254. Several delegations expressed the view that the opening phrase of draft article 75, “unless the contract of carriage contains an exclusive choice of court agreement that is valid under articles 76 or 81” should be deleted as allowing for too much freedom of contract in terms of establishing which places should be considered appropriate for the establishment of jurisdiction. In addition, questions were raised regarding whether there should be a provision in the draft convention establishing the rules for designating the appropriate jurisdiction for actions against the shipper and the consignee, in addition to those provisions in draft article 75 and 77, providing such rules for actions against the carrier and the maritime performing party, respectively. In regard to both issues, a preference was expressed for the approach taken in article 21 of the Hamburg Rules. In response, it was said that while there was some sympathy for these suggestions, it was thought that, in light of the delicate compromise struck on these issues during its sixteenth session, the Working Group should at the moment retain its views, as expressed in the text under consideration, and that concerns about the freedom of contract were perhaps best left to the consideration of draft article 76 on choice of court agreements. In response to a concern raised regarding the use of the word “plaintiff” in draft article 75 and that it could allow an opening for carriers seeking to circumvent the provision by seeking a declaration of non-liability in an anti-suit injunction, it was explained that that problem might be best dealt with in terms of possible drafting adjustments to draft article 80 (2), which was aimed primarily at that problem.

Draft article 76. Choice of court agreements

255. Despite a view expressed to the contrary, there was general agreement in the Working Group to delete the square brackets surrounding the phrase “claims against the carrier” and retain the text therein, and to delete the alternative “[disputes]” in draft article 76 (1).

256. With regard to the alternative text set out in square brackets in draft article 76 (2) (b), there was general agreement to retain the text “designates the courts of one Contracting State or one or more specific courts of one Contracting State” as allowing parties to be more precise in choosing the court in a choice of court agreement. It was further agreed to add the word “clearly” at the beginning of the chosen phrase, and to delete the alternative text set out in square brackets in the draft provision.

257. It was agreed that draft paragraph 76 (2) (c) could be deleted, since sufficient protection was thought to have been provided as between the parties to a volume agreement in draft paragraph 76 (2) (a).

258. It was proposed that the text in draft paragraph 76 (3) (b) be retained without square brackets. However, it was suggested that since the term “transport document” had a very broad meaning under the draft convention, the provision should be narrowed slightly to provide for proper notice to be provided to the third party to the volume contract, by deleting the phrase “issued in relation to” and substituting the phrase, “that evidences the contract of carriage for”. There was general support for that proposal.

259. With regard to draft article 76 (3) (d) regarding the requirement for binding a third party to a volume contract to a choice of court agreement concluded therein, a concern was expressed that the conditions set out in the provision were not sufficiently clear with respect to how such parties would be bound. In response to this concern, it was proposed that subparagraph (d) be amended to refer to the law of the agreed place of destination of the goods, rather than to the “rules of private international law of the court seized”. While this suggestion was welcomed as a possible solution, concerns were expressed regarding what law was being chosen under this formulation, and it was suggested that “the place of receipt of the goods” might be better wording, but that that connecting factor was unusual, and it was thought to be preferable to refer to the law of the forum or the law governing the contract. Further, the view was expressed that the draft convention had avoided elsewhere making specific reference to the law chosen, and that the current text as found in A/CN.9/WG.III/WP.75 might be preferable. Support was expressed for the view that the provision should be left as it was currently found, or failing that, that the law of the forum should be used so as to avoid a potentially uncertain and confusing rule like the “law of the place of receipt of the goods”. It was agreed that alternative text could be proposed for draft article 76 (3) (d) as follows: “[the law of the place of destination of the goods][the law of the place of receipt of the goods] [the applicable law pursuant to the rules of private international law of the law of the forum]”, and that the Secretariat should have regard to the use of the word “court” in this draft article, and specifically, to proper usage of the term “competent court”.

260. The Working Group agreed that under the proposal to include a reservation or “opt in” clause regarding the entire chapter on jurisdiction, paragraphs 4 and 5 of draft article 76 would be deleted.

Draft article 77. Actions against the maritime performing party

261. After discussion, the Working Group agreed that the text in square brackets in draft article 77 (b) should be retained as necessary to further define the maritime performing party and the brackets around them deleted, but that the words “single” and “all of” could be deleted as redundant.

Draft article 79. Arrest and provisional or protective measures

262. Although the view was expressed that retaining the text in square brackets in draft article 79 might effectively provide an extra ground of jurisdiction under the draft convention by including the place of arrest, the Working Group agreed to retain the text in square brackets and to delete the brackets.

Draft article 80. Consolidation and removal of actions

263. With respect to the square brackets appearing in draft article 80 (2), there was support for the proposal that, of the texts presented, the best text was the following compromise between the three alternative texts: “seeking a declaration of non-liability or any other action that would deprive a person of its right to select the forum under articles 75 or 77.” Two other issues mentioned for consideration by the Secretariat in future drafting were the possibility that the reference in draft article 80 to articles 76 or 81 might need to be adjusted if the option with respect to the partial “opt in” approach was taken, and that with respect to draft article 80 (2), the Secretariat could consider clarifying that the cargo claimant must designate a

forum to which the action must be removed, or there would be no removal. The Working Group approved both suggestions.

Draft article 81. Agreement after dispute has arisen and jurisdiction when the defendant has entered an appearance

264. There was approval for the suggestion to add the word “competent” before the word “court” in draft article 81 (2).

Draft article 81 bis. Recognition and enforcement

265. The Working Group reiterated its view that the text of draft articles 81 bis (2) and (3) might need to be adjusted depending on what decision was made regarding the whole or partial reservation or “opt in” with respect to chapter 16. It was submitted that draft article 81 bis did not place an obligation on Contracting States to recognize and enforce judgments from other States but offered the possibility to do so subject to their national laws. The submission was accepted by the Working Group. Further, the Secretariat was requested to review the use of the terms “may” and “shall” in draft article 81 bis (1).

Conclusions reached by the Working Group regarding the provisions in chapter 16:

266. After discussion, the Working Group decided that:

- The Secretariat should make the adjustments to the provisions of chapter 16 as approved above in paragraphs 245 to 265.

Arbitration — Chapter 17

267. The Working Group was reminded that it had most recently considered the topic of arbitration at its sixteenth session (see A/CN.9/591, paras. 85-103), and that it had previously considered the topic at its fourteenth (see A/CN.9/572, paras. 151-157) and fifteenth sessions (see A/CN.9/576, paras. 176-179).

268. The Working Group was reminded that, following the consideration of the topic of arbitration during its sixteenth session, a revised text for a new chapter on arbitration had been proposed (see A/CN.9/591, para. 95). Discussion on that proposal ensued in the Working Group at that same session, and it was decided that the general approach taken in those provisions was acceptable and should be retained for future consideration by the Working Group (see A/CN.9/591, paras. 96 to 103). It was further recalled that draft article 83 of that revised text provided for a claimant to commence either arbitral proceedings according to the terms of the arbitration agreement in the contract of carriage, or to institute court proceedings in any place, provided that such place was specified by draft article 75 of the draft convention. It was further recalled that the purpose of that approach was to ensure that, with respect to the liner trade, the right of the cargo claimant to choose the place of jurisdiction for a claim pursuant to draft article 75 was not circumvented by way of enforcement of an arbitration clause. In addition, the Working Group was reminded that it had attempted in that approach to limit interference with the right to arbitrate in the liner trade while protecting the cargo claimant, but that the intended approach in the non-liner trade was to allow for complete freedom to arbitrate, thus preserving the status quo in both trades.

269. At that time, it was noted that the approach of that revised text in paragraph 95 of A/CN.9/591, would in practice mean that an otherwise valid arbitration agreement might not be considered binding if the claimant chose to institute court proceedings elsewhere. This particular aspect of that revised text was felt to be possibly inconsistent with article II of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, 1958 (the New York Convention), which generally recognized the binding nature of arbitration agreements and mandated courts to decline jurisdiction in respect of disputes which the parties had agreed to submit to arbitration. Therefore, it was suggested that the Working Group should seek the opinion of UNCITRAL Working Group II (Arbitration) on the provisions of the draft convention relating to arbitration (see A/CN.9/591, para. 101).

270. The Working Group was informed that the Secretariat had since facilitated consultations between experts that participated in the activities of both Working Groups with a view to devising ways to implement the approach taken by Working Group III at its sixteenth session in a manner that did not conflict with the New York Convention and the policies advocated by UNCITRAL in the field of arbitration. As a result of those consultations, the following text was proposed for consideration by the Working Group:

“CHAPTER 17. ARBITRATION

“Article 83. Arbitration agreements

“1. Subject to this chapter, parties may agree that any dispute that may arise relating to the carriage of goods under this Convention shall be referred to arbitration.

“2. The arbitration proceedings shall, at the option of the person asserting a claim against the carrier, take place at one of the following locations:

“(a) Any place designated for that purpose in the arbitration agreement; or

“(b) Any other place situated in a State where any of the places specified in article 75, paragraph (a), (b) or (c), is located.

“3. The designation of the place of arbitration in the agreement is binding for disputes between the parties to the agreement if it is contained in a volume contract that clearly states the names and addresses of the parties and either

“(a) is individually negotiated; or

“(b) contains a prominent statement that there is an arbitration agreement and specifies the location within the volume contract of that agreement.

“4. When an arbitration agreement has been concluded in accordance with paragraph 3 of this article, a person that is not a party to the volume contract is bound by the designation of the place of arbitration in that agreement only if:

“(a) The place of arbitration designated in the agreement is situated in one of the places referred to in article 75, paragraphs (a), (b) or (c);

“[(b) The agreement is contained in the contract particulars of a transport document or electronic transport record that evidences the contract of carriage for the goods in respect of which the claim arises;]

“(c) The person to be bound is given timely and adequate notice of the place of arbitration; and

“(d) Applicable law [for the arbitration agreement] permits that person to be bound by the arbitration agreement.

“5. The provisions of paragraphs 1, 2, 3, and 4 of this article are deemed to be part of every arbitration clause or agreement, and any term of such clause or agreement to the extent that it is inconsistent therewith is null and void.

“Article 84. Arbitration agreement in non-liner transportation

“1. If this Convention has been incorporated by reference into a charter party or other contract of carriage that is excluded from the application of this Convention pursuant to article 9, then the incorporation does not include this chapter unless it explicitly expresses the intent to incorporate this chapter.

“2. Nothing in this Convention affects the enforceability of an arbitration agreement in a charter party or other contract of carriage that is excluded from the application of this Convention pursuant to article 9 if that agreement has been incorporated by reference into a transport document or electronic transport record issued under that charter party or other contract of carriage and the provision in the transport document or electronic transport record that incorporates the agreement (i) identifies the parties to and date of the charter party; and (ii) specifically refers to the arbitration clause.

“Article 85. Agreements for arbitration after the dispute has arisen

“Notwithstanding the provisions of this chapter and chapter 16, after a dispute has arisen, the parties to the dispute may agree to resolve it by arbitration in any place.

“Article 85 bis. Application of Chapter 17

“Variant A

“The provisions of this chapter will apply only to a Contracting State if that State makes a declaration to this effect in accordance with Article XX [which will describe the formalities of the declaration process].

“Variant B

“A Contracting State may make a reservation in accordance with Article XX [which will describe the formalities of the reservation process] with respect to this chapter.”

271. It was explained that under the above text the arbitration agreement itself would be considered to be binding, and the cargo claimant would not be allowed to disregard the arbitration agreement by filing suit at court. Instead, the text used the approach taken in article 22 of the Hamburg Rules to provide a mechanism to

protect the cargo claimant from being denied its right to choose the place of jurisdiction by way of enforcement of an arbitration clause. Under the above text, the claimant was given the option to either commence arbitral proceedings according to the terms of the arbitration agreement in the contract of carriage, or in any place specified by draft article 75 of the draft convention. It was noted that in the past the Working Group had been reluctant to follow the approach taken in the Hamburg Rules, mainly because of concerns that moving arbitration proceedings away from the place of arbitration originally agreed might in practice render arbitration impracticable, in particular where the arbitration rules of the arbitral institution chosen by the parties did not accommodate the conduct of arbitration proceedings away from the arbitral institution's seat. It was observed, however, that in view of the objections that had been raised to the text tentatively agreed at the Working Group's sixteenth session, reverting to the approach taken in article 22 of the Hamburg Rules, with the adjustments contained in the text proposed in paragraph 270 above would, in balance, offer a better alternative for achieving the Working Group's policy objective of protecting the interests of the cargo claimant in a manner that respected the general principle of the binding nature of arbitration agreements. Problems that might arise from a request by the claimant that arbitration proceedings take place at a place other than the agreed place of arbitration would be solved within the framework of the New York Convention and in the light of the case law that had interpreted its text.

272. By way of further explanation of the text proposed in paragraph 270 above, it was said that an attempt was made to align that text as closely as possible with the approach taken in the chapter of the draft convention on jurisdiction. In particular, it was noted that draft article 83 (3) was intended to be the counterpart of draft article 76 with respect to volume contracts, and that draft article 83 (4) was intended to parallel the approach of draft article 76 with respect to the binding effect of arbitration agreements on third parties to the contract of carriage. Further, Variants A and B of draft article 85 bis reflected the proposed reservation or "opt in" approaches to the chapter on arbitration that were also suggested with respect to the chapter on jurisdiction, and it was said that should the Working Group adopt the partial "opt in" approach to the chapter on jurisdiction, corresponding changes would be necessary with respect to this provision as well, since whatever choice the Working Group made with respect to the particular mechanism according to which chapter 16 would apply should also extend to chapter 17.

General discussion

273. Although some delegations reiterated their opposition to including any provisions in the draft convention on arbitration, it was pointed out that the reservation or "opt in" approach set out in draft article 85 bis should alleviate those concerns. While there was agreement in the Working Group that further reflection would be necessary on the revised text in paragraph 270 above, support was expressed for the compromise approach and the principles expressed therein to allow for as broad an approach to arbitration as possible in the liner trade, while at the same time ensuring that the rules establishing jurisdiction in claims against the carrier in draft article 75 were not circumvented. Support was again expressed for the principle that there should be broad ability to resort to arbitration in the non-liner trade. Certain specific observations were made as follows with respect to the specific text of the chapter under consideration.

Draft article 83

274. The proposal was made to delete the phrase “against the carrier” in the chapeau of paragraph 2, since it was thought to be more in keeping with the nature of arbitration if a claim could be asserted by either party to the dispute. Support was expressed for this proposal. In response to a question regarding the operation of the word “binding” in the chapeau of draft article 83 (3) and its intended operation with draft article 83 (2), it was confirmed that the use of that term in that context was intended to completely prohibit “exclusive” arbitration agreements in the liner trade. It was proposed that in the case where the carrier took the initiative to have recourse to arbitration at the place designated by the draft convention, the other party could nonetheless determine that the proceedings would take place at one of the places specified in draft article 75 (a), (b) or (c).

275. Concern was also expressed with respect to draft article 83 (4) regarding the conditions under which third parties to arbitration agreements in contracts of carriage would be bound. It was thought that subparagraph (d) was problematic, in that it provided that one of the conditions for a third party to be bound by the arbitration agreement was that the “applicable law” permitted that party to be so bound. In particular, it was thought that the phrase “applicable law” was too vague, in that it did not specify whether it was the procedural law or the law chosen by the arbitration itself, and that a more precise term should be used, such as the law of the contract of carriage, or the law of the arbitration proceedings, or the law of the State in which the arbitration proceedings took place. It was noted that a similar discussion had taken place in the Working Group regarding the law applicable to binding a third party in the case of choice of court provisions in a volume contract in draft article 76 (3) (d) (see para. 259 above), and doubt was expressed whether a decision could be reached in respect of this similar provision in the arbitration chapter, since it was thought to be more controversial than the provision in the jurisdiction chapter. The Working Group was therefore encouraged to refrain from making any specific reference about the applicable law in this regard. It was also stated that a third party should be bound by an arbitration clause only if it had agreed to it.

Draft article 84

276. It was observed that draft article 84 differed substantially from the version previously considered at the sixteenth session of the Working Group (see A/CN.9/591, para. 95). It was explained that draft article 84 was intended to preserve traditional resort to arbitration in charter parties in the non-liner trade, but to ensure the inclusion in that category of those situations where the draft convention was incorporated by reference. It was noted that paragraph 2 of draft article 84 had been redrafted from the previous version, but that the intention had been to keep the provision substantially the same, except for slightly limiting the circumstances under which a bill of lading issued pursuant to a charter party could contain an arbitration clause. In particular, the revised approach was attempting to deal with a particular problem by allowing bills of lading issued pursuant to a charter party to incorporate the charter party’s arbitration clause.

277. While the intended operation of this provision was thought to be helpful, there was support for the suggestion that paragraph 1 of draft article 84 should be deleted, as it was seen as a material rule that could affect the interpretation of such incorporation by reference, and could be used as a mechanism to affect charter parties, which were, in any event, intended to be outside of the scope of

the draft convention. Further it was suggested that the phrase “or jurisdiction” should be added after the phrase “enforceability of an arbitration” in order to cover the limited number of cases where charter parties incorporated litigation rather than arbitration, and that the phrase “parties to and date of” should be deleted from subparagraph 2 (i). As a result of concerns that paragraph 2 set out conditions that could have the unwanted effect of establishing conditions that restricted the use of arbitration clauses in the non-liner trade, it was suggested that the text following the second instance of the phrase “or other contract of carriage” should be deleted.

Draft article 85 bis

278. It was noted that draft article 85 bis setting out the reservation and “opt in” alternatives for the application of the chapter on arbitration was not linked to similar provisions in chapter 16 on jurisdiction, since every State would have complete freedom to decide on the application of chapter 17, but that the choice on whether or not to adopt chapter 16 would be made by some States in a joint fashion.

Conclusions reached by the Working Group regarding chapter 17 on arbitration:

279. After discussion, the Working Group decided that:

- The draft text set out in paragraph 270 above represented a good compromise and acceptable grounds on which to continue discussions toward final drafting;
- Delegations would still have the right to comment further on the text pending further consideration of the new version presented during the session; and
- Although some suggested drafting changes did not receive sufficient support, such as the deletion of the phrase “against the carrier” in draft article 83 (2), the Secretariat should prepare a revised version of the text, taking into account the above discussion and making any necessary drafting adjustments, particularly in light of any adjustment necessary with respect to a partial “opt in” approach.

III. Other business

Planning of future work

280. The Working Group agreed to complete consideration of any outstanding issues from its second reading, including freedom of contract, and to commence its third reading of the draft convention, at its nineteenth session (New York, 16 to 27 April, 2007). The Working Group also took note that its twentieth session was scheduled for 15 to 25 October 2007, subject to the approval of the Commission at its fortieth session in 2007.

281. The Working Group expressed its strong satisfaction with the continued progress made on the draft convention, particularly in light of the heavy agenda at its current session. The Working Group agreed that it was on target to complete its third and final reading of the draft convention at the end of 2007.

**B. Note by the Secretariat on the preparation of a draft convention on
the carriage of goods [wholly or partly] [by sea] — Limitation of Carrier Liability,
submitted to the Working Group on Transport Law
at its eighteenth session
(A/CN.9/WG.III/WP.72) [Original: English]**

In preparation for the eighteenth session of Working Group III (Transport Law), the Government of China submitted to the Secretariat the document attached hereto as an annex with respect to the limitation of the carrier's liability in the draft convention on the carriage of goods [wholly or partly] [by sea]. The Government of China advised that the text was intended to facilitate consideration of the topic of the limitation of the carrier's liability for breaches of its obligations under the draft convention in the Working Group by compiling the views and comments of various delegations into a single document for discussion by the Working Group.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

I. Introduction

1. The 10th session of Working Group III (Transport Law), held between 16 and 20 September 2002 in Vienna, started an initial discussion on the issue of limitation of the carrier's liability (see A/CN.9/525, paragraphs 65 to 70 and 81 to 92). The 13th Session of Working Group III (Transport Law), held between 3 and 14 May 2004 in New York, held the second round of discussions on the issue of limitation of the carrier's liability (see A/CN.9/552, paragraphs 38 to 51 (basis for the limitation of liability), 25 to 31 (liability for loss caused by delay), and 51 to 62 (loss of the right to limit liability)). Following that discussion, the Working Group asked the secretariat of the United Nations Commission on International Trade Law (UNCITRAL) to draft a plan for revising the articles that had been considered. The draft text of the articles on the limitation of liability was contained in paragraphs 3 and 6 to 8 of A/CN.9/WG.III/WP.39. The secretariat compiled and submitted in November 2005 a new, amalgamated text of the draft convention, and issued it as A/CN.9/WG.III/WP.56. The provisions of the limitation of liability in A/CN.9/WG.III/WP.56 are to a certain extent different from A/CN.9/WG.III/WP.39 in terms of their overall structure. A/CN.9/WG.III/WP.56 has an independent Chapter 13 on the limitation of liability, including draft article 64: basis of limitation of liability (corresponding to draft art. 18 of A/CN.9/WG.III/WP.39), draft article 65: liability for loss caused by delay (corresponding to draft art. 16 (2) of A/CN.9/WG.III/WP.39), draft article 66: loss of the right to limit liability (corresponding to draft art. 19 of A/CN.9/WG.III/WP.39) and draft article 104: amendment of limitation amounts (corresponding to draft art. 18 (bis) of A/CN.9/WG.III/WP.39). The present document is based on the text of the draft convention in A/CN.9/WG.III/WP.56.

2. In November 2005, the Chinese Delegation distributed to all interested delegations an informal questionnaire on the issue of limitation of the liability of the

carrier's liability. The purpose of this document is to facilitate the discussion by the Working Group on this topic. Five delegations submitted their responses to the questionnaire. The text of the present document does not necessarily reflect the views of the Chinese Delegation, but represents a compromise that may be reached, which the Working Group may wish to consider.

II. The Core Provisions of Chapter 13

3. The core provision of Chapter 13 of the draft convention is draft article 64: Basis of limitation of liability.
4. Paragraph 1 of draft article 64 provides for the limitation level of liability. It adopted a per package and per kilogram limitation approach, and treated as exceptions goods with a declared value and those regarding which other agreements exist between the parties.
5. Paragraph 2 of draft article 64, which includes two variants, of which Variant A is intended as a clarification of the text of Variant B, without change in substance. Thus, differences exist in the text, but the issues covered remain the same. Both variants regulate the limitation of liability when it cannot be determined during which leg of the transport the loss or damage occurred.
6. Paragraph 3 of draft article 64 regulates the limitation of liability in terms of the number of packages or shipping units when using containers, pallets or other similar means of transport.
7. Paragraph 4 of draft article 64 provides for the unit of account, and requires that the Special Drawing Rights (SDR) defined by the International Monetary Fund be used as the unit of account.
8. There are two alternative texts set out in draft article 65, Liability for loss caused by delay. Variant A is again intended as a clarification of the text of Variant B, without a change in substance.
9. The final provision in Chapter 13 is draft article 66, Loss of the right to limit Liability.
10. Paragraph 1 of draft article 66 provides for circumstances under which the right to limit liability for loss of or damage to goods, and for breaches of the carrier's obligations under the draft convention may be lost.
11. Paragraph 2 of draft article 66 provides for circumstances under which the right to limit liability for loss caused by delay in delivery may be lost.
12. The final provision of relevance to this report is draft article 104, Amendment of limitation amounts.
13. Draft article 104 was drafted by the Secretariat at the request of the Working Group, by drawing on such international conventions as the 2002 Protocol to the Athens Convention and the United Nations Convention for Liability of Operators of Transport Terminals in International Trade.

III. Draft article 64: Basis of Limitation of Liability

Paragraph 1: Breaches of the carrier's obligations under the draft convention

14. At the 13th session of the Working Group, some delegates suggested adding “in connection with the goods” of Article 4(5) of the Hague Rules to enable this paragraph to be applicable to circumstances including misdelivery or misrepresentation of the goods in the bill of lading. The conclusion of the discussion on this issue was to insert “in connection with the goods” in brackets into this and other paragraphs for the Working Group to review and discuss in future (see paragraphs 41 to 44 of A/CN.9/552). A/CN.9/WG.III/WP.56 replaces the wording of the whole phrase “loss of, damage to [or in connection with goods] with “breaches of its obligations under this Convention”. In the responses to the informal questionnaire, some delegations were opposed to using “breaches of its obligations under this Convention”, suggesting that this was an expansion of the limitation on liability enjoyed by the carrier. Other delegations that responded to the informal questionnaire, however, suggested that the Working Group should first discuss what other liabilities of the carrier than those included in chapters 6 and 7 should be subject to limitation. For example, it seems to be possible for a carrier to limit liability in cases of misdelivery of the goods, delivery without presentation of negotiable transport document or misrepresentation in the transport document. It seems impossible to cover the above cases by simply using “loss of or damage to goods”. As a result, it may not be justifiable to hold that the carrier is not entitled to limit its liability since there might be no question of “intent” or “knowledge” when the carrier acted as mentioned above. Therefore, the correct approach may be to use suitable wording to include the cases mentioned above in the liability limitation covered by draft article 64. Whether or not the carrier should lose the liability limit should be decided by judging in accordance with draft article 66 if the acts of the carrier were taken “with intent” or “with knowledge”.

15. On the basis of the above discussion, it seems that the Working Group may wish to consider:

- (1) What other liabilities of the carrier than those included in Chapters 6 and 7 should be subject to limitation? Should misdelivery of the goods, delivery without presentation of negotiable transport document or misrepresentation in the transport document be covered by the limitation of liability covered by draft article 64?
- (2) If the Working Group decides that the limitation of liability should cover the circumstances mentioned above, then which specific wording can accurately reflect the intention of the Working Group, i.e. “loss of or damage to goods or [or in connection with the goods]” or “[breaches of its obligations under this Convention]”?

Paragraph 1: Limitation level of liability

16. At the 13th session of the Working Group, delegates expressed the belief that it was not yet the time to discuss the level of the limitation of liability, and therefore did not discuss the level of limitation of liability that the convention should adopt (see para. 39 of A/CN.9/552). Following the 13th session, the Secretariat compiled at the request of the Working Group in December 2005 a comparative table on limitation levels of carrier liability (A/CN.9/WG.III/WP.53) on the basis of the initial information provided by a number of States. In the responses to the informal

questionnaire, some delegations suggested adopting the level of limitation of liability of the Hague-Visby Rules, while other delegations suggested adopting the level of limitation of liability of the Hamburg Rules. Still another delegation suggested greatly raising the level of limitation of liability, arguing that the 1996 Protocol to amend the Convention on Limitation of Liability for Maritime Claims had greatly increased the limit set by the 1976 Convention.

17. If the draft convention adopted the limitation of liability of the Hague-Visby Rules, i.e. 666.67 SDR per package or 2 SDR per kilogram, it would be the same as the limitation of liability currently applied by the majority of countries, which would help the adoption of the draft convention as it would have less impact on the existing system. However, considering the fact that any revision to the draft convention would increase appropriately the limitation of liability on the basis of considering price factors such as inflation, it seemed feasible to raise it to 835 SDR per package or 2.5 SDR per kilogram as required by the Hamburg Rules. Since the draft convention would be an international transport convention rooted mainly in maritime transport, the appropriate approach seemed to be an investigation into the average value of goods shipped through maritime transport and into claims for cargo loss or damage, and then to determine a scientific level of limit of liability on the basis of the result of the investigation. Some States that responded to the informal questionnaire carried out work similar to this, and the conclusion was that the average value of goods and the absolute majority of the claims were under the level of limitation of liability of 2 SDR or 2.5 SDR per kilogram. As shown by the restricted investigation that China has conducted into judicial decisions, the absolute majority of the claims were under the level of limitation of liability of 2 SDR per kilogram.

18. On the basis of the above discussion, the Working Group may wish to consider:

What level of limitation of liability should the draft convention set after considering factors such as the average value of goods and claims against goods loss or damage?

Paragraph 2: Non-localized loss or damage

19. The Working Group discussed paragraph 2 of draft article 64 in detail at its 12th session, the result of which was an even split between the opinions which favoured maintaining the provision, and those which favoured eliminating it (see paragraphs 43 to 50 of A/CN.9/544). The Working Group reiterated this opinion but did not discuss it in detail at its 13th session (see paragraph 45 of A/CN.9/552). In the responses to the informal questionnaire, one delegation favoured maintaining this provision, but the majority of the delegations who responded recommended eliminating it, arguing that the draft convention was an international convention that would be in fact mainly targeted on maritime transport plus other legs of transport. Since the draft convention focuses on maritime transport, it was suggested that it would be not appropriate to include this paragraph in the draft convention. Furthermore, limitation of liability was not an isolated issue, but instead was closely related to such issues as the basis of liability and the conditions for the loss of the limitation of liability. It was suggested that it was not advisable to introduce the limitation of liability for individual legs of transport.

20. The Working Group may also wish to note that article 19 of the United Nations Convention on International Multimodal Transport of Goods provides that where the

leg of the multimodal transport in which the loss or damage occurs is determined, the higher limit of liability provided either by an international convention or a domestic law that governs that leg of the transport should be applied. This is in keeping with the principle in draft article 27 of the draft convention. Nevertheless, the United Nations Convention on International Multimodal Transport of Goods does not include any provision for non-localized loss or damage. It seems that the unified limit of liability provided for in article 18 of that Convention should be applied. It seems that the draft convention should adopt a similar approach to apply the limit of liability of draft article 64, paragraph 1, to non-localized loss or damage.

21. The two alternative texts on this provision do not have any substantive difference. Variant A further clarifies Variant B.

22. On the basis of the above discussion, the Working Group may wish to consider:

After thorough consideration of the advantages and disadvantages of providing for non-localized loss or damage, should this provision be deleted so as to apply the limit of liability of draft article 64, paragraph 1, to non-localized loss or damage?

IV. Draft article 65: Liability for loss caused by delay

Economic Loss

23. Draft article 65 includes two variants. Variant A is intended to clarify the content of Variant B. In the responses to the informal questionnaire, one delegation expressed support for Variant A, believing that it was clearer. There were also delegations who supported Variant B, but they suggested replacing “consequential loss” with “economic loss”. Still another delegation proposed distinguishing different kinds of loss, suggesting that the Working Group should make clear that the decrease in the market value was a kind of economic loss, and therefore should be subjected to a limitation of liability such as [one times] the freight.

24. On the basis of the above discussion, it seems that the Working Group may wish to consider:

Which of Variants A or B is clearer? If Variant B is chosen, the Working Group may wish to consider replacing “consequential loss” with “economic loss” so as to cover the loss represented by the decrease in market value.

Limitation Level for Economic Loss Caused by Delay

25. On the issue of what level should be set for the limitation of liability for economic loss caused by delay in delivery, most delegations that responded to the informal questionnaire proposed to apply the liability limit of 2.5 times the freight payable on the goods delayed, as required by the Hamburg Rules, and supported the rule that the total amount of compensation received in accordance with this article and draft article 64, paragraph 1, should not exceed the liability limit for the total loss of the goods calculated according to draft article 64, paragraph 1. However, another delegation that responded believed that one times the freight would be enough. It was proposed that the specific issue of the level of the limitation for loss caused by delay should be settled on the basis of further investigation, for which

consideration should be made of many factors, including the future recognition and acceptability of the amount chosen.

26. On the basis of the above discussion, it seems that the Working Group may wish to consider:

Should the liability limit of the economic loss caused by delay in delivery be set at 1 or 2.5 times of the freight?

Unless otherwise agreed

27. As for the wording “unless otherwise agreed”, some delegations that responded to the informal questionnaire proposed that the limit of liability of this article should be compulsory, and not subject to negotiation. Another delegation believed that the limit of liability in this article, although compulsory, could be negotiated, but that the limit could only be increased rather than decreased, according to the spirit of the principle of freedom of contract in chapter 20. Still another delegation believed that it was not necessary to include “unless otherwise agreed” because a correct conclusion could be drawn by following the spirit of the principle established in draft article 94 of Chapter 20. It was suggested that it would be superfluous to insert “unless otherwise provided” into this article.

28. On the basis of the above discussion, it seems that the Working Group may wish to consider:

Is it necessary to keep the wording “unless provided otherwise”?

V. Draft article 66: Loss of the right to limit liability

29. Draft article 66 provides the conditions for the loss by the carrier of the right to limit its liability. The original paragraph was divided into two paragraphs, regulating respectively the circumstances of the loss of the right to limit liability related to loss of or damage to goods, and that related to loss caused by delay in delivery. In addition, the wording of “breach of the carrier’s obligation under this Convention” was inserted into paragraph 1 in lieu of the phrase “[or in connection with] the goods”, as it was in paragraph 1 of draft article 64. In the responses to the informal questionnaire, there seemed to be no substantial difference of views among the delegations regarding this provision. The delegations that responded broadly supported a separate paragraph 2 to deal with the issue of delay in delivery, and it appears that they were also satisfied with the conditions for losing the limitation of liability.

30. Only one delegation expressed misgivings about the fact that “breach of the carrier’s obligation under this Convention” was added to the first part of paragraph 1 of this draft article, yet it was not mentioned in the latter part. It was suggested that the inconsistency between the wording of the first part and the latter part of the paragraph could cause problems. The example was given that, in the case of misrepresentation of the transport document, the carrier did not cause the loss of or damage to goods with intent, or recklessly and with knowledge that loss or damage would probably result, yet it was obvious that the carrier should lose the right to limit its liability in such circumstances.

31. On the basis of the above discussion, it seems that the Working Group may wish to consider:

Would the insertion of “breach of the carrier’s obligation under this Convention” into paragraph 1 result in inconsistency between the wording in the first part and the latter part of this paragraph, which might cause problems for the application of this paragraph?

VI. Draft article 104: Amendment of limitation amounts

Paragraph 1

32. In the responses to the informal questionnaire, some delegations proposed the addition of a rule on an amendment procedure for the revision of the liability limit for loss caused by delay. However, another delegation that responded was opposed to it, arguing that freight itself was a variable factor.

33. On the basis of the above discussion, it seems that the Working Group may wish to consider:

Whether amendment of the limit of liability for loss caused by delay of Article 65 should be added to paragraph 1?

Paragraph 2

34. In the responses to the informal questionnaire, some delegations mentioned that the number of States that could apply for amendment of the limitation of liability, i.e. one-quarter or one-half of the total, was related to the number of ratifying States required for the Convention to come into force. If the latter number was high, then a quarter would be enough. If the latter number was low, then half would seem to be more acceptable. In addition, it was suggested that a second condition could be considered, i.e. to set the minimum number of States required for an application to amend the limitation of liability.

35. On the basis of the above discussion, it seems that the Working Group may wish to consider:

What is the appropriate number of States that could apply for amendment of the limitation of liability that should be required in paragraph 2? Should a second condition should be added, i.e. to set the minimum number of States required to apply for amendment of the limitation of liability?

C. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Comments and proposals by the International Chamber of Shipping, BIMCO and the International Group of P&I Clubs on topics on the agenda for the 18th session, submitted to the Working Group on Transport Law at its eighteenth session
(A/CN.9/WG.III/WP.73) [Original: English]

In preparation for the eighteenth session of Working Group III (Transport Law), the International Chamber of Shipping, BIMCO and the International Group of P&I Clubs submitted to the Secretariat the document attached hereto as an annex containing their comments and proposals on provisions of the draft convention on the carriage of goods [wholly or partly] [by sea] scheduled for discussion during the session.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Draft convention on the carriage of goods [wholly or partly] [by sea] (A/CN.9/WG.III/WP.56)

International Chamber of Shipping, BIMCO and the International Group of P&I Clubs

Comments and proposals on the topics scheduled for discussion at the 18th session of UNCITRAL Working Group III, to be held in Vienna, 6-17 November 2006

1. In order to assist the deliberations of the Working Group at its next session, the International Chamber of Shipping, BIMCO and the International Group of P&I Clubs offer the following comments on the following topics scheduled for discussion:

- A. Jurisdiction and Arbitration (Chapters 16 and 17)
- B. Transport Documents and Electronic Records (Chapter 9)
- C. Delay and outstanding matters regarding shippers' obligations (Chapters 6 and 8)
- D. Limitation of Liability (Chapters 13 and 21)
- E. Rights of and Time for Suit (Chapters 14 and 15)

A. Jurisdiction and Arbitration (Chapters 16 and 17)

2. The draft convention should not introduce prescriptive provisions for dispute resolution. The absence of provisions in the Hague and Hague-Visby Rules has not detracted from their wide-spread application or created difficulties of principle or practice. In contrast, the inclusion of provisions in the Hamburg Rules has militated against their use. There are, therefore, strong arguments for leaving commercial

parties to determine dispute resolution arrangements most suited to their particular needs. In this context, it is perhaps worth reiterating a point made and acknowledged by many participants in the Working Group, namely that contracts for the carriage of goods are essentially a matter of private rather than public law, which in the modern era are in virtually all cases made between parties of similar bargaining strength who are almost invariably insured.

Jurisdiction

3. The proposals put forward at the sixteenth session of the Working Group in Vienna in 2005, while less constricting than provisions in the Hamburg Rules, nevertheless intrude on party freedom and create legal uncertainty.

Draft article 75 — Actions against the carrier

4. It should be clarified that this draft article does not apply where draft articles 83 and 84 come into play.

Draft article 76 — Choice of court agreements

5. Exclusive jurisdiction clauses are widely used in contracts of carriage. Such clauses create uniformity and legal certainty (two of the main purposes for developing international conventions) for both cargo interests and carriers. Draft article 76 as presently drafted will, other than in the case of volume contracts, result in a lack of uniformity and certainty and promote forum shopping by claimants. Moreover, the inclusion of both paragraph 4, which permits a state to recognize jurisdiction clauses that do not otherwise satisfy the requirements of draft article 76, and paragraph 5, which despite paragraph 4, permits a claimant to proceed in those jurisdictions specified in draft article 75, will inevitably lead to conflicts between competing jurisdictions and necessarily additional litigation with all its associated cost and delays.

Draft article 80 — Consolidation and removal of actions

6. The position is further complicated where an action is brought against both the contracting carrier and maritime performing party. If an exclusive jurisdiction clause cannot be enforced, the contracting carrier might be required to defend the case in a jurisdiction to which he has not agreed in the contract of carriage and this would be unreasonable.

Concursus of Claims

7. The absence of concursus provisions in the event of multiple claims is a significant shortcoming where exclusive jurisdiction clauses are not accepted. As drafted, a shipowner would be forced to defend actions in an almost unlimited number of jurisdictions in the case of claims relating to multi-modal cargoes arising out of the same incident. It would be unreasonable to expect the carrier to defend such suits in many different jurisdictions, possibly subject to varying limitation regimes. Costs would be increased considerably, to the detriment of all parties, and the settlement of claims delayed where the carrier was entitled to limit liability under a global limitation regime. This issue needs to be reconsidered.

Draft article 79 — Provisional or protective measures

8. The provision opens the way for the forum of arrest of a ship (*forum arresti*) to be an additional, and unpredictable, jurisdiction open to manipulation by claimants seeking to avoid compliance with the fora listed in draft article 75. In earlier discussions, the Working Group has largely been of the view, no doubt due to the uncertainty which would be created, that *forum arresti* should not provide an additional connecting factor. This issue needs to be addressed through a conflict of conventions provision which gives preference to the jurisdiction provisions of the draft convention over the provisions on jurisdiction/*forum arresti* of the 1952 and 1999 Arrest Conventions to the extent that this is possible under international law.

Arbitration

9. What has been said above in relation to the benefits of giving effect to choice of jurisdiction clauses is equally applicable to arbitration agreements. Arbitration has long been used by parties to a maritime adventure as a means of resolving disputes speedily and economically. This has resulted in the development of a number of arbitration centres of experience and expertise supported by a well developed legal framework. In industry's view, the introduction of provisions in the draft convention that would curtail the freedom of the parties to a contract of carriage to choose a particular place of arbitration would be both restrictive and unnecessary and would again promote uncertainty. It has been argued that an unrestricted right to include arbitration arrangements could be used by shipowners to circumvent jurisdiction provisions giving rise to the proposals considered by the Working Group at its 16th session (see A/CN.9/591, paras. 90 to 103) to limit the extent of such freedom. Nevertheless, no such difficulties have been experienced under the present system and it can be expected that carriers who have generally preferred to use jurisdiction, particularly in the context of non-bulk trades, would continue with this practice. However, alternative arrangements might at some future stage be a preferred mutual option and should not be rendered unworkable by the draft convention.

Draft article 83

10. Under this provision, arbitration agreements, other than those falling within the draft convention's definition of non-liner (i.e. tramp) transportation, would be subject to the default provisions under this rule whereby a claimant has the ability to opt for judicial proceedings despite the existence of an arbitration agreement. However, the dividing line between the trade types is not necessarily clear and vessels using "liner terms" but not operating to a regular schedule or those undertaking one-off, occasional voyages or engaged in the carriage of specialized cargoes appear to be subject to the regime. The precise meaning of the provision is unclear and likely to be open to differing interpretations.

11. The position in liner trades operating on defined routes and at scheduled times is protected by the proposals relating to liner service volume contracts (see draft article 95 of the draft convention). This will enable regular shippers to agree with carriers to derogate from the provisions of the draft convention, including specific arrangements for dispute resolution matters which might, in the parties' choice, be by reference to the courts or arbitration. Use of the system of liner service volume contracts can be expected to increase.

12. In contrast, the same flexibility to agree binding and enforceable arbitration provisions will be problematic in trades outside the scope of draft article 84.

Draft article 84 — Arbitration agreement in non-liner transportation

13. This broadly reflects practice in tramp trades where arbitration is the preferred method for dispute resolution. It will be necessary to ensure that third party interests are equally bound to an agreement but this is primarily a matter of drafting.

14. However, there is an outstanding issue. The original wording in the chapeau made reference to “[a jurisdiction or] an arbitration agreement” but the text in square brackets was removed, without explanation, in the final draft. Although, for the most part, charter parties incorporate arbitration agreements, litigation is used in a limited number of cases. The deletion of the phrase could, therefore, have implications for the exclusivity of such arrangements. In order to preserve the position the following amendment is suggested:

“Article 84 Dispute resolution agreements in non-liner transportation

Nothing in this Convention affects the enforceability of an arbitration or jurisdiction agreement in a contract of carriage [remainder of article unchanged]”

B. Transport Documents and Electronic Records (Chapter 9)

Draft article 37 — Issuance of the transport document or the electronic transport record

15. It is essential that the draft convention contains unambiguous provisions as to who is entitled to receive the transport document. We believe the shipper should be the person entitled to receive the transport document, however, this should only be the declaratory rule, which means that the shipper may request that the carrier hands over the transport document to somebody else, e.g. the consignor/seller. It is for the seller in a FOB sales contract to ensure in the sales contract that the FOB buyer/shipper agrees with the carrier that the transport document should be issued to the seller or the consignor.

Draft article 38 — Contract particulars

16. Provisions requiring name and address of the shipper should be included.

Draft article 40 — Deficiencies in the contract particulars

17. Draft article 40 (3) should be deleted. We are opposed to the notion that where the transport document or electronic record is ambiguous or silent as to the identity of the carrier, there is a presumption that the registered owner of the ship is the carrier. A registered owner may be a financial institution not involved with the operation or trading of the ship. Furthermore, the presumption is inappropriate in an instrument which covers door-to-door transport, where the unidentified carrier might well be a non-vessel operator (NVO). Likewise, the possibility of a bareboat charterer being presumed to be the carrier also strikes us as inappropriate and inequitable given that ships will often be under management contracts, where the registered owner and any bareboat charterer have little to do with the day to day operations.

18. Channelling of liability is a feature of international pollution liability and compensation conventions where the claimant is an unconnected third party, but is inappropriate for parties involved in the contractual carriage of goods. A shipper should ascertain the identity of the contracting carrier, and parties acquiring bills of lading should not be placed in a better position than the shipper who, in accordance with draft article 38 (1) (e), will be aware of the name and address of the carrier set out in the transport document or electronic transport record. During informal consultation, a majority of delegates addressing the issue opposed draft article 40 (3).

Draft article 41 — Qualifying the description of the goods in the contract particulars

19. Apart from the more technical comments made below, draft article 41 (a) and (c) are acceptable. However, draft article 41 (b) is difficult to read, unclear and repetitious. The heading of draft article 41 governs (a) as well as (b), and it seems then very unclear why the latter part of (b) largely repeats what already follows from the heading of draft article 41. The problem may be solved by simply deleting the latter part of (b), i.e. all the words from “the carrier may include ...”.

20. The words in draft article 41 (a) (i): “the carrier can show that it” seem to contradict the burden of proof rule in draft article 42 (c) where it is for the party claiming that the carrier did not act in good faith to prove this.

21. In an effort to overcome these problems, we suggest the following revised text for draft article 41:

“Article 41. Qualifying the description and weight of the goods in the contract particulars

The carrier, if acting in good faith when issuing a transport document or an electronic transport record, may qualify the information referred to in article 38 (1) (a), 38 (1) (b) or 38 (1) (c) in order to indicate that the carrier does not assume responsibility for the accuracy of the information furnished by the shipper:

(a) For non-containerized goods

(i) if the carrier had no reasonable means of checking the information furnished by the shipper, it may so state in the contract particulars, indicating the information to which it refers, or

(ii) if the carrier reasonably considers the information furnished by the shipper to be inaccurate, it may include a qualifying clause stating what it reasonably considers accurate information.

(b) For containerized goods

(i) unless the carrier [or a performing party] in fact inspects the goods inside the container or otherwise has actual knowledge of the contents of the container before issuing the transport document or the electronic transport record, provided, however, that in such case the carrier may include a qualifying clause if it reasonably considers the information furnished by the shipper regarding the contents of the container to be inaccurate.

(ii) *the carrier may qualify any statement of the weight of goods or the weight of a container and its contents with an explicit statement that the carrier has not weighed the container if*

1. *the carrier can show that neither the carrier nor a performing party weighed the container, and the shipper and carrier did not agree prior to the shipment that the container would be weighed and the weight would be included in the contract particulars, or*
2. *the carrier can show that there was no reasonable means of checking the weight of the container.”*

Draft article 43 — Prima facie and conclusive evidence

22. It is inappropriate that non-negotiable documents should provide conclusive evidence because conclusive evidence should only attach to negotiable documents where a third party buyer of goods relies on the terms of the negotiable document when acquiring the goods. Accordingly, Variants A and B should both be deleted.

Draft article 44 — Evidentiary effect of qualifying clauses

23. The suggestion in footnote 154 to attach legal importance to whether a container is delivered intact and undamaged will give rise to a lot of uncertainty and disputes. Furthermore the alternative seems to mix up documentary liability and cargo liability. Thus for these reasons the alternative text in footnote 154 is not acceptable.

C. Delay and outstanding matters regarding shippers' obligations (Chapters 6 and 8)

24. During the 17th session of the Working Group the question of liability for delay for the shipper was extensively discussed and a number of options were considered (see A/CN.9/594, paras. 199 to 207). No solution was achieved, but there was considerable support for the principles of having a balanced solution, i.e. either the draft convention should provide that the carrier as well as the shipper should be liable for delay, or that neither of them should be liable under the Convention.

25. Carriers remain very much opposed to liability for delay outside of any express agreement between the parties, apart from liability for physical loss of/or damage to the goods or to the vessel caused by delay. Accordingly, we fully support the proposals in A/CN.9/WG.III/WP.69.

26. If A/CN.9/WG.III/WP.69 does not achieve sufficient support, and it is decided to leave the question of liability for delay to national law, it is essential in order to provide certainty and predictability that the draft convention establishes some restrictions as to what delay liabilities shippers and carriers may incur under national laws and a distinction may have to be made between bulk and liner trades. Accordingly the draft convention should contain the following elements:

1. Where physical damage to the goods or the vessel takes place following delay, the draft convention should provide for carrier and shipper liability and limitation of liability, as set forth in 3 below;
2. The draft convention should give a right for States to provide for a combination of carrier and shipper liability for delay as follows:

- i. The liability of the carrier should be limited to loss of market value of the goods and similar losses directly connected with the goods following delay. The liability and limits of liability should be as set forth in 3 below;
 - ii. The liability of the shipper should be for loss directly related to delaying the vessel in its loading, departure, voyage, arrival or unloading. The liability and limits of liability should be as set forth in 3 below.
3. The shippers' and carriers' liability for delay under the draft convention or under national laws should for the shipper be an ordinary fault-based liability limited to e.g. the value of the goods. The carriers' liability should follow the general liability rules of the draft convention and be limited to the freight (i.e. to an amount equivalent to one times the freight payable on the goods delayed).
27. If it is decided to regulate liability for delay in the draft convention and not leave it to national law, the rules of the draft convention should be based upon the same principles as suggested above, e.g. provide for a restricted liability for delay for the shipper and the carrier and provide for limitation of liability for both parties.

Dangerous goods

28. At the 17th session of the Working Group it was decided to considerably limit the scope of shipper obligations to provide information under draft article 30 (b) by adopting the proposal in A/CN.9/WG.III/WP.69 (para. 6) (see A/CN.9/594, paras. 190 to 194). In view of this change, it seems justified to provide for strict liability for the shipper for providing correct information. The reference in both Variant A and Variant B of paragraph 2 of draft article 31 to draft article 30 (b) and (c) should be maintained, and the proposal in paragraph 25 of A/CN.9/WG.III/WP.67 should not be followed.

D. Limitation of Liability (Chapters 13 and 21)

Draft article 64 — Basis of limitation of liability

29. We firmly believe that it would be appropriate to include the Hague-Visby limits in draft article 64 (1) of the draft convention. Claims' experience demonstrates that the overwhelming majority of claims fall within current liability levels (see footnote 2 of A/CN.9/WG.III/WP.34). Moreover, the adoption of the Hague-Visby limits would in itself constitute a significant increase in the world-wide average limits in use. We suggest that the following amendment should be made to draft article 64:

*“Subject to articles 65 and 66, paragraph 1, the carrier’s liability for breaches of its obligations under this Convention is limited to 666.67 SDR per package or other shipping unit or 2 SDR per kilogram of the gross weight of the goods lost or damaged, whichever is the higher, **except where ad valorem freight is agreed and paid** or the nature and the value of the goods have been declared by the shipper before shipment and included in the contract particulars [or when a higher amount than the amount of limitation of liability set out in this article has been agreed upon between the carrier and the shipper].”*

30. Whether or not the words in the last parenthesis should be included depends on the outcome of the discussion under draft article 94.

31. It is of great importance that all liabilities following breaches of the carrier's duties, obligations etc. under the draft convention are subject to limitation. We suppose that the words in draft article 64 "*for breaches of its obligations under this Convention*" are aiming exactly at this. Thus wrongful delivery and misrepresentation constitute breaches of obligations under the draft convention for which the carrier may be liable, but also entitled to limitation of liability (unless, of course, in the case of intentional breach).

32. A right to limit liability for delay under national law has to be included in the draft convention. We refer to our comments above in relation to delay.

33. We are very much opposed to draft article 64 (2) both in Variant A and in Variant B, and support its deletion. Any contract of carriage falling under the draft convention must include a maritime leg, and in by far most transports falling under the draft convention, the maritime leg will be the most important leg time-wise and length-wise. Under these circumstances, it would be quite logical to apply the liability and limitation rules of the maritime leg for concealed damages. There are of course a number of cases where the maritime leg is insignificant, e.g. a transport from the northern part of Sweden via ferry over the Sound to the southern part of Italy. We believe that in practically all such cases it will be possible to establish whether the damage took place during the ferry crossing or at some stage during the road transport. We question whether the proposals in both Variant A and in Variant B will really benefit claimants if, as the evidence suggests, the overall majority of claims are within the Hague-Visby limits. We also fear that increased liability for concealed damages may deter maritime carriers from offering multimodal transport documents and lead to increased insurance costs. Where larger claims are involved, carriers will do their utmost to establish where the damage took place in order to secure a recourse claim against the sub-carrier. The underlying reason for Variant A and Variant B — that a large number of claims are claims for concealed damages — is highly questionable. For this reason alone, Variant A and Variant B should not be supported. Furthermore, the proposals would lead to great uncertainty. This is especially so, if the reference to national law is retained.

Draft article 104 — Amendment of limitation amounts

34. We question the appropriateness of a tacit amendment procedure in a private law instrument. However, if Hague-Visby limits are agreed, a tacit amendment procedure would not be opposed. In that case, we would support the principles in A/CN.9/WG.III/WP.34 (Section II).

35. Draft article 104 (5) is modelled on the Athens Convention, and the factors contained in the provision are appropriate for a public law instrument primarily concerned with regulating claims for loss of life and personal injury to passengers. However, the draft convention is primarily concerned with property claims of commercial parties. In addition to the list of factors in article 104 (5), we consider that account should be taken of average cargo values and freight rates when acting on a proposal to amend the limits.

36. While we would not object to changes in monetary values being taken into account, we would point out that many other factors are involved, such as the type and value of commodities, the fall in real terms of the cost of many consumer goods, and improvements in packaging and transport generally. Furthermore,

preliminary research suggests a significant decline in the relative value of freight rates over the years.

E. Rights of and Time for Suit (Chapters 14 and 15)

Chapter 14 — Rights of suit

37. We very much doubt the need to include this chapter in the draft convention. It should be deleted. The right to sue is normally regulated by general rules in most legal systems and to establish a special set of rules applicable in this connection, which may differ from the rules applicable under national law, might be difficult, if not impossible.

Chapter 15 — Time for Suit

Draft article 69 — Limitation of actions

38. We support retention of the present one year prescription period as set forth in Variant A of draft article 69. With modern speedy communication etc., it is difficult to understand that there should be a need to extend this period. The tendency in national law today is to shorten prescription periods. We would suggest that Variant A of draft article 69 is extended to cover actions against maritime performing parties as well, but would suggest further that it is confined to actions against contracting carriers and maritime performing parties. We suggest this in view of the fact that the draft convention does not provide for rules as to jurisdiction etc., vis-à-vis shippers. Accordingly, instituting proceedings against shippers may be a somewhat more complicated task justifying a longer prescription period, and it may be better to leave the question to national law.

Draft article 72 — Action for indemnity

39. We prefer Variant B of draft article 72 (b).

Draft article 74 — Actions against the bareboat charterer

40. We refer to our comments above in relation to draft article 40.

**D. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Shipper's liability for delay: Document presented for the information of the Working Group by the Government of Sweden, submitted to the Working Group on Transport Law at its eighteenth session
(A/CN.9/WG.III/WP.74) [Original: English]**

In preparation for the eighteenth session of Working Group III (Transport Law), the Government of Sweden submitted to the Secretariat the document attached hereto as an annex with respect to shipper's liability for delay in the draft convention on the carriage of goods [wholly or partly] [by sea]. The Swedish delegation advised that, following the consideration of the topic of the shipper's liability for delay by the Working Group during its seventeenth session (see A/CN.9/594, paras. 199 to 207), the document was intended to facilitate consideration of the topic in the Working Group at its eighteenth session.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Shipper's Liability for Delay in the Draft Convention on Carriage of Goods by Sea — A Study of the Risks and Consequences

I. Introduction

1. During the seventeenth session of Working Group III on transport law in New York from 3 to 13 April 2006, the question whether the draft convention should include provisions on the shipper's liability for delay was discussed (see A/CN.9/594, paras. 199 to 207). A number of delegations asked for a study of the risks and consequences of having such a liability for delay included in the draft convention. The Government of Sweden has agreed to prepare such a study.

2. In part II of this study, the regulation of the liability of the shipper for delay in the Hague-Visby and Hamburg Rules is presented. Parts III and IV contain an account of the regulation in the draft convention of the liability for delay of the carrier and the shipper, respectively. It has proved to be necessary to take into account also the carrier's liability for delay, since its inclusion in the draft convention to a certain extent affects the actual liability of the shipper. In parts V and VI, some possible risk scenarios regarding liability for delay are outlined and analysed. Part VII contains a study on the insurability of liability for delay on the part of both the carrier and the shipper. Finally, in part VIII, different options regarding the regulation of liability for delay are presented and analysed.

II. Hague-Visby and Hamburg Rules

3. The Hague-Visby rules do not include any provisions on the liability of the carrier for delay. Consequently, a carrier can only be liable for delay if national law imposes such a liability on the carrier, or if the carrier in the contract of carriage has agreed to deliver the goods at a certain time. The Hamburg Rules include liability of the carrier for delay based on fault in article 5. The liability is limited to two and a half times the freight payable for the goods delayed (article 6 (1)(b)).

4. Pursuant to the Hague-Visby and Hamburg Rules, the shipper may be liable for loss, including loss as a result of delay, which the shipper causes through its fault (see article 4 (3) of the Hague Rules and article 12 of the Hamburg Rules). In addition, the shipper is strictly liable for loss as a result of inaccurate information furnished by him (see article 3 (5) of the Hague Rules and article 17 (1) of the Hamburg Rules). Such loss may include delay. According to article 13 (2)(a) of the Hamburg Rules, the shipper is also under the obligation to inform the carrier about dangerous goods and to mark and label them accordingly. The shipper is strictly liable for loss, damage or delay as a result of a breach of its obligation to so inform the carrier. Further, the liability of the shipper under these provisions is unlimited.

III. Carrier's liability for delay in the draft convention

5. Delay in delivery is defined in draft article 22 of the draft convention. According to this provision, delay in delivery occurs "when the goods are not delivered at the place of destination provided for in the contract of carriage within the time expressly agreed upon or, in absence of such an agreement, within the time it would be reasonable to expect of a diligent carrier, having regard to the terms of the contract, the characteristics of the transport, and the circumstances of the voyage or journey". This means that if the parties to the transport agreement have expressly agreed that the goods shall be delivered at a certain time, the carrier will be strictly liable for this obligation. (It is assumed here that it will be possible for the carrier to take on a stricter liability than that provided for in the draft convention, as referred to in draft article 94.) In all other cases, the carrier will be liable for delay caused by its fault. According to draft article 17 (1), the shipper would have to establish a *prima facie* breach by the carrier, i.e. that the goods were not delivered within a reasonable time and that loss occurred because of the delay. In cases where the carrier cannot be said to have guaranteed the time of delivery, the carrier could, according to paragraphs (2) and (3) of draft article 17, defeat the claim by establishing that the particular circumstances of the individual voyage justified the longer length of the voyage.

6. The compensation payable if goods are delayed is regulated in draft article 65. The draft convention as set out in A/CN.9/WG.III/WP.56 included two variants, however, the essence of both is, that the liability for consequential loss arising out of the delay is limited to one times the freight payable on the goods delayed. The compensation for physical loss or damage to the goods arising out of delay is calculated according to the general rule on liability for loss or damage to the goods. This means that according to draft article 23, the compensation will be calculated by reference to the value of the goods at the place and time of delivery. In addition, the carrier will have the right to limit the compensation to a certain amount per package or per kilogram of the gross weight of the goods lost or damaged.

7. If the delay causes physical loss or damage to the goods as well as consequential loss, such as loss of production, the shipper or the consignee will have the possibility to claim compensation for all loss, subject to the limitation provisions in draft articles 64 and 65. However, in a situation where the total loss exceeds the limit that is to be established in draft article 64, the shipper or the consignee will not be able to claim additional compensation for consequential loss equal to one times the freight. In case of a total loss, the limitation level in draft article 64 will instead form an absolute limitation level.

8. In addition to the liability for delay in draft article 17, the carrier will, according to the network principle in draft article 27, be liable for delay in relation to the shipper according to other mandatory transport conventions. A typical example here could be that the goods are transported by road under the Convention on the Contract for the International Carriage of Goods by Road, 1956, as amended by the 1978 Protocol (the CMR convention) or by rail under the Uniform Rules concerning the Contract for International Carriage of Goods by Rail, Appendix to the Convention concerning International Carriage by Rail, as amended by the Protocol of Modification of 1999 (the COTIF/CIM rules) from the port of discharge in Rotterdam to Berlin in Germany. If the delay occurs during this transport leg, the carrier will be liable for delay limited to one times the freight according to the CMR convention or to four times the freight according to the COTIF/CIM rules.

IV. Shipper's liability for delay in the draft convention

9. According to draft article 28 and draft article 30, the shipper is under the obligation to deliver the goods ready for carriage and to provide the carrier with certain information, instructions and documents. The liability for delay, due to breach of these obligations, is regulated in draft article 31. During the sixteenth session of Working Group III, it was decided that the liability for breach of these obligations should be based on fault with an ordinary burden of proof (see para. 138 of A/CN.9/591). Only in cases where dangerous cargo is transported would the shipper be strictly liable for delay due to failure to inform the carrier of the dangerous nature of the goods or for the failure to mark or label such goods accordingly (see draft article 33). In addition to this, it was decided that the shipper would be strictly liable for loss or damage due to the fact that information and instructions actually provided to the carrier were inaccurate (see paras. 148 to 150 of A/CN.9/591).

10. The liability of the shipper in the present draft text of the convention is an unlimited one. This means that the shipper, once it is found liable, may have to pay compensation for any direct as well as indirect loss that the carrier suffers. The compensation will only be limited by general principles on causation in national law.

V. Effects of the current draft regulation of the carrier's liability for delay — possible risk scenarios

11. With regard to the carrier liability for delay, there are four scenarios that could possibly occur. The first one is that the ship is delayed for some totally external reason of a force majeure character listed in draft article 17 (3), for example a storm, a war, etc. Here, there is no causation between the action of the carrier and

the loss that the shipper suffers and consequently, the carrier is not liable in this situation.

12. The second scenario is that the delay is caused by the carrier. Here, the question whether the carrier is liable will depend on whether the carrier can be said to have guaranteed the time of delivery or if the delay occurred as a result of the fault of the carrier. Standard practice today seems to be that carriers never guarantee that the goods are delivered at a certain time, i.e. carriers never take on a strict liability for delay. Normally, it is explicitly stated in the transport documents currently used on the market that the time of delivery is to be considered an estimated one. The reason for this is that there is often no need for an exact time. Shippers tend to use sea transport where there are larger volumes of goods of a relatively low value. Goods of a higher value, such as specially manufactured electronic equipment, where the date of delivery is often much more important, are usually transported by air. In order to find out whether the carrier was at fault in a situation where there is no explicit agreement on the time of delivery, a court would have to compare the normal time for a journey like the one agreed on and the actual time that the journey lasted. Here, it is important to note that, like the time of delivery indicated in a transport document, the information in the timetables is not to be considered as exact. In addition to this, the court would have to take into account the characteristics of the transport and other circumstances of the individual journey. This would mean that where the master on board decides to reduce the speed because of heavy weather or where there is traffic congestion in a harbour, the carrier will not be liable for any resulting delay.

13. A third scenario is that the delay is caused by the shipper, for example, that the shipper has not provided the documents required for customs clearance. It is explicitly regulated in draft article 17 (3)(h) that in a situation like this, the carrier is relieved from liability for any delay in relation to the shipper.

14. A fourth scenario is that the delivery is delayed because of the act or omission of another shipper. An example of this could be where shipper A claims compensation from the carrier because of the fact that the discharge of the vessel was delayed in the port of destination. According to draft article 17 (1), the carrier will, in this situation, be relieved from liability if it can prove that the delay was not due to the fault of the carrier, but to the fact that shipper B did not submit the documents required. Shipper B cannot, in this situation, be considered as a servant or contractor for whom the carrier is responsible.

15. The conclusion here is that the carrier's risk exposure regarding liability for delay is rather limited. This is also underlined by the fact that even if the vessel is delayed, this does not mean that the delivery of all cargo will automatically be delayed. For example, if the vessel arrives in the harbour two days late, but a part of the cargo was supposed to be stored in a terminal for four days waiting for transport by truck to the final inland destination, despite the delay of the vessel, the carrier will be able to deliver on time at the final destination. On the other hand, in certain situations the risk of late delivery at the final destination will increase because of the fact that goods will have to be stored while in transit due to delay during one of the previous legs of the transport. Also, the liability for delay imposed on the carrier as a result of the network principle in draft article 27 will, in practice, be rather limited, because of the fact that such liability will most often only concern a few containers, since the ship's cargo will be spread on different trucks and trains after the discharge of the container ship.

16. In addition to the fact that the risk of being liable for delay is rather limited, the carrier also has the right to limit the compensation to, at present, one times the freight payable on the goods delayed. This means that, in a worst case scenario regarding a voyage from Gothenburg to New York, where a vessel with 7,000 containers on board is detained and all of the cargo is delayed, the carrier will have to pay compensation of US\$ 20,650,000 in total, based on the fact that the freight rate for the carriage of a 20 ft. container is US\$ 2,950. Further, if there is a total loss, the loss due to delay will be regarded as part of the physical loss of the goods, which means that the shipper will not be able to claim any compensation separate from the compensation for the physical loss. In other words, the limitation level for physical loss will here form an absolute limitation level.

VI. Effects of the current draft regulation of the shipper's liability for delay — possible risk scenarios

17. Regarding the shipper's liability for delay, there are two possible risk scenarios which ought to be considered. The first one is that the shipper is not able to deliver the cargo ready for carriage in the port of loading. In the liner trade, this would result in the vessel sailing without having taken on board the containers belonging to that specific shipper. In the bulk trade, the shipper might be subject to liability for demurrage, etc., but this is something which is outside the scope of the draft convention.

18. The second scenario is that goods already taken on board a vessel give rise to delay of the vessel. If the delay depends on the fact that the shipper failed to inform the carrier about the dangerous character of the goods or failed to mark or label them accordingly, the shipper will be strictly liable for the resulting delay. The shipper will also be strictly liable for delay due to incorrect information and documents actually submitted to the carrier. In all other cases, the shipper will be liable only in the case where the shipper is at fault. A typical example here would be if it were found that containers belonging to one shipper were infected with insects and the whole vessel was ordered not to enter the port of discharge before the cargo had been fumigated. Another example would be if the customs authorities refused to let the vessel discharge her cargo because of the fact that there were documents missing regarding the goods in some containers. The carrier may here suffer a direct loss, such as costs for fumigation, costs for returning to a previous port for the discharge of certain containers, inspections on board, etc. However, these are risks that shippers are already facing today. It also seems that the direct loss of a carrier in such a situation will in most cases be rather limited.

19. The great risk here consists of the fact that the consequential losses that other cargo owners may suffer as a result of this may be enormous. But this is not something that will increase the risk exposure of the carrier. As noted above, the latter is not responsible for the acts and omissions of a shipper and consequently not liable in relation to other shippers for the loss they suffer because of those acts or omissions. Therefore, the risk of a recourse action by the carrier against the shipper is minimal here. Only in a situation where the delay has been caused by the carrier and the shipper jointly and the former has paid full compensation to the other shippers would there seem to be room for a recourse action. However, in practice, such a situation will not occur because of the provision on apportionment in draft article 17 (4). Instead the real risk seems to be of the shipper being sued by the other

shippers in tort. But this is a risk that a shipper will always be faced with regardless of the liability rule in chapter 8 of the draft convention.

VII. Insurance coverage

20. It can be assumed that liability for delay on the carrier's side will be insurable by the protection and indemnity (P&I) clubs. The risk that the carrier will become liable for economic loss as a result of delay at all appears to be rather small and the risk that a worst case scenario would occur appears to be even smaller. This is illustrated by the fact that the national provisions on liability of the carrier for delay in the Scandinavian Maritime Code of 1994 have so far not given rise to any case law. And if a worst case scenario would occur, the compensation would be limited to a certain amount. The additional risk for including liability for delay under the P&I insurance can therefore be assumed to affect insurance premiums only marginally.

21. Regarding insurance coverage of the risk of the shipper becoming liable to the carrier for delay, the picture is more complicated. Normally, general cargo insurance will not include any liability risks. This is the case with, for example, the Institute Cargo Clauses. On certain markets, like the Scandinavian market, for example, cargo insurance may cover minor liability risks. For example, if a cargo hold becomes contaminated in connection with the damage of the cargo, a shipper may be able to recover from the insurer some indemnification for costs for the cleaning of cargo holds. Pure economic loss will never be covered.

22. It is also uncertain whether such risks are covered by the general liability insurance of a company that acts as a shipper. As indicated above, the shipper will here be exposed to the direct loss the carrier will suffer, and in some cases also to the indirect loss, i.e. loss that other shippers suffer. However, it is important to note that in relation to the regulation proposed in the draft convention, these are not new risks. They already exist today. For example, a shipper that causes damage to the ship will also be exposed to the risk of having to indemnify the carrier not only for the physical damages to the vessel, but also for pure economic loss, such as loss of freight, etc. In addition the shipper will run the risk of being sued by other shippers for costs they have suffered because of the delay.

VIII. Alternative solutions to the problem and their effects

23. From a practical point of view there seem to be three possible options regarding the regulation of the liability for delay in the draft convention. One option is to leave the liability for delay completely outside the scope of the draft convention, except for the liability for delay as a result of the submission of inaccurate information (cf. article 3 (5) of the Hague Rules). In other words, all references to delay would be deleted. Regarding the carrier's liability for delay, this would in practice mean that the question would be left to national law, and there would be no uniformity. To leave out the regulation of the carrier's liability for delay would also create a discrepancy between, on the one hand, the draft convention, and on the other hand, the CMR convention and the COTIF/CIM rules, according to which the carrier has mandatory liability for delay. Because of the network principle adopted in draft article 27, the carrier will be exposed to such liability. Another consequence of not having liability for delay for the contracting carrier included in the draft convention would probably be that performing land

carriers would be more exposed to claims regarding delay because of the fact that they often operate under national mandatory liability regimes, which include liability for delay.

24. It could also be argued that already today, door-to-door concepts form important parts of modern production systems and that a key element of such a concept is that the goods are delivered in time. In order to reduce costs, the production of components is often out-sourced at the same time, as warehousing is kept at a minimum in the logistics chain. Deleting liability for delay would, in other words, to a certain extent undermine the idea that the draft convention should consist of modern legislation for the global shipping and logistics industry.

25. Regarding the shipper's liability for delay, a decision to delete all references to delay would not lead to the result that the shipper would have no liability for delay at all according to the draft convention. Despite the fact that there would be no specific reference to delay in draft article 31, the shipper would still under many jurisdictions be liable for delay as a consequence of the fact that the vessel was damaged or that documents were not submitted.

26. A question that might arise here, regardless of the fact whether or not a reference to delay is included in draft article 31, is whether the liability of the shipper ought to be limited and if so, what the limitation level ought to be. One advantage of having a limitation is that the risk exposure would otherwise be severe if the vessel were totally lost. The shipper would then be liable for direct loss (the vessel and other equipment) as well as for indirect loss (freight, etc.).

27. A second option would be to keep carrier liability for delay in the draft convention, but to delete the specific references to delay in the chapter on shipper's obligations. This would leave the carrier with uniform limited liability. As indicated above, this would not affect the shipper because of the fact that the carrier is not liable for the acts of a shipper in relation to other shippers. The advantage of such a solution is that while the delivery of the goods at the destination is a key obligation in the transport agreement, the same thing cannot be said about the obligations of the shipper to deliver the goods and certain documents to the carrier. The primary obligation of the shipper is to pay the freight. Consequently, the same need to create uniformity on the international level does not seem to exist regarding liability for delay on the shipper side as compared to liability for delay on the carrier side. As indicated above, the effect of such a deletion will not be that the shipper will not be liable for delay at all. The shipper will still be liable for delay that occurs as a result of damage to the ship or as a result of the submission of inaccurate information at the same time as the liability for other delay will be left to national law.

28. A third option would be to retain all references to delay on the part of the carrier as well as on the part of the shipper. In that situation, there might be a need for the inclusion of a limitation level regarding the shipper's liability that is acceptable for both the carrier and the shipper. It is not an easy task to establish such a level because of the fact that the type and amount of damage may vary substantially between different cases. One way of doing this would be to hold the shipper fully liable for physical loss, such as loss and damage to the ship and other equipment. Regarding other economic loss, direct or indirect, the shipper would be liable for loss equal to the value of the goods shipped. This is not a perfect solution because of the fact that cargo of rather low value may cause as much damage as more valuable cargo, but at least it will create a situation where shippers who are shipping large volumes of more valuable cargo will have to take on greater liability.

An advantage with linking the limitation level to the value of the goods shipped instead of linking it to the weight of the goods is that the establishment of an SDR-formula could be avoided. A system based on the value of the goods would be reminiscent of the solutions often found in commercial sales contracts where the maximum damage payable is linked to the contract sum, i.e. the value of the goods sold. The limitation level regarding delay in delivery could be, for example, 15 or 30 per cent of the contract sum. However, because of the fact that shippers may sometimes ship rather small volumes, the limitation level here should be equal to the full value of the goods rather than a part of the value. A limitation level would promote predictability and would make it possible to create better insurance coverage on the part of the shipper, for example by adding a liability element to the existing cargo insurance or company liability insurance.

E. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Chapter 16: Jurisdiction, submitted to the Working Group on Transport Law at its eighteenth session

(A/CN.9/WG.III/WP.75) [Original: English]

In preparation for the eighteenth session of Working Group III (Transport Law), the Secretariat has prepared a revised text of chapter 16 on jurisdiction of the draft convention on the carriage of goods [wholly or partly] [by sea] for the consideration of the Working Group which, along with a definition from chapter 1, is attached in the annex to this note. The revised text is based upon the text accepted by the Working Group during its sixteenth session (see A/CN.9/591, para. 84) as set out in paragraph 73 of A/CN.9/591, with drafting clarifications proposed by the Secretariat as indicated following the consideration of the text by the Working Group (see A/CN.9/591, paras. 74 to 84).

ANNEX

CHAPTER 1. GENERAL PROVISIONS

Article 1. Definitions

29 bis. “Competent court” means a court in a Contracting State that, according to the rules on the internal allocation of jurisdiction among the courts of that State, may exercise jurisdiction over a matter.¹

CHAPTER 16. JURISDICTION

Article 75. Actions against the carrier²

Unless the contract of carriage contains an exclusive choice of court agreement that is valid under articles 76 or 81, the plaintiff has the right to institute judicial proceedings under this Convention against the carrier in a competent court within the jurisdiction of which is situated one of the following places:

- (a) The domicile of the carrier;³
- (b) The contractual place of receipt or the contractual place of delivery;

¹ As agreed by the Working Group in paragraph 73 of A/CN.9/591. The phrasing is the same as that used in article 5 (3)(b) of the Convention on Choice of Court Agreements, 2005.

² Text as set out in paragraph 73 of A/CN.9/591, and accepted in substance by the Working Group in paragraph 84 of A/CN.9/591, with a reference to article 81 added to correct the text.

³ Reference corrected to “carrier” rather than to “defendant” in order to be consistent with draft article 77 regarding actions against maritime performing parties.

(c) The port where the goods are initially loaded on a ship; or the port where the goods are finally discharged from a ship; or

(d) Any place designated for that purpose in accordance with article 76, paragraph 1.

*Article 76. Choice of court agreements*⁴

1. If the shipper and the carrier agree that a competent court has jurisdiction to decide [disputes] [claims against the carrier]⁵ that may arise under this Convention, that court has non-exclusive jurisdiction.⁶

2. The jurisdiction of a court chosen in accordance with paragraph 1 of this article is exclusive for disputes between the parties to the contract only if the parties so agree and the agreement conferring jurisdiction:

(a) Is contained in a volume contract that clearly states the names and addresses of the parties and either (i) is individually negotiated; or (ii) contains a prominent statement that there is an exclusive choice of court agreement and specifies its location within the volume contract;

(b) [Clearly states the name and location of the chosen court] [Designates the courts of one Contracting State or one or more specific courts of one Contracting State];⁷ and

[(c) Is contained in the contract particulars.]

3. A person that is not a party to the volume contract is only bound by an exclusive choice of court agreement concluded in accordance with paragraph 2 of this article if:

(a) The court is in one of the places designated in article 75, paragraphs (a), (b) or (c);

[(b) That agreement is contained in the contract particulars of a transport document or electronic transport record issued in relation to the goods in respect of which the claim arises;]

(c) That person is given timely and adequate notice of the court where the action shall be brought and that the jurisdiction of that court is exclusive; and

⁴ Text as set out in paragraph 73 of A/CN.9/591, and accepted in substance by the Working Group in paragraph 84 of A/CN.9/591, with some drafting improvements to improve clarity.

⁵ The Working Group must decide which approach of the two alternatives in square brackets to choose with respect to draft article 76. Suggested drafting improvements to this text are noted in the relevant footnotes.

⁶ Sub-paragraphs 1 (a) and (b) of the text in paragraph 73 of A/CN.9/591 have been deleted as a drafting improvement, since the form requirement for draft article 76 is treated by adding a reference to draft article 76 to draft article 3.

⁷ The text appearing as alternative bracketed text is taken from article 3 (b) of the Convention on Choice of Court Agreements, 2005, and is suggested as it may be difficult to state the name and location of the chosen court with sufficient precision when agreeing on the choice of court in the volume contract.

(d) Applicable law as determined by the rules of private international law of the court seized⁸ permits that person to be bound by the exclusive choice of court agreement.

4. This article does not prevent a Contracting State from giving effect to a choice of court agreement that does not meet the requirements of paragraphs 1, 2 or 3 of this article. Such Contracting State shall give notice to that effect [to _____].⁹

5. (a) Nothing in paragraph 4 of this article or in a choice of court agreement effective under paragraph 4 of this article prevents a court specified in article 75[, paragraphs (a), (b), (c) or (d)] and situated in a different Contracting State from exercising its jurisdiction over the dispute and deciding the dispute according to this Convention.

(b) Except as provided in this chapter, no choice of court agreement is exclusive with respect to an action [against a carrier] under this Convention.¹⁰

*Article 77. Actions against the maritime performing party*¹¹

The plaintiff has the right to institute judicial proceedings under this Convention against the maritime performing party in a competent court within the jurisdiction of which is situated one of the following places:

(a) The domicile of the maritime performing party; or

(b) The port where the goods are initially received by the maritime performing party or the port where the goods are finally delivered by the maritime performing party[, or the single port in which the maritime performing party performs all of its activities with respect to the goods].¹²

⁸ The Working Group may wish to consider whether further clarification may be necessary to ascertain whether the “court seized” will necessarily be the competent court, or whether it may be another court.

⁹ The Working Group may wish to consider the interplay between this approach and the final clauses.

¹⁰ Separate paragraph provided for this provision in order to avoid making it subject to paragraph 4 of this article, as suggested by the Working Group in paragraph 80 of A/CN.9/591.

¹¹ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84. A slight variation has been made to the chapeau for drafting purposes only in order to ensure that the chapeau mirrors that of article 75, and text has been suggested in paragraph (b) to accommodate maritime performing parties that operate in a single port. Further, the Working Group may wish to clarify the relationship between articles 76 and 77.

¹² The text in square brackets is proposed for addition in order to allow for situations in which a maritime performing party performs all of its activities in a single port. A similar change was made in draft article 20 concerning the liability of maritime performing parties.

*Article 78. No additional bases of jurisdiction*¹³

Subject to articles 80 and 81, no judicial proceedings under this Convention against the carrier or a maritime performing party may be instituted in a court not designated under articles 75, 76 or 77.

*Article 79. Arrest and provisional or protective measures*¹⁴

Nothing in this Convention affects jurisdiction with regard to provisional or protective measures, including arrest. [A court in a State in which a provisional or protective measure was taken does not have jurisdiction to determine the case upon its merits unless:

- (a) The requirements of this chapter are fulfilled; or
- (b) An international convention that applies in that State, according to its rules of application, so provides.]

Article 80. Consolidation and removal of actions

1. Except when there is an exclusive choice of court agreement that is valid under articles 76 or 81, if a single action is brought against both the carrier and the maritime performing party arising out of a single occurrence, the action may be instituted only in a court designated under both article 75 and article 77. If there is no such court, such action may be instituted in a court designated under article 77, subparagraph (b), if there is such a court.

2. Except when there is an exclusive choice of court agreement that is valid under articles 76 or 81, a carrier or a maritime performing party that institutes an action [[that would affect][the principal purpose of which is to affect] the rights of a person to select the forum under articles 75 or 77,][seeking a declaration of non-liability] shall at the request of the defendant, withdraw that action and may recommence it in one of the courts designated under articles 75 or 77, whichever is applicable, as chosen by the defendant.¹⁵

¹³ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84, with a clarification concerning proceedings against the carrier or a maritime performing party.

¹⁴ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84.

¹⁵ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84. It might be necessary to arrange the provisions of time for suit for such cases when the original action was brought within the time period but the recommencement was not.

*Article 81. Agreement after dispute has arisen and jurisdiction when the defendant has entered an appearance*¹⁶

1. After the dispute has arisen, the parties to the dispute may agree to resolve it in any competent court.
2. A court in a Contracting State before which a defendant appears, without contesting jurisdiction in accordance with the rules of that court, has jurisdiction.

*Article 81 bis. Recognition and enforcement*¹⁷

1. A decision made by a court of one Contracting State that had jurisdiction under this Convention or by a court on which the parties agreed under article 81, paragraph 1, shall be recognized and enforced in another Contracting State in accordance with the law of the Contracting State where recognition and enforcement are sought.
2. A court in a Contracting State may refuse recognition and enforcement of a decision made in another Contracting State that is based on the application of article 76, paragraph 4.
3. A court in a Contracting State that has exclusive jurisdiction under article 76, paragraphs 2, 3 and 4, in a dispute under this Convention may refuse recognition and enforcement of a decision made by a court of another Contracting State in such dispute.

¹⁶ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84. Opening phrase “Notwithstanding the preceding articles of this chapter” has been deleted as redundant, as references to article 81 have been added to articles 75, 76 and 80, and opening phrase of the second paragraph has been clarified from “a competent court” to “a court in a Contracting State”.

¹⁷ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84. Drafting adjustments made to clarify paragraphs 1 and 2, but no change to the substance was intended. Paragraph 3 was added to respond to the request for clarification in paragraph 79 of A/CN.9/591.

F. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Rights of suit and time for suit: document presented for information by the Government of Japan, submitted to the Working Group on Transport Law at its eighteenth session

(A/CN.9/WG.III/WP.76) [Original: English]

In preparation for the eighteenth session of Working Group III (Transport Law), the Government of Japan submitted to the Secretariat the document attached hereto as an annex with respect to rights of suit and time for suit in the draft convention on the carriage of goods [wholly or partly] [by sea]. The Government of Japan advised that the document was intended to facilitate consideration of the topics of rights of suit and time for suit in the Working Group by compiling the views and comments of various delegations into a single document for discussion by the Working Group.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Rights of suit and time for suit: document presented for information by the Government of Japan

I. Introduction

1. The Working Group exchanged preliminary views on the issues of rights of suit and time for suit, at its 9th session (April 2002, see A/CN.9/510, paras. 58 to 60), and it discussed the issues in detail at its 11th session (March-April 2003, see A/CN.9/526, paras. 149 to 182). Based on these discussions, the original text of the draft convention in A/CN.9/WG.III/WP.21 was revised in A/CN.9/WG.III/WP.32 and a few additional changes were made to the text in A/CN.9/WG.III/WP.56. These topics were discussed in an informal seminar held in London arranged on behalf of the Government of Italy ("London Seminar") in January 2006 to which all delegations and observers to the Working Group were invited. After the 17th session of the Working Group (April 2006), an informal questionnaire was circulated by the Japanese delegation among delegations and to observers of the Working Group. Responses were submitted by delegations from Canada, China, Denmark, Italy, Norway, Sweden, Switzerland and the United States. For the convenience of the Working Group, this document summarizes the discussions in the previous sessions of the Working Group and introduces preliminary views exchanged in the informal seminar and in responses to the informal questionnaire.

II. Rights of suit

A. General issues of the chapter

1. Necessity of the chapter on rights of suit

2. In the previous sessions of the Working Group, some delegations suggested the deletion of draft article 67 (see A/CN.9/WG.III/WP.56, footnote 237; and A/CN.9/526, paras.152 and 157). The informal questionnaire asked whether the draft convention should include a chapter on rights of suit. All responses answered in the negative suggested deletion of the entire chapter. One delegation, however, suggested that in addition to the deletion of the chapter, several principles set forth in draft article 67 (Variant A) should be incorporated into the provisions laid out in chapter 6 (liability of the carrier).

2. Relationship with other Conventions

3. It was pointed out at the London Seminar that the provisions on rights of suit might conflict with the rights of suit provided for under other transport law conventions when the contract of carriage was multimodal. For example, other transport law conventions may give rights of suit to a more limited number of persons than provided for in draft article 67. The informal questionnaire asked whether the draft convention should coordinate with other transport conventions on the issues of rights of suit. Responses to the informal questionnaire varied regarding this point. Many delegations that responded thought it unnecessary to coordinate with other transport conventions. One of them observed that draft article 27 already offered the solution. Some delegations were more cautious about the possible conflict with other conventions and sought coordination, although no specific solution was proposed on how to deal with the issue.

B. Draft article 67

4. Draft article 67 as set out in A/CN.9/WG.III/WP.56 provides as follows:

Article 67. Parties

Variant A

1. Without prejudice to articles 68 and 68 (b), rights under the contract of carriage may be asserted against the carrier or a performing party¹ only by:

(a) The shipper,² to the extent that it has suffered loss or damage in consequence of a breach of the contract of carriage;

(b) The consignee, to the extent that it has suffered loss or damage in consequence of a breach of the contract of carriage; or

¹ “Performing party” in Variant A should probably be replaced by “maritime performing party”.

² Article 34 provides that the “documentary shipper” is entitled to the shipper’s rights under Chapter 14. It might be questioned whether the “documentary shipper” should have the rights for suit.

(c) Any person to which the shipper or the consignee has transferred its rights, or that has acquired rights under the contract of carriage by subrogation under the applicable national law, such as an insurer, to the extent that the person whose rights it has acquired by transfer or subrogation suffered loss or damage in consequence of a breach of the contract of carriage.

2. In case of any passing of rights of suit through transfer or subrogation under subparagraph 1 (c), the carrier and the performing party are entitled to all defences and limitations of liability that are available to it against such third party under the contract of carriage and under this Convention.

Variant B

Any right under or in connection with a contract of carriage may be asserted by any person having a legitimate interest in the performance of any obligation arising under or in connection with such contract, when that person suffered loss or damage.

1. Scope of the draft article

5. Variant A covers only claims against the carrier or the (maritime) performing party.³ Variant B extends its coverage to claims against cargo interests. The informal questionnaire asked what the scope of the article should be. Responses to the question were divided. The majority viewed that claims against the shipper should also be covered. One delegate observed that it might be a good idea to allow only the carrier to sue the shipper under the provisions regarding shipper's obligations. The minority opposed such an extension of the scope. One delegation would like to limit the scope of draft article 67 to claims under draft articles 17 and 20 only.

2. "Loss or damage" requirement

6. Both variants require that the claimant should suffer "loss or damage". However, it was suggested in the previous sessions that this requirement might be problematic. For example, the requirement would be inappropriate for claims by a consignee that demanded the delivery of goods that are in the hands of the carrier (see A/CN.9/526, para.153).

7. At the informal seminar in London a more fundamental question was raised in relation to the "loss or damage" requirement. Draft article 67 was criticized as a confusion of substantive law (What should be ultimately established by the claimant in the litigation?) and of procedural law (What is necessary to be a proper plaintiff?). It was argued that, although it is necessary for the claimant to establish the "loss or damage" in order to win the suit, procedural law does not require such proof at the initial stage in order to file and maintain the lawsuit.

8. The informal questionnaire asked whether the requirement of "loss or damage" was appropriate. Some responses said that it was appropriate. One delegation assumed that the claim for delivery or enforcement of the right of control was covered in an exhaustive manner in other chapters, and since draft article 67 covered only an action for damages, the "loss or damage" required in draft article 67 was not problematic. Another delegation that responded suggested that the problem could be avoided if draft article 67 limited its scope to claims under draft articles 17

³ See footnote 1 above.

and 20. One delegation that responded suggested that the requirement might be unnecessary in that the party would not be interested in litigation if it had not suffered any loss or damage.

3. Choice of the variants

9. As for the choice between the two variants, most responses preferred Variant B, which offers a more general approach. One delegation proposed an additional paragraph to Variant B, which would read as follows: “Any right under or in connection with a contract of carriage may be asserted by any person having a legitimate interest in the performance of any obligation arising under or in connection with such contract, when that person suffered loss or damage.”

10. One delegation that responded preferred a reduced version of Variant A, which limited its scope to claims under draft articles 17 and 20.

4. Second paragraph of Variant A

11. Variant A contains a second paragraph which provides for defences and limitations with respect to the liability of the carrier and the (maritime) performing party⁴ in the case of a transfer of the rights of suit or the acquisition of the rights of suit through subrogation. There has been no substantive discussion about this paragraph in the previous sessions of the Working Group or in the London Seminar.

12. The informal questionnaire asked for comments on the paragraph and inquired whether the same paragraph was also necessary in Variant B. Some responses proposed the deletion of this paragraph. One of them argued that the issue should be dealt with in chapter 12 (transfer of rights). Some delegates observed otherwise, and argued that the same paragraph should be included if Variant B is chosen.

C. Draft article 68

13. Draft article 68 as set out in A/CN.9/WG.III/WP.56 provides as follows:

*Article 68. When negotiable transport document or negotiable
electronic transport record is issued*

In the event that a negotiable transport document or negotiable electronic transport record is issued:

(a) The holder is entitled to assert rights under the contract of carriage against the carrier or a performing party, irrespective of whether it suffered loss or damage itself; and

(b) When the claimant is not the holder, it must, in addition to proving that it suffered loss or damage in consequence of a breach of the contract of carriage, prove that the holder did not suffer the loss or damage in respect of which the claim is made.

14. Draft paragraph (a) allows the holder to assert his or her rights against the carrier whether or not the holder suffered loss or damage. The explanatory note to the original draft is as follows: “It seems that under many legal systems claimants

⁴ See footnote 1 above.

under a bill of lading are not confined to claiming their own loss. This article does not provide that only such holder has the right to sue” (see A/CN.9/WG.III/WP.21, para. 204). In a previous session of the Working Group, it was widely accepted that this principle is generally recognized in many jurisdictions (see A/CN.9/526, para. 160).

15. Draft paragraph (b) includes two different components: (1) the claimant other than the holder who is referred to under draft article 67 can make a claim against the carrier even when a negotiable transport document or a negotiable electronic transport record is issued, and (2) in this case, the claimant should prove, in addition to the loss or damage it has suffered, that the holder did not suffer the loss or damage. This provision is probably more controversial than draft paragraph (a). The Working Group agreed at its 11th session that the issue might need to be further discussed at a later stage (see A/CN.9/526, para. 162).

16. The first question asked in the informal questionnaire was whether it was necessary or desirable that the draft convention deal with problems such as those addressed under current draft articles 68 (a) and (b). All responses answered in the negative. One delegate thought draft article 68 (a) was inconsistent with its domestic civil procedure law and if draft article 68 (a) were deleted, draft article 68 (b) would become unnecessary.

17. The informal questionnaire further invited any suggestion regarding both paragraphs. Since most delegations that responded supported the deletion of draft article 68, only a few drafting suggestions were made to the current text. One delegation noted that the carrier was exposed to the danger of double payment under draft article 68 (a) when a person other than the holder that suffered the ultimate loss (e.g., the owner of the goods which are damaged) claimed against the carrier after the carrier had compensated the holder.⁵ One delegation suggested that the “holder” should be treated simply as a consignee in the sense of draft article 67 (1)(b).

III. Time for suit

A. General issues of the chapter

18. The necessity of the chapter on time for suit was never questioned in the previous sessions of the Working Group, although certain provisions might possibly be deleted. All responses to the informal questionnaire unanimously agreed in this regard.

⁵ The original draft has a second sentence, which is intended to deal with this situation, and which reads as follows: “If such holder did not suffer the loss or damage itself, it is deemed to act on behalf of the party that suffered such loss or damage.” The original draft’s wording was criticized and deleted during the 11th session (see A/CN.9/526, para. 161).

B. Draft article 69

19. Draft article 69 as set out in A/CN.9/WG.III/WP.56 provides as follows:

Article 69. Limitation of actions

Variant A

The carrier⁶ is discharged from all liability under this Convention if judicial or arbitral proceedings have not been instituted within a period of [one] year. The shipper⁷ is discharged from all liability under chapter 8 of this Convention if judicial or arbitral proceedings have not been instituted within a period of [one] year.

Variant B

All [rights] [actions] under this Convention are extinguished [time-barred] if judicial or arbitral proceedings have not been commenced within the period of [one] year.

20. In previous sessions, several different issues have been addressed in relation to draft article 69.

1. Which claim should be subject to the time limitation of this convention?

21. Both Variant A and Variant B limit the time for suit not only regarding claims against the carrier or the maritime performing party, but also with respect to those against the cargo interest.⁸ It was discussed at some length at the 11th session of the Working Group whether this approach is appropriate (see A/CN.9/526, para. 166). The Working Group may also wish to consider whether this approach should still be maintained when draft article 67 covers only claims against the carrier or the maritime performing party (see A/CN.9/526, para. 154). It should also be noted that the Working Group decided at its 14th session that the Convention should regulate the jurisdiction and arbitration of claims only against the carrier or the maritime performing party (see A/CN.9/572, paras. 116-117).

22. Second, claims may arise out of the contract of carriage that are not based on the provisions of the draft convention, for example, the carrier's claim against the shipper for freight. In addition, there are several obligations under the draft convention for which the consequences are not provided and which are thus left to applicable national law. Should these claims be subject to the time limitation?

⁶ The reference to "maritime performing party" may be added to the first sentence of Variant A although article 20 (1) possibly makes it unnecessary.

⁷ The reference to "a person referred to in article 34" may be added to the second sentence of Variant A although draft article 34 possibly makes it unnecessary. However, the current draft article 34 does not refer to the immunities in chapter 15 and the reference should be added.

⁸ To be more precise, there seems to be a slight difference in coverage between Variant A and Variant B with regard to actions against the cargo interest. For example, the claim for reimbursement against the controlling party under draft article 57 (2) is not subject to draft article 69 under Variant A, while it is under Variant B. The Working Group may wish to consider whether a time limit for those claims also needs to be imposed.

23. In the responses to the informal questionnaire, most delegations supported the suggestion that claims against the shipper should also be covered, while one delegation that responded took the opposing view. One delegation noted that while it might be advisable that draft article 69 should cover claims against shippers etc., the limitation period should be carefully chosen for such claims. It was suggested that in the case of total disaster of the ship caused by the shipper's negligence, the investigation to uncover the real cause of the accident would likely take a long time.

24. Most delegations that responded did not explicitly answer whether only the claims under the draft convention should be covered. One delegation responded expressly that claims under applicable national law should not be covered. Another delegation suggested that the limitation should apply to all rights and actions arising out of the contract of carriage.

25. One delegation that responded proposed that draft article 69 should also cover actions against the ship, as is the case in the Hague-Visby Rules. It was also suggested that a corresponding change in connection with the shipper might be necessary so that the draft article would also cover claims against the cargo interest.

2. Choice of variants and wordings

26. There are several possible formulations for the time limitation of claims. Article 3 (6) of the Hague-Visby Rules adopts the expression "carrier shall be discharged from all liability" while article 20 (1) of the Hamburg Rules states "any action is time-barred". Although the question is more or less a matter of expression, it was pointed out that there are several substantive questions related to the choice of variants and wording.

27. These substantive questions regarding the wording of the text include the following:

(a) *The Nature of the Limitation.* The distinction between "limitation period" and "extinguishment of right" was emphasized in a previous session of the Working Group. It was suggested that the difference might affect the applicability of the suspension of the time period or the choice of applicable law (see A/CN.9/526, para.167).

(b) *Availability of the Claim for Set-off.* If the draft convention provides that "the actions are time-barred", it might be ambiguous whether the party can still use the "time-barred" claim by means of set-off without bringing an action. In fact, the Budapest Convention on the Contract for the Carriage of Goods by Inland Waterway, 2000 (the CMNI), which uses the term "time-barred", contains an additional provision to clarify the consequence: "A right of action which has become barred by lapse of time may not be exercised by way of counterclaim or set-off."⁹ In contrast, if the Working Group adopts such expressions as "the carrier is discharged" or "the rights are extinguished", it is probably unnecessary to address the issue of possible set-off. (It is apparent that an extinguished claim cannot be used even by means of set-off.)

28. The informal questionnaire asked which approach, the "limitation period" or "extinguishment of right" approach, was preferable, as well as which variant and which wording was preferable. Most responses expressed a preference for the

⁹ CMNI Article 24 (5). The Convention on the Contract for the International Carriage of Goods by Road, 1956 as amended by the 1978 Protocol (CMR) has a similar provision (Article 32 (5)).

“limitation period” approach. One response proposed the following clarification to avoid any doubts concerning the consequences of limitation: “Upon limitation the claimant loses its right to the fulfilment of the claim”. One response preferred the “limitation period” approach because it believed that the time-barred claim could be used by means of set-off. In contrast, one delegation that responded preferred the “extinguishment of right” approach to make the time-bar absolute, suggesting that, according to its national law, a limitation period could be easily extended by the mere fact that the party claimed compensation. One delegation noted that “limitation period” was not a term of art in civil law jurisdictions.

29. As for the choice of the variants, responses to the informal questionnaire were evenly divided. Some delegations preferred Variant B and chose the expression “actions are time-barred”. The availability of the time-barred claim by means of set-off could be questioned if these wordings are adopted (see above). Others supported Variant A. One of the respondents noted that the expression used in the Hague and Hague-Visby Rules (Variant A) did not seem to have given rise to any problems.

3. Suspension of time period

30. It might be necessary to consider whether and how the issue of the “suspension of time period” should be addressed in the draft convention. Should the draft convention provide its own rules regarding the issue or should the issue be left to national law? In the latter case, which law should govern the problem? For example, CMNI article 24 (3) clarifies that the law applicable to the contract of carriage governs the issue of the suspension and the interruption of the limitation period (see also CMR article 32 (2) and (3)).

31. The informal questionnaire asked how the draft convention should treat the issue of suspension. Most delegations that responded answered that the issue of the suspension of the time period should be left to national law, while one delegation suggested that the draft convention should regulate the issue. However, some delegations that responded thought that it was desirable for the draft convention to clarify at least which law was applicable to the question, and it was suggested that the law governing the contract of carriage should apply. Some delegations that responded reserved their position.

4. Appropriate time period

32. Finally, there is the question of the appropriate time period. Article 3 (6) of the Hague-Visby Rules provide for one year, while article 20 (1) of the Hamburg Rules allows for two. In the responses to the informal questionnaire, most delegations answered that one year was sufficient. One delegation preferred two years, but it was ready to compromise if the Working Group preferred otherwise. Another delegation suggested special consideration for a claim against the carrier, depending on the type of the claim.

C. Draft article 70

33. Draft article 70 as set out in A/CN.9/WG.III/WP.56 provides as follows:

Article 70. Commencement of limitation period

The period referred to in article 69 commences on the day on which the carrier has completed delivery of the goods concerned pursuant to article 11 (4) or 11 (5) or, in cases in which no goods have been delivered, on the [last] day on which the goods should have been delivered. The day on which the period commences is not included in the period.

1. A claim against the carrier

34. Draft article 70 provides for the commencement day of the limitation period. There was a long discussion in a previous session of the Working Group about whether the commencement date should be the date of the actual delivery (see A/CN.9/526, para. 170). One might support the “actual receipt approach” otherwise the time period begins to run before the consignee can check the condition of the goods in the case of delay. However, concerns were raised against this approach. It was pointed out that the actual delivery might be delayed by unilateral action of the consignee or by the local customs authority. In addition, the “actual receipt approach” cannot be maintained in a case where all the goods were lost. The current draft convention includes the second part of the first sentence which deals with the situation.

35. If the Working Group rejects the “actual receipt approach”, one possible alternative might be that the time period always commences from “the time of delivery specified in article 11 (4) or 11 (5)”. If this approach is taken, the second part of the first sentence becomes unnecessary.¹⁰ However, one might have a concern whether this approach provides an appropriate solution in cases of delay.

36. The Hague-Visby Rules define the commencement date in article 3 (6) as the date “of their [goods] delivery or of the date when they [goods] should have been delivered,” while article 20 (2) of the Hamburg Rules define it as “the day on which the carrier has delivered the goods or part thereof or, in cases where no goods have been delivered, on the last day on which the goods should have been delivered.” The two look like a combination of the “actual” and “contractual” approaches.

37. In the response to the informal questionnaire regarding the appropriate commencement date for a claim against the carrier, the majority answered that the date of actual delivery was preferable. One delegation that responded thought that, to avoid unnecessary disputes, the periods should commence when the goods have arrived at the place of delivery and the notice is sent to the consignee that the goods are ready for delivery. Another delegation preferred “the time of delivery specified in article 11 (4) or 11 (5)”. Further, one delegation preferred the contractual approach as a starting point, while suggesting that the day of actual delivery should prevail if it is the later of the two. One delegation simply supported the wording of current draft text. However, it was suggested that the current wording, “carrier has completed delivery of the goods concerned pursuant to article 11 (4) or 11 (5),” is

¹⁰ The “actual receipt” is not completely abandoned even under this approach when there is neither contractual agreement nor customs or usages for time of delivery.

problematic when, for instance, the goods are delivered prior to the date agreed in the contract of carriage.

38. Almost all delegations that responded to the informal questionnaire agreed that should the actual delivery approach be taken, it should be supplemented with a special rule in the case of total loss of the goods. In this case, it was suggested that the date on which the goods were supposed to be delivered should be the commencement date. It was also suggested by one delegation that the same should also apply when the consignee does not take delivery.

2. A claim against a maritime performing party

39. It was argued at the London Seminar that the notion of “delivery” should be clarified in connection with a possible claim against a maritime performing party. It was suggested that the limitation period for a claim against a maritime performing party should run from the date of delivery of the goods by the maritime performing party to the subsequent carriers rather than the date of final delivery to the consignee.

40. Taking this suggestion into account, the informal questionnaire asked whether the commencement date for the claim against a maritime performing party should be different from the action against a carrier. All responses agreed that the commencement date should be the same as with respect to the contracting carrier. It was explained that in the case of multimodal transport, the damage to the goods might not be detected until they reach the final destination and the limitation periods should commence at that point even for a claim against the maritime performing party.

3. A claim against cargo interest

41. In a previous session of the Working Group, doubts were raised as to whether the time of delivery was relevant for the limitation period for claims against the shipper or other cargo interest (see A/CN.9/526, para. 173). However, no specific alternative commencement date was suggested for claims against the person other than the carrier. The informal questionnaire asked whether it was appropriate to have the same commencement date for claims against the shipper and the carrier. The majority answered that the commencement date should be the same. One delegation expressed a different view that the limitation period for a claim against the shipper should begin from the date when the loss or damage occurred.

4. Other issues

42. Some delegations that responded to the informal questionnaire expressed a concern with respect to the bracketed word in the first sentence of draft article 70. One of them proposed the deletion of the word “last”, and the inclusion of the following text as the last part of the first sentence: “*on the day in which delivery of the goods should have been completed*”.

D. Draft article 71

43. Draft article 71 as set out in A/CN.9/WG.III/WP.56 provides as follows:

Article 71. Extension of limitation period

The person against which a claim is made may at any time during the running of the period extend that period by a declaration to the claimant. This period may be further extended by another declaration or declarations.

1. Difference with Hague-Visby Rules

44. A provision that enables the parties to extend the limitation period exists under the Hague-Visby Rules (article 3 (6)) and the Hamburg Rules (article 20 (4)). There is, however, a slight difference between them. The current draft text is basically identical to the latter. The difference is as follows: first, the Hamburg Rules require a “declaration” while the Hague-Visby Rules require an “agreement”; and second, the extension might be allowed even after the lapse of the time period under the Hague-Visby Rules, while the current draft and the Hamburg Rules clearly deny that possibility.

45. In response to the informal questionnaire, most delegations that responded preferred “declaration” to “agreement”, while some delegates took the opposing view. One delegation suggested that an extension after the lapse of time should be possible.

2. Form requirement

46. Draft article 3 provides the form requirement for the declaration under draft article 71. Although the treatment is the same as in article 20 (4) of the Hamburg Rules, it may be questioned whether it is consistent with the treatment of agreement for jurisdiction after a dispute has arisen (draft article 81, as set out in A/CN.9/591, para. 73).¹¹ In response to the informal questionnaire, most delegations that responded saw the form requirement under the current draft of the convention as appropriate while one suggested that an oral declaration might be sufficient.

E. Draft article 72

47. Draft article 72 as set out in A/CN.9/WG.III/WP.56 provides as follows:

Article 72. Action for indemnity

An action for indemnity by a person held liable under this Convention may be instituted even after the expiration of the period referred to in article 69 if the indemnity action is instituted within the later of:

(a) The time allowed by applicable law in the jurisdiction where proceedings are instituted; or

¹¹ It was confirmed that no form requirement is necessary in article 81. See A/CN.9/591, paras. 61 to 62 and 64.

(b) Variant A of paragraph (b)

90 days commencing from the day when the person instituting the action for indemnity has either

- (i) settled the claim; or
- (ii) been served with process in the action against itself.

Variant B of paragraph (b)

90 days commencing from the day when either

- (i) the person instituting the action for indemnity has settled the claim; or
- (ii) a final judgement not subject to further appeal has been issued against the person instituting the action for indemnity.

48. Draft article 72 provides for a special extension of the time period with respect to recourse action. The special rule is necessary to ensure, for example, that the carrier has sufficient time to bring an action against the sub-carrier when the action against the carrier was brought immediately before a lapse of the time period. A similar rule exists under both the Hague-Visby Rules (article 3 (6 bis)) and Hamburg Rules (article 20 (5)).

49. All responses to the informal questionnaire supported the basic substance of the provision. However, one delegation that responded thought it necessary for the article to cover situations where the shipper seeks indemnity from the carrier after having been held liable by the consignee pursuant to the underlying contract between the shipper and the consignee.

50. There are two variants of draft paragraph (b) which provide for a different commencement date for the additional 90 days. Variant A provides for essentially the same rule as in both the Hague-Visby Rules and the Hamburg Rules. Variant B, which is a new rule, was introduced based on the suggestion at the 11th session of the Working Group that, in certain civil law countries, it was not possible to commence an indemnity action until after the final judgement in the case has been rendered (see A/CN.9/526, para. 176).

51. Most responses to the informal questionnaire preferred Variant A, while some supported Variant B. One delegate stressed that if Variant B were taken, the third party from whom indemnity was being sought might not be approached for many years after the accident, and many things including evidence, witnesses and memories will be lost during the period. In addition, it was also suggested that although Variant B was drafted to meet the concern of certain civil law countries where an indemnity action cannot be commenced until after the final judgement is rendered, paragraph (a) of draft article 72 gives adequate protection.

F. Draft article 73

52. Draft article 73 as set out in A/CN.9/WG.III/WP.56 provides as follows:

Article 73. Counterclaims

A counterclaim by a person held liable under this Convention may be instituted even after the expiration of the period referred to in article 69 if it is instituted within 90 days commencing from the day when the person making the counterclaim has been served with process in the action against itself.

53. This provision is based on the suggestion at the 11th session of the Working Group that the same consideration should apply to counterclaims as to recourse actions (see A/CN.9/526, para. 177). The informal questionnaire asked whether the draft convention should address the issue of counterclaims and whether the current draft was appropriate for that purpose. Some responses suggested that the draft article should be deleted. One delegation questioned whether there was any counterclaim that deserved extension under this provision. Others that responded thought that the provision was necessary and expressed their basic support for the current draft of the text.

54. There were a number of drafting suggestions. First, one delegation that responded observed that the expression “a counterclaim ... may be instituted” gave rise to doubts as to whether the counterclaim should be made in the same proceedings or in separate proceedings, and suggested that it be clarified that the former is the case. Second, it was proposed that the words “or within the longer period allowed by the *lex fori*” should be added at the end of the sentence because in certain jurisdictions a counterclaim may be made only at the time of entering an appearance, and the period between the service of process and the entry of an appearance may be more than 90 days. Finally, a question was raised regarding the scope of the article. One delegation suggested that the scope of draft article 73 should be limited to counterclaims that were instituted for set-off. Another delegation noted that the current draft seemed far-reaching and that an additional condition should be added to the scope of the counterclaim. It proposed the addition of the following text:

The limitation of a claim does not mean that a right of counterclaim is extinguished, provided that the claim against which the counterclaim is made derives from the same legal context as the time-barred claim and has arisen prior to this claim becoming time-barred.

G. Draft article 74

55. Draft article 74 as set out in A/CN.9/WG.III/WP.56 provides as follows:

Article 74. Actions against the bareboat charterer

[If the registered owner of a ship defeats the presumption that it is the carrier under article 40 (3), an action against the bareboat charterer may be instituted even after the expiration of the period referred to in article 69 if the action is instituted within the later of:

(a) The time allowed by the applicable law in the jurisdiction where proceedings are instituted; or

- (b) 90 days commencing from the day when the registered owner [both
 - (i) proves that the ship was under a bareboat charter at the time of the carriage; and]
 - [(ii)] adequately identifies the bareboat charterer.]

56. This draft article addresses the concern that the limitation period may expire before a claimant has identified the bareboat charterer that is the responsible “carrier” under draft article 40 (3). However, the question of whether article 40 (3) should be deleted or retained is still pending and if the Working Group decides to delete it, then this article should also be deleted.

57. The informal questionnaire asked whether draft article 74 is acceptable assuming that draft article 40 (3) remains in the text. Some responses supported the substance of draft article 74 while others opposed it. One delegate proposed the following new text on the assumption that draft article 40 (3) is redrafted as proposed in A/CN.9/WG.III/WP.70, para.3:

“If the contract particulars fail to indicate the name and address of the carrier and the plaintiff has requested the registered owner to properly identify the carrier

(a) an action against the registered owner may be instituted within 90 days commencing from the date when the request to identify the carrier is made, and

(b) an action against the carrier may be instituted within 90 days commencing from the date when the registered owner has properly identified the carrier.”

H. Possible additional article with regard to the removal of action pursuant to draft article 80 (2)

58. It was suggested at the 16th session of the Working Group that the draft convention should provide for the treatment of the time limitation for suit in connection with the removal of actions pursuant to draft article 80 (2) (see A/CN.9/591, para. 57).

59. One might doubt, however, whether a special rule is necessary to deal with this situation. It was generally accepted that a typical action, which can be removed under draft article 80 (2), is a declaratory action to deny the carrier’s liability and does not include “legitimate” actions against the shipper such as a claim for liability under chapter 8 (see A/CN.9/591, paras. 57-59). Suppose that the carrier brings a declaratory action for non-liability against the consignee before the time period has expired and the consignee demands a removal of the action. The carrier brings a new action in another forum specified in draft article 75 or 77 after the time period has expired. Does the carrier want to extend the limitation period in this situation? It is also not clear whether the cargo interest deserves the extension because it could have brought an action against the carrier at any time in the forum specified in draft article 75 or 77. A careful examination seems necessary as to the question of whether any party should have a legitimate interest for the extension of the time limitation in connection with draft article 80 (2).

60. The informal questionnaire asked whether it was necessary to have a special rule in connection with the removal of actions pursuant to draft article 80 (2) and what such a special rule should provide. While some delegations reserved their position, many delegations that responded did not think it necessary to include such a provision. In contrast, one delegation explicitly supported the additional article with regard to the removal of actions under draft article 80 (2). It was suggested that such an article should give the carrier reasonable time (e.g., 90 days) to bring an action before the competent court which the cargo interest has chosen.

G. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Procedure for amendment of limitation amounts — drafting proposal by the Government of the United States of America, submitted to the Working Group on Transport Law at its eighteenth session
(A/CN.9/WG.III/WP.77) [Original: English]

In preparation for the eighteenth session of Working Group III (Transport Law), the Government of the United States of America submitted to the Secretariat the proposal attached hereto as an annex with respect to the procedure for the amendment of the limitation amounts in the draft convention on the carriage of goods [wholly or partly] [by sea]. The Government of the United States of America advised that the document was intended to facilitate consideration of the topic of the procedure for the amendment of limitation amounts in the Working Group by proposing revised text for draft article 104 of the draft convention.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Procedure for Amendment of Limitation Amounts

General comment

1. As discussed in A/CN.9/WG.III/WP.34, the United States supports an expedited procedure to amend limits which avoids the full panoply of formalities normally required to amend the draft Convention. At the same time, the United States is of the view that it is important to ensure that such amendments to liability limits reflect a broad consensus on the need for a change and that the procedure ensures a stable, predictable commercial environment regarding risk management arrangements. Unless otherwise indicated, the following comments relate to draft article 104 of A/CN.9/WG.III/WP.56.

Draft paragraph 2

2. Initiating a change to the liability limits should require the support of at least half of the parties to the draft Convention. The number of parties does not necessarily correlate to the percentage of cargo volume or cargo value covered by the draft convention, nor of a country's number of transport providers. A requirement of only one quarter of the parties would permit the initiation of the process to change a material term of a formal treaty without insuring that there is a consensus on the need for change, particularly amongst those most affected. Requiring the support of half of the parties does not tie the change to a cargo volume or value requirement, but it does insure that the need for change will be a widely held view. We believe that review of limits agreed in a formal treaty should not be undertaken absent such a widely held view. Several comparable treaties require the support of at least half of the parties to initiate an amendment. In addition to the 2002 Protocol to the Athens Convention, the 1990 Protocol to the Athens Convention, the Convention for Liability and Compensation for Damage in

Connection with the Carriage of Hazardous and Noxious Substances by Sea, and the 1996 Protocol to the Convention on Limitation of Liability for Maritime Claims adopt such a procedure.

3. Under existing practices in international private law, significant changes to concluded texts are usually produced by the same multilateral bodies that formulated the original text, acting through their general membership (and, in the case of UNCITRAL, observer States), and not only Contracting States to a particular treaty (although States party can also always agree to amendments as between themselves, or *inter se*). UNCITRAL, for example, amended its first convention (the 1974 Convention on the Limitation Period in the International Sale of Goods) not by action of the Contracting States but by the Commission elaborating a 1980 amending Protocol to the Convention.

Draft paragraph 4

4. Similarly, strict voting procedures tend to politicize issues, and are not in line with the Commission's consistent practice of making decisions by consensus, which is a more appropriate method for the formulation of uniform rules on private law matters. Given that the initial limitation adopted in draft article 64 will have been adopted by consensus, any amendment should be adopted in the same manner. Any amendment adopted by the Commission should, following the normal practice, be referred to the General Assembly for approval upon the recommendation of the Commission.

Draft paragraph 5

5. The need for and utility of this provision requires further discussion. Our current view is that such a provision is not necessary.

Draft paragraph 6

6. The relevant date for permitting the amendment procedure should be seven years after the draft convention enters into force and seven years after prior amendments under this procedure. Given the informal nature of this amendment procedure, there should be restrictions on the level of increases that can be approved. We suggest 21% for any single adjustment, and no more than a cumulative increase of 100%.

Draft paragraphs 7 and 8

7. If the amendment has been adopted by consensus at a meeting open to Contracting States, UNCITRAL members and observer States, and subsequently approved by the General Assembly, there is no need to insert yet another approval process before the amendment enters into force. Also, 18 months is an unnecessarily long period of time between approval by the General Assembly and entry into force. This amendment procedure only applies to the amendment of the liability amount. It should not take many months for a Contracting State to study that one figure and determine whether it supports it. Twelve months should be sufficient, provided that at least a certain number of Contracting States have ratified, accepted or approved the amendment by that time. (The exact number should probably be the same as is required for entry into force of the draft convention under draft article 101.)

Draft paragraph 9

8. The United States could not accept a provision that would bind all Contracting States to an amendment of the limitation amount unless they denounce the entire draft convention. A Contracting State should be able to denounce a specific amendment rather than the entire convention. As this is intended to be an expedited amendment procedure, the time after which it will enter into force for a Contracting State if that State does not denounce it may be relatively short and not sufficient for some States to comply with their domestic legal procedures. A State may have to denounce the amendment simply because it had not concluded its internal approval process. Therefore, the amendment procedure should allow for a State to withdraw its denunciation at anytime.

9. Attached below is our proposed text of draft article 104. We appreciate the opportunity to comment on this important subject.

U.S. Proposal for Article 104**Article 104. Amendment of limitation amounts**

1. Without prejudice to the provisions of article 103, the special procedure in this article shall apply solely for the purpose of amending the limitation amount set out in article 64, paragraph 1, of this Convention.

2. At the request of at least one half of the Contracting States to this Convention to amend the limitation amount specified in article 64, paragraph 1, of this Convention and subject to paragraph 5(a) of this article, the depositary shall convene a meeting of all Contracting States and all Members of the United Nations Commission on International Trade Law to consider whether the limitation amount should be modified.

3. The meeting shall take place on the occasion of and at the location of the next session of the United Nations Commission on International Trade Law.

4. Except as provided in paragraph 5 of this article, the normal procedures of the United Nations Commission on International Trade Law and the United Nations General Assembly shall apply to this meeting and to any recommendations resulting from it.

5. (a) No amendment of the limit under this article may be considered less than seven years from the date of entry into force of this Convention or less than seven years from the date of entry into force of a previous amendment under this article.

(b) No limit may be increased or decreased by more than twenty-one per cent in any single adjustment.

(c) No limit may be increased or decreased by more than two times the original amount, cumulatively.

6. Any amendment adopted in accordance with paragraphs 2 through 5 of this article shall enter into force twelve months after either its adoption or its ratification, acceptance, or approval by [x] Contracting States, whichever is later.

7. All Contracting States shall be bound by the amendment, unless they denounce the amendment in accordance with article 105 before the amendment

enters into force. Such denunciation shall take effect when the amendment enters into force, and may be withdrawn at any time.

8. When an amendment has been adopted but has not yet entered into force because the twelve-month period has not yet expired, a State which becomes a State Party during the twelve-month period shall be bound by the amendment when the amendment enters into force or when this Convention enters into force for that State, if later.

H. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Relation with other conventions, submitted to the Working Group on Transport Law at its eighteenth session

IV. Relation between the draft convention and other international legal instruments .	54-55

I. Introduction

1. In preparation for the eighteenth session of Working Group III (Transport Law) and with a view to facilitating the Working Group's consideration of chapter 21 containing the final clauses of the draft convention on the carriage of goods [wholly or partly] [by sea], the Secretariat has prepared a note on the relation between the draft convention and other international legal instruments, taking into consideration also various views and comments expressed on this topic, and, in particular, on the door-to-door scope of application of the draft convention. This note presents information on the relation between the draft convention and other instruments relating to international carriage of goods by sea; the relation between the draft convention and instruments relating to non-maritime international carriage

of goods; and the relation between the draft convention and international legal instruments not relating to the carriage of goods.

2. The Working Group may wish to note that issues relating to door-to-door transport, and possible conflicts between the draft convention and other international instruments governing carriage by modes other than sea carriage were already discussed in document A/CN.9/WG.III/WP.29. The Working Group may wish to consider that document in conjunction with the present note, bearing in mind, however, that the analysis contained in document A/CN.9/WG.III/WP.29 was made at a time when the draft convention did not explicitly limit direct actions under the draft convention to actions between the contractual parties to the overarching maritime contract of carriage, which by itself has limited the scope for possible conflicts with other conventions, as compared to the situation contemplated in document A/CN.9/WG.III/WP.29.

II. Relation between the draft convention and other instruments relating to international carriage of goods by sea

3. The draft convention covers the entire subject matter of the International Convention for the Unification of Certain Rules of Law relating to Bills of Lading, 1924 (the “Hague Rules”),¹ of the Protocol to Amend the International Convention for the Unification of Certain Rules of Law Relating to Bills of Lading signed at Brussels on 25 August 1924, 1968 (usually referred to, in conjunction with the previous instrument, as the “Hague-Visby Rules”),² and of the United Nations Convention on the Carriage of Goods by Sea, 1978 (the “Hamburg Rules”).³

4. As their subject matter coincides, the operation of the draft convention among its parties is incompatible with the operation, among the same parties, of other, pre-existing treaties relating to the international carriage of goods by sea. It was therefore deemed advisable to insert in the final clauses of the draft convention a provision requiring a State, which intended to become a party to the draft convention to denounce certain named treaties relating to international carriage of goods by sea, to which it might be a party. Accordingly, article 102 of the draft convention requires a State wishing to become a party to the draft convention to denounce the Hague Rules, the Hague-Visby Rules or the Hamburg Rules. Its text was inspired by articles 99, paragraphs 3 and 6, of the United Nations Convention on Contracts for the International Sale of Goods (the “United Nations Sales Convention”)⁴ and by article 31 of the Hamburg Rules.

5. The approach adopted in draft article 102 has the advantage of providing maximum certainty on the applicable law, since after its denunciation a treaty would not have any force of law in the denouncing State. However, it has been suggested that this approach might have a potential disadvantage, since the denunciation of the Hague, Hague-Visby or Hamburg Rules would deprive the carriers and shippers in the denouncing State of the benefit of a uniform legal regime with a number of contracting partners in States which had not yet become parties to the draft

⁴ United Nations, *Treaty Series*, vol. 1489, No. 25567.

convention, but were parties to another instrument relating to international carriage of goods by sea.

6. In that connection, the Secretariat brought to the attention of the Working Group the alternative approach that had been adopted in article 55 of the Convention for the Unification of Certain Rules Relating to International Carriage by Air, 1999 (the “Montreal Convention”)⁵ (see A/CN.9/WG.III/WP.56, footnote 302). The approach taken in article 55 of the Montreal Convention, which is based on article 30 of the Vienna Convention on the Law of Treaties,⁶ does not require a formal denunciation of pre-existing treaties, but rather holds that the Montreal Convention should prevail between States parties that are also parties to another convention on the same subject. Under this approach, the State becoming a party to the draft convention would apply the new regime in respect of carriage originating from or destined to those States that had already become a party to the draft convention, in accordance with draft article 8. However, the same State would apply the previous regime in respect of contracts of carriage to which those previous conventions, under their own terms, would apply if the factors that determine their application were connected to other States that were still parties to the previous conventions. The new regime would progressively substitute the older ones, as the various States became party to the draft convention.

7. However, it should also be noted that, as a consequence of this approach, a dual uniform legal regime, corresponding to the new and the previous instruments, might come into existence in a State party to the draft convention. The approach taken in the Montreal Convention might also lead to some difficulties in countries that, according to their constitutional laws, provide for direct application of international treaties and conventions upon ratification and internal promulgation. In those countries, the later treaty would automatically become part of the domestic legal system, displacing the earlier regime.

III. Relation between the draft convention and instruments relating to non-maritime transport conventions

8. The relation between the draft convention and other instruments relating to international carriage of goods by modes of transport other than by sea has been discussed at length by the Working Group, with particular regard to the intended scope of application of the draft convention in relation to door-to-door transport (see A/CN.9/510, paras. 26-32; A/CN.9/526, paras. 219-267; and A/CN.9/544, paras. 20-50).

9. At its ninth session (New York, 15-26 April 2002), the Working Group considered the desirability and feasibility of a door-to-door scope of application in the draft convention (see A/CN.9/510, paras. 26-32). It was suggested that the inclusion of door-to-door operations would better serve the needs of the trade

⁵ United Nations, *Treaty Series*, vol. 2242, No. 39917.

⁶ United Nations, *Treaty Series*, vol. 1155, No. 18232. Article 30, paragraph 3, of the Vienna Convention on the Law of Treaties provides that when all parties to an earlier treaty are parties to a later treaty on the same subject matter, “the earlier treaty applies only to the extent that its provisions are compatible with those of the later treaty.” Pursuant to paragraph 4 of the same article, the same rule applies as between states parties to both treaties, when the parties to the later treaty do not include all parties to the earlier one.

community since most contracts of carriage by sea, especially in containerized traffic in the liner trade, included a non-sea leg (see A/CN.9/510, para. 30). However, it was added that, in adopting a door-to-door approach, the draft convention should not displace non-maritime transport conventions of mandatory application, such as the Convention on the Contract for the International Carriage of Goods by Road, 1956 ("CMR"),⁷ and the International Convention Concerning the Carriage of Goods by Rail, 1980 ("COTIF-CIM"),⁸ and its subsequent revisions (see A/CN.9/510, para. 30). It was further indicated that, while it would be desirable that the draft convention should resolve conflicts with non-maritime transport conventions of mandatory application, at the same time, the draft convention should not become a fully-fledged multimodal instrument (see A/CN.9/510, para. 28).

10. After an exhaustive exchange of views, the Working Group considered that, in light of the needs of worldwide trade and the requirements of modern international container carriage, it would be useful to continue its discussion of the draft convention under the provisional working assumption that it would cover door-to-door transport operations, and requested the Commission to approve that approach (see A/CN.9/510, para. 30).

11. In response to that request, at its thirty-fifth session (New York, 17-28 June 2002), the Commission approved the working assumption that the draft instrument should cover door-to-door transport operations, subject to further consideration of the scope of application of the draft instrument after the Working Group had considered the substantive provisions of the draft instrument and come to a more complete understanding of their functioning in a door-to-door context.⁹

12. The underlying reason for this decision was the particular importance of a door-to-door scope of application since a new instrument intended for global use must take into account the needs of worldwide trade and the requirements of modern international maritime container carriage. It was also recognized that modern carriage of goods often involves carriage under two or more means of transport to include pre- and post-maritime mode of transport. In fact, most existing unimodal inland transport conventions, including the CMR, had already recognized the need for some scheme to accommodate that commercial reality. In addition to article 2 of the CMR, reference may be had in this regard to article 1, paragraphs 3 and 4, and article 38 of the COTIF-CIM, as amended by the Protocol of Modification of 1999; article 2 of the Budapest Convention on the Contract for the Carriage of Goods by Inland Waterway, 2000 ("CMNI");¹⁰ article 18, paragraph 5, and article 31 of the Convention for the Unification of Certain Rules Relating to International Carriage by Air, 1929, as amended by the Protocol signed at The Hague on 28 September 1955 and by the Protocol No. 4 signed at Montreal on 25 September 1975 (the Warsaw Convention);¹¹ and articles 18, paragraph 4, and 38 of the Montreal Convention.

13. In opting for door-to-door coverage as a working assumption, the Working Group departed from the approach taken in the Hamburg Rules, which are limited to

⁷ United Nations, *Treaty Series*, vol. 399, No. 5742.

⁸ United Nations, *Treaty Series*, vol. 1397, No. 23353.

⁹ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17, (A/56/17)*, paragraph 224.

¹¹ United Nations, *Treaty Series*, vol. 2145, No. 6943.

port-to-port carriage. At the same time, however, the Working Group agreed that the draft convention should not go so far as attempting to replace all unimodal transport regimes by a single multimodal system. Thus, the expanded scope of application of the draft convention does not affect the general policy of safeguarding the application of existing conventions that apply to contracts of carriage of goods primarily by a mode of transport other than sea carriage, as reflected in article 25, paragraph 5, of the Hamburg Rules.

A. The limited network approach to carrier's liability in door-to-door transportation

14. At its eleventh session (New York, 24 March-4 April 2003), the Working Group discussed how best to deal with the door-to-door carriage of goods (see A/CN.9/526, paras. 219-239; see also A/CN.9/WG.III/WP.29). It was indicated that, in principle, such carriage could be regulated under a "uniform system", under a "network system", or under a combination of the two. It was further explained that under a uniform system, the same rules would apply to the carriage, irrespective of the stage or mode of transportation when the loss, damage or delay occurred. It was also explained that under a network system, different rules relating to unimodal transport could apply depending upon the different stages or modes of transportation when the loss, damage or delay occurred, while a set of uniform rules would apply in the case of non-localized loss or damage.

15. It was suggested that the adoption of a network system would better serve the needs of the industry, given the importance of non-maritime legs in door-to-door carriage, especially for containerized traffic, as witnessed by the fact that the maritime transport industry had already developed contractual versions of limited network systems, with the widespread adoption of the UNCTAD/ICC Rules for Multimodal Transport Documents, 1992,¹² and of the BIMCO COMBICONBILL Combined Transport Bill of Lading, 1995¹³ (see A/CN.9/526, paras. 232 and 234).

16. However, support was also expressed for the adoption of a uniform liability system for door-to-door carriage of goods. It was suggested that a uniform liability system would best address the needs of door-to-door carriage, and was indeed the approach adopted in the United Nations Convention on International Multimodal Transport of Goods, 1980 ("Multimodal Convention").¹⁴ It was added that the adoption of a uniform liability regime would also be in line with the wishes of the trade to extend to maritime carriage the trend in favour of the extension of the scope of unimodal conventions to other modes of carriage preceding or subsequent to its own mode of carriage (see A/CN.9/526, para. 223).

17. The Working Group considered extensively the advantages and disadvantages of both the network and the uniform liability system for dealing with door-to-door carriage. The consensus that eventually emerged at the Working Group's twelfth session (Vienna, 6-17 October 2003) favoured the retention of a limited network system, as reflected in draft article 27 as set out in A/CN.9/WG.III/WP.56 (previously draft article 8 in A/CN.9/WG.III/WP.32; originally draft article 4.2.1 in A/CN.9/WG.III/WP.21) (see A/CN.9/544, paras. 20-27). Draft article 27 provides

¹² ICC publication, No. 481 (ICC, Paris, 1992).

¹³ *BIMCO Bulletin*, vol. 91, 1996.

¹⁴ TD/MT/CONF/16 (treaty not yet in force).

that, when the loss, damage or delay giving rise to the claim occurs during carriage preceding or subsequent to the sea carriage, provisions of an international convention that provide for carrier's liability, limitation of liability or time for suit should prevail over the provisions of the draft convention to the extent that such other convention declares itself applicable and its liability provisions are mandatory.

18. The network system in draft article 27, paragraph 1, is limited in a double sense. Firstly, the network system is limited to the issue of the carrier's liability. In all areas of the draft convention other than carrier's liability, limitation of liability and time for suit, the provisions of the draft convention would apply irrespective of any different provisions that may exist in other applicable conventions (A/CN.9/WG.III/WP.29, para. 72; see also paras. 73-105, for an analysis of the possible application of competing conventions on issues outside of carrier's liability, limitation of liability and time for suit). Secondly, the limited network system only comes into play in situations where, because of an expanded interpretation of the coverage of a given unimodal transport convention, there might be a conflict between the liability provisions of the draft convention and the liability provisions of the relevant unimodal transport convention.

19. The essence of such a limited network system, therefore, is that, in the event that both conventions are held applicable to a particular contract of carriage and damage to the goods occurred during a transport leg other than sea carriage, the relevant provisions mandatorily applicable to the determination of liability of the inland carrier "apply directly to the contractual relationship between the carrier on the one hand and the shipper or consignee on the other" (A/CN.9/WG.III/WP.29, para. 52). Thus, in respect of that relationship, the provisions of the draft instrument apply in conjunction with the provisions mandatorily applicable to the inland transport; whereas as between carrier and inland subcontracting carrier, the inland provisions alone are relevant (supplemented as necessary by any applicable national law) (A/CN.9/WG.III/WP.29, para. 52).

B. Scope of the network system in draft article 27

20. The limited network system contemplated in draft article 27 has given rise to some criticism by other organizations and scholars. In a letter addressed to the Secretariat, the International Road Transport Union (IRU) has expressed the view that, by adopting a limited network system, the draft convention would be in conflict with other international agreements, and contravene general treaty law.¹⁵ The IRU argues, *inter alia*, that draft article 27 would run counter to article 1, paragraph 5, of the CMR Convention, which prohibits modifications to the CMR Convention other than those allowed for in that convention, as well as article 41, paragraph 1, of the Vienna Convention on the Law of Treaties, which prohibits modification of a multilateral treaty between only some of its parties, except in certain circumstances. A similar objection to the network system had already been raised at the Working Group's eleventh session, when it was said that the current draft article 27, paragraph 1, "did not solve the issue of conflict of conventions, since it gave preference only to specific provisions of applicable unimodal conventions" (see A/CN.9/526, para. 246).

¹⁵ The text of the letter from the IRU, as well as the reply sent by the UNCITRAL secretariat, have been made available to the Contracting Parties of the CMR by the United Nations Economic Commission for Europe and can be found in www.unece.org/trans/main/sc1/sc1cmr.html.

21. Another line of criticism concerns the practical operation of the limited network system. It has been argued that draft article 27 might have the undesirable effect of derogating from inland treaties whose rules would have been better suited to regulate non-maritime carriage of goods than the rules contained in the draft convention. Furthermore, to the extent that draft article 27 only defers to other mandatory law as regards the carrier's "liability, limitation of liability or time for suit", it has been argued that the applicable rules would consist of "a combination of some provisions of the applicable unimodal regime, as interpreted by the relevant court or arbitral tribunal, together with the remaining part of the [draft convention]".¹⁶ This has been said to lead to an "obscure patchwork of different regimes which were not designed to complement each other", thus introducing elements of uncertainty on the law applicable to the contract of carriage.¹⁷ It has been further said that a clear-cut distinction between rules that "specifically provide for carrier's liability, limitation of liability or time for suit" and other mandatory rules in an international convention or domestic law governing carriage of goods by a particular mode of transportation is not always feasible. In view of the divergences that already exist in the interpretation of some existing unimodal conventions, provisions on jurisdiction in other conventions, for example, have been said to have a significant practical impact on the claimant's position, thus affecting the carrier's liability.¹⁸

22. In considering the first level of criticism, this note will leave aside the theoretical question as to whether and to what extent a subsequent provision in a treaty dealing with a subject matter not expressly dealt with in an earlier treaty concerned with a different legal relationship might be regarded as a modification of the earlier treaty under public international law. To the extent that the draft convention deals with a type of contract different from the contract governed, for instance, by the CMR, article 27, paragraph 1, should be seen as a provision that coordinates the application of the liability regime provided for in the draft convention vis-à-vis the liability regime provided for in other conventions, such as the CMR, and not as a modification of the liability rules of any other convention.

23. The scope of application of the draft convention and of existing unimodal transport conventions should normally be mutually exclusive (see A/CN.9/WG.III/WP.29, paras. 54-71). Accordingly, draft article 27, paragraph 1, would be expected to apply only to situations where some of those other conventions, "according to their terms", were to be interpreted as covering a contract of carriage involving a portion of carriage by a mode other than the mode primarily governed by the convention in question. Except for those cases where such an expanded interpretation of the scope of a given unimodal transport convention might lead that convention to be held applicable to a door-to-door carriage involving a sea leg to which the draft convention, in accordance with draft article 8, would also apply, no conflict should be expected between the draft convention and existing unimodal transport conventions.

¹⁶ See, for instance, Mahin Faghfour, "International regulation of liability for multimodal transport — in search of uniformity", *WMU journal of maritime affairs*, vol. 5, No. 1 (2006), pp. 95-114.

¹⁷ Comments by UNCTAD on the draft convention (A/CN.9/WG.III/WP.21/Add.1, Annex II, para. 44).

¹⁸ See, for instance, Krijn Haak and Marian Hoeks, "Intermodal transport under unimodal arrangements. Conflicting conventions: the UNCITRAL/CMI draft instrument and the CMR on the subject of intermodal contracts", *Transportrecht*, vol. 28, No. 3 (2005), pp. 89-102.

24. Furthermore, article 27 should be read in conjunction with other provisions that establish the scope of application of the draft convention. According to draft article 19, paragraph 1, the carrier is liable vis-à-vis the shipper and the consignee, for the acts and omissions of any performing parties and other persons that undertake to perform any of the carrier's obligations under the contract of carriage, in accordance with the liability rules of the draft convention. However, in the course of its deliberations, the Working Group has agreed to the proposition that only maritime performing parties (that is, generally those that would have been covered in a port-to-port instrument) will be covered by the draft instrument, and that non-maritime performing parties are excluded from the liability regime of the draft convention, even though vis-à-vis the shipper and the consignee the carrier remains liable for their acts (see A/CN.9/544, para. 23).

25. Therefore, a conflict of conventions could not arise under the draft convention with respect to recourse action of the door-to-door carrier against a non-maritime performing carrier (i.e. of the carrier against the subcontracting inland carrier), which remains governed by other applicable law outside the draft convention. This circumstance alone represents an important safeguard to limit the possible scope for conflict between the draft convention and other international conventions or domestic law that mandatorily applies to the liability of the carrier in other modes of transport. The Working Group agreed to make this point evident and adjust the scope of application of the draft convention (see A/CN.9/544, paras. 20-27). The notion of "maritime performing party" was accordingly inserted in the draft convention to limit direct actions under the draft convention to actions between the contractual parties to the maritime contract of carriage and to actions against the maritime performing party (see A/CN.9/544, paras. 28-42).

26. As regards the criticism concerning the practical operation of the limited network system contemplated in draft article 27, paragraph 1, it should be noted that the approach taken in draft article 27, paragraph 1, is not novel. Indeed, the widely-used Bimco COMBICONBILL reads, in relevant part, as follows:

"9. Basic Liability

"(1) The Carrier shall be liable for loss of or damage to the goods occurring between the time when he receives the goods into his charge and the time of delivery [...]."

"11. Special Provisions for Liability and Compensation

"(1) Notwithstanding anything provided for in Clauses 9 and 10 of this Bill of Lading, if it can be proved where the loss or damage occurred, the Carrier and the Merchant shall, as to the liability of the Carrier, be entitled to require such liability to be determined by the provisions contained in any international convention or national law, which provisions:

"(a) cannot be departed from by private contract, to the detriment of the claimant, and

"(b) would have applied if the Merchant had made a separate and direct contract with the Carrier in respect of the particular stage of transport where the loss or damage occurred and received as evidence thereof any particular document which must be issued if such international convention or national law shall apply.

“(2) Insofar as there is not mandatory law applying to carriage by sea by virtue of the provisions of sub-clause 11 (1), the liability of the Carrier in respect of any carriage by sea shall be determined by the [...] Hague-Visby Rules. The Hague-Visby Rules shall also determine the liability of the Carrier in respect of carriage by inland waterways as if such carriage were carriage by sea [...]”

27. Unlike draft article 27, paragraph 1, the COMBICONBILL does not specify which mandatory provisions of the relevant “international convention or national law” would apply instead of the Hague-Visby Rules. Nevertheless, the phrase “the Carrier and the Merchant shall, as to the liability of the Carrier, be entitled to require such liability to be determined by the provisions contained in any international convention or national law” makes it obvious that the “network system” contemplated by the COMBICONBILL is limited to provisions directly relevant to the determination of the carrier’s liability. Therefore, although the formulation of draft article 27, paragraph 1, differs from the relevant provisions in the COMBICONBILL, the practical operation of the limited network system, as contemplated in draft article 27, paragraph 1, is consistent with that industry standard.

28. The fact that draft article 27, paragraph 1, adopts a limited network system for the carrier’s liability does not create a conflict with the liability system in existing or future unimodal conventions. On the contrary, such a system may be said to offer a solution, in the context of the type of carriage covered by the draft convention, for a conflict that would likely arise in the absence of such a provision, since a judge or arbitrator would be otherwise left with no indication as to which rules should be applied to establish the carrier’s liability in case of localized loss or damage. The choice made in draft article 27, paragraph 1, gives full effect to those provisions of other conventions that specifically provide for carrier’s liability, limitation of liability or time for suit that mandatorily apply. The reference to provisions that “specifically provide for the carrier’s liability, limitation of liability or time for suit” is a logical corollary to the context of the provision, which is concerned with the determination of the carrier’s liability. Provisions that in a concrete case would have no bearing on the determination of the carrier’s liability should not displace the relevant provisions of the draft convention. As currently worded, the provision would seem to be sufficiently broad to leave it for the prudent discretion of the courts or arbitrators to decide which of the mandatory provisions in other conventions “specifically provide” for the carrier’s liability, limitation of liability or time for suit, and should thus prevail over the draft convention.

29. However, should the Working Group consider that, for the avoidance of doubt, further clarification in this regard would still be desirable, the Working Group may wish to consider that it would be desirable to spell out clearly one of the basic elements of the compromise arrived at by the Working Group at its twelfth session, that, where the provisions in the draft convention “relate to the obligations and liability of performing parties, reference should be made only to maritime performing parties” and that the draft convention should be revised “to create a direct cause of action against maritime performing parties only” (see A/CN.9/544, para. 21). In that case, the Working Group may wish to consider inserting, at an appropriate place, a provision along the following lines:

“This Convention does not establish a direct cause of action by the shipper, the consignee, or any other person against [any person other than a carrier or a maritime performing party] [a non-maritime performing party].”

30. It is submitted that the addition of a provision that expressly limits direct actions under the draft convention to actions between the contractual parties to the maritime contract of carriage and to actions against the maritime performing party (thus preserving the application of other mandatory law, if any, to the relations between the carrier and the non-maritime performing parties) might address remaining concerns about the potential conflicts with other conventions that have been identified earlier (see A/CN.9/WG.III/WP.29, paras. 72-110).

31. Notwithstanding the above considerations, should the Working Group not be convinced that this would suffice to avoid conflicts with the liability regime in other conventions, two alternative options might be considered. One option might be to expand draft article 27, paragraph 1, beyond the matters referred to therein so as to encompass, for example, other matters, such as shipper's obligations, as has been suggested earlier (see, for example, A/CN.9/WG.III/WP.29, para. 84). Another alternative available would be for the Working Group to change the limited network system under draft article 27 into an "unlimited" network system, thus allowing for the application of all relevant mandatory provisions of unimodal transport conventions where those conventions would be applicable. Such an alternative, however, would require a revision of the policy direction earlier taken by the Working Group in favour of a limited network system, which in the view of the Working Group would promote greater uniformity than an unlimited one (see A/CN.9/544, paras. 23, 24 and 47).

C. Treatment of non-localized loss or damage

32. The draft convention complements the limited network system for localized damage with a uniform system for the case of non-localized loss or damage. Indeed, draft article 27, paragraph 2, refers to draft article 64, paragraph 2, which provides that, in case of non-localized loss or damage, the highest limit of liability found in the various international instruments that could govern the different legs of the transport should apply.

33. Draft article 64, paragraph 2, was inserted following a request made at the Working Group's eleventh session. At that time, the view was expressed that the liability limits set out in the Hague-Visby Rules were too low to be acceptable as a default rule in case of non-localized damage, and that higher limits of liability should apply in case of non-localized damage. It was also suggested that the draft instrument should be amended to reflect the policy that, should the carrier wish to avoid the higher limit of liability, it should bear the burden of proving in which leg of the carriage the damage had occurred (see A/CN.9/526, para. 264). The Working Group discussed draft article 64, paragraph 2, at its twelfth session, when it was decided to keep the provision in square brackets, pending the decision of the Working Group on the liability limit set forth in draft article 64, paragraph 1 (see A/CN.9/544, paras. 43-50).

34. At the time draft article 64, paragraph 2, was proposed, it was questioned why the draft instrument should apply as a default rule in case of non-localized damage. In response, the view was reiterated that the main consideration regarding that matter should be to ensure predictability and certainty regarding the liability regime applicable to non-localized damage (see A/CN.9/526, para. 262). This conclusion flows logically from the very wording of draft article 27, which was conceived as an exception to the overall regime of the draft convention. It is implicit in the liability

system established by the draft convention that in cases where it cannot be established that loss of or damage to goods or delay occurred “before the time of their loading on to the ship” or “after their discharge from the ship to the time of their delivery to the consignee” (i.e. if the damage is not “localized”), the regime of the draft convention will apply.

35. The Working Group might wish to note that, under a uniform system for non-localized damage, a conflict with unimodal transport conventions of mandatory application might arise, in theory, in cases where (a) any such convention were to be interpreted so as to cover a contract that included carriage by modes other than the mode primarily governed by that convention; and (b) one could argue that the liability provisions of such convention could apply even if it was not proved that the damage occurred during carriage by the mode specifically covered by the convention in question (i.e. non-localized damage). If the liability rules of the draft convention and of such competing unimodal convention differed, an action might lead to different outcomes depending under which convention it was brought. In practice, however, it is suggested that such a conflict would be unlikely to arise in view of the fact that the draft convention effectively limits direct actions under the draft convention to actions between the contractual parties to the maritime contract of carriage and to actions against the maritime performing party. As the shipper, consignee or other interested party would not be privy to a subcontract of carriage by a mode other than sea carriage that might be covered by other conventions, the shipper, consignee or other interested party would not normally be entitled to sue the subcontracting carrier directly under the draft convention.

36. In any event, the Working Group may find it desirable to coordinate more clearly the legal regimes governing localized damage under article 27, paragraph 1 and non-localized damage under article 64, paragraph 2, as has been suggested earlier (see A/CN.9/526, para. 266). Such a clarification might be useful even if draft article 64, paragraph 2, were not retained in the draft convention, as it would clarify the exceptional nature of the limited network system under article 27 and clearly spell out the fact that the draft convention would introduce a uniform liability system for door-to-door carriage, which even opponents of the limited network system have said to be one of the main contributions that the draft convention might offer.¹⁹ A possible clarifying provision might read along the following lines:

“Except where otherwise provided in [article 27, paragraph 1 and 64, paragraph 2], the liability of the carrier and the maritime performing party for loss of or damage to the goods, or for delay, shall be solely governed by the provisions of this Convention.”

¹⁹ “If the network system in the draft were to be expanded as suggested however, the draft instrument could do a lot of good in the field of intermodal transport. It would create more uniformity in the area of international sea carriage law, and it would fill up some holes concerning for example the liability in case of unlocalized loss under multimodal contracts by virtue of a complementary effect to existing unimodal conventions” (Krijn Haak and Marian Hoeks, *op. cit.*, p. 102).

D. Other instances of possible derogation from mandatory regimes of non-maritime transport conventions

37. The combined effect of draft article 27, paragraph 1, with the implicit uniform system for the carrier's liability in respect of non-localized damage is that, at least as regards the determination of the carrier's liability, the applicable rules are generally clear: if the damage is localized, the provisions that specifically provide for carrier's liability, limitation of liability, or time for suit of other conventions of mandatory application shall apply; if the damage is not localized, the draft convention applies. Obviously, the question as to how much of the other convention needs to be preserved to govern the carrier's liability for localized damage still needs to be further considered by the Working Group. As a matter of principle, however, the rules offer a workable solution for determining the carrier's liability. Combined with the limitation of actions under the draft convention only to actions against the carrier and the maritime performing party, the overall features of this system may avoid conflicts of liability regimes. It is submitted that the draft convention therefore already offers a workable means for dealing with what, in practice, is likely to be the main source of private disputes arising out of a contract of carriage under the draft convention (i.e. the carrier's liability for cargo loss or damage, or for delay).

38. However, as indicated above (see above, para. 18), the draft convention currently does not provide a system to avoid conflicts with other conventions in respect of matters other than the carrier's liability that may be governed by those conventions. Possible areas where the provisions of the draft convention may differ from those contained in some other conventions governing carriage by other modes of transportation have been identified earlier, and include certain aspects of matters such as obligations and liability of the shipper for damage caused by the goods; obligations of the shipper to furnish information; transport documents; right of control; delivery of the goods and transfer of rights (see A/CN.9/WG.III/WP.29, paras. 72-105).

39. It is assumed that the scope of conflict is already reduced by the way the draft convention circumscribes its scope of application. As stated in the reply by the UNCITRAL Secretariat to the IRU letter (see above, para. 20), the draft convention and the CMR are by the very terms of their scope of application intended to apply to different contracts of carriage:

“... the draft convention carefully limits its application to the master maritime contract of carriage under which the carrier undertakes to carry goods from one place to another and which must provide for international carriage by sea, while the CMR applies to international contracts of carriage by road, including to any subcontracts for international road carriage that may exist under the master maritime contract. The application of these two instruments is thus intended to be mutually exclusive.”

40. These considerations may apply, *mutatis mutandis*, to carriage by other modes of transportation. However, as indicated earlier (see A/CN.9/WG.III/WP.29, paras. 115-116), this conclusion presupposes that the scope of application of conventions dealing with carriage of goods by other modes of transportation would not be interpreted in a manner that would lead those conventions to apply to the type of carriage that the draft convention is intended to cover.

41. Of course, it is not possible for the draft convention to dictate how the scope of application of other conventions must be read. While the possibility of some overlap between the draft convention and other conventions may not be entirely excluded, it is submitted that the likelihood of residual conflict has already been greatly reduced by the combined effect of the provisions on the coordination of liability regimes for both localized and non-localized damage and by the definition of the scope of application of the draft convention (draft art. 1, subpara. (a), in conjunction with and draft art. 8).

E. Relation between draft article 89 and draft article 90

42. At the Working Group's eleventh session, the Secretariat was requested to draft a conflict of conventions provision for possible insertion into the text of the draft convention should it be necessary in addition to draft article 27 to resolve conflicts with other transport conventions (see A/CN.9/526, para. 250). This request was made after the Working Group had heard concerns that current draft article 27, paragraph 1, might not solve the issue of conflict of conventions, since it gave preference only to specific provisions of applicable unimodal transport conventions. At that time, it was also said that certain States would find it impossible to be signatory to more than one multimodal convention, and that if the draft instrument was a multimodal instrument, ratification of it could preclude some States from ratifying broader multimodal conventions. A further concern was that States parties to other instruments that have multimodal aspects, such as the Montreal Convention and COTIF, might have to denounce those conventions in favour of the draft instrument (A/CN.9/526, para. 246). Further to that request, draft article 89, which is based on article 25, paragraph 5, of the Hamburg Rules, was provisionally inserted in the draft text to provide that the draft convention would not displace the application of other international instruments already in force at the date of the conclusion of the draft convention and which would apply mandatorily to contracts of carriage of goods by a mode of transport other than carriage by sea.

43. At the same session, the Secretariat was also requested, in connection with the discussion of what was then draft article 16.1 (in A/CN.9/WG.III/WP.21), and is currently draft article 91 (in A/CN.9/WG.III/WP.56), to clarify the prevalence of the draft convention over earlier transport treaties incompatible with the draft convention (see A/CN.9/526, para. 196). Thus, draft article 90, indicating the prevalence of the draft convention over other treaties to which the parties to the draft convention might also be a party, was inserted in the draft convention. It was further clarified that, in line with article 30, paragraph 4, of the Vienna Convention on the Law of Treaties, the provision would not affect those States which would not become a party to the draft convention (see A/CN.9/WG.III/WP.32, footnote 232).

44. When taken outside the context from which they originate, draft article 89 and draft article 90 seem to reflect two opposite approaches to dealing with conflict of conventions so that the joint operation of the two draft articles, as currently worded, would not appear to be possible.

45. Draft article 89 preserves the application of unimodal transport conventions of mandatory application. This provision may be understood as complementary to the adoption in the draft convention (and, in particular, in its draft article 27, para. 1) of a limited network system to deal with liability in door-to-door transportation. Draft article 89 could indeed be read to mean that the limited precedence given by

draft article 27, paragraph 1, to mandatory liability provisions of other transport conventions in the relations between the carrier and the shipper or the consignee does not otherwise affect the operation of any other transport convention that may mandatorily apply to the relations between the carrier and a non-maritime performing party. However, draft article 89 might also be read as conflicting with draft article 27, paragraph 1, by giving general precedence over the draft convention to other transport conventions in respect of matters other than liability (to which draft art. 27, para. 1, already refers), even in the relations between the carrier and the shipper or consignee, and not only in the relations between the carrier and the subcontractor whose activities would usually fall under the scope of the other transport convention.

46. Draft article 90, in turn, indicates the prevalence of the draft convention over all other conventions incompatible with its provisions, including those relating to non-maritime carriage of goods. It seems that draft article 90 is intended to facilitate the general adoption of a uniform system to deal with liability in door-to-door transportation. In its current formulation, however, and when read in isolation, draft article 90 might also be interpreted as a general clause relating to the prevalence of the draft convention over all treaties that might contain provisions incompatible with the draft convention.

47. In the light of the above, the Working Group may wish to reconsider both articles 89 and 90 in light of the provisions and policy options to which they are logically related.

48. The arguments that prompted the inclusion of draft article 89 show some similarity to the arguments voiced in favour of the inclusion of article 25, paragraph 5, of the Hamburg Rules during the United Nations Conference on the Carriage of Goods by Sea (Hamburg, 6-31 March 1978). Article 25, paragraph 5, was added to the Hamburg Rules following the adoption of the final definition of “contract of carriage by sea”, in article 1, paragraph 6, of the Hamburg Rules, which provides that “a contract which involves carriage by sea and also carriage by some other means is deemed to be a contract of carriage by sea for the purposes of this Convention only in so far as it relates to the carriage by sea”. At that time, it was said, that this slightly expanded notion of “contract of carriage” made it necessary to include a provision that preserved the application of other conventions that might cover transport by more than one mode because the Hamburg Rules could not solve “the general problem of the international regulation of multimodal transport”, as it lacked “provision for cases in which the place where damage had occurred was unknown” as well as “uniform rules to regulate certain procedural matters”.²⁰ Indeed it appears that most supporters of the inclusion of article 25, paragraph 5, of the Hamburg Rules were concerned with the fact of bringing carriage primarily conducted through means other than sea carriage under the umbrella of a convention that only applied to the sea-borne part of multimodal transport.²¹

49. The Working Group may wish to note the substantive differences between the Hamburg Rules, where the responsibility of the carrier only covers the period

²⁰ *Official Records of the United Nations Conference of the Carriage of Goods by Sea (Hamburg, 6-31 March 1978)* (United Nations publication, sales No. E.80.VIII.1), part II, Summary records of meetings of the Second Committee, 7th meeting (A/CONF.89/C.2/SR.7), paragraph 50; see also *ibid.*, 9th meeting (A/CONF.89/C.2/SR.9), paragraph 9.

²¹ *Ibid.*, 7th meeting (A/CONF.89/C.2/SR.7), paragraphs 39-62; 8th meeting (A/CONF.89/C.2/SR.8), paragraphs 4-30; 9th meeting (A/CONF.89/C.2/SR.9), paragraphs 2-34.

“during which the carrier is in charge of the goods at the port of loading, during the carriage and at the port of discharge”, and the draft convention, which may extend “door-to-door”. Furthermore, unlike the Hamburg Rules, the draft convention expressly provides for the legal regime that should govern the carrier’s liability for localized damage under multimodal transportation and extends otherwise its own liability regime for all cases where damage has not been localized. In the context of the Hamburg Rules, article 25, paragraph 5, served the purpose of dispelling possible concerns that the inland leg of a multimodal transportation under a contract of carriage to which the Hamburg Rules applied might be left in a legal vacuum. The Working Group may wish to consider that the context of the draft convention is quite different from the Hamburg Rules and that, accordingly, there might not be the same need for a provision along the lines of draft article 89, at least in the same formulation as in the Hamburg Rules.

50. Moreover, if the Working Group were to conclude that the intended purpose of draft article 89 was to complement the limited network system under draft article 27, paragraph 1, the Working Group might wish to consider that the provision, which was proposed before the adjustments made to the treatment of performing parties (see above, paras. 24 and 25) may not be needed. Indeed, the entire liability system of the draft convention is now limited to the carrier and the maritime performing party, and the draft convention is not concerned with the legal regime governing any subcontracts that may be entered into by the carrier for transportation other than sea carriage. The Working Group may wish to consider that it is not appropriate for the draft convention, which clearly defines its own scope of application, to venture into what law, pursuant to its own terms, should apply to the relations between the carrier and a non-maritime performing party. In any event, if the Working Group still felt a need for draft article 89, it would seem advisable to clarify the relationship between draft article 89 and draft article 27, paragraph 1.

51. On the other hand, if the Working Group were to conclude that the intended purpose of draft article 89 is to give general precedence to other transport conventions also in respect of matters other than liability (for which there is a specific rule in draft art. 27, para. 1), the Working Group might wish to consider that draft article 89 is incompatible with the limited nature of the network system provided for in draft article 27, paragraph 1.

52. Similarly, as regards draft article 90, if the Working Group were to conclude that the rationale for this provision was originally to offer a complementary solution for conflicts of diverging liability regimes in international conventions, the Working Group may wish to consider that this provision, too, is not needed, and would in any event conflict with draft article 89, if that provision is retained. Indeed, draft article 90 was inserted at a time when the draft convention did not explicitly limit direct actions under the draft convention to actions between the contractual parties to the overarching maritime contract of carriage, and may have become obsolete since the types of conflicts that draft article 90 was intended to settle might in the meantime have been avoided by the refined scope of application of the draft convention, following the Working Group’s almost unanimous support for the exclusion of non-maritime performing parties from the liability regime of the draft instrument (see A/CN.9/544, paras. 20-27).

53. Should the Working Group, in turn, regard draft article 90 as a general rule aimed at solving possible residual conflicts with other conventions in areas other than the liability of the carrier (see above, para. 38), the Working Group may still

wish to consider whether the range of possible conflict situations that this draft article would be intended to solve would justify the inclusion of such a far-reaching provision. The Working Group may wish to note that clauses of general prevalence are not common in international trade law treaties. They are in fact more frequent in other instruments, especially those that establish international intergovernmental organizations (see, for instance, art. 103 of the Charter of the United Nations).

IV. Relation between the draft convention and other international legal instruments

54. Draft article 16 of the draft convention in A/CN.9/WG.III/WP.21 contained a draft provision on the relation of the draft convention with conventions relating to: limitation of liability relating to the operation of vessels; carriage of passengers and their luggage by sea; and damage caused by nuclear incidents. Those provisions, whose content was inspired by article 25, paragraphs 1, 3 and 4, of the Hamburg Rules, are currently draft articles 91, 92 and 93 of the draft convention.

55. The Working Group may wish to consider that these provisions, by affirming the continued application of those other conventions, adequately avoid possible conflicts between them and the draft convention.

**I. Note by the Secretariat on the preparation of a draft convention
on the carriage of goods [wholly or partly] [by sea] — Identity of
carrier — Drafting proposal by the Governments of Italy and
the Netherlands, submitted to the Working Group on
Transport Law at its eighteenth session
(A/CN.9/WG.III/WP.79) [Original: English]**

In preparation for the eighteenth session of Working Group III (Transport Law), the Governments of Italy and the Netherlands submitted to the Secretariat the proposal attached hereto as an annex with respect to the identity of carrier in the draft convention on the carriage of goods [wholly or partly] [by sea].

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Identity of carrier

1. This proposal is intended to address practical problems relating to transport documents that are unclear as to the identity of the carrier. It tries to take into account the observations made by delegates when draft article 40 (3) was discussed previously.¹

2. The premises of the proposal are that the evidentiary function of a transport document entails that any holder of the document must be able to ascertain from the document itself who the carrier is. In principle, research into the contractual relations between the shipper and the carrier should not be needed in order to find out who the carrier is.

3. The first practical problem addressed in this proposal is the matter of an unclear face of the document. Such face may include certain names that legally may be the carrier's booking agents or its trade name only. However, it is important that the carrier is *identified* as such on the document.² Therefore, it is proposed that article 38 (e) is redrafted as follows:

“(e) the name and address of a person identified as carrier;”

4. A second practical problem is that the carrier is identified on the face of the document (often in the signature box), while the small print at the reverse of the same document includes a clause on the identity of carrier or a demise clause that refers to the owner of the carrying vessel as the carrier. Often, these two indications of the carrier's identity are in conflict. The ambiguity resulting therefrom may be solved by making the information on the face of the document to prevail over the

¹ See A/CN.9/526, paras. 56-60 and A/CN.9/WG.III/WP.62, paras. 27-34.

² This is in line with the requirements of articles 23 (a)(i) and 26 (a)(i) of the ICC Uniform Customs and Practice for Documentary Credits 500 (UCP 500). However, these articles also accept bills of lading signed by the master of the carrying vessel without the carrier being identified.

information at the reverse side. For this purpose the following language is suggested:

“If a person is on the face of a transport document or electronic record identified as the carrier, any information on the reverse side of the transport document or electronic record expressly or impliedly identifying a different person as the carrier shall have no legal effect.”

5. Thirdly, from the document it may not be sufficiently clear who the carrier is. At present, many transport documents do not comply with the requirement of draft article 38 (e). The most common example is the document signed by (or on behalf of) the master. In such case it is rarely stated whether the master has signed pursuant to the authority of the owner of the vessel or the authority of somebody else, such as a time- or voyage charterer. Under many national jurisdictions case law has developed dealing with this matter and some jurisdictions may have statutory provisions too. However, these solutions at national level are far from uniform. To address this issue, the current draft article 40 (3) introduces a rebuttable presumption that the registered owner is the carrier. However, in previous discussions this draft provision gave rise to several critical questions. Therefore, hereunder is a new and more refined draft suggested as a replacement of the current draft of article 40 (3) that may address most of the concerns raised:

“If no person is identified in the transport document or electronic record as the carrier or its name and address is not included therein, but the contract particulars indicate that the goods have been loaded on board of a named ship, then the registered owner of that ship is presumed to be the carrier, unless it proves that the ship was under a bareboat charter at the time of the carriage and it identifies this bareboat charterer and indicate its address, in which case this bareboat charterer is presumed to be the carrier.

Alternatively, the owner may defeat the presumption of being the carrier by identifying the carrier and indicating its address. The bareboat charterer may defeat any presumption of being the carrier in the same manner.”

6. If the draft proposed in the previous paragraph would be accepted, a consequential provision is needed to the effect that the one year prescription period must be extended for cases that the presumption is rebutted. A draft could be:

“If the owner has identified the bareboat charterer and has provided its address, or any of them has identified the carrier and provided its address, the period mentioned in article 69 shall not run from the date of institution of judicial or arbitral proceedings against the registered owner or bareboat charterer until the lapse of 90 days from the date when the relevant information is provided by the owner or the bareboat charterer as the case may be.”

7. Finally, as a drafting matter it is suggested to the secretariat to delete the current draft article 40 (3) and, instead, to create a new article to be placed between the current articles 38 and 39 that, if adopted, includes the drafts outlined in the paragraphs 4, 5 and 6 above. Such new article may bear the heading:

“Identity of carrier”

**J. Report of the Working Group on Transport Law on the work of
its nineteenth session (New York, 16-27 April 2007)**

(A/CN.9/621) [Original: English]

Revised text of draft article 12	44-49
Chapter 5. Obligations of the carrier	50-62
Draft article 13. Carriage and delivery of the goods	50-51

Draft article 14. Specific obligations	52-54
Draft article 15. Goods that may become a danger	55-57
Draft article 16. Specific obligations applicable to the voyage by sea	58-62
Chapter 6. Liability of the carrier for loss, damage or delay	63-117
Draft article 17. Basis of liability	63-74
Draft article 18. Liability of the carrier for other persons	75-82
Draft article 19. Liability of maritime performing parties	83-97
Draft article 20. Joint and several liability and set-off	98-105
Draft article 22. Calculation of compensation	106-109
Draft article 23. Notice of loss, damage or delay	110-117
Chapter 7. Additional provisions relating to particular stages of carriage	118-126
Draft article 24: Deviation during sea carriage	118-119
Draft article 25: Deck cargo on ships	120-126
Chapter 1. General provisions	127-153
Draft article 1. Definitions	127
Paragraphs 6 and 7 — “performing party” and “maritime performing party”	128-138
Paragraph 8 — “non-maritime performing party”	139-140
Revised text of draft articles 1 (6) and 1 (7) (“performing party” and “maritime performing party”); and draft articles 4, 18 and 19	141-153
Chapter 19. Validity of contractual terms	154-176
Draft article 88. General provisions	155-160
Draft article 89. Special rules for volume contracts	161-172
Draft article 90. Special rules for live animals and certain other goods	173-176
Liability for delay in delivery of the goods	177-184
Draft article 26. Carriage preceding or subsequent to sea carriage	185-193
Paragraph 2 of draft article 62 (2) regarding the limits of liability	194-203
Draft article 84. International conventions governing the carriage of goods by air	204-206
Chapter 8. Obligations of the shipper to the carrier	207-263
Draft article 27. Delivery for carriage	207-213

Draft article 28. Obligations of the shipper and the carrier to provide information and instructions	214-216
Draft article 29. Shipper's obligations to provide information, instructions and documents	217-219
Draft article 30. Basis of shipper's liability to the carrier	220-238
Revised text of draft article 30	239-243
Draft article 31. Information for compilation of contract particulars	244-248
Draft article 32. Special rules on dangerous goods	249-253
Draft article 33. Assumption of the shipper's rights and obligations by the documentary shipper	254-256
Draft article 34. Liability of the shipper for other persons	257-260
Draft article 35. Cessation of shipper's liability	261-263
Chapter 9. Transport documents and electronic transport records	264-304
Draft article 36. Issuance of the transport documents or the electronic record	266-268
Draft article 37. Contract particulars	269-277
Draft article 38. Identity of the carrier	278-288
Draft article 39. Signature	289-293
Draft article 40. Deficiencies in the contract particulars	294-297
Draft article 41. Qualifying the description of the goods in the contract particulars	298-300
Draft article 42. Evidentiary effect of the contract particulars	301-302
Draft article 43. "Freight prepaid"	303-304
III. Other business	305
Planning of future work	305

Introduction

1. At its thirty-fourth session, in 2001, the Commission established Working Group III (Transport Law) and entrusted it with the task of preparing, in close cooperation with interested international organizations, a legislative instrument on issues relating to the international carriage of goods such as the scope of application, the period of responsibility of the carrier, obligations of the carrier, liability of the carrier, obligations of the shipper and transport documents.¹ The Working Group commenced its deliberations on a draft convention on the carriage of goods [wholly or partly] [by sea] at its ninth session in 2002. The most recent compilation of historical references regarding the legislative history of the draft convention can be found in document A/CN.9/WG.III/WP.80.

2. Working Group III (Transport Law), which was composed of all States members of the Commission, held its nineteenth session in New York from 16 to 27 April 2007. The session was attended by representatives of the following States members of the Working Group: Algeria, Argentina, Australia, Austria, Belarus, Benin, Brazil, Cameroon, Canada, Chile, China, Colombia, Czech Republic, Ecuador, France, Gabon, Germany, Guatemala, India, Iran (Islamic Republic of), Italy, Japan, Kenya, Lebanon, Mexico, Morocco, Nigeria, Pakistan, Republic of Korea, Russian Federation, Singapore, South Africa, Spain, Sweden, Switzerland, Thailand, Tunisia, Turkey, Uganda, United States of America, Venezuela (Bolivarian Republic of) and Zimbabwe.

3. The session was also attended by observers from the following States: Burkina Faso, Burundi, Congo, Costa Rica, Côte d'Ivoire, Cyprus, Democratic Republic of the Congo, Denmark, Dominican Republic, El Salvador, Finland, Ghana, Greece, Holy See, Indonesia, Kuwait, Latvia, Lesotho, Malaysia, the Republic of Moldova, Netherlands, New Zealand, Niger, Norway, Panama, Peru, Philippines, Romania, Saudi Arabia, Senegal, Ukraine and Yemen.

4. The session was also attended by observers from the following international organizations:

(a) **Intergovernmental organizations:** Asian-African Legal Consultative Organization, European Commission;

(b) **International non-governmental organizations invited by the Working Group:** Association of American Railroads (AAR), BIMCO, Comité Maritime International (CMI), European Shippers' Council (ESC), Ibero-American Institute of Maritime Law (IAIML), International Chamber of Commerce (ICC), International Chamber of Shipping (ICS), International Federation of Freight Forwarders Associations (FIATA), International Group of Protection and Indemnity (P&I) Clubs, International Multimodal Transport Association (IMMTA), International Union of Marine Insurance (IUMI), Maritime Organization of West and Central Africa (MOWCA), The European Law Students' Association International (ELSA), and the World Maritime University (WMU).

¹ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17 and corrigendum (A/56/17 and Corr.3)*, para. 345.

5. The Working Group elected the following officers:
Chairman: Mr. Rafael Illescas (Spain)
Rapporteur: Mr. Walter de Sá Leitão (Brazil)
6. The Working Group had before it the following documents:
 - (a) Annotated provisional agenda and corrigendum (A/CN.9/WG.III/WP.80 and A/CN.9/WG.III/WP.80/Corr.1);
 - (b) The draft convention on the carriage of goods [wholly or partly] [by sea] and corrigendum (A/CN.9/WG.III/WP.81 and A/CN.9/WG.III/WP.81/Corr.1);
 - (c) A document outlining the position of the French National Committee of the International Chamber of Commerce (ICC France) (A/CN.9/WG.III/WP.82);
 - (d) A document describing the position of the European Shippers' Council (A/CN.9/WG.III/WP.83);
 - (e) A proposal of the Government of the United States of America on the definition of "maritime performing party" (A/CN.9/WG.III/WP.84);
 - (f) A drafting proposal by the Government of Sweden on shipper's obligations (A/CN.9/WG.III/WP.85);
 - (g) A proposal of the governments of Denmark, Norway and Finland on draft article 37 (1)(a) regarding contract particulars (A/CN.9/WG.III/WP.86);
 - (h) A document containing comments of the International Chamber of Shipping (ICS), BIMCO and the International Group of P&I Clubs on the draft convention (A/CN.9/WG.III/WP.87);
 - (i) A joint proposal of the governments of Australia and France concerning volume contracts (A/CN.9/WG.III/WP.88);
 - (j) A document containing proposals of the Government of France regarding the linkage between the draft convention on the carriage of goods wholly or partly by sea and the conventions applicable to land or air transport (A/CN.9/WG.III/WP.89);
 - (k) Proposals by the International Road Transport Union (IRU) concerning articles 1 (7), 26 and 90 of the draft convention (A/CN.9/WG.III/WP.90);
 - (l) A proposal of the Government of the United States of America on carrier and shipper delay (A/CN.9/WG.III/WP.91); and
 - (m) A joint proposal by Australia and France on freedom of contract under volume contracts (A/CN.9/612).
7. The Working Group adopted the following agenda:
 1. Election of officers.
 2. Adoption of the agenda.
 3. Preparation of a draft convention on the carriage of goods [wholly or partly] [by sea].
 4. Other business.
 5. Adoption of the report.

I. Deliberations and decisions

8. The Working Group continued its review of the draft convention on the carriage of goods [wholly or partly] [by sea] (“the draft convention”) on the basis of the text contained in the annex to a note by the Secretariat (A/CN.9/WG.III/WP.81). The Working Group was reminded that the text contained in that note was the result of negotiations within the Working Group since 2002. The Working Group agreed that while the provisions of the draft convention could be further refined and clarified, to the extent that they reflected consensus already reached by the Working Group, the policy choices should only be revisited if there was a strong consensus to do so. Those deliberations and conclusions are reflected in section II below (see paras. 9 to 304 below). Note that all references to A/CN.9/WG.III/WP.81 in the following paragraphs are intended to indicate A/CN.9/WG.III/WP.81, as corrected by A/CN.9/WG.III/WP.81/Corr.1.

II. Preparation of a draft instrument on the carriage of goods [wholly or partly] [by sea]

Chapter 1. General provisions

Draft article 1. Definitions

9. The Working Group agreed to defer its discussions of article 1 until agreement had been reached on the substantive articles relating to the terms defined in draft article 1.

Draft article 2. Interpretation of this Convention

10. The Working Group recalled that the text contained in draft article 2 corresponded to that contained in A/CN.9/WG.III/WP.56. Noting that the text represented standard text in many international conventions, the Working Group approved the substance of the text contained in draft article 2.

Draft article 3. Form requirements

11. The Working Group considered the text in draft article 3 to be acceptable pending further examination as to the cross-references contained therein. The Working Group also agreed that it might be desirable to include within the final text an explanatory note to the effect that any notices contemplated in the draft convention that were not expressly mentioned in draft article 3 might be made by any means including orally or by exchange of data messages that did not meet the definition of “electronic communication”.

Draft article 4. Applicability of defences and limits of liability

12. Noting that draft article 4 referred to “maritime performing party”, it was agreed that discussion of the term be deferred until draft articles 18 and 19, which dealt generally with performing parties, were considered.

13. It was questioned whether there was a need to include draft article 4 given that draft article 5 already set out the scope of application of the draft convention. It was suggested that in many jurisdictions, courts might extend the defences and limits of

liability provided by the draft convention to other parties acting on behalf of the carrier even without a provision such as draft article 4. In response, it was noted that the provision was useful in certain jurisdictions. It was further pointed out that the draft article corresponded to similar provisions contained in the Hague-Visby and Hamburg Rules. It was said that its deletion might be interpreted as a reversal of the rule contained in those earlier conventions.

14. Support was expressed for the structure and underlying policy of draft article 4 but it was noted that, as currently drafted, the draft article appeared to apply only in respect of actions against the carrier. It was suggested that draft article 4 be extended to apply to shippers insofar as shipper liability was covered by the draft convention. That proposal received support.

15. Secondly, a concern was expressed that, as drafted, draft article 4 referred only to “defences and limits of liability” which might be too narrow and fail to protect the right of the carrier to a proper forum under the draft convention. It was suggested that draft article 4 be reviewed to ensure that it had the same intended effect in all jurisdictions.

16. A question was raised as to the meaning of the term “or otherwise”. It was suggested that those words were helpful to encompass claims other than contractual or tort claims such as claims in restitution or arising out of quasi-contract. It was agreed that the term should be retained to ensure that the draft article was broad enough to cover situations that might arise in different legal systems.

17. The Working Group adopted the definitions contained in paragraphs (5), (9) and (25) of draft article 1 in substance. Although it was deemed unnecessary in some legal systems, the Working Group agreed to retain draft article 4 and to extend its coverage to apply also to shippers to the extent that shipper liability was covered by the draft convention. In respect of the phrase, “or otherwise” the Working Group agreed to retain this phrase and requested the Secretariat to review its utility. In respect of procedural issues, the Working Group agreed that a review be undertaken as to the scope of defences and limits of liability after these terms had been settled.

Chapter 2. Scope of application

Draft article 5. General scope of application

18. The Working Group noted that draft article 5 corresponded to the text contained in draft article 8 of the text contained in A/CN.9/WG.III/WP.56. The Working Group approved the definition of the term “contract of carriage” as contained in draft article 1, paragraph (1). The Working Group also approved the text contained in draft article 5 as set out in A/CN.9/WG.III/WP.81.

Draft article 6. Specific exclusions

19. The Working Group noted that draft article 6 corresponded to draft article 9 of A/CN.9/WG.III/WP.56. A suggestion was made that as charterparties were not part of regularly scheduled transport, paragraph (1)(a) should be deleted and instead a reference should be made to wording such as “contract for the use of space on a vessel”.

20. It was noted that draft article 6 represented a compromise text and caution was expressed about reopening matters settled in that provision. It was noted that, in

general, there was a distinction between liner transportation and charterparties but that charterparties were occasionally used in liner carriage and thus the draft convention should address these new developments. As well, it was recalled that the Working Group had previously agreed that the coverage under the new convention should be at least as broad as what was already covered under the Hague and Hague-Visby Rules, which also applied to contracts of carriage under bills of lading in non-liner transportation.

21. For purposes of clarification, a number of drafting proposals were made. It was proposed to delete the term “contracts” in subparagraph (1)(b) of draft article 6 and replace it with “other contractual arrangements” and to delete the term “contract” in subparagraph (2)(a) of draft article 6 and replace it with “other contractual arrangement between the parties”. As well it was proposed that the words after “thereon”, namely “between the parties, whether such contract is a charterparty or not” be deleted. While there was support for these proposals, the Working Group agreed that the Secretariat should first ascertain whether they in fact merely clarified and did not have substantive effect on the scope of draft article 6. The Working Group accepted the provision, subject to drafting clarification.

Draft article 7. Application to certain parties

22. A question was raised as to whether the reference to consignors in draft article 7 was appropriate as it gave the impression that the draft convention regulated the relationship between the carrier and consignor. Even though it was agreed that the draft convention did not regulate the relationship between the carrier and consignor in all cases, the Working Group noted that the draft convention did regulate that relationship in some specific cases and therefore, it was important to mention the consignor in article 7. It was suggested that the draft article should be reviewed and possibly a cross reference to draft article 79 should be included to ensure that draft article 7 did not impact adversely on any arbitration agreement contained in a bill of lading held by a third party. That proposal was supported. The Working Group accepted the provision, subject to any necessary cross-reference.

Chapter 3. Electronic transport records

23. The Working Group was reminded that its most recent consideration of draft chapter 3 on electronic transport records was at its fifteenth session (see A/CN.9/576, paras. 180 to 210). The consideration by the Working Group of the provisions of chapter 3 was based on the text as found in A/CN.9/WG.III/WP.81.

Draft article 1 definitions relevant to chapter 3

24. The Working Group considered the text of the definitions in draft article 1 that were thought to be closely connected to the text of chapter 3: paragraph 16 on “transport document”; paragraph 17 on “negotiable transport document”; paragraph 18 on “non-negotiable transport document”; paragraph 20 on “electronic transport record”; paragraph 21 on “negotiable electronic transport record”; paragraph 22 on “non-negotiable electronic transport record”; and paragraph 23 on the “issuance” and “transfer” of a negotiable electronic transport record. It was recalled by the Working Group that those definitions had been the result of expert consultations with Working Group IV on electronic commerce, and that, along with the entire chapter, those provisions were considered to be both carefully drafted and

of a very technical nature. A view was expressed that the definition of “non-negotiable transport document” as found in draft article 1 (18) could possibly be deleted as redundant, but a preference was articulated for retaining the provision in order to maintain the goal of having an electronic equivalent for any paper document in the draft convention.

Conclusions reached by the Working Group regarding draft article 1 definitions relevant to chapter 3

25. The Working Group was in agreement that the definitions in draft article 1 set out in the paragraph above were acceptable as found in A/CN.9/WG.III/WP.81.

Draft article 8. Use and effect of electronic transport records;

Draft article 9. Procedures for use of negotiable electronic transport records;

Draft article 10. Replacement of negotiable transport document or negotiable electronic transport record; Draft article 59 (2)

26. The Working Group next considered the text of draft chapter 3, consisting of draft articles 8, 9 and 10, as well as the text of draft article 59 (2), which, it was recalled, had been discussed together as part of the group of provisions in the draft convention concerning electronic commerce when the Working Group had last considered the chapter. It was recalled that those provisions had also been the result of expert consultations with Working Group IV on electronic commerce, and that they were considered to be both carefully drafted and of a very technical nature.

Conclusions reached by the Working Group regarding chapter 3 and draft article 59 (2)

27. The Working Group was in agreement that the provisions of chapter 3 and of draft article 59 (2) were acceptable as set out in A/CN.9/WG.III/WP.81.

Chapter 4. Period of responsibility

Draft article 11. Period of responsibility of the carrier

28. The Working Group was reminded that its most recent consideration of draft article 11 on the period of responsibility of the carrier was at its sixteenth session (see A/CN.9/591, paras. 190 to 208). The Working Group proceeded to consider draft article 11 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1

29. Clarification was requested regarding the different definitions of “carrier” (draft article 1 (5)) and of “performing party” (draft article 1 (6)) in the draft convention, such that the definition of “performing party” included employees, agents and subcontractors, while the definition of “carrier” did not. The question was raised whether this might cause ambiguity regarding when the period of responsibility commenced if the goods were received by the employee or agent of the carrier, and not by the carrier itself. It was explained that the draft convention had specifically attempted to avoid agency issues, but that at times, it was thought to be important to stress that a particular provision was intended to include carriers acting through their agents, and thus the term “carrier or performing party” had been

used, but that as a general matter, the employees of carriers would be included in the provision by virtue of their inclusion in the definition of performing parties.

Paragraph 2

30. Concern was expressed regarding the text of draft paragraph 2, since it was thought that the text as currently drafted confused the contractual time and location of receipt and delivery with the actual time and location of receipt and delivery. The view was expressed that, in any event, the location of delivery was irrelevant for the purposes of determining the period of responsibility of the carrier, and it was suggested that adjustments should be made to the text of draft paragraph 2 to reflect that view. However, there was support for the view that both the time and location of receipt for carriage and delivery were important to the definition of the period of responsibility, and that, in any event, setting the parameters of those terms was important for other provisions in the draft convention. It was further explained that draft paragraph 2 was intended as a further clarification of draft paragraph 1, and there was agreement that that relationship should be more clearly set out.

31. A question was also raised regarding whether the text of draft paragraph 2 (b) created a potential gap in the period of responsibility of the carrier, since unloading of the goods by the carrier to a warehouse owned by the carrier would signal the end of the period of responsibility of the carrier pursuant to draft paragraph 2 (b), but it was suggested that the period should extend to the time when the consignee actually collected the goods. In response, it was explained if there were storage by the carrier, it would likely be pursuant to an agreement between the shipper and the carrier, or pursuant to custom or usage, and that if there were no such agreement or custom, storage of the goods would fall within draft article 50 which was intended to work in conjunction with draft article 11 to avoid any gap in the responsibility of the carrier.

Drafting suggestions

32. In order to clarify the relationship between draft paragraphs 1 and 2, it was suggested that the phrase “For the purposes of paragraph 1 of this draft article” be added at the beginning of draft paragraph 2. Further, it was noted that draft article 2 (b) referred to “discharge or unloading”, while draft article 4 (b) referred only to “discharge”, and it was suggested that reference to “discharge” should be deleted, and that the term “unloading” should be used in both instances. Finally, clarification was requested regarding the consequences of a contract of carriage that violated draft paragraph 4, and modifications were suggested to the provision to the effect that a provision in the contract of carriage would be void to the extent that it violated the provisions of draft paragraph 4.

Conclusions reached by the Working Group regarding draft article 11

33. The Working Group was in agreement with the intended purpose of draft article 11 as set out in A/CN.9/WG.III/WP.81, and agreed with the drafting suggestions set out in the paragraph above. In addition, the Secretariat was requested to consider possible improvements that could be made to draft paragraph 1, in order to clarify the relationship between draft paragraphs 1 and 2 of the provision, and to consider how to revise the text to ensure that the period of responsibility of the carrier would not commence if the shipper failed to deliver the goods to the carrier as stipulated in the contract of carriage.

Draft article 12. Transport not covered by the contract of carriage

34. The Working Group was reminded that its most recent consideration of draft article 12 on transport not covered by the contract of carriage was at its ninth session (see A/CN.9/510, paras. 41 to 42). The Working Group proceeded to consider draft article 12 as contained in A/CN.9/WG.III/WP.81.

35. The Working Group was reminded that two alternatives for the second sentence of the provision appeared in the text in square brackets, for consideration by the Working Group.

36. As a general remark, the view was expressed that the text of draft article 12 seemed unusual, since it seemed to suggest that the carrier was doing a favour for the shipper rather than providing a service, and that in so doing, the carrier could limit any potential liability it incurred in fulfilling that service. It was also suggested that draft article 12 appeared in general to allow carriers to offer additional services to shippers. However, it was said that the provision might give rise to abuses by carriers wishing to avoid responsibility for the proper provision of that service. In response, it was observed that draft article 12 was intended to cover the situation where the shipper specifically requested the additional service, in the form of a so called “mixed contract”, that is, partly one of carriage, and partly one of freight forwarding, that could be covered by a single transport document. In addition, it was clarified that the intention of the draft article was, in fact, to emphasize that the scope of the draft convention was limited to coverage of the contract of carriage, but through this specific provision the draft convention would accommodate the situation where the carrier performed additional services for the shipper beyond the contract of carriage, at the risk and for the account of the shipper. By including a provision such as draft article 12, the intention was not to eliminate the carrier’s obligation in the performance of the additional service, but to emphasize that any liability arising from it was not pursuant to the contract of carriage, and was thus necessarily outside the scope of the draft convention. However, such additional service as performed by the carrier would still be subject to liability under other applicable legal regimes.

37. Some strong views were expressed in support of the deletion of draft article 12. However, it was noted that the draft provision was intended to eradicate a form of abuse, where the carrier would include standard form clauses in the contract of carriage to the effect that the carrier was only liable if it carried the goods on its own vessel. While such provisions were said to be less common today, it was suggested that draft article 12 was intended to protect shippers from such abuse, and that its deletion could allow this abusive practice to persist, creating ambiguity and unfairness. The prevailing view in the Working Group was in favour of retaining the draft provision.

The first variant of the second sentence

38. Support was expressed for the approach taken in the first variant of the second sentence set out in square brackets, particularly since requests by shippers for through bills of lading were increasingly a part of modern maritime carriage and in keeping with industry practice, for example, in cases where the carrier could not perform the inland carriage or the shipper’s own merchant haulage arrangements were required, but where a documentary credit required that the transport be covered by a single transport document. There was support in the Working Group for the approach taken in the first variant of the second sentence of the text, that

when the carrier acted as agent of the shipper outside of the carrier's obligations in the contract of carriage, the carrier should only be responsible as agent, and should not be subject to the draft convention with respect to those additional services.

39. However, concern was expressed that the text of the first variant was not clear as drafted, and a number of modifications to it were suggested. One suggestion was that the carrier should be liable for the entire period for which it arranged the additional carriage on behalf of the shipper. The view was also expressed that the text was unclear regarding whether the carrier had any liability to a third party document holder, and it was suggested that this type of provision could create a problem regarding the identity of the carrier, which might be dealt with under draft article 38. There was agreement within the Working Group that the drafting of the provision should be improved and clarified. One suggestion to assist in the clarification of the provision was to make clear in the title that it concerned a "mixed contract." It was also noted that the provision used two different terms, "specified transport" and "additional transport", and it was suggested that a review should be had in order to make consistent use of terminology.

40. Additional concern was raised regarding the apparent creation of an additional obligation of the carrier, which could entitle it to limit its liability for a breach of an obligation "under this Convention" pursuant to text of draft article 62 (1), even though the breach of obligation did not arise from the contract of carriage. A solution proposed to remedy this problem was to adjust the first variant to read: "If the carrier arranges the additional transport as provided in such transport document or electronic transport record, the carrier is deemed to do so on behalf of the shipper." Support was expressed in the Working Group for this proposed adjustment to the text of the first variant as set out in the second sentence of draft article 12.

The second variant of the second sentence

41. Some support was expressed for the approach taken in the second variant of the second sentence set out in square brackets. However, some modifications to that text were suggested, such as including in it the phrase, "unless otherwise agreed" in order to ensure that the text was only a default provision. An additional view was expressed that certain aspects of the second variant could be retained and expressed in the text of the provision as redrafted from the first variant. However, the Working Group did not take up the second variant of the second sentence in draft article 12.

Location of draft article 12 in the text

42. It was suggested that draft article 12 should be moved to another location in the text, possibly for insertion in chapter 5 following draft article 18.

Conclusions reached by the Working Group regarding draft article 12

43. After discussion, the Working Group decided that:

- The text of draft article 12 should be retained in the draft convention, incorporating the approach taken in the first variant of the second sentence, but clarifying the text considerably in light of the concerns set out in paragraphs 34 to 41 above; and
- Consideration should be given to the proper placement of the provision in the text of the draft convention.

Revised text of draft article 12

44. In light of the decisions made by the Working Group with respect to the text of draft article 12 (see above, para. 43), the Working Group continued its deliberations on the following revised text of the provision:

“Article 12. Transport not covered by the contract of carriage

“On the request of the shipper, the carrier may agree to issue a single transport document or electronic transport record that includes specified transport [that is not covered by the contract of carriage] [in respect of which it is not the carrier]. In such event, the responsibility of the carrier covers only the period of the contract of carriage. If the carrier arranges the transport that is not covered by the contract of carriage as provided in such transport document or transport record, the carrier does so on behalf of the shipper.”

45. It was explained that the revised text of draft article 12 contained alternative text in two sets of square brackets, and that the first set of square brackets contained text taken from draft article 12 as it appeared in A/CN.9/WG.III/WP.81, while the second set contained what was intended to express the same principles, but in clearer drafting. Further, the second sentence of the revised provision was said to be taken from the first variant of the text as it appeared in A/CN.9/WG.III/WP.81, as preferred by the Working Group, while the third sentence was included in order to describe, but not to regulate, the legal relationship between the carrier and the shipper, when the carrier arranged for additional carriage.

46. Support was expressed in the Working Group for the second variant in square brackets as being clearer than the first, and as being somewhat more in keeping with the text of the similar provision in article 11 of the Hamburg Rules, that referred to “a named person other than the carrier”. While there remained some expressions of a preference to delete the draft provision from the text, the Working Group was reminded that it had already made the decision to retain the concept of the text of draft article 12, subject only to redrafting. Some support was also expressed in the Working Group in favour of the first alternative in square brackets.

47. A suggestion was made to include both phrases in square brackets in the text, joining them with the word “and”, in order to make the meaning of the provision as clear as possible. There was broad support for this approach in the Working Group. Concern was raised that including both phrases might lead to confusion, since courts might conclude that the two phrases had different content or that both had to be satisfied in order to meet the requirements of the provision. There was some sympathy for that concern, and it was suggested that greater clarity could be achieved by inserting text along the lines of “and in respect of which is therefore not the carrier” after the first variant.

48. By way of further clarification, it was noted that the third sentence of the revised text was intended to make clear that if the carrier arranged transport that was not covered by the contract of carriage, the carrier who entered into the contract for that particular additional carriage would be the carrier for that leg, and that that carrier would be liable for the carriage under applicable law.

Conclusions reached by the Working Group regarding revised draft article 12

49. After discussion, the Working Group decided that:
- The alternative phrases in square brackets should both be retained and made conjunctive, possibly using text such as “and in respect of which is therefore not the carrier”, and the square brackets around them deleted;
 - The text of revised draft article 12 was otherwise acceptable to the Working Group.

Chapter 5. Obligations of the carrier**Draft article 13. Carriage and delivery of the goods**

50. The Working Group proceeded to consider article 13 as set out in A/CN.9/WG.III/WP.81. It was questioned why the phrase “place of destination” was used rather than the phrase “place of delivery” which was used elsewhere in the draft convention, such as in subparagraph 1 (c) of draft article 5. Support was expressed for the principle that there should be consistency in the use of terminology in the draft convention unless the use of different terminology was justified. In response, it was said that the use of the term “place of destination” was appropriate in the current context to clarify the main obligations of the carrier and distinguish it from the place of unloading which was often erroneously seen as a synonym of the place of destination. That view was supported.

Conclusions reached by the Working Group regarding draft article 13

51. The Working Group was in agreement that the text in draft article 13 as contained in A/CN.9/WG.III/WP.81 was acceptable.

Draft article 14. Specific obligations

52. The Working Group considered draft article 14 as contained in A/CN.9/WG.III/WP.81. It was proposed to add the words “and is the responsibility of” following the words “is to be performed by” in paragraph 2. It was said that these words were necessary given that paragraph 2 provided a derogation from draft article 14, paragraph 1 and should extend to permitting such derogation when the parties agreed that it should be responsibility of the shipper. In response, it was said that the current wording of draft article 14 represented a compromise and that the inclusion of a reference to the responsibility of the shipper would be confusing, in particular in the context of Chapter 8, which dealt with the obligations of the shipper to the carrier.

53. It was also said that the wording in paragraph 2 was overly broad and should be restricted so as to preclude carriers from routinely disclaiming liability for damage to the goods that occurred during the operations contemplated in the draft article. In response, it was said that the provision was not too broad, since it focused on very specific tasks, and was clearly restricted to loading, handling, stowage or discharge of the goods. It was suggested that draft article 14 should be read in the context of subparagraph 17 (3)(i) which provided an exoneration of the responsibility of the carrier for any loss or damage caused to the goods when the shipper carried out those tasks.

Conclusions reached by the Working Group regarding draft article 14

54. The Working Group was in agreement that the text in draft article 14, as set out in A/CN.9/WG.III/WP.81, was acceptable.

Draft article 15. Goods that may become a danger

55. The Working Group recalled that the concept of “an illegal or unacceptable danger” to the environment that appeared in the text in A/CN.9/WG.III/WP.56 had been changed to refer to a “danger to the environment” as an effort to introduce a more objective standard for the carrier to apply in respect of goods that might become a danger. However, it was said that that formulation might set a lower standard than the standard that applied under other international maritime conventions and might make it too easy for the carrier, for example, to find a justification for destroying the goods. Notwithstanding a suggestion to revert to the language contained in A/CN.9/WG.III/WP.56 by restoring the words “an illegal or unacceptable danger” to the environment, the Working Group recalled that that formulation had been rejected for the reason that it would be difficult for the carrier to judge when a danger to the environment was “illegal” or “unacceptable” under the laws of the various jurisdictions in which carriers operated. Instead, it was proposed that the word “reasonably” be inserted before the words “appear likely to” to introduce an objective standard against which a decision by the carrier to destroy allegedly dangerous goods could be measured.

56. A suggestion was made to add the words “and security of any country” at the end of draft article 15 to deal with matters that might not affect persons or goods but would nevertheless impact adversely on a country’s general security. That proposal did not receive sufficient support.

Conclusions reached by the Working Group regarding draft article 15

57. The Working Group agreed that the word “reasonably” be added before the words “appear likely to” in the text in draft article 15 as set out in A/CN.9/WG.III/WP.81. Subject to that amendment, the Working Group was in agreement that the text of draft article 15 was acceptable.

Draft article 16. Specific obligations applicable to the voyage by sea**Paragraph 1**

58. A proposal was made to delete subparagraphs (b) and (c) of draft article 16 (1) for the reason that the substance of both subparagraphs was already encompassed by subparagraph (a) which referred to making and keeping the ship seaworthy. However, support was expressed for maintaining separate subparagraphs. It was said that the formulation set out in subparagraphs (a), (b) and (c) represented the approach long taken in the Hague Rules and the Hague-Visby Rules. The only change that had been made was to render the carrier’s obligation of a continuing nature, that is, one that applied throughout the voyage, rather than only before it started. It was cautioned that any departure from those well-known standards of due diligence could create problems in interpretation.

Conclusions reached by the Working Group regarding paragraph 1 of draft article 16

59. The Working Group agreed that the paragraph (1) of draft article 16 as set out in A/CN.9/WG.III/WP.81 was acceptable and should be retained.

Paragraph 2

60. The Working Group recalled that it had previously approved the substance of paragraph 2 but that the location of the paragraph was still to be determined. It was noted that the purpose of draft article 15, which focussed on destroying or rendering harmless dangerous goods, was entirely different from the purpose of draft article 16, paragraph 2, whereby goods not necessarily of a dangerous nature were sacrificed in the interests of common safety.

61. Some support was expressed for including paragraph 2 in chapter 17 on general average if that chapter were to be retained in the final text of the draft convention. A suggestion was made to place the paragraph in the article on deviation if the chapter on general average were ultimately not retained. It was pointed out that although the exercise of the rights under paragraph 2 by the carrier might give rise to claims in general average in some cases, it would not do so in all cases. Thus it was said that it might be more appropriate to place the text in paragraph 2 in a separate article. That proposal was supported.

Conclusions reached by the Working Group regarding paragraph 2 of draft article 16

62. The Working Group agreed that the text contained in paragraph 2 of draft article 16 and set out in A/CN.9/WG.III/WP.81 was acceptable, that the square brackets should be deleted and the text therein be retained in a separate article, possibly numbered as article 16 bis.

Chapter 6. Liability of the carrier for loss, damage or delay**Draft article 17. Basis of liability**

63. The Working Group was reminded that its most recent consideration of draft article 17 on the basis of liability was at its fourteenth session (see A/CN.9/572, paras. 12 to 80). The Working Group proceeded to consider draft article 17 as contained in A/CN.9/WG.III/WP.81. It was recalled that the text of draft article 17 as currently drafted was the result of a broad and carefully negotiated consensus that emerged from intense discussions in the Working Group over several sessions. It was suggested that the entire structure of the draft article should be kept in mind when considering particular paragraphs, and that caution should be exercised in suggesting any changes to the carefully balanced text.

Paragraph 1

64. The Working Group was in agreement that draft paragraph 1 should be approved as drafted.

Paragraph 2

65. The view was expressed that, while there was broad agreement on the text of draft article 17, certain changes should be made to paragraph 2 in order to remedy some perceived shortcomings. In particular, it was thought that the list set out in paragraph 3 of draft article 17 was exhaustive in terms of events that could relieve a carrier of liability, and that paragraph 6 covered the situation where the damage to the goods was caused only partly by the carrier, but that article 2 allowed the carrier to escape liability where two causes of the damage existed, either of which could have caused the entire loss, but only one of which was attributable to the carrier.

It was suggested that to remedy this perceived shortcoming, the phrases “all or part of” and “or one of the causes” should be deleted from the text of paragraph 2.

66. While some sympathy was expressed for that position, it was pointed out that similar issues had been raised in the Working Group during its fourteenth session, and that the overwhelming view of the Working Group at that time was that it supported the text as currently drafted. Moreover, it was suggested that the apparent problem articulated would be properly solved through the application of the current text even though it did not precisely take the issue into account. Further, it was indicated that the draft convention had deliberately avoided the discussion of issues of causality, leaving it to national law, and that there was thus insufficient reason to disturb the complex series of compromises represented in the drafting of the current text. A suggestion was made for the insertion of a provision clarifying that causation and related matters, such as comparative negligence, were left to national law.

67. The Working Group was in agreement that draft paragraph 2 should be approved as drafted.

Paragraph 3

68. A number of delegations expressed support for the deletion of paragraph 3 of draft article 17, which was said to provide carriers with an excessively generous list of exonerations, while some other delegations suggested that the deletion of error of navigation from this paragraph during previous sessions of the Working Group should be reviewed, or at least borne in mind by the Working Group in assessing the overall balance of liabilities in the draft convention. The Working Group nevertheless expressed its strong support for the inclusion of paragraph 3 as drafted. In support of this position, a number of delegations cited the delicate balance and consensus that was reached by the Working Group in the negotiation of the entire draft article, and the support during past sessions for the inclusion of paragraph 3 in the draft convention.

Bracketed text in subparagraphs (g), (h), (i) and (k)

69. The Working Group next considered the text in paragraph 3 that remained in square brackets. With respect to subparagraph (h), it was suggested that the square brackets around the phrase “the consignor” should be lifted and the text retained since, although the draft convention did not concern itself with matters of agency, it was thought to be good policy that the carrier should not be held liable for acts of the consignor that caused damage to the goods. With respect to subparagraph (i), it was suggested that the square brackets around the phrase “or a performing party” should be removed and the text retained, and that in the case of subparagraph (k), that the square brackets around the text “or on behalf of” should be deleted and the text retained. While there was some support for the deletion of the text in square brackets as found in these subparagraphs, overall, these inclusions were thought to clarify the text of the various subparagraphs, and the Working Group supported the proposals to include them.

70. In the case of subparagraph (g), it was proposed that both of the variants that appeared in square brackets should be deleted along with the words “in the”, thus leaving the text substantially as it appeared in article 4 (2)(p) of the Hague-Visby Rules. Concern was expressed that choosing the “ship” variant would unduly restrict the previously broader approach in the Hague-Visby Rules that included, for example, cranes, but that the alternative “means of transport” was too broad, even

though the draft convention was intended to be a “maritime plus” convention. While some support was expressed for each of these two variants, the prevailing view was that the best approach was to retain the approach taken in the Hague-Visby Rules and delete both variants.

Conclusions reached by the Working Group regarding draft paragraph 3

71. After discussion, the Working Group decided that:

- The text of draft paragraph 3 should be retained in the draft convention as drafted;
- The text in both sets of square brackets in subparagraph (g) should be deleted along with the words “in the”; and
- The text in square brackets in subparagraphs (h), (i) and (k) should be retained and the brackets deleted.

Paragraph 4

72. A proposal to add the phrase “listed in paragraph 3” after the word “circumstance” in subparagraph (a) was not accepted, and the Working Group was in agreement that draft paragraph 4 should be adopted as drafted.

Paragraph 5

73. A proposal to shift the burden of proof in subparagraph (a) of the draft provision from the claimant to the carrier in order to reduce the burden of proof on the shipper was not accepted by the Working Group. In response to a question regarding the intention of subparagraph (b) of the text, it was clarified that the intended scheme of paragraph 5 was that the cargo claimant would have to prove the probable cause of the loss, damage or delay under subparagraph (a), and that subparagraph (b) provided the carrier with the possibility of counterproof. It was observed that any ambiguity regarding this intention should be rectified. The Working Group was in agreement that draft paragraph 5 should be adopted as drafted, with any necessary clarification as noted above.

Paragraph 6

74. The Working Group was in agreement that draft paragraph 6 should be approved as drafted.

Draft article 18. Liability of the carrier for other persons

Paragraph 1

75. Noting that paragraph 1 (b) of draft article 19 and article 34 related to auxiliary persons to the maritime performing party and to the shipper, respectively, it was proposed that the language used in both the articles should be mirrored in paragraph 1 of draft article 18, which dealt with auxiliary persons to the carrier. It was proposed that paragraph 1 (b) be redrafted along the following lines, “any person to which the carrier has entrusted the performance of any of its obligations under the contract of carriage”. It was said that that redraft would provide a simpler formulation that would better clarify that the carrier was not responsible for the acts of a person under its supervision or control if that person had not been entrusted with the performance of the carrier’s obligations. That proposal was not supported.

Conclusions reached by the Working Group regarding paragraph 1

76. The Working Group agreed to retain the text of paragraph 1 as contained in A/CN.9/WG.III/WP.81.

Paragraph 2

77. Some support was expressed for retention of the text set out in paragraph 2, which was currently contained in square brackets. It was said that its retention would promote greater international uniformity. However, strong support was expressed for the deletion of the paragraph for the reason that determination of the scope of employment contracts or agency should be left to national law. In response, it was pointed out that, as drafted, paragraph 2 did not affect national law and that its application even relied on rules of national law. Furthermore, the provision was not concerned with the carrier's own employees but only with the carrier's vicarious liability for the acts of other parties. If an employee acted outside his or her employment contract, a carrier would probably not be relieved of liability given that that event would not be covered by the list contained in draft article 17 (3). Nevertheless strong support was expressed for the deletion of paragraph 2 in order to leave matters of the scope of employment contracts and agency to national law.

Conclusions reached by the Working Group regarding paragraph 2

78. The Working Group agreed to delete the text of paragraph 2 as contained in A/CN.9/WG.III/WP.81.

Paragraph 3

79. The Working Group proceeded to consider a proposal as contained in A/CN.9/WG.III/WP.85 (see para. 3) to clarify by adding a new paragraph 3 to article 18 that a carrier would not be liable for loss of or damage to the goods to the extent that it was attributable to an act or omission of another shipper. It was noted that the proposal was aimed at addressing the concern expressed at an earlier session that, under the draft convention, carriers might nevertheless be found liable to other shippers with goods on board that vessel for a delay caused by only one shipper (A/CN.9/616, para. 103).

80. Some support was expressed for the inclusion of the proposed text. It was suggested that, notwithstanding the Working Group's support for the exclusion of shipper liability for delay from the draft convention, a shipper could still cause delay and damage to other shippers. Nevertheless, if the Working Group agreed to include the proposed text, its placement and wording should still be considered. The proposed text might fit better in article 17, paragraph 3, which dealt with carrier liability. It was also said that the proposed additional language which referred to "another shipper" was ambiguous and should instead refer to "another shipper under another contract of carriage".

81. The Working Group, however, was of the view that the proposed text was unnecessary as its content was already adequately covered by the liability regime set out in draft article 17.

Conclusions reached by the Working Group regarding proposal to add paragraph 3 of draft article 18

82. The Working Group did not support the proposal to add paragraph 3 of draft article 18 as contained in A/CN.9/WG.III/WP.85.

Draft article 19. Liability of maritime performing parties

83. It was clarified that the language in the bracketed text in paragraph 1 of draft article 19 was intended to ensure that maritime performing parties would not be covered by the draft convention if they did not perform any of their activities in a Contracting State. Whilst there was some support for the deletion of the bracketed text, there was strong support for the retention of the language. In that respect, it was pointed out that the exclusion of maritime performing parties did not mean that carriers would not be liable for the acts of these performing parties. Rather, it meant that the shipper or consignee would not have a direct cause of action against the maritime performing party under the draft convention, and that such maritime performing party would not automatically enjoy the same exoneration and limits on liability that applied to the carrier under the draft convention.

Conclusions reached by the Working Group regarding paragraph 1

84. The Working Group agreed to retain the text of paragraph 1 of draft article 19 as contained in A/CN.9/WG.III/WP.81 and delete the brackets.

Paragraph 2

85. The Working Group proceeded to consider paragraph 2 of draft article 19 as set out in A/CN.9/WG.III/WP.81. The Working Group took the view that, in light of the decision taken to delete paragraph 2 of draft article 18, paragraph 2 of draft article 19 should also be deleted.

Conclusions reached by the Working Group regarding paragraph 2

86. The Working Group decided that the text in paragraph 2 of draft article 19 as found in A/CN.9/WG.III/WP.81 should be deleted.

Paragraph 3

87. Given the broad formulation of the definition of maritime performing party, a proposal was made to delete paragraph 3 for the reason that it would not be fair to the consignee to allow a carrier to enforce the limitation of liability with respect to additional obligations or to higher liability limits that it agreed to, but to refuse to bind the maritime performing party to those same limits absent express agreement. However, support was expressed for retention of that paragraph. It was said that if the contractual carrier agreed to increase liability beyond that provided for in the draft convention, it would be illogical to impose such liability on the maritime performing party who might not even be a party to that agreement.

Conclusions reached by the Working Group regarding paragraph 3

88. The Working Group was in agreement that the text in paragraph 3 of draft article 19 as found in A/CN.9/WG.III/WP.81 should be retained, subject to any changes to cross-references that might be necessary once the text of the draft convention was finalized.

Paragraph 4

General comments and placement

89. Support was expressed for the general policy behind paragraph 4, which was to afford employees, agents and subcontractors of the carrier and maritime performing parties the full protection of the rights, defences and limits of liability available to the carrier under the draft convention for any breach of its contractual obligations or duties in the event that an action under the draft convention was made directly against it, a protection which was often sought through the insertion of so-called “Himalaya” clauses in transport documents. It was agreed that the term “defences and limits of liability” should be interpreted broadly, as had been agreed by the Working Group in connection with draft article 4.

90. A concern was expressed that it was not clear whether or not employees of the carrier were dealt with anywhere else than paragraph 4 in the draft convention. For example, subparagraph 1 (b) of draft article 18, which referred to persons that performed the carrier’s obligation, did not appear to encompass the carrier’s employees. It was suggested that a Himalaya clause should be extended to apply to any person who assisted the carrier in performing its duties. To that end, a proposal was made to expand paragraph 4 so as to encompass the full category of parties that performed the carrier’s obligations under the draft convention, including its employees and agents. A suggestion was made that the master and crew of the ship should also be covered as well as independent contractors. A view was expressed that the existing definitions of performing party and maritime performing party were broad enough to include these persons. Given the different possible interpretations, it was agreed that these definitions should be clarified. In that respect, it was stated that, in the situation where crew members were not employees of the carrier but rather employees of the ship owner or of a crew company should also be taken into account.

91. It was proposed that, as paragraph 4 dealt with matters different from exemptions for maritime performing parties, it might be more appropriately located following article 4 in Chapter 1 of the draft convention which dealt with general provisions. Some support was expressed for that suggestion.

Bracketed text

92. The Working Group proceeded to consider the three alternative bracketed texts.

93. Some support was expressed for the retention of the first bracketed text. However, it was suggested that if the first bracketed text, which referred only to maritime performing parties, were retained, then paragraph 4 could be deleted as it was already covered by paragraph 1 of draft article 19.

94. Strong support was expressed for retaining the second bracketed text. In that respect, it was noted that article 4 bis (2) of the Hague-Visby Rules extended the protection of a Himalaya clause to servants or agents of the carrier, as such protection was not always valid in all jurisdictions.

95. Some support was expressed for the third bracketed text for the reason that it was said to better reflect that the draft convention applied to multimodal rather than traditional port-to-port transportation. It was suggested that the words “or subparagraph 1 (a) of this article,” could also be deleted. However, concern was expressed that the third bracketed text appeared to bring agents and servants of

inland carriers within the scope of Himalaya protection which would not be consistent with the Working Group's decision to exclude inland carriers from the scope of the draft convention.

"if [it proves that] it acted within the scope of its contract, employment or agency"

96. Although some support was expressed for its retention, there was a consensus to delete the entire phrase "if [it proves that] it acted within the scope of its contract, employment or agency".

Conclusions reached by the Working Group regarding paragraph 4

97. The Working Group was in agreement that:

- The second bracketed text in paragraph 4 of draft article 19 as found in A/CN.9/WG.III/WP.81 be retained without the brackets;
- Paragraph 4 and the definitions of "performing party" and "maritime performing party" be reconsidered and possibly redrafted to specify who precisely was covered by the Himalaya protection clause and consideration be given as to whether the crew, master, independent contractors and employees of the carrier were also covered;
- The final part of paragraph 4, "if [it proves that] it acted within the scope of its contract, employment or agency" be deleted in accordance with the decision to delete paragraph 2 of article 18 and leave matters relating to the scope of employment contracts and agency to national law (see paras. 77 to 78 above); and
- That the location of paragraph 4 be reconsidered, taking account of the suggestions of the Working Group.

Draft article 20. Joint and several liability and set-off

Paragraph 1

98. The Working Group proceeded to consider paragraph 1 of draft article 20 as set out in A/CN.9/WG.III/WP.81 noting that it contained bracketed text which was intended to clarify what was meant by the term "joint and several liability". Support was expressed for retention of the bracketed text for those jurisdictions where joint and several liability was not well-recognized in order to assist in a harmonized interpretation of those terms. However, opposition was expressed to retaining the text in square brackets, since it was noted that a number of international conventions also used these terms but did not include definitions. Concerns were expressed that the inclusion of such definitions might thus have adverse interpretative consequences. It was also suggested that the definitions were overly simplistic and might not sufficiently capture the subtle differences in the use of the terms in different jurisdictions.

99. A suggestion was made to delete the references to articles 25, 62 and 63 given that these limits would apply regardless of whether or not they were listed. That proposal did not receive sufficient support.

Conclusions reached by the Working Group regarding paragraph 1

100. The Working Group agreed to the deletion of the bracketed text in paragraph 1.

Paragraph 2

101. It was agreed that the phrase “all such persons” was intended to cover all parties that were jointly or severally liable. It was questioned how paragraph 2 would operate in situations where a carrier had contracted out of the provisions of the draft convention, and had increased its liability limit. In response, it was suggested that the overall limit of liability referred to in this provision was intended to include a voluntary increase in the limitation on the carrier’s liability, which would then become the amount referred to in draft paragraph 2.

Conclusions reached by the Working Group regarding paragraph 2

102. The Working Group agreed to retain the text of paragraph 2.

Paragraph 3

103. The Working Group proceeded to consider draft paragraph 3 as set out in A/CN.9/WG.III/WP.81. The Working Group was reminded that the aim of paragraphs 1 and 2 was that the overall limits of liability should not be circumvented by a claimant suing more than one party. Paragraph 3 was included to avoid the possibility that might arise in some jurisdictions that a court might find that a claimant who successfully sued a non-maritime performing party should not have the amount awarded set off against a claim made under the draft convention. It was suggested that paragraph 3, as drafted, was capable of two interpretations: either it operated to set off the amount recovered from suing outside of the draft convention against the total amount of the damage, or it operated to set off the amount recovered from the limitation on liability in the draft convention. There was support for the view that the first interpretation was acceptable, and would, in fact, be the conclusion reached in most jurisdictions, but that the second interpretation was not acceptable. It was clarified that the second interpretation had been the one sought in the original proposal for the inclusion of this paragraph in the draft convention.

104. Support was expressed for the deletion of paragraph 3 as being both unclear in its effect, and for the reason that it might introduce procedural difficulties such as determining who bore the onus of proving whether or not an action had been successfully brought against the non-maritime performing party.

Conclusions reached by the Working Group regarding paragraph 3

105. The Working Group agreed to delete the text of paragraph 3.

Draft article 22. Calculation of compensation

106. The Working Group was reminded that its most recent consideration of draft article 22 on the calculation of compensation was at its thirteenth session (see A/CN.9/552, paras. 32 to 37). The Working Group proceeded to consider draft article 22 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1

107. Bearing in mind that the reference in draft paragraph 1 to draft article 11 might have to be revisited should any adjustments be made to the text of draft article 11, the Working Group was in agreement that draft paragraph 1 should be approved as drafted.

Paragraph 2

108. A suggestion was made that the order of factors to be used in determining the value of goods under draft paragraph 2 should be altered so that the market value would be taken into account before the commodity exchange price. However, that view received insufficient support and draft paragraph 2 was approved as drafted.

Paragraph 3

109. The Working Group was in agreement that draft paragraph 3 should be approved as drafted.

Draft article 23. Notice of loss, damage or delay

110. The Working Group was reminded that its most recent consideration of draft article 23 on notice of loss, damage or delay was at its thirteenth session (see A/CN.9/552, paras. 63 to 87). The Working Group proceeded to consider draft article 23 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1*Legal effect of draft paragraph 1*

111. Concern similar to that expressed during the thirteenth session of the Working Group (see A/CN.9/552, para. 65) was reiterated regarding the operation of draft paragraph 1. There was support for the view that paragraph 1 was unnecessary since the issuance of the notice to the carrier or the performing party, or the failure to provide such a notice, did not affect the respective burdens of proof of the carrier and of the claimant as set out in the general liability regime in draft article 17. Moreover, it was noted that in some jurisdictions, the provision on which this draft article was based, article 3 (6) of the Hague Rules, had caused confusion and had led some courts to conclude that failure to provide such a notice resulted in the loss of the right to claim for loss or damage pursuant to the instrument. As such, the Working Group was urged to delete draft paragraph 1, and, failing that, to make it clear that failure to provide the notice under the draft provision was not intended to have a special legal effect.

112. In response, it was noted that the draft paragraph was not intended to attach a specific legal effect to the failure to provide notice. Nevertheless, the draft provision was intended to have the positive practical effect of requiring notice of the loss or damage as early as possible to the carrier, so as to enable the carrier to conduct an inspection of the goods, assuming there had been no joint inspection. While there was no agreement in the Working Group to reverse its earlier decision to retain the draft paragraph, there was agreement that draft paragraph 1 was not intended to affect the rights of cargo interests to make claims under the draft convention, and that it was in particular not intended to affect the liability regime and burdens of proof set out in draft article 17.

Time period

113. There was some support in the Working Group for the selection of a notice period of three working days from the alternatives appearing in the draft text in square brackets, particularly in light of the purpose of the draft paragraph to encourage that inspections of the damaged goods should take place as early as possible. However, the Working Group expressed a preference that a notice period

of seven working days at the place of delivery should be chosen from among the alternatives presented.

Conclusions reached by the Working Group regarding draft paragraph 1

114. After discussion, the Working Group decided that:

- The text of draft paragraph 1 should be retained in the draft convention as drafted;
- The text in square brackets “seven working days at the place of delivery” should be retained and the brackets removed, and all other alternative time periods in square brackets should be deleted; and
- It should be made clear that draft paragraph 1 was not intended to have any evidentiary effect nor was it intended to conflict with or affect the liability regime and burdens of proof set out in draft article 17 in any way.

Paragraph 2

115. It was agreed that the discussion of this paragraph would be postponed until the broader consideration by the Working Group of shipper and carrier delay.

Paragraph 3

116. It was observed that the phrase “same effect” in draft paragraph 3 referred to the notice referred to in draft paragraph 1, which was thought in that context to have no special legal effect (see above, para. 112). The Working Group was in agreement that draft paragraph 3 should be approved as drafted.

Paragraph 4

117. The Working Group agreed that draft paragraph 4 should be adopted as drafted.

Chapter 7. Additional provisions relating to particular stages of carriage

Draft article 24. Deviation during sea carriage

118. The Working Group was reminded that its most recent consideration of draft article 24 on deviation during sea carriage was at its thirteenth session (see A/CN.9/552, paras. 100 to 102). The Working Group proceeded to consider draft article 24 as contained in A/CN.9/WG.III/WP.81.

119. The Working Group agreed that draft article 24 should be approved as drafted.

Draft article 25. Deck cargo on ships

120. The Working Group was reminded that its most recent consideration of draft article 25 on deck cargo on ships was at its thirteenth session (see A/CN.9/552, paras. 103 to 117). The Working Group proceeded to consider draft article 25 as contained in A/CN.9/WG.III/WP.81. A general remark was made questioning whether chapter 7 was the appropriate placement for draft article 25.

Paragraphs 1, 2, 3 and 4

121. The Working Group agreed that draft paragraphs 1, 2, 3 and 4 should be approved as drafted.

Paragraph 5

122. It was noted that draft paragraph 5 appeared in the text in square brackets, and that the provision also contained four sets of square brackets in the text itself.

Text of the entire paragraph and placement

123. The view was expressed that draft paragraph 5 should be deleted in its entirety, and that in all cases under the draft convention, resort should be had to draft article 64 in the cases of loss of or damage to goods improperly carried as deck cargo. It was clarified, however, that the intention of draft paragraph 5 was not to lower the general threshold for the loss of the benefit of the limitation on liability in draft article 64, which should be kept as the general rule under the draft convention. It was appropriate, however, to treat a breach by the carrier to its express promise to carry goods under deck as a case warranting a special sanction.

124. There was broad agreement in the Working Group that the square brackets around the draft paragraph should be lifted and the text of the paragraph retained. A proposal was made that the draft paragraph should be moved to become a new subparagraph of draft article 24 but was not taken up. However, there was agreement to the drafting suggestion that the phrase “not entitled to limit its liability” in draft paragraph 5 should be adjusted to be consistent with the phrase used in draft article 64 “not entitled to the benefit of the limitation of liability”.

“[expressly]”, “[[that solely][to the extent that such damage] resulted from their carriage on deck]”

125. The Working Group next considered the text that appeared in square brackets in the draft provision. While there were some views expressed to the contrary, the Working Group agreed to retain the word “expressly” and to delete the square brackets surrounding it; to delete the phrase “that solely”, including square brackets surrounding it; to retain the phrase “to the extent that such damage” and to delete the square brackets surrounding it; and to retain the phrase “resulted from their carriage on deck” and delete the square brackets surrounding the entire final phrase. It was felt that the requirement of an express agreement to trigger the loss of the benefit of the liability limits was important so as to make foreseeable for the carrier its exposure to that sanction. Furthermore, the phrase “to the extent that such damage” was to be preferred over the words “that solely”, since it was in keeping with the general approach to causation in the draft convention.

Conclusions reached by the Working Group regarding draft paragraph 5

126. After discussion, the Working Group decided that:

- The text of draft paragraph 5 should be retained in the draft convention as drafted and the square brackets around it deleted;
- The phrase “not entitled to limit its liability” in draft paragraph 5 should be adjusted to be consistent with the phrase used in draft article 64 “not entitled to the benefit of the limitation of liability”; and

- The draft paragraph should reflect the text chosen by the Working Group from the alternatives presented, as set out in paragraph 125 above.

Chapter 1. General provisions

Draft article 1. Definitions

127. In accordance with its earlier decision to consider definitions in keeping with the consideration of the substantive articles containing defined terms (see para. 9 above) the Working Group proceeded to consider the definitions of “performing party”, “maritime performing party” and “non-maritime performing party” as contained in paragraphs 6, 7 and 8, respectively, of draft article 1 as contained in A/CN.9/WG.III/WP.81.

Paragraphs 6 and 7 — “performing party” and “maritime performing party”

128. The Working Group noted that the definition of “performing party” contained two sentences: the first described a performing party, and the second extended that initial definition to include employees, agents and subcontractors. It was noted that the purpose of the definition of “performing party” was to regulate three different issues, which should not be confused. First, the definition was intended to govern parties that performed the carrier’s activities under a contract of carriage, usually subcontractors, and their joint and several liability with the contracting carrier. Secondly, the definition was aimed at regulating the vicarious liability of the performing party for its employees or others working in its service. Finally, the definition, in conjunction with draft articles 4 and 19, was aimed at extending the protection of the so-called “Himalaya clause” to such employees, agents or subcontractors.

129. It was noted that the definition of “maritime performing party” referred back to the definition of “performing party” and thus it also included employees, agents and subcontractors. It was suggested that, as formulated, the definition could have the unintended effect that any possible contractual liability of a maritime performing party under the contract of carriage could be imposed directly on an employee, agent or subcontractor, and there was support for the view that the definition of “performing party” should be reconsidered to avoid such an unintended consequence. In that respect, it was noted that, as drafted, the unintended consequence of rendering employees directly contractually liable would be inconsistent with many national laws which protected employees from such liability.

130. In response, it was explained that the reason that the definition had been framed so broadly was in order to avoid the privity of contract problem that had arisen in the jurisprudence with respect to Himalaya clauses that allowed for such protection under the clause only for subcontractors, but not for those further down the chain of contracts. In addition, it was said that it was difficult to envisage from both a practical and, in some countries, a legal perspective, a situation where an individual employee would be held responsible as a maritime performing party, including all of the liabilities that would follow therefrom. It was suggested that, in practice, it would be unlikely that a cargo owner would sue an employee directly on the basis that litigants tended to sue those with the greatest financial means to satisfy a judgement. It was cautioned that, if the definition were to be reformulated, care should be taken to avoid the accidental removal of the vicarious liability of employers, and, since reference was made throughout the draft convention to

“performing parties” and “maritime performing parties”, caution was also advised against changes that could have unintended consequences elsewhere in the text.

131. It was suggested that the reformulation of the definition should be considered by the Working Group. It was agreed that any reformulation should consider the substantive articles throughout the text that referred to the definition and should be based on the following guiding principles:

- Carriers and subcontractors should have joint and several liability;
- Carriers and employers should be vicariously liable for their employees; and
- The protection of the so-called “Himalaya clause” should apply to employees in the same way that it applied to employers and not be limited in operation by the principle of privity of contract.

Proposal to exclude rail carriers

132. The Working Group was reminded of its policy decision to exclude inland carriers from the draft convention.

133. As set out in A/CN.9/WG.III/WP.84, a proposal was made that rail carriers, even if performing services within a port, should be excluded from the definition of “maritime performing party.” To that end, it was suggested that the following sentence be added at the end of draft article 1, paragraph 7 (the definition of “maritime performing party”): “A rail carrier, even if it performs services that are the carrier’s responsibilities after arrival of the goods at the port of loading or prior to the departure of the goods from the port of discharge, is a non-maritime performing party.”

134. In support of the proposal, it was suggested that such an exemption was warranted given the practical reality that although rail carriers might be somewhat similar to other inland carriers in that they collected cargo or delivered it for carriage within a port area, rail carriers differed dramatically from other inland carriers in that the ultimate purpose of their services was virtually exclusively to move goods great distances into or out of a port, and not simply to move goods from one place to another within a port.

135. It was questioned whether a specific exemption was necessary given that the existing text of the draft convention made it clear that such inland carriers were almost invariably classified as such and not covered by the definition of maritime performing party, thus falling outside of the scope of the draft convention. In response, it was said that without an express provision, courts would be required to undertake an analysis on a case-by-case basis to determine if a rail carrier was covered by the definition or not. It was said that an express exemption provided clarity and would reduce litigation on that question.

136. Concern was expressed that the consequences of a blanket exemption for rail carriers had not been fully considered. One issue raised was the problem that a catalogue of carriers of various types might seek to be similarly exempted from the scope of application of the draft convention. In addition, a view was expressed that a preferable approach to a blanket exemption might be to provide more clearly in the text that the draft convention did not apply if maritime transport was neither contemplated nor actually performed, since it was suggested that freight forwarders

needed the flexibility to perform contracts of carriage in the manner they saw fit, including the right to use the optimal modes of transport.

137. Further, it was questioned why such an exemption should be limited to rail carriers. Some support was expressed for the view that the proposed exemption should also extend to road carriers (as suggested in A/CN.9/WG.III/WP.90) and possibly to inland barges. In that respect it was said that, unlike rail carriers, truckers might perform purely inland carriage as well as services that were exclusively within the port area, and that therefore any exemption for road carriage might need to be formulated in different terms than that which applied to rail carriage. It was suggested that an exemption for both road and rail carriers might be drafted too broadly and thus exempt truckers who exclusively provided services in the port area and should be treated as “maritime performing parties”. One suggestion to allow for a more nuanced approach to the problem was an exemption drafted along the following lines: “a rail carrier or road carrier is a maritime performing party only when it performs or undertakes to perform its services exclusively within the port area”. That proposal received some support.

Conclusions reached by the Working Group regarding draft paragraphs 6 and 7

138. After discussion, the Working Group decided to postpone its decision on the definitions of “performing party” and “maritime performing party” pending an examination of redrafted provisions, including a possible exemption for rail and possibly other inland carriers from the definition of maritime performing party, taking into account the proposals made in the Working Group.

Paragraph 8 — “non-maritime performing party”

139. The Working Group noted that the term “non-maritime performing party” was only used in draft article 20, paragraph 3. In light of its earlier decision to delete that paragraph (see para. 105 above), the Working Group agreed that that definition be deleted.

Conclusions reached by the Working Group regarding draft paragraph 8

140. The Working Group agreed that the definition of “non-maritime performing party” contained in draft paragraph 8 be deleted.

Revised text of draft articles 1 (6) and 1 (7) (“performing party” and “maritime performing party”); and draft articles 4, 18 and 19

141. In accordance with its earlier decision to reconsider the reformulated definitions of “performing party” and “maritime performing party” as originally contained in paragraphs 6 and 7, respectively, of draft article 1 (see above, para. 138), the Working Group continued its deliberations on the following revised text of those provisions, as well as consequential changes to draft articles 4, 18 and 19:

“Article 1. Definitions

“6. (a) “Performing party” means a person other than the carrier that performs or undertakes to perform any of the carrier’s obligations under a contract of carriage with respect to the receipt, loading, handling, stowage, carriage, care, discharge or delivery of the goods, to the extent that such person acts, either directly or indirectly, at the carrier’s request or under the

carrier's supervision or control. It includes agents or subcontractors of a performing party to the extent that they likewise perform or undertake to perform any of the carrier's obligations under a contract of carriage.

“(b) Performing party does not include:

“(i) an employee of the carrier or a performing party; or

“(ii) any person that is retained, either directly or indirectly, by a shipper, by a documentary shipper, by the consignor, by the controlling party or by the consignee instead of by the carrier.

“7. “Maritime performing party” means a performing party to the extent that it performs or undertakes to perform any of the carrier's obligations during the period between the arrival of the goods at the port of loading of a ship and their departure from the port of discharge of a ship, but, in the event of a trans-shipment, does not include a performing party that performs any of the carrier's obligations inland during the period between the departure of the goods from a port and their arrival at another port of loading. An inland carrier is a maritime performing party only if it performs or undertakes to perform its services exclusively within a port area.

“Article 4. Applicability of defences and limits of liability

“[renumber current article 4 as paragraph 1]

“2. If judicial or arbitral proceedings are instituted in respect of loss or damage [or delay] covered by this Convention against master, crew or any other person who performs services on board the ship or employees or agents of a carrier or a maritime performing party that person is entitled to defences and limits of liability as provided for in this Convention.

“3. Paragraph 2 applies whether judicial or arbitral proceedings are founded in contract, in tort or otherwise.

“Article 18. Liability of the carrier for other persons

“The carrier is liable for the breach of its obligations pursuant to this Convention caused by the acts or omissions of:

“(a) Any performing party;

“(b) Master or crew of the ship;

“(c) Employees or agents of the carrier or a performing party; or

“(d) Any other person that performs or undertakes to perform any of the carrier's obligations under the contract of carriage, to the extent that the person acts, either directly or indirectly, at the carrier's request or under the carrier's supervision or control.

“Article 19. Liability of maritime performing parties

“1. A maritime performing party that initially received the goods for carriage in a Contracting State, or finally delivered them in a Contracting State, or performed its activities with respect to the goods in a port in a Contracting State if the occurrence that caused the loss, damage or delay took place during the period between the arrival of the goods at the port of loading of a ship and their departure from the port of discharge from a ship, when it

has custody of the goods or at any other time to the extent that it is participating in the performance of any of the activities contemplated by the contract of carriage:

“(a) Is subject to the obligations and liabilities imposed on the carrier under this Convention and is entitled to the carrier’s defences and limits of liability as provided for in this Convention, and

“(b) Is liable for the breach of its obligations pursuant to this Convention caused by the acts and omissions of any person to which it has entrusted the performance of any of the carrier’s obligations under the contract of carriage. ...”

142. It was explained that the three guiding principles agreed upon by the Working Group with respect to the reformulation of the definitions of “performing party” and “maritime performing party” (see above, para. 131) had been followed in redrafting the text. In the revised text, “Performing party” was defined narrowly, such that subparagraph (a) detailed the inclusive list, and subparagraph (b) detailed the excluded persons, which was thought to solve the potential problem of the employee of the maritime performing party being held liable pursuant to the draft convention for the actions of its employer. In addition, it was indicated that the list of persons included in the vicarious liability provision of draft article 18 was expanded to specifically include the persons who, the Working Group had decided, should receive such protection. Further, automatic protection was specifically included for the broader category of persons, as agreed by the Working Group, and protection pursuant to draft article 4 was expanded, including small additional changes such as the inclusion of arbitral proceedings in the text of the provision. Certain technical adjustments were also made to draft article 19 (1), such as moving a portion of subparagraph 1 (a) into the chapeau. Finally, it was explained that the last sentence of the definition of “maritime performing party” was intended to exclude specifically from the definition those inland carriers who carried the goods only into or out of the port, as decided by the Working Group.

“by the carrier” in draft article 1 (6)(b)(ii)

143. It was suggested that the closing phrase, “by the carrier” in draft article 1 (6)(b)(ii) could be deleted as redundant. However, it was explained that that phrase was necessary because subparagraph (b) set out the exclusions from the definition, and subparagraph (b)(ii) specifically referred to the situation in draft article 14 (2), where a shipper or other person could agree to perform obligations normally undertaken by the carrier. In such a case, it was clarified, the draft convention should exclude from the definition those retained either directly or indirectly by cargo interests, but that since the carrier itself was also retained by the shipper, the phrase had to be included to ensure that the carrier was not excluded as a “performing party”.

“Inland carrier” in draft article 1 (7)

144. In response to concerns raised that the phrase “inland carrier” did not include carriage by inland waterway, partially due to uncertainties of translation in various language versions of the text, the Working Group affirmed that it intended to include road, rail and inland waterway transport within the term. There was support for a request that that intention be clarified in the text, and for the suggestion that the position of ferries operated by inland carriers also be clarified, perhaps more in

terms of the definition of the contract of carriage of goods by sea than as part of the definition of “maritime performing parties.”

145. In addition, it was noted that the term “inland carrier” might not be ideal, since the word “carrier” was a defined term, and it was suggested that “inland performing party” might be preferable. That suggestion was not favoured, however, as it was thought that it could inadvertently exclude from the definition of “maritime performing party” some inland performing parties who clearly should be included, such as stowage planners, who might do their work exclusively from an office located outside of a port, but who were clearly maritime performing parties.

“trans-shipment” and “port” in draft article 1 (7)

146. A question was raised regarding the exclusion of performing parties in the case of trans-shipment from the definition of “maritime performing party.” While it was acknowledged that the Working Group had agreed to such treatment, concern was raised regarding the apparent gap that such treatment created in the coverage of the draft convention. Nonetheless, the text in this regard was accepted as drafted.

147. An additional drafting point was raised with respect to the second sentence of the definition of “maritime performing party” referring to trans-shipment. It was thought that that sentence could be deleted as being covered by the closing sentence of the definition that only included in its scope inland carriers that performed services exclusively within a port area, thus excluding from the definition those involved in trans-shipment that did not perform services exclusively in a port area, but rather travelled between ports. Some support was expressed for that view, and it was suggested that such an approach could be considered in further drafting adjustments.

148. Concerns were raised, however, that in the case of very large or geographically proximate ports, or different ports that were administered under a single authority, it would be very difficult to determine whether a performing party were performing its services “exclusively within a port area”, and thus very difficult to determine who qualified as “maritime performing parties.” Support was expressed for those concerns, including some support for the suggestion that the Working Group might wish to consider excluding altogether inland carriers from operation of the draft convention. In response, it was noted that the Working Group had previously agreed to leave the determination of what constituted a “port” to local authorities and the judiciary, since views on that topic differed widely according to geographic conditions. It was also indicated that it was difficult to determine whether this would be a serious problem, and that, in any event, the draft convention had left undefined a number of terms given the inability of the instrument to answer every question. In addition, it was noted that the Hamburg Rules referred to the “port” without defining the term. Despite concerns that such an approach to determining the ambit of a particular port could result in unnecessary and expensive litigation to determine the local meaning of “port”, it was agreed that a solution such as the suggested exclusion of all inland carriers would be a policy decision that would have serious consequences throughout the draft convention. As such, the current approach taken in draft article 1 (7) was broadly supported.

Draft article 4

149. It was observed that paragraph 1 of draft article 4 should be amended through the inclusion of “arbitral proceedings” in order to render it consistent with the

additional paragraphs proposed in the revised text. In response to a question regarding the use of the phrase “that person is entitled to defences and limits of liability as provided for in this Convention” in the revised text, it was explained that a different phrase was used from that of the original text in order to clarify that where, for example, a carrier contractually agreed to increase its limitation on liability, a person referred to in draft article 4 would not be bound by that contractual agreement, but would rather be governed by the terms of the draft convention. Support was expressed for that approach, and clarification of the text in that regard was encouraged.

Various drafting issues

150. It was indicated that the definition of “performing party” included agents but excluded employees, and that in some jurisdictions, agents and employees would be treated similarly. In response to a question, it was noted that there was a duplication in draft article 18 that should be corrected, in that subparagraph (a) referred to “any performing party” and subparagraph (c) included “agents”, but that “agents” were already included in the definition of “performing party”. However, it was thought that that issue should be examined more closely, since it might still be necessary to refer to “agents of the carrier” in draft article 18. A further suggestion was made that “agents of the carrier” should be expressly included in the definition of the “performing party.”

151. In response to a question regarding the treatment of employees and agents under draft article 19 (1)(b), it was noted that the phrase “any person to which it has entrusted the performance” was intended to include such persons. However, it was agreed that should any doubt persist in that regard, the master and crew of the ship, employee and agent should be included in the text of draft article 19 (1)(b). A preference was expressed for such a clarification in the text, but a further observation was made that that inclusion should be very specific so as to ensure that it referred to the master and crew of the ship that performed the ocean transport leg for which the maritime performing party was responsible.

152. A question was also raised regarding the inclusion of independent contractors in the Himalaya protection. It was indicated that “subcontractors” were included in the definition of the “performing party” and thus were included under Himalaya protection by virtue of the inclusion of the “performing party”, but it was suggested that if that reference were unclear, consideration could be given to the addition of “independent contractors”.

Conclusions reached by the Working Group regarding the revised text

153. After discussion, the Working Group decided that:

- It was satisfied that the revised text corresponded to its earlier decisions;
- Some drafting suggestions as set out in the paragraphs above should be considered by the Secretariat, including examination of the list of persons excluded from “performing party”; the treatment of “agents” in draft article 1 (6), 4 (2) and 18; and appropriate wording to include inland waterways in the closing sentence of draft article 1 (7);
- The revised text was otherwise generally acceptable to the Working Group.

Chapter 19. Validity of contractual terms

General remarks

154. In accordance with its earlier decision to consider all provisions affecting the scope of application of the draft convention at the current session, the Working Group proceeded to consider the provisions in chapter 19 (Validity of contractual terms) of the draft convention, together with the definition of “volume contracts” (article 1, paragraph 2), once the Working Group had had sufficient time to study and consult on proposals that had been submitted by some delegations on the issue of freedom of contract under the draft convention (joint proposals by Australia and France contained in documents A/CN.9/612 and A/CN.9/WG.III/WP.88).

Draft article 88. General provisions

155. The Working Group was reminded that its most recent consideration of draft article 88 on the validity of contractual terms was at its seventeenth session (see A/CN.9/594, paras. 146 to 153). The Working Group proceeded to consider draft article 88 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1

156. The Working Group was in agreement that draft paragraph 1 should be approved as drafted.

Paragraph 2

157. A suggestion was made that paragraph 2, concerning exclusions or limitations in the contract of carriage to the obligations and liabilities of shippers, should be drafted in similar fashion to paragraph 1 in order to act as a counterbalance to that provision, which concerned exclusions or limitations in the contract of carriage to the obligations and liabilities of carriers. By way of explanation regarding how a shipper's obligations might still be increased despite the fact that there was currently no limit on a shipper's liability in the draft convention, it was noted that a shipper's liability might, for example, be increased from one based on negligence to one of strict liability.

158. While there were some suggestions to delete the paragraph completely, there was agreement in the Working Group to keep the paragraph in the text and to remove the square brackets surrounding it.

159. Some doubts were raised with respect to the word “or increases” which appeared in square brackets in subparagraphs (a) and (b). If the obligations of the shipper being referred to in paragraph 2 were limited to those set out in the draft convention, it was thought that the references to “or increases” should be kept and the brackets deleted. However, if the obligations referred to additional obligations outside of the draft convention, it was said that the references to “or increases” should be deleted from the text. Since, generally speaking, the view of the Working Group was that shippers in the case of this paragraph needed greater protection, as the paragraph related to contracts of carriage other than a volume contract, there was support for the view to retain the references to “or increases” and to delete the square brackets surrounding them. However, it was thought that further consideration should be given to the possibility of confusion regarding which

obligations were being referred to, and possible adjustments should be made to the text to clarify the issue, if necessary.

Conclusions reached by the Working Group regarding draft paragraph 2

160. After discussion, the Working Group decided that:

- The text of draft paragraph 2 should be retained in the draft convention as drafted; and
- The text in square brackets “or increases” should be retained and the brackets removed.

Draft article 89. Special rules for volume contracts

161. The Working Group noted that the text that appeared in draft article 89 was the result of extensive negotiations that had taken place since the Working Group’s twelfth session (Vienna, 6-17 October 2003), and reflected, with some drafting adjustments, a compromise that had been achieved at the seventeenth session of the Working Group (New York, 3-13 April 2006).

162. There was wide support within the Working Group for the notion of freedom of contract and the need to incorporate in the draft convention provisions that took into account commercial reality, in particular the growing use of volume contracts. There was support for the view that shippers were not exposed to any significant risk of being deprived from the protection afforded by the draft convention since shippers were free to enter into volume contracts and negotiate their terms or, alternatively, to ship goods under a transport document fully covered by the draft convention. The choice between one or the other option was within each shipper’s commercial judgement. However, there was strong support for the proposition that, while generally desirable in the case of parties with equal bargaining power, unlimited freedom of contract might in other cases deprive the weaker party, typically small shippers, of any protection against unreasonable unilateral conditions imposed by carriers. It was further said that, as presently drafted, draft article 89, when read in conjunction with the definition of volume contracts in draft article 1, paragraph 2, did not afford the desirable level of protection. The Working Group was reminded that the history of the law of carriage of goods by sea was the history of the gradual introduction of mandatory rules on liability, which nowadays could be found in various international conventions regulating different modes of carriage. As the draft convention was said to be the only international instrument to contain provisions that offered considerable scope for freedom of contract, the Working Group was urged to consider proposals to remedy that situation.

163. Those proposals as contained in A/CN.9/WG.III/WP.88 and A/CN.9/612 included essentially three elements. Firstly, the definition of volume contracts in draft article 1, paragraph 2, should be amended so as to provide for a minimum period and a minimum quantity of shipments, or at least require such shipments to be “significant”. Secondly, the substantive condition for the validity of a volume contract (that is, that it should be “individually negotiated”), and the formal condition for validity of derogations (that the derogation should be “prominently” specified), as provided in draft article 89, paragraph 1, should be made cumulative, rather than alternative, so as to make it clear that both parties to the contract must expressly consent to the derogations. Thirdly, the list of matters on which no derogation was admitted, which currently included only the carrier’s obligation to keep the ship seaworthy and properly crew the ship (art. 16 (1)), and the loss of the

right to limit liability (art. 64), should be expanded so as to cover draft article 17 (basis of the carrier's liability), draft article 62 (limits of liability), draft article 30 (basis of the shipper's liability to the carrier), chapter 5 (obligations of the carrier); and draft articles 28 to 30, and 33 (obligations of the shipper). There were various expressions of support for the proposition that, even if the Working Group were not to accept all of those elements, at least a revision of the definition of volume contracts should be considered, so as to narrow down its scope of application and protect smaller shippers, in view of the potentially very wide share of international shipping that might, in practice, be covered by the current definition of volume contracts. Failure to do so, it was said, might mean that the draft convention would be devoid of practical significance.

164. At that stage, the Working Group was reminded of its past deliberations on the matter and the evolution of the treatment of freedom of contract under the draft convention. It was pointed out that special rules for volume contracts and the extent of freedom of contract that should be afforded thereunder had been under consideration by the Working Group for a number of years. Following the approach taken in previous maritime instruments, the draft convention had been originally conceived as a body of law incorporating essentially mandatory rules for all parties. Thus, the initial version of the draft convention had provided, in relevant part that "any contractual stipulation that derogates from this instrument is null and void, if and to the extent that it is intended or has as its effect, directly or indirectly, to exclude, [or] limit [, or increase] the liability for breach of any obligation of the carrier, a performing party, the shipper, the controlling party, or the consignee" (A/CN.9/WG.III/WP.21, article 17.1).

165. At the twelfth session of the Working Group (Vienna, 6-17 October 2003), however, it had been suggested that more flexibility should be given to the parties to so-called "Ocean Liner Service Agreements" in the allocation of their rights, obligations and liabilities, and that they should have the freedom to derogate from the provisions of the draft convention, under certain circumstances (A/CN.9/WG.III/WP.34, paras. 18-29). It was proposed that such freedom should be essentially granted whenever one or more shippers and one or more carriers entered into agreements providing for the transportation of a minimum volume of cargo in a series of shipments on vessels used in a liner service, and for which the shipper or shippers agreed to pay a negotiated rate and tender a minimum volume of cargo (A/CN.9/WG.III/WP.34, para. 29).

166. At that session, there was broad agreement that certain types of contracts either should not be covered by the draft instrument at all, or should be covered on a non-mandatory, default basis. It was considered that such contracts would include those that, in practice, were the subject of extensive negotiation between shippers and carriers, as opposed to transport contracts that did not require (or where commercial practices did not allow for) the same level of variation to meet individual situations. The latter generally took the form of contracts of adhesion, in the context of which parties might need the protection of mandatory law. The Working Group agreed, however, that the definition of the scope of freedom of contract and the types of contracts in which such freedom should be recognized needed further consideration (A/CN.9/544, paras. 78-82).

167. The Working Group considered a revised proposal on freedom of contract under "Ocean Liner Service Agreements" (A/CN.9/WG.III/WP.42) at its fourteenth session Working Group (Vienna, 29 November-10 December 2004). At that time, the Working Group heard a number of concerns regarding freedom of contract under

Ocean Liner Service Agreements. In particular, it was suggested that it should not be possible for parties to OLSAs to contract out of certain mandatory provisions of the draft instrument. It was also stated that the introduction of a special regime for OLSAs could create market competition-related problems. Concerns were also expressed regarding the protection of small shippers with weak bargaining power who could be subject to potential abuse by carriers through OLSAs. However, it was also said that in current trade practice, small shippers generally preferred to resort to rate agreements, which were not contracts of carriage but which guaranteed a maximum rate without specifying volume, rather than committing to volume contracts, and that the attractiveness of rate agreements combined with market forces would minimize any potential exposure to abuses by carriers under the proposed OLSA regime. Broad support was expressed for the inclusion of OLSA provisions in the draft instrument, subject to these and other concerns (A/CN.9/572, paras. 99-101). The Working Group concluded its deliberations at that stage by deciding that it was not opposed to the inclusion of a provision on OLSAs in the draft instrument, subject to the clarification of issues relating to the scope of application of the draft instrument to volume contracts generally. The Working Group further decided that particular care should be dedicated to the definition of OLSAs and to the protection of the interests of small shippers and of third parties, and that further consideration should be given to examining which provisions, if any, of the draft convention should be of mandatory application in an OLSA. Lastly, the Working Group invited the original proponents of the OLSA proposal to work with other interested delegations on refining the OLSA definition (A/CN.9/572, para. 104).

168. The Working Group reverted to the matter of freedom of contract under “Ocean Liner Service Agreements” at its fifteenth session (New York, 18-28 April 2005). The Working Group was then informed of the outcome of the consultations that had taken place pursuant to the request made at its fourteenth session. It was then suggested that since “Ocean Liner Service Agreements” were a type of volume contract, adjustments could be made to the provisions in A/CN.9/WG.III/WP.44 and to draft articles 88 and 89 in order to subsume OLSAs into the existing approach to volume contracts in the scope of application of the draft instrument. The Working Group concurred with that suggestion (A/CN.9/576, paras. 12, and 14-16). The Working Group then proceeded to consider manners of addressing the concerns that had been expressed at its earlier session, as regards the conditions under which it should be possible to derogate from the provisions of the draft convention. While a view was expressed that no derogation from the provisions of the draft convention should be allowed under any conditions, there was support for derogation to be allowed in some circumstances. The Working Group generally accepted that the following four conditions should be met before it would be possible for a volume contract, or individual shipments thereunder, to derogate from the draft instrument: (a) the contract should be [mutually negotiated and] agreed to in writing or electronically; (b) the contract should obligate the carrier to perform a specified transportation service; (c) a provision in the volume contract that provides for greater or lesser duties, rights, obligations, and liabilities should be set forth in the contract and may not be incorporated by reference from another document; and (d) the contract should not be [a carrier’s public schedule of prices and services,] a bill of lading, transport document, electronic record, or cargo receipt or similar document but the contract may incorporate such documents by reference as elements of the contract (A/CN.9/576, paras. 17-19). The Working Group proceeded to consider the question as to whether there should be mandatory

provisions of the draft convention from which derogation should never be allowed, and if so, what were they. In this respect, the Working Group decided that the seaworthiness obligation should be a mandatory provision of the draft instrument from which derogation was not allowed (A/CN.9/576, paras. 17-19).

169. The Working Group last considered the matter of volume contracts at its seventeenth session (New York, 3-13 April 2006), on the basis of a revised version of the draft convention (A/CN.9/WG.III/WP.56) and amending proposals that had been made following informal consultations (A/CN.9/WG.III/WP.61). At that session, some concerns were reiterated regarding the possible abuse of volume contracts to derogate from the provisions of the draft convention, particularly in cases where volume contracts could involve a large amount of trade. Concerns were raised that it could be seen as inconsistent to have such broad freedom of contract to derogate from a mandatory convention, and the view was expressed that a preferable approach would be instead to list specific provisions that could be subject to derogation. Another view was expressed that the combination of paragraphs 1 and 5 of draft article 95, and of the definition of volume contracts in draft article 1 had addressed earlier concerns regarding sufficient protection for the contracting parties. An additional concern was expressed that while, generally, some freedom of contract was desirable and that volume contracts as such were not necessarily objectionable, it was possible that draft paragraph (1) (b) did not provide sufficient protection for the parties to such contracts (A/CN.9/594, para. 155). Overall, however, strong support was expressed in the Working Group both for the volume contract regime in the draft convention in general, and for the redrafted text of draft paragraph 95 (1) as it appeared in paragraph 49 of A/CN.9/WG.III/WP.61. The view was expressed that the volume contract framework provided an appropriate balance between necessary commercial flexibility to derogate from the draft convention in certain situations, while nonetheless providing adequate protection for contracting parties (A/CN.9/594, para. 156). The Working Group next considered the issue of whether it was desirable to include in the volume contract regime of the draft convention a provision containing a list of absolutely mandatory provisions from which there could be no derogation regardless of any agreement, such as that set out in draft paragraph 95 (4) in paragraph 49 of A/CN.9/WG.III/WP.61. Some concern was raised regarding the inclusion of such a provision in the draft convention, since it was felt that it could be used in the later interpretation of the draft convention to reintroduce the notion of overriding obligations that had been carefully avoided in the drafting of the provisions. However, strong support was expressed for the inclusion of a provision listing the mandatory provisions from which there could never be derogation pursuant to the volume contract regime in the draft convention. It was felt that including a provision such as draft paragraph 95 (4) was an important part of the overall compromise intended to provide sufficient protection for contracting parties under the volume contract framework (A/CN.9/594, para. 160). As regards which provisions should be included in such a list, it was agreed that all of the references in the then draft paragraph 95 (4) as set out in A/CN.9/WG.III/WP.61 should be kept in the text (A/CN.9/594, para. 161).

170. The text that appeared in draft article 89, therefore, was said to be the result of a carefully crafted compromise that had involved extensive negotiations over a number of sessions of the Working Group. There were several expressions of sympathy for the concerns that had been expressed in connection with the treatment of freedom of contract under the draft convention. However, the prevailing view within the Working Group was that the current text of draft article 89 reflected the best possible consensus solution to address those concerns in a manner that

preserved a practical and commercially meaningful role for party autonomy in volume contracts. There was wide agreement within the Working Group that it would be highly unlikely that the Working Group would be in a position to build an equally satisfactory consensus around a different solution, and the Working Group was strongly urged not to make attempts in that direction at such a late stage of its deliberations.

171. It was also noted that a number of delegations that currently advised against revisiting draft article 89 had shared at least some of those concerns and had been originally inclined towards a stricter regime for freedom of contract. While those delegations did not regard draft article 89 in all respects as an ideal solution, it was said that their major concern, namely the protection of third parties, had been satisfactorily addressed by the provisions of paragraph 5 of the draft article. Furthermore, the use of the words “series of shipments” in the definition of volume contracts in draft article 1, paragraph 2, provided additional protection against the risk of unilateral imposition of standard derogations from the draft convention, since occasional or isolated shipments would not qualify as “volume contract” under the draft convention.

Conclusions reached by the Working Group regarding draft article 89

172. After extensive consideration of the various views expressed, the Working Group rejected the proposal to reopen the previously-agreed compromise and approved the text of draft article 89 that had previously been accepted in April 2006 (see A/CN.9/594, paras. 154 to 170).

Draft article 90. Special rules for live animals and certain other goods

173. The Working Group was reminded that its most recent consideration of draft article 90 on special rules for live animals and certain other goods was at its seventeenth session (see A/CN.594, paras. 171 to 172). The Working Group proceeded to consider draft article 90 as contained in A/CN.9/WG.III/WP.81.

Chapeau and subparagraph (a)

174. The Working Group was in agreement that the chapeau and draft subparagraph (a) should be approved as drafted, bearing in mind that adjustments might need to be made to the text following the Working Group’s reconsideration of the definitions of “performing party” and “maritime performing party”.

Subparagraph (b)

175. The Working Group took note of the proposal set out in A/CN.9/WG.III/WP.90 that, to combat alleged abuses that considered containers or road vehicles “non-ordinary shipments” in order to have the container or road vehicle considered to be a single unit for the purposes of limiting liability, the following sentence should be added to the end of the subparagraph: “The containers or road vehicles, whose transport is made by a ship entirely or partially equipped to undertake such transport, cannot be considered as ‘non-ordinary commercial shipments’.” The view was expressed that such an addition was unnecessary, since clauses of that type usually appeared in some short sea voyages, such as ferry carriage, in respect of which carriers typically issued sea waybills rather than bills of lading which would trigger the Hague and Hague-Visby Rules. However, it was expected that the

contract of carriage applicable in such a case would trigger the draft convention, whose provisions would eliminate such an abuse.

176. The Working Group was in agreement that draft subparagraph (b) should be approved as drafted.

Liability for delay in delivery of the goods

177. The Working Group was reminded that its most recent consideration of liability for delay in the delivery of goods pursuant to the draft convention had taken place in the context of shipper's liability for delay, which had been last considered at its eighteenth session (see A/CN.9/616, paras. 83 to 113). It was also recalled that two proposals with respect to liability for delay had been submitted to the Working Group for consideration: a proposal on delay prepared in light of the consideration of the topic during its eighteenth session (A/CN.9/WG.III/WP.85) and a proposal on carrier and shipper delay (A/CN.9/WG.III/WP.91). The Working Group proceeded to consider the various provisions concerning delay as contained in A/CN.9/WG.III/WP.81.

General introduction

178. The Working Group was reminded that it had considered the topic of liability for delay in the delivery of goods during a number of its sessions, and that the topic was one of particular sensitivity on the part of both shippers and carriers. Given the thoroughness of previous discussions on the topic, it was thought that a complete review of the issues involved and the carrier and shipper interests at stake was unnecessary, and discussion proceeded to various proposals that had been placed before the Working Group. It was explained that the proposal contained in A/CN.9/WG.III/WP.85 was a written version of what had been proposed orally during the eighteenth session of the Working Group (A/CN.9/616, paras. 101-113), which, it was recalled, had been an attempt by the Working Group to retain in the draft convention liability for delay on the part of both the carrier and the shipper, and to find an appropriate limitation level for shipper's liability for delay. In light of that, the proposal was said to be a compromise that contained three elements: a clarification of draft article 18 that the carrier was not liable for any loss or damage to the extent that it was attributable to other shippers; the limitation of shipper's liability for pure economic loss arising from delay to an amount that was in square brackets in the text; and a general rule on causation to be placed in draft article 22.

179. The Working Group was reminded that its deliberations on damages for delay were concerned with pure economic loss resulting from delay, since physical damage to the goods resulting from delay would be covered by the draft convention under its provisions on liability for loss of or damage to the goods. Further, it was indicated that research undertaken on the topic had found very few reported cases, and no successful cases, in jurisdictions that allowed for the recovery of damages for delay. While some doubt was expressed regarding the reason for so few cases on the topic, a view was expressed that the findings suggested that there was no commercial need for delay provisions, and it was said that, in any event, they should be non-mandatory. More specific arguments were put forward in support of the view that liability for delay should be non-mandatory, as set out in A/CN.9/WG.III/WP.91. Although it was said that the deletion of liability for delay on the part of both the shipper and the carrier was the best option in light of

commercial reality and the apparent difficulty in finding an acceptable way to limit the liability of the shipper for damages due to delay, an alternative proposal set out in A/CN.9/WG.III/WP.91 was to make shipper's and carrier's liability for delay non-mandatory, or subject to freedom of contract. However, concerns were raised that this approach would simply result in carriers inserting standard language in the transport document exempting them from liability for any damages due to delay.

Discussion

180. The Working Group was informed that the working hypothesis for a compromise on the issue of delay that had been proposed during its eighteenth session, and that was embodied in A/CN.9/WG.III/WP.85, had not met with sufficient support in further formal and informal consultations, and that it was in danger of failing. In light of that possibility, a number of other proposals were made regarding how best to deal with the issue of liability for delay in the draft convention. Those proposals could be summarized as follows:

(a) All reference to liability for delay on the part of the shipper and on the part of the carrier should be deleted from the text of the draft convention, thus leaving the determination of such matters to national law;

(b) A more elaborate proposal consisted of three elements. First, the shipper's liability for delay should be deleted due to failure to find a suitable means to limit that liability. Secondly, the text of draft article 21 on delay should be limited to the opening phrase ("Delay in delivery occurs when the goods are not delivered at the place of destination provided for in the contract of carriage within the time expressly agreed") and the rest of the draft article should be deleted. Thirdly, draft article 63 should be made mandatory by deletion of the phrase in square brackets "unless otherwise agreed";

(c) The limitation of liability for economic loss caused by delay should be made subject to freedom of contract by retaining the text in square brackets in draft article 63 and removing the brackets;

(d) Liability for delay should be made non-mandatory, or subject to freedom of contract, in regard to both the carrier and the shipper;

(e) The text with respect to the recoverability of damages as proposed during the eighteenth session of the Working Group (see para. 107, A/CN.9/616) should be reintroduced in addition to the proposal set out in A/CN.9/WG.III/WP.85;

(f) Shipper's liability for delay should be excluded from the draft convention, and carrier liability for delay should only be maintained in the case where the shipper made clear to the carrier its interest in timely delivery;

(g) Liability for delay should be mandatory on the part of the carrier, but more flexible with respect to shippers;

(h) The treatment of both the carrier and the shipper should be identical with respect to liability for damages for delay;

(i) A provision should be included that made clear that compensation for economic loss that was not connected to any physical damage should be excluded from the draft convention in the case of both the shipper and the carrier;

(j) Liability for delay should be mandatory on the part of both the shipper and the carrier; and

(k) The same approach to delay should be taken as was adopted in the Hamburg Rules, including the limitation level of two and one half times the freight payable for the goods delayed.

181. The Working Group heard a number of views on which of the proposals set out in the previous paragraph were preferred, and which could be considered as second and third choices. In the course of that discussion, while no clear consensus for any one of the approaches set out above initially emerged in the Working Group, a number of strongly held positions were enunciated and received support in the Working Group. These may be summarized as:

(a) There appeared to be general agreement that the compromise articulated in A/CN.9/WG.III/WP.85 would not achieve acceptance in the Working Group;

(b) There was strong support for the retention of liability on the part of the carrier for damages arising due to delay;

(c) There was support for the view that liability for delay on the part of the carrier should be mandatory; and

(d) There was a high degree of flexibility regarding the necessity of including liability on the part of shippers for damages due to delay, particularly given information provided to the Working Group on the difficulty and expense involved for shippers insuring for pure economic loss.

182. In light of the strong views expressed, the Working Group sought to reach a compromise on the issue by focussing on the first two alternative approaches set out in paragraph 180 above. It was stated that one of the advantages of deleting liability for delay for both the shipper and the carrier from the draft convention was to give greater flexibility to jurisdictions that had specific rules on carrier delay. In addition, the view was expressed that it was better to have no rule on liability for delay in the draft convention than to formulate one that was inadequate or detrimental to the operation of mandatory domestic law. The countervailing view was that the three-pronged proposal would allow for at least a certain level of harmonization with respect to the rules on delay, rather than leaving the entire matter to domestic law. Furthermore, a compromise solution that limited the notion of delay to a failure to deliver the goods within the agreed delivery period would fit well with a commercial approach that had been advocated to the problem of liability for delay.

183. While a general preference appeared to emerge in favour of the three-pronged proposal described in paragraph 180 (b) above, the Working Group heard conflicting views on the desirability of deleting the clause in draft article 21 that referred to the time within which it would be reasonable to expect that a diligent carrier would deliver the goods, having regard to the terms of the contract, the customs, practices and usages of the trade, and the circumstances of the journey. There was strong support for retaining those words, which were said to be the core of the draft article and to offer an important safeguard to protect shippers from unreasonable delay by carriers. Shippers, it was stated, should not only be entitled to damages for delay when carriers failed to deliver by an expressly agreed date. Shippers deserved the same protection when they relied on advertisements and line schedules published by carriers. However, there was also strong support for deleting the words in question, which were said to express a vague concept of difficult application that was likely to increase the risk of litigation.

184. At that stage, the Working Group was invited to consider an amended version of the three-pronged approach set out in paragraph 180 (b) above. The Working Group was reminded that the first option for several delegations was to have mandatory rules on carrier delay in the draft convention, failing which they would prefer the deletion of all references to liability for delay from the text of the draft convention, thus leaving the determination of such matters to domestic law. The proponents of that solution were however prepared to accept the three-pronged approach set out in paragraph 180 (b) above, subject to the deletion of the word “expressly” from the description of delay enunciated in draft article 21. Such an adjustment, it was said, would render the deletion of the latter half of the draft provision less problematic for many in the Working Group, and reduce the burden of proof on cargo claimants regarding agreement on the time of delivery. Others were of the view, however, that deletion of the word “expressly” would not substantively alter the provision. In the spirit of compromise, the Working Group welcomed that proposal and supported the three-pronged approach as amended by it.

Draft article 26. Carriage preceding or subsequent to sea carriage

185. The Working Group was reminded that draft article 26 had been last considered at its eighteenth session (see A/CN.9/616, paras. 216 to 228). The Working Group proceeded to consider draft article 26 on carriage preceding or subsequent to sea carriage as contained in A/CN.9/WG.III/WP.81.

186. In respect of draft article 26 generally, the Working Group was reminded that a proposal had been made suggesting a consolidated text for draft articles 26, 64 (2) and the former draft article 89 as it appeared in A/CN.9/WG.III/WP.56 (see A/CN.9/WG.III/WP.89). It was suggested that the close connection between those draft provisions in terms of regulating the relationship of the draft convention with other conventions made it desirable to consolidate them into a single provision that would be clearer and more reader-friendly. The Working Group, however, preferred to continue treating those provisions separately and did not take up that proposal.

Paragraph 1

“*[or national law]*”

187. Some support was expressed for a retention of the bracketed text “or national law” in draft paragraph 1. In that respect, it was said that the contract of carriage under a “maritime plus” regime such as that envisaged pursuant to the draft convention, might contain a very long inland leg and a comparatively short sea leg. In that context, it was said that a reference to national law in draft article 26 was necessary in some jurisdictions to preserve mandatory national law that applied in respect of the inland transport. In further support of maintaining the references to national law in draft paragraph 1, it was suggested that with that reference non-maritime performing parties would have greater certainty that they did not fall within the liability regime of the draft convention. Further, in response to suggestions that the inclusion of the reference to mandatory national law strayed too far from the draft convention’s goal of uniformity, it was pointed out that the inclusion of “international instruments” in paragraph 1 already provided for the possible inclusion of regional international agreements, which could simply consist of an exchange of notes between two States.

188. However, strong support was shown for the deletion of the phrase “or national law” as currently found in square brackets in draft paragraph 1. Although there was sympathy for those who sought a solution for the problems outlined in the previous paragraph, it was said that the retention of references to national law represent a major departure from the balance that had already been achieved on the network approach as contained in draft article 26, paragraph 1. It was further said that there had been an understanding that in formulating a basis for the network system, it had not been possible to reach complete uniformity due to the need to accommodate in certain limited situations the operation of other unimodal conventions such as the Convention on the Contract for the International Carriage of Goods by Road (CMR) and the Uniform Rules concerning the Contract for International Carriage of Goods by Rail (CIM-COTIF). However, it was said that the expansion of those narrow exceptions to include all mandatory national law would undermine the usefulness of the entire provision and would greatly detract from the uniformity and predictability of the draft convention as a whole. In addition, it was suggested that the inclusion of a reference to national law in article 26, paragraph 1 could render it impossible to use draft article 4 (“the Himalaya clause”) to protect performing parties. Another problem with the inclusion of a reference to national law was said to be that it would create uncertainty for both shippers and carriers in terms of determining which liability regime would govern their activities.

The compromise proposal

189. In light of the support within the Working Group in favour of both retaining and of deleting the phrase “or national law” in paragraph 1, a compromise proposal was suggested. The proposal was to allow Contracting States that wished to apply their mandatory national law to inland cases of loss of or damage to the goods to do so by means of declarations made in accordance with draft article 94. It was envisaged that Contracting States should be required to identify specifically the national law that would apply in those cases. The effect of such a declaration would be to allow the courts of that State to apply national law to cases of localized inland damage in that State. However, courts of other States than the State making the declaration would not be bound by that declaration, and would apply the text of the draft convention according to its terms, and without regard to mandatory national law. Furthermore, it was clarified that courts of the State making the declaration would only be able to apply their substantive national law with respect to damage occurring within that State, and that the declaration would not provide a basis for any purported extraterritorial effect of the national law in cases of inland loss or damage outside of that State.

190. While strong preferences were expressed in the Working Group for both retaining and deleting the references to national law, broad support was expressed for the compromise proposal. While the inclusion of national law in draft article 26, even if by way of declaration rather than in the text itself, was said to detract from the uniformity of the draft convention, it was noted that at least the specification of only certain national laws by specific countries making declarations to that effect would allow for greater uniformity and predictability than including reference in the text to the national law of all Contracting States. Further, such an approach allowed for the accommodation of the needs of certain States who had mandatory national provisions regarding their inland carriage. The Working Group was reminded that such an approach had been advocated in A/CN.9/WG.III/WP.23. In light of the technical nature of formulating the appropriate approach to the declaration technique, the Working Group agreed not to consider specific proposals to that

effect at the present stage and requested the Secretariat to offer draft language in due course. The Working Group took note of the view that if the declaration approach were adopted by the Working Group as a compromise solution, part of the compromise should be the deletion of the phrase “or national law” in draft article 62 (2) on non-localized damage, if draft article 62 (2), which was in square brackets, were retained in the text.

Variant A or B

191. While support was expressed in the Working Group for the retention of Variant A of subparagraph 1 (a), a stronger preference was expressed for Variant B as being clearer and more likely to be interpreted accurately. It was further said that the text of Variant B was preferable in that it ensured that the operation of the draft convention would take place independently of the scope provisions of other transport conventions. Variant A, it was suggested, was less desirable, since it was drafted as primarily a conflict of conventions provision that relied upon the interpretation of the scope provisions of other transport conventions.

Conclusions reached by the Working Group regarding paragraph 1

192. The Working Group was in agreement that:

- All references to the phrase “[or national law]” should be deleted from paragraph 1;
- The Secretariat should draft a declaration provision allowing a Contracting State to include in draft article 26 (1) its mandatory national law provided that: (1) the State specifically identified in a declaration to that effect made pursuant to draft article 94; (2) the national law of the State making the declaration applied to the loss or damage in question; and (3) the damage occurred in the territory of the State that made the declaration; and
- Variant B of draft subparagraph 1 (a) should be taken up and Variant A deleted.

Paragraph 2

193. It was observed that draft paragraph 2 of article 26 referred to draft article 62 (2), and it was suggested that discussion of draft article 26 (2) should be deferred until the Working Group had considered draft article 62 (2). That suggestion was approved by the Working Group in light of the relationship between draft article 26 on localized damage to the goods and draft article 62 (2) on non-localized damage to the goods. However, it was also suggested that draft article 62 (2) could not be considered until a decision regarding the limitation level in draft article 62 (1) had been made was not taken up in light of the link regarding the scope of the draft convention shared by draft articles 26 and 62 (2).

Paragraph 2 of draft article 62 (2) regarding the limits of liability

194. The Working Group proceeded to consider the text of paragraph 2 of draft article 62 as found in A/CN.9/WG.III/WP.81.

195. Strong support was expressed for the deletion of draft paragraph 2 in its entirety. The view was expressed that the provision in issue was ambiguous and that it had no place in a “maritime plus” convention. In support of that view, it was said

that it was important to recall that the subject matter of the provision was non-localized damage to the goods. Since by definition, it would be unknown during which leg of the transport the damage occurred, only the contracting carrier could be held liable for such damage, and not the performing party. A provision such as draft paragraph 2 was said to undermine the very purpose of adopting an international convention. It was argued, in that connection, that although a limit on the liability of the carrier had not been settled upon, it surmised from previous discussions (see A/CN.9/616, paras. 162 to 174) that in the majority of cases, the limit would be sufficient to cover the damage to any goods, even particularly valuable goods, based on the per package limitation rate. The only result of a provision such as paragraph 2, it was said, would be to undermine the application of the per package limitation amounts in the draft convention by substituting the lesser per kilogram limitation under other transport conventions such as the CMR or CIM COTIF. Further, since only the contracting carrier would be held liable for non-localized damage, it was said that there was no logical explanation for the approach suggested in paragraph 2.

196. In addition to arguments raised in favour of the compensation rates of the per package rule in the draft convention (for both sides of the discussion, see, in general, A/CN.9/616, paras. 162 to 174) and for the suggestion that draft paragraph 2 should therefore be deleted, problems were indicated regarding the operation of the draft provision. In particular, it was said that where the damage could be said to occur during two legs of the transport, as for example, in the case of perishable goods in a container that was not properly refrigerated, it was not possible to determine whether draft paragraph 2 should apply. It was also noted that it would often be difficult to determine which transport regime offered the higher limitation amount, since the decision would entail a comparison of per package and per kilogram limitation rates, and, it was said, for goods weighing less than 82 kilograms per package, the per package limitation amount in the draft convention would always result in a higher limitation amount. Further complications were indicated with respect to the intended operation of draft paragraph 2, including difficulty regarding how to decide whether a limit on liability was unbreakable and with respect to the general increase in uncertainty and a need for litigation that it was said paragraph 2 would cause. It was also suggested that draft paragraph 2 was inconsistent with the burden of proof regime under draft article 26.

197. In response, strong support was also expressed for retaining the text of draft paragraph 2, at least in square brackets, until the Working Group had decided on what the limitation level in draft paragraph 1 would be. It was pointed out that the low limitation rate of the Hague-Visby Rules might not be considered sufficient in the case of, for example, heavy machinery cargo, which would not be subject to the per package rule, but would rather benefit from the higher per kilogram rates of the other transport conventions.

198. Views were also expressed regarding what aspects the text should contain, if it were kept. Amongst those that favoured retaining the text of draft paragraph 2, at least in square brackets, there was a preference expressed for Variant A of the draft provision as being more clearly drafted. In terms of the phrase “[or national law]”, there was support both for its retention and its deletion.

199. Further, there was support in the Working Group for the view that, in spite of the arguments for and against retaining draft paragraph 2, the clearest solution to the problem would be to have a suitable limitation on liability in paragraph 1 of draft article 62 apply in the case of all non-localized damage to goods. In such a situation,

there was support in the Working Group for the view that draft paragraph 2 could be deleted. In light of that view, it was suggested that draft paragraph 2 should be retained in square brackets pending a decision on paragraph 1 of draft article 62. However, the Working Group was also reminded that for some, the compromise reached regarding the disposition of the phrase “or national law” in draft article 26 (1) was closely tied to the disposition of draft article 62 (2), particularly with respect to deletion of the phrases “or national law”, and it was suggested that draft article 26 (1) should also be placed in square brackets pending the disposition of draft article 62 (2).

Conclusions reached by the Working Group regarding paragraph 2 of draft article 62

200. The Working Group recognized the broadly prevailing preference for the deletion of draft article 62 (2) but decided to retain the text in square brackets as it appeared in A/CN.9/WG.III/WP.81.

Paragraph 3 of draft article 26

201. The Working Group next considered the text of paragraph 3 of draft article 26 as found in A/CN.9/WG.III/WP.81. It was observed that draft paragraph 3 was intended to clarify that no deviation could be made from draft article 26 except by choice of law, and that notwithstanding paragraph 1 of draft article 26, the normal liability rules of the draft convention would continue to apply. While there was some doubt regarding the necessity of including a provision such as paragraph 3, support was expressed for the additional clarity that it lent the application of the general liability rules in the draft convention.

“maritime performing party”

202. A question was raised regarding whether it was necessary to refer to the maritime performing party in the text of draft paragraph 3, since the focus of draft article 26 was on the contract of carriage, and should thus perhaps be limited to a reference to the carrier. Some doubt was expressed regarding this view, however, and it was agreed that the concern regarding the inclusion of the maritime performing party would be noted.

Conclusions reached by the Working Group regarding paragraph 3

203. The Working Group agreed that:

- The square brackets around the text of draft paragraph 3 should be deleted and the text of the provision retained; and
- The Secretariat examine the need for referring to the maritime performing party in the draft paragraph and make proposals to the Working Group in due course.

Draft article 84. International conventions governing the carriage of goods by air

204. In keeping with its discussion of matters involving the relationship of the draft convention with other transport conventions as determined by the operation of draft article 26, the Working Group next considered a provision that had been added to the text of the draft convention following its most recent consideration of those issues during its eighteenth session (see A/CN.9/616, paras. 216 to 235). It was recalled that at that session, the Working Group had requested that a provision be

proposed in the draft convention in order to ensure that it would not conflict with the Montreal Convention (see A/CN.9/616, paras. 225 and 234 to 235). Draft article 84, as it appeared in A/CN.9/WG.III/WP.81 was intended to respond to that request.

205. To the extent that conventions such as the CMR also contained a certain multimodal dimension, the question was raised whether other unimodal transport conventions in addition to the Montreal and Warsaw Conventions should be mentioned in the provision in order to ensure that conflicts were not encountered with those conventions. In response, it was noted that the Working Group had considered the issue at its eighteenth session, and that it had decided to include in the draft convention text like that found in draft article 84 only with respect to the Montreal and Warsaw Conventions, which were unique in their intention to include multimodal transport to such an extent that a conflict between those conventions and the draft convention was inevitable. There was support for retaining draft article 84 as it appeared in the text.

Conclusions reached by the Working Group regarding draft article 84

206. The Working Group was in agreement that draft article 84 should be approved as drafted.

Chapter 8. Obligations of the shipper to the carrier

Draft article 27. Delivery for carriage

207. The Working Group was reminded that its most recent consideration of draft article 27 on delivery for carriage was at its sixteenth session (see A/CN.9/591, paras. 109 to 120). The Working Group proceeded to consider draft article 27 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1

208. The Working Group was in agreement that draft paragraph 1 should be approved as drafted.

Paragraph 2

209. Although there was some support for the deletion of the provision, there was general agreement in the Working Group that draft paragraph 2 should be retained in the text of the draft convention and the square brackets around it removed.

210. It was indicated that reference was made in draft article 14 (2) to parties other than the shipper, such as the person referred to in article 34, the controlling party, and the consignee, and it was suggested that, in addition to the shipper's obligation, there should also be an obligation in paragraph 2 on those parties to properly and carefully carry out such tasks as they are performed. In any event, it was noted that all of the tasks set out in paragraph 2 were unlikely to be performed by the shipper, such as discharge, and it was suggested that there should be alignment between the wording of draft article 14 (2) and paragraph 2. One remedy suggested was that a phrase be added along the lines of "tasks that the shipper performs or causes to be performed". It was further indicated that draft article 34 (1) on the liability of the shipper for other persons was also unclear, which added to the problem. In that regard, it was suggested that if draft article 34 (1) included the shipper's liability for

the consignee and the controlling party, paragraph 2 could remain the same, but that if draft article 34 (1) did not include the consignee and the controlling party, those parties should be included in draft paragraph 2. There was support both for that view and for the view that the draft provision should remain as drafted and should be limited to the shipper's obligations, since draft article 14 (2) referred to an agreement between the shipper and the carrier for the performance of those tasks by a person other than the carrier, and it was proper that any liability that might arise in the performance of those tasks should lie with the shipper.

211. The view was expressed that the wording of draft paragraph 2 was imprecise in that the entire list of tasks set out therein did not need to be performed properly and carefully by the shipper, but instead only those tasks agreed to pursuant to draft article 14 (2). It was suggested that the list of tasks should be qualified through the addition of the phrase "as agreed" or "in accordance with the agreement". There was support for that suggestion, although other views were expressed that the use of the word "or" made the intention of the draft provision sufficiently clear without any additional text.

Conclusions reached by the Working Group regarding draft paragraph 2

212. After discussion, the Working Group decided that:

- The text of draft paragraph 2 should be retained in the draft convention as drafted and the square brackets removed;
- Regard should be had to whether the text of draft paragraph 2 should be aligned with that of draft articles 14 (2) and 34 (1) particularly in terms of the inclusion of the consignee and the controlling party; and
- The text of draft paragraph 2 could be clarified through the addition of a phrase such as "as agreed".

Paragraph 3

213. The Working Group was in agreement that draft paragraph 3 should be approved as drafted.

Draft article 28. Obligations of the shipper and the carrier to provide information and instructions

214. The Working Group was reminded that its most recent consideration of the previous text on which draft article 28 on the obligations of the shipper and the carrier to provide information and instructions was based was at its seventeenth session (see A/CN.9/594, paras. 175 to 186). The Working Group proceeded to consider draft article 28 as contained in A/CN.9/WG.III/WP.81.

215. It was indicated that the title of the draft article, which in substance concerned mutual cooperation between the carrier and the shipper, was rather close to that of draft article 29, which concerned shipper's obligations, and it was suggested that a different title for draft article 28 might be preferable so as to avoid confusion and to indicate its status as something less than an obligation of the shipper. The Working Group approved the content of draft article 28.

Conclusions reached by the Working Group regarding draft article 28

216. After discussion, the Working Group decided that:

- The text of draft article 28 was approved, with any necessary adjustments to the title.

Draft article 29. Shipper's obligations to provide information, instructions and documents

217. The Working Group was reminded that its most recent consideration of the previous text on which draft article 29 on the shipper's obligations to provide information, instructions and documents was at its seventeenth session (see A/CN.9/594, paras. 187 to 194). The Working Group proceeded to consider draft article 29 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1

218. In reference to footnote 97 of A/CN.9/WG.III/WP.81, the suggestion was made to delete the word "reasonably" as it appeared before the word "necessary" in the chapeau of draft paragraph 1 for the reason that it was said to be redundant. Further, the view was expressed that the obligation to provide information, instructions and documents was an important shipper's obligation that should not in any way be qualified. However, the Working Group was in agreement that the draft paragraph should be approved as drafted.

Paragraph 2

219. The Working Group was in agreement that draft paragraph 2 should be approved as drafted.

Draft article 30. Basis of shipper's liability to the carrier**Paragraph 1**

220. The Working Group was reminded that it had most recently considered the basis of shipper's liability to the carrier at its seventeenth session (see A/CN.9/594, paras. 199-207) and earlier at its sixteenth session (see A/CN.9/591, paras. 136-153).

221. The Working Group was also reminded that it had decided that the liability for breach of the shipper's obligations should be generally fault-based with an ordinary burden of proof (see A/CN.9/591, para. 138). Thus, once a carrier had proved loss or damage was caused by the breach of obligations or negligence of the shipper, the shipper could seek to prove that the loss or damage was not due to its fault.

Variant A or B

222. It was noted that Variant A expressly placed the burden of proof on the carrier to show that the loss or damage was caused by the goods or by a breach of the shipper's obligations under draft articles 27 and 29, subparagraphs 1 (a) and (b). By contrast, Variant B focussed on shipper liability for loss, damage or delay caused by the breach of its obligations under draft articles 27 or 29 provided such loss, damage or delay was due to the fault of the shipper. It was further noted that the second sentence, which relieved the shipper of all or part of its liability if it proved that the cause or one of the causes was not attributable to its fault or to the fault of any

person referred to in draft article 34, was intended to apply regardless of which of the two variants was ultimately chosen.

223. Some support was expressed for Variant A for the reason that it appeared to implement the earlier decision of the Working Group that shipper liability should be based on fault and expressly imposed the burden of proof on the carrier.

224. However, support was also expressed for Variant B for the reason that it was a clearer expression that shipper liability was fault-based within a contractual relationship. It was said that Variant B was preferable as it expressly set out the responsibility of the shipper and indicated that the carrier bore the onus of proving that the shipper had breached its obligations and that there was a link of causation between the breach and the loss or damage.

225. Some delegations indicated that Variant B would be acceptable provided that the second sentence of paragraph 1 were deleted. It was said that that sentence created confusion as to the fault-based nature of shipper liability and also cast uncertainty on the principle that the carrier bore the burden of proof in respect of a breach of shipper obligations. Concern was expressed that that sentence appeared to require a shipper to prove that it was not at fault which might lead to the situation that draft article 30 contradicted draft article 17 which dealt with carrier liability. For example, if two or more containers came loose and damaged the ship, the cause of damage could be due to the carrier's failure to load the goods on board correctly or the result of the shipper not having packed the goods in the containers correctly. It was said that, applying the second sentence, if a carrier sued the shipper, the shipper would have the burden of proof to show what occurred on board which would in practice be very difficult. For that reason, it was proposed that shipper liability, contained in draft article 30, should not exactly mirror carrier liability in draft article 17, which merely required that claimants prove that the loss, damage or delay occurred during the period of responsibility of the carrier. It was said that shipper liability should instead be based on fault based on ordinary principles of burden of proof that the shipper was at fault. It was also said that article 30 ought to regulate shipper liability for breach of its obligations due to fault and should not try to regulate who had the burden of proof.

226. In response, it was explained that the second sentence of paragraph 1 was not intended to reverse the burden of proof but rather to set out the position that applied in most legal systems that, once the carrier had discharged its burden of proof in relation to the breach of an obligation by the shipper, the shipper could, except in respect of obligations for which it had strict liability under draft articles 31 and 32, nevertheless bring proof to show that the loss or damage or delay was not attributable to its fault or to the fault of any person referred to in draft article 34.

227. Following that explanation, some support was expressed for variant B provided it was reformulated so as to clarify that the burden of proof lay on the carrier. It was noted that the confusion in respect of burden of proof that applied in draft article 30 had arisen because it had generally been referred to as an ordinary burden of proof as if it involved a case in tort, when in fact the article referred to a contractual cause of action. It was noted that that problem did not arise in some jurisdictions which classified the cause of action for delay as neither a claim in tort or contract but rather as a statutory claim. Given the potential for misunderstanding, it was said that paragraph 1 of draft article 30 should be reformulated to clarify the nature of the burden of proof and the standards that applied thereto.

228. However, some support was expressed for a reformulation of paragraph 1 to provide a straightforward rule of negligence that the carrier prove the fault of the shipper. It was said that neither variant appeared to make clear that the carrier be required to prove the loss was caused by the shipper and that the shipper could be relieved of liability where it showed that it was not at fault. On that basis, an alternative text to Variants A and B was proposed in the following terms: “Subject to the provisions of articles 31 and 32, the shipper is liable to the carrier for loss or damage caused by the breach of its obligations pursuant to article 27 and article 29, unless the shipper proves that the cause or one of the causes of the loss or damage is not attributable to its fault or to the fault of any person referred to in article 34”.

229. Some reservations were expressed to that formulation for the reason that it did not appear to emphasize the fault-based liability of the shipper. However, the proposal also received some support for the reasons that: it clarified that the burden of proof was in relation to contractual obligations; it indicated that the liability was fault-based such that the obligations of the shipper under articles 27 and 29 were “best efforts” obligations; and it also clarified that first the carrier was to prove the breach, damage and the causation between the two, and it was then for the shipper to show that it was not at fault.

230. It was suggested that, given that the Working Group had generally reached consensus on the nature of the shipper liability provision, the reformulation could be left to the Secretariat. A proposal was made that such a reformulation could be in the following terms: “Subject to the provisions of articles 31 and 32, the shipper is liable to the carrier for loss or damage proved by the carrier to be the result of a breach by the shipper of its obligations pursuant to articles 27 and 29, unless the shipper proves that the cause or one of the causes of the loss or damage was not attributable to its fault or to the fault of any person referred to in article 34”. Some support was expressed for that reformulation although it was suggested that it be modified to indicate that the carrier must not only prove the loss or damage but also that the shipper was in breach of its obligations. It was also suggested that the text might be improved if the questions of fault-based liability and strict liability contained in draft articles 31 and 32 were separated out into two separate sentences.

Reference to article 31 in second sentence of draft article 30, paragraph 1

231. A question was raised whether the reference in the second sentence to article 31 was correct. In that respect it was noted that draft article 31 contained an obligation on the shipper to provide accurate information in a timely manner (paragraph 1) and to guarantee the accuracy of that information (paragraph 2). It was said that strict liability that applied under the second sentence of draft article 30, paragraph 1 should apply only to paragraph 2 of draft article 31 and not to paragraph 1, given that the obligation to provide information in a timely manner should be subject to fault-based rather than strict liability. That proposal received some support.

“was caused by the goods”

232. It was questioned why it was necessary to include the expression “was caused by the goods” in variant A. Some support was expressed for inclusion of the term regardless which variant was chosen to cover situations where the damage was clearly caused by the goods. However, some concern was expressed that the term might be confusing under some systems of law. It was suggested that the formulation of the text seemed to place an obligation of result and not of means on

the shipper. It was said that the inclusion of the term was illogical given that goods did not have a life of their own and could not, of themselves cause loss or damage. It was said that the words were also unnecessary given the obligations on the shipper to, inter alia, load the goods so that they would not cause harm to persons or property as set out in article 27, paragraph 1.

Delay

233. Given the Working Group's earlier decision that carrier liability for delay should be limited to situations where the carrier had agreed to deliver the goods within a certain time (see paras. 180 to 184 above) it was suggested that, as a matter of fairness, a shipper should only be liable for delay if it had so agreed. It was said that that approach would create fairness as between the carrier and shipper.

234. It was reiterated that the Working Group had decided to delete all references to delay. However, it was noted that mere deletion of all references to delay might not be sufficient to remove the possibility of delay being implied given that the term "loss" as used in both variants, could be interpreted to encompass loss caused by delay. As well, concern was expressed that deletion of all references to delay should not be interpreted as exonerating the shipper from any cause of action for delay that might arise under applicable national law.

235. To avoid any interpretation of implied liability for delay and ensure the preservation of applicable law on shipper's delay, a proposal was made to add language along the following lines to draft article 30, paragraph 1: "The term 'loss' referred to in this article or in article 31 or article 32 does not include the loss caused by delay. Nothing in this Convention prevents the carrier from claiming shipper liability for delay under the applicable law". It was explained that the first sentence of that proposal was intended to clarify that there was no implied cause of action against the shipper for delay under the draft convention, and the second sentence was intended to clarify that any applicable national law relating to the question of shipper's delay remained unaffected. Some support was expressed for that clarifying text.

236. Nevertheless, it was said that the second sentence of the proposed text might be unnecessary as the applicable law would apply automatically to matters beyond the scope of the draft convention. In that regard, it was noted that obligations existed under the draft convention for which there was no corresponding liability on either the carrier's or the shipper's side, and the liability for those obligations was thus left to applicable law.

Conclusions reached by the Working Group regarding draft article 30, paragraph 1

237. After discussions, the Working Group decided that:

- The text of paragraph 1 be reformulated in accordance with its discussions bearing in mind that the liability of the shipper should be fault-based and take account of the contractual relationship between the shipper and the carrier; and
- That references to delay contained in paragraph 1 be deleted with the possible inclusion of text clarifying that the applicable law relating to shipper's delay was not intended to be affected.

Paragraph 2

238. Subject to the deletion of the bracketed text “or delay” in accordance with its earlier decision to delete references to delay, the Working Group was in agreement that paragraph 2 should be approved as drafted.

Revised text of draft article 30

239. In accordance with its earlier decision to consider the reformulated text of draft article 30, paragraph 1 (see above, paras. 220 to 237), the Working Group continued its deliberations on the following revised text of that provision:

“Article 30. Basis of the shipper’s liability to the carrier

“1. The shipper is liable for loss or damage sustained by the carrier if the carrier proves that such loss or damage was caused by a breach of the shipper’s obligations pursuant to articles 27, [and] 29, subparagraphs 1(a) and (b) [and 31, paragraph 1].

“2. Except in respect of loss or damage caused by a breach by the shipper of its obligations under articles 31 [, paragraph 2,] and 32, the shipper is relieved of all or part of its liability if the cause or one of the causes of the loss or damage is not attributable to its fault or to the fault of any person referred to in article 34.”

240. It was explained that the redrafted text was based on the proposal made to the Working Group (see above, para. 230), along with the general views expressed in the Working Group with respect to draft article 30. It was further explained that the text in square brackets in both paragraphs was intended to indicate only that the references therein should be adjusted according to the necessary clarifications to be made to draft article 31, in order to ensure that the obligation to provide accurate information was made subject to strict liability, and that the obligation to provide timely information was based on fault. It was also noted that a correction should be made to the final line of the draft text of paragraph 1, deleting the reference to “(a) and (b)”.

241. Although there was some support for the reinsertion of a reference in paragraph 2 that it was the shipper’s responsibility to prove that the cause of the loss or damage was not attributable to its fault, there was broad agreement in the Working Group for the structure and approach of the revised text as drafted.

242. Two drafting suggestions met with approval in the Working Group, and should be examined by the Secretariat:

(a) Paragraph 1 could be redrafted to refer to all of the shipper’s liabilities, including both the fault-based liability and strict liability, since the carrier had to prove the same loss or damage and breach of the shipper’s obligation in both contexts; and

(b) Paragraph 2 could be restructured to refer first to the general principle, and next to the exception.

Conclusions reached by the Working Group regarding the revised text

243. After discussion, the Working Group decided that:

- It was satisfied that the revised text corresponded to its earlier discussion;

- The drafting suggestions as set out in the paragraph above should be considered by the Secretariat; and
- The revised text was otherwise generally acceptable to the Working Group.

Draft article 31. Information for compilation of contract particulars

244. The Working Group was reminded that its most recent consideration of the content of draft article 31 on information for the compilation of contract particulars was at its seventeenth session (see A/CN.9/594, paras. 187 to 194). The Working Group proceeded to consider draft article 31 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1

245. It was noted that due to a typographical error, draft paragraph 1 made reference only to draft article 37, subparagraphs 1 (a), (b) and (c), and it was agreed that the reference should be corrected to include subparagraph 37 (1)(d). It was further indicated that the draft provision had antecedents in the Hague-Visby and Hamburg Rules, and that it was a particularly important provision since it set out the shipper's obligation that would trigger the strict liability provision in draft article 31 (2). Given the serious consequences of a breach of the obligations set out in draft paragraph 1, it was suggested that the use of the word "including" in the draft paragraph was too broad and that it should be more precise in order to provide the shipper with greater predictability regarding its potential strict liability.

246. The Working Group was in agreement that draft paragraph 1 should be corrected through the addition of a reference to subparagraph 37 (1)(d), but that the provision could be accepted, bearing in mind that an adjustment to the drafting might be necessary in order to render the text more precise, as indicated in the above paragraph.

Paragraph 2

247. It was recalled that the Working Group had agreed to delete from the text of the draft convention all instances of shipper's liability for delay (see above, paras. 182 to 184), and that the reference to "delay" in square brackets in the draft paragraph would be deleted accordingly. A question was raised with respect to the fact that draft paragraph 2 set out the liability of the shipper for the accuracy of the information provided to the carrier, but not with respect to its timeliness. It was explained that, in keeping with the Hague-Visby and the Hamburg Rules, the Working Group had decided at an earlier session to render a failure by the shipper to provide accurate information to be subject to strict liability, while it had intended to make a failure by the shipper to provide timely information subject only to liability based on the fault of the shipper.

248. The Working Group was in agreement that paragraph 2 should be approved as drafted, with the deletion of the reference to "delay."

Draft article 32. Special rules on dangerous goods

249. The Working Group was reminded that its most recent consideration of the content of draft article 32 on special rules for dangerous goods was at its seventeenth session (see A/CN.9/594, paras. 195 to 198). The Working Group proceeded to consider draft article 32 as contained in A/CN.9/WG.III/WP.81, bearing in mind that the references to "delay" in square brackets were to be deleted

in accordance with the previous decision of the Working Group (see above, paras. 182 to 184).

“[or become]”

250. The Working Group first considered the phrase “or become” as it appeared in square brackets in the chapeau of draft article 32. In light of concerns regarding the safety of shipping, it was suggested that the text should be retained in the draft provision and the brackets deleted in order to allow for the widest possible scope for the prevention of accidents involving dangerous goods, such that it would include those that were dangerous prior to and during the voyage. In response, doubts were raised as to whether the inclusion of the phrase “or become” was necessary in light of the inclusion in the chapeau of the phrase “reasonably appear likely to become”, which was said to be sufficiently broad to include all risks. Further, it was said that it would be unfair to hold the shipper liable for a failure to inform the carrier about the nature of the goods if they only became dangerous during the voyage, well after they had been delivered by the shipper for carriage. As such, it was thought that the best solution would be to delete the phrase “or become”.

251. There was broad support in the Working Group for the deletion of the phrase “or become”, however, a suggestion to delete the word “reasonably” as redundant in the phrase “reasonably appear likely to become” was not supported.

“[the carriage of such goods]/[such failure to inform]”

252. It was suggested that the variant “the carriage of such goods” in subparagraph (a) should be retained and the variant “such failure to inform” should be deleted, since the carrier could suffer potentially enormous losses due to the shipper’s failure to provide information on the dangerous nature of the goods, such that retention of the phrase offering the broadest protection was warranted. However, that suggestion was not taken up, and there was strong support in the Working Group for the retention of the phrase “such failure to inform” as better addressing the issue of causation of the damage than the phrase “the carriage of such goods”, which should be deleted. It was further noted that the phrase “such failure to inform” was more consistent with the approach taken to causation in draft subparagraph (b).

Conclusions reached by the Working Group regarding draft article 32

253. After discussion, the Working Group decided that:

- The phrase “or becomes” in the chapeau of draft article 32 should be deleted along with the square brackets surrounding it;
- References to the shipper’s liability for delay should be deleted and the text adjusted accordingly;
- The phrase “such failure to inform” should be retained in the text and the square brackets surrounding it deleted, and the phrase “the carriage of such goods” should be deleted along with the square brackets surrounding it; and
- The text of draft article 32 was otherwise accepted by the Working Group.

Draft article 33. Assumption of the shipper's rights and obligations by the documentary shipper

254. The Working Group was reminded that its most recent consideration of the content of draft article 33 on the assumption of the shipper's rights and obligations by the documentary shipper was at its sixteenth session (see A/CN.9/591, paras. 171 to 175). The Working Group proceeded to consider draft article 33 as contained in A/CN.9/WG.III/WP.81.

255. It was observed that the definition of "documentary shipper" as set out in paragraph 10 of draft article 1 had been created from the first sentence of the previous version of the draft provision as found in A/CN.9/WG.III/WP.56.

256. The Working Group agreed that draft articles 1 (10) and 33 should be approved as drafted.

Draft article 34. Liability of the shipper for other persons

257. The Working Group was reminded that its most recent consideration of the content of draft article 34 on the liability of the shipper for other persons was at its sixteenth session (see A/CN.9/591, paras. 176 to 180). The Working Group proceeded to consider draft article 34 as contained in A/CN.9/WG.III/WP.81.

Paragraph 1

258. It was suggested that the bracketed text in draft paragraph 1 should be retained and the brackets surrounding it deleted, since it was thought that the shipper should not be held responsible for the actions of the carrier. While it was questioned whether the text in square brackets was necessary, it was agreed that, if it provided clarification of the draft provision, its inclusion was acceptable. There was broad support for the retention of the text in square brackets. In addition, the Working Group requested the Secretariat to address the drafting problem raised during the consideration of draft articles 14 (2), 27 (2) and 17 (3)(h) (see above, para. 157), which should be rendered consistent with draft article 34 (1) with regard to whether the shipper was responsible for the acts and omissions of the controlling party and the consignee.

Paragraph 2

259. The Working Group agreed to delete draft paragraph 2, based on its earlier decision to delete draft article 18 (2) (see above, para. 78).

Conclusions reached by the Working Group regarding draft article 34

260. After discussion, the Working Group decided that:

- The phrase in square brackets in draft article 34 (1) should be retained and the square brackets surrounding it should be deleted;
- The Secretariat was requested to make the necessary adjustments to draft articles 14 (2), 27 (2), 17 (3)(h) and 34 in order to render consistent the treatment of the shipper's responsibility for the acts of the consignee and the controlling party; and
- Draft article 34 (2) should be deleted.

Draft article 35. Cessation of shipper's liability

261. The Working Group was reminded that its most recent consideration of the content of draft article 35 regarding the cessation of the shipper's liability was at its sixteenth session (see A/CN.9/591, paras. 181 to 183). The Working Group proceeded to consider draft article 35 as contained in A/CN.9/WG.III/WP.81.

262. It was noted that the reference in subparagraph (a) should be corrected to read "article 33" rather than "article 35", and that given the defined term "documentary shipper" in draft article 1 (10), that term should be used instead of the reference to "a person referred to in article 33". In addition, the Secretariat was requested to consider whether the term "documentary shipper" could also be substituted for the phrase in the chapeau of the draft provision "any other person identified in the contract particulars as the shipper", and whether any adjustment should be made to the title of the draft article in terms of adding the documentary shipper. In addition, it was suggested that the term "void" should be used instead of "not valid" in the chapeau, and that draft subparagraph (c) should be retained in square brackets until the Working Group had made its final decision regarding chapter 12 on transfer of rights.

Conclusions reached by the Working Group regarding draft article 35

263. After discussion, the Working Group decided that:

- The reference to "article 35" should be corrected to "article 33", and the term "documentary shipper" as defined in draft article 1 (10) should be used in subparagraph (a) and possibly in the chapeau;
- Consideration should be given to changing the word "not valid" to "void"; and
- Draft article 35 (c) should be retained in square brackets pending a decision by the Working Group on chapter 12.

Chapter 9. Transport documents and electronic transport records

264. The Working Group was reminded that its most recent consideration of draft chapter 9 on transport documents and electronic transport records had commenced at its seventeenth session (see A/CN.9/594, paras. 216 to 233) and had continued at its eighteenth session (see A/CN.9/616, paras. 9 to 82). It was also recalled that the most recent complete consideration of the topic by the Working Group had taken place during its eleventh session (see A/CN.9/526, paras. 24-61), and that a written proposal regarding the identity of the carrier in then draft article 40 (3) had been submitted for the consideration of the Working Group for its eighteenth session (see A/CN.9/WG.III/WP.79). The consideration by the Working Group of the provisions of chapter 9 at the present session was based on the text as set out in A/CN.9/WG.III/WP.81.

265. The Working Group was reminded that the substantive articles contained in draft chapter 9 were closely related to a number of definitions, including those contained in subparagraphs 16, 17, 18, 20, 21, 22 and 23 of draft article 1.

Draft article 36. Issuance of the transport documents or the electronic record

266. The Working Group noted that draft article 36 had been amended as agreed by the Working Group at its seventeenth session (A/CN.9/594, paras. 223 and 224).

267. Support was expressed for draft article 36 as drafted. It was noted that subparagraph (b) entitled the shipper to obtain from the carrier either a negotiable or non-negotiable transport document but that the latter part of subparagraph (b) did not entitle the shipper to obtain a negotiable transport document if the shipper and carrier had agreed not to use a negotiable transport document or a negotiable electronic transport document. A clarification was sought as to whether a shipper could nevertheless obtain a non-negotiable transport document or non-negotiable electronic transport document in that circumstance. It was agreed that such was the intention of subparagraph (b) and if that was not clear then the text should be clarified. It was suggested that the subparagraph could be restructured so that the exception to the principle which was currently contained in the chapeau could appear after the principle which was stated in subparagraphs (a) and (b).

Conclusions reached by the Working Group regarding draft article 36

268. The Working Group decided that, subject to the proposed drafting suggestions, the text in draft article 36 as found in A/CN.9/WG.III/WP.81 should be approved.

Draft article 37. Contract particulars

269. The Working Group took note that draft article 37 had been redrafted as agreed by the Working Group at its seventeenth session (A/CN.9/594, paras. 225 and 233).

Paragraph 1

270. The Working Group considered paragraph 1 as contained in A/CN.9/WG.III/WP.81 and a proposal in respect of subparagraph (1) (a) of that draft article as contained in A/CN.9/WG.III/WP.86.

271. It was noted that subparagraph 1 (a) obliged the carrier to include a “description of the goods” as furnished by the shipper and that the draft convention contained no limits as to the amount of information that could be provided by the shipper. In light of the increasing tendency of shippers to provide lengthy and detailed technical descriptions of goods for inclusion in the transport document particularly since the use of computers had facilitated such lengthy descriptions, a proposal was made to introduce a limit as to the length, nature and degree of detail of the information the shipper might seek to include in the transport document. It was noted that without such a limitation, a carrier would be obliged to perform a reasonable check of all information furnished by the shipper which was physically practicable and commercially reasonable to check in accordance with draft article 41, subparagraph 2 (a). As well, it was noted that as the description of goods would often be transferred to the cargo manifest, overly lengthy descriptions could overburden customs and security authorities as well as banks. To address that concern it was proposed to amend subparagraph 1 (a) so that it read as follows: “a description in general terms of the goods”. Support was expressed for that proposal given that it was based on the wording of subparagraph 1 (a) of article 15 of the Hamburg Rules.

272. However, a concern was expressed that the reference to “in general terms” might be too vague and an amended proposal was made to include wording along

the following lines: “a description as appropriate for the transport” to cover situations such as where import restrictions applied in respect of certain goods and to provide sufficient information, particularly in relation to dangerous goods. Support was expressed for that proposal and it was suggested that the word “relevant” might be substituted for, or included in addition to, the word “appropriate”.

273. In response, it was said that the proposal was not intended to affect the carrier’s right to reject information that did not meet the requirements needed for any customs clearances or relating to security. It was noted that subparagraph 1 (b) of draft article 29 also required the shipper to provide information as reasonably necessary to, inter alia, allow the carrier to comply with the law. Nevertheless, support was expressed for the amended proposal for the reason that it appeared to reflect both a minimum and maximum limit for information that ought to be included.

Additional particulars

274. Proposals were made that the list contained in draft article 37, paragraph 1, should also refer to the consignee, the date of delivery, where it had been agreed upon, the name of the vessel, the loading and unloading ports and an indication of whether the goods were of a dangerous nature. In response, it was said that the list of contract particulars contained in article 37 had already been decided upon by the Working Group and should not be reconsidered without adequate consensus in that regard. As well, it was noted that requiring inclusion of the name of a vessel, whilst possible in a port-to-port context, would be almost impossible in the door-to-door context when a carrier was often not the ship owner but instead a non-vessel operating carrier. In response, it was said that the intention was not to revisit the issue but rather to align draft article 37 with draft article 31, which related to information for compilation of contract particulars, and which had been revised at the current session.

“the transport document or electronic transport document referred to in article 36”

275. It was noted that paragraphs 1 and 2 of draft article 37 referred to “the transport document or electronic transport document referred to in article 36”. It was suggested that that reference should be confined to a transport document or electronic transport document referred to in draft article 36, paragraph (b) only, given that the documents covered by paragraph (a) of that draft article merely evidenced receipt of the goods. There was support for that proposal.

Paragraph 2

276. It was suggested that the reference to the “name and address of a person identified as a carrier” could be misinterpreted as permitting the naming of a person other than a contractual carrier as the carrier in the transport document and thereby create a so-called “documentary carrier”. It was noted that such had not been the intention of the Working Group. To avoid such difficulties, it was suggested that the text refer simply to the name and address of the carrier, as contained in an earlier version of paragraph 2. It was noted that the text had been changed to follow the language used in UCP 500. However, it was said that the new UCP 600 no longer referred to the “name and address of a person identified as a carrier”. The Secretariat was requested to confirm that the language used in subparagraph 2 (a) was consistent with the approach taken in UCP 600.

Conclusions reached by the Working Group regarding draft article 37

277. The Working Group agreed:

- To amend paragraph 1 (a) to contain language along the following lines: “a description as appropriate for the transport”;
- To review paragraph 2 (a) to ensure its consistency with UCP 600; and
- To approve paragraph 3.

Draft article 38. Identity of the carrier

278. The Working Group took note that draft article 38 had been redrafted as agreed by the Working Group at its eighteenth session (A/CN.9/616, para. 28).

Paragraph 1

279. A proposal was made to refer to “a carrier” rather than “the carrier” given that the words “the carrier” implied identification already.

280. A proposal was made to delete paragraph 1 as it appeared to act as an absolute presumption by providing that if a carrier was identified by name, then any contrary information in the transport document should have no effect. It was said that the naming of a carrier should merely raise a rebuttable presumption. However, support was expressed for the retention of paragraph 1 given that there might be doubts as to the identity of a carrier, particularly where there was inconsistency between the named carrier on the face of a transport document from that on the reverse of that document. Some concern was expressed that the words “by name” might be confusing in some language versions. However it was noted that the words “by name” were necessary to indicate that the actual name of the carrier, and not merely a logo or other circumstantial evidence, was the essential element.

Paragraph 2

281. A proposal was made to delete both variants of paragraph 2 for the reasons that:

- A presumption that the registered owner of the ship was the carrier was unfair given that the owner might have no knowledge of the contract of carriage;
- The registered owner was often a separate entity from the ship owner;
- A document holder that relied on a document that plainly did not state the name of the carrier and failed to take reasonable measures to ascertain the identity of the carrier did not deserve protection; and
- There was substantial jurisprudence on the identity of the carrier in a number of jurisdictions and the relationship of paragraph 2 to that jurisprudence was unclear.

282. That proposal received some support but it was suggested that, if paragraph 2 were retained, it should be limited in scope to situations where the wrong person was named in the contract of carriage. It was further suggested that, if paragraph 2 were ultimately retained, then paragraph 3 should also be kept to avoid the actual carrier from using the presumption that the registered owner of the ship was the carrier as a defence.

283. It was noted that retention of paragraph 2 was not of great import in those jurisdictions that allowed the shipper to seek the arrest of the ship directly against the registered owner to secure claims against the carrier, but it was suggested that retention of the paragraph was preferable. It was also said that a registered owner could not be said to be totally unrelated to the contract of carriage, since the owner of a ship should be expected to take interest in the purposes for which the ship was used.

284. Some support was expressed for the retention of Variant A, but broad support was expressed for the retention of Variant B as it was consistent with modern shipping practice in its recognition that the registered ship owner might not be the person who entered into the contract of carriage. It was said that Variant B represented a compromise approach that allowed a registered owner to identify the proper carrier and covered situations of registered owners as well as bareboat charterers which was more appropriate to modern practices, particularly in the liner container transport context. As well, it was noted that the rule contained in paragraph 2 was consistent with the new rule that performing parties were jointly liable with carriers given that the registered ship owner was a performing party.

285. Proposals were made to amend Variant B as follows:

- Delete “bareboat” from paragraph 2; and
- For the sake of clarity, delete “in the same manner” and substitute the words “in the same manner as the registered owner of the ship”.

286. Some support was expressed for the addition of the clarifying words “in the same manner as the registered owner of the ship”. However, opposition was expressed to deletion of the term “bareboat” given that the bareboat charterer would, in practice, often be treated in the same way as a ship owner, since it related particularly to a charter for a ship, and should therefore have the same possibilities of rebutting any presumption that were available to the registered owner of the ship. In that respect, it was noted that in simply referring to a “charterer”, reference would not necessarily be had to the charterer of a ship, but rather could encompass a voyage charterer or a time charterer, who only contracted for the services of the ship, and could thus not be considered akin to a registered owner for the purposes of identifying the carrier.

Paragraph 3

287. It was suggested that the purpose of paragraph 3 was better expressed in footnote 122 of A/CN.9/WG.III/WP.81 than the text as contained therein. It was agreed to reformulate the paragraph based on that footnote.

Conclusions reached by the Working Group regarding draft article 38

288. The Working Group:

- Accepted paragraph 1 as drafted;
- Accepted Variant B of paragraph 2 and referred the text to the Secretariat to consider whether or not the text should better clarify that the bareboat charterer might defeat the presumption of being the carrier in the same manner that the registered owner might defeat such a presumption; and

- Requested that paragraph 3 be redrafted based on the language used in footnote 122 of A/CN.9/WG.III/WP.81.

Draft article 39. Signature

Paragraph 1

289. The Working Group noted that draft article 39 had been redrafted as agreed by the Working Group when it has last discussed the draft provision at its eighteenth session (A/CN.9/616, para. 12 and 13) by substituting the phrase “by or on behalf of the carrier” for the phrase “by the carrier or a person having authority from the carrier”.

290. It was noted that, as drafted, paragraph 1 might not conform with the rules relating to transport documents contained in the UCP 600, which provided that any signature by an agent indicated that it was signing for or on behalf of the carrier. It was suggested that paragraph 1 be amended so as to conform with the language contained in UCP 600. A further proposal was made that the words “or a person duly mandated by the latter” should replace the words “or a person acting on its behalf” so as to clarify that the person was acting within a mandate granted by the carrier.

291. In reply, it was said that the UCP 600 had a different purpose to the draft convention, in that the former was concerned with facilitating the system of documentary credits, while the latter set out legal rules with legal consequences. It was recalled that, while the insertion of additional text might clarify paragraph 1, the Working Group had already agreed to leave issues of agency to the applicable law, rather than dealing with them in the draft convention. The Working Group agreed to accept paragraph 1 as drafted.

Paragraph 2

292. The Working Group was in agreement that draft paragraph 2 should be approved as drafted.

Conclusions reached by the Working Group regarding draft article 39

293. The Working Group accepted draft article 39 as drafted.

Draft article 40. Deficiencies in the contract particulars

294. The Working Group was reminded that its most recent consideration of draft article 40 on deficiencies in the contract particulars was at its eighteenth session (see A/CN.9/616, paras. 10 to 13). The Working Group proceeded to consider draft article 40 as contained in A/CN.9/WG.III/WP.81.

295. Subject to a few adjustments to the text of the provision in different language versions, the Working Group accepted paragraphs 1, 2 and 3 of draft article 40 as drafted.

Proposed paragraph 4 of draft article 40

296. As indicated in footnote 129 of A/CN.9/WG.III/WP.81, the Working Group had in a previous session agreed to add to draft article 37 (2) a new subparagraph (d) requiring the number of original negotiable transport documents to be included in the contract particulars when more than one original was issued. It was noted that the draft convention did not state the legal effect of a failure to include that

information in the contract particulars. It was proposed that, in order to provide the holder of one of the original negotiable transport documents and the carrier with some certainty, the legal effect of such a failure should be that when there was no indication of the number of originals in the contract particulars, the negotiable transport document would be deemed to have stated that only one original was issued. It was suggested that such a provision should be included in the text as draft paragraph 4 of article 40. There was support in the Working Group for that suggestion.

Conclusions reached by the Working Group regarding draft article 40

297. The Working Group accepted draft article 40 as drafted, and requested the Secretariat to draft a new paragraph 4 in keeping with the approach discussed in the paragraph above.

Draft article 41. Qualifying the description of the goods in the contract particulars

298. The Working Group was reminded that its most recent consideration of the content of draft article 41 on the qualifying the description of the goods in the contract particulars was at its eighteenth session (see A/CN.9/616, paras. 29 to 39 and 69 to 73). The Working Group proceeded to consider draft article 41 as contained in A/CN.9/WG.III/WP.81.

299. Some drafting suggestions were made with respect to draft article 41. A suggestion was made to adjust the title of the draft article so that it referred to “information” rather than to “description”, which seemed to limit it to draft article 37 (1)(a) only. In paragraph 41 (1)(a), it was suggested that the word “materially” before the phrase “false or misleading” could be deleted as redundant. An additional suggestion was made to coordinate the text of paragraphs 1, 2 and 3, which all used the term “qualify”, while paragraph 1 referred to a type of correction, and paragraphs 2 and 3 referred more to reservations. Finally, it was suggested that in draft paragraphs 1 (b) and 2 (b), reference was made to the accuracy of the information, for which the shipper was held strictly liable under the draft convention, and that in light of that fact, it might be preferable to use the phrase “the carrier has reasonable grounds to believe” rather than “the carrier reasonably considers.”

Conclusions reached by the Working Group regarding draft article 41

300. The Working Group accepted draft article 41 as drafted, subject to adjustments made to the text by the Secretariat in light of the suggestions in the paragraph above.

Draft article 42. Evidentiary effect of the contract particulars

301. The Working Group was reminded that its most recent consideration of the content of draft article 42 on the evidentiary effect of the contract particulars was at its eighteenth session (see A/CN.9/616, paras. 45 to 68). The Working Group was reminded that draft article 42 as contained in A/CN.9/WG.III/WP.81 was the product of extensive debate and compromise at its eighteenth session, and a preference was expressed to postpone the third reading of that provision until the twentieth session of the Working Group, in order to accord it sufficient time for thorough discussion of subparagraph (a), which had since been included in the draft article.

Conclusions reached by the Working Group regarding draft article 42

302. The Working Group agreed to postpone the third reading of draft article 42 until its twentieth session.

Draft article 43. “Freight prepaid”

303. The Working Group was reminded that its most recent consideration of draft article 43 on “freight prepaid” was at its eighteenth session (see A/CN.9/616, paras. 74 to 82). The Working Group proceeded to consider draft article 43 as contained in A/CN.9/WG.III/WP.81. A suggestion to insert a good faith requirement was rejected on the grounds that such a requirement was self-evident.

Conclusions reached by the Working Group regarding draft article 43

304. The Working Group accepted draft article 43 as drafted.

III. Other business

Planning of future work

305. The Working Group agreed to continue with its third reading, commencing with draft article 42, and continuing with chapter 10 of the draft convention, at its twentieth session (Vienna, 15 to 25 October, 2007). The Working Group also took note that its twenty-first session was scheduled for 7 to 18 April 2008, but that the scheduling of both sessions was subject to the approval of the Commission at its fortieth session in 2007.

**K. Note by the Secretariat on the preparation of a draft convention on the
carriage of goods [wholly or partly] [by sea], submitted to the Working Group on
Transport Law at its nineteenth session**

(A/CN.9/WG.III/WP.81 and Corr.1) [Original: English]

Article 97. Entry into force	
Article 98. Revision and amendment.	
Article 99. Amendment of limitation amounts.	
Article 100. Denunciation of this Convention	

Introduction

1. At its thirty-fourth session, in 2001, the Commission established Working Group III (Transport Law) and entrusted it with the task of preparing, in close cooperation with interested international organizations, a legislative instrument on issues relating to the international carriage of goods such as the scope of application, the period of responsibility of the carrier, obligations of the carrier, liability of the carrier, obligations of the shipper and transport documents.¹ The Working Group commenced its deliberations on a draft instrument on the carriage of goods [wholly or partly] [by sea] at its ninth session in 2002. The most recent compilation of historical references regarding the legislative history of the draft instrument can be found in document A/CN.9/WG.III/WP.80.

2. This document consists of a consolidation of revised provisions for the draft convention on the carriage of goods [wholly or partly] [by sea] prepared by the Secretariat for consideration by the Working Group for the third reading of the draft convention. Changes to the consolidated text most recently considered by the Working Group (contained in document A/CN.9/WG.III/WP.56) have been indicated in footnotes to the text indicating those changes and, where applicable, by reference to the working paper in which the revised text appeared, or to the paragraph of the report in which such text appeared.

¹ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17* and corrigendum (A/56/17 and Corr. 3), para. 345.

Draft convention on the carriage of goods [wholly or partly] [by sea]

CHAPTER 1. GENERAL PROVISIONS

Article 1. Definitions

For the purposes of this Convention:

1. “Contract of carriage” means a contract in which a carrier, against the payment of freight, undertakes to carry goods from one place to another. The contract shall provide for carriage by sea and may provide for carriage by other modes of transport in addition to the sea carriage.¹

2. “Volume contract” means a contract of carriage that provides for the carriage of a specified quantity of goods in a series of shipments during an agreed period of time. The specification of the quantity may include a minimum, a maximum or a certain range.²

3. “Liner transportation” means a transportation service that is offered to the public through publication or similar means and includes transportation by ships operating on a regular schedule between specified ports in accordance with publicly available timetables of sailing dates.³

4. “Non-liner transportation” means any transportation that is not liner transportation.⁴

5. “Carrier” means a person that enters into a contract of carriage with a shipper.

6. “Performing party” means a person other than the carrier that performs⁵ or undertakes to perform any of the carrier’s obligations⁶ under a contract of carriage with respect to the receipt, loading, handling, stowage, carriage, care, discharge or delivery of the goods, to the extent that such person acts, either directly or indirectly, at the carrier’s request or under the carrier’s supervision or control. It includes employees, agents and subcontractors of a performing party to the extent that they likewise perform or undertake to perform any of the carrier’s obligations

¹ Text as set out in para. 16 of A/CN.9/WG.III/WP.61, as considered by the Working Group in paras. 121 to 133 of A/CN.9/594.

² Text as set out in para. 16 of A/CN.9/WG.III/WP.61, as considered by the Working Group in paras. 121 to 133 of A/CN.9/594.

³ Text as set out in para. 16 of A/CN.9/WG.III/WP.61, as considered by the Working Group in paras. 121 to 133 of A/CN.9/594.

⁴ The Working Group may wish to consider whether the definition of “non-liner transportation” is necessary in light of the definition of “liner transportation”.

⁵ As a drafting improvement, the word “physically” has been deleted from its previous placement in the text in A/CN.9/WG.III/WP.56 prior to the word “perform(s)” in two places in this sentence, since the translation of this phrase in some languages was unclear, and since the list of functions set out in the provision makes it clear that the performing party must take some concrete action in the performance of the contract of carriage in order to be included in the definition.

⁶ In order to standardize the text, the word “obligations” has been substituted for the word “responsibilities”, where appropriate.

under a contract of carriage,⁷ but does not include any person that is retained by a shipper, by a documentary shipper, by the consignor, by the controlling party or by the consignee, or is an employee, agent or subcontractor of a person (other than the carrier) who is retained by a shipper, by a documentary shipper, by the consignor, by the controlling party or by the consignee.

7. “Maritime performing party” means a performing party to the extent⁸ that it performs or undertakes to perform any of the carrier’s obligations during the period between the arrival of the goods at the port of loading of a ship and their departure from the port of discharge of a ship,⁹ but, in the event of a trans-shipment, does not include a performing party that performs any of the carrier’s obligations inland during the period between the departure of the goods from a port and their arrival at another port of loading.

8. “Non-maritime performing party” means a performing party to the extent that it is not a maritime performing party.¹⁰

9. “Shipper” means a person that enters into a contract of carriage with a carrier.

10. “Documentary shipper” means a person other than the shipper that accepts to be named as “shipper” in the transport document or electronic transport record.¹¹

11. “Consignor” means a person that delivers the goods to the carrier or to a performing party for carriage.

12. “Holder” means:

(a) A person that is in possession of a negotiable transport document; and (i) if the document is an order document, is identified in it as the shipper or the consignee, or is the person to which the document is duly endorsed; or (ii) if the document is a blank endorsed order document or bearer document, is the bearer thereof; or

(b) The person to which a negotiable electronic transport record has been issued or transferred and that has exclusive control of that negotiable electronic transport record in accordance with the procedures in article 9.¹²

⁷ The opening phrase of this sentence has been added to clarify further the definition.

⁸ The addition of the phrase “to the extent” is suggested to further clarify the definition to take into account the possibility that the same person may perform both a maritime part and an inland part of the transport.

⁹ The phrases “[or, in case of trans-shipment, at the first port of loading]” and “[or final port of discharge as the case may be]” have been deleted in order to clarify the text and to make it consistent with the definition of “performing party” in the paragraph above. Refinements with respect to the liability of the maritime performing party have been made to draft art. 19. As set out in an earlier note, it was suggested at para. 31 of A/CN.9/544 that a rail carrier, even if it performed services within a port, should be deemed to be a non-maritime performing party. The Working Group may wish to consider this suggestion.

¹⁰ Revised text to maintain consistency with technique used elsewhere in the draft convention, for example, in the definition of “non-liner transportation”. The Working Group may wish to consider whether this definition is necessary, since the term “non-maritime performing party” is used only in draft art. 20(3).

¹¹ This definition was moved from its former position in the first sentence of former draft article 34 as it appeared in A/CN.9/WG.III/WP.56.

¹² The phrase “in accordance with the procedures in article 9” has been added to allow for the deletion of the second sentence of former draft article 1(u) as it appeared in

13. “Consignee” means a person entitled to delivery¹³ of the goods under a contract of carriage or a transport document or electronic transport record.

14. “Right of control” of the goods means the right under the contract of carriage to give the carrier instructions in respect of the goods in accordance with chapter 11.¹⁴

15. “Controlling party” means the person that pursuant to article 53 is entitled to exercise the right of control.

16. “Transport document” means a document issued under a contract of carriage by the carrier or a performing party that satisfies one or both of the following conditions:

(a) Evidences the carrier’s or a performing party’s receipt of goods under a contract of carriage; or

(b) Evidences or contains a contract of carriage.

17. “Negotiable transport document” means a transport document that indicates, by wording such as “to order” or “negotiable” or other appropriate wording recognized as having the same effect by the law applicable to the document, that the goods have been consigned to the order of the shipper, to the order of the consignee, or to bearer, and is not explicitly stated as being “non-negotiable” or “not negotiable”.

18. “Non-negotiable transport document” means a transport document that is not a negotiable transport document.

19. “Electronic communication” means information generated, sent, received or stored by electronic, optical, digital or similar means with the result that the information communicated is accessible so as to be usable for subsequent reference.¹⁵

A/CN.9/WG.III/WP.56, which defined “exclusive control” in a circular fashion by referring to the procedure of draft article 9. If the Working Group decides to delete draft article 59, the definition may require further drafting adjustment.

¹³ The word “take” that had been placed before “delivery” has been deleted as redundant and potentially misleading.

¹⁴ Definition of “right of control” drawn from the chapeau of draft article 52, formerly draft art. 54 as it appeared in A/CN.9/WG.III/WP.56.

¹⁵ Suggested clarification to ensure that the draft convention does not draw an unnecessary distinction between the means of transmission and the form in which the data are stored. The definition of “electronic communication” draws on the definition of “data message” in art. 2 of the United Nations Model Law on Electronic Commerce, 1996 (“MLEC”), without the illustrative list of techniques. In the MLEC and the United Nations Convention on the Use of Electronic Communications in International Contracts (“Electronic Contracting Convention”), Annex I to *Official Records of the General Assembly, Sixtieth Session, Supplement No. 17*, (A/60/17), not all data messages are capable of having the same value as written paper documents, which is only possible in respect of data messages that are “accessible so as to be usable for subsequent reference”. In the draft instrument, the notion of “electronic communication”, also incorporates the criteria for the functional equivalence between data messages and written documents on art. 6 of MLEC and art. 9, para. 2 of Electronic Contracting Convention. Thus, an “electronic communication” under the instrument must always be capable of replicating the function of written documents.

20. “Electronic transport record” means information in one or more messages issued by electronic communication under a contract of carriage by a carrier or a performing party, including information logically associated with the electronic transport record by attachments or otherwise linked to the electronic transport record contemporaneously with or subsequent to its issue by the carrier or a performing party, so as to become part of the electronic transport record, that satisfies one or both of the following conditions:

- (a) Evidences the carrier’s or a performing party’s receipt of goods under a contract of carriage; or
- (b) Evidences or contains a contract of carriage.

21. “Negotiable electronic transport record” means an electronic transport record:

- (a) That indicates, by statements such as “to order”, or “negotiable”, or other appropriate¹⁶ statements recognized as having the same effect by the law applicable to the record, that the goods have been consigned to the order of the shipper or to the order of the consignee, and is not explicitly stated as being “non-negotiable” or “not negotiable”; and
- (b) The use of which meets the requirements of article 9, paragraph 1.

22. “Non-negotiable electronic transport record” means an electronic transport record that is not a negotiable electronic transport record.

23. The “issuance” and the “transfer” of a negotiable electronic transport record means the issuance and the transfer of exclusive control over the record.¹⁷

24. “Contract particulars” means any information relating to the contract of carriage or to the goods (including terms, notations, signatures and endorsements) that is in a transport document or an electronic transport record.

25. “Goods” means the wares, merchandise, and articles of every kind whatsoever that a carrier undertakes to carry under a contract of carriage and includes the packing and any equipment and container not supplied by or on behalf of the carrier.¹⁸

26. “Ship” means any vessel used to carry goods by sea.

27. “Container” means any type of container, transportable tank or flat, swapbody, or any similar unit load used to consolidate goods, and any equipment ancillary to such unit load.

¹⁶ The Working Group may wish to consider whether the word “appropriate” is necessary in light of the use of the phrase “recognized as having the same effect” and whether similar language in draft para. 1(17) should be aligned accordingly.

¹⁷ Text as set out in para. 207 of A/CN.9/576, and as approved for further discussion in para. 210 of A/CN.9/576, but for the second sentence, which has been deleted as a drafting improvement in favour of the addition of the phrase “in accordance with the procedures in article 9” at the end of draft article 1(12)(ii).

¹⁸ The phrase “or a performing party” has been deleted since it should be clear that the performing party is included by way of the use of the phrase “supplied by or on behalf of the carrier”.

28. “Freight” means the remuneration payable to the carrier for the carriage of goods under a contract of carriage.¹⁹

29. “Domicile” means (a) a place where a company or other legal person or association of natural or legal persons has its (i) statutory seat or place of incorporation or central registered office, as appropriate, (ii) central administration, or (iii) principal place of business, and (b) the habitual residence of a natural person.²⁰

30. “Competent court” means a court in a Contracting State that, according to the rules on the internal allocation of jurisdiction among the courts of that State, may exercise jurisdiction over a matter.²¹

Article 2. Interpretation of this Convention

In the interpretation of this Convention, regard is to be had to its international character and to the need to promote uniformity in its application and the observance of good faith in international trade.

Article 3. Form requirements²²

The notices, confirmation, consent, agreement, declaration and other communications referred to in articles 19, paragraph 3; 23, paragraphs 1 to 3; 37, subparagraphs 1(b), (c) and (d); 41, subparagraph 3(b); 45; 50, paragraph 3; 53, paragraph 1; 61, subparagraph (d); 62, paragraph 1; 66; 69; and 89, paragraphs 1 and 5 shall be in writing. Electronic communications may be used for these purposes, provided the use of such means is with the consent²³ of the person by which it is communicated and of the person to which it is communicated.

¹⁹ Deletion of this definition is proposed given the deletion of the chapter on freight and the inclusion of “freight” in the definition of “contract of carriage” in para. 1(1).

²⁰ Suggested adjustments to text as set out in para. 115 of A/CN.9/576. It is suggested that reference should be made to associations, since these legal entities often own ships, but may not be included in “other legal persons”. “Place of incorporation or registered office” have been added for certainty, since “statutory seat” is not universally recognized. All of these changes conform with the text of art. 60 of Council Regulation (EC) No. 44/2001, 22 Dec. 2000 on jurisdiction and the recognition and enforcement of judgements in civil and commercial matters [Official Journal L 12 of 16.01.2001] (“Brussels I”), from which the original text was drawn. Further, the Working Group may wish to note that the definitions of “time of receipt” and “place of receipt” and “time of delivery” and “place of delivery” that formerly appeared in square brackets as draft articles 1(aa) and (bb) in A/CN.9/WG.III/WP.56 have been deleted as redundant, since these terms are already specified in the text as necessary at draft articles 5, 11 and 69.

²¹ As agreed by the Working Group in para. 73 of A/CN.9/591. The phrasing is the same as that used in article 5(3)(b) of the Convention on Choice of Court Agreements, 2005.

²² The Working Group may wish to note that this list is not closed, pending further examination. Further, the Working Group may wish to consider whether it is advisable to include with the final text an explanatory note that any notices contemplated in this convention that are not included in art. 3 may be made by any means including orally or by exchange of data messages that do not meet the definition of “electronic communication”. It is implicit in the definition of “electronic communication” that it must be capable of replicating the function of written documents (see *supra*, note to definition of “electronic communication”).

²³ The phrase “express or implied” that had formerly been inserted before the word “consent” in the text as it appeared in A/CN.9/WG.III/WP.56 has been deleted as redundant.

Article 4. Applicability of defences and limits of liability

The defences and limits of liability provided for in this Convention and the obligations imposed by this Convention apply in any action against the carrier or a maritime performing party for loss of, damage to, or delay in delivery of goods covered by a contract of carriage or for the breach of any other obligation under this Convention,²⁴ whether the action is founded in contract, in tort, or otherwise.²⁵

CHAPTER 2. SCOPE OF APPLICATION

*Article 5. General scope of application*²⁶

1. Subject to article 6, this Convention applies to contracts of carriage in which the place of receipt and the place of delivery are in different States, and the port of loading of a sea carriage²⁷ and the port of discharge of the same sea carriage are in different States, if, according to the contract of carriage, any one of the following places is located in a Contracting State:²⁸

- (a) The place of receipt;
- (b) The port of loading;
- (c) The place of delivery; or
- (d) The port of discharge.

2. This Convention applies without regard to the nationality of the vessel, the carrier, the performing parties, the shipper, the consignee, or any other interested parties.

Article 6. Specific exclusions

1. This Convention does not apply to the following contracts of carriage in liner transportation:

- (a) Charterparties; and
- (b) Contracts for the use of a ship or of any space thereon, whether or not they are charterparties.²⁹

²⁴ The addition of “the breach of any other obligation” is thought to have made the reference to “[or in connection with]” the goods unnecessary.

²⁵ Draft article 4(2) as it existed in A/CN.9/WG.III/WP.56 has been deleted as redundant given the text of draft article 19(4).

²⁶ Revised draft based on A/CN.9/WG.III/WP.61, para. 19, as agreed by the Working Group (A/CN.9/594, paras. 123 and 128).

²⁷ Revised draft based on A/CN.9/WG.III/WP.61, para. 19, as agreed by the Working Group (A/CN.9/594, paras. 123 and 128). The phrases “of a sea carriage” and “of the same sea carriage” have been reinserted into the text in order to emphasize the sea carriage aspect and for enhanced clarity.

²⁸ The phrase “according to the contract of carriage, any one of the following places is located in a Contracting State” has been added to the end of the chapeau in order to allow for deletion of that phrase from the sub-paragraphs that follow. Further, the sub-paragraphs as they appeared in A/CN.9/WG.III/WP.56 have been divided into separate paragraphs so as to make clear that each component listed must be agreed in the contract of carriage.

²⁹ New draft based on A/CN.9/WG.III/WP.61, para. 23, as agreed by the Working Group (A/CN.9/594, paras. 129-133).

2. This Convention does not apply to contracts of carriage in non-liner transportation except when:

(a) There is no charterparty or contract for the use of a ship or of any space thereon between the parties, whether such contract is a charterparty or not; and

(b) The evidence of the contract of carriage is a transport document or an electronic transport record that also evidences the carrier's or a performing party's receipt of the goods.³⁰

*Article 7. Application to certain parties*³¹

Notwithstanding article 6, this Convention applies as between the carrier and the consignor, consignee, controlling party or holder³² that is not an original party to the charterparty or other contract of carriage excluded from the application of this Convention. However, this Convention does not apply as between the original parties to a contract of carriage excluded pursuant to article 6.³³

CHAPTER 3. ELECTRONIC TRANSPORT RECORDS

Article 8. Use and effect of electronic transport records

Subject to the requirements set out in this Convention:

(a) Anything that is to be in or on a transport document pursuant to this Convention may be recorded in an electronic transport record, provided the issuance and subsequent use of an electronic transport record is with the consent³⁴ of the carrier and the shipper; and

(b) The issuance, control, or transfer of an electronic transport record has the same effect as the issuance, possession, or transfer of a transport document.

Article 9. Procedures for use of negotiable electronic transport records

1. The use of a negotiable electronic transport record shall be subject to procedures that provide for:

(a) The method for the issuance and the transfer of that record to an intended holder;

(b) An assurance that the negotiable electronic transport record retains its integrity;

³⁰ Redrafting of text in A/CN.9/WG.III/WP.61, para. 23 (agreed by the Working Group A/CN.9/594, paras. 129-133), not intended to change meaning of paragraph.

³¹ Text based on A/CN.9/WG.III/WP.61, para. 23, as agreed by the Working Group (A/CN.9/594, paras. 134-140).

³² The phrase "or the person referred to in article 34 (now article 33)", as considered by the Working Group in paras. 138 and 140 of A/CN.9/594, has been deleted from the text in A/CN.9/WG.III/WP.61, para. 23 as a clarification, since the application of draft article 7 to the documentary shipper in draft article 33 would be to that person in its capacity as controlling party or holder, but not in its capacity as the documentary shipper.

³³ Text from A/CN.9/WG.III/WP.61, para. 23, as agreed by the Working Group (A/CN.9/594, paras. 134-140), with slight adjustments intended to improve the drafting but to leave unchanged the substance of the draft article.

³⁴ The phrase "express or implied" that had formerly been inserted before the word "consent" in A/CN.9/WG.III/WP.56 has been deleted as redundant.

(c) The manner in which the holder is able to demonstrate that it is the holder; and

(d) The manner of providing confirmation that delivery to the holder has been effected, or that, pursuant to articles 10, paragraph 2, or 49, subparagraphs (a)(ii) and (c), the negotiable electronic transport record has ceased to have any effect or validity.

2. The procedures in paragraph 1 of this article shall be referred to in the contract particulars and be readily ascertainable.³⁵

Article 10. Replacement of negotiable transport document or negotiable electronic transport record

1. If a negotiable transport document has been issued and the carrier and the holder agree to replace that document by a negotiable electronic transport record:

(a) The holder shall surrender the negotiable transport document, or all of them if more than one has been issued, to the carrier;

(b) The carrier shall issue to the holder a negotiable electronic transport record that includes a statement that it replaces the negotiable transport document; and

(c) The negotiable transport document ceases thereafter to have any effect or validity.

2. If a negotiable electronic transport record has been issued and the carrier and the holder agree to replace that electronic transport record by a negotiable transport document:

(a) The carrier shall issue to the holder, in place of the electronic transport record, a negotiable transport document that includes a statement that it replaces the negotiable electronic transport record; and

(b) The electronic transport record ceases thereafter to have any effect or validity.

CHAPTER 4. PERIOD OF RESPONSIBILITY

Article 11. Period of responsibility of the carrier

1. Subject to article 12, the period of responsibility of the carrier for the goods under this Convention begins when the carrier or a performing party receives the goods for carriage and ends when the goods are delivered.³⁶

³⁵ As set out in footnote 34 in A/CN.9/WG.III/WP.47, and as agreed in paras. 198-199 of A/CN.9/576, the term “readily ascertainable” was used to indicate without excessive detail that the necessary procedures must be available to those parties who have a legitimate interest in knowing them prior to entering a legal commitment based upon the validity of the negotiable electronic transport record. It was further noted that the system envisaged would function in a manner not dissimilar to the current availability of terms and conditions of bills of lading. The Working Group may wish to consider whether related detail should be specified in a note or a commentary accompanying the draft convention.

³⁶ The phrase “to the consignee” has been deleted from this paragraph and from subpara. 3(b) as unnecessary, since ‘delivery’ as it is referred to in these provisions concerns not the obligation of the carrier, but rather the actual delivery that defines the end of the period of responsibility of

2. The time and location of receipt of the goods for carriage and of delivery of the goods are the time and location agreed in the contract of carriage, or, failing such agreement, the time and location that are in accordance with the customs, practices, or usages of the trade. In the absence of such agreement or of such customs, practices, or usages:

(a) The time and location of receipt of the goods for carriage are when and where the carrier or a performing party actually takes custody of the goods; and

(b) The time and location of delivery are that of the discharge or unloading of the goods from the final means of transport in which they are carried under the contract of carriage.³⁷

3. If the consignor is required to hand over the goods at the place of receipt, or if the carrier is required to hand over the goods at the place of delivery, to an authority or other third party to which, pursuant to the law or regulations of the place of receipt or delivery, the goods must be handed over and from which the carrier, or the consignee, as the case may be, may collect them:³⁸

(a) The time and location of the carrier's collection of the goods from the authority or other third party are the time and location of the receipt of the goods by the carrier pursuant to subparagraph 2(a) of this article; and

(b) The time and location of such handing over at the place of delivery are the time and location of delivery of the goods by the carrier pursuant to subparagraph 2(b) of this article.

4. For the purposes of determining the carrier's period of responsibility and subject to article 14, paragraph 2, the contract of carriage may not provide that:

(a) The time of receipt of the goods is subsequent to the commencement of their initial loading under the contract of carriage; or

(b) The time of delivery of the goods is prior to the completion of their final discharge under the contract of carriage.³⁹

*Article 12. Transport not covered by the contract of carriage*⁴⁰

On the request of the shipper, the carrier may agree to issue a single transport document or electronic transport record that includes specified transport that is not covered by the contract of carriage. In such event, [the responsibility of the carrier covers the period of the contract of carriage and, unless otherwise agreed, the carrier, on behalf of the shipper, shall arrange the additional transport as provided in

the carrier.

³⁷ Para. 2 combines and replaces former paragraphs 2 and 4 of this draft article as previously set out in A/CN.9/WG.III/WP.56. The change is intended as a drafting improvement and not as a change in substance.

³⁸ This paragraph is proposed by the Secretariat to address the situation when the consignor is required to hand over the goods to an authority, such as a customs authority, prior to them being handed over to the carrier. Further, para. 3 combines and replaces former paragraphs 3 and 5 of this draft article as previously set out in A/CN.9/WG.III/WP.56. The change is intended as a drafting improvement and not as a change in substance.

³⁹ Para. 4 is suggested in order to ensure that fictions may not be included in the contract of carriage in order to reduce the carrier's period of responsibility.

⁴⁰ The Working Group may wish to consider whether art. 12 is properly placed within chapter 4 on period of responsibility.

such transport document or electronic transport record.] [the carrier shall exercise due diligence in selecting the other carrier, conclude a contract with such other carrier on usual and normal terms, and do everything that is reasonably required to enable such other carrier to perform duly under its contract.]⁴¹

CHAPTER 5. OBLIGATIONS OF THE CARRIER

Article 13. Carriage and delivery of the goods

The carrier shall, subject to this Convention and in accordance with the terms of the contract of carriage,⁴² carry the goods to the place of destination and deliver them to the consignee.

Article 14. Specific obligations

1. The carrier shall during the period of its responsibility as defined in article 11, and subject to article 26, properly and carefully receive,⁴³ load, handle, stow, carry, keep, care for, discharge and deliver the goods.

2. Notwithstanding paragraph 1 of this article, and without prejudice to the other provisions in chapter 5 and to chapters 6 to 8,⁴⁴ the parties may agree that the loading, handling, stowing or discharging of the goods is to be performed by the shipper, any person referred to in article 34, paragraph 1, the controlling party or the consignee. Such an agreement shall be referred to in the contract particulars.

Article 15. Goods that may become a danger⁴⁵

Notwithstanding articles 13, 14, and 16, paragraph 1, the carrier or a performing party may decline to receive or to load, and may take such other measures as are reasonable, including unloading, destroying, or rendering goods harmless if the goods are, or appear likely to become during the carrier's period of responsibility an actual danger to persons, to property or to the environment.⁴⁶

Article 16. Specific obligations applicable to the voyage by sea

1. The carrier is bound before, at the beginning of, and during the voyage by sea to exercise due diligence to:

⁴¹ Since the first sentence of Variant B of this draft article as it appeared in A/CN.9/WG.III/WP.56 was intended only as a clarification of para. 1 of Variant A, the two variants have been combined into one, where the text in square brackets in the second sentence presents two alternative approaches: the first changes the obligation of the carrier in its arrangement of additional transport from one of due diligence to whatever is agreed in the contract of carriage or elsewhere, and the second alternative maintains an obligation of due diligence on the part of the carrier.

⁴² Suggested deletion of "[properly and carefully]" as unnecessary and repetitious, since "subject to this Convention" already includes proper and careful carriage. Further, draft art. 13 is intended as a general obligation that is enhanced in subsequent articles.

⁴³ "Receive" and "deliver" have been added to ensure they are recognized as carrier's obligations.

⁴⁴ The opening phrase "Notwithstanding paragraph 1 of this article, and without prejudice to the other provisions in chapter 5 and to chapters 6 to 8" has been added to achieve greater clarity.

⁴⁵ The revised text of this draft article combines what appeared as Variant A and Variant B in A/CN.9/WG.III/WP.56.

⁴⁶ The concept of "an illegal or unacceptable danger" to the environment that appeared in the text in A/CN.9/WG.III/WP.56 has been changed to a "danger to the environment" in an effort to make the standard more objective.

- (a) Make and keep the ship seaworthy;
- (b) Properly crew,⁴⁷ equip and supply the ship and keep the ship so crewed,⁴⁸ equipped and supplied throughout the voyage; and
- (c) Make and keep the holds and all other parts of the ship in which the goods are carried, including any containers supplied by the carrier in or upon which the goods are carried, fit and safe for their reception, carriage and preservation.

[2. Notwithstanding articles 13, 14, and 16, paragraph 1, the carrier or a performing party may sacrifice goods when the sacrifice is reasonably made for the common safety or for the purpose of preserving from peril human life or other property involved in the common adventure.]⁴⁹

CHAPTER 6. LIABILITY OF THE CARRIER FOR LOSS, DAMAGE OR DELAY

*Article 17. Basis of liability*⁵⁰

1. The carrier is liable for loss of or damage to the goods, as well as for delay in delivery, if the claimant proves that the loss, damage, or delay, or the event or circumstance⁵¹ that caused or contributed to it took place during the period of the carrier's responsibility as defined in chapter 4.

2. The carrier is relieved of all or part of its liability pursuant to paragraph 1 of this article if it proves that the cause or one of the causes of the loss, damage, or delay is not attributable to its fault or to the fault of any person referred to in article 18, paragraph 1.

3. The carrier is also relieved of all or part of its liability pursuant to paragraph 1 of this article if, alternatively to proving the absence of fault as provided in paragraph 2 of this article, it proves that one or more of the following events or circumstances caused or contributed to the loss, damage, or delay:

- (a) Act of God;
- (b) Perils, dangers, and accidents of the sea or other navigable waters;
- (c) War, hostilities, armed conflict, piracy, terrorism, riots, and civil commotions;
- (d) Quarantine restrictions; interference by or impediments created by governments, public authorities, rulers, or people including detention, arrest, or

⁴⁷ As set out in footnote 56 of A/CN.9/WG.III/WP.36, the gender-neutral word "crew" had been inserted in place of the word "man".

⁴⁸ Ibid.

⁴⁹ As noted at para. 157 of A/CN.9/544, the Working Group decided to maintain draft para. 16(2) in square brackets in its current location, with a view to considering at a later stage whether it should be moved to chapter 17 on general average.

⁵⁰ Redraft of text set out in paras. 31 and 75 of A/CN.9/572, as broadly accepted in paras. 33 and 80 of A/CN.9/572, and as published in A/CN.9/WG.III/WP.56. The redraft of this draft article, which is drawn entirely from the previous text as accepted, is only intended to improve the drafting by simplifying the structure of the draft article, and is not intended to change the content of the provision in any way.

⁵¹ The word "occurrence" has been replaced with "event or circumstance" to standardize the text used elsewhere in the draft article and for greater clarity. Reference to "event or circumstance" has been standardized throughout the draft article.

seizure not attributable to the carrier or any person referred to in article 18, paragraph 1,⁵²

- (e) Strikes, lockouts, stoppages, or restraints of labour;
 - (f) Fire on the ship;
 - (g) Latent defects in the [ship] [means of transport]⁵³ not discoverable by due diligence;
 - (h) Act or omission of the shipper[, the consignor]⁵⁴ or any person referred to in article 34,⁵⁵ paragraph 1, the controlling party, or the consignee;
 - (i) Loading, handling, stowing, or discharging⁵⁶ of the goods performed pursuant to an agreement in accordance with article 14, paragraph 2, unless the carrier [or a performing party] performs such activity on behalf of the shipper.
 - (j) Wastage in bulk or weight or any other loss or damage arising from inherent defect, quality, or vice of the goods;
 - (k) Insufficiency or defective condition of packing or marking not performed by [or on behalf of] the carrier;
 - (l) Saving or attempting to save life at sea;
 - (m) Reasonable measures to save or attempt to save property at sea;
 - (n) Reasonable measures to avoid or attempt to avoid damage to the environment;
 - (o) Acts of the carrier⁵⁷ in pursuance of the powers conferred by articles 15 and 16, paragraph 2.⁵⁸
4. Notwithstanding paragraph 3 of this article, the carrier is liable for all or part of the loss, damage, or delay if the claimant proves:
- (a) That the fault of the carrier or of a person referred to in article 18, paragraph 1, caused or contributed to the event or circumstance on which the carrier relies; or
 - (b) That an event or circumstance not listed in paragraph 3 of this article contributed to the loss, damage, or delay, and the carrier cannot prove that this event

⁵² Further examination is needed whether the reference to art. 18, paragraph 1, is necessary.

⁵³ The Working Group may wish to consider which of the terms in square brackets is intended to be addressed in this paragraph.

⁵⁴ The Working Group may wish to decide whether draft article 34 is intended to include the “consignor” or not, and should expressly include it in draft article 34, if that is the intention. If draft article 34 includes “consignor”, this reference is not needed.

⁵⁵ Further examination is needed whether the reference to art. 34 is necessary.

⁵⁶ “Discharging” is suggested in order to be consistent with the language in draft art. 14.

⁵⁷ The phrase “or a performing party” that appeared after the word “carrier” in the text in A/CN.9/WG.III/WP.56 has been deleted as redundant, since the performing party has no powers under draft articles 15 and 16.

⁵⁸ The square brackets around this draft paragraph have been removed and the phrase “when the goods have become a danger to persons, property, or the environment or have been sacrificed” have been deleted as unnecessary in light of the Working Group’s consideration of draft arts. 15 and 32 (see A/CN.9/510, paras. 128-130, A/CN.9/591, paras. 157-170, and A/CN.9/594, paras. 195-198).

or circumstance is not attributable to its fault or to the fault of any person referred to in article 18, paragraph 1.

5. The carrier is also liable, notwithstanding paragraph 3 of this article, for all or part of the loss, damage, or delay if:

(a) The claimant proves that the loss, damage, or delay was or was probably caused by or contributed to by (i) the unseaworthiness of the ship; (ii) the improper crewing, equipping, and supplying of the ship; or (iii) the fact that the holds or other parts of the ship in which the goods are carried (including any containers supplied by the carrier in or upon which the goods are carried) were not fit and safe for reception, carriage, and preservation of the goods; and

(b) The carrier can prove neither that the loss, damage, or delay was not caused by any of the events or circumstances referred to in subparagraph 5(a) of this article nor that it complied with its obligation to exercise due diligence pursuant to article 16, paragraph 1.

6. When the carrier is relieved of part of its liability pursuant to this article, the carrier is liable only for that part of the loss, damage or delay that is attributable to the event or circumstance for which it is liable pursuant to this article.

*Article 18. Liability of the carrier for other persons*⁵⁹

1. The carrier is liable for the breach of its obligations pursuant to this Convention caused by the acts or omissions of:

(a) Any performing party; and

(b) Any other person,⁶⁰ that performs or undertakes to perform any of the carrier's obligations under the contract of carriage, to the extent that the person acts, either directly or indirectly, at the carrier's request or under the carrier's supervision or control.⁶¹

[2. The carrier is liable pursuant to paragraph 1 of this article only when the performing party's or other person's act or omission is within the scope of its contract, employment, or agency.]⁶²

⁵⁹ Note that former draft art. 18 as it appeared immediately prior to this provision in A/CN.9/WG.III/WP.56 was deleted following the Working Group's deliberations on draft article 28 (A/CN.9/594, para. 186). The opening phrase of para. 1 as set out in A/CN.9/WG.III/WP.56, "Subject to article 20, paragraph 4", has been deleted as a drafting improvement to avoid an unnecessary cross-reference.

⁶⁰ The phrase "including a performing party's employees, agents and subcontractors" that appeared after the word "carrier" in the text in A/CN.9/WG.III/WP.56 has been deleted as redundant, since that phrase is now included in the definition of "performing party" in draft article 1(6).

⁶¹ The phrase "as if such act or omissions were its own" that appeared in the text in A/CN.9/WG.III/WP.56 has been deleted as redundant.

⁶² The Working Group may wish to consider deleting this paragraph as it may cause evidentiary problems in some jurisdictions where, for example, employees who have started fires with cigarettes or who have stolen cargo have been found to be acting outside of their scope of employment or contract. Deletion of the paragraph would leave the issue of what is within the scope of employment to national law. Similar treatment should be given to para. 2 of draft art. 34.

Article 19. Liability of maritime performing parties

1. A maritime performing party [that initially received the goods for carriage in a Contracting State, or finally delivered them in a Contracting State, or performed its activities with respect to the goods in a port in a Contracting State].⁶³

(a) Is subject to the obligations and liabilities imposed on the carrier under this Convention and is entitled to the carrier's rights and immunities provided by this Convention if the occurrence that caused the loss, damage or delay took place during the period between the arrival of the goods at the port of loading of a ship and their departure from the port of discharge from a ship, when it has custody of the goods or at any other time to the extent that it is participating in the performance of any of the activities contemplated by the contract of carriage, and

(b) Is liable for the breach of its obligations pursuant to this Convention caused by the acts and omissions of any person to which it has entrusted the performance of any of the carrier's obligations under the contract of carriage.⁶⁴

2. [A maritime performing party is liable pursuant to paragraph 1 of this article only when the act or omission of the person concerned is within the scope of its contract, employment, or agency.]⁶⁵

3. If the carrier agrees to assume obligations other than those imposed on the carrier under this Convention, or agrees that its liability is higher than the limits imposed pursuant to articles 63, 62⁶⁶ and 25, paragraph 5, a maritime performing party is not bound by this agreement unless the maritime performing party expressly agrees to accept such obligations or such limits.

4. If an action⁶⁷ is [brought against a maritime performing party]⁶⁸ [brought against an employee or agent of the carrier or a maritime performing party]⁶⁹

⁶³ The phrase "that initially received the goods for carriage in a Contracting State, or finally delivered them in a Contracting State" has been inserted as preferred drafting to the insertion of para. 5 as set out in A/CN.9/WG.III/WP.61, para. 44, as agreed by the Working Group (A/CN.9/594, paras. 140-145). The text of para. 5, as it appeared in A/CN.9/WG.III/WP.61, read as follows: "5. This article does not apply unless the place where the goods are initially received by the maritime performing party or the place where the goods are finally delivered by the maritime performing party is situated in a Contracting State." In addition, the phrase "or performed all of its activities with respect to the goods in a single port in a Contracting State" has been inserted as a drafting improvement to further refine the provision.

⁶⁴ As a drafting improvement and to be consistent with draft article 19, former draft article 20(1)(a) and (b) as they appeared in A/CN.9/WG.III/WP.56 have been combined into one paragraph, and former draft article 20(3) as it appeared in A/CN.9/WG.III/WP.56 has been moved to become subparagraph (b) of draft article 19(1).

⁶⁵ As a drafting improvement and to be consistent with draft article 18, the last sentence of former draft article 20(3) as it appeared in A/CN.9/WG.III/WP.56 has been moved to draft article 19(2). Square brackets have been inserted around this phrase to mirror the treatment of similar phrases elsewhere in the text. See also footnote 62 above to draft art. 18(2), and footnote 110 below to draft article 34(2).

⁶⁶ As set out in footnote 69 of A/CN.9/WG.III/WP.36, the Working Group took note of the suggestion to limit the reference to draft art. 62, since it was stated that, while the reference to paras. (1), (3) and (4) of draft art. 62 was acceptable, para. (2) of draft art. 62 should not be referred to since the performing party was not liable in case of non-localized damage. The Working Group decided that this suggestion might need to be further discussed after a decision had been made regarding the inclusion of para. (2) of draft art. 62 in the draft convention.

⁶⁷ The phrase "under this Convention" has been deleted from the text as it appeared in

[brought against any person referred to in article 18, paragraph 1, or subparagraph 1(a) of this article, other than the carrier,]⁷⁰ that person is entitled to the defences and limits of liability available to the carrier under this Convention if [it proves that]⁷¹ it acted within the scope of its contract, employment, or agency.

Article 20. Joint and several liability and set-off

1. If the carrier and one or more maritime performing parties are liable for the loss of, damage to, or delay in delivery of the goods, their liability is joint and several [, such that each such party is liable for compensating the entire amount of such loss, damage or delay, without prejudice to any right of recourse it may have against other liable parties,]⁷² but only up to the limits provided for in articles 25, 62 and 63.

2. Without prejudice to article 64, the aggregate liability of all such persons shall not exceed the overall limits of liability under this Convention.

[3. If a claimant obtains compensation from a non-maritime performing party for the loss of, damage to, or delay in delivery of the goods, the amount received by the claimant shall be set off against any subsequent claim for that loss, damage or delay that the claimant makes against the carrier or a maritime performing party.]⁷³

A/CN.9/WG.III/WP.56 in order to broaden the application of this provision, which is then limited by the use of the phrase “under this Convention” at the end of the subparagraph.

⁶⁸ This approach was formerly reflected in Variant A of former draft article 20(4) as it appeared in A/CN.9/WG.III/WP.56.

⁶⁹ This approach reflects that taken in former draft article 4(2) as it appeared in A/CN.9/WG.III/WP.56.

⁷⁰ This approach reflects that taken in Variant B of former draft article 20(4) as it appeared in A/CN.9/WG.III/WP.56. Further, the phrase “including employees or agents of the contracting carrier or of a maritime performing party” as it appeared in this provision in A/CN.9/WG.III/WP.56 has been deleted to correspond with the inclusion of that concept in the definition of “maritime performing party” in draft article 1.

⁷¹ The Working Group may wish to consider whether the bracketed text should be deleted in order to reduce the burden of proof on the person entitled to claim the benefit of the defence of limit of liability of the carrier.

⁷² As decided at paras. 12 and 17 of A/CN.9/552, the phrase in square brackets was added for clarification of the meaning of “joint and several liability”. However, the Working Group may wish to consider the use of the term “joint and several liability” in numerous international instruments, including: para. 10(4) of the Hamburg Rules; para. 27(4) of the Uniform Rules concerning the Contract for International Carriage of Goods by Rail, as amended by the Protocol of Modification of 1999 (“CIM-COTIF 1999”); para. 4(5) of the Budapest Convention on the Contract for the Carriage of Goods by Inland Waterway, 2000 (“CMNI”); para. 30(3) of the Convention for the Unification of Certain Rules Relating to International Carriage by Air, as amended by protocols in 1955 and 1975 (“Warsaw Convention”); and para. 36(3) of the Convention for the Unification of Certain Rules for the International Carriage by Air, Montreal 1999 (“Montreal Convention”).

⁷³ As decided at paras. 14 and 17 of A/CN.9/552, a revised draft has been prepared, pending further discussion regarding the preparation of a uniform rule on set-off, or of leaving the issue to domestic law. The Working Group may wish to consider whether this paragraph is necessary or whether it can be deleted. Further, should the Working Group decide to delete the definition of “non-maritime performing party”, the phrase “a performing party other than a maritime performing party” could be substituted for the phrase “a non-maritime performing party”.

Article 21. Delay

Delay in delivery occurs when the goods are not delivered at the place of destination provided for in the contract of carriage within the time expressly agreed upon or, in the absence of such agreement, within the time it would be reasonable to expect of a diligent carrier, having regard to the terms of the contract, the customs, practices and usages of the trade,⁷⁴ and the circumstances of the journey.

Article 22. Calculation of compensation

1. Subject to article 62, the compensation payable by the carrier for loss of or damage to the goods is calculated by reference to the value of such goods at the place and time of delivery established in accordance with article 11.

2. The value of the goods is fixed according to the commodity exchange price or, if there is no such price, according to their market price or, if there is no commodity exchange price or market price, by reference to the normal value of the goods of the same kind and quality at the place of delivery.

3. In case of loss of or damage to the goods, the carrier is not liable for payment of any compensation beyond what is provided for in paragraphs 1 and 2 of this article except when the carrier and the shipper have agreed to calculate compensation in a different manner within the limits of chapter 19.

Article 23. Notice of loss, damage, or delay

1. The carrier is presumed, in absence of proof to the contrary, to have delivered the goods according to their description in the contract particulars unless notice of loss of or damage to⁷⁵ the goods, indicating the general nature of such loss or damage, was given⁷⁶ to the carrier or the performing party that delivered the goods before or at the time of the delivery, or, if the loss or damage is not apparent, within [three working days][seven days][seven working days at the place of delivery][seven consecutive days] after the delivery of the goods. Such a notice is not required in respect of loss or damage that is ascertained in a joint inspection of the goods by the person to whom they have been delivered⁷⁷ and the carrier or the maritime performing party against which liability is being asserted.⁷⁸

2. No compensation is payable pursuant to articles 21 and 63 unless notice of loss due to delay was given to the carrier within 21 consecutive days following delivery of the goods.

3. When the notice referred to in this article is given to the performing party that delivered the goods, it has the same effect as if that notice was given to

⁷⁴ In order to be consistent with other provisions of the draft convention, such as draft article 11, the phrase “customs, practices and usages of the trade” has been inserted instead of the phrase “characteristics of the transport” found in this provision in A/CN.9/WG.III/WP.56.

⁷⁵ “In connection with” deleted as unnecessary in this paragraph.

⁷⁶ The phrase “[by or on behalf of the consignee]” has been deleted to improve drafting since it is irrelevant from whom the notice comes as long as notice is given.

⁷⁷ The term “consignee” has been replaced with “person to whom they have been delivered” in order to clarify that what is meant in this provision is joint inspection by the person who receives the goods who may not actually be the consignee in a legal sense.

⁷⁸ Variant A of para. 1 as set out in A/CN.9/WG.III/WP.56 has been chosen for insertion over Variant B as representing better drafting with greater clarity and entailing no substantive difference in meaning.

the carrier, and notice given to the carrier has the same effect as a notice given to a maritime performing party.

4. In the case of any actual or apprehended loss or damage, the parties to the dispute shall give all reasonable facilities to each other for inspecting and tallying the goods and shall provide access to records and documents relevant to the carriage of the goods.

CHAPTER 7. ADDITIONAL PROVISIONS RELATING TO PARTICULAR STAGES OF CARRIAGE

Article 24. Deviation during sea carriage

When pursuant to national law, a deviation constitutes a breach of the carrier's obligations, such deviation of itself shall not deprive the carrier or a maritime performing party of any defence or limitation of this Convention, except to the extent provided in article 64.⁷⁹

*Article 25. Deck cargo on ships*⁸⁰

1. Goods may be carried on the deck of a ship only if:

- (a) Such carriage is required by law; or
- (b) They are carried in or on containers⁸¹ on decks that are specially fitted to carry such containers; or
- (c) The carriage on deck is in accordance with the contract of carriage, or⁸² the customs, usages, and practices of the trade in question.

2. The provisions of this Convention relating to the liability of the carrier apply to the loss of, damage to or delay in the delivery of goods carried on deck pursuant to paragraph 1 of this article, but the carrier is not liable for loss of or damage to such goods, or delay in their delivery, caused by the special risks involved in their carriage on deck when the goods are carried in accordance with subparagraphs 1(a) or (c) of this article.⁸³

3. If the goods have been carried on deck in cases other than those permitted pursuant to paragraph 1 of this article, the carrier is liable for loss of or damage to the goods or delay in their delivery that is exclusively caused by their carriage on deck, and is not entitled to the defences provided for in article 17.

⁷⁹ Variants A and B as they appeared in A/CN.9/WG.III/WP.56 have been deleted as confusing due to their overlap with draft articles 17(3)(l) and (m), which could be seen to created confusing different standards. The text that has been substituted is based on that previously found in footnotes 105 and 424 of A/CN.9/WG.III/WP.56, which was thought to contain preferable drafting.

⁸⁰ Drafting improvements have been made to clarify the text of this draft article as set out in A/CN.9/WG.III/WP.56, but to keep its meaning intact.

⁸¹ The phrase "[fitted to carry cargo on deck]" has been deleted as redundant.

⁸² The square brackets that were formerly around the phrase "the contract of carriage, or" have been deleted, since they were added pending consideration by the Working Group of freedom of contract issues, pursuant to paragraph 106 of A/CN.9/552, and this consideration has already occurred.

⁸³ As discussed at paras. 108 and 109 of A/CN.9/552, para. 2 may need to be discussed in greater detail in conjunction with draft para. 17(6), however, changes to para. 17(6) may have rendered this discussion unnecessary.

4. The carrier is not entitled to invoke subparagraph 1(c) of this article against a third party that has acquired a negotiable transport document or a negotiable electronic transport record in good faith, unless the contract particulars state that the goods may be carried on deck.⁸⁴

[5. If the carrier and shipper [expressly] agreed that the goods would be carried under deck, the carrier is not entitled to limit its liability for any loss of, damage to or delay in the delivery of the goods [[that solely][to the extent that such damage] resulted from their carriage on deck]⁸⁵.]⁸⁶

*Article 26. Carriage preceding or subsequent to sea carriage*⁸⁷

1. When loss of or damage to goods, or an event or circumstances causing a delay in their delivery, occurs during the carrier's period of responsibility but solely before their loading onto the ship or solely after their discharge from the ship, the provisions of this Convention do not prevail over those provisions of another international instrument⁸⁸ [or national law] that, at the time of such loss, damage or event or circumstance causing delay:

(a) [Variant A of subparagraph (a): Pursuant to the provisions of such international instrument [or national law] apply to all or any of the carrier's activities under the contract of carriage during that period;⁸⁹]

[Variant B of subparagraph (a): Pursuant to the provisions of such international instrument [or national law] would have applied to all or any of the carrier's activities if the shipper had made a separate and direct contract with the carrier in respect of the particular stage of carriage where the loss of, or damage to goods, or an event or circumstance causing delay in their delivery occurred;⁹⁰]

(b) Specifically provide for the carrier's liability, limitation of liability, or time for suit; and

⁸⁴ As discussed at paras. 110 and 111 of A/CN.9/552, discussion of this paragraph, which formerly appeared as draft article 26(3) in A/CN.9/WG.III/WP.56, and whether it should cover third-party reliance on non-negotiable transport documents and electronic transport records would continue after discussion of third-party rights and freedom of contract.

⁸⁵ As decided at paras. 113-114 and 117 of A/CN.9/552, square brackets were placed around "that exclusively resulted from their carriage on deck". A further alternative has been added.

⁸⁶ As decided at paras. 116 and 117 of A/CN.9/552, square brackets were placed around para. 5, for discussion at a future session, with further study of its relationship with draft art. 64.

⁸⁷ The redrafted text of draft paragraph 1 of this article from the text as set out in A/CN.9/WG.III/WP.56 is intended as improved drafting only, and is not intended to change the content of the provision in any way.

⁸⁸ The word "convention" has been changed to "instrument" here and in subparas. 1(a) and (c) in order to include the mandatory regulations of regional organizations.

⁸⁹ Variant A is the text of former draft article 27(1)(b)(i) as it appeared in A/CN.9/WG.III/WP.56, with slight drafting improvements. Further, as set out in para. 55 of A/CN.9/WG.III/WP.21, the bracketed text "[irrespective whether the issuance of any particular document is needed in order to make such international convention applicable]" reflected the situation under the 1980 Convention concerning International Carriage by Rail ("COTIF"). Since the 1999 Protocol for the Modification of COTIF entered into force in July 2006, the bracketed text has been deleted in both Variants.

⁹⁰ Variant B is based upon the drafting suggestion set out in para. 224 of A/CN.9/616 and agreed at para. 228.

(c) Cannot be departed from by contract⁹¹ either at all or to the detriment of the shipper under that instrument [or national law].

[2. Paragraph 1 of this article does not affect the application of article 62, paragraph 2.⁹²]

[3. Except where otherwise provided in [paragraph 1 of this article and 62, paragraph 2], the liability of the carrier and the maritime performing party for loss of or damage to the goods, or for delay, shall be solely governed by the provisions of this Convention.⁹³]

CHAPTER 8. OBLIGATIONS OF THE SHIPPER TO THE CARRIER

*Article 27. Delivery for carriage*⁹⁴

1. Unless otherwise agreed in the contract of carriage, the shipper shall deliver the goods ready for carriage. In any event, the shipper shall deliver the goods in such condition that they will withstand the intended carriage, including their loading, handling, stowing, lashing and securing, and discharging, and that they will not cause harm to persons or property.

[2. When the carrier and the shipper have made an agreement referred to in article 14, paragraph 2, the shipper shall properly and carefully load, handle, stow or discharge the goods.]

3. When a container or trailer is packed by the shipper, the shipper shall properly and carefully stow, lash and secure the contents in or on the container or trailer and in such a way that they will not cause harm to persons or property.

Article 28. Obligation of the shipper and the carrier to provide information and instructions

Without prejudice to the shipper's obligations in article 30, the carrier and the shipper shall respond to requests from each other to provide information and instructions required for the proper handling and carriage of the goods, if the information is in the requested party's possession or the instructions are within the requested party's reasonable ability to provide and they are not otherwise reasonably available to the requesting party.⁹⁵

⁹¹ The word "private" has been deleted from before the word "contract" as redundant.

⁹² If para. 62(2) is deleted, this paragraph should also be deleted.

⁹³ Paragraph 3 as it appeared in A/CN.9/WG.III/WP.56 has been replaced with the text set out in paragraph 36 of A/CN.9/WG.III/WP.78, as considered by the Working Group in paragraphs 233 and 235 of A/CN.9/616. Although the text of this paragraph has changed, it is intended to fulfil the same purpose as the previous text, which was, as set out in para. 54 of A/CN.9/WG.III/WP.21, as a conflict of law provision that was intended to safeguard the applicability of inland transport conventions.

⁹⁴ Revised text intended to simplify the text of this article (see paras. 113 and 120 of A/CN.9/591), taking into account the text in footnotes 116 and 435 of A/CN.9/WG.III/WP.56, and to clarify that draft para. 1 refers to the condition of the goods themselves and to their packaging, while draft paras. 2 and 3 refer to the proper stowage of the goods. Draft para. 2 takes into consideration the situation where there has been an agreement on a FIO(S) clause pursuant to draft article 14(2).

⁹⁵ Revised draft based on A/CN.9/WP.67, para. 14, Variant C, as agreed by the Working Group (A/CN.9/594, para. 186). The Working Group may wish to consider whether this draft article should be included in light of the content of draft article 29.

*Article 29. Shipper's obligation to provide information, instructions and documents*⁹⁶

1. The shipper shall provide to the carrier in a timely manner such information, instructions, and documents relating to the goods that are not otherwise reasonably available to the carrier, and that are reasonably⁹⁷ necessary:

(a) For the proper handling and carriage of the goods, including precautions to be taken by the carrier or a performing party; and

(b) For the carrier to comply with law, regulations or other requirements of public⁹⁸ authorities in connection with the intended carriage, provided that the carrier notifies the shipper in a timely manner of the information, instructions and documents it requires.

2. Nothing in this article affects any specific obligation to provide certain information, instructions and documents related to the goods pursuant to law, regulations or other requirements of public authorities in connection with the intended carriage.

Article 30. Basis of shipper's liability to the carrier

1. [Variant A of the first sentence:⁹⁹ The shipper is liable for loss¹⁰⁰ or damage sustained by the carrier[, including loss or damage caused by delay,] if the carrier proves that such loss or damage was caused by the goods¹⁰¹ or by a breach of the shipper's obligations pursuant to articles 27 and 29, subparagraphs 1(a) and (b).] [Variant B of the first sentence¹⁰²: The shipper is liable to the carrier for loss, [or] damage [or delay] caused by the breach of its obligations pursuant to articles 27 and 29, provided such loss, [or] damage [or delay] was due to the fault of the shipper or of any person referred to in article 34.] Except as provided in articles 31 and 32, the shipper is relieved of all or part of its liability if it proves that the cause or one of the causes of the loss[, or] damage [or delay] is not attributable to its fault or to the fault of any person referred to in article 34.

⁹⁶ Revised draft based on A/CN.9/WG.III/WP.69, para. 6, with elements from Variant A of A/CN.9/WG.III/WP.67, para. 20, as agreed by the Working Group (A/CN.9/594, paras. 187-194).

⁹⁷ The Working Group may wish to consider whether this second "reasonably" may be deleted, since the word "necessary" may be considered sufficient.

⁹⁸ The phrase "public authorities" has been reintroduced in paragraphs 1 and 2 of this draft article for drafting and translation purposes, and to be consistent with its use in draft article 17(3)(d).

⁹⁹ Revised draft based on the Working Group's deliberations at the 16th session (A/CN.9/591, paras. 136-153). Both Variants A and B of former paragraph 2 as it appeared in A/CN.9/WG.III/WP.56, as well as former paragraph 3, have been deleted from this draft article accordingly, and the substance of Variants A and B of paragraph 2 regarding strict liability for the provision of accurate information has been moved to a new provision in draft art. 31. The text of Variant A of para. 1 mirrors draft article 17(1).

¹⁰⁰ This loss could include loss resulting from delay.

¹⁰¹ The Working Group may wish to consider whether the phrase "caused by the goods" is appropriate in this context.

¹⁰² Variant B is taken from the text set out in para. 25 of A/CN.9/WG.III/WP.67, with the addition of the second sentence from Variant A, to facilitate the operation of draft para 2.

2. When the shipper is relieved of part of its liability pursuant to this article, the shipper is liable only for that part of the loss[, or] damage [or delay] that is attributable to its fault or to the fault of any person referred to in article 34.¹⁰³

*Article 31. Information for compilation of contract particulars*¹⁰⁴

1. The shipper shall provide to the carrier, in a timely manner, accurate information required for the compilation of the contract particulars and the issuance of the transport documents or electronic transport records, including the particulars referred to in article 37, subparagraphs 1(a), (b) and (c); the name of the party to be identified as the shipper in the contract particulars; the name of the consignee, if any; and the name of the person to whose order the transport document or electronic transport record is to be issued, if any.

2. The shipper is deemed to have guaranteed the accuracy at the time of receipt by the carrier of the information that is provided according to paragraph 1 of this article. The shipper shall indemnify the carrier against all loss, [or] damage [or delay] resulting from the inaccuracy of such information or documents.

*Article 32. Special rules on dangerous goods*¹⁰⁵

When goods by their nature or character are, [or become,] or reasonably appear likely to become, a danger to persons or property or to the environment:

(a) The shipper shall inform the carrier of the dangerous nature or character of the goods in a timely manner before the consignor delivers them to the carrier or a performing party. If the shipper fails to do so and the carrier or performing party does not otherwise have knowledge of their dangerous nature or character, the shipper is liable to the carrier for all loss, [or] damage, [or delay] and expenses resulting from [the carriage of such goods][such failure to inform] and

(b) The shipper shall mark or label dangerous goods in accordance with any law, regulations or other requirements of public authorities that apply during any stage of the intended carriage of the goods. If the shipper fails to do so, it is liable to the carrier for all loss, [or] damage, [or delay] resulting from such failure.

*Article 33. Assumption of shipper's rights and obligations by the documentary shipper*¹⁰⁶

1. A documentary shipper¹⁰⁷ is subject to the obligations and liabilities imposed on the shipper pursuant to this chapter and pursuant to article 57, and is entitled to the shipper's rights and immunities provided by this chapter and by chapter 14.

2. Paragraph 1 of this article does not affect the obligations, liabilities, rights or immunities of the shipper.

¹⁰³ Para. 2 is a new provision patterned on draft article 17(6) and is intended to ensure similar treatment of shippers and carriers in this regard.

¹⁰⁴ Removed into a separate provision from former draft article 30, subpara. (c), as set out in A/CN.9/WG.III/WP.56, as agreed by the Working Group (see A/CN.9/591, paras. 148 and 153).

¹⁰⁵ Revised draft based on text found in A/CN.9/WG.III/WP.67, para. 31, without paragraph 4, as agreed by the Working Group (A/CN.9/594, paras. 195-198).

¹⁰⁶ Revisions in this draft article as agreed in paras. 171 to 175 of A/CN.9/591.

¹⁰⁷ The first sentence of this draft paragraph as it appeared in A/CN.9/WG.III/WP.56 has been moved to draft article 1(10) as the definition of "documentary shipper."

*Article 34. Liability of the shipper for other persons*¹⁰⁸

1. The shipper is liable for the breach of its obligations under this Convention caused by the acts or omissions of any person, including employees, agents and subcontractors, to which it has entrusted the performance of any of its obligations as if such acts or omissions were its own[, but the shipper is not liable for acts or omissions of the carrier or a performing party acting on behalf of the carrier to which it has entrusted the performance of its obligations pursuant to this chapter].¹⁰⁹

[2. The shipper is liable pursuant to paragraph 1 of this article only when the act or omission of the person concerned is within the scope of that person's contract, employment or agency.]¹¹⁰

*Article 35. Cessation of shipper's liability*¹¹¹

A term in the contract of carriage according to which the liability of the shipper or any other person identified in the contract particulars as the shipper will cease, wholly or partly, upon a certain event or after a certain time is not valid:

(a) With respect to any liability pursuant to this chapter of the shipper or a person referred to in article 34; or

(b) With respect to any amounts payable to the carrier under the contract of carriage, except to the extent that the carrier has adequate security for the payment of such amounts.

[(c) To the extent that it conflicts with article 61, subparagraph (d)(iii).¹¹²]

¹⁰⁸ Revised draft based on A/CN.9/WG.III/WP.55, para. 41, as agreed by the Working Group (A/CN.9/591, paras. 178-180). As noted with respect to draft article 17(3)(h), the Working Group may wish to decide whether draft article 34 includes the "consignor" or not, and should expressly include it in draft article 34, if that is the intention.

¹⁰⁹ The bracketed text has been moved to para. 1 from its original location in para. 2 of the draft article as it appeared in A/CN.9/WG.III/WP.56, in order to mirror the text in draft article 18. The bracketed text was intended to deal with the FIO(S) issue in draft article 14(2), but the reference in draft article 17(3)(i) to actual performance of obligations by the shipper, any person referred to in art. 35 (now draft art. 34), or other parties has now been deleted in favour of the phrase "performed pursuant to an agreement in accordance with article 14, paragraph 2, unless the carrier [or a performing party] performs such activity on behalf of the shipper".

¹¹⁰ The Working Group may wish to consider whether this paragraph could be deleted as it may cause evidentiary problems in some jurisdictions where, for example, employees who have started fires with cigarettes or who have stolen cargo have been found to be acting outside of their scope of employment or contract. Deletion of the paragraph would leave the issue of what is within the scope of employment to national law. Similar treatment should be given to para. 2 of draft art. 18.

¹¹¹ Former para. 43(2) of A/CN.9/WG.III/WP.32, moved to this placement from the now-deleted chapter 9 on freight.

¹¹² Paragraph (c) could be deleted if the chapter on transfer of rights is deferred for future work.

CHAPTER 9. TRANSPORT DOCUMENTS AND ELECTRONIC TRANSPORT RECORDS

Article 36. Issuance of the transport document or the electronic transport record¹¹³

Unless the shipper and the carrier have agreed not to use a transport document or an electronic transport record, or it is the custom, usage or practice in the trade not to use one, upon delivery of the goods for carriage to the carrier or performing party:

(a) The consignor is entitled to obtain a non-negotiable transport document or, subject to article 8, subparagraph (a), a non-negotiable electronic transport record that evidences only the carrier's or performing party's receipt of the goods; and

(b) The shipper or, if the shipper consents,¹¹⁴ the documentary shipper, is entitled to obtain from the carrier, at the shipper's option, an appropriate negotiable or non-negotiable transport document or, subject to article 8, subparagraph (a), a negotiable or non-negotiable electronic transport record, unless the shipper and the carrier have agreed not to use a negotiable transport document or negotiable electronic transport record, or it is the custom, usage, or practice in the trade not to use one.¹¹⁵

Article 37. Contract particulars¹¹⁶

1. The contract particulars in the transport document or electronic transport record referred to in article 36 shall include the following information, as furnished by the shipper:

- (a) A description of the goods;
- (b) The leading marks necessary for identification of the goods;
- (c) The number of packages or pieces, or the quantity of goods; and
- (d) The weight of the goods, if furnished by the shipper.

2. The contract particulars in the transport document or the electronic transport record referred to in article 36 shall also include:

- (a) A statement of the apparent order and condition of the goods at the time the carrier or a performing party receives them for carriage;
- (b) The name and address of a person identified as¹¹⁷ the carrier;

¹¹³ Draft article amended as agreed by the Working Group (A/CN.9/594, paras. 223 and 224). Additional drafting suggestions made to clarify the application of custom, usage or practice in the trade.

¹¹⁴ The phrase "instructs the carrier" was thought to be too inflexible and too narrow, and has thus been replaced with the word "consents".

¹¹⁵ As set out in footnote 127 of A/CN.9/WG.III/WP.32, with respect to para. (a), it was acknowledged that, since not all transport documents as defined under draft art. 1(16) served the function of evidencing receipt of the goods by the carrier, it was important to make it clear that, under para. (a), the transport document should serve the receipt function.

¹¹⁶ Para. 1 of this draft article as set out in A/CN.9/WG.III/WP.56 has been redrafted as agreed by the Working Group (A/CN.9/594, paras. 225-233), and has been split into paras. 1 and 2 for greater clarity in that para. 1 concerns information furnished by the shipper.

¹¹⁷ As agreed by the Working Group at paragraphs 18 and 28 of A/CN.9/616.

(c) The date on which the carrier or a performing party received the goods, or on which the goods were loaded on board the ship, or on which the transport document or electronic transport record was issued; and

(d) The number of originals of the negotiable transport document, when more than one original is issued.

3. For the purposes of this article, the phrase “apparent order and condition of the goods” in subparagraph 2 (a) of this article refers to the order and condition of the goods based on:

(a) A reasonable external inspection of the goods as packaged at the time the shipper delivers them to the carrier or a performing party; and

(b) Any additional inspection that the carrier or a performing party actually performs before issuing the transport document or the electronic transport record.

*Article 38. Identity of the carrier*¹¹⁸

1. If the carrier is identified by name in the contract particulars, any other information in the transport document or electronic transport record relating to the identity of the carrier shall have no effect to the extent that it is inconsistent with that identification.¹¹⁹

[2. Variant A

If the contract particulars fail to identify the carrier but indicate that the goods have been loaded on board a named ship, the registered owner of the ship is presumed to be the carrier. The registered owner can defeat this presumption if it proves that the ship was under a bareboat charter at the time of the carriage that transfers contractual responsibility for the carriage of the goods to an identified bareboat charterer. [If the registered owner defeats the presumption that it is the carrier pursuant to this article, the bareboat charterer at the time of the carriage is presumed to be the carrier in the same manner as that in which the registered owner was presumed to be the carrier.]]¹²⁰

Variant B

If no person is identified in the contract particulars as the carrier as required pursuant to article 37, subparagraph 2 (b), but the contract particulars indicate that the goods have been loaded on board a named ship, the registered owner of that ship is presumed to be the carrier, unless it proves that the ship was under a bareboat charter at the time of the carriage and it identifies this bareboat charterer and indicates its address, in which case this bareboat charterer is presumed to be the carrier. Alternatively, the registered owner may

¹¹⁸ This new draft article has been inserted to draw together the provisions regarding the identity of the carrier into a single identifiable draft provision. The first paragraph of this new draft article consists of para. 4 of A/CN.9/WG.III/WP.79, while Variant A of the second paragraph consists of former draft article 40(3) as it appeared in A/CN.9/WG.III/WP.56, and Variant B of the second paragraph consists of paragraph 5 of A/CN.9/WG.III/WP.79.

¹¹⁹ This text is a modification of the text of para. 4 of A/CN.9/WG.III/WP.79, which the Working Group agreed to include in the draft convention in para. 28 of A/CN.9/616. The modification was made to ensure that the principle agreed upon by the Working Group could be applied with similar result in the case of both transport documents and electronic transport records.

¹²⁰ Variant A is the text of former draft article 40(3) as it appeared in A/CN.9/WG.III/WP.56.

rebut the presumption of being the carrier by identifying the carrier and indicating its address. The bareboat charterer may defeat any presumption of being the carrier in the same manner.^{121]}

3. Nothing in paragraph 2 of this article prevents the claimant from proving that any person other than the registered owner is the carrier.¹²²

Article 39. Signature

1. A transport document shall be signed by the carrier or a person acting on its behalf.¹²³

2. An electronic transport record shall include the electronic signature of the carrier or a person acting on its behalf.¹²⁴ Such electronic signature shall identify the signatory in relation to the electronic transport record and indicate the carrier's authorization of the electronic transport record.

Article 40. Deficiencies in the contract particulars

1. The absence of one or more of the contract particulars referred to in article 37, paragraphs 1 or 2, or the inaccuracy of one or more of those particulars, does not of itself affect the legal character or validity of the transport document or of the electronic transport record.

2. If the contract particulars include the date but fail to indicate its significance, the date is deemed¹²⁵ to be:

(a) The date on which all of the goods indicated in the transport document or electronic transport record were loaded on board the ship,¹²⁶ if the contract particulars indicate that the goods have been loaded on board a ship; or

(b) The date on which the carrier or a performing party received the goods,¹²⁷ if the contract particulars do not indicate that the goods have been loaded on board a ship.

3. If the contract particulars fail to state the apparent order and condition of the goods at the time the carrier or a performing party receives them from the consignor, the contract particulars are deemed to have stated¹²⁸ that the goods were

¹²¹ Variant B is based on the text suggested in paragraph 5 of A/CN.9/WG.III/WP.79.

¹²² The Working Group may wish to consider the inclusion of a provision such as this to ensure that cargo interests remain free to advance their claims against the carrier they believed to be responsible for the loss or damage, as supported by the Working Group in paragraphs 23 and 28 of A/CN.9/616.

¹²³ Although the Working Group agreed at paras. 12 and 13 of A/CN.9/616 to substitute the phrase "by or on behalf of the carrier" for the phrase "by the carrier or a person having authority from the carrier", the Working Group may wish to consider whether the drafting suggested more effectively achieves its goal of leaving issues such as agency and proper authority to the applicable law. The drafting formulation suggested is the same as that taken in article 15(1)(j) of the Hamburg Rules.

¹²⁴ Ibid.

¹²⁵ Text changed from "considered" to "deemed" to render it more conclusive as agreed by the Working Group in paras. 16 and 28 of A/CN.9/616.

¹²⁶ This drafting suggestion to reverse the order of the two phrases as they existed in the previous text is intended to improve the clarity of the subparagraph.

¹²⁷ Ibid.

¹²⁸ While draft para. 3 was approved in substance (see para. 26 of A/CN.9/616), a drafting clarification has been made to the text to ensure conformity with the changes made to draft

in apparent good order and condition at the time the consignor delivered them to the carrier or a performing party.¹²⁹

*Article 41. Qualifying the description of the goods in the contract particulars*¹³⁰

1. The carrier may qualify the information referred to in article 37, subparagraphs 1(a), (b), (c) or (d) in the circumstances and in the manner set out in this article in order to indicate that the carrier does not assume responsibility for the accuracy of the information furnished by the shipper, and shall do so if:

(a) The carrier has actual knowledge that any material statement in the transport document or electronic transport record is materially false or misleading; or

(b) The carrier reasonably believes that a material statement in the transport document or electronic transport record is false or misleading.¹³¹

2. When the goods are not delivered for carriage to the carrier or a performing party in a closed container, the carrier may qualify the information referred to in article 37, subparagraphs 1(a), (b), (c) or (d) if:

(a) The carrier had no physically practicable or commercially¹³² reasonable means of checking the information furnished by the shipper, in which case it may indicate which information it was unable to check; or

(b) The carrier reasonably considers the information furnished by the shipper to be inaccurate, in which case it may include a clause providing what it reasonably considers accurate information.

3. When the goods are delivered for carriage to the carrier or a performing party in a closed container, the carrier may include a qualifying clause in the contract particulars with respect to:

(a) The information referred to in article 37, subparagraphs 1(a), (b), or (c), if:

(i) Neither the carrier nor a performing party has in fact inspected the goods inside the container; or

(ii) Neither the carrier nor a performing party otherwise has actual knowledge of its contents before issuing the transport document or the electronic transport record;

article 42 and to take into account the approach taken in article 16(2) of the Hamburg Rules.

¹²⁹ The Working Group may wish to consider whether reference should be made in this article to the number of original bills of lading now required in the contract particulars pursuant to draft article 37(2)(d).

¹³⁰ The draft article has been reformulated to simplify and better align its structure and to take into account the issues raised in A/CN.9/WG.III/WP.62, paras. 36-39, and the deliberations at the Working Group's eighteenth session (A/CN.9/616, paras. 29-39).

¹³¹ As agreed by the Working Group (paras. 35-37, 39, 41 and 43-44, A/CN.9/616).

¹³² The phrase "the carrier can show that" has been deleted here and in draft paras. 4(a) and (b) pursuant to the decision of the Working Group (para. 38, A/CN.9/616). Further, the phrase "physically practicable or commercially" has been included here to allow for the deletion of former draft article 42(a), as it appeared in A/CN.9/WG.III/WP.56, as agreed by the Working Group (paras. 43-44, A/CN.9/616).

- (b) The information referred to in article 37, subparagraph 1(d), if:
 - (i) Neither the carrier nor a performing party weighed the container, and the shipper and the carrier had not agreed prior to the shipment that the container would be weighed and the weight would be included in the contract particulars; or
 - (ii) There was no physically practicable or commercially¹³³ reasonable means of checking the weight of the container.

*Article 42. Evidentiary effect of the contract particulars*¹³⁴

Except to the extent that the contract particulars have been qualified in the circumstances and in the manner set out in article 41:¹³⁵

(a) A transport document or an electronic transport record that evidences receipt of the goods is prima facie evidence of the carrier's receipt of the goods as stated in the contract particulars;¹³⁶

(b) Proof to the contrary by the carrier in respect of any contract particulars shall not be admissible, when such contract particulars are included in:

- (i) A negotiable transport document or a negotiable electronic transport record that is transferred to a third party acting in good faith, or
- (ii) A non-negotiable transport document or a non-negotiable electronic transport record that indicates that it must be surrendered in order to obtain delivery of the goods and is transferred to the consignee acting in good faith.¹³⁷

(c) Proof to the contrary by the carrier shall not be admissible against a consignee acting in good faith in respect of contract particulars referred to in article 37, subparagraph 2 (a) included in a non-negotiable transport document or a non-negotiable electronic transport record, when such contract particulars are furnished by the carrier. For the purpose of this paragraph, the information referred to in article 37, subparagraph 2 (a), as well as the number, type and identifying numbers of the containers, but not the identifying numbers of the container seals, is deemed to be information furnished by the carrier.¹³⁸

¹³³ The phrase "physically practicable or commercially" has been included here to allow for the deletion of former draft article 42(a), as it appeared in A/CN.9/WG.III/WP.56, as agreed by the Working Group (paras. 43-44, A/CN.9/616).

¹³⁴ The drafting adjustments to the text are made to the provision as it appeared in para. 58 of A/CN.9/616.

¹³⁵ The contents of the chapeau of draft article 42 was located in former draft article 44, as it appeared in A/CN.9/WG.III/WP.56, which has been deleted.

¹³⁶ The Working Group may wish to note that this paragraph represents an expansion of the coverage of this principle from that set out in article IV(5)(f) of the Hague-Visby Rules.

¹³⁷ This subparagraph has been reformulated to avoid the difficult notion of conclusive evidence by using the construction of article 16(3)(b) of the Hamburg Rules, which has, however, been expanded to include non-negotiable transport documents and electronic transport records.

¹³⁸ The clarifications made to draft para. (c) as compared with the version of the text that appeared in para. 58 of A/CN.9/616 are those agreed to by the Working Group in para. 59 of A/CN.9/616.

*Article 43. "Freight prepaid"*¹³⁹

If the contract particulars¹⁴⁰ contain the statement "freight prepaid" or a statement of a similar nature, the carrier cannot assert against the holder or the consignee the fact that the freight has not been paid.¹⁴¹ This article does not apply if the holder or the consignee is also the shipper.

CHAPTER 10. DELIVERY OF THE GOODS

Article 44. Obligation to accept delivery

When the goods have arrived at their destination, the consignee that [exercises any of its rights under][has actively involved itself in] the contract of carriage¹⁴² shall accept delivery of the goods at the time and location referred to in article 11, paragraph 2.

Article 45. Obligation to acknowledge receipt

On request of the carrier or the performing party that delivers the goods, the consignee shall acknowledge receipt¹⁴³ of the goods from the carrier or the performing party in the manner that is customary at the place of delivery. The carrier may refuse delivery if the consignee refuses to acknowledge such receipt.

*Article 46. Delivery when no negotiable transport document or negotiable electronic transport record is issued*¹⁴⁴

When no negotiable transport document or no negotiable electronic transport record has been issued:

(a) The carrier shall deliver the goods to the consignee at the time and location referred to in article 11, paragraph 2. The carrier may refuse delivery if the person claiming to be the consignee does not properly identify itself as the consignee on the request of the carrier.

(b) If the name and address of the consignee are not referred to in the contract particulars, the controlling party shall prior to or upon the arrival of the goods at the place of destination advise the carrier of such name and address.

(c) If the name or the address of the consignee is not known to the carrier or if the consignee, after having received a notice of arrival, does not claim delivery of

¹³⁹ Former draft para. 44(1) from A/CN.9/WG.III/WP.32 retained as agreed (see paras. 162 to 164 of A/CN.9/552) in draft art. 43.

¹⁴⁰ The phrase "in a negotiable transport document or a negotiable electronic transport record" has been deleted in order to render the provision neutral as between negotiable and non-negotiable documents, as agreed by the Working Group (paras. 81-82, A/CN.9/616).

¹⁴¹ As agreed by the Working Group (para. 80, A/CN.9/616), the text suggested in para. 59 of A/CN.9/WG.III/WP.62 has been included in the provision.

¹⁴² As set out in footnote 160 of A/CN.9/WG.III/WP.32, a preference was expressed for the obligation to accept delivery not to be made dependent upon the exercise of any rights by the consignee, but rather that it be unconditional.

¹⁴³ It was thought that deletion of the phrase "shall confirm delivery" and replacement with the phrase "must acknowledge receipt" was preferable since the consignee could confirm its own act, but not the fulfilment of the carrier's obligation.

¹⁴⁴ Revised text as agreed by the Working Group (A/CN.9/591, paras. 226 and 230), but with the order of paras. (a) and (b) reversed from their former position in the draft article in A/CN.9/WG.III/WP.56.

the goods from the carrier after their arrival at the place of destination, the carrier shall so advise the controlling party or, if, after reasonable effort, it is unable to locate the controlling party, the shipper. In such event, the controlling party or shipper shall give instructions in respect of the delivery of the goods. If the carrier is unable, after reasonable effort, to locate the controlling party or the shipper, the documentary shipper is deemed to be the shipper for purposes of this paragraph.

(d) The carrier that delivers the goods upon instruction of the controlling party or the shipper pursuant to subparagraph (c) of this article is discharged from its obligations to deliver the goods under the contract of carriage.¹⁴⁵

[Article 47. Delivery when a non-negotiable transport document that requires surrender is issued¹⁴⁶

When a non-negotiable transport document has been issued that [provides] [indicates] [specifies] that it shall be surrendered in order to obtain delivery of the goods:

(a) The carrier shall deliver the goods at the time and location referred to in article 11, paragraph 2 to the consignee upon proper identification of it on the request of the carrier and surrender of the non-negotiable document. The carrier may refuse delivery if the person claiming to be the consignee fails to properly identify itself on the request of the carrier, and shall refuse delivery if the non-negotiable document is not surrendered. If more than one original of the non-negotiable document has been issued, the surrender of one original will suffice and the other originals cease to have any effect or validity.

(b) If the consignee does not claim delivery of the goods from the carrier after their arrival at the place of destination or the carrier refuses delivery because the person claiming to be the consignee does not properly identify itself as the consignee or does not surrender the document, the carrier shall so advise the shipper. In such event, the shipper shall give instructions in respect of delivery of the goods. If the carrier, after reasonable effort, is unable to locate the shipper, the documentary shipper is deemed to be the shipper for the purpose of this paragraph.

(c) The carrier that delivers the goods upon instruction of the shipper pursuant to subparagraph (b) of this article is discharged from its obligation to deliver the goods under the contract of carriage, irrespective of whether the non-negotiable transport document has been surrendered to it.^{147]}

¹⁴⁵ Paragraph (d) of this draft article consists of the final sentence of former paragraph (c) of this draft article, but it has been placed in a separate paragraph to be consistent with the treatment of the similar paragraph in draft article 49.

¹⁴⁶ Draft article based on proposed new article 48 bis as set out in A/CN.9/WG.III/WP.68, para. 15, with slight drafting adjustments, which the Working Group agreed to include in the draft convention (A/CN.9/594, paras. 208-215).

¹⁴⁷ Paragraph (c) of this draft article consists of the final sentence of former paragraph (b) of this draft article as it appeared in A/CN.9/WG.III/WP.68, para. 15, but it has been placed in a separate paragraph to be consistent with the treatment of the similar paragraph in draft article 49.

[Article 48. Delivery when a non-negotiable electronic transport record that requires surrender is issued]¹⁴⁸

When a non-negotiable electronic transport record has been issued that [provides] [indicates] [specifies] that it shall be surrendered in order to obtain delivery of the goods:

(a) The carrier shall deliver the goods at the time and location referred to in article 11, paragraph 2 to the person named in the electronic record as the consignee and that has exclusive control of the electronic record. Upon such delivery the electronic record ceases to have any effect or validity. The carrier may refuse delivery if the person claiming to be the consignee does not properly identify itself as the consignee on the request of the carrier, and shall refuse delivery if the person claiming to be the consignee is unable to demonstrate in accordance with the procedures referred to in article 9 that it has exclusive control of the electronic record.

(b) If the consignee does not claim delivery of the goods from the carrier after their arrival at the place of destination or the carrier refuses delivery in accordance with subparagraph (a) of this article, the carrier shall so advise the shipper. In such event, the shipper shall give instructions in respect of delivery of the goods. If the carrier, after reasonable effort, is unable to locate the shipper, the documentary shipper is deemed to be the shipper for the purpose of this paragraph.

(c) The carrier that delivers the goods upon instruction of the shipper pursuant to subparagraph (b) of this article is discharged from its obligation to deliver the goods under the contract of carriage, irrespective of whether the person to which the goods are delivered is able to demonstrate in accordance with the procedures referred to in article 9 that it has exclusive control of the electronic record.^{149]}

Article 49. Delivery when a negotiable transport document or negotiable electronic transport record is issued¹⁵⁰

When a negotiable transport document or a negotiable electronic transport record has been issued:

(a) Without prejudice to article 44, the holder of the negotiable transport document or negotiable electronic transport record is entitled to claim delivery of the goods from the carrier after they have arrived at the place of destination, in which event the carrier shall deliver the goods at the time and location referred to in article 11, paragraph 2, to the holder, as appropriate:

¹⁴⁸ Draft article based on proposed new article 48 ter as set out in A/CN.9/WG.III/WP.68, para. 16, with slight drafting adjustments, which the Working Group agreed to include in the draft convention (A/CN.9/594, paras. 208-215).

¹⁴⁹ Paragraph (c) of this draft article consists of the final sentence of former paragraph (b) of this draft article as it appeared in A/CN.9/WG.III/WP.68, para. 16, but it has been placed in a separate paragraph to be consistent with the treatment of the similar paragraph in draft article 49.

¹⁵⁰ Revised text as agreed by the Working Group (A/CN.9/591, paras. 231-239, and A/CN.9/595, paras. 80-89). As a drafting improvement to avoid repetition, former subparas. (a)(i) and (ii) as set out in A/CN.9/WG.III/WP.56 have been combined to form paras. (a) and (b) in this article.

- (i) Upon surrender of the negotiable transport document and, if the holder is one of the persons referred to in article 1, subparagraph 12(a)(i), upon proper identification; or
 - (ii) Upon demonstration by the holder, in accordance with the procedures referred to in article 9, subparagraph 1(c), that it is the holder of the negotiable electronic transport record.
- (b). The carrier shall refuse delivery if the conditions of subparagraph (a)(i) or (a)(ii) are not met.
- (c) If more than one original of the negotiable transport document has been issued, the surrender of one original will suffice and the other originals cease to have any effect or validity. When a negotiable electronic transport record has been used, such electronic transport record ceases to have any effect or validity upon delivery to the holder in accordance with the procedures required by article 9, subparagraph 1(d).
- (d) If the holder does not claim delivery of the goods from the carrier after their arrival at the place of destination, the carrier shall so advise the controlling party or, if, after reasonable effort, it is unable to locate the controlling party, the shipper. In such event the controlling party or shipper shall give the carrier instructions in respect of the delivery of the goods. If the carrier is unable, after reasonable effort, to locate the controlling party or the shipper, the documentary shipper shall be deemed to be the shipper for purposes of this paragraph.
- (e) The carrier that delivers the goods upon instruction of the controlling party or the shipper in accordance with subparagraph (d) of this article is discharged from its obligation to deliver the goods under the contract of carriage to the holder, irrespective of whether the negotiable transport document has been surrendered to it, or the person claiming delivery under a negotiable electronic transport record has demonstrated, in accordance with the procedures referred to in article 9, that it is the holder.
- (f) A person that becomes a holder of the negotiable transport document or the negotiable electronic transport record after the carrier has delivered the goods pursuant to subparagraph (e) of this article, but pursuant to contractual or other arrangements made before such delivery acquires rights against the carrier under the contract of carriage, other than the right to claim delivery of the goods.
- (g) Notwithstanding subparagraphs (e) and (f) of this article, the holder that did not have or could not reasonably have had knowledge of such delivery at the time it became a holder acquires the rights incorporated in the negotiable transport document or negotiable electronic transport record.

Article 50. Goods remaining undelivered

1. Unless otherwise agreed and without prejudice to any other rights that the carrier may have against the shipper, controlling party or consignee,¹⁵¹ if the goods have remained undelivered, the carrier may, at the risk and expense of the

¹⁵¹ Former draft article 50 as set out in A/CN.9/WG.III/WP.56 has been deleted, and its substance incorporated into draft article 50 in this text, in light of the Working Group's deliberations at the 17th session (A/CN.9/594, paras. 90-93). See also subpara. 2(b) of this article.

person entitled to the goods, take such action in respect of the goods as circumstances may reasonably require, including:¹⁵²

- (a) To store the goods at any suitable place;
- (b) To unpack the goods if they are packed in containers, or to act otherwise in respect of the goods, including by moving the goods or causing them to be destroyed; and
- (c) To cause the goods to be sold in accordance with the practices, or pursuant to the law or regulations of the place where the goods are located at the time.

2. For the purposes of this article, goods shall be deemed to have remained undeliverable if, after their arrival at the place of destination:¹⁵³

- (a) The consignee does not accept delivery of the goods pursuant to this chapter at the time and location referred to in article 11, paragraph 2;
- (b) The controlling party or the shipper cannot be found or does not give the carrier adequate instructions pursuant to articles 46, 47, 48 and 49;
- (c) The carrier is entitled or required to refuse delivery pursuant to articles 46, 47, 48 and 49;¹⁵⁴
- (d) The carrier is not allowed to deliver the goods to the consignee pursuant to the law or regulations of the place at which delivery is requested; or
- (e) The goods are otherwise undeliverable by the carrier.

3. The carrier may exercise these rights only after it has given reasonable advance notice of arrival of the goods at the place of destination to the person stated in the contract particulars as the person if any, to be notified of the arrival of the goods at the place of destination, and to one of the following persons in the order indicated, if known to the carrier: the consignee, the controlling party or the shipper.¹⁵⁵

4. If the goods are sold pursuant to subparagraph 1(c) of this article, the carrier shall hold the proceeds of the sale for the benefit of the person entitled to the goods, subject to the deduction of any costs incurred by the carrier and any other amounts that are due to the carrier in connection with the carriage of those goods.¹⁵⁶

¹⁵² Paragraph 1 is a slightly amended version of former draft art. 51(2) as set out in A/CN.9/WG.III/WP.56, with amendments and corresponding changes to the chapeau as per deliberations of the Working Group (A/CN.9/594, paras. 97 to 99).

¹⁵³ Paragraph 2 is a slightly amended version of former draft art. 51(1)(a) as set out in A/CN.9/WG.III/WP.56, with amendments and corresponding changes to the chapeau as per deliberations of the Working Group (A/CN.9/594, paras. 96 and 99).

¹⁵⁴ The Working Group may wish to consider the addition of subpara. 2(c) in order to include the situation when the goods remain undelivered because the carrier is entitled or required to refuse delivery.

¹⁵⁵ Paragraph 3 reflects the incorporation into draft article 50 of former article 52 as set out in A/CN.9/WG.III/WP.56, which the Working Group wished to see placed earlier in the text (A/CN.9/594, paras. 102-106).

¹⁵⁶ This paragraph was formerly draft art. 51(3) of the text as set out in A/CN.9/WG.III/WP.56, with slight modifications to reflect the views of the Working Group (A/CN.9/594, paras. 100-101).

5. The carrier shall not be liable for loss of or damage to goods that remain undelivered pursuant to this article unless the claimant proves that such loss or damage resulted from the failure by the carrier to take steps that would have been reasonable in the circumstances to preserve the goods and that the carrier knew or ought to have known that the loss or damage to the goods would result from its failure to take such steps.¹⁵⁷

*Article 51. Retention of goods*¹⁵⁸

Nothing in this Convention affects a right of the carrier or a performing party that may exist pursuant to the contract of carriage or the applicable law to retain the goods to secure the payment of sums due.

CHAPTER 11. RIGHTS OF THE CONTROLLING PARTY¹⁵⁹

*Article 52. Exercise and extent of right of control*¹⁶⁰

1. The right of control may be exercised only by the controlling party and is limited to:

(a) The right to give or modify instructions in respect of the goods that do not constitute a variation of the contract of carriage;

(b) The right to obtain delivery of the goods at a scheduled port of call or, in respect of inland carriage, any place en route; and

(c) The right to replace the consignee by any other person including the controlling party.

2. The right of control exists during the entire period of responsibility of the carrier, as provided in article 11, paragraph 1.

Article 53. Identity of the controlling party and transfer of the right of control

1. When no negotiable transport document or no negotiable electronic transport record is issued:¹⁶¹

(a) The shipper is the controlling party unless the shipper, when the contract of carriage is concluded, designates the consignee, the documentary shipper or another person as the controlling party;

(b) The controlling party is entitled to transfer the right of control to another person. The transfer becomes effective with respect to the carrier upon its

¹⁵⁷ This draft paragraph consists of a combination of the second sentence of former draft art. 46 and of the spirit of former draft art. 53, both as set out in A/CN.9/WG.III/WP.56, and revised so as to reflect the Working Group's deliberations (A/CN.9/594, paras. 107-113). The Secretariat suggests that placement of the revised provision would be best in this draft article.

¹⁵⁸ This new draft paragraph is based on the text contained in para. 14 of A/CN.9/WG.III/WP.63 and reflects the Working Group's deliberations (A/CN.9/594, paras. 114-117).

¹⁵⁹ Title of the chapter revised to better reflect its content.

¹⁶⁰ Revised draft as agreed by the Working Group (A/CN.9/594, paras. 10-16), with drafting alterations to reflect that the definition of "controlling party" has been placed in draft article 1(15).

¹⁶¹ Revised draft as agreed by the Working Group (A/CN.9/594, paras. 23-36 and 68-71). Former draft article 56(1)(d) as set out in A/CN.9/WG.III/WP.56 has been moved to become a separate para. 5 of this article.

notification of the transfer by the transferor, and the transferee becomes the controlling party;

(c) The controlling party shall produce proper identification when it exercises the right of control.

2. When a non-negotiable transport document or a non-negotiable electronic transport record has been issued that [provides] [indicates] [specifies] that it shall be surrendered in order to obtain delivery of the goods:

(a) The shipper is the controlling party and may transfer the right of control to the consignee named in the transport document or the electronic transport record by transferring the document to this person without endorsement, or by transferring the electronic transport record to it in accordance with the procedures referred to in article 9. If more than one original of the document was issued, all originals shall be transferred in order to effect a transfer of the right of control;

(b) In order to exercise its right of control, the controlling party shall produce the document and proper identification, or, in the case of an electronic transport record, shall demonstrate in accordance with the procedures referred to in article 9 that it has exclusive control of the electronic transport record. If more than one original of the document was issued, all originals shall be produced, failing which the right of control cannot be exercised.

3. When a negotiable transport document is issued:

(a) The holder or, if more than one original of the negotiable transport document is issued, the holder of all originals is the controlling party;

(b) The holder may transfer the right of control by transferring the negotiable transport document to another person in accordance with article 59. If more than one original of that document was issued, all originals shall be transferred in order to effect a transfer of the right of control;

(c) In order to exercise the right of control, the holder shall produce the negotiable transport document to the carrier, and if the holder is one of the persons referred to in article 1, subparagraph 12(a)(i), the holder shall produce proper identification. If more than one original of the document was issued, all originals shall be produced, failing which the right of control cannot be exercised.¹⁶²

4. When a negotiable electronic transport record is issued:

(a) The holder is the controlling party;

(b) The holder may transfer the right of control to another person by transferring the negotiable electronic transport record in accordance with the procedures referred to in article 9;

(c) In order to exercise the right of control, the holder shall demonstrate, in accordance with the procedures referred to in article 9, that it is the holder.¹⁶³

5. The right of control ceases when the goods have arrived at destination and have been delivered in accordance with this Convention.¹⁶⁴

¹⁶² Revised draft as agreed by the Working Group (A/CN.9/594, paras. 37-40).

¹⁶³ Revised draft as agreed by the Working Group (A/CN.9/594, para. 41).

¹⁶⁴ Revised draft as agreed by the Working Group (A/CN.9/594, paras. 23-36 and 68-71). This

[6. Notwithstanding article 61, a person, not being the shipper or the documentary shipper, that transferred the right of control without having exercised that right, is upon such transfer discharged from the liabilities imposed on the controlling party by the contract of carriage or by this Convention.]¹⁶⁵

Article 54. Carrier's execution of instructions

1. Subject to paragraphs 2 and 3 of this article, the carrier shall execute the instructions referred to in article 52 if:¹⁶⁶

(a) The person giving such instructions is entitled to exercise the right of control;

(b) The instructions can reasonably be executed according to their terms at the moment that they reach the carrier; and

(c) The instructions will not interfere with the normal operations of the carrier, including its delivery practices.

2. In any event, the controlling party shall reimburse the carrier any additional expense that the carrier may incur and shall indemnify the carrier against any loss or damage that the carrier may suffer as a result of executing any instruction pursuant to this article, including compensation that the carrier may become liable to pay for loss of or damage to [or for delay in delivery of] other goods being carried.¹⁶⁷

3. The carrier is entitled to obtain security from the controlling party for the amount of additional expense, loss or damage that the carrier reasonably expects will arise in connection with the execution of an instruction pursuant to this article. The carrier may refuse to carry out the instructions if no such security is provided.

4. The carrier's liability for loss of or damage to the goods [or for delay in delivery] resulting from its failure to comply with the instructions of the controlling party in breach of its obligation pursuant to paragraph 1 of this article shall be subject to articles 17 to 23, and the amount of the compensation payable by the carrier shall be subject to articles 62 to 64.¹⁶⁸

Article 55. Deemed delivery

Goods that are delivered pursuant to an instruction in accordance with article 52, subparagraph 1(b), are deemed to be delivered at the place of destination, and the provisions of chapter 10 relating to such delivery apply to such goods.

paragraph was formerly draft para. 56(1)(d) as set out in A/CN.9/WG.III/WP.56, and has been moved to this placement to improve clarity.

¹⁶⁵ Revised draft as agreed by the Working Group (A/CN.9/594, paras. 42-45). The Working Group agreed that this paragraph should be placed in square brackets pending its possible modification or deletion, following further consideration of the issues raised and of the text in draft para. 60(1).

¹⁶⁶ Revised draft as agreed by the Working Group (A/CN.9/594, paras. 46-49).

¹⁶⁷ Revised draft as agreed by the Working Group (A/CN.9/594, paras. 50-51).

¹⁶⁸ New provision replacing former article 57(4), as it appeared in A/CN.9/WG.III/WP.56, as requested by the Working Group (A/CN.9/594, paras. 55-58).

*Article 56. Variations to the contract of carriage*¹⁶⁹

1. The controlling party is the only person that may agree with the carrier to variations to the contract of carriage other than those referred to in article 52, subparagraphs 1(b) and (c).

2. Variations to the contract of carriage, including those referred to in article 52, subparagraphs 1(b) and (c), shall be stated in a negotiable transport document or incorporated in a negotiable electronic transport record, or, at the option of the controlling party, shall be stated in a non-negotiable transport document or incorporated in a non-negotiable electronic transport record.¹⁷⁰ If so stated or incorporated, such variations shall be signed in accordance with article 39.

3. Variations to the contract of carriage made pursuant to this article shall not affect the rights and obligations of the parties prior to the date on which they are signed in accordance with article 39.

Article 57. Providing additional information, instructions or documents to carrier

If the carrier or a performing party during the period that it has custody of the goods reasonably requires information, instructions, or documents in addition to those referred to in article 29, subparagraph 1(a), the controlling party, on request of the carrier or such performing party, shall provide such information, instructions or documents to the extent that it is able to do so. If the carrier, after reasonable effort, is unable to locate the controlling party or the controlling party is unable to provide adequate information, instructions, or documents to the carrier, the shipper or the documentary shipper shall do so.¹⁷¹

Article 58. Variation by agreement

The parties to the contract of carriage may vary the effect of articles 52, subparagraphs 1(b) and (c), 53, paragraph 5 and 54. The parties may also restrict or exclude the transferability of the right of control referred to in article 53, subparagraph 1(b).¹⁷²

¹⁶⁹ Draft article moved here from its previous placement as former draft article 55 earlier in the chapter as set out in A/CN.9/WG.III/WP.56. Revised draft of provision as agreed by the Working Group (A/CN.9/594, paras. 17-22).

¹⁷⁰ The non-negotiable transport document and electronic transport record that require surrender in draft articles 47 and 48 should be included here should the Working Group decide that they will constitute conclusive evidence.

¹⁷¹ The Working Group at para 63 of A/CN.9/594 suggested that a difference could be drawn based on whether the controlling party has been active or passive. However, the Secretariat suggests that this may be unnecessary, since the controlling party should always be aware if it is a controlling party, and text as it stands indicates other parties who may be contacted for additional information if the controlling party is not identified or found.

¹⁷² The Secretariat suggests the deletion of the following closing phrase as redundant: "If a negotiable transport document or a negotiable electronic transport record is issued, any agreement referred to in this article shall be stated or incorporated in the contract particulars."

[CHAPTER 12. TRANSFER OF RIGHTS¹⁷³*Article 59. When a negotiable transport document or negotiable electronic transport record is issued*

1. When a negotiable transport document is issued, the holder may transfer the rights incorporated in the document by transferring it to another person:

(a) If an order document, duly endorsed either to such other person or in blank; or,

(b) If a bearer document or a blank endorsed document, without endorsement; or,

(c) If a document made out to the order of a named person and the transfer is between the first holder and the named person, without endorsement.¹⁷⁴

2. When a negotiable electronic transport record is issued, its holder may transfer the rights incorporated in it, whether it be made out to order or to the order of a named person, by transferring the electronic transport record in accordance with the procedures referred to in article 9.¹⁷⁵

Article 60. Liability of holder

1. Without prejudice to article 57, a holder that is not the shipper and that does not exercise any right under the contract of carriage does not assume any liability under the contract of carriage solely by reason of being a holder.

2. A holder that is not the shipper and that exercises any right under the contract of carriage assumes [any liabilities imposed on it under the contract of carriage to the extent that such liabilities are incorporated in or ascertainable from the negotiable transport document or the negotiable electronic transport record] [the liabilities imposed on the controlling party pursuant to chapter 11 and the liabilities imposed on the shipper for the payment of freight, dead freight, demurrage and compensation for detention to the extent that such liabilities are incorporated in the negotiable transport document or the negotiable electronic transport record].¹⁷⁶

¹⁷³ The original text of this chapter is taken from A/CN.9/WG.III/WP.32, with some drafting improvements suggested to that text. The Working Group has not yet taken a final decision regarding the disposition of this chapter, following its decision in paras. 77-78 of A/CN.9/594 to defer for future discussion the consideration of chapter 12 on transfer of rights.

¹⁷⁴ As set out in footnote 201 of A/CN.9/WG.III/WP.32, there was strong support in the Working Group to maintain the text of draft para. 59(1) as drafted in order to promote harmonization and to accommodate negotiable electronic transport records. The concern raised in para. 132 of A/CN.9/526 regarding nominative negotiable documents under certain national laws was noted.

¹⁷⁵ As set out in footnote 202 of A/CN.9/WG.III/WP.32, para. 2 was discussed during the fifteenth session of the Working Group in conjunction with the other provisions in the draft convention regarding electronic transport records.

¹⁷⁶ As set out in footnote 204 of A/CN.9/WG.III/WP.32, the Working Group requested the Secretariat to prepare a revised draft of para. 2 with due consideration being given to the views expressed. However, the views expressed in the preceding paras. 137 to 139 of A/CN.9/526 were not consistent. Those that favoured a revision of the text requested that the subparagraph stipulate which liabilities the holder that exercised any right under the contract of carriage would assume pursuant to that contract, and an attempt has been made to revise the text. It should be noted that there is a relevant type of liability that ought perhaps to be considered: the liability in respect of loss, damage or injury caused by the goods (but excluding in any event that for breach of the shipper's obligations under draft art. 27).

3. For the purpose of paragraphs 1 and 2 of this article [and article 44],¹⁷⁷ a holder that is not the shipper does not exercise any right under the contract of carriage solely because:

(a) It agrees with the carrier, pursuant to article 10, to replace a negotiable transport document by a negotiable electronic transport record or to replace a negotiable electronic transport record by a negotiable transport document; or

(b) It transfers its rights pursuant to article 59.

Article 61.¹⁷⁸ When no negotiable transport document or negotiable electronic transport record is issued

When no negotiable transport document or no negotiable electronic transport record is issued:

(a) The transfer of rights pursuant to a contract is subject to the law applicable to the contract for the transfer of such rights;

(b) The transfer of rights other than by contract is subject to the law applicable to such other mode of transfer;

(c) The transferability of rights is subject to the law applicable to the contract of carriage; and

(d) Regardless of the law applicable pursuant to subparagraphs (a) and (b) of this article,

(i) A transfer that is otherwise permissible pursuant to the applicable law may be made by electronic means,

(ii) A transfer shall be notified to the carrier by the transferor or, if applicable law permits, by the transferee, and

(iii) The transferor and the transferee are jointly and severally liable for liabilities that are connected to or flow from the right that is transferred.]

CHAPTER 13: LIMITS OF LIABILITY

Article 62. Limits of liability

1. Subject to articles 63 and 64, paragraph 1, the carrier's liability for breaches of its obligations under this Convention¹⁷⁹ is limited to [...] units of account per package or other shipping unit, or [...] units of account per kilogram of the gross weight of the goods that are the subject of the claim or dispute, whichever amount is the higher, except when the value¹⁸⁰ of the goods has been declared by the

¹⁷⁷ Inclusion of the text in square brackets will depend upon the decision of the Working Group regarding the inclusion of the bracketed text in draft art. 44.

¹⁷⁸ Draft art. 61, formerly draft art. 61 bis, has replaced draft arts. 61 and 62 from A/CN.9/WG.III/WP.32, as agreed by the Working Group in para. 213 of A/CN.9/576, following its consideration of the electronic commerce aspects of art. 63, as set out in para. 12 of A/CN.9/WG.III/WP.47, and its consideration of replacing former draft arts. 61 and 62 with draft art. 61 in paras. 212 and 213 of A/CN.9/576.

¹⁷⁹ The addition of breaches of the carrier's obligations is thought to have made the reference to "[or in connection with]" the goods unnecessary.

¹⁸⁰ Further to the decision of the Working Group (paras. 172 and 174, A/CN.9/616), reference to the "nature" of the goods has been deleted.

shipper and included in the contract particulars, or when a higher amount than the amount of limitation of liability set out in this article has been agreed upon between the carrier and the shipper.

Variant A of paragraph 2¹⁸¹

[2. Notwithstanding paragraph 1 of this article, if (a) the carrier cannot establish whether the goods were lost or damaged [or whether the delay in delivery was caused]¹⁸² during the sea carriage or during the carriage preceding or subsequent to the sea carriage and (b) provisions of an international convention [or national law] would be applicable pursuant to article 26 if the loss, damage, [or delay] occurred during the carriage preceding or subsequent to the sea carriage, the carrier's liability for such loss, damage, [or delay] is limited pursuant to the limitation provisions of any international convention [or national law]¹⁸³ that would have applied if the place where the damage occurred had been established, or pursuant to the limitation provisions of this Convention, whichever would result in the higher limitation amount.]

Variant B of paragraph 2

[2. Notwithstanding paragraph 1 of this article, if the carrier cannot establish whether the goods were lost or damaged [or whether the delay in delivery was caused]¹⁸⁴ during the sea carriage or during the carriage preceding or subsequent to the sea carriage, the highest limit of liability in the international [and national]¹⁸⁵ mandatory provisions applicable to the different parts of the transport applies.]

3. When goods are carried in or on a container, pallet, or similar article of transport used to consolidate goods, the packages or shipping units enumerated in the contract particulars as packed in or on such article of transport are deemed packages or shipping units. If not so enumerated, the goods in or on such article of transport are deemed one shipping unit.

4. The unit of account referred to in this article is the Special Drawing Right as defined by the International Monetary Fund. The amounts referred to in this article are to be converted into the national currency of a State according to the value of such currency at the date of judgement or award or the date agreed upon by the parties. The value of a national currency, in terms of the Special Drawing Right, of a Contracting State that is a member of the International Monetary Fund is to be calculated in accordance with the method of valuation applied by the International Monetary Fund in effect at the date in question for its operations and transactions. The value of a national currency, in terms of the Special Drawing Right, of a Contracting State that is not a member of the International Monetary Fund is to be calculated in a manner to be determined by that State.

¹⁸¹ If draft article 62(2) is retained, its text should be adjusted based on the final text of draft article 26. Variant A is intended as a clarification of the text of Variant B, and is not intended to change the suggested approach.

¹⁸² See, *infra*, note 184.

¹⁸³ Text placed in square brackets to mirror the text in art. 26(1), pending a decision by the Working Group.

¹⁸⁴ Draft para. 2 was maintained in square brackets, and reference to delay in delivery was introduced in square brackets, for future discussion.

¹⁸⁵ See *supra*, note 183.

*Article 63. Limits of liability for loss caused by delay*¹⁸⁶

Subject to article 64, paragraph 2, compensation for physical loss of or damage to the goods caused by delay shall be calculated in accordance with article 22 and [, unless otherwise agreed,] liability for economic loss caused by delay is limited to an amount equivalent to [one times] the freight payable on the goods delayed. The total amount payable pursuant to this article and article 62, paragraph 1 may not exceed the limit that would be established pursuant to article 62, paragraph 1 in respect of the total loss of the goods concerned.

Article 64. Loss of the benefit of limitation of liability

1. Neither the carrier nor any of the persons referred to in article 18, paragraph 1, is entitled to the benefit of the limitation of liability as provided in article 62¹⁸⁷, or as provided in the contract of carriage,¹⁸⁸ if the claimant proves that the loss resulting from the breach of the carrier's obligation under this Convention was attributable to a personal act or omission of the person claiming a right to limit done with the intent to cause such loss or recklessly and with knowledge that such loss would probably result.

2. Neither the carrier nor any of the persons mentioned in article 18, paragraph 1, is entitled to the benefit of the limitation of liability as provided in article 63 if the claimant proves that the delay in delivery resulted from a personal act or omission of the person claiming a right to limit done with the intent to cause the loss due to delay or recklessly and with knowledge that such loss would probably result.

CHAPTER 14. TIME FOR SUIT

Article 65. Limitation of actions

1. No judicial or arbitral proceedings in respect of claims or disputes arising from a breach of an obligation under this Convention¹⁸⁹ may be commenced after the expiration of a period of two years.¹⁹⁰

2. The period referred to in paragraph 1 of this article commences on the day on which the carrier has delivered the goods, or, in cases in which no goods have been delivered, or only part of the goods have been delivered,¹⁹¹ on the last¹⁹²

¹⁸⁶ Variant B has been deleted and Variant A has been retained from the text as it appeared in A/CN.9/WG.III/WP.56, as agreed by the Working Group (para. 181, A/CN.9/616).

¹⁸⁷ As discussed at paras. 55 and 62 of A/CN.9/552, the suggestion to add a reference to art. 22 might need to be further discussed in the context of chapter 19.

¹⁸⁸ As agreed by the Working Group (para. 198 and 200, A/CN.9/616), the square brackets around the words "[or as provided in the contract of carriage,]" were deleted and the text retained.

¹⁸⁹ The insertion of the phrase "in respect of claims or disputes arising from a breach of an obligation under this Convention" is intended to provide for the same scope of coverage in this provision as in draft article 62.

¹⁹⁰ In keeping with the decision made by the Working Group (see paras. 127-133, A/CN.9/616), Variant B of the text as it appeared in A/CN.9/WG.III/WP.56 was used as the basis for a revised draft by the Secretariat. The text suggested in this regard is intended to contain the essential elements agreed to by the Working Group, but to rephrase the provision in such a fashion so as to avoid consideration of whether rights or actions have been extinguished or time-barred.

¹⁹¹ As agreed by the Working Group, reference to draft article 11 has been deleted (paras. 136 and 143, A/CN.9/616) and accommodation has been made for cases of partial delivery, as provided for in article 20(2) of the Hamburg Rules (para. 138, A/CN.9/616).

day on which the goods should have been delivered. The day on which the period commences is not included in the period.¹⁹³

3. Notwithstanding the expiration of the period set out in paragraph 1 of this article, one party may rely on its claim as a defence or for the purpose of set-off against a claim asserted by the other party.¹⁹⁴

Article 66. Extension of limitation period

The limitation period provided in article 65 shall not be subject to suspension or interruption,¹⁹⁵ but the person against which a claim is made may at any time during the running of the period extend that period by a declaration to the claimant. This period may be further extended by another declaration or declarations.

Article 67. Action for indemnity

An action for indemnity by a person held liable under this Convention may be instituted after the expiration of the period referred to in article 65 if the indemnity action is instituted within the later of:

(a) The time allowed by the applicable law in the jurisdiction where proceedings are instituted; or

(b) 90 days commencing from the day when the person instituting the action for indemnity has either settled the claim or been served with process in the action against itself¹⁹⁶, whichever is earlier.¹⁹⁷

Article 68. Actions against the person identified as the carrier

An action against the bareboat charterer or the person identified as the carrier pursuant to article 38, paragraph 2,¹⁹⁸ may be instituted after the expiration of the period referred to in article 65 if the action is instituted within the later of:

(a) The time allowed by the applicable law in the jurisdiction where proceedings are instituted; or

¹⁹² The square brackets have been removed from around the word “last” as agreed by the Working Group (paras. 133 and 139).

¹⁹³ As set out in footnote 216 of A/CN.9/WG.III/WP.32, the Working Group requested the Secretariat to retain the text of former draft art. 70, as it appeared in A/CN.9/WG.III/WP.56, with consideration being given to possible alternatives to reflect the views expressed. That text has now been moved into this paragraph, and former draft article 70, as it appeared in A/CN.9/WG.III/WP.56, has been deleted. In addition, the last sentence of this paragraph has been added from article 20(3) of the Hamburg Rules.

¹⁹⁴ In keeping with the Working Group’s decision to allow for set-off of claims as a defence even when the limitation period had expired (paras. 130-131, 133, and 154 A/CN.9/616), the Secretariat has prepared draft paragraph 3, based on article 25(2) of the Convention on the Limitation Period in the International Sale of Goods. Former article 73 of the text as it appeared in A/CN.9/WG.III/WP.56 has been deleted as a consequence of the inclusion of this text.

¹⁹⁵ Reference to suspension or interruption of the limitation period has been included further to the agreement in the Working Group (paras. 132-133, A/CN.9/616).

¹⁹⁶ Further to the decision made by the Working Group (para. 152, A/CN.9/616), Variant B of the text as it appeared in A/CN.9/WG.III/WP.56 has been deleted and the text of Variant A retained.

¹⁹⁷ The phrase “whichever is earlier” has been added for clarification in those situations where service of process has already taken place, and discussions regarding settlement occur later.

¹⁹⁸ Drafting clarifications and corrections made to text in light of the revisions made as a consequence of former draft article 40(3), as it appeared in A/CN.9/WG.III/WP.56, now found in draft article 38(2).

(b) 90 days commencing from the day when the carrier has been identified or the registered owner or bareboat charterer has rebutted the presumption that it is the carrier, pursuant to article 38, paragraph 2.¹⁹⁹

CHAPTER 15. JURISDICTION²⁰⁰

Article 69. Actions against the carrier

Unless the contract of carriage contains an exclusive choice of court agreement that complies with²⁰¹ article 70 or 75, the plaintiff has the right to institute judicial proceedings under this Convention against the carrier:

(a) In a competent court within the jurisdiction of which is situated one of the following places:

- (i) The domicile of the carrier;²⁰²
- (ii) The place of receipt agreed in the contract of carriage;²⁰³
- (iii) The place of delivery agreed in the contract of carriage; or
- (iv) The port where the goods are initially loaded on a ship or the port where the goods are finally discharged from a ship; or

(b) In a competent court or courts designated by an agreement between the shipper and the carrier for the purpose of deciding claims against the carrier that may arise under this Convention.²⁰⁴

Article 70. Choice of court agreements²⁰⁵

1. The jurisdiction of a court chosen in accordance with article 69, paragraph (b), is exclusive for disputes between the parties to the contract only if the parties so agree and the agreement conferring jurisdiction:

(a) Is contained in a volume contract that clearly states the names and addresses of the parties and either (i) is individually negotiated; or (ii) contains a

¹⁹⁹ Consequential drafting changes have been made to this provision as a result of the revised text of former draft article 40(3), as it appeared in A/CN.9/WG.III/WP.56, now found in draft article 38(2).

²⁰⁰ The suggested drafting changes are made to the version of this chapter as it appeared in the annex to A/CN.9/WG.III/WP.75, as considered by the Working Group in paras. 245-266 of A/CN.9/616.

²⁰¹ "Complies with" is suggested as preferable to "is valid", which appeared previously in the text.

²⁰² Reference corrected to "carrier" rather than to "defendant" in order to be consistent with draft article 71 regarding actions against maritime performing parties.

²⁰³ Subparagraphs (ii) and (iii) were placed in separate subparas. from the previous text as it appeared in A/CN.9/WG.III/WP.75 for the purposes of clarity.

²⁰⁴ The text in subparagraph (b) replaces that of both former subparagraph (d) and former draft article 76(1), as they appeared in the text in A/CN.9/WG.III/WP.75, and which have been deleted in this version of the draft convention.

²⁰⁵ The first paragraph of this provision as it appeared in the annex to A/CN.9/WG.III/WP.75 has been deleted and, as a drafting improvement, replaced with a reference to draft article 69(b) in paragraph 1.

prominent statement that there is an exclusive choice of court agreement and specifies the sections of the volume contract containing that agreement;²⁰⁶ and

(b) Clearly²⁰⁷ designates the courts of one Contracting State or one or more specific courts of one Contracting State.

2. A person that is not a party to the volume contract is only bound by an exclusive choice of court agreement concluded in accordance with paragraph 1 of this article if:

(a) The court is in one of the places designated in article 69, paragraph (a);

(b) That agreement is contained in the contract particulars of a transport document or electronic transport record that evidences the contract of carriage for²⁰⁸ the goods in respect of which the claim arises;

(c) That person is given timely and adequate notice of the court where the action shall be brought and that the jurisdiction of that court is exclusive; and

(d) [The law of the court seized²⁰⁹][The law of the [agreed] place of delivery of the goods][The law of the place of receipt of the goods [by the carrier]][The applicable law pursuant to the rules of private international law of the law of the forum]²¹⁰ recognizes that that person may be bound by the exclusive choice of court agreement.

[3. This article does not prevent a Contracting State from giving effect to a choice of court agreement that does not meet the requirements of paragraphs 1 or 2 of this article. Such Contracting State shall give notice to that effect [to _____].²¹¹

4. (a) Nothing in paragraph 3 of this article or in a choice of court agreement effective pursuant to paragraph 3 of this article prevents a court specified in article 69[, paragraph (a)] and situated in a different Contracting State from exercising its jurisdiction over the dispute and deciding the dispute under this Convention.

²⁰⁶ The phrase “sections of” has replaced the phrase “location within” as accurately reflecting the text of draft article 89(1)(b).

²⁰⁷ The phrase “clearly designates the courts of one Contracting State or one or more specific courts of one Contracting State” has been retained and the square brackets deleted in accordance with the decision taken by the Working Group (para. 256, A/CN.9/616). Further, former draft paragraph (c), as it appeared in A/CN.9/WG.III/WP.75 has been deleted as agreed by the Working Group (para. 257, A/CN.9/616).

²⁰⁸ As agreed in the Working Group, the square brackets around draft paragraph (b) have been deleted, and the phrase “that evidences the contract of carriage for” has replaced the phrase “issued in relation to” (para. 258, A/CN.9/616).

²⁰⁹ The Working Group may wish to consider whether further clarification may be necessary to ascertain whether the “court seized” will necessarily be the competent court, or whether it may be another court.

²¹⁰ Various alternatives for this provision have been added as agreed by the Working Group (para. 259, A/CN.9/616).

²¹¹ The Working Group may wish to consider the interplay between this approach and the final clauses.

(b) Except as provided in this chapter, no choice of court agreement is exclusive with respect to an action [against a carrier] under this Convention.^{212]}²¹³

*Article 71. Actions against the maritime performing party*²¹⁴

The plaintiff has the right to institute judicial proceedings under this Convention against the maritime performing party in a competent court within the jurisdiction of which is situated one of the following places:

(a) The domicile of the maritime performing party; or

(b) The port where the goods are initially received by the maritime performing party or the port where the goods are finally delivered by the maritime performing party, or the port in which the maritime performing party performs its activities with respect to the goods.²¹⁵

*Article 72. No additional bases of jurisdiction*²¹⁶

Subject to articles 74 and 75, no judicial proceedings under this Convention against the carrier or a maritime performing party may be instituted in a court not designated pursuant to articles 69, [or] 71 [or pursuant to rules applicable due to the operation of article 77, paragraph 2].²¹⁷

*Article 73. Arrest and provisional or protective measures*²¹⁸

Nothing in this Convention affects jurisdiction with regard to provisional or protective measures, including arrest. A court in a State in which a provisional or protective measure was taken does not have jurisdiction to determine the case upon its merits unless:

(a) The requirements of this chapter are fulfilled; or

(b) An international convention that applies in that State so provides.²¹⁹

²¹² Separate paragraph provided for this provision in order to avoid making it subject to paragraph 3 of this article, as suggested by the Working Group in paragraph 80 of A/CN.9/591.

²¹³ Square brackets have been inserted around draft paragraphs 3 and 4 to indicate the Working Group's agreement that if the decision were made to include a reservation or "opt in" clause regarding the entire chapter on jurisdiction, these paragraphs could be deleted (para. 260, A/CN.9/616).

²¹⁴ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84. A slight variation has been made to the chapeau for drafting purposes only in order to ensure that the chapeau mirrors that of article 69, and text has been suggested in paragraph (b) to accommodate maritime performing parties that operate in a single port. Further, the Working Group may wish to clarify the relationship between articles 70 and 71.

²¹⁵ The square brackets have been deleted from the text as it appeared in the annex to A/CN.9/WG.III/WP.75, in addition to the deletion of the words "single" and "all of", as agreed by the Working Group (para. 261, A/CN.9/616).

²¹⁶ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84, with a clarification concerning proceedings against the carrier or a maritime performing party.

²¹⁷ The phrase in square brackets would be necessary if a "partial opt-in" approach to this chapter were adopted pursuant to draft article 77(2).

²¹⁸ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84.

Article 74. Consolidation and removal of actions

1. Except when there is an exclusive choice of court agreement that is valid pursuant to articles 70 [or] 75 [or pursuant to rules applicable due to the operation of article 77, paragraph 2]²²⁰, if a single action is brought against both the carrier and the maritime performing party arising out of a single occurrence, the action may be instituted only in a court designated pursuant to both article 69 and article 71. If there is no such court, such action may be instituted in a court designated pursuant to article 71, subparagraph (b), if there is such a court.

2. Except when there is an exclusive choice of court agreement that is valid pursuant to articles 70 [or] 75 [or pursuant to rules applicable due to the operation of article 77, paragraph 2]²²¹, a carrier or a maritime performing party that institutes an action seeking a declaration of non-liability or any other action that would deprive a person of its right to select the forum pursuant to article 69 or 71²²² shall at the request of the defendant, withdraw that action once the defendant has chosen a court designated pursuant to article 69 or 71, whichever is applicable, where the action may be recommenced²²³

Article 75. Agreement after dispute has arisen and jurisdiction when the defendant has entered an appearance²²⁴

1. After the dispute has arisen, the parties to the dispute may agree to resolve it in any competent court.

2. A competent²²⁵ court in a Contracting State before which a defendant appears, without contesting jurisdiction in accordance with the rules of that court, has jurisdiction.

²¹⁹ The square brackets in the text have been removed as agreed in the Working Group (para. 262, A/CN.9/616) and the text inside retained, and the phrase “according to its rules of application” has been deleted as redundant.

²²⁰ The phrase in square brackets would be necessary if a “partial opt-in” approach to this chapter were adopted pursuant to draft article 77 (2).

²²¹ The phrase in square brackets would be necessary if a “partial opt-in” approach to this chapter were adopted pursuant to draft article 77 (2).

²²² The text “seeking a declaration of non-liability or any other action that would deprive a person of its right to select the forum under articles 69 or 71” has been inserted and the alternative texts that appeared in A/CN.9/WG.III/WP.75 have been deleted in keeping with the decision of the Working Group (para. 263, A/CN.9/616).

²²³ It is suggested that the closing phrase of the previous text as it appeared in A/CN.9/WG.III/WP.75 “and may recommence it in one of the courts designated under articles 69 or 71, whichever is applicable, as chosen by the defendant” be replaced with the phrase “once the defendant has chosen a court designated pursuant to article 69 or 71, whichever is applicable, where the action may be recommenced” in order to make clear that the defendant is required to choose a court in which the case should be heard, and cannot simply avoid the action by failing to choose a court.

²²⁴ Text from sixteenth session of Working Group, paragraph 73 of A/CN.9/591, accepted in substance in paragraph 84. The opening phrase “Notwithstanding the preceding articles of this chapter” has been deleted as redundant, as references to article 75 have been added to articles 69, 70 and 74, and opening phrase of the second paragraph has been clarified from “a competent court” to “a court in a Contracting State”.

²²⁵ The word “competent” has been inserted as agreed in the Working Group (para. 264, A/CN.9/616).

*Article 76. Recognition and enforcement*²²⁶

1. A decision made by a court having jurisdiction under this Convention shall be recognized and enforced in another Contracting State in accordance with the law of that Contracting State when both States have made a declaration in accordance with article 77.

2. A court may refuse recognition and enforcement:

(a) Based on the grounds for the refusal of recognition and enforcement available pursuant to its law;

(b) If the action in which the decision was rendered would have been subject to withdrawal pursuant to article 74, paragraph 2, had the court that rendered the decision applied the rules on exclusive choice of court agreements of the State in which recognition and enforcement is sought; or

(c) If a court of that Contracting State had exclusive jurisdiction in a dispute resulting in the decision in respect of which recognition and enforcement is sought pursuant to the rules applied as a result of a declaration made pursuant to article 77, paragraph 2.

3. This chapter shall not affect the application of the rules of a regional economic integration organization that is a party to this Convention, as concerns the recognition or enforcement of judgments as between member states of the regional economic integration organization, whether adopted before or after this Convention.

*Article 77. Application of chapter 15*²²⁷[Variant A]

A Contracting State may declare at the time of signature, ratification, acceptance, approval or accession, in accordance with article 94, that it will not be bound by the provisions of this chapter.]

[Variant B]

The provisions of this chapter shall bind only Contracting States that declare [at the time of signature, ratification, acceptance, approval or accession,] [at any time thereafter] in accordance with article 94, that they will be bound by them.]

[Variant C] would consist of Variant B plus the following text as a second para.:

A Contracting State that makes a declaration pursuant to paragraph 1 of this article may at the same time declare that it will not be bound by article 70 and its courts shall instead apply the rules which would be otherwise applicable in that Contracting State.]

²²⁶ The suggested drafting changes are made to the version of this draft article as it appeared in the annex to A/CN.9/WG.III/WP.75, in order to accommodate the possible adoption by the Working Group of a whole or partial reservation or “opt in” approaches with respect to chapter 15, in keeping with paras. 265-266 of A/CN.9/616.

²²⁷ Variant A is intended to represent the reservation approach to the chapter on jurisdiction, while Variant B is intended to represent the “opt-in” approach, and Variant C, which would consist of both Variants B and C, is intended to represent a “partial opt-in” approach (see A/CN.9/616, paras. 246-252).

CHAPTER 16. ARBITRATION²²⁸*Article 78. Arbitration agreements*

1. Subject to this chapter, parties may agree that any dispute that may arise relating to the carriage of goods under this Convention shall be referred to arbitration.

2. The arbitration proceedings shall, at the option of the person asserting a claim against the carrier, take place at²²⁹:

(a) Any place designated for that purpose in the arbitration agreement; or

(b) Any other place situated in a State where any of the places specified in article 69, subparagraph (a), is located.

3. The designation of the place of arbitration in the agreement is binding for disputes between the parties to the agreement if it is contained in a volume contract that clearly states the names and addresses of the parties and either

(a) Is individually negotiated; or

(b) Contains a prominent statement that there is an arbitration agreement and specifies the sections of²³⁰ the volume contract containing the arbitration²³¹ agreement.

4. When an arbitration agreement has been concluded in accordance with paragraph 3 of this article, a person that is not a party to the volume contract is bound by the designation of the place of arbitration in that agreement only if:

(a) The place of arbitration designated in the agreement is situated in one of the places referred to in article 69, subparagraph (a);

[(b) The agreement is contained in the contract particulars of a transport document or electronic transport record that evidences the contract of carriage for the goods in respect of which the claim arises;]

(c) The person to be bound is given timely and adequate notice of the place of arbitration; and

(d) Applicable law²³² permits that person to be bound by the arbitration agreement.

5. The provisions of paragraphs 1, 2, 3, and 4 of this article are deemed to be part of every arbitration clause or agreement, and any term of such clause or agreement to the extent that it is inconsistent therewith is void.

²²⁸ The suggested changes to the text of this chapter are to the version of the provision as it appeared in para. 270 of A/CN.9/616.

²²⁹ The phrase “one of the following locations” has been deleted as redundant.

²³⁰ The phrase “sections of” has replaced the phrase “location within” as accurately reflecting the text of draft article 89(1)(b).

²³¹ The phrase “containing the arbitration” has replaced “of that” for greater precision.

²³² It is suggested that the phrase “[for the arbitration agreement]” be deleted as it has caused confusion regarding the applicable law in the past.

*Article 79. Arbitration agreement in non-liner transportation*²³³

1. Nothing in this Convention affects the enforceability of an arbitration agreement in a contract of carriage in non-liner transportation to which this Convention or the provisions of this Convention apply by reason of:

- (a) The application of article 7; or
- (b) The parties' voluntary incorporation of this Convention in a contract of carriage that would not otherwise be subject to this Convention.

2. Notwithstanding paragraph 1 of this article, an arbitration agreement in a transport document or electronic transport record to which this Convention applies by reason of the application of article 7 is subject to this Chapter unless:

(a) The terms of such arbitration agreement are the same as the terms of the arbitration agreement in the charterparty or other contract of carriage excluded from the application of this Convention by reason of the application of article 7; or

(b) Such an arbitration agreement: (i) incorporates by reference the terms of the arbitration agreement contained in the charterparty or other contract of carriage excluded from the application of this Convention by reason of the application of article 7; (ii) specifically refers to the arbitration clause; and (iii) identifies the parties to and the date of the charterparty.

Article 80. Agreements for arbitration after the dispute has arisen

Notwithstanding the provisions of this chapter and chapter 15, after a dispute has arisen, the parties to the dispute may agree to resolve it by arbitration in any place.

*Article 81. Application of chapter 16*²³⁴[Variant A]

A Contracting State may declare at the time of signature, ratification, acceptance, approval or accession, in accordance with article 94, that it will not be bound by the provisions of this chapter.]

[Variant B]

The provisions of this chapter shall be binding only on Contracting States that declare [at the time of signature, ratification, acceptance, approval or accession,] [at any time thereafter] in accordance with article 94, that they will be bound by them.]

²³³ In response to the views of the Working Group as set out in paras. 276-277 of A/CN.9/616 and in order to clarify this provision in general, this draft article has been substantially adjusted from the version set out in para. 270 of A/CN.9/616.

²³⁴ For the purposes of consistency, the drafting approach taken in both Variants A and B is similar to that taken in draft article 77, with respect to the chapter on jurisdiction. Variant A is intended to represent the reservation approach to the chapter on arbitration, while Variant B is intended to represent the "opt-in" approach. A "partial opt-in" approach was considered with respect to the chapter on arbitration, as suggested in discussion in the Working Group (see A/CN.9/616, paras. 278-279), but was not considered necessary or practicable with respect to arbitration.

CHAPTER 17. GENERAL AVERAGE

Article 82. Provisions on general average

Nothing in this Convention prevents the application of terms in the contract of carriage or provisions pursuant to national law regarding the adjustment of general average.

CHAPTER 18. OTHER CONVENTIONS

*Article 83. Denunciation of other conventions*²³⁵

1. A State that ratifies, accepts, approves or accedes to this Convention and is a party to the International Convention for the Unification of certain Rules relating to Bills of Lading signed at Brussels on 25 August 1924; to the Protocol signed on 23 February 1968 to amend the International Convention for the Unification of certain Rules relating to Bills of Lading signed at Brussels on 25 August 1924; or to the Protocol to amend the International Convention for the Unification of certain Rules relating to Bills of Lading as Modified by the Amending Protocol of 23 February 1968, signed at Brussels on 21 December 1979, shall at the same time denounce that Convention and the protocol or protocols thereto to which it is a party by notifying the Government of Belgium to that effect.

2. A State that ratifies, accepts, approves or accedes to this Convention and is a party to the United Nations Convention on the Carriage of Goods by Sea concluded at Hamburg on 31 March 1978, shall at the same time denounce that Convention by notifying the Secretary-General of the United Nations to that effect.

3. For the purpose of this article, ratifications, acceptances, approvals and accessions in respect of this Convention by States parties to the instruments listed in paragraphs 1 and 2 of this article are not effective until such denunciations as may be required on the part of those States in respect of these instruments have themselves become effective. The depositary of this Convention shall consult with the Government of Belgium, as the depositary of the instruments referred to in paragraph 1 of this article, so as to ensure necessary co-ordination in this respect.²³⁶

Article 84. International conventions governing the carriage of goods by air

Nothing in this Convention prevents a Contracting State from applying the provisions of any other international convention regarding the carriage of goods by air to the contract of carriage when such international convention according to its provisions applies to any part of the contract of carriage.²³⁷

²³⁵ Draft article 83 consists of former article 102 as it appeared in A/CN.9/WG.III/WP.56, which has been moved to this location from its previous location in the chapter on Final Clauses. It is thought that chapter 18 on Other Conventions reads more logically with the addition of former article 102, now draft article 83, on denunciations to this location.

²³⁶ Text based on paras. 99(3) and (6) of the United Nations Convention on Contracts for the International Sale of Goods. See also art. 31 of the Hamburg Rules.

²³⁷ Suggested approach along the lines of former draft article 89 as it appeared in A/CN.9/WG.III/WP.56 to ensure that there is no conflict of conventions with the Montreal Convention, as considered by the Working Group in paras. 225 and 234-235 of A/CN.9/616.

Article 85. Global limitation of liability

This Convention does not modify the rights or obligations of the carrier, or the performing party provided for in international conventions or national law applicable to the limitation of liability of owners of seagoing ships or the limitation of liability for maritime claims.²³⁸

Article 86. Other provisions on carriage of passengers and luggage

No liability arises under this Convention for any loss of or damage to or delay in delivery of luggage for which the carrier is liable under any convention or national law applicable to the carriage of passengers and their luggage.

Article 87. Other provisions on damage caused by nuclear incident

No liability arises under this Convention for damage caused by a nuclear incident if the operator of a nuclear installation is liable for such damage:

(a) Under the Paris Convention on Third Party Liability in the Field of Nuclear Energy of 29 July 1960 as amended by the additional Protocol of 28 January 1964, the Vienna Convention on Civil Liability for Nuclear Damage of 21 May 1963 as amended by the Joint Protocol Relating to the Application of the Vienna Convention and the Paris Convention of 21 September 1988, and as amended by the Protocol to Amend the 1963 Vienna Convention on Civil Liability for Nuclear Damage of 12 September 1997, or the Convention on Supplementary Compensation for Nuclear Damage of 12 September 1997, including any amendment to these conventions and any future convention in respect of the liability of the operator of a nuclear installation for damage caused by a nuclear incident; or

(b) By virtue of national law applicable to the liability for such damage, provided that such law is in all respects as favourable to persons that may suffer damage as either the Paris or Vienna Conventions or the Convention on Supplementary Compensation for Nuclear Damage.

CHAPTER 19. VALIDITY OF CONTRACTUAL TERMS²³⁹*Article 88. General provisions*²⁴⁰

1. Unless otherwise provided in this Convention, any term in a contract of carriage is void to the extent that it:

(a) Directly or indirectly excludes or limits the obligations of the carrier or a maritime performing party under this Convention;

(b) Directly or indirectly excludes or limits the liability of the carrier or a maritime performing party for breach of an obligation under this Convention; or

²³⁸ The phrase “for maritime claims” has been added in order to reflect the terminology of the Convention on Limitation of Liability for Maritime Claims, 1976 and its 1996 Protocol.

²³⁹ The Working Group may wish to consider whether this chapter would be better placed before chapter 17 on general average, or merged into chapter 2 on scope of application.

²⁴⁰ Revised draft based on text in A/CN.9/WG.III/WP.61, para. 46, as requested by the Working Group (A/CN.9/594, paras. 147 and 153). The word “provision” has been substituted for “stipulation”.

(c) Assigns a benefit of insurance of the goods in favour of the carrier or a person referred to in article 18, paragraph 1.

[2. Unless otherwise provided in this Convention, any term in a contract of carriage is void to the extent that it:

(a) Directly or indirectly excludes, limits, [or increases] the obligations under this Convention of the shipper, consignor, consignee, controlling party, holder, or documentary shipper; or

(b) Directly or indirectly excludes, limits, [or increases] the liability of the shipper, consignor, consignee, controlling party, holder, or documentary shipper for breach of any of its obligations under this Convention.]

Article 89. Special rules for volume contracts ²⁴¹

1. Notwithstanding article 88, as between the carrier and the shipper,²⁴² a volume contract to which this Convention applies may provide for greater or lesser rights, obligations, and liabilities than those set forth in this Convention provided that the volume contract contains a prominent statement that it derogates from this Convention, and:

(a) Is individually negotiated; or

(b) Prominently specifies the sections of the volume contract containing the derogations.

2. A derogation pursuant to paragraph 1 of this article shall be set forth in the volume contract and may not be incorporated by reference from another document.

3. A carrier's public schedule of prices and services, transport document, electronic transport record, or similar document is not a volume contract pursuant to paragraph 1 of this article, but a volume contract may incorporate such documents by reference as terms of the contract.

4. Paragraph 1 of this article does not apply to rights and obligations provided in articles 16, subparagraphs (1)(a) and (b), 29 and 32 or to liability arising from the breach thereof, nor does paragraph 1 of this article apply to any liability arising from an act or omission referred to in article 64.²⁴³

5. The terms of the volume contract that derogate from this Convention, if the volume contract satisfies the requirements of paragraph 1 of this article, apply between the carrier and any person other than the shipper provided that:

²⁴¹ Revised draft based on alternative version in A/CN.9/WG.III/WP.61, para. 49, with amendments to paras. 4 and 5 requested by the Working Group (A/CN.9/594, paras. 163-167). Drafting adjustments have been made to the text of para. 5 with the intention of improving clarity but not changing the substance, and former subpara. 5(c) as it appeared in para. 49 of A/CN.9/WG.III/WP.61 has been moved into a separate para. 6.

²⁴² The phrase "as between the carrier and the shipper" has been added to this paragraph to accommodate the simplified version of para. 5 now inserted into the draft convention by ensuring the inclusion of the text in former subpara. 5(a) of the draft article as set out in para. 49 of A/CN.9/WG.III/WP.61, which stated "Paragraph 1 of this article applies between the carrier and the shipper".

²⁴³ Revised draft based on text in A/CN.9/WG.III/WP.61, para. 49, with amendments regarding the reference to draft art. 64 as requested by the Working Group (A/CN.9/594, paras. 158-162).

(a) Such person received information that prominently states that the volume contract derogates from this Convention and gives its express consent to be bound by such derogations; and

(b) Such consent is not solely set forth in a carrier's public schedule of prices and services, transport document, or electronic transport record.²⁴⁴

6. The party claiming the benefit of the derogation bears the burden of proof that the conditions for derogation have been fulfilled.

*Article 90. Special rules for live animals and certain other goods*²⁴⁵

Notwithstanding article 88 and without prejudice to²⁴⁶ article 89, the contract of carriage may exclude or limit the obligations or the liability of both the carrier and a maritime performing party if:

(a) The goods are live animals except when the claimant proves that the loss of or damage to the goods, or delay in delivery resulted from an act or omission of the carrier or of a person referred to in article 18, paragraph 1, or of a maritime performing party done recklessly and with knowledge that such loss or damage,²⁴⁷ or that the loss due to delay, would probably result; or

(b) The character or condition of the goods or the circumstances and terms and conditions under which the carriage is to be performed are such as reasonably to justify a special agreement, provided that such contract of carriage is not related to ordinary commercial shipments made in the ordinary course of trade and no negotiable transport document or negotiable electronic transport record is issued for the carriage of the goods.

CHAPTER 20. FINAL CLAUSES

Article 91. Depositary

The Secretary-General of the United Nations is hereby designated as the depositary of this Convention.²⁴⁸

Article 92. Signature, ratification, acceptance, approval or accession

1. This Convention is open for signature by all States [at [...] from [...] to [...] and thereafter] at the Headquarters of the United Nations in New York from [...] to [...].

²⁴⁴ Drafting adjustments have been made to the text of para. 5 as set out in para. 49 of A/CN.9/WG.III/WP.61 with the intention of improving clarity but not changing the substance. Former subpara. 5(c) as it appeared in para. 49 of A/CN.9/WG.III/WP.61 has been moved into a separate para. 6.

²⁴⁵ Revised draft based on text in A/CN.9/WG.III/WP.61, para. 62, as requested by the Working Group (A/CN.9/594, paras. 163-167).

²⁴⁶ In the opening phrase of para (a), the phrase "without prejudice to" has been added to the text as set out in para. 62 of A/CN.9/WG.III/WP.61 to better reflect the nature of articles 88 and 89.

²⁴⁷ In order to avoid repetition, the phrase "would probably occur or recklessly and with knowledge" has been deleted from the text as set out in para. 62 of A/CN.9/WG.III/WP.61.

²⁴⁸ Text taken from art. 15 of the Electronic Contracting Convention and art. 27 of the Hamburg Rules.

2. This Convention is subject to ratification, acceptance or approval by the signatory States.

3. This Convention is open for accession by all States that are not signatory States as from the date it is open for signature.

4. Instruments of ratification, acceptance, approval and accession are to be deposited with the Secretary-General of the United Nations.²⁴⁹

Article 93. Reservations

No reservations are permitted except those expressly authorized in this Convention.²⁵⁰

Article 94. Procedure and effect of declarations²⁵¹

1. Declarations made at the time of signature are subject to confirmation upon ratification, acceptance or approval.

2. Declarations and their confirmations are to be in writing and to be formally notified to the depositary.

3. A declaration takes effect simultaneously with the entry into force of this Convention in respect of the State concerned. However, a declaration of which the depositary receives formal notification after such entry into force takes effect on the first day of the month following the expiration of six months after the date of its receipt by the depositary.

4. Any State that makes a declaration under this Convention may modify or withdraw it at any time by a formal notification in writing addressed to the depositary. The modification or withdrawal is to take effect on the first day of the month following the expiration of six months after the date of the receipt of the notification by the depositary.

Article 95. Effect in domestic territorial units

1. If a Contracting State has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at the time of signature, ratification, acceptance, approval or accession, declare that this Convention is to extend to all its territorial units or only to one or more of them, and may amend its declaration by submitting another declaration at any time.

2. These declarations are to be notified to the depositary and are to state expressly the territorial units to which the Convention extends.

3. If, by virtue of a declaration pursuant to this article, this Convention extends to one or more but not all of the territorial units of a Contracting State, and if the place of business of a party is located in that State, this place of business, for the purposes of this Convention, is considered not to be in a Contracting State, unless it is in a territorial unit to which the Convention extends.

²⁴⁹ Text taken from art. 16 of the Electronic Contracting Convention.

²⁵⁰ Revised text to accommodate the possible inclusion of reservations regarding chapters 15 and 16.

²⁵¹ Suggested text to accommodate the possible inclusion of reservations regarding chapters 15 and 16.

4. If a Contracting State makes no declaration pursuant to paragraph 1 of this article, the Convention is to extend to all territorial units of that State.²⁵²

*Article 96. Participation by regional economic integration organizations*²⁵³

1. A regional economic integration organization that is constituted by sovereign States and has competence over certain matters governed by this Convention may similarly sign, ratify, accept, approve or accede to this Convention. The regional economic integration organization shall in that case have the rights and obligations of a Contracting State, to the extent that that organization has competence over matters governed by this Convention. When the number of Contracting States is relevant in this Convention, the regional economic integration organization does not count as a Contracting State in addition to its member States which are Contracting States.

2. The regional economic integration organization shall, at the time of signature, ratification, acceptance, approval or accession, make a declaration to the depositary specifying the matters governed by this Convention in respect of which competence has been transferred to that organization by its member States. The regional economic integration organization shall promptly notify the depositary of any changes to the distribution of competence, including new transfers of competence, specified in the declaration pursuant to this paragraph.

3. Any reference to a “Contracting State” or “Contracting States” in this Convention applies equally to a regional economic integration organization when the context so requires.

Article 97. Entry into force

1. This Convention enters into force on the first day of the month following the expiration of [one year] [six months] after the date of deposit of the [twentieth] [third] instrument of ratification, acceptance, approval or accession.

2. For each State that becomes a Contracting State to this Convention after the date of the deposit of the [twentieth] [third] instrument of ratification, acceptance, approval or accession, this Convention enters into force on the first day of the month following the expiration of [one year] [six months] after the deposit of the appropriate instrument on behalf of that State.

3. Each Contracting State shall apply this Convention to contracts of carriage concluded on or after the date of the entry into force of this Convention in respect of that State.²⁵⁴

²⁵² Text is taken from art. 18 of the Electronic Contracting Convention. See also art. 52 of the Convention on International Interests in Mobile Equipment, Cape Town, 16 November 2001.

²⁵³ Text from sixteenth session of Working Group, para. 73 of A/CN.9/591, where it was not discussed, as noted in para. 83 of A/CN.9/591.

²⁵⁴ Text is taken from art. 30 of the Hamburg Rules. Note that the second suggested time period in square brackets is drawn from art. 23 of the Electronic Contracting Convention. The time selected for entry into force, which is a function of both the number of ratifications required and of the length of time required after the deposit of the appropriate instrument, is generally the time considered appropriate for business practice to adjust to the new regime.

Article 98. Revision and amendment

1. At the request of not less than one third of the Contracting States to this Convention, the depositary shall convene a conference of the Contracting States for revising or amending it.

2. Any instrument of ratification, acceptance, approval or accession deposited after the entry into force of an amendment to this Convention is deemed to apply to the Convention as amended.²⁵⁵

Article 99. Amendment of limitation amounts²⁵⁶

1. The special procedure in this article applies solely for the purposes of amending the limitation amount set out in article 62, paragraph 1 of this Convention.

2. Upon the request of at least [one fourth²⁵⁷] of the Contracting States to this Convention,²⁵⁸ the depositary shall circulate any proposal to amend the limitation amount specified in article 62, paragraph 1, of this Convention to all the Contracting States²⁵⁹ and shall convene a meeting of a committee composed of a representative from each Contracting State to consider the proposed amendment.

3. The meeting of the committee shall take place on the occasion and at the location of the next session of the United Nations Commission on International Trade Law.

²⁵⁵ Text is taken from art. 32 of the Hamburg Rules. Amendment procedures are not common in UNCITRAL texts, but the Hamburg Rules have a general provision in art. 32 and a special provision in art. 33 for revision of the limitation amounts and the unit of account. In the Electronic Contracting Convention, the Commission decided not to have a provision on amendments because the States parties to that Convention may initiate an amendment procedure under general treaty law (typically, with a diplomatic conference and an amending protocol, such as in the case of the Convention on the Limitation Period in the International Sale of Goods, as amended by the Protocol of 11 April 1980, New York, 14 June 1974), if applicable, after discussion in the Commission. Note that the amendment provisions at draft arts. 103 and at draft art. 104 may be adopted independently.

²⁵⁶ Text as set out in para. 7 of A/CN.9/WG.III/WP.39, including footnotes. The proposal is based upon the amendment procedure set out at art. 23 of the 2002 Protocol to the Athens Convention ("Athens Convention") and at art. 24 of the United Nations Convention on the Liability of Operators of Transport Terminals in International Trade ("OTT Convention"). Similar approaches have been taken in a number of International Maritime Organization ("IMO") conventions, such as the Protocol of 1992 to amend the International Convention on Civil Liability for Oil Pollution Damage, 1969; the Protocol of 1992 to amend the International Convention on the Establishment of an International Fund for Compensation for Oil Pollution Damage, 1971; the Protocol of 2003 to the International Convention on the Establishment of an International Fund for Compensation for Oil Pollution Damage, 1992 (not yet in force) ("2003 Protocol to the IOPC Fund 1992"); the Protocol of 1996 to amend the Convention on Limitation of Liability for Maritime Claims, 1976; and the International Convention on Liability and Compensation for Damage in connection with the Carriage of Hazardous and Noxious Substances by Sea, 1996.

²⁵⁷ Para. 23(2) of the Athens Convention refers to "one half" rather than "one quarter" of the Contracting States.

²⁵⁸ Para. 23(2) of the Athens Convention includes the phrase "but in no case less than six" of the Contracting States.

²⁵⁹ Para. 23(2) of the Athens Convention also includes reference to Members of the IMO.

4. Amendments shall be adopted by the committee by a two-thirds majority of its members present and voting.²⁶⁰

5. When acting on a proposal to amend the limits, the committee will take into account the experience of claims made under this Convention and, in particular, the amount of damage resulting therefrom, changes in the monetary values and the effect of the proposed amendment on the cost of insurance.²⁶¹

6. (a) No amendment of the limit pursuant to this article may be considered less than [five]²⁶² years from the date on which this Convention was opened for signature or less than [five] years from the date of entry into force of a previous amendment pursuant to this article.

(b) No limit may be increased so as to exceed an amount that corresponds to the limit laid down in this Convention increased by [six] per cent per year calculated on a compound basis from the date on which this Convention was opened for signature.²⁶³

(c) No limit may be increased so as to exceed an amount that corresponds to the limit laid down in this Convention multiplied by [three].²⁶⁴

7. Any amendment adopted in accordance with paragraph 4 of this article shall be notified by the depositary to all Contracting States. The amendment is deemed to have been accepted at the end of a period of [eighteen]²⁶⁵ months after the date of notification, unless within that period not less than [one fourth]²⁶⁶ of the States that were Contracting States at the time of the adoption of the amendment have communicated to the depositary that they do not accept the amendment, in which case the amendment is rejected and has no effect.

8. An amendment deemed to have been accepted in accordance with paragraph 7 of this article enters into force [eighteen]²⁶⁷ months after its acceptance.

²⁶⁰ Para. 23(5) of the Athens Convention is as follows: "Amendments shall be adopted by a two-thirds majority of the Contracting States to the Convention as revised by this Protocol present and voting in the Legal Committee ... on condition that at least one half of the Contracting States to the Convention as revised by this Protocol shall be present at the time of voting."

²⁶¹ This provision has been taken from para. 23(6) of the Athens Convention. See, also, para. 24(4) of the OTT Convention.

²⁶² Paras. 11 and 12 of A/CN.9/WG.III/WP.34 suggest that the time period in this draft paragraph should be seven years rather than five years.

²⁶³ No similar provision is found in the OTT Convention. An alternative approach as suggested in paras. 11 and 12 of A/CN.9/WG.III/WP.34 could be: "No limit may be increased or decreased so as to exceed an amount which corresponds to the limit laid down in this Convention increased or decreased by twenty-one per cent in any single adjustment."

²⁶⁴ No similar provision is found in the OTT Convention. An alternative approach as suggested in paras. 11 and 12 of A/CN.9/WG.III/WP.34 could be: "No limit may be increased or decreased so as to exceed an amount which in total exceeds the limit laid down in this Convention by more than one hundred per cent, cumulatively."

²⁶⁵ Paras. 11 and 12 of A/CN.9/WG.III/WP.34 suggest that the time period in draft paras. 7, 8 and 10 should be twelve months rather than eighteen months.

²⁶⁶ The OTT Convention specifies at para. 24(7) "not less than one third of the States that were States Parties".

²⁶⁷ Recent IMO conventions have reduced this period to twelve months when urgency is important. See, for example, the 2003 Protocol to the IOPC Fund 1992, at para. 24(8).

9. All Contracting States are bound by the amendment unless they denounce this Convention in accordance with article 100 at least six months before the amendment enters into force. Such denunciation takes effect when the amendment enters into force.

10. When an amendment has been adopted but the [eighteen]-month period for its acceptance has not yet expired, a State that becomes a Contracting State during that period is bound by the amendment if it enters into force. A State that becomes a Contracting State after that period is bound by an amendment that has been accepted in accordance with paragraph 7 of this article. In the cases referred to in this paragraph, a State becomes bound by an amendment when that amendment enters into force, or when this Convention enters into force for that State, if later.

Article 100. Denunciation of this Convention

1. A Contracting State may denounce this Convention at any time by means of a notification in writing addressed to the depositary.

2. The denunciation takes effect on the first day of the month following the expiration of one year after the notification is received by the depositary. If a longer period is specified in the notification, the denunciation takes effect upon the expiration of such longer period after the notification is received by the depositary.²⁶⁸

DONE at [...], this [...] day of [...], [...], in a single original, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic.

IN WITNESS WHEREOF the undersigned plenipotentiaries, being duly authorized by their respective Governments, have signed this Convention.

²⁶⁸ Text is taken from art. 34 of the Hamburg Rules. The second sentence of para. 2 is not strictly necessary but is present in the Hamburg Rules and in some other UNCITRAL treaties, including the Electronic Contracting Convention. It is not present, for instance, in art. 27 of the United Nations International Convention for the Suppression of Acts of Nuclear Terrorism, 2005 (the most recent text deposited with the Secretary-General), which provides some slightly modified alternative language:

“1. Any State Party may denounce this Convention by written notification to the Secretary-General of the United Nations.
2. Denunciation shall take effect one year following the date on which notification is received by the Secretary-General of the United Nations.”

**L. Note by the Secretariat on the preparation of a draft convention
on the carriage of goods [wholly or partly] [by sea] — Position of the
French National Committee of the International Chamber of
Commerce (ICC France), submitted to the Working Group on
Transport Law at its nineteenth session
(A/CN.9/WG.III/WP.82) [Original: French]**

In preparation for the nineteenth session of Working Group III (Transport Law), the French National Committee of the International Chamber of Commerce (ICC France) submitted to the Secretariat the document attached hereto as an annex containing its comments and proposals on provisions of the draft convention on the carriage of goods [wholly or partly] [by sea] scheduled for discussion during the session.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

**Position of ICC France submitted to UNCITRAL Working
Group III (Transport Law)**

Draft convention on the carriage of goods [wholly or partly] [by sea]

Provisions relating to arbitration

1. At its sixteenth session (Vienna, 28 November-9 December 2005), Working Group III (Transport Law), having been entrusted with preparing a draft convention on the carriage of goods [wholly or partly] [by sea], considered document A/CN.9/WG.III/WP.54, which contains a proposal by the Netherlands on arbitration.

That document was presented as a compromise between the principle of unqualified freedom to arbitrate and the view that arbitration should be available to the parties to a dispute but should not be capable of being used by parties in order to circumvent the bases of jurisdiction set out in draft article 75 of the draft convention.

The compromise proposed by the Netherlands entails the deletion of the entire chapter on arbitration and the addition of a paragraph 2 to draft article 78 of the draft convention with the intention of ensuring that the rules in the draft convention on jurisdiction could not be circumvented.

This compromise also entails the inclusion of a reference in draft article 81 to make effective any agreement made by the parties to refer a dispute that has arisen between them to arbitration.

The aim of the proposal is to preserve the status quo with respect to the use of arbitration in the maritime transport industry by providing minimal arbitration rules

with respect to the liner industry while maintaining freedom of arbitration in the non-liner industry through the addition of draft article 81 bis.

2. The report of Working Group III (A/CN.9/591) on the work of its sixteenth session (Vienna, 28 November-9 December 2005) stated that the compromise proposal of the Netherlands had given rise to reservations on the part of several delegations.

The report recalled that the question had been raised as to whether the compromise proposal of the Netherlands (A/CN.9/WG.III/WP.54) might limit the use of arbitration in the liner trade.

It was stressed that commercial enterprises would in fact be unlikely to include arbitration provisions in a contract unless they could with certainty determine the place of arbitration.

However, given the current wording of draft article 75, the determination of the place of arbitration might not be possible.

The report also pointed out that refinements were called for in the drafting of the proposed text, in particular in view of the new provisions considered for the jurisdiction chapter.

3. The comments by the delegation of ICC France on the work of Working Group III at its sixteenth session (Vienna, 28 November-9 December 2005) indicated that the French delegation had reservations concerning the Netherlands proposal.

The French delegation recalled that, although during the discussions it had accepted the principle of the compromise, it did not agree with the wording of the text subsequently drawn up, which did not reflect the discussions.

The French delegation had also pointed out that the wording of article 83 raised a number of difficulties, in particular by granting the claimant the option of instituting court proceedings or resorting to arbitration.

Several delegations (France, the United Kingdom, Italy and the Baltic and International Maritime Council (BIMCO)), supported by the delegation of ICC France, stressed that they disagreed with the wording of article 83, which conflicted with arbitration practice.

In the light of those difficulties, the secretariat of the Working Group was asked to give its opinion.

The secretariat pointed out that the solutions recommended in document A/CN.9/WG.III/WP.54 were unusual and it suggested that the wording of article 83 should be re-examined.

4. In that context, ICC France wishes to comment on those provisions of the draft convention that deal with arbitration.

4.1. *Draft article 76: choice of court agreements*

4.1.1. Draft article 76 (1) stipulates that the choice of court agreement has to be concluded or documented in writing.

Arbitration agreements appear to be covered by this definition.

However, they may not be entered into orally or implicitly.

4.1.2. Draft article 76 (2) stipulates that an arbitration agreement (i) has to be included in a volume contract with a clear indication of the parties and (ii) must clearly state the name and location of the chosen court.

(i) As regards volume contracts, it would be desirable to broaden the scope of admission of arbitration agreements to all contracts of carriage of goods by sea.

(ii) As regards the statement of the name and location of the court, such a requirement seems incompatible with an arbitration clause.

It also weakens the role of arbitration institutions, which have no opportunity to remedy any disagreement of the parties concerning the place of arbitration and the designation of arbitrators.

4.1.3. Draft article 76 (3) stipulates that an exclusive choice of court clause is binding on a person that is not a party to the volume contract provided that this is consistent with applicable law as determined by international private law or the conflict of law rules of the court seized.

Recourse to conflict rules may be seen to be obsolete in international trade.

This provision also applies to courts.

Under these circumstances, it would be appropriate to allow an option for arbitration, with the exclusion of the courts.

4.2. *Draft article 81 bis: recognition and enforcement*

This article relates only to decisions made “by a court of one Contracting State” (*“par un tribunal d’un État contractant”*).

However, an arbitral tribunal, by its nature, is not under the jurisdiction of a State.

The provisions concerning recognition and enforcement of decisions will therefore not be applicable to arbitration.

It should, however, be recalled that the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards remains applicable.

The formulation “*par un tribunal siégeant dans un État contractant*” would appear to be preferable.

4.3. *Draft article 83: arbitration agreements*

This article provides that (i) the arbitration agreement has to specify the place of arbitration and (ii) the claimant may, even where there is an arbitration agreement, institute judicial proceedings in any place specified in draft article 75 of the convention.

The option available to the claimant of instituting judicial proceedings seems to conflict with international arbitration practice, in particular where contrary to the principle of jurisdiction to decide jurisdiction.

5. At the eighteenth session of Working Group III (Vienna, 6 November-17 November 2006), the Secretariat presented a document on arbitration (A/CN.9/WG.III/XVIII/CRP.3) prepared in conjunction with Working Group II in line with the New York Convention.

The statement by the delegation of ICC France indicated that the new wording of chapter 17 on arbitration was intended to prevent the provisions of chapter 16 on jurisdiction being circumvented.

The French delegation approved chapter 17 as a whole.

However, it did not wish to adopt a position on article 85 bis (applicability of chapter 17 to Contracting States) since that issue came within the domain of the European Union.

The French delegation has considered the precise meaning of the term “applicable law”, which appears in article 83 (4)(d), in relation to arbitration agreements.

This term would in fact seem to refer to the law governing the arbitration procedure and not the law applicable to the arbitration itself.

It is also felt that the wording of article 84 (2) on arbitration agreements in non-linear transportation could be improved and that the conditions under which arbitration agreements would be binding on third parties, in particular consignees, could be re-examined.

Several delegations have requested that the chapter on arbitration be excluded from the draft convention in that it limits the possibilities for resorting to arbitration.

The delegation of ICC France pointed out that the provisions on arbitration were of particular concern to ICC France.

Since document A/CN.9/WG.III/XVIII/CRP.3 had been distributed to delegates during the session, ICC France undertook to adopt a position subsequently.

The delegation of ICC France indicated that its position would be based on respect for freedom of contract and freedom to arbitrate, which are essential principles in the field of international trade.

Conclusion

ICC France notes with satisfaction the progress made in the work of UNCITRAL.

ICC France welcomes the fact that the principle of unqualified freedom to arbitrate has been reaffirmed by the Working Group.

ICC France believes, however, that some provisions, as currently worded, may limit the use of arbitration.

ICC France therefore requests the Working Group to take its observations into consideration.

**M. Note by the Secretariat on the preparation of a draft convention
on the carriage of goods [wholly or partly] [by sea] — Position of the
European Shippers' Council, submitted to the Working Group
on Transport Law at its nineteenth session
(A/CN.9/WG.III/WP.83) [Original: French]**

In preparation for the nineteenth session of Working Group III (Transport Law), the European Shippers' Council submitted to the Secretariat the document attached hereto as an annex containing its comments and proposals on provisions of the draft convention on the carriage of goods [wholly or partly] [by sea] scheduled for discussion during the session.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Introduction

1. With reference to the work of the eighteen session, which took place in Vienna, the European Shippers' Council wishes to present its analysis of those points which were simply discussed but not actually settled by consensus, in anticipation of the nineteenth session, to be held in New York in 2007.
2. The adopted positions set out below are based on the deliberations in Vienna and on main document A/CN.9/WG.III/WP.64, together with further specific work of official delegations, since to date we are neither aware of the consolidated version of the text following completion of the second reading nor in possession of the agenda for the New York session.

Limitation of liability

Article 64

3. The Council wishes the determination of the method of calculating the liability limit to take account of the actual value of the goods transported by sea. Rather than refer dogmatically to past systems, it seems preferable to take into consideration a value that is representative of current cargo flows and to use high-value flows as a basis (trade from Asia to the rest of the world).
4. The Council is very wary of the apparent extension of the scope of application of limitations of liability in relation to the Hague-Visby and Hamburg Rules.
5. The Council supports variant A of article 64 (2), which automatically applies the limitation that is most favourable to the shipper.

Article 65

6. While welcoming the fact that the principle of liability for delay on the carrier's part is still retained, the Council notes that the method of calculation

envisaged by some delegations at the eighteenth session, in Vienna, is still based on the amount of freight.

7. The Council again points out that this criterion, which was meaningful at the time of negotiation of the Hamburg Rules, in the 1970s, when freight rates were high (e.g. the Far Eastern Freight Conference (FEFC) rate of around US\$ 2,000/2,500 for a 20-foot container loaded with steel), has today lost its relevance owing to the volatility of rates, which have fallen to very low levels because of competition (e.g. the average freight-all-kinds (FAK) rate of US\$ 150-200 per 20-foot container for the Europe/Asia sector). The Council recommends abandoning a system whose only justification is tradition and advocates using a modern criterion in the future.

8. The Council proposes that the liability limitation rules applicable to both parties to the contract of carriage be unified:

- Either through the application of a blanket rule, as set out in article 64,
- Or through the principle of compensation for actual loss, being limited to a certain sum that is actually insurable in the case of the smallest operators.

In this latter context, the amount of 500,000 Special Drawing Rights (SDRs), proposed at a meeting of the eighteenth session by a consensus group led by the Swedish delegation, during discussions on the shipper's liability for delay, is in our opinion unjustified. We feel that a sum in the region of 80,000/100,000 SDRs is more realistic. That amount would represent the limit of liability of a carrier whose delay gives rise to a proven loss and the limit of liability of a shipper whose fault causes a loss.

9. However, without prejudice to the foregoing, should delegations by consensus adopt a method of calculation based on the amount of freight, the choice of a multiplier lower than that already existing in the Hamburg Rules (2.5 times the freight payable) would be an unacceptable backwards step for shippers benefiting from the most recent convention.

10. At the last session, held in Vienna, an informal group proposed, on the basis of document A/CN.9/WG.III/WP.74, a text relating specifically to the liability of the shipper whose fault causes delay. In essence the proposal denies the shipper the possibility of limiting its liability in two specific cases: where its fault give rise to damage to the ship or where a misstatement concerning its goods causes delay or loss.

11. Only in the very restricted case of the shipper's liability for delay whose cause is not related to a misstatement concerning the goods could it be limited, such limitation corresponding not to the formula "one or X times the freight payable" but to an amount arbitrarily fixed at 500,000 SDRs.

12. Such a proposal, which has no foundation in law, would defy any rule of symmetry and balance between the situation created for the carrier and for the shipper. The Council thus wishes to emphasize that retaining such a clause in the convention would have a negative impact on its support for the draft instrument and would influence shippers' attitude towards their respective Governments when the question of signing and ratifying the convention arises. It should also be noted that the Council finds it unacceptable that the text retains neither the formula in the Hague-Visby Rules (article IV (3)), nor that in the Hamburg Rules (article 12), whereby the shipper is not liable unless there is fault on the shipper's part.

13. The Council's rejection of the draft proposed by the informal group does not, however, mean, as suggested by some delegations, that it is abandoning its wish to retain the clause concerning the carrier's liability in the event of delay. That position is in line with the criteria of service quality that can justifiably be expected from transport providers engaged in global trade conducted under just-in-time and total quality principles.

14. The Council refuses to let itself be drawn into a quid pro quo scenario artificially created to enable carriers to reverse the achievements of the Hamburg Rules in regard to liability for delay.

Article 66

15. In the interests of consistency of interpretation by all legal systems, it is desirable to delete the word "personal" from the English version, which limits cases of liability. That restrictive element is incompatible with the expectations of shipper customers from their transport providers, who are increasingly assuming a major player position in a modern maritime world.

16. The Council also feels very reluctant regarding the apparent extension of the scope of application of the circumstances recommended in article 66 where the carrier does not lose the right of liability limitation.

Article 89: Other conventions

17. The Council supports the analysis made by the International Road Transport Union (IRU) and shares the concerns expressed by it from a multimodal perspective, whose significance it is important to recognize.

18. We consider it desirable to retain article 27 (but delete article 90, which is harmful) and to retain and modify article 89. The Council is not opposed to a neutral multimodal instrument of global application but is primarily in favour of simple solutions offering good predictability. From that viewpoint, it might consider accepting a single system of liability and compensation but such a position has limits and is valid only if genuine equality of treatment is established in the convention. The instrument as it now stands is so unbalanced to the detriment of shippers that, regrettably, the Council feels compelled at this stage to call for the application of unimodal transport conventions for the non-maritime legs, since such conventions are far more protective of shippers' interests.

Articles 75 and 76: Jurisdiction

19. On the question of designating courts, the Council is primarily seeking predictability and simplicity and accordingly favours an article that gives a specific list of standard places for determining competent courts, in particular those traditionally associated with the transport operation. It would also be desirable to include the place of formation of the contract.

20. The fullest possible list is preferable to the system adopted, which combines a list of locations and total freedom of choice.

21. Such freedom of choice of jurisdiction encourages forum-shopping, which could lead to the designation of places of jurisdiction outside the list of proposed locations and even allow the designation of a court in a country that has not acceded to the convention.

22. The Council feels that freedom of contract (cf. below) granted to the contracting parties should be limited to the possibility of choosing by agreement a basis of jurisdiction from among those appearing in the list in article 75 (a), (b) and (c).

23. The criteria in article 76 (2) (a), (b) and (c) allowing total derogation from article 75 (a), (b) and (c) are not sufficient to justify such a derogation. The definition of the volume contract, on which the right to derogate from the provisions of the instrument is based, is too general. Only substantial strengthening of the definitional criteria concerning the volume contract would make it possible to justify such an extensive derogation.

24. The Council also stresses the need to protect the consignee. From this perspective, paragraph 3 of article 76 does not provide the desired safeguards. It would be necessary to add to paragraph 3 a clause providing for express acceptance of the choice of forum by the consignee, failing which the consignee would be entitled to impose, at its option, one of the places listed in article 75.

25. Again in the interests of predictability, the rules for designating competent courts contained in the convention should be binding on all signatory countries. A convention that allows for an opt-in or opt-out system (article 76 (4)) will needlessly complicate the convention's implementation. The Council does not therefore support the provisions included or put forward by delegations during the discussions on article 76 (4) at the eighteenth session.

26. The Council notes that there is no mention of judicial proceedings against the shipper. In the interests of balance and reciprocity, that point should be specified.

Remarks on contractual freedom

27. The Council recalls the extreme reservations that it was prompted to make in its previous statement of position (A/CN.9/WG.III/WP.64) concerning some delegations' stance in favour of total freedom of contract, which would be harmful to small and medium-sized shippers. Its position on articles 75 and 76 reinforces its misgivings regarding freedom of contract based solely on insufficient definition of the volume contract. It should be noted that the Hague and Hamburg Rules allow very broad freedom of contract while protecting small and medium-sized shippers. By simply reproducing their well-known provisions and excluding derogations in favour of the carrier alone, it would be possible to dispense with the entire, poorly constructed volume contract mechanism.

Conclusions

28. With the second reading of the draft instrument now completed, it has to be acknowledged that the Council, disappointed by the loss of direction of a text whose developments have more to do with reversing the achievements of the Hamburg Rules than endeavouring to modernize intermodal transport law, questions the usefulness of such an instrument in dealing with freight transport in the coming decades.

29. The lack of balance in the main provisions, in particular those concerning rules of liability, is now such that the Council is pessimistic about any possible realignment of the main areas of imbalance by the time of completion of the work. It will nevertheless be present in a constructive spirit at the next session, in New York, in an attempt to save what can still be saved.

30. The European Shippers' Council is the organization which represents the interests of European industrial and commercial companies as users of all modes of transport. "Shippers" are primarily producers or distributors of goods, which they market and distribute to their customers. Carriage by sea is their main mode of transport in international trade.

N. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposal of the United States of America on the definition of “maritime performing party”, submitted to the Working Group on Transport Law at its nineteenth session

(A/CN.9/WG.III/WP.84) [Original: English]

In preparation for the nineteenth session of Working Group III (Transport Law), the Government of the United States of America submitted to the Secretariat the proposal attached hereto as an annex with respect to the definition of “maritime performing party” in the draft convention on the carriage of goods [wholly or partly] [by sea].

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Proposal of the United States of America on the definition of “maritime performing party”

As set out in footnote 9 of A/CN.9/WG.III/WP.81, it has been suggested that the definition of “maritime performing party” (draft article 1 (7) of the draft convention) should be edited to clarify that a rail carrier, even if it performs services that might be considered the carrier’s responsibilities after the arrival of the goods at the port of loading or prior to the departure of the goods from the port of discharge, should be considered a non-maritime performing party.

The convention applies to actions against the carrier or a maritime performing party (draft article 4), but not to actions against a non-maritime performing party. The suggestion outlined in paragraph 1 was made at the behest of the Association of American Railroads (AAR) (representing U.S., Canadian, and Mexican railroads). The AAR has made it known to the United States from the beginning of this negotiation that it is concerned that it might inadvertently be deemed to be a maritime performing party when it performs services within a port area, even though the ultimate purpose of those services will virtually always be to move goods into or out of a port and not to move goods from one place to another within a port. Therefore, the United States supports the suggestion reflected in paragraph 1.

The United States proposes that the following sentence be added at the end of draft article 1 (7) of A/CN.9/WG.III/WP.81 (the definition of “maritime performing party”):

“A rail carrier, even if it performs services that are the carrier’s responsibilities after arrival of the goods at the port of loading or prior to the departure of the goods from the port of discharge, is a non-maritime performing party.”

O. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Shipper's Obligations: Drafting proposal by the Swedish delegation, submitted to the Working Group on Transport Law at its nineteenth session

(A/CN.9/WG.III/WP.85) [Original: English]

In preparation for the nineteenth session of Working Group III (Transport Law), the Government of Sweden submitted to the Secretariat the paper attached hereto as an annex with respect to liability for delay in the draft convention on the carriage of goods [wholly or partly] [by sea]. The Swedish delegation advised that the paper was intended to facilitate consideration of the topic in the Working Group by proposing revised text for some of the provisions on liability for delay. The Swedish delegation further advised that the revised text and commentary in the attached annex was prepared in light of the consideration of the topic of shipper's obligations by the Working Group during its eighteenth session, and on the basis of further informal consultations with other delegations. The Working Group may wish to consider the text in the attached annex in its further consideration of the provision on liability for delay of the draft convention.

ANNEX

Liability for delay in the Draft convention on the carriage of goods [wholly or partly] [by sea] — a possible compromise solution

I. Introduction

1. At the eighteenth session, the Working Group decided that the approach to the treatment of liability for pure economic loss or consequential damages caused by delay on the part of the shipper or the carrier set out in "option three" (as described in A/CN.9/WG.III/WP.74) should be pursued as the optimal approach for the draft convention, subject to the Working Group's ability to identify an appropriate method to limit the liability of the shipper for pure economic loss or consequential damages caused by delay (A/CN.9/616, paras. 92, 93 and 100). During that session, the Swedish delegation presented a compromise solution on that matter. However, a number of delegations asked for a written presentation of that compromise proposal. The Swedish delegation has taken on the task to produce such a presentation in order to facilitate the future debate on this matter. The proposal is based on the consolidated text of the draft convention in document A/CN.9/WG.III/WP.81.

II. Carrier's liability for delay caused by a shipper — the question of causation

2. As explained in A/CN.9/WG.III/WP.74, paragraph 14, the intention behind the regulation of delay in the draft convention is that the carrier would never become liable to one shipper for a delay caused by an act or omission of another shipper. For example, if shipper A claims compensation from the carrier because of the fact that

the discharge of the goods from the vessel was delayed in the port of destination, the carrier will in this situation be relieved from liability provided that it can prove that the delay was not due to fault on the carrier side, but to the fact that shipper B did not submit the documents required. Shipper B cannot in this situation be considered as a servant or contractor for whom the carrier is responsible.

3. However, at the eighteenth session, some delegations were concerned that carriers would nevertheless be found liable under the draft convention for a delay caused by one shipper in relation to all other shippers with goods on board that vessel (A/CN.9/616, para. 103). In order to accommodate the needs of those delegations, a clarification that the carrier would not be liable for loss or damage to the extent that it is attributable to an act or omission of another shipper could be added in draft article 18 as a new paragraph 3. Such a clarification could read as follows:

Article 18. Liability of the carrier for other persons

1. The carrier is liable for the breach of its obligations pursuant to this Convention caused by the acts or omissions of:

(a) Any performing party; and

(b) Any other person, that performs or undertakes to perform any of the carrier's obligations under the contract of carriage, to the extent that the person acts, either directly or indirectly, at the carrier's request or under the carrier's supervision or control.

[2. The carrier is liable pursuant to paragraph 1 of this article only when the performing party's or other person's act or omission is within the scope of its contract, employment, or agency.]

3. The carrier is not liable to a shipper or a consignee for any loss or damage to the extent this is attributable to an act or omission by another shipper.

4. A concern that might be raised against the proposal to insert such a clarification in draft article 18 is that such a rule is already contained in draft article 17 (1) where it is regulated that the carrier is relieved of its liability if it can prove that the loss, damage or delay is not attributable to its fault or to the fault of any person whom it is responsible for according to draft article 18 (A/CN.9/616, para. 104). However, there is a risk, at least in some jurisdictions, that draft article 17 might be interpreted to the effect that the carrier would be found liable anyway in relation to a shipper having goods on board the ship, perhaps for an overall failure to put into place systems to prevent delays caused by another shipper. In such a situation, a clarification of this kind might be helpful.

III. Limitation of the shipper's liability for delay

5. At the eighteenth session of the Working Group, some delegations raised concerns about the potentially very high exposure to liability for the shipper, especially regarding pure economic loss (A/CN.9/616 paras. 105 and 106). One way of limiting this exposure is to put a cap on the liability of the shipper regarding economic loss due to pure delay as a result of a breach of the obligations in draft articles 27, 29 and 31, para. 1. This would make the risk exposure in case of a pure delay more predictable and, as a consequence of this, insurable. For economic loss due to the fact that the shipper is in breach of its obligations regarding accuracy of

information and dangerous goods in draft articles 31, para. 2, and 32 it will still be fully liable regardless of whether there is a pure delay or not. The reason for not putting a cap on the liability for a breach of one of these obligations is that they are considered that vital to the carrier that a shipper who disregards them does not deserve the protection of a limitation of liability. In respect of breaches of its obligations under draft articles 27, 29 and 31, paragraph 1, the shipper will also be fully liable for consequential loss resulting from physical damage to the vessel, other cargo or personal injury. Regarding liability for physical damage to the vessel, other cargo or personal injury, a shipper already currently has unlimited liability according to both the Hague Visby Rules and the Hamburg Rules and this seems not to have caused any problems in practice.

6. If it is decided that the shipper's liability for pure delay should be limited, it becomes necessary to make sure that the limitation level does not apply to the obligation to pay demurrage or damage for the detention of the vessel arising out of charterparties or other transport contracts outside the scope of the draft convention.

7. It has proved difficult to link the limitation level to the weight or value of the goods or to the freight. Neither of these factors correspond with the risk. For example, a shipper, who is shipping waste might cause the same damage as a shipper who is shipping electronic equipment. Therefore, it seems preferable to establish a fixed sum as the limitation level. Such a type of liability could also be easily incorporated as a liability element in cargo insurance. Regarding the amount of the cap, an overall objective should be that the limitation level ensures that shippers are fully liable in ordinary cases, at the same time as they are protected from excessive exposure in extraordinary cases in order to make the liability insurable. If a limitation level of 500,000 SDR is established, approximately between 260 and 320 claims for full freight from other shippers would be covered, based on the fact that the average freight rate of a container amounts to between 1,500 to 3,000 US dollars. A provision establishing such a limitation level could read as follows:

Article 30 ter. Limitation of shipper's liability for loss caused by delay

1. In case of economic loss due to delay, other than as a result of loss or damage to the vessel, other cargo or personal injury, the liability of the shipper for breaches of its obligations under this chapter, except for articles 31, paragraph 2, and 32, is limited to an amount equal to [500,000] SDR per incident.

2. Paragraph 1 does not apply to obligations to pay demurrage or damage for the detention of the vessel arising out of charterparties or other transport contracts outside the scope of this Convention[, incorporated into a transport document or electronic transport record].

IV. A general regulation regarding causation

8. At the eighteenth session, some delegations also indicated that there might be a need for the inclusion of a more general provision on causation in case of liability for delay in order to safeguard that general principles on this in national law are not affected (A/CN.9/616 paras. 107 and 108). Other delegations were of the view that such a provision was not necessary because of the fact that if the draft convention is silent, it follows automatically that national law applies. However, it could be argued that the mere regulation of the shipper's liability in chapter 8 might lead to the result that principles on causation established in national law would be

undermined. A provision on causation has to be restricted on the carrier's side to cover only liability due to delay. Otherwise such a provision would be in contradiction with the carrier's right to limit the liability to the value of the goods in case of loss of or damage to the goods. A possible solution that the Working Group might wish to consider is to add a new paragraph (para. 4) to draft article 22. The article would then read as follows:

Article 22. Calculation of compensation

1. Subject to article 62, the compensation payable by the carrier for loss of or damage to the goods is calculated by reference to the value of such goods at the place and time of delivery established in accordance with article 11.
 2. The value of the goods is fixed according to the commodity exchange price or, if there is no such price, according to their market price or, if there is no commodity exchange price or market price, by reference to the normal value of the goods of the same kind and quality at the place of delivery.
 3. In case of loss of or damage to the goods, the carrier is not liable for payment of any compensation beyond what is provided for in paragraphs 1 and 2 of this article except when the carrier and the shipper have agreed to calculate compensation in a different manner within the limits of chapter 19.
 4. Subject to article 63, economic loss due to delay in delivery of the goods is calculated according to rules and principles established under applicable national law.
9. The corresponding provision on the calculation of the loss due to the fault of the shipper will have to form a new article in chapter 8 on shipper's obligations. However, this provision should not be restricted to economic loss due to delay, but should apply to all types of loss and damage. Such a provision might read as follows:

Article 30 bis. Calculation of compensation

Subject to article 30 ter, loss or damage due to the breach of any of the shipper's obligations under this chapter is calculated according to rules and principles established under applicable national law.

**P. Note by the Secretariat on the preparation of a draft convention
on the carriage of goods [wholly or partly] [by sea] — Proposal
of the delegations of Denmark, Norway and Finland on draft
article 37 (1)(a) regarding contract particulars, submitted to the
Working Group on Transport Law at its nineteenth session
(A/CN.9/WG.III/WP.86) [Original: English]**

In preparation for the nineteenth session of Working Group III (Transport Law), the Governments of Denmark, Norway and Finland submitted to the Secretariat the proposal attached hereto as an annex with respect to draft article 37 (1)(a) on contract particulars in the draft convention on the carriage of goods [wholly or partly] [by sea].

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Contract particulars

1. Under draft article 37 (1)(a) the carrier is obliged to include a “description of the goods” as furnished by the shipper. The carrier may, however, protect itself by entering a reservation on the document if it has no physically practicable or commercially reasonable means of checking the accuracy of the information (see draft article 41 (2)(a)). In any event, the carrier must include the information provided by the shipper. The draft convention provides no limits as to the amount of information, the nature of the information, descriptions, etc. which the shipper may require to have included in the transport document. This is new as compared to the equivalent provision in the Hague, Hague-Visby and Hamburg Rules.

2. In practice, there is an increasing tendency of shippers to provide lengthy and detailed technical descriptions of the goods which they ask to have included in the transport document. It is important that the draft convention provides for a limit as to the length, nature and degree of detail of the information that the shipper may require to have included in the transport document. If such a limit is not provided for, the carrier is obliged to perform a reasonable checking of all such information furnished by the shipper which it is physically practicable and commercially reasonable to check (see draft article 41 (2)(a)). When a considerable amount of information or information of a specific nature is to be included in the transport document, it will often be a matter of opinion — and therefore give rise to disputes — whether such checking will be physically practicable or commercially reasonable. By permitting too many and too detailed particulars in the transport documents, compliance with the obligation of the carrier to exercise a reasonable control of those particulars is made significantly more difficult and burdensome. One element is the increased insecurity connected with reading several pages of information; another is that the way is paved for including particulars remote or even unrelated to the contract of carriage and hence unfamiliar to the carrier. In

addition, it may adversely affect the standard of reasonableness to be applied to the carrier.

3. In order to meet these concerns it is suggested that the following amendment be made in the text:

Draft article 37 (1)(a) should be altered to read as follows: “A description ***in general terms*** of the goods;”.

This proposal is based on the wording of UCP 600 (Uniform Customs and Practice for Documentary Credits (6th revision)), Article 14 (e), which ensures that the transport document will still fulfil its purpose in international trade. It is also quite similar to the solution in the Hamburg Rules, Article 15 (1)(a) which speaks of “the general nature of the goods”.

Q. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Comments of the International Chamber of Shipping (ICS), BIMCO and the International Group of P&I Clubs on the draft convention, submitted to the Working Group on Transport Law at its nineteenth session

(A/CN.9/WG.III/WP.87) [Original: English]

In preparation for the nineteenth session of Working Group III (Transport Law), the International Chamber of Shipping (ICS), BIMCO and the International Group of P&I Clubs submitted to the Secretariat the document attached hereto as an annex containing their comments on the draft convention on the carriage of goods [wholly or partly] [by sea] (A/CN.9/WG.III/WP.81) scheduled for discussion during the session.

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Comments of the International Chamber of Shipping (ICS), BIMCO and the International Group of P&I Clubs on the draft convention (A/CN.9/WG.III/WP.81)

Introduction

International Chamber of Shipping (ICS), BIMCO and the International Group of P&I Clubs (collectively referred to as “we”) have the following comments on the draft convention on the carriage of goods [wholly or partly] [by sea] as contained in UNCITRAL document A/CN.9/WG.III/WP.81.

Draft Article 6 — Specific exclusions

Draft Article 6(1)(b)

Delete “Contracts” and replace with “Other contractual arrangements ...”

Draft Article 6(2)(a)

Delete “contract” and replace with “other contractual arrangement between the parties”. After “thereon” delete “between the parties, whether such contract is a charterparty or not”.

Rationale: The above suggestions for amendment are in order to clarify the text.

Draft Article 12 — Transport not covered by the contract of carriage

The words in the first parenthesis are strongly preferred.

Rationale: The carrier may wish to assist with shipper requests for pre-carriage or onward carriage. Such service would be most efficiently provided using a through transport document but in such a case, the carrier should act only as agent for the shipper in respect of the pre-carriage or onward carriage so that it remains at the shipper's risk and responsibility. This practice is in widespread use, ensuring a smooth accomplishment of international trade with appropriate delineation of risk. If the second parentheses are chosen, then many carriers may not agree to arrange pre-carriage or onward carriage as agents and will only contract for the whole of the combined transport. The second parenthesis thereby discourages flexibility and that is not helpful to carriers or shippers.

Draft Article 17 — Basis of liability

Draft Article 26 — Carriage preceding or subsequent to sea carriage

The words “event or circumstance” should be replaced with “occurrence” wherever they appear in these articles.

Rationale: The word “circumstance” is too broad in scope and not appropriate for the intention of these articles and the use of both “event” and “circumstance” is unnecessary and otiose. “Occurrence” is more in line with the meaning and intention of the clause and should replace the present wording.

Draft Article 18 — Liability of the Carrier for other persons

Draft Article 18(2) — Lift the parentheses.

Rationale: As a matter of principle, it is important that the carrier's liability for the actions of its agents, employees and sub-contractors is limited to when the party is acting within the scope of its employment or contract or duty. See also the suggestion under draft article 19 below.

Draft Article 19 — Liability of maritime performing parties

Draft Article 19(4) — We support the principle behind this article but believe that it is more appropriately placed in an independent article and it should be expanded to include the full category of parties that perform the carrier's obligations under this convention.

Rationale: The employee, agent and sub-contractor of the carrier and the maritime performing party, should be afforded the full protection of the rights, defences and limits of liability available to the carrier under this convention for any breach of its contractual obligations or duties in the event that an action under the draft convention is made directly against it (a “Himalaya” clause). This draft article upholds this principle but since it, rightly, encompasses a wider range of parties than the heading of this draft article (maritime performing parties), it is more appropriate for it to be an independent article.

Finally, we suggest that the clause includes a provision similar to draft article 19(2) but extended to the carrier, performing party and maritime performing party.

Draft Article 26 — Carriage preceding or subsequent to sea carriage

Draft Article 26(1) — The reference to “national law” in the preamble to the draft article should be deleted.

Draft Article 26(1)(a) — Variant B is preferred with the reference to “national law” in parentheses, deleted.

Rationale: Only those regulations contained in international conventions or instruments should be able to prevail over the terms of this draft convention since these provisions will be easily and readily identifiable. To allow national law provisions, wherever and whatever they may be, to prevail would create considerable uncertainty as to the extent of carrier’s and shipper’s liability. Variant B of draft article 26(1)(a) is preferred since it contains more restricted criteria for the circumstances that must exist before the draft convention can be ousted and it introduces the factor of relevance.

Draft Article 27 — Delivery for Carriage

Draft Article 27(2) — Delivery for Carriage

We would suggest supporting the deletion of the square brackets around draft article 27(2).

Rationale: When the shipper agrees to perform the operations listed in draft article 14(2), it is right to impose an obligation that they are performed with the same standard of care as the draft convention imposes on the carrier, namely in draft article 14(1).

Draft Article 32 — Special rules on dangerous goods

Draft Article 32 (a) — We support the deletion of the square brackets around “the carriage of such goods” and deleting the words “such failure to inform” in the final line of the paragraph.

Rationale: The carrier stands exposed to enormous loss and damage if dangerous goods are loaded on to his vessel without his knowledge and consent. It is only reasonable, therefore, for the carrier to be afforded the widest protection in these circumstances and the shipper should then be liable for all consequences of such goods having been loaded and carried.

Draft Article 37 — Contract particulars

Draft Article 37(1)(a) — “A description of the goods” could lead to a shipper inserting a very lengthy and detailed description. We wonder therefore whether there should be words here to limit the extent of the goods’ description.

Draft Article 38 — Identity of the carrier

Draft Article 38(2) — We have strong objection to any presumption as is proposed in draft article 38(2) and therefore both Variant A and B should be deleted.

Rationale: Where the registered owner is a separate entity from the ship operator, the registered owner will rarely have any practical influence over the operation of the vessel and, indeed, is often a financial institution. Industry maintains that a shipper is in the best position to ascertain the identity of the contracting carrier, and parties acquiring bills of lading should not be placed in a better position than the shipper. As draft article 37(2)(b) now contains an obligation on the shipper to specify the name and address of the carrier and it is agreed in draft article 38(1) that any statements to the contrary elsewhere in the transport document will have no

legal effect, any ambiguity thereafter is more appropriately dealt with by the courts under the applicable law and not by the draft convention.

Draft Article 41 — Qualifying the description of the goods in the contract particulars

Draft article 41 is of very great practical importance to carriers. It is vital that carriers know when and how to make a qualification: in order to avoid any uncertainty in this respect, draft article 41 should be somewhat restructured and rephrased. In particular, it should more clearly set out the distinction between cases where a qualification shall be made and cases where a qualification may be made. Additionally, it would appear from the scheme of the article that the qualification to be made under sub-paragraph 1 is more in the nature of a “correction” of the shipper’s statements whereas the qualifications to be made under sub-paragraphs 2 and 3 respectively are more in the nature of a “reservation” of rights. We would suggest that this distinction is made clearer in the article. In particular, whereas the word “qualify” is appropriate in paragraph 1, the word “reservation” should be used in paragraphs 2 and 3. Draft article 41(1)(a) is also a little unclear in that there is a reference twice to “material”. Is this intended, and if so, is there any reason why the same phraseology has not been used in draft article 41(1)(b)? Furthermore, we would request clarification as to the difference between “materially false” and “false”.

Draft Article 42 — Evidentiary effect of the contract particulars

We are strongly opposed to draft article 42(b)(ii) since it proposes to extend the conclusive evidentiary effect of the statements in a transport document not only to all non-negotiable transport documents transferred to a consignee and where that transport document has to be presented in order to take receipt of the goods, but also to sea waybills.

In commercial practice the distinction referred to in the last sentence of draft article 42 (c) is of no practical use.

Rationale: As a matter of principle, conclusive evidence should only attach to negotiable documents where a third party buyer of goods relies on the terms of the negotiable document when acquiring the goods. Where there has been no such reliance on the statements in the transport document, there is no reason why a consignee of a non-negotiable document should be placed in a better position than the shipper. Having said that, the draft convention should be flexible and recognize the parties’ freedom to contract on terms that are commercially agreeable. An acceptable compromise solution therefore could be to give conclusive evidentiary effect to statements in non-negotiable documents where the parties so agree by a statement on the face of the document.

Draft Article 46 — Delivery when no negotiable transport document or negotiable electronic record is issued

Draft Article 46 (c) — Delete the words “after having received a notice of arrival”

Rationale: We recall that it had been agreed that there should not be an obligation in all circumstances to give a notice of arrival and, indeed, a corresponding obligation does not appear in the subsequent articles. It may be, therefore, that the appearance of the obligation in this article is an oversight and should be deleted.

Draft Article 49 — Delivery when negotiable transport document or negotiable electronic transport record is issued

Draft Article 49(f) — Add after “other than the right to claim delivery of the goods”, the words “or compensation for the failure to deliver the goods”.

Rationale: It is arguable that the present wording whilst excluding the right to claim delivery of the goods does not exclude the right to claim losses or damages for failure to deliver the goods. The proposed amendment is intended to exclude such claims.

Draft Article 49 (g) — This provision should be deleted.

Rationale: It is of great practical importance that delivery which takes place according to the provisions in draft article 49 (a) to (d) should release the carrier from any further obligations as to delivery. A transport document holder who acquires it in good faith after delivery has taken place may acquire other rights, but not a right to claim delivery or a right to claim loss or damage for failure to deliver the goods. This principle is accepted in draft article 49 (f) and it is difficult to understand why the mere fact of lack of knowledge of the delivery at the time of becoming holder should justify a departure from this important principle in draft article 49 (g). If draft article 49 (g) is retained, there is a risk that the holder at the time of delivery may simply transfer the transport document to another person acting in good faith and thereby resurrect the right to claim delivery.

Draft Article 50 — Goods remaining undelivered

Draft Article 50(5) — This provision should be amended in order to more clearly set forth the liability of the carrier.

Rationale: The carrier should be liable according to an ordinary fault liability rule with the burden of proof on the claimant. This liability should be related not only to preservation of the goods, but to any steps taken by the carrier under draft article 50(1). Such a rule should be supplemented with a special rule under which a carrier is not liable for damage to the goods or other loss or damage which is a consequence of the goods not being received by the consignee, provided the goods have been handed over to a suitable terminal authority, public authority or other independent person or authority who takes care of the goods. Often destruction or sale of the goods are no real alternatives, therefore the carrier should be provided with alternative ways to be relieved of a continuing liability. Alternatively, an extended concept of delivery could be introduced under which the goods are deemed delivered, if it is handed over to such authority, etc. Compare the principles in draft article 11(3) and draft article 55.

Draft Article 54 — Carrier’s execution of instructions

Draft Article 54(4) — Lift the parentheses.

Rationale: It is preferable for reasons of harmonization of liability rules, for liability under this article, including liability for delay, to be dealt with under the convention rather than leaving it to national law.

Draft Article 60 — Liability of holder

Draft Article 60(2) — The words in the first parentheses are preferred.

Rationale: These words are clearer in the drafting and more comprehensive as to the liabilities to be assumed by the holder. Furthermore, as these liabilities are those that are actually incorporated in or ascertainable from the transport document, it is also fairer to the holder, rather than having liabilities imposed on him through the convention of which he may not be aware, as is the case with the words in the second parentheses.

CHAPTER 12 — TRANSFER OF RIGHTS

This chapter provides clarity regarding as to who can provide instructions to the carrier as to delivery of the cargo and serves a very useful purpose by harmonising national laws in an area where quite different rules apply worldwide. Harmonization would greatly facilitate international trade and this chapter is therefore supported.

Draft Article 62 — Limits of liability

Draft Article 62(1) — The decisions already agreed in relation to carrier's liability should be borne in mind. In particular, it has been agreed: (a) to exclude the exception of error in navigation; (b) that the carrier shall exercise due diligence to make the vessel seaworthy throughout the voyage rather than to limit this obligation to the commencement of the voyage; and (c) that the carrier is liable for delay. The sum result of all these changes has been to radically alter the scheme of liability so that the carrier will be liable in most cases. This will have a serious economic impact on shipowners and their insurers and is very relevant when it comes to deciding levels of limits of carrier's liability.

From the point of view of ensuring adequate compensation, claims experience demonstrates that the overwhelming majority of claims fall within current liability levels in the Hague-Visby Rules (see footnote 2 of A/CN.9/WG.III/WP.34) and no evidence to the contrary has been adduced. It should not be forgotten that the draft convention contains a mechanism to increase any limits of liability should they be found to be insufficient by the tacit amendment procedure in draft article 99 which will be of great practical importance. Moreover, in the event that a cargo is high value, the shipper should be encouraged to declare the value in the bill of lading and for the freight to be adjusted accordingly.

In addition, the concept of "ad valorem" freight is still supported.

Draft Article 62(2) — Substitute Variant A and B for a provision that where the place of damage is not known, the liability rules and limits of liability under the draft convention shall apply.

Rationale: Any contract of carriage falling under the draft convention must include a maritime leg, and in most transports falling under the draft convention the maritime leg will be the most important leg time-wise and lengthwise. Under these circumstances it would be quite logical to apply the liability and limitation rules of the maritime leg for concealed damage. Increased liability for concealed damage may deter maritime carriers from offering multimodal transport documents and lead to increased insurance costs.

Draft Article 63 — Limits of liability for loss caused by delay

The draft convention text should include liability for delay causing economic loss by both carrier and shipper with an appropriate cap on the liability for each party.

Rationale: At the 18th session of the Working Group in Vienna 2006, the Working Group expressed support for the third option put forward by Sweden in A/CN.9/WG.III/WP.74, namely that the draft convention should include a capped liability for delay for both shipper and carrier subject to agreeing an appropriate method to limit the shipper's liability. Industry strongly supports this option as it represents equal treatment of parties which is an important principle to uphold in the draft convention if it is to gain wide support. As to the cap on liability, industry supports the proposal canvassed at the 18th session that this should be one times the freight for the carrier and USD 500,000 for the shipper. In addition, in support of the parties' freedom of contract, the parties should have the right to be able to adjust the cap on liability by the use of a phrase such as "unless otherwise agreed".

CHAPTER 15 — JURISDICTION

We are in favour of a modification whereby inclusion of the jurisdiction chapter would be optional. We support the proposal that this is achieved through a partial opt-in provision which preserves the right of states incorporating the jurisdiction provisions to determine whether, in accordance with their legal policy, to give effect to an exclusive choice of court agreement in respect of any contract, that is, partial opt-in.

CHAPTER 16 — ARBITRATION

Draft Article 78 — Arbitration agreement in liner transportation

This should include a partial opt-in provision similar to draft article 70(3) under the chapter on jurisdiction.

Rationale: It was agreed at the 18th session of the Working Group in Vienna 2006 that if the approach now being put forward in relation to jurisdiction is developed in respect of liner trades, it is essential to replicate the partial opt-in provisions suggested there also with regard to arbitration so that a designated arbitration agreement could be given effect and upheld equally in a state which would recognize an exclusive choice of court agreement. Moreover, rights under an arbitration agreement should be a two-way process, allowing for action both by and against a carrier.

Draft Article 79 — Arbitration agreements in non-liner transportation

Bulk trades are expressly excluded from the arbitration provisions. Nevertheless, it should be made clear that a jurisdiction clause in a charterparty is accorded the same status as a charterparty arbitration clause.

Draft Article 88 — General provisions

Paragraphs 1 and 2 should fully match each other in scope.

Draft Article 99 — Amendment of limitation amounts

The tacit amendment procedure of the limits of liability is an extremely important aspect of the draft convention and one which will ensure its relevance and ability to meet changing situations and is therefore strongly supported. It is submitted that the provisions in this draft article should also extend to shipper's limits of liability for delay.

R. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Joint proposal by Australia and France concerning volume contracts, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.88) [Original: English/French]

In preparation for the nineteenth session of Working Group III (Transport Law), the Governments of Australia and France submitted to the Secretariat the proposal attached hereto as an annex concerning volume contracts in the draft convention on the carriage of goods [wholly or partly] [by sea].

This note and document A/CN.9/612 refer to articles in the draft convention as they appeared in document A/CN.9/WG.III/WP.56 and not as they appear in the revised version of the draft convention (A/CN.9/WG.III/WP.81). The proposals are in addition to the ones contained in document A/CN.9/612. The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Joint proposal by Australia and France concerning volume contracts

Proposals concerning volume contracts

In document A/CN.9/612, replace paragraph 12 with the following:

“12. It would be preferable to clarify the definition of volume contract given in draft article 1 (b) as follows:

‘Volume contract’ means a contract of carriage negotiated by the parties by which a carrier agrees to special terms for the carriage of a substantial quantity of cargo, in a series of shipments during a set period of time of no less than one year. The quantity may be specified as a minimum, a maximum or a certain range.”

After paragraph 12 in document A/CN.9/612, insert the following and renumber the remaining paragraphs:

“13. The proposed definition clarifies the concept of volume contract under the Convention. The specific feature of this type of contract is that it is negotiated between the parties taking into account that they are committed over a long period of time and for a large quantity. It can thus be distinguished from a contract of carriage that normally is a standard form contract, since the bill of lading is not discussed but only signed by the shipper. The long period of time and the large quantity are what justify allowing derogations to the Convention under article 89 (last version).”

S. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposals of France, submitted to the Working Group on Transport Law at its nineteenth session

(A/CN.9/WG.III/WP.89) [Original: French]

In preparation for the nineteenth session of Working Group III (Transport Law), the French delegation submitted to the Secretariat its proposals regarding the linkage between the draft convention on the carriage of goods [wholly or partly] [by sea] and the conventions on other modes of transport.

The document in the attached annex contains these proposals in the form in which they were received by the Secretariat.

ANNEX

Proposals of France regarding the linkage between the draft convention on the carriage of goods wholly or partly by sea and the conventions applicable to land or air transport

Comments

The provisions which deal with the linkage between the UNCITRAL draft instrument on the carriage of goods wholly or partly by sea and the other modal conventions are currently distributed among four articles in three different chapters (articles 27, 64 (2), 89 and 90 in chapters 3, 13 and 19). In view of the close connection between these provisions, and in order to make the text more reader-friendly, it is proposed that articles 27, 64 (2) and 89 be merged to form a single article in the chapter “Other Conventions”, replacing the current article 89. Article 90 would be deleted.

In the merging of articles 27, 64 (2) and 89, a number of editorial changes have been made in the consolidated draft article:

- In paragraph 1 of the new article, the expression “... loss of or damage to [goods] or delay occurring during”, deemed too vague, has been replaced by “When ... the cause of such loss, damage or delay occurs ...”.
- Paragraph (b) of article 27 was deemed to be superfluous, as the need to determine a linkage between the liability regime of the UNCITRAL convention and another convention should arise only insofar as the other convention has its own liability regime.
- In the context of a consolidated version, it was not deemed useful to retain paragraph 2 of article 27, which states that paragraph 1 of article 27 does not affect the application of article 64, paragraph 2. Paragraph 2 of article 64 has become paragraph 2 of the new article, and the wording proposed for this

paragraph specifies that it applies “notwithstanding paragraph 1”. This reiterates the provisions in article 27.

- There is no obvious need for paragraph 3 of article 27, which reads: “This article applies regardless of the national law otherwise applicable to the contract of carriage”. This paragraph has therefore not been retained in the consolidated draft.
- Paragraph 3 of the new article reiterates the substance of article 89 in a more explicit form. It was not considered necessary to retain the reference to article 92. Furthermore, the wording “which is already in force ... at the date of this Convention” has been deleted from the proposed draft: a convention cannot pre-empt the choices that might be made by the drafters of a future convention. Such a provision would only limit the options available to future legislators, which is unacceptable.

It is also proposed that article 90 be deleted, as the Working Group appears to have wished at its latest session. This article would seem to be potentially in conflict with article 89. The deletion of article 90 will make it more certain that implementing the UNCITRAL draft convention will not lead to conflicts between the convention and the existing modal instruments.

We note that the expressions *loading* and *discharge* in paragraph 1 of the consolidated proposal could give rise to difficulties of interpretation. These expressions are not defined in the convention. The application of paragraph 1 might require reference to the provisions of a national law, port practice or liner terms.

We also note that in the context of article 27, or of the new article proposed, the purpose of the expressions *loading* and *discharge* is to delineate the maximum possible scope of land transport liability regimes rather than the necessary limits of the maritime regime: the maritime liability regime might therefore extend to the period before loading or after discharge—for example, to storage or various barrowing operations, especially since these operations do not necessarily fall within the scope of land transport regimes.

New draft article 89, consolidating articles 27, 64 (2) and 89:

Article 89

International instruments governing other modes of transport

1. When a claim or dispute arises out of loss of, damage to or delay in goods, and the cause of such loss, damage or delay occurs during the carrier’s period of responsibility, but only before the time of their loading on to the ship or only after their discharge from the ship, the provisions of this Convention shall not prevail over the provisions of another international convention [or national law] which, at the time of such loss, damage or delay, apply mandatorily, according to their terms, to all or any of the carrier’s activities under the contract of carriage during that period;
2. [Notwithstanding paragraph 1, if the carrier cannot establish whether the goods were lost or damaged [or whether the delay in delivery was caused] during the sea carriage or during the carriage preceding or subsequent to the

sea carriage, the highest limit of liability in the international [and national] mandatory provisions that govern the different parts of the transport applies.]¹

3. Nothing contained in this Convention shall prevent the application of another international convention relating to a non-maritime mode of transport when that convention mandatorily governs multimodal transport.²

¹ Variant B of article 64 (2) (A/CN.9/WG.III/WP.56).

² Redrafted version of article 89 (A/CN.9/WG.III/WP.56): [Subject to article 92, nothing contained in this Convention prevents a Contracting State from applying any other international instrument which is already in force at the date of this Convention and that applies mandatorily to contracts of carriage of goods primarily by a mode of transport other than carriage by sea.]

T. Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposals by the International Road Transport Union (IRU) concerning articles 1 (7), 26 and 90 of the draft convention, submitted to the Working Group on Transport Law at its nineteenth session
(A/CN.9/WG.III/WP.90) [Original: English/French]

In preparation for the nineteenth session of Working Group III (Transport Law), the International Road Transport Union (IRU) submitted to the Secretariat the proposals attached hereto as an annex concerning articles 1 (7), 26 and 90 of the draft convention on the carriage of goods [wholly or partly] [by sea].

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Proposals submitted by the International Road Transport Union (IRU) concerning articles 1 (7), 26 and 90 of the draft Convention the carriage of goods [wholly or partly] [by sea] (A/CN.9/WG.III/WP.81)

Article 1 (7)

1. The IRU shares the opinion expressed by the United States of America in the annex to their document A/CN.9/WG.III/WP.84, according to which a rail carrier should not be considered as a “maritime performing party”.

In addition to this opinion and for the same reasons as those pointed out by the US, the IRU proposes that the road carrier performing services within a port area should, like rail carriers, also not be considered as a “maritime performing party”. The text proposed by the US could be slightly amended to also integrate road carriers, thus reading as follows:

“A rail or road carrier, even if it performs services that are the carrier’s responsibilities after arrival of the goods at the port of loading or prior to the departure of the goods from the port of discharge, is a non-maritime performing party.”

Article 26

2. The IRU proposes to eliminate Variant B of subparagraph (a) of article 26 for the two following reasons:

- if “another international instrument” is imperatively applicable, this imperative application is hindered if it is subordinated to the condition that the shipper made or did not make a separate and direct contract with the carrier for the non-maritime part of the transport;

- upholding the condition that the shipper made or did not make a separate and direct contract with the carrier for the non-maritime part of the transport contradicts also subparagraph (c) of Article 26, according to which the imperative provisions of other such international instruments “cannot be departed from by contract either at all or to the detriment of the shipper”.

Article 90, subparagraph (b)

3. This provision, inspired by the provisions of Article 6 of the Hague Rules and the Hague-Visby Rules, has led to abuses by some maritime performing parties operating in the English Channel and the North Sea. According to these maritime performing parties, the containers or road vehicles — whose transport has become common in the past 50 years — are still considered as “non-ordinary shipments” for which the indemnity amounts to a maximum of SDR 666,67 per unit, the container or road vehicle being considered as a single unit. The fact that the transport document refers to a number of packages or a specific weight is considered, by these maritime performing parties, as not relevant. To avoid the extension of such abuses through the instrument now proposed by UNCITRAL, the IRU proposes to complete subparagraph (b) by adding at the end of the subparagraph the following words:

“The containers or road vehicles, whose transport is made by a ship entirely or partially equipped to undertake such transport, cannot be considered as “non-ordinary commercial shipments.”

**U. Note by the Secretariat on the preparation of a draft convention
on the carriage of goods [wholly or partly] [by sea] — Proposal of the
United States of America on carrier and shipper delay, submitted to the
Working Group on Transport Law at its nineteenth session
(A/CN.9/WG.III/WP.91) [Original: English]**

In preparation for the nineteenth session of Working Group III (Transport Law), the Government of the United States of America submitted to the Secretariat the proposal attached hereto as an annex with respect to carrier and shipper delay in the draft convention on the carriage of goods [wholly or partly] [by sea].

The document in the attached annex is reproduced in the form in which it was received by the Secretariat.

ANNEX

Proposal of the United States of America on carrier and shipper delay

I. INTRODUCTION

1. At the 13th session of the Working Group, a draft article providing for carrier liability for consequential damages resulting from delay was included in the draft convention (A/CN.9/552 at paragraphs 18-31). More than two years later, at the 18th session of the Working Group, a further provision imposing liability on shippers for consequential damages resulting from delay was included in the draft convention (A/CN.9/616 at paragraphs 83-113). When these provisions were considered, it was understood that liability caps for both carriers and shippers would eventually be stipulated.¹ As the provisions on carrier and shipper delay are necessarily related in order to ensure an overall fair balance in rights and obligations among relevant interests, it was unfortunate that these provisions were not simultaneously considered by the Working Group from the outset. It is widely recognized that the final text produced by the Working Group must be viewed as equitable and balanced to increase the likelihood of widespread acceptance and ratification.

2. A number of delegations did not concur with the approach of introducing liability for consequential damages arising from delay for either carriers or shippers, believing such a course would result in legal uncertainties, unnecessary costs, and severe difficulties in practical implementation. Moreover, those delegations anticipated it would prove impossible to determine suitable caps on this type of liability for either carriers or shippers.

¹ At the 18th session, there was a suggestion that the carrier liability cap for delay might be one times freight, and the shipper liability cap for delay might be 500,000 SDRs (approximately €570,000 Euros or U.S. \$751,500). These proposed caps are strongly opposed by shippers involved in the U.S. trades, as they are not perceived to be fair and equitable.

3. Although the United States was one of the countries strongly preferring no delay provisions in the draft convention, since the 13th session of the Working Group the U.S. delegation has engaged in extensive consultations within our Government, as well as with the academic community and industry, in order to develop a reasonable position on the appropriate liability caps to complement the regime proposed in the draft convention. We have not been able to find any caps that are acceptable to all of our major industry participants (shipper, carrier, and intermediary interests). Therefore, the United States continues to believe that it will be difficult, if not impossible, to establish caps on this type of liability that would be equitable and acceptable to interested parties. Moreover, the United States does not believe that including delay liability in the draft convention advances any legitimate public policy objective. Imposing delay damages will be practically unworkable, and it will be bad public policy.

4. The United States respectfully requests that other delegations consider the economic and policy arguments set forth in this paper. This type of analysis has not previously been presented to the Working Group. We hope that other delegations will, like the United States, come to the conclusion that liability for consequential damages caused by delay should not be included on a mandatory basis in the new convention.

5. Preliminarily, it may be useful to remind delegations of the very limited scope of the issue that is before us:

- Everyone agrees that physical loss caused by either shipper or carrier delay is covered by the draft convention. The question here is whether consequential, i.e., pure economic, loss should be covered, and, if so, what the liability caps should be.
- Everyone agrees that the shipper and carrier should be liable for consequential loss caused by delay if their contract so provides. The question here is whether there should be liability for consequential damages caused by delay if the goods do not arrive in a "reasonable" period of time, even if there is no delivery date in the contract.
- Everyone agrees that any delay liability rules included in the draft convention would not be mandatory for "volume contracts" covered by draft article 89's special rules.
- We are left with only two situations: (1) The carrier may be liable for consequential damages if it causes the vessel to be delayed, but only to shippers that prove that they were damaged as the result of the carrier-caused delay (e.g., the shipper's plant was forced to shut down for lack of a part); and (2) A shipper may be liable to the carrier for damages that the carrier incurs (e.g., loss of use of the vessel or additional port charges) as a result of the shipper-caused delay.

With these parameters in mind, we present the following analysis.

II. IMPOSING DELAY LIABILITY ON SHIPPERS AND CARRIERS IS AN UNNECESSARY CHANGE TO CURRENT LAWS AND COMMERCIAL PRACTICES IN MOST COUNTRIES.

6. As documented in A/CN.9/WG.III/WP.74, the most widely accepted legal conventions governing maritime shipping liability, the Hague and Hague-Visby

Rules, do not hold carriers or shippers liable for consequential damages resulting from delay. It appears that only the Hamburg Rules and the Scandinavian Maritime Code provide for such liability, and on carriers only. Thus, for most of the trading world, incorporation of delay liability into the draft convention would represent a dramatic change from the status quo, at the risk of introducing greater complexity and uncertainty into the draft convention.

7. With respect to carrier liability for delay, even in those jurisdictions that apply the Hamburg Rules or the Scandinavian Maritime Code, it is difficult to find instances in which claims have been pursued to recover delay damages from carriers. This suggests that such provisions have not proven effective in accomplishing their expressed purpose, or that there is no need in practice for the imposition of such liability.

8. Moreover, the lack of cases in which shippers have sought to recover delay damages from carriers in maritime transport, both in the few jurisdictions that expressly provide for such recoveries and in other countries, strongly suggests that this is an issue that as a practical matter tends to get resolved amicably between carriers and shippers.

9. With respect to shipper liability, the scenario in which a shipper is most likely to cause vessel delay is when it fails to provide accurate or complete shipment information to the carrier, the carrier reports such information to customs authorities under new security regulations, and a customs authority delays the vessel to ensure that the cargo loaded on the vessel is not a security threat or otherwise unlawful. Just as shippers appear to have made few or no delay claims against carriers, however, the United States is not aware of any delay claims made by carriers against shippers for this type of delay since the relevant security regulations were adopted in 2002.

10. Based on the relatively recent adoption of security rules and the lack of claims or cases involving vessel delays, we believe there are too many questions and uncertainties surrounding the issue of liability for delay. The United States does not believe it is wise to insert those uncertainties into the draft convention. These circumstances argue strongly against the radical change to current law that would result from the inclusion of delay in the draft convention, which is intended to modernize the liability regime by addressing real commercial issues involving maritime commerce.

11. Furthermore, the Working Group has not been presented with any factual evidence whatsoever that there is a need to include liability for delay in the draft convention. In light of the foregoing, the United States is not aware of any pressing need for governments to impose these new liabilities on shippers and carriers.

12. In this regard, many goods moving via ocean transport are relatively low value commodities (agricultural commodities, raw materials, paper, etc.). Even if the draft convention were to provide a basis for shippers to assert claims on account of delays, it is unlikely that shippers of such commodities would be in a position to prove that they sustained any consequential damages, and thus they would be unable to recover compensation for delay under the draft convention. As explained in section III below, however, if delay liability is included in the draft convention, all shippers will experience increased costs, with those costs disproportionately impacting shippers of goods that are not time-sensitive.

13. Moreover, other developments in the Working Group have had an effect on how delay should be treated in the draft convention. Recalling the Working Group's deliberations at its 13th session, a principal justification asserted for making a significant change to current law and providing for carrier liability for delay was that such action was thought to be necessary in light of the increasing prevalence of "just-in-time" inventory management techniques in global supply chains, whereby assured delivery of goods by an agreed date is an essential element of the transport undertaking. But at its 15th session, the Working Group decided to include draft article 95 on "volume contracts," which upholds the integrity of private shipping contracts. As explained in greater detail in section IV below, such contracts are a much more efficient means of addressing this issue, particularly for time-sensitive shipments, and, as a practical matter, virtually all shipments in "just-in-time" supply chains are transported pursuant to volume contracts of that nature. Thus, the need for protection against delay for "just-in-time" arrangements in this draft convention appears to have been overstated and the Working Group should not continue to pursue inclusion of delay without pausing to consider the implications of the subsequent decision to adopt draft article 95.

III. DELAY LIABILITY WILL LEAD TO UNNECESSARY COST INCREASES FOR SHIPPERS AND CARRIERS.

14. As noted above, imposing delay liability on shippers and carriers will add significant costs to the ocean transportation industry. Carriers facing exposure to this new liability will be required to purchase insurance to cover their potentially significant maximum exposure (e.g., perhaps one times freight on each container or other unit of cargo on the vessel) and will factor this cost into their freight rates. Shippers facing liability for delay can likewise be expected to purchase insurance cover in an amount equal to the cap on their liability for delay, also a significant maximum exposure (e.g., perhaps 500,000 SDRs per voyage). The end result is an increase in cost to all shippers in the form of higher freight rates due to the increased costs imposed on carriers, and their own increased insurance costs to protect against the liability risks created by the draft convention. These costs will be borne not only by shippers of high-value, time-sensitive commodities, but by many small- and medium-sized enterprises that are shipping lower value commodities and do not need protection against the consequences of shipping delays. This second category of shipper in effect will be required to subsidize the cost of providing such protection for others if liability for carrier delay is included in the draft convention. The shipper delay provisions will likewise add an extraordinary cost to the industry on a cumulative basis. In addition, the exposure created by the proposed shipper delay provisions could have a devastating effect on small businesses that fail to purchase insurance protection but cause a vessel delay due to a documentation or other error.

15. The cost increases described above could have a double impact on transportation intermediaries such as NVOCCs and forwarders, which provide much needed competition to the ocean carriers that otherwise would offer the only transport options in many trades. This is because intermediaries will be required to insure against liability for delay in their capacity as carrier, as well as against liability for delay in their capacity as shipper. These costs will necessarily be passed on to the customers of the intermediary, which are typically small- and medium-sized enterprises. Thus, inclusion of delay will not only again have a disproportionate impact on small- and medium-sized shippers, but will also make

intermediaries a less attractive option for all shippers because their cost of doing business will be so significantly increased.

16. Moreover, most businesses that rely on “just-in-time” inventory management have put in place business interruption insurance, which compensates them for losses of this nature whether due to ocean transportation delays or other factors. This approach, because it is specifically tailored to the needs and business model of the individual shipper or carrier, is a far more efficient and economical means of risk management than the “one size fits all” approach reflected in the current draft of the draft convention.

IV. DELAY LIABILITY SHOULD NOT BE IMPOSED ON ALL SHIPPERS AND CARRIERS BUT SHOULD BE ADDRESSED IN PRIVATE CONTRACTS BETWEEN PARTIES THAT NEED SUCH PROTECTION.

17. The United States notes that the Working Group, at its 15th session, decided to incorporate in draft article 95 a regime applicable to “volume contracts” that upholds the integrity of private shipping contracts that derogate from the otherwise applicable terms of the draft convention subject to the limitations provided in that article. Virtually all cargo moving in “just-in-time” supply chains is (and will continue to be) transported pursuant to such volume contracts, which reflect appropriate delivery time commitments and penalties, as agreed between the shipper and carrier or intermediary in question. Simply put, carriers and shippers both are free to negotiate and agree upon contract terms relating to carrier delivery requirements or cargo documentation requirements, including the consequences that will occur in cases of late deliveries or vessel delays.

18. It would be more efficient and equitable to leave the issue of delay to contractual arrangements between those parties who want and need protection such that they may negotiate appropriate terms based on their specific factual circumstances. It would be far more preferable to have contracting parties make appropriate transportation and risk management decisions based on their specific circumstances and shipping arrangements, than to impose a system of delay liability and the resulting costs on all carriers and shippers, many of which have no need or desire for such protection.

V. INCLUDING DELAY LIABILITY IN THE CONVENTION WILL HAVE SIGNIFICANT NEGATIVE IMPLICATIONS FOR ALL CONCERNED PARTIES.

19. At present, carriers typically do not guarantee that goods will arrive on any specific date or even within a prescribed time window, as a number of operational factors may arise that could cause deviations from the usual timeline. Parties doing business in the ocean shipping environment fully understand and accept these inherent uncertainties of this form of transport. In cases in which a shipper cannot tolerate an uncertain delivery date, the goods are normally transported pursuant to a volume contract whereby a time-definite delivery commitment has been negotiated and is reflected in the freight rate. Alternatively, many such time-sensitive goods are not sent by sea at all, but are transported instead by air freight.

20. If the draft convention were to include new provisions imposing liability for delay, a number of unfortunate consequences will likely ensue. As explained above, because the ocean shipping industry does not at present generally operate on the basis of exact delivery dates, it could prove difficult and would introduce much

uncertainty to attempt to discern at what point a delay is significant enough to trigger legal liability to pay damages. The draft convention takes the approach of applying a reasonableness standard to resolve this question. This, of course, really just defers the issue until an actual claim arises, at which point both the carrier and the shipper will likely find it necessary to incur substantial expenses litigating their respective positions on the question. Moreover, it seems inevitable that different courts in different jurisdictions may reach different results as to what constitutes reasonableness, thus resulting in inconsistent treatment of similarly situated claimants, and a lack of certainty and predictability for shippers, carriers, and their insurers going forward. Insurers may understandably have to assume they may face exposure under a “worst case” scenario — i.e., the highest liability under the most extreme interpretation of reasonableness adopted by any forum anywhere in the world — even though the probability of a claimant actually recovering damages of that magnitude may be low.

21. Faced with potential delay liability, carriers can be expected to protect themselves by altering their published schedules and transit times to increase delivery times. This inevitable expansion of transit times would make projected deliveries less rather than more certain, and could needlessly lengthen shippers' supply chains and thereby create inefficiencies. The risk of shipper liability for delay created by the draft convention could compound those inefficiencies if shippers are forced to alter their documentation processes and information flows in order to provide shipment information to carriers earlier than is already required under existing security laws (generally 24 hours before loading) out of fear of inadvertently causing a vessel delay. These adverse consequences are the exact opposite of the purpose for which delay liability is proposed to be included in the draft convention.

22. Moreover, under a new regime imposing liability for delay damages, ocean carriers may be less willing to undertake to arrange inland transportation, since they would find it untenable to be held potentially liable for delays caused by the inland carriers, and for delays resulting from missed connections between the inland transportation and the ocean voyage. This would only add to the cost and complexity of international shipping, particularly for small- and medium-sized businesses, and would tend to narrow the access to world markets for otherwise competitive producers. Such an outcome plainly is contrary to fundamental economic interests of all concerned, and to the over-arching objectives of the exercise with which this Working Group is tasked.

23. The United States believes that the intense competition that characterizes the ocean shipping industry, the potential loss of business by carriers that fail to perform as advertised, and the economic consequences to a carrier of failing to adhere to its schedule (having to speed up vessels thus increasing fuel costs, using alternate and more expensive means of transport, skipping ports of call, port and terminal congestion and the like) all provide a major incentive for carriers to perform in a timely fashion. In addition, shippers likewise have strong commercial incentives to provide carriers with accurate and complete information in order to ensure that their cargo gets loaded onto the vessel and delivered in time to meet their customers' or their own business requirements. Furthermore, if a shipper fails to provide accurate and complete cargo information to a carrier and that failure causes a breach of security regulations, the shipper is already exposed to potential liability outside of the Convention. Thus, there are significant commercial and legal

incentives already in place that will cause shippers to exercise due care to avoid causing delays.

VI. CAPS ON LIABILITY DO NOT ADDRESS THE FUNDAMENTAL PROBLEMS WITH DELAY DAMAGES.

24. The current draft provisions contemplate that there will be caps on the amount of carrier and shipper liability for consequential delay damages. As noted in the report on the 18th session (A/CN.9/616 at paragraph 105), it was suggested that the caps might be in the range of one times the freight with regard to carrier liability, and 500,000 Special Drawing Rights (SDRs) with regard to shipper liability. The United States strongly believes that caps on delay liability do not address the broader problems resulting from the inclusion of delay in the draft convention.

25. As noted above, the inclusion of delay requires both carriers and shippers to insure against their respective risks. The cost of insurance will be passed on to shippers by carriers, resulting in higher freight rates. This increases shippers' costs, which will be further increased by the cost of insuring against their own potential delay liability. As further noted above, many shippers do not need this protection and should not be forced to pay for it. Moreover, caps on liability only serve to make the risk reasonably insurable, and do not remedy the fact that including delay liability in the draft convention imposes additional costs on all participants and will create inefficiencies in the ocean transportation industry that are unwarranted.

26. Moreover, resolving the issue of consequential damages for delay in a manner that will be viewed as fair and equitable by the industry is essential to ensuring broad acceptance of the draft convention and widespread ratification. The United States believes that including delay liability in the draft convention for both carriers and shippers is a mistake for all of the public policy and commercial reasons stated above.

VII. POSSIBLE COMPROMISE

27. For all of the above reasons, the United States believes that including delay liability in the draft convention would hurt, not help, all of the affected commercial interests (except, perhaps, the insurers), as well as consumers. If the Working Group nevertheless decides to retain delay liability, then it is essential that language be included making such liability optional in all contracts.

28. At its 18th session, the Working Group decided (A/CN.9/616, at paragraph 113) that text should be prepared that would make shipper's delay liability subject to freedom of contract, just as there is bracketed "unless otherwise agreed" language in the provision on carrier's liability for delay (draft article 63 in A/CN.WG.III/WP.81). Thus, the Working Group has recognized that the issue of whether shipper and carrier delay liability should be optional in all contracts is an open issue that has not yet been decided. The recently submitted Swedish proposal (A/CN.9/WG.III/WP.85) addresses all other parts of the Working Group's conclusions on shipper's delay liability, but does not address the freedom of contract aspect.

29. If delay is included in the draft convention, the United States believes that language must be included that would make these provisions subject to freedom of contract. Unfortunately, however, simply including "unless otherwise agreed" in the articles on shipper and carrier delay liability would not work. This is because in

most non-volume contracts (which are all that need concern us here as it has already been agreed that volume contracts can derogate from the draft convention's delay rules), the shipper may have little or no real opportunity to object to any of the contractual terms, and, in fact, might not even see the contract until after the goods have been delivered. Thus, if the language in the draft convention on both shipper and carrier delay liability simply states that the draft convention's rules apply "unless otherwise agreed," the carrier theoretically could delete all delay liability for itself, while leaving in (and even increasing) delay liability for the shipper. In order to avoid this inequitable result, the draft convention should include an "all or nothing" rule on delay liability. In other words, the parties should have two, and only two, choices: either be silent in the contract on the delay issue, in which case the draft convention's rules apply; or, state in the contract that the draft convention's delay liability rules for both carrier and shipper do not apply. Such a provision could read as follows:

"Any contract to which this Convention applies may provide that there is no liability under the contract for economic loss caused by delay, notwithstanding the provisions of Articles 30 and 63."

VIII. CONCLUSION

30. The Working Group has benefited from the breadth of views contributed by the wide range of Member States and Observers participating in this process, each of which has its own unique perspective and interests in regard to maritime shipping. One fundamental point that has become very clear is that the end product of our collective efforts must reflect a fair balance among the relevant stakeholders, and a fair and equitable distribution of risks and liabilities. On the issue of liability for consequential damages for delay, the United States is very concerned that it will be difficult, if not impossible, to find caps that will be accepted as fair and equitable by our shipper and carrier interests..

31. A convention of broad applicability such as this draft convention necessarily must propose "one size fits all" solutions. In the case of delay damages, however, the truth of the matter is that "one size fits no one." Not only is there no factual evidence supporting a need to address delay in the draft convention, but the inclusion of delay is being pursued with no analysis of or appreciation for the potential consequences that will result. The United States believes that the introduction of this novel form of liability could have far-reaching consequences on international trade, including a negative impact on the availability of affordable ocean transportation service and the competitiveness of certain commodities, particularly those of relatively low value.

32. The Working Group is in the final stages of a truly historic endeavour, which all of us hope will lead to a widely-adopted maritime liability regime to replace the patchwork quilt of arrangements that currently exists. This exercise has resulted in a lengthy and complicated draft convention. The current draft actually contains more articles than the Hague Convention, the Hague Convention as amended by the Visby Protocol, and the Hamburg Rules added together. To attempt to introduce this new liability for carrier and shipper consequential delay damages will add further layers of needless complexity.

33. If the Working Group nevertheless decides to include carrier and shipper consequential delay damages in the draft convention, despite what the United States believes is overwhelming evidence that this will most likely harm, not help, all

parties except insurers, it should do so on a non-mandatory basis. (The question of whether the delay issue should be subject to freedom of contract in all cases has been “on the table” since the beginning of these negotiations, and has not yet been decided. See para. 29, above.) Otherwise, we fear that the delay issue could jeopardize the broad support and acceptance that this draft convention needs in order to be successful.

**V. Note by the Secretariat on the preparation of a draft convention
on the carriage of goods [wholly or partly] [by sea] — Joint proposal
by Australia and France on freedom of contract under volume
contracts, submitted to the Commission at its thirty-ninth session
(A/CN.9/612) [Original: English]**

In preparation for the thirty-ninth session of the Commission, the delegations of Australia and France submitted to the Secretariat the document attached hereto as an annex containing a joint proposal on freedom of contract under volume contracts in the draft convention on the carriage of goods [wholly or partly] [by sea] being considered in Working Group III (Transport Law). The text is reproduced as an annex to this note in the form in which it was received by the Secretariat.

ANNEX

Introduction

1. The draft version of article 95 on special rules for volume contracts was examined at the seventeenth session of Working Group III. Few changes were made during that session to the version of the article proposed to the Working Group. Several delegations nevertheless voiced concerns about the extent of freedom of contract allowed under volume contracts. The European Shippers Council, commenting for the first time at the Working Group, also pointed to difficulties that the current version of the draft text could raise.
2. It should also be stressed that the draft instrument initially submitted to the Working Group did not contain any general provisions favourable to freedom of contract.¹ The draft version of article 95 reflected a clear change in the direction of the Working Group's work, because it was only introduced during the fifteenth session of the Working Group, when the instrument had already been substantially drafted.
3. Australia and France therefore consider that further debate is required on this important issue. They would like to draw the Commission's attention in a plenary session to the issue of freedom of contract in the draft instrument and submit alternative proposals.

Historical context

4. The history of the law of carriage of goods by sea is the history of the gradual introduction of mandatory rules on liability. By the late nineteenth century, freedom

¹ Document A/CN.9/WG.III/WP.32, the initial version of the draft convention, clearly stated that "any contractual stipulation that derogates from this instrument is null and void, if and to the extent it is intended or has to its effect, directly or indirectly, to exclude, [or] limit [, or increase] the liability for breach of any obligation of the carrier, a performing party, the shipper, the controlling party, or the consignee [...]."

of contract was being used extensively and aggressively by ship-owners to unfairly reduce their liabilities for cargo loss or damage. To combat such practice, in 1893 the United States introduced the Harter Act, a mandatory regime governing trade with the country. This was followed in 1924 with the signing of the International Convention for the Unification of Certain Rules of Law Relating to Bills of Lading, which now forms the foundation of the law on carriage of goods by sea. That Convention states that “any clause, covenant, or agreement in a contract of carriage relieving the carrier or the ship from liability for loss or damage to, or in connexion with, goods arising from negligence, fault, or failure in the duties and obligations provided in this Article or lessening such liability [...], shall be null and void and of no effect”.

5. This mandatory regime of liability is found today, in highly comparable terms, in the international conventions on the different modes of carriage.² Consequently, as it stands, the instrument currently being drafted is the only one to contain provisions that offer considerable scope to freedom of contract.

6. The shift, through the mechanism of volume contracts, from a fundamentally mandatory regime to a largely derogative regime represents a major change. The risk is that in some States obstacles may arise to ratification of a convention whose provisions, which differ sharply from national legislation in the field, appear to be incompatible with fundamental principles of domestic law.

Analysis of the current provisions on freedom of contract

7. The definition of a volume contract given in article 1 of the draft instrument could cover a wide range of contracts of carriage. Indeed, the new version adopted on a proposal from the Finnish delegation, clearly states that “a volume contract is a contract of carriage”.³ This definition of a volume contract is distinguished by its lack of limitation, whether in terms of the duration of the two parties’ commitment, the number of shipments or the quantities carried. A volume contract could therefore potentially cover almost all carriage of goods by shipping lines falling within the scope of the convention. This is likely to leave a loophole in the convention that would enable the parties to release themselves from the binding provisions of the instrument. For example, it is quite conceivable, from a legal point of view, that the carriage of two containers over a period of one year could be governed by a volume contract.

² The Convention on the Contract for the International Carriage of Goods by Road (CMR) stipulates that: “any stipulation which would directly or indirectly derogate from the provisions of this Convention shall be null and void” (Art. 41.1). Similarly, the Montreal Convention of 1999 on air carrier liability, states that “any provision tending to relieve the carrier of liability or to fix a lower limit than that which is laid down in this Convention shall be null and void” (Art. 26). On the carriage of goods by inland waterways, the Budapest Convention of 2001 (which came into force in 2005) also states that “any contractual stipulation intended to exclude, limit or increase the liability, within the meaning of this Convention, of the carrier, the actual carrier or their servants or agents, shift the burden of proof or reduce the periods for claims or limitations [...] shall be null and void. Any stipulation assigning a benefit of insurance of the goods in favour of the carrier is also null and void.”

³ The draft version of article 1 (b) sets forth: “‘Volume contract’ means a contract that provides for the carriage of a specified quantity of cargos in a series of shipments during an agreed period of time. The specification of the quantity may include a minimum, a maximum or a certain range.”

8. With respect to the “special rules for volume contracts” set forth in article 95, which are designed to introduce freedom of contract into this framework, the conditions established for the article’s application appear equally devoid of limitation.

9. First, regarding the conditions of form for derogations from the convention, it is only stipulated that the volume contract “is individually negotiated or prominently specifies the sections [...] that contain derogations” (art. 95.1 (a) and (b)). More precisely, the conditions indicated do not require that both parties to the contract expressly consent to the derogations: this clearly opens up the possibility that *standard contracts* containing derogating clauses could be submitted to the shippers. The principle of freedom of contract should, however, be based on genuine negotiation between the shipper and the carrier. If volume contracts are to be the basis of wide-ranging derogations from the terms of the draft conventions, it is imperative that those volume contracts be genuinely negotiated between the parties.

10. Secondly, regarding the scope of the authorized derogations, the limits set on the carrier’s right to derogate from the Convention seem extremely weak. It appears paradoxical that the right to derogate from the Convention is established as a principle (art. 95.1).⁴ The only exclusions from this right, set forth in paragraph 4, are the carrier’s obligation to keep the ship seaworthy and properly man the ship (art. 16.1), and the loss of the right to limit liability (art. 66). Furthermore, these limits do not appear to have been set in the interests of the shipper, but to have been designed as minimal obligations with respect to public interest, given the risks associated with an unseaworthy vessel in particular.

11. Australia and France contend that the public interest defended by other provisions of the convention comprises a minimal level of protection for the contracting parties and that the draft texts on freedom of contract should be revised accordingly.

Proposals regarding volume contracts

12. It would be preferable to clarify the definition of “volume contract” given in draft article 1 (b) as follows (the proposed amendments appear in bold type):

“‘Volume contract’ means a contract that provides for the carriage of a **set** quantity of cargo in a series of shipments during a **set** period of time **of no less than one year**. The **set** quantity may be a minimum, a maximum or a certain range.”

13. It would be desirable for the derogations from the provisions of the instrument to be subject to express agreement by the two parties. In article 95.1 (a) we propose making the conditions of form cumulative by replacing “or” by “and” and, in (b), “clear” by “in highly visible type”. This will provide a much stronger safeguard against misuse of the right of derogation than merely allowing a situation in which a standard form contract with a derogation noted in the text can be used to satisfy the requirements of 95.1 (as could be the case with the draft of art. 95 contained in both A/CN.9/WG.III/WP.56 and A/CN.9/WG.III/WP.61).

⁴ The draft version of article 95.1 states: “[...] the volume contract may provide for greater or lesser duties, rights and obligations and liabilities than those set forth in the Convention [...].”

14. We propose not allowing any derogation from the liability regime set in the Convention, which is the core of the draft instrument, or from the fundamental obligations of the carrier and the shipper.

Thus, Australia and France suggest that paragraph 4 of article 95 could read as follows:

“Paragraph 1 does not apply to:

“(a) article 17 (basis of the carrier’s liability), or to article 66 (right to limit liability);

“(b) article 31 (basis of the shipper’s liability);

“(c) chapter 5 (obligations of the carrier); or

“(d) articles 28 to 30, and 33 (obligations of the shipper).”

15. Alternatively, a more concise version of the entire article 95 could read as follows:

“1. The parties to a volume contract may derogate from the provisions of this convention only if :

“(a) the volume contract is individually negotiated;

“(b) the derogation is agreed in writing between the parties; and

“(c) the derogation is set forth in highly visible type in the volume contract in a manner that identifies the clauses of the volume contract containing derogations.

“2. Any such derogation is not binding on third parties, unless those third parties accept it expressly.

“3. Any derogation made pursuant to paragraph 1 does not apply to the basis of the liability of the carrier or the shipper, as set forth in articles 17 and 31 respectively, nor to the fundamental obligations of the carrier or the shipper, as set forth in chapter 5 and in articles 28 to 30, and 33 respectively, and any derogation is null and void to the extent that it purports to so apply.”

V. INSOLVENCY LAW

A. Report of the Working Group on Insolvency Law on the work of its thirty-first session (Vienna, 11-15 December 2006)

D. Scope of future work	68-71

Introduction

1. At its thirty-ninth session, in 2006, the Commission agreed that the topic of the treatment of corporate groups in insolvency was sufficiently developed for referral to Working Group V (Insolvency Law) for consideration in 2006 and that the Working Group should be given the flexibility to make appropriate recommendations to the Commission regarding the scope of its future work and the form it should take, depending upon the substance of the proposed solutions to the problems the Working Group would identify under that topic.

2. Working Group V (Insolvency Law), which was composed of all States members of the Commission, held its thirty-first session in Vienna from 11 to 15 December 2006. The session was attended by representatives of the following States members of the Working Group: Algeria, Argentina, Australia, Belarus, Canada, China, Colombia, Croatia, Czech Republic, Ecuador, France, Germany, Iran (Islamic Republic of), Italy, Lithuania, Mexico, Pakistan, Republic of Korea, Russian Federation, Singapore, Spain, Switzerland, Thailand, Tunisia, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland and United States of America.

3. The session was also attended by observers from the following States: Congo, Denmark, Dominican Republic, Ireland, Latvia, Libyan Arab Jamahiriya, Malaysia, Netherlands, Philippines and Slovakia.

4. The session was also attended by observers from the following international organizations:

(a) Organizations of the United Nations System: International Monetary Fund (IMF), and the World Bank;

(b) Intergovernmental organizations: Asian Development Bank (ADB), European Bank for Reconstruction and Development (EBRD), European Commission (EC), and Organization for Economic Cooperation and Development (OECD);

(c) International non-governmental organizations invited by the Working Group: American Bar Association (ABA), American Bar Foundation (ABFN), Center for International Legal Studies (CILS), Groupe de réflexion sur l'insolvabilité et sa prévention (GRIP 21), INSOL International, International Bar Association (IBA), International Insolvency Institute (III), and International Working Group on European Insolvency Law.

5. The Working Group elected the following officers:

Chairman: Mr. Wisit Wisitsora-At (Thailand)

Rapporteur: Ms. Jasna Garašić (Croatia)

6. The Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.V/WP.73);

(b) A note by the secretariat on the treatment of corporate groups in insolvency (A/CN.9/WG.V/WP.74 and Add.1 and 2).

7. The Working Group adopted the following agenda:

1. Opening of the session;

2. Election of officers;
3. Adoption of the agenda;
4. Consideration of the treatment of corporate groups in insolvency;
5. Other business;
6. Adoption of the report.

I. Deliberations and decisions

8. The Working Group began discussion of the treatment of corporate groups in insolvency on the basis of documents A/CN.9/WG.V/WP.74 and Add.1 and 2, and other documents referred therein. The deliberations and decisions of the Working Group on this topic are reflected in section II below.

II. Consideration of the treatment of corporate groups in insolvency

9. As a preface to discussion in the Working Group, it was noted that documents A/CN.9/WG.V/WP.74, and addenda 1 and 2, discussed the treatment of corporate groups in insolvency on the basis of the relevant recommendations contained in the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide) and parts of the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law). It was suggested that those texts should constitute the starting point for the discussions of the Working Group. It was also suggested that the Glossary contained in document A/CN.9/WG.V/WP.74 might be revised in the future in line with the progress of work, so as to provide uniform reference terminology for the Working Group.

A. Introduction

10. Delegations were invited to provide additional information on the treatment of corporate groups in insolvency that might complement the information made available to the Working Group.

11. It was indicated that the structure of corporate groups could vary greatly and be especially intricate, in particular, in the case of transnational corporate groups. Recent developments added further elements of complexity, for instance, in case of special forms of intra-group control, such as special purpose entities and joint ventures, as well as in the case of agreements for the temporary control of one company over another. It was added that economic activities, which were traditionally subject to a separate discipline, such as banking and insurance, were also increasingly performed in the context of corporate groups, thus adding an additional layer of complexity to their discipline.

12. It was confirmed that, while most jurisdictions refrained from offering a general definition of corporate groups, such definition often existed for special purposes, such as tax and accounting rules. In the insolvency field, the “separate entities approach” was prevalent, but certain instruments were available, under given conditions, to trigger the cross-liability of the companies belonging to the same corporate group.

13. In some jurisdictions that had recently reformed or attempted to reform their insolvency law to recognize the notion of corporate groups, it was observed that difficulties were encountered in the definition of that notion because of the need to achieve a balance between ensuring predictability and transparency and reflecting economic reality. It was suggested that reference to the notion of ownership, typically in terms of percentage of shares owned by the parent company, would provide a more certain basis for the definition of corporate groups. On the other hand, reference to the notion of control, while based on less objective parameters, would give more flexibility in addressing the diverse economic realities expressed by the operations of corporate groups.

14. The view was expressed that corporations served many important social, commercial and legal purposes. The provision of limited liability, in particular, facilitated the raising capital for business purposes, enabled creditors to rely on the assets and liabilities of the corporate entity with which they dealt, and provided certainty in commercial relations. It was noted that those purposes were baseline commercial and legal principles in many nations, and that to interrupt reliance and the expectations that arose from those principles would require some extraordinary rationale. It was further suggested that the circumstances for disregarding those principles rarely occurred.

B. Domestic issues

1. Application for commencement of insolvency proceedings

15. The Working Group considered how the provisions of the Legislative Guide with respect to commencement of insolvency proceedings might apply in the context of corporate groups and the changes, if any, that might be required with respect to the applicable commencement standard, the debtors against whom proceedings could be commenced and the parties who might make an application to commence.

16. As a starting point, the Working Group considered the position of an insolvent parent and an insolvent subsidiary and the question of whether or not an application could be made in respect of both debtors, referred to as a joint application. Although there were examples of laws that would permit such an application to be made, the general practice was for parallel applications to be made, in some cases at the same time, with various possibilities for treating the applications together for administrative purposes.

17. A second example involved the question of whether a joint application could be made with respect to an insolvent parent and a solvent subsidiary. Under some laws, a joint application could be made in respect of more than one member of a corporate group if only one member of the group was insolvent, provided that that insolvency had the potential to affect other members of the group; other examples were given where the insolvency of the parent could affect the solvent subsidiary because they were closely economically integrated, there was intermingling of assets or a specified degree of control or ownership. A different view emphasized the need to protect solvent members of a group and ensure their viability, notwithstanding the insolvency of the parent, as well as the need to protect the interests of creditors (including intra-group creditors), particularly those of solvent group members and ensure predictability for all creditors of members of a group with respect to the commencement of insolvency proceedings.

18. Reference was made to recommendations 15 and 16 of the Legislative Guide, which established the commencement standards for debtor and creditor applications respectively and formed the basis upon which an application could be made in respect of each member of a group that satisfied the standard, including imminent insolvency in the case of a debtor application. The reference to the debtor in recommendation 15 might be interpreted to include more than one member of a group in the same application. To some extent recommendation 15 could also cover the example of the insolvent parent and the solvent subsidiary, where the insolvency of the parent affected the financial stability of the subsidiary and it was likely to become insolvent following the insolvency of the parent (i.e. imminent insolvency). It was also suggested that if certain members of the group were left out of a debtor application under recommendation 15, it was always possible that they might subsequently be the subject of an application by creditors under recommendation 16.

19. Where recommendation 15 did not apply to both the parent and the subsidiary, however, it was suggested that the issue for consideration was whether there was any need to provide an exception that would allow the solvent subsidiary to be included in the insolvency of the parent and if so, what would be the basis of that exception. One view was that recommendation 15 (a) was sufficient and only those members of a group that could satisfy the insolvency test should be the subject of an application for commencement of insolvency proceedings. A different view was that a general concept of insolvency for groups might usefully be developed that would enable the financial status of the group as a whole to be considered and would resolve any difficulties that might be encountered by creditors seeking to commence insolvency proceedings against different members of a group. A further view was that recommendation 15 was not sufficient and that a more flexible test was required to ensure timely commencement of insolvency proceedings that might involve a solvent subsidiary in the insolvency of a parent in certain circumstances.

20. It was suggested that those circumstances might include the ones set forth in A/CN.9/WG.V/WP.74/Add.1, paragraph 12, such as intermingling of assets, unity of the group as a whole or consent of the parties. It was also suggested that, with respect to a debtor application, the debtor might be in a position to determine which members of the group should be included in the application; this would not apply in the case of a creditor application.

21. It was indicated that the treatment in the Legislative Guide of applications by a regulatory or other governmental body for commencement of insolvency proceedings should apply also in the case of corporate group insolvency.

22. A question was raised with respect to the possibility of a parent company applying for the commencement of insolvency proceedings against a subsidiary.

23. The general view was that that would be possible in certain cases, such as where the parent and the subsidiary shared the same representative and when the parent company was a creditor of the subsidiary and therefore able to apply as such. However, it was suggested that the adequate treatment of corporate groups in insolvency proceedings demanded further consideration of the matter. It was pointed out that when a group started to fail it might not be possible to distinguish solvent members from insolvent members, since in most cases all members of a corporate group would eventually be involved in insolvency proceedings. Moreover, the corporate group might have an interest in protecting the assets of solvent members in the context of a comprehensive reorganization plan. In considering the answer to

the question, it was further suggested that a careful balance should be sought between the different stakeholders, including creditors of the solvent member and shareholders that were not members of the corporate group.

24. It was suggested that different recommendations might need to be made with respect to reorganization and liquidation proceedings. In particular, it might be desirable to recognize the wish of the parent company to have a comprehensive reorganization plan involving all the members in the group. After discussion, there was no consensus on the need for an exception to recommendations 15 and 16 of the Legislative Guide to permit application by a parent company in respect of a subsidiary.

2. Effects of commencement

(a) Appointment of a single insolvency representative

25. The view was expressed that the appointment of a single insolvency representative to proceedings in respect of more than one member of a corporate group would be desirable since it would ensure coordination of the administration of the various members, reduce related costs and facilitate the gathering of information on the corporate group as a whole. However, it was noted that the appointment of a single administrator might give rise to conflicts of interests, and that simplification of the structure of the administration should not be sought to the detriment of any of the interests involved.

26. The general view was that in a number of cases, especially in the context of corporate group reorganization, the appointment of a single administrator would be desirable, but that provision should be made for the appointment of separate administrators or co-administrators for each member of the group where conflicts of interest might arise.

(b) Cases where management remains in office after commencement

27. It was noted that the provisions of the Legislative Guide that allowed the management to remain in office after the commencement of insolvency proceedings would find application also in the case of insolvency of corporate groups.

(c) Application of the stay to a solvent corporate group member

28. The view was expressed that recommendations 39 to 51 of the Legislative Guide on the effects of commencement and, in particular, application of a stay, could apply in the case of the insolvency of one or more members of a corporate group to those members against which insolvency proceedings were commenced.

29. A question was raised with respect to the possibility of extending the application of those recommendations to solvent members of that corporate group, in the event that not all members were subject to insolvency proceedings.

30. It was suggested that in some jurisdictions that extension, with particular regard to the effects of a stay or suspension, would be possible, and that that possibility was reflected in recommendation 48 of the Legislative Guide. While further consideration might be given to the protection of creditors of the solvent members, it was suggested that adequate protection for those creditors might be found in the relevant provisions of the Legislative Guide. In particular, it was suggested that recommendation 51 might have some application beyond secured

creditors in such circumstances. A different view was that in other jurisdictions the extension of the effects of a stay or suspension to solvent members might not be possible, as in some cases it might conflict with the protection of property rights, at both the constitutional and international level. Additionally, it was suggested that certain jurisdictions might have difficulties in granting insolvency-related relief, such as a stay or suspension, against a solvent member. However, effects similar to those of a stay might be obtained in those jurisdictions by requesting a provisional measure in conjunction with the commencement of insolvency proceedings against other members of that corporate group.

31. After discussion, there was agreement that the effects of a stay should not be automatically extended to solvent members of a corporate group. However, it was also the view that in certain cases, for example to protect an intra-group guarantee, such extension could be available at the courts' discretion and subject to certain specific conditions.

(d) Joint administration

32. The Working Group considered the possibility of joint administration of proceedings commenced against one or more members of a corporate group. Although jurisdiction was generally determined by reference to the location of each member of a group, joint administration was possible as a matter of practice in a number of jurisdictions to facilitate efficient administration. Some of the problems that might be raised by joint administration were considered and it was pointed out, for example, that issues could arise, even in a domestic context, where the parent and subsidiary were located in different places and different courts were competent to consider the respective insolvency applications. Creditors of the different members of a group might also be located in different places, raising issues of representation and location of creditor committees. In some States, different proceedings could be consolidated or transferred to an appropriate court. In one example, that appropriate court might be the court with competence to administer insolvency proceedings against the parent of a group.

(e) Use and disposal of assets

33. The question of whether the assets of a solvent member of a group could be used to fund the ongoing operations of an insolvent member, pending resolution of the insolvency proceedings, was raised. Reference was made to recommendation 54 of the Legislative Guide, which addressed the use of third party owned assets in the possession of the debtor. It was suggested that while that recommendation might cover some issues involving the use of the assets of one group member by another group member, the issue in the group context was potentially broader and would involve use of assets not in the possession of the debtor. The general view expressed was that such use of assets could not be supported unless the owner of those assets, the solvent member, could be included in the insolvency proceedings. Such support might raise questions of avoidance, particularly where the supporting member subsequently became insolvent, and also raised concerns for creditors of the supporting member.

(f) Post-commencement finance

34. The question with respect to post-commencement finance was related to the question on use and disposal of assets: could the assets of a solvent member of

a group be used to obtain financing for an insolvent member from an external source or to fund the insolvent member directly and, if so, what were the implications for the recommendations of the Legislative Guide concerning priority and security. For example, would a solvent subsidiary be entitled to priority under recommendation 64 if it were to provide funding to its insolvent parent or would that transaction be subject to subordination as intra-group lending? It was observed that while post-commencement finance was important in the context of individual proceedings, as noted in the Legislative Guide, it was even more critical in the group context; if there were no ongoing funds there was very little prospect of reorganizing an insolvent group. Notwithstanding that importance, the view was expressed that using group assets to obtain financing was possible where all members of the group were insolvent; this would be covered by the recommendations of the Legislative Guide. Difficulties arose, however, where it was suggested that the assets of a solvent member be used to fund an insolvent member or as the basis for obtaining external funding. The general view expressed was that that should not be permitted, although it was acknowledged that there might be situations where such funding could be provided if the creditors of the solvent member consented.

3. Reorganization of two or more members of a group

35. The Working Group considered whether it would be possible for an insolvent group to be reorganized through a single plan. While several insolvency laws permitted the negotiation of a single plan, under others it was only possible as a matter of practice if different insolvency proceedings against group members could be coordinated. A further approach enabled a single plan to be negotiated through procedural consolidation of all proceedings against group members. It was noted that proceeding by way of a single plan had the potential to ensure savings across the group's insolvency proceedings. With respect to voting on and approval of a plan, different approaches were taken. Under one approach, the different interests of corporate group members and their creditors could be grouped in classes and voting requirements, in terms of majorities within classes and of classes would remain the same as in proceedings for approval of a plan for a single debtor. Another approach provided for a unified plan with different majority requirements designed to facilitate approval. The consequences of failure to approve such a unified plan was liquidation of all insolvent members of the group covered by the plan. After discussion, it was agreed that there would be benefit in permitting a single reorganization plan to be negotiated, subject to the same requirements for approval and to the same protections as included in the Legislative Guide.

4. Remedies

(a) Consolidation

36. The Working Group noted that the remedies discussed in A/CN.9/WG.V/WP.74/Add.1, paragraphs 24 to 45 (extension of liability, contribution orders and substantive consolidation or pooling) could essentially be divided into those that required a finding of fault and those that relied upon the establishment of certain facts with respect to the operations of the corporate group. It was suggested that in the case of misfeasance of management of a debtor other more appropriate remedies might be available, including removal of management or allowing creditors, as opposed to the debtor, to prepare a reorganization plan.

37. It was noted that the remedies discussed in paragraphs 24 to 45 were available in only limited circumstances and were rarely used as they had the potential to disrupt certain fundamental principles relating to a corporate entity, that is, limited liability and the ability of creditors to rely on the corporate entity (and the rights, duties and obligations that attach to it). The view was expressed that the Working Group should not try to establish a standard for when those fundamental principles would be interrupted as the grounds for doing so, if at all, would be fact-intensive and vary depending upon legal cultures and legal systems. It was added that increasing the recovery of some creditors was an insufficient ground in and of itself for interrupting those fundamental principles. The situations in which it was suggested such remedies might be appropriate included those where there was such an intermingling of assets that it was impossible to untangle the ownership of individual assets and consolidation would benefit all creditors, and where creditors had dealt with the members of a corporate group as a single economic unit and did not rely upon their separate identity in extending credit. While those insolvency laws that included provision for consolidation relied upon the court to assess the existence of appropriate conditions, another approach allowed an insolvency representative to consolidate where certain requirements were met and all creditors consented to the consolidation.

38. In support of consolidation, it was observed that, since intra-group trading was increasingly a norm, consolidation could enable an insolvency representative to focus on external debts of the group because intra-group debts disappeared as a result of consolidation.

39. The scope of consolidation was discussed with respect to whether such an order could include both insolvent and solvent members of a group. Although that remedy was generally used in the context of members against which insolvency proceedings had commenced, it was noted that under some laws it might be possible to include solvent members (paragraph 35 of A/CN.9/WG.V/WP.74/Add.1). Additional situations in which consolidation might be appropriate were suggested, including where consolidating the members might lead to greater return of value for creditors, whether because of the structural relationship between the members and the manner in which they conducted their business and financial relationship or because of the value of assets common to the whole group, such as intellectual property in a process conducted across numerous group members and the product of that process. Such an approach could serve the goal of consolidation as a tool for enhancing the overall distribution to creditors. In response, it was said that substantive consolidation seldom increased recovery for all creditors; rather, it generally effected a levelling of recoveries by decreasing the recoveries of some creditors and increasing the recoveries of others. The only situation in which substantive consolidation was likely to result in increased recovery for all creditors was where it was impossible to untangle the ownership of individual assets across the group. A further situation might occur where there was no real separation between the members of a group, with the group structure being maintained solely for dishonest or fraudulent purposes.

40. The possibility of achieving consolidation by agreement through a reorganization plan was also suggested. Some laws permitted a plan to include proposals for a debtor to be consolidated with other members of a group, whether insolvent or solvent, which could be implemented if creditors approved the plan. The same result could be achieved in practice in other jurisdictions which did not have strict requirements concerning the plan, although it was noted that problems

might arise where a solvent member of a group was to be included in such a proposal.

41. It was suggested that a further issue to be considered was how secured and priority creditors should be treated in consolidation, particularly where the priority creditors of one group member (such as employees) would interact in consolidation with the secured creditors of another group member. One solution mentioned was to exclude external secured creditors from the process of consolidation and cancel the interests of secured creditors internal to the group. Another issue to be considered was that of timing, as consolidation could take place at an early stage of the proceedings or later when it emerged that to do so would enhance the value to be distributed to creditors.

42. Where consolidation orders were to be made by a court, it was agreed that there needed to be clear criteria against which judges could assess the relevant issues.

(b) Avoidance

43. It was recalled that the Legislative Guide included a number of recommendations on avoidance, including recommendations 90 and 91 on transactions with “related persons”. “Related person” was a term defined in the glossary to the Legislative Guide and could include members of a corporate group. It was pointed out, however, that since recommendation 90 referred only to the length of the suspect period for transactions with related persons, additional provisions might be needed for such transactions in the corporate group context.

44. It was noted that certain domestic legislation established a rebuttable presumption that transactions among corporate group members and between those members and the shareholders of that corporate group would be detrimental to creditors, and could therefore be avoided. However, it was also said that a number of those transactions might be entered into for legitimate purposes and should not automatically be subject to that treatment. It was added that a broad application of avoidance might hinder access to financing in the context of reorganization.

45. It was suggested that further consideration should be given to the relationship between avoidance of intra-group transactions, substantive consolidation and the ability of the single administrator to deal with intra-group transactions, as well as between avoidance and subordination.

(c) Subordination

46. It was noted that in certain circumstances the existence of a special relationship between the enterprise in insolvency proceedings and a creditor could lead to subordination of that creditor’s claim to claims of other creditors. It was suggested that that special relationship might also exist between members of the same corporate group, leading to the possible subordination of intra-group credits.

47. In response, it was noted that automatic subordination of intra-group credits might be perceived as a punitive measure and lead to unfair results as many intra-group transactions had a legitimate purpose. It might also ultimately disadvantage the creditors of the members holding subordinated credits. In that respect, it was suggested that the appropriateness of subordination as a remedy might differ as between liquidation and reorganization.

5. Definition of a “domestic corporate group”

48. Having completed its discussion of the remedies, the Working Group considered a possible definition or description of the term “corporate group” on the basis of the material included in the glossary in A/CN.9/WG.V/WP.74.

49. It was agreed that while it might be difficult to reach a definition that could be used both for insolvency and other purposes, it was nevertheless important to reach a common understanding of what might identify a “corporate group”. It was pointed out that solutions to the treatment of corporate groups in insolvency could not be reached by way of a definition, nor should that definition lead to legal consequences. It was suggested that a working definition should be wide enough to include different types of corporate groups common to different countries and regions, such as family-controlled corporate groups, and enterprises that were not incorporated as these were commonly part of a group. One proposal was that a corporate group could be understood as a number of enterprises associated by common or interlocking holdings or allied by control or the capacity to control, where the enterprise need not be incorporated and capacity to control could include those corporate groups based on a contractual arrangement. That suggestion was generally supported.

C. International issues

1. Centre of main interests (COMI)

50. The Working Group considered the concept of COMI and how criteria additional to the presumptions contained in article 16 of the UNCITRAL Model Law on Cross-Border Insolvency might be developed. It was noted that in those jurisdictions where the concept of COMI was used, whether under the EC Regulation on insolvency proceedings or the Model Law, it was a developing concept and a number of factors sufficient to rebut the presumption of the registered office had been identified. Those factors included the location of centres of production and command and control, of bank accounts and accounting services and the place where design, marketing and other economic activities took place.

51. It was noted that neither the EC Regulation nor the Model Law addressed the concept of COMI in terms of corporate groups. In practice, the COMI of each member of a corporate group could be located in a different jurisdiction, leading to proceedings being commenced in each jurisdiction on the basis of the various factors noted above. It was pointed out that in cases where the COMI of a number of group members was found to be in one jurisdiction, there was the potential for creditors, including employees, who were located in jurisdictions different to that of the COMI to be disadvantaged, for instance with respect to filing claims and participating in hearings. It was also pointed out that it was not always possible to ascertain what the COMI of members of a corporate group might be before the insolvency proceedings commenced.

52. Although the discussion proceeded from experience with the Model Law and the EC Regulation, it was suggested that a broader approach to COMI in the group context should be adopted, as those texts did not apply universally. Some support was expressed in favour of developing a concept of “group COMI” that would enable proceedings covering all insolvent members of a group to be filed in one jurisdiction. One suggestion was that the concept of “group COMI” might

incorporate notions of centre of main interest, establishment and presence of assets, as well as taking into account creditor connections and issues of control.

53. It was questioned whether definition of such a concept was possible and how it would be recognized and enforced universally. It was pointed out that most jurisdictions established criteria or connecting factors that gave a debtor the standing to commence insolvency proceedings in a particular jurisdiction. It was recalled that those factors had been discussed in the context of the Legislative Guide (Part two, chapter one, paras. 12 to 19). Even if one court took the view that the COMI of the corporate group fell under its jurisdiction and it could therefore hear applications with respect to other members of that group, other courts would not necessarily concur with that decision in the absence of a binding obligation to do so. In addition, different views might be taken with respect to the inclusion of an enterprise in a corporate group, particularly an international corporate group; for example, some courts might regard as a subsidiary what others might regard as a domestic company, notwithstanding its connection to members of a group located elsewhere.

54. The difficulties of achieving an agreed definition suggested the need to focus on facilitating coordination and cooperation between the various courts in which insolvency proceedings against different members of a corporate group might be commenced, whilst acknowledging the desirability of avoiding a multiplicity of proceedings in the corporate group context.

2. Definition of an “international corporate group”

55. The Working Group considered how an international corporate group might be defined and the characteristics that would distinguish it from a domestic corporate group (see above, paras. 48-49). It was pointed out that a definition that focused on common characteristics and found wide international support was desirable.

56. One proposal was that an international corporate group could be understood as an ensemble of companies subject to the legislation of different countries, bound by capital or control and organized in a coordinated manner. In order not to exclude unincorporated entities and possibly individuals from such a group it was suggested that, as in the discussion of the domestic context, the term “enterprises” could be substituted for “companies”. A further proposal included additional references to the types of connections that might be found between members of a corporate group, such as shared assets, shared management and the control or ability to control the interests of one or more members of the group by making binding decisions with respect to their financial and economic activities.

57. It was suggested that the international nature of a group should be more clearly described. What was required was not simply the existence of offices of group members in different jurisdictions, but rather economic activity or the presence of assets that would be sufficient to establish jurisdiction for the purposes of commencing insolvency proceedings in those different jurisdictions.

58. After discussion, the Secretariat was requested to develop a definition of what might constitute an “international corporate group”, taking into account the various observations made.

3. Remedies

(a) Joint administration

59. One view was that joint administration was as essential in the international context as in the domestic context to ensure that members of a corporate group could be jointly administered, facilitating timely reorganization, greater return of value to creditors and minimization of costs. It was pointed out, however, that while in the domestic context there might be procedures that would enable proceedings commenced in different jurisdictions to be brought together, such procedures did not generally exist at the international level. At that level, proceedings in different jurisdictions would involve diversity of assets, creditors, laws, priorities and so forth. Additional questions concerned the choice of jurisdiction from which joint administration should be conducted, the treatment that might be applicable to solvent members in different jurisdictions and the ability of the insolvency representatives to operate in different jurisdictions, particularly those in which they were not qualified under the relevant law.

60. It was acknowledged that in some situations there might be a need for parallel proceedings to address some of these difficulties, although in general a multiplicity of proceedings should be avoided in order to facilitate coordination and cooperation. Adoption of the Model Law would provide the local rules necessary to achieve that cooperation. There was some agreement that while joint administration should be recommended, further proposals on how it could be achieved might not be possible at this stage of the discussion.

(b) Consolidation

61. It was noted that, while benefits could arise from the consolidation of insolvency proceedings in the context of cross-border insolvency, the international dimension added further complexity, such as the need to adopt criteria for currency conversion, which suggested the need for an even higher threshold than for domestic proceedings. Other issues that might create difficulty related to different procedures for distribution and the recognition of claims, as well as to the differences that might arise from territorial as opposed to universal approaches to insolvency.

62. It was noted that consolidation in the cross-border context might require harmonization of the treatment of security interests in the various jurisdictions, which varied considerably, to the point that certain security interests might have no equivalent in other legal systems.

4. Post-commencement finance

63. The general view was expressed that access to post-commencement finance was key to the success of reorganization, and that such access was possible only in cases where the lender obtained adequate guarantees of recovery of its capital. It was added that those guarantees might not be available in certain jurisdictions which emphasized the protection of pre-commencement security interests, as well as in other jurisdictions lacking the commercial framework to support post-commencement finance, thus hindering reorganization of corporate group members located in those jurisdictions.

64. Concerns were raised as to the feasibility of introducing in certain legal systems the notion of an overarching rank of security interests for the benefit of the lender of the post-commencement finance, sometimes referred to as a “super-

priority”. In that respect, it was added, difficulties might be encountered where enforcement of a reorganization plan contemplating such “super-priority” would be sought in courts other than those of the jurisdiction in which the plan was approved, and especially when the change in the ranking of security interests would affect assets held by solvent members of the corporate group. In that context, it was noted that providing adequate protection for the interests of the creditor of the solvent subsidiary, as well as preventing the exploitation of the solvent subsidiary for the exclusive benefit of the insolvent parent company, would also be desirable goals.

65. It was suggested that some of those concerns might be addressed through the use of protocols, subject to the approval of all courts concerned. In response, it was noted that, while such an approach would ensure adequate representation of all stakeholders, it might also be excessively time-consuming, especially in light of the strict timeline dictated by the financial needs of an insolvent corporate group.

66. Alternatively, it was suggested that a solution might be sought along the lines of certain procedures applicable to cross-border merger of companies. That would entitle courts with jurisdiction over the relevant assets to pass a judgment on the balancing of the various interests at stake and request adequate guarantees to ensure the desired balance was achieved.

67. The Working Group concluded that further discussion of the matter would be desirable and that such discussion should take place on the basis of recommendations 63 to 68 of the Legislative Guide and their application in the international context of corporate groups.

D. Scope of future work

68. The secretariat informed the Working Group on the progress of the work relating to the use of protocols in cross-border insolvency and of the preparation of a report on that topic for consideration by the Commission at its fortieth session in 2007.

69. It was agreed that the Working Group’s current discussion of the treatment of corporate groups in insolvency suggested the need for further work. The UNCITRAL Legislative Guide on Insolvency Law and the UNCITRAL Model Law on Cross-Border Insolvency provided a sound basis for the unification of insolvency law and the integrity of those texts should be maintained in any future work. Therefore, the current work was intended to complement those texts, not to replace them.

70. It was suggested that a possible method of work would entail the consideration of those provisions contained in existing texts that might be relevant in the context of corporate groups and the identification of those issues that required additional discussion and the preparation of additional recommendations. Other issues, although relevant to corporate groups, could be treated in the same manner as in the Legislative Guide and Model Law. The possible outcome of that work might be in the form of legislative recommendations supported by a discussion of the underlying policy considerations.

71. Referring to the decision of the Commission at its last session (A/61/17, para. 209 (b)), it was agreed that, within the given mandate, the Working Group would act flexibly in the manner in which the work on domestic and international post-commencement financing would be conducted.

I. Glossary

1. The following terms, commonly found in the law and literature relating to corporate groups, may have different meanings in different jurisdictions or may be common to one legal tradition and not to others. They are included in this note to provide orientation to the reader and facilitate a common understanding of the issues.

(a) Corporate group

“The word ‘group’ is generally applied to a number of companies which are associated by common or interlocking shareholdings, allied to unified control or capacity to control” (Australia: *Walker v Wimbourne* (1976) ACLR 529 at 532).

“Close and common management links, as well as an interlocking web of complex mutual shareholdings are features sufficient in de facto terms to constitute the various companies in question within the group as being properly described as such, being responsive to the needs and interests of each other as corporate entities through their management” (UK: *Re Enterprise Gold Mines NL* (1991) 3 ACSR 531 at 540).

“A group of undertakings, which consists of a parent undertaking, its subsidiaries and the entities in which the parent undertaking or its subsidiaries hold a right to participate, as well as undertakings linked to each other by a relationship within the meaning of Article 12 (1) of Directive 83/349/EEC” (relating to consolidated accounts). (Article 2, Directive 2002/87/EC of the European Parliament and of the Council of 16 December 2002 on the supplementary supervision of credit institutions, insurance undertakings and investment firms in a financial).

(b) Control

The power normally associated with the holding of a strategic position within the corporate organization that enables its possessor to dominate directly or indirectly those organs entrusted with decision-making authority, generally with respect to financial and operating policies.

A company can be considered to control another if it directly or indirectly holds a percentage of the capital that confers upon it the majority of the voting rights in the general assemblies of the second company; when the first company alone holds the majority of the voting rights in the second company pursuant to an agreement concluded with other members or shareholders and which is not contrary to the interests of the second company; when the first company actually makes, due to the voting rights which it holds, the decisions concerning the interests of the second company. A company is presumed to exercise this control when it directly or indirectly holds a percentage of the voting rights higher than 40 per cent and when no other member or shareholder directly or indirectly holds a percentage higher than its percentage (France: Commercial Code, article L233-3).

“Control ... may also rest in an entity holding less than a majority of the voting shares in a company if by virtue of management contracts, conditions in credit arrangements, voting trusts, license or franchise agreements, or other elements, it has the power to exercise decisive influence over the activities of the company in question” (Obligations of Multinational Enterprises and their Member Companies, Institut de droit international, (1995)).

(c) Holding or parent corporation

A holding company or parent company is a company that directly or indirectly owns enough voting stock in another firm to control management and operations by influencing or electing its board of directors. The term may signify a company that does not produce goods or services itself, but whose purpose is to own shares of other companies (or own other companies outright).

(d) Subsidiary corporation

A company that is owned or controlled by another company belonging to the same group of companies. Usually, a subsidiary is incorporated under the laws of the State in which it is established (Obligations of Multinational Enterprises and their Member Companies, Institut de droit international, (1995)).

When a company owns more than half of the capital of another company, the second company is regarded as the subsidiary of the first company (France: Commercial Code, article L233-1).

(e) Parent-subsidiary relationship

A parent-subsidiary relationship exists whenever a corporation holds a strategic position within the corporate decision-making organization of the latter, which gives it a power to directly or indirectly influence its business affairs. Criteria to support the existence of such a relationship would include: the holding of a majority of capital; the holding of a majority voting capital; the holding of a power to elect the majority of management and supervisory boards; the holding of financial, personal, contractual, or any other linkages which are able to create for one of the corporations a strategic controlling position as defined above (Antunes, Jose Engracia, *Liability of Corporate Groups*, Kluwer 1994).

(f) Branch

A unit of a larger entity not separately incorporated in the State where it is established or engaged in operation (Obligations of Multinational Enterprises and their Member Companies, Institut de droit international (1995)).

(g) Related/associated/affiliated corporation

“(jj) “Related person”: as to a debtor that is a legal entity, a related person would include: (i) a person who is or has been in a position of control of the debtor; and (ii) a parent, subsidiary, partner or affiliate of the debtor” (UNCITRAL Legislative Guide on Insolvency Law).

(h) Pooling order (effect is same as substantive consolidation)

An order permitting assets and liabilities of the corporate group in liquidation to be “pooled” or collected together into a single insolvency estate for the general benefit of unsecured creditors.

(i) Contribution orders

Orders by which a court can require a solvent group company to contribute specific funds to cover all or some of the debts of other groups companies in liquidation.

(j) Consolidation

(i) *Procedural consolidation* (referred to in this note as joint administration) where insolvency proceedings or separate entities are consolidated for administration purposes to promote procedural convenience and cost efficiencies, but the assets and liabilities of the debtors remain separate and distinct, with the substantive rights of claimants unaffected.

(ii) *Substantive consolidation* permits the court in insolvency cases involving related entities in appropriate circumstances to disregard the separate identity of the entities to consolidate and pool their assets and liabilities and treat them as though held and incurred by a single entity — creating a single estate for the general benefit of creditors of all consolidated entities.

(k) Joint administration (see consolidation)

(l) Shadow and de facto directors

A shadow director is a person in accordance with whose directions or instructions the directors of the company are accustomed to act (Section 741 (2), UK Companies Act 1985). A company may be a shadow director of another company.

A de facto director can be a shareholder or an officer or director of a parent company who actually perform the functions of a director or hold themselves out as such, but has not been formally appointed as a director.

(m) Transfer pricing

Transfer pricing refers to the pricing of goods and services within a multi-divisional organization. Goods from the production division may be sold to the marketing division, or goods from a parent company may be sold to a foreign subsidiary. The choice of the transfer prices affects the division of the total profit among the parts of the company. It can be advantageous to choose them so that, in terms of bookkeeping, most of the profit is made in a country with low taxes.

(n) Off-balance sheet

Off balance sheet usually means an asset or debt or financing activity not on the company's balance sheet. Examples of off-balance-sheet financing include joint ventures, research and development partnerships, and operating leases (rather than purchases of capital equipment), where the asset itself is kept on the lessor's balance sheet, and the lessee reports only the required rental expense for use of the asset.

(o) Consolidated accounts

Consolidated accounts are financial statements that factor the holding company's subsidiaries into its aggregated accounting figure, presenting the group as a single entity.

II. Background

A. Introduction

2. Most jurisdictions recognize the "corporation", an entity on which a legal personality separate from the individuals comprising it, whether as owners, managers, or employees, is conferred. As a legal or juristic person, a corporation is capable of enjoying and being subject to certain legal rights, duties, and liabilities, such as the capacity to sue and be sued, to hold and transfer property, to sign contracts and to pay taxes. The corporation also enjoys the characteristic of perpetuity, in the sense that its existence is maintained irrespective of its members at any given time and over time, and shareholders can transfer their shares without affecting the entity's corporate existence. Corporations may also have limited liability, whereby investors will only be liable for the amount they have intentionally put at risk in the enterprise. Without that limitation, investors would put their entire assets at risk for every business venture they entered into. A corporation depends on a legal process to obtain its legal persona and once formed,

will be subject to the regulatory regime applying to entities so formed. That law generally will determine not only the requirements for formation, but also the consequences of formation, such as the powers and capacities of the company, the rights and duties of its members and the extent to which members may be liable for the company's debts. The corporate form can thus be seen as promoting certainty in the ordering of business affairs, as those dealing with a corporation know that they can rely upon its legal personality and the rights, duties and obligations that attach to it.

3. The business of corporations is increasingly conducted, both domestically and internationally, through "corporate groups". The term "corporate group" covers a large number of different forms of economic organization based upon the single corporate entity and for a working definition may be loosely described as two or more corporations that are linked together by some form of control (whether direct or indirect) or ownership (see below). The size and complexity of corporate groups may not always be readily apparent, as the public image of many is that of a unitary organization operating under a single corporate identity.

4. Corporate groups have been in existence for some time, emerging in some countries, according to commentators, at the end of the 19th and beginning of the 20th century through a process of internal expansion, which involved companies taking control of their own financial, technical or commercial capacities. These single entity enterprises then expanded externally to take legal or economic control of other corporations. Initially these other corporations may have been in the same market, but eventually the expansion encompassed corporations working in related fields and later in fields that were different or unrelated, whether by reference to product or geographical location or both.¹ One of the factors supporting this expansion, at least in some jurisdictions, was the legitimatization of ownership of the shares of one corporation by another corporation; a phenomenon originally prohibited in both common law and civil law systems.

5. Throughout this expansion, corporations retained and continue to retain, their separate legal personality even though, as one commentator suggests, "the individual corporation ceased to be the most significant form of organization in the 1920s and 1930s",² with the single operating company now probably the typical form of organization only for small private businesses. Corporate groups are now ubiquitous in both emerging and developed markets, with common characteristics of operations across a large number of often-unrelated industries, often with family ownership in combination with varying degrees of participation by outside investors. The largest economic entities in the world include not only countries, but also equal numbers of multinational enterprises. Major multinational groups may be responsible for significant percentages of Gross National Product worldwide and have annual growth rates and annual turnovers that exceed those of many countries.

6. Despite the reality of the corporate group, much of the legislation relating to corporations and particularly to their treatment in insolvency, deals with the single corporate entity as if it were the norm. Despite the absence of legislation, judges in many countries, faced with issues that can better be addressed by reference to the single enterprise than the single corporate entity, have developed solutions to achieve results that better reflect the economic reality of modern business.

¹ Antunes, Jose Engracia, *Liability of Corporate Groups*, Kluwer 1994, chapter 1.

² Hadden, *Inside Corporate Groups*, 1984 *International Journal of Sociology of Law*, 12, 271-28 at 271.

B. Nature of corporate groups

7. Corporate group structures may be simple or highly complex, involving numbers of wholly or partly owned subsidiaries, operating subsidiaries, sub-subsidiaries, sub-holding companies, service companies, dormant companies, cross-directorships, equity ownership and so forth. They may also involve other types of entity, such as special purpose entities (SPE), joint ventures, offshore trusts and partnerships.

8. Corporate groups may have a hierarchical or vertical structure, with succeeding layers of parent and controlled companies, which may be subsidiaries or other types of affiliated or related companies, operating at different points in a production or distribution process. They may also have a more horizontal structure, with many sibling groups companies, often with a high degree of cross-ownership, operating at the same level in that process. The businesses they conduct may be in a related field or in a diverse range of unrelated fields. It has been suggested that horizontal groups are more common in some parts of the world, such as Europe, while vertical groups are more common in others, such as the USA and Japan.

9. The research literature on business groups clearly shows that they can be based on different types of alliances such as bank relationships, interlocking board directorates, owner alliances, information sharing, joint ventures, and cartels. The research also shows that business group structure varies across corporate governance systems. Japan's keiretsu are organized either vertically or horizontally and develop across industries. They generally include a bank, a holding or a trading company, and a diverse group of manufacturing firms. In contrast, Korea's chaebol are typically controlled by a single family or a small number of families and are uniformly vertically organized. Business groups in China have developed their own unique structure: the groups are large multi-industry entities with strong ties to the state but not to particular families.³

10. The degree of financial and decision-making autonomy in groups can vary considerably. In some groups, corporations may be active trading entities, with primary responsibility for their own business goals, activities and finances. In others, strategic and budgetary decisions may be centralized, with group corporations operating as divisions of a larger business and exercising little independent discretion within the cohesive economic unit. A parent corporation may exercise close control by allocating equity and loan capital to group members through a central group finance operation, deciding their operational and financial policies, setting performance targets, selecting directors and other key personnel, and continuously monitoring their activities. The power of the group may be centralized in the ultimate holding company or in a company further down the group chain, with the holding company owning the key corporate group shares, but not having any direct productive or managerial role. The largest groups might have their own banks and perform the principal functions of a capital market. Group financing might involve intra-group lending between the holding company and subsidiaries, involving loans both from and to the holding company. Intra-group lending might be working capital or unpaid short-term debt such as unpaid dividends or credit in respect of intra-group trading; they may or may not involve the payment of interest.

³ Khanna, T. and Yafeh, Y., *Business Groups in Emerging Markets: Paragons or Parasites?*, European Corporate Governance Institute, 2005.

11. In some countries, family ties play an important connecting factor in corporate groups and it may be the case, for example, that the more important family members and close associates of family members will sit on the board of the holding company of a group, with members of that board spread around the boards of group companies so that there is a web of interlinked common directorships, enabling the family to maintain control over the group. For example, a chart of the Tata group in India shows a complex web of shared directorships between the eighteen-member board of the holding company, Tata Sons Ltd, and 45 other members of the group.⁴ Interlocking directorships are common in many countries: a survey in France, Germany, Italy, UK and USA showed that 2 out of every 10 corporate directors sat in at least 3 separate corporations.⁵

12. In some countries, corporate groups have enjoyed close ties to governments and government policies, such as those affecting access to credit and foreign currency and competition have significantly influenced the development of groups. Equally, there are examples where government policies have targeted the operations of groups, removing certain type of preferential treatment, such as access to capital.

13. The structure of many corporate groups shows the dimension and potential complexity of the arrangements. A 1997 survey in Australia of the Top 500 listed companies showed that 89 per cent of those companies controlled other companies; the greater the market capitalization of a listed company, the more companies it was likely to control (this ranged from an average of 72 controlled companies for those companies with the largest market capitalization to an average of 9 for the smallest); 90 per cent of controlled companies were wholly owned; the number of vertical subsidiary levels in a corporate group ranged from 1 to 11, with an overall average of 3 to 4.⁶ In other countries the figures are much larger. A study based upon the 1979 accounts and reports of a number of large British-based multinationals had to be abandoned with respect to two of the largest groups, with 1200 and 800 subsidiaries respectively, because of the impossibility of completing the task. The researchers also noted that few people inside the group could have a clear understanding of the precise legal relationships between all members of the group and that none of the groups studied appeared to have its own complete chart.⁷ Similarly, the group charts of several Hong Kong property groups such as Carrian, which failed over 20 years ago, ran to several pages and a reader would have needed a good magnifying glass to identify the subsidiaries. Today, the group chart of the Federal Mogul group, an automotive component supplier, when blown up to the point where you can read the names of all the subsidiaries, fills a wall of a small office. The group chart of Collins and Aikman, another automotive group, is printed in a book, with sub-sub-groups having the complexity of structure of many domestic groups of companies.

14. The degree of integration of a corporate group might be determined by reference to a number of factors,⁸ which might include the economic organization of the group (e.g., whether the administrative structure is arranged centrally or

⁴ Bikram De, *The Incidence and performance effects of interlocking directorates in emerging market business groups: evidence from India*, Indira Gandhi Institute of Development Research, April 2003.

⁵ Antunes, note 1, p. 45.

⁶ Cited in Companies and Securities Advisory Committee (CASAC), *Corporate Groups Final Report*, 2000 (Australia), paragraph 1.2.

⁷ Hadden, note 2, p. 273.

⁸ CASAC, note 6, paragraph 1.7.

maintains the independence of the various members, whether subsidiaries depend on the group for financing or loan guarantees, whether personnel matters are handled centrally, the extent to which the parent makes key decisions on policy, operations and budget and the extent to which the businesses of the group are integrated vertically or horizontally); how the group manages its marketing (e.g., the importance of intra-group sales and purchases, the use of common trademarks, logos and advertising programmes and the provision of guarantees for the products); and the public image of the group (e.g., the extent to which the group presents itself as a single enterprise, and the extent to which the activities of the constituent companies are described as operations of the group in external reports, such as those for shareholders, regulators and investors).

15. The legal structure of a group as a number of separate legal entities is not necessarily determinative of how the business of the group is managed. While each corporation is a separate entity, management may be arranged in divisions along product lines and subsidiaries may have one or many product lines with the result that they fall across different divisions. In some cases, management may treat wholly owned subsidiaries as if they were branches of the parent company.

16. As noted above, corporate groups may involve other types of entity such as SPEs, joint ventures, offshore trusts and partnerships. One issue in the context of groups is how these types of entities and arrangements will be treated for insolvency purposes.

Special purpose entities

17. Special purpose entities (SPE, also known as a “special purpose vehicle” or “bankruptcy-remote entity”) are created to fulfil narrow or temporary objectives, such as the acquisition and financing of specific assets, primarily to isolate financial risk or enhance tax efficiency. An SPE is typically a subsidiary owned almost entirely by the parent corporation; certain jurisdictions require that another investor own at least 3 per cent. Its asset and liability structure and legal status generally makes its obligations secure even if the parent becomes insolvent. The corporation establishing the SPE can accomplish its purpose without having to carry any of the associated assets or liabilities on its own balance sheet, thus they are “off-balance sheet.”

18. As financial markets have become more and more sophisticated, SPEs have been used for a wide variety of transactions. These include: securitizing financial assets such as various types of loans; credit card receivables; finance and aircraft operating leases; real estate mortgages; and aircraft and ship financing. The SPE will acquire the underlying asset from the originator of the transaction, and will then issue notes, bonds or other securities. The benefits to the originator of proceeding in this manner may include: removal of the underlying asset or asset pool from the balance sheet; improved liquidity; reduction of interest, currency and maturity risk to which the originator may have been exposed by the underlying asset pool; and improving return on assets and capital.

19. SPEs may also be used for competitive reasons to ensure intellectual property, such as for the development of new technology, is owned by a separate entity that is not affected by pre-existing licence agreements.

Joint venture

20. A joint venture is often a contractual arrangement or partnership between 2 or more parties to pursue a joint business purpose. Such an arrangement may sometimes result in the formation of one or more legal entities that may involve both parties contributing equity, and sharing in the revenues, expenses, and control of the enterprise. The venture could be for one specific project only, or a continuing business relationship. Joint ventures are widely used in an international context, as some countries require foreign corporations to form joint ventures with a domestic partner in order to enter a market. This requirement often results in technology and managerial control being transferred to the domestic partner.

21. Forming a joint venture might assist in spreading costs and risks; improving access to financial resources; providing economies of scale and advantages of size; and facilitating access to new technologies and customers or to innovative managerial practices. It may also serve competitive and strategic goals such as influencing structural evolution of an industry; pre-empting competition; creating stronger competitive units; and facilitating transfer of technology and skills, as well as diversification. The question to be considered in the group context is whether a joint venture is considered to be a part of a corporate group and how the form of the joint venture affects the answer to this question.

Offshore trusts

22. An offshore trust is a conventional trust that is formed under the laws of an offshore jurisdiction. They are similar in nature and effect to onshore trusts, involving a transfer of assets to a trustee to manage for the benefit of a person or class or persons. A number of jurisdictions have modified their laws to make their jurisdictions more attractive to the establishment of such trusts. Offshore trusts may be formed for tax purposes or asset protection. In practice the effectiveness of such trusts may be limited if the insolvency law of the home jurisdiction of the person transferring the assets operates to set aside transfers to the trusts, and transactions entered into to defraud creditors.

Cross-guarantees

23. In many countries a significant method of corporate-group capital raising is cross-guarantee financing, where each company within a group guarantees the performance of the others. Implementing cross-guarantee claims in liquidation has proved difficult in some jurisdictions and they have sometimes been set aside.

24. In one jurisdiction (Australia), cross-guarantees may operate to reduce the regulatory burden on companies by bestowing accounting and auditing relief on companies that are party to the arrangement. The deed of cross-guarantee makes the group of companies that are party to that deed akin to a single legal entity in many respects and operates as a form of voluntary contribution or pooling in the event that one or more of the companies party to the deed goes into liquidation while the cross-guarantee is still operative. One advantage of this arrangement is that creditors and potential creditors can focus on the consolidated position for those entities, rather than on the individual financial statements of the wholly owned subsidiaries that are party to the deed.

C. Reasons for conducting business through corporate groups

25. Diverse factors shape the formation, operation and evolution of corporate groups, ranging from legal and economic factors to societal, cultural, institutional and other norms. State leadership, inheritance customs, kinship structures (including inter-generational considerations), ethnicity and national ideology, as well as the level of development of the legal (e.g., effectiveness of contract enforcement) and institutional framework supporting commercial activity may influence corporate groups in different environments. Some studies suggest that group structures can make up for under-developed institutions, with consequent benefits for transaction costs.⁹

26. The advantages of conducting business through a corporate group structure¹⁰ may include assisting to reduce commercial risk, or maximize financial returns, by enabling the group to diversify its activities into various types of businesses, each operated by a separate group company. One company may acquire another to expand and increase market power, at the same time preserving the acquired company and continuing to operate it as a separate entity to utilize its corporate name, goodwill and public image. Expansion may occur to acquire new or technical or management skills. Once formed, groups may continue to exist and proliferate because of the administrative costs associated with rationalizing and liquidating redundant subsidiaries.

27. A group structure may enable a group to attract capital to only part of its business without forfeiting overall control, by incorporating that part of the business as a separate subsidiary and allowing outside investors to acquire a minority shareholding in it. A group structure may enable a group to lower the risk of legal liability by confining high liability risks, such as environmental and consumer liability, to particular group companies, thus isolating the remaining group assets from this potential liability. Better security for debt or project financing may be facilitated by moving specific assets into a separate company incorporated for that purpose, thus ensuring that the lender has a first priority over the whole or most of the new company's property. A separate group company may also be formed to undertake a particular project and obtain additional finance by means of charges over its own assets and undertaking or may be required for the purpose of holding a government license or concession. A group structure can simplify the partial sale of a business as it may be easier, and sometimes more tax effective, to transfer the shares of a group company to the purchaser, rather than sell discrete assets. A group may also be formed incidentally when a company acquires another company, which in turn might be a holding company for various other companies.

28. Meeting prudential or other statutory requirements may be easier where the corporations subject to those regulatory requirements are separate members of a group. In the case of multinational groups, the domestic law of particular countries in which the group wishes to conduct business may require that local businesses be conducted through separate subsidiaries (sometimes subject to minimum local equity requirements) or impose other requirements or limitations, relating for example to employment and labour regulation. Arrangements not involving equity have been used for foreign expansion because of, for example, local obstacles to equity participation, the level of regulation imposed upon foreign investment

⁹ Khanna and Yafeh, note 3, p. 21.

¹⁰ The following reasons are discussed in CASAC, note 6, paragraph 1.8.

operations and the relative cost advantages of those types of arrangement. Another relevant factor for multinational groups may be geographical imperatives, such as the need to acquire raw materials or to market products through a subsidiary established in a particular location. A related consideration of increasing importance that perhaps relates more to where parts of the groups structure are to be located than to the question of whether or not to organize a business through a group structure, is the importance of local law on issues such as cost and simplicity of incorporation in the first instance, obligations of incorporations and treatment of the group in insolvency (these issues are discussed below under international considerations). Differences in law across different jurisdictions can significantly complicate these issues.

29. Other key drivers for complicated group structures include fiscal considerations and their influence on the flow of money within groups. The incidence of tax is often cited as the reason for the formation of and subsequent growth of corporate groups and many legal systems have traditionally given weight to the economic unity of related corporate entities. While separate taxation of individual corporate entities might be the underlying principle, it may be qualified to fulfil basic purposes such as protecting the revenue interests of governments and alleviating the tax burden that would otherwise result from the separate taxation of each member of the group.¹¹ Measures that take into account the connections between parent and subsidiary companies include tax exemptions for intra-group dividends; group relief; and measures aimed at combating tax evasion. Tax exemptions may be available, for example, on the dividends paid by a company to its resident corporate shareholders and for intra-group dividends where companies are linked by substantial ownership. Tax credits may be allowed for the foreign tax paid on the underlying profits of the subsidiary and for the foreign tax that is charged directly on a dividend. Group relief might be available where related companies can be treated as a single fiscal unit and file consolidated accounts. Losses of one subsidiary may be offset against the income of another or profits and losses may be pooled amongst members of the group.

30. As a result of the importance of fiscal considerations, inter-company pricing policies and national taxation rates and policies often determine the distribution of assets and liabilities within corporate groups. Differential corporate tax rates across jurisdictions, as well as certain exceptions (such as reduced tax rates for profits from manufacturing activities or financial services income) applicable in some jurisdictions may make those jurisdictions more attractive than others that have higher tax rates and fewer or no exceptions. Nevertheless, tax authorities may have the right to revisit transfer-pricing structures¹² aimed at locating profits in low taxation domiciles.

31. Choices such as between establishing a branch or a subsidiary might also be affected by fiscal regulation where, for example, repatriation of profits from a foreign subsidiary may be effected tax free by loan repayments to a parent company or may be tax free provided the parent owns a specified percentage (ranging from 5-20 per cent) of the foreign company's share capital; interest on funds borrowed to finance the acquisition of a subsidiary can be offset against their profits and as already noted, the subsidiaries profits and losses can be offset against each other in

¹¹ International Investment and Multinational Enterprises — Responsibility of parent companies and their subsidiaries, OECD, 1979.

¹² See glossary.

a consolidated tax return. Business activities have also been divided between two or more corporations to exploit tax allowances, limits imposed on the amounts of tax allowances or progressive rates of taxation. Other reasons might include: taking advantage of differences in accounting methods, taxable years, depreciation methods, inventory valuation methods and foreign tax credits; segregating activities that if combined in a single taxable entity, might be disadvantageous in fiscal terms; and taking advantage of favourable treatment for certain activities (e.g., anticipated or potential sales, mergers, liquidations or intra-family gifts or bequests) that is available for some operations, but not for others.

32. Accounting requirements also have a role to play in determining the structure of corporate groups. In some jurisdictions, certain devices such as “agent only” subsidiaries might be created to manage certain aspects of the business and enable the holding company to avoid submitting detailed trading accounts for that subsidiary, which is just an agent of the holding company that owns all of the relevant assets.

33. Many of these benefits of conducting business through a corporate group may be illusory. Protection against devastating losses may fall away as a result of group financing agreements; intra-group trading and cross-guarantees; letters of comfort¹³ given to group auditors and the inclination of major creditors, and particularly bankers, to ensure that they have the indemnity of the top company in any group.

34. To avoid doubt, group structures are not required from the accounting point of view — accountants are just as happy with consolidating branches as groups of subsidiaries. It seems probable that the banking, commercial and legal sectors often fail to appreciate the accounting aspects of groups of companies. The opportunities for misunderstanding will increase in the transition to new international financial reporting standards and many groups change their consolidation approach from one that has regard for the substance of transactions, to one that requires legal form to prevail over substance. It was the “off-balance” accounting structures that made Enron, WorldCom and other failures possible and the need for clarity of financial statements is widely acknowledged.

D. Defining the “corporate group” — ownership and control

35. Although the existence of groups and the importance of relationships between the members of groups are increasingly acknowledged, both in legislation and court decisions, there is no coherent body of rules that directly governs those relationships in a comprehensive manner. In jurisdictions where there is legislation that recognizes corporate groups, it may not specifically deal with the regulation of such groups, by way of commercial or corporate legislation, but rather be contained in legislation on taxation, corporate accounting, competition and mergers or other issues; legislation addressing the treatment of corporate groups in insolvency is rare. Furthermore, an analysis of legislation that does address aspects of corporate groups

¹³ A letter of comfort is generally provided by a parent corporation to persuade another entity to enter into a transaction with a subsidiary. It may include various types of undertaking, none of which would amount to a guarantee, which may include an undertaking to maintain its shareholding or other financial commitment to a subsidiary; using its influence to see that the subsidiary meets its obligation under a primary contract; or confirming that it is aware of a contract with the subsidiary, but without any express indication that it will assume any responsibility for the primary obligation.

reveals a diversity of approach to the various issues associated with groups, not only between jurisdictions but also on a comparison of the different legislation within a single jurisdiction. Thus different tests may apply to what constitutes a group for different purposes, although there may be common elements, and where those tests employ a particular concept, such as “control”, definitions may be broader or narrower, depending upon the purpose of the legislation, as noted above.

36. While much legislation avoids specifically defining the term “corporate group”, several concepts are common to determining what relationships between corporate entities will be sufficient to constitute them as a corporate group for certain specific purposes, such as extending liability, accounting purposes, taxation and so on. These concepts are found both in legislation and in numerous court decisions on corporate groups in various countries and generally include aspects of ownership and control or influence, both direct and indirect, although in some examples only direct ownership or control or influence is considered. Some examples consider ownership by reference to a formal relationship between the companies, such as what constitutes a holding-subsidary or parent-subsidary relationship. This may be determined by reference to a formal standard — the holding, whether directly or indirectly, of a specified percentage of capital or votes. Examples of those percentages vary from as little as 5 per cent to more than 80 per cent. Those specifying lower percentages generally consider additional factors such as the ones discussed below as indicators of control. In some examples, the percentages establish a rebuttable presumption as to ownership, while higher percentages establish a conclusive presumption.

37. Other examples of what constitutes a corporate group adopt a more functional approach and focus on aspects of control, or controlling or decisive influence (referred to in this note as control), where “control” is often a defined term. The key elements of control include actual control or capacity to control, either directly or indirectly, financial and operating policy and decision-making. Where the definition includes capacity to control, it allows for a passive potential for control, rather than focussing upon control that is actively exercised. Control may be obtained by ownership of assets, or through rights or contracts that give the controlling party the capacity to control. What is important is not so much the strict legal form of the relationship, such as parent-subsidary, between the entities, but rather the substance of that relationship.

38. Factors that might indicate the existence of control of one entity by another could include: the ability to dominate the composition of the board of directors or governing body of the second entity; the ability to appoint or remove all or a majority of the directors or governing members of the second entity; the ability to control the majority of the votes cast at a meeting of the board or governing body of the second entity; and the ability to cast or regulate the casting of, a majority of the votes that are likely to be cast at a general meeting of the second entity, irrespective of whether that capacity arises through shares or options. Information that may be relevant to consideration of these factors might include: the company’s incorporation documents; details about the company’s shareholding; information relating to substantive strategic decisions of the company; internal and external management agreements; details of bank accounts and their administration and authorized signatories; and information relating to employees.

E. Regulation of corporate groups

39. Regulation of corporate groups is generally based on one of two approaches or in some cases on a combination of the two: the separate entity approach (which is the traditional approach and by far the most prevalent) and the single enterprise approach.

40. The separate entity approach relies on several basic principles, foremost of which is the separate legal personality of each group company. It is also based upon the limited liability of shareholders of each group company and the duties of directors of each separate group entity to that entity.

41. The separate legal personality of a corporation generally means that it has its own rights and duties, irrespective of who controls it or owns it (i.e., whether it is wholly or partly owned by another company) and its participation in the activities of the group. The debts it incurs are its debts and the assets of the group generally cannot be pooled to pay for these debts. Contracts entered into with external persons do not automatically involve the parent company and a parent company cannot take into account the undistributed profits of other group companies in determining its own profits. Limited liability of a corporation means that unlike in a partnership or sole proprietorship, members of a corporation have no liability for the corporation's debts and obligations, with the result that their potential losses cannot exceed the amount they contributed to the corporation by purchasing shares.

42. The single enterprise approach, in comparison, relies upon the economic integration of members of a corporate group, treating the group as a single economic unit that operates to further the interests of the group as a whole, or of the dominant corporate body, rather than of individual members. Borrowing may be conducted on a group basis, with group treasury arrangements being used to offset the credit and debit balances of each group company; group companies may be permitted to operate at a loss, or be undercapitalized, as part of the overall group financial structure and strategy; assets and liabilities may be moved between group companies in various ways; and intra-group loans, guarantees or other financial arrangements may be entered into on essentially preferential terms.

43. While many countries follow the separate entity approach, there are some countries that recognize exceptions to strict application of that approach and others that have introduced, either by legislation or through the courts, a single enterprise approach that applies to certain situations.

44. Some of the circumstances in which strict application of the separate entity approach is overridden in one country (Australia)¹⁴ include: consolidation of corporate group accounts for a company and any controlled entity; related party transactions (a public company is prohibited from giving any financial benefit, including intra-group loans, guarantees, indemnities, releases of debt or asset transfers, to a related company unless that transaction is approved by shareholders or is otherwise exempt); cross-shareholding (companies are generally prohibited from acquiring, or taking a security over, the shares of any controlling company or issuing or transferring their shares to any controlled company); and insolvent trading (a holding company which ought to suspect the insolvency of a subsidiary can be made liable for the debts of that subsidiary incurred when it was insolvent).

¹⁴ CASAC, note 8, para. 1.73.

45. A few countries (Germany, Portugal) have established various categories of corporate groups that can operate as a single enterprise, in exchange for enhanced protection of creditors and minority shareholders. In Germany, corporate group structures involving public companies are divided into 3 categories: (a) integrated groups; (b) contract groups; and (c) de facto groups, to which a set of harmonized single enterprise principles dealing with corporate governance and liability applies.

(a) Integrated groups are based upon a vote, by a specified proportion of shareholders of the holding company, which in turn owns a specified proportion of the shares of the subsidiary, to approve the complete integration of the subsidiary. The holding company will have unlimited power to direct the subsidiary, in return for the holding company being jointly and severally liable for the debts and obligations of the subsidiary;

(b) Contract groups can be formed by a specified proportion of shareholders of each of two companies entering into a contract that grants one company (the parent) the right to direct the other company, provided the directions are consistent with the interest of the parent company or the group as a whole. In return for giving the parent company the right of control, minority shareholders and creditors are given enhanced protection; and

(c) De facto groups are those where one company exercises, either directly or indirectly, a dominant influence over another company. Although not created by any formal arrangement, there must nevertheless be systematic involvement by the parent in the affairs of the controlled company.

46. In one country where single enterprise principles have been introduced into corporate legislation (New Zealand), directors of wholly or partly owned subsidiaries may act in the interests of the holding company rather than their subsidiary company; there are provisions for streamlined group mergers; and legislation also permits contribution and pooling orders (discussed in A/CN.9/WG.V/WP.74/Add.1).

47. In another country (USA), commercial regulatory laws affecting corporate groups increasingly use single enterprise principles to ensure that the policy underlying specific commercial legislation cannot be undermined or avoided by the use of corporate groups. The courts have assisted in this development, selectively introducing the single enterprise concept to achieve the underlying policies of the legislation. The concept has been applied to insolvency law to avoid specified intra-group transactions, to support intra-group guarantees and to achieve consolidation (discussed in A/CN.9/WG.V/WP.74/Add.1). The courts also have the power to alter the priority of claims in the liquidation of a group entity, either by treating some intra-group loans to that entity as equity rather than debt, or by subordinating intra-group loans to that entity to the claims of its external creditors.

F. Issues for consideration — domestic treatment of corporate groups in insolvency	52-54

III. The onset of insolvency: domestic issues

1. Corporate groups may be structured in ways that minimize the threat of insolvency to one or more members of the group, by entering into cross-guarantees, indemnities and similar types of arrangements. Where problems do arise, a parent company may seek to avoid the insolvency of any of its group members in order to preserve its reputation and maintain its credit in commercial and financial spheres by providing additional finance and agreeing to subordinate intra-group claims to other external liabilities.

2. However, if the complexity of a corporate group's structure is disturbed by the onset of financial difficulty affecting one or more, or even all, of the members of a group that leads to insolvency, problems arise simply because the group is constituted by members that are each recognized as having a separate legal personality and existence. Since the great majority of domestic insolvency and corporate laws omit provision for the effective liquidation or restructuring of groups, even though group issues might be addressed outside the insolvency area in relation to accounting treatment, regulatory issues and taxation, the absence of legislative authority to the contrary or judicial discretion to intervene in insolvency

means that each entity has to be separately considered and, if necessary, separately administered in insolvency. In certain situations, such as where the business activity of a company has been directed or controlled by a related company, the treatment of the group companies as separate legal personalities may operate unfairly. It may, for example, prevent access to the funds of one company for the payment of the debts or liabilities of a related debtor company (except where the debtor company is a shareholder or creditor of the related company), notwithstanding the close relationship between the companies and the fact that the related company may have taken part in the management of the debtor or acted like a director of the debtor and caused it to incur debts and liabilities. Furthermore, where the debtor company belongs to a group of companies, it may be difficult to untangle the specific circumstances of any particular case to determine which group company particular creditors dealt with or to establish the financial dealings between group companies.

3. Much of what already exists in domestic law regarding the insolvency of corporate groups concentrates on the circumstances in which it might be appropriate to consolidate insolvency estates. What is lacking is more comprehensive guidance on how corporate group insolvency should be considered and in particular, whether and in what circumstances corporate groups should be treated differently from the insolvency treatment of a single corporate entity.

A. Commencement

4. The standard to be met for commencement of insolvency proceedings is central to the design of an insolvency law. As the basis of insolvency proceedings, this standard is instrumental to identifying the debtors that can be brought within the protective and disciplinary mechanisms of the insolvency law and determining who may make an application for commencement, whether the debtor, creditors or other parties. The UNCITRAL Legislative Guide on Insolvency Law¹ notes that commencement standards should be transparent, certain and flexible with respect to the types of proceedings available and the ease with which those proceedings can be accessed.

5. The appropriateness of the solutions recommended by the Legislative Guide should be examined for application to corporate groups. A first issue is the insolvency test to be applied and to whom it will apply in the group context. A second question relates to who can apply to commence insolvency proceedings in respect of members of a group or the group as a whole, and the factors that are relevant to that determination.

1. Commencement standard

6. Many insolvency laws require a debtor to be insolvent (however defined) for commencement of insolvency proceedings. On that basis, insolvency proceedings could generally only be commenced against those members of the group that satisfied the insolvency test. One issue of relevance to the question of whether or not a member of a corporate group satisfies the test of insolvency is how various liabilities such as intra-group indebtedness and potential liabilities under a cross-guarantee should be treated.

¹ UNCITRAL Legislative Guide, part two, chapter I, section B, paras. 20-21.

7. In some cases, where for example the structure of the group is diverse, involving unrelated businesses and assets, the insolvency of one or more members of the group may not affect other members or the group as a whole and the insolvent members can be administered separately. In other cases, however, the insolvency of one member of a group may cause financial distress in other members or in the group as a whole, because of the group's integrated structure, with a high degree of interdependence and linked assets and debts between its different parts. In those cases, the ability to consider the group as a whole would facilitate development of an insolvency solution for the whole of the group and avoid piecemeal commencement of proceedings over time if and when additional members of the group became affected by the insolvency proceedings initiated against the originally insolvent members. It would also overcome the difficulties that might arise with respect to identifying the appropriate debtor within the corporate structure against which proceedings should be commenced.

8. This scenario raises one of the key issues in the treatment of groups of companies in insolvency, that is, the degree to which the corporate group is economically and organizationally integrated and more importantly, the extent to which a highly integrated group should be treated differently in insolvency to a group where individual members retain a high degree of independence. That treatment might suggest, for example, that insolvency proceedings could be extended to include group members who do not satisfy the commencement standard, because it is necessary for the greater good of the group as a whole that they be included in those proceedings. A related issue might be whether the court should have the discretion to join or consolidate applications to commence proceedings against more than one insolvent member of a group to facilitate the joint administration of those proceedings. Joint administration is discussed below.

2. Persons permitted to apply

9. As a matter of general insolvency law, the Legislative Guide recommends that creditors and debtors should be permitted to make an application for commencement of insolvency proceedings. It does not specifically address the issue of commencement with respect to corporate groups² and the questions to be considered would include whether a parent company could apply to commence proceedings against one or more members of its group, whether one member is permitted to apply in respect of all other members, including the parent and whether the insolvency representative appointed in respect of one member of the group could apply with respect to another member, for example, could the insolvency representative of the parent apply for commencement of proceedings against a subsidiary?

10. In addition, are there any public policy elements that might suggest that some provision for the possible intervention of a regulatory body (such as a securities agency or corporate regulatory agency) might be appropriate? A related question concerns application for commencement by creditors. While there may be no reason to justify departure from the approach that recommends creditors be permitted to apply for commencement of both liquidation and reorganization in the case of a corporate group, the structure of a corporate group may make it particularly difficult for a creditor to identify the specific part of the group with which it dealt and

² UNCITRAL Legislative Guide, part two, chapter 1, paras. 20-79.

provide the evidence necessary to satisfy the commencement standard.³ In some cases, particularly where the group is loosely organized, the particular debtor may be easily identified. Where there is a high degree of integration, however, the answer may be less clear, especially where the creditor believed that it was dealing with the group as a single enterprise.

11. With respect to intervention by a regulatory or supervisory body, the Legislative Guide notes⁴ that in addition to the right of the Government as a creditor to initiate insolvency proceedings, some countries provide an additional more broadly based power for government or other supervisory authorities to use the insolvency regime to shut down a business in circumstances where the authority is not necessarily a creditor but closure of the business is considered to be in the public interest. In that case, a demonstration of illiquidity is not always necessary, enabling the Government to terminate the operations of businesses that have been engaged in certain activities, generally of a fraudulent or criminal nature or involving serious breach of regulatory obligations or a combination of these. The Legislative Guide suggests that given the potential for such a power to be misused in circumstances unrelated to insolvency and for public interest grounds to be very broadly defined, it is highly desirable that such powers be available only in very limited circumstances and only as a last resort in the absence of appropriate remedies under other laws. These limited circumstances may include the use of insolvency powers in conjunction with enforcement of laws, such as laws relating to money-laundering or regulation of securities, where a demonstration of insolvency may not be required. The Legislative Guide recommendations do not specifically refer to regulatory authorities as being amongst those parties permitted to make an application for commencement of insolvency proceedings.⁵

12. As a general rule, insolvency laws respect the separate legal status of each member of a corporate group and a separate application for commencement of insolvency proceedings is required to be made for each insolvent entity. There are some limited exceptions, however, which allow a single application to be extended to other members of the group where, for example, all interested parties consent to the inclusion of more than one company (South Africa); or there is a relationship between the companies that is variously described, but involves, for example, a significant degree of interdependence or control; intermingling of assets; the fictitious nature of the group; unity of identity or other similar characteristics (South Africa, Spain, France, Argentina, Mexico, USA⁶) that need not necessarily arise from the legal relationship (such as holding company-subsidiary) between the companies. Such joint administration (sometimes also referred to as procedural or administrative consolidation) does not affect the substantive rights of each of those debtors or the liability of each member to its own creditors. Appointment of the same insolvency representative for each company would facilitate their joint administration.

³ UNCITRAL Legislative Guide, part two, chapter I, paras. 37-41 and 48-53, for a discussion of creditor application.

⁴ UNCITRAL Legislative Guide, part two, chapter I, para. 42.

⁵ Recommendation 14 provides that: "The insolvency law should specify the persons permitted to make an application for commencement of insolvency proceedings, which should include the debtor and any of its creditors."

⁶ USA: Bankruptcy Rule 1015 explicitly contemplates joint administration.

B. Effects of commencement

13. The ways in which the commencement of insolvency proceedings will affect the debtor and its assets are discussed in detail with respect to debtors engaged in commercial activities in the UNCITRAL Legislative Guide on Insolvency Law (part two, chapter I). The Legislative Guide does not, however, discuss how those effects might or should differ in the case of the insolvency of one or more members of a corporate group. Some of the effects that might need to be considered in the group context include the following.

14. First, the appointment of the same insolvency representative in respect of each group member. While many insolvency laws do not address this question, there are some jurisdictions where this has become a practice (including Australia, England and Germany). This has also been achieved to a limited extent in some cross-border insolvency cases in the EU (discussed further below). If this could be achieved, it would facilitate coordinated resolution of the insolvencies of the relevant group members. As a safeguard against possible conflict, the insolvency representative could be required to give an undertaking or be subject to a practice rule or statutory obligation to seek direction from the court in the event a conflict arises. If appointment of the same insolvency representative were not possible, consideration might need to be given to what additional powers insolvency representatives might require to facilitate coordination of the different proceedings, including: sharing and disclosure of information; proposal and negotiation of coordinated reorganization plans (unless preparation of a single group plan was possible as discussed below); use of avoidance powers and so forth. A related question concerns whether an insolvency representative appointed to the insolvency proceedings of a parent company should have any powers that might override those of insolvency representatives appointed in respect of subsidiaries?

15. Second, the manner in which potential conflicts (for example, because of cross-guarantees members of a group, inter-group debts, wrongdoing by one member of a group that affects another member) should be addressed.

16. Third, the need, in jurisdictions that permit management to remain in office (whether under supervision or not), for any further or special provisions in the case of a corporate group.

17. Fourth, the appropriateness of provisions relating to application of a stay or suspension in the case of a single debtor to the case of a corporate group.

18. Fifth, provisions applicable to use and disposal of assets of the affected group members once proceedings commence and whether any special provisions are required, particularly with respect to the use of cash.

19. Sixth, the need for special provisions with respect to post commencement finance for a corporate group (or some two or more of its members). This issue is of particular relevance in relation to corporate groups in an international setting (discussed in A/CN.9/WG.V/WP.74/Add.2). The Legislative Guide recognizes that the continued operation of the debtor's business after the commencement of insolvency proceedings is critical to reorganization and, to a lesser extent, liquidation where the business is to be sold as a going concern. To maintain its business activities, the debtor must have access to funds to enable it to continue to pay for crucial supplies of goods and services, including labour costs, insurance, rent, maintenance of contracts and other operating expenses, as well as costs

associated with maintaining the value of assets. The Guide notes, however, that many jurisdictions restrict the provision of new money in insolvency or do not specifically address the issue of new finance or the priority for its repayment in insolvency. The Legislative Guide⁷ includes a number of recommendations aimed at promoting the availability of finance for continued operation or survival of the debtor's business, providing appropriate protection for the providers of post-commencement finance, as well as appropriate protection for those parties whose rights may be affected by the provision of post-commencement finance.

C. Usual or special types of proceedings

20. Many insolvency laws make liquidation and reorganization available as mechanisms to resolve a debtor's financial difficulties. In the context of a corporate group, are these mechanisms sufficient or is there a need for them to be adapted to meet the special needs of corporate group insolvency and, in addition, to provide for the possibility of applying other remedies or relief that are peculiar to a corporate group?

D. Reorganization of two or more members of a group

21. Where insolvency proceedings are commenced against two or more members of a group, irrespective of whether or not those proceedings can be jointly administered, there is a question of whether it will be possible to reorganize the debtors through a single reorganization plan. If such a course of action were to be possible, what provisions amending, or in addition to, those discussed in detail in the reorganization chapter of the Legislative Guide⁸ might be required to address fundamental matters such as: parties competent to propose the plan or participate in its proposal; nature and content of a plan; safeguards concerning a plan; convening and conduct of creditors meetings in respect of a plan; claims of creditors; classification of classes of creditors; voting of creditors and approval of a plan; objections to approval of the plan (or confirmation where it is required); and implementation of a plan.

22. A single reorganization plan would need to take into account the different interests of the different groups of creditors. It would also need to achieve an appropriate balance between the rights of those different groups of creditors with respect to approval of the plan and ensure that rejection by the creditors of one subsidiary would not mean the plan could not go ahead, provided safeguards analogous to those included in recommendation 152 of the Legislative Guide were available. These safeguards might include that the benefits to be received under the plan are equal to or greater than the creditors would have received in liquidation and fair in relation to their position relative to creditors of other group members.

23. These issues generally are not addressed in insolvency laws, although it is suggested that in some jurisdictions applications for commencement by members of the group will be jointly administered as a matter of practice and negotiations will

⁷ UNCITRAL Legislative Guide, part two, chapter II, section D, para. 94, Purpose of legislative provisions preceding recommendation 63. Chapter II, section D is set forth in document A/CN.9/582/Add.5.

⁸ UNCITRAL Legislative Guide, part two, chapter IV.

commonly lead to consensual plans of reorganization in which different entities are effectively treated as one, although the court never formally considers the issue of substantive consolidation (USA).

E. Remedies

24. Because of the nature of corporate groups and the way in which they operate, there may be, as noted above, a complex web of financial transactions between members of the group and creditors may have dealt with different members or even with the group as a single economic entity, rather than with individual members. Untangling the ownership of assets and liabilities and identifying the creditors of each member of the group may involve a complex and costly legal inquiry. However, because of adherence to the separate entity approach, creditors of each entity must in general look to that entity for payment of their debt, and it will generally become necessary, where insolvency proceedings have commenced against one or more of the members of that group, to untangle the ownership of assets and liabilities of the insolvent entities.

25. Where this untangling can be effected, adherence to the separate entity principle operates to limit creditor recovery to the assets of the insolvent entity. Where it cannot be untangled or reasons exist to treat the group as a single enterprise, some laws include remedies that allow the single entity approach to be set aside in specified circumstances. Historically, these remedies have been developed to overcome the perceived inefficiency and unfairness of the traditional separate entity approach in specific cases. These include, for example, extending liability for external debts to other, solvent members of the group, as well as to office holders and shareholders; contribution orders; pooling or (substantive) consolidation orders;⁹ setting aside intra-group transactions; or subordinating intra-group lending. Because of the potential inequity caused to one creditor group when forced to share *pari passu* with creditors of another entity that may be less solvent, these remedies are not universally available, generally not comprehensive and apply only in restricted circumstances. Those remedies involving extension of liability may involve “piercing” or “lifting the corporate veil”, by which shareholders, who are generally shielded from liability for the corporation’s activities, can be held liable for certain activities. The other remedies discussed here do not, although in some circumstances the effect may appear to be similar.

1. Extension of liability

26. Extending the liability for external debts and, in some cases, the actions of the insolvent group member to solvent group members and relevant office holders is a remedy available to individual creditors on a case-by-case basis and depends upon the circumstances of that creditor’s relationship with the debtor.

27. Many laws recognize circumstances in which exceptions to limited liability are available and related companies and relevant office holders could be found liable for the debts and actions of a group member. Some laws adopt a more prescriptive approach and the circumstances are strictly limited; other laws adopt a more expansive approach and courts are given broad discretion in evaluating the circumstances of a particular case on the basis of specific guidelines. In both cases,

⁹ See glossary A/CN.9/WG.V/WP.74.

however, the basis for extending liability beyond the insolvent entity is the relationship between the insolvent and related group members in terms of both ownership and control. A further relevant factor may be the conduct of the related company to the creditors of the insolvent company.

28. Whilst there are different formulations of the circumstances in which liability might be extended, examples generally fall into the following categories, although it should be noted that not all laws reflect all of these categories and to some extent they may overlap:

- (i) Exploitation or abuse by one member of the group (perhaps the parent) of its control over another member of the group, including operating a subsidiary continually at a loss in the interests of the controlling company (Argentina, Australia, South Africa, France, Brazil);
- (ii) Fraudulent conduct by the dominant shareholder, which might include fraudulently siphoning off a subsidiary's assets or increasing its liabilities (France), or conducting the affairs of the subsidiary with an intent to defraud creditors (Liechtenstein);
- (iii) Operating a subsidiary as the parent company's agent, trustee or partner (Australia, UK);
- (iv) Conducting the affairs of the group or of a subsidiary in such a way that some classes of creditors might be prejudiced (for example, incurring liabilities to employees of one group member) (Poland);
- (v) Artificial fragmentation of a unitary enterprise into several entities for the purposes of insulating the single entity from potential liabilities; failure to follow the formalities of treating group members as separate legal entities, including disregarding the limited liability of subsidiaries (USA) or confusing personal and corporate assets; or where the corporate group structure is a mere sham or façade (UK, France), such as where the corporate form is used as a device to circumvent statutory or contractual obligations;
- (vi) Inadequate capitalization of the company, so that it does not have an adequate capital basis for carrying out its operations (USA). This may apply at the time of establishment, or be the result of depletion of the capital by way of refunds to shareholders or if shareholders have drawn more than distributable profits;
- (vii) Misrepresentation of the real nature of the corporate group, leading creditors to believe that they are dealing with a single enterprise, rather than with a member of a group;
- (viii) Misfeasance, where any person, including another group member, can be required to compensate for any loss or damage to a company arising from fraud, breach of duty or other misfeasance, such as actions causing significant injury or environmental damage (USA, UK);
- (ix) Wrongful trading, where directors, including shadow directors,¹⁰ of a company have a duty to monitor, for example, whether the company can properly continue carrying on business in the light of its financial condition and are required to file for insolvency within a specified period once the

¹⁰ Shadow or de facto directors: see glossary A/CN.9/WG.V/WP.74.

company has become insolvent (France, UK, Russia). Permitting or directing a group member to incur debts when it is or is likely to become insolvent would fall into this category; and

(x) Failing to observe regulatory requirements, such as keeping regular accounting records of the subsidiary (France).

29. Generally, the mere incidence of control or domination of a subsidiary by a parent, or other form of close economic integration within a corporate group, is not regarded as sufficient reason to justify disregarding the separate legal personality of each group member and piercing the corporate veil.

30. In a number of the examples where liability might be extended to the parent or other company in control of an insolvent subsidiary, that liability may include the personal liability of the members of the board of directors of the parent or controlling company (who may be described as *de facto* or shadow directors). While directors of a company may generally owe certain duties to that company, directors of a group company may be faced with balancing those duties against the overall commercial and financial interests of the group. Achieving the general interests of the group, for example, may require that the interests of individual members be sacrificed in certain circumstances. Some of the factors that might be relevant to determining whether directors of a controlling company will be personally liable for the debts or actions of an insolvent controlled company include: whether there was active involvement in the management of the controlled entity; whether there was grievous negligence or fraud in the management of the insolvent company; whether the parent's management could be in breach of duties of care and diligence or there was abuse of managerial power; or whether there was a direct relationship between the management of the controlled entity and its insolvency. In some jurisdictions, directors may also be found criminally liable. One of the principal difficulties with extending liability in such cases is proving the behaviour in question to show that the controlling company was acting as a *de facto* or shadow director.

31. There are also laws that provide for parent companies to accept liability for debts of subsidiaries by contract, especially where the creditors involved are banks (Belgium, Netherlands), or voluntary cross-guarantees (Australia). Under other laws, which provide for various forms of integration of groups of companies (Germany, Portugal) the principal company can be jointly and severally liable to the creditors of the integrated companies, for liabilities arising both before and after the formalization of the integration.

2. Contribution orders

32. Another possible remedy in insolvency is the contribution order, by which a court can require a solvent group company to contribute specific funds to cover all or some of the debts of other group companies in liquidation. New Zealand introduced contribution orders into its Corporations Act in 1980.¹¹ The provisions specify that the companies should be "related" companies as defined.¹² Under that

¹¹ New Zealand Companies Act, Sections 271-272.

¹² Companies Act 1993, section 2 (3) which defines the necessary relationship by reference to a holding/subsidiary relationship; direct or indirect ownership of more than half of the shares of the company, either by the other company, members of the other company or companies related to the other company; the businesses of the companies have been conducted in such a way that they cannot be separated; or both the insolvent company and the related company have one of these specified relationships with a third company.

definition, the related company need not be the ultimate holding company of the group member in liquidation. The New Zealand provisions permit a liquidator, creditor or shareholder of a company in liquidation to make an application for a contribution order, although payment must be made to the liquidator, not to the applicant.

33. The New Zealand legislation provides that, in making a contribution order, the court must take into account certain specified circumstances. These include: the extent to which a related company took part in the management of the company in liquidation; the conduct of the related company towards the creditors of the company in liquidation, although creditor reliance on the existence of a relationship between the companies is not sufficient grounds for making an order; the extent to which the circumstances giving rise to liquidation are attributable to the actions of the related company; and such other matters at the court thinks fit.¹³

34. Because of the problem of reconciling the interests of the two sets of unsecured creditors that have dealt with the two separate companies, the power to make a contribution order is not commonly exercised. Furthermore, the courts have taken the view that a full contribution order may be inappropriate if the effect is to threaten the solvency of the related company not already in liquidation. However, conduct of the solvent company after commencement of the liquidation of its related company might be relevant if it indirectly or directly affects the creditors of the related company, such as with respect to failure to perform a contract.

3. Substantive consolidation or pooling

35. A further type of remedy is that of substantive consolidation or pooling (referred to in this note as consolidation). As noted above, where joint administration occurs, the assets and liabilities of the debtors remain separate and distinct, with the substantive rights of claimants unaffected. Consolidation, however, permits the court in insolvency cases involving members of the same group to disregard the separate identity of the group members in appropriate circumstances and consolidate their assets and liabilities and treat them as though held and incurred by a single entity. This has the effect of creating a single estate for the general benefit of all creditors of all consolidated entities. Consolidation might extend to solvent companies belonging to the same group and to individuals, such as the controlling shareholder.

36. The availability of this type of order is not widespread and, where it is available, in general it is not widely used. Few jurisdictions provide statutory authority for consolidation orders.¹⁴ Because of the absence of direct statutory authority or a prescribed standard for the circumstances in which such orders can be made, the courts of some jurisdictions have played a direct role in developing these orders and delimiting the circumstances in which they can be made. As is the case with contribution orders, these circumstances are very limited and tend to be those where there is a high degree of integration of the members of a corporate group and it would be difficult, if not impossible, to disentangle the assets and liabilities of the different entities.

37. The principal concerns with the availability of such orders, in addition to those associated with the fundamental issue of overturning the separate entity principle,

¹³ New Zealand Companies Act, Section 272 (1).

¹⁴ See New Zealand Corporations Act 1980, s272.

include the potential unfairness caused to one creditor group when forced to share *pari passu* with creditors of another entity that may be less solvent and whether the savings or benefits to the collective class of creditors outweighs incidental detriment to individual creditors. An additional issue is the extent to which the availability of consolidation would enable stronger, larger creditors to take advantage of assets that do not and should not properly be available to them. Other considerations include the likelihood that making a consolidation order will encourage creditors who disagree with such an order to seek review of the order, thus prolonging the insolvency proceedings, and the damage likely to be inflicted upon certainty and foreseeability of legal security. Inter-company claims disappear as a result of consolidation and creditors that have security interests in those claims will lose their rights. These concerns have led some commentators to suggest that consolidation should only be available where creditors agree or if not, under careful court control.¹⁵

38. In those jurisdictions where the courts have played a role in developing consolidation orders, they have identified a number of elements considered to be relevant to determining whether or not substantive consolidation is warranted. In each case it is a question of balancing the various elements; no single element is necessarily conclusive and all of the elements do not need to be present. The elements include: the presence or absence of consolidated financial statements; the unity of interests and ownership between the entities; the degree of difficulty in segregating individual assets and liabilities; sharing of overhead, management, accounting and other related expenses among different entities; existence of inter-entity loans and cross-guarantees on loans; the extent to which assets were transferred or funds shifted from one entity to another without observing proper formalities; adequacy of capital; commingling of assets or business operations; common directors or officers; common business location; fraudulent dealings with creditors; and whether consolidation would facilitate a reorganization or is in the interests of creditors. While these many factors remain relevant, some courts have started to focus on two factors in particular, namely, whether creditors dealt with the entities as a single economic unit and did not rely on their separate identity in extending credit, and whether the affairs of the entities are so entangled that consolidation will benefit all creditors.

39. In some jurisdictions where there is no specific legislative authority for consolidation (Australia), voluntary consolidation may nevertheless be facilitated by provisions of the law addressing, for example, group cross-guarantee arrangements; schemes of arrangement; and arrangements between creditors and companies being liquidated or about to be liquidated. It may also be possible for courts to make consolidation orders on a consent basis (Canada). In a recent US case involving an application for consolidation by the parent, creditors of the subsidiary, which was in a much better financial situation, objected to the consolidation. A settlement was agreed whereby those creditors of the subsidiary who objected were promised a substantially greater payout than other unsecured creditors of the parent,¹⁶ thus departing from the strict policy of equal distribution. The possibility of providing

¹⁵ Peter, H., *Insolvency in a Group of Companies, Substantive and Procedural Consolidation: When and How?* In *Challenges of Insolvency Law in the 21st Century*, eds. H. Peter, N. Jeandin, J. Kilborn, Schulthess 2006, p. 206.

¹⁶ *WorldCom and MCI* — Skeel, D. A., *Groups of Companies: Substantive Consolidation in the U.S.*, in *Challenges of Insolvency Law in the 21st Century*, eds. H. Peter, N. Jeandin, J. Kilborn, Schulthess 2006, p. 232.

such an exception to the principle of *pari passu* with respect to consolidation orders has been noted elsewhere.¹⁷

40. In jurisdictions permitting consolidation orders relatively few have been made. In New Zealand's leading case,¹⁸ the court took into account the intermingled corporate group management practices, which included combined board meetings of the various group companies; the use of a single bank account for all the group companies and the policy of using whichever group company was convenient for the various business operations undertaken. In addition to those practices, management had encouraged creditors to treat the corporate group as a single entity, which created confusion among the creditors as to which of the entities they were dealing with and otherwise blurred the legal boundaries of the group companies. The court also concluded that given those arrangements, the liquidity of each group company affected that of the others. A further factor was that the only way to determine the status of various intra-group debts, if a consolidation order were not made, would be through separate legal proceedings, which would invariably increase the cost and length of the liquidation and thereby deplete the funds otherwise available for creditors.

41. The New Zealand court also considered the competing interests of creditors and shareholders and concluded that in insolvency the rights of creditors outweighed those of shareholders, supporting the making of the consolidation order. Moreover, without a consolidation order, the shareholders of some corporate group members would receive a return at the expense of creditors of other group members. The competing interests of shareholders of the different group companies were also to be considered, and in particular the interests of those who were shareholders of some of the companies but not of others.

42. The competing interests of secured and unsecured creditors also need to be considered, and in particular whether the rights of secured creditors should remain unaffected by such an order. The Legislative Guide on Insolvency Law discusses the position of secured creditors in insolvency proceedings and adopts the approach that while as a general principle that the effectiveness and priority of a security interest should be recognized and the economic value of the encumbered assets should be preserved in insolvency proceedings, an insolvency law may modify the rights of secured creditors in order to implement business and economic policies, subject to appropriate safeguards.¹⁹

43. Individual creditors may also be affected by the court treating as invalid any charges, guarantees or other intra-group securities between the companies in liquidation. The New Zealand court in *Re Dalhoff* ruled that an external creditor could not enforce an intra-group guarantee that depended on retaining the separate identity of the group companies in liquidation; that creditor would be treated as an unsecured creditor unless the court considered that it should retain some priority right over other creditors.²⁰

¹⁹ Annex I of the UNCITRAL Legislative Guide sets forth the sections of the Guide addressing the treatment of secured creditors in insolvency proceedings.

²⁰ See note 18.

44. Consolidation orders may also have taxation implications, where for example, taxation rules rely upon identification of the specific source of any returns to shareholders made after distributions to creditors (Australia).

4. Partial substantive consolidation or pooling

45. Courts in some jurisdictions that permit consolidation (NZ), can make a limited order by exempting the claims of specific unsecured creditors and satisfying them from the particular assets of one of the companies in liquidation where it would be equitable to do so. Partial consolidation might be achieved by: extending the order to only unsecured creditors on the basis that secured creditors have relied upon the single entity principle; extending the order to cover only net equity of the solvent group companies, thus not affecting the rights of the creditors of those solvent entities; making the parent company liable only for the negative net equity of the insolvent group member, thus not affecting that members assets; and limiting the consolidation to those assets and liabilities that are intermingled and excepting those assets whose ownership is clear.²¹

5. Avoidance

46. As the UNCITRAL Legislative Guide on Insolvency Law notes,²² many insolvency laws include provisions which apply retroactively from a particular date (such as the date of application for, or commencement of, insolvency proceedings) for a specified period of time (often referred to as the suspect period) and are designed to overturn those past transactions to which the insolvent debtor was a party or which involved the debtor's assets where they have certain effects, such as reducing the net worth of the debtor or upsetting the principle of equal sharing between creditors of the same rank. The types of transactions to which such provisions apply generally include: transactions intended to defeat, hinder or delay creditors; undervalued transactions; preferential transactions; and transactions with related persons. The Legislative Guide notes the difficulties of proving subjective elements of avoidance requirements, such as the intention of the debtor when entering into the transaction and the subjective knowledge of the counterparty. Such elements would be even more difficult to prove in the corporate group context.

47. Those provisions and the types of transactions to which they apply are relevant in the context of the insolvency of one or more members of a corporate group. In that context, they may affect intra-group financial transactions, such as loans, asset transfers and guarantees, as well as third party mortgages or guarantees provided to external lenders. In some jurisdictions (Australia), payments by a company to a creditor of a related company and a guarantee or mortgage given by one group company to support a loan by an outside party to another group company, may be subject to avoidance if the benefits accruing to the guarantor or mortgagor are outweighed by the detriment incurred by entering into the transaction. Intra-group transactions that might involve a director of one group company breaching their fiduciary duties and the other group company having actual or constructive knowledge of that fact, such as loans, asset transfers or third party mortgages given by a company prior to its liquidation but without any direct or indirect benefit, may also be subject to avoidance.

²¹ H. Peter, note 16, p. 208.

²² UNCITRAL Legislative Guide, part two, chapter II, section F, para. 150.

48. The question to be considered with respect to those types of transactions is how they should be treated in insolvency of corporate groups. For example, should the avoidance provisions applicable in the context of a debtor that is a separate corporate entity apply in the context of corporate groups or is there a need for more extensive provisions that include different categories of transactions? In addition, would a relevant criterion in respect of group transactions be whether the transaction conveyed advantages to the parent company that would not normally be granted between unrelated business entities?

6. Subordination

49. In some cases where consolidation might be inappropriate, other remedies such as subordination might be considered. One example might be where insiders (typically the controlling shareholder or a person related to that shareholder) have behaved in a manner that suggests they may not deserve priority relative to external creditors acting in good faith.

50. Some laws provide for subordination of related company debt to that of outside creditors (Spain, Germany, USA). Under the corporate law of one jurisdiction (USA), courts may review intra-group financial arrangements to determine whether particular funds given to a group company should be treated as an equity contribution (thus enabling subordination to creditors' claims), rather than an intra-group loan, or whether debts owed by a group member in liquidation under any intra-group lending arrangement should be subordinated to the rights of external creditors of that group member. For example, a parent company which is the secured creditor of a controlled company in liquidation may have its claims subordinated to those of unrelated unsecured creditors or even minority shareholders of the controlled company, based upon factors such as: the level of capitalization of the controlled company; the parent company's participation in the management of the controlled company; whether the parent company has sought to manipulate intra-group transactions to its own advantage at the expense of external creditors; or whether the parent company has otherwise behaved unfairly, to the detriment of creditors and shareholders of the controlled company.

51. In one jurisdiction that does not have legislative provisions permitting subordination (UK), the courts may in limited cases postpone the prior rights of intra-group creditors to those of unsecured external creditors, under the principles of unjust enrichment.²³ In another jurisdiction (Australia), a creditor group company may voluntarily agree to subordinate its claims to those of external creditors.²⁴

F. Issues for consideration — domestic treatment of corporate groups in insolvency

52. The foregoing discussion indicates those aspects of the treatment of corporate groups in insolvency that are addressed by laws affecting domestic insolvency; it is clear that most attention has focussed upon the circumstances in which the separate

²³ A legal doctrine stating that if a person receives money or other property through no effort of his own, at the expense of another, the recipient should return the property to the rightful owner, even if the property was not obtained illegally. Most courts will order that the property be returned if the party who has suffered the loss brings a lawsuit.

²⁴ Australia: Corporations Law, s563C.

corporate entity approach can be reconsidered once insolvency proceedings have commenced. Few laws specifically address issues such as the commencement of those proceedings against one or more members of a corporate group or the effects of such commencement. While it may be possible to draw the conclusion, therefore, that the manner in which corporate insolvency laws address those issues in the context of individual corporations is appropriate to the insolvency of one or more members of a corporate group, it is suggested that that may not always be the case.

53. The Working Group may also wish to consider what future work might be undertaken on the treatment of corporate groups in insolvency in light of the following possibilities. In considering those possibilities, the Working Group may wish to adopt a working assumption that any proposals or recommendations are not intended to interfere with the high incidence and increasing sophistication of corporate group structures, nor interfere in or create uncertainty for the multitude of commercial transactions that are entered into with corporate groups (often regardless of the absence or presence of legislation directed at the possible insolvency of or within a group). The prospect or possibility that work on corporate groups could propel corporate groups toward sanctuary in a “safe haven” should be avoided.

54. The Working Group may wish to consider the following issues:

(a) The scope of future work and, in particular, how the term “corporate group” could be defined for that purpose;

(b) Access to insolvency proceedings in the event of the insolvency of one or more members of a corporate group, which might include consideration of:

(i) The circumstances under which it would be appropriate for proceedings to be commenced against all or part of a corporate group and the commencement standard that should apply, in particular to members of the group that may not satisfy that standard but should be included in the proceedings for other reasons;

(ii) The person competent to make an application for commencement;

(iii) The effects of commencement and the extent to which they should differ from those discussed in the UNCITRAL Legislative Guide, for example, with respect to use and disposal of assets;

(c) What relief should be available in insolvency proceedings against a corporate group, including:

(i) Procedural relief, such as whether the same insolvency representative could be appointed to each insolvent group member or the extent to which it would be appropriate for insolvency estates to be jointly administered;

(ii) Substantive relief, such as the extent to which formal relief, protections and remedies would be available against solvent members of a corporate group; the extent to which the limited liability protection of separate entities may be waived; the extent to which two or more members of a group may be liable for the external debts of one of them; the extent to which it would be appropriate to facilitate substantive consolidation of assets and liabilities of group companies, contribution orders and subordination of claims; and

(iii) Other forms of relief that might be appropriate in group situations;

(d) Cooperation between courts and insolvency representatives in a group situation, particular where different insolvency representatives are appointed to different members of the group;

(e) Other issues particular to corporate groups that might require special provisions, such as:

(i) The powers of an insolvency representative appointed in the insolvency of a parent company of a group and the extent to which, for example, that insolvency representative could steer the actions to be taken by the (insolvent) subsidiary;

(ii) Whether provisions additional to the recommendations of the UNCITRAL Legislative Guide on Insolvency Law are required with respect to the provision of post-commencement finance in the corporate group context;

(iii) The extent to which the recommendations on avoidance provisions UNCITRAL Legislative Guide on Insolvency Law should apply in the context of corporate groups and whether there is a need for more extensive provisions that include different categories of transactions, including those between members of the group;

(iv) The extent to which special provisions may be needed in the case of corporate groups where management is permitted to remain in office; and

(v) Whether provisions additional to the recommendations of the UNCITRAL Legislative Guide on Insolvency Law are required with respect to reorganization of corporate groups, in particular with respect to negotiation, approval and implementation of a reorganization plan.

IV. International issues

A. Introduction

1. In the international context, the models that have been created to address cross-border insolvency issues have always stopped short of dealing satisfactorily with groups. When the United Kingdom's House of Lords sitting under the chairmanship of Lord Hoffmann considered whether the United Kingdom should subscribe to the European Convention on Insolvency Proceedings,¹ the committee commented on the failure of the convention to deal with groups of companies — the most common form of business model. When the convention became the European Council (EC) Regulation No. 1346/2000 of 29 May 2000 on insolvency proceedings

¹ Opened for signature on 23 November 1995.

(the EC Regulation), it still did not address the issue. When the text of what became the UNCITRAL Model Law on Cross-Border Insolvency was debated, groups were “a stage too far”. Subsequently, when the UNCITRAL Legislative Guide on Insolvency Law was being developed, it was recognized that embarking upon a discussion of the topic of corporate groups could significantly hinder progress with the remainder of the Guide and it therefore contains only a limited introduction, and no recommendations, on the subject of groups.

2. A well-reported case that illustrates one of the key problems with respect to groups in the international context was KPN Quest, which failed the day the EC Regulation came into force, 31 May 2002. KPN Quest was a telecoms group that owned cables around Europe and to the US. The main cables were in rings: for the ring around Europe, the French part of the ring was owned by a French subsidiary; the German part by a German subsidiary, and so on. When the Dutch parent failed, many of the subsidiaries were obliged to file for the protection of the court in the jurisdictions in which they were incorporated. No one was able to coordinate the proceedings and it was effectively broken up. A discussion of other international cross-border cases would confirm the shortcomings of the existing system; there is often a clear tension between the traditional separate legal entity approach to corporate regulation and its implications for insolvency and the facilitation of insolvency proceedings against a group or part of a group in a cross-border situation in a manner that would enable the goal of maximizing value for the benefit of creditors to be achieved.

3. The discussion in document A/CN.9/WG.V/WP.74/Add.1 raises a number of questions with respect to treatment of corporate groups in the domestic context that might also be discussed in the cross-border context, both with respect to the commencement of proceedings against members of a corporate group located in different States and the administration of those proceedings. Jurisdictions may have different tests for what qualifies a debtor to apply for commencement of proceedings, as well as different types of proceedings. For example, not all jurisdictions have well-developed proceedings for reorganization and even amongst those that do there are differences. Some, for example, may provide a form of reorganization that permits the debtor to remain in control, while others do not. Some jurisdictions may facilitate reorganization by permitting various types of post-commencement finance, while others do not (discussed further below). Rules on the effects of commencement vary (e.g. the type of stay available and to whom it will apply), as do rules on powers of the insolvency representative with respect, for example, to avoidance of antecedent transactions and the rules on negotiation, approval and implementation of a plan of reorganization.

4. As already stated, few laws recognize the reality of the corporate group and provide comprehensive rules for their treatment in a domestic context, let alone in cross-border situations. Given the ubiquity of corporate groups in modern commerce, there has been a steady increase in recent years in the number of insolvencies involving multinational corporate groups. Problems encountered with the insolvency of corporate groups in the domestic context are multiplied many times when one or more debtors are part of a multinational group, but each is a separate legal entity located in a different jurisdiction, against which separate proceedings must be initiated. Having concurrent proceedings with respect to related companies taking place in different jurisdictions may not be conducive to achieving a global plan because of the many differences in insolvency laws and the procedures available, if any, for coordinating those different proceedings. The

history of cross-border insolvency since the Maxwell case in 1991² underscores the problems encountered in managing numbers of parallel proceedings, and the need for the creative solutions that have been developed and adopted. The following discussion raises a number of issues specific to the treatment of corporate groups in the cross-border context.

B. Jurisdiction to commence insolvency proceedings

5. The UNCITRAL Legislative Guide notes that a debtor must have a sufficient connection to a State to be subject to its insolvency laws. In many cases, no issue as to the applicability of the insolvency law will arise as the debtor will be a national or resident of the State and will conduct its economic activities in the State through a legal structure registered or incorporated in the State. However, where there is a question of the debtor's connection with a State, insolvency laws adopt different tests, including whether the debtor has its centre of main interests in the State, whether the debtor has an establishment in the State or whether it has assets in the State.

1. Centre of main interests (COMI)

6. The EC Regulation uses COMI to determine where "main" proceedings should be commenced within the EU. The UNCITRAL Model Law on Cross-Border Insolvency (the Model Law) also uses the concept of COMI, although somewhat differently to indicate those proceedings that could be recognized as constituting foreign "main" proceedings for the purposes of assistance. Importantly, the Model Law recognizes that the status of those proceedings as main proceedings may change and accordingly that the order for recognition may need to be modified or terminated.

7. Neither the UNCITRAL Model Law nor the EC Regulation define the term; recital 13 of the EC Regulation does however indicate that the term should correspond to "the place where the debtor conducts the administration of his interests on a regular basis and is therefore ascertainable by third parties". Article 16, paragraph 3, of the UNCITRAL Model Law and article 3 of the EC Regulation also provide that the debtor's registered office, or habitual residence in the case of an individual, is presumed to be the centre of main interests, unless it can be shown that the centre of main interests is elsewhere.

8. Much has been written about the concept of "centre of main interests" and how it is to be interpreted, particularly with respect to the EC Regulation. While the Regulation contains the presumption with respect to registered office, the weight to be given to that element and other factors to be taken into consideration in determining COMI have been the subject of a number of cases in the EU in recent years. It is not the purpose of this note to examine the development of that interpretation in detail; some of the cases involving consideration of COMI have been included in previous UNCITRAL documents (see A/CN.9/580, paras. 58-79 and A/CN.9/579, paras. 8-17).

² This case involved the United States and the United Kingdom. United States Bankruptcy Court for the Southern District of New York, Case No. 91 B 15741 (15 January 1992), and the High Court of Justice, Chancery Division, Companies Court, Case No. 0014001 of 1991 (31 December 1991).

9. In its May 2006 decision in the Eurofood IFSC Ltd case,³ the European Court of Justice's principal conclusion was that the presumption that a company's COMI is in the Member State in which its registered office is situated can be rebutted only if objective factors ascertainable by third parties enable it to be established that the COMI is elsewhere. The Court did not consider what those factors might be, but noted that COMI could be in a location different to the registered office where, for example, the company was not carrying out business in the Member State in which its registered office was situated. In contrast, where a company was carrying out its business in the territory of the Member State in which it had its registered office, the mere fact that its economic choices were or could be controlled by a parent company in another Member State was not enough to rebut the presumption in article 3. The court emphasized that in the system established by the Regulation for determining the competence of the courts of the Member States, each debtor constituting a distinct legal entity is subject to its own court jurisdiction.

10. In cases decided before the ECJ decision, some of the factors considered sufficient to rebut the presumption have related to: the extent of a subsidiary's independence with respect to financial, management and policy decision-making; financial arrangements between parent and subsidiary, including capitalization, location of bank accounts and accountancy services; the division of responsibility with respect to provision of technical and legal documentation and signature of contracts; where design, marketing, pricing and delivery of products was conducted; and conduct of office functions. It remains to be seen how the relevance of, and weight attached to, those factors will be affected by the ECJ decision.

11. It has been suggested by one commentator that French cases decided before the ECJ decision indicated that some courts had been influenced by the fact that in many cases it was practical to bring together group insolvencies and to deal with them in the country where proceedings concerning the parent company have commenced.⁴ Cases cited involved French parent companies with subsidiaries in other Member States. This could also be said about the courts of a number of other jurisdictions in the EU where COMI has been applied, in appropriate cases, in a manner that resulted in the component parts of an insolvent group being administered in one country. Those cases have involved EU Member States, as well Member and non-Member States, such as Switzerland. It has been suggested that those cases achieved better results because of, for example, better coordination and the appointment of the same insolvency representative for all group members. The extent to which this can be achieved is, however, dependant upon the existence of factors supporting a determination that the COMI of all group members is in the same Member State. Those factors will not always exist and the insolvency of two or more group members may require proceedings to be commenced in different jurisdictions with respect to those different group members.

³ C-341/04; available at <http://eur-lex.europa.eu>. Eurofood was registered in Ireland in 1997, with its registered office in Dublin. It is a wholly owned subsidiary of Parmalat SpA, a company registered in Italy, and its principal objective was the provision of financial facilities for the companies in the Parmalat group.

⁴ Jean-Luc Vallens, Eurofenix, Summer 2006, pp. 10-11.

2. Presence of assets and establishment

12. These two tests are discussed in the UNCITRAL Legislative Guide.⁵ In the UNCITRAL Model Law and the EC Regulation, which both define the term “establishment” although slightly differently, proceedings commenced where a debtor has an establishment are secondary or non-main proceedings; in the case of the Regulation, those proceedings are restricted to liquidation of those assets of the debtor situated in that State. The Model Law does not accord recognition to proceedings commenced on the basis of presence of assets, but acknowledges that there might be a need in some cases to commence local proceedings to deal with such assets, provided the debtor is already involved in main proceedings elsewhere (article 28).

C. Conflict of laws

13. The UNCITRAL Legislative Guide on Insolvency Law addresses some of the issues of conflict of laws that arise where insolvency proceedings involve parties or assets located in different States, noting that while insolvency proceedings may typically be governed by the law of the State in which those proceedings are commenced, many States have adopted exceptions to the application of that law.

14. Difficult problems of conflict of laws also arise with respect to multinational enterprises. One issue, for example, is that of parent company responsibility. The responsibility of a parent for a subsidiary might be determined by the law of the country in which the subsidiary is incorporated. That approach might not reflect the unity of the group as a whole as it would place creditors of the subsidiaries in unequal situations depending upon the location of the subsidiary. If, however, responsibility were to be based upon the rules of the jurisdiction of registration of the parent, that would lead to an extension of jurisdiction that might not be acceptable to other jurisdictions. This issue may be resolved to some extent where the parent voluntarily assumes the financial obligations of foreign subsidiaries, but not otherwise. The Working Group may wish to consider the extent to which conflict of laws issues should be addressed in future work on corporate groups and the steps that might be taken in that regard.

D. Provision of post-commencement finance

15. A/CN.9/WG.V/WP.74/Add.1 refers to the recognition in the Legislative Guide of the need to facilitate post-commencement finance in the domestic context. It also notes that many jurisdictions restrict the provision of new money in insolvency or do not specifically address the issue of new finance or the priority for its repayment in insolvency. Some of the structural impediments to providing new money include: lack of statutory authority; personal liability of an insolvency representative or directors or officers of the debtor for incurring the debts that such financing would entail; application of avoidance provisions to financing transactions; problems associated with providing priority to post-commencement finance; and a preference for liquidation over reorganization that makes the issue of such finance difficult to

⁵ UNCITRAL Legislative Guide, part two, chapter I, paras. 15-18.

address.⁶ The existence of these structural impediments with respect to domestic insolvency makes the availability and protection of post-commencement finance in cross-border insolvencies most uncertain. Differences exist between jurisdictions with respect to the priority accorded to post-commencement finance, as well as with respect to the provision of security for post-commencement finance. There are questions of applicable law, and of the use of post-commencement finance within corporate groups. For example, could post-commencement finance obtained by one insolvent corporate group member be used by another member of the same corporate group and if so, under what circumstances and conditions? Could a non-debtor member of a corporate group borrow money post-commencement and permit an insolvent group member to use those funds? In a number of cross-border insolvency cases, issues associated with post-commencement finance have been addressed in cross-border protocols.⁷

16. The recommendations of the Legislative Guide may not be sufficient to address post-commencement finance in the cross-border insolvency context. Some of the issues relevant to further consideration might include the following.

1. Authorization of post-commencement finance

17. The Legislative Guide refers to authorization by the court or consent by creditors (rec. 63) and in the domestic context it is clear which court and which creditors are relevant. In the insolvency of a corporate group, however, where the parent and subsidiaries may be located in different jurisdictions and thus be subject to different insolvency proceedings and different legal regimes, and finance may be required for one or more of those subsidiaries, several questions arise. Can the parent obtain finance in its own jurisdiction and provide it to the subsidiary in another jurisdiction? In that case, would court approval or creditor consent be required in the parent's jurisdiction or that of the subsidiary or perhaps both? Can one court approve post-commencement finance that will have effects in the other jurisdiction? Will both jurisdictions recognize orders made in the other affecting the provision of post-commencement finance in this situation?

18. The Legislative Guide notes that different laws require different types of authorization for different types of debt. For example, unsecured debt incurred by the insolvency representative in the ordinary course of business may not require authorization, while the same debt incurred outside the ordinary course will require authorization. Debt requiring security or priority will generally require authorization by the court and in some cases consent by creditors, especially where priority for post-commencement finance ranks ahead of existing priorities. In the cross-border context, should the requirement for authorization depend on the terms of the post-commencement finance?

19. The Legislative Guide also refers to post-commencement finance being obtained by the insolvency representative. In the type of scenario noted above, would it be the insolvency representative of the parent or the subsidiary? In

⁶ For a comparative summary and matrix of the treatment of post-commencement finance in 54 jurisdictions see International Insolvency Institute (<http://www.iiiglobal.org>); see also *Financing in Insolvency Proceedings*, INSOL 2006, which covers 12 countries: Australia, Brazil, Canada, Germany, Hong Kong, India, Japan, Netherlands, Poland, South Africa, UK and USA.

⁷ See *Digest of Financing Provisions from Cross-Border Insolvency Protocols*, International Insolvency Institute (<http://www.iiiglobal.org>).

addition, are there personal liability implications for the insolvency representative or for officers and directors of the parent or subsidiary?

2. Priority for post-commencement finance

20. The Legislative Guide recommends that an insolvency law should establish the priority to be accorded to post-commencement finance and that it should rank ahead of those claims of unsecured creditors with an administrative priority. In the cross-border context, which claims of which creditors will that priority refer to? How is the question of authorization affected by differences in the priority that may be afforded between the two jurisdictions?

3. Security for post-commencement finance

21. The Legislative Guide also refers to the provision of a security interest for post-commencement finance on unencumbered assets or already encumbered assets provided it does not have priority over existing creditors. It also recommends the procedure to be followed in order to provide a priority senior to that of existing secured creditors. Could the court of one jurisdiction approve post-commencement finance that involved encumbering property in another jurisdiction? Where existing secured creditors objected to the encumbrance of that property, could the court nevertheless approve the provision of a security interest and if so, under what circumstances?

4. Conversion of proceedings

22. Where reorganization proceedings are converted to liquidation, questions may arise as to whether the priority accorded to post-commencement finance in the reorganization will be recognized in a subsequent liquidation. The Legislative Guide recommends that it should be so recognized, but how would that issue be addressed in a cross-border situation?

E. Recognition of foreign proceedings

23. Outside those States to which the EC Regulation applies, achieving a coordinated result for the insolvency of one or more members of a corporate group located in different States depends upon whether foreign proceedings can be recognized and whether parties involved in the various proceedings can cooperate and coordinate with each other. In those States that have adopted the UNCITRAL Model Law on Cross-Border Insolvency,⁸ the answer should be relatively straightforward; proceedings commenced where the debtor has its COMI could be recognized as foreign main proceedings [art. 17], while proceedings commenced where the debtor has an establishment could be recognized as non-main proceedings. Once recognition has been ordered, specified assistance to the foreign proceedings comes into effect and the courts and insolvency representatives associated with the various proceedings are authorized to cooperate and communicate with each other. Where the Model Law has not been adopted,

⁸ Adopted in British Virgin Islands, overseas territory of the United Kingdom of Great Britain and Northern Ireland (2005), Eritrea, Great Britain (2006), Japan (2000), Mexico (2000), Montenegro (2002), Poland (2003), Romania (2003), Serbia (2004), South Africa (2000) and United States of America (2005).

however, reference must be had to national laws, many of which do not contain provisions equivalent to those provided in the Model Law with respect to recognition, assistance, cooperation or coordination.⁹ Because of the absence of such provisions, achieving a coordinated result can be time-consuming, costly and, in some cases, impossible.

24. For those reasons, coordination and harmonization of international insolvency proceedings has been greatly facilitated in recent years by practices and procedures developed by insolvency professionals and courts, starting with individual cases and the need to address particular issues faced by the parties. Agreements or “protocols” have been negotiated by the parties and approved by the courts in the jurisdictions involved. Those cross-border insolvency protocols cover a number of issues, including, for example, settling a particular dispute arising from the different laws in concurrent cross-border proceedings, creating a legal framework for the general conduct of the case and coordinating the administration of an insolvent estate in one State with an administration in another State. Some examples of cross-border protocols are discussed in UNCITRAL document A/CN.9/580, paragraphs 18-48.

25. At its 39th session in 2006, the Commission decided that work to compile practical experience with respect to negotiating and using cross-border insolvency protocols should be undertaken by the Secretariat, initially through informal consultation with judges and insolvency practitioners.¹⁰

F. Cooperation between courts and office holders

26. Chapter IV is a key part of the legislative framework provided by the Model Law, filling the gaps found in many national laws by expressly empowering courts to cooperate in the areas governed by the Model Law and to communicate directly with foreign counterparts. Notably, this is not restricted to the time after which a decision to recognize a foreign proceeding has been made, and it could therefore take place from the earliest point of contact. Authorization is also provided for cooperation between a court in the enacting State and a foreign representative, and between a person administering the insolvency proceeding in the enacting State and a foreign court or a foreign representative. Recognizing that the idea of cooperation might be unfamiliar to many judges and representatives, article 27 of the Model Law sets out possible means of cooperation. The analogous provision of the EC Regulation is article 31, which establishes a duty of cooperation and communication between, in the language of the Regulation, “liquidators”, but does not address the same obligation as between courts or between courts and liquidators. The key to many cross-border insolvency cases involving groups of companies has been the ability and willingness of courts and insolvency representatives to cooperate and communicate to ensure coordination of main and non-main proceedings.

⁹ For an analysis of the law of 39 jurisdictions, see “Cross-Border Insolvency: A Guide to Recognition and Enforcement”, INSOL International, 2003.

¹⁰ See *Official Records of the General Assembly, Sixty-first session, Supplement No. 17 (A/61/17)*, para. 209.

G. Where to from here?

27. In view of the current situation with respect to the insolvency of corporate groups internationally and in the absence of greater convergence of domestic insolvency laws, and in particular the rules addressing treatment of corporate groups, what can be done to facilitate the administration of cross-border insolvency cases, aside from promotion of the UNCITRAL Model Law, and is there a need for legislative provisions specifically addressing the insolvency of groups that might, for example, be added to the Model Law? The EC Regulation, which represents one mechanism that perhaps could be extended to specifically address questions relating to groups, applies directly to participating Member States to ensure that main proceedings commenced in one jurisdiction will be automatically recognized in other States, with certain specified effects. It entails a certain surrender of sovereignty within members States that facilitates its administration. Outside of an integrated regional group like the EU, however, a different approach may be required.

28. Consolidation and joint administration have been discussed above in the domestic context and may have application in cross-border cases. Other proposals are based upon establishing a concept of centre of main interests applicable to a corporate group that would facilitate group commencement and administration of insolvency proceedings.

1. Centre of main interests of a corporate group

29. One solution for addressing the issues noted above with respect to the cross-border treatment of groups might be to establish a concept of “centre of main interests of a corporate group”. This would be of particular relevance in cases where there was a high degree of integration between members of a corporate group and the group was run essentially as a single entity. The concept could be defined by reference to, for example, the issues discussed in the context of the COMI in the EU, such as how and where policy, management and financial decisions of the group were made (which has been referred to as where the “head office functions”¹¹ of the group were carried out) and third party perceptions, particular those of creditors, concerning that location. The COMI would determine the jurisdiction in which main insolvency proceedings against a corporate group or one or more of its members should be commenced and the law that would apply to commencement and administration of the proceedings. Where the adoption of such an approach depended on close integration of the group, the requisite level of integration would need to be defined. Creditors would be required to investigate the connections of a company with which they dealt to ascertain whether or not it was part of a group. It may lead to main insolvency proceedings being commenced against an insolvent subsidiary at the location of the group COMI, irrespective of whether the parent or other subsidiaries registered at that location were also subject to insolvency and local proceedings might still be required at the place of incorporation of the insolvent subsidiary to deal with its business and assets.

30. A different approach could be to deem the COMI of the group to be that of the parent corporation, so that all subsidiaries would also have that COMI and

¹¹ See Gabriel Moss, QC and Professor Dr. Christoph Paulus, *The urgent need for reform — what and when? Current trends in European Rescue and the Impact of the European Insolvency Regulation*, 15 July 2005.

jurisdiction for commencement of proceedings would not be related to place of incorporation or registered office.

2. Substantive consolidation

31. Where a group is closely integrated and assets and liabilities belonging to each group member cannot be easily identified, cross-border substantive consolidation might facilitate the administration of group proceedings. Consideration of this remedy in a cross-border case is, however, much more complex than in a domestic setting, since it raises issues of the insolvency law to apply; the extent to which courts could waive rules in a cross-border situation that would be applied in a domestic case; the avoidance rules to apply; negotiation, approval and implementation of a reorganization plan and so forth. Such consolidation in cross-border cases is not common. There are, however, examples of cases where the insolvency of a closely integrated group involving subsidiaries in different jurisdictions has been administered as if it were a single entity with the consent of creditors and the legality of the solution was never tested in the courts.¹² Some cases between Canada and the USA have involved a consolidated reorganization plan.

3. Joint administration

32. Another approach might be to adopt measures facilitating the broader use of joint administration. As noted above, few jurisdictions provide formally for joint administration of insolvency cases involving members of the same corporate group, although the practice does exist between some jurisdictions, for example, Canada and the United States.¹³ Joint administration requires no formal decision with respect to a group's centre of main interests and would be facilitated by adoption of the UNCITRAL Model Law, to provide a legislative framework for cross-border cooperation and communication, and the use of cross-border protocols or other mechanisms to address procedural and administrative issues between the different jurisdictions.

¹² *Bramalea* involved a corporation headquartered in Canada, with operating subsidiaries in Canada and the USA, as well as a number of partnerships and joint venture arrangements, discussed in Ziegel, J, *Corporate Groups and Crossborder Insolvencies: A Canada-United States Perspective*, 7 *Fordham J. Corp & Fin. L.* 367. There are additional examples of such an approach being used in the EU.

¹³ US law provides for companies related to an original applicant (where the relationship is defined) to file in the same court provided the original applicant has its domicile, residence, principal place of business or principal assets in the district of that court. Once the application has been made, the court may make an order for joint administration of the estate (US: Bankruptcy Code, title 28, 1408).

H. Issues for consideration: international treatment of corporate groups

33. A/CN.9/WG.V/WP.74/Add.1 raises a number of issues for consideration by the Working Group with respect to the treatment of corporate groups in insolvency in a domestic context. In addition to those issues, the Working Group may also wish to consider the following issues as they apply to the international context:

(a) Definition or description of a “corporate group” and the ways in which it might differ from the domestic context;

(b) Access to insolvency proceedings and in particular the jurisdiction in which single proceedings for a corporate group might be commenced by reference, for example, to some concept of COMI for corporate groups;

(c) The relief available in international proceedings, including joint administration and consolidation; and

(d) Provisions additional to those contained in the UNCITRAL Legislative Guide on Insolvency Law that might be required with regard to post-commencement finance.

D. Form of future work	93-94

I. Introduction

1. At its thirty-ninth session, in 2006, the Commission agreed that the topic of the treatment of corporate groups in insolvency was sufficiently developed for referral to Working Group V (Insolvency Law) for consideration in 2006 and that the Working Group should be given the flexibility to make appropriate recommendations to the Commission regarding the scope of its future work and the form it should take, depending upon the substance of the proposed solutions to the problems the Working Group would identify under that topic.

2. At its thirty-first session, held in Vienna from 11 to 15 December 2006, the Working Group agreed that its current discussion of the treatment of corporate groups in insolvency suggested the need for further work; that the UNCITRAL Legislative Guide on Insolvency Law and the UNCITRAL Model Law on Cross Border Insolvency provided a sound basis for the unification of insolvency law; and that the integrity of those texts should be maintained in any future work. It was also agreed that the current work was intended to complement those texts, not to replace them (see A/CN.9/618, paragraph 69).

3. On that occasion, it was suggested that a possible method of work would entail the consideration of the provisions contained in these existing texts that might be relevant in the context of corporate groups and the identification of those issues that required additional discussion and the preparation of additional recommendations. Other issues, although relevant to corporate groups, could be treated in the same manner as in the Legislative Guide and Model Law. It was also suggested that the possible outcome of that work might be in the form of legislative recommendations supported by a discussion of the underlying policy considerations (see A/CN.9/618, paragraph 70).

II. Organization of the session

4. Working Group V (Insolvency Law), which was composed of all States members of the Commission, held its thirty-second session in New York from 14 to 18 May 2007. The session was attended by representatives of the following States members of the Working Group: Canada, Chile, China, Colombia, Croatia, Fiji, France, Germany, Guatemala, India, Iran (Islamic Republic of), Italy, Jordan, Kenya, Lithuania, Madagascar, Mexico, Morocco, Nigeria, Pakistan, Poland, Qatar, Republic of Korea, Russian Federation, Spain, Sweden, Switzerland, Thailand,

Tunisia, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America, Venezuela (Bolivarian Republic of) and Zimbabwe.

5. The session was also attended by observers from the following States: Denmark, Egypt, El Salvador, Holy See, Ireland, Malaysia, Netherlands, Philippines, Romania, Senegal, Slovenia, Sudan and Yemen.

6. The session was also attended by observers from the following international organizations:

(a) **Organizations of the United Nations system:** International Monetary Fund (IMF) and the World Bank;

(b) **Intergovernmental organizations:** Asian-African Legal Consultative Organization (AALCO), Asian Development Bank (ADB), European Central Bank (ECB) and the European Commission (EC);

(c) **International non-governmental organizations invited by the Working Group:** American Bar Association (ABA), INSOL International, International Bar Association (IBA), International Insolvency Institute (III) and International Women's Insolvency & Restructuring Confederation (IWIRC).

7. The Working Group elected the following officers:

Chairman: Mr. Carlos Sánchez Mejorada y Velasco (Mexico)

Rapporteur: Mr. Adam Ożarowski (Poland)

8. The Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.V/WP.75);

(b) A note by the secretariat on the treatment of corporate groups in insolvency (A/CN.9/WG.V/WP.76 and Add.1 and 2).

9. The Working Group adopted the following agenda:

1. Opening of the session;
2. Election of officers;
3. Adoption of the agenda;
4. Consideration of the treatment of corporate groups in insolvency;
5. Other business;
6. Adoption of the report.

III. Deliberations and decisions

10. The Working Group began discussion of the treatment of corporate groups in insolvency on the basis of documents A/CN.9/WG.V/WP.76 and Add.1 and 2, and other documents referred therein. The deliberations and decisions of the Working Group on this topic are reflected in section IV below.

IV. Treatment of corporate groups in insolvency

11. The Working Group commenced its deliberations with general observations on the form that the work on corporate groups might take. It was emphasized that the work should build upon the UNCITRAL Legislative Guide on Insolvency Law and the UNCITRAL Model Law on Cross-Border Insolvency without unnecessarily restating those texts and adding additional material only where supported by the Working Group. It was suggested that any decision on the form of the work should be taken at a later stage to fully reflect the outcome of the Working Group's deliberations.

A. Glossary: definition of corporate group

12. The Working Group considered the definition of "domestic corporate group" and "international corporate group" as set forth in paragraph 3 of document A/CN.9/WG.V/WP.76. Some concerns were expressed with respect to the generality of the definition proposed and the consistency of the use of that definition throughout the document. Concerns were also expressed with respect to the contractual element of the definition. It was agreed that further refinement of the definition should take place after deliberations on the substantive issues, with the existing definition sufficing as a preliminary and provisional working basis for those deliberations (see paragraphs 77-84 below).

B. The onset of insolvency: domestic issues

1. Commencement of proceedings

Debtor application for commencement

13. Concerns were expressed on various aspects of the commencement of insolvency proceedings, including the question of solvent entities being the subject of applications for commencement of insolvency proceedings; the extent of creditor applications and, in particular, the ability of a creditor to apply for commencement of insolvency proceedings with respect to a group member, of which it was not a creditor or to a solvent member of which it was a creditor; and the scope of requirements for the giving of notice in a group context, particularly with respect to members of a group that were not the subject of an application for commencement. It was also suggested that the need to differentiate between liquidation and reorganization in the case where applications for both were made against members of a group should also be considered.

Recommendations 1-4

14. Those concerns, in so far as they related to solvent members of a group were also expressed with respect to draft recommendations 1-4 and in particular, the extent to which those recommendations indicated a departure from recommendations 15 and 16 of the Legislative Guide by allowing an application to include a solvent member of a group. It was agreed that such a possibility raised serious concerns for the stakeholders of the solvent group member, including lenders, creditors and shareholders, as well as issues of unfair competition. A further concern related to issues of jurisdiction and determination of the court competent to

consider the proposed joint application. The prevailing view was that draft recommendations 1-4 could not be supported in the suggested draft form, although the view was also expressed that they could provide the basis for further discussion (see paragraphs 19 and 20 below).

15. To focus on the complexity of the different questions raised by the proposal for joint applications, the Working Group agreed to an approach that would examine the issues layer by layer, starting with the simplest hypothetical case. Such an approach would facilitate a clear definition and understanding of the issues at stake at each stage of the insolvency process, both in a domestic context and internationally, and the acceptability of possible solutions.

16. The first example considered was that of two or more members of a corporate group both meeting the commencement standard of recommendation 15 of the Legislative Guide and located in the same jurisdiction. It was generally agreed that those two members should be permitted to apply together for commencement of proceedings. It was added that such an application would not affect the separate identity of the applicants. Where the two members were situated in different jurisdictions, reference would be made to the relevant treatment of jurisdictional issues in the Legislative Guide and to domestic law.

17. The second example raised the question of an application that included a solvent member of the group. It was agreed that that example was much more complex, touching upon the relationship between the solvent and insolvent members, including financial arrangements, management and so forth, as well as the terms of recommendation 15 of the Legislative Guide. With respect to the latter, it was noted that since paragraph (a) of recommendation 15 included the possibility of imminent insolvency, it would also apply in the corporate group context. If, for example, the insolvency of the parent of the group was likely to cause the financial failure of other members of the group, that situation would potentially be covered by recommendation 15.

18. It was pointed out that, as previously discussed, the possibility of including solvent entities in reorganization under the protection of the insolvency law raised fundamental issues of unfair competition and could not be supported. In addition, such an approach would have a direct impact on the provision of finance and credit based upon the separate identity of individual business entities. It was further suggested that a distinction needed to be drawn between including a solvent entity in an application for commencement of proceedings and extending proceedings already commenced to additional entities on the basis of a thorough investigation that could include the views of relevant stakeholders and would involve the application of relevant safeguards under insolvency law. While the former could not be supported, the latter possibility would need to be considered at a later stage.

19. On that basis, some support was expressed in favour of considering the substance of draft recommendation 3 of A/CN.9/WG.V/WP.76 in the context of commencement of insolvency proceedings, rather than in the context of an application for commencement, as the conditions specified would be relevant to determining whether, for example, the proceedings should be jointly administered.

20. After further discussion, the prevailing view was that draft recommendation 1 should be retained and draft recommendations 2-4 deleted, noting the potential relevance of the conditions set forth in draft recommendation 3 to the discussion of joint administration.

Creditor application for commencement

21. On the question of a creditor application for commencement of insolvency proceedings, the Working Group considered whether a creditor could make a joint application against two or more insolvent group members of which it was a creditor. The view that that situation was adequately covered by recommendation 16 of the Legislative Guide received some support. However, there was also support for the view that a recommendation to that effect might be useful, and the secretariat was requested to prepare a draft for future consideration by the Working Group.

Debtor application: notice to creditors

22. With respect to draft recommendation 5, there was support for deleting the words in the second set of square brackets, on the basis that such a requirement was too onerous. Different views expressed were that it would be useful for all creditors of the group to be aware of the commencement of insolvency proceedings and that due process required that all parties whose interests were likely to be affected by the commencement of insolvency proceedings should be informed. It was recalled that recommendations 22-25 of the Legislative Guide addressed several issues relevant to the provision and content of notice on commencement of insolvency proceedings and that those recommendations would apply equally in the corporate group context. As a general matter of drafting, it was suggested that while it would not be necessary to restate the content of the recommendations of the Legislative Guide in this work, it would nevertheless be useful to clearly indicate the connection between this work and the relevant recommendations of the Legislative Guide and clarify that the draft recommendations of this work built upon those of the Legislative Guide. The connection between draft recommendation 5 and recommendation 24 of the Legislative Guide was questioned, especially in the light of the proposal to delete the words in the second set of square brackets. It was observed that while recommendation 24 addressed notification of creditors of the debtor, draft recommendation 5 went further and required creditors of one group member to be given notice of the proceedings commenced against another group member. After discussion, it was agreed that draft recommendation 5 should be retained with deletion of the words as noted above.

23. Support was expressed in favour of retaining draft recommendation 6, with further consideration to be given to its placement in relation to other draft recommendations addressing joint administration.

Creditor application: notice to the debtor

24. It was agreed that draft recommendation 7 should be retained, but that the words “[all members of the corporate group]” should be deleted on the same basis as the deletion of similar words from draft recommendation 5 was agreed.

Joint administration

25. It was noted that since draft recommendation 8 addressed the issue of joint administration it should be discussed in the context of the treatment of assets on commencement of insolvency proceedings.

2. Treatment of assets on commencement of insolvency proceedings

(a) Joint administration and appointment of an insolvency representative

26. The Working Group discussed joint administration and appointment of an insolvency representative on the basis of the considerations set forth in paragraphs 32 and following of document A/CN.9/WG.V/WP.76.

Definition of joint administration

27. It was suggested that the definition of joint administration contained in document A/CN.9/WG.V/WP.74, part I, letter (j) needed further refining. In particular, it was indicated that in the context of corporate groups joint administration could refer to varying levels of integration of proceedings, namely:

(a) Coordination of two or more separate insolvency proceedings regarding members of the same corporate group, each having its own insolvency representative;

(b) Appointment of a single insolvency representative in two or more separate insolvency proceedings regarding members of the same corporate group;

(c) Appointment of a single insolvency representative in single insolvency proceedings regarding two or more members of the same corporate group; and

(d) Pooling of assets and liabilities of two or more members of the same corporate group (substantive consolidation).

28. It was indicated that the purpose of joint administration was to promote cost efficiency and procedural convenience, for instance, through knowledge sharing and preservation of the integrity of the various economic units of the corporate group. Examples of those benefits could be found, for instance, in the possibility of streamlining notice formalities and of holding joint creditors' meetings. It was stressed that the effect of joint administration should be limited to administrative aspects of the proceedings and should not touch upon substantive issues. It was further suggested that joint administration should not prevent the possibility of returning to separate administration of each insolvency proceeding at a later stage.

29. Concerns were expressed with respect to the possibility that joint administration might interfere with rules on jurisdiction in those cases where, under those rules, different courts would have competence over the various members of the corporate group. In response, it was indicated that domestic procedural law might effectively deal with the matter. It was agreed that jurisdictional issues should be considered at a later stage of the work, possibly in conjunction with the discussion of the centre of main interests.

30. The Working Group agreed that, in light of the intended goals, it was desirable that a definition of joint administration should encompass the cases outlined in (a) and (b) of paragraph 27 above. It was further agreed that the cases outlined in (c) and (d) of paragraph 27 above went beyond an acceptable notion of joint administration.

31. It was suggested that joint administration should be permitted both in the case of a joint application by two or more members of the same corporate group and in the case of multiple separate applications. It was added that joint administration should be granted exclusively at the discretion of the court.

Recommendations 8, 9, 10 and 11

32. The Working Group agreed that draft recommendation 8 was acceptable in light of the definition of joint administration and of the additional explanations referred to above. The secretariat was requested to revise the material on joint administration in the light of that discussion. It was also suggested that the bracketed words “in the same court” should be substituted with the words “in different courts or in the same court” to ensure that joint administration would be permitted in both cases.

33. It was suggested that the term “should” be replaced by the term “may” in draft recommendation 9.

34. It was also suggested that draft recommendation 10 should permit the appointment of one or more additional insolvency representatives, in appropriate circumstances.

35. Support was indicated for the inclusion in draft recommendation 11 of practical examples of the manner in which cooperation to the maximum extent could be achieved, along the lines of the examples offered in paragraph 36 of document A/CN.9/WG.V/WP.76.

(b) Application of the stay: recommendation 12

36. In the light of the Working Group decision that solvent group members could not be included in insolvency proceedings, it was suggested that draft recommendation 12 was not appropriate. It was added that it would negatively affect the interests of creditors of the solvent group member. It was also pointed out that membership of a corporate group of which some members were insolvent was not a sufficient basis for such relief to be ordered with respect to a solvent member of the same group and that the availability of such relief would negatively affect access to credit for solvent members of a corporate group and would also raise issues of unfair competition. A different view was that in certain limited circumstances, such as to protect an intra-group guarantee as mentioned in paragraph 31 of document A/CN.9/618, the relief provided in draft recommendation 12 should be available at the discretion of the court. After discussion, it was agreed that draft recommendation 12 should be deleted.

(c) Use and disposal of assets

37. The Working Group considered the question posed in paragraph 53 of document A/CN.9/WG.V/WP.76 concerning the use of assets of a solvent member of a group to support the reorganization of insolvent members.

38. It was noted that although recommendation 54 of the Legislative Guide addressed the use of third-party-owned assets, the reference to a third party would usually be understood as being to a party external to the group. Accordingly, it was suggested that it might be useful, in the corporate group context, to address the situation of a special purpose entity (see A/CN.9/WG.V/WP.74, paragraphs 17-19) established for the purpose of holding assets such as intellectual property that were key to the continuation of the activities of the insolvent entities. It was recalled that the Working Group had discussed that matter at its previous session (A/CN.9/618, paragraph 33), and the concerns expressed at that time were reiterated. The view that no recommendation was required to address the issue received support. It was also suggested, however, that the question of the use of those assets might be

addressed in the context of a reorganization plan and it was agreed that the issue should be further considered in that context.

(d) Post-commencement finance: recommendations 13-19

39. The Working Group emphasized the importance of post-commencement finance to both liquidation, especially in the case of sale as a going concern, and reorganization, and the desirability of including recommendations on the issue to provide information and guidance to those States not familiar with the issue.

40. It was noted that, in the corporate group context, the question of post-commencement finance raised a number of issues that were different to those relating to a single entity, including: in the situation of a single insolvency representative for several members of the group, the possibility of conflict of interest between the needs of the different debtors with respect to ongoing finance; the involvement of solvent members of the group, especially in cases where that member was controlled by the insolvent parent of the group; the use of the assets of a solvent special purpose entity with a single creditor for the purposes of obtaining finance for other insolvent members of the group; balancing the interests of individual members of the corporate group with the reorganization of the group; and the desirability of maintaining, in insolvency proceedings, the financing structure that the group had before the onset of insolvency, especially where that structure involved pledging all of the assets of the group for finance that was channelled through a centralized group entity with treasury functions.

Recommendation 13

41. The view was expressed that since a corporate group did not have legal identity as such, draft recommendation 13 should only refer to the provision of post-commencement to individual members of the group, but not to the corporate group itself. With that revision, the substance of draft recommendation 13 was supported.

Recommendation 14

42. It was noted that draft recommendation 14 was based upon recommendation 63 of the Legislative Guide, with the addition of the alternative texts in square brackets and the specific references to members of a corporate group. It was suggested that the decision on draft recommendation 13 with respect to the references to the group should be reflected in the drafting of recommendation 14. To that end, it was proposed that the language in the first set of square brackets should be deleted and the alternative text retained; that the words following “survival of the business” in the first sentence should be “of that member”; and that the second sentence should refer to the provision of post-commencement finance “for any member of the group”. After discussion, those proposals were supported.

43. Several additional proposals were made with respect to the words “the preservation or enhancement of the value of the estates of one or more members of the group” including: that the reference should be to the value of the corporate group as a whole since the group may have more value than the sum of the members taken separately; that the reference should be limited to the member receiving the post-commencement finance; and that it should be cumulative, referring to both preservation and enhancement of value. After discussion, it was agreed that the text should be retained as drafted.

44. It was also proposed that draft recommendation 14 should be revised to take into account the general agreement of the Working Group that restatement of the recommendations of the Legislative Guide should be avoided and the elements specific to the corporate group context that required addition to or departure from the provisions of the Legislative Guide should be clearly indicated.

45. With respect to the powers of the insolvency representative to obtain post-commencement finance, the view was expressed that, contrary to the language of draft recommendation 14, that power should not be unfettered, in particular because of the potential for conflict of interest in the case of a single insolvency representative in a joint administration of multiple insolvency proceedings. On that basis, it was suggested that approval of the court or of creditors referred to in the second sentence should be a requirement of the insolvency law. A different view was that, as the insolvency representative would be subject to specific duties and liability for actions taken, there was no need to circumscribe the ability of the insolvency representative to obtain post-commencement finance by requiring court or creditor approval. After discussion, the prevailing view was that the second sentence of draft recommendation 14 should be retained as drafted.

46. After discussion, the Working Group agreed to the substance of draft recommendation 14, with the drafting suggestions noted above.

Recommendation 15

47. A number of clarifications were sought as to the meaning of draft recommendation 15 and in particular the phrase “debtor-guarantor” and the tests included in paragraphs (a)-(c), in so far as they referred to concepts such as comparable benefit and economic harm.

48. The question was also raised as to which creditors were referred to in paragraph (b): it was suggested that if the reference was to all creditors, the proposed requirement of seeking consent might prove not only unworkable, but also costly.

49. It was proposed that the requirements contained in paragraphs (a)-(c) should be cumulative rather than alternative in order to ensure the appropriate level of protection. In response, it was suggested that to do so would set a standard so high that it could almost never be met and would defeat the purpose of facilitating post-commencement finance. It was observed that the provision of guarantees in a corporate group context was a common mechanism for financing and what needed to be considered was how that normal practice was affected by the onset of insolvency and the safeguards that were required.

50. In discussing the possible scope of draft recommendation 15, the Working Group considered separately the questions of whether an insolvent group member could provide a guarantee to another insolvent group member and whether a solvent group member could provide a guarantee to an insolvent group member.

51. With respect to the first question, it was observed that that might be prohibited in some States as constituting, for example, a preferential transaction. It was also pointed out that in the context of a single insolvency representative administering multiple insolvency proceedings, a conflict of interest was likely to arise with respect to the provision of such a guarantee.

52. With respect to the second question, it was indicated that to permit such a guarantee to be given would amount to a transfer of the assets of that solvent entity

to the insolvent entity to the detriment of the creditors and shareholders of the solvent entity, and in the context of joint administration would raise a potential conflict of interest. Such an approach could not be supported. In response, it was pointed out that the solvent entity would be acting on its own authority under company law in a commercial context and should not be required to seek additional authority from its creditors to provide financial support to another member of the group if management so wished. It was also suggested that different types of solvent entities, such as special purpose entities with few liabilities and many assets, could be involved in providing such a guarantee; that the solvent group member might have an interest in the financial stability of the parent or of other members of the group, depending upon the specific circumstances; and that the interests of the group as a whole might be a consideration. In the specific context of draft recommendation 15, it was noted that the court was required to assess whether the various safeguards set forth in paragraphs (a)-(c) were met before the guarantee could be provided.

53. It was proposed that many of the difficulties associated with the question might be solved if addressed in the context of a reorganization plan, in which the solvent group member, as well as finance providers, could participate on a contractual basis. While acknowledging that there might be situations where that approach could be appropriate, it was pointed out that very often post-commencement finance was required at any early stage of the insolvency proceedings and before a plan could be negotiated. A further observation was that post-commencement finance might also be required in situations, such as liquidation on a going concern basis, where there would not be a reorganization plan.

54. The Working Group requested the secretariat to reconsider and revise draft recommendation 15 for future consideration, taking into account the different issues raised in the discussion and the need to provide greater clarity with respect to the various elements.

Recommendation 16

55. The Working Group agreed to the substance of draft recommendation 16 with the following revisions: deletion of the reference to a corporate group in the first set of square brackets and amendment of the reference to the ordinary unsecured creditors of “each” member of the group to “that” member of the group.

Recommendation 17

56. The Working Group agreed to the substance of draft recommendation 17 with the following revision: “provided to the group [or member of the group]” substituted with “provided to another member of the group”.

Recommendation 18

57. It was agreed that the two texts in square brackets should be retained with the square brackets removed. A further suggestion was to clarify which secured creditors were concerned by adding the word “affected” to the words “existing secured creditors”. With respect to the alternative at the end of the draft recommendation permitting either consent of the existing secured creditors or adherence to the procedure in draft recommendation 19, the view was expressed that only the consent of the existing creditors should be required. It was observed that to proceed without that approval might raise constitutional issues and constituted a

“cram-down”, which might be acceptable only in exceptional cases such as where a creditor unreasonably withheld its consent. Another view was that draft recommendation 18 had to be considered together with draft recommendation 19, which provided the necessary safeguards to existing secured creditors.

58. After discussion, the substance of draft recommendation 18 was approved with the revisions noted above.

Recommendation 19

59. The Working Group agreed to the substance of draft recommendation 19 with the deletion of the second alternative text in square brackets in paragraph (b) and removal of the square brackets from the first alternative.

60. It was noted that the headings of recommendations 13-19 would need to be revised to reflect the agreements on the substance of each recommendation.

(e) Avoidance: recommendations 20-21

61. At the outset of the discussion, several observations of a general nature were made concerning issues underlying the concepts being discussed. Those included: the question of how a creditor could identify that it was dealing with a member of a corporate group, noting that that question would be of particular importance if the rules applicable to the corporate group context were different to those applicable to single corporate entities; the need for clearer definition of what constituted a corporate group, as well as other concepts and assumptions; and the need to clarify whether the work proceeded from an assumption of corporate separateness and an identification of the circumstances, if any, that might justify a departure from that assumption. The Working Group agreed that those issues needed to be considered.

62. With respect to avoidance, it was recalled that the Legislative Guide addressed that issue in some detail, both in the commentary and the recommendations (part two, chapter II, paragraphs 148-203). The recommendations with respect to related person transactions, however, addressed only the issue of the suspect period (recommendation 90) and the need for specification of the categories of persons to be treated as persons related to the debtor (recommendation 91). The issue for consideration by the Working Group, it was suggested, was whether further treatment was required to address transactions occurring in the group context.

63. A number of questions were raised with respect to the goal of avoidance in the corporate group context, noting that the involvement of parties both internal and external to the group in transactions that might be subject to scrutiny suggested the need to consider whether treatment different to that of the Legislative Guide was required. In particular, it was questioned whether the desired goal should be protection of intra-group transactions based upon the notion of a corporate group as a whole or particular scrutiny of those transactions on the basis that each group member was a separate entity and transactions between them should be considered as related person transactions, within the meaning of the definition of that term in the Legislative Guide (Glossary, paragraph (jj)). Some support was expressed in favour of the latter approach.

64. Support was also expressed in favour of the approach adopted in draft recommendations 20 and 21, which was to draw attention to the fact that transactions occurring in the group context raised special considerations that might need to be addressed in the insolvency law. It was suggested that the possibility of

fraud should be included as a basis for avoiding transactions occurring in the group context.

65. After discussion, the substance of draft recommendations 20 and 21, with the addition of a reference to fraudulent transactions, was approved.

(f) Subordination

66. The Working Group considered the question raised in paragraph 17 of document A/CN.9/WG.V/WP.76/Add.1. Limited support was expressed in favour of the need to address the issue of subordination by way of recommendation.

3. Remedies

Consolidation: recommendation 22

67. The Working Group emphasized that consolidation should be available as a remedy only in very limited and appropriate circumstances and that that approach should be clearly reflected in draft recommendation 22.

68. It was observed that the criteria indicated in paragraphs (a)-(c) of the draft recommendation would generally become apparent only after the commencement of insolvency proceedings and that that point should be more clearly reflected in the drafting.

69. It was suggested that paragraph (a) of draft recommendation 22 might also include a reference to intermingled debts.

70. Some concern was expressed as to the scope of paragraph (b) and the difficulties associated with ascertaining what was in the mind of creditors at the time they entered into transactions with members of a corporate group, as noted in paragraph 27 of A/CN.9/WG.V/WP.76/Add.1. For that reason, it was suggested that the test in paragraph (b) should refer to a majority or significant number of creditors.

71. A further suggestion was that the criterion of benefit to all creditors set forth in paragraph (c) should be regarded as the key factor in ordering consolidation and, as such, would resolve any potential ambiguity in draft paragraph (b). To indicate the significance of that factor, it was agreed that reference to that criterion should be moved from paragraph (c) to the chapeau of the recommendation and that paragraph (c) should be deleted accordingly.

72. It was agreed that a further factor to be considered in ordering consolidation would be the existence of fraudulent schemes or fictitious structures, which should be added as paragraph (d).

73. The substance of draft recommendation 22 was approved with the drafting revisions noted above.

4. Reorganization

Unified reorganization plan: recommendations 23-24

74. With respect to draft recommendation 23, it was proposed that the reference to “proposal” of the plan should be revised to “approval” of the plan; that it should be made clear in the draft recommendation that such a plan would recognize the interests and rights of the creditors of the different group members included in the

plan; and that it might be more appropriate to refer to a “joint plan” rather than to a “unified plan”. The substance of the draft recommendation was approved with those revisions.

75. With respect to draft recommendation 24, the view that a solvent entity could not be included in a reorganization plan by order of the court, because it was not subject to the insolvency law and not part of the insolvency proceedings, was widely supported. Nevertheless, recognizing that there would be circumstances in which such inclusion was appropriate and that it was not unusual in practice, the Working Group agreed that a solvent entity could be included in a reorganization plan on a voluntary basis in order to aid the reorganization of other members of the same corporate group, provided the shareholders and creditors of that solvent entity agreed in accordance with applicable corporate rules. The secretariat was requested to draft a new recommendation to that effect for future consideration.

5. Other issues

76. The Working Group deferred its consideration of the issues raised in paragraph 49 of document A/CN.9/WG.V/WP.76/Add.1 to a future session.

6. Definition of “corporate group”

77. The Working Group discussed a possible definition of “corporate group” in the context of insolvency proceedings on the basis of the text provided in paragraph 3 of document A/CN.9/WG.V/WP.76, as well as of the considerations expressed in paragraphs 7 and following of document A/CN.9/WG.V/WP.74.

78. It was indicated that a number of definitions of corporate groups existed in different areas such as tax, accounting and stock exchange regulations. It was further indicated that such a definition existed also in certain insolvency laws, such as, for instance, Colombia, where that definition was built around the two key ideas of unity of purpose and of unity of decision-making of the members of the corporate group.

79. A concern with respect to the concept of “corporate group” as set forth in paragraph 3 of document A/CN.9/WG.V/WP.76 was the need for third parties to be able to identify their commercial partners as members of a group. As noted above with regard to consolidation, it was indicated that determining the level of awareness of third parties about the existence of the corporate group might entail difficulties. It was added that establishing such a requirement might require a publicity or registration system, and that such a system might not be easy to administer at the cross-border level and would potentially require sanctions for non-compliance.

80. It was suggested that a possible definition of “corporate group” should be built on the basis of certain core elements common to all jurisdictions. Those core elements could be identified in: plurality of enterprises having assets in different jurisdictions; control over the members of the corporate group expressed in the unity of its managerial direction; and actual exercise of that control. It was added that other elements, such as publicity of the membership of a corporate group and third parties’ awareness of the existence of the group, could be added for consideration by individual States.

81. It was further indicated that the Working Group might wish to consider different notions of “corporate group” depending on the context and the scope of the

relevant provision. For instance, it was explained that a broad notion of corporate group might be desirable for the purpose of joint administration and a narrow definition for avoidance.

82. With respect to the definition contained in paragraph 3 of document A/CN.9/WG.V/WP.76, it was observed that the reference to unincorporated enterprises was necessary as those enterprises were subject to insolvency proceedings in a number of States. It was added that that approach was in line with recommendation 8 of the Legislative Guide. Similar remarks were made with respect to the inclusion of a reference to natural persons in that definition.

83. It was further suggested that, while the reference to contractual arrangements in the draft definition of “corporate group” should be maintained, those contracts, such as franchising agreements, which did not entail any control between contract parties, should be excluded.

84. After discussion, the Working Group requested the Secretariat to prepare a new draft definition of “corporate group” in light of the comments expressed above.

C. International issues

1. Jurisdiction to commence insolvency proceedings: centre of main interests (COMI)

85. The Working Group deferred its discussion of the topic of jurisdiction on the commencement of insolvency proceedings to a future session.

2. Treatment of assets on commencement of insolvency proceedings

(a) Joint administration

86. The Working Group agreed to discuss joint administration of insolvency proceedings in the international context at a later session, in conjunction with consideration of the revised recommendations on joint administration in the domestic context.

(b) Post-commencement finance: recommendations 25-33

87. With respect to post-commencement finance, the Working Group noted that some of the revisions agreed with respect to the recommendations on post-commencement finance in the domestic context (see paragraphs 39-60 above), such as the references to the corporate group obtaining such finance, would need to be reflected also in recommendations 25-33, since it would be desirable to have the same rules in both contexts.

88. It was noted, however, that a number of issues arising in the international context did not apply domestically, in particular the issue raised by draft recommendation 27 and the transfer of value between members of the corporate group. It was added that those issues might require the adoption of an approach different from that taken in the domestic context. It was suggested, for example, that the movement of assets in the group context might be governed by economic considerations that would lead to the adoption of a more flexible approach and to a greater willingness to permit those transfers. It was also suggested that the need for greater flexibility should be reflected in the draft text.

89. It was further observed that the recommendations should focus upon the conditions under which post-commencement finance might be available.

90. Concern was expressed with respect to draft recommendation 26 on the basis that it was not clear from the current draft which insolvency representative would be in a position to obtain finance in a corporate group context and on behalf of which entity that finance would be obtained. It was noted in response that the answer to that question might depend upon whether there was a joint administration of the group members or individual insolvency proceedings of those members, each with a distinct insolvency representative.

91. After some preliminary discussion, the Working Group agreed that further discussion of those recommendations should take place at a later session when the revised recommendations on post-commencement finance in the domestic context could be further considered.

3. Remedies: substantive consolidation

4. Reorganization: unified reorganization plans

5. Other issues: conflict of laws

92. The Working Group noted that issues relating to substantive consolidation, unified reorganization plans and conflict of laws raised a number of complex questions in the international context and deferred their consideration to a later session after further discussion of those issues in the domestic context.

D. Form of future work

93. The Working Group agreed that at this stage a decision on the form of its work was not possible. It was generally agreed that the Legislative Guide should form the starting point for that work, and that the issues raised by the treatment of corporate groups in insolvency should be carefully analysed and specific provisions should be developed where required for that context.

94. It was further agreed that working papers in the format of A/CN.9/WG.V/WP.76 and its addenda facilitated the deliberations of the Working Group on the various issues relating to treatment of corporate groups in insolvency, and that that approach should be continued.

**D. Note by the Secretariat on the treatment of corporate groups in insolvency,
submitted to the Working Group on Insolvency Law at its thirty-second session**

(A/CN.9/WG.V/WP.76 and Add.1-2) [Original: English]

1. This note draws upon the material contained in A/CN.9/WG.V/WP.74 and Add.1 and 2, the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide), the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law), and the Report of Working Group V (Insolvency Law) on the work of its thirty-first session (A/CN.9/618). It has been prepared on the basis that the work on corporate groups will form a supplement to the Legislative Guide and therefore follows the format of the Legislative Guide, including both commentary and recommendations. Some explanatory notes on recommendations have also been included, but only for the information of the Working Group.

I. Glossary

2. A glossary of terms relating to corporate groups is included in A/CN.9/WG.V/WP.74. The Working Group may wish to consider which of the explanations for a particular term contained in the Glossary in A/CN.9/WG.V/WP.74 would be the most appropriate for the purposes of revising the Glossary, along the lines of the Glossary contained in the Legislative Guide.

3. Additional terms could include the following:

(a) Domestic corporate group

A number of enterprises, including enterprises that are not necessarily incorporated, that: (a) are [associated by common or interlocking holdings or allied by control, including the capacity to control] [bound together by means of capital or control, including capacity to control]; and (b) organize and conduct their business in a coordinated manner. The capacity to control includes corporate groups based on a contractual arrangement.

(b) International corporate group

A number of enterprises, including enterprises that are not necessarily incorporated, that: (a) are subject, whether through incorporation, the conduct of economic activity, the presence of assets or some other test, to the legislation of different countries; (b) are [associated by common or interlocking holdings or allied by control, including the capacity to control] [bound together by means of capital or control, including capacity to control]; and (c) organize and conduct their business in a coordinated manner.

II. Background

4. The Working Group may wish to consider whether the background material contained in document A/CN.9/WG.V/WP.74, which discusses the nature of corporate groups, reasons for conducting business through corporate groups, definition of the “corporate group” and regulation of corporate groups, could be expanded to reflect additional comparative material based on the practice of different jurisdictions and form the basis of a background chapter for the work to be developed on corporate groups.

III. The onset of insolvency: domestic issues

A. Commencement of proceedings

1. Commencement standards

[Reference: Legislative Guide: part two, chap. I, paras. 20-79 and recommendations 14-29]

5. The standard to be met for commencement of insolvency proceedings is central to the design of an insolvency law. As the basis for insolvency proceedings, that standard is instrumental to identifying the debtors that can be brought within the protective and disciplinary mechanisms of the insolvency law and determining

who may make an application for commencement, whether the debtor, creditors or other parties. It will also affect the type of proceedings that can be brought against a debtor.

6. The Legislative Guide discusses issues relating to commencement of insolvency proceedings in some detail.¹ In general, the considerations identified as applying to commencement against a single debtor will apply in the corporate context, although some additional issues are raised below.

7. Many insolvency laws require a debtor to be insolvent (however defined) for commencement of insolvency proceedings. As a general rule, insolvency laws also respect the separate legal status of each member of a corporate group and a separate application for commencement of insolvency proceedings would therefore be required for each member of the group that satisfied the insolvency test. In that context, one issue of relevance to determining which members of a corporate group satisfy the test of insolvency is how various liabilities such as intra-group indebtedness and potential liabilities under a cross guarantee should be treated.

8. A second key issue in the treatment of corporate groups in insolvency is the degree to which the corporate group is economically and organizationally integrated and how that level of integration affects treatment of the group in insolvency and in particular, the extent to which a highly integrated group should be treated differently to a group where individual members retain a high degree of independence. In some cases, where for example the structure of a group is diverse, involving unrelated businesses and assets, the insolvency of one or more members of the group may not affect other members or the group as a whole and the insolvent members can be administered separately. In other cases, however, the insolvency of one member of a group may cause financial distress in other members or in the group as a whole, because of the group's integrated structure, with a high degree of interdependence and linked assets and debts between its different parts.

2. Persons permitted to apply

9. As a matter of general insolvency law, the Legislative Guide recommends that creditors and debtors should be permitted to make an application for commencement of insolvency proceedings, without distinguishing between liquidation and reorganization. Recommendation 14 provides:

“14. The insolvency law should specify the persons permitted to make an application for commencement of insolvency proceedings, which should include the debtor and any of its creditors.”²

(a) Debtor application

10. Irrespective of the level of integration of a group, an insolvency law may permit a number of insolvent members of the group to jointly apply for commencement of insolvency proceedings or permit applications already made to be joined, where members satisfy the commencement standard (either on the basis that they are already insolvent or likely to become insolvent, where imminent insolvency is a component of the commencement standard).

¹ UNCITRAL Legislative Guide, part two, chap. I.

² This would include a government authority that is a creditor of the debtor.

11. These possibilities would be within the scope of recommendation 15 of the Legislative Guide, which provides:

“Debtor application

15. The insolvency law should specify that insolvency proceedings could be commenced on the application of a debtor if the debtor can show either that:

- (a) It is or will be generally unable to pay its debts as they mature; or*
- (b) Its liabilities exceed the value of its assets.³”*

12. Recommendation 15 makes no distinction between liquidation and reorganization, referring only to insolvency proceedings. In the context of joint applications, recommendation 15 may be more appropriate to reorganization where it is key to the success of the reorganization that the financial circumstances of closely integrated members of the group be addressed in joint insolvency proceedings and possibly through the preparation of a single reorganization plan (see below). It may also be relevant in liquidation where it would facilitate administration of the proceedings to deal with assets together, such as where the insolvent members are closely integrated, or where certain units of the group can be sold as a going concern.

(b) Applications with respect to a solvent group member

13. Where a group is closely integrated, an insolvency law may also permit an application to include group members that do not satisfy the commencement standard, because it is desirable in the interests of the group as a whole that they be included in those proceedings. Such an application might be made by a parent in respect of subsidiary members of the group or by any member in respect of other members, including the parent. Consideration might also be given to permitting an application by an insolvency representative appointed to the insolvency of the parent, where it is determined to be necessary for the success of the proceedings affecting the parent to include other members of the group. Such an approach may facilitate the preparation of a comprehensive reorganization plan, addressing the assets of both solvent and insolvent members of a group. It could also facilitate development of an insolvency solution for the whole of the group, avoiding piecemeal commencement of proceedings over time, if and when additional members of the group became affected by the insolvency proceedings initiated against the originally insolvent members.

14. Factors relevant to determining whether the necessary degree of integration exists might include: that there is a relationship between the companies that is variously described, but involves, for example, a significant degree of interdependence or control; intermingling of assets; the fictitious nature of the group; unity of identity, reliance on management and financial support or other similar factors that need not necessarily arise from the legal relationship (such as parent-subsidiary) between the companies.

³ The intention of this recommendation and the recommendation on creditor applications is to allow legislators flexibility in developing commencement standards, based on a single or dual test approach. Where the insolvency law adopts a single test, it should be based on the debtor's inability to pay debts as they mature (cessation of payments test) and not on the balance sheet test. Where the insolvency law contains both tests (cessation of payments and balance sheet tests), proceedings can be commenced if one of the tests can be satisfied.

15. A joint application for commencement might also be permitted where all interested members of the group consent to the inclusion of one or more other members, whether they are insolvent or not, or all parties in interest, including creditors, so consented. An insolvency law might also consider whether a group member not involved at the time of commencement of insolvency proceedings against other members of the group might later be joined in those proceedings if it is subsequently affected by those proceedings or determined that its joinder would be in the interests of the group as a whole.

(c) Creditor application

16. Although, as noted above, recommendation 14 of the Legislative Guide recommends that both creditors and debtors should be permitted to apply for commencement of insolvency proceedings, without distinguishing between liquidation and reorganization, it also notes that a number of laws only permit debtor applications for reorganization. While there may be no reason to justify departure, in the case of a corporate group, from the general approach that recommends creditors be permitted to apply for commencement of both liquidation and reorganization, the structure of a corporate group may raise particular difficulties for creditors.⁴ In some cases, especially where the group is loosely organized, the particular debtor may be easily identified. Where there is a high degree of integration, however, the issue may be less clear, especially where the creditor believed that it was dealing with the group as a single enterprise, and it may be particularly difficult for a creditor to identify the specific part of the group or a particular debtor with which it dealt and provide the evidence necessary to satisfy the commencement standard. For the same reasons, it might be difficult for a creditor to determine whether liquidation or reorganization proceedings would be more appropriate for a particular debtor where the insolvency law requires such a determination to be made at the time of the application.

17. If certain members of the group are not included in a debtor application under recommendation 15, they might subsequently be the subject of an application by creditors under recommendation 16, which could include a group member that was a creditor of an insolvent group member. Recommendation 16 provides:

“Creditor application

16. The insolvency law should specify that insolvency proceedings could be commenced on the application of a creditor if it can be shown that either:

- (a) The debtor is generally unable to pay its debts as they mature; or*
- (b) The debtor’s liabilities exceed the value of its assets.”*

(d) Application by a government or regulatory authority

18. The Legislative Guide discusses the issue of governmental or other supervisory authorities having the authority to apply for commencement of insolvency proceedings and concludes that such a power should only be available in very limited circumstances and only as a last resort in the absence of appropriate remedies under other laws (see part two, chap. I, paras. 42-44). The Legislative

⁴ UNCITRAL Legislative Guide, part two, chap. I, paras. 37-41 and 48-53, for a discussion of creditor applications.

Guide outlines those circumstances and the desirability of limiting the use of such a power to applications for liquidation.

19. The same considerations would apply to applications by government or regulatory authorities for commencement of insolvency proceedings against two or more members of a corporate group.

3. Notice of application and commencement

(a) Debtor application: notice to creditors

20. Since the rights of creditors of each of the group members involved in a joint administration should not be altered without their agreement, it is desirable that an insolvency law include provisions requiring notice of the commencement of joint proceedings (where the application is made by one or more members of the corporate group) to be given to the creditors of all members involved in the insolvency proceedings. It may be desirable to require notice to be provided to the creditors of all members of the group, particularly where the group is closely integrated and the solvency of members not included in the proceedings may be influenced by the proceedings. Recommendations 24 and 25 of the Legislative Guide address the provision of notice on commencement of insolvency proceedings on an application by the debtor and should apply equally in the context of a corporate group. Creditors disputing issues of insolvency or objecting to joint administration could do so after commencement of the proceedings.

21. Additional information concerning the effect of joint administration could be added to the information to be provided under recommendation 25 of the Legislative Guide, particularly as it affects creditors. That information would be of particular importance to creditors of any solvent member of a group that was included in insolvency proceedings.

(b) Creditor application: notice to the debtor

22. Similarly, recommendation 19 of the Legislative Guide, concerning commencement on a creditor application, should apply in the group context, requiring notice of the application for commencement to be given to those members of the corporate group included in the application, providing them with an opportunity to object. Consideration may also be given to whether notice should be given to members of the corporate group not included in the application, but which may nevertheless be affected by the insolvency proceedings.

Recommendations

Commencement of insolvency proceedings: corporate groups

(1) The insolvency law may permit a joint application for commencement of [insolvency] [reorganization] proceedings to be made by two or more members of a corporate group that satisfy the commencement standard in recommendation 15 of the Legislative Guide.

(2) The insolvency law may permit a joint application for commencement of [insolvency] [reorganization] proceedings to be made by two or more members of a corporate group provided one of them satisfies the commencement standard in recommendation 15 of the Legislative Guide.

(3) The insolvency law may permit an application for commencement of [insolvency] [reorganization] proceedings by [one or more members] [the parent] of a corporate group that satisf[y][ies] the commencement standard of recommendation 15 to be extended to include one or more [members] [subsidiaries] of the group that do not satisfy that standard, where:

(a) [The members to which the application is to be extended] [all members of the group] [creditors of the group member to be included] [all interested parties] consent; or

(b) The court determines that the members of the group to be included in the application are controlled by the insolvent parent; the assets of those members of the group cannot be separated; the affairs of the solvent group member are so intermingled with those of other group members that it would be beneficial for the solvent group member to be included in reorganization proceedings; or creditors have dealt with the group as a single unit.

(4) The insolvency law may permit a parent of a group of companies that meets the commencement standard of recommendation 15 of the Legislative Guide, to determine the other members of the group that should be included in a joint application for commencement of [insolvency] [reorganization] proceedings under recommendation (1).

Debtor application: notice to creditors

(5) The insolvency law should specify that, when joint insolvency proceedings commence against two or more members of a corporate group, notice of the commencement is to be given to all creditors of [members of the corporate group against which proceedings have commenced] [all members of the corporate group, including solvent members].

(6) The insolvency law should specify that the notice of insolvency proceedings is to include, in addition to the information specified in recommendation 25, information on the conduct of the joint administration of particular relevance to creditors.

Creditor application: notice to the debtor

(7) The insolvency law should specify that when an application is made by a creditor for commencement of insolvency proceedings against two or more members of a corporate group, notice of the application is to be given to all [members of the corporate group included in the application] [all members of the corporate group].

Joint administration

(8) The insolvency law may permit two or more [insolvency] [reorganization] proceedings pending [in the same court] against members of the same corporate group to be jointly administered.

Notes on recommendations

23. Recommendations (1)-(4) address the issue of joint applications for commencement of insolvency proceedings against two or more members of a corporate group.

24. Recommendation (1) is intended to address a joint application by all members of a corporate group that satisfy the commencement standard of recommendation 15 of the Legislative Guide.

25. Recommendation (2) is intended to address a joint application by a number of members of a corporate group, provided one of them satisfies the commencement standard of recommendation 15. This would allow solvent members to be included in the application for commencement, without specifying any conditions for that inclusion.

26. Recommendation (3) adopts a different approach, permitting an application made by certain members of a group to be extended to include other members, provided certain conditions are satisfied. The chapeau is drafted to reflect two alternatives: the first is an application by any member that satisfies the commencement standard of recommendation 15 that may be extended to any member that does not satisfy recommendation 15; the second is an application by a parent company satisfying the commencement standard that may be extended to include a subsidiary that does not satisfy that standard. The conditions include, in subparagraph (a), alternatives for extension by consent of relevant parties, including the group member to be included; all members of the group; creditors of the group member to be included; and all interested parties, which would include creditors (whether of the group member to be included or of all group members) and members of the group. Subparagraph (b) establishes conditions based upon control and integration.

27. Recommendation (4) permits the insolvent parent of a corporate group to determine which other members of the group should be included in an application for commencement of insolvency proceedings under recommendation (1).

28. Each of recommendations (1)-(4) includes an alternative with respect to the proceedings to be commenced: insolvency generally, as included in recommendation 15 of the Legislative Guide, or only reorganization, on the basis that these recommendations may be more appropriate to the reorganization of a corporate group.

29. Recommendations (5)-(7) address the provision of notice on application for commencement of proceedings in the case of a creditor application and on commencement in the case of a debtor application, closely following recommendations 19 and 22 of the Legislative Guide; those recommendations establish the difference in the time at which notice is to be given, depending upon whether the application for commencement is made by the debtor or a creditor.

30. Recommendation (8) addresses the possibility that, where insolvency proceedings have already commenced against two or more members of a group, they could be jointly administered.

B. Treatment of assets on commencement of insolvency proceedings

[Reference: Legislative Guide: part two, chap. II, paras. 1-215, and recommendations 35-107; chap. III, paras. 35-74 and recommendations 115-125]

31. The ways in which the commencement of insolvency proceedings affect the debtor and its assets are discussed in detail in the Legislative Guide.⁵ In general, those effects would apply equally to commencement of insolvency proceedings against two or more members of a corporate group. Some of the effects that might differ in the group context are discussed below, with respect to administration of the estates of group members; appointment of an insolvency representative; application of the stay; use and disposal of assets; post-commencement finance; avoidance; subordination; and remedies, including contribution and consolidation orders.

1. Joint administration and appointment of an insolvency representative

32. A joint application would give rise to joint administration (sometimes also referred to as procedural or administrative consolidation) of the estates of those group members included in the proceedings, but should not affect the substantive rights of each of those debtors or the liability of each member to its own creditors. To save time and costs, certain procedures may be able to be conducted jointly, for example meetings of creditors of two or more members of the group being administered. Consideration could be given to whether or not the consent of all affected creditors would be required. Voting would remain separate for each group member on issues relevant to that member.

33. Joint administration of the different estates would be facilitated by the appointment of a single insolvency representative. Such an appointment would ensure coordination of the administration of the various group members, reduce related costs and facilitate the gathering of information on the corporate group as a whole.

34. While many insolvency laws do not address this question, there are some jurisdictions where appointment of a single insolvency representative in the group context has become a practice. This has also been achieved to a limited extent in some cross-border insolvency cases (discussed further below).

35. Where a single insolvency representative is appointed to administer a group involving multiple debtors with complex financial and business relationships and different groups of creditors, conflict may arise, for example, with respect to cross-guarantees, intra-group debts or the wrongdoing by one group member with respect to another group member. As a safeguard against possible conflict, the insolvency representative could be required to give an undertaking or be subject to a practice rule or statutory obligation to seek direction from the court in the event a conflict arises. Additionally, the insolvency law could provide for the appointment of a further insolvency representative to administer the other debtor or debtors involved in the conflict. The obligation of disclosure contained in recommendations 116 and 117 of the Legislative Guide may be relevant to conflict situations arising in a group context.

36. If appointment of a single insolvency representative is not possible, or if more than one insolvency representative is required to be appointed because of an apparent conflict, an insolvency law could specify obligations additional to those applicable to insolvency representatives under the Legislative Guide (recommendations 111, 116-117, 120) to facilitate coordination of the different proceedings. These obligations might include: sharing and disclosure of information; cooperation on use and disposal of assets; proposal and negotiation of

⁵ UNCITRAL Legislative Guide, part two, chap. II.

coordinated reorganization plans (unless preparation of a single group plan is possible as discussed below); coordination of use of avoidance powers; obtaining of post-commencement finance; and coordination of filing and admission of claims.

37. The insolvency law could also address timely resolution of disputes between the different insolvency representatives appointed. Consideration might be given to the question of whether, in a group context, where different insolvency representatives are appointed to administer the parent and different subsidiaries, the insolvency representative appointed to the parent should have any additional coordinating role with respect to the other insolvency representatives or additional powers to resolve disputes or conflicts.

Recommendations

Appointment of a single insolvency representative

(9) The insolvency law should specify that, where insolvency proceedings against two or more members of a corporate group are to be jointly administered, a single insolvency representative may be appointed to conduct that joint administration.

(10) The insolvency law should include measures to address a conflict of interest that might arise in a joint administration where only one insolvency representative is initially appointed. Such measures could include the appointment of an additional insolvency representative.

Appointment of more than one insolvency representative

(11) The insolvency law should specify that, where insolvency proceedings are commenced against two or more members of a corporate group and more than one insolvency representative is appointed, the insolvency representatives should cooperate to the maximum extent possible to facilitate coordination of the administration of the proceedings.

Notes on recommendations

38. Recommendation (9) permits a single insolvency representative to be appointed to a joint administration of insolvency proceedings against two or more members of a corporate group.

39. Recommendation (10), in addition to recommendations 116 and 117 of the Legislative Guide, addresses the issue of conflict that may arise in a joint administration and proposes one way in which that conflict might be addressed. Other possible means that could be included in the recommendation are referred to in the commentary, paragraph 35 above.

40. Recommendation (11) addresses the key importance of facilitating coordination of the proceedings where more than one insolvency representative is appointed in a joint administration. It uses the wording of articles 25 and 26 of the UNCITRAL Model Law on Cross-Border Insolvency: “cooperate to the maximum extent possible”. What that cooperation might cover or how it might be achieved, as discussed in paragraph 36 of the commentary, could be included in the recommendation by way of example.

2. Application of the stay

41. The Legislative Guide notes⁶ that many insolvency laws include a mechanism to protect the value of the insolvency estate that not only prevents creditors from commencing actions to enforce their rights through legal remedies during some or all of the period of insolvency proceedings, but also suspends actions already under way against the debtor. The provisions of the Legislative Guide relating to the application of that mechanism, referred to as a “stay”, would apply generally in the case of insolvency proceedings against two or more members of a corporate group (see recommendations 39-51).

42. One issue that might arise in the context of the insolvency of corporate groups is the extension of the stay to a solvent member that is not subject to the insolvency proceedings (where the insolvency law permits a solvent member of a group to be included in the proceedings, as discussed above, this issue will not arise). Such an extension might be necessary, for example, to protect an intra-group guarantee that relies upon the assets of the solvent group member providing the guarantee. Such extension of the stay has the potential to affect the business of the solvent member and the interests of its creditors, depending upon the nature of the solvent member and its function within the group structure. The day-to-day activities of a trading group member, for example, may be more adversely affected than those of a subsidiary established to hold certain assets or obligations.

43. In some jurisdictions, ordering insolvency-related relief against a solvent member of a group (not included in insolvency proceedings) might not be possible as it might conflict, for example, with the protection of property rights or raises issues of constitutional rights. Nevertheless, it might be possible to achieve the same effect if a court could order provisional measures in conjunction with the commencement of insolvency proceedings against other members of that corporate group in certain cases, such as where there is an intra-group guarantee. The measures may be available at the courts’ discretion, subject to such conditions as the court determines appropriate.

44. Such measures might be covered by recommendation 48 of the Legislative Guide, which provides for the court to grant relief in addition to any relief that might be applicable automatically on commencement of insolvency proceedings (such as that addressed in recommendation 46). As the footnote to recommendation 48 points out, that additional relief would depend upon the types of measures available in a particular jurisdiction and the measures that might be appropriate in a particular insolvency proceeding.

45. Protection for the interests of the creditors, both secured and unsecured, of the solvent member of the group, might be found in the relevant provisions of the Legislative Guide; recommendation 51 for example specifically addresses the issue of protection of secured creditors and grounds for relief from the stay applicable on commencement and might be extended to secured creditors of the solvent group member. Other grounds for relief from the stay might relate to the financial situation of the solvent member and the continuing effect of the stay on its day-to-day operations and, potentially, its solvency.

46. Where a secured creditor is another member of the same corporate group, a different approach to the question of protection might be required, especially where

⁶ UNCITRAL Legislative Guide, part two, chap. II, para. 26.

the insolvency law permits consolidation or subordination of related person claims (see below).

Recommendations

(12) The law should specify that, where insolvency proceedings have commenced against two or more members of a corporate group, the court may grant relief at the request of [a member of the corporate group] [the insolvency representative] where relief is needed to protect and preserve the value of the assets of a member of the corporate group not subject to the insolvency proceedings.

That relief may include:

(a) Staying the commencement or continuation of individual actions or proceedings concerning the assets, rights, obligations or liabilities of the member of the corporate group not subject to the insolvency proceedings;

(b) Staying execution or other enforcement against the assets of the member of the corporate group not subject to the insolvency proceedings;

(c) Suspending the right of a counterparty to terminate any contract with the member of the corporate group not subject to the insolvency proceedings; and

(d) Suspending the right to transfer, encumber or otherwise dispose of any assets of the member of the corporate group not subject to the insolvency proceedings.

Notes on recommendations

47. At its thirty-first session the Working Group agreed that the effects of a stay should not be automatically extended to solvent members of a group, but that there would be certain cases where it could be extended at the discretion of the court and subject to certain conditions.⁷

48. Recommendation (12) is an outline of the types of measure that might apply in such circumstances, based upon recommendation 39 of the Legislative Guide. The Working Group may wish to consider the specific circumstances in which such relief might be appropriate and any conditions to which it might be subject.

49. The Working Group also noted⁸ that recommendation 51 of the Legislative Guide, which addresses relief from measures applicable on commencement of insolvency proceedings, may have some application beyond secured creditors where the stay is ordered against a member of the group not subject to the insolvency proceedings. The Working Group may wish to consider, against the background of recommendation 51, grounds for relief from the stay referred to in recommendation (12) and their application to both secured and unsecured creditors.

3. Use and disposal of assets

50. The Legislative Guide notes⁹ that, although as a general principle it is desirable that an insolvency law not interfere unduly with the ownership rights of

⁷ Report of Working Group V (Insolvency Law) on the work of its thirty-first session, A/CN.9/618, para. 31.

⁸ Ibid., para. 30.

⁹ UNCITRAL Legislative Guide, part two, chap. II, para. 74.

third parties or the interests of secured creditors, the conduct of insolvency proceedings will often require assets of the insolvency estate, and assets in the possession of the debtor being used in the debtor's business, to continue to be used or disposed of (including by way of encumbrance) in order to enable the goal of the particular proceedings to be realized.

51. Where insolvency proceedings concern two or more members of a corporate group, issues may arise with regard to the use of assets belonging to a solvent member of the same group to support ongoing operations of the insolvent members pending resolution of the proceedings. Where those assets are in the possession of one of the insolvent group members, recommendation 54 of the Legislative Guide, which addresses the use of third party owned assets in the possession of the debtor, may be sufficient. Recommendation 54 provides:

“Use of third-party-owned assets

54. The insolvency law should specify that the insolvency representative may use an asset owned by a third party and in the possession of the debtor provided specified conditions are satisfied, including:

(a) The interests of the third party will be protected against diminution in the value of the asset; and

(b) The costs under the contract of continued performance of the contract and use of the asset will be paid as an administrative expense.”

52. Where those assets are not in the possession of any of the insolvent group members, recommendation 54 generally will not apply. There may be circumstances, however, where the solvent group member is included in the insolvency proceedings and the provisions of a group reorganization plan would cover the assets. Where the solvent group member is not included in the proceedings, the question will be whether those assets can be used to support the insolvent group members and if so, the conditions to which that use would be subject. The use of those assets might raise questions of avoidance, particularly where the supporting member subsequently became insolvent, and also raises concerns for creditors of the solvent member.

53. The Working Group may wish to consider the circumstances in which assets of a solvent group member could be used to support the reorganization of insolvent members of the same group, where that solvent member is not subject to the insolvency proceedings.

4. Post-commencement finance

54. The Legislative Guide¹⁰ recognizes that the continued operation of the debtor's business after the commencement of insolvency proceedings is critical to reorganization and, to a lesser extent, liquidation where the business is to be sold as a going concern. To maintain its business activities, the debtor must have access to funds to enable it to continue to pay for crucial supplies of goods and services, including labour costs, insurance, rent, maintenance of contracts and other operating expenses, as well as costs associated with maintaining the value of assets. The Guide notes, however, that many jurisdictions restrict the provision of new money in insolvency or do not specifically address the issue of new finance or the priority

¹⁰ UNCITRAL Legislative Guide, part two, chap. II, section D, para. 94, Purpose of legislative provisions preceding recommendation 63.

for its repayment in insolvency. Very few, if any, of those laws specifically address the issue in the context of corporate groups.

55. The Legislative Guide includes recommendations 63-68, which aim to promote the availability of finance for continued operation or survival of the debtor's business and provide appropriate protection for the providers of post-commencement finance, as well as appropriate protection for those parties whose rights may be affected by the provision of post-commencement finance.

56. While post-commencement finance is important in the context of individual proceedings, as noted in the Legislative Guide, it is even more critical in the group context; if there are no ongoing funds there is very little prospect of reorganizing an insolvent group. One of the questions with respect to post-commencement finance in the corporate group context is whether the assets of a solvent member of a group can be used to obtain financing for an insolvent member from an external source or to fund the insolvent member directly and, if so, what are the implications for the recommendations of the Legislative Guide concerning priority and security. For example, would a solvent subsidiary be entitled to priority under recommendation 64 if it provided funding to its insolvent parent or would that transaction be subject to subordination as intra-group lending? Using group assets to obtain financing may generally be possible where all members of the group are subject to insolvency proceedings; this would be covered by the recommendations of the Legislative Guide. Difficulties are likely to arise, however, where it is proposed that the assets of a solvent member be used to fund an insolvent member or as the basis for obtaining external funding. In general, as noted above, it is not likely to be permitted by insolvency law, although there might be situations where funding could be provided if the creditors of the solvent member consented.

57. In addition to the recommendations included below, recommendation 68 of the Legislative Guide will be relevant where reorganization proceedings are converted to liquidation.

Recommendations

Attracting and authorizing post-commencement finance for a corporate group

(13) The insolvency law should specify that a corporate group or any member of a corporate group can obtain post-commencement financing under the circumstances and standards set forth in recommendations 15-18, below.

(14) The insolvency law should facilitate and provide incentives for post-commencement finance to be obtained by [the insolvency representative of a corporate group] [an insolvency representative of any member of a corporate group] where the insolvency representative determines it to be necessary for the continued operation or survival of the business of the [corporate group [or any of its members]], or the preservation or enhancement of the value of the estates of one or more members of the group. The insolvency law may require the court to authorize, or the creditors of any affected member of the group to consent to the provision of post-commencement finance for the group [or any member of the group], as specified in recommendation 18 and 19, below.

Guarantee or other assurances for repayment of post-commencement finance for a corporate group

(15) The insolvency law should specify that a member of a [corporate group [that is a debtor]] may guarantee or provide other assurance of repayment for post-commencement finance obtained by another member of the corporate group so long as the court determines that:

(a) [The estate of] the debtor-guarantor would receive benefits from such post-commencement finance comparable to those received by the obtainer of post-commencement finance; or

(b) The [creditors] [insolvency representative] of the debtor-guarantor consent to the provision of that guarantee or other assurance of repayment; or

(c) The creditors of the debtor-guarantor would suffer no economic harm as a result of such guarantee or other assurance of repayment.

Priority for post-commencement finance for a corporate group

(16) The insolvency law should establish the priority that may be accorded to post-commencement finance provided to [a corporate group] [or member of a corporate group], ensuring at least the payment of the post-commencement finance provider ahead of the ordinary unsecured creditors of each member of the group, including those unsecured creditors with administrative priority.

Security for post-commencement finance for a corporate group

(17) The insolvency law should enable a member of a corporate group to grant a security interest for repayment of post-commencement finance provided to the group [or member of the group], including a security interest on an unencumbered asset, including an after-acquired asset, or a junior or lower priority security interest on an already encumbered asset of the estate of such member of the group.

(18) The law¹¹ should specify that a security interest over the assets of the estate of any member of the corporate group granted to secure post-commencement finance for [any other member of] the group does not have priority ahead of any existing security interest over the same assets unless the insolvency representative [of each affected member of the group] obtains the agreement of existing secured creditor(s) or follows the procedure in recommendation 19.

(19) The insolvency law should specify that, where any existing secured creditor does not agree [that post-commencement finance should be accorded a priority senior to its security interest], the court may authorize the creation of a security interest having priority over pre-existing security interests provided specified conditions are satisfied, including:

(a) The existing secured creditor was given the opportunity to be heard by the court;

(b) It can be proven that the corporate group cannot obtain the finance [in any other way] [on more favourable terms and conditions]; and

(c) The interests of the existing secured creditor will be protected.

¹¹ This rule may be in a law other than the insolvency law, in which case the insolvency law should note the existence of the provision.

Notes on recommendations

58. With the exception of recommendation (15), these recommendations are based upon recommendations 63-67 of the Legislative Guide.

59. To some extent, recommendations (13) and (14) overlap. Recommendation (13) specifically requires the insolvency law to include provisions enabling post-commencement finance and specifying the applicable circumstances and conditions. Recommendation (14) is based on recommendation 63 of the Legislative Guide and is of general application, focussing upon the desirability of providing incentives for post-commencement finance and addressing the question of consent; it does not explicitly refer to the need for statutory provisions on post-commencement finance.

60. Recommendation (15) addresses the situation where post-commencement finance may be obtained by one member of a group for use by another member and permits the first member to guarantee its repayment, provided certain conditions are met. By including the phrase “[that is a debtor]”, it leaves open the question of whether the member of the group providing the guarantee could be a group member not subject to the insolvency proceedings.

61. As drafted, these recommendations leave open issues of (i) the consolidated administration of the estates of the members of a corporate group; (ii) appointment of one insolvency representative for the corporate group as a whole; and (iii) inclusion of a solvent member of a corporate group in insolvency proceedings related to the other, insolvent, members of the group.

(*continued*)****5. Avoidance**

[Reference: Legislative Guide: part two, chap. II, paras. 148-203 and recommendations 87-99]

1. The recommendations of the UNCITRAL Legislative Guide on Insolvency Law¹ relating to avoidance would generally apply to avoidance of transactions in the context of a corporate group, although additional considerations may apply to transactions between members of the group. A significant expenditure of time and money may be required to disentangle the layers of intra-group transactions in order to determine which, if any, are subject to avoidance. Some transactions that might appear to be preferential or undervalued as between the immediate parties might be considered differently when viewed in the broader context of a closely integrated group, where the benefits and detriments of transactions might be more widely assigned. Similarly, some transactions occurring within a group that might be for legitimate purposes would not take place outside the group if the benefits and detriments were analysed on normal commercial grounds.

2. Intra-group transactions may represent trading between group members; channelling of profits upwards from the subsidiary to the parent; loans from one member to another to support continued trading by the borrowing member; asset transfers and guarantees between group members; payments by a company to a creditor of a related company; a guarantee or mortgage given by one group company to support a loan by an outside party to another group company; or a range of other transactions. A group may have the practice of putting all available money and assets in the group to the best commercial use in the interests of the group as a whole, as opposed to the benefit of the group member to which they belong. This might include sweeping cash from subsidiaries into the financing member of the group. Although this might not always be in the best interests of the subsidiary, some laws permit directors of wholly owned subsidiaries, for example, to act in that manner, provided it is in the best interests of the parent.

3. Some of the transactions occurring in the group context may be clearly identified as falling within the categories of transactions subject to avoidance under recommendation 87² of the Legislative Guide. Other transactions may not be so clearly within the scope of recommendation 87 and may raise issues concerning the extent to which the group was operated as a single enterprise or the assets and liabilities of group members were closely intermingled, thus potentially affecting the nature of the transactions between members and between members and external creditors. There may also be transactions that are not covered by the terms of avoidance provisions. Some insolvency laws, for example, may provide for

¹ UNCITRAL Legislative Guide, recommendations 87-99.

² Recommendation 87 provides:

Avoidable transactions

87. The insolvency law should include provisions that apply retroactively and are designed to overturn transactions, involving the debtor or assets of the estate, and that have the effect of either reducing the value of the estate or upsetting the principle of equitable treatment of creditors. The insolvency law should specify the following types of transaction as avoidable:

(a) Transactions intended to defeat, delay or hinder the ability of creditors to collect claims where the effect of the transaction was to put assets beyond the reach of creditors or potential creditors or to otherwise prejudice the interests of creditors;

(b) Transactions where a transfer of an interest in property or the undertaking of an obligation by the debtor was a gift or was made in exchange for a nominal or less than equivalent value or for inadequate value that occurred at a time when the debtor was insolvent or as a result of which the debtor became insolvent (undervalued transactions); and

(c) Transactions involving creditors where a creditor obtained, or received the benefit of, more than its pro rata share of the debtor's assets that occurred at a time when the debtor was insolvent (preferential transactions).

avoidance of preferential payments to a debtor's own creditors, but not to the creditors of a related group member, unless the payment is made, for example, pursuant to a guarantee.

4. Transactions between members of a corporate group might be covered by those provisions of an insolvency law dealing with transactions between related persons. The Legislative Guide defines "related person" to include members of a corporate group such as a parent, subsidiary, partner or affiliate of the insolvent member of the group against which insolvency proceedings have commenced or a person, including a legal person, that is or has been in control of the debtor. Those transactions are often subject, under the insolvency law, to stricter avoidance rules than other transactions, in particular with regard to the length of suspect periods, as well as presumptions or shifted burdens of proof to facilitate avoidance proceedings³ and dispensing with requirements that the debtor was insolvent at the time of the transaction or was rendered insolvent as a result of the transaction. A stricter regime may be justified on the basis that these parties are more likely to be favoured and tend to have the earliest knowledge of when the debtor is, in fact, in financial difficulty.

5. One approach to the burden of proof in the case of transactions with related persons might be to provide that the requisite intent or bad faith is deemed or presumed to exist where certain types of transaction are undertaken within the suspect period and the counterparty to the transaction will have the burden of proving otherwise. In the context of corporate groups, some laws have established a rebuttable presumption that transactions among corporate group members and between those members and the shareholders of that corporate group would be detrimental to creditors and therefore subject to avoidance. Additionally, the claims of the related group member may be subjected to special treatment and the rights of related group members under intra-group debt arrangements deferred or subordinated to the rights of external creditors of the insolvent members (on subordination, see below).

6. With respect to the commencement of avoidance actions, the level of integration of the group may also have the potential to significantly affect the ability of creditors to identify the group member with which they dealt where the insolvency law permits them to commence avoidance proceedings.

Recommendations

Avoidance

(20) The insolvency law should specify that, in considering whether a transaction of the kind referred to in recommendation 87 (a), (b) or (c) of the Legislative Guide that took place between related persons in a corporate group context should be avoided, the court may have regard to the circumstances of the group in which the transaction took place. Those circumstances may include: the degree of integration between the members of the corporate group that are party to the transaction; the

³ See Legislative Guide, recommendation 97, which provides:

97. The insolvency law should specify the elements to be proved in order to avoid a particular transaction, the party responsible for proving those elements and specific defences to avoidance. Those defences may include that the transaction was entered into in the ordinary course of business prior to commencement of insolvency proceedings. The law may also establish presumptions and permit shifts in the burden of proof to facilitate the conduct of avoidance proceedings.

purpose of the transaction; and whether the transaction granted advantages to members of the group that would not normally be granted between unrelated parties.

(21) The insolvency law may specify that, with respect to the elements referred to in recommendation 97 of the Legislative Guide and their application in the context of a corporate group, special provisions concerning defences and presumptions apply.

Notes on recommendations

7. Recommendation (20) takes note of the fact that transactions occurring within a corporate group raise considerations additional to those generally applying to transactions between related parties. While the provisions of the Legislative Guide would generally apply, the Working Group may wish to consider whether those additional considerations should be reflected in recommendations.

8. At its thirty-first session, the Working Group noted that broad application of rebuttable presumptions concerning transactions between corporate group members and between those members and the shareholders of that group could be detrimental to creditors and should be avoided.⁴ Recommendation (21) notes the need for special consideration to be given to the application of burden of proof provisions and the use of presumptions in the corporate group context, without specifying the detail.

6. Subordination

[Reference: Legislative Guide: part two, chap. V, paras. 55-61]

9. The Legislative Guide notes⁵ that subordination refers to a rearranging of creditor priorities in insolvency and does not relate to the validity or legality of the claim. Notwithstanding the validity of a claim, it might nevertheless be subordinated because of a voluntary agreement or a court order. Two types of claims that typically may be subordinated in insolvency are those of persons related to the debtor and of owners and equity holders of the debtor.

(a) Related person claims

10. In the corporate group context, subordination of related person claims might mean, for example, that the rights of group members under intra-group arrangements could be deferred to the rights of external creditors of those group members subject to insolvency proceedings.

11. As noted above, the term “related person” as used in the Legislative Guide would include members of a corporate group. The mere fact of a special relationship with the debtor, including, in the corporate group context, being another member of the same group, may not be sufficient in all cases to justify special treatment of a creditor’s claim. In some cases these claims will be entirely transparent and should be treated in the same manner as similar claims made by creditors who are not related persons; in other cases they may give rise to suspicion and will deserve special attention. An insolvency law may need to include a mechanism to identify those types of conduct or situation in which claims will deserve additional attention.

⁴ Report of Working Group V (Insolvency Law) on the work of its thirty-first session, A/CN.9/618, para. 44.

⁵ UNCITRAL Legislative Guide, part two, chap. V, para. 56.

Similar considerations apply, as noted above, with respect to avoidance of transaction occurring between members of a corporate group.

12. The Legislative Guide identifies a number of situations in which special treatment of a related person's claim might be justified (e.g. where the debtor is severely undercapitalized and where there is evidence of self-dealing). In the group context, additional considerations might include, as between a parent and a controlled subsidiary, the parent's participation in the management of the subsidiary; whether the parent has sought to manipulate intra-group transactions to its own advantage at the expense of external creditors; or whether the parent has otherwise behaved unfairly, to the detriment of creditors and shareholders of the controlled group member. Under some laws, the existence of those circumstances might result in the parent having its claims subordinated to those of unrelated unsecured creditors or even minority shareholders of the controlled company.

13. Some laws include other approaches to intra-group transactions such as permitting debts owed by a group member that borrowed funds under an intra-group lending arrangement to be involuntarily subordinated to the rights of external creditors of that borrowing member, permitting the court to review intra-group financial arrangements to determine whether particular funds given to a group member should be treated as an equity contribution rather than as a loan, where equity contributions are subordinated to creditor claims (on treatment of equity, see below); and allowing voluntary subordination of intra-group claims to those of external creditors.

14. The practical result of a subordination order in a corporate group context might be to reduce or effectively extinguish any repayment to those group members whose claims have been subordinated if the claims of secured and unsecured external creditors are large in relation to the funds available for distribution. In some cases this might threaten the viability of the subordinated group member and be detrimental not only to its own creditors, but also its shareholders.

(b) Treatment of equity

15. The Legislative Guide notes⁶ that many insolvency laws distinguish between the claims of owners and equity holders that may arise from loans extended to the debtor or their ownership interest in the debtor. With respect to claims arising from equity interests, many insolvency laws adopt the general rule that the owners and equity holders of the business are not entitled to a distribution of the proceeds of assets until all other claims that are senior in priority have been fully repaid (including claims of interest accruing after commencement). As such, these parties will rarely receive any distribution in respect of their interest in the debtor. Where a distribution is made, it would generally be made in accordance with the ranking of shares specified in the company law and the corporate charter. Debt claims, such as those relating to loans, however, are not always subordinated.

16. Few insolvency laws specifically address subordination of equity claims in the corporate group context. One that does allows the courts to review intra-group financial arrangements to determine whether particular funds given to a group member that is now subject to insolvency proceedings should be treated as an equity contribution, rather than as an intra-group loan, enabling it to be postponed behind creditors' claims. Those funds are likely to be treated as equity where the original

⁶ UNCITRAL Legislative Guide, part two, chap. V, para. 76.

debt to equity ratio was high before the funds were contributed and the funds would reduce the ratio; if the paid-up share capital was inadequate; if it is unlikely that an external creditor would have made a loan in the same circumstances; and if the terms on which the advance was made were not reasonable and there was no reasonable expectation of repayment.

17. The Working Group may wish to consider the need for recommendations dealing with subordination in the context of a corporate group and the circumstances in which subordination might be appropriate.

C. Remedies

1. Introduction

18. Because of the nature of corporate groups and the way in which they operate, there may be, as noted above, a complex web of financial transactions between members of the group, and creditors may have dealt with different members or even with the group as a single economic entity, rather than with individual members. Disentangling the ownership of assets and liabilities and identifying the creditors of each member of the group may involve a complex and costly legal inquiry. However, because adherence to the separate entity approach means that creditors of each group member must in general look to that group member for payment of their debt, it will generally become necessary, where insolvency proceedings have commenced against one or more of the members of that group, to disentangle the ownership of their assets and liabilities.

19. Where this disentangling can be effected, adherence to the separate entity principle operates to limit creditor recovery to the assets of the insolvent group member. Where it cannot be effected or other specified reasons exist to treat the group as a single enterprise, some laws include remedies that allow the single entity approach to be set aside. Historically, these remedies have been developed to overcome the perceived inefficiency and unfairness of the traditional separate entity approach in specific cases. In addition to setting aside intra-group transactions or subordinating intra-group lending, the remedies include: extending liability for external debts to other solvent members of the group, as well as to office holders and shareholders; contribution orders; and pooling or (substantive) consolidation orders. Some of these remedies require findings of fault to be made, while others rely upon the establishment of certain facts with respect to the operations of the corporate group. In some cases, particularly where misfeasance of management is involved, other remedies might be more appropriate, such as removal of the offending directors and limiting management participation in reorganization.

20. Because of the potential inequity that may result when one creditor group is forced to share assets and liabilities with other creditors of another group member that may be less solvent, these remedies are not universally available, generally not comprehensive and apply only in restricted circumstances. Those remedies involving extension of liability may involve “piercing” or “lifting the corporate veil”, by which shareholders, who are generally shielded from liability for the corporation’s activities, can be held liable for certain activities. The other remedies discussed here do not, although in some circumstances the effect may appear to be similar.

2. Contribution orders

21. A contribution order is an order by which a court can require a solvent member of a corporate group to contribute specific funds to cover all or some of the debts of other group members in liquidation. Although contribution orders are not widely available under insolvency laws, a few jurisdictions have adopted or are considering adopting these measures. Under those laws that do permit contribution orders, the problem, as noted above, of reconciling the interests of the two sets of unsecured creditors that have dealt with the two separate group companies, has meant that the power to make a contribution order is not commonly exercised. Courts have also taken the view that a full contribution order may be inappropriate if the effect is to threaten the solvency of the related company not already in liquidation, although it might be possible to order a partial contribution that is limited to certain assets, such as the balance remaining after meeting bona fide obligations.

22. Under one law that does provide for contribution orders, the court must take into account certain specified circumstances in considering whether to make an order. These include: the extent to which a related company took part in the management of the company in liquidation; the conduct of the related company towards the creditors of the company in liquidation, although creditor reliance on the existence of a relationship between the companies is not sufficient grounds for making an order; the extent to which the circumstances giving rise to liquidation are attributable to the actions of the related company; the conduct of the solvent company after commencement of the liquidation of its related company, particularly if it indirectly or directly affects the creditors of the related company, such as with respect to failure to perform a contract; and such other matters as the court thinks fit.⁷

3. Substantive consolidation or pooling

(a) Introduction

23. Another remedy is substantive consolidation or pooling (referred to as consolidation). As noted above, where joint administration occurs, the assets and liabilities of the debtors remain separate and distinct, with the substantive rights of claimants unaffected. Consolidation, however, permits the court, in insolvency proceedings involving two or more members of the same corporate group, to disregard the separate identity of each group member in appropriate circumstances and consolidate their assets and liabilities, treating them as though held and incurred by a single entity. This has the effect of creating a single estate for the general benefit of all creditors of all consolidated group members. Consolidation would generally involve the group members against which insolvency proceedings had commenced, but in some cases might extend to a solvent group member, where the affairs of that member were so closely intermingled with those of other group members that it would be beneficial to include it in the consolidation. It may even extend to individuals, such as the controlling shareholder. While typically requiring a court order, consolidation may also be possible on the basis of consensus of the relevant interested parties or by way of an approved reorganization plan.

24. Few jurisdictions provide statutory authority for consolidation orders,⁸ and where the remedy is available, in general it is not widely used. Notwithstanding the

⁷ New Zealand Companies Act 1993, Sections 271 (1)(a) and 272 (1).

⁸ Ibid., s272.

absence of direct statutory authority or a prescribed standard for the circumstances in which such orders can be made, the courts of some jurisdictions have played a direct role in developing these orders and delimiting the appropriate circumstances. This practice reflects increased judicial recognition of the widespread use of interrelated corporate structures for taxation and business purposes. As is the case with contribution orders, the circumstances that would support a consolidation order are very limited and tend to be those where because of a high degree of integration of the members of a corporate group, whether through control or ownership, it would be difficult, if not impossible, to disentangle the assets and liabilities of the different group members and administer the estate of each debtor separately.

25. Consolidation is typically discussed in the context of liquidation and the legislation that does authorize such orders does so only in that context. There are, however, legislative proposals that would permit consolidation in the context of various types of reorganization. In jurisdictions without specific legislation, consolidation orders may be available in both liquidation and reorganization, where such an order would, for example, assist the reorganization of the group.

26. Consolidation might be appropriate where it leads to greater return of value for creditors, either because of the structural relationship between the members of the group and the manner in which they conduct their business and financial relationships or because of the value of assets common to the whole group, such as intellectual property in both a process conducted across numerous group members and the product of that process. A further situation might be where there is no real separation between the members of a group, the group structure being maintained solely for dishonest or fraudulent purposes. Since intra-group trading is increasingly a norm of commercial activity, consolidation could enable an insolvency representative to focus on the external debts of the group where intra-group debts disappeared as a result of consolidation (discussed further below).

27. The principal concerns with the availability of such orders, in addition to those associated with the fundamental issue of overturning the separate entity principle, include, as already noted, the potential unfairness caused to one creditor group when forced to share *pari passu* with creditors of another group member that may be less solvent and whether the savings or benefits to the collective class of creditors outweighs incidental detriment to individual creditors. Creditors opposing consolidation could argue that as they relied on the separate assets of a particular group member when trading with it, they should not be denied a full payout because of their trading partner's relationship with another member of the same group. Creditors supporting consolidation could argue that they had relied upon the assets of the whole group and that it would be unfair if they were limited to recovery against the assets of a single group member.

28. Because it involves pooling the assets of different group members, consolidation may not lead to increased recovery for all creditors, but rather operate to level the recoveries across all creditors, increasing the amount distributed to some at the expense of distributions to others. Additionally, the availability of consolidation may enable stronger, larger creditors to take advantage of assets that do not and should not properly be available to them; encourage creditors who disagree with such an order to seek review of the order, thus prolonging the insolvency proceedings; and damage the certainty and foreseeability of security interests (where intra-group claims disappear as a result of consolidation, creditors that have security interests in those claims will lose their rights).

(b) Circumstances supporting consolidation

29. A number of elements have been identified as relevant to determining whether or not substantive consolidation is warranted, both in the legislation that authorizes consolidation orders and where the courts have played a role in developing these orders. In each case it is a question of balancing the various elements; no single element is necessarily conclusive and all of the elements do not need to be present in any given case. The elements include: the presence or absence of consolidated financial statements for the group; the use of a single bank account for all group members; the unity of interests and ownership between the group members; the degree of difficulty in segregating individual assets and liabilities; sharing of overhead, management, accounting and other related expenses among different group members; the existence of intra-group loans and cross-guarantees on loans; the extent to which assets were transferred or funds shifted from one member to another as a matter of convenience without observing proper formalities; adequacy of capital; commingling of assets or business operations; appointment of common directors or officers and the holding of combined board meetings; a common business location; fraudulent dealings with creditors; the practice of encouraging creditors to treat the corporate group as a single entity, creating confusion among creditors as to which of the group members they were dealing with and otherwise blurring the legal boundaries of the group companies; and whether consolidation would facilitate a reorganization or is in the interests of creditors. A further factor supporting consolidation might be where the only way to determine the status of various intra-group debts, if a consolidation order were not made, would be through separate legal proceedings. Such proceedings would invariably increase the cost and length of the liquidation and deplete the funds otherwise available for creditors.

30. While these many factors remain relevant, some courts have started to focus on two factors in particular, namely, whether creditors dealt with the group as a single economic unit and did not rely on the separate identity of individual group members in extending credit, and whether the affairs of the group members are so intermingled that consolidation will benefit all creditors.

(c) Competing interests in consolidation

31. In addition to the competing interests of the creditors of different members of a corporate group, the competing interests of different types of creditor warrant consideration in the context of consolidation: of creditors and shareholders; of shareholders of the different group companies, and in particular those who are shareholders of some of the companies but not of others; and of secured and priority creditors of different members of a consolidated group.

(i) Owners and equity holders

32. Many insolvency laws adopt the general rule that the rights of creditors outweigh those of owners and equity holders, with owners and equity holders being ranked after all other claims in the order of priority for distribution. Typically, this results in owners and equity holders not receiving a distribution.⁹ In the corporate group context, the shareholders of some group members with many assets and few liabilities may receive a return when the creditors of other group members with fewer assets and more liabilities may not. If the general approach of ranking

⁹ UNCITRAL Legislative Guide, part two, chap. V, para. 76.

shareholders behind unsecured creditors were to be extended, in consolidation, to the group as a whole, all creditors could be paid before the shareholders of any group member received a distribution.

(ii) *Secured creditors*

33. With respect to secured creditors, both internal and external to the group, there is a question of how their rights should be treated in a consolidation. The Legislative Guide on Insolvency Law¹⁰ discusses the position of secured creditors in insolvency proceedings and adopts the approach that while as a general principle the effectiveness and priority of a security interest should be recognized and the economic value of the encumbered assets should be preserved in insolvency proceedings, an insolvency law may nevertheless modify the rights of secured creditors in order to implement business and economic policies, subject to appropriate safeguards.

34. Questions that might arise with respect to consolidation might include: whether a security interest over some or all of the assets of one group member could extend to include assets of another group member where a consolidation order was made or whether that security interest should be limited to the defined pool of assets upon which the secured creditor had originally relied; whether secured creditors with insufficient security could claim the remaining debt against the pooled assets as unsecured creditors; and whether internal secured creditors (i.e. creditors that are other members of the same group) should be treated differently to external secured creditors. One solution with respect to external secured creditors might be to exclude them from the process of consolidation, thus achieving what might be a partial consolidation. Individual secured creditors that relied upon the separate identity of group members, such as where they relied upon an intra-group guarantee, might require special consideration. Where encumbered assets are required for reorganization, a different solution might be possible, such as allowing the court to adjust the consolidation order to make specific provision for such assets. The interests of internal secured creditors also need to be considered; different approaches might include cancelling internal security interests, leaving the creditors with an unsecured claim, or modifying or subordinating those interests.

(iii) *Priority creditors*

35. Similar questions arise with respect to the treatment of priority creditors. Practically, they might benefit or lose from the pooling of the group's assets in the same way as other unsecured creditors. Where priorities, such as those for employee benefits or tax, are based on the single entity principle, a question arises as to how they should be treated across the group, especially where they interact with each other. For example, employees of a group member that has many assets and few liabilities will potentially compete with those of a group member in the opposite situation, with few assets and many liabilities if there is consolidation. While priority creditors generally might obtain a better result at the expense of unsecured creditors without priority, the different groups of those priority creditors might have to adjust any expectations that are based on the single entity principle.

¹⁰ Annex I of the UNCITRAL Legislative Guide sets forth the sections of the Guide addressing the treatment of secured creditors in insolvency proceedings.

(d) Inclusion of solvent group members in consolidation

36. As noted above, consolidation might be extended to include solvent members of a corporate group, either because that group member is covered by the insolvency proceedings or because the affairs of that member are so closely intermingled with those of other group members that it would be beneficial to include it in the consolidation. Where that occurs, the creditors of that solvent group member may have particular concerns and a limited approach might be taken so that the consolidation order extended only to the net equity of the solvent group member in order to protect the rights of those creditors.

(e) Notification of creditors

37. The potential impact of consolidation on creditor rights suggests that affected creditors should have the right to be notified of any application for consolidation and the right to object. The interests of individual creditors who may have relied upon the separate identity of each group member in their dealings with a group would have to be weighed against the overall benefit to be gained by consolidation. One issue to be considered is whether a single objection would be sufficient to prevent consolidation or whether consolidation could nevertheless be ordered. It may be possible, for example, to provide objecting creditors who will be significantly disadvantaged by the consolidation relative to other creditors with a substantially greater level of return than other unsecured creditors, thus departing from the strict policy of equal distribution. It may also be possible to exclude specific groups of creditors with certain types of contracts, for example limited recourse project financing arrangements entered into with clearly identified group members at arm's length commercial terms.

(f) Other issues: timing and inclusion of additional group members over time

38. Additional issues to be considered with respect to consolidation orders include the timing of such an order (whether it could only be made at an early stage of the proceedings or later when it emerged that to do so would enhance the value to be distributed to creditors) and whether an additional group member could be added to an existing consolidation. If the consolidation order is made with the consent of the creditors, or if creditors are given the opportunity to object to a proposed order, the addition of another group member at a later stage of the proceedings has the potential to vary the pool of assets from what was originally agreed or notified to creditors. In that situation, it is desirable that creditors have a further opportunity to consent or object to the addition to the consolidation.

Recommendations*Consolidation*

(21) The insolvency law may permit the court to order insolvency proceedings against two or more members of a corporate group to proceed together as if they were a single entity in appropriate circumstances. In deciding whether appropriate circumstances exist, the court may consider:

(a) The extent to which there was such an intermingling of assets between the group members that it was impossible to disentangle the ownership of individual assets;

- (b) The extent to which creditors had dealt with the members of a corporate group as a single economic unit and did not rely upon their separate identity in extending credit;
- (c) The extent to which consolidation would benefit all creditors; and
- (d) [...].

Notes on recommendations

39. At its thirty-first session, the Working Group agreed that consolidation might be appropriate in certain limited circumstances and that judges would need clear criteria against which to assess the relevant issues.¹¹ Recommendation (21) recognizes that a court may order consolidation in appropriate circumstances and indicates some of the criteria that might be relevant to determining whether those circumstances exist in a particular case. A number of additional examples of potentially appropriate circumstances are outlined in paragraph 29 above.

D. Reorganization

[Reference: Legislative Guide, Part two, chap. IV and recommendations 139-159]

40. The Legislative Guide includes a detailed treatment of issues relevant to reorganization and the negotiation, approval and implementation of a reorganization plan.¹² Many of the issues discussed and the recommendations will apply to the reorganization of two or more members of a corporate group. One issue not considered is whether a single reorganization plan can be proposed for two or more members of a group.

41. Where reorganization proceedings are commenced against two or more members of a group, irrespective of whether or not those proceedings can be jointly administered, there is a question of whether it will be possible to reorganize the debtors through a single reorganization plan that has the potential to deliver savings across the group's insolvency proceedings, ensure a coordinated approach to the resolution of the group's financial difficulties, and maximise value for creditors. Several insolvency laws permit the negotiation of a single reorganization plan. Under some laws this approach is only possible where the proceedings are jointly administered or consolidated. Where that is not permitted, a unified reorganization plan would generally only be possible where the proceedings could, as a matter of practice, be coordinated.

42. If the insolvency law were to permit a unified reorganization plan, consideration would need to be given to the application of a number of the provisions of the Legislative Guide relating to reorganization of a single debtor to the case of a corporate group. Relevant provisions might include those relating to: parties competent to propose the plan or participate in its proposal;¹³ nature and content of a plan;¹⁴ safeguards concerning a plan;¹⁵ convening and conduct of

¹¹ Report of Working Group V (Insolvency Law) on the work of its thirty-first session, A/CN.9/618, paras. 37 and 42.

¹² UNCITRAL Legislative Guide, part two, chap. IV.

¹³ Ibid, paras. 8-14.

¹⁴ Ibid, paras. 3-5 and 17-25.

¹⁵ Ibid, paras. 54-63.

creditors meetings in respect of a plan; classification of claims and classes of creditors;¹⁶ voting of creditors and approval of a plan;¹⁷ objections to approval of the plan (or confirmation where it is required);¹⁸ and implementation of a plan.¹⁹

43. A single reorganization plan would need to take into account the different interests of the different groups of creditors, including the possibility that it might need to provide varying rates of return for the creditors of different group members. An appropriate balance between the rights of those different groups of creditors with respect to approval of the plan, including appropriate majorities, both within the creditors of a single group member and between creditors of different group members would also need to be achieved. For example, would rejection by the creditors of one of several group members mean the plan could not go ahead? One approach might be based upon provisions applicable to the approval of a reorganization plan for a single debtor. Another approach might be to devise different majority requirements that are specifically designed to facilitate approval in the group context. Safeguards analogous to those in recommendation 152 of the Legislative Guide could also be included, with an additional requirement that the plan should be fair as between the creditors of different group members.

44. Recommendation 152 of the Legislative Guide provides:

Confirmation of an approved plan

152. Where the insolvency law requires court confirmation of an approved plan, the insolvency law should require the court to confirm the plan if the following conditions are satisfied:

(a) The requisite approvals have been obtained and the approval process was properly conducted;

(b) Creditors will receive at least as much under the plan as they would have received in liquidation, unless they have specifically agreed to receive lesser treatment;

(c) The plan does not contain provisions contrary to law;

(d) Administrative claims and expenses will be paid in full, except to the extent that the holder of the claim or expense agrees to different treatment; and

(e) Except to the extent that affected classes of creditors have agreed otherwise, if a class of creditors has voted against the plan, that class shall receive under the plan full recognition of its ranking under the insolvency law and the distribution to that class under the plan should conform to that ranking.

45. An insolvency law might also include provisions addressing the consequences of failure to approve such a reorganization plan as addressed by recommendation 158, especially where solvent members of a corporate group can be included in the plan. One law, for example, provides that the consequence of failure to approve a plan is the liquidation of all insolvent members of the group.

¹⁶ Ibid, paras. 27, 36-37, 41-43.

¹⁷ Ibid, paras. 27-51.

¹⁸ Ibid, paras. 53-63.

¹⁹ Ibid, paras. 69-71.

46. Recommendation 158 of the Legislative Guide provides:

Conversion to liquidation

158. The insolvency law should provide that the court may convert reorganization proceedings to liquidation where:

- (a) A plan is not proposed within any time limit specified by the law and the court does not grant an extension of time;*
- (b) A proposed plan is not approved;*
- (c) An approved plan is not confirmed (where the insolvency law requires confirmation);*
- (d) An approved or a confirmed plan is successfully challenged; or*
- (e) There is substantial breach by the debtor of the terms of the plan or an inability to implement the plan.*

Recommendations

Unified reorganization plan

(22) The insolvency law may permit the proposal of a unified reorganization plan for two or more members of a corporate group that are subject to insolvency proceedings.

(23) The insolvency law may provide that a solvent member of the corporate group that is not subject to the insolvency proceedings can be included in a unified reorganization plan where the court determines that inclusion to be in the interests of the corporate group.

Notes on recommendations

47. Recommendations (22) and (23) outline the basic principles that an insolvency law may permit the proposal of a unified reorganization plan covering two or more members of a group against which insolvency proceedings have commenced and that a solvent member of the group not included in those insolvency proceedings may nevertheless be included in the plan where to do so would be in the interests of the group.

48. Taking into consideration the discussion included in paragraphs 42-44 above, the Working Group may wish to consider including additional recommendations addressing issues of content, in particular the extent to which it might be possible or necessary to allow different rates of return to be provided for different groups of creditors; approval; protections; failure of implementation; and other issues included in recommendations 139-159 of the Legislative Guide.

E. Other issues

49. In addition to the issues included above, the Working Group may wish to consider the following questions that have not yet been discussed:

- (a) The application of recommendations 69-86 of the Legislative Guide, which address the treatment of contracts, in the case of insolvency of two or more

members of a corporate group, particularly where those contracts were entered into between group members;

(b) Particular considerations that would apply to creditor participation in insolvency proceedings in a corporate group context where one or more of the creditors might be members of the same group and may or may not be subject to the same insolvency proceeding;

(c) The possibility of establishing a single creditor committee for each member of the group or each type of creditor across a group;

(d) With respect to creditor representation, special considerations that might apply to the application of recommendations 126-136 of the Legislative Guide, which address creditor participation. Members of a group that are creditors of other members of the group presumably would be considered to be related parties for the purpose of 131 and therefore disqualified from participating in creditor committees;

(e) The application of recommendations 137-138 of the Legislative Guide, which address rights of parties in interest to be heard and to appeal, to a member of a corporate group: "party in interest" as explained in the Legislative Guide would include a member of a corporate group in various possible ways, whether as a fellow debtor in joint proceedings, as a creditor, an equity holder, or simply as another member of the same group;

(f) Special considerations that might apply to submission of claims by other members of the same group, such as special scrutiny as claims by related persons under recommendation 184 of the Legislative Guide.

IV. International issues**A. Introduction**

1. The Working Group may wish to consider whether the background material contained in paragraphs 1-4 of document A/CN.9/WG.V/WP.74/Add.2 could form the basis of an introduction to this chapter on international issues.

B. Jurisdiction to commence insolvency proceedings: Centre of main interests (COMI)

2. The UNCITRAL Legislative Guide notes¹ that a debtor must have a sufficient connection to a State to be subject to its insolvency laws. In many cases, no issue as to the applicability of the insolvency law will arise as the debtor will be a national or resident of the State and will conduct its economic activities in the State through a legal structure registered or incorporated in the State. However, where there is a question of the debtor's connection with a State, insolvency laws adopt different tests, including whether the debtor has its centre of main interests in the State, whether the debtor has an establishment in the State or whether it has assets in the State.

3. Although both the European Council (EC) Regulation No. 1346/2000 of 29 May 2000 on insolvency proceedings (the EC Regulation) and the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law) use the concept of COMI, with respect to commencement of proceedings in the case of the Regulation and the provision of assistance in the case of the Model Law, it is not defined in either text. Both, however, provide a presumption that a debtor's COMI is the registered office, or habitual residence in the case of an individual, unless it can be shown that it is elsewhere.

4. Although applicable to countries subject to the EC Regulation or that have adopted the Model Law, the concept of COMI is not universal and where it is used, is a developing concept. Moreover, neither the Regulation nor the Model Law specifically address the concept of COMI as it might apply to a corporate group, although a number of cases have considered issues such as the integration of companies in a group in the context of considering whether the presumption that the debtor's COMI is its registered office can be displaced in a given case.

5. Factors identified as relevant to the rebuttal of the presumption, have included: the extent of a subsidiary's independence with respect to financial, management and policy decision-making; financial arrangements between parent and subsidiary, including capitalization, location of bank accounts and accountancy services; the division of responsibility with respect to provision of technical and legal documentation and signature of contracts; the location where design, marketing, pricing, delivery of products and office functions were conducted.

6. If the test of COMI were to be adopted universally, in practice, the COMI of each member of a corporate group, based on the treatment of individual members as separate legal entities, could be located in a different jurisdiction, leading to insolvency proceedings being commenced in each of those jurisdictions. In that scenario, coordination and cooperation between the different proceedings would be essential to ensure a successful resolution of the groups' insolvency.

7. Achieving a coordinated result for the insolvency of one or more members of a corporate group located in different States depends upon whether the different proceedings against each member can be recognized in other jurisdictions and whether parties involved in the various proceedings can cooperate and coordinate with each other. In those States that have adopted the UNCITRAL Model Law on

¹ UNCITRAL Legislative Guide, part two, chap. I, para. 12.

Cross-Border Insolvency,² the answer should be relatively straightforward; proceedings commenced where the debtor has its COMI could be recognized as foreign main proceedings, while proceedings commenced where the debtor has an establishment could be recognized as non-main proceedings and the effects of recognition provided by the Model Law would apply.³ Where the Model Law has not been adopted, however, reference must be had to national laws, many of which do not contain provisions equivalent to those provided in the Model Law with respect to recognition, assistance, cooperation or coordination.⁴ Because of the absence of such provisions, achieving a coordinated result can be time-consuming, costly and, in some cases, impossible.

8. For those reasons, coordination of international insolvency proceedings has been greatly facilitated in recent years by practices and procedures developed by insolvency professionals and courts, starting with individual cases and the need to address particular issues faced by the parties. Agreements or “protocols” have been negotiated by the parties and approved by the courts in the jurisdictions involved. Those cross-border insolvency protocols cover a number of issues, including, for example, settling a particular dispute arising from the different laws in concurrent cross-border proceedings, creating a legal framework for the general conduct of the case and coordinating the administration of an insolvent estate in one State with an administration in another State.

9. The Working Group may wish to note the progress with work being undertaken by the UNCITRAL secretariat through informal consultations with judges and insolvency practitioners to compile practical experience with respect to negotiating and using cross-border insolvency protocols.⁵ A report is being prepared on the development of that work (A/CN.9/629) for consideration by the fortieth Commission in 2007.

10. As an alternative to multiple proceedings, it might be possible in some cases to bring together insolvency proceedings against different group members. The insolvency proceedings might be conducted in or coordinated from a single jurisdiction or some form of joint administration might be possible (see below). Identifying the jurisdiction most central for a corporate group might be assisted by developing a concept of a “corporate group COMI”; or developing a rule deeming the COMI of the group to be, for example, the place of registration of the parent of the group or the place where it conducts its business activities. The extent to which those approaches could be achieved would depend upon widespread acceptance of a single standard or rule and agreement on what might constitute a “corporate group” for the purposes of such a rule.

11. Establishing the concept of COMI for a corporate group would be of particular relevance in cases where there was a high degree of integration between members of

² Adopted in British Virgin Islands, overseas territory of the United Kingdom of Great Britain and Northern Ireland (2005), Eritrea, Great Britain (2006), Japan (2000), Mexico (2000), Montenegro (2002), Poland (2003), Romania (2003), Serbia (2004), South Africa (2000) and United States of America (2005).

³ See UNCITRAL Model Law on Cross-Border Insolvency: art. 17 on decision to recognize and arts. 20 and 21 on effects of recognition.

⁴ For an analysis of the law of 39 jurisdictions, see “Cross-Border Insolvency: A Guide to Recognition and Enforcement”, INSOL International, 2003.

⁵ See *Official Records of the General Assembly, Sixty-first session, Supplement No. 17* (A/61/17), para. 209 for the decision of the Commission to undertake this work.

a corporate group and the group was run essentially as a single entity, with the activities of the group centralized at the COMI. The concept could be defined by reference to, for example, the issues discussed in para. 5 above, such as how and where policy, management and financial decisions of the group were made and third party perceptions, particular those of creditors, concerning that location. The COMI would determine the jurisdiction in which insolvency proceedings against a corporate group could be commenced and the law that would apply to commencement and administration of the proceedings.

12. Where the adoption of such an approach depended on close integration of the group, the requisite level of integration would need to be defined. Creditors would be required to investigate the connections of a company with which they dealt to ascertain whether or not it was part of a group. Such an approach may lead to a disconnection between the place of business of a member of a corporate group and the place in which insolvency proceedings could be commenced against that member. Additional proceedings might still be required in the jurisdiction away from the COMI in which group members conducted their businesses and held their assets.

13. Where such an approach relied upon a consideration of different factors to determine the COMI of the group it would not always be possible to ascertain that location before the insolvency proceedings actually commenced. A rule deeming the COMI to be in a specific location would create more certainty. A further issue would arise however with respect to widespread recognition and enforcement of such a rule and the decisions made in pursuance of it. Even if one court took the view that the COMI of the corporate group fell under its jurisdiction and it could therefore hear applications with respect to other members of that group, other courts would not necessarily concur with that decision in the absence of a binding obligation to do so. This could lead to competing and overlapping claims. In addition, different views might be taken with respect to the inclusion of an enterprise in a corporate group, particularly an international corporate group; for example, some courts might regard as a subsidiary what others might regard as a domestic company, notwithstanding its connection to members of a group located elsewhere. A further consideration would be the extent to which the determination that the COMI of a number of group members was found to be in one jurisdiction, would disadvantage creditors, including employees, who were located in jurisdictions different to that of the COMI, with respect, for example to filing claims, participating in creditor committees and participating at hearings.

14. A further approach, as noted above, could be to deem the COMI of the group to be that of the parent of a corporate group, so that all other group members would also have that COMI and jurisdiction for commencement of proceedings would not be related to place of incorporation or registered office, except as it related to the parent where that was a determinant of COMI. Difficulties might arise, however, where the parent was not insolvent but group members located elsewhere were insolvent.

15. Applicable on a regional basis, the Transnational Insolvency: Principles of Cooperation among NAFTA Countries⁶ recommend two rules concerning subsidiaries in the context of corporate groups. The first⁷ is that a subsidiary should

⁶ Developed by The American Law Institute, 2003 as part of its Transnational Insolvency project, available at www.ali.org.

⁷ Procedural Principle 23: Coordination with Subsidiaries.

be permitted to apply for insolvency in the jurisdiction in which the parent's insolvency proceedings have commenced so that reorganization can be administered on a group basis. The possibility of parallel proceedings is acknowledged, in which case coordination should facilitate achievement of the benefits of consolidation as far as possible. The second recommendation⁸ is that corporate groups should be reorganized from a global perspective, subject to the necessity of allocating value with regard to the corporate form. The principles provide an exception for those situations where either the main jurisdiction or the subsidiary's jurisdiction require insolvency as a condition of making an application for commencement of proceedings or the court of the main proceeding will not ordinarily accept jurisdiction over a company that is not registered and does not do business in that country, which will often be true of the subsidiary.

16. At its thirty-first session,⁹ the Working Group acknowledged that the difficulties in achieving an agreed definition of the concept of COMI suggested the need to focus on facilitating coordination and cooperation between the various courts in which insolvency proceedings against different members of a corporate group might be commenced, while acknowledging the desirability of avoiding a multiplicity of proceedings in the corporate group context.

17. The Working Group may wish to consider the issue of commencement of insolvency proceedings in the group context further in light of the discussion outlined above and the discussion of joint administration and reorganization below. The Working Group might wish to consider, for example, the possibility of supplementing the provisions of the UNCITRAL Model Law on Cross-Border Insolvency to specifically address coordination and cooperation in the context of corporate groups. Those provisions might include, for example, facilitation of joint administration and approval of unified reorganization plans.

C. Treatment of assets on commencement of insolvency proceedings

1. Joint administration

18. As noted above with respect to the domestic context,¹⁰ joint administration has the potential to facilitate the conduct of insolvency proceedings by reducing costs and delays. It also has this potential in the cross-border context. However, while in the domestic context there might be procedures that would enable proceedings commenced in different jurisdictions to be brought together, those procedures generally do not exist at the international level, although a practice of facilitating

It should be permissible to file bankruptcy for a subsidiary in the same jurisdiction as the parent's bankruptcy, and to have either procedural or substantive consolidation under applicable law, absent a proceeding involving the subsidiary in the country of its main interests. Where the subsidiary is in a parallel proceeding in the country of its main interests, coordination between the two proceedings should achieve the benefits of consolidation where possible.

⁸ Procedural Principle 24: Principles as Applied to Subsidiaries

The principles of coordination and cooperation should include parallel proceedings involving a subsidiary of a foreign parent debtor to the same extent as with parallel proceedings involving the debtor, although certain decisions, such as allocation of value, may be differently determined because of the need to honour the corporate form.

⁹ Report of Working Group V (Insolvency Law) on the work of its thirty-first session, A/CN.9/618, para. 54.

¹⁰ A/CN.9/Working Group.V/WP.76, paras. 32-37.

joint administration does exist between some neighbouring jurisdictions.¹¹ At the international level, proceedings in different jurisdictions involve diversity of assets, creditors, laws, and priorities, as well as questions concerning choice of the jurisdiction from which joint administration should be conducted, the treatment that might be applicable to solvent members in different jurisdictions and the ability of the insolvency representatives to operate in different jurisdictions, particularly those in which they are not qualified under the relevant law.

19. In some situations there might be a need for parallel proceedings to address some of these issues, although in general a multiplicity of proceedings should be avoided in order to facilitate coordination and cooperation. Joint administration, which does not require a formal decision with respect to a group's centre of main interests, would be facilitated by adoption of the UNCITRAL Model Law, to provide a legislative framework for cross-border cooperation and communication, and the use of cross-border protocols or other mechanisms to address procedural and administrative issues arising between the different jurisdictions.

2. Post-commencement finance

20. The Working Group may wish to consider whether paragraphs 15-22 of A/CN.9/WG.V/WP.74/Add.2 could be revised to form the commentary for this section on post-commencement finance.

Recommendations

Attracting and authorizing post-commencement finance for an international corporate group

(24) The insolvency law should enable an international corporate group [or any member of the group] to obtain post-commencement finance under the circumstances and standards set forth in recommendations 26 to 32, below.

(25) The insolvency law should facilitate and provide incentives for post-commencement finance to be obtained by the insolvency representative of any member of an international corporate group where the insolvency representative determines it to be necessary for the continued operation or survival of the business of the international corporate group [or any of its members], or the preservation or enhancement of the value of the estates of one or more members of the group. The insolvency law may require either the court with jurisdiction over any affected member of the group to authorize, or the creditors of any affected member of the group, to consent to the provision of post-commencement finance to such affected member of the group, as specified in recommendations 31 and 32, below.

(26) The insolvency law should permit a debtor that is a member of an international corporate group to receive the proceeds of post-commencement finance obtained by another member or members of such group.

Guarantee or other assurances for repayment of post-commencement finance for an international corporate group

(27) The insolvency law should specify that a member of an international corporate group [that is a debtor] may guarantee or provide other assurance of repayment for post-commencement finance obtained by another member of the international

¹¹ For example, Canada and the USA.

corporate group provided the court with jurisdiction over the debtor-guarantor determines that:

(a) [The estate of] the debtor-guarantor would receive benefits from such post-commencement finance comparable to those received by the obtainer of the post-commencement finance; or

(b) The [creditors] [insolvency representative] of the debtor-guarantor consent to the provision of that guarantee or other assurance of repayment; or

(c) The creditors of the debtor-guarantor would suffer no economic harm as a result of such guarantee or other assurance of repayment.

Priority for post-commencement finance for an international corporate group

(28) The insolvency law should establish the priority that may be accorded to post-commencement finance provided to a member of an international corporate group, provided the court with jurisdiction over that member ensures at least the payment of the post-commencement finance provider ahead of the ordinary unsecured creditors of that member, including those unsecured creditors with administrative priority.

Security for post-commencement finance for an international corporate group

(29) The insolvency law should enable a member of an international corporate group to grant a security interest for repayment of post-commencement finance provided to that member of the group, including a security interest on an unencumbered asset, including an after-acquired asset, or a junior or lower priority security interest on an already encumbered asset of the estate of that member of the group.

(30) The insolvency law should enable a member of an international corporate group to grant a security interest for repayment of post-commencement finance provided to another member of the group, including a security interest on an unencumbered asset, including an after-acquired asset, or a junior or lower priority security interest on an already encumbered asset of such grantor.

(31) The law should¹² specify that a security interest over the assets of the estate of any member of an international corporate group granted to secure post-commencement finance for any member(s) of the group does not have priority ahead of any existing security interest over the same assets unless the insolvency representative [of each affected member of the group] obtains the agreement of existing secured creditor(s) or follows the procedure in recommendation 32.

(32) The insolvency law should specify that, where any existing secured creditor does not agree [that post-commencement finance should be accorded a priority senior to its security interest], the court with jurisdiction over the member of the group that is subject to the existing security interest may authorize the creation of a security interest having priority over pre-existing security interests provided specified conditions are satisfied, including:

(a) The existing secured creditor was given the opportunity to be heard by the court;

¹² This rule may in a law other than the insolvency law, in which case the insolvency law should note the existence of the provision.

(b) It can be proven that the affected member(s) of the international corporate group cannot obtain the finance [in any other way] [on more favourable terms and conditions]; and

(c) The interests of the existing secured creditor will be protected.

Notes on recommendations

21. These recommendations are based upon recommendations 63 to 67 of the Legislative Guide and recommendations 13 to 19 of A/CN.9/WG.V/WP.76 with respect to post-commencement finance for a corporate group in a domestic context.

22. The notes in paragraphs 58 to 61 of A/CN.9/WG.V/WP.76 with respect to draft recommendations 13 to 19 would apply also to these draft recommendations.

23. Recommendation 26 permits one member of a corporate group to receive post-commencement finance obtained by another member of the same group, where those members might be in different jurisdictions and finance could not be provided in that situation without specific legislative authorization.

24. Recommendations 29 and 30 are based on recommendation 17, but deal respectively with a security interest provided by the group member receiving the finance and by a group member other than the group member receiving the finance, where those members may be located in different jurisdictions.

25. As noted above with respect to post-commencement finance in a domestic context, recommendation 68 of the Legislative Guide, which seeks to preserve the priority afforded to post-commencement finance, would be relevant where reorganization proceedings against a member or members of a corporate group are converted to liquidation.

D. Remedies: Substantive consolidation

26. As discussed in the domestic context,¹³ where a group is closely integrated and assets and liabilities belonging to each group member cannot be easily identified, cross-border substantive consolidation might facilitate the administration of group proceedings. Consideration of this remedy in a cross-border case is, however, much more complex than in a domestic setting, since it raises issues relating to: applicable insolvency law; the extent to which courts could waive rules in a cross-border situation that would be applied in a domestic case; applicable avoidance rules; negotiation, approval and implementation of a single reorganization plan; applicable rules on recognition of claims and distribution; treatment of security interests; and so forth.

27. Consolidation in cross border cases is not common. There are, however, examples of cases where the insolvency of a closely integrated group involving subsidiaries in different jurisdictions has been administered as if it were a single entity with the consent of creditors, as well as examples involving a unified reorganization plan.

¹³ A/CN.9/WG.V/WP.76/Add.1, paras. 23-39.

E. Reorganization: Unified reorganization plans

28. As noted above in the domestic context,¹⁴ the ability to negotiate a single reorganization plan has the potential to facilitate reorganization of a corporate group in several ways. This is also true in the international context, although different considerations will apply, including how different requirements with respect to proposal and approval of a reorganization plan in different jurisdictions could be satisfied in the case of a single plan and whether a reorganization plan approved in one jurisdiction could be recognized or regarded as binding in another.

29. A unified reorganization plan might be possible in those cases where the laws concerning negotiation and approval of a plan in the relevant jurisdictions are not significantly different or where the differences between those laws can be resolved by way of a protocol. One approach, at a regional level, is proposed by *The Principles of Cooperation among NAFTA Countries*,¹⁵ which address the possibility of making a reorganization plan approved in a main proceeding binding in non-main proceedings, provided certain safeguards are met.

“Recommendation 5: Binding Effect of Plans

The NAFTA countries should adopt provisions requiring approval of main-proceeding reorganization plans by courts in non-main proceedings despite a lack of compliance with rules for approval of such plans under domestic law if (a) the plan distribution will include significant value from assets or operations from outside the approving country; (b) the plan has been approved under the voting requirements of the law of the main proceeding; (c) creditors and other interested parties from the approving country have had a fair and reasonable opportunity to participate in the main proceeding; and (d) the plan does not discriminate unfairly on the basis of national citizenship, residence, or domicile. The provisions should also make such a plan final and binding in the approving country on the rights of all parties interested in the debtor’s affairs to the same extent as it is under the law of the main proceeding.”

30. Where there is only a main proceeding, and no parallel proceedings within NAFTA, the Principles provide, firstly, that the plan should be final and binding upon the debtor and upon every creditor who participates in any way in the main proceeding. For this purpose, participation includes filing a claim; voting; or accepting a distribution of money or property under a plan.¹⁶ The Principles provide further that the plan should also be final and binding as to the claims against the debtor of every unsecured creditor who was given adequate individual notice of the case; and who would be considered within the jurisdiction of the courts in ordinary commercial matters under the law of the country of the main proceeding, with respect to the type of claims asserted by that creditor.¹⁷

31. The operation of those Principles would mean that every creditor that participated in the specified manner in the main proceedings could be bound by the plan approved in those proceedings even if they did not support the plan, as could any creditor that was notified of the proceedings and had sufficient contacts with the

¹⁴ A/CN.9/WG.V/WP.76/Add.1, paras. 40-43.

¹⁵ See note 6 above and also paragraph 15 above.

¹⁶ Procedural Principle 26: Plan Binding on Participant.

¹⁷ Procedural Principle 27: Plan Binding: Personal Jurisdiction.

country of the main proceeding to make the operation of its insolvency jurisdiction over that creditor reasonable.

32. The Working Group may wish to consider how the proposal and approval of a unified reorganization plan might be facilitated, in addition to draft recommendations 22 and 23 which apply in a domestic context, in a cross-border insolvency context.

F. Other issues: Conflicts of laws

33. The Working Group may wish to recall the discussion of conflict of laws issues in the context of the Legislative Guide¹⁸ and consider the extent to which conflict of laws issues as they relate to the insolvency of international corporate groups could be addressed in future work on corporate groups.

¹⁸ UNCITRAL Legislative Guide, part two, chap. I, paras. 80-91 and recommendations 30-34.

IV.	Conclusions	87-89

I. Introduction

1. At its thirty-ninth session, in 2006, the Commission on International Trade Law (UNCITRAL) approved in principle the substance of the recommendations of the draft UNCITRAL legislative guide on secured transactions (the “draft guide”).¹ At that session, the Commission noted that intellectual property (e.g. copyrights, patents or trademarks) was increasingly becoming an extremely important source of credit and should not be excluded from a modern secured transactions law. In that connection, it was stated that financing transactions with respect to equipment or inventory often included security rights in intellectual property as an essential and valuable component. It was also observed that significant financing transactions involving security rights in all the assets of a grantor would typically include intellectual property.²

2. In addition, the Commission noted that the recommendations of the draft guide generally applied to security rights in intellectual property to the extent they were not inconsistent with intellectual property law (see A/CN.9/631, recommendation 4, subpara. (b)). Moreover, the Commission noted that, as the recommendations had not been prepared with the special intellectual property law issues in mind, the draft guide generally recommended that enacting States might consider making any necessary adjustments to the recommendations to address those issues.³

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 13-78.

² *Ibid.*, para. 81.

³ *Ibid.*, para. 82.

3. Moreover, in order to provide guidance to States in that regard, the Commission requested the Secretariat to prepare, in cooperation with other organizations and in particular the World Intellectual Property Organization (WIPO), a note discussing future work by the Commission on security rights in intellectual property. The Commission also requested the Secretariat to organize a colloquium on security rights in intellectual property.⁴

4. The UNCITRAL Second International Colloquium on Secured Transactions: Security Interests in Intellectual Property Rights (hereinafter the “Colloquium on Security Interests in Intellectual Property Rights”) was held in Vienna on 18 and 19 January 2007. At the Colloquium, several issues were raised with respect to the treatment of security rights in intellectual property in the draft guide.⁵ It was widely felt that some of those issues could be addressed by clarifying the text of certain definitions and recommendations of the draft guide without changing policy decisions made by the Commission and Working Group VI (Security Interests), while other issues required more substantial work and adjustments to the asset-specific part of the draft guide.

5. At its twelfth session (New York, 12-16 February 2007), Working Group VI revised several recommendations and definitions to address those issues that could be addressed with minor adjustments and clarifications (see A/CN.9/620, paras. 111-120). At its eleventh and twelfth sessions, the Working Group considered and approved the recommendations of the draft guide, presented in two parts for each chapter, one part that highlighted the general recommendations or core principles for the benefit of all States, and another part that dealt with asset-specific principles and recommendations for the benefit of those States which might not need all the asset-specific recommendations (see A/CN.9/617 and A/CN.9/620).

6. The purpose of the present note is to address some of the issues that would require further work by the Commission and more significant adjustments to the asset-specific part of the draft guide, as a supplement to the draft guide for the benefit of those States which would need specific guidance with respect to security rights in intellectual property. The note is not intended to list all the issues in an exhaustive way or to discuss them in every detail. It briefly discusses some of the main issues that would need to be addressed with a view to reasonably establishing the desirability and feasibility of future work by the Commission.

7. The note first discusses briefly the importance of intellectual property as security for credit and the inadequacy of current laws (chap. II), and then summarizes the current treatment of security rights in intellectual property in the draft guide and suggests several adjustments that would need to be made to the asset-specific part of the draft guide (chap. III). The note concludes with the suggestions for future work on security rights in intellectual property (chap. IV).

II. Importance of intellectual property as security for credit and the inadequacy of current laws

8. With the advent of the information age and the rapid pace of technological development, intellectual property, such as patents, trademarks, copyrights,

⁴ Ibid., para. 86.

⁵ The papers presented at the Colloquium are available on the UNCITRAL website (www.uncitral.org/uncitral/en/commission/colloquia/2secint.html).

customer lists, know-how and trade secrets (for the definition of “intellectual property”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation), represents an increasingly significant component of the value of many businesses. Many of those businesses are engaged in developing, licensing, distributing and managing intellectual property and their principal assets consist of the intellectual property. In addition, other businesses, such as manufacturers, frequently utilize equipment that requires the use of patented technology for its operation and distributors often sell goods that derive a significant portion of their value from trademarks affixed to the goods or copyrighted material included in the packaging. All those businesses, including technology businesses that currently have resort only to investors as a source of capital, as well as more traditional companies that rely increasingly on the use of intellectual property in their businesses, would benefit from access to secured credit predicated upon the value of their intellectual property or their rights to use intellectual property of other persons.

9. Intellectual property is typically used as an encumbered asset in secured lending transactions in two primary ways. First, intellectual property frequently represents an intrinsic component of the value of other property owned by the grantor, such as goods that have been branded with a registered trademark or that incorporate copyrighted materials in their packaging. Such intellectual property may be owned by the grantor or licensed by the grantor from a third party pursuant to an exclusive or non-exclusive licence. In either case, the goods themselves may have little or no value to a lender as security unless applicable law would permit the lender to enforce its security rights in the goods in an efficient and cost-effective manner without infringing the intellectual property rights.

10. Second, intellectual property often has sufficient independent value so that a grantor is able to use it as security for credit. Examples would be the portfolio of patents owned by a pharmaceutical company or the trademarked name and logo of a well-known chain of retail stores. This is especially true for the growing number of companies in the technology sector. For example, an owner/licensor of computer software might seek to obtain a loan secured by the anticipated streams of royalty payments from its various licences. In these circumstances, the amount of credit that a lender is willing to extend and the interest and other compensation that the lender will require, will depend in part on the lender’s level of certainty that it will be able to look to the intellectual property and anticipated royalty payments under the various licences as a source for repayment of its loan.

11. In any case, clear and predictable laws are critical to enabling the lender to make this determination. As is the case with any asset that may be used as an encumbered asset for credit, law other than secured transactions law governs the exact nature or the extent of the asset. In the case of intellectual property, the asset is defined in the framework of national law and practice, as well as a number of international conventions that determine in the first instance what types of intellectual property may be encumbered and how. This framework is, in many cases, not coordinated with existing secured transactions laws, which are often based on principles applicable to tangible assets, such as inventory and equipment, or other types of intangible asset, such as receivables. In some jurisdictions, some aspects of security rights in certain types of intellectual property are governed by the intellectual property law (e.g. registration), while in other jurisdictions such rights are subject to a more complete coverage in the secured transactions law. The common result is that security rights in intellectual property are governed by both

sets of laws, often with some uncertainty as to the relationship between the two regimes.

12. Accordingly, there is a need for a careful coordination between the laws governing secured transactions (and, in the case of the grantor's insolvency, insolvency laws) and those governing intellectual property generally.⁶ This requires understanding the principles that support intellectual property commerce and identifying the extent to which they may differ from those supporting commerce for tangible goods and receivables.⁷

III. Asset-specific adjustments to the draft guide with respect to security rights in intellectual property

A. Terminology

13. The term “intellectual property” is defined in the draft guide as including “copyrights, trademarks, patents, service marks, trade secrets and designs and any other asset that is considered to be intellectual property under the domestic law of the enacting State or an international agreement to which it is a party” (see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). The commentary makes reference to agreements, such as the Convention Establishing the World Intellectual Property Organization and the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS).⁸

14. With respect to other terms, the draft guide relies on terminology normally used in secured transactions legislation. While this approach may be adequate in some respects, it may require adjustments in other respects, because intellectual property law has its own terminology, which may not be fully consistent with the current terminology used in the draft guide.

15. For example, the draft guide uses the term “assignment” solely with respect to receivables (see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). However, “assignment” has a broader meaning in intellectual property practice, involving a transfer of ownership in intellectual property and not merely the transfer of a receivable. Similarly, the draft guide does not define a “licence” and only refers to a licence in an undifferentiated sense without addressing the differences between exclusive licences and non-exclusive ones. In the same vein, the draft guide uses the term “retention of title” only with respect to tangible property. It does not refer to licences, which by definition involve the retention of title in intellectual property by the licensor (see para. 37 below).

⁶ For more information on the importance of intellectual property as security for credit and problems under current law, see “Intellectual property issues affecting a secured transactions regime”, submitted by the Commercial Finance Association in connection with UNCITRAL's development of a guide on secured transactions (August, 2004), available at www.uncitral.org/pdf/english/colloquia/2secint/Kohn.pdf.

⁷ For an analysis of the issues by a group of intellectual property law experts, see “Report and analysis of the Ad Hoc Working Group on Intellectual Property Financing regarding the UNCITRAL draft legislative guide on secured transactions” (January, 2007), available at www.uncitral.org/pdf/english/colloquia/2secint/Ad%20Hoc%20Working%20Group%20Report.pdf.

⁸ Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations, annex IC (United Nations, *Treaty Series*, vol. 1867, No. 31874).

Furthermore, the draft guide does not provide terminology to identify the varying interests of owners, co-owners, joint authors and other parties involved in the initial development of intellectual property.

16. In addition, following the approach taken in most legal systems and reflected in the United Nations Convention on the Assignment of Receivables in International Trade⁹ (hereinafter the “United Nations Assignment Convention”), the draft guide does not differentiate trade receivables from income streams under licence agreements relating to intellectual property. As this approach is disputed in some intellectual property circles, the issue may need to be discussed (see para. 35 below).

17. Moreover, the draft guide does not define tangible property embodying in part intellectual property (e.g. trademarks of goods or software embedded in goods) or security rights in such property, nor discusses at any length the relevant issues. On the one hand, if a security right in such property did not extend to intellectual property embodied therein, the security right may be deprived of any meaning (where, for example, the encumbered asset is inventory of digital cameras operated by software on a chip). On the other hand, such a result may be incompatible with the right of the owner of the intellectual property to control the distribution of copies and goods embodying intellectual property and may have to be limited in line with applicable principles of intellectual property law (see paras. 38 and 39 below).

B. Scope

18. The law recommended in the draft guide should provide that it applies to “all types of movable property and attachment, tangible or intangible, present or future, including inventory, equipment and other goods, contractual and non-contractual receivables, contractual non-monetary obligations, negotiable instruments, negotiable documents, rights to payment of funds credited to a bank account, proceeds under an independent undertaking and intellectual property rights” (see A/CN.9/631, recommendation 2, subpara. (a)).

19. However, the law should provide that “notwithstanding recommendation 2, subparagraph (a), it does not apply to ... intellectual property to the extent that the provisions of this law are inconsistent with national law or international agreements, to which the State is a party, relating to intellectual property” (see A/CN.9/631, recommendation 4, subpara. (b)).

20. The commentary explains that a State enacting secured transactions legislation in accordance with the draft guide should consider whether it might be appropriate to adjust certain of the recommendations as they apply to security rights in intellectual property. Examples of such recommendations include recommendation 204 on the law applicable to security rights in intangible property, recommendations 43 and 83 on registration in a specialized registry, and recommendations raising the issue of whether a security right in goods extends to any intellectual property involved in their use or operation (see A/CN.9/631/Add.1).

21. In addition, the commentary draws the attention of States to the need to examine their existing intellectual property laws and the State’s obligations under intellectual property treaties, conventions and other international agreements and, in

⁹ United Nations publication, Sales No. E.04.V.14.

the event that the recommendations of the draft guide are inconsistent with any such existing laws or obligations, the State's secured transactions law should expressly confirm that those existing intellectual property laws and obligations govern such issues to the extent of the inconsistency. Moreover, the commentary clarifies that States may need to adjust certain recommendations of the draft guide to avoid inconsistencies with intellectual property laws and treaties (see A/CN.9/631/Add.1).

22. While the commentary encourages States to undertake an analysis of possible inconsistencies between intellectual property law and the draft guide, it does not provide specific guidance on where such inconsistencies may arise nor how recommendations in the draft guide should be adjusted to avoid them. Although the draft guide recommends that intellectual property law prevail over secured transactions law to the extent there are any inconsistencies between the two, there may be reluctance on the part of some States to apply any recommendations in the draft guide to intellectual property assets due to concerns about possible adverse domestic or international consequences from an erroneous application. This reluctance may in turn lead lenders to conclude that intellectual property assets are not an appropriate subject for secured financing, which can have undesired consequences given the increasingly important role of intellectual property in modern economies.

23. Future work by the Commission would provide specific guidance to States as to any adjustments that would need to be made in the asset-specific part of the draft guide to address issues arising in secured transactions relating to intellectual property and thus facilitate such transactions.

C. Creation of a security right

1. General approach of the draft guide

24. Under the draft guide, a security right is created by agreement between the grantor and the secured creditor (see A/CN.9/631, recommendation 12). To be effective, a security agreement must reflect the intent of the parties to create a security right, identify the secured creditor and the grantor and describe the secured obligation and the encumbered assets (see A/CN.9/631, recommendation 13). If not accompanied by a transfer of possession of the encumbered asset, the agreement must be concluded in or evidenced by a writing that, in conjunction with the course of conduct between the parties, indicates the grantor's intent to grant a security right. Otherwise, it may even be oral (see A/CN.9/631, recommendation 14).

25. The assets encumbered under the security agreement may be described in a generic way, such as "all present and future assets" or "all present and future inventory" (see A/CN.9/631, recommendation 13). The security right may secure any type of obligation, present or future, determined or determinable, as well as conditional and fluctuating obligations (see A/CN.9/631, recommendation 15). It may cover any type of asset, including assets that, at the time the security agreement is concluded, may not yet exist or that the grantor may not yet own or have the power to encumber (see A/CN.9/631, recommendation 16). Unless otherwise agreed by the parties to the security agreement, the security right in the encumbered asset extends to its identifiable proceeds (see A/CN.9/631, recommendation 18).

26. If the encumbered asset is a receivable, an assignment of the receivable is effective as between the assignor and the assignee and as against the debtor of

the receivable notwithstanding an agreement between the initial or any subsequent assignor and the debtor of the receivable or any subsequent assignee limiting in any way the assignor's right to assign its receivables (see A/CN.9/631, recommendation 22).

2. Possible asset-specific adjustments

27. The general provisions of the draft guide with respect to the creation of a security right may apply to security rights in intellectual property (see A/CN.9/631, recommendations 12-18). However, the application of certain provisions to security rights in intellectual property may need to be adjusted with asset-specific recommendations.

(a) Generic description of encumbered assets

28. For example, the concept of a generic description of the encumbered assets may need modification when applied to the registration of intellectual property in a specialized registry. A description that embraces "all rights" for a specific item of intellectual property may be "generic" for these purposes, such as "all rights in Patent B in Country X". However, a description of multiple items of intellectual property may need some identifying description for each item, such as "all motion pictures owned by Studio A identified by title on the attached schedule".

29. As discussed below (see para. 49), intellectual property registries index notices by the intellectual property, not the grantor. Thus, a notice that merely identified "all intellectual property owned by the grantor" would not contain a sufficient description. It would instead be necessary to identify each item of intellectual property by title or identification in the registered notice. For efficiency reasons, it might be appropriate to require the description of the encumbered assets in the security agreement to meet the same level of precision.

(b) Non-transferable obligations

30. Another example is the provision of the draft guide that, while a security right may secure any type of obligation (see A/CN.9/631, recommendation 15), the law recommended in the draft guide does not override statutory prohibitions to the transferability of specific types of asset, with the exception of prohibitions to the transferability of future receivables and the effectiveness of an assignment of receivables made despite an anti-assignment agreement (see A/CN.9/631, recommendation 17).

31. Further work would need to clarify that it is important to permit the party to whom the services in personal service contracts with authors or inventors are owed to create a security right in its rights to receive performance, as this will often be necessary to obtain financing. However, a blanket provision that allows such a party to create such a security right without consent of the party owing the performance of such services might be incompatible with existing laws. The impact of these matters on the ability of a party to create a security right in the right to receive performance under such personal service contracts may need further study.

(c) After-acquired assets

32. A further example is the provision of the draft guide that a security agreement may cover assets that may not exist at the time the security agreement is concluded

(“after-acquired” or “future assets”; see A/CN.9/631, recommendation 16). On the one hand, there is commercial utility in allowing a security right to extend to intellectual property to be later created or acquired. For example, in some States it is possible to create a security right in a patent application before the patent is issued. Similarly, it is common practice to fund motion pictures or software to be produced. An effective secured financing law should support such practices. On the other hand, many States limit transfers of various future intellectual property. Some States limit the ability to make effective transfers of rights in new media or technological uses that are unknown at the time of the grant. It may be necessary to adjust the draft guide to accommodate those rules.

(d) The *nemo dat* principle

33. Another example is the requirement that the grantor must have rights in the encumbered asset (the principle that no one can give what he or she does not have — *nemo dat quod non habet* or *nemo plus juris transferre potest quam ipse habet*), which has particular importance with respect to security rights by licensees (see A/CN.9/631, recommendation 13). Future work would need to clarify the application of the *nemo dat* principle to intellectual property, namely that a creditor obtaining a security right in intellectual property or rights to use intellectual property does not obtain any rights more than the rights that the grantor has in that intellectual property. In particular, if the grantor were a licensee, it would need to be confirmed that the licensee could not give anything more than the right granted to the licensee from the licensor. One of the effects of this result is that future work would need to reinforce the lender’s need to conduct appropriate due diligence to determine matters such as the extent of the licensee’s rights, the duration of those rights and the territories in which those rights may be exercised.

(e) The principle of party autonomy

34. Another example of an issue that might require further work is the provision of the draft guide recognizing party autonomy (see A/CN.9/631, recommendation 8). Further work on security rights in intellectual property should clarify that intellectual property owners have the right to decide which third parties may use the intellectual property and the conditions for so doing. In particular, intellectual property owners should have the right to transfer their rights or to give to another person a licence to use them.

(f) Anti-assignment agreements

35. In this connection, future work has to confirm the right of the licensor under law other than the secured transactions law to limit by contract the right of the licensee to transfer the licence or give a sub-licence to a third party, as well as the right of the licensor to terminate the licence for breach of contract. As a result, it should be made clear that the relevant provision of the draft guide with respect to anti-assignment agreements relating to receivables (see A/CN.9/631, recommendation 25) does not apply to the rights of licensees under intellectual property licences. However, in line with current law in most legal systems and the United Nations Assignment Convention, it does apply with respect to receivables arising from intellectual property (e.g. licence royalties). In this regard, intellectual property experts argue that receivables arising from intellectual property should be treated as forming part of the intellectual property. In support of their argument, they refer to case law, international conventions permitting transfers and licences of

intellectual property and restricting practices involving compulsory licences. They also refer to national laws, for example, imposing restrictions on the assignability of royalties payable to owners-licensors.

(g) Title to intellectual property

36. Another issue that should be addressed is who has title or the rights associated with title to intellectual property as an encumbered asset: the grantor or the secured creditor. For intellectual property, title determines important components of asset value, including the right to deal with governmental authorities for several purposes, such as for patent prosecutions, to grant licences and to pursue infringers. It is therefore important to determine whether the grantor or the secured creditor holds title to the intellectual property during the financing, as this will be important to both parties in order to preserve the value of the encumbered asset. Under the principle of party autonomy, the law should allow the parties to decide the matter for themselves in the security agreement. Where the agreement is silent, it may be necessary for a secured transactions law to be coordinated with the relevant rules of intellectual property law to ensure that the secured creditor does not have title to intellectual property as an encumbered asset (as is the case with any other encumbered asset). A possible approach may be to provide that, unless otherwise agreed, the secured creditor has no right to approve various types of licence.

(h) Retention of title by the licensor in a licence agreement

37. Yet another example is the provision of the draft guide that treats certain title-retention transactions as functionally equivalent to secured transactions, allowing a buyer of goods to create a security right in the goods even before the buyer pays the price in full and acquires title in the goods. A licence agreement involves permission to use intellectual property under the conditions set out in the licence agreement and the retention of title in the intellectual property by the licensor. Future work should clarify that such a transaction is not functionally equivalent to a secured transaction and the licensee does not automatically have the right to transfer the licence or give a sub-licence to a third party (for further discussion of this issue, see chap. III, sect. J, on acquisition financing, paras. 78-80 below).

(i) Tangible property embodying intellectual property

38. A further issue that should be addressed relates to security rights in tangible property embodying intellectual property rights (e.g. pharmaceuticals and mechanical devices that reflect patented inventions; DVDs, paperback books and lithographs that embody copyrighted work; and labels, apparel and merchandise containing trademarks). While the security right in such tangible property would be worthless if it did not give rights of use of the embodied intellectual property, the security right in the tangible property is limited by the rights of the holder of rights in the embodied intellectual property. For example, a person that buys a copy of a DVD containing copyrighted music cannot then make and sell thousands of duplicates without permission of the intellectual property owner.

39. Under current practice, intellectual property law addresses this situation under the “exhaustion” doctrine. Under this rule, an authorized sale of a copy exhausts some rights, such as the right to control further sales of that particular copy. Thus, if the grantor has obtained ownership of the goods in a transaction that “exhausted” relevant intellectual property rights, a secured creditor could resell the goods at least

within the authorized territory without infringement. However, the treatment of the exhaustion doctrine is a complex issue, especially in international transactions, and would need to be carefully examined (see also para. 72 below).

D. Third-party effectiveness of a security right

1. General approach of the draft guide

40. The main method for making a security right effective against third parties is registration of a notice with limited information in a general security rights registry (see A/CN.9/631, recommendation 33). Other methods for achieving third-party effectiveness of a security right include registration in a specialized registry (see A/CN.9/631, recommendation 43), transfer of possession and control (see A/CN.9/631, recommendation 38, 50 and 51).

2. Possible asset-specific adjustments

(a) Intellectual property that is registrable

41. Registration of a notice in the general security rights registry is relevant with respect to the third-party effectiveness of a security right in intellectual property. Similarly, registration of a security right in a specialized registry is relevant under the law of many jurisdictions (the draft guide simply recognizes it if it exists, but does not require it), at least with respect to certain types of intellectual property, such as patents and trademarks (and, in some States, copyrights). Other methods for achieving third-party effectiveness of a security right, such as transfer of possession or control, are not relevant for intellectual property (see A/CN.9/631, recommendations 38 and 50).

42. Coordination between the general security rights registry and any specialized registry, such as a patent or trademark registry, is an issue that would need to be addressed, in particular since:

(a) Intellectual property registries may be indexed by asset while the security rights registry is indexed by the name of the grantor of the security right;

(b) Intellectual property registries may involve document registration rather than notice registration and the legal effects may be the creation of a right (title, right to use or security right), rather than only the third-party effectiveness of a security right as is the case with the general security rights registry;

(c) Intellectual property registries may involve the registration of title, right to use and security right in an intellectual property asset rather than only to a security right as is the case with the general security rights registry;

(d) Registration of a security right in after-acquired property may not be possible in an intellectual property registry, while it is possible in the general security rights registry; and

(e) Multiple registrations in the various registries would increase cost and effort both for registrations and searches (under the draft guide, the secured creditor may choose to register in the general security rights registry or in the specialized registry (if registration of security rights is permitted), although registration in the specialized registry provides a higher priority ranking).

(b) Intellectual property that is not registrable

43. Future work would need to address the third-party effectiveness of security rights in intellectual property with respect to which there is no specialized registry (e.g. trade secrets or copyrights in many States). In this situation, a security right in such intellectual property may become effective against third parties automatically upon its creation or upon registration in the general security rights registry. Another approach, which conforms to the practice in a few States, would be to provide that intellectual property not subject to a registration system might not be used as security for credit at all. However, such an approach would not be consistent with the purpose of the draft guide to modernize the law so as to promote increased access to secured credit.

44. Yet another approach would be to provide that, where there is no registry for the specific intellectual property, a security right in intellectual property may become effective against third parties by registration of a notice in the general security rights registry. However, this approach (which is already possible under the general recommendations of the draft guide) would require that the issues identified above (see para. 42) be addressed through new asset-specific recommendations. In particular, the fact that the general security rights registry would not reflect the chain of title in intellectual property as an encumbered asset and secured creditors would have to check the chain of title in the encumbered asset outside the general security rights registry should be carefully considered (of course, this is the case with any other movable property with the exception of receivables with respect to which even outright transfers are registrable). Otherwise, if the grantor transferred title to the intellectual property and subsequently created a security right, the secured creditor would run the risk of not obtaining an effective security right.

E. Registry system

1. General approach of the draft guide

45. The draft guide recommends a general security rights registry (see A/CN.9/631, recommendations 55-73). In general, the purpose of the registry system in the draft guide is to provide a method for making a security right effective in existing or future assets, to establish an efficient point of reference for priority rules based on the time of registration and to provide an objective source of information for third parties dealing with a grantor's assets as to whether the assets may be encumbered by a security right.

46. Under this approach, registration is accomplished by registering a notice as opposed to the security agreement or other document (see A/CN.9/631, recommendation 55, subpara. (b)). The notice need only provide the following information:

- (a) An identification of the grantor and the secured creditor and their addresses;
- (b) A description that reasonably identifies the encumbered assets, with a generic description being sufficient;
- (c) The duration of the effectiveness of the registration; and
- (d) If the enacting State so decides, a statement of the maximum amount secured (see A/CN.9/631, recommendation 58).

47. The draft guide provides precise rules for identifying the grantor, whether an individual or a legal person. This is because notices are indexed and can be retrieved by searchers according to the name of the grantor or according to some other reliable identifier of the grantor (see A/CN.9/631, recommendations 55, subpara. (h), and 59-61). The draft guide contains other rules to simplify operation and use of the registry.

2. Possible asset-specific adjustments

(a) Coordination of registries

48. As discussed above, many States maintain registries for recording transfers, including security rights, with respect to intellectual property. These registries exist in most States for patents and trademarks. Some States have similar registries for copyrights, but the practice is not universal. The registry proposed in the draft guide is a notice-based registry. The idea is that the registry only gives notice of a security right and a reasonable identification of the collateral, usually by generic category. Such a system works well for tangible and certain intangible assets (e.g. receivables).

49. Intellectual property registries, however, primarily use recording act structures or “document registration” systems. In those systems, it is necessary to record the entire instrument of transfer, or, in some cases, a detailed memorandum of transfer. The reason for this is that in many cases the transfer may only involve limited rights in the intellectual property. As such, it is essential for the instrument of transfer to identify the precise right being transferred in order to give effective notice to searchers and to allow efficient utilization of assets. In addition, the intellectual property systems index registrations by the specific item of intellectual property, not by grantor. This is because the central focus is on the intellectual property itself, which may have multiple co-inventors or co-authors and may be subject to multiple changes in ownership as transfers are made.

50. Coordination between the general security rights registry and any specialized intellectual property registry is an issue that would need to be addressed, as mentioned above (see para. 42). In addition, the issue would need to be examined as to whether the general security rights registry proposed in the draft guide should be used for security rights in intellectual property at all, especially in cases where a specialized intellectual property registry is otherwise available.

(b) After-acquired assets

51. An essential feature of the general security rights registry recommended in the draft guide is that it can apply to “after-acquired” property of the grantor. This means that the security right can cover assets to be later acquired by the grantor (see A/CN.9/631, recommendation 16). The notice may also cover assets identified by generic description (see A/CN.9/631, recommendation 64). Thus, if the security right covers all existing or later acquired inventory the notice may so identify such inventory. Since priority is determined by date of registration, the lender may maintain its priority position in later acquired inventory. This greatly facilitates revolving credit facilities, since a lender extending new credit under such a facility knows that it can maintain its priority position in new assets that are included in the borrowing base.

52. Existing intellectual property registries, however, do not readily accommodate after-acquired property. Since transfers of or security rights in intellectual property are indexed against each specific item of intellectual property, they can only be effectively recorded after the intellectual property is first registered in the registry. This means that a blanket recording in a specialized registry with respect to “after-acquired” intellectual property would not be effective, but instead a new recording is required each time a new item of intellectual property is acquired.

53. At the Colloquium on Security Interests in Intellectual Property Rights, intellectual property professionals indicated that they had undertaken some considerable work on this issue under the auspices of WIPO. The Commission may profitably examine that work in addressing this matter.

(c) Dual registration

54. The draft guide permits registration with respect to a security right in intellectual property through registration in either the general security rights registry or a specialized intellectual property registry, or in both of them. The utility of each of these approaches should be the subject of further study in light of the benefits that can be obtained as against the costs involved for multiple filing and searching.

F. Priority of a security right

1. General approach of the draft guide

55. The priority of a security right is based on the time of registration (i.e. before creation) or the time a security right was made effective against third parties (i.e. after creation; see A/CN.9/631, recommendation 78). However, a security right that was made effective against third parties by registration in a specialized registry (that provides for registration of security rights) is superior to a security right that was made effective against third parties by registration of a notice in the general security rights registry (see A/CN.9/631, recommendation 83). Similarly, a security right made effective by transfer of possession or control is superior to a security right made effective by registration of a notice in the general security rights registry (see A/CN.9/631, recommendations 99 and 101). Finally, with limited exceptions, transferees of encumbered assets take the assets subject to any security right that was effective against third parties at the time of the transfer (see A/CN.9/631, recommendations 85-88).

2. Possible asset-specific adjustments

(a) Identification of competing claimants

56. Where the encumbered asset is intellectual property, future work should discuss the types of competing claimant (for the definition of “competing claimant”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). Competing claimants may differ depending on whether a transfer of intellectual property, an exclusive or non-exclusive licence or a security right in intellectual property is involved.

57. In the case of a transfer or an exclusive licence of intellectual property that is not subject to registration, the main competing claimants are transferees and the basic rule is that the first transfer in time prevails. With respect to intellectual property that may be registered, the main rule is that the first transferee to register

in the intellectual property registry has priority. In some jurisdictions, a later-in-time transferee that obtained its right in good faith (i.e. without notice of the prior transfer) may have priority. In the case of a non-exclusive licence, the primary competing claimants would be the licensor, competing title claimants and the creditors of the non-exclusive licensee. This is because the creditors of the non-exclusive licensee may not have the right to stop competing claimants from using the intellectual property and need the cooperation of the licensor.

(b) Relevance of knowledge of prior transfers or security rights

58. The rule providing that knowledge of the existence of a right on the part of a competing claimant is irrelevant for determining priority may need to be reconsidered with respect to security rights in intellectual property (see A/CN.9/631, recommendation 75). As mentioned, many intellectual property registries provide that a later conflicting transfer may only gain priority if it is recorded first and taken without knowledge of a prior conflicting transfer. This rule applies both to security rights and to title transfers recorded in the registry. Inconsistencies could result if the knowledge requirement for security rights was treated differently than title transfers. This matter requires further study.

(c) Priority of a right registered in an intellectual property registry

59. The rule that registration in a specialized registry (including an intellectual property registry) provides a right with higher priority status than a right registered in the general security rights registry is also appropriate with respect to security rights in intellectual property (see A/CN.9/631, recommendation 83). In this regard, it is worth reviewing how the operation of intellectual property registries differs from that for the general security rights register proposed in the draft guide (see para. 42 above).

(d) Priority of a right that is not registrable in an intellectual property registry

60. Another issue is the priority rule with respect to security rights in intellectual property with respect to which there is no specialized intellectual property registry. One approach may be to provide that, in such cases, priority for security rights is determined by the order of registration in the general security rights registry recommended in the draft guide. However, as discussed above, transfers of title in intellectual property are not registrable in the general security rights registry. Thus, unless such title transfers are registrable in the general security rights registry, as between a prior title transfer and a registered security right, the prior title transfer would evidently prevail. This means a creditor would still need to search outside the registry to find prior title transfers, as is the case with movable property in general.

(e) Rights of transferees of encumbered intellectual property

61. The rules of the draft guide are sufficient for the situation where the security right is created and made effective against third parties and thereafter title to the intellectual property is transferred. The basic rule would be that the transferee takes the intellectual property subject to the security right (see A/CN.9/631, recommendation 85). The first exception to the rule would be applicable in the case where the asset sold or licensed is intellectual property. The buyer or licensee would take the intellectual property free of the security right if the secured creditor authorizes the grantor to sell or license the encumbered intellectual property

(see A/CN.9/631, recommendation 86). However, there is some doubt in intellectual property circles as to whether the second exception should also apply, that is whether a non-exclusive licensee in the ordinary course of business (that complies with the terms of the licence and appropriate instructions to pay any secured creditor of the licensor that has a security right in any royalties owed by the licensee to the licensor) should take free of a security right created by the licensor (see A/CN.9/631, recommendation 87, subpara. (c); see also paras. 62 and 63 below).

(f) Rights of licensees of encumbered intellectual property

62. Intellectual property is routinely licensed. The retained rights of a licensor, such as the right to receive royalties, and the rights of a licensee can both be used as an encumbered asset for credit. In each case, it is necessary to consider the relevant priority rules where the competing claimants are the lenders of the licensor and the licensee, or the licensor and the lenders of the licensee. Generally, there should not be a competition between the lender of the licensor and the lender of the licensee because each would have a different encumbered asset. The lender of the licensor would normally have a security right in royalties owed by the licensee to the licensor, while the lender of the licensee would have a security right in royalties owed by a sub-licensee to the licensee. In any case, the lender of the licensee would not have rights any greater than the licensee itself, so that if the licensee defaulted under the licence, the licensor could terminate the licence, if the licence so provided.

63. With regard to the first case, the licensor's lender would need to know that in case of enforcement the licensee would continue to render performance and pay royalties to the lender, while a licensee would need to know that so long as it continued performance its licence would not be terminated. As to the second case, the licensor would need to know that it had mechanisms to gain priority over the licensee's lender and other creditors with respect to royalties payable under the licence. In addressing those issues, it would be appropriate to preserve party autonomy so that the parties could adjust their respective rights and obligations by individual agreement. The provisions of the draft guide regarding party autonomy, in particular with respect to priority, are relevant in that regard and may need to be adjusted or supplemented by appropriate commentary (see A/CN.9/631, recommendations 8 and 77).

(g) Rights of "ordinary course" non-exclusive licensees

64. One question of particular importance is whether a non-exclusive licensee "in the ordinary course of business" of the licensor should take free of any security rights created by the licensor (i.e. whether recommendation 87, subpara. (c), should apply in the context of security rights in intellectual property). The concept of an "ordinary course" transaction comes from the practices in tangible property. No customer would buy goods from a dealer if the customer thought that a lender could repossess the goods because the dealer did not pay its loan. Thus, to facilitate commercial practices, the draft guide allows an "ordinary course" buyer to take free of the prior security right. However, under the draft guide, the security right continues in proceeds from the sale (see A/CN.9/631, recommendations 18, 40 and 41). Thus, the lender loses a security right in the goods to an ordinary course buyer, but in exchange obtains a security right in proceeds from their sale or disposition.

65. It is argued that this “ordinary course of business” concept is inappropriate for intellectual property. Under the *nemo dat* principle, a licensee of intellectual property only takes the actual right transferred subject to all prior transfers, including security rights. Thus, according to this view, application of an “ordinary course of business” exception would be incompatible with this principle and the ability of owners-licensors to control use of their intellectual property. Moreover, if a sub-licensee can “take free” of a prior security right, it could limit the ability of lenders to police improvident sub-licences (to determine whether they were in fact made in the ordinary course of business of the licensee). This is a matter that needs further study.

G. Rights and obligations of third-party obligors

1. General approach of the draft guide

66. The draft guide discusses the rights and obligations of debtors other than the debtor granting a security right in an asset to secure the payment or other performance of an obligation. Such third-party debtors (obligors is the term used in the draft guide to distinguish from the debtor-grantor) include the debtor of an assigned receivable, the person obligated under a negotiable instrument, the guarantor/issuer, confirmer, or nominated person where the encumbered asset is in the form of proceeds under an independent undertaking (for the definition of “proceeds under an independent undertaking”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation), the depositary bank where the encumbered asset is the right to payment of funds credited to a bank account (for the definition of “right to payment of funds credited to a bank account”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation) and the issuer of a negotiable document.

2. Possible asset-specific adjustments

67. Any future work on security rights in intellectual property would need to include a discussion of the rights and obligations of third parties such as the licensor in a situation where the licensee has created a security right in its licence. In the same way that a depositary bank is protected in cases where the encumbered asset is the right to payment of funds credited to a bank account, the rights of a licensor may need to be protected. For example, a licensor may help facilitate the financing of a licensee’s interest by agreeing with the lender to enforce various licence clauses in case the licensee defaults on the loan, such as withholding performance or terminating the licence. In these situations, licensors need to be able to preserve the integrity of their intellectual property and contractual relationships.

H. Enforcement of a security right

1. General approach of the draft guide

68. Under the draft guide, after default the secured creditor is entitled (see A/CN.9/631, recommendation 134):

- (a) To obtain possession of a tangible encumbered asset;
- (b) To sell or otherwise dispose of, lease or license an encumbered asset;

(c) To propose to the grantor that the secured creditor accept an encumbered asset in total or partial satisfaction of the secured obligation;

(d) To collect on or otherwise enforce a security right in an encumbered asset that is a receivable, negotiable instrument, right to payment of funds credited to a bank account or proceeds under an independent undertaking;

(e) To enforce rights under a negotiable document;

(f) To enforce its security right in an attachment to immovable property; and

(g) To exercise any other right provided in the security agreement (except to the extent inconsistent with the provisions of the law recommended in the draft guide) or any other law.

69. In exercising its rights, the secured creditor has to act in good faith and in a commercially reasonable manner (see A/CN.9/631, recommendation 128). In particular with respect to extrajudicial enforcement, the secured creditor must abide by this standard of conduct and exercise its remedies subject to certain notifications and additional safeguards (see A/CN.9/631, recommendations 141-144).

2. Possible asset-specific adjustments

70. The enforcement of a security right in intellectual property raises special issues that would need to be addressed. For example, the right of the secured creditor to take possession of the encumbered asset is not relevant if the encumbered asset is intellectual property (see A/CN.9/631, recommendations 142 and 143). The question arises here (as with all types of intellectual property) as to whether an equivalent right of the secured creditor to take control should be introduced and how this would fit with the particular type of intellectual property involved.

71. Another question that would need to be discussed relates to the right of the secured creditor to dispose of, license, accept or collect licence fees with respect to intellectual property, in particular in cases where the intellectual property is inseparable from another asset (e.g. trademarked goods or goods with embedded software; see paras. 38 and 39 above) or in situations where the intellectual property has been licensed and the rights of the licensor must be taken into account. A further question relates to responsibilities of a secured creditor that becomes the owner of a trademark or other intellectual property right to renew and maintain the trademark in good order, or to police its use against infringement.

72. A further question arises with respect to encumbered assets that consist of goods that embody intellectual property. The main issue is the extent to which a security right that only applies to the goods allows the secured creditor to deal in or otherwise dispose of the goods consistent with the intellectual property right, taking into account any doctrine of intellectual property law that would permit a transfer of the goods with the intellectual property embodied in the goods (see paras. 38 and 39 above).

73. All those issues would need to be addressed also for situations where the encumbered asset is not intellectual property but the rights of a licensee arising from a licence to use intellectual property. In such a situation, the rights of the secured creditor may be constrained. For example, if the licensee-grantor has created a lower-ranking security right in the same licence, usually enforcement of a higher-ranking security right would eliminate a lower-ranking security right

(see A/CN.9/631, recommendations 158 and 159). However, where the encumbered asset is merely a licence, the secured creditor only succeeds to the licensee's rights. A mere licensee cannot enforce the intellectual property right against another mere licensee or secured creditor with a lower-ranking security right. Only the licensor (or appropriate right-holder) can do that (in some jurisdictions, exclusive licensees may join the licensor as a party to the proceedings). Thus, a secured creditor enforcing its security right against a licensee may have limited rights against other parties. This issue deserves further study, especially in reference to a determination of the "competing claimants" to a security right in intellectual property licences.

I. Insolvency

1. General approach of the draft guide

74. In the case of insolvency of the grantor, the effectiveness of a security right is preserved subject to any avoidance actions and stays (see A/CN.9/631, recommendations of the *UNCITRAL Legislative Guide on Insolvency Law*¹⁰ (hereinafter the "*UNCITRAL Insolvency Guide*"), chap. XI, recommendations (35), (39) and (46)). The priority of a security right is also preserved subject to any preferential claims (see A/CN.9/631, recommendations 178-180). Post-commencement finance does not take priority over pre-commencement security rights, but the insolvency court may authorize the post-commencement creation of security rights with priority over pre-commencement security rights in certain situations (see A/CN.9/631, recommendations of the *UNCITRAL Insolvency Guide* (66) and (67)). Secured creditors are entitled to participate in insolvency proceedings and to vote on a reorganization plan, which may be binding on secured creditors even without their approval if certain conditions are met (see A/CN.9/631, recommendations of the *UNCITRAL Insolvency Guide* (126), (151) and (152)).

2. Possible asset-specific adjustments

75. The provisions of the draft guide with respect to the general application of insolvency law, in particular with respect to stays and similar limitations, would apply to security rights in intellectual property (see A/CN.9/631, recommendations of the *UNCITRAL Insolvency Guide* (35), (39), (46) and (49)).

76. However, certain special issues would need to be addressed. One example is the effect of the rejection of a licence in cases in which the insolvent debtor is the licensor. In such a situation, a licensee may have invested considerable sums in further developing or commercializing the intellectual property, so that rejection of the licence may entail significant financial loss. On the other hand, insolvent licensors need some protection against a continuing obligation to support overly burdensome licences (for the treatment of contracts in the *UNCITRAL Insolvency Guide*, see part two, chap. II, sect. E).

77. Another example is the treatment of intellectual property as a third-party-owned asset in cases in which the insolvent debtor is the licensee. In this situation, there is a question as to whether the licensee's interest under the licence should become part of the insolvency estate where other law, such as intellectual property law, restricts the assignment of such a licence without the licensor's consent. In cases where the interest of a licensee does become part of the insolvency estate, issues arise regarding the obligation of the insolvency estate to perform ongoing

¹⁰ United Nations publication, Sales No. E.05.V.10.

obligations, such as payment of royalties, and the ability of the insolvency representative to dispose of the licence consistent with its terms. It should also be noted that there is considerable difference in the treatment of these issues in the insolvency laws of different countries, which will necessitate a careful study in order to achieve a harmonized approach.

J. Acquisition financing

1. General approach of the draft guide

78. The draft guide discusses acquisition financing with respect to tangible property. It provides for a unitary approach to acquisition financing, in the context of which all rights securing the payment of the purchase price for tangible property fall under a unitary notion of a security right with the result that, with the exception of certain special provisions for acquisition security rights, the provisions applicable to security rights apply to acquisition security rights (for the definition of “acquisition security right”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). As an alternative, the draft guide provides for a non-unitary approach to acquisition financing, in the context of which the terminology of various types of rights securing the purchase price of tangible property is maintained, while certain special provisions are introduced to ensure that acquisition financing rights (for the definition of “acquisition financing right”, see A/CN.9/631, Introduction, sect. B, Terminology and rules of interpretation) are treated as functional equivalents of acquisition security rights.

2. Possible asset-specific adjustments

79. The provisions of the draft guide with respect to acquisition financing apply only to tangible property. One of the results of this approach is that standard intellectual property licences, in the context of which the licensor by definition reserves title and assignments of intellectual property with a right to terminate are not assimilated to security rights. This result is generally accepted as being appropriate. However, an inadvertent result of this approach is that the draft guide does not discuss acquisition financing with respect to intellectual property. In view of the importance of this type of financing, the draft guide should address it.

80. An example may illustrate the issue. A grantor grants a lender a security right in all its existing and future intellectual property. The lender registers a notice of its security in the general security rights register. A licensor then grants the grantor a licence of intellectual property. The licensor would like a mechanism to gain priority over the lender’s pre-existing security right, for example to secure a right to receive royalties. Under the priority rules in the draft guide, since priority is mainly determined on the basis of order of registration, the licensor has no mechanism to do so without an acquisition security right. Thus, in order to provide parity between sellers of goods and licensors of intellectual property, an acquisition financing right would seem appropriate. On the other hand, if priority is determined by the rules of a specialized intellectual property registry, an acquisition financing right is unnecessary (at least in legal systems in which such a specialized registry exists and, in any case, only with respect to intellectual property rights that may be registered in such a registry). This is because the lender cannot gain priority unless it makes a new registration identifying the specific intellectual property, and the licensor can always record the licence as soon as it is made and before the lender

can file. It will be necessary to study in what situations an acquisition financing right is appropriate for intellectual property.

K. Law applicable to a security right in intellectual property

1. General approach of the draft guide

81. Under the draft guide, the creation, third-party effectiveness, priority and enforcement of a security right in intangible property is subject to the law of the State in which the grantor is located (see A/CN.9/631, recommendation 204). The grantor is located in the State in which it has its place of business. In the case of places of business in more than one State, reference is made to the State in which the grantor has its central administration (see A/CN.9/631, recommendation 207).

82. The mutual rights and obligations of the grantor and the secured creditor with respect to the security right are governed by the law chosen by them and, in the absence of a choice of law, by the law governing the security agreement (see A/CN.9/631, recommendation 212).

2. Possible asset-specific adjustments

83. A new asset-specific recommendation may need to be introduced with respect to the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property. Intellectual property conventions adopt the principle of territoriality. The consequence is that all issues concerning security rights in intellectual property are referred to the law of the place where the secured creditor exercises its security right (*lex protectionis*).

84. In addition, under the principle of minimum rights, all States parties to those conventions accord a basic level of protection to intellectual property owners and their successors. Finally, under the principle of national treatment, each State has to treat nationals of another State no less favourably than it treats its own nationals. This creates a system in which nationals of any State know that in any other State they will be accorded at least certain minimum rights, along with any greater rights that are accorded to locals. The benefits of this structure, including ease of administration and fairness in application, have been proven by experience.

85. Other possible approaches are based on the principle of “material reciprocity” or “country of origin”, in which the rights of a person in the home or “origin” State determines the extent of a person’s rights in another State. A further approach could be to provide that the third-party effectiveness and priority of a security right in intellectual property is governed by the law of the grantor’s location, with the exception of a priority contest between a secured creditor and a transferee under an outright transfer of an intellectual property right, which would be governed by the law of the State in which the intellectual property right is used or protected.

86. From the point of view of lenders, it would be more efficient to look to a single national law, as recommended in the draft guide (i.e. the law of the location of the grantor), to determine issues of creation, third-party effectiveness, priority and enforcement of a security right regardless of the State where these issues arise. However, from the point of view of intellectual property owners, these issues with respect to a security right also entail issues regarding ownership and enforcement of the right, especially in the context of minimum rights and national treatment, issues

that are determined under the territoriality principle. Thus, further work is needed on the appropriate law for security rights in intellectual property.

IV. Conclusions

87. The draft guide contains a general part and an asset-specific part, since not all States may need all asset-specific parts of the draft guide. The general part of the draft guide applies to security rights in intellectual property. However, the asset-specific part of the draft guide does not contain provisions (commentary or recommendations) dealing with security rights in intellectual property. For this reason, the draft guide defers to intellectual property law with respect to any inconsistency between its general part and intellectual property law. In addition, the draft guide draws the attention of States to the need to consider adjusting their laws to avoid any such inconsistencies without, however, providing any specific guidance in that regard.

88. The Commission may wish to consider that such guidance may be usefully provided in an asset-specific appendix of the draft guide, in view of the generally recognized importance of intellectual property as security for credit and the detrimental effects that may flow from an inadequate coordination between secured transactions and intellectual property laws. In addition, the Commission may wish to consider that such work would be feasible to the extent it would involve asset-specific commentary and recommendations such as those mentioned above. As indicated by the Colloquium on Security Interests in Intellectual Property Rights, an important element ensuring the feasibility of this work would be the participation of representatives of international organizations with expertise in the area of intellectual property, such as WIPO, international associations of intellectual property practitioners, together with international organizations and international associations of secured financing experts, in a balanced way that would adequately reflect the various practices and the various legal systems of the world.

89. The Commission may wish to entrust to Working Group VI the preparation of an asset-specific text on security rights in intellectual property that would usefully supplement the work of the Commission on the draft guide by providing specific guidance with respect to security rights in intellectual property. The Commission may also wish to consider inviting international organizations with expertise in the area of intellectual property, such as WIPO, and international associations of intellectual property and secured financing practitioners, to participate actively in this work.

B. Note by the Secretariat on possible future work in the area of electronic commerce

(A/CN.9/630 and Add.1-5) [Original: English]

Comprehensive reference document on elements required to establish a favourable legal framework for electronic commerce: sample chapter on international use of electronic authentication and signature methods

1. In 2004, having completed its work on the Convention on the Use of Electronic Communications in International Contracts, Working Group IV (Electronic Commerce) of the United Nations Commission on International Trade Law (UNCITRAL) requested the Secretariat to continue monitoring various issues related to electronic commerce, including issues related to cross-border recognition of electronic signatures, and to publish the results of its research with a view to making recommendations to the Commission as to whether future work in those areas would be possible (see A/CN.9/571, para. 12).

2. In 2005, the Commission took note of the work undertaken by other organizations in various areas related to electronic commerce and requested the Secretariat to prepare a more detailed study, which should include proposals as to the form and nature of a comprehensive reference document discussing the various elements required to establish a favourable legal framework for electronic commerce, which the Commission might in the future consider preparing with a view to assisting legislators and policymakers around the world.¹ In 2006, UNCITRAL considered a note prepared by its secretariat pursuant to that request (A/CN.9/604). The note identified the following areas as possible components of a comprehensive reference document: (a) authentication and cross-border recognition of electronic signatures; (b) liability and standards of conduct for information-services providers; (c) electronic invoicing and legal issues related to supply chains in electronic commerce; (d) transfer of rights in tangible goods and other rights through electronic communications; (e) unfair competition and deceptive trade practices in electronic commerce; and (f) privacy and data protection in electronic commerce. The note also identified other issues that, although in a more summary fashion, could be included in such a document: (a) protection of intellectual property rights; (b) unsolicited electronic communications (spam); and (c) cybercrime.

3. There was support for the view that the task of legislators and policymakers, in particular in developing countries, might be greatly facilitated if the Commission were to formulate a comprehensive reference document dealing with the topics identified by the Secretariat. Such a document, it was also said, might also assist the Commission to identify areas in which it might itself undertake future harmonization work. However, there were also concerns that the range of issues identified was too wide and that the scope of the comprehensive reference document might need to be reduced. The Commission eventually agreed to ask its secretariat to prepare a sample portion of the comprehensive reference document dealing

¹ *Official Records of the General Assembly, Sixtieth Session, Supplement No. 17 (A/60/17)*, para. 214.

specifically with issues related to authentication and cross-border recognition of electronic signatures, for review at its fortieth session, in 2007.²

4. The annex to the present note contains the introductory part of a sample chapter dealing with legal issues related to the international use of electronic authentication and signature methods (henceforth referred to as the “sample chapter”). The addenda to the present note discuss the legal treatment of electronic authentication and signatures and legal problems arising out of their international use.

5. The Commission may wish to consider the structure, level of detail, nature of discussion and type of advice provided in the sample chapter and consider whether it would be desirable and useful for the Secretariat to prepare other chapters following the same model, to deal with other issues that the Commission may wish to select from among those proposed earlier (see para. 2 above). Alternatively, the Commission may wish to request that the Secretariat continue to follow closely legal developments in the relevant areas, with a view to making appropriate suggestions in due course. In that case, the Commission may wish to consider whether the Secretariat should be requested to publish the sample chapter, with whatever amendments the Commission may consider appropriate, as a stand-alone publication.

Foreword

The present document analyses the main legal issues arising out of the use of electronic signatures and authentication methods in international transactions. Part one provides an overview of methods used for electronic signature and authentication and their legal treatment in various jurisdictions (see below, paras. [...]–[...]).* Part two considers the use of electronic signature and authentication methods in international transactions and identifies the main legal issues related to cross-border recognition of electronic signature and authentication methods (see below, paras. [...]–[...]).

It has been observed that, from an international perspective, legal difficulties are more likely to arise in connection with the cross-border use of electronic signature and authentication methods that require the involvement of third parties in the signature or authentication process. This is the case, for instance, of electronic signature and authentication methods supported by certificates issued by a trusted third-party certification services provider, in particular digital signatures under a public key infrastructure (PKI). For this reason, part two of this document pays special attention to international use of digital signatures under a PKI. This emphasis should not be understood as a preference or endorsement of this or any other particular type of authentication method or technology.

Introduction

1. Information and computer technology have developed various means for linking information in electronic form to particular persons or entities, for ensuring the integrity of such information or for enabling persons to demonstrate their entitlement or authorization to obtain access to a certain service or repository of information. These functions are sometimes referred to generically either as electronic “authentication” or electronic “signature” methods. Sometimes, however, distinctions are made between electronic “authentication” and electronic “signature”. The use of terminology is not only inconsistent, but to some extent misleading. In a paper-based environment, the words “authentication” and “signature” and the related actions of “authenticating” and “signing” do not have exactly the same connotation in different legal systems and have functionalities that may not necessarily correspond to the purpose and function of the so-called electronic “authentication” and “signature” methods. Furthermore, the word “authentication” is sometimes generically used in connection with any assurance of both authorship and integrity of information, but some legal systems may distinguish between those elements. A short overview of differences in terminology and legal understanding is therefore necessary with a view to establishing the scope of the present document.

2. Under common law on civil evidence, a record or document is regarded as “authentic” if there is evidence that the document or record “is what its proponent

* All cross references in this document and its addenda, as well as all cross references in their footnotes, will be finalized when the final document is issued in consolidated form.

claims”.¹ The notion of “document” as such is fairly broad and generally encompasses “anything in which information of any description is recorded”.² This would include, for example, such things as photographs of tombstones and houses,³ account books⁴ and drawings and plans.⁵ The relevancy of a document as a piece of evidence is established by connecting it with a person, place or thing, a process which in some common law jurisdictions is known as “authentication”.⁶ Signing a document is a common — albeit not exclusive — means of “authentication”, and, depending on the context, the terms “to sign” and “to authenticate” may be used as synonyms.⁷

3. A “signature”, in turn, is “any name or symbol used by a party with the intention of constituting it his signature”.⁸ It is understood that the purpose of statutes that require a particular document to be signed by a particular person is to confirm the genuineness of the document.⁹ The paradigm case of signature is the signatory’s name, written in the signatory’s own hand, on a paper document (a “handwritten” or “manuscript” signature).¹⁰ However, the handwritten signature is not the only conceivable type of signature. Since courts regard signatures as “only a mark”, unless the statute in question requires the signature to be an autograph, “the printed name of the party who is required to sign the document is enough”, or the signature “may be impressed upon the document by a stamp engraved with a facsimile of the ordinary signature of the person signing”, provided that proof in these cases is given “that the name printed on the stamp was affixed by the person signing”, or that such signature “has been recognized and brought home to him as having been done by his authority so as to appropriate it to the particular instrument”.¹¹

¹ United States of America, Federal Rules of Evidence, rule 901, subdivision (a): “The requirement of authentication or identification as a condition precedent to admissibility is satisfied by evidence sufficient to support a finding that the matter in question is what its proponent claims.”

⁴ *Hayes v. Brown* [1920] 1 K.B. 250 (United Kingdom, Law Reports, King’s Bench).

⁵ *J. H. Tucker & Co., Ltd. v. Board of Trade* [1955] 2 All ER 522 (United Kingdom, All England Law Reports).

⁶ *Farm Credit Bank of St. Paul v. William G. Huether*, 12 April 1990 (454 N.W.2d 710, 713) (United States, Supreme Court of North Dakota, North Western Reporter).

⁷ In the context of the revised article 9 of the United States Uniform Commercial Code, for example, “authenticate” is defined as “(A) to sign; or (B) to execute or otherwise adopt a symbol, or encrypt or similarly process a record in whole or in part, with the present intent of the authenticating person to identify the person and adopt or accept a record.”

⁸ *Alfred E. Weber v. Dante De Cecco*, 14 October 1948 (1 N.J. Super. 353, 358) (United States, New Jersey Superior Court Reports).

⁹ *Lobb v. Stanley* (1844), 5 Q.B. 574, 114 E.R. 1366 (United Kingdom, Law Reports, Queen’s Bench).

¹⁰ Lord Denning in *Goodman v. Eban* [1954] Q.B.D. 550 at 56: “In modern English usage when a document is required to be signed by someone that means that he must write his name with his own hand upon it.” (United Kingdom, Queen’s Bench Division).

¹¹ *R. v. Moore: ex parte Myers* (1884) 10 V.L.R. 322 at 324 (United Kingdom, Victorian Law Reports).

4. Legal signature requirements as a condition for the validity of certain acts in common law jurisdictions are typically found in the British Statute of Frauds¹² and its versions in other countries.¹³ With time, courts have tended to interpret the Statute of Frauds liberally, out of recognition that its strict form requirements were conceived against a particular background¹⁴ and that strict adherence to its rules might unnecessarily deprive contracts of legal effect.¹⁵ Thus, in the last 150 years, common law jurisdictions have seen an evolution of the concept of “signature” from an original emphasis on form to a focus on function.¹⁶ Variations on this theme have been considered by the English courts from time to time, ranging from simple modifications such as crosses¹⁷ or initials,¹⁸ through pseudonyms¹⁹ and identifying phrases,²⁰ to printed names,²¹ signatures by third parties²² and rubber stamps.²³ In all

¹² The Statute of Frauds was originally passed in Great Britain in 1677 “[f]or the prevention of many fraudulent practices which are commonly endeavoured to be upheld by perjury and subordination of perjury.” Most of its provisions were repealed in the United Kingdom during the twentieth century.

¹³ For example, section 2-201, subsection 1, of the Uniform Commercial Code of the United States, which has expressed the Statute of Frauds as follows: “Except as otherwise provided in this section, a contract for the sale of goods for a price of \$500 or more is not enforceable by way of action or defence unless there is some writing sufficient to indicate that a contract for sale has been made between the parties and signed by a party against whom enforcement is sought or by his authorized agent or broker.”

¹⁴ “The Statute of Frauds was passed at a period when the legislature was somewhat inclined to provide that cases should be decided according to fixed rules rather than to leave it to the jury to consider the effect of the evidence in each case. This, no doubt, arose to a certain extent from the fact that in those days the plaintiff and the defendant were not competent witnesses.” (J. Roxborough in *Leeman v. Stocks* [1951] 1 Ch 941 at 947-8) (United Kingdom, Law Reports, Chancery Division) citing approval for the views of J. Cave in *Evans v. Hoare* [1892] 1 QB 593 at 597) (United Kingdom, Law Reports, Queen’s Bench).

¹⁵ As explained by Lord Bingham of Cornhill “It quickly became evident that if the seventeenth century solution addressed one mischief it was capable of giving rise to another: that a party, making and acting on what was thought to be a binding oral agreement, would find his commercial expectations defeated when the time for enforcement came and the other party successfully relied on the lack of a written memorandum or note of the agreement.” (*Actionstrength Limited v. International Glass Engineering*, 3 April 2003, [2003] UKHL 17) (United Kingdom, House of Lords).

Typewriting has also been considered in *Newborne v. Sensolid (Great Britain), Ltd.* [1954] 1 QB 45 (United Kingdom, Law Reports, Queen’s Bench).

²² *France v. Dutton*, 24 April 1891 [1891] 2 QB 208 (United Kingdom, Law Reports, Queen’s Bench).

²³ *Goodman v. J. Eban Ltd.*, [1954] 1 QB 550, cited in *Lazarus Estates, Ltd. v. Beasley*, Court of Appeal, 24 January 1956 ([1956] 1 QB 702); *London County Council v. Vitamins, Ltd.*, *London County Council v. Agricultural Food Products, Ltd.*, Court of Appeal, 31 March 1955 [1955] 2 QB 218 (United Kingdom, Law Reports, Queen’s Bench).

these cases the courts have been able to resolve the question as to whether a valid signature was made by drawing an analogy with a manuscript signature. Thus, it could be said that against a background of some rigid general form requirements, courts in common law jurisdictions have tended to develop a broad understanding of what the notions of “authentication” and “signature” mean, focusing on the intention of the parties, rather than on the form of their acts.

5. The approach to “authentication” and “signature” in civil law jurisdictions is not in all respects identical to the common law approach. Most civil law jurisdictions follow the rule of freedom of form for contractual engagements in private law matters, either expressly²⁴ or impliedly²⁵ subject, however, to a more or less extensive catalogue of exceptions depending on the jurisdiction concerned. This means that, as a general rule, contracts need not be in “writing” or “signed” in order to be valid and enforceable. However, there are civil law jurisdictions that generally require a writing to prove the contents of contracts, except in commercial matters.²⁶ In contrast to common law jurisdictions, civil law countries tend to interpret evidentiary rules rather strictly. Typically, rules on civil evidence establish a hierarchy of evidence for proving the content of civil and commercial contracts. Highest in such ranking are documents issued by public authorities, followed by authentic private documents. Often, such hierarchy is conceived in such a way that the notions of “document” and “signature”, although formally distinct, may become nearly inseparable.²⁷ Other civil law jurisdictions, however, positively link the notion of “document” to the existence of a “signature”.²⁸ This does not mean that a

²⁴ This is recognized, for instance, in article 11, paragraph 1, of the Code of Obligations of Switzerland. Similarly, section 215 of the Civil Code of Germany provides that agreements are only invalid where they failed to observe a form **prescribed** by law or agreed upon by the parties. Except for such specific instances, it is generally understood that private law contracts are not subject to specific form requirements. Where the law expressly prescribes a particular form, that requirement is to be interpreted strictly.

²⁵ In France, for instance, freedom of form is an implication within the basic rules on contract formation under the Civil Code. According to article 1108 of the Civil Code of France, the validity of a contract requires the consent of the promisor, his or her legal capacity, a certain object and a licit cause; once these have been met, the contract is “law between the parties” according to article 1134. This is also the rule in Spain under articles 1258 and 1278 of the Civil Code. Italy also follows the same rule, although less explicitly (see Civil Code of Italy, articles 1326 and 1350).

²⁶ Article 1341 of the Civil Code of France requires a writing for the proof of contracts exceeding a certain value, but article 109 of the Commercial Code admits various types of evidence, without a particular hierarchy. This led the Court of Cassation of France in 1892 to recognize the general principle of freedom of evidence in commercial matters (Cass. civ. 17 mai 1892, DP 1892.1.604; cited in Luc Grynbaum, *Preuve, Répertoire de droit commercial Dalloz*, June 2002, sections 6 and 11).

²⁷ Thus, for instance, under German law a signature is not an essential element of the notion of “document” (*Urkunde*) (Gerhard Lüke and Alfred Walchshöfer, *Münchener Kommentar zur Zivilprozessordnung* (Munich, Beck, 1992), section 415, No. 6. Nevertheless, the hierarchy of documentary evidence established by sections 415, 416 and 419 of the Code of Civil Procedure of Germany clearly links the signature to the document. Indeed, section 416, on the evidentiary value of private documents (*Privaturkunden*), provides that private documents constitute “full proof” for the information they contain as long as they are signed by the author or by a notarized signature). As nothing is provided for documents without a signature, it seems that they share the sort of defective documents (i.e. garbled, damaged), whose evidentiary value is “freely established” by the courts (Code of Civil Procedure of Germany, section 419).

²⁸ Thus, in France, a signature is an “essential element” of private documents (“*actes sous sein privé*”) (see *Recueil Dalloz, Preuve*, no. 638).

document that has not been signed is necessarily deprived of any value as evidence, but such a document would not enjoy any particular presumption and is generally regarded as a “beginning of evidence”.²⁹ “Authentication” is in most civil law jurisdictions a concept that is rather narrowly understood to mean that the authenticity of a document has been verified and certified by a competent public authority or a notary public. In civil procedure it is common to refer instead to the notion of “originality” of documents.

6. As is the case under the common law, the paradigm of a signature in civil law countries is the handwritten one. As regards the signature itself, some jurisdictions tend to admit various equivalents, including mechanical reproductions of signatures, despite a generally formalist approach to evidence.³⁰ Other jurisdictions, however, admit mechanical signatures for commercial transactions,³¹ but until the advent of computer technologies, continued to require a handwritten signature for the proof of other types of contract.³² It could therefore be said that against a general background of freedom of form for the conclusion of business contracts, civil law countries tend to apply strict standards to assess the evidentiary value of private documents and may be dismissive of documents whose authenticity is not immediately recognizable on the basis of a signature.

7. The above discussion shows not only that the notions of signature and authentication are not uniformly understood, but also that the functions they fulfil vary across legal systems. Despite these divergences, a few general common elements can be found. The notions of “authentication” and “authenticity” are generally understood in law to refer to the genuineness of a document or record, that is, that the document is the “original” support of the information it contains, in the form it was recorded and without any alteration. Signatures, in turn, perform three main functions in the paper-based environment: signatures permit to identify the signatory (identification function); signatures provide certainty as to the personal involvement of that person in the act of signing (evidentiary function); and signatures associate the signatory with the content of a document (attribution function).³³ Signatures can be said to perform various other functions as well, depending on the nature of the document that was signed. For example, a signature might attest to the intent of a party to be bound by the content of a signed contract; the intent of a person to endorse authorship of a text (thus displaying awareness of the fact that legal consequences might possibly flow from the act of signing); the intent of a person to associate him or herself with the content of a document written

²⁹ This is the situation in France, for example see *Recueil Dalloz, Preuve*, nos. 657-658.

³⁰ Commentators of the Code of Civil Procedure of Germany point out that requiring a handwritten signature would mean excluding all forms of mechanically made signs, a result that would run counter to ordinary practice and technological progress (see Gerhard Lüke and Alfred Walchshöfer, *Münchener Kommentar zur Zivilprozessordnung* (Munich, Beck, 1992), section 416, No. 5).

³¹ For example, France (see *Recueil Dalloz, Preuve*, no. 662).

³² In France, for instance, the signature could not be replaced with a cross or other signs, by a seal or by fingerprints (see *Recueil Dalloz, Preuve*, no. 665).

³³ *UNCITRAL Model Law on Electronic Signatures with Guide to Enactment 2001* (United Nations publication, Sales No. E.02.V.8), part two, para. 29, available at www.uncitral.org/uncitral/en/uncitral_texts/electronic_commerce.html. This analysis had already served as a basis for functional equivalence criteria in article 7 of the earlier *UNCITRAL Model Law on Electronic Commerce with Guide to Enactment 1996 with Additional Article 5 bis as Adopted in 1998* (United Nations publication, Sales No. E.99.V.4), available at www.uncitral.org/uncitral/en/uncitral_texts/electronic_commerce.html.

by someone else; and the fact that, and the time when, a person has been at a given place.³⁴

8. It should be noted, however, that even though the authenticity is often presumed by the existence of a signature, a signature alone does not “authenticate” a document. The two elements may even be separable, depending on the circumstances. A signature may retain its “authenticity” even though the document to which it is affixed is subsequently altered. Likewise, a document may still be “authentic” even though a signature it contains was forged. Furthermore, the authority to intervene in a transaction and the actual identity of the person in question, while important elements to ensure the authenticity of a document or signature, are neither fully demonstrated by the signature alone, nor sufficient assurance of the authenticity of the documents or of the signature.

9. This observation leads to another aspect of the issue presently discussed. Regardless of the particular legal tradition, a signature, with very few exceptions, is not self-standing. Its legal effect will depend on the link between the signature and the person to whom the signature is attributable. In practice, various steps may be taken to verify the identity of the signatory. When the parties are all present at the same place at the same time, they may simply recognize one another by their faces; if they negotiate over the telephone, they may recognize each other’s voices and so on. Much of this happens as a matter of course and is not subject to specific legal rules. However, where the parties negotiate by correspondence, or where signed documents are forwarded along a contracting chain, there may be few means of establishing that the signs that appear on a given document were indeed made by the person to whose name they appear to be linked and whether indeed only the duly authorized person was the one who produced the signature supposed to bind a particular person.

10. Although a manual signature is a familiar form of “authentication” and serves well for transaction documents passing between known parties, in many commercial and administrative situations a signature is therefore relatively insecure. The person relying on the document often has neither the names of persons authorized to sign nor specimen signatures available for comparison.³⁵ This is particularly true of many documents relied upon in foreign countries in international trade transactions. Even where a specimen of the authorized signature is available for comparison, only an expert may be able to detect a careful forgery. Where large numbers of documents are processed, signatures are sometimes not even compared except for the most important transactions. Trust is one of the basic foundations of international business relations.

³⁴ Ibid.

³⁵ Some areas of the law recognize both the inherent insecurity of handwritten signatures and the impracticability of insisting on strict form requirements for the validity of legal acts, and admit that in some instances even the forgery of a signature would not deprive a document of its legal effect. Thus, for example, article 7 of the Uniform Law on Bills of Exchange and Promissory Notes annexed to the Convention providing a Uniform Law for Bills of Exchange and Promissory Notes, done at Geneva on 7 June 1930, provides that “if a bill of exchange bears the signatures of persons incapable of binding themselves by a bill of exchange, or forged signatures, or signatures of fictitious persons, or signatures which for any other reason cannot bind the persons who signed the bill of exchange or on whose behalf it was signed, the obligations of the other persons who signed it are none the less valid” (League of Nations, *Treaty Series*, vol. CXLIII, No. 3313).

11. Most legal systems have special procedures or requirements that are intended to enhance the reliability of handwritten signatures. Some procedures may be mandatory in order for certain documents to produce legal effects. They may also be optional and available to parties that wish to act to preclude possible arguments concerning the authenticity of certain documents. Typical examples include the following:

(a) **Notarization.** In certain circumstances, the act of signing has a particular formal significance due to the reinforced trust associated with a special ceremony. This is the case, for instance, with notarization, i.e. the certification by a notary public to establish the authenticity of a signature on a legal document;

(b) **Attestation.** Attestation is the act of watching someone sign a legal document and then signing one's name as a witness. The purpose of attestation is to preserve evidence of the signing. By attesting, the witness states and confirms that the person whom he or she watched sign the document in fact did so. Attesting does not extend to vouching for the accuracy or truthfulness of the document. The witness can be called on to testify as to the circumstances surrounding the signing;³⁶

(c) **Seals.** The practice of using seals in addition to, or in substitution of signatures, is not uncommon, especially in certain regions of the world.³⁷ Signing or sealing may, for example, provide evidence of the identity of the signatory; that the signatory agreed to be bound by the agreement and did so voluntarily; that the document is final and complete; or that the information has not been altered after signing.³⁸ It may also caution the signatory and indicate the intent to act in a legally binding manner.

12. Apart from these special situations, handwritten signatures have been used in commercial transactions, both domestic and international, for centuries without any particularly designed legislative or operational framework. The addressees or holders of the signed documents have assessed the reliability of signatures on a case-by-case basis depending on the level of trust enjoyed by the signatory. In fact, the vast majority of international written contracts — if there is “writing” at all — are not necessarily accompanied by any special formality or authentication procedure.

13. Cross-border use of signed documents becomes more complicated when public authorities are involved, as receiving authorities in a foreign country typically require some evidence of the identity and authority of the signatory. These requirements are traditionally satisfied by so-called “legalization” procedures, where the signatures are contained in domestic documents, authenticated by diplomatic authorities for use abroad. Conversely, consular or diplomatic representatives of the country where the documents are intended to be used may also authenticate signatures of foreign public authorities in the country of origin. Often consular and diplomatic authorities only authenticate signatures of certain high-ranking authorities in the issuing countries, thus requiring several layers of

³⁶ Adrian McCullagh, Peter Little and William Caelli, “Electronic signatures: understand the past to develop the future”, *University of New South Wales Law Journal*, vol. 21, No. 2 (1998), see especially chapter III, section D, on the concept of witnessing.

³⁷ Seals are used in several countries in eastern Asia, such as China and Japan.

³⁸ Mark Sneddon, “Legislating to facilitate electronic signatures and records: exceptions, standards and the impact of the statute book”, *University of New South Wales Law Journal*, vol. 21, No. 2 (1998), see especially part 2, chapter II, on policy objectives of writing and signature requirements.

recognition of signatures where the document was originally issued by a lower-ranking official, or require prior notarization of signatures by a notary in the issuing country. Legalization is in most cases a cumbersome, time-consuming and expensive procedure. The Convention Abolishing the Requirement of Legalisation for Foreign Public Documents,³⁹ done at The Hague on 5 October 1961, was therefore negotiated to replace existing requirements with a simplified and standardized form (the “apostille”), which is used for providing a certification of certain public documents in the States parties to the Convention.⁴⁰ Only a “Competent Authority” designated by the State from which the public document emanates may issue an apostille. Apostilles certify the authenticity of the signature, the capacity in which the person signing the document has acted and, where appropriate, the identity of the seal or stamp that the document bears, but do not relate to the content of the underlying document itself.

14. As has been indicated above, in many legal systems, commercial contracts need not always to be contained in a document or evidenced by a writing to be valid. Even where a writing exists, a signature is not necessarily mandatory in order for the contract to be binding on the parties. Of course, where the law requires contracts to be in writing or to be signed, failure to meet those requirements would render the contract invalid. Perhaps more significant than form requirements for purposes of validity of contracts, are form requirements for evidentiary purposes. The difficulty of proving oral agreements is one of the main reasons why commercial contracts are reflected in written documents or documented by correspondence, even if an oral agreement would be otherwise valid. Parties whose obligations are documented in signed writings are unlikely to succeed in attempts to negate the content of their obligations. Strict rules on documentary evidence typically aim at affording a high degree of reliability on the documents that meet them, which is generally believed to raise legal certainty. At the same time, however, the more elaborate the evidentiary requirements, the greater the opportunity a party has to invoke formal defects with a view to invalidating or denying enforceability to obligations they no longer intend to perform, for instance because the contract has become commercially disadvantageous. The interest for promoting security in the exchange of electronic communications needs therefore to be balanced against the risk of providing an easy way for traders in bad faith to repudiate their freely assumed legal obligations. Achieving this balance through rules and standards that are internationally recognized and operable across national borders is a major task of policymaking in the area of electronic commerce. The purpose of the present document is to help legislators and policymakers to identify the main legal issues involved in international use of electronic authentication and signature methods and consider possible solutions for them.

³⁹ United Nations, *Treaty Series*, vol. 527, No. 7625. Available at the apostille section on the website of the Hague Conference on Private International Law at http://hcch.e-vision.nl/index_en.php?act=text.display&tid=37, accessed on 7 February 2007.

⁴⁰ Those documents include documents emanating from an authority or official connected with a court or tribunal of the State (including documents issued by an administrative, constitutional or ecclesiastical court or tribunal, a public prosecutor, a clerk or a process-server); administrative documents; notarial acts; and official certificates that are placed on documents signed by persons in their private capacity.

Part One

Electronic signature and authentication methods

I. Definition and methods of electronic signature and authentication

A. General remarks on terminology

15. The terms “electronic authentication” or “electronic signature” are used to refer to various techniques currently available on the market or still under development for the purpose of replicating in an electronic environment some or all of the functions identified as characteristic of handwritten signatures or other traditional authentication methods.

16. A number of different electronic signature techniques have been developed over the years. Each technique aims at satisfying different needs and providing different levels of security, and entails different technical requirements. Electronic authentication and signature methods may be classified in three categories: those based on the knowledge of the user or the recipient (e.g. passwords, personal identification numbers (PINs)), those based on the physical features of the user (e.g. biometrics) and those based on the possession of an object by the user (e.g. codes or other information stored on a magnetic card).⁴¹ A fourth category might include various types of authentication and signature methods that, without falling under any of the above categories, might also be used to indicate the originator of an electronic communication (such as a facsimile of a handwritten signature, or a name typed at the bottom of an electronic message). Technologies currently in use include digital signatures within a PKI, biometric devices, PINs, user-defined or assigned passwords, scanned handwritten signatures, signature by means of a digital pen, and clickable “OK” or “I accept” boxes.⁴² Hybrid solutions based on the combination of different technologies are becoming increasingly popular, such as, for instance, in the case of the combined use of passwords and TLS/SSL (transport layer security/secure sockets layer), which is a technology using a mix of public and symmetric key encryptions. The features of the main techniques currently used are described below (see paras. [...]–[...]).

17. As is often the case, technology developed long before the law entered this area. The resulting gap between law and technology leads not only to varying levels of expert knowledge, but also inconsistent use of terminology. Expressions that were traditionally used with a particular connotation under national laws started to be used to describe electronic techniques whose functionality did not necessarily coincide with the functions or characteristics of the corresponding concept in legal usage. As has been seen above (see paras. [...]–[...]), the notions of “authentication”, “authenticity”, “signature” and “identity”, although in certain contexts closely related, are not identical or interchangeable. The usage in the

⁴¹ See report of the Working Group on Electronic Commerce on the work of its thirty-second session, held in Vienna from 19 to 30 January 1998 (A/CN.9/446), paras. 91 ff., available at www.uncitral.org/uncitral/en/commission/working_groups/4Electronic_Commerce.html.

⁴² *UNCITRAL Model Law on Electronic Signatures with Guide to Enactment 2001* (see note [33]), part two, para. 33.

information technology industry, which evolved essentially around concerns over network security, however, does not necessarily apply the same categories as legal writings.

18. In some cases, the expression “electronic authentication” is used to refer to techniques that, depending on the context in which they are used, may involve various elements, such as identification of individuals, confirmation of a person’s authority (typically to act on behalf of another person or entity) or prerogatives (for example, membership in an institution, or subscription of a service) or assurance as to the integrity of information. In some cases, the focus is on identity only,⁴³ but sometimes it extends to authority,⁴⁴ or a combination of any or all of those elements.⁴⁵

19. Neither the UNCITRAL Model Law on Electronic Commerce,⁴⁶ nor the UNCITRAL Model Law on Electronic Signatures⁴⁷ uses the term “electronic authentication”, in view of the different meaning of “authentication” in various legal systems and the possible confusion with particular procedures or form requirements (see paras. [...]–[...] above). The Model Law on Electronic Commerce uses instead the notion of “original form” to provide the criteria for the functional equivalence of “authentic” electronic information. According to article 8 of the Model law, where the law requires information to be presented or retained in its original form, that requirement is met by a data message if:

(a) There exists “a reliable assurance as to the integrity of the information from the time when it was first generated in its final form, as a data message or otherwise;” and

(b) Where it is required that information be presented, that information “is capable of being displayed to the person to whom it is to be presented.”

⁴³ The Technology Administration of the United States Department of Commerce, for example, defines electronic authentication as “the process of establishing confidence in user identities electronically presented to an information system” (United States, Department of Commerce, *Electronic Authentication Guideline: Recommendations of the National Institute of Standards and Technology*, NIST Special Publication 800-63, version 1.0.2 (Gaithersburg, Maryland, April 2006)), available at http://csrc.nist.gov/publications/nistpubs/800-63/SP800-63V1_0_2.pdf, accessed on 4 April 2007.

⁴⁴ For example, the Government of Australia developed an electronic authentication framework that defines electronic authentication as “the process of establishing a level of confidence in whether a statement is genuine or valid when conducting a transaction online or by phone. It helps build trust in an online transaction by giving the parties involved some assurance that their dealings are legitimate. These statements might include: identity details; professional qualifications; or the delegated authority to conduct transactions” (Australia, Department of Finance and Administration, *Australian Government e-Authentication Framework: An Overview* (Commonwealth of Australia, 2005), available at www.agimo.gov.au/infrastructure/authentication/agaf_b/overview/introduction#e-authentication, accessed on 4 April 2007).

⁴⁵ The Principles for Electronic Authentication prepared by the Government of Canada, for instance, define “authentication” as “a process that attests to the attributes of participants in an electronic communication or to the integrity of the communication.” “Attributes” in turn are defined as “information concerning the identity privilege or rights of a participant or other authenticated entity” (Canada, Industry Canada, *Principles for Electronic Authentication: a Canadian Framework* (Ottawa, May 2004), available at http://strategis.ic.gc.ca/epic/site/ecic-ceac.nsf/en/h_gv00240e.html, accessed on 4 April 2007).

⁴⁶ UNCITRAL Model Law on Electronic Commerce with Guide to Enactment (see note [33]).

⁴⁷ UNCITRAL Model Law on Electronic Signatures (see note [33]).

20. In keeping with the distinction made in most legal systems between signature (or seals, where they are used instead) as a means of “authentication”, on the one hand, and “authenticity” as the quality of a document or record on the other, both model laws complement the notion of “originality” with the notion of “signature”. Article 2, subparagraph (a), of the UNCITRAL Model Law on Electronic Signatures defines electronic signature as: data in electronic form in, affixed to or logically associated with, a data message, which may be used to “identify the signatory” in relation to the data message and to “indicate the signatory’s approval of the information contained in the data message.”

21. The definition of “electronic signature” in UNCITRAL texts is deliberately broad, so as to encompass all existing or future “electronic signature” methods. As long as the methods used are “as reliable as was appropriate for the purpose for which the data message was generated or communicated, in the light of all the circumstances, including any relevant agreement”,⁴⁸ they should be regarded as meeting legal signature requirements. UNCITRAL texts relating to electronic commerce, as well as a large number of other legislative texts, are based on the principle of technological neutrality and therefore aim at accommodating all forms of electronic signature. Thus, UNCITRAL’s definition of electronic signature would cover the entire spectrum of “electronic signature” techniques, from higher-level security, such as cryptographically based signature assurance schemes associated with a PKI scheme (a common form of “digital signature” (see paras. [...]–[...]) to lower levels of security, such as unencrypted codes or passwords. The simple typing of the author’s name at the end of an e-mail message, which is the most common form of electronic “signature”, would, for instance, fulfil the function of correctly identifying the author of the message whenever it was not unreasonable to use such a low level of security.

22. The UNCITRAL model laws do not deal otherwise with issues related to access control or identity verification. This was also in keeping with the fact that, in a paper-based environment, signatures may be signs of identity but are necessarily attributive of identity (see paras. [...]–[...]). The UNCITRAL Model Law on Electronic Commerce deals, however, with the conditions under which the addressee of a data message is entitled to assume that the message actually originated from its purported originator. Indeed, article 13 of the Model Law provides that as between the originator and the addressee, a data message is deemed to be that of the originator if it was sent: by a person “who had the authority to act on behalf of the originator in respect of that data message”; or by “an information system programmed by, or on behalf of, the originator to operate automatically.” As between the originator and the addressee, an addressee is entitled to regard a data message as being that of the originator, and to act on that assumption, if (a) in order to ascertain whether the data message was that of the originator, “the addressee properly applied a procedure previously agreed to by the originator for that purpose;” or (b) the data message as received by the addressee resulted from the actions of a person whose relationship with the originator or with any agent of the originator enabled that person to gain access to a method used by the originator to identify data messages as its own. As a whole, these rules allow a party to infer someone else’s identity, whether or not the message was electronically “signed” and whether or not the method used for attributing the message to the originator could be validly used for “signature” purposes. This conforms to current practice in the

⁴⁸ *UNCITRAL Model Law on Electronic Commerce with Guide to Enactment* (see note [33]), article 7, subparagraph 1 (b).

paper-based environment. Checking someone else's voice, physical appearance or identity papers (for example, a national passport) may suffice to conclude that the person is who he or she purports to be for the purpose of communicating with the person concerned, but would not qualify as a "signature" of such person under most legal systems.

23. Besides the confusion that has been caused by the fact that technical and legal usage of terms in the paper-based and in the electronic environment do not coincide, the various techniques mentioned earlier (see above, para. [16] and the more detailed discussion in paras. [...] below) can be used for different purposes and provide a different functionality, depending on the context. Passwords or codes, for example, may be used to "sign" an electronic document, but they may also be used to gain access to a network, a database or another electronic service, in much the same way as a key may be used to unlock a safe or open a door. However, while in the first instance the password is a proof of **identity**, in the second instance, it is a **credential** or sign of authority, which, while ordinarily linked to a particular person, is also capable of being transferred to another. In the case of digital signatures, the inappropriateness of the current terminology is even more patent. The digital signature is widely regarded as a particular technology for "signing" electronic documents. However, it is at least questionable whether, from a legal point of view, the application of asymmetric cryptography for authentication purposes should be referred to as a digital "signature", as its functions go beyond the typical functions of a handwritten signature. The digital signature offers means both to "verify the authenticity of electronic messages" and "guarantee the integrity of the contents."⁴⁹ Furthermore, digital signature technology "does not merely establish origin or integrity with respect to individuals as is required for signing purposes, but it can also authenticate, for instance, servers, websites, computer software, or any other data that is distributed or stored digitally", which gives digital signatures "much broader use than an electronic alternative for handwritten signatures."⁵⁰

**Comprehensive reference document on elements required to
establish a favourable legal framework for electronic commerce:
sample chapter on international use of electronic
authentication and signature methods**

ADDENDUM

The annex to the present note contains part of a sample chapter (part one, chap. I, sects. B and C) of a comprehensive reference document dealing with legal issues related to the international use of electronic authentication and signature methods.

Annex**CONTENTS**

	<i>Paragraphs</i>
B. Main methods of electronic signature and authentication.	1-44
1. Digital signatures relying on public key cryptography.	2-29
2. Biometrics.	30-40
3. Passwords and hybrid methods	41-42
4. Scanned signatures and typed names.	43-44
C. Electronic identity management.	45-54

Part One**Electronic signature and authentication methods**

[...]

I. Definition and methods of electronic authentication and signature

[...]

B. Main methods of electronic signature and authentication

1. For the purposes of this discussion, four main signature and authentication methods will be discussed: digital signatures; biometric methods; passwords and hybrid methods; and scanned or typed signatures.

1. Digital signatures relying on public key cryptography

2. “Digital signature” is a name for technological applications using asymmetric cryptography, also referred to as public key encryption systems, to ensure the authenticity of electronic messages and guarantee the integrity of the contents of these messages. The digital signature has many different appearances, such as fail-stop digital signatures, blind signatures and undeniable digital signatures.

(a) Technical notions and terminology

(i) *Cryptography*

3. Digital signatures are created and verified by using cryptography, the branch of applied mathematics that is concerned with transforming messages into a seemingly unintelligible form and then back into their original form. Digital signatures use what is known as public key cryptography, which is often based on the use of algorithmic functions to generate two different but mathematically related “keys” (i.e. large numbers produced using a series of mathematical formulae applied to prime numbers).¹ One such key is used for creating a digital signature or transforming data into a seemingly unintelligible form, and the other key is used for verifying a digital signature or returning the message to its original form.² Computer equipment and software utilizing two such keys are often collectively referred to as “cryptosystems” or, more specifically, “asymmetric cryptosystems” where they rely on the use of asymmetric algorithms.

(ii) *Public and private keys*

4. A complementary key used for digital signatures is named the “private key”, which is used only by the signatory to create the digital signature and should be kept secret, while the “public key” is ordinarily more widely known and is used by a relying party to verify the digital signature. The private key is likely to be kept on a

¹ It should be noted, however, that the concept of public key cryptography, as discussed here, does not necessarily imply the use of algorithms based on prime numbers. Other mathematical techniques are currently used or under development, such as cryptosystems relying on elliptic curves, which are often described as offering a high degree of security through the use of significantly reduced key-lengths.

² While the use of cryptography is one of the main features of digital signatures, the mere fact that a digital signature is used to authenticate a message containing information in digital form should not be confused with a more general use of cryptography for purposes of confidentiality. Confidentiality encryption is a method used for encoding an electronic communication so that only the originator and the addressee of the message will be able to read it. In a number of countries, the use of cryptography for confidentiality purposes is limited by law for reasons of public policy that may involve considerations of national defense. However, the use of cryptography for authentication purposes by producing a digital signature does not necessarily imply the use of cryptography to make any information confidential in the communication process, since the encrypted digital signature may be merely appended to a non-encrypted message.

smart card or to be accessible through a personal identification number (PIN) or a biometric identification device, such as thumbprint recognition. If many people need to verify the signatory's digital signature, the public key must be available or distributed to all of them, for example by attaching the certificates to the signature or by other means that ensure that the relying parties, and only those who have to verify the signatures, can obtain the related certificates. Although the keys of the pair are mathematically related, if an asymmetric cryptosystem has been designed and implemented securely it is virtually impossible to derive the private key from knowledge of the public key. The most common algorithms for encryption through the use of public and private keys are based on an important feature of large prime numbers: once they are multiplied together to produce a new number, it is particularly difficult and time-consuming to determine which two prime numbers created that new, larger number.³ Thus, although many people may know the public key of a given signatory and use it to verify that signatory's signature, they cannot discover that signatory's private key and use it to forge digital signatures.

(iii) *Hash function*

5. In addition to the generation of key pairs, another fundamental process, generally referred to as a "hash function", is used in both creating and verifying a digital signature. A hash function is a mathematical process, based on an algorithm that creates a digital representation or compressed form of the message (often referred to as a "message digest" or "fingerprint" of the message), in the form of a "hash value" or "hash result" of a standard length that is usually much smaller than the message but nevertheless substantially unique to it. Any change to the message invariably produces a different hash result when the same hash function is used. In the case of a secure hash function, sometimes called a "one-way hash function", it is virtually impossible to derive the original message from knowledge of its hash value. Another basic feature of hash functions is that it is also virtually impossible to find another binary object (i.e. different from the one from which the digest was originally derived) producing the same digest. Hash functions therefore enable the software for creating digital signatures to operate on smaller and more predictable amounts of data, while still providing robust evidentiary correlation to the original message content, thereby efficiently providing assurance that there has been no modification of the message since it was digitally signed.

(iv) *Digital signature*

6. To sign a document or any other item of information, the signatory first delimits precisely the borders of what is to be signed. Then a hash function in the signatory's software computes a hash result unique (for all practical purposes) to the information to be signed. The signatory's software then transforms the hash result

³ Certain existing standards refer to the notion of "computational unfeasibility" to describe the expected irreversibility of the process, that is, the hope that it will be impossible to derive a user's secret private key from that user's public key. "'Computationally unfeasible' is a relative concept based on the value of the data protected, the computing overhead required to protect it, the length of time it needs to be protected, and the cost and time required to attack the data, with such factors assessed both currently and in the light of future technological advance." (American Bar Association, *Digital Signature Guidelines: Legal Infrastructure for Certification Authorities and Secure Electronic Commerce* (Chicago, American Bar Association, 1 August 1996), p. 9, note 23, available at www.abanet.org/scitech/ec/isc/dsgfree.html, accessed on 5 April 2007).

into a digital signature using the signatory's private key. The resulting digital signature is thus unique to both the information being signed and the private key used to create the digital signature. Typically, a digital signature (the encryption with the signer's private key of the hash result of the message) is attached to the message and stored or transmitted with that message. However, it may also be sent or stored as a separate data element, as long as it maintains a reliable association with the corresponding message. Since a digital signature is unique to its message, it is inoperable if permanently disassociated from the message.

(v) *Verification of digital signature*

7. Digital signature verification is the process of checking the digital signature by reference to the original message and a given public key, thereby determining whether the digital signature was created for that same message using the private key that corresponds to the referenced public key. Verification of a digital signature is accomplished by computing a new hash result for the original message, by means of the same hash function used to create the digital signature. Then, using the public key and the new hash result, the verifier checks whether the digital signature was created using the corresponding private key and whether the newly computed hash result matches the original hash result that was transformed into the digital signature during the signing process.

8. The verification software will confirm the digital signature as "verified" from a cryptographic viewpoint if (a) the signatory's private key was used to sign digitally the message, which is known to be the case if the signatory's public key was used to verify the signature because the signatory's public key will verify only a digital signature created with the signatory's private key; and (b) the message was unaltered, which is known to be the case if the hash result computed by the verifier is identical to the hash result extracted from the digital signature during the verification process.

(vi) *Other uses of digital signature technology*

9. As indicated above, digital signature technology has a much broader use than merely to "sign" electronic communications in the same manner that handwritten signatures are used to sign documents (see paragraph [...]). Indeed, digitally signed certificates are often used, for instance, to "authenticate" servers or websites, for example in order to guarantee to their users that the server or website is the one it purports to be, or is genuinely attached to the company that claims to run the server or website. Digital signature technology can also be used to "authenticate" computer software, for example in order to guarantee the authenticity of a software downloaded from a website; or in order to guarantee that a particular server uses a technology that is widely recognized as providing a certain level of connection security, or in order to "authenticate" any other data that is distributed or stored digitally.

(b) **Public key infrastructure and certification services providers**

10. To verify a digital signature, the verifier must have access to the signatory's public key and have assurance that it corresponds to the signatory's private key. However, a public-key and private-key pair has no intrinsic association with any person; it is simply a pair of numbers. An additional mechanism is necessary to associate reliably a particular person or entity to the key pair. This is particularly

important, as there may be no pre-existing relationship of trust between the signatory and the recipients of digitally signed communications. To that effect, the parties involved must have a degree of confidence in the public and private keys being issued.

11. The required level of confidence may exist between parties who trust each other, who have dealt with each other over a period of time, who communicate on closed systems, who operate within a closed group or who are able to govern their dealings contractually, for example in a trading partner agreement. In a transaction involving only two parties, each party can simply communicate (by a relatively secure channel such as by courier or telephone) the public key of the key pair each party will use. However, the same level of confidence may not be present when the parties deal infrequently with each other, communicate over open systems (e.g. the World Wide Web on the Internet), are not in a closed group, or do not have trading partner agreements or other laws governing their relationships. Moreover, it should be taken into account that, if disputes need be settled in court or by arbitration, it might be difficult to demonstrate that a certain public key had or had not actually been given to the recipient by its actual owner.

12. A prospective signatory might issue a public statement indicating that signatures verifiable by a given public key should be treated as originating from that signatory. The law of the enacting State would govern the form and the legal effectiveness of such a statement. For example, a presumption of attribution of electronic signatures to a particular signatory could be established through publication of the statement in an official bulletin or in a document recognized as “authentic” by public authorities. However, other parties might be unwilling to accept the statement, especially where there is no prior contract establishing the legal effect of that published statement with certainty. A party relying upon such an unsupported published statement in an open system would run a great risk of inadvertently trusting an impostor or of having to disprove a false denial of a digital signature (an issue often referred to in the context of “non-repudiation” of digital signatures) if a transaction should turn out to prove disadvantageous for the purported signatory.

13. One solution to some of these problems is the use of one or more third parties to associate an identified signatory or the signatory’s name with a specific public key. That third party is generally referred to as a “certification authority”, “certification services provider” or “supplier of certification services” in most technical standards and guidelines (in the UNCITRAL Model Law on Electronic Signatures,⁴ the term “certification service provider” has been chosen). In a number of countries, such certification authorities are being organized hierarchically into what is often referred to as a “public key infrastructure” (PKI). Certification authorities within a PKI can be established in a hierarchical structure, where some certification authorities only certify other certification authorities, which provide services directly to users. In such a structure, some certification authorities are subordinate to other certification authorities. In other conceivable structures, all certification authorities may operate on an equal footing. In any large PKI, there would likely be both subordinate and superior certification authorities. Other solutions may include, for example, certificates issued by relying parties.

⁴ See note [...] [United Nations publication, Sales No. E.02.V.8].

(i) *Public key infrastructure*

14. Setting up a PKI is a way to provide confidence that (a) a user's public key has not been changed and in fact corresponds to that user's private key; and (b) the cryptographic techniques being used are sound. To provide the confidence described above, a PKI may offer a number of services, including the following: (a) managing cryptographic keys used for digital signatures; (b) certifying that a public key corresponds to a private key; (c) providing keys to end users; (d) publishing revocation information of public keys or certificates; (e) managing personal tokens (e.g. smart cards) that can identify the user with unique personal identification information or can generate and store an individual's private keys; (f) checking the identification of end users and providing them with services; (g) providing time-stamping services; and (h) managing cryptographic keys used for confidentiality encryption where the use of such a technique is authorized.

15. A PKI may be based on various hierarchical levels of authority. For example, models considered in certain countries for the establishment of possible PKIs include references to the following levels: (a) a unique "root authority", which would certify the technology and practices of all parties authorized to issue cryptographic key pairs or certificates in connection with the use of such key pairs and would register subordinate certification authorities;⁵ (b) various certification authorities, placed below the "root" authority, which would certify that a user's public key actually corresponds to that user's private key (i.e. has not been tampered with); and (c) various local registration authorities, placed below the certification authorities, which would receive requests from users for cryptographic key pairs or for certificates in connection with the use of such key pairs, requiring proof of identification and checking identities of potential users. In certain countries, it is envisaged that notaries public might act as, or support, local registration authorities.

16. PKIs organized in a hierarchical structure are scalable in the sense that they may incorporate entire new PKI "communities" simply by having the "root authority" establish a trust relationship with the new community's "root".⁶ The root authority of the new community may be incorporated directly under the "root" of the receiving PKI, thus becoming a subordinate certification services provider within that PKI. The root authority of the new community may also become a subordinate certification services provider to one of the subordinate certification services providers within the existing PKI. Another attractive feature of hierarchical PKIs is that it makes it easy to develop certification paths because they run in one direction only, from a user's certificate back to the trust point. Furthermore, certification paths within a hierarchical PKI are relatively short and the users of a hierarchy know implicitly which applications a certificate may be used for, based on the position of the certification services provider within the hierarchy. However, hierarchical PKIs have drawbacks as well, mainly as a consequence of reliance on a single trust point. If the root authority is compromised, the entire PKI is compromised. Furthermore, some countries have found it difficult to select one

⁵ The question as to whether a Government should have the technical ability to retain or recreate private confidentiality keys may be dealt with at the level of the root authority.

⁶ William T. Polk and Nelson E. Hastings, *Bridge Certification Authorities: Connecting B2B Public Key Infrastructures*, National Institute of Standards and Technology (September 2000), available at <http://csrc.nist.gov/pki/documents/B2B-article.pdf>, accessed on 30 March 2007.

single entity as a root authority and to impose such a hierarchy on all other certification services providers.⁷

17. The so-called “mesh” PKI is an alternative to a hierarchical PKI. Under this model, certification services providers are connected in a peer-to-peer relationship. All certification services providers in such a model can be trust points. Generally, users will trust the certification services providers that issued their certificate. Certification services providers will issue certificates to each other; the pair of certificates describes their reciprocal trust relationship. The lack of hierarchy in such a system means that certification services providers cannot impose conditions governing the types of certificate issued by other certification services providers. If a certification services provider wishes to limit the trust extended to other certification services providers, it must specify these limitations in the certificates issued to its peers.⁸ Harmonizing conditions and limitations of mutual recognition may however be an extremely complex objective.

18. A third alternative structure is built around the so-called “bridge” certification services provider. This structure may be particularly useful to allow various pre-existing PKI communities to trust each other’s certificates. Unlike a certification services provider in a “mesh” PKI, a “bridge” certification services provider does not issue certificates directly to users. Neither is a “bridge” certification services provider intended to be used as a trust point by the users of the PKI, as would be the case with a “root” certification services provider. Instead, the “bridge” certification services provider establishes peer-to-peer trust relationships with the different user communities, thus allowing the users to keep their natural trust points within their respective PKIs. If a user community implements a trust domain in the form of a hierarchical PKI, the “bridge” certification services provider will establish a relationship with the root authority of that PKI. However, if the user community implements a trust domain by creating a mesh PKI, the “bridge” certification services provider will only need to establish a relationship with one of the PKI’s certification services providers, which then becomes the “principal” certification services provider within that PKI for the purpose of establishing the “bridge of trust” to the other PKI. The “bridge of trust” that joins two or more PKIs through their mutual relationship with a “bridge” certification services provider enables users from the different user communities to interact with each other through the “bridge” certification services provider with a specified level of trust.⁹

(ii) *Certification services provider*

19. To associate a key pair with a prospective signatory, a certification services provider (or certification authority) issues a certificate, which is an electronic record that lists a public key together with the name of the certificate subscriber as the “subject” of the certificate, and which may confirm that the prospective signatory identified in the certificate holds the corresponding private key. The principal function of a certificate is to bind a public key with a particular signatory. A “recipient” of the certificate desiring to rely upon a digital signature created by the

⁷ Polk and Hastings (see note [6]) note that in the United States of America, it was very difficult to single out one agency of the Federal Government to assume the overall authority over the federal PKI.

⁸ Polk and Hastings, *Bridge Certification Authorities ...* (see note [5]).

⁹ The “bridge” certification services provider was the structure eventually chosen to set up the PKI system for the United States Federal Government (Polk and Hastings, see note [6]). This was also the model followed to develop the PKI system of the Government of Japan.

signatory named in the certificate can use the public key listed in the certificate to verify that the digital signature was created with the corresponding private key. If such verification is successful, a level of assurance is provided technically that the signatory created the digital signature and that the portion of the message used in the hash function (and, consequently, the corresponding data message) has not been modified since it was digitally signed.

20. To assure the authenticity of the certificate with respect to both its contents and its source, the certification services provider digitally signs it. The issuing certification services provider's digital signature on the certificate can be verified by using the public key of the certification service provider listed in another certificate by another certification services provider (which may, but need not, be on a higher level in a hierarchy), and that other certificate can in turn be authenticated by the public key listed in yet another certificate, and so on, until the person relying on the digital signature is adequately assured of its genuineness. Recording the digital signature in a certificate issued by the certification services provider (sometimes referred to as a "root certificate") is another possible way of verifying a digital signature.¹⁰

21. In each case, the issuing certification services provider may digitally sign its own certificate during the operational period of the other certificate used to verify the certification services provider's digital signature. Under the laws of some States, one way of building trust in the digital signature of the certification services provider might be to publish the public key of the certification services provider or certain data pertaining to the root certificate (such as a "digital fingerprint") in an official bulletin.

22. A digital signature corresponding to a message, whether created by the signatory to authenticate a message or by a certification services provider to authenticate its certificate, should generally be reliably time stamped to allow the verifier to determine whether the digital signature was created during the "operational period" stated in the certificate, and in any case whether the certificate was valid (e.g. was not mentioned in a revocation list) at the relevant time, which is a condition of the verifiability of a digital signature.

23. To make a public key and its correspondence to a specific signatory readily available for verification, the certificate may be published in a repository, or made available by other means. Typically, repositories are online databases of certificates and other information available for retrieval and use in verifying digital signatures.

24. Once issued, a certificate may prove to be unreliable, for example in situations where the signatory misrepresents its identity to the certification services provider. In other circumstances, a certificate may be reliable enough when issued, but may become unreliable sometime afterwards. If the private key is "compromised", for example through loss of control of the private key by the signatory, the certificate may lose its trustworthiness or become unreliable, and the certification services provider (at the signatory's request or even without the signatory's consent, depending on the circumstances) may suspend (temporarily interrupt the operational period) or revoke (permanently invalidate) the certificate. In a timely fashion upon suspending or revoking a certificate, the certification services provider may be expected to publish a notice of the revocation or suspension, or to notify persons

¹⁰ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17 and corrigendum (A/56/17 and Corr.3), para. 279.*

who enquire or who are known to have received a digital signature verifiable by reference to the unreliable certificate. Similarly, where applicable, the certification services provider's own certificate should also be reviewed for possible revocation, as should the certificate issued for the verification of the signature of the time-stamping authority on the time-stamp tokens and the certificate of the certification services provider that issued the certificate of the time-stamping authority.

25. Certification authorities could be operated by private sector service providers or Government authorities. In a few countries, it is envisaged that, for public policy reasons, only Government entities should be authorized to operate as certification authorities. In most countries, however, certification services are either entirely left for the private sector or State-run certification services providers coexist with private sector providers. There are also closed certification systems, where small groups set up their own certification services provider. In some countries, State-owned certification services providers issue certificates only in support of digital signatures used by the public administration. Irrespective of whether certification authorities are operated by public entities or by private sector service providers, and of whether certification authorities would need to obtain a licence to operate, there is typically more than one certification services provider operating within the PKI. Of particular concern is the relationship between the various certification authorities (see paras. [15]-[18] above).

26. It may be incumbent upon the certification services provider or the root authority to ensure that its policy requirements are met on an ongoing basis. While the selection of certification authorities may be based on a number of factors, including the strength of the public key being used and the identity of the user, the trustworthiness of any certification services provider may also depend on its enforcement of standards for issuance of certificates and the reliability of its evaluation of data received from users who request certificates. Of particular importance is the liability regime applying to any certification services provider with respect to its compliance with the policy and security requirements of the root authority or superior certification services provider, or with any other applicable requirement, on an ongoing basis. Of equal importance is the obligation of the certification services provider to act in accordance with the representations made by it with respect to its policies and practices, as envisaged in article 9, paragraph 1 (a), of the Model Law on Electronic Signatures.

(c) Practical problems in public key infrastructure implementation

27. Despite the considerable knowledge of digital signature technologies and the way they function, the implementation of public key infrastructures and digital signature schemes has, in practice, faced some problems that have kept the level of use of digital signatures below expectations.

28. Digital signatures work well as a means to verify signatures that are created during the period of validity of a certificate. However, once the certificate expires or is revoked, the corresponding public key loses its validity, even if the key pair was not compromised. Accordingly, a PKI scheme would require a digital signature management system to ensure the availability of the signature over time. The main difficulty results from the risk that the "original" electronic records (that is, the binary digits, or "bits" that make up the computer file on which the information is recorded), including the digital signature, may become unreadable or unreliable over time, mainly because of the obsolescence of the software, the equipment or both. In fact, the digital signature may become insecure, as a consequence of

scientific advances in cryptanalysis, the signature verification software may not be available over long periods of time or the document may lose its integrity.¹¹ This makes the long-term retention of electronic signatures generally problematic. Even though digital signatures were for some time believed to be essential for archival purposes, experience has shown that they are not immune to long-term risks. Since every alteration to the record after the time when the signature was created will cause the verification of the signature to fail, reformatting operations intended to keep a record legible for the future (such as “migration”, or “conversion”) may affect the durability of the signature.¹² In fact, digital signatures were conceived more for providing security for the communication of information than for the preservation of information over time.¹³ Initiatives to overcome this problem have not yet resulted in a durable solution.¹⁴

¹¹ Jean-François Blanchette, “Defining electronic authenticity: an interdisciplinary journey”, available at <http://polaris.gseis.ucla.edu/blanchette/papers/dsn.pdf>, accessed on 5 April 2007 (paper published in a supplemental volume of the 2004 International Conference on Dependable Systems and Networks (DSN 2004), Florence, Italy, 28 June-1 July 2004), pp. 228-232.

¹² “In the end, all we can preserve in an electronic context are bits. However, it has been clear for a long time that it is very difficult to keep a set of bits indefinitely. With the lapse of time, the set of bits becomes illegible (to the computer and thus to humans) as a result of the technological obsolescence of the application program and/or of the hardware (e.g. the reader). The problem of the durability of PKI-based digital signatures has been poorly studied so far because of its complexity. ... Although the authentication tools that were used in the past, such as handwritten signatures, seals, stamps, fingerprints etc. are also subject to reformatting (e.g. microfilming) because of the obsolescence of the paper carrier, they never become completely useless after reformatting. There is always at least a copy available that can be compared with other original authentication tools.” (Jos Dumortier and Sofie Van den Eynde, *Electronic Signatures and Trusted Archival Services*, p. 5, available at www.law.kuleuven.ac.be/icri/publications/172DLM2002.pdf?where, accessed on 5 April 2007.

¹³ In 1999, archivists from various countries launched the International Research on Permanent Authentic Records in Electronic Systems (InterPARES) project with the aim of “developing the theoretical and methodological knowledge essential to the long-term preservation of authentic records created and/or maintained in digital form” (see www.interpares.org, accessed on 5 April 2007). The draft report of the Authenticity Task Force, which was part of the first phase of the project (InterPARES 1, concluded in 2001), indicated that “digital signatures and public key infrastructures (PKI) are examples of technologies that have been developed and implemented as a means of authentication for electronic records that are transmitted **across space**. Although record-keepers and information technology personnel place their trust in authentication technologies to ensure the authenticity of records, these technologies were never intended to be, and are not currently viable as, a means of ensuring the authenticity of electronic records **over time**” (emphasis added), available at www.interpares.org/documents/atf_draft_final_report.pdf, accessed on 5 April 2007. The final report of InterPARES 1 is available at www.interpares.org/book/index.htm. The continuation of the project (InterPARES 2), aims to develop and articulate the concepts, principles, criteria and methods that can ensure the creation and maintenance of accurate and reliable records and the long-term preservation of authentic records in the context of artistic, scientific and Government activities developed from 1999 and 2001.

¹⁴ The European Electronic Signature Standardization Initiative (EESSI), for example, was created in 1999 by the Information and Communications Technology Standards Board, a collaborative group of organizations concerned with standardization and related activities in information and communications technologies established to coordinate the standardization activity in support to the implementation of European Union Directive on electronic signatures (see note [...]) [Official Journal of the European Communities, L 13/12]. The EESSI consortium (a standardization effort which seeks to translate the requirements of the European directive on electronic signatures into European standards) has sought to address the need for ensuring the

29. Another area where digital signatures and PKI schemes may give rise to practical problems concerns data security and privacy protection. Certification services providers must keep safe the keys used to sign certificates issued to their customers and may be exposed to attempts by outsiders to gain unauthorized access to the keys (see also part two, paras. [...] below). Furthermore, certification services providers need to obtain a series of personal data and business information from persons applying for certificates. This information needs to be stored by the certification services provider for future reference. Certification services providers must take the necessary measures to ensure that access to such information is in accordance with applicable data protection laws.¹⁵ However, unauthorized access remains a real threat.

2. Biometrics

30. A biometric is a measurement used to identify an individual through its intrinsic physical or behavioural traits. Traits that may be used for recognition in

long-term preservation of cryptographically signed documents through its standard on Electronic Signature Formats (Electronic Signature Formats ES 201 733, ETSI, 2000). The format distinguishes between signature validation moments: the initial validation and a later validation. The format for late validation encapsulates all of the information that can eventually be used in the validation process, such as revocation information, time stamps, signature policies, etc. This information is gathered at the stage of initial validation. The designers of these electronic signature formats were concerned with the security threat to the validity of the signature that results from decay in cryptographic strength. To guard against this threat of decay, EESSI signatures are regularly time stamped afresh, with signing algorithms and key sizes appropriate to state-of-the-art cryptanalytic methods. The problem of software longevity has been addressed in a 2000 report by EESSI, which introduced “trusted archival services”, a new type of commercial service that would be offered by yet to be specified competent bodies and professions, in order to guarantee the long-term preservation of cryptographically signed documents. The report lists a number of technical requirements such archival services should provide, among them, “backward compatibility” with computer hardware and software, through either preservation of equipment and/or emulation (see Blanchette, “Defining electronic authenticity...” (see note [12])). A follow-up study on the EESSI recommendation on trusted archival services by the Interdisciplinary Centre for Law and Information Technology of the Katholieke Universiteit Leuven (Catholic University of Leuven), Belgium, entitled *European Electronic Signature Standardization Initiative: Trusted Archival Services* (Phase 3, final report, 28 August 2000) is available at www.law.kuleuven.ac.be/icri/publications/91TAS-Report.pdf?where=, accessed on 12 April 2007). EESSI was closed in October 2004. Systems to implement these recommendations do not seem to be currently in operation (see Dumortier and Van den Eynde, *Electronic Signatures and Trusted Archival Services* (see note [13])).

¹⁵ See Organization for Economic Cooperation and Development (OECD) Guidelines on the Protection of Privacy and Transborder Flows of Personal Data (Paris, 1980) available at www.oecd.org/document/18/0,2340,en_2649_34255_1815186_1_1_1_1,00.html, accessed on 7 February 2007; Council of Europe Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (Council of Europe, *European Treaty Series*, No. 108), available at <http://conventions.coe.int/Treaty/en/Treaties/Html/108.htm>, accessed on 7 February 2007; Guidelines for the regulation of computerized personal data files (General Assembly resolution 45/95), available at <http://193.194.138.190/html/menu3/b/71.htm>, accessed on 7 February 2007; and Directive 95/46/EC of the European Parliament and of the Council of 24 October 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data (*Official Journal of the European Communities*, L 281, 23 November 1995), available at http://eur-lex.europa.eu/smartapi/cgi/sga_doc?smartapi!celexapi!prod!CELEXnumdoc&lg=EN&numdoc=31995L0046&model=guichett, accessed on 7 February 2007.

biometrics include DNA, fingerprint, iris, retina, hand or facial geometry, facial thermogram, ear shape, voice, body odour, blood vessel pattern, handwriting, gait and typing patterns.

31. The use of biometric devices typically involves capturing a biometric sample of a biological feature of an individual. This sample is in the digital form. Then, biometric data is extracted from that sample to create a reference template. Eventually, the biometric data stored in the reference template is compared with the one extracted from the end user for the purpose of verification, so that it is possible to indicate whether or not an identification or verification of identity has been achieved.¹⁶

32. The nature of biometric devices entails unique features that need to be taken into due consideration. The existence of those features, which may to some extent differ with the trait chosen as a reference, has a major impact on the suitability of the technology for the intended application.

33. A number of risks relate to the storage of biometrical data since biometric patterns are typically not revocable. When biometric systems have been compromised, the legitimate user has no recourse but to revoke the identification data and switch to another set of uncompromised identification data. Therefore, special rules are needed to prevent the abuse of biometrics databases.

34. The accuracy of biometric techniques cannot be absolute since biological features tend to be inherently variable and any measurement may involve deviation. In this respect, biometrics are not considered unique identifiers but rather semi-unique identifiers. To accommodate those variations, the accuracy of biometrics may be manipulated by setting the threshold for matching the reference template with the extracted sample. However, a low threshold may bias the test towards false acceptance while a high threshold may tend towards false rejections. Nevertheless, the accuracy of authentication provided by biometrics may be adequate in the majority of commercial applications.

35. Moreover, data protection and human rights issues arise in relation to the storage and disclosure of biometrical data. Data protection laws,¹⁷ although they may not refer expressly to biometrics, aim at protecting personal data relating to natural persons, whose processing, both in their raw form and as templates, is at the core of biometrics technology.¹⁸ Moreover, measures may be required to protect consumers against risks generated by the private use of biometric data, as well as in case of identity theft. Other legal domains, including labour and health law, may also come into play.¹⁹

¹⁶ International Association for Biometrics (iAfb) and International Computer Security Association (ICSA), *1999 Glossary of Biometric Terms*, available at www.afb.org.uk/docs/glossary.htm, accessed on 7 February 2007.

¹⁷ See note [15].

¹⁸ Paul de Hert, *Biometrics: Legal Issues and Implications*, background paper for the Institute for Prospective Technological Studies of the European Commission (European Communities, Directorate General Joint Research Centre, 2005), p. 13, available at http://cybersecurity.jrc.es/docs/LIBE%20Biometrics%20March%202005/LegalImplications_Paul_de_Hert.pdf.

¹⁹ For instance, in Canada, the use of biometrics was discussed with respect to the application of the Personal Information Protection and Electronic Documents Act (2000, c. 5) in the workplace (see *Turner v. TELUS Communications Inc.*, 2005 FC 1601, 29 November 2005 (Federal Court of Canada)).

36. Technical solutions might assist in addressing some concerns. For instance, storage of biometrical data on smart cards or tokens may protect from unauthorized access, which could occur if the data is stored on a centralized computer system. Moreover, best practices have been developed to reduce risks in different areas such as scope and capabilities; data protection; user control of personal data; and disclosure, auditing, accountability and oversight.²⁰

37. Biometric devices are generally considered as offering a high level of security. While they are compatible with a range of uses, their current main scope is on Government applications, particularly law enforcement applications such as immigration clearance and access controls.

38. Commercial applications have also been developed, where often biometrics are used in the context of a two-factor authentication process requiring provision of an element in possession of the individual (biometrics) and an element in the knowledge of the individual (typically, a password or a PIN). Moreover, applications were developed to store and compare the characteristics of a person's handwritten signature. Digital-based pen tablets record the pen pressure and duration of the signing process. The data are then stored as an algorithm to be used for comparison against future signatures. However, in light of the inherent features of biometrics, caution is also expressed on the dangers of a gradual, uncontrolled increase relating to their use in routine commercial transactions.

39. If biometric signatures are used as a substitute for handwritten signatures, a problem of evidence may arise. As mentioned before, the reliability of biometric evidence varies between the technologies used and the chosen false acceptance rate. Besides, there is the possibility to tamper with or falsify the biometric data stored in digital form.

40. The general reliability tests under the UNCITRAL Model Law on Electronic Signatures²¹ and Model Law on Electronic Commerce,²² as well as under the more recent United Nations Convention on the Use of Electronic Communications in International Contracts,²³ can be applied to the use of biometric signatures. To ensure uniformity, it might also be useful to develop international guidelines on the use and management of biometric methods.²⁴ Whether such standards would be premature, given the current state of development of biometric technologies, and might risk hampering the continued development of biometric technologies, needs to be carefully considered.

²⁰ See, for an example of best practices, the International Biometric Group BioPrivacy Initiative, "Best practices for privacy-sympathetic biometric deployment", available at www.bioprivacy.org.

²¹ (See note [...]) [United Nations publication, Sales No. E.02.V.8].

²² (See note [...]) [United Nations publication, Sales No. E.99.V.4].

²³ The United Nations Convention on the Use of Electronic Communications in International Contracts was finalized by UNCITRAL at its thirty-eighth session (Vienna, 4-15 July 2005) and officially adopted by the General Assembly on 23 November 2005 (General Assembly resolution 60/21, annex), available at www.uncitral.org/uncitral/en/uncitral_texts/electronic_commerce/2005Convention.html.

²⁴ These could be compared with the criteria for reliability presented in the Guide to Enactment of the UNCITRAL Model Law on Electronic Signatures (see note [...]) [United Nations publication, Sales No. E.02.V.8], paragraph 75.

3. Passwords and hybrid methods

41. Passwords and codes are used both for controlling access to information or services and for “signing” electronic communications. In practice, the latter use is less frequent than the former, because of the risk of compromising the code if it is transmitted in non-encrypted messages. Passwords and codes are however the most widely used method for “authentication” for purposes of access control and identity verification in a broad range of transactions, including most Internet banking, cash withdrawals at automatic teller machines and consumer credit card transactions.

42. It should be recognized that multiple technologies can be used to “authenticate” an electronic transaction. Several technologies or several uses of a single technology can be utilized for a single transaction. For example, signature dynamics for authentication can be combined with cryptography for message integrity. Alternatively, passwords can be passed over the Internet, using cryptography (e.g. SSL in browsers) to protect them, in conjunction with the use of biometrics to trigger a digital signature (asymmetric cryptography), which, on receipt, generates a Kerberos ticket (symmetric cryptography). In developing legal and policy frameworks to deal with these technologies, consideration should be given to the role of multiple technologies. Legal and policy frameworks for electronic authentication will need to be flexible enough to cover hybrid technology approaches, as those that focus on specific technologies could impede the use of multiple technologies.²⁵ Technology neutral provisions would facilitate the acceptance of such hybrid technology approaches.

4. Scanned signatures and typed names

43. The main reason for legislative interest in electronic commerce in the private law area has been concern about how new technologies may affect the application of rules of law that were conceived for other media. This attention to technology has often led, deliberately or not, to a focus on sophisticated technologies that offer a higher level of security for electronic authentication and signature methods. It is often neglected, in that context, that a very large number, if not the majority, of business communications exchanged throughout the world do not make use of any particular authentication or signature technology.

44. In day-to-day practice, companies around the world are often satisfied, for instance, with exchanging e-mails without the use of any form of authentication or signature other than the typed name, title and address of parties at the bottom of their communications. Sometimes a more formal appearance is given by the use of facsimile or scanned images of handwritten signatures, which of course constitute only a copy in digitalized form of a handwritten original. Neither typed names on unencrypted e-mails nor scanned signatures offer a high level of security or can definitely prove the identity of the originator of the electronic communication in which they appear. Nevertheless, business entities freely choose to use these forms of “authentication” in the interest of ease, expediency and cost-effectiveness of

* This section would be further developed in a final version of the comprehensive reference document.

²⁵ Foundation for Information Policy Research, *Signature Directive Consultation Compilation*, 28 October 1998, which provides a compilation of responses made during consultations on the European Union draft directive on electronic signatures, prepared at the request of the European Commission, available at www.fipr.org/publications/sigdirecon.html, accessed on 12 April 2007.

communications. It is important for legislators and policymakers to bear in mind these widespread business practices when considering regulating electronic authentication and signature. Stringent requirements for electronic authentication and signature, in particular the imposition of a particular method or technology, may inadvertently cast doubt as to the validity and enforceability of a significant number of transactions that are entered into every day without the use of any particular kind of authentication or signature. That, in turn, may stimulate parties acting in bad faith to avoid the consequences of obligations they freely assumed by questioning the authenticity of their own electronic communications. It is unrealistic to expect that imposing a certain high level of authentication and signature requirements would eventually lead all parties to actually use them on a daily basis. Recent experience with sophisticated methods, such as digital signatures, has shown that concerns about cost and complexity often limit the practical use of authentication and signature techniques.

C. Electronic identity management*

45. In the electronic world, natural or legal persons may access the services of a number of providers. Every time a person registers with a service provider to access those services, an electronic “identity” is created. Moreover, a single identity may be linked to a number of accounts for each application or platform. The multiplication of identities and of their accounts may hinder their management both for the user and for the service provider. These difficulties could be avoided by having a single electronic identity for each person.

46. The registration with a service provider and the creation of an electronic identity entails the establishment of a mutually trusted relationship between the person and the provider. The creation of a single electronic identity requires gathering together those bilateral relationships into a broader framework where they could be managed jointly, in what is referred to as identity management. Benefits of identity management on the provider side may include security improvements, easier regulatory compliance and greater business agility; on the user side, they may include facilitated access to information.

47. Identity management may be described in the context of two approaches: the traditional user access (log-on) paradigm, based on a smart card and its associated data that a customer uses to log on to a service; and the more innovative service paradigm, based on a system that delivers personalized services to users and their devices.

48. The user access approach to identity management focuses on the administration of user authentication, access rights, access restrictions, account profiles, passwords and other attributes in one or more applications or systems. It aims at facilitating and controlling access to applications and resources while protecting confidential personal and business information from unauthorized users.

49. Under the service paradigm approach, the scope of identity management becomes broader and includes all the resources of the company that are used to deliver online services, such as network equipment, servers, portals, content, applications and products, as well as a user’s credentials, address books, preferences and entitlements. In practice, it could include, for instance, information relating to parental control settings and participation in loyalty programmes.

50. Efforts are under way to expand identity management both at the business and at the Governmental level. However, it should be noted that policy choices in the two scenarios may differ considerably. In fact, the Government approach may be more oriented towards better serving citizens' needs and therefore may be slanted towards interaction with physical persons. On the other hand, commercial applications need to take into account the increasing use of automated machines in business transactions and therefore may adopt features meant to accommodate the specific needs of those machines.

51. Difficulties identified in relation to identity management systems include privacy concerns due to the risks associated with the misuse of unique identifiers. Moreover, issues may arise also with respect to differences in applicable legal regulations, especially in relation to the possibility to delegate authority to act for another. Solutions based on voluntary business cooperation based on a so-called circle of trust, where participants are required to rely on the correctness and accuracy of the information provided to them by other members of the circle, have been suggested. However, this approach may not be fully sufficient to regulate all related matters and might still require the adoption of a legal framework.²⁶ Guidelines have also been developed to provide legal requirements for the compliance of a circle of trusted infrastructures.²⁷

52. With respect to technical interoperability, the International Telecommunication Union has established a Focus Group on Identity Management "to facilitate and advance the development of a generic [identity management] framework and means of discovery of autonomous distributed identities and identity federations and implementations".²⁸

53. Identity management solutions are being provided also in the context of e-government. For instance, in the context of the European Union "i2010: a European Information Society for growth and employment" initiative, a study on identity management in e-government was initiated to facilitate progress towards a coherent approach in electronic identity management in e-government in the European Union based on existing expertise and initiatives in the European Union member States.²⁹

54. The distribution of electronic signature devices, often in the form of smart cards, in the context of e-government initiatives is becoming increasingly common. Nationwide exercises of distribution of smart cards have been launched, among other places, in Belgium³⁰ and in Estonia. As a consequence of those initiatives, a

²⁶ See *Modinis Study on Identity Management in eGovernment: Identity Management Issue Report* (European Commission, Directorate General Information Society and Media, June 2006), pp. 9-12, available at https://www.cosic.esat.kuleuven.be/modinis-idm/twiki/pub/Main/ProjectDocs/modinis.D3.9_Identity_Management_Issue_Interim_Report_II1.pdf.

²⁷ The Liberty Alliance Project (see www.projectliberty.org) is an alliance of more than 150 companies, non-profit and Government organizations from around the globe. The consortium is committed to developing an open standard for federated network identity that supports all current and emerging network devices. Federated identity offers businesses, Governments, employees and consumers a more convenient and secure way to control identity information in today's digital economy and is a key component in driving the use of e-commerce and personalized data services, as well as web-based services. Membership is open to all commercial and non-commercial organizations.

²⁸ See www.itu.int/ITU-T/studygroups/com17/fgidm/index.html.

³⁰ See <http://eid.belgium.be/en/navigation/12000/index.html>.

very large number of citizens are receiving devices with, inter alia, secure electronic signature capabilities at low cost. While the primary goal of those initiatives may not be commercial, such devices may equally be used in the commercial world. The convergence of the two domains of application is increasingly acknowledged.³¹

³¹ See, for instance, *2006 Korea Internet White Paper* (Seoul, National Internet Development Agency of Korea, 2006), p. 81, with reference to the dual use in e-government and e-commerce applications of the Electronic Signature Act of the Republic of Korea, available at www.ecommerce.or.kr/activities/documents_view.asp?bNo=642&Page=1.

**Comprehensive reference document on elements required to establish a
favourable legal framework for electronic commerce: sample chapter on
international use of electronic authentication and signature methods**

ADDENDUM

The annex to the present note contains part of a sample chapter (part one, chap. II, sects. A and B) of a comprehensive reference document dealing with legal issues related to the international use of electronic authentication and signature methods.

Annex

CONTENTS

	<i>Paragraphs</i>
Part One. Electronic signature and authentication methods (<i>continued</i>)	1-46
II. Legal treatment of electronic authentication and signatures	1-46
A. Technology approach of legislative texts	5-19
1. Minimalist approach	6-12
2. Technology-specific approach	13-15
3. Two-tiered or two-pronged approach	16-19
B. Evidentiary value of electronic signature and authentication methods	20-46
1. "Authentication" and general attribution of electronic records	21-29
2. Ability to meet legal signature requirements	30-35
3. Efforts to develop electronic equivalents for special forms of signature	36-46

Part One

Electronic signature and authentication methods

[...]

II. Legal treatment of electronic authentication and signatures

1. Creating trust in electronic commerce is of great importance for its development. Special rules may be needed to increase certainty and security in its use. Such rules may be provided in a variety of legislative texts: international legal instruments (treaties and conventions); transnational model laws; national legislation (often based on model laws); self-regulatory instruments;¹ or contractual agreements.²

2. A significant volume of electronic commercial transactions is performed in closed networks, that is, groups with a limited number of participants accessible only to previously authorized persons or companies. Closed networks support the operation of a single entity or an existing closed user group, such as financial institutions participating in the inter-bank payment system, securities and commodities exchanges, or an association of airlines and travel agents. In these cases, participation in the network is typically restricted to institutions and companies previously admitted to the group. Most of these networks have been in place for several decades, use sophisticated technology and have acquired a high level of expertise in the functioning of the system. The rapid growth of electronic commerce in the last decade has led to the development of other network models, such as supply chains or trade platforms.

3. Although these new groups were originally structured around direct computer-to-computer connections as were most of the closed networks already in existence at that time, there is an increasing trend towards using publicly accessible means, such as the Internet, as a common connection facility. Even under these more recent models, a closed network retains its exclusive character. Typically, closed networks operate under previously agreed contractual standards, agreements, procedures and rules known by various names such as “system rules”, “operation rules” or “trading partner agreements” that are designed to provide and guarantee the necessary operational functionality, reliability and security for the members of the group. These rules and agreements often deal with matters such as recognition of the legal value of electronic communications, time and place of dispatch or receipt of data messages, security procedures for gaining access to the network and authentication

¹ See, for example, Economic Commission for Europe, United Nations Centre for Trade Facilitation and Electronic Business, recommendation No. 32, entitled “E-commerce self-regulatory instruments (codes of conduct)” (ECE/TRADE/277), available at www.unece.org/cefact/recommendations/rec_index.htm, accessed on 28 March 2007.

² Many initiatives at the national and international levels aim at developing model contracts. See, for example, Economic Commission for Europe, Working Party on the Facilitation of International Trade Procedures, recommendation No. 26, entitled “The commercial use of interchange agreements for electronic data interchange” (TRADE/WP.4/R.1133/Rev.1); and United Nations Centre for Trade Facilitation and Electronic Business, recommendation No. 31, entitled “Electronic commerce agreement” (ECE/TRADE/257), both available at www.unece.org/cefact/recommendations/rec_index.htm, accessed on 28 March 2007.

or signature methods to be used by the parties.³ Within the limits of the contractual freedom under applicable law, such rules and agreements are usually self-enforcing.

4. However in the absence of contractual rules, or to the extent that applicable law may limit their enforceability, the legal value of electronic authentication and signature methods used by the parties will be determined by the applicable rules of law, in the form of default or mandatory rules. The various options used in different jurisdictions to develop a legal framework for electronic signatures and authentication are discussed in the present chapter.

A. Technology approach of legislative texts

5. Electronic authentication legislation and regulation has taken many different forms at the international and domestic levels. Three main approaches for dealing with signature and authentication technologies can be identified: (a) the **minimalist approach**; (b) the **technology specific approach**; and (c) the **two-tiered** or **two-pronged approach**.⁴

1. Minimalist approach

6. Some jurisdictions recognize all technologies for electronic signature, following a policy of technological neutrality.⁵ This approach is also called minimalist, since it gives a minimum legal status to all forms of electronic signature. Under the minimalist approach, electronic signatures are considered to be the functional equivalent of handwritten signatures, provided that the technology employed is intended to serve certain specified functions and in addition meets certain technology-neutral reliability requirements.

7. The UNCITRAL Model Law on Electronic Commerce⁶ provides the most widely used set of legislative criteria for establishing a generic functional equivalence between electronic and handwritten signatures. Article 7, paragraph 1, of the Model Law provides:

“(1) Where the law requires a signature of a person, that requirement is met in relation to a data message if:

“(a) a method is used to identify that person and to indicate that person’s approval of the information contained in the data message; and

“(b) that method is as reliable as was appropriate for the purpose for which the data message was generated or communicated, in the light of all the circumstances, including any relevant agreement.”

8. This provision contemplates the two main functions of handwritten signatures: to identify the signatory, and to indicate the signatory’s intent with respect to the signed information. Any technology that can provide these two functions in

³ For a discussion of issues typically covered in trading partner agreements, see Amelia H. Boss, “Electronic data interchange agreements: private contracting toward a global environment”, *Northwestern Journal of International Law and Business*, vol. 13, No. 1 (1992), p. 45.

⁴ Susanna F. Fischer, “Saving Rosencrantz and Guildenstern in a virtual world? A comparative look at recent global electronic signature legislation,” *Journal of Science and Technology Law*, vol. 7, No. 2 (2001), pp. 234 ff.

⁵ For example, Australia and New Zealand.

⁶ See note [...] [United Nations publication, Sales No. E.99.V.4].

electronic form should, according to the Model Law on Electronic Commerce, be regarded as satisfying a legal signature requirement. The Model Law is therefore technologically neutral; that is, it does not depend on or presuppose the use of any particular type of technology and could be applied to the communication and storage of all types of information. Technological neutrality is particularly important in view of speed of technological innovation and helps to ensure that legislation remains capable of accommodating future developments and does not become obsolete too quickly. Accordingly, the Model Law carefully avoids any reference to particular technical methods of transmission or storage of information.

9. This general principle has been incorporated into the laws of many countries. The principle of technological neutrality also allows for future technological developments to be accommodated. Furthermore, this approach gives prominence to the freedom of the parties to choose technology that is appropriate to their needs. The onus is then placed on the parties' ability to determine the level of security that is adequate for their communications. This may avoid excessive technological complexity and its associated costs.⁷

10. Except in Europe, where legislation has been primarily influenced by directives issued by the European Union,⁸ most countries that have legislated in relation to electronic commerce have used the Model Law on Electronic Commerce as their template.⁹ The Model Law has also served as a basis for the domestic

⁷ S. Mason, "Electronic signatures in practice", *Journal of High Technology Law*, vol. VI, No. 2 (2006), p. 153.

⁸ In particular, Directive 1999/93/EC of the European Parliament and of the Council on a Community framework for electronic signatures (see note [...]) [*Official Journal of the European Communities*, L 13]. The Directive on electronic signatures was followed by a more general one, Directive 2000/31/EC of the European Parliament and of the Council of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market (Directive on electronic commerce) (*Official Journal of the European Communities*, L 178, 17 July 2000), dealing with various aspects of the provision of information technology services and some matters of electronic contracting.

⁹ As at January 2007, legislation implementing provisions of the UNCITRAL Model Law on Electronic Commerce had been adopted in at least the following countries: Australia, Electronic Transactions Act 1999; China, Electronic Signatures Law, promulgated in 2004; Colombia, *Ley de comercio electrónico*; Dominican Republic, *Ley sobre comercio electrónico, documentos y firmas digitales* (2002); Ecuador, *Ley de comercio electrónico, firmas electrónicas y mensajes de datos* (2002); France, *Loi 2000-230 portant adaptation du droit de la preuve aux technologies de l'information et relative à la signature électronique* (2000); India, Information Technology Act, 2000; Ireland, Electronic Commerce Act, 2000; Jordan, Electronic Transactions Law, 2001; Mauritius, Electronic Transactions Act 2000; Mexico, *Decreto por el que se reforman y adicionan diversas disposiciones del código civil para el distrito federal en materia federal, del Código federal de procedimientos civiles, del Código de comercio y de la Ley federal de protección al consumidor* (2000); New Zealand, Electronic Transactions Act 2002; Pakistan, Electronic Transactions Ordinance, 2002; Panama, *Ley de firma digital* (2001); Philippines, Electronic Commerce Act (2000); Republic of Korea, Framework Act on Electronic Commerce (2001); Singapore, Electronic Transactions Act (1998); Slovenia, Electronic Commerce and Electronic Signature Act (2000); South Africa, Electronic Communications and Transactions Act (2002); Sri Lanka, Electronic Transactions Act (2006); Thailand, Electronic Transactions Act (2001); Venezuela (Bolivarian Republic of), *Ley sobre mensajes de datos y firmas electrónicas* (2001); and Viet Nam, Law on Electronic Transactions, (2006). The Model Law has also been adopted in the British crown dependencies of the Bailiwick of Guernsey (Electronic Transactions (Guernsey) Law 2000), the Bailiwick of Jersey (Electronic Communications (Jersey) Law 2000) and the Isle of Man (Electronic Transactions Act 2000); in

harmonization of e-commerce legislation in countries organized on a federal basis, such as Canada¹⁰ and the United States of America.¹¹ With very few exceptions,¹² countries enacting the Model Law have preserved its technologically neutral approach and have neither prescribed nor favoured the use of any particular technology. Both the UNCITRAL Model Law on Electronic Signatures,¹³ which was adopted in 2001, and the more recent United Nations Convention on the Use of Electronic Communications in International Contracts¹⁴ (which was adopted by the General Assembly on 23 November 2005 and has been opened for signature since 16 January 2006) follow the same approach, although the UNCITRAL Model Law on Electronic Signatures contains some additional language (see below, paras. [...]-[...]).

11. When legislation adopts the minimalist approach, the issue of whether electronic signature equivalence has been proven normally falls to a judge, arbitrator or public authority to determine, generally by means of the so-called “appropriate reliability test”. Under this test, all types of electronic signature that

the overseas territories of the United Kingdom of Great Britain and Northern Ireland of Bermuda (Electronic Transactions Act 1999), the Cayman Islands (Electronic Transactions Law 2000) and the Turks and Caicos (Electronic Transactions Ordinance 2000); and in Hong Kong Special Administrative Region (SAR) of China (Electronic Transactions Ordinance (2000)). Unless otherwise indicated, references made hereafter to statutory provisions of any of these countries refer to provisions contained in the statutes listed above.

¹⁰ The domestic enactment of the model law in Canada is the Uniform Electronic Commerce Act, adopted by the Uniform Law Conference of Canada in 1999 (available with official commentary at www.chlc.ca/en/poam2/index.cfm?sec=1999&sub=1999ia, accessed on 12 April 2007). The Act has since been enacted in a number of provinces and territories of Canada, including Alberta, British Columbia, Manitoba, New Brunswick, Newfoundland and Labrador, Nova Scotia, Ontario, Prince Edward Island, Saskatchewan and Yukon. The Province of Quebec enacted specific legislation (the Act to Establish a Legal Framework for Information Technology (2001)), which, although being broader in scope and drafted very differently, achieves many of the objectives of the Uniform Electronic Commerce Act and is generally consistent with the UNCITRAL Model Law on Electronic Commerce. Updated information on the enactment of the Uniform Electronic Commerce Act may be found at www.chlc.ca/en/cls/index.cfm?sec=4&sub=4b, accessed on 7 February 2007.

¹¹ In the United States of America, the National Conference of Commissioners on Uniform State Law used the UNCITRAL Model Law on Electronic Commerce as a basis for preparing the Uniform Electronic Transactions Act, which it adopted in 1999 (the text of the Act and the official commentary is available at www.law.upenn.edu/bll/ulc/uecicta/eta1299.htm, accessed on 7 February 2007). The Uniform Electronic Transactions Act has since been enacted in the District of Columbia and in the following 46 states: Alabama, Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Hawaii, Idaho, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, West Virginia, Wisconsin and Wyoming. Other states are likely to adopt implementing legislation in the near future, including the state of Illinois, which had already enacted the UNCITRAL Model Law through the Electronic Commerce Security Act (1998). Updated information on the enactment of the Uniform Electronic Transactions Act may be found at www.nccusl.org/nccusl/uniformact_factsheets/uniformacts-fs-ueta.asp, accessed on 7 February 2007.

¹² Colombia, Dominican Republic, Ecuador, India, Mauritius, Panama and South Africa.

¹³ See note [...] [United Nations publication, Sales No. E.02.V.8].

¹⁴ See note [...] [General Assembly resolution, 60/21, annex].

satisfy the test are considered valid; hence, the test embodies the principle of technological neutrality.

12. A wide array of legal, technical and commercial factors may be taken into account in determining whether, under the circumstances, a particular authentication method offers an appropriate level of reliability, including: (a) the sophistication of the equipment used by each of the parties; (b) the nature of their trade activity; (c) the frequency with which commercial transactions take place between the parties; (d) the nature and size of the transaction; (e) the function of signature requirements in a given statutory and regulatory environment; (f) the capability of communication systems; (g) compliance with authentication procedures set forth by intermediaries; (h) the range of authentication procedures made available by any intermediary; (i) compliance with trade customs and practice; (j) the existence of insurance coverage mechanisms against unauthorized messages; (k) the importance and the value of the information contained in the data message; (l) the availability of alternative methods of identification and the cost of implementation; and (m) the degree of acceptance or non-acceptance of the method of identification in the relevant industry or field both at the time the method was agreed upon and the time when the data message was communicated.

2. Technology-specific approach

13. The concern to promote media neutrality raises other important issues. The impossibility of guaranteeing absolute security against fraud and transmission error is not limited to the world of electronic commerce and applies to the world of paper documents as well. When formulating rules for electronic commerce, legislators are often inclined to aim at the highest level of security offered by existing technology.¹⁵ The practical need for applying stringent security measures to avoid unauthorized access to data, ensure the integrity of communications and protect computer and information systems cannot be questioned. However, from the perspective of private business law, it may be more appropriate to graduate security requirements in steps similar to the degrees of legal security encountered in the paper world. In the paper world, businessmen are in most cases free to choose among a wide range of methods to achieve integrity and authenticity of communications (for example, the different levels of handwritten signature seen in documents of simple contracts and notarized acts). Under a technology-specific approach, regulations would mandate a specific technology to fulfil the legal requirements for the validity of an electronic signature. This is the case, for instance, where the law, aiming at a higher level of security, demands PKI-based

¹⁵ One of the earliest examples was the Utah Digital Signature Act, which was adopted in 1995, but was repealed effective 1 May 2006 by State Bill 20, available at www.le.state.ut.us/~2006/htmldoc/sbillhtm/sb0020.htm, accessed on 28 March 2007. The technology bias of the Utah Act can also be observed in a number of countries where the law only recognizes digital signatures created within a public key infrastructure (PKI) as a valid means of electronic authentication, which is the case, for example, under the laws of Argentina, Ley de firma digital (2001) and Decreto No. 2628/2002 (Reglamentación de la Ley de firma digital); Estonia, Digital Signatures Act (2000); Germany, Digital Signature Act, enacted as article 3 of the Information and Communication Services Act of 13 June 1997; India, Information Technology Act 2000; Israel, Electronic Signature Law (2001); Japan, Law concerning Electronic Signatures and Certification Services (2001); Lithuania, Law on Electronic Signatures (2000); Malaysia, Digital Signature Act 1997; Poland, Act on Electronic Signature (2001); and Russian Federation, Law on Electronic Digital Signature (2002).

applications. Since it prescribes the use of a specific technology, it is also called the “prescriptive” approach.

14. The disadvantages of the technology-specific approach are that, in favouring specific types of electronic signature, it “risks excluding other possibly superior technologies from entering and competing in the marketplace”.¹⁶ Rather than facilitating the growth of electronic commerce and the use of electronic authentication techniques, such an approach may have an opposite effect. Technology specific legislation risks fixing requirements before a particular technology matures.¹⁷ The legislation may then either prevent later positive developments in the technology or become quickly outdated as a result of later developments. A further point is that not all applications may require a security level comparable with that provided by certain specified techniques, such as digital signatures. It may also happen that speed and ease of communication or other considerations may be more important for the parties than ensuring the integrity of electronic information through any particular process. Requiring the use of an overly secure means of authentication could result in wasted costs and efforts, which may hinder the diffusion of electronic commerce.

15. Technology-specific legislation typically favours the use of digital signatures within a PKI. The way in which PKIs are structured, in turn, varies from country to country according to the level of Government intervention. Here, too, three main models can be identified:

(a) **Self-regulation.** Under this model, the authentication arena is left wide open. While the Government may establish one or more authentication schemes within its own departments and related organizations, the private sector is free to set up authentication schemes, commercial or otherwise, as it sees fit. There is no mandatory high-level authentication authority and authentication service providers are responsible for ensuring interoperability with other providers, domestically and internationally, depending on the objectives of establishing the authentication scheme. No licensing or technology approvals of authentication service providers are required (with the possible exception of consumer protection regulations);¹⁸

(b) **Limited Government interference.** The Government might decide to establish a voluntary or mandatory high-level authentication authority. In this case, authentication service providers may find it necessary to interoperate with the high-level authentication authority to have their tokens of authentication (or other authenticators) accepted outside their own systems. In this case, the technical and management specifications of the authentication service providers must be published as quickly as possible so that both Government departments and the

¹⁶ Stewart Baker and Matthew Yeo, in collaboration with the secretariat of the International Telecommunication Union, “Background and issues concerning authentication and the ITU”, briefing paper presented to the Experts Meeting on Electronic Signatures and Certification Authorities: Issues for Telecommunications, Geneva, 9 and 10 December 1999, Document No. 2, available at www.itu.int/osg/spu/ni/esca/meetingdec9-101999/briefingpaper.html, accessed on 12 April 2007.

¹⁷ However, in view of the fact that PKI is today fairly mature and established, some of these concerns may no longer apply with the same force.

¹⁸ Asia-Pacific Economic Cooperation, *Assessment Report on Paperless Trading of APEC Economies* (Beijing, APEC secretariat, 2005), pp. 63 and 64, where the United States is cited as an example of the application of this model.

private sector may plan accordingly. Licensing and technology approvals for each authentication service provider could be required;¹⁹

(c) **Government-led process.** The Government may decide to establish an exclusive central authentication service provider. Special purpose authentication service providers may also be established with Government approval.²⁰ Identity management systems (see paras. [...] above) represent another way in which Governments may indirectly lead the process of digital signature. Some Governments have already launched programmes for issuing to their citizens machine-readable identity documents (“electronic identifications”) equipped with digital signature functionalities.

3. Two-tiered or two-pronged approach

16. In this approach, the legislation sets a low threshold of requirements for electronic authentication methods to receive a certain minimum legal status and assigns greater legal effect to certain electronic authentication methods (referred to variously as secure, advanced or enhanced electronic signatures, or qualified certificates).²¹ At the basic level, legislation adopting a two-tiered system generally grants electronic signatures functional-equivalence status with handwritten signatures, based on technologically neutral criteria. Higher-level signatures, to which certain rebuttable presumptions apply, are required to comply with specific requirements that may relate to a particular technology. Currently, legislation of this type usually defines such secure signatures in terms of PKI technology.

17. This approach is typically chosen in jurisdictions that consider it important to address certain technological requirements in their legislation, but wish, at the same time, to leave room for technological developments. It can provide a balance between flexibility and certainty in relation to electronic signatures, by leaving it to the parties to decide, as a commercial judgement, whether the cost and inconvenience of using a more secure method is suitable to their needs. These texts also provide guidance as to the criteria for the recognition of electronic signatures in the context of a certification authority model. It is generally possible to combine the two-tiered approach with any type of certification model (whether self-regulated, voluntary accreditation or a Government-led scheme), in much the same way as might be done under the technology-specific approach (see above, paras. [...] above). Thus, while some rules may be flexible enough to accommodate different electronic signature certification models, some systems would only recognize licensed certification services providers as possible issuers of “secure” or “qualified” certificates.

18. The first jurisdictions to have passed legislation adopting the two-tiered approach include Singapore²² and the European Union.²³ They were followed by a

¹⁹ Ibid., where Singapore is cited as an example.

²⁰ Ibid., where China and Malaysia are cited as examples.

²¹ Aalberts and van der Hof, *Digital Signature Blindness* ... (see note [...]), para. 3.2.2.

²² Section 8 of the Electronic Transactions Act of Singapore admits any form of electronic signature, but only secure electronic signatures that meet the requirements of section 17 of the Act (i.e. those which are “(a) unique to the person using it; (b) capable of identifying such person; (c) created in a manner or using a means under the sole control of the person using it; and (d) linked to the electronic record to which it relates in a manner that if the record was changed the electronic signature would be invalidated”) enjoy the presumptions listed in section 18 (inter alia, that the signature “is of the person to whom it correlates” and that the

number of others.²⁴ The UNCITRAL Model Law on Electronic Signatures allows an enacting State to set up a two-tiered system through regulations, even though it does not actively promote it.²⁵

19. Regarding the second tier, it was proposed that countries should not require the use of second-tier signatures for form requirements relating to international commercial transactions and that “secure” electronic signatures should be limited to areas of the law that do not have a significant impact on international trade (e.g. trusts, family law, real property transactions, etc.).²⁶ Moreover, it was suggested that two-tier laws should explicitly give effect to contractual agreements concerning the use and recognition of electronic signatures, so as to ensure that global contract-based authentication models do not run afoul of national legal requirements.

B. Evidentiary value of electronic signature and authentication methods

20. One of the main objectives of the UNCITRAL Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures was to pre-empt disharmony and possible over-regulation by offering general criteria to establish the functional equivalence between electronic and paper-based signature and authentication methods. Although the UNCITRAL Model Law on Electronic

signature “was affixed by that person with the intention of signing or approving the electronic record”). Digital signatures supported by a trustworthy certificate that complies with the provisions of section 20 of the Act are automatically considered to be “secure electronic signatures” for the purposes of the Act.

²³ Like the Electronic Transactions Act of Singapore, the European Union Directive on electronic signatures (see note [...]), distinguishes between an “electronic signature” (defined in art. 2, para. 1, as “data in electronic form which are attached to or logically associated with other electronic data and which serve as a method of authentication”) and an “advanced electronic signature” (defined in art. 2, para. 2, as an electronic signature that meets the following requirements: “(a) it is uniquely linked to the signatory; (b) it is capable of identifying the signatory; (c) it is created using means that the signatory can maintain under his sole control; and (d) it is linked to the data to which it relates in such a manner that any subsequent change of the data is detectable”). The Directive, in article 5, paragraph 2, mandates the States members of the European Union to ensure that an electronic signature “is not denied legal effectiveness and admissibility as evidence in legal proceedings solely on the grounds” that it is “in electronic form, or not based upon a qualified certificate, or not based upon a qualified certificate issued by an accredited certification-service-provider, or not created by a secure signature-creation device.” However only advanced electronic signatures “which are based on a qualified certificate and which are created by a secure-signature-creation device” are declared to “(a) satisfy the legal requirements of a signature in relation to data in electronic form in the same manner as a handwritten signature satisfies those requirements in relation to paper-based data; and (b) are admissible as evidence in legal proceedings.” (see art. 5, para. 1, of the Directive).

²⁴ For example, Mauritius and Pakistan. For details of the respective statutes, see note [9] above.

²⁵ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 6, paragraph 3, provides that an electronic signature is considered to be reliable if (a) the signature creation data are, within the context in which they are used, linked to the signatory and to no other person; (b) they were, at the time of signing, under the control of the signatory and of no other person; (c) any alteration to the electronic signature, made after the time of signing, is detectable; and (d) any alteration made to that information after the time of signing is detectable where the legal requirement for a signature is intended to provide assurance as to the integrity of the information.

²⁶ Baker and Yeo, “Background and issues concerning authentication...” (see note [16]).

Commerce has found widespread acceptance, and an increasing number of States have used it as a basis for their e-commerce legislation, it cannot yet be assumed that the principles of the Model Law have achieved universal application. The attitude taken by various jurisdictions in relation to electronic signatures and authentication typically reflects the general approach of the jurisdiction to writing requirements and the evidentiary value of electronic records.

1. “Authentication” and general attribution of electronic records

21. The use of electronic methods of authentication involves two aspects that are relevant for the present discussion. The first aspect relates to the general issue of attribution of a message to its purported originator. The second relates to the appropriateness of the identification method used by the parties for the purpose of meeting specific form requirements, in particular legal signature requirements. Also relevant are legal notions that imply the existence of a handwritten signature, such as is the case for the notion of a “document” in some legal systems. Even though these two aspects may often be combined or, depending on the circumstances, may not be entirely distinguishable one from another, an attempt to analyse them separately may be useful, as it appears that courts tend to reach different conclusions according to the function being attached to the authentication method.

22. The Model Law on Electronic Commerce deals with attribution of data messages in its article 13. That provision has its origin in article 5 of the UNCITRAL Model Law on International Credit Transfers,²⁷ which defines the obligations of the sender of a payment order. Article 13 of the Model Law on Electronic Commerce is intended to apply where there is a question as to whether an electronic communication was really sent by the person who is indicated as being the originator. In the case of a paper-based communication, the problem would arise as the result of an alleged forged signature of the purported originator. In an electronic environment, an unauthorized person may have sent the message, but the authentication by code, encryption or similar means would be accurate. The purpose of article 13 is not to attribute authorship of a data message or to establish the identity of the parties. Rather, it deals with the attribution of data messages, by establishing the conditions under which a party may rely on the assumption that a data message was actually from the purported originator.

23. Article 13, paragraph 1, of the Model Law on Electronic Commerce recalls the principle that an originator is bound by a data message if it has effectively sent that message. Paragraph 2 refers to a situation where the message was sent by a person other than the originator who had the authority to act on behalf of the originator. Paragraph 3 deals with two kinds of situation in which the addressee could rely on a data message as being that of the originator: first, situations in which the addressee properly applied an authentication procedure previously agreed to by the originator; and second, situations in which the data message resulted from the actions of a person who, by virtue of his or her relationship with the originator, had access to the originator’s authentication procedures.

24. A number of countries have adopted the rule in article 13 of the Model Law on Electronic Commerce, including the presumption of attribution established in paragraph 3 of that article.²⁸ Some countries expressly refer to the use of codes,

²⁷ United Nations publication, Sales No. E.99.V.11, available at www.uncitral.org/pdf/english/texts/payments/transfers/ml-credittrans.pdf.

²⁸ Colombia (art. 17); Ecuador (art. 10); Jordan (art. 15); Mauritius (sect. 12, subsect. 2);

passwords or other means of identification as factors that create a presumption of authorship.²⁹ There are also more general versions of article 13, in which the presumption created by proper verification through a previously agreed procedure is rephrased as an indication of elements that may be used for attribution purposes.³⁰

25. However, other countries have adopted only the general rules in article 13, namely that a data message is that of the originator if it was sent by the originator him or herself, or by a person acting on the originator's behalf, or by a system programmed by or on behalf of the originator to operate automatically.³¹ In addition, several countries that have implemented the Model Law on Electronic Commerce have not included any specific provision based on article 13.³² The assumption in those countries was that no specific rules were needed and that attribution was better left to ordinary methods of proof, in the same way as attribution of documents on paper: "The person who wishes to rely on any signature takes the risk that the signature is invalid, and this rule does not change for an electronic signature."³³

26. Other countries, however, have preferred to take the provisions of the Model Law on Electronic Commerce on attribution separately from provisions on electronic signatures. This approach is based on the understanding that attribution in a documentary context serves the primary purpose of providing a basis for reasonable reliance, and may include broader means than those more narrowly used for identifying individuals. Some laws, such as the United States Uniform Electronic Transactions Act, emphasize this principle by stating, for example, that "an electronic record or electronic signature is attributable to a person if it was the act of the person", which "may be shown in any manner, including a showing of the efficacy of any security procedure applied to determine the person to which the electronic record or electronic signature was attributable."³⁴ Such a general rule on

Philippines (sect. 18, para. 3); Republic of Korea (art. 7, para. 2); Singapore (sect. 13, subsect. 3); Thailand (sect. 16); and Venezuela (Bolivarian Republic of) (art. 9). The same rules are also contained in the laws of the British crown dependency of Jersey (art. 8) and the British overseas territories of Bermuda (sect. 16, para. 2) and Turks and Caicos (sect. 14). For details of the respective statutes, see note [9] above.

²⁹ Mexico (see note [9] above), art. 90, para. 1.

³⁰ For example, the Uniform Electronic Transactions Act of the United States (see note [10]) provides in section 9, subsection (a), that an electronic record or electronic signature "is attributable to a person if it was the act of the person. The act of the person may be shown in any manner, including a showing of the efficacy of any security procedure applied to determine the person to which the electronic record or electronic signature was attributable". Section 9, subsection (b), provides further that the effect of an electronic record or electronic signature attributed to a person under subsection (a) "is determined from the context and surrounding circumstances at the time of its creation, execution, or adoption, including the parties' agreement, if any, and otherwise as provided by law".

³¹ Australia (sect. 15, para. 1); essentially in the same manner, India (sect. 11); Pakistan (sect. 13, subsect. 2); Slovenia (art. 5); the British crown dependency of the Isle of Man (sect. 2); and Hong Kong SAR of China (sect. 18). For details of the respective statutes, see note [9] above.

³² For example, Canada, France, Ireland, New Zealand and South Africa.

³³ Canada, Uniform Electronic Commerce Act (with official commentary) (see note [10]), commentary to section 10.

³⁴ United States, Uniform Electronic Transactions Act (1999) (see note [11]), section 9. Paragraph 1 of the official comments to section 9 offer the following examples where both the electronic record and electronic signature would be attributable to a person: a person "types his/her name as part of an e-mail purchase order"; a "person's employee, pursuant to authority, types the person's name as part of an e-mail purchase order"; or a "person's computer, programmed to order goods upon receipt of inventory information within particular parameters,

attribution does not affect the use of a signature as a device for attributing a record to a person, but is based on the recognition that “a signature is not the only method for attribution.”³⁵ According to the commentary on the United States Act, therefore:

“4. Certain information may be present in an electronic environment that does not appear to attribute but which clearly links a person to a particular record. Numerical codes, personal identification numbers, public and private key combinations all serve to establish the party to whom an electronic record should be attributed. Of course security procedures will be another piece of evidence available to establish attribution.

“The inclusion of a specific reference to security procedures as a means of proving attribution is salutary because of the unique importance of security procedures in the electronic environment. In certain processes, a technical and technological security procedure may be the best way to convince a trier of fact that a particular electronic record or signature was that of a particular person. In certain circumstances, the use of a security procedure to establish that the record and related signature came from the person’s business might be necessary to overcome a claim that a hacker intervened. The reference to security procedures is not intended to suggest that other forms of proof of attribution should be accorded less persuasive effect. It is also important to recall that the particular strength of a given procedure does not affect the procedure’s status as a security procedure, but only affects the weight to be accorded the evidence of the security procedure as tending to establish attribution.”³⁶

27. It is also important to bear in mind that a presumption of attribution would not of itself displace the application of rules of law on signatures, where a signature is needed for the validity or proof of an act. Once it is established that a record or signature is attributable to a particular party, “the effect of a record or signature must be determined in light of the context and surrounding circumstances, including the parties’ agreement, if any” and of “other legal requirements considered in light of the context”.³⁷

28. Against the background of this flexible understanding of attribution, the courts in the United States seem to have taken a liberal approach to the admissibility of electronic records, including e-mail, as evidence in civil proceedings.³⁸ Courts in the

issues a purchase order which includes the person’s name, or other identifying information, as part of the order”.

³⁵ Ibid. Paragraph 3 of the official comments to section 9 states: “The use of facsimile transmissions provides a number of examples of attribution using information other than a signature. A facsimile may be attributed to a person because of the information printed across the top of the page that indicates the machine from which it was sent. Similarly, the transmission may contain a letterhead that identifies the sender. Some cases have held that the letterhead actually constituted a signature because it was a symbol adopted by the sender with intent to authenticate the facsimile. However, the signature determination resulted from the necessary finding of intention in that case. Other cases have found facsimile letterheads NOT to be signatures because the requisite intention was not present. The critical point is that with or without a signature, information within the electronic record may well suffice to provide the facts resulting in attribution of an electronic record to a particular party.”

³⁶ Ibid., official comments on section 9.

³⁷ Ibid., paragraph 6 of the official comments on section 9.

³⁸ *Commonwealth Aluminum Corporation v. Stanley Metal Associates*, United States District Court for the Western District of Kentucky, 9 August 2001, Federal Supplement, 2nd series, vol. 186,

United States have dismissed arguments that e-mail messages were inadmissible as evidence because they were unauthenticated and parole evidence.³⁹ The courts have found instead that e-mails obtained from the plaintiff during the discovery process were self-authenticating, since “the production of documents during discovery from the parties’ own files is sufficient to justify a finding of self-authentication”.⁴⁰ The courts tend to take into account all available evidence and do not reject electronic records as being prima facie inadmissible.

29. In countries that have not adopted the Model Law on Electronic Commerce, there seem to be no specific legislative provisions dealing with attribution in an analogous fashion. In those countries, attribution is typically a function of the legal recognition of electronic signatures and the presumptions attached to records authenticated with particular types of electronic signature. Concerns about the risk of manipulation in electronic records have, for instance, led courts in some of those countries to dismiss the value of e-mails as evidence in court proceedings, on the grounds that e-mails do not offer adequate guarantees of integrity.⁴¹ Further examples of a more restrictive approach to the evidentiary value of electronic records and attribution can be found in recent cases involving Internet auctions, in which courts have applied a high standard for attribution of data messages. Those cases have typically involved suits for breach of contract on the grounds of lack of payment for goods allegedly purchased in Internet auctions. Claimants maintained that the defendants were the buyer, as the highest bid for the goods had been authenticated with the defendant’s password and had been sent from the defendant’s e-mail address. The courts have found that those elements were not sufficient to firmly conclude that it was in fact the defendant who had participated in the auction and submitted the winning bid for the goods. The courts have used various arguments to justify that position. For example, passwords were not reliable because anyone who knew the defendant’s password could have used its e-mail address from anywhere and participated in the auction using the defendant’s name,⁴² a risk that some courts estimated as “very high”, on the basis of expert evidence regarding security threats to Internet communications networks, in particular through the use of “Trojan horses” capable of “stealing” a person’s password.⁴³ The risk of unauthorized use of a person’s identification device (password) should be borne by

⁴³ Germany, Landesgericht (Land Court) Konstanz, Case No. 2 O 141/01 A, 19 April 2002, *JurPC Internet-Zeitschrift für Rechtsinformatik und Informationsrecht*, JurPC Web-Dok. No. 291/2002, available at www.jurpc.de/rechtspr/20020291.htm, accessed on 25 August 2003.

the party that offered goods or services through a particular medium, as there was no legal presumption that messages sent through an Internet website with recourse to a person's access password to such website were attributable to that person.⁴⁴ Such a presumption might conceivably be attached to an "advanced electronic signature", as defined in law, but the holder of a simple "password" should not bear the risk of it being misused by unauthorized persons.⁴⁵

2. Ability to meet legal signature requirements

30. In some countries, the courts have been inclined to interpret signature requirements liberally. As previously indicated (see introduction, paras. [...]–[...]), this has been typically the case in some common law jurisdictions in connection with statute of frauds requirements that certain transactions must be in writing and bear a signature in order to be valid. Courts in the United States have also been receptive to legislative recognition of electronic signatures, admitting their use in situations not expressly contemplated in the enabling statute, such as the issue of judicial warrants.⁴⁶ More importantly for a contractual context, the courts have also assessed the adequacy of the authentication in the light of the dealings between the parties, rather than using a strict standard for all situations. Thus, where the parties had regularly used e-mail in their negotiations, the courts have found that the originator's typed name in an e-mail satisfied statutory signature requirements.⁴⁷ A person's "deliberate choice to type his name at the conclusion of all e-mails" has been considered to be valid authentication.⁴⁸ The readiness of the United States courts to accept that e-mails and names typed therein are capable of satisfying writing requirements⁴⁹ follows a liberal interpretation of the notion of "signature", which is understood as encompassing "any symbol executed or adopted by a party with present intention to authenticate a writing" so that, in some instances, "a typed name or letterhead on a document is sufficient to satisfy the signature requirement".⁵⁰ Where the parties do not deny having written or received communications by e-mail, statutory signature requirements would be met, since courts have "long recognized that a binding signature may take the form of any

⁴⁴ Germany, Landesgericht (Land Court) Bonn, Case No. 2 O 450/00, 7 August 2001, *JurPC Internet-Zeitschrift für Rechtsinformatik und Informationsrecht*, JurPC Web-Dok. No. 136/2002, available at www.jurpc.de/rechtspr/20020136.htm, accessed on 25 August 2003.

⁴⁵ Germany, Oberlandesgericht (Court of Appeal) Köln, Case No. 19 U 16/02, 6 September 2002, *JurPC Internet-Zeitschrift für Rechtsinformatik und Informationsrecht*, JurPC Web-Dok. No. 364/2002, available at www.jurpc.de/rechtspr/20020364.htm, accessed on 25 August 2003.

⁴⁶ *Department of Agriculture and Consumer Services v. Haire*, Fourth District Court of Appeal of Florida, Case Nos. 4D02-2584 and 4D02-3315, 15 January 2003.

⁴⁷ *Cloud Corporation v. Hasbro, Inc.*, United States Court of Appeals for the Seventh Circuit, 26 December 2002, Federal Reporter, 3rd series, vol. 314, p. 296.

⁴⁸ *Jonathan P. Shattuck v. David K. Klotzbach*, Superior Court of Massachusetts, 11 December 2001, 2001 Mass. Super. LEXIS 642.

⁴⁹ *Central Illinois Light Company v. Consolidation Coal Company*, United States District Court for the Central District of Illinois, Peoria Division, 30 December 2002, Federal Supplement, 2nd Series, vol. 235, p. 916.

⁵⁰ *Ibid.*, p. 919: "Internal documents, invoices and e-mails can be used to satisfy the Illinois [Uniform Commercial Code] statute of frauds". In the concrete case, however, the court found that the alleged contract failed to satisfy the statute of frauds, not because the e-mails as such could not validly record the terms of a contract, but because there was no indication that the authors of the e-mails and the persons mentioned therein were employees of the defendant.

mark or designation thought proper by the party to be bound”, provided that the author “intends to bind himself”.⁵¹

31. Courts in the United Kingdom of Great Britain and Northern Ireland have taken a similar approach, generally considering the form of a signature to be less relevant than the function it serves. Thus, courts would consider the fitness of the medium both to attribute a record to a particular person, and to indicate the person’s intention with respect to the record. E-mails may therefore constitute “documents”, and names typed on the e-mails may be “signatures”.⁵² Some courts have declared that they “have no doubt that if a party creates and sends an electronically created document then he will be treated as having signed it to the same extent that he would in law be treated as having signed a hard copy of the same document” and that “[t]he fact that the document is created electronically as opposed to as a hard copy can make no difference.”⁵³ On occasion, courts have rejected arguments that e-mails constituted signed contracts for the purposes of the statute of frauds, mainly because the intent to be bound by the signature was lacking. There seems to be no precedent, however, where courts would have denied a priori the ability of e-mails and names typed therein to meet statutory writing and signature requirements. In some cases, it was found that the requirements of the statute of frauds were not met because the e-mails in question only reflected ongoing negotiations and not a final agreement, for instance because during the negotiations one of the parties had contemplated that a binding contract would be entered into once a “deal memo” had been signed, and not before.⁵⁴ In other cases courts have suggested that they might have been inclined to admit as a signature the originator’s “name or initials” at “the end of the e-mail” or “anywhere else in the body of the e-mail”, but held that the “automatic insertion of a person’s e-mail address after the document has been transmitted by either the sending and/or receiving [Internet service provider]” was not “intended for a signature”.⁵⁵ Although British courts seem to interpret the writing requirements of the statute of frauds more strictly than their United States counterparts, they are generally inclined to admit the use of any type of electronic signature or authentication method, even outside any specific statutory authorization, as long as the method in question serves the same functions as a handwritten signature.⁵⁶

⁵¹ *Roger Edwards, LLC v. Fiddes & Son, Ltd.*, United States District Court for the District of Maine, 14 February 2003, Federal Supplement, 2nd Series, vol. 245, p. 251.

⁵² *Hall v. Cognos Limited* (Hull Industrial Tribunal, Case No. 1803325/97) (unreported).

⁵³ *Mehta v. J. Pereira Fernandes S.A.* [2006] EWHC 813 (Ch), (United Kingdom, England and Wales High Court, Chancery Division), [2006] 2 Lloyd’s Rep 244 (United Kingdom, England and Wales, Lloyd’s List Law Reports).

⁵⁴ *Pretty Pictures Sarl v. Quixote Films Ltd.*, 30 January 2003 ([2003] EWHC 311 (QB), (United Kingdom, England and Wales High Court, Law Reports Queen’s Bench, [2003] All ER (D) 303 (January)) (United Kingdom, All England Direct Law Reports (Digests)).

⁵⁵ *Mehta v. J. Pereira Fernandes S.A.* (see note [55]).

⁵⁶ *Mehta v. J. Pereira Fernandes S.A.* (see note [55]), No. 25: “It is noteworthy that the Law Commission’s view in relation to [the European Union Directive on electronic commerce (2000/31/EC)] is that no significant changes are necessary in relation to statutes that require signatures because whether those requirements have been satisfied can be tested in a functional way by asking whether the conduct of the would-be signatory indicates an authenticating intention to a reasonable person. ... Thus, as I have already said, if a party or a party’s agent sending an e-mail types his or her or his or her principal’s name to the extent required or permitted by existing case law in the body of an e-mail, then in my view that would be a sufficient signature for the purposes of [the statute of frauds]”.

32. Courts in civil law jurisdictions tend generally to follow a more restrictive approach, arguably because for many of those countries the notion of “document” ordinarily implies the use of some form of authentication, thus becoming hardly dissociable from a “signature”. Courts in France, for instance, had been reluctant to accept electronic means of identification as equivalent to handwritten signatures until the adoption of legislation expressly recognizing the validity of electronic signatures.⁵⁷ A slightly more liberal line is taken by decisions that accept the electronic filing of administrative complaints for the purpose of meeting a statutory deadline, at least as long as they are subsequently confirmed by regular correspondence.⁵⁸

33. In contrast to their restrictive approach to the attribution of data messages in the formation of contracts, German courts seem to have been liberal in the acceptance of identification methods as equivalent to handwritten signatures in court proceedings. The debate in Germany has evolved around the increasing use of scanned images of legal counsel’s signature to authenticate computer facsimiles containing statements of appeals transmitted directly from a computer station via modem to a court’s facsimile machine. In earlier cases, courts of appeal⁵⁹ and the Federal Court (*Bundesgerichtshof*)⁶⁰ had held that a scanned image of a handwritten signature did not satisfy existing signature requirements and offered no proof of a person’s identity. Identification might conceivably be attached to an “advanced electronic signature”, as defined in German law. Generally, however, it was for the legislator and not the courts to establish the conditions for the equivalence between writings and intangible communications transmitted by data transfers.⁶¹ That understanding was eventually reversed in view of the unanimous opinion of the other high federal courts that accepted the delivery of certain procedural pleas by means of electronic communication of a data message accompanied by a scanned image of a signature.⁶²

⁵⁷ The Court of Cassation of France rejected the receivability of a statement of appeal signed electronically, because there were doubts as to the identity of the person who created the signature and the appeal had been signed electronically before entry into force of the law of 13 March 2000, which recognized the legal effect of electronic signatures (Cour de cassation, Deuxième chambre civile, 30 avril 2003, *Sté Chalets Boisson c/ M. X.*, available at www.juriscom.net/jpt/visu.php?ID=239, accessed on 12 September 2003).

⁵⁸ France, Conseil d’État, 28 décembre 2001, N° 235784, *Élections municipales d’Entre-Deux-Monts*, available at www.rajf.org/article.php?id_article=467, accessed on 12 September 2003.

⁵⁹ For instance, Oberlandesgericht (Court of Appeal) Karlsruhe, Case No. 14 U 202/96, 14 November 1997, *JurPC Internet-Zeitschrift für Rechtsinformatik und Informationsrecht*, JurPC Web-Dok. No. 09/1998, available at www.jurpc.de/rechtspr/19980009.htm, accessed on 12 September 2003.

⁶⁰ Germany, Bundesgerichtshof (Federal Court of Justice), Case No. XI ZR 367/97, 29 September 1998, *JurPC Internet-Zeitschrift für Rechtsinformatik und Informationsrecht*, JurPC Web-Dok. No. 05/1999, available at www.jurpc.de/rechtspr/19990005.htm, accessed on 12 September 2003.

⁶¹ Ibid.

⁶² In a decision on a case referred to it by the Bundesgerichtshof of Germany (Federal Court of Justice) (see note [62]), the Gemeinsamer Senat der obersten Gerichtshöfe des Bundes (Joint Chamber of the Highest Federal Courts of Germany) noted that form requirements in court proceedings were not an end in themselves. Their purpose was to ensure a sufficiently reliable (“hinreichend zuverlässig”) determination of the content of the writing and the identity of the person from whom it emanated. The Joint Chamber noted the evolution in the practical application of form requirements to accommodate earlier technological developments such as telex or facsimile. The Joint Chamber held that accepting the delivery of certain procedural pleas by means of electronic communication of a data message with a scanned image of a

34. It is interesting to note that even courts in some civil law jurisdictions that have adopted legislation favouring the use of PKI-based digital signatures, such as Colombia,⁶³ have taken a similarly liberal approach and confirmed, for example, the admissibility of judicial proceedings conducted entirely by electronic communications. The submissions exchanged during such proceedings were valid, even if they were not signed with a digital signature, since the electronic communications used methods that allowed for the identification of the parties.⁶⁴

35. Case law on electronic signatures is still rare and the small number of court decisions to date does not provide a sufficient basis to draw firm conclusions. Nevertheless, a brief review of existing precedents reveals several trends. It seems that the legislative approach taken to electronic signatures and authentication has influenced the attitude of courts on this issue. Arguably, the legislative focus on electronic “signatures”, without an accompanying general rule on attribution, has led to excessive attention being paid to the identity function of authentication methods. This has, in some countries, engendered a certain degree of mistrust vis-à-vis any authentication methods that do not satisfy the statutory definition of an electronic “signature”. It is therefore doubtful that the same courts that have adopted a liberal approach in the context of judicial or administrative appeals would be equally liberal in respect of signature requirements for the validity of contracts. Indeed, while in a contractual context a party might be faced with the risk of repudiation of the agreement by the other party, in the context of civil proceedings it is typically the party using electronic signatures or records that is interested in confirming its approval of the record and its contents.

3. Efforts to develop electronic equivalents for special forms of signature

(a) Apostilles*

36. It has been stated that the spirit and letter of the Convention Abolishing the Requirement of Legalisation for Foreign Public Documents, done at The Hague on 5 October 1961, did not constitute an obstacle to the usage of modern technology.⁶⁵ The First International Forum on e-Notarization and e-Apostilles endorsed this

signature would be in line with the spirit of existing case law (Gemeinsamer Senat der obersten Gerichtshöfe des Bundes, GmS-OGB 1/98, 5 April 2000, *JurPC Internet-Zeitschrift für Rechtsinformatik und Informationsrecht*, JurPC Web-Dok. No. 160/2000, available at www.jurpc.de/rechtspr/20000160.htm, accessed on 12 September 2003).

⁶³ For example, Colombia, which has adopted the UNCITRAL Model Law on Electronic Commerce, including the general provisions of its article 7, but has established a legal presumption of authenticity only in respect of digital signatures (*Ley de comercio electrónico*, art. 28).

⁶⁴ Colombia, Juzgado Segundo Promiscuo Municipal Rovira Tolima, *Juan Carlos Samper v. Jaime Tapias*, 21 julio 2003, Rad. 73-624-40-89-002-2003-053-00. The Court found that the process undertaken via electronic means was valid notwithstanding that the e-mails were not digitally signed because (a) the sender of the data messages could be fully identified; (b) the sender of the data messages consented to and affirmed the content of the data messages sent; (c) the data messages were safely kept in the Tribunal; and (d) the messages could be reviewed at any time (available at www.camara-e.net/_upload/80403--0-7-diaz082003.pdf, accessed on 2 February 2007).

* This section would be further developed in a final version of the comprehensive reference document.

⁶⁵ Hague Conference on Private International Law, “Conclusions and recommendations adopted by the Special Commission on the practical operation of The Hague Apostille, Evidence and Service Conventions: 28 October to 4 November 2003” (The Hague, 2003).

conclusion and noted that the application and operation of the Convention could be further improved by relying on such technologies.⁶⁶ An interpretation of the Convention in the light of the principle of functional equivalence would permit competent authorities both to keep electronic registries and to issue electronic Apostilles, in order to enhance further international legal assistance and government services.

37. In April 2006, the Hague Conference on Private International Law and the National Notary Association (NNA) of the United States launched the electronic Apostille Pilot Program (e-APP). Under the e-APP, the Hague Conference and the NNA are, together with any interested State, developing, promoting and assisting in the implementation of software models for (a) the issuance and use of electronic apostilles (e-apostilles); and (b) the operation of electronic registers of apostilles (e-registers).⁶⁷

(b) Seals

38. Some jurisdictions have already abolished the requirement for seals on the ground that sealing is no longer relevant in today's context. An attested (i.e. witnessed) signature has been substituted.⁶⁸ Other jurisdictions have legislation that allows secure electronic signatures to satisfy the requirement for sealing. For instance, Ireland has specific provisions for secure electronic signatures, with appropriate certification, to be used in place of a seal, subject to the consent of the person or public body to which the document under seal is required or permitted to be given.⁶⁹ Canada provides that requirements for a person's seal under certain federal laws are satisfied by a secure electronic signature that identifies the secure electronic signature as the person's seal.⁷⁰

39. A number of countries have also launched initiatives that contemplate the use of electronic documents and signatures in land transactions involving deeds. The model used in Victoria, Australia, envisages the use of secure digital signature technology via the Internet with digital cards issued by a certification authority. In the United Kingdom, the model envisages execution of deeds by solicitors on behalf of their clients via an Intranet. In some legislation, the possibility of using "electronic seals" as an alternative to "manual seals" is recognized in legislation,

⁶⁶ Conclusions adopted at the First International Forum on e-Notarization and e-Apostilles, held in Las Vegas, United States, on 30 and 31 May 2005, available at www.hcch.net/upload/concl_forum.pdf, accessed on 7 February 2007.

⁶⁷ The e-APP is designed to use already existing and widely used technology. The suggested technology is based on Portable Document Format (PDF) with embedded Extensible Markup Language (XML). More information may be found at http://hcch.e-vision.nl/index_en.php?act=text.display&tid=37, under "Second International Forum on e-Notarization and e-Apostilles", held in Washington, D.C., from 27 to 29 May 2006.

⁶⁸ For example, United Kingdom, Law of Property (Miscellaneous Provisions) Act 1989, which implemented the Law Reform Commission Report on "Deeds and escrows" (Law Com. No. 143, 1987).

⁶⁹ Ireland, Electronic Commerce Act, section 16. However, where the document to be under seal is required or permitted to be given to a public body or to a person acting on behalf of a public body, the public body that consents to the use of an electronic signature may nevertheless require that it be in accordance with particular information technology and procedural requirements.

⁷⁰ Canada, Personal Information Protection and Electronic Documents Act (2000), part 2, section 39. The federal laws referred to are the Federal Real Property and Federal Immovables Act and the Federal Real Property Regulations.

leaving the technical details of the form of the electronic seal to be separately determined.⁷¹

40. The United States Uniform Real Property Electronic Recording Act⁷² expressly states that a physical or electronic image of a stamp, impression or seal need not accompany an electronic signature. Essentially, it is only the information on the seal, rather than the seal itself, that is required. It also provides that any statute, regulation or standard that requires a personal or corporate stamp, impression or seal is satisfied by an electronic signature. These physical indicia are inapplicable to a fully electronic document. Nevertheless, this act requires that the information that would otherwise be contained in the stamp, impression or seal must be attached to, or logically associated with, the document or signature in an electronic fashion.⁷³ Thus, the notarial stamp or impression that is required under the laws of some states is not required for an electronic notarization under this act. Nor is there a need for a corporate stamp or impression as would otherwise be required under the laws of some states to verify the action of a corporate officer.

(c) Notarization*

41. There are three principal United States statutes dealing with notarization: the Uniform Electronic Transactions Act, the Electronic Signatures in Global and National Commerce Act (E-sign)⁷⁴ and the Uniform Real Property Electronic Recording Act.⁷⁵ In combination, they provide that the legal requirements for a document, or a signature associated with a document to be notarized, acknowledged, verified, witnessed or made under oath will be satisfied if the electronic signature of the person authorized to perform those acts, together with all other information required to be included by other applicable law, is attached to or logically associated with the document or signature.

42. In Austria, the cyberDOC electronic document archive, an independent company jointly established by the Austrian Chamber of Civil Law Notaries and Siemens AG, provides notaries with an electronic archive that includes authentication functions.⁷⁶ Austrian notaries are obliged under the law to record and store all notarial deeds perfected after 1 January 2000 in this archive.

⁷¹ Examples are found in requirements relating to the validation of documents by licensed or registered professionals, for example the Engineering and Geoscientific Professions Act (Manitoba, Canada), which defines an “electronic seal” as the form of identification issued by the association of any member to be used in the electronic validation of documents in computer readable form (see <http://apegm.mb.ca/keydocs/act/index.html>, accessed on 4 April 2007).

⁷² The Uniform Real Property Electronic Recording Act of the United States was prepared by the National Conference of Commissioners on Uniform State Laws and is available at www.law.upenn.edu/bll/ulc/urpera/URPERA_Final_Apr05-1.htm, accessed on 7 February 2007. It has been adopted in Arizona, Delaware, the District of Columbia, Kansas, North Carolina, Texas, Virginia and Wisconsin (see www.nccusl.org/Update/uniformact_factsheets/uniformacts-fs-urpera.asp, accessed on 7 February 2007).

⁷³ That is, criteria similar to those embodied in the Uniform Electronic Transactions Act of the United States.

* This section would be further developed in a final version of the comprehensive reference document.

⁷⁴ Codified as United States Code, title 15, chapter 96, sections 7001-7031.

⁷⁵ See note [74].

⁷⁶ See Österreichische Notariatskammer (Austrian Chamber of Civil Law Notaries), available at www.notar.at/de/portal/einrichtungen/cyberdocgmbhcokg/, accessed on 7 February 2007.

(d) Attestation

43. It has been argued that traditional witnessing processes, such as attestation, are not wholly adaptable to the process of electronically signing documents, since there is no assurance that the image on the screen is in fact the document to which the electronic signature will be affixed. All that the witness and the signatory can see is a representation on the computer screen, capable of being read by a human being, of what is allegedly in the memory. When the witness sees the signatory pressing the keyboard, the witness will not know with certainty what is actually happening. Therefore, it would be possible to ensure that the screen display corresponds to the contents of the computer memory and that the signatory's keystrokes correspond to his or her intentions only if the computer has been evaluated to effect a trusted path by trusted evaluation criteria.⁷⁷

44. However, a secure electronic signature would be able to perform a similar function to the attesting witness by identifying the person purporting to sign the deed. Using a secure electronic signature **without a human witness**, it could be possible to verify the authenticity of the signature, the identity of the person to whom the signature belongs, the integrity of the document and probably even the date and time of signing. In this sense, a secure electronic signature may even be superior to an ordinary handwritten signature. The advantages of having, in addition, an actual witness to attest a secure digital signature would probably be minimal unless the voluntary nature of the signing is in question.⁷⁸

45. Existing legislation has not gone so far as to entirely replace attestation requirements with electronic signatures, but merely allows the witness to use an electronic signature. The Electronic Transactions Act of New Zealand provides that the electronic signature of a witness meets the legal requirement for a signature or seal to be witnessed. The technology to be used in making the electronic signature is not specified, as long as it "adequately identifies the witness and adequately indicates that the signature or seal has been witnessed"; and "is as reliable as is appropriate given the purpose for which, and the circumstances in which, the witness's signature is required."⁷⁹

46. The Personal Information Protection and Electronic Documents Act of Canada provides that requirements in federal law for a signature to be witnessed are satisfied with respect to an electronic document if each signatory and each witness signs the electronic document with their secure electronic signature.⁸⁰ A statement required to be made under certain federal laws declaring or certifying that any information given by a person making the statement is true, accurate or complete may be made in electronic form if the person signs it with that person's secure

⁷⁷ This is referred to as the "What you see is what you sign" (WYSIWYS) problem in literature. See V. Liu and others, "Visually sealed and digitally signed documents", Association of Computing Machinery, *ACM International Conference Proceedings Series*, vol. 56, *Proceedings of the Twenty-seventh Australasian Conference on Computer Science*, vol. 26, (Dunedin, New Zealand, 2004) p. 287 (see also for a discussion of trusted display controllers).

⁷⁸ See discussions in Joint Infocomm Development Authority of Singapore and the Attorney-General's Chambers, *Joint IDA-AGC Review of Electronic Transactions Act Stage II: Exclusions under Section 4 of the ETA*, consultation paper LRRD No. 2/2004 (Singapore, 2004), parts 5 and 8, available at www.agc.gov.sg, under "Publications".

⁷⁹ New Zealand, Electronic Transactions Act (see note [9]), section 23, available at www.legislation.govt.nz/browse_vw.asp?content-set=pal_statutes, accessed on 4 April 2007.

⁸⁰ Canada, Personal Information Protection and Electronic Documents Act (see note [72]), part 2, section 46.

electronic signature.⁸¹ A statement required to be made under oath or solemn affirmation under federal law may be made in electronic form if the person who makes the statement signs it with that person's secure electronic signature, and the person before whom the statement was made, and who is authorized to take statements under oath or solemn affirmation, signs it with that person's secure electronic signature.⁸² An alternative that has been suggested to provide further assurance is for the electronic signature to be executed by or in the presence of a trusted professional such as a lawyer or a notary.⁸³

⁸¹ Ibid., section 45.

⁸² Ibid., section 44.

⁸³ Conveyancers will need to have electronic signatures and authentication from a recognized certification authority. Buyers and sellers might need to empower conveyancers to sign by written authority. See "E-conveyancing: the strategy for the implementation of e-conveyancing in England and Wales" (United Kingdom, Land Registry, 2005), available at www.landregistry.gov.uk/assets/library/documents/e-conveyancing_strategy_v3.0.doc, accessed on 7 April 2007. The project is scheduled to be implemented in tranches from 2006 to 2009.

Comprehensive reference document on elements required to establish a favourable legal framework for electronic commerce: sample chapter on international use of electronic authentication and signature methods

ADDENDUM

The annex to the present note contains part (part two, chap. I, sects. A and B) of a sample chapter of a comprehensive reference document dealing with legal issues related to the international use of electronic authentication and signature methods.

Annex

CONTENTS

	<i>Paragraphs</i>
Part Two Cross-border use of electronic signature and authentication methods	
I. Legal recognition of foreign electronic authentication and signature methods	1-23
A. International impact of domestic laws	2-14
1. International obstacles created by conflicting domestic approaches	4-10
2. Emerging consensus	11-14
B. Criteria for recognition of foreign electronic authentication and signature methods.	15-23
1. Place of origin, reciprocity and local validation	17-19
2. Substantive equivalence	20-23

Part Two

Cross-border use of electronic signature and authentication methods

I. Legal recognition of foreign electronic authentication and signature methods

1. Legal and technical incompatibilities are the two principal sources of difficulties in the cross-border use of electronic signature and authentication methods, in particular where they are intended to substitute for a legally valid signature. Technical incompatibilities affect the interoperability of authentication systems. Legal incompatibilities may arise because the laws of different jurisdictions impose different requirements in relation to the use and validity of electronic signature and authentication methods.

A. International impact of domestic laws

2. Where domestic laws allow for electronic equivalents of paper-based authentication methods, the criteria for the validity of such electronic equivalents may be inconsistent. For example, if the law recognizes only digital signatures, other forms of electronic signatures will not be acceptable. Other inconsistencies in the criteria for the recognition of electronic authentication and signature methods may not prevent their cross-border use in principle, but the cost and inconvenience arising from the need to comply with the requirements imposed by various jurisdictions may reduce the speed and efficiency gains expected from the use of electronic communications.

3. The following sections discuss the impact of varying legal approaches to technology on the growth of cross-border recognition. They also summarize the emerging international consensus on the measures that could potentially facilitate the international use of electronic signature and authentication methods.

1. International obstacles created by conflicting domestic approaches

4. Technology-neutral approaches, especially those which incorporate a “reliability test”, tend to resolve legal incompatibilities. International legal instruments adopting this approach include the UNCITRAL Model Law on Electronic Commerce, article 7, paragraph 1 (b),¹ and the United Nations Convention on the Use of Electronic Communications in International Contracts, article 9, paragraph 3.² Under this approach, an electronic signature or authentication method that can both identify the signatory and indicate the signatory’s intention in respect of the information contained in the electronic communication will fulfil signature requirements, provided it meets several criteria. In the light of all the circumstances, including any agreement between the originator and the addressee of the data message, the signature or authentication method must be shown to be as reliable as is appropriate for the purpose for which the data

¹ See note [...] [United Nations publication, Sales No. E.99.V.4].

² See note [...] [General Assembly resolution 60/21, annex].

message is generated or communicated. Alternatively, by itself or in conjunction with other evidence, it must be shown to have fulfilled these purposes.

5. Arguably, the minimalist approach facilitates cross-border use of electronic authentication and signatures, since under this approach any method of electronic signature or authentication may be validly used to sign or authenticate a contract or communication, as long as it meets the above general conditions. The consequence of this approach, however, is that such conditions are typically only confirmed *a posteriori*, and there is no assurance that a court will recognize the use of any particular method.

6. Cross-border use of electronic authentication and signatures becomes a real issue in systems that either mandate or favour a particular technology. The complexity of the problem increases in direct relation to the level of governmental regulation of electronic signatures and authentication and the degree of legal certainty that the law attaches to any specific method or technology. The reasons for this are simple: where the law does not attach any particular legal value or presumption to particular types of electronic signature or authentication, and merely provides for their general equivalence to hand-written signatures or paper-based authentication, the risks of reliance on an electronic signature are the same as the risk of reliance on a hand-written signature under existing law. However, where more legal presumptions are attached by the law to a particular electronic signature (typically those regarded as “secure” or “advanced”), the increased level of risk is shifted from one party to another. One fundamental assumption of technology-specific legislation is that such a general *a priori* shift in legal risks may be justified by the level of reliability offered by a given technology, once certain standards and procedures are complied with. The downside to this approach is that once reliability *a priori* is predicated upon the use (among other conditions) of a particular technology, all other technologies — or even the same technology used under slightly different conditions — become *a priori* unreliable, or at least fall under suspicion *a priori* of unreliability.

7. Conflicting technology-specific national legislation may therefore inhibit rather than promote the use of electronic signatures in international commerce. This could happen in two distinct but closely interrelated ways.

8. First, if electronic signatures and the certification services providers who authenticate them are subject to conflicting legal and technical requirements in different jurisdictions, this may inhibit or prevent electronic signatures from being used in many cross-border transactions, if the electronic signature cannot satisfy the various jurisdictional requirements simultaneously.

9. Second, technology-specific legislation, particularly legislation that favours digital signatures, which is also the case in the two-tiered approach, is likely to give rise to a patchwork of conflicting technical standards and licensing requirements that will make the use of electronic signatures across borders very difficult. A system in which each country prescribes its own standards may also prevent parties from entering into mutual recognition and cross-certification agreements.³ Indeed, a

³ Stewart Baker and Matthew Yeo, in collaboration with the secretariat of the International Telecommunication Union, “Background and issues concerning authentication and the ITU”, briefing paper presented to the Experts Meeting on Electronic Signatures and Certification Authorities: Issues for Telecommunications, Geneva, 9 and 10 December 1999, Document No. 2.

major remaining problem relating, in particular, to digital signatures is that of cross-border recognition. The Working Party on Information Security and Privacy (WPSIP) of the Organization for Economic Cooperation and Development (OECD) (hereinafter OECD WPSIP) has noted that although the approach adopted by most jurisdictions appears to be non-discriminatory, differences in local requirements will continue to engender interoperability problems.⁴ For the purposes of the present study, the following weaknesses noted by OECD WPSIP may be relevant:

(a) **Interoperability.** Challenges and limitations to interoperability were found to be prevalent. At the technical level, although there is an abundance of standards, the lack of “core”, common standards for some technologies was cited as a problem. At the legal/policy level, the difficulty in principals understanding their respective trust framework, including assignment of liability and compensation, were cited as factors that were impeding progress. According to OECD WPSIP, this is an area that “would appear to require closer examination and scrutiny with a view to perhaps developing common tools to assist jurisdictions in achieving the level of interoperability desired for a particular application or system”;

(b) **Recognition of foreign authentication services.** The focus of efforts according to OECD WPSIP has been on establishing domestic services. Thus, mechanisms for recognizing foreign authentication services “are generally not very well developed”. On this basis, OECD WPSIP suggests that this “would appear to be an area where further work would be useful. Given that any work in this area would be highly related to the more general subject of interoperability, the topics could be combined”;

(c) **Acceptance of credentials.**⁵ In some cases, the acceptance of the credentials issued by other entities was cited as a barrier to interoperability. As such, OECD WPSIP suggests that consideration could be given to the possibility of developing a set of best practices or guidelines for issuing credentials for authentication purposes. Work may already be under way in several jurisdictions on this issue that could provide useful input to any initiatives of OECD WPSIP in this regard;

(d) **A range of authentication methods in use.** OECD WPSIP found that in virtually all OECD member States, a range of authentication solutions was in use. The methods range from passwords on the one hand, to tokens, digital signatures and biometrics on the other. Depending on the application, and its requirements, the methods can be used alone, or in combination. While many would view this as positive, the information gathered in the OECD WPSIP survey suggests that the range of possibilities is so great that application providers and users run the risk of

⁴ Organization for Economic Cooperation and Development, Working Party on Information Security and Privacy, *The Use of Authentication across Borders in OECD Countries* (DSTI/ICCP/REG(2005)4/FINAL), www.oecd.org/dataoecd/1/10/35809749.pdf, accessed on 2 February 2007.

⁵ A credential is a token given to prove that an individual or a specific device has gone through an authentication process. Credentials that are bound to the user are essential for identification purposes. Bearer credentials may be sufficient for some forms of authorization. Examples are a valid driving licence, a person’s social security number or other identification number, or smart cards. Centre for Democracy and Technology, “Privacy principles for authentication systems”, <http://tprc.org/papers/2003/183/CDTauthenticationTPRC.pdf>, accessed on 12 April 2007; see also Centre for Democracy and Technology, Authentication Privacy Principles Working Group, “Interim report on privacy principles for authentication systems”, www.cdt.org/privacy/authentication/030513interim.pdf, accessed on 12 April 2007.

being hopelessly confused as to which method is appropriate for their requirements. According to OECD WPSIP, this would suggest that there could be some benefit to introducing a reference tool for assessing the various authentication methods and the degree to which their attributes address requirements identified by application providers or users.

10. Confidence in the use of electronic signature and authentication methods in international transactions might be raised by wide adoption of the United Nations Convention on the Use of Electronic Communications in International Contracts and implementation of its technology-neutral approach to electronic signatures and authentication. However, it is unrealistic to expect that this would entirely obviate the need for a harmonized solution for dealing with incompatible legal and technical standards. Many countries may still prescribe the use of specific authentication methods in certain types of transaction. Also, some countries may feel that more concrete guidance is needed to assess the reliability of signature and authentication methods, in particular foreign ones, and their equivalence to methods used or at least known in the country.

2. Emerging consensus

11. The policy divergence that has occurred internationally is probably the result of a combination of factors, in varying degrees. As has been seen earlier (see paras. [...] above), some countries tend to have more stringent and particularized form requirements with respect to signatures and documents, while others focus on the intent of the signing party and permit a broad range of ways to prove the validity of signatures. These general differences usually find their way into specific legislation dealing with electronic authentication and signature methods (see paras. [...] above). An additional source of inconsistency results from the varying degree of governmental interference with technical aspects of electronic authentication and signature methods. Some countries are inclined to play a direct role in setting standards for new technologies, possibly in the belief that this confers a competitive advantage for local industry.⁶

12. The divergent policies may also reflect different assumptions about how authentication technologies will emerge. One scenario, the so-called “universal authentication paradigm”,⁷ assumes that the principal purpose of authentication technologies will be to verify identities and attributes among persons who have no pre-existing relationship with each other and whose common use of technology is not the subject of contractual agreement. Therefore, the authentication or signature technology should confirm the identity or other attributes of a person to a potentially unlimited number of persons and for a potentially unlimited number of purposes. This model stresses the importance of technical standards and of the operational requirements of certification services providers when trusted third parties are involved. Another scenario, the so-called “bounded authentication paradigm” advocates that the principal use of authentication and signature technologies will be to verify identities and attributes among persons whose common use of the technology takes place under contractual agreements.⁸ Therefore, the authentication technology should confirm the identity or other attributes of the certificate holder only for a set of specifically defined purposes and

⁶ See note [...] [Background and issues concerning authentication and the ITU].

⁷ Ibid.

⁸ Ibid.

within a defined community of potentially relying parties who are subject to common terms and conditions for the use of the technology. Under this model, focus is on the legal recognition of the contractual agreements.

13. Despite these discrepancies, some of which still prevail, the findings of OECD WPISP⁹ suggest that there now appears to be a growing international consensus on the basic principles that should govern electronic commerce and in particular electronic signature. The following findings are particularly interesting for the present study:

(a) **Non-discriminatory approach to “foreign” signatures and services.** The legislative frameworks do not deny legal effectiveness to signatures originating from services based in other countries as long as these signatures have been created under the same conditions as those given legal effect domestically. On this basis, the approach appears to be non-discriminatory, as long as local requirements, or their equivalent, are met. This is consistent with findings in previous surveys on authentication done by OECD WPISP;

(b) **Technology neutrality.** While virtually all respondents indicated that their legislative and regulatory framework for authentication services and e-signatures was technology neutral, the majority indicated that, where e-government applications were involved, or where maximum legal certainty of the electronic signature was required, the use of public key infrastructure (PKI) was specified. On that basis, while legislative frameworks may be technology neutral, policy decisions seem to require the technology to be specified;

(c) **PKI prevalence.** According to OECD WPISP, PKI seems to be the authentication method of choice when strong evidence of identity and high legal certainty of the electronic signature is required. It is used in specific “communities of interest” where all users seem to have a prior business relationship of some form. The use of PKI-enabled smart cards and the integration of digital certificate functions into application software, have made the use of this method less complicated for users. However, it is generally acknowledged that PKI is not required for all applications and that the choice of authentication method should be made on the basis of its suitability for the purposes for which it would be used.

14. Furthermore, OECD WPISP found that regulatory frameworks in all the countries surveyed had some form of legislative or regulatory framework in place to provide for the legal effect of electronic signatures at the domestic level. OECD WPISP found that, while the details of the legislation might differ between jurisdictions, a consistent approach appeared nevertheless to be discernible, in that most domestic laws were based on existing international or transnational frameworks (i.e. the UNCITRAL Model Law on Electronic Signatures and Directive 1999/93/EC of the European Parliament and of the Council on a Community framework for electronic signatures¹⁰).

B. Criteria for recognition of foreign electronic authentication and signature methods

15. As noted above, one of the main obstacles to the cross-border use of electronic signatures and authentication has been a lack of interoperability, due to conflicting or divergent standards or their inconsistent implementation. Various forums have been established to promote standards-based, interoperable PKI as a foundation for secure transactions in electronic commerce applications. They include both intergovernmental¹¹ and mixed public sector and private sector organizations¹² at a global¹³ or regional level.

16. Some of this technical work aims at developing technical standards for the provision of the information necessary for meeting certain legal requirements.¹⁴

¹¹ In the Asia-Pacific region, the Asia-Pacific Economic Cooperation (APEC) forum has developed “Guidelines for Schemes to Issue Certificates Capable of Being Used in Cross Jurisdiction eCommerce” (eSecurity Task Group, APEC Telecommunications and Information Working Group, December 2004), www.apectelwg.org/contents/documents/eSTG/PKIGuidelines-Final_2_web.pdf, accessed on 12 April 2007. These Guidelines are intended to assist in developing schemes that are potentially interoperable and in reviewing the interoperability of existing schemes. The Guidelines cover classes or types of certificate used in transnational e-commerce only. The Guidelines are not intended to address other certificates, nor are they intended to limit schemes to only issuing certificates covered by the Guidelines.

¹² Within the European Union, the European Electronic Signature Standardization Initiative (EESSI), was created in 1999 by the Information and Communications Technology (ICT) Standards Board to coordinate the standardization activity in support of the implementation of European Union Directive 1999/93/EC on electronic signatures. The ICT Standards Board itself is an initiative of the European Committee for Standardization (CEN), which was created by national standards organizations and two non-profit organizations: the European Committee for Electrotechnical Standardization (CENELEC) and the European Telecommunications Standards Institute (ETSI). EESSI has developed various standards to promote interoperability, but their implementation has been slow, allegedly because of their complexity (Paolo Balboni, “Liability of certification service providers towards relying parties and the need for a clear system to enhance the level of trust in electronic communication”, *Information and Communications Technology Law*, vol. 13, No. 3, 2004), pp. 211-242, 214.

¹³ For example, the Organization for the Advancement of Structured Information Standards (OASIS) is a not-for-profit, international consortium founded in 1993 to promote the development, convergence and adoption of standards for electronic business. OASIS has established a PKI Technical Committee comprised of PKI users, vendors and experts to address issues related to the deployment of digital certificates technology. The OASIS PKI Technical Committee has developed an action plan that contemplates, inter alia, to develop specific profiles or guidelines that describe how the standards should be used in particular applications so as to achieve PKI interoperability; to create new standards, where needed; and to provide interoperability tests and testing events (OASIS, PKI Technical Committee, “PKI action plan” (February 2004), www.oasis-open.org/committees/pki/pkiactionplan.pdf, accessed on 12 April 2007).

¹⁴ For example, the ETSI has developed a standard (TS 102 231) to implement a non-hierarchical structure that, among other things, can address also cross recognition of PKI domains and, therefore, of certificates’ validity. Basically, ETSI technical standard TS 102 231 specifies a standard for the provision of information on the status of a provider of certification services (called a “trust service provider”). It adopts a form of a signed list, the “Trust Service Status List” as the basis for presentation of this information. The Trust Service Status List specified by ETSI accommodates the requirement of evidence as to whether the provider of a trust service is or was operating under the approval of any recognized scheme at either the time the service was

However, to a large extent, this important work is mainly concerned with technical aspects rather than legal issues and falls outside the scope of this study. The discussion in the following sections is therefore focused on the formal and substantive legal requirements for cross-border recognition of electronic signatures.

1. Place of origin, reciprocity and local validation

17. Place of origin has been a classical factor in affording legal recognition to foreign documents or acts. This is typically done on the basis of reciprocity, so that signatures and certificates of a given country will be given domestic effect to the extent that domestic signatures and certificates are given legal effect in the other country. Another related factor is to subject the domestic effect of the foreign signature and certificate to some form of validation or acknowledgement by a domestic certification services provider, certification authority or regulator. Some of them combine all these factors.¹⁵

18. It is not common for domestic laws expressly to deny legal recognition to foreign signatures or certificates, which may confirm the appearance of their non-discriminatory character. In practice, however, many recognition regimes are likely to have some discriminatory impact, even if unintended. The European Union Directive on electronic signatures, for example, generally bans discrimination of foreign qualified certificates (i.e. PKI-based digital signatures). However, this works mainly in favour of certificates issued by certification services providers established within the territory of the States members of the European Union. A certification services provider established in a non-European-Union country has three options to obtain recognition of its certificate in the European Union: fulfil the requirements of the European Union Directive on electronic signatures and obtain accreditation under a scheme established in a member State; establish a cross certification with a certification services provider established in a European Union member State; or operate under the umbrella of a general recognition at the level of international agreement.¹⁶ The manner in which the European Directive regulates

provided, or the time at which a transaction reliant on that service took place. In order to fulfil that requirement, the Trust Service Status List must contain information from which it can be established whether the certification services provider's service was, at the time of the transaction, known by the scheme operator and if so what was the status of the service (i.e. whether it was approved, suspended, cancelled, or revoked). The Trust Service Status List contemplated by ETSI technical standard TS 102 231 must therefore contain not only the service's current status, but also the history of its status. Therefore, the list becomes a combination of valid services ("white list") and cancelled or revoked services ("black list") (see http://portal.etsi.org/stfs/STF_HomePages/STF290/draft_ts_102231v010201p&RGW.doc, accessed on 4 March 2007).

¹⁵ In Argentina, for instance, foreign certificates and electronic signatures are recognized if there is a reciprocity agreement between Argentina and the country of origin of the foreign certification authority or if there is "acknowledgment by a certification authority licensed in Argentina and authenticated by the enforcement authority" (see *Ley de firma digital* (2001), art. 16).

¹⁶ Indeed, under article 7 of the Directive, European Union member States only must ensure that the certificates issued by a certification services provider in a third country are recognized as legally equivalent to certificates issued by a certification services provider established within the Community if (a) the certification services provider "fulfils the requirements laid down in this Directive and has been accredited under a voluntary accreditation scheme established in a Member State"; or (b) a certification services provider established within the Community that fulfils the requirements laid down in the Directive "guarantees" the certificate; or (c) the

international aspects suggests that ensuring conditions for market access abroad of European Union providers of certification services was one of the objectives pursued by the Directive.¹⁷ By cumulating the requirement of substantive equivalence with European Union standards with the additional requirement of “accreditation under a scheme established in a member State”, the European Union Directive on electronic signatures effectively requires foreign certification services providers to comply both with their original and with the European Union regime, which is a higher standard than is required from certification services providers accredited in a State member of the European Union.¹⁸

19. Article 7 of the European Union Directive on electronic signatures has been implemented with some variations.¹⁹ Ireland and Malta, for instance, recognize foreign digital signatures (qualified certificates, under European Union terminology) as equivalent to domestic signatures, as long as other legal requirements are satisfied. In other cases, recognition is subject to domestic verification (Austria, Luxembourg) or a decision of a domestic authority (Czech Republic, Estonia, Poland). This tendency to insist on some form of domestic verification, which is typically justified by a legitimate concern as to the level of reliability of foreign certificates, leads in practice to a system of discrimination of foreign certificates on the basis of their geographic origin.

2. Substantive equivalence

20. Consistent with a long-standing tradition, UNCITRAL declined to endorse geographic considerations when proposing factors for recognition of foreign certificates and electronic signatures. Indeed, article 12, paragraph 1, of the UNCITRAL Model Law on Electronic Signatures expressly provides that in determining whether, or to what extent, a certificate or an electronic signature is legally effective, “no regard shall be had” either to “the geographic location where the certificate is issued or the electronic signature created or used” or to “the geographic location of the place of business of the issuer or signatory.”

21. Paragraph 1 of article 12 of the UNCITRAL Model Law on Electronic Signatures is intended to reflect the basic principle that the place of origin, in and of itself, should in no way be a factor in determining whether and to what extent foreign certificates or electronic signatures should be recognized as capable of being legally effective. Determination of whether, or the extent to which, a certificate or an electronic signature is capable of being legally effective should depend on its technical reliability, rather than the place where the certificate or the electronic signature was issued. Non-discrimination provisions similar to article 12 of the Model Law on Electronic Signatures can also be found in some domestic regimes,

certificate or the certification services provider “is recognized under a bilateral or multilateral agreement between the Community and third countries or international organisations.”

¹⁷ The concern with securing access by European certification services providers to foreign markets is clear from the formulation of article 7, paragraph 3, of the Directive, which provides that “[w]hensoever the Commission is informed of any difficulties encountered by Community undertakings with respect to market access in third countries, it may, if necessary, submit proposals to the Council for an appropriate mandate for the negotiation of comparable rights for Community undertakings in these third countries.”

¹⁸ Jos Dumortier and others, “The legal and market aspects of electronic signatures”, study for the European Commission Directorate General Information Society, Katholieke Universiteit Leuven, 2003, p. 58.

¹⁹ *Ibid.*, pp. 92-94.

such as the United States Electronic Signatures in Global and National Commerce Act 2000.²⁰ These provisions provide that the place of origin, in and of itself, should not be a factor in determining whether and to what extent foreign certificates or electronic signatures should be recognized as capable of being legally effective in an enacting State. They recognize that the legal effectiveness of a certificate or electronic signature should depend on its technical reliability.²¹

22. Rather than geographic factors, the Model Law establishes a test of substantive equivalence between the reliability levels offered by the certificates and signatures in question. Accordingly, if the foreign certificate offers “a substantially equivalent level of reliability” as a certificate issued in the enacting State, it shall have “the same legal effect”. By the same token, an electronic signature created or used outside the country “shall have the same legal effect” as an electronic signature created or used in the country “if it offers a substantially equivalent level of reliability.” The equivalence between the reliability levels offered by the domestic and foreign certificates and signatures must be determined in accordance with recognized international standards and any other relevant factors, including an agreement between the parties to use certain types of electronic signatures or certificates, unless the agreement would not be valid or effective under applicable law.

23. The Model Law does not require or promote reciprocity arrangements. In fact, the Model Law “contains no specific suggestion” as to “the legal techniques through which advance recognition of the reliability of certificates and signatures complying with the law of a foreign country might be made by an enacting State (e.g. a unilateral declaration or a treaty)”.²² Possible methods to achieve that result that were mentioned during the preparation of the Model Law included, for example, automatic recognition of signatures complying with the laws of another State if the laws of the foreign State required a level of reliability at least equivalent to that required for equivalent domestic signatures. Other legal techniques through which advance recognition of the reliability of foreign certificates and signatures might be made by an enacting State could include unilateral declarations or treaties.²³

Cross-border use of electronic signature and authentication methods

[...]

II. Methods and criteria for establishing legal equivalence

1. As indicated above, the survey undertaken by the Working Party on Information Security and Privacy (WPISP) of the Organization for Economic Cooperation and Development (OECD) (hereinafter OECD WPISP) found that most legislative frameworks were at least in principle non-discriminatory towards foreign electronic signatures and authentication, provided local requirements or their equivalent were met, in the sense that they did not deny legal effectiveness to signatures relating to services originating from countries, provided those signatures had been created under the same conditions as those recognized under domestic law.¹ However, OECD WPISP also noted that mechanisms for recognizing foreign authentication services were generally not well developed and identified this as an area where future work might be useful. Given that any work in this area would be closely related to the more general subject of interoperability, OECD WPISP suggested that the topics could be combined. OECD WPISP suggested that a set of best practices or guidelines might be developed.

2. The following sections discuss the legal arrangements and mechanisms for international interoperability and factors that determine the equivalence of liability regimes. They focus primarily on issues arising out of the international use of electronic signature and authentication methods supported by certificates issued by a trusted third-party certification services provider, in particular digital signatures under a public key infrastructure (PKI), since legal difficulties are more likely to arise in connection with the cross-border use of electronic signature and authentication methods that require the involvement of third parties in the signature or authentication process.

A. Types and mechanisms of cross recognition

3. The additional burden placed on foreign certification services providers by domestic technology-driven requirements has the potential to become a barrier to international trade.² For example, laws relating to the means by which national authorities grant recognition to foreign electronic signatures and certificates could discriminate against foreign businesses. So far, every legislature that has considered this issue has included in its laws some requirement relating to the standards adhered to by the foreign certification services provider, so the issue is inextricably related to the broader question of conflicting national standards. At the same time,

¹ See note [...] [*The Use of Authentication across Borders in OECD Countries*].

² See Alliance for Global Business, "A discussion paper on trade-related aspects of electronic commerce in response to the WTO's e-commerce work programme", April 1999, www.biac.org/statements/iccp/AGBtoWTOApril1999.pdf, accessed on 5 February 2007, p. 29.

legislation may also impose other geographic or procedural limitations that prevent cross-border recognition of electronic signatures.

4. In the absence of an international PKI, a number of concerns could arise with respect to the recognition of certificates by certification authorities in foreign countries. The recognition of foreign certificates is often achieved by a method called “cross certification”. In such a case, it is necessary that substantially equivalent certification authorities (or certification authorities willing to assume certain risks with regard to the certificates issued by other certification authorities) recognize the services provided by each other, so their respective users can communicate with each other more efficiently and with greater confidence in the trustworthiness of the certificates being issued. Legal issues may arise with regard to cross certifying or chaining of certificates when there are multiple security policies involved, such as determining whose misconduct caused a loss and upon whose representations the user relied.

1. Cross recognition

5. Cross recognition is an interoperability arrangement in which the relying party in the area of a PKI can use authority information in the area of another PKI to authenticate a subject in the area of the other PKI.³ This is typically the result of a formal licensing or accreditation process in the area of the other PKI, or of a formal audit process performed on the representative certification services provider of the PKI area.⁴ The onus of whether to trust a foreign PKI area lies with the relying party or the owner of the application or service, rather than with a certification services provider that the relying party directly trusts.

6. Cross recognition would typically occur at the PKI level rather than at the level of the individual certification services provider. Thus, where a PKI recognizes another PKI, it automatically recognizes any certification services providers accredited under that PKI scheme. Recognition would be based on assessment of the other PKI’s accreditation process rather than assessing each individual certification services provider accredited by the other PKI. Where PKIs issue multiple classes of certificates, the cross-recognition process involves identifying a class of certificates acceptable for use in both areas and basing the assessment on that class of certificates.

7. Cross recognition entails issues of technical interoperability at the application level only, i.e. the application must be able to process the foreign certificate and access the directory system of the foreign PKI area to validate the status of the foreign certificate. It should be noted that, in practice, certification services providers issue certificates with various levels of reliability, according to the purposes for which the certificates are intended to be used by their customers. Depending on their respective level of reliability, certificates and electronic signatures may produce varying legal effects, both domestically and abroad. For example, in certain countries, even certificates that are sometimes referred to as

³ The concept of cross recognition was developed in 2000 by the then Asia-Pacific Economic Cooperation Telecommunications and Information Working Group, Electronic Authentication Task Group, see APEC publication No. 202-TC-01.2, *Electronic authentication: issues relating to its selection and use* (APEC, 2002), available at www.apec.org/apec/publications/all_publications/telecommunications.html, accessed on 7 February 2007.

⁴ Definition based on the work of the APEC Telecommunications and Information Working Group, Electronic Authentication Task Group.

“low-level” or “low-value” certificates might, under certain circumstances (e.g. where parties have agreed contractually to use such instruments), produce legal effect (see below, paras. [42-50]). Therefore, the equivalence to be established is between functionally comparable certificates.

8. As said above, in cross recognition the decision to trust a foreign certificate lies with the relying party, not with its certification services provider. It does not necessarily involve a contract or agreement between two PKI domains. Detailed mapping of certificate policies⁵ and certificate practice statements⁶ is also unnecessary, as the relying party decides whether to accept the foreign certificate based on whether the certificate has been issued by a trustworthy foreign certification services provider. The certification services provider is regarded as trustworthy if it has been licensed or accredited by a formal licensing or accreditation body, or has been audited by a trusted independent third party. The relying party makes an informed decision unilaterally based on the policies stipulated in the certificate policy or certificate practice statement in the foreign PKI domain.

2. Cross certification between public key infrastructures

9. Cross certification refers to the practice of recognizing another certification services provider’s public key to an agreed level of confidence, normally by virtue of a contract. It essentially results in two PKI domains being merged (in whole or in part) into a larger domain. To the users of one certification services provider, the users of the other certification services provider are simply signatories within the extended PKI.

10. Cross certification involves technical interoperability and the harmonization of certificate policies and certificate practice statements. Policy harmonization, in the form of the harmonization of certificate policies and certificate practice statements, is necessary to ensure that PKI domains are compatible both in terms of their certificate management operations (i.e. certificate issuance, suspension and revocation) and in their adherence to similar operational and security requirements. The amount of liability coverage is also relevant. This step is highly complex, as these documents are typically voluminous and deal with a wide range of issues.

11. Cross certification is most suitable for relatively closed business models, e.g. if both PKI domains share a set of applications and services, such as e-mail or financial applications. Having technically compatible and operable systems, congruent policies and the same legal structures would greatly facilitate cross certification.

12. Unilateral cross certification (whereby one PKI domain trusts another but not vice versa) is uncommon. The trusting PKI domain must ensure unilaterally that its policies are compatible with those of the trusted PKI domain. Its use seems to be limited to applications and services where the trust required for the transaction involved is unilateral, e.g. an application in which the merchant has to prove the identity to the customer before the latter submits confidential information.

⁵ A certificate policy is a named set of rules that indicates the applicability of a certificate to a particular community and/or class of application with common security requirements.

⁶ A certificate practice statement is a statement of the practices that a certification services provider employs in issuing certificates.

B. Equivalence of standards of conduct and liability regimes

13. Whether international use of electronic signature and authentication methods is based on a cross-recognition or cross-certification scheme, a decision to recognize a whole PKI or one or more foreign certification services providers, or to establish equivalent levels between classes of certificates issued under different PKIs, presupposes an assessment of the equivalence between the domestic and the foreign certification practices and certificates.⁷ From a legal point of view, this requires an assessment of the equivalence between three main elements: equivalence in legal value; equivalence in legal duties; and equivalence in liability.

14. Equivalence in legal value means attributing to a foreign certificate and signature the same legal effect of a domestic equivalent. The resulting domestic legal effect will be determined essentially on the basis of the value attributed by the domestic law to electronic signature and authentication methods, which has already been discussed (see above, paras. [...]–[...]). Recognizing the equivalence in legal duties and liability regimes entails a finding that the duties imposed on the parties operating under a PKI regime correspond in substance to those existing under the domestic regime and that their liability for breaches of those duties is substantially the same.

15. Liability in the context of electronic signatures may give rise to different issues depending on the technology and the certification infrastructure used. Complex issues may arise especially in those cases where certification is provided by a dedicated third party, such as a certification services provider. In this case, there will essentially be three parties involved, namely the certification services provider, the signatory and the relying third party. To the extent that their acts or omissions cause harm to any of the others, or contravene their express or implied duties, each could become liable, or may lose the right to assert liability, against another party. Various legislative approaches have been adopted with respect to liability in connection with the use of digital signatures:

(a) **No specific provisions on standards of conduct or liability.** One option may be for the law to remain silent on this point. In the United States of America, the Electronic Signatures in Global and National Commerce Act 2000⁸ does not provide for the liability of any of the parties involved in the certification service. Generally speaking, this approach has been adopted in most other jurisdictions taking a minimalist approach to electronic signatures, such as Australia;⁹

⁷ The United States Federal Public Key Infrastructure Policy Authority, Certificate Policy Working Group, for example, has developed a methodology for providing a judgment as to the equivalence between elements of policy (based on the framework defined in RFC (“Request for Comments”) 2527). This methodology may be used when mapping different PKIs or mapping a PKI against these guidelines (see www.cio.gov/fpkipa, accessed on 20 February 2007).

⁸ See note [...] [United States Code, title 15, chapter 96, section 7031 (Principles governing the use of electronic signatures in international transactions)].

⁹ It was felt, for example, that private law mechanisms admitted by Australian law, such as contractual exclusions, waivers and disclaimers of liability, and the limits posed to their operation by the common law, were better suited for regulating liability than statutory provisions (see Mark Sneddon, Legal liability and e-transactions: a scoping study for the National Electronic Authentication Council (National Office for the Information Economy, Canberra, 2000), <http://unpan1.un.org/intradoc/groups/public/documents/APCITY/UNPAN014676.pdf>, accessed on 7 February 2007, pp. 43–47).

(b) **Standards of conduct and liability rules for certification services providers only.** Another approach is for the law to provide only for the liability of the certification services provider. This is the case under European Union Directive 1999/93/EC on a Community framework for electronic signatures,¹⁰ in which recital 22 states that “Certification-service-providers providing certification-services to the public are subject to national rules regarding liability”, as outlined in article 6 of the Directive. It is worth noting that article 6 applies only to “qualified signatures”, which, for the time being, means PKI-based digital signatures only.¹¹

(c) **Standards of conduct and liability rules for signatory and certification services providers.** In some jurisdictions, the law provides for the liability of the signatory and of the certification services provider, but does not establish a standard of care of the relying party. This is the case in China, under the Electronic Signatures Law of 2005. This is also the case in Singapore, under the Electronic Transactions Act, 1998;

(d) **Standards of conduct and liability rules for all parties.** Finally, the law may provide for standards of conduct and a basis for the liability of all parties involved. This approach is adopted in the UNCITRAL Model Law on Electronic Signatures,¹² which indicates the duties relating to the conduct of the signatory (art. 8), of the certification services provider (art. 9) and of the relying party (art. 11). The Model Law can be said to set out criteria against which to assess the conduct of those parties. However, it leaves to the domestic law to determine the consequences of the inability to fulfil the various duties and the basis for the liability that may affect the various parties involved in the operation of electronic signature systems.

16. Differences in domestic liability regimes may be an obstacle to the cross-border recognition of electronic signatures. There are two main reasons for this. Firstly, certification services providers may be reluctant to recognize foreign certificates or the keys issued by foreign certification services providers whose liability or standards of care may be lower than their own. Secondly, users of electronic signature and authentication methods, too, may fear that lower liability limits or standards of care of a foreign certification services provider may limit the remedies available to them in case, for instance, of forgery or false reliance. For the same reasons, where the use of electronic signature and authentication methods, or the activities of certification services providers, is provided for by legislation, the law typically subjects recognition of foreign certificates or certification services providers to some assessment of substantive equivalence with the reliability offered by domestic certificates and certification services providers. The standards of care and levels of liability to which the various parties are subject constitute the main legal benchmark against which the equivalence is measured. Moreover, the ability of the certification services provider to limit or disclaim its liability will also have an impact on the level of equivalence afforded to its certificates.

¹⁰ See note [...] [*Official Journal of the European Communities*, L 13/12].

¹¹ Legislation adopted in the European Union follows this approach, for instance, the German law on electronic signature (SignaturGesetz – SigG) and the related ordinance (SigV), 2001, the Austrian Federal Electronic Signature Law (SigG) and the United Kingdom of Great Britain and Northern Ireland Electronic Signature Regulation 2002, section 4.

¹² See note [...] [United Nations publication, Sales No. E.02.V.8].

1. Basis for liability in a public key infrastructure framework

17. Allocation of liability under a PKI framework is effected essentially in two ways: by means of contractual provisions, or by the law (precedent, statute or both). The relations between the certification services provider and the signatory are typically of a contractual nature and, therefore, liability will typically be based on a breach of either party's contractual obligations. The relations between the signatory and the third party will depend on the nature of their dealing in any concrete instance. They may or may not be based on contract. Lastly, the relations between the certification services provider and the relying third party would in most cases not be based on contract.¹³ Under most legal systems the basis of liability (whether contract or tort) will have extensive and significant consequences for the liability regime, in particular as regards the following elements: (a) the degree of fault that is required to engage a party's liability (in other words, what is the "standard of care" owed by one party to the other); (b) the parties that may claim damages and the extent of damages recoverable by them; and (c) whether and to what extent a party at fault is able to limit or disclaim its liability.

18. It flows from the above not only that the standards of liability will vary from one country to the other, but also that within one country they will vary depending on the nature of the relationship between the party held liable and the injured party. Furthermore, various legal rules and theories may have an impact on one or the other aspect of liability under both a contractual or a common law or statutory liability regime, which sometimes lessens the differences between the two regimes. The present study cannot attempt to offer a complete detailed analysis of these general questions. It will instead focus on questions specifically raised in a PKI context and briefly discuss how domestic laws have approached them.

(a) Standard of care

19. Although different legal systems use different ranking systems and theories, for the purposes of this study it is assumed that the liability of the parties involved in a PKI framework would essentially be based on three possible standards: ordinary negligence or fault; presumed negligence (or fault with reversed burden of proof); and strict liability.¹⁴

(i) Ordinary negligence

20. Under this general standard, a person is legally required to compensate other people for the negative consequences of his or her actions, provided that the relationship to that other person is one that gives rise at law to a duty of care. Furthermore, the standard of care generally required is that of "reasonable care," which may be defined simply as the degree of care that a person of ordinary prudence, knowledge and foresight would exercise in the same or similar

¹³ Steffen Hindelang, in "No remedy for disappointed trust: the liability regime for certification authorities towards third parties outwith the EC Directive in England and Germany compared", *Journal of Information, Law and Technology*, 2002, Issue No. 1, (www2.warwick.ac.uk/fac/soc/law/elj/jilt/2002_1/hindelang, accessed on 6 February 2007), at 4.1.1, discussed in detail the possibility of creating a contractual relationship between the certification services provider and the third party under English law, coming to a negative conclusion. However, there are jurisdictions where a contractual relation might arise.

¹⁴ For the discussion of the liability system in this context, see Balboni, "Liability of certification service providers ..." (see note [...]), pp. 232 ff.

circumstances. In common law jurisdictions, this is often referred to as the “reasonable person” standard, whereas in several civil law jurisdictions this is often referred to as the “good family father” (*bonus pater familias*) standard. Viewed specifically from a business perspective, reasonable care refers to the degree of care that an ordinarily prudent and competent person engaged in the same line of business or endeavour would exercise under similar circumstances. Where liability is generally based on ordinary negligence, it is incumbent upon the injured party to demonstrate that the damage was caused by the other party’s faulty breach of its obligations.

21. Reasonable care (or ordinary negligence) is the general standard of care contemplated in the UNCITRAL Model Law on Electronic Signatures. This standard of care applies to certification services providers in respect of issuance and revocation of certificates and disclosure of information.¹⁵ A number of factors may be used in assessing compliance by the certification services provider with its general standard of care.¹⁶ The same standard also applies to signatories in respect of preventing unauthorized use and safekeeping signature creation devices.¹⁷ The Model Law extends the same general standard of reasonable care to the relying party, which is expected to take reasonable steps to verify both the reliability of an electronic signature and the validity, suspension or revocation of the certificate and to observe any limitation with respect to the certificate.¹⁸

¹⁵ See note [...] [United Nations publication, Sales No. E.02.V.8]. Article 9, paragraph 1, of the Model Law states: “Where a certification service provider provides services to support an electronic signature that may be used for legal effect as a signature, that certification service provider shall”: (...) “(b) Exercise reasonable care to ensure the accuracy and completeness of all material representations made by it that are relevant to the certificate throughout its life cycle or that are included in the certificate; (c) Provide reasonably accessible means that enable a relying party to ascertain from the certificate:” (...); “(d) Provide reasonably accessible means that enable a relying party to ascertain, where relevant, from the certificate or otherwise: (...)”.

¹⁶ See note [...] [*Model Law on Electronic Signatures with Guide to Enactment 2001*]. Paragraph 146 of the Guide to Enactment states “In assessing the liability of the certification service provider, the following factors should be taken into account, inter alia: (a) The cost of obtaining the certificate; (b) The nature of the information being certified; (c) The existence and extent of any limitation on the purpose for which the certificate may be used; (d) The existence of any statement limiting the scope or extent of the liability of the certification service provider; and (e) Any contributory conduct by the relying party. In the preparation of the Model Law, it was generally agreed that, in determining the recoverable loss in the enacting State, weight should be given to the rules governing limitation of liability in the State where the certification service provider was established or in any other State whose law would be applicable under the relevant conflict-of-laws rule.”

¹⁷ See note [...] [United Nations publication, Sales No. E.02.V.8]. Article 8 of the Model Law states: “Where signature creation data can be used to create a signature that has legal effect, each signatory shall: (a) Exercise reasonable care to avoid unauthorized use of its signature creation data; and (b) Without undue delay, utilize means made available by the certification service provider (...), or otherwise use reasonable efforts, to notify any person that may reasonably be expected by the signatory to rely on or to provide services in support of the electronic signature if: (i) The signatory knows that the signature creation data have been compromised; or (ii) The circumstances known to the signatory give rise to a substantial risk that the signature creation data may have been compromised”. Further, the signatory must “exercise reasonable care to ensure the accuracy and completeness of all material representations made by the signatory that are relevant to the certificate throughout its life cycle or that are to be included in the certificate”.

¹⁸ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 11, subparagraphs (a), (b)(i) and (b)(ii).

22. A few countries, typically enacting States of the UNCITRAL Model Law on Electronic Commerce,¹⁹ have adopted the general standard of “reasonable care” for the conduct of the certification services provider.²⁰ In some countries, it appears that a certification services provider will “most likely be held to a general standard of reasonable care”, although the fact that certification services providers, by their nature, will be parties with specialized skills in whom laypersons place trust beyond that extended to normal marketplace participants “may eventually give rise to professional status, or otherwise subject them to a higher duty of care to do what is reasonable given their specialized skills.”²¹ Indeed, as discussed below (see para. 29) this seems to be the situation in most countries.

23. As regards the signatory, some jurisdictions that have adopted the UNCITRAL Model Law on Electronic Signatures provide for a general standard of “reasonable care”.²² In various countries the law includes a more or less extensive list of positive obligations without describing the standard of care or indicating the consequences of failure to comply with those obligations.²³ In some countries, however, the law expressly complements the list of obligations with a general declaration of liability of the signatory for his or her breach,²⁴ which in one case is even of a criminal nature.²⁵ Arguably, there may not be a single standard of care, but a staggered system, with a general standard of reasonable care as a default rule for the signatory’s obligations, which is however raised to a warranty standard in respect of some specific obligations, typically those that relate to accuracy and truthfulness of representations made.²⁶

¹⁹ See note [...] [United Nations publication, Sales No. E.99.V.4].

²⁰ For example, the Cayman Islands, Electronic Transactions Law, 2000, section 28; and Thailand, Electronic Transactions Act (2001), section 28.

²¹ “Certification authority: liability issues”, prepared for the American Bankers Association by Thomas J. Smedinghoff, February 1998 (www.bakernet.com/ecommerce/CA-Liability-Analysis.doc), accessed on 5 February 2007, section 1.1.

²² For example, Thailand, Electronic Transactions Act (2001), section 27.

²³ For example, Argentina, *Ley de firma digital (2001)*, article 25; Cayman Islands, Electronic Transactions Law, 2000, section 31; Chile, *Ley sobre documentos electrónicos, firma electrónica y servicios de certificación de dicha firma (2002)*, article 24; Ecuador, *Ley de comercio electrónico, firmas electrónicas y mensajes de datos*, article 17; India, Information Technology Act, 2000, sections 40-42; Mauritius, Electronic Transactions Act 2000, articles 33-36; Peru, *Ley de firmas y certificados digitales*, article 17; Turkey, Ordinance on the Procedures and Principles Pertaining to the Implementation of Electronic Signature Law (2005), article 15; Tunisia, *Loi relative aux échanges et au commerce électroniques*, article 21; and Venezuela (Bolivarian Republic of), *Ley sobre mensajes de datos y firmas electrónicas*, article 19.

²⁴ China, Electronic Signatures Law, promulgated 2004, article 27; Colombia, *Ley 527 sobre comercio electrónico*, article 40; Mexico, *Código de Comercio: Decreto sobre firma electrónica (2003)*, article 99; Dominican Republic, *Ley sobre comercio electrónico, documentos y firmas digitales (2002)*, articles 53 and 55; Panama, *Ley de firma digital (2001)*, articles 37 and 39; Russian Federation, Federal Law on Electronic Digital Signature (2002), clause 12; Venezuela (Bolivarian Republic of), *Ley sobre mensajes de datos y firmas electrónicas*, article 19; and Viet Nam, Law on Electronic Transactions, article 25.

²⁵ Pakistan, Electronic Transactions Ordinance, 2002, section 34.

²⁶ For example, Singapore, Electronic Transactions Act (chapter 88). Section 37, paragraph 2, of the Act provides that by accepting a certificate the signatory “certifies to all who reasonably rely on the information contained in the certificate that (a) the subscriber rightfully holds the private key corresponding to the public key listed in the certificate; (b) all representations made by the subscriber to the certification authority and material to the information listed in the certificate are true; and (c) all information in the certificate that is within the knowledge of the

24. The situation of the relying party is a peculiar one, because it is unlikely that either the signatory or the certification services provider could be damaged by an act or omission of the relying party. In most circumstances, if the relying party fails to exercise the requisite degree of care, he or she would bear the consequences of his or her actions, but would not incur any liability towards the certification services provider. It is not surprising, therefore, that, when addressing the role of relying parties, domestic laws on electronic signatures seldom provide more than a general list of basic duties of the relying party. This is generally the case in jurisdictions that have adopted the UNCITRAL Model law on Electronic Signatures, which recommends a standard of “reasonable care” in relation to the conduct of the relying party.²⁷ In some cases, however, this requirement is not expressly stated.²⁸ It should be noted that the express or implied duties of the relying party are not irrelevant for the certification services provider. Indeed, a breach by the relying party of its duty of care may provide the certification services provider with a defence against liability claims by a relying party, for example, when the certification services provider can show that the damage sustained by the relying party could have been avoided or mitigated had the relying party taken reasonable measures to ascertain the validity of the certificate or the purposes for which it could be used.

(ii) *Presumed negligence*

25. The second possibility is a fault-based system with a reversed burden of proof. Under this system, a party’s fault is presumed whenever damage has resulted from an act attributable to it. The rationale for such a system is generally the assumption that, under certain circumstances, damage could in the normal course of events only have occurred because a party failed to comply with its obligations or abide by a standard of conduct expected from it.

26. In civil law, presumed fault may occur in connection with liability for breach of contract,²⁹ and also for various instances of tort liability. Examples include

subscriber is true.” Section 39, paragraph 1, in turn only contemplates “a duty to exercise reasonable care to retain control of the private key corresponding to the public key listed in such certificate and prevent its disclosure to a person not authorized to create the subscriber’s digital signature.” This seems also to be the case in the Bolivarian Republic of Venezuela, where article 19 of the *Ley sobre mensajes de datos y firmas electrónicas*, expressly qualifies the obligation to avoid unauthorized use of the signature creation device as one of “due diligence” (“actuar con diligencia”), whereas other obligations are expressed in categorical terms.

²⁷ Cayman Islands, Electronic Transactions Law, 2000, section 21; Mexico, *Código de Comercio: Decreto sobre firma electrónica* (2003), article 107; and Thailand, Electronic Transactions Act (2001), section 30.

²⁸ Turkey, Ordinance on the Procedures and Principles Pertaining to the Implementation of Electronic Signature Law (2005), article 16; and Viet Nam, Law on Electronic Transactions, article 26.

²⁹ Section 280, paragraph 1, of the Civil Code of Germany, for instance, declares the debtor liable for damage arising out of the breach of a contractual obligation unless the debtor is not responsible for the breach (“*Verletzt der Schuldner eine Pflicht aus dem Schuldverhältnis, so kann der Gläubiger Ersatz des hierdurch entstehenden Schadens verlangen. Dies gilt nicht, wenn der Schuldner die Pflichtverletzung nicht zu vertreten hat*”). Article 97, paragraph 1, of the Code of Obligations of Switzerland states this principle in even clearer terms: if the creditor does not obtain performance, the debtor is liable to compensate the resulting damage unless it can prove that the failure to perform was not attributable to its own fault (“*Lorsque le créancier ne peut obtenir l’exécution de l’obligation ou ne peut l’obtenir qu’imparfaitement, le débiteur est tenu de réparer le dommage en résultant, à moins qu’il ne prouve qu’aucune faute ne lui est imputable*”). A similar rule is contained in article 1218 of the Civil Code of Italy. Under French

vicarious liability for the acts of employees, agents, infants or animals, liability arising in the course of some commercial or industrial activity (environmental damage, damage to adjacent property, transportation accidents). The theories justifying the reversal of the burden of proof and the particular instances in which it is admitted vary from country to country.

27. In practice, such a system leads to a result similar to the enhanced standard of care that is expected from professionals under common law. Professionals must have a minimum amount of special knowledge and skills necessary to act as a member of the profession and have a duty to act as a reasonable member of the profession would in a given circumstance.³⁰ This does not necessarily mean that the burden of proof is reversed, but the higher standard of care expected from the professional means in practice that professionals are deemed to be capable of avoiding doing harm to persons that hire their services or whose welfare is otherwise entrusted to them if they act according to those standards. Under certain circumstances, however, the so-called *res ipsa loquitur* doctrine allows courts to presume, absent proof to the contrary, that the occurrence of damage in the “ordinary course of things” is only possible due to a person’s failure to exercise reasonable care.³¹

28. If this rule is applied to the activities of certification services providers, it would mean that whenever a relying party or a signatory sustains a damage as a result of using an electronic signature or certificate, and that damage can be attributed to a failure by the certification services provider to act in accordance with its contractual or statutory obligations, the certification services provider is presumed to have been negligent.

29. Presumed negligence seems to be the prevailing standard used under domestic laws. Under the European Union Directive on electronic signatures, for example, the certification services provider is liable for damages towards any entity that reasonably relies on the qualified certificate unless the certification services provider proves that it has not acted negligently.³² In other words, the certification services provider liability is based on negligence with a reversal of the burden of

law, negligence is always presumed if the contract involved a promise of a certain result (*obligation de résultat*), but negligence must be established where the object of the contract was to offer a standard of performance (*obligation de moyen*), rather than a specific result (see Gérard Légier, “Responsabilité contractuelle”, *Répertoire de droit civil Dalloz*, August 1989, No. 58-68).

³⁰ W. Page Keeton and others, *Prosser and Keeton on the Law of Torts*, 5th ed., (Saint Paul, Minnesota, West Publishing Co., 1984), section 32 at p. 187.

³¹ “There must be reasonable evidence of negligence. But where the thing is shown to be under the management of the defendant or his servants, and the accident is such, as in the ordinary course of things, that it does not happen if those who have the management use proper care, it affords reasonable evidence, in the absence of explanation by the defendants, that the accident arose from want of care.” (C. J. Erle in *Scott v. The London and St. Katherine’s Docks Co.*, Ex. Ch., 3 H & C 596, 601, 159 Eng. Rep. 665, 667 (1865)).

³² See note [...] [*Official Journal of the European Communities*, L 13/12]. Article 6 of the Directive provides a minimum standard of liability. It would be possible for enacting States to strengthen the liability of the certification services provider, for instance by introducing a strict liability regime or extending liability also to non-qualified certificates. However, this has not happened so far and is unlikely to happen since it would place the certification services providers of one country in a disadvantaged position with respect to other European Union certification services providers (Balboni “Liability of certification service providers ...” (see note [...]), p. 222).

proof: the certification services provider must prove that its actions were not negligent, since it is in the best position to do so, having the technical skills and access to the relevant information (both of which signatories and relying third parties might not possess).

30. This is also the case under various domestic laws outside the European Union that provide for an extensive list of duties to be observed by certification services providers, which generally subject them to liability for any loss caused by their failure to comply with their statutory obligations.³³ It is not altogether clear whether all of these laws actually reverse the burden of proof, but several do provide quite explicitly for such a reversal, either generally,³⁴ or in relation to specific obligations.³⁵

31. The preference for a system of presumed fault is arguably the result of concerns that liability based on ordinary negligence would be not be fair to the relying party, which may lack the technological knowledge, as well as the access to relevant information, to satisfy the burden of showing the certification services provider's negligence.

(iii) *Strict liability*

32. Strict liability or "objective liability" (*responsabilité objective*) is a rule used in various legal systems to attach liability to a person (typically manufacturers or operators of potentially dangerous or harmful products or equipment) without a finding of fault or breach of a duty of care. The person is held to be liable simply for placing a defective product on the market or for the malfunctioning of a piece of equipment. Since liability is assumed from the mere fact that loss or damage has occurred, the individual legal elements required to establish an action such as negligence, breach of a warranty, or intentional conduct need not be established.

33. Strict liability is an exceptional rule under most legal systems and is ordinarily not presumed, absent clear statutory language. In the context of electronic signature and authentication methods, strict liability might impose an excessive burden on the

³³ Argentina, *Ley de firma digital* (2001), article 38; Chile, *Ley sobre documentos electrónicos, firma electrónica y servicios de certificación de dicha firma* (2002), article 14; Ecuador, *Ley de comercio electrónico, firmas electrónicas y mensajes de datos*, article 31; Panama, *Ley de firma digital* (2001), article 51; and Tunisia, *Loi relative aux échanges et au commerce électroniques*, article 22.

³⁴ China, Electronic Signatures Law, promulgated 2004, article 28: "If an electronic signatory or a person who relies on an electronic signature incurs a loss as a result of relying on the electronic signature certification service provided by an electronic certification service provider while engaging in civil activities, and if the electronic certification service provider fails to provide evidence that the provider was not at fault, then the electronic certification service provider shall bear liability for damages"; see also Turkey, Electronic Signature Law 2004, article 13: "Electronic Certificate Service Providers shall be liable for compensation for damages suffered by third parties as a result of infringing the provisions of this Law or the ordinances published in accordance with this Law. Liability of compensation shall not occur if the Electronic Certificate Service Provider proves the absence of negligence".

³⁵ Barbados, chapter 308B, Electronic Transactions Act (1998), section 20: "An authorized certification service provider is not liable for errors in the information in an accredited certificate where (a) the information was provided by or on behalf of the person identified in the accredited certificate; and (b) the certification service provider can demonstrate that he has taken all reasonably practical measures to verify that information."; see also Bermuda, Electronic Transactions Act, 1999, section 23, paragraph 2 (b).

certification services provider, which, in turn, might hinder the commercial viability of the industry at an early stage of its development. At present, no country appears to impose strict liability on either the certification services provider or any other parties involved in the electronic signature process. It is true that in countries that provide for a catalogue of positive obligations for certification services providers, the standard of care for certification services providers is typically very high, approaching in some cases a strict liability regime, but the certification services provider can still be released from liability if it can show that it acted with the required diligence.³⁶

(b) Parties entitled to claim damages and extent of damages recoverable

34. One important issue in determining the extent of liability of certification services providers and signatories concerns the group of persons that might be entitled to claim compensation for damage caused by a breach by either party of their contractual or statutory obligations. Another related matter is the extent of the obligation to compensate and the types of damage that should be recompensed.

35. Contractual liability generally follows upon the breach of a contractual obligation. In a PKI context, a contract would usually exist between the signatory and the certification services provider. The consequences of breaches by one of its contractual obligations to another are determined by the words of the contract, as governed by applicable laws of contract. For electronic signatures and certificates, liability outside a clearly defined contractual relationship would typically arise in situations where a person has sustained damage in reasonable reliance on information provided either by the certification services provider or the signatory, which has turned out to be false or inaccurate. Normally, the relying third party does not enter into a contract with the certification services provider and probably does not interact with the certification services provider at all, except for relying on the certification. This may give rise to difficult questions not entirely answered in some jurisdictions.

36. Under most civil law systems, it could be assumed that a certification services provider would be liable for loss sustained by the relying party as a result of reliance on inaccurate or false information even without specific provisions to that effect in specific legislation dealing with electronic signatures. In several jurisdictions, this liability may follow from the general tort liability provision that has been introduced into most civil law codifications,³⁷ with few exceptions.³⁸ In some jurisdictions, an analogy could be drawn between the activities of a certification services provider and notaries public, who are generally held liable for damage caused by negligence in the performance of their duties.

³⁶ For example, Chile, Ecuador and Panama.

³⁷ Article 1382 of the Civil Code of France provides that “whatever” human act that causes damage to someone else obliges the one by whose fault it occurred, to compensate it. This general liability rule has inspired similar provisions in various other countries, such as article 2043 of the Civil Code of Italy and article 483 of the Civil Code of Portugal.

³⁸ The Civil Code of Germany contains three general provisions (sections 823 I, 823 II and 826) and a few specific rules dealing with a number of rather narrowly defined tortious situations. The main provision is section 823 I, which differs from the French Code to the extent that it expressly refers to injury to someone else’s “life, body, health, freedom, property or another right”.

37. In common law jurisdictions, however, the situation may not be so clear. Where a tort is committed in the performance of acts governed by a contract, common law jurisdictions have traditionally required some privity of contract between the tortfeasor and the injured party. Since the relying third party does not enter into a contract with the certification services provider and probably does not interact with the certification services provider at all, except for relying on the false certification, it may be difficult in some common law jurisdictions (absent an explicit statutory provision) for the relying party to establish a cause of action against the certification services provider.³⁹ If there is no privity of contract, a cause of action at tort under the common law would require a showing of a breach of a duty of care owed by the tortfeasor to the injured party. Whether or not for the certification services provider such a duty exists in respect of all possible relying parties is not entirely clear. Generally, the common law is reluctant to subject a person to “liability in an indeterminate amount, for an indeterminate time, to an indeterminate class”⁴⁰ for negligent misrepresentation unless the negligent words “are uttered directly, with knowledge or notice that they will be acted on, to one to whom the speaker is bound by some relation of duty, arising out of public calling, contract or otherwise, to act with care if he acts at all”.⁴¹

38. In this case, the issue at stake is to determine what is the spectrum of persons to whom a certification services provider (or the signatory for that matter) would owe a duty of care. There are basically three standards that may be used to define the spectrum of persons who in such a situation may validly assert claims against the certification services provider:⁴²

(a) **Foreseeability standard.** This is the broadest standard of liability. Under this standard, the signatory or the certification services provider will be liable to any person for whom reliance on the false representations was reasonably foreseeable;

(b) **Standard based on intent and knowledge.** This is a narrower standard that limits liability to loss suffered by a member of the group of the persons for whose benefit and guidance one intends to supply information or knows that the recipient intends to supply it;

(c) **Privity standard.** This is the most limited standard, creating a duty owed solely to the client, or one with whom the information provider had specific contact.

39. The UNCITRAL Model Law on Electronic Signatures does not attempt to circumscribe the universe of persons who may fall under the category of “relying parties”, which could include “any person having or not a contractual relationship

³⁹ For instance, for English common law, an author concludes that “In the absence of legislation, [the certification services provider]’s liability to [the third party] is far from certain, yet [the third party] foreseeably suffers loss as a result of her negligence. Moreover, it is difficult to see how [the third party] can protect itself. If there is no liability, there is at least an arguable lacuna, and negligence on the part of the [certification services provider], in particular, creates a clear lacuna. The common law might fill lacunae, but the process is uncertain and unreliable” (Paul Todd, *E-Commerce Law* (Abingdon, Oxon, Cavendish Publishing Limited, 2005, pp. 149-150). Similar conclusions were reached for Australian law, see Sneddon, *Legal liability and e-transactions* ... (see note [11]), p. 15.

⁴⁰ Words by Judge Cardozo in *Ultramares Corporation v. George A. Touche et al*, Court of Appeals of New York, 6 January 1931, 174 N.E. 441, p. 445.

⁴¹ *Ibid.*, p. 447.

⁴² Smedinghoff, “Certification authority: liability issues” (see note [23]), section 4.3.1.

with the signatory or the certification services provider.”⁴³ Similarly, under the European Union Directive on electronic signatures, the certification services provider is liable for damages towards “any entity or legal or natural person who reasonably relies” on the qualified certificate. The European Union Directive is clearly built around a PKI scheme, since it applies only in cases of digital signatures (qualified certificates). The notion of entity is usually interpreted as referring to third relying parties, and the Directive has been implemented by all but two States in that sense.⁴⁴

40. Like the UNCITRAL Model Law on Electronic Signatures, the European Union Directive on electronic signatures does not narrow down the categories of persons that may qualify as relying parties. It has therefore been suggested that, even under common law, “in the provision of certification services it is self-evident that a certification service provider owes a duty of care towards anyone who may rely upon their certificate in deciding to accept a particular electronic signature in a particular transaction, since the very purpose for which the certificate was issued is to encourage such reliance.”⁴⁵

41. Another point of interest concerns the nature of loss recoverable from a signatory or certification services provider. For instance, in some common law jurisdictions, claims for purely economic losses for product defects are not recoverable in tort. However, cases of intentional fraud, or in some jurisdictions even negligent misrepresentation, are regarded as exceptions to the economic loss rule.⁴⁶ It is interesting to note, in that connection, that the United Kingdom Electronic Signatures Regulations 2002 did not reproduce the provisions on liability of the European Union Directive on electronic signatures. Therefore, standard rules on liability apply, which, in this case, relate to the test of the proximity of the damage.⁴⁷ The amount of damages recoverable is typically left for general contract or tort law. Some laws expressly require certification services providers to purchase liability insurance or otherwise make public to all potential signatories, among other information, the financial guaranties for its possible liability.⁴⁸

(c) Ability to contractually limit or disclaim liability

42. Certification services providers are expected to seek routinely as much as possible to limit their contractual and tort liability towards the signatory and relying parties. As far as the signatory is concerned, limitation clauses will typically be contained in elements of the contract documentation, such as certification practice statements. Such statements may impose a cap to the liability per incident, per series of incidents, per period of time and exclude certain classes of damages. Another technique would be the inclusion in certificates of the maximum amount of the

⁴³ *UNCITRAL Model Law on Electronic Commerce with Guide to Enactment* (see note [...]), para. 150.

⁴⁴ The exceptions being Denmark and Hungary (Balboni, “Liability of certification service providers ...” (see note [...]), p. 220.

⁴⁵ Lorna Brazell, *Electronic Signatures: Law and Regulation* (London, Sweet and Maxwell, 2004), p. 187.

⁴⁶ Smedinghoff, “Certification authority: liability issues” (see note [23]), section 4.5.

⁴⁸ Turkey, *Electronic Signature Law*, 2004, article 13; and Argentina, *Ley de firma digital* (2001), article 21 (a)(1); see also Mexico, *Código de Comercio: Decreto sobre firma electrónica* (2003), article 104 (III).

value of the transaction for which the certificate may be used, or restrict the use of the certificate to certain purposes only.⁴⁹

43. While most legal systems generally recognize the right of contract parties to limit or exclude liability through contractual provisions, this right is usually subject to various limitations and conditions. In most civil law jurisdictions, for instance, a total exclusion of liability for a person's own fault is not admissible⁵⁰ or is subject to clear limitations.⁵¹ Moreover, if the terms of the contract are not freely negotiated, but rather are imposed or pre-established by one of the parties ("adhesion contracts"), some types of limitation clauses may be found to be "abusive" and therefore invalid.

44. In common law jurisdictions a similar result may flow from various theories. In the United States, for instance, courts generally will not enforce contract provisions found to be "unconscionable". Although this concept usually depends on a determination of the particular circumstances of the case, it generally refers to contract terms "which no man in his senses, not under delusion would make, on the one hand, and which no fair and honest man would accept on the other"⁵² and that are characterized by "an absence of meaningful choice on the part of one of the parties together with contract terms which are unreasonably favourable to the other party."⁵³ Similarly to the civil law notion of "contract of adhesion", the doctrine has been applied to prevent instances of "commercial sharp practices" by parties with superior bargaining power.⁵⁴ Not every contract term that comes about this way is invalid. However, although courts generally enforce standard form or adhesion contracts where there is no ability to bargain regarding the terms, even in consumer contracts, sometimes a court will decline to enforce a clause in a standard contract if its insertion amounts to unfair surprise.⁵⁵

45. Lastly, in both civil law and common law systems, consumer protection rules may significantly reduce the ability of a certification services provider to limit its liability vis-à-vis the signatory, in circumstances where the limitation of liability

⁴⁹ See Smedinghoff, "Certification authority: liability issues" (see note [23]), section 5.2.5.4; and Hindelang, "No remedy for disappointed trust ..." (see note [15]), section 4.1.1.

⁵⁰ In France, it is in principle possible to exclude liability arising out of a breach of contract. In practice, however, courts tend to invalidate such clauses whenever it is found that the clause would release the party from the consequences of a breach of a "fundamental" contractual obligation (see Légier, "Responsabilité contractuelle" (see note [...]), nos. 262 and 263).

⁵¹ In most civil law countries, the law prohibits the disclaimer of liability arising out of gross negligence or violation of duty imposed by a rule of public policy. Some countries have explicit rules to this effect, such as article 100 II of the Code of Obligations of Switzerland and article 1229 of the Civil Code of Italy. Other countries, such as Portugal, do not have a similar statutory rule, but achieve essentially the same result as Italy (see António Pinto Monteiro, *Cláusulas Limitativas e de Exclusão de Responsabilidade Civil* (Coimbra, Faculdade de Direito de Coimbra, 1985), p. 217).

⁵² *First Financial Ins. Co. v. Purolator Security, Inc.*, 388 N.E.2d 17, 22 (Ill. Ct. App. 1 Dist. 1979), citing *Hume v. U.S.*, 132 U.S. 406, 410 (1975), cited in Smedinghoff, "Certification authority: liability issues" (see note [23]), section 5.2.5.4.

⁵³ *Ibid.*, citing *Williams v. Walker-Thomas Furniture Co.*, 350 F.2d 315, 320 (D.C. 1965), cited in Smedinghoff, "Certification authority: liability issues" (see note [23]), section 5.2.5.4.

⁵⁴ *First Financial Ins. Co. v. Purolator Security, Inc.*, 388 N.E.2d 17, 22 (Ill. Ct. App. 1 Dist. 1979), cited in Smedinghoff, "Certification authority: liability issues" (see note [23]), section 5.2.5.4.

⁵⁵ Raymond T. Nimmer, *Information Law*, section 11.12[4][a], at 11-37, cited in Smedinghoff, "Certification authority: liability issues" (see note [23]), section 5.2.5.4.

would effectively deprive the signatory of a right or remedy recognized by the applicable law.

46. The possibility for the certification services provider to limit its potential liability vis-à-vis the relying party would in most cases be subject to even greater restrictions. Apart from closed business models where a relying party would be required to adhere to contract terms,⁵⁶ quite often the relying party will not be bound by contract to the certification services provider or even the signatory. Thus, to the extent that the relying party might have a claim at tort against the certification services provider or the signatory, those parties might have no means of effectively limiting their liability, since under most legal systems this would require giving the relying party adequate notice of the limitation of liability. Lack of knowledge of the identity of the relying party prior to the occurrence of the damage may prevent the certification services provider (and arguably even more so, the signatory) from putting in place an effective system for limiting its liability. This problem is typical of open systems where strangers interact with no prior contact and leaves the signatory exposed to potentially devastating consequences.⁵⁷ This situation was felt by many, in particular representatives of the certification industry, to be a major impediment to wider use of electronic signature and authentication methods, given the difficulty for certification services providers to assess their exposure to liability.

47. The desire to clarify the law on this aspect has led a number of countries to expressly recognize the right of certification services providers to limit their liability. The European Union Directive on electronic signatures, for example, obliges European Union member States to ensure that a certification services provider may indicate in a qualified certificate “limitations on the use of that certificate” as long the limitations “are recognizable to third parties”.⁵⁸ These limitations may be typically of two categories: there may be limits on the types of transaction for which particular certificates or classes of certificates may be used; there may also be limits on the value of the transactions in connection with which the certificate or class of certificates may be used. Under either hypothesis, the certification services provider is expressly exempted from liability “for damage arising from use of a qualified certificate that exceeds the limitations placed on it.”⁵⁹ Furthermore, the European Union Directive on electronic signatures mandates European Union member States to ensure that a certification services provider “may indicate in the qualified certificate a limit on the value of transactions for which the certificate can be used, provided that the limit is recognizable to third parties.”⁶⁰ In such a case the certification services provider shall not be liable for damage resulting from this maximum limit being exceeded.⁶¹

48. The European Union Directive on electronic signatures does not establish a cap for the liability that the certification services provider may incur. However, the directive does allow a certification services provider to limit the maximum value per transaction for which certificates may be used, exempting the certification services

⁵⁶ Such as envisaged for the E-Authentication Federation administered by the General Services Administration of the United States Government (see E-Authentication Federation, Interim Legal Document Suite, version 4.0.7, available at www.cio.gov/eaauthentication/documents/LegalSuite.pdf, accessed on 8 February 2007).

⁶⁰ Ibid., article 6, paragraph 3.

⁶¹ Ibid.

provider from liability exceeding that value cap.⁶² As a matter of business practice, certification services providers also often introduce an overall cap to their liability, on a contractual basis.

49. Several other domestic laws support those contractual practices by recognizing a limit on the liability of the certification services provider towards any potentially affected party. Typically, these laws allow limitations as specified in the certificate of practice statement of the certification services provider, and in some cases expressly exempt the certification services provider from liability where a certificate was used for a purpose different from the one for which it was issued.⁶³ Furthermore, some laws recognize the right of certification services providers to issue certificates of different classes and to establish different recommended levels of reliance,⁶⁴ which typically provide different levels of limitation (and of security) depending on the fee paid. However, some laws expressly prohibit any limitations of liability other than as a result of limitations on the use or value of certificates.⁶⁵

50. Countries that have adopted a minimalist approach have, in turn, regarded legislative intervention as generally undesirable and have preferred to leave the matter for the parties to regulate by contract.⁶⁶

⁶² Dumortier and others, “The legal and market aspects of electronic signatures” (see note [...]), p. 55, and discussion in Hindelang, “No remedy for disappointed trust ...” (see note [15]), section 4.1.1. Balboni, “Liability of certification service providers ...” (see note [...]), p. 230, goes further by stating that “... by article 6 (4), it is only possible to limit the value of the transaction (...), which has nothing to do with a limitation of the potential amount of damage that can arise from that transaction.”

II. Methods and criteria for establishing legal equivalence

B. Equivalence of standards of conduct and liability regimes

2. Particular instances of liability in a public key infrastructure framework

1. The main focus of discussions concerning liability in connection with the use of electronic signature and authentication methods has been the basis and

characteristics of the liability of certification services providers. It is generally accepted that the basic duty of a certification services provider is to utilize trustworthy systems, procedures and human resources and to act in accordance with representations that the certification services provider makes with respect to its policies and practices.¹ In addition, the certification services provider is expected to exercise reasonable care to ensure the accuracy and completeness of all material representations it makes in connection with a certificate. All these activities may expose a certification services provider to a varying degree of liability, depending on the applicable law. The following paragraphs identify the instances that carry a greater risk for a certification services provider of being exposed to liability and summarize the way in which domestic laws deal with such liability.

(a) Failure to issue or delay in issuing a certificate

2. A certification services provider typically issues certificates upon application by candidate signatories. If an application meets the certification services provider's criteria, the certification services provider may issue a certificate. It is conceivable that an applicant might meet the criteria but nevertheless be rejected or delayed, either because the certification services provider simply makes a mistake, or because the certification services provider's application facilities are unavailable by design or accident, or because the certification services provider, for ulterior motives, wishes to delay or deny issuance of a certificate to the applicant. Applicants rejected or delayed under these circumstances may have claims against the certification services provider.²

3. If there is a competitive market for certification services, there might be no real harm to an applicant if a certification services provider were to refuse to issue a certificate, either by accident or on purpose. However, in the absence of meaningful competition, a certification services provider's refusal to issue a certificate or delay in issuing a certificate could cause serious harm where the rejected applicant is unable to engage in a particular business without the certificate. Even if competitive alternatives were available, one could envision transaction-specific losses arising from circumstances where a certificate was requested in connection with a particular transaction and, as a result of delay or denial, the certificate was not available in time for the intended transaction, forcing the applicant to forego the valuable transaction.³

4. This kind of scenario is unlikely to arise in an international context, since most signatories would be more likely to seek the services of certification services providers located in their own countries.

(b) Negligence when issuing a certificate

5. The principal function of a certificate is to bind an identity of the signatory to a public key. Accordingly, the principal task of a certification services provider is to verify, in conformance with its stated practices, that an applicant is the purported signatory and is in control of the private key corresponding to the public key listed in the certificate. Failure to do so may expose the certification services provider to potential liability to the signatory, or to a third party that relies on the certificate.

¹ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 9, subparagraphs 1 (a) and 1 (b).

² Smedinghoff, "Certification authority: liability issues" (see note [...]), section 3.2.1.

³ Ibid.

6. Damage to the signatory might be caused, for example, by the erroneous issuance of a certificate to an impostor using a misappropriated identity. The certification services provider's own employees or contractors might conspire to issue erroneous certificates using the certification services provider's signing key against improper applications by the impostor. Those persons might negligently issue an erroneous certificate, either by failing to perform properly the certification services provider's stated validation procedures in reviewing the impostor's application, or by using the certification services provider's signing key to create a certificate that has not been approved. Lastly, a malefactor might impersonate a signatory using forged, but seemingly authentic, identification documents, and convince the certification services provider, despite careful and non-negligent adherence to its published policies, to issue a certificate to the impostor.⁴

7. Erroneous issuance to an impostor could have very serious consequences. Relying parties who conduct online transactions with the impostor may rely on the incorrect data in the erroneously issued certificate and, as a result of that reliance, ship goods, transfer funds, extend credit, or undertake other transactions with the expectation that they are dealing with the impersonated party. When the fraud is discovered, the relying parties may have suffered substantial loss. In this situation, there are two injured parties: the relying party who was defrauded by the erroneously issued certificate, and the person whose identity was impersonated in the erroneously issued certificate. Both will have claims against the certification services provider. Another scenario might be the negligent issuance of a certificate to a fictitious person, in which case only the relying party would suffer damage.⁵

8. Article 9 of the UNCITRAL Model Law on Electronic Signatures provides, *inter alia*, that a certification services provider shall "exercise reasonable care to ensure the accuracy and completeness of all material representations made by it that are relevant to the certificate throughout its life cycle or that are included in the certificate". This general duty has been literally transposed into the domestic legislation of several countries implementing the Model Law,⁶ although in some countries the standard seems to have been raised from "reasonable care" to a higher warranty standard.⁷

9. The regime established by the European Union Directive on electronic signatures obliges European Union member States, as "a minimum", to ensure that by issuing a certificate as a qualified certificate to the public, or by guaranteeing such a certificate to the public, a certification services provider is liable for damage caused to any entity or legal or natural person who reasonably relies on that certificate: (a) as regards the accuracy at the time of issuance of all information contained in the qualified certificate and as regards the fact that the certificate contains all the details prescribed for a qualified certificate; (b) for assurance that, at the time of the issuance of the certificate, the signatory identified in the qualified

⁴ Ibid.

⁵ Ibid.

⁶ For example, Thailand, Electronic Transactions Act (2001), section 28, paragraph 2; and Cayman Islands (overseas territory of the United Kingdom), Electronic Transactions Law, 2000, section 28 (b).

⁷ For example, China, Electronic Signatures Law, article 22: "Electronic certification service providers **shall ensure** that the contents of electronic signature certificates are complete and accurate during their valid term, and shall ensure that parties relying on electronic signatures can verify or comprehend all of the recorded contents of electronic signature certificates and other relevant matters", emphasis added.

certificate held the signature-creation data corresponding to the signature-verification data given or identified in the certificate; (c) for assurance that the signature-creation data and the signature-verification data can be used in a complementary manner in cases where the certification services provider generates them both; unless the certification services provider proves that he has not acted negligently.⁸

10. Other domestic laws generally coincide in imposing on certification services providers the obligation to verify the accuracy of the information on the basis of which a certificate is issued. In some countries, a certification services provider is generally held liable to any person who reasonably relied on the certificate for the accuracy of all information in the accredited certificate as from the date on which it was issued,⁹ or guarantees its accuracy,¹⁰ although in some of those countries the certification services provider may qualify this warranty by an appropriate statement in the certificate.¹¹ Some laws, however, expressly exempt the certification services provider from liability for inaccurate signatory-provided information, subject to verification according to the certificate practice statement, provided that the certification services provider can prove that it took all reasonable measures to verify the information.¹²

11. In other countries the same result is achieved not by a statutory warranty, but by imposing on certification services providers a general duty to verify the information supplied by the signatory before issuing a certificate,¹³ or to establish systems for verifying such information.¹⁴ In some cases, there is an obligation to revoke a certificate immediately upon finding out that information on which the certificate was issued was inaccurate or false.¹⁵ In a few cases, however, the law is silent about the issuance of certificates, merely requiring the certification services provider to comply with its certification practice statement¹⁶ or to issue the certificate as agreed with the signatory.¹⁷ This does not mean that the law does not contemplate any liability for certification services providers. On the contrary, some laws clearly contemplate certification services provider liability, by requiring the certification services provider to purchase adequate third-party liability insurance

⁸ European Union Directive on electronic signatures (see note [...]), article 6, paragraph 1.

⁹ Barbados, chapter 308B, Electronic Transactions Act (1998), section 20, paragraph 1 (a); Bermuda, Electronic Transactions Act, 1999, section 23; Hong Kong (Special Administrative Region (SAR) of China), Electronic Transactions Ordinance, section 39; India, Information Technology Act, 2000, section 36 (e); Mauritius, Electronic Transactions Act 2000, section 27, paragraph 2 (d); and Singapore, Electronic Transactions Act, sections 29, subsection (2)(a) and (c), and 30, subsection (1).

¹⁰ Tunisia, *Loi relative aux échanges et au commerce électroniques*, article 18; and Viet Nam, Law on Electronic Transactions, article 31 (d).

¹⁷ Colombia, *Ley 527 sobre comercio electrónico*, article 32 (a); Dominican Republic, *Ley sobre comercio electrónico, documentos y firmas digitales (2002)*, article 40 (a); and Panama, *Ley firma digital (2001)*, article 49, paragraph 7.

covering all contractual and extra-contractual damage caused to signatories and third parties.¹⁸

12. The certification services provider's duty to verify the accuracy of the information that is provided is supplemented by a duty of the signatory to "exercise reasonable care to ensure the accuracy and completeness of all material representations made by the signatory that are relevant to the certificate throughout its life cycle or that are to be included in the certificate."¹⁹ The signatory could therefore be held liable, either to the certification services provider or to the relying party, for providing false or inaccurate information to the certification services provider when applying for a certificate. Sometimes this is formulated as a general duty to provide accurate information to the certification services provider,²⁰ or to exercise reasonable care to ensure the correctness of the information,²¹ sometimes the signatory is expressly declared liable for damages resulting from its failure to comply with this particular requirement.²²

(c) Unauthorized use of signature or compromised certificate practice statement

13. There are two aspects of unauthorized use of signature creation devices and certificates. On the one hand, a signature creation device might not be properly kept or be otherwise compromised, for instance by misappropriation by an agent of the signatory. On the other hand, the actual signing hierarchy of the certification services provider might be compromised, for instance if either the certification services provider's own signing key or the root key are lost, or disclosed to or used by unauthorized persons, or otherwise compromised.

14. The signing hierarchy might be compromised in various ways. The certification services provider or one of its employees or contractors might accidentally destroy or lose control of the key, the data centre that held the private key might be damaged by an accident, or the certification services provider's key might be destroyed intentionally or compromised by someone for unlawful purposes (e.g. a hacker). The consequences of a compromise of the signing hierarchy could be very serious. For instance, if either the private signing key or the root keys were to fall into the hands of a malefactor, that person could generate false certificates and use them to impersonate real or fictitious signatories, to the detriment of relying parties. Furthermore, once the damage was discovered, all certificates issued by the certification services provider would need to be revoked, resulting in a potentially massive claim by the entire signatory community for loss of use.

15. This matter is not dealt with in detail in the UNCITRAL Model law on Electronic Signatures. Arguably, the general obligation of the certification services provider under the Model Law to "use trustworthy systems, procedures and human

¹⁸ Bolivarian Republic of Venezuela, *Ley sobre mensajes de datos y firmas electrónicas*, article 32.

¹⁹ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 8, subparagraph 1 (c).

²⁰ Argentina, *Ley de firma digital (2001)*, article 25; Chile, *Ley sobre documentos electrónicos, firma electrónica y servicios de certificación de dicha firma (2002)*, article 24; and Mexico, *Código de Comercio: Decreto sobre firma electrónica (2003)*, article 99 (III).

²¹ Cayman Islands, *Electronic Transactions Law 2000*, section 31 (c).

²² Colombia, *Ley 527 sobre comercio electrónico*, article 40; Dominican Republic, *Ley sobre comercio electrónico, documentos y firmas digitales (2002)*, article 55; Mexico, *Código de Comercio: Decreto sobre firma electrónica (2003)*, article 99 (III); and Panama, *Ley de firma digital (2001)*, article 39.

resources”²³ could be construed as imposing a duty on a certification services provider to take all necessary measures to prevent its own key (and thereby its entire signing hierarchy) from being compromised. Several domestic laws explicitly provide for such an obligation, often combined with the certification services provider’s obligation to utilize trustworthy systems.²⁴ Sometimes there is a specific duty to take measures to avoid forgery of certificates.²⁵ A certification services provider is under a duty to refrain from creating or accessing the signature creation data of the signatories, and may be liable for acts of its employees that deliberately do so.²⁶ A certification services provider would be placed under a duty to request the revocation of its own certificate, if its signature creation data is compromised.²⁷

16. The signatory is also required to exercise all due care. The UNCITRAL Model Law on Electronic Signatures, for example, requires the signatory to “exercise reasonable care to avoid unauthorized use of its signature creation data”.²⁸ A similar duty exists under most domestic laws, although with some variations. In some cases, the law subjects the signatory to a strict obligation to ensure exclusive control over the signature creation device and prevent its unauthorized use,²⁹ or makes the signatory solely responsible for safekeeping the signature creation device.³⁰ Often, however, this obligation is qualified as a duty to keep adequate control over the signature creation device or to take adequate measures to keep control over it,³¹ to act diligently to avoid unauthorized use,³² or to exercise reasonable care to avoid unauthorized use of its signature device.³³

²³ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 9, subparagraph 1 (f).

²⁴ Argentina, *Ley de firma digital (2001)*, article 21 (c) and (d); Colombia, *Ley 527 sobre comercio electrónico*, article 32 (b); Mauritius, Electronic Transactions Act 2000, article 24; Panama, *Ley de firma digital (2001)*, article 49, paragraph 5; Thailand, Electronic Transactions Act (2001), section 28, paragraph 6; and Tunisia, *Loi relative aux échanges et au commerce électroniques*, article 13.

²⁵ Bolivarian Republic of Venezuela, *Ley sobre mensajes de datos y firmas electrónicas*, article 35.

²⁶ Argentina, *Ley de firma digital (2001)*, article 21 (b).

²⁷ Ibid., article 21 (p).

²⁸ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 8, subparagraph 1 (a).

²⁹ Argentina, *Ley de firma digital (2001)*, article 25 (a); Colombia, *Ley 527 sobre comercio electrónico*, article 39, paragraph 3; Dominican Republic, *Ley sobre comercio electrónico, documentos y firmas digitales (2002)*, article 53 (d); Panama, *Ley de firma digital (2001)*, article 37, paragraph 4; Russian Federation, Federal Law on Electronic Digital Signature (2002), clause 12, paragraph 1; and Turkey, Ordinance on the Procedures and Principles Pertaining to the Implementation of Electronic Signature Law (2005), article 15 (e).

³⁰ Tunisia, *Loi relative aux échanges et au commerce électroniques*, article 21.

³¹ Chile, *Ley sobre documentos electrónicos, firma electrónica y servicios de certificación de dicha firma (2002)*, article 24; and Viet Nam, Law on Electronic Transactions, article 25, paragraph 2 (a).

³² Bolivarian Republic of Venezuela, *Ley sobre mensajes de datos y firmas electrónicas*, article 19.

³³ Cayman Islands, Electronic Transactions Law, 2000, section 39 (a); Ecuador, *Ley de comercio electrónico, firmas electrónicas y mensajes de datos*, article 17 (b); India, Information Technology Act, 2000, section 42, paragraph 1; Mauritius, Electronic Transactions Act 2000, section 35, paragraph 1 (a) and (b); Mexico, *Código de Comercio: Decreto sobre firma electrónica (2003)*, article 99 (II); Singapore, Electronic Transactions Act (chapter 88), section 39; and Thailand, Electronic Transactions Act (2001), section 27, paragraph 1.

(d) Failure to suspend or revoke a certificate

17. The certification services provider could also incur liability for failing to suspend or revoke a compromised certificate. For a digital signature infrastructure to function properly and enjoy trust, it is critical that a mechanism be in place to determine in real time whether a particular certificate is valid, or whether it has been suspended or revoked. Whenever a private key is compromised, for example, revocation of the certificate is the primary mechanism by which a signatory can protect itself from fraudulent transactions initiated by impostors who may have obtained a copy of their private key.

18. As a consequence, the speed with which the certification services provider revokes or suspends a signatory's certificate following a request from the signatory is critical. The lapse of time between a signatory's request to revoke a certificate, the actual revocation and the publication of the notice of revocation, could allow an impostor to enter into fraudulent transactions. Consequently, if the certification services provider unreasonably delays posting a revocation to a certificate revocation list, or fails to do so, both the signatory and the defrauded relying party could suffer significant damages in reliance upon an allegedly valid certificate. Furthermore, as part of their certification services, certification services providers may offer to maintain online depositories and certificate revocation lists that will be accessible by relying parties. Maintaining this database involves two basic risks: that the repository or certificate revocation list might be inaccurate, thereby providing erroneous information upon which the recipient will rely to its detriment; and the risk that the repository or certificate revocation list will be unavailable (e.g. because of system failure), thereby interfering with the ability of signatories and relying parties to complete transactions.

19. As indicated earlier, the UNCITRAL Model Law on Electronic Signatures assumes that the certification services provider may issue various levels of certificates with varying degrees of reliability and security. Accordingly, the Model Law does not require a certification services provider to always make available a revocation system, which may not be commercially reasonable for certain types of low-value certificate. Instead, the Model Law only requires the certification services provider to provide "reasonably accessible means" that enable a relying party to ascertain from the certificate, *inter alia*, "whether means exist for the signatory to give notice" that the signature creation data have been compromised and "whether a timely revocation service is offered".³⁴ Where a timely revocation service is offered, the certification services provider is obliged to ensure its availability.³⁵

20. The regime established by the European Union Directive on electronic signatures obliges European Union member States, as "a minimum", to ensure that a certification services provider who has issued a certificate as a qualified certificate to the public is liable for damage caused to any entity or legal or natural person who reasonably relies on the certificate for failure to register revocation of the certificate, unless the certification services provider proves that it has not acted negligently.³⁶ Some domestic laws oblige the certification services provider to take

³⁴ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 9, subparagraph 1 (d), (v) and (vi).

³⁵ *Ibid.*, article 9, subparagraph 1 (e).

³⁶ European Union Directive on electronic signatures (see note [...]), article 6, paragraph 2; see also paragraph (b) of annex II to the Directive.

measures to prevent certificate forgery³⁷ or to revoke a certificate immediately upon finding out that information on which the certificate was issued was inaccurate or false.³⁸

21. A similar duty may also exist for the signatory and other authorized persons. The UNCITRAL Model Law on Electronic Signatures, for example, requires the signatory “without undue delay”, to “utilize means made available by the certification service provider”, or “otherwise use reasonable efforts, to notify any person that may reasonably be expected by the signatory to rely on or to provide services in support of the electronic signature” if the signatory “knows that the signature creation data have been compromised” or if “circumstances known to the signatory give rise to a substantial risk that the signature creation data may have been compromised”.³⁹

22. Domestic laws often affirm the duty of the signatory to request revocation of the certificate in any circumstance where the secrecy of the signature creation data might have been compromised,⁴⁰ although in some cases the law only obliges the signatory to communicate that fact to the certification services provider.⁴¹ The laws of several countries have adopted the formulation in the UNCITRAL Model Law on Electronic Signatures, which places the signatory under an obligation to further notify any person who may reasonably be expected by the signature device holder to rely on or to provide services in support of the electronic signature.⁴² Although the consequences of breach of this duty may be implied in a number of legal systems, in some countries the law expressly declares the signatory liable for failure to communicate the loss of control over the private key or failure to request the revocation of the certificate.⁴³

³⁹ UNCITRAL Model Law on Electronic Signatures (see note [...]), article 8, subparagraph 1 (b), (i) and (ii).

⁴⁰ Argentina, *Ley de firma digital (2001)*, article 25 (c); Colombia, *Ley 527 sobre comercio electrónico*, article 39, paragraph 4; Dominican Republic, *Ley sobre comercio electrónico, documentos y firmas digitales (2002)*, articles 49 and 53 (e); Ecuador, *Ley de comercio electrónico, firmas electrónicas y mensajes de datos*, article 17 (f); Mauritius, Electronic Transactions Act 2000, article 36; Panama, *Ley de firma digital (2001)*, article 37, paragraph 5; Singapore, Electronic Transactions Act (chapter 88), section 40; and Russian Federation, Federal Law on Electronic Digital Signature (2002), clause 12, paragraph 1.

⁴¹ India, Information Technology Act, 2000, section 42, paragraph 2; and Turkey, Ordinance on the Procedures and Principles Pertaining to the Implementation of Electronic Signature Law (2005), article 15 (f) and (i).

⁴² Cayman Islands, Electronic Transactions Law, 2000, section 31 (b); China, Electronic Signatures Law, article 15; Thailand, Electronic Transactions Act (2001), section 27, paragraph 2; and Viet Nam, Law on Electronic Transactions, article 25, paragraph 2 (b).

⁴³ China, Electronic Signatures Law, article 27; Dominican Republic, *Ley sobre comercio electrónico, documentos y firmas digitales (2002)*, article 55; Ecuador, *Ley de comercio electrónico, firmas electrónicas y mensajes de datos*, article 17 (e); Panama, *Ley de firma digital (2001)*, article 39; Russian Federation, Federal Law on Electronic Digital Signature (2002), clause 12, paragraph 2; and Venezuela (Bolivarian Republic of), *Ley sobre mensajes de datos y firmas electrónicas*, article 40.

Conclusion

23. Wide use of electronic authentication and signature methods may be a significant step to reduce trade documentation and the related costs in international transactions. While to a very large extent the pace of developments in this area is mainly determined by the quality and security of technological solutions, the law may offer a significant contribution towards facilitating the use of electronic authentication and signature methods.

24. A large number of countries have already taken domestic measures in that direction by adopting legislation that affirms the legal value of electronic communications and sets the criteria for their equivalence to paper-based ones. Provisions regulating electronic authentication and signature methods are often an important component of such laws. The UNCITRAL Model Law on Electronic Commerce⁴⁴ has become the single most influential standard for legislation in this area and its wide implantation has helped to promote an important degree of international harmonization. Wide ratification of the United Nations Convention on the Use of Electronic Communications in International Contracts⁴⁵ would provide even greater harmonization, by offering a particular set of rules for international transactions.

25. International use of electronic authentication and signature methods may also benefit from the adoption of those UNCITRAL standards. In particular, the flexible criteria for functional equivalence between electronic and paper-based signatures contained in the United Nations Convention on the Use of Electronic Communications in International Contracts may provide an international common framework for allowing electronic authentication and signature methods to meet foreign form signature requirements. Nevertheless, some problems may persist, in particular in connection with international use of electronic authentication and signature methods that require the involvement of a trusted third party in the authentication or signature process.

26. The problems that arise in this particular area derive to a very large extent from inconsistency of technical standards or incompatibility of equipment or software, resulting in lack of international interoperability. Efforts to harmonize standards and improve technical compatibility may lead to a solution to the difficulties that exist at present. However, there are also legal difficulties related to use of electronic authentication and signature methods, in particular in connection with domestic laws that either prescribe or favour the use of a particular technology for electronic signatures, typically digital signature technology.

27. Laws that provide for the legal value of digital signatures typically attribute the same legal value to signatures supported by foreign certificates only to the extent that they are regarded as equivalent to domestic certificates. The review done in this study indicates that proper assessment of legal equivalence requires a comparison not only of the technical and security standards attached to a particular signature technology, but also of the rules that would govern the liability of the various parties involved. The UNCITRAL Model Law on Electronic Signatures provides a set of basic common rules governing certain duties of the parties involved in the authentication and signature process that may have an impact on

⁴⁴ See note [...] [United Nations publication, Sales No. E.99.V.4].

⁴⁵ See note [...] [General Assembly resolution 60/21, annex].

their individual liability. There are also regional texts, such as the European Union Directive on electronic signatures, that offer a similar legislative framework for the liability of certification services providers operating in the region. However, neither of those texts addresses all liability issues arising out of the international use of certain electronic authentication and signature methods.

28. It is important for legislators and policymakers to understand the differences between domestic liability regimes and the elements common to them, so as to devise appropriate methods and procedures for recognition of signatures supported by foreign certificates. The domestic laws of various countries may already provide substantially equivalent answers to the various questions discussed in the present reference document, for instance because they share a common legal tradition or belong to a regional integration framework. Such countries may find it useful to devise common liability standards or even harmonize their domestic rules, so as to facilitate cross-border use of electronic authentication and signature methods.

C. Note by the Secretariat on possible future work Indicators of Commercial Fraud

(A/CN.9/624 and Add.1-2) [Original: English]

At its thirty-fifth session in 2002, the Commission first considered whether the problem of fraudulent practices of an international character resulted in a significant adverse economic impact on world commerce and negatively affected legitimate commercial institutions. At its thirty-sixth session in 2003, the Commission considered the note of the Secretariat (A/CN.9/540), and agreed with the recommendation that an international colloquium should be organized to permit an exchange of views from various interested parties regarding the private law aspects of commercial fraud. At its thirty-seventh session in 2004, the Commission considered the report of the UNCITRAL Secretariat on the colloquium (A/CN.9/555), and, *inter alia*, agreed that, with a view towards education, training, and prevention, the preparation of materials setting out common features present in typical fraudulent schemes could be useful as educational material for participants in international trade and other potential targets of perpetrators of fraud, in order to help potential targets protect themselves and avoid becoming victims of fraudulent schemes. It was agreed that the Secretariat should consider preparing, in close consultation with experts, such materials listing common features present in typical fraudulent schemes. The annex attached to this note is the result of that work, and is presented to the Commission for its consideration. Due to the length of the materials, they have been separated into three documents that should be read together: A/CN.9/624; A/CN.9/624/Add.1 and A/CN.9/624/Add.2.

Bearing in mind the full agenda of the current session of the Commission, one possible course of action may be for the Commission to take note of the text and, with any comments it may wish to make, request the Secretariat to disseminate it to Governments and potentially interested institutions, in particular international intergovernmental and non-governmental organizations, with a view to obtaining comments. On the basis of the comments received, the Commission would be able to assess any other action it may wish to take in respect of it.

I. Introduction

Purpose and Target audience

As early as 2002, the United Nations Commission on International Trade Law (UNCITRAL) first considered the problem of fraudulent practices that resulted in a significant adverse economic impact on world commerce and negatively affected legitimate commercial institutions. Through a series of consultations with experts and government officials who regularly encounter and combat commercial fraud and who represented different regions, perspectives, and disciplines, UNCITRAL became aware of the widespread existence of commercial fraud and its significant worldwide impact, regardless of a country's level of economic development or system of government. In considering possible responses to this threat, it was felt that education and training could play significant roles in fraud prevention, and that the identification of common warning signs and indicators of commercial fraud could be particularly useful in combating fraud.

To this end, the UNCITRAL secretariat met over the ensuing years with international experts and government officials knowledgeable in the identification and prevention of commercial fraud, and as a result developed the attached list of twenty-three indicators of commercial fraud. The overall objective of this project was to assist in the prevention of commercial fraud by creating an easily understood and widely-disseminated document that set out indicators to assist potential victims and their organizations in the identification of behaviour that could be associated with or could constitute commercial fraud. Governments and other bodies and organizations are encouraged to disseminate these materials as widely as possible, and encourage their use in the prevention of fraud.

It is hoped that, in addition to preventing the perpetration of specific commercial frauds through education and awareness, this anti-fraud project will serve three main overarching purposes. First, these materials are intended to identify patterns and characteristics of commercial fraud in a manner that facilitates the private sector in combating commercial fraud in an organized and systematic manner. Second, it is hoped that governmental bodies may be assisted by these materials in understanding how to help the public and private sector to address the problem of commercial fraud. Finally, these materials may assist the criminal law sector in understanding how best to engage the private sector in the battle against commercial fraud.

The intended audience for these materials includes individuals, professionals, business persons, regulators, law enforcement officers, litigants, and potentially arbitration tribunals and courts in cases involving commercial fraud. These materials are not intended as a legislative text nor a legal text, but rather as instructive materials containing useful guidance and reference materials for users. It is hoped that financial decision-makers and those charged with combating commercial fraud can learn and benefit from these materials, be they individual investors or purchasers, CEOs, bank executives, law enforcement agencies or regulators, or the board of directors of any company, large or small. Even decision-makers charged with distributing emergency relief or crisis funds on behalf of governments or international organizations may benefit from recognizing and remaining alert to these potential indicators of fraud. In addition, third parties such as employees of banks or other entities, or professionals assisting in a transaction or an investment, must be aware that they may unwittingly assist in the perpetration of a fraud by simply being blind to the indicators of a potential fraud.

Examination of the various indicators has revealed that they tend to be present in many different cases of potential fraud, regardless of the level of sophistication of the financial decision-maker, or of the development of a particular economy involved. In an effort to illustrate this point, the instances and examples that are given in these materials for each of the indicators are drawn from various different areas of legal practice and include various different types of victims. They are intended to demonstrate that the indicators are meant to be of universal application in a commercial and administrative context, regardless of the identity or role of the potential victim, their net worth, their level of sophistication or their geographic location. The only quality that the victims are certain to share is a vulnerability to fraud that stems from their role as a financial decision maker.

However, it is important to remember that each of the indicators taken alone or in combination is not intended to definitively indicate the presence of commercial fraud. Instead, the presence of a single warning sign is intended to send a signal that

commercial fraud is a possibility, while the presence of several of the indicators should heighten that concern.

The presentation of each of the indicators is similar: first, the indicator is identified, followed by a more detailed description of the indicator, which is in turn followed by instances and examples of the particular indicator as found in a commercial fraud in a variety of different contexts. Advice is then provided regarding what may be done to avoid or to counteract the effects of the behaviour identified in each indicator, as appropriate. Finally, since the identification of discrete indicators is not conducive to a scientific exercise with clear demarcations between them, many of the indicators may or should overlap, and these materials include cross references to other related indicators, where relevant.

History

At its thirty-fifth session in 2002, UNCITRAL first considered whether the problem of fraudulent practices of an international character resulted in a significant adverse economic impact on world commerce and negatively affected legitimate commercial institutions. It was felt that fraudulent practices that affected international commerce had not been sufficiently addressed by international bodies, particularly with respect to their commercial aspects. It was suggested that UNCITRAL was well-positioned to consider the issue of commercial fraud, since it presented the unique combination of a governmental perspective with recognized expertise in international commerce and a tradition of collaboration with other international organizations.¹

In order to assess the extent and implications of commercial fraud and to consider possible recommendations regarding future action, in December 2002, the UNCITRAL Secretariat convened a meeting of experts who regularly encounter and combat commercial fraud and who represented different regions, perspectives, and disciplines. Following that meeting, the UNCITRAL secretariat prepared and issued a note on possible future work relating to commercial fraud (A/CN.9/540) as requested by UNCITRAL at its thirty-fifth session. The note concluded that available evidence suggested that commercial fraud constituted a serious and potentially increasing threat to international commerce. The note also considered factors in defining or describing commercial fraud, concluding that a precise definition was not currently available but that it would be useful to identify and detail common patterns of fraudulent commercial conduct. Finally, the note also suggested that there was an important independent commercial dimension to commercial fraud in addition to that of criminal law enforcement, and made several recommendations to UNCITRAL in regard to future work.

At its thirty-sixth session in 2003, UNCITRAL considered the note of the Secretariat (A/CN.9/540). It agreed with the recommendation that an international colloquium should be organized to permit an exchange of views from various interested parties, including those working in national Governments, intergovernmental organizations and relevant private organizations on the private law aspects of commercial fraud. It was also noted that the colloquium would provide an opportunity to promote an exchange of views with the criminal law and regulatory sectors that combat commercial fraud and to identify matters that could be coordinated or harmonized.²

¹ *Official Records of the General Assembly, Fifty-seventh Session, Supplement No. 17 and corrigendum (A/57/17 and Corr.3)*, paras. 279-290.

² *Ibid.*, *Fifty-eighth Session, Supplement No. 17 (A/58/17)*, paras. 240-241.

A colloquium on international commercial fraud was held in Vienna from 14 to 16 April 2004. The speakers, panellists, and participants at the colloquium consisted of experts from each of several legal practice areas examined, representing as broad a spectrum of approaches to the problem of commercial fraud as possible, and included approximately 120 participants from 30 countries. It was agreed at the colloquium that any doubt had been dispelled as to the widespread existence of commercial fraud and its significant worldwide impact, regardless of a country's economic development or system of government. It was also agreed that education and training played significant roles in fraud prevention and that it would be particularly useful to identify common warning signs and indicators of commercial fraud. In addition, it was agreed at the colloquium that local cooperative efforts between law enforcement bodies and the private sector seemed particularly effective and should be encouraged (see A/CN.9/555, paras. 3, 4, 25-28, and 62-71).

At its thirty-seventh session in 2004, UNCITRAL considered the report of the UNCITRAL secretariat on the colloquium (A/CN.9/555), and, *inter alia*, agreed that, with a view towards education, training, and prevention, the preparation of materials setting out common features present in typical fraudulent schemes could be useful as educational material for participants in international trade and other potential targets of perpetrators of fraud. It was thought that such materials would help potential targets protect themselves and avoid becoming victims of fraudulent schemes. Further, it was thought that national and international organizations interested in fighting commercial fraud could be invited to circulate such material among their members in order to help test and improve those lists. While it was not proposed that UNCITRAL itself or its intergovernmental working groups be directly involved in that activity, it was agreed that the UNCITRAL Secretariat should consider preparing, in close consultation with experts, such materials listing common features present in typical fraudulent schemes.³

At its thirty-eighth session in 2005, UNCITRAL reiterated its support for this project,⁴ and at its thirty-ninth session in 2006, UNCITRAL further approved of the general approach taken in the drafting of these materials as set out in a note by the Secretariat (A/CN.9/600).⁵

For further information, please visit the UNCITRAL website at www.uncitral.org.

II. What is Commercial Fraud?

It would not be appropriate to set out a strictly legal definition of commercial fraud in light of the aims and objectives of these materials, nor would such a definition allow sufficient flexibility for the intended broad use of those materials. However, a descriptive definition outlining the main elements of commercial fraud could be helpful to the user of these materials.

The following elements are key to the identification of commercial fraud:

- (1) There is an element of deceit or of providing inaccurate, incomplete or misleading information;

³ Ibid., *Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 110-112.

⁴ Ibid., *Sixtieth Session, Supplement No. 17* (A/60/17), para. 220.

⁵ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), para. 217.

- (2) Reliance on the deceit or the information provided or omitted induces the target of the fraud to part with some valuable thing that belongs to the target or to surrender a legal right;
- (3) There is a serious economic dimension and scale to the fraud;
- (4) The fraud uses or misuses and compromises or distorts commercial systems and their legitimate instruments, potentially creating an international impact; and
- (5) There is a resultant loss of value.

Further, the term “fraudster” has been used in these materials as a term to identify someone who is perpetrating, or attempting to perpetrate a fraud.

III. Related Topics

A number of serious issues related to commercial fraud have not been covered in these materials in order to keep them of a manageable and useful size, and since such issues have been, and are continuing to be, dealt with in other forums or by other organizations. A non-exhaustive list of such issues, and some suggestions regarding where further information can be found, appears below. Note also that the suggested sources for further information are limited to international organizations, and that there are numerous national governmental and non-governmental organizations which have also worked extensively in these areas, and to which resort should be had for more information.

A. Corruption and Bribery

Corruption has been defined by Transparency International as “the misuse of entrusted power for private gain”. Further differentiation has been made between “according to the rule corruption” and “against the rule corruption”, wherein the former includes facilitation payments, where a bribe is paid to receive preferential treatment for something that the receiver of the bribe is required to do by law, while the latter includes bribes to obtain services that the receiver of the bribe is prohibited from providing.

A number of international organizations have adopted instruments, including conventions, aimed at fighting corruption and bribery. These organizations include: the United Nations; the African Union; the Council of Europe; the European Union; the Economic Community of West African States; the Organization of American States; and the Organisation for Economic Cooperation and Development.

There is a large amount of information available concerning corruption and bribery, including materials on how to combat it. The following lists a few of the many sources of such information:

- Transparency International; www.transparency.org
- United Nations Office on Drugs and Crime; www.unodc.org
- Organisation for Economic Cooperation and Development; www.oecd.org
- Organization of American States; www.oas.org
- The World Bank; www.worldbank.org

B. Money-Laundering

Money-laundering may be described as the practice of engaging in specific financial transactions in order to conceal the identity, course, and/or the destination of money. A number of national and international rules and programmes have been developed to combat money-laundering.

Again, there is a great deal of information available on money-laundering, both nationally and internationally. For example, resort may be had to:

- Financial Action Task Force; www.fatf-gafi.org
- International Bar Association Anti-Money-Laundering Forum; www.anti-moneylaundering.org

C. Transparency

“Transparency” has been defined, again by Transparency International on their website, as “a principle that allow those affected by administrative decisions, business transactions or charitable work to know not only the basic facts and figures, but also the mechanisms and processes” by means of which the decisions were made and transactions entered into. It is further said that “it is the duty of civil servants, managers and trustees to act visibly, predictably and understandably”.

As a general principle, true transparency should be sought in all transactions and if achieved, should result in the prevention and avoidance of commercial fraud.

For further information, one source that may be consulted is:

- Transparency International; www.transparency.org

D. Best Practices

“Best practices” are, in this case, those techniques, methods, processes, activities or the like, used by highly respected organizations, public and private, that are focused on the prevention or detection of commercial fraud, and that should be adopted by entities such as companies and financial institutions and consistently followed by their employees. If such approaches are followed, and the proper processes, checks and testing have taken place, those systems should assist greatly in the prevention or detection of a fraud. Entities and organizations should be sure to investigate and adopt the best practices most suited to their operations, and should investigate them by way of their professional organizations or consult with private sector specialists.

(1) Corporate Governance

The term “corporate governance” is the set of processes, laws, policies and institutions affecting the way a corporation is directed, administered and controlled, and involves the set of relationships between the company’s management, its board of directors, its shareholders and other stakeholders. At the core of corporate governance are issues such as corporate fairness, transparency, fiduciary duty and accountability.

Establishing and adhering to the principles of good corporate governance should assist greatly in the prevention of commercial fraud either on the company, or on other parties, with the assistance of employees.

A great deal of material has been published on this topic, and resort could be had to the following sources:

- Organisation for Economic Cooperation and Development; www.oecd.org

(2) Whistleblower policies

A “whistleblower” is someone, usually an insider, who reveals wrongdoing within an organization to the public or to those in positions of authority. Whistleblowing policies operate to give adequate protection to those who wish to come forward to report deviations from legal or ethical corporate standards. This can be done, for example, via confidential telephone services or intranet sites through which employees and business partners can address concerns or pass information. To make such services effective, genuine concerns must be listened to and acted upon in a timely manner by the responsible board committee.

The adoption of adequate whistleblower policies by an organization, and education of employees about the existence and anonymity of such processes, can aid greatly in the detection of fraud or wrongdoing within an organization.

Again, much has been written on this topic, for example by:

- Transparency International; www.transparency.org

(3) Role of Internal and External Auditors

Internal auditing is an independent, objective assurance and consulting activity designed to add value and improve an organization’s operations. It helps an organization accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes. Internal auditors are employees of the entity who report to a general or chief auditor, who, in turn, reports to the Audit Committee of the Board of Directors.

An external auditor consists of audit professionals who perform an audit on the financial statements of a company, individual or other organization, its key characteristic being that it is independent from the entity being audited. The external auditor also reports to the Board of Directors of an organization, and may also be required by specific legislation to make submissions to regulatory agencies.

Both types of audits are useful and recommended to detect fraudulent activity and to assist in its prevention.

- Transparency International; www.transparency.org
- Organisation for Economic Cooperation and Development; www.oecd.org

Indicators of Commercial Fraud

Indicator 1 Irregular Documents

Indicator 2 Misuse of Technical Terms

Indicator 3	Inconsistencies in the Transaction
Indicator 4	Misuse of Names
Indicator 5	Disproportionate Returns
Indicator 6	Undue Secrecy
Indicator 7	Overly Complex or Overly Simplistic Transactions
Indicator 8	Frustration of Due Diligence
Indicator 9	Corrupted Incentives
Indicator 10	Ensnarement and Psychological Inducements
Indicator 11	Crisis-Caused Breakdowns in Preventive Controls
Indicator 12	Immediate, Fast or Irrevocable Transfer of Funds
Indicator 13	Questionable or Unknown Source of Repayment
Indicator 14	Irrational or Illogical Aspects or Explanations
Indicator 15	Fraud Based on Abuse of Personal Affinity or Relationships
Indicator 16	Fraud By or Involving Employees
Indicator 17	Unusual Involvement or Participation of Professionals
Indicator 18	Inappropriate Requests for Information Disclosure
Indicator 19	Unsolicited E-mails and Related Misuse of Technology
Indicator 20	Pyramid and Multi-Level Marketing Schemes
Indicator 21	Frauds involving Goods and Services
Indicator 22	Securities Fraud and Market Abuse
Indicator 23	Misuse of Insolvency Proceedings

Indicator 1: Irregular Documents

Commercial frauds almost always involve the issuance of, use of, or reliance on documents that are not normally or typically used in the type of transaction to which they are intended to relate, or on documents that contain discernable irregularities either individually, or when read in light of all the documents presented in support of the scheme.

Explanation:

Commercial frauds, like legitimate transactions, involve the use of multiple documents to explain, memorialize, and reflect the transaction. However, the documents used in commercial frauds often differ from those used in legitimate transactions either because they are improperly drafted, or because they contain some unusual features to induce investment, to bolster the fraudster's credibility, to explain the extraordinary returns claimed by the fraudster, or they set out unusual procedures. It is often possible to determine the likelihood or presence of a commercial fraud by identifying these irregular aspects. Documents used in support of a commercial fraud can be genuine, fraudulent, forged, or fictitious, and can be

issued or authenticated either properly or improperly by institutions or individuals. Sometimes professionals can be involved in their creation or authentication.

Instances and Examples:

- Documents that may be used in connection with commercial frauds include:

- Genuine documents;

Illustration 1-1: Such documents may include: studies by organizations; letters of introduction; written attestations that an individual has an account in the institution or is a customer of the institution; a contract drafted by a lawyer; an authenticated telecommunication or funds transfer or SWIFT.

- Fictitious documents that are not used in legitimate commerce;

Illustration 1-2: Such documents may include: an “irrevocable SWIFT”; “UCP500 Forfait Transaction” or “Grain Warrants”.

- Forged or fraudulent documents;

Illustration 1-3: An employee forges the signature of a bank manager on a letter provided by the fraudster.

Illustration 1-4: Documents that are commonly forged or fraudulent may include a forged signature or misdescription of goods on a bill of lading; a bank guarantee; documents under a commercial letter of credit; or false audit reports.

- Counterfeits of genuine documents.

Illustration 1-5: Documents that are commonly counterfeited include stock certificates; debentures; promissory notes; precious metal depositary certificates; warehouse certificates; or government procurement contracts, all of which may be used to induce investment in a fraudulent investment scheme or hypothecated to obtain an extension of credit from a legitimate financial institution.

- Legitimate institutions or their employees can be knowingly or unwittingly induced to issue or verify legitimate or illegitimate documents that are then used to enhance the fraudulent scheme. Electronic verification may also be requested.

Illustration 1-6: A clerk is asked to issue or authenticate a document that is not usually issued by that clerk or by that institution. Or, the requester of the document seeks the inclusion of unusual phrases such as that funds are of “non-criminal origin”, or may request the insertion of legitimate commercial terms such as that the customer is “ready, willing, and able” to enter into transaction. The clerk obliges in order to assist the customer but without understanding the document or phrases, and the documents are subsequently used to bolster the credibility of the fraud.

Illustration 1-7: A clerk authenticates a document prepared by a customer on bank or company stationery. Although the clerk intends only to authenticate the signature or identity of the

customer, the document contains statements that are used to enhance credibility by indicating that the bank or company attests to what is said in the document.

- The irregularities in documents used in commercial fraud may be caused by or connected with professionals.

Illustration 1-8: A lawyer, accountant or other professional prepares documents at the request of a client regarding a transaction that the professional does not inquire into or does not understand, and that does not make economic or other sense. The fraudster often needs the professional to give credibility to his or her scheme. Agreeing to witness or confirm a pre-signed document would be a particular example of a transaction that could facilitate a fraud.

- A commercial fraud may be signalled by:

- An absence of proper documentation;

Illustration 1-9: The existence of only a few poorly drafted documents for a major transaction; or a bank loan without a business plan to repay money.

- Documents that are issued by a genuine commercial entity but contain irregularities in connection with their issuance;

Illustration 1-10: A shipping clerk is asked to sign and postdate a document stating that goods, which have not yet arrived, have been received on the basis of the presenter's representation that goods will be received by that date. The presenter then uses the document to obtain payment, although goods are never delivered.

Illustration 1-11: A seller of real or personal property is asked to adjust the stated purchase price for real or personal property so that the buyer may increase the amount able to be borrowed or to decrease tax liability for the transaction or the property.

- Internal irregularities and inconsistencies in the documents;

Illustration 1-12: A document relating to a sophisticated transaction or one for a large sum contains spelling errors or grammatical errors, or has unprofessional-looking graphics or an unsophisticated appearance.

Illustration 1-13: Odd phrases or terms found in genuine documents, including: "NC/ND"; a document that is not a letter of credit is said to be subject to UCP500; performance in a "year and a day" or "a month and a day"; reference to "international banking seconds, hours or days".

Illustration 1-14: A transaction for a large amount of money that is disproportionate with the situation or the person with which it is connected, such as a small bank with assets of UK £75 million issuing a document for UK £100 million.

- The presence of a document that does not itself make sense or that does not make sense in connection with other documents involved in the transaction;

Illustration 1-15: In a transaction allegedly involving the sale of independent guarantees, a document was presented relating to factoring.

- The presence of incorrect or unusual headings of or in documents;

Illustration 1-16: What is supposed to be a letter of credit is entitled “Hypothecation Agreement” and contains a promise to pay funds to bearer.

- Documents that do not appear in the normal course of business;
- The unusual appearance or texture of a financial instrument;

Illustration 1-17: Document contains blurred typography, poor paper quality, spelling mistakes or an unprofessional look or graphics.

- The antedating or postdating of documents;

Illustration 1-18: A bill of lading stating that the goods are loaded on board a vessel is issued with a date a week earlier than the date the goods are said to have been loaded.

- Or changes in the existing documentation that fundamentally and inexplicably change the nature of the transaction.

Illustration 1-19: The transaction is said to relate to trading in sugar and, purportedly as a result of a difficulty, the documents are suddenly switched to relate to a sale of steel.

Illustration 1-20: The documentation was an independent guarantee and it is suddenly a promissory note.

Advice:

- Complete documentation of the investment should be required in advance and any unusual characteristics or aspects that are not understood in the form, content, or authenticity of the documents should be investigated, especially where the investment involves financial instruments.
- Read carefully documents presented in support of an investment and remember that they should be consistent in terms of the transaction as a whole.
- Documents should not be antedated or postdated, and the dates referred to in them should be consistent.
- Documents presented in support of a proposed commercial transaction should not be relied upon without considering their content, purpose and source.
- Inquire whether the document is of a type that is regularly issued.
- A general addressee, such as “To whom it may concern” should be cause for further inquiry.
- Do not assume the authenticity of letterheads of well-known companies or organizations that could have been produced by laser printer.

- Verify signatures.
- Determine that professionals employed have an understanding of the documents they are preparing or verifying.
- Perform thorough due diligence by consulting independent sources of information, or by consulting legal and risk management or security departments regarding the documents and their contents.
- If critical reliance in a transaction is placed on a particular document, it should be produced.
- Extreme caution should be exercised if engaging in a transaction where irregular or incomplete documents are used or relied upon as a matter of course in the trade.
- Never grant power of attorney to persons unknown.
- Do not sign, issue or authenticate documents that are unusual, that are not understood, that are not usually signed by the individual or institution being requested to sign them, or whose purpose is not understood.
- Do not sign a document that is incomplete or that is in another language that is not understood.
- Never sign or issue a statement that is known or suspected to be untrue.
- Investigate whether the person requesting the service is a regular customer.
- It may be advisable to set out the purpose for which the document was prepared in the body of the document itself, as a means to possibly avoid later misuse.
- Be cautious of issuing unusual documents, particularly when the text is provided by the requester.
- Use forms that are approved by legal and risk management or security departments.
- If presented with a financial instrument that is unfamiliar in the marketplace, such as a stock certificate traded on a foreign exchange, have the document examined by a reputable expert in the field, like a stockbroker of good reputation.

Indicator 2: Misuse of Technical Terms

Commercial frauds misuse technical terms by using an actual term in an incorrect context or inventing an impressive sounding term to gain credibility, to obscure implausible aspects of the scheme, or to impress or intimidate victims or their advisors.

Explanation:

Modern commerce and finance are complex and regularly use specialized terms related to a transaction or its financing. Commercial frauds frequently employ such terms to give the impression that the scheme is genuine, to impress or intimidate victims, or to cover their inability to explain inconsistencies or illegal aspects of the transaction. Since the fraudsters are often not knowledgeable themselves, they often misuse specialized terms, thereby signalling that the transaction is not genuine. Legitimate transactions occasionally may contain mistakes that are not essential to the transaction, and where a misuse is infrequent or the mistake is peripheral to the nature of the scheme, it is less likely to indicate commercial fraud. However, where the misuse is of a term essential to the scheme, and where it is consistent and frequent, it may indicate that the transaction is not legitimate.

Instances and Examples:

- Technical terms can be misused to:
 - Impress or overwhelm the victim;

Illustration 2-1: Fraudster gives a detailed but distorted discussion of macroeconomic history oriented towards reinforcing the credibility of the investment.

Illustration 2-2: Fraudster makes reference to major international agreements or programmes such as the Bretton Woods Agreements or the Marshall Plan to explain the overall scheme.
 - Justify the inexplicable by resort to technical terminology;

Illustration 2-3: Funds in an account are said not be to at risk because they will be “scanned” by the trading bank, but not otherwise affected.
 - Excuse a failure in promised performance;

Illustration 2-4: Government regulations, such as tax laws, or electronic funds transfer systems rules are referred to in explaining why the “trades” or payment is delayed, or why additional funds are required by the fraudster.
 - Or build excessive reliance by the victim on the fraudster’s apparently superior knowledge.

Illustration 2-5: Fraudster rationalizes the disproportionate returns of the scheme based on an economic analysis that explains how banks purportedly increase the money supply.
- Misused technical terms may either exist and be used properly, may be used incorrectly or in an improper context, or may be entirely fictional.

Illustration 2-6: Actual terms such as “Factoring” or “Forfait” may be used incorrectly.

Illustration 2-7: Investment is said to involve trading in independent guarantees that do exist but are not “traded”.

Illustration 2-8: Investment is said to be made on a specific form, such as “ICC Form 1020”, but the form does not exist.

Illustration 2-9: Fraudster misuses or twists legitimate technical or scientific terms, such as a successful fraud in the oil and gas industry that referred to the fictional process of “sonic” fracturing to assist oil or gas recovery.

- Technical terms may also be misused in different ways:

- At different stages of the scheme;

Illustration 2-10: For example, they may be used to entice the investor, to obtain funds, to induce the transfer of control of assets, to explain why payments are delayed, or to prevent the investor from contacting authorities.

- Or beyond their intended purpose in order to validate a transaction.

Illustration 2-11: Commercial frauds often use technical terms regarding funds transfer to purportedly indicate the legitimacy of the transaction, but which are in fact only intended to indicate that a particular message was sent, but do not authenticate its contents.

Advice:

- Do not be intimidated or impressed by the use of technical terms and jargon.
- Insist on a clear explanation, regardless of the level of one’s own knowledge or expertise.
- Understand all aspects of the transaction before investing.
- When performing due diligence, do not simply be satisfied with the existence of a specific technical term, such as “stand-by letters of credit”, but ascertain whether the technical term or its role in the transaction is used properly in the context.
- Check into the existence and operation of any law under which taxes, fees and other sums are allegedly owed.
- Employees should be educated about commonly misused terms and phrases.
- The appropriate employee within an organization should be consulted on a specialized transaction, or should be part of the negotiating or document review team.

See also: Indicator 6 — Undue Secrecy; Indicator 8 — Frustration of Due Diligence; Addendum 1 — Performing Due Diligence.

Indicator 3: Inconsistencies in the Transaction

In attempting to mimic aspects of genuine transactions, commercial frauds often contain untrue or conflicting statements of material facts, omissions of material facts and other serious inconsistencies.

Explanation:

Commercial transactions operate under rule-based systems; multiple aspects, documents, details, and representations are consistent with one another and, taken as a whole, reflect the scope and purpose of the transaction. Any inconsistency or repeated inconsistencies that do not result from an agreed change in the transaction are removed in the case of legitimate commercial transactions. Transaction participants understand the representations and details and ensure that all aspects of the entire context of the transaction are consistent. On this basis they may with confidence accept transactional and contractual obligations.

In a sophisticated fraud, inconsistencies may not be obvious, such as in the case of frauds where professionals within seemingly reputable firms of lawyers, accountants and bankers may have been successfully misled by a fraudster, and have unwittingly assisted in creating fraudulent documentation. However, in a typical scheme, fraudsters are unlikely to concern themselves with transactional realities in their quest to find a potential victim. In fact, fraudsters may create inconsistencies intentionally, with the expectation that the more informed persons will walk away, leaving only those potential victims who are most vulnerable. Further, fraudsters are not necessarily concerned that all aspects of the context of the transaction be consistent. They often use old, pattern frauds, developed by others decades ago, and simply adapt these old schemes to the Internet, or replace old names with invented modern sounding fictitious instruments, such as “Anti-Terrorism/Drug Free Certificates” and may not know of the fraud’s internal inconsistencies. Fraudsters often are not experts in the fields of investment or business contemplated by their frauds and, lacking such expertise, they inadvertently may create inconsistencies in the transaction within individual documents or between documents, or there may be inconsistencies between what is written and what is said on various occasions.

Instances and Examples:

- The nature of goods changes depending on the document examined.

Illustration 3-1: At the outset, a transaction involves shipments of one commodity, but without any commercial explanation, the goods being sold are described as a different commodity in later documentation.

- What is written or said is devoid of logic or common sense.

Illustration 3-2: The goods described in the transaction, or a financial instrument described in the transaction, do not exist or are not commercially traded.

Illustration 3-3: An invoice reflects ocean carriage, but the transport document reflects rail or truck transport only.

Illustration 3-4: The first document refers to “ABC Corp” while later documents refer to “XYZ Corp”, or one company may guarantee the first document, while another guarantees the second document.

Illustration 3-5: Container or seal numbers listed on bills of lading or other transport documents are suspicious, or do not reflect the proper numbering and lettering systems.

- Individual orders are out of context with the overall transactional history.

Illustration 3-6: An unusual quantity of the same product is ordered with a demand for next-day delivery to be shipped to a mail-drop address.

Advice:

- Read documents critically, take detailed notes of any oral representations, and require any oral representations to be incorporated into the documents.
- Do not rely solely on the documents presented for due diligence.
- Ask questions about inconsistencies and do not accept facile answers or excuses. Suspicious or illogical explanations when inconsistencies are raised may signal fraud.
- The presence of inconsistencies is unusual; the unresolved presence of inconsistencies is highly unusual; and both may signal fraud.
- If a transaction or activity occurs that does not pass one's own "common sense" test, then that alone is a good enough basis to consider the matter suspicious and to pursue due diligence.

Indicator 4: Misuse of Names

The person promoting a fraudulent scheme often seeks to enhance personal credibility or that of the scheme by associating it with the names of persons or organizations known, or likely to be known, by the person or entity to which the scheme is presented.

Explanation:

Names, particularly of those who are reputable or influential in the field, are misused in several ways in commercial frauds. Similarly, the names, logos, trademarks, catch-phrases, and symbols of a company or other entity, can be used in the perpetration of a fraud. A fraudster may suggest that individuals known within the field have reviewed and approved of the purported transaction, thus suggesting to the victim credibility, validity and enforceability of the fraudulent scheme. A fraudster may introduce or promote a scheme by asserting a false or exaggerated relationship with a person or entity known to the victim or its advisors. A fraudster may give the name of a well-known person or entity as his or her own or suggest an association with it, or a fraudster may simply adopt the name of another person or entity to hide the fraudster's own identity.

Instances and Examples:

- The names used in connection with commercial fraud may be of:
 - Well-known persons or organizations;

Illustration 4-1: A fraudster claims to be a protégé of the head of a country's Central Bank or Ministry or similar body, who is alleged to have provided advice regarding the scheme, but whose role and/or identity is not revealed.

Illustration 4-2: The fraudster introduces the potential victim to an actual or purported relative of an eminent person, such as the prime minister or a president of a country, who is willing to vouch for the fraudster or his or her proposed transaction.

- Individuals with whom the potential victim or the victim's advisors are familiar;

Illustration 4-3: The fraudster claims that the potential victim's business partner or friend has participated in the transaction when, in fact, that person has not.

- Or well-known organizations and rules.

Illustration 4-4: Documentation provided by the fraudster mentions the United Nations, or the International Monetary Fund or the International Chamber of Commerce, but gives no explanation as to its relationship to the transaction. Other references may be to ICC Rules, UCP 500, or SWIFT when the nature of the transaction does not correspond with the rules cited, or, more generally, to the involvement or approval of other "federal" or "national" or international banking or other authorities.

- A commercial fraud may be signalled where:

- The promoter of the transaction gives instructions concerning individuals or entities that the potential victim may wish to contact to verify the authenticity of the transaction:

Illustration 4-5: The fraudster suggests that an international or governmental entity approves of transactions of the type promoted. However, the fraudster warns the potential victim that if he or she contacts that body to ask about the transaction, the entity will be forced to deny the legitimacy of the transaction.

Illustration 4-6: The fraudster suggests that the president of a major bank has approved of the fraudster's transaction and suggests that the potential victim contact the president to discuss the transaction, even providing the president's telephone number and email address. However, the potential victim's inquiries are in fact answered by the fraudster or a co-conspirator, who assures the potential victim of the legitimacy of the transaction.

- The potential victim cannot verify that the references made by the fraudster actually support the transaction:

Illustration 4-7: The fraudster states that a well-known celebrity or sports figure has invested in the fraudster's purported transaction. Because the victim cannot contact the celebrity directly to discuss financial transactions, the reference cannot be verified.

- Or telephone numbers given to verify information are mobile telephone numbers, or do not correspond geographically with the address given.

Advice:

- An independent investigation of claims of affiliation should be conducted. Most well-known organizations have public information against which claims and documents can be compared for substantiation. However, note that elaborate schemes may involve the creation of false websites that mirror the authentic website of an organization, which may provide false information about the scheme.
- A solid investment opportunity should stand on its own merits and not rely on purported associations with well-known persons or entities.
- Do not rely upon or make assumptions about the use of names and reputations of alleged backers or prior investors without further inquiry and investigation.
- In countries or situations where it is difficult to investigate secret personal relationships with powerful people and organizations, extreme caution should be used by a prospective investor.
- Do not rely on a business card as a means of identification of the individuals with whom one is dealing.
- Professional intermediaries must also be aware of the dangers of relying on the use of names without an independent investigation.
- Organizations should actively and publicly defend their name and expose any improper use of it and should make publicly clear the organization's legitimate functions.

Indicator 5: Disproportionate Returns

Commercial frauds often guarantee high yields with little or no risk.

Explanation:

Every investor wishes to maximize returns. However, it must be remembered that returns are always proportionate to the perceived risk, which varies amongst investments. When the risk is high, investors require higher returns than they would receive from less risky investments before placing their capital at risk. Therefore, the higher the risk, the greater the promised return. Commercial frauds distort this principle of proportionality, promising high returns for little or no risk in order to induce investments. Often promised returns are even far in excess of what could be earned from highly speculative investments. The risk-free character of the proposed investment is emphasized using a variety of means, including promises or guarantees from the fraudster or from third parties or entities. Some fraudulent

schemes purport to provide evidence that the returns are being earned or they may even actually pay such returns from the money originally invested or from money invested by other investors.

Instances and Examples:

- Commercial frauds promise:

- Low risk;

Illustration 5-1: The literature in support of the investment provides assurances that the principal or principal and earnings are “risk free” or “without risk”.

Illustration 5-2: The funds are said to be in an account that is under the control of the investor and that the funds will not be moved without the investor’s permission.

Illustration 5-3: The funds are said to be placed in an escrow account of a professional such as an attorney, which is intended to provide added confidence as to the safety of the investment and the funds. However, the professional may be deliberately assisting in the fraud or may be under the instruction of the fraudster rather than of the person depositing the funds.

Illustration 5-4: Phrases such as “riskless principal” are used out of context.

- Guarantees are made or given;

Illustration 5-5: The fraudster provides a personal guarantee or one from an accomplice, but such a guarantee is worthless.

Illustration 5-6: The fraudster promises a guarantee from a major bank or financial institution which will be provided when the investment is made.

Illustration 5-7: The fraudster indicates that the funds or investment are insured.

Illustration 5-8: The fraudster asserts that the funds are guaranteed by a governmental or international agency or organization.

- Or disproportionately high returns.

Illustration 5-9: The returns promised frequently range from 20 per cent per month to 50 per cent per month in a low inflation currency.

- The disproportionately high returns are explained in a variety of ways.

Illustration 5-10: High returns are justified by the volume of “trading” in which small profits per trade are accumulated. Usually the mathematics supporting these figures is flawed: the calculation may fail to take into account expenses, or may suggest more trades than typically take place in the given investment.

Illustration 5-11: Sales and market data are often manipulated, especially with respect to the time frame, to make it seem that returns are very high over a very short period of time.

- Note: Even the actual payment of promised high returns does not ensure the legitimacy of the investment.

Illustration 5-12: Alleged returns may be paid from the investor's own money or that of other investors and not from any real return on the investment.

Illustration 5-13: Such high returns often appear only as bookkeeping entries and investors are encouraged to "reinvest" by the promise of even higher returns.

Advice:

- If an investment scheme sounds too good to be true, it probably is not genuine.
- Perform due diligence by understanding the nature of the investment, its likely and possible risks and returns or consulting with an independent person who may be relied upon to provide appropriate advice.
- Beware of confidence builders, i.e. small, insignificant transactions which appear effective and offer suitable returns aimed at inducing further and more substantial investment.
- Excessive emphasis by a promoter on rate of return, or that an investment is "no risk" or "low risk" or "high return", with little or no discussion of the substance of the investment should be a cause for concern.
- The returns promised are completely out of proportion to the risk assumed and to prevailing market rates of returns.

Indicators of Commercial Fraud

CONTENTS

Indicator 6: Undue Secrecy	
Indicator 7: Overly Complex or Overly Simplistic Transactions	
Indicator 8: Frustration of Due Diligence	
Indicator 9: Corrupted Incentives	
Indicator 10: Ensnarement and Psychological Inducements	
Indicator 11: Crisis-Caused Breakdowns in Preventive Controls	
Indicator 12: Immediate, Fast or Irrevocable Transfer of Funds	
Indicator 13: Questionable or Unknown Source of Repayment	
Indicator 14: Irrational or Illogical Aspects or Explanations	
Indicator 15: Fraud Based on Abuse of Personal Affinity or Relationships	

Indicator 6: Undue Secrecy

Commercial frauds frequently seek to impose undue secrecy and confidentiality on a number of issues including the existence of the opportunity to invest, the nature of the investment, the investment mechanisms and the source of return.

Explanation:

Transparency is critical to the functioning of modern financial markets and information about these markets and investments is widely available. On the other hand, investors do engage in investments based on confidential information or information whose significance is not widely understood. In some situations, acting on such information can be illegal. In other commercial activities, companies legitimately seek to prevent disclosure of confidential information or industrial techniques by employees or others by various legal devices in order to remain competitive in an industry. Such restrictions however, are almost never appropriate with respect to investors and particularly not with regard to the means by which funds are to be generated. Undue secrecy is a level of secrecy that goes beyond that which is appropriate to the transaction.

The requirement of secrecy may be set out in rules or requirements, often coupled with “legal sanctions” purporting to make investors liable for damages should they disclose any information, in order to suggest that the financial decision maker would be implicated, should the transaction be revealed. Such secrecy is intended to obscure the transaction, to inhibit the exercise of due diligence and to prevent investors from contacting advisors or appropriate sources of information that might assist the investor in avoiding the fraud.

Instances and Examples:

- Multiple excuses are given to justify undue secrecy.

Illustration 6-1: Frequently, it is claimed that consulting with knowledgeable persons or organizations disrupts the business transaction, interferes with the deal somehow, and ruins the opportunity for profits.

Illustration 6-2: Claims are often made that banks, stock markets, CEOs, professionals, or prominent persons engage in the type of investment at issue on a regular basis, but secretly, in order to prevent the public from gaining a similar financial advantage.

Illustration 6-3: It is often claimed that the laws of off-shore jurisdictions that are somehow connected to the investment require such secrecy.

- During the course of the transaction, victims are often warned against contacting the police, regulators, or other officials.

Illustration 6-4: It is often stated that the involvement of regulators will cause the transaction to be frozen, delayed, or jeopardized, placing the onus on the victim.

- The term “Non-Circumvention or Non-Disclosure” is frequently used in connection with attempts at secrecy. Such provisions are used in businesses where there is a middleman linking buyer and seller, but are completely inappropriate or of concern with respect to ordinary investments.

Illustration 6-5: Victims are required to sign a detailed ICC (International Chamber of Commerce) Non-Circumvention and Non-Disclosure Agreement that, if taken at face value, would prevent them from discussing the investment with their accountant, attorney, or financial advisor.

- Confidentiality or secrecy is often given as an excuse for the lack of public information about the investment.

Illustration 6-6: Illogical claims that allegedly prove the genuine nature of the transactions, such as that the United States Federal Reserve chairman knows about this type of transaction, but if asked about it, he would deny it.

- Sources of concern include the following in a financial as opposed to a commercial transaction:

Illustration 6-7: Repeated insistence on absolute secrecy.

Illustration 6-8: investors are required to sign agreements with disproportionately serious sanctions should they disclose information.

Advice:

- Investors should discuss the proposed transaction with a competent professional advisor.

- An investor should ask whether there is any commercial imperative for the secrecy or whether the secrecy is unrelated to the core concept of the investment.
- An investor should not be intimidated by the suggestion that liability will result from revealing aspects of the transaction to financial advisors.
- An investor should remember that legitimate confidentiality agreements do not prevent or forbid either the performance of due diligence on the transaction, or the contacting of authorities.
- An investor should not participate in investments when funds are moved off-shore unless complete and detailed information on the transaction is available in order to ascertain where money is flowing and whether movement of funds to that jurisdiction could be improper.

See also: Indicator 1 — Irregular Documents; Indicator 2 — Misuse of Technical Terms; Indicator 4 — Misuse of Names; Indicator 8 — Due Diligence; Indicator 9 — Corrupted Incentives; Indicator 10 — Ensnarement and Psychological Inducements; Indicator 12 — Immediate, Fast or Irrevocable Transfer of Funds; Addendum 1 — Performing Due Diligence.

Indicator 7: Overly Complex or Overly Simplistic Transactions

Commercial frauds are often designed to be overly complex in an attempt to obscure the fundamentals of the transaction, and may include illogical representations as well as convoluted, circuitous or impenetrable documentation. On the other hand, some commercial frauds may also be unduly simplistic or informal, with very little documentation or explanation, despite their apparent connection with a sophisticated or complex financial transaction.

Explanation:

Although commercial transactions, particularly international commercial transactions, may at times be complex by their very nature, the person being asked to make a decision with financial implications should have at least a basic understanding of the transaction in which participation is being solicited. Fraudsters often use as a model legitimate transactions that are highly complex and therefore marketed only to very sophisticated investors. This model is then used by the fraudster to involve less sophisticated individuals who may not be capable of understanding the nature of the transaction or the necessity of the complexity. Further, a web of companies or other entities may be created in order to distance the fraudster from blame when the fraud is discovered, to frustrate asset recovery, to launder the proceeds of crime, or to enable the fraudster to continue to operate a series of parallel schemes. Artificial or unnecessary complexity and absurd oversimplifications are two techniques that fraudsters use to obfuscate the fundamentals of the transaction, which, typically, make no economic sense.

Instances and Examples:

- Inordinately complex business structures that create a façade for multiple companies with no apparent role or reason are designed to make it difficult to hold fraudsters accountable.

Illustration 7-1: Six individuals formed a number of corporations and companies under the umbrella of a “programme of empowerment” and “wealth enhancement” network, conducting large workshops to entice unsophisticated investors into investments in foreign currency that they falsely described as highly profitable and “low risk”.

- Very little documentation may be associated with an unduly simplistic or informal transaction that would ordinarily require significant documentation.

Illustration 7-2: Homeowners in imminent risk of foreclosure were persuaded to sign a simple form to “temporarily” transfer ownership of their homes to “straw buyers”. The straw buyers then applied for mortgages on the homes using phoney credit histories. After draining the equity, the loans were defaulted upon, subjecting the owners to threats of eviction. The financial institutions recovered little.

Illustration 7-3: The presence of highly informal text in the documents, for example, the use of a phrase such as “telephone at the usual number”, may signal the presence of a commercial fraud.

- Complexity compounds problems related to tracking payments and disbursements and recovering funds.

Illustration 7-4: Frequently, fraudsters use multiple layers of business entities to conduct multiple transfers of funds and/or frequent changes of depository banks. Since transnational fraud schemes also often use Internet-based funds transfer mechanisms rather than conventional banking channels, such funds are extremely difficult to trace.

- Technology, including transportation, information and communication technology, is increasingly being used to inject complexity in order to avoid detection and to conceal proceeds.

Advice:

- Be aware that there may be commercial fraud when there is no explanation and no apparent commercial purpose for complexities in the transaction, where intricacies appear artificial, where there appear to be parties with no meaningful role, or where the number of transactions or transfers or the structure of the transaction make it difficult to investigate it.
- Ensure that the purpose of each element of the transaction is understood. Do not be afraid to ask questions, even though it is possible that the answers might be obvious.
- Legitimate transactions may be complex, but, if so, they require informed counterparties using independent advice from knowledgeable sources.
- If details cannot be provided immediately, it should not deter the investor from obtaining the details from elsewhere prior to investing.

- Inquire into who initiated the transaction, who is recommending it, who is promoting it, and why a particular individual was approached as a potential investor. When there is an apparent effort to discourage questions from being asked, be suspicious of the reasons.

See also: Indicator 8 — Frustration of Due Diligence; Indicator 10 — Ensnarement and Psychological Inducements; Indicator 19 — Unsolicited E-Mail and Related Misuse of Technology; Addendum 1 — Performing Due Diligence.

Indicator 8: Frustration of Due Diligence

Since due diligence is the key tool through which suspicions can be explored and suspicious transactions avoided, it is a primary goal of fraudsters to frustrate the proper exercise of due diligence.

Explanation:

The person or entity being asked to make a decision with financial implications should ensure that due diligence is conducted through independent sources to investigate the proposed transaction, particularly any unusual aspects. The person being asked to invest should have the greatest motivation, and be best-placed, to conduct due diligence. Commercial frauds employ a wide variety of devices to frustrate the exercise of due diligence, whether by creating distractions; by creating false credibility through the impression of mass approval; by controlling the means by which due diligence is exercised; by directing the investor towards non-independent sources; through the use high-pressure sales tactics; through insistence on urgency or secrecy; or the like. Any attempt to thwart the complete and independent investigation of the transaction and especially unusual or questionable aspects is highly suspicious.

Instances and Examples:

- A fraudster may attempt to prevent the exercise of due diligence by:
 - Presenting information in support of the transaction that cannot be verified;

Illustration 8-1: A fraudster may suggest that eminent persons who cannot be contacted are involved with or have approved the transaction, or that the roots of the transaction lie in historical private or international agreements.

- Insisting on absolute secrecy;

Illustration 8-2: The fraudster promotes an investment to the potential victim but tells the potential victim that the investment and promised returns are only possible if absolute secrecy is maintained.

Illustration 8-3: The fraudster may claim that information used in promoting the investment is proprietary, secret, or confidential, and cannot be shared with independent sources for due diligence.

- Using high-pressure tactics;

Illustration 8-4: The fraudster insists that there is only a “short window of opportunity”, or a “last chance” to invest before the opportunity is lost forever.

Illustration 8-5: The sense of immediacy may be tied to unrelated but current world events or crises, such as political upheavals or natural disasters, in order to increase the pressure to invest quickly.

- Insisting that due diligence is unnecessary;

Illustration 8-6: In a situation where the fraudster controlled all parties to a transaction (the buyer, seller, and shipper), the buyer sought a letter of credit from its bank in favour of the seller. Although the goods did not even exist, the fraudster created forged documents that state that the goods had been delivered, and sought to draw on the letter of credit. To persuade the bank employee to issue the letter of credit, the fraudster persuaded the employee that he had spoken to the employee’s boss, who approved the transaction and the letter of credit, and the fraudster suggested that therefore the employee did not even require proof of ownership of the goods.

Illustration 8-7: A fraudster promotes a high-yield investment programme assisted by a lawyer and an accountant. Attendees at a seminar touting the investment programme hear presentations by the lawyer and accountant who claim to have examined the transaction and found it to be legitimate. Attendees are led to believe that the lawyer and accountant are independent, but they are each co-conspirators in the scam.

- Suggesting that the transaction has gained the approval either of the public or officials in the field;

Illustration 8-8: The fraudster promotes a high-yield investment programme to the potential victim and invites the potential victim to a seminar where the potential victim can learn more about the programme. The potential victim is taken to a seminar with hundreds of other potential investors. At the seminar, the fraudster touts his or her wealth, and may use the additional technique of promoting an association of the programme with well-known public figures, even if in a general way. All of these techniques generate a sense of mass approval intended to dissuade the victim from performing proper due diligence.

Illustration 8-9: Fraudsters can use any type of media, including print and electronic media, e-mail, television, live presentations, and the creation of convention-like events, to create a sense of mass approval of a certain “opportunity”, in order to distract the victim from performing due diligence.

- Suggesting that due diligence is being performed and therefore it is unnecessary for the investor to do separate due diligence;

Illustration 8-10: A fraudster can give the impression that due diligence is being exercised when it is not by claiming that it is being undertaken by a third party, or by insisting that a guarantee,

an escrow account, or some sort of outside professional involvement affords sufficient protection to the investor.

Illustration 8-11: A fraudster may recommend a specific professional to carry out the due diligence, but that professional has either been compromised by the fraudster, or has insufficient knowledge to carry out thorough due diligence.

- Or making due diligence impossible to accomplish, even while suggesting that the investor perform his or her own due diligence.

Illustration 8-12: A fraudster may encourage the potential investor to perform due diligence, but may effectively block its performance by providing incorrect or compromised contact information, creating excuses why key people cannot be contacted, providing insufficient detail regarding the transaction to perform the due diligence, and the like.

- Commercial fraud may be signalled where there is unusual difficulty in obtaining additional and independent information on the transaction or the parties, due to their identities, to their geographic location, or to other factors.

Illustration 8-13: Fraudulent transactions often involve international companies based off-shore, making due diligence more difficult.

- A fraudster may steer the potential victim toward non-independent sources of information when due diligence is being pursued, or may present false documents to bolster credibility.

Illustration 8-14: Fraudsters will use different means to frustrate due diligence, including setting up collaborators for the victim to call to verify information, and they have even been known to create elaborate shell businesses with actual premises when pursuing large investments from victims.

Advice:

- It is absolutely essential to seek independent advice from sources other than those provided by the person encouraging the investment.
- The person from whom advice is sought should be knowledgeable about the subject matter.
- The key facts of the transaction should be verified.
- Trust one's common sense and investigate thoroughly when an aspect causes one to feel uneasy.
- Be aware that modern commercial fraudsters often work in sophisticated groups that loosely corroborate and reinforce one another and the scheme.
- Evaluate the reasons for the immediacy, if any.
- Take time to investigate and do not rush into a business decision, especially when the decision is regarding something out of the ordinary course of one's business.

Indicator 9: Corrupted Incentives

Commercial frauds may involve taking advantage of an entity's performance incentives or offers of assistance, gifts, favours or other inducements to particular individuals in exchange for consideration that would not otherwise be available, or to overlook certain questionable activity.

Explanation:

Performance incentives designed in accordance with international and national laws, professional ethics and industry standards can be a useful tool for encouraging profitable performance, particularly when they are subject to rigorous oversight. However, they can also mask fundamental problems with an account or a relationship, or give employees strong incentives to ignore what might otherwise be troubling signs.

Unless properly communicated, reported upon and monitored, even the best-intended employee incentive programmes weaken an entity's protection from commercial fraud. In addition to the possibility of employees themselves engaging in fraudulent activity to obtain incentives from their employer, outsiders may corrupt otherwise legitimate employee incentive programmes by seeking out poorly-managed schemes and targeting employees prepared to exploit those weaknesses.

Another aspect of corrupt incentives in general is the use of gifts, status, favours, money, data, information or other inducements to create a conflict of interest for the recipient. By using such means to persuade senior management or other employees to engage in practices that are contrary to the generally accepted standards of prudent operation, fraudsters may use incentives to undermine the organization as a whole. What is sought can range from general amenability to help or to encourage the recipient to do something specific that is not improper in itself, but that facilitates something that is improper, to inducements that result in the recipient becoming a collaborator in the scheme.

Fraudsters may also mirror business incentives as a device in the course of their schemes: for example, by offering early investors financial incentives to recruit others in pyramid schemes, where payments are made from other participants' money. Fraudsters often use such incentives to persuade participants to "roll over" or reinvest illusory profits rather than be paid.

Instances and Examples:

- Employees or fraudsters will take advantage of poorly monitored corporate performance incentives, for example, to enter into continuing transactions even when such transactions seem suspicious.

Illustration 9-1: One hedge fund executive lost several hundred million dollars of investors' funds and deceived them and related institutions for more than three years using fake account statements.

- Gifts, status, favours, money, data, information, or other inducements that may create a conflict of interest for the recipient are intended to cause the

recipient to give consideration that would not otherwise be available or to overlook or examine things that would otherwise be suspicious or problematic.

Illustration 9-2: To curry favour, lenders provided all-expenses-paid trips for university financial aid officers and put university officials on their boards. Many universities operated as trusted middlemen by recommending these “preferred lenders” that did not necessarily offer the best rate to student borrowers.

- Internal and external incentives and gifts may signal corruption or fraud in certain identifiable ways.

Illustration 9-3: An employee is meeting very high performance expectations, with little oversight or understanding of transactions.

Illustration 9-4: Unusual hospitality or excessive professional fees or excessive consultants’ fees are offered.

Illustration 9-5: A businessman well-known for generosity gave very expensive gold watches to bankers and lawyers that made it difficult for them to ask difficult questions about the large loans that he took out and ultimately defaulted on.

- Commercial and financial decisions should be made on their own merits.

Illustration 9-6: The person whose influence is sought can be either the direct or indirect recipient of the gifts or favours, which may also be given to children, parents, spouses, etc.

Illustration 9-7: The fraudster’s goal is to obtain undue consideration or cooperation including obtaining contracts, information, documents, reducing the willingness to ask questions, providing access to people, compromising the integrity of the recipient or to encourage the recipient to become part of the scheme.

Illustration 9-8: Scheme incentives typically include promises of unusual or excessive returns and strong encouragement to re-invest the windfall.

Advice:

- The oversight of employee incentive programmes should include review and audit by independent persons.
- Systems should be in place to identify and resolve causes of employee grievances and to ensure that there are adequate and effective whistle-blowing policies.
- Employers should have policy guidelines in place regarding receipt and reporting of gifts and favours, and should ensure that employees are aware of, and adhere to, those guidelines.
- Professionals should be aware that they are often targets of attempts at improper inducements.

- When receiving a gift, any employee or professional should consider carefully the value of the gift and the identity of, and relationship with, the giver.
- Employers should ensure that purchases of gifts at company expense should be subject to review and approval by persons other than the donor.
- Investors must understand how returns on an investment are generated, ask questions when cautionary flags are raised, and be open to seeking confirmation from an expert advisor.

See also: Indicator 5 — Disproportionate Returns; Indicator 6 — Undue Secrecy; Indicator 8 — Frustration of Due Diligence; Indicator 13 — Questionable or Unknown Source of Repayment; Indicator 16 — Fraud By or Involving Employees; Indicator 20 — Pyramid and Multi-Level Marketing Schemes; Addendum 1 — Performing Due Diligence.

Indicator 10: Ensnarement and Psychological Inducements

Fraudsters may seek to entice victims by using psychological inducements and manipulation first to persuade them into participating in the fraud, and then to ensnare them with respect to the real or imagined illegality of their participation in the fraud. Such ensnarement is then used against them to distract them or to obtain their silence regarding the much more serious commercial fraud being committed.

Explanation:

Commercial frauds often use psychological inducements to encourage a financial decision-maker to enter into a fraudulent transaction, and then to avoid detection of the fraud. The most obvious inducement is an appeal to greed, but other factors can include flattery of the decision-maker, through gifts or references to investor sophistication or the general appeal of being included in a private and exclusive deal. Many fraudsters can be very charming and persuasive people.

In terms of ensnarement, there is a natural psychological and moral reluctance to commit an improper or illegal action. Where an investor is induced to commit an act that may be questionable or illegal by a person seeking to involve the investor in an investment or other financial opportunity, this may be a device to ensure their silence or to distract them from the commission of a commercial fraud. Later attempts to avoid detection can include such psychological tools as threats regarding disclosure and suggestions of collusion or ensnarement.

Instances and Examples:

- Fraudsters depend upon and prey upon powerful human emotions such as greed, pride, empathy or fear.

Illustration 10-1: Potential victims are seen by the fraudsters as predisposed to believe there are secret ways to make enormous amounts of money with no risk.

Illustration 10-2: While still in the enticement stages, a proponent of the investment appeals to the victim's ego by alluding to investment sophistication or by trying to make the victim feel foolish for asking for explanations of complex transactions or technical terms.

Illustration 10-3: In many common financial frauds, cheques and money orders are made out for amounts larger than the debt owed or commission to be paid to the victim, so that the victim is induced to deposit the cheque or money order in his or her bank account and to wire the balance of the funds to a foreign bank account before he or she is notified by the banks that the cheque or money order is counterfeit or invalid.

Illustration 10-4: Advance-fee fraud resorts to the victims' predisposition to cooperate with government regulations by inducing them to pay money to fraudsters for nonexistent "taxes", "fees", or "customs duties" before the fraudsters are expected to provide whatever goods or services (e.g., offshore tax shelters) they have promised to victims.

- Commercial fraud schemes may be designed to appeal to certain psychological profiles by suggesting 'secret' markets, conspiracies or exclusive business circles

Illustration 10-5: Those who may be seen as distrustful of government are offered investments to avoid paying taxes through offshore accounts. In one multi-million dollar fraud, victims were offered 80 percent annual returns through a secretive web of money dealers supposedly set up by a coalition of governments in 1914 to pay for World War I debt. The scheme claimed that seven "world traders" control the entire global money supply and act as a board of directors for a few hundred "licensed traders" around the world.

- Promoters look for weaknesses in population groups, concentrations of immigrants, the poor, the elderly and the infirm, preying on emotions such as the fears of senior citizens running out of money.

Illustration 10-6: In a common scheme, information is received by the elderly that the recipient has won a large "unclaimed prize" or international sweepstakes drawing or lottery that must be claimed by submitting an advance fee or by calling a telephone or mobile phone number to which significant charges apply.

Illustration 10-7: Victims may be more at risk depending on their particular profile or their stage in life, such as whether they are elderly, recently divorced, have health problems, or may have recently won or been awarded a substantial amount of cash.

- Some fraudsters use flattery and the veneer of sophistication to entice victims to participate in the fraudulent investment.

Illustration 10-8: The fraudsters may make a display of lavish lifestyles and expensive luxury goods as they offer sophisticated sounding but fictitious investment products that mimic the many new legitimate products, while counting on naïve investors not to ask questions to avoid seeming to be themselves unsophisticated.

- When other psychological inducements fail, fraudsters often resort to inducing compliance by threat or actual use of violence.

Illustration 10-9: Investors who have not realized they are victims are used to entice others to participate. When the fraud is discovered, these middlemen fear they, too, will be implicated, and the fraudster uses that fear to keep the middlemen quiet.

Illustration 10-10: Once a victim discovers the fraud, the fraudster may threaten public embarrassment by exposing involvement in the scheme, or may string the victim along with a series of mythical difficulties, or may offer the potential of new schemes with even greater returns, all common tactics used to delay or deter disclosure of activities.

Illustration 10-11: It may be suggested to an individual involved with the scheme, often a professional, that the professional has become a conduit for money-laundering, although perhaps unwittingly, and once implicated, the professional may be reluctant to report the scheme.

Illustration 10-12: A major telephone service provider was threatened because a fraudulently activated phone had been shut off. In a recorded telephone call, the fraudster threatened the telephone service provider that if the provider did not provide access to its computer system, he would cause its web service to collapse through a denial of service attack — an attack designed to ensure that a website is so flooded with requests for information that legitimate users cannot access the website.

Illustration 10-13: Fraudsters will try to frighten victims telling them that they are deeply implicated in the fraud and that they will not be allowed to escape the fraud, or that the fraudster has ways of seeing to it that they will be arrested by national or international law enforcement authorities. Witness intimidation is common in commercial fraud.

- Fraudsters rationalize that there are no real victims because their targets are avaricious, complicit and gullible.

Advice:

- Try to objectively appraise the merits of the proposed transaction, and be aware that suspicions that flow from one's own common sense appraisal should be taken seriously. Ask oneself "Why me? If this scheme really works, why is some stranger in a hotel meeting room or on the telephone or the Internet approaching me with a complicated financial deal with such high returns with an offer to allow me to participate?"
- One's ego should not override one's suspicions — keep asking questions, even though the scheme's promoter may intimate that one is foolish for not understanding. It is much more foolish to invest in something that is not completely understood.
- Obtain legal advice from independent counsel with the competence to advise regarding the transaction.
- Do not be discouraged from reporting a fraud to the authorities because of some ensnarement aspect.

Indicator 11: Crisis-Caused Breakdowns in Preventive Controls

Commercial frauds may exploit weaknesses in control systems in order to take advantage of generous or emotional impulses in the aftermath of natural and man-made disasters.

Explanation:

A hallmark of civilization is the exercise of generous impulses and actions towards those less fortunate. Natural and man-made disasters bring forth such impulses spontaneously. In response to recent hurricanes, typhoons, earthquakes and tsunamis, the public and private sectors of the international community have worked together and spent billions on recovery. The mass destruction of homes, businesses and public infrastructure and the displacement of millions of individuals require emergency action, characterized by trust in common purpose. Commercial entities and transactions have a significant role in making possible support of disaster recovery by the private and public sectors. However, coincident with the common good, neither the presence of an emergency nor our natural crisis-driven impulse of mutual trust should take the place of understanding the investment or business transaction, or of the exercise of due diligence and vigilance in preventive controls. A key lesson of past disasters is that funding lost to fraud slowed the recovery effort and reduced the amount of support that could have been delivered to alleviate the suffering and needs of legitimate victims.

Fraudulent schemes anticipate that, in the aftermath of disasters, individuals, businesses and governments will tend to suspend due diligence or circumvent the operation of normal preventive controls. In the mental model of fraudsters, disasters create opportunities by opening or exposing control weaknesses at a time of enhanced national or international urgency and when there is a general heightened emotion on the part of populations wishing to place trust in a common purpose.

Instances and Examples:

- The outpouring of public generosity in the immediate aftermath of a disaster is often manipulated by attempts to exploit charities or charitable giving.

Illustration 11-1: There are always some fraud schemes involving solicitations for ostensibly charitable purposes. When natural disasters strike, the incidence of such schemes can rise dramatically. After the terrorist attacks of September 11, 2001, the Indian Ocean Tsunami and Hurricanes Katrina and Rita, for example, law enforcement authorities saw a significant number of schemes that purported to be collecting money for first responders and survivors of the disasters.

Illustration 11-2: “High-yield” investment schemes spring up very quickly after major disasters or world events. Characteristic of such schemes the selling tactics are not aimed at a purely charitable purpose but mix the promise of great profits with alleged charitable or “humanitarian project” benefits. Often fraudsters allege that the scheme is “sanctioned by the United Nations” or that it is a “UN approved programme for investment”.

- As governments organize for response, fraudsters search for control weaknesses in their procurement, benefit and grant processing.

Illustration 11-3: Procurement fraud schemes, such as kickbacks from vendors to contracting agency employees in exchange for favourable treatment, occur with frequency in contracts for procurement of goods and services after large-scale natural disasters, when many governments and international agencies enter into contracts for debris removal and infrastructure rebuilding.

Illustration 11-4: Fraudsters pressure evacuees to give the fraudsters permission to receive their mail. Government disaster assistance cheques intended for the evacuees are sent to the fraudsters’ addresses and then diverted to secure cash or buy goods from local businesses. Often the goods are then sold directly or through online auctions initiated by fraudsters in other regions, or even other nations, serving as “brokers” for theft rings in the immediate area of the disaster.

- As private sector resources are accessed to engage in disaster recovery, fraudsters take advantage of information gaps in the damage assessment process and systemic breakdowns in controls normally associated with financial systems.

Illustration 11-5: Examples of insurance fraud include fraudulent claims for property damage or loss, or for feigned physical injury, and false claims for renovations due to disaster damage, as well as sales of false insurance contracts.

Illustration 11-6: Displaced financial institutions attempting to provide emergency banking services to disaster survivors experience an increase in cheque kiting: the use of several bank accounts in different geographic areas to make deposits and write cheques against the accounts before the deposit cheques clear the banking system, creating a “float” of money out of nothing more than the lag in time while cheques clear and post to their respective accounts.

Advice:

- Exercise any charitable impulses through appropriate and recognized charities.
- Where there are claims that an investment will not only achieve high returns, but that it has the additional benefit of humanitarian purposes, disaster relief, or the like; or where such motives are held out as a basis for justifying investments or other financial opportunities that are not

explicable or justifiable on their own business terms, there may be an indication of commercial fraud.

- The sudden interjection of a commercial transaction in a non-commercial setting should raise concern that there is no real or logical connection between the charitable cause and the proposed scheme.
- With a focus on substantially diminishing the opportunity for fraudulent access to systems through front-end controls, preventive controls are a key element of an effective fraud-prevention programme.
- Well before any disaster, preventive controls should be field tested to ensure they operate as intended.
- Repeat offenders are common in Internet-based fraud. Databases of prior fraud, as a defensive method, for example to compare elements of incoming orders to information in the prior-fraud database, may guard against repeat false orders or invoices.
- A well-trained work force that is aware of the potential for fraud can help prevent fraud. Fraud awareness training with frontline personnel — specifically on the potential for fraud within the programme and the likely types of fraud they could encounter — is crucial to stopping fraud before it gains access into the business or government operation.

See also: Indicator 8 — Frustration of Due Diligence; Indicator 15 — Fraud Based on Abuse of Personal Affinity or Relationships; Addendum 1 — Performing Due Diligence.

Indicator 12: Immediate, Fast or Irrevocable Transfer of Funds

Commercial frauds often pressure potential investors not only to make a very rapid decision, but also to immediately or quickly transfer funds, leaving little to no time for due diligence or reliance on expert advice.

Explanation:

Legitimate transactions often require quick decisions and immediate action. However, the individuals or entities engaged in such transactions typically are able to participate because of a prior understanding of the nature of the risks and rewards involved. Thus, those individuals and entities do not suspend due diligence in favour of quick decision-making, but instead, exercise due diligence of a different variety, or at different points in the transaction.

A fraudster will often persuade a victim of the need for quick decisions in an attempt to thwart due diligence or to effect an irrevocable transfer of funds in the fraudster's favour. A person or entity being asked to make a decision with financial implications may be pressured to effect immediate, fast or irrevocable transfers of funds in order to complete the transaction. Once sums have been transferred, they are easily further transferred by the fraudster, often into other international jurisdictions that may make retrieval or tracing difficult or impossible.

Instances and Examples:

- The fraudster will insist on an immediate transfer of funds, leaving little or no time for even basic due diligence.

Illustration 12-1: The promoter of an investment touts the investment's certain rewards and high yield. At the same time, the promoter will warn the potential victim that the investment opportunity "will not last", or is a "once in a lifetime opportunity", and that the victim must "act fast". The promoter insists on a quick decision before the victim has sufficient time to thoroughly review the transaction.

- The immediacy of the transaction may be used to induce the victim to agree to additional terms.

Illustration 12-2: An investor is induced to authorize a transfer to a new account established for the fraud. Because of an alleged need for urgency and convenience, the investor is induced to add the fraudster or his or her accomplice as a co-signer on the new account. The fraudster and co-signer then transfer the funds in the new account into their control.

- A fraud may also involve the immediate and irrevocable transfer of funds to off-shore companies.

Illustration 12-3: A transaction involves transfers to an off-shore company described as an "anonymous" off-shore company, or to an off-shore company, trust, or account in a "tax-haven" jurisdiction.

Advice:

- Do not be induced to enter into a transaction before exercising the requisite due diligence because of pressure and time limitations.
- Never relinquish control over banking or investment accounts.
- Understand the reasons given for any transfer of funds, especially when a transaction involves multiple transfers.
- Be particularly vigilant regarding transfers of money to another jurisdiction, especially off-shore jurisdictions which have secrecy laws and make any recovery of transferred funds extremely difficult and cost-prohibitive.

See also: Indicator 6 — Undue Secrecy; Indicator 8 — Frustration of Due Diligence; Addendum 1 — Performing Due Diligence.

Indicator 13: Questionable or Unknown Source of Repayment

Commercial frauds often obscure the source of payment of alleged earnings or returns on an investment by referring to vague sources, foreign sources, uncertain sources, such as generic "trading programmes" (sometimes on "secret" markets), or by suggesting sources of payment in unregulated international jurisdictions or from non-regulated entities.

Explanation:

Knowing the source of repayment, as well as compliance with documented procedures that ensure accurate, timely repayment of earnings and returns is essential to legitimate commercial transactions. In commercial transactions, genuine

financial intermediaries possess sound principles of management, clear business models and documented and well-executed processes that are subjected to ongoing evaluation of efficiencies. Efficient repayment operations are conditioned on clear and known rules and accurate communications with trusted counterparties. Commercial transactions often require foreign sources of repayment, however, transactions typically do not include unexplained complexities, or use of inefficient repayment methods, or requirements that sources of repayment depend upon unregulated international jurisdictions. Nor would it be usual for an offshore or foreign source of repayment to be part of an otherwise wholly domestic transaction. The person or entity being asked to make a decision with financial implications must understand the business reasons justifying the underlying transaction, and determine the specific commercial reasons for any complexities, and must know, with certainty, the source of repayment.

Fraudulent schemes often entice prospective investors into not questioning the source or method of repayment by offering unusual financial incentives that are not related to the underlying transaction, or that have no commercial justification. Investors may be lured by an “enhanced rate of return” to accept a promise of repayment from an entity with no discernable business connection to the transaction. Often, part of a fraudulent scheme may depend on the investor agreeing to repayments transacted through jurisdictions regarded as secrecy havens. This “offshore source” feature subjects the victim to further manipulation: by agreeing to unusual sources of repayment in exchange for the potential to avoid paying any taxes on proposed returns, the investor becomes complicit in the scheme. Vague, uncertain or offshore sources of repayment are often used to keep investors in a state of doubt, so that a fraud is not noticed until it is too late.

Instances and Examples:

- The true nature of a transaction will be obscured, will likely lack commercial purpose, and will have improbable characteristics, such as disproportionate returns.

Illustration 13-1: “Historical bonds”, or bonds that were once valid obligations of commercial or sovereign entities but that are now worthless as securities and only collected or traded as memorabilia, are said to be worth millions or billions of dollars based on third-party statements often referred to as “hypothecated authentications” or “hypothetical valuations”, and are sold to unsophisticated investors at inflated prices far exceeding their value as collectibles.

- Returns are claimed to be from purported sales of more of a commodity than is produced or available in the world.

Illustration 13-2: The source of repayment is claimed to be gold, that is “collateralized” by fictitious “gold certificates” or “warehouse receipts”, variously said to have been issued by obscure or non-existent offshore banks, or by major financial institutions, or even by well-known international organizations, representing gold bullion that, if true, would require more gold than produced in recorded history.

- Repayments are sourced from other participants’ investments or from a participant’s own investment.

Illustration 13-3: In one “pyramid scheme” a “trading company” sold bags of ants asking investors to breed the insects and bring them back for a 130 per cent return. Initially, the purchase money received from new investors was used to pay returns to the previous investors. Pyramid schemes reach critical mass, and collapse, when the source of funds from new investors is inadequate for repayment of prior investors.

Illustration 13-4: After falling for “high-yield”, “Prime Bank” investment fraud, victims are often approached by a second team of fraudsters with an offer of “fraud recovery” services. Small amounts are “recovered” in exchange for an “advance fee”. The victims are then pressured for additional and more substantial fees, and promised “more complex” higher value recoveries. The source of all funds “recovered” by the second team is the victims’ own funds in the hands of the first team. The fraud continues until the second team has extracted all the fees the victims are willing or able to pay. By this time, the victims will have lost all funds initially “invested” with the first team and all “advance fees” paid to the second team.

Advice:

- Be able to identify the commercial purpose of the transaction and understand how the returns are generated.
- An overemphasis on esoteric details, such as “historical bonds”, overly complex methods of payment, inconsistent explanations regarding sources of repayment, and unusual requirements predicate to earnings, are not typical of legitimate business dealings.
- When returns are overdue an investor should immediately seek independent, objective advice and accept no excuse.
- When a major source of returns is derived from inducing others to invest and, in turn, recruit others, great care must be exercised regarding the legitimacy of the scheme. If the major commercial purpose is obtaining percentages of investments from lower tier investors, it could be a so-called “pyramid scheme”.
- Do not become so focused on the amount of the alleged returns on the investment that one forgets to focus on the source of those returns.
- Be suspicious of repayment methods or sources that involve entities, jurisdictions or complexities having no discernable business justification in connection with the transaction.
- References to “high yield” and “no risk” investments in “secret trading programmes” or “secret trading rooms” in “tax-free” or “bank privacy” jurisdictions signal that the transaction departs from commercial norms and that there may be no commercial source of repayment. If confronted with such terms, investors must aggressively conduct due diligence.

— Pyramid and Multi-Level Marketing Schemes; Addendum 1 —
Performing Due Diligence.

Indicator 14: Irrational or Illogical Aspects or Explanations

Once an investment has been made, in an effort to prolong the fraud or to hide the proceeds, a fraudster often relies upon any available or superficially plausible reason to explain any aspect that is questioned. Often, these excuses or explanations will not bear close scrutiny and will reveal the commercial fraud.

Explanation:

Modern commerce and finance has a rational and systematic character. Although it may sometimes be difficult to understand, there are always commercial, historical, systemic, or other reasons for its features that can be understood and explained. Where there are irrational or illogical elements of an instrument or scheme, particularly with respect to failed performances, further investigation is warranted and an independent expert should be consulted.

A fraudster will frequently give inconsistent or illogical explanations to persuade the potential victim not to seek such advice, to prolong the fraud, or to hide the proceeds of the fraud. The victim may be given illogical explanations that attempt to induce the victim to participate further in the fraud. Or, when the proceeds are delayed, the fraudster may claim that returns due the investor are delayed by natural disasters, current events, or other such events that typically would not affect transactions of the type contemplated. The victim may also be induced to remain silent about the transaction based upon threats that reporting will delay payment or make payment impossible.

Instances and Examples:

- Fraudulent transactions may involve illogical explanations as to counterparties' roles or identities in the transaction.

Illustration 14-1: The fraud may involve unlikely connections in the overall scheme, such as a banking transaction with organizations that are not banks, such as the United Nations or the International Chamber of Commerce, or a private banking transaction with an international banking institution that does not conduct retail banking, such as the International Monetary Fund or the World Bank.

Illustration 14-2: The fraudster may describe clients or counterparties whom the victim never meets. For example, a lawyer promotes a transaction in which a "client" will trade financial instruments as a member of a secret inter-bank market in these instruments, but the client is never identified or introduced to the victim.

- Irrational or illogical aspects may appear in the very fundamentals of the transaction.

Illustration 14-3: There may be a serious disproportion in the overall structure of the transaction, such as a relatively small transaction with a huge, powerful bank allegedly behind it.

Illustration 14-4: Illogical logistics may appear, for example, in the sale of goods, where the movements of such goods do not make sense geographically in terms of where they are typically produced or grown.

- Irrational or illogical explanations may also be used to explain delays in realizing the proceeds of a transaction. In most situations, the reason claimed for the delay bears little relationship to any actual or likely delay in the transaction.

Illustration 14-5: The fraudster may involve claims of delays falsely attributed to legal considerations, governmental interference, current events such as natural disasters or political changes. In one case, for example, the fraudster claimed that international payment systems were shut down after the death of a member of the Royal Family, and the proceeds of a transaction would not be available until after the systems had been reopened.

- A fraudster may actively discourage reporting the current failure to complete a transaction or the failure to make payment by claiming that doing so will make future completion or payment impossible.

Illustration 14-6: When proceeds are not realized, the fraudster may tell victims that realization of the investment is pending and that, if reported, the authorities will not understand the transaction and will cause unnecessary delays while they investigate it.

Illustration 14-7: When a victim questions the fraudster about delayed proceeds, the fraudster may attempt to ensure silence by leading the victim to believe that he or she, too, is implicated in any fraudulent conduct. For example, the fraudster may admit to the victim that the transaction is of questionable legality but that because the victim had received some proceeds from other victims, he or she is just as guilty as the fraudster.

Advice:

- Think critically about the logic or likelihood of explanations, and when the explanations are not understood, do not be embarrassed or afraid to seek independent advice.
- Always ask the promoter of a transaction to explain necessary terms or critical roles if they are not understood. Be suspicious of a promoter who cannot explain vital roles or terms satisfactorily, and be willing to seek objective advice in such cases.
- It is better to face unpleasant suspicions and investigate them sooner rather than later, since time is always in favour of the fraudster.
- If there is doubt, seek assistance from the authorities.

See also: Indicator 3 — Inconsistencies in the Transaction; Indicator 8 — Frustration of Due Diligence; Addendum 1 — Performing Due Diligence.

Indicator 15: Fraud Based on Abuse of Personal Affinity or Relationships

Commercial frauds often take advantage of non-economic factors like the natural trust between people of similar backgrounds to cause potential victims to reduce the due diligence that they would otherwise exercise and to use the group as a source of potential victims. Moreover, commercial frauds often tailor themselves to the beliefs or commonalities that unite or are characteristic of a group.

Explanation:

It is normal to give credibility to and to defer to those with whom one is closely associated such as relatives, friends, or those of similar backgrounds, including religious, social, political, ethnic, charitable, fraternal and other relationships. Commercial frauds often play on these affinities to promote themselves and cause investors to substitute the security of the affinity for understanding or seeking out advice with respect to the proposed investment. The problem lies not in the affinity or relationship, but in an excessive reliance on the common linkage instead of objective factors related to the proposed investment.

Instances and Examples:

- Relationships that can be abused include:

- Family relationships;

Illustration 15-1: Fraudsters often induce relatives and friends to invest in a scheme of which they would otherwise have been sceptical.

- Sports teams or apparent celebrity endorsements;

Illustration 15-2: The fraudster uses the reputation of a major sports figure to induce and promote investments that are fraudulent.

Illustration 15-3: An eminent citizen or celebrity is invited to an event promoting an investment, and by accepting the invitation, appears to be personally endorsing the investment.

- Religious or cultural affinity;

Illustration 15-4: A religious or cultural group is encouraged by other members or a leader to join an investment scheme that purports to benefit their common faith or heritage only on the basis of that relationship.

Illustration 15-5: A group suddenly becomes focused on a particular investment or scheme, seeming to support it en masse, when it is unrelated to the purpose or common theme of the group.

Illustration 15-6: A previously unknown individual becomes a member of a particular group, becomes influential in the group, and strongly encourages a particular investment or scheme to members of that group.

Illustration 15-7: A sudden change in the group dynamic from a religious or cultural focus to a more commercially-oriented one.

- Or charities.

Illustration 15-8: A fraudster uses a current tragedy to set up a false charity whose proceeds benefit the fraudster and affiliates and not the victims of the tragedy.

Illustration 15-9: It is common for commercial frauds to state that a certain portion of funds will be used to benefit a given humanitarian or other charitable cause.

- Assurances: The fraudster may attempt to link the fraud to the group to provide added comfort.

Illustration 15-10: Fraudster may convince a group that funds invested will remain in the control of the group.

- The credibility of these schemes can be enhanced considerably by returns paid as promised from the same money invested or the investments of others.

Advice:

- Trust based on shared interests or relationships should not take the place of understanding the investment or business transaction or of the exercise of due diligence and vigilance in protecting one's interests.
- Think independently.
- Do not substitute the friendly advice or suggestions of an acquaintance from a social or other group for professional advice when finances are involved.
- Because a counterparty has had a history of financial solvency in the past, do not assume that it is necessarily solvent today.
- Knowing one's counterparty must be an ongoing process, since circumstances can change, and business stresses can lead to reckless and fraudulent behaviour even in a previously legitimate business.
- Do not allow outward trappings like expensive cocktail parties at luxurious hotels, or meetings of like-minded individuals, to cloud one's judgment regarding a potential investment.
- Be careful which invitations are accepted and thus those to which one's name and reputation are lent.

Indicators of Commercial Fraud**CONTENTS**

Indicator 16: Fraud By or Involving Employees	
Indicator 17: Unusual Involvement or Participation of Professionals	
Indicator 18: Inappropriate Requests for Information Disclosure	
Indicator 19: Unsolicited E-mail and Related Misuse of Technology	
Indicator 20: Pyramid and Multi-Level Marketing Schemes	
Indicator 21: Frauds Involving Goods and Services	
Indicator 22: Securities Fraud and Market Abuse	
Indicator 23: Misuse of Insolvency Proceedings	
Addendum 1: Performing Due Diligence	

Indicator 16: Fraud By or Involving Employees

Employees (or other corporate insiders with access to similar information or systems, including agents, contractors, and affiliated companies and parties) of all levels can be involved in a variety of frauds ranging from obtaining a position of trust with a view toward perpetrating a fraud, to taking advantage of an opportunity or situation within an entity either alone or in concert with other employees or outsiders.

Explanation:

All businesses operate through employees. Employees, however, have access to non-public information (including information that is confidential or proprietary) and are effectively placed in positions of trust. Commercial frauds are often accomplished with the involvement of employees of the entity that is being defrauded. Frauds may involve managers, employees with professional designations, outside consultants, highly overqualified employees in sensitive positions, poorly-vetted temporary employees, and senior or highly-experienced employees who are perceived to be unchallengeable. Various frauds are possible, and may include the movement of funds, the acquisition and sale or inappropriate use of sensitive information, inventory fraud, procurement fraud, and accounting frauds to inflate assets or earnings. Motivations or opportunities for employee fraud may include overambitious performance targets, annual bonus or incentive programmes, grievances, or lack of sufficient supervision or internal controls.

Instances and Examples:

- Fraudsters may seek to place themselves or an overqualified employee in an easily-obtained but lower-level position in order to illicitly obtain information or other valuable data for various improper purposes.

Illustration 16-1: Cleaning or maintenance staff having unsupervised access to sensitive information sells the information.

Illustration 16-2: Temporary staff with decision-making power has access to valuable documents, steals and sells them.

- An employee who does not have sufficient skills to perform when he or she is under-qualified for a position may feel pressure to commit fraud to achieve mandated performance goals or to appear to comply with performance expectations. Extravagant bonuses tied to unrealistic performance goals may motivate employees to participate in fraudulent schemes to achieve bonuses.
- An unhappy employee or one who does not believe he or she is properly appreciated may engage in fraud or be a target for a fraudster to use in a fraud against the company.

Illustration 16-3: A disgruntled employee seeks to punish a company by participating in a fraud.

Illustration 16-4: A disgruntled employee may accept kickbacks or bribes to make up for perceived lack of appreciation.

Illustration 16-5: An employee who feels unappreciated becomes involved in bid-rigging or price-fixing.

- Employees may be tempted to use their ability to access business assets, including non-balance sheet assets such as customer lists, for their own purposes.

Illustration 16-6: An employee may be making unauthorized personal use of business assets to enrich themselves — even low level fraud like unauthorized telephone charges or access to office supplies can add up over time.

Illustration 16-7: An employee may engage in expense account manipulation.

Illustration 16-8: An employee without an understanding of the importance of data may be approached to sell seemingly insignificant information.

- Employees may be requested or pressured by senior managers to assist in a fraud conducted at the company itself, or on behalf of the company for which they work.

Illustration 16-9: A senior banker facilitated a multi-million dollar cheque fraud operation for the benefit of a personal friend, overriding the bank's internal controls by directing a junior employee to approve transactions while the senior banker was on holiday. In fear of losing his job if he refused, the junior employee acquiesced, and detection of the fraud was avoided.

- The work of a senior employee may be perceived as too complex, too important or too lucrative for it to be challenged or examined, and any fraudulent activity thus remains undetected.

Illustration 16-10: A multi-partner firm of lawyers was ruined by the activities of a dominant and apparently successful senior partner who was facilitating massive frauds.

Illustration 16-11: A very large firm of lawyers suffered reputational and financial damage in the millions arising from work by a partner which others often remarked upon as being odd but clearly too complex for them to understand.

Advice:

- Entities should use independent auditing committees, analytical review and surprise audits of both successful and unsuccessful aspects of operations.
- Employers should create fraud and conflict of interest policies and should ensure that employees are informed of them and trained in their operation.
- Employers should have effective whistleblower policies in place, and ensure that employees are informed of them and have confidence in their operation.
- Employers should ensure that all employees and senior managers are adequately supervised.
- Employers should perform periodic reviews of company contracts and agreements to eliminate contract and procurement fraud, such as kickbacks, bribery and conflicts of interest.
- Employers should ensure that no single employee possesses too many decision-making powers, and that there is an appropriate separation of important responsibilities amongst employees within an entity, as well as effective internal oversight.
- Employers should impose mandatory vacations: employee fraud is often detected when the wrongdoer is not present to control the situation, and employee fraudsters often never take holidays or may work unusual hours in comparison with other employees in the company.
- Employers should create periodic job rotation, provided it is consistent with local labour laws.
- Employers should have employee assistance programmes to help employees deal with the pressures of dealing with issues such as addiction, family problems, or economic hardship.
- Employers should consider programmes to encourage loyalty amongst employees, including paying them competitive salaries.
- Employers should be alert for sudden changes in an employees' lifestyle, including extravagant purchases or excessive lines of credit.
- Employers should ensure that the knowledge and skill of employees are consistent with the position they hold.

- Employers should check references or credentials in employment applications or resumes.
- In general, employers must create a robust control environment in the business in order to prevent fraud.

See also: Indicator 8 — Frustration of Due Diligence; Indicator 9 — Corrupted Incentives; Addendum 1 — Performing Due Diligence.

Indicator 17: Unusual Involvement or Participation of Professionals

The involvement of a professional does not guarantee that a transaction is necessarily genuine, particularly when the involvement seems unusual in some way.

Explanation:

Commercial transactions naturally involve professionals in a variety of roles. Moreover, businesses rely on professionals for advice and to protect them from commercial fraud. They may use an attorney to draft the documents used in a transaction; an accountant to give advice regarding how a transaction should be recorded on the company's books or on its tax implications; or a financial adviser or a banker to recommend a particular transaction or to give advice regarding certain types of transactions.

However, where the professional's involvement in the transaction seems unusual, a commercial fraud may be indicated. Where the professional provides no advice or services, but simply transfers money, or where the professional performs acts typically performed by another type of professional, a fraud may be present. Fraud may also be indicated where heavy reliance is placed upon a particular professional who is provided by the promoter of the investment to the exclusion of independent advice or due diligence from an outside professional. In addition, an individual acting as a professional should have the proper education and experience to provide the advice or services expected.

Instances and Examples:

- An individual who lacks proper credentials, or whose credentials cannot easily be verified, performs acts typically, or exclusively, performed by professionals.

Illustration 17-1: A fraudster promoting an investment scheme provides potential investors with the testimony of an individual who verifies that the transactions in a particular instrument are legitimate. The individual is not presented as an attorney, accountant, or financial adviser and holds no such credentials.

Illustration 17-2: The professionals involved have a disciplinary history, possibly including customer complaints, civil actions, or criminal prosecutions.

- The promoter of a transaction relies heavily upon, and advocates resort to, a particular professional working with the promoter, to the exclusion of independent advice.

Illustration 17-3: A promoter assures potential investors that a transaction has been approved by an attorney named and advocated

by the promoter, and encourages the investors to direct all questions to that attorney. The promoter may also state that other attorneys will deny the existence of the transaction, because they are not experienced enough to be aware of such transactions.

- A professional may provide no advice in connection with a transaction but will simply hold or transfer money, and if the professional is an unwitting participant in the scheme, may receive handsome fees simply for holding or transferring money.

Illustration 17-4: A party is informed that an accountant or lawyer will participate in a transaction, but the accountant or lawyer's only role is to accept money from that party and transfer the funds to the fraudster. Fraudster uses this arrangement to hide the sources of funds, and possibly to influence the professional by alleging his or her involvement in money-laundering.

- A fraudster may use reputable advisers, but restrict their terms of reference or provide them with false or misleading information.

Illustration 17-5: An independent lawyer or an accountant is engaged to assist on the transaction, but is provided with false financial statements and accounting records.

Advice:

- If in doubt about a professional, seek independent advice, such as one's own professional advisor who is known and trusted; never rely solely on advice given by professionals suggested by one's counterparty.
- Never suspend due diligence solely because a counterparty's professional advisor claims to have found the transaction to be legitimate.
- If a professional recommended by the promoter of the investment is involved in the transaction, check that professional's credentials and disciplinary history with any available licensing or regulatory authorities.
- Professional indemnity insurance and fidelity funds often refuse to cover losses arising from frauds. Do not rely on such cover as a substitute for due diligence.
- Professionals should question unusual instructions received from their clients.
- Professionals who are sole practitioners or part of a small firm and are involved in apparently very high value transactions and receiving high fees for little or no services should question the purpose of their professional involvement.
- Professionals should be careful of being drawn into transactions that they do not understand or are unsure about, particularly if they are offered unusual inducements such as a very high level of fees or overly generous hospitality.

See also: Indicator 1 — Irregular Documents; Indicator 4 — Misuse of Names; Indicator 8 — Frustration of Due Diligence; Indicator 10 —

Ensnarement and Psychological Inducements; Addendum 1 — Performing Due Diligence.

Indicator 18: Inappropriate Requests for Information Disclosure

Commercial frauds often rely on information obtained using means or a manner that would be unusual or inappropriate in certain circumstances; such information may be used to perpetrate a fraud against the individual or entity from whom the information is requested or against others.

Explanation:

The perpetration of commercial fraud requires that the fraudster gather information both to prepare the architecture of the fraud and in order to identify potential victims. To this end, customer lists of an entity may be sought in order to identify possible victims, or internal directories of the entity may be sought, which the fraudster may use to provide himself an identity, to lend the fraud credibility, or to identify possible accomplices. The fraudster may also need documents, logos, or trademarks produced by an entity to copy in order to steal the entity's identity. Further, the fraudster may seek to obtain vital personal identification in order to steal an individual's identity. Such information may be sought in person, or by means of e-mail, telephone, or fax solicitations.

The circumstances under which such information is requested may be inappropriate or unusual so as to signal a possible fraud. The request may be inappropriate, because the information requested is not usually disclosed using the form of communication requested, or, in more extreme examples, the request may be for sensitive information that is never disclosed in the manner requested by the fraudster. The request may seem unusual, because it concerns information not typically disclosed to an individual in the fraudster's position, or the request may be a part of a pattern of unusual requests of the entity or individual. Further, the request may be inappropriate, because the person asked to provide such information is not in a position to make such disclosures. Theft of information and identity fraud is a growing problem, for both individuals and organizations, and persons involved in commerce or finance should value information and should carefully consider any information disclosures that are requested.

Instances and Examples:

- A fraudster may request information to be supplied in a manner not typically used to supply such information, or technology may be used to inappropriately access confidential information.

Illustration 18-1: In a "phishing" scheme, a fraudster copies an entity's website or trademarks and sends an unsolicited e-mail to potential victims using the copied material to trick the victim into believing the entity has sent the e-mail. The fraudster asks the potential victims to fill in sensitive personal information, such as bank account numbers or personal identification details and reply. The fraudster then uses the information to steal from the victims' accounts.

Illustration 18-2: Information stored or conveyed using technology may be subject to inadvertent disclosure, since personal organizers

and mobile phones can be connected to computers to access information, and wireless technology is highly vulnerable given easily obtainable scanning equipment. “Keystroking” devices or software (or spyware) may be used to record and sift every keystroke made on personal computers.

Illustration 18-3: Aggressive telephone solicitations may purport to be promoting disaster-related relief, technologies or products (external or internal) in an effort to gain sensitive personal information.

- The request may be for information that the entity or individual does not typically supply to individuals in the fraudster’s position.

Illustration 18-4: Commercial frauds often involve requests for seemingly innocuous information, which an entity typically would not provide to customers or other individuals outside the entity. For example, the fraudster may request customer lists, internal telephone directories, and the like, which the fraudster may use to contact potential victims or to impersonate the entity’s employees.

Illustration 18-5: An entity is requested to provide an explanation of an entity’s product or service on that entity’s letterhead. The fraudster then uses the entity’s letterhead to impersonate the entity or lend credibility to his or her scheme.

Illustration 18-6: An attorney is asked to verify that a client or business associate is familiar to the attorney or that the client or business associate is trustworthy. The client or business associate, a fraudster, then shows the letter to potential victims so that they are induced to invest with the fraudster.

- A request may also be unusual, because the individual asked to disclose information is not in a position to make such disclosures.

Illustration 18-7: Fraudster requests that a bank teller issue a letter indicating that the fraudster has deposited with the bank “good, clean funds of a non-criminal origin”. The teller, believing the requested statement to be true, issues what is believed to be a harmless letter, which the fraudster then uses in an investment scam to give credibility to himself and to the fraud.

- A fraud may be indicated where unusual patterns of access have been made to a corporate database.

Illustration 18-8: A corporate database is accessed multiple times by individuals outside the company. A fraudster may access such information to create lists of potential victims or to steal the identities of the listed individuals.

Advice:

- Business entities should protect confidential information through the implementation of instructions relating to access to and use of confidential information and through careful training of employees who have regular

contact with the public, as well as by limiting which employees have access to such information.

- Where appropriate to protect confidential information, employees should be requested to sign confidentiality agreements to protect highly sensitive information.
- Any unusual requests for information should be carefully considered before an entity or individual complies.
- Only use secure means when conveying sensitive information, such as credit card or bank account numbers, and destroy or protect receipts or other documents bearing such sensitive information.
- Entities should employ both effective monitoring processes and effective security processes to ensure that confidential information cannot be accessed by those outside the company and that the entity is aware of attempts at access.
- Entities should ensure that effective computer data protection policies and procedures are in place to guard against hacking and computer misuse, that confidential information is secure, and that any attempt to override the policies is a disciplinary offence.

See also: Indicator 8 — Frustration of Due Diligence; Indicator 19 — Unsolicited E-mail and Related Misuse of Technology; Addendum 1 — Performing Due Diligence.

Indicator 19: Unsolicited E-mail and Related Misuse of Technology

The significant increase in the commercial use of information and communication technologies worldwide has introduced a corresponding increase in frauds which target commerce and which take advantage of technologies to reduce risks and increase potential proceeds and the number of victims.

Explanation:

Wire line telephones, wireless or cellular telephones, fax machines, electronic mail and the Internet are examples of technologies that are available in both urban and rural areas throughout the world, and which are heavily used in commercial activities. There is a relationship between the availability and use of information, communication and commercial technologies and commercial transnational fraud. As one example, many companies seek to expand domestic and international markets by advertising their products or services for sale via the Internet, thereby attracting online attacks against the company, its systems and its customers.

Information, communication and commercial technologies are used as tools to defraud victims and to transfer and conceal proceeds. Fraud imitates legitimate commerce, making variations of commercial practice likely to produce corresponding variations in commercial fraud over time, between countries or regions, and with respect to specific areas of commerce. The number of fraud victims, total proceeds of fraud, occurrences of transnational fraud, and fraud involving technologies have seen an increase, corresponding to the increased use of technologies in commercial systems and the availability of technologies to offenders and victims.

Instances and Examples:

- Technologies are used to update and to increase the effectiveness of paper-based frauds that may date back hundreds of years.

Illustration 19-1: One type of advance fee “phishing” fraud known as “419” uses the Internet and electronic mail to develop contacts and to pursue victims. A “419” fraud is a computer version of an ancient “your friend is a captive” fraud, in which hundreds of letters would be sent to wealthy families offering to free an imaginary victim in exchange for an advance fee. Using computers, in “419” frauds a few individuals are able to send billions of unsolicited e-mails worldwide promising the release of captive fortunes, a share of which may be obtained in exchange for personal or financial information of the victims and the payment of an advance fee. The wealth of the victims is siphoned off and their identity and financial information is used to carry out additional frauds.

- A general sense of confidence in global commercial and payment systems is used to lull suppliers into inaction and to suspend normal credit and payment controls.

Illustration 19-2: A supplier of diesel generators receives a large Internet order from an overseas buyer. Excited by the amount of the sale, the merchant accepts several different credit card numbers as payment. The charges are authorized by the credit card authorization centre and confirmation numbers are received. The generators are shipped. Two weeks later, the merchant discovers the credit card authorization centre has charged back the value of the purchase, citing fraud.

Illustration 19-3: While the vast majority of commercial Internet transactions are consummated without incident, increasingly fraudsters will contract for goods using counterfeit or altered financial instruments, or unauthorized or stolen payment card data as payment. By the time the merchant becomes aware the payment has been rejected, the goods may have already been shipped, received and disposed of by the fraudster. Recovery of amounts lost is extremely difficult and generally not possible.

- After initially contacting a company by electronic mail, a fraudulent buyer will offer a corporate cheque or money order or draft in excess of the sale amount and ask that the seller return the difference by wire transfer.

Illustration 19-4: A wholesaler receives e-mail from a buyer who places an order for \$25,000 worth of goods. The buyer claims to be with an established company with international operations. The wholesaler receives a “certified company cheque” for \$50,000 and contacts the buyer by e-mail to report the “error”. The buyer instructs the seller to simply deposit the cheque, keep the monies owed and wire transfer the balance to an outlet of a money-wire service. Cautious the cheque could be worthless, the seller waits until it clears the bank. Assuming all is well, the seller wire transfers the extra funds as instructed and ships the goods. Two

weeks later, the bank reverses the \$50,000 payment. The cheque was counterfeit and was not detected by the company named on the cheque until its monthly reconciliation was completed.

- Fraudsters know that the Internet provides safe and efficient ways to market stolen goods.

Illustration 19-5: Online auctions are used to sell merchandise that fraudsters already have stolen or fraudsters may act as brokers for theft rings in different regions of the world that may directly ship stolen goods to auction winners.

- The Internet attracts fraudsters who use new technologies to maintain anonymity.

Illustration 19-6: Fraudsters worldwide use Internet “pharming”, that is look-alike, false websites aimed at redirecting a legitimate website’s traffic to a fraudulent website.

Illustration 19-7: Technologies and transnational fraud are linked when fraudsters use call-forwarding, anonymous re-mailers and similar means in an effort to conceal their identities and locations and avoid tracing by law enforcement.

- Technologies, including transportation, information and communication technologies are increasingly being used more effectively by fraudsters to share expertise from one region to another, to identify, contact and deceive victims, to avoid detection and to conceal proceeds.

Illustration 19-8: A growing variety of fraud schemes depend substantially on technological elements and exploit technological vulnerabilities, including telemarketing fraud, Internet fraud, credit and debit card fraud, and financial institution fraud. The more sophisticated transnational fraud schemes have tended to take advantage of cutting-edge developments in technology to reach potential victims, including cellular telephony, Voice Over Internet Protocol (VOIP), and Internet-based communication.

Advice:

- Be aware that the scope of fraud conducted through the Internet and related technologies and encountered by the commercial community is very broad, reflecting the full diversity of legitimate commercial activity, and that international orders are particularly susceptible in this regard.
- Exercise caution when entering Internet sales transactions that involve high-value merchandise, which are often involved in Internet fraud schemes, including online auctions or online retail sales, and credit-card fraud schemes.
- Insist on receiving the appropriate amount of money for a sale and do not wire transfer cash back to a buyer based on an “overpayment” that was not made in cash.
- When cheques, money orders, drafts or similar financial instruments are used as payment, certified or otherwise, verify the amount and check the

number and signature if possible using direct communication channels outside the Internet and electronic mail. Inquire with the postal service or issuing bank to verify that the document numbers or amounts are legitimate.

- Beware of common misuses of technology, such as e-mail “phishing”, where victims are induced to provide their own identity or financial information to fraudsters masquerading as commercial or government authority figures, or “pharming” where identical but false websites redirect a legitimate website’s traffic to a fraudulent website.

See also: Indicator 7 — Overly Complex or Overly Simplistic Transactions; Indicator 8 — Frustration of Due Diligence; Indicator 18 — Inappropriate Requests for Information Disclosure; Indicator 20 — Pyramid and Multi-Level Marketing Schemes; Indicator 21 — Frauds Involving Goods and Services; Addendum 1 — Performing Due Diligence.

Indicator 20: Pyramid and Multi-Level Marketing Schemes

A fraudster may seek to recruit new sales personnel to sell merchandise or financial products. The sales recruit will be asked to pay (or “invest”) a fee to join the programme and will then recruit others, who will also pay a fee, from which the fraudster and the earlier recruit will receive commissions. The recruit will typically be promised large returns, both from the sales and the recruitment fees.

Explanation:

Manufacturers and marketing companies typically establish distribution networks and recruit sales forces to service them. Some may offer incentives to sales recruits to recruit other sales personnel to work for them and share their sales commissions. Such a multi-level marketing structure may be legitimate, but fraudsters also use such arrangements to facilitate fraud.

The sales structure is essentially in the shape of a pyramid with the fraudster at the top and successive layers of salespersons or victims beneath him. The objective is to obtain as large a sales force as possible to maximize fees. Additionally, the fraudster may require the recruit, and his or her recruits in turn, to purchase large quantities of product that may prove difficult to sell if the sales territory is saturated with sales personnel. Typically, the fraudster and a very few early recruits at the top of the pyramid are enriched, while the later recruits lose most or all of their investment when the pyramid ultimately collapses.

Regardless of the underlying product, service, investment or programme, any “profit” is illusory and is paid as the result of the pyramid type scheme. Such “profit” represents only principal or invested capital returned to the investor from his or her own capital or funds contributed by other investor-victims. Trans-national multi-level, mass-marketing frauds use multiple jurisdictions to conduct different aspects of the schemes and have been known to use communication technologies that create the appearance that they are located in other nations.

Instances and Examples:

- At times the structure of the pyramid is itself the incentive and induces victims to provide references for the programme.

Illustration 20-1: For a fee, a merchandise distributor offered prospective distributors the opportunity to recruit new salespeople and receive direct and override commissions for each new salesperson recruited. The prospective distributor must purchase a specified amount of merchandise that it may re-sell to its salesman.

Illustration 20-2: Marketing various products, a company offered prospective distributors direct and override commissions for recruiting salespersons under its supervision. The prospective distributor must agree to purchase a large quantity of goods, which may be resold to its salesmen. The company does not have specific retail sales targets and commissions are computed on wholesale sales. Additionally, the company will not accept the return of unsold merchandise.

- At other times, fraudsters use multi-level marketing structures in the background, relying on the underlying offer to entice recruits while changing details of the enticement to suit different regions of the world, consumer trends and categories of victims.

Illustration 20-3: A promoter of a high-yield, no-risk, exotic financial instrument “roll trading programme” offered wealthy prospective investors 100 percent per month returns and “bonuses” for introducing new investors, who would also be entitled to bonuses for introducing others.

Illustration 20-4: In a consumer-cantered economy, a promoter used newspaper advertisements, telephone messages and “investment seminars” at hotels and shopping malls to contact new recruits to an investment that promised returns up to 2,500 percent per month within three months and 62,500 percent within six months with “no risk”.

Illustration 20-5: In a developing economy, where the right of private ownership was relatively new, a promoter lured investors from new economy employees, offering “undivided interest” in remote teak tree plantations or unidentifiable or even nonexistent individual teak trees.

Illustration 20-6: In a transitional economy, a promoter enticed unemployed urban citizens with promises of 60 percent returns in exchange for the right to breed insects for medicinal purposes.

- Conditions such as major economic development or transitions can generate substantial increases in pyramid type, multi-level, mass-marketing frauds, that seek to take advantage of the confusion between old and new economic principles and specific activities such as the privatization of State-owned operations.

Illustration 20-7: One nation attempting to make the transition from central to private ownership suffered extreme economic failure as a result of a series of nationwide, privately run, pyramid type lottery frauds.

Advice:

- When a programme requires the purchase of expensive inventory and marketing materials, contact the appropriate regulatory authority for information on the programme and perform basic due diligence considering the quality and cost of inventory, reputation of the supplier, and the like.
- Be wary of programmes that offer commissions or high rates of return to prospective investors for recruiting new investors, who may, in turn, recruit others.
- It is a signal of potential fraud when the promoter offers only a token amount of product while promising large returns if the prospective investor increases the number of new recruits and the programme does not permit the return of unsold merchandise.
- Pyramid promoters often offer “asset enhancement programmes”. It is a signal of potential fraud when the promoter offers “above market returns” or programmes based on exotic financial instruments, investments or products to participants not familiar with the market for the underlying instruments, investments or products, when the programme is offered at what is billed as a “charity event” or “benefit”, or when the programme requires an initial entry fee.

See also: Indicator 5 — Disproportionate Returns; Indicator 8 — Frustration of Due Diligence; Indicator 9 — Corrupted Incentives; Indicator 13 — Questionable or Unknown Source of Repayment; Indicator 15 — Fraud Based on Abuse of Personal Affinity or Relationships; Indicator 19 — Unsolicited E-mail and Related Misuse of Technology; Addendum 1 — Performing Due Diligence.

Indicator 21: Frauds Involving Goods and Services

Commercial frauds involving goods or services are often facilitated by fraudsters who misrepresent the nature, quality, or value of goods or services to be delivered or that are the subject of investment.

Explanation:

Sales of goods and services are important components of international trade. Fraudsters often take advantage of these activities to commit fraud by entering into the transaction with no intention of performing their obligations, or by deciding to do so during the course of the transaction. The fraudster promoting the transaction may perpetrate fraud by seriously misrepresenting the goods or services involved, or the purchaser of a product, an investor, or someone relying on the receipt of physical goods may find that the goods are never received or never existed. If goods are received, those that are received or in which investment has been made may differ substantially from the representations of the fraudster, or from the specifications of the transaction. Goods may be of greatly inferior or little value, counterfeit, or may have been tampered with in such a way so as to significantly reduce their value. Similarly, a victim that has contracted for the receipt of services, and paid in advance, might never receive those services.

Instances and Examples:

- The goods that are the subject of the transaction or investment may be of lesser quality or value than as contracted, or the goods may be counterfeit.

Illustration 21-1: Goods such as luxury products, art, antiquities or precious stones, in which a buyer needs special expertise to ascertain their value or their provenance may be misrepresented as being much more valuable than they are or as having a legitimate provenance.

Illustration 21-2: Fraudulent investments have been sought on the basis of an alleged massive projected increase in value of a variety of products, including art, stamps, and even malt whiskey.

Illustration 21-3: Labelling may be changed or affixed to counterfeit products so as to pass them off on unsuspecting purchasers.

Illustration 21-4: Pharmaceuticals or other products sold at greatly reduced rates on the internet and elsewhere may not be genuine products, or they may be black market products being sold to gain proceeds from theft or other crimes.

Illustration 21-5: A fraudster contracts with a buyer for the sale of specifically manufactured goods. After the fraudster has received payment, the buyer discovers that the goods shipped are imitations.

- A fraudster may represent that goods have been shipped or received when, in fact, they have not, or the fraudster may represent that goods exist when they do not.

Illustration 21-6: A fraudster contracts with a buyer to sell the buyer certain goods and both agree that the seller will accept a letter of credit as payment. The seller ships nothing but presents conforming documents to its bank, indicating that goods have been shipped, and the seller's bank pays the contract price.

Illustration 21-7: A fraudster seeks financing from a bank for the manufacture of raw materials into a final product. The fraudster represents that it is already in possession of the raw materials and induces the bank to finance the fraudster, although the bank has never observed the raw materials. The fraudster receives the proceeds of the transaction, although the raw materials do not exist.

- The goods that are received may have been tampered with by the fraudster.

Illustration 21-8: A fraudster contracts to sell certain goods to a buyer, and both parties agree that seller will accept a letter of credit as payment. The fraudster ships the goods in containers, properly marked in conformance with the shipping documents. The fraudster presents conforming documents to the bank to receive payment, based upon delivery of the containers before the buyer discovers that the containers have been packed with scrap metal instead of the contracted goods.

Illustration 21-9: Seals on trucks or on containers of products may be tampered with, the contents of the truck or container removed, and the seals replaced with fraudulent seals.

Advice:

- Before entering a transaction relying on the existence of goods, always ensure that the goods exist as represented.
- Never blindly rely on the self-professed expertise of the promoter of the product, particularly when dealing with goods outside one's personal expertise.
- If products are available for inspection, examine carefully the labelling and quality, or where necessary, have the products examined by a reputable expert.
- When the commodity offered is significantly below its wholesale price, be suspicious: obtain a random sample and have it analyzed or appraised by a reputable expert.
- Know one's counterparty, including performing any due diligence necessary to establish the reliability of the counterparty.
- If products are available for inspection, examine carefully the labelling and quality.

See also: Indicator 3 — Inconsistencies in the Transaction; Indicator 8 — Frustration of Due Diligence; Indicator 19 — Unsolicited E-mail and Related Misuse of Technology; Addendum 1 — Performing Due Diligence.

Indicator 22: Securities Fraud and Market Abuse

Commercial frauds often involve the sale of securities that are not registered by persons who are not licensed to sell them under applicable securities laws and regulations, or where market abuse or manipulation occurs.

Explanation:

The issuance and sale of securities is an essential component of modern finance and commerce, and securities market regulators in most countries are very active in preventing and prosecuting securities fraud and financial market abuse. In part, they do so by requiring that securities be registered and that persons selling them be licensed. Fraudsters often seek to manipulate these perceptions of safety engendered by regulatory systems and to reap the profits that the abuse of securities markets can offer. In addition to the manipulation of the market via insider trading, investors may find themselves subject to high pressure sales tactics regarding certain securities, or they may fall victim to so-called “pump and dump” schemes that artificially increase the price of the security and the demand for it, thus allowing the fraudster to sell out at the inflated price. Further, funds and assets may be siphoned off by the management of a particular publicly-traded company at the expense of non-controlling shareholders. In general, a high percentage of securities cases involve one or more of these basic violations: unlicensed brokers, unregistered or fictitious securities or fraudulent misrepresentations or omissions, unsuitable

recommendations, excessive trading or “churning”, market manipulation, or outright theft of funds and assets by corporate insiders.

Instances and Examples:

- Fraudulent or fictitious securities are promoted in a variety of ways that imitate and expand on the marketing of legitimate securities:

- Advertisements or newspaper articles are encouraged or placed containing false or misleading information;

Illustration 22-1: Articles and advertisements were published suggesting that there was a current value for once valid World War I era bonds that had been demonetized by statute and by international treaty.

- Unsolicited contacts are made;

Illustration 22-2: Unsolicited phone calls, faxes, letters or e-mails are received from persons presenting themselves as stock promoters or brokerage firms and advocating that the recipient act immediately on a ‘hot’ tip.

- High pressure sales tactics are used, and there is often an element of urgency connected with the investment.

Illustration 22-3: Promotions suggest that a unique profit opportunity will be lost unless it is acted upon immediately by the investor since only a limited number of people can invest. Allegations may be made that the market is only open for a limited time.

- There are assurances of little or no risk;
- And often there is reference to so-called “secret markets” in which “trading” occurs.

- Fraudulent or fictitious securities violate securities laws and regulations and frustrate their scheme of regulation:

- The securities are not properly registered;

Illustration 22-4: The fraudster may allege that registration of the securities in this instance is not required;

- The person selling the fraudulent or fictitious security often is not licensed as a securities broker;
- Or misrepresentations and omissions of material information are made about the profits, risks, and fees associated with investments represented by the securities.

- Fraudulent securities often are exotic or have exotic features or incredible stories associated with them in order to explain their alleged value.

Illustration 22-5: Metal boxes containing securities allegedly worth billions of US dollars in so-called “Federal Reserve Notes” were newly discovered in the Philippines after being hidden by an infamous warlord at the end of World War II.

- Account statements or transactions statements that have an irregular appearance, suggesting possible forgery to disguise theft.

Advice:

- Only deal in securities through reputable channels and brokers.
- Reject the proposal or contact the appropriate securities regulator to make sure that the salesperson is properly licensed and that the security itself meets applicable registration requirements.
- Discuss any proposed investment with one's own independent financial adviser prior to investing, particularly when the price of a particular financial instrument seems to be increasing or decreasing rapidly.
- Review carefully all account statements for signs of irregularities that may suggest a falsified statement intended to disguise theft.
- Independently verify accounts with the financial house said to hold them.
- When the security cannot be understood without a complex and convoluted explanation with unusual characteristics, it should be rejected or independently verified.

Indicator 23: Misuse of Insolvency Proceedings

The insolvency process can be used as a mechanism to facilitate commercial fraud by facilitating the improper transfer of assets, by obtaining investment in the insolvent entity through misrepresentation, or by filing or selling false claims.

Explanation:

Most legal systems have insolvency legislation to enable companies or individual entities in business to restructure debt through reorganization or liquidation proceedings. Those insolvency regimes provide for substantial oversight in the insolvency process through judicial or administrative supervision if properly used. The insolvency processes serve important commercial and policy needs for businesses experiencing financial difficulties.

While frauds may often result in the filing of an insolvency proceeding relating to the victim, fraudulent schemes also use the legal process related to insolvency to mask or facilitate commercial fraud, and to use the credibility of the insolvency process to provide a false sense of security to intended victims. Fraudsters use the insolvency process to misrepresent that the insolvency court or representative has reviewed and approved of representations purportedly made on behalf of the insolvent entity. Fraudsters also can use the insolvency process to hide the improper transfer of assets or to file and sell false claims. Finally, the insolvency process can be used to provide credibility for the insolvent entity, so that it may obtain additional goods, services, or credit.

Instances and Examples:

- The insolvency process can be used to hide assets from existing creditors.

Illustration 23-1: Before entering insolvency, an entity may shift assets from one jurisdiction to another in order to hide the assets or to establish a new business operation. Creditors of the entity are then denied recovery, because the entity has insufficient assets to pay prior debts.

Illustration 23-2: Prior to an entity entering insolvency, the principals of the entity transfer assets to themselves or to other insiders, thus denying available funds to creditors of the entity.

- The fraudster may misrepresent the value of assets or business enterprises of the insolvent entity.

Illustration 23-3: Fraudster undervalues the assets of an insolvent entity, so that creditors are induced to accept substantially less than full value of the debt owed.

Illustration 23-4: Fraudster may overvalue assets of an insolvent entity, knowing that victims will believe the fraudster's valuations have been reviewed by or verified by the court or insolvency representative. Victims then invest in the insolvent entity, believing that the entity's financial position is better than it is.

- False claims may be filed in the insolvency proceeding to defraud creditors or potential investors.

Illustration 23-5: Once an entity enters insolvency proceedings, the principals of the entity file false claims, inducing the court and insolvency representative to distribute less to valid creditors as well as portions of the assets to the principals.

Illustration 23-6: A fraudster files false claims against an insolvent entity and sells the claims at a discount to victims who, believing the claims to be valid, attempts to collect from the insolvent entity.

- The insolvency proceedings may be used to lend credibility to the insolvent entity.

Illustration 23-7: A fraudster induces a victim to provide the insolvent entity with goods, services, or credit. Victim is told that the court or insolvency representative has guaranteed payment or otherwise assured the victim of repayment by giving its authorization or approval, when in fact it has not.

Illustration 23-8: Another fraud can take place when a transaction requires a prepayment, and the other party claims that it is insolvent subsequent to the receipt of the prepayment.

Advice:

- Remember that insolvent entities are in insolvency proceedings as a result of being unable to pay existing creditors or of failing in its business enterprise. Any proposed transaction with or investment in the insolvent entity must be carefully reviewed prior to any investment made.

- Always exercise proper due diligence and independently investigate any representations of value by the insolvent entity before extending any additional credit or providing goods and services on credit.
- Because insolvency proceedings are generally a matter of public record, the insolvency proceedings should be reviewed to verify any representations supposedly made by an insolvency court or insolvency representative.
- Never suspend the exercise of due diligence on a mere assertion by a counterparty that an insolvency court or insolvency representative has approved or authorized a transaction or investment.
- Carefully review any transfers of assets by the insolvent entity both prior to and during the insolvency proceeding to determine if such transfers are legitimate.

See also: Indicator 8 — Frustration of Due Diligence; Addendum 1 — Performing Due Diligence.

Addendum 1: Performing Due Diligence

The appropriate performance of due diligence will depend upon the particular circumstances of the transaction in issue, but it is possible to articulate some general rules that should be followed in ascertaining the bona fides of a transaction and of counterparties. Remember that this list contains only general guidance, and that other sources should be considered for more detailed assistance, for example, the website of the US Federal Trade Commission (www.ftc.gov); the website of an international consortium of consumer protection agencies, Consumer Sentinel (www.consumer.gov); another international consortium, Econsumer (www.econsumer.gov); or the European Union consumer website (http://ec.europa.eu/consumers/index_en.htm).

1. Determining how one was chosen for contact

- If the investor did not initiate the contact, inquire as to how the counterparty obtained one's name and contact information
- Inquire as to why the counterparty is contacting the particular investor. Why does the counterparty think the investor is appropriate for a business transaction? Vague or general answers indicate that the counterparty does not have a good basis for determining one's suitability for the transaction.

2. Verifying the counterparty

- Always seek contact numbers, information and the identity of the counterparty and its representatives independently of the information provided by the promoter of the investment, via Internet, telephone books, business organizations, the press, library materials, or the like. Do not rely on telephone numbers, websites, addresses or the views of professionals provided by the promoter of the investment in performing due diligence.
- When dealing with a professional, ascertain from the relevant professional organization whether the professional is properly registered and qualified by the organizations and the history of the professional, including any complaints made or charges brought against that professional.

- If possible, check the names of counterparties and promoters for criminal history or complaints with criminal fraud authorities in one's jurisdiction. Remember that aliases may be used by fraudsters.
- Remember that fraudsters may work in teams, and corroboration by other people, particularly those suggested by the promoter, may not be sufficient to protect oneself.

3. Recognizing sales tactics

High pressure

- Do not abandon the completion of thorough due diligence when faced with emotional appeals, such as those purporting to involve humanitarian crises.
- Do not succumb to time pressures such as the need to invest or purchase immediately because the opportunity is about to be lost. If the deal is that good, the promoter would not need to contact individual investors. If one is discouraged from conducting due diligence due to time pressures, do not proceed with the transaction.

Expectations

- Check the key facts of the transaction, including predictions of rates of return, against current economic events, such as the price or amount of a particular commodity in issue, or the normal trading patterns of the commodity.

4. Identifying the product

- Determine the product that is being sold. Sometimes the product is a service or an intangible legal right disguised as a physical product.
- Intangible rights such as options to buy, time share arrangements, rights to lease and the like are very difficult to verify as to their existence. Extra due diligence will be necessary to verify their authenticity.
- Products that are stored in a different local jurisdiction or overseas are easily falsified and will also need additional due diligence.

5. Identifying the nature of the transaction

- Determine what one is being asked to do: make a down payment, pay a finder's fee, enter into a "swap" transaction, set up an escrow, purchase a letter of credit or similar events that are only part of the transaction. Many of these transactions do not transfer any property rights to the customer, but are preliminary at best.
- Consider using a trusted broker as a "middleman" to hold funds pending contract performance or delivery of goods.
- Verify that any funds sent are returnable if the transaction does not complete.

6. Determining the mechanics and documentation of the transaction

How funds are handled

- Determine where funds are being sent for payment and verify the recipient institution. Is it a reputable financial institution in a reputable jurisdiction

or is it an offshore account? Legal remedies in offshore centres are generally weak for individual investors.

- If the money is being held in escrow or in a letter of credit, is the financial institution in good standing and with a good reputation?
- Verify signatures, accounts, and other documentary information provided by contacting, for example, the organization on whose letterhead the information is printed, or the person who has purportedly signed the document.
- Any security vehicles or documents provided, such as letters of credit, guarantees, or the like, should be verified by calling the other parties mentioned in the document to ascertain their validity.

How to communicate with the counterparty

- The counterparty should be easily accessible by phone, mail or e-mail. The information should be independently verifiable.
- Personal visits to the counterparty's offices should be available to get an idea as to the nature of the counterparty. Care should be taken that appearances are deceiving.

What information is exchanged with counterparty

- Care should be taken as to what information is given to the counterparty. Business information is appropriate but personal information is not in a normal commercial transaction.
- Personal information to financial institutions such as securities and commodities brokers should only be given after verifying their registration and good standing with the relevant regulatory authorities.

8. Researching the parties, products and transactions

- Increasingly, materials on on-going fraudulent schemes and warnings regarding domestic or foreign fraud areas are being publicized by regulatory authorities and business and consumer organizations. Efforts should be made to locate such materials either online or via local business organizations.
- Follow up on any uneasiness one may have — for example, a telephone area code that does not fit the purported location, or facts that do not make sense.
- Engage in some comparison shopping for similar products or transactions, if possible.
- If dealing with products, try to obtain a sample to have it analyzed, or try to have the item in question appraised by a qualified and independent party.
- Start one's inquiry on a regional basis, looking to domestic private and governmental organizations for information, then broaden the approach to encompass cross-border review, into jurisdictions referred to in the documentation or by the promoter as well as those that have not been mentioned, which may have been the site of previous frauds.

- If a very large investment is being considered, hire the services of professionals to conduct due diligence on the promoter and the proposal.
- Even if the relationship is an ongoing one, treat every new investment or significant transaction with the same caution and the same approach to due diligence.

VII. CASE LAW ON UNCITRAL TEXTS (CLOUT)

The secretariat of the United Nations Commission on International Trade Law (UNCITRAL) continues to publish court decisions and arbitral awards that are relevant to the interpretation or application of a text resulting from the work of UNCITRAL. For a description of CLOUT (Case Law on UNCITRAL Texts), see the users guide (A/CN.9/SER.C/GUIDE/1/Rev.1), published in 2000 and available on the Internet at www.uncitral.org.

A/CN.9/SER.C/ABSTRACTS may be obtained from the UNCITRAL secretariat at the following address:

UNCITRAL secretariat
P.O. Box 500
Vienna International Centre
A-1400 Vienna
Austria

Telephone (+43-1) 26060-4060 or 4061

Telex: 135612 uno a

Telefax: (+43-1) 26060-5813

E-mail: uncitral@uncitral.org

They may also be accessed through the UNCITRAL homepage on the Internet at www.uncitral.org.

Copies of complete texts of court-decisions and arbitral awards, in the original language, reported on in the context of CLOUT are available from the secretariat upon request.

I. Introduction

1. The United Nations Commission on International Trade Law (UNCITRAL) plays an important role in developing the legal framework for international trade and investment through its mandate to prepare and promote the use and adoption of legislative and non-legislative instruments in a number of key areas of trade law, including: sales; dispute resolution; government contracting; banking and payments; security interests; insolvency; transport; and electronic commerce. Those instruments are widely accepted, offering solutions appropriate to different legal traditions and to countries at different stages of economic development and include:

(a) In the area of sale of goods, the United Nations Convention on Contracts for the International Sale of Goods (CISG)¹ and the United Nations Convention on the Limitation Period in the International Sale of Goods;²

(b) In the area of dispute resolution, the Convention on the Recognition and Enforcement of Foreign Arbitral Awards³ (the new York convention, a United Nations convention adopted prior to the establishment of the Commission, but actively promoted by it), the UNCITRAL Arbitration Rules,⁴ the UNCITRAL Conciliation Rules,⁵ the UNCITRAL Model Law on International Commercial Arbitration and revised articles,⁶ the UNCITRAL Notes on Organizing Arbitral Proceedings,⁷ and the UNCITRAL Model Law on International Commercial Conciliation;⁸

(c) In the area of government contracting, the UNCITRAL Model Law on Procurement of Goods, Construction and Services,⁹ the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects¹⁰ and the UNCITRAL Model Legislative Provisions on Privately Financed Infrastructure Projects;¹¹

¹ 11 April 1980, United Nations, *Treaty Series*, vol. 1489, p. 3; *Official Records of the United Nations Conference on Contracts for the International Sale of Goods, Vienna, 10 March-11 April 1980* (United Nations publication, Sales No. E.82.V.5), part. I.

² *Official Records of the United Nations Conference on Prescription (Limitation) in the International Sale of Goods, New York, 20 May-14 June 1974* (United Nations publication, Sales No. E.74.V.8), part I; United Nations, *Treaty Series*, vol. 1511, pp. 77 and 99; *UNCITRAL Yearbook 1980*, part three, chap. I, sect. C.

¹¹ *Official Records of the General Assembly, Fifty-eighth Session, Supplement No. 17 (A/57/17)*, annex I.

(d) In the area of banking and payments, the United Nations Convention on International Bills of Exchange and International Promissory Notes,¹² the UNCITRAL Model Law on International Credit Transfers,¹³ and the United Nations Convention on Independent Guarantees and Standby Letters of Credit;¹⁴

(e) In the area of security interests, the United Nations Convention on the Assignment of Receivables in International Trade;¹⁵

(f) In the area of insolvency, the UNCITRAL Model Law on Cross-Border Insolvency¹⁶ and the UNCITRAL Legislative Guide on Insolvency Law;¹⁷

(g) In the area of transport, the United Nations Convention on the Carriage of Goods by Sea (Hamburg Rules),¹⁸ and the United Nations Convention on the Liability of Operators of Transport Terminals in International Trade;¹⁹ and

(h) In the area of electronic commerce, the UNCITRAL Model Law on Electronic Commerce,²⁰ the UNCITRAL Model Law on Electronic Signatures²¹ and the United Nations Convention on the Use of Electronic Communications in International Contracts (ECC).²²

2. Technical cooperation and assistance activities aimed at promoting the use and adoption of its texts is one of UNCITRAL's priorities, pursuant to a decision taken at its twentieth session (1987),²³ and are particularly useful for developing countries and economies in transition lacking expertise in the areas of trade law covered by the work of UNCITRAL. Since trade law reform, based on harmonized international instruments, has a clear impact on the ability to participate in international trade, the Secretariat's technical cooperation and assistance work aimed at promoting use and adoption of texts can facilitate economic development.

3. In its resolution 60/20 of 23 November 2005, the General Assembly reaffirmed the importance, in particular for developing countries and economies in transition, of the technical cooperation and assistance work of the Commission in the field of international trade law and reiterated its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance

programme of the Commission and to cooperate and coordinate their activities with those of the Commission. The General Assembly also stressed the importance of bringing into effect the conventions emanating from the work of the Commission to further the progressive harmonization and unification of private law, and to this end urged States that have not yet done so to consider signing, ratifying or acceding to those conventions.

4. This note lists the technical cooperation and assistance activities of the Secretariat subsequent to the date of the previous note submitted to the Commission at its thirty-ninth session in 2006 (A/CN.9/599 of 4 April 2006), and reports on the development of resources to assist technical cooperation and assistance activities.

II. Technical cooperation and assistance activities

5. Technical cooperation and assistance activities undertaken by the UNCITRAL Secretariat promote the adoption of UNCITRAL legislative texts, including conventions, model laws and legislative guides and include providing advice to States considering signature, ratification or accession to UNCITRAL conventions, as well as to States that are in the process of revising their trade law and considering adoption of an UNCITRAL model law or use of a UNCITRAL legislative guide. They also support implementation of these texts and their uniform interpretation. Technical cooperation and assistance may involve: undertaking briefing missions and participating in seminars and conferences, organized at both regional and national levels, on UNCITRAL texts; assisting countries to review existing legislation and assess their need for law reform in the trade field; assisting with the drafting of national legislation to implement UNCITRAL texts; assisting international and bilateral development agencies to use UNCITRAL texts in their law reform activities and projects; providing advice and assistance to international and other organizations, such as professional associations, organizations of attorneys, chambers of commerce and arbitration centres, on the use of UNCITRAL texts; and organizing training activities to facilitate the implementation and interpretation of modern legislation based on UNCITRAL texts by judiciaries and legal practitioners.

A. Activities addressing multiple topics

6. A number of technical cooperation and assistance activities undertaken since the last report covered several of the topic areas noted in paragraph 1 above.

7. In the context of providing support for ongoing peace-building activities, the Ministry of Foreign Affairs of Liberia requested the Office of Legal Affairs/Treaty Section to coordinate the participation of a number of substantive offices of the United Nations (OLA/International Trade Law Division, United Nations Office of Drugs and Crime, Office of the High Commissioner for Human Rights) and the International Committee of the Red Cross in a seminar on treaty implementation promoted by the Result-Focused Transitional Framework for Liberia Implementation and Monitoring Committee (RFTF-RIMCO) (a United Nations Development Programme-World Bank joint initiative) (Monrovia, Liberia, 10-14 July 2006).^{*} The purpose of the mission was to support, in accordance with a

^{*} Denotes activities funded by the UNCITRAL Trust fund for Symposia.

wish of the Secretary-General of the United Nations, the Liberian Government in its implementation of the obligations resulting from the treaty actions undertaken in September 2005, including treaties in the field of international trade law on sale of goods, transport and international commercial arbitration.

8. At the regional level, the Secretariat participated at:

(a) 3rd Association of Southeast Asian Nations (ASEAN) Law Forum “International Trade Law Development among ASEAN countries” (Nongkhai, Thailand and Vientiane, Laos, 9-14 September 2006)* focussing on international trade law development among ASEAN Countries. UNCITRAL promoted the use of UNCITRAL instruments as a basis for legal harmonization among ASEAN countries, in line with the Action Plan drawn up by the ASLOM (ASEAN Law Officials Meeting) Working Group on Establishing the Modalities for Harmonization of ASEAN Trade Laws; and

(b) Workshop on Harmonisation of Business Law in Africa, organized by the African Union in cooperation with the African Law Institute (Tswane, South Africa, 12-14 December 2006).* The objective of the workshop was to elaborate a general framework for harmonization of business law in Africa and to recommend a long term work programme to be adopted by relevant organs of the African Union. UNCITRAL recommended inclusion of UNCITRAL instruments in that programme, including in the areas of dispute resolution, electronic commerce, secured transactions and cross-border insolvency.

9. At the country level, in collaboration with the International Trade Centre (ITC), the Secretariat participated at a workshop on multilateral trade treaties within the European Union Asian Trust Fund funded project “Upgrading Vietnam’s Legal Multilateral Trade Framework”, in conjunction with the Ministry of Trade of Viet Nam (Hanoi, Viet Nam, 7-11 October 2006).* The goal of the workshop was to provide the Vietnamese partners with an overview of international agreements relating to trade law, so as to start a process aimed at enhancing the participation of the country in those agreements and assist in improving the overall framework for international trade. This is in line with the ASEAN regional initiative referred to in paragraph (a) above.

10. The Secretariat held a joint meeting with representatives of Italian Ministries in order to present UNCITRAL objectives, policies and activities and with the Ministry of Foreign Affairs, discuss a number of draft UNCITRAL technical cooperation and assistance projects and explore opportunities for funding (Rome, Italy, 9-10 October 2006).*

11. The Secretariat held consultations with Deutsche Gesellschaft für Technische Zusammenarbeit (GTZ) concerning areas of possible technical legal assistance cooperation between GTZ and UNCITRAL, including projects in which UNCITRAL texts might form the basis of law reform activities, focussing upon the Balkans and Central Asia (Frankfurt, Germany, 26 January 2007).* Further discussions are taking place concerning possible projects in the areas of sale of goods, dispute resolution and insolvency.

12. To provide a briefing on UNCITRAL’s current legislative activities, the Secretariat organized, in conjunction with the United Nations Institute for Training and Research (UNITAR), a two-day seminar for Permanent Missions accredited to the United Nations Office at Vienna (Vienna, Austria, 21-22 November 2006).

45 representatives from 35 Permanent Missions attended. Briefings on various working group topics are regularly being offered in Vienna.

B. Sale of goods

13. The Secretariat has been particularly active in promoting adoption of the CISG, at the regional level, as well as through contact with Permanent Missions to the United Nations in Vienna, Geneva and New York and directly with relevant officials in selected States. Regional activities included providing a seminar, in cooperation with the Ministry of Justice of Thailand, (Bangkok, Thailand, 9-11 August 2006)* attended by officials from regional countries, which was followed by a workshop with Thai government officials on draft CISG legislation. Activities at the country level included participation at a conference at Istanbul Bilgi University, Turkey (16-19 November 2006) on “United Nations Convention on Contracts for the International Sale of Goods — what challenges for Turkish sales law?”.

14. Assistance was also provided to States in the final stage of the adoption process, with particular regard to formulation of reservations and the deposit of instruments of consent to be bound. Since the last report, the CISG has been adopted by El Salvador, Montenegro and the former Yugoslav Republic of Macedonia.

C. Dispute resolution

15. The Secretariat has promoted adoption of the texts relating to arbitration and conciliation through participation in activities organized both on a regional basis and with individual countries, as well as activities organized by arbitral institutions. Regional activities included:

(a) Participating in a symposium organized with the International Trade Centre (ITC) (Chamonix, France, 16-20 May 2006),* on “Managing Commercial Dispute Resolution Centres”;

(b) Participating in the Advanced Training Course on Managing Investment Disputes, organized and funded jointly by the General Secretariat of the Organization of American States (OAS) and the Secretariat of the United Nations Conference on Trade and Development (UNCTAD) (Puebla, Mexico, 11-18 October 2006).* The programme was directed at government officials responsible for negotiating bilateral investment protection agreements. UNCITRAL addressed use of the UNCITRAL Arbitration Rules and execution of awards under the New York Convention;

(c) Providing a regional seminar involving Viet Nam, Cambodia, Myanmar, Thailand and Lao People’s Democratic Republic (Bangkok, Thailand, 8 August 2006)* on the UNCITRAL Model Laws on International Commercial Arbitration and International Commercial Conciliation, hosted by the Ministry of Justice of Thailand; and

(d) Participation at a Regional Conference on Alternative Dispute Resolution, Mediation and Third Party Arbitration (Kiev, Ukraine, 23-24 May 2006), sponsored by the United Kingdom Department for International Development.

16. The Secretariat collaborated with a number of arbitral institutions and organizations, participating at:

(a) The 18th Congress of the International Council for Commercial Arbitration (ICCA) (Montreal, Canada, 25-26 June 2006);

(b) A conference organized by the International Chamber of Commerce and the Société de législation comparée (Paris, France, 25-27 September 2006) to present recent work by UNCITRAL in the field of arbitration;

(c) The XXXIII Assembly of the Inter-American Association of Chambers of Commerce (AICO) and Conference of the Inter-American Commission of Commercial Arbitration (CIAC) (Alicante, Spain, 22-25 October 2006); and

(d) The International Arbitration Congress jointly organized by the China International Economic and Trade Arbitration Commission (CIETAC) and the International Commercial Arbitration Court of the Chamber of Commerce and Industry of the Russian Federation (Almaty, Kazakhstan, 1-3 November 2006)* to evaluate progress of commercial arbitration legislation in Central Asian countries. The new legislative provisions on interim measures and preliminary orders adopted as a new chapter IV A of the UNCITRAL Model Law on International Commercial Arbitration were introduced to participants.²⁴

17. Activities related specifically to the anniversary of the UNCITRAL Arbitration Rules and their possible revision included: a conference in Bogota, Colombia (19 September 2006)* and a seminar in Kuala Lumpur, Malaysia, (21-24 November 2006)* hosted by the Kuala Lumpur Arbitration Centre.

18. With respect to the New York Convention, the Secretariat conducted a briefing for countries not yet party to the New York Convention to discuss the Convention and the benefits of its adoption (United Nations Headquarters, New York, 7 February 2007).

D. Procurement

19. In accordance with requests of Working Group I (Procurement), the Secretariat has established links with other organizations interested in procurement to foster cooperation, particular with regard to UNCITRAL's work of revising the UNCITRAL Model Law on Procurement of Goods, Construction and Services, as well as undertaking activities to promote knowledge and acceptance of the Model Law.²⁵ These activities have included:

(a) Participation at an International Conference on Electronic Government Procurement (EGP) organized by the Ministry of Finance, China, the Asian Development Bank and the World Bank to make a presentation on the work of UNCITRAL on electronic procurement (Beijing, China, 26-27 April 2006);

(b) A presentation on UNCITRAL's work on public procurement, including revisions to the UNCITRAL Model Law, at the conference "Public Procurement: Global Revolution III" organized by the School of Law, University of Nottingham (Nottingham, United Kingdom, 19-20 June 2006);

²⁴ See note 6.

²⁵ See documents A/CN.9/575, paras. 52 and 67, and A/CN.9/615, para. 14.

(c) Participation at the 2nd and 3rd Organization Committee meetings (Paris, France, 29 August and 20-21 November 2006), for an International Symposium “Developing Trends in Public Procurement and Auditing” to take place in May 2007, being prepared by the procurement department of the European Space Agency; and

(d) Participation at an Organization for Economic Cooperation and Development (OECD) symposium “Mapping out Good Practices for Integrity and Corruption Resistance in Procurement”, and a forum entitled “Forum for Policy Dialogue with Non-Members: Sharing Lessons on Promoting Good Governance and Integrity in Procurement” (Paris, France, 29 November to 1 December 2006). A result of these activities will be publication, by the OECD, of a Good Practice Report, which will map out good practices, and particular approaches, measures and tools that have proved successful in promoting integrity in public procurement in countries across the world.

E. Security interests

20. The Secretariat participated in a number of activities in Europe to promote adoption of the United Nations Convention on the Assignment of Receivables in International Trade (Receivables Convention) and disseminate information on the draft UNCITRAL Legislative Guide on Secured Transactions, including an International Seminar on the Law of Proprietary Security Rights in the Proposal for a new Hungarian Civil Code (Budapest, Hungary 30 November-2 December)* and international and research seminars in Austria and Switzerland. The Secretariat also gave a presentation on the Receivables Convention to the Istanbul Chamber of Commerce (Istanbul, Turkey, 6 November 2006).

F. Commercial fraud

21. The Secretariat participated at the Project MARC Workshop on crime proofing of EU legislation (Brussels, Belgium, 26 June 2006), which aims to provide a mechanism that will facilitate policymakers to assess whether there is any risk that present and future legislation and regulation may produce opportunities for crime.

G. Insolvency

22. The Secretariat has promoted the use and adoption of insolvency texts, particularly the Model Law on Cross-Border Insolvency, through country specific activities aimed at assisting with the drafting of implementing legislation and regional workshops. For example, at the invitation of the Greek Ministry of Justice, the Secretariat participated in meetings of the Greek Bankruptcy Committee to assist with adoption of the UNCITRAL Model Law on Cross-border Insolvency, including the drafting of implementing legislation (Athens, Greece, 11-14 April 2006 and 3-5 November 2006).

23. At the regional level, the Secretariat participated in several workshops, including:

(a) At the invitation of USAID, a Joint Regional Training Workshop on Theoretical and Practical Aspects of Jurisdiction and the Recognition of Insolvency

Proceedings organized by USAID/Commercial Courts Administration Strengthening Activity (CCASA)/Community Assistance for Reconstruction Development and Stabilization (CARDS) Regional Project 2003 (European Union and Council of Europe) (Belgrade, Serbia, 17-20 April 2006). The workshop was attended by judges and government officials from Albania, Bosnia Herzegovina, Croatia, the former Yugoslav Republic of Macedonia, Romania, Serbia and Montenegro. The workshop discussion included the UNCITRAL Model Law on Cross-Border Insolvency, adopted by Serbia, Montenegro and Romania, as well as the intersection between the Model Law and the European Council (EC) Regulation No. 1346/2000 of 29 May 2000 on insolvency proceedings (EC Regulation); and

(b) Fifth Forum on Asian Insolvency Reform (FAIR), (Beijing, China, 27-28 April 2006)* organized to examine the main policy issues arising in legal and institutional reforms of the Asian insolvency systems in recent years and distil lessons stemming from international guidance, including the UNCITRAL Legislative Guide on Insolvency Law and the UNCITRAL Model Law on Cross-Border Insolvency. 160 participants from 22 countries and 5 international organizations attended.

24. Further adoptions of the UNCITRAL Model Law on Cross-Border Insolvency in 2006, in particular by the United States and Great Britain, raised interest in the text and its interaction with the EC Regulation within the European Union (EU). The Secretariat participated in a number of seminars and conferences in Europe with the aim of promoting adoption of the text by EU Member States as a framework for facilitating coordination of cross-border insolvency proceedings between EU Member States and non-Member States.

25. UNCITRAL co-sponsored the Seventh UNCITRAL/INSOL/World Bank Multinational Judicial Colloquium (Cape Town, South Africa, 17-18 March 2007)* with 65 judges and officials attending from 42 countries. The colloquium focused on issues of cross-border cooperation in insolvency cases, including adoption of the UNCITRAL Model Law on Cross-Border Insolvency, and implementing cross-border cooperation and coordination, in particular through the use of cross-border protocols, which is the subject of informal work being undertaken by the Secretariat to compile practical experience with respect to negotiating and using cross-border insolvency protocols.²⁶

H. Electronic commerce

26. The Secretariat has participated in joint activities with national governments and agencies, including a conference on E-Signature law sponsored by the United States Commercial Law Development Programme (CLDP) and the Government of Egypt, at which UNCITRAL made a presentation on the work of UNCITRAL in the area of electronic signatures (Cairo, Egypt, 11-13 July 2006).

27. The Secretariat has been actively promoting adoption of the United Nations Convention on the Use of Electronic Communications in International Contracts (ECC), including by organizing an event dedicated to that Convention in New York on 6 July 2006. Since the last report, the ECC has been signed by China, Lebanon, Madagascar, Paraguay, Senegal, Sierra Leone, Singapore, and Sri Lanka.

²⁶ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 207-209.

I. Assistance with legislative drafting

28. In the context of a programme of commercial law reform for Rwanda (2006 and continuing) the Secretariat has assisted with legislative drafting of various commercial laws based upon UNCITRAL texts, including arbitration, privately financed infrastructure projects, electronic commerce, security interests and insolvency.

III. Coordination activities

29. In accordance with its mandate,²⁷ the UNCITRAL Secretariat participates in a number of the working groups and meetings of other organizations active in the field of international trade law to facilitate coordination of the work being undertaken. Since the last report these have included:

(a) Third session of the UNIDROIT Advisory Board preparing a model law on leasing (Rome, Italy, 3-5 April 2006);

(b) Governing Council of UNIDROIT (Rome, Italy, 7-10 May 2006);

(c) First Session of the Working Group for the preparation of an additional chapter to the UNIDROIT Principles of International Commercial Contracts (Rome, Italy, 29 May-1 June 2006);

(d) A regional workshop for countries negotiating accession to the World Trade Organization (WTO)/WTO Agreement on Government Procurement (GPA) (Geneva, Switzerland 26-30 June 2006);

(e) International Workshop on Collateral Reform and Access to Finance, organized by the European Bank for Reconstruction and Development (EBRD) and the World Bank (London, United Kingdom, 7-10 June 2006);

(f) UNCITRAL-UNIDROIT-Hague Conference on private international law coordination meeting, dealing in particular with coordination between UNCITRAL and UNIDROIT in the field of security interests (Rome, Italy, 18 September 2006);

(g) United Nations Economic Commission for Europe (UNECE) Working Party on Road Transport (Geneva, Switzerland, 18 October 2006);

(h) International Chamber of Commerce (ICC) Banking Committee meeting, to make a presentation on the work of UNCITRAL on transport law (Paris, France, 23 October 2006);

(i) Upon invitation of the International Finance Corporation (IFC), World Bank Group, to participate in the an Experts Workshop on Arbitration and Dispute Resolution and Corporate Governance to discuss the role UNCITRAL plays or can play in setting the stage for solving corporate governance related disputes through mediation mechanisms and providing international guidelines for local institutions (Paris, France, 12-13 February 2007);

(j) ICC task force on E-Business, IT and Telecoms (EBITT) meeting to update members on UNCITRAL's work programme and attend the e-signatures expert group meeting (Paris, France, 20-21 March 2007);

²⁷ General Assembly resolution 2205 (XXI), sect. II, para. 8.

(k) Participation at the multilateral banks' e-government procurement working group meetings (Rome, Italy, 19-20 September 2006; Washington, D.C., United States, 25-29 March 2007); and

(l) World Bank-UNCITRAL meeting on coordination in the area of secured financing law reform (Washington, United States, 27 March 2007).

IV. Dissemination of information

30. A number of publications and documents prepared by UNCITRAL serve as key resources for its technical cooperation and assistance activities, particularly with respect to dissemination of information on its work and texts. These resources are being developed to further improve the ease of dissemination of information and ensure that it is current and up to date. All recent publications are available both in hard copy and electronically.

A. Case Law on UNCITRAL Texts (CLOUT)

31. CLOUT, established for the collection and dissemination of case law on UNCITRAL texts, continues to be an important tool of the technical cooperation and assistance activities undertaken by UNCITRAL. The wide distribution of CLOUT in the six official languages of the United Nations promotes the uniform interpretation and application of UNCITRAL texts by facilitating access to decisions and awards from many jurisdictions.

32. The system is regularly updated with new abstracts, and the full text of the court decisions and arbitral awards are collected, but not published. As at the date of this note, 63 issues of CLOUT had been prepared for publication, dealing with 686 cases, relating mainly to the United Nations Convention on Contracts for the International Sale of Goods (CISG) and the UNCITRAL Model Law on International Commercial Arbitration.

33. The Digest of Case Law on the CISG, published in December 2004, has been reviewed in order to improve its uniformity in approach and style. The revised Digest will be presented to the CLOUT National Correspondents at their meeting on 5 July 2007.

34. A search engine to facilitate retrieval of published case law on the UNCITRAL website will be operative in the second half of 2007.

B. Website

35. The website, available in the six official languages of the United Nations, includes all UNCITRAL documents contained in the United Nations Official Documents System (ODS), as well as other information relating to the work of UNCITRAL. The website is maintained and developed at no additional cost to the Secretariat.

36. The number of visitors to the UNCITRAL website has increased by one quarter since the last report. About 45 per cent of the traffic is directed to pages in English, 30 per cent to pages in French and Spanish, and the remaining 25 per cent to pages in Arabic, Chinese and Russian.

37. The content of the website is updated and expanded on an on-going basis. In particular, UNCITRAL official documents relating to early Commission sessions are being uploaded in the ODS and made available on the website under a project on digitization of UNCITRAL archives conducted jointly with the Dag Hammarskjöld Library in New York.

C. Library

38. The UNCITRAL Law Library was established in 1979 in Vienna. Since its establishment, the Library has been providing services not only to UNCITRAL delegates and to the staff of the Secretariat, but also to the staff of permanent missions and the staff of other Vienna-based international organizations. It has also provided research assistance to scholars and students from many countries.

39. The collection of the UNCITRAL Law Library focuses mainly on international trade law and currently consists of over 10,000 monographs; 150 active journal titles; legal and general reference material, including non-UNCITRAL United Nations documents, and documents of other international organizations; and electronic resources (restricted to in-house use only). Lately, particular attention has been given to expanding the holdings in all of the six United Nations official languages.

40. The UNCITRAL Law Library maintains an online public access catalogue (OPAC) jointly with the other United Nations libraries in Vienna and with the technical support of the United Nations Library in Geneva. The OPAC is available via the library page of the UNCITRAL website and is located at the address <http://libunov-cat.unog.ch>.

D. Publications

41. UNCITRAL traditionally has two series of publications, in addition to official documents, which include the texts of all instruments developed by the Commission and the UNCITRAL Yearbook. A new book providing basic facts about UNCITRAL, "The UNCITRAL Guide", is in press.

42. Publications are regularly provided to support technical cooperation and assistance activities undertaken by the Secretariat, as well as by other organizations where the work of UNCITRAL will be discussed, and in the context of national law reform efforts.

E. Press releases

43. To improve the availability of up-to-date information on the status and development of UNCITRAL texts, efforts have been made to ensure that press releases are issued when treaty actions are taken or information is received on the adoption of a model law. Those press releases are provided to interested parties by email and are posted on the UNCITRAL website, as well as on the website of the United Nations Information Service (UNIS) in Vienna.

F. General enquiries

44. The Secretariat currently addresses approximately 1,750 general inquiries per year concerning, inter alia, technical aspects and availability of UNCITRAL texts, working papers, Commission documents and related matters. Increasingly, these inquiries can be answered by reference to the UNCITRAL website.

G. Information lectures in Vienna

45. On request, the Secretariat provides information lectures in-house on the work of UNCITRAL to visiting university students and academics, government officials and others. Since the last report lectures have been given to universities from Austria, USA, Finland, the Netherlands, Ukraine and Turkey.

V. Resources and funding

A. UNCITRAL Trust Fund for symposia

46. In the period under review, a contribution was received from Mexico, to whom the Commission may wish to express its appreciation.

47. The ability of the Secretariat to implement the technical cooperation and assistance component of the UNCITRAL work programme is contingent upon the availability of extrabudgetary funding, since the costs of technical cooperation and assistance activities are not covered by the regular budget.

48. The UNCITRAL Trust Fund for symposia supports technical cooperation and assistance activities for the members of the legal community in developing countries; participation of UNCITRAL staff, as speakers, at conferences where UNCITRAL texts are presented for examination and possible adoption; and fact finding missions for law reform assessments in order to review existing domestic legislation and assess country needs for law reform in the commercial field.

49. The Commission may wish to note that, in spite of efforts by the Secretariat to solicit new donations, funds remaining in the Trust Fund will be sufficient only for technical cooperation and assistance activities already planned for 2007. Beyond the end of 2007, requests for technical cooperation and assistance involving the expenditure of funds for travel or to meet other associated costs will have to be declined unless new donations to the Trust Fund are received or other alternative sources of funds can be found.

50. The Commission may once again wish to appeal to all States, relevant United Nations Agencies and bodies, international organizations and other interested entities to make contributions to the Trust Fund, if possible in the form of multi-year contributions, so as to facilitate planning and to enable the Secretariat to meet the increasing demands from developing countries and States with economies in transition.

B. UNCITRAL Trust Fund to grant travel assistance to developing countries that are members of UNCITRAL

51. The Commission may wish to recall that, in accordance with General Assembly resolution 48/32 of 9 December 1993, the Secretary-General was requested to establish a Trust Fund to grant travel assistance to developing countries that are members of UNCITRAL. The Trust Fund so established is open to voluntary financial contributions from States, intergovernmental organizations, regional economic integration organizations, national institutions and non-governmental organizations, as well as to natural and juridical persons. In the period under review, no contributions were received.

52. In order to ensure participation of all Member States in the sessions of UNCITRAL and its Working Groups, the Commission may wish to reiterate its appeal to relevant bodies in the United Nations system, organizations, institutions and individuals to make voluntary contributions to the Trust Fund established to provide travel assistance to developing countries that are members of the Commission.

53. It is recalled that in its resolution 51/161 of 16 December 1996, the General Assembly decided to include the Trust Funds for UNCITRAL symposia and travel assistance in the list of funds and programmes that are dealt with at the United Nations Pledging Conference for Development Activities.

IX. STATUS AND PROMOTION OF UNCITRAL LEGAL TEXTS

Status of conventions and model laws

I. Introduction

1. In resolution 34/142 of 17 December 1979, the General Assembly requested the Secretary-General to place before the United Nations Commission on International Trade Law a report on the legal activities of international organizations in the field of international trade law, together with recommendations as to the steps to be taken by the Commission to fulfil its mandate of coordinating the activities of other organizations in the field.

2. In resolution 36/32 of 13 November 1981, the General Assembly endorsed various suggestions by the Commission to implement further its coordinating role in the field of international trade law.¹ Those suggestions included presenting, in addition to a general report of activities of international organizations, reports on specific areas of activity focusing on work already under way and areas where unification work was not under way but could appropriately be undertaken.²

3. This general report, prepared in response to resolution 34/142, is the third in a series which the Secretariat proposes to update and revise on an annual basis for the information of the Commission. The first paper (A/CN.9/584, May 2005) and related papers on electronic commerce (A/CN.9/579) and insolvency (A/CN.9/580/Add.1) were prepared for the thirty-eighth session of the Commission. The second paper (A/CN.9/598, April 2006) and related papers on procurement (A/CN.9/598/Add.1) and security interests (A/CN.9/598/Add.2) were prepared for the thirty-ninth session of the Commission. The present paper focuses on activities of international organizations primarily undertaken since preparation of the second paper. It is based upon publicly available material and consultations sought with the listed organizations. This paper does not repeat information contained in the previous papers unless necessary to facilitate understanding of a particular issue.

4. The work of the following organizations is described in this report:

(a) United Nations bodies and specialized agencies

ITU	International Telecommunications Union
UNECE	United Nations Economic Commission for Europe
UNESCAP	United Nations Economic and Social Commission for Asia and the Pacific
UNCTAD	United Nations Conference on Trade and Development
UNODC	United Nations Office on Drugs and Crime
WIPO	World Intellectual Property Organization

(b) Other intergovernmental organizations

ADB	Asian Development Bank
APEC	Asia Pacific Economic Cooperation Commonwealth Secretariat
EBRD	European Bank for Reconstruction and Development
EC	European Commission
Hague Conference	Hague Conference on Private International Law
OAS	Organization of American States

¹ *Official Records of the General Assembly, Thirty-sixth Session, Supplement No. 17 (A/36/17)*, paras. 93-101.

² *Ibid.*, para. 100.

OTIF	Intergovernmental Organization for International Carriage by Rail
OECD	Organization for Economic Cooperation and Development
Unidroit	International Institute for the Unification of Private Law
World Bank	International Bank for Reconstruction and Development
WCO	World Customs Organization
WTO	World Trade Organization
(c)	International non-governmental organizations
CTO	Commonwealth Telecommunications Organization
INSOL	International Association of Restructuring, Insolvency and Bankruptcy Professionals
IBA	International Bar Association
ICC	International Chamber of Commerce
III	International Insolvency Institute

II. Harmonization and unification of international trade law

A. International commercial contracts

Hague Conference³

5. The Hague Convention of 15 November 1965 on the Service Abroad of Judicial and Extrajudicial Documents in Civil or Commercial Matters (Hague Service Convention) provides for the channels of transmission to be used when a judicial or extrajudicial document is to be transmitted from one State Party to the Convention to another State Party for service in the latter. The Convention provides for one main channel of transmission (via a Central Authority of the requested State), and several alternative channels of transmission.

6. The Practical Handbook on the Operation of the Hague Service Convention was officially presented during the meeting of the Special Commission on General Affairs and Policy of the Hague Conference (3-5 April 2006). This fully revised and expanded edition of the Handbook offers detailed explanations on the general operation of the Convention as well as authoritative commentaries on the major issues raised by practice over the past forty years. The Handbook analyses or otherwise refers to approximately 250 court decisions rendered in a great number of jurisdictions in application of the Convention.

7. The Handbook also contains a FAQ section with succinct and practical replies that offer a quick overview of the Convention's main provisions and basic features.

³ www.hcch.net/.

This section is usefully complemented by four Explanatory Charts on various aspects of the Convention's operation. This paper edition of the Handbook comes with a fully searchable and easy-to-use e-book (in PDF format).⁴

8. At its meeting on 3-5 April 2006, the Special Commission on General Affairs and Policy of the Hague Conference invited the Permanent Bureau to prepare a feasibility study on the development of an instrument concerning choice of law in international contracts. In preparation of the study, which should consider in particular whether there is a practical need for the development of such an instrument, the Permanent Bureau has sent a Questionnaire to Member States, national and international arbitration institutions and — through the ICC secretariat — to the international business community. Moreover, a comparative law overview on the issue of choice of law in international contracts, both in court proceedings and arbitration, was drawn up.

Unidroit⁵

9. Pursuant to the recommendation of the Governing Council of Unidroit, the Principles of International Commercial Contracts (PICC), first published in 1994, are included as an on going project in the work programme of the Institute. Subsequent to the adoption of the second enlarged edition of the PICC in 2004, in 2005 the Governing Council decided to set up a new Working Group with the task of preparing a third edition of the PICC including new chapters on unwinding of failed contracts, plurality of obligors and of obligees, termination of long-term contracts for just cause. The Working Group, composed of eminent experts representing the major legal systems and/or regions of the world as well as observers from international organizations and arbitration centres, including UNCITRAL, held its first session in Rome from 29 May to 1 June 2006. On the basis of a preliminary study prepared by the Unidroit Secretariat, the Group proceeded to an in-depth discussion of the five topics suggested for inclusion in the new edition of the Principles and appointed several rapporteurs to deal with the topics of: unwinding of failed contracts; illegality; plurality of obligors and of obligees; conditions; and termination of long-term contracts for just cause. The Rapporteurs were invited to prepare position papers on their respective topics for discussion at the Group's next session in June 2007.

10. UNCITRAL, at its 40th session in July 2007, will be invited to give its endorsement to the 2004 version of the PICC.

B. International transport of goods

1. Transport by sea

UNCTAD⁶

11. UNCTAD continued its participation at sessions of the UNCITRAL Working Group III (Transport Law), submitting comments providing technical analysis on the issues under consideration and highlighting implications for developing

⁴ The Handbook is sold on a commercial basis by two distributors: Wilson & Lafleur (Montreal) and Bruylant (Brussels).

⁵ www.unidroit.org.

⁶ www.unctad.org.

countries, with respect to the development of a new international convention to govern the carriage of goods by sea as well as multimodal transport including a sea leg.

2. Transport by land

UNECE⁷

12. At the 99th session of the Working Party on Road Transport (SC.1) in October 2005, an editorial committee, comprising both Unidroit and UNCITRAL, was established to finalize the drafting of the text of an additional Protocol to the Convention on the Contract for the International Carriage of Goods by Road⁸ (Geneva, 19 May, 1956) (CMR) with a view to facilitating the possible use of electronic consignment notes. At its 100th session, two versions were considered, the first version prepared by Unidroit and amended to take account of comments by various delegations, and another prepared by the International Road Transport Union based largely on the ICAO Montreal Protocol. SC.1 opted for the first version and adopted the technical provisions of Protocol (ECE/TRANS/SC.1/379, Annex 3).⁹ Following comments by one delegation, the text was slightly amended with the consent of Unidroit, UNCITRAL and the International Road Transport Union (IRU). Regarding the final provisions of the Protocol, the Committee noted that, in the light of observations by the Treaty Section of the Office of Legal Affairs at United Nations Headquarters in New York, it was necessary to amend or supplement certain points, for example the introduction of a clause amending the Protocol. Since the secretariat cannot amend the text on its own authority without the prior agreement of members of SC.1, the Committee endorsed the secretariat's proposal to make written representations to the Contracting Parties to the CMR as soon as possible. The procedure for opening the Protocol for signature may be set in motion once there has been agreement by the Contracting Parties.

OTIF¹⁰

13. The Uniform Rules concerning the Contract for International Carriage of Goods by Rail, Appendix to the Convention concerning International Carriage by Rail (CIM-COTIF),¹¹ as amended by the Protocol of Modification of 1999 (Vilnius Protocol) entered into force on 1 July 2006.

3. Inland waterway transport

UNECE

14. The Budapest Convention on the Contract for the Carriage of Goods by Inland Waterway (CMNI Convention), adopted at a Diplomatic Conference organized jointly by CCNR, Danube Commission and UNECE (Budapest, 25 September-3 October 2000), entered into force on 1 April 2005. It currently has eight Contracting Parties: Bulgaria, Croatia, the Czech Republic, Hungary, Luxembourg, Netherlands, Romania and Switzerland. The CMNI Convention governs the

⁷ www.unece.org.

⁸ Entry into force: 2 July 1961, United Nations, *Treaty Series*, vol. 399, p. 189.

¹¹ Budapest, 22 June, 2001. Entered into force 1 April 2005.

contractual liability of parties to the contract for the carriage of goods by inland waterway and provides for the limitation of the carrier's liability.

4. Transport by air

UNCTAD

15. UNCTAD has prepared a guide on aspects of air law, designed to assist developing countries in their understanding of the complex international framework of air law conventions, including in respect of effective uniform implementation of conventions at the national level. The document, entitled "*Carriage of Goods by Air: A Guide to the International Legal Framework*" is available electronically at www.unctad.org/ttl/legal.

5. Intermodal transport

UNECE

16. At its forty-seventh session (Geneva, 5-6 March 2007), the Working Party on Intermodal Transport and Logistics was informed that the EC was preparing an action plan on logistics to be issued in November 2007. The action plan would address requirements for logistical infrastructures, including financing, urban freight transport, information technologies, dimensions of intermodal transport units (ITU), and working conditions in logistics. More detailed information on the action plan and the envisaged activities of the EC is to be made available at the October 2007 session of the Working Party.

17. The Working Party recalled in this context that, at its last session, it was considered premature to initiate work on a pan-European civil liability regime for transport covering road, rail, inland water and short sea shipping. The action plan prepared by the European Commission and the ensuing discussions possibly would provide additional elements to decide on this matter (ECE/TRANS/WP.24/113, paragraphs 17-21).¹²

C. Electronic commerce and new technologies

APEC¹³

18. Project outcomes for a project entitled, "Development of APEC Guidance for Electronic Commerce Using the Best Practices of E-Government Procurement Systems" were included in the final report presented to the Electronic Commerce Steering Group (ECSG) during a meeting held in Canberra, Australia in January 2007.¹⁴

19. Building on the first training course conducted in Beijing in October, 2006, APEC also conducted a second training program on e-trade and supply chain management aimed at reducing the digital divide between SMEs in developing economies and those in developed APEC economies by applying E-business and supply chain management. The second training course was held in Sanya, Hainan province, China on 27-30 March, 2007.

¹² www.unece.org/trans/wp24/wp24-reports/documents/113-e.pdf.

¹³ www.apec.org.

¹⁴ http://aimp.apec.org/Documents/2007/ECSG/ECSG1/07_ecsg1_010.doc.

20. Work continued on the implementation of APEC's Strategies and Actions Toward a Cross-Border Paperless Trading Environment to enable the electronic transmission of trade-related information across the region by 2020. Sixteen economies have prepared Paperless Trading Individual Action Plans. These plans outline the steps members should take to meet APEC's target to reduce or eliminate customs, cross-border trade administration and other documents relevant to international sea, air and land transport. The ECSG is also collaborating with the United Nation Centre for Trade Facilitation and Electronic Business to undertake work to enhance trade facilitation through technical cooperation and knowledge sharing, specifically in electronic standards for paperless trade.

EC¹⁵

21. In May 2007 political agreement on the implementation of pan-European electronic customs was reached by the European Council of Ministers. The electronic customs project initiated by the European Commission aims to replace paper format customs procedures with EU wide electronic ones in order to enhance security at the external borders of the European Union and to facilitate trade. The compromise agreement now needs to be confirmed by the European Parliament in a second reading which is expected to occur shortly.¹⁶

Hague Conference

22. During the Special Commission on General Affairs and Policy of the Hague Conference on Private International Law (HCCH) held in April 2006, the HCCH and the National Notary Association (NNA) officially launched the electronic Apostille Pilot Program (e-APP). Under this Program, the two Organizations are, together with any interested State, developing, promoting and assisting in the implementation of low-cost, operational and secure software models for (i) the issuance of and use of electronic Apostilles (e-Apostilles), and (ii) the operation of electronic Registers of Apostilles (e-Registers). The e-APP is designed to illustrate how the Conclusions and Recommendations of the 2003 Special Commission meeting on the practical operation of the Hague Apostille Convention and the 2005 International Forum on e-Notarization and e-Apostilles can be implemented in practice by relying on existing and widely used technology.

23. In February 2006 the state of Kansas issued the first test e-Apostille in accordance with the model suggested under the e-APP, and Colombia, the receiving State, officially indicated its acceptance of this test e-Apostille. As a result, the two jurisdictions are now ready to complete authentications of public documents entirely electronically. Furthermore, the state of Rhode Island joined the e-APP by adopting and implementing the Program's free, open-source electronic Register software. Any interested person can now conduct a secure, online search for an Apostille issued by Rhode Island officials (currently in paper form, soon also in electronic form) by entering its number and date and the register will show automatically if a matching entry can be found, thus allowing receiving parties to verify the origin of the Apostille much more quickly and efficiently than can be accomplished currently.

24. In the context of the development of a Convention on the international recovery of child support and other forms of family maintenance, the Hague

¹⁵ ec.europa.eu.

¹⁶ http://ec.europa.eu/taxation_customs/customs/policy_issues/electronic_customs_initiative/index_en.htm.

Conference on Private International Law, with the assistance of UNCITRAL, has been preparing proposals for medium-neutral and technology-neutral provisions to ensure that Central Authorities can employ the most rapid means of communication under the future instrument to transmit applications and relevant information and documents under the Convention to recover maintenance swiftly and at a low cost. The new Hague Convention takes account of future needs, the developments occurring in national and international systems of maintenance recovery and the opportunities provided by advances in information technology.

ITU¹⁷

25. In the framework of its “Countering Spam” activities, the International Telecommunication Union has created a platform to gather anti-spam legislation worldwide, and provide a list of the competent enforcement authorities and their contact details. Links to news and other sources is also provided. Information is regularly updated. Over 30 countries have provided information for the survey which is updated regularly.¹⁸

OECD¹⁹

26. On April 20, 2006, the OECD launched an anti-spam toolkit to help governments and industry work together to combat spam. The toolkit also includes an OECD recommendation on enforcement cooperation. The anti-spam toolkit, its annexes and background papers are available online.²⁰

27. As well, the OECD E-Government Project which was launched in 2001, explores how governments can best exploit information and communication technologies (ICTs) to embed good governance principles and achieve public policy goals. The Project produces reports on best practices and develops frameworks for addressing issues such as cost/benefit analysis, e-services and take-up. It also carries out country peer reviews on e-government. These reviews place e-government in a national context, and help identify the strengths and weaknesses of national e-government programmes. The OECD Network of Senior E-Government Officials met in Paris on 6-7 February 2006 to address issues regarding cost and benefit analysis of e-government.²¹

UNCTAD

28. The eventual adaptation of laws and regulations related to the use of ICT constitutes a key step towards the development of an information society in developing countries. In this sense, UNCTAD provides advisory services to developing countries on the legal aspects of e-commerce, and carries out related training and capacity-building. These activities enable legal professionals, policy makers, and private sector representatives to achieve a common understanding of e-commerce legal and regulatory issues for trade facilitation and harmonization of regional and national legal frameworks. Beneficiaries of capacity-building become more acquainted with key concepts such as intellectual property, content regulation, securing e-commerce, as well as with the United Nations Convention on the use of

¹⁷ www.itu.int.

²¹ Further information available at <http://webdomino1.oecd.org/COMNET/PUM/egovproweb.nsf>.

electronic communications in international contracts (2005). For example, UNCTAD training in the course of 2006 helped Cambodia and Lao PDR move forward in passing electronic commerce legislation before 2008 (the deadline specified by the e-ASEAN initiative) and customize such legislation to their own business environment. UNCTAD also helped the East-African Community (EAC) secretariat to formulate a roadmap for a harmonized framework for cyber laws in the region, and a series of actions was recommended as a follow-up to an UNCTAD workshop in December 2006. UNCTAD also trained African law-makers and government officials to understand the basic legal implications of e-commerce, and to identify the main policy issues involved, as well as the priority areas for law reform, improving their ability to draft e-commerce legislation. Finally, UNCTAD's Information Economy Report 2006 included a chapter on "Laws and Contracts in an E-commerce Environment" that examined the legal nature of communications and data messages in electronic commerce, including policy recommendations consisting of a checklist of issues for developing countries to consider when embarking on law reform designed to facilitate electronic commerce.²²

UNECE

29. The United Nations Centre for Trade Facilitation and Electronic Business (UN/CEFACT) has a global remit to develop a wide range of electronic business standards in support of trade and of government to business communications. Recent developments following the October 2006 UN/CEFACT Forum in New Delhi²³ and the March 2007 Forum in Dublin²⁴, include: publication of candidate release standards for the Cross Industry Invoice schema and eTendering schemas; approval of the United Nations Electronic Trade Documents (UNeDocs) Business Requirement Specification; and commencement of work on a new project on Cross Domain eProcurement.²⁵

30. The UN/CEFACT's new intellectual property rights (IPR) policy²⁶ was adopted at its annual plenary session in May of 2006.²⁷

31. Currently, UN/CEFACT is in the process of setting up a joint project with the World Customs Organization to develop an international Cross Border Reference Data Model (CBRDM). The CBRDM will allow better information exchange and coordination between Customs and other border agencies such as ministries of agriculture, health, finance and transport and will support the implementation of Single Windows for export and import.²⁸

32. UN/CEFACT's Legal Group has begun work on a Recommendation on the Legal Framework for Single Windows. This recommendation will seek to identify the legal issues involved in creating and operating a Single Window for international trade and suggest possible solutions. The Legal Group will soon circulate a draft version of this Recommendation for an internal review. The Legal Group is also working on a Unified Business Agreements and Contracts (UBAC) Project, which seeks to align the concepts defined within the ISO Open-EDI

lifecycle stages of an e-business relationship with the legal processes of contract formation, performance and arbitration.

33. In addition, the Legal Group is focusing its attention on renewing and strengthening its working relationship with UNCITRAL. Representatives of the UNCITRAL secretariat and the Legal Group met in Vienna in 2006 to discuss common areas of work. As well Legal Group members participated in an UNCITRAL high-level Experts Group Meeting in February 2007 on the cross-border recognition of electronic signatures and authentication methods, where they made a presentation. The Legal Group will also present a paper focusing on the legal issues of the International Trade Single Window at UNCITRAL's Congress in July 2007.

UNESCAP²⁹

34. UNESCAP convened a conference from 27-29 November 2006 in Manila, the Philippines aimed at identifying the gaps between planning and implementing e-government in countries in the Asian and Pacific region, particularly in the areas of e-customs and e-procurement and to devise the ways for closing such gaps. The Conference was attended by fourteen participants from nine countries. It was organized as part of the activities of the ESCAP project entitled "Closing the gap between planning and implementation of e-government", which is funded by the Korea Information Society Development Institute (KISDI) and has been implemented by Information, Communication and Space Technology Division (ICSTD).

D. Commercial arbitration and conciliation

APEC

35. In 2006 APEC published the paper "The Role of ADR (Alternative Dispute Resolution) / ODR (Online Dispute Resolution) in Implementing the APEC Privacy Framework".³⁰ ADR/ODR was considered relevant to the work of APEC by: leveraging limited resources of enforcement; allowing companies to resolve disputes before "case filing"; and providing means of online resolution to consumers with recognized neutral third parties or transparent system while allowing for possible recourse to an arbitral authority.

CTO³¹

36. The CTO ADR Centre has established partnership relationships with the Chartered Institute of Arbitrators, the Centre for Effective Dispute Resolution and the Singapore Mediation Center. The CTO ADR Centre and the Claims Room.com Ltd jointly operate an online dispute resolution platform in partnership.³² Recognizing the need to build capacity within developing countries and in the industry sector itself the CTO ADR Centre conducts training programmes. One

³¹ www.cto.int/.

³² www.ctomediation.com/.

event has already been held in Cameroon and others are planned in Caribbean, Pacific and Asian regions.

ICC³³

37. The ICC Commission on Arbitration has constituted five task forces covering amiable composition and *ex aequo et bono*,³⁴ criminal law and arbitration, guidelines for ICC expertise proceedings, reducing time and costs in arbitration and trusts and arbitration.³⁵

38. The task force on amiable composition and *ex aequo et bono*³⁶ was mandated to identify the essential features of “amiable composition” and of “*ex aequo et bono*” and study the role of the arbitrators when acting as “amiable compositeurs” or when deciding “*ex aequo et bono*” (e.g. jurisdictional, procedural or substantive problems that may arise). The task force met on 22 May 2006, to analyse answers to the first task force survey and is currently preparing a report based on a synthesis of the survey answers. It will also begin drafting guidelines to assist arbitrators who have been empowered to decide “*ex aequo et bono*” or to act as “amiable compositeurs”.

39. The task force on criminal law and arbitration³⁷ was mandated to study the impact of criminal law in the framework of arbitrations (e.g. jurisdictional, procedural and substantive problems that may arise) and also study the role of arbitral tribunals when facing situations in which problems related to criminal law arise. The task force has, by circulating a questionnaire, obtained information on the topic from ICC arbitrators, National Committees and Members of the Task Force and compiled the information into a synopsis, which covers various legal traditions. It has decided to limit its study and final report to the arbitrators’ duty to report a criminal offence; the arbitrators’ duty to appear as a witness if summoned by the authorities; the arbitrators’ ability to invoke professional privilege to the questions that he/she is asked; and the definition of professional privilege.

40. Following the adoption by the ICC Commission in Arbitration of the revised ICC Rules for Expertise in 2003, another task force prepared a set of guidelines for ICC expertise proceedings.³⁸ The task force is now preparing explanatory notes for the use of experts covering issues including: the use of experts in ICC Arbitration; using experts under the ICC Rules for Expertise as fact finders; and neutral experts as facilitators under the ICC ADR and Dispute Board Rules.

41. A task force on reducing time and costs in international arbitration³⁹ is currently preparing a synthesis of a survey circulated on that topic and will analyse

³³ www.iccwbo.org/.

³⁴ www.iccwbo.org/policy/arbitration/id6566/index.html.

³⁵ This Task Force has the following mission: to study and identify specific issues related to “Trusts and Arbitration” and, if deemed appropriate, prepare a report with respect thereto; to study the possibility of suggesting a draft ICC model arbitration clause to be included in the trust deed, and, if deemed appropriate, to propose such a clause and to prepare an explanatory note with respect thereto. The Task Force met on 5 February 2007 at the ICC Headquarters to start working on the adaptation of a model arbitration clause to the particularities of Trusts.

³⁶ Further information is available at www.iccwbo.org/policy/arbitration/id6566/index.html.

³⁷ Further information is available at: www.iccwbo.org/policy/arbitration/id1783/index.html.

³⁸ Information on the task force on guidelines for ICC expertise proceedings is available at www.iccwbo.org/policy/arbitration/id1785/index.html.

³⁹ www.iccwbo.org/policy/arbitration/id3874/index.html.

the problems raised therein grouped into parties' responsibilities, arbitral tribunal responsibilities and institution responsibilities.

OECD

42. In a report adopted on 30 January 2007 by the OECD Committee on Fiscal Affairs entitled "Improving the Resolution of Tax Treaty Disputes",⁴⁰ the OECD has agreed to modify the OECD Model Tax Convention, which serves as a basis for most negotiations between countries on tax matters, by including the possibility of arbitration in cross-border disputes over taxation if they remain unresolved for more than two years.

43. The decision was based on the recognition that with the growth of cross-border trade and investment and the accompanying increase in the number of people working abroad, cross-border tax disputes arising when two states assert conflicting rights to tax an individual living and working in more than one country or companies that invest outside their home country, have also increased.

44. The report addresses a number of issues relating to what is known as the "mutual agreement procedure", or MAP, the mechanism provided by tax treaties to resolve disputes between the countries that sign these treaties. At the same time, the Committee has published a web-based manual setting forth 25 best practices to help countries to improve the existing mechanisms for resolving tax disputes.⁴¹

UNCTAD

45. UNCTAD has developed and is implementing a project on "Building capacity through training in dispute settlement in International Trade, Investment and Intellectual Property". The objective of the project is to promote the integration of developing countries and countries in transition into the multilateral trading system through capacity-building on dispute settlement in International Trade, Investment and Intellectual Property. It aims to achieve this by improving the knowledge and level of critical awareness of the legal framework governing dispute settlement in international economic and trade relations.

46. The project focuses on the dispute settlement rules and mechanisms of international organizations such as ICC, ICSID, UNCITRAL, WIPO and WTO under five headings: (1) General Dispute Settlement Topics; (2) Settlement of International Investment Disputes and ICSID; (3) Settlement of International Trade Law Disputes and WTO; (4) Settlement of International Intellectual Property Disputes and WIPO; (5) International Commercial Arbitration; and (6) Regional Approaches. The comprehensive course on dispute settlement consists of forty chapters or modules, each dealing with one specialized topic as an essential building block of international dispute settlement.⁴² The pedagogical methodology, on which

⁴⁰ www.oecd.org/dataoecd/17/59/38055311.pdf.

⁴¹ www.oecd.org/document/26/0,2340,en_2649_37427_36197402_1_1_1_37427,00.html.

⁴² General topics: International Court of Justice; Permanent Court of Arbitration. Investment disputes: Overview; Selecting the Appropriate Forum; Consent to Arbitration; Requirements Ratione Personae; Requirements Ratione Materiae; Applicable Law; Procedural Issues; Post-Award Remedies; Binding Force and Enforcement; Trade Disputes: Overview; Panels; Appellate Review; Implementation and Enforcement; GATT 1994; Anti-dumping Measures; Subsidies and Countervailing Measures; Safeguard Measures; Sanitary and Phytosanitary Measures; Technical Barriers to Trade; Textiles and Clothing; Government Procurement; GATS; TRIPS; Agriculture. Intellectual property: (WIPO) Arbitration and Mediation Centre;

the format of the modules is based, allows for self-study for beginners and includes a tool to test what has been learned. At the same, the modules provide a quick introduction to specialists, who find guidance to further specialized sources and materials. The course was developed in English, with partial translation in Spanish and French and Portuguese. Over one million copies of the modules have been downloaded to date (February 2007).

47. Capacity-building workshops are being held to train officials, academics, legal practitioners and business from developing countries, including LDCs, and countries in transition.

48. Since its start in May 2002, the project has successfully cooperated with United Nations bodies and international organizations, such as the World Trade Organization (WTO), the World Intellectual Property Organization (WIPO), the International Chamber of Commerce (ICC), the International Centre for Settlement of Investment Disputes (ICSID) of the World Bank Group, the United Nations Commission on International Trade Law (UNCITRAL), the World Bank, and the Advisory Centre on WTO Law. There is also cooperation with national and regional institutions, especially in the organization and delivery of workshops.

WIPO⁴³

49. WIPO has released a number of publications providing an overview of the resources and services offered by the WIPO Mediation and Arbitration Center ('the Center') and encouraging parties to seek alternative dispute resolution mechanisms. These publications include: WIPO Services under the UNCITRAL Arbitration Rules, WIPO Arbitration and Mediation Rules, Dispute Resolution for the 21st century, Guide to WIPO Arbitration, Guide to WIPO Domain Name Dispute Resolution and the Guide to WIPO Mediation.

LCIA⁴⁴

50. On 5 May 2006, a joint meeting of the LCIA Court and Board voted to publish the LCIA Court's decisions on challenges to arbitrators. The Court based its decision on a report that studied the LCIA challenge decisions since 1995. The report also reviewed the practice and procedure in dealing with conflicts and challenges in other institutions such as the ICC and the AAA. The Court decided that publication will be in the form of abstracts and that all of its decisions will be published. Work is now under way to prepare an introductory text and the abstracts, for review by the full LCIA Court, which will then decide whether the abstracts should be published on the LCIA website, or in paper form, or both.

E. International payments

Hague Conference

51. In the context of the development of a convention on the international recovery of child support and other forms of family maintenance, the Hague Conference on Private International Law, hopes that UNCITRAL could undertake work in relation to financial mechanisms of protection against foreign exchange fluctuations. Such mechanisms as used everyday for commercial transactions could be beneficial to the international recovery of child support by providing mechanisms to reduce arrears build-up over time caused by foreign exchange fluctuations.

ICC

52. The 2007 Revision of Uniform Customs and Practice for Documentary Credits, UCP 600, (ICC Publication No. 600) were approved by the ICC Commission on Banking Technique and Practice⁴⁵ on 25 October 2006. The UCP were first published by ICC in 1933. Revised versions were issued by the ICC in 1951, 1962, 1974, 1983 and 1993. Written into virtually every letter of credit, the UCP are accepted worldwide. UCP 600 is expected to be implemented from 1 July 2007 and contains significant changes to the existing rules, including: a reduction in the number of articles from 49 to 39; new articles on “Definitions” and “Interpretations” providing more clarity and precision in the rules; a definitive description of negotiation as “purchase” of drafts of documents; the replacement of the phrase “reasonable time” for acceptance or refusal of documents by a maximum period of five banking days. UCP 600 also includes the 12 Articles of the eUCP, ICC’s supplement to the UCP governing presentation of documents in electronic or part-electronic form.

F. Competition law

UNCTAD

53. As a follow up to the Fifth Review Conference, the eighth session of the Intergovernmental Group of Experts (IGE) on Competition Law and Policy was held in Geneva from 31 October until 2 November 2006 and considered four specific competition policy issues for better implementation of the “Set of Multilaterally Agreed Equitable Principles and Rules for the Control of Restrictive Business Practices” (the Set), adopted by the General Assembly in 2005, as they relate to: (i) interface between competition and sectoral regulators; (ii) hard-core cartels; (iii) cooperation and dispute settlement mechanisms; and (iv) subsidies. In addition, the IGE also organized a voluntary Peer review of the competition policy and law of Tunisia. Over the period under review, UNCTAD continued to assist interested member states in adopting and implementing competition law and policy in line with the principles and rules multilaterally agreed in the UN Set of Principles on Competition Policy.

⁴⁵ For more information, see www.iccwbo.org/home/banking/commission.asp.

G. Trade facilitation

UNCTAD

Harmonizing organic agricultural standards at regional level

54. Laws and regulations dealing with technical standards are an important determinant of trade flows at regional and multilateral level. Harmonization of such trade-related technical standards would therefore provide additional export opportunities for developing country producers. One such harmonization initiative carried out by UNCTAD in 2006 was the promotion of a common East African Organic Standard. The EAOS will become the second regional organic standard in the world after the European Union's and the first ever to have been developed in cooperation between the organic movements and the National Standards Bodies. The EAOS is expected to boost organic trade and market development in the region, raise awareness about organic agriculture among farmers and consumers, and create a unified negotiating position that should help East African organic farmers win access to export markets and influence international organic standard setting processes.⁴⁶

H. Insolvency

EBRD

55. Recognizing that a solid law is not enough for an effective insolvency system, the EBRD has endeavoured to build on its core principles for an insolvency law regime and focus on the effectiveness of insolvency system by identifying a set of principles to guide countries in setting standards for the qualifications, appointment conduct, supervision, and regulation of office holders ("Office holders" are the trustees, administrators, liquidators, insolvency representatives, or similar functionaries who make many insolvency systems work) in insolvency cases. The draft EBRD Insolvency Office Holder Principles are available on the EBRD's website.⁴⁷

International Insolvency Institute (III)/American Law Institute (ALI)

56. As noted in the previous report, the III and the ALI have embarked upon a joint project to develop a statement of "Principles of Cooperation in International Insolvency Cases". A first meeting was held in June 2006 and a second meeting is planned for June 2007. Approval of the Principles will be sought from professional and judicial associations.

INSOL

57. As foreshadowed in the previous report, in 2006 INSOL published:

(a) "Financing in Insolvency Proceedings", covering the different insolvency procedures that are available, the extent to which lenders get involved in providing finance to insolvent companies and related issues such as getting security, priority given to new lenders, and the role of the judicial process in 12 countries; and

⁴⁶ For more information see www.unctad.org/Templates/Page.asp?intItemID=4070&lang=1.

⁴⁷ See www.ebrd.org/country/sector/law/insolve/Princip/principles.pdf.

(b) “Credit Derivatives in Restructurings”, a guidance booklet for insolvency practitioners and others on matters relating to the impact of credit derivatives in restructurings. The book covers an overview of the credit derivatives market, basic elements of credit default swaps, settlement following a credit event, and a comparison with other types of credit products and techniques.

58. A further publication on treatment of secured claims in insolvency as well as pre-insolvency proceedings, as well as the second in a series of technical papers, entitled “Formalities for the transfer of businesses in insolvency” will be published in 2007.

59. In 2006, INSOL International and the American Bankruptcy Institute launched GLOBAL INSOLvency to provide a comprehensive source of information both on current issues in international insolvency and restructuring law and on the legal framework for insolvency and restructuring around the world.

OECD

60. The fifth meeting of the Forum on Asian Insolvency Reform (FAIR), organized by OECD in cooperation with APEC, the Australian Agency for International Development (AusAID), the Asian Development Bank, the World Bank and the Government of Japan, took place in Beijing, PRC from 27 to 28 April 2006. Participants examined the lessons from ten years of institutional and legal reforms of Asian insolvency systems and discussed the relevance of international guidance to improving insolvency systems, focussing in particular on the UNCITRAL Legislative Guide on Insolvency, the World Bank Principles on Insolvency and Creditor Right Systems and the UNCITRAL Model Law on Cross-Border Insolvency.

61. The inaugural conference on corporate governance hosted by the Hawkamah Institute for Corporate Governance and the OECD for countries the Middle East and North Africa (MENA) adopted the Dubai Declaration on Corporate Governance, which includes agreement that MENA countries should act to establish effective insolvency systems and provide a framework for value maximization and more efficient allocation of capital to productive uses. It has been agreed that a module on corporate restructuring and insolvency should be included in the work programme and will involve establishing partnerships with interested organizations, including in the private sector.

World Bank

62. In June 2006, The World Bank organized the 2006 Working Group Session of the Global Judges Forum, in cooperation with the International Association of Judges, the Latin American Federation of the Judiciary, the European Association of Judges, the Argentine Federation of Magistrates, and the Argentine Association of Federal Judges in Buenos Aires. Topics included: mediation and arbitration in commercial/insolvency cases, streamlining commercial proceedings using non-judicial entities and processes; delegation/substitution in enforcement proceedings and judicial cooperation and court-to-court-communication in cross-border insolvency proceedings

63. In 2007, the World Bank joined UNCITRAL and INSOL to co-sponsor the seventh in the series of multinational judicial colloquium focussing on coordination and cooperation in cross-border insolvency organized by UNCITRAL and INSOL since 1995.

A/CN.9/628/Add.1 [Original: English]**Current activities of international organizations related to the harmonization and unification of international trade law****ADDENDUM****CONTENTS**

	<i>Paragraphs</i>
I. Corporate governance	1-3
J. Procurement	4-25
K. Security Interests	26-41

I. Corporate governance**EBRD¹**

1. In 2006, EBRD published the Transition Report 2006, devoted to an analysis of the financial sector in transition countries. The Report looked at how financial systems have been restructured over the past 15 years, their impact on the economy and private sector development and the introduction of new financial services.² As well, the EBRD published, “Law in transition online 2006 — Focus on central Europe”.³ This edition of the Bank’s legal journal, Law in transition online, charts and evaluates eight countries’ remarkable progress since their accession to the European Union and critically assesses the challenges they now face as part of an enlarged EU.

OECD

2. From 29-30 March 2007 in Shanghai, China, the OECD and the Shanghai Stock Exchange in partnership with the Japanese Government, the Global Corporate Governance Forum (GCGF) and the Yale School of Management convened a high level meeting to exchange experience on corporate governance.⁴

3. The OECD also recently published a report entitled “Intellectual Assets and Value Creation: Implications for Corporate Reporting”⁵ which found that companies can boost their stock market valuations and lower their cost of capital through

¹ www.ebrd.com/.

² For more information, see www.ebrd.com/pubs/econo/6813.htm.

³ For more information, see www.ebrd.com/pubs/legal/lit062.htm.

⁴ For more information, see

www.oecd.org/document/61/0,2340,en_2649_37439_34970813_1_1_1_37439,00.html.

improved reporting of intellectual assets and value creation strategies that overcome the limits of accounting standards.

J. Procurement

WTO

4. The WTO working party on GATS rules is continuing negotiations on government procurement in services under GATS article XIII. Discussions in 2006 evolved around communications from the European Communities (S/WPGR/W/52 and S/WPGR/W/54), which touched upon such issues as technical specification, qualification of suppliers, procurement methods, time periods, tender documentation, and contract award (S/WPGR/W/52), and proposed a legal text for an annex to the GATS on government procurement (S/WPGR/W/54). Other questions raised included the relationship to the plurilateral WTO Government Procurement Agreement (the “GPA”).⁶

5. Within the WTO Committee on Government Procurement that administers the GPA (“the Committee”), the negotiations that focused on the simplification and improvement of the non market access related provisions of the GPA resulted in an understanding on the revision of the 1994 text.⁷ Apart from editorial changes to the 1994 text, including relocation of a number of provisions, significant substantive revisions have been made, including to the provisions addressing the needs of developing countries, the content of notices of intended procurement and tender documentation, qualification of suppliers, and modifications and rectifications to coverage.⁸ New articles have been introduced,⁹ and the text has been amended to accommodate and regulate the use of electronic means of communication and techniques.¹⁰

6. According to article XXII (Final provisions) of the revised text of the GPA, negotiations are expected to continue on some revised provisions, including on the rules of origin in the light of the outcome of the ongoing work in the WTO in that area. It is also envisaged that, not later than the end of the third year from the date of entry into force of the revised GPA, the Committee will undertake further work to

⁶ See “Annual report of the Working Party on GATS rules to the Council for Trade in Services”, 2006, document S/WPGR/16, 23 November 2006, paras. 5 and 6, available, as of 26 February 2007, at www.wto.org/english/tratop_e/gproc_e/gpserv_e.htm.

⁷ The revised text of the GPA has been circulated among all WTO members as document GPA/W/297. The footnotes in the revised text mark provisions that are still under negotiation. The revised text of the GPA is intended for use as basis for consultations and other ongoing work relating to the accession of new parties. See also “Report of the Committee on Government Procurement (November 2005-December 2006)”, document GPA/89, 11 December 2006, paras. 18-21. The report and the revised text of the GPA are available, as of 26 February 2007, at www.wto.org/english/tratop_e/gproc_e/gp_gpa_e.htm.

⁸ See articles IV, VII, X, IX and XIX of the revised text.

⁹ On definitions (article I), general principles (article V that consolidates some of the provisions of the 1994 text, such as on national treatment and non-discrimination, rules of origin and offsets, and adds new provisions, such as on use of electronic means and conduct of procurement), conditions for participation (article VIII), electronic reverse auctions (article XIV), transparency of procurement information and disclosure of information (articles XVI and XVII, which are based on the provisions of articles XVIII and XIX of the 1994 text), and modifications and rectifications to coverage (article XIX).

¹⁰ See, for instance, articles I, II, V-VII, IX- XI and XVI of the revised text.

consider the advantages and disadvantages of developing common nomenclature for goods and services and standardized notices. Within the Committee, agreement was also reached on arrangements for conclusion of the market access aspect of the negotiations under Article XXIV:7 of the 1994 GPA. The overall goal was to complete the market access negotiations (and therefore all aspects of the negotiations) in spring 2007.¹¹

Multilateral development banks (MDBs)

Joint working group on Harmonization of Electronic Government Procurement

7. During the period under review, the MDBs' joint Working Group on Harmonization of Electronic Government Procurement (e-GP) (the "joint Working Group"),¹² has been revising its E-Tendering Requirements and the E-reverse Auction Guidelines,¹³ to reflect experience with their implementation in practice. Revisions intend to address, in particular, criteria for charging fees for the use of electronic procurement systems, conditions for the use of exclusively electronic or paper system in procurement proceedings or allowing both, and encryption requirements in technology neutral terms and provide for more flexible regulation of electronic reverse auctions.

8. The joint Working Group has also sponsored (i) the preparation of new guidelines and papers, such as a note on electronic purchasing and a working paper on corruption in the context of the use of new technologies in public procurement, (ii) the development of interactive standard bidding documents for IT products, expected to be piloted in May 2007, (iii) an online e-GP training tool, expected to be operative in July 2007, (iv) international e-GP survey, expected to be published by June 2007, that covers e-GP systems from a total of fifteen countries and intends to identify the strategic approaches of the surveyed countries to e-GP programs, including system functionalities, issues that they faced in the transition to e-GP, costs and benefits, success factors, and lessons learned, and (v) an international e-GP conference, to be held in Washington D.C. in November 2007.

Revisions of MDBs' policies

9. In October 2006, the World Bank revised its Procurement and Consultant Guidelines and updated standard bidding and consulting documents¹⁴ and it published the Consulting Services Manual.¹⁵ It is in the process of updating a manual on procurement of goods or works, to reflect recent policy changes. The ADB issued new Procurement Guidelines in April 2006 and, effective 8 September 2006, revised definitions therein of corrupt, fraudulent, coercive and collusive

¹¹ See supra, endnote 6, "Report of the Committee on Government Procurement (November 2005-December 2006)", document GPA/89, 11 December 2006, paras. 22-23.

¹² The Working Group was set up at the beginning of 2003 by the ADB, the IADB, and the World Bank, and subsequently joined by the AfDB, EBRD and Nordic Development Fund. The UNCITRAL secretariat has participated as observer in the Working Group's meetings since 2005.

¹³ Available at the joint e-GP portal www.mdb-egp.org/.

¹⁴ The revised versions (as of 1 October 2006) are available at the World Bank web site.

¹⁵ Available as of 9 February 2007 at <http://siteresources.worldbank.org/INTPROCUREMENT/Resources/2006ConsultantManual.pdf>.

practices.¹⁶ The AfDB reported that its revised procurement policies were due for approval in 2007.

10. In August 2006, a new set of standard documents was prepared within the auspices of the regular meetings of the Heads of Procurement for the MDBs and International Financial Institutions for adoption and use by their respective institutions. The Standard Prequalification Document and user's guide are intended primarily for use in prequalifying applicants who express an interest in bidding on large building and civil engineering contracts under international competitive bidding procedures. The principles may also be applied if prequalification is needed under national competitive bidding.¹⁷

APEC

11. In September 2006, the APEC Committee on Trade and Investment endorsed the revised non-binding Principles on Government Procurement (the "NBPs").^{18, 19} The revised text builds on the 1999 version of the NBPs. Apart from structural and editorial changes,²⁰ substantive amendments have been made to the 1999 text. The revised NBPs strengthen some elements of the principles, especially in the cross-border context, and address some issues arising from the use of modern means of communication in public procurement. Unlike the 1999 version, the revised NBPs do not contain provisions related to suppliers' registers and to charging fees in the context of access to procurement-related information. In addition, the transparency principle included in the 1999 version has been subsumed into the area-specific APEC Transparency Standards on Government Procurement,²¹ which are included in the revised NBPs by cross-reference.²²

EC

Revision of the remedies directives

12. In May 2006, the European Commission put forward a proposal for a directive seeking to amend the two European Union remedies directives in the area of public procurement.²³ The proposal intends to clarify and improve the effectiveness of the

¹⁶ Both the new Guidelines and amendments thereto are available as of 8 February 2007 at <http://adb.org/Documents/Guidelines/Procurement/>.

¹⁷ Available at the World Bank website.

¹⁸ See the summary of the third meeting for 2006 (Da Nang, Viet Nam, 12-13 September 2006), paragraph 56, available as of 8 February 2007 at www.apec.org/content/apec/documents_reports/committee_trade_investment/2006.html.

¹⁹ The revised September 2006 version of the NBPs can be found in document 2006/SOM3/GPEG/005, "Review of the APEC Non-Binding Principles (NBPs) on Government Procurement", available as of 13 February 2007 at http://aimp.apec.org/Documents/2006/GPEG/GPEG2/06_gpeg2_005.pdf.

²⁰ As regards the structural changes, the revised text sets out the main elements of each principle and requirements under it upfront in the text, with more detailed commentary to each principle in annexes. This structure is different from the one followed in the 1999 version.

²¹ APEC Leaders' Transparency Standards, Santiago, Chile – 21 November 2004, document number 028.

²² See annex 6 in document 2006/SOM3/GPEG/005, *supra*, endnote 14.

²³ Document COM(2006) 195 final/2, 2006/0066 (COD), of 14 June 2006. The directives in question are (i) Directive 89/665/EEC that applies, in principle, to contracts for works, services and supplies awarded by contracting authorities, now coming under Directive 2004/18/EC; and (ii) Directive 92/13/EEC that applies to contracts awarded by contracting entities operating in

current review provisions in the formal award procedures or in the case of illegal direct awards of contracts. It introduces, among other amendments, a “standstill period”, during which awarding authorities would be obliged to suspend the conclusion of a public contract, in order to allow bidders to bring review procedures, and specifies the details of the standstill obligation, such as its scope, consequences and enforcement, the time span and permissible exceptions.

Procurement of defence contracts

13. At the end of 2006, the European Commission adopted an “Interpretative Communication on the application of article 296 of the Treaty in the field of defence procurement”.²⁴ The communication is a non-legislative measure and does not modify but clarifies the existing legal framework. It aims to prevent possible misinterpretation and misuse of article 296 of the Treaty of Rome establishing the European Community (the “Treaty”), which gives the States members of the European Community the possibility of derogating from the Community public procurement rules when this is necessary for protection of their “essential security interests”.²⁵ The communication explains the principles of the exemption, and clarifies the conditions for its use in the light of the case law of the European Court of Justice (the “ECJ”).

14. In parallel, the European Commission has carried out an impact assessment in order to determine whether a possible directive on the procurement of defence equipment would be useful, by introducing more flexible rules, which are better suited to the specific nature of defence markets, than those contained in the current public procurement directive 2004/18/EC. The European Commission’s Legislative and Work Programme 2007 (the “2007 Work Programme”)²⁶ envisages elaboration by the European Commission of a proposal for a directive on the coordination of procedures for award of public contracts in the defence sector as well as other legislative and non-legislative actions in the area of defence sector procurement.²⁷

the water, energy, transport and postal services sectors, now coming under Directive 2004/17/EC.

²⁴ Document COM (2006) 779 final, of 7 December 2006. The preparation of the interpretative communication was preceded by the assessment of the defence procurement market (see Commission Staff Working Document SEC (2006) 1554 of 7 December 2006). Its findings have indicated that the defence sector has been kept out of the application of the public procurement directive 2004/18/EC by virtue of the extensive use by the EU member States of the exemption provided by article 296 with the result that a majority of defence contracts have been awarded on the basis of national procurement rules, which differ widely throughout the EU. It was observed that this could limit market access for non-national suppliers, creating extra costs and inefficiencies that had a negative impact on the competitiveness of Europe’s defence industry. See IP/06/1703 of 7 December 2006.

²⁵ See also article 10 of the European Union public procurement directive 2004/18/EC, according to which, the directive applies to “contracts awarded by contracting authorities in the field of defence, subject to Article 296 of the Treaty”.

²⁶ Communication from the Commission to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions, Brussels, 24 October 2006, document COM(2006) 629 final; available, as of 26 February 2007, at http://eur-lex.europa.eu/LexUriServ/site/en/com/2006/com2006_0629en01.pdf.

²⁷ Such as a communication on defence industries and markets, and a proposal for a regulation on the transfer of defence products.

Award of low-value contracts

15. In July 2006, the European Commission published²⁸ an interpretative communication on the Community law applicable to contract awards not, or not fully, subject to the provisions of the public procurement directives.²⁹ The communication explains and clarifies how the principles of EU law should be applied to two types of contracts: (i) low-value contracts to which the directives do not apply as their contract values are below the thresholds for application of these directives, but which nevertheless may have cross-border interest; and (ii) service contracts (so called Annex B services) that, although covered by the directives, are subject to only a limited number of rules. The communication does not create any new legislative rules but provides the European Commission's understanding of the existing ECJ case law applicable to these types of contracts and suggests best practices to assist member States to comply with the internal market requirements confirmed by the ECJ case law.³⁰

Public Private Partnerships (PPPs)

16. On 26 October 2006, the European Parliament adopted a resolution on public-private partnerships and Community law on public contracts and concessions (2006/2043(INI)).³¹ In its resolution, the Parliament confirmed application of the Community public procurement law to PPPs, including institutionalised public-private partnerships ("IPPPs") (paragraphs 2, 6, 7 and 37). The Parliament considered that it was premature to assess the effects of the public procurement directives and therefore opposed a review of these directives (paragraph 2). It also opposed the establishment of a European agency for PPPs (paragraph 18).

17. The Parliament requested the European Commission to undertake a number of actions under the resolution, such as to make recommendations as to an appropriate procurement procedure in the field of concessions (paragraph 32) and to provide clarifications about the application of procurement law to the creation of public-private undertakings in connection with the award of a contract or concession (paragraph 35).³² It supported the European Commission in its efforts to ascertain whether standard procurement rules should be created for all PPPs on a contractual basis, irrespective of whether the PPPs concerned qualify as a public contract or a concession, and to take action in the field of IPPPs in view of the clear signs of existing legal uncertainty (paragraphs 33 and 34).

18. The 2007 Work Programme, acknowledging the demand for a stable, consistent legal environment for the award of concessions at the European Union level, envisages the European Commission's action in the form of drafting a

²⁸ Document 2006/C 179/02.

²⁹ The directives in question are the European Union (EU) procurement directives 2004/17/EC and 2004/18/EC.

³⁰ In addition on the same subject, the European Parliament, in its resolution 2006/2043(INI) of 26 October 2006, opposed the creation of rules on the award of public procurement contracts beneath the threshold values at the EU level, underlining the responsibility of the Member States to implement in an efficient way the Treaty principles of transparency, non-discrimination and the freedom to provide services in relation to public procurement contracts beneath the threshold values (paragraph 21 of the resolution).

³¹ As of 26 February 2007, available at http://ec.europa.eu/internal_market/publicprocurement/ppp_en.htm#conclusions.

³² See also paragraphs 38 and 43 of the resolution.

proposal for a directive on the coordination of procedures for the award of concessions.³³

Other procurement-related initiatives under the 2007 European Commission's Legislative and Work Programme

19. The 2007 Work Programme envisages actions in the field of green public procurement. They include: (i) submission of proposals for EU-wide green public procurement target and for regular benchmarking and monitoring by the European Commission and the member States; (ii) giving guidance to member States for the adoption of national action plans on green public procurement; and (iii) revisions to regulations (EC) No 1980/2000 on a revised Community eco-label award scheme and (EC) 761/2001 allowing voluntary participation by organizations in a Community eco-management and audit scheme (EMAS), with a view, inter alia, of creating the links with the EU green public procurement instruments.³⁴

20. The 2007 Work Programme also envisages revision of regulation (EC) No. 2195/2002 on the Common Procurement Vocabulary (CPV), necessary to maintain an efficient and simple procurement system that is easily applied for both suppliers and bidders.³⁵

United Nations Office on Drugs and Crime³⁶: United Nations Convention against Corruption³⁷

21. The first Conference of States Parties to the United Nations Convention against Corruption was held in December 2006.³⁸ Around the same time, the Conference secretariat — the United Nations Office on Drugs and Crime (“UNODC”) published the Legislative Guide for the Implementation of the United Nations Convention against Corruption.³⁹ The objective of the Guide is to assist States seeking to ratify and implement the Convention by identifying legislative requirements, issues arising from those requirements and various options available to States as they develop and draft the necessary legislation.⁴⁰ Some paragraphs of the Guide relate to the provisions of the Convention dealing with public procurement⁴¹ and management of conflict of interest in public administration.⁴²

OECD

OECD DAC Joint Venture on Procurement

22. On 17 July 2006, the OECD DAC Joint Venture on Procurement, set up to oversee the implementation of the Paris Declaration on Aid Effectiveness of

2 March 2005⁴³ as it relates to procurement, and to instigate activities to ensure progress towards the procurement-related targets, approved the Methodology for Assessment of National Procurement Systems (Version 4) for testing and application.⁴⁴ The methodology is intended to provide a common tool that developing countries and donors can use to assess the quality and effectiveness of national procurement systems. Such assessment will provide a basis upon which a country can formulate a capacity development plan to improve its procurement system while donors can develop strategies for assisting the capacity to develop, plan and mitigate risks in the individual operations that they decide to fund. The long-term goal is that countries will improve their national procurement systems to meet internationally recognized standards enabling greater effectiveness in the use of funds to meet country obligations. The methodology will be tested at a country level during the coming years until the next High-Level Forum on Aid Effectiveness expected to be held in 2008.⁴⁵ The results of these field tests and the lessons learned from these experiences will be used to improve and refine the tool and the methodology.⁴⁶

OECD Good Practices for Integrity and Corruption Resistance in Procurement

23. At the 2004 OECD Global Forum on Governance “Fighting Corruption and Promoting Integrity in Public Procurement”, focused on steps to enhance integrity and corruption resistance in public procurement, in particular in relation to ensuring that: public procurement procedures are transparent, that there is reliable and fair and equal treatment for bidders; that public resources linked to public procurement are used in accordance with intended purposes; that procurement officials’ behaviour and professionalism is in line with the public purposes of their organization; and that systems are in place to challenge public procurement decisions, ensure accountability, and promote public scrutiny.

24. The OECD approach is to consider public procurement from a good governance perspective, and focuses on the role of transparency and accountability. Its activity is complementary to multidisciplinary efforts in the OECD to improve public procurement systems in OECD and other countries, including the development of a Common Benchmarking and Assessment Tool for Public Procurement Systems for developing countries by the Aid Effectiveness and Donor Practices Working Party of the Development Assistance Committee,⁴⁷ and surveys in the European Union member states of central public procurement organization and

⁴³ See www.aidharmonization.org/.

⁴⁴ The document consists of the User’s Guide, Baseline Indicators (on legislative and regulatory framework, institutional framework and management capacity, procurement operations and market practices, and integrity and transparency of the public procurement system), Compliance and Performance Indicators and Sheet, and International Good Practice Information. Available in English, French, Portuguese and Spanish, as of 8 February 2007, at www.oecd.org/document/40/0,2340,en_2649_19101395_37130152_1_1_1_1,00.html.

capacity, performance and efficiency as well as review and remedies systems by the SIGMA (Support for Improvement in Governance and Management) Programme.⁴⁸

25. Further to these activities, the OECD held a symposium entitled “Mapping out Good Practices for Integrity and Corruption Resistance in Procurement”, and a forum entitled “Forum for Policy Dialogue with Non-Members: Sharing Lessons on Promoting Good Governance and Integrity in Procurement” from 29 November to 1 December 2006, as a result of which the OECD will publish a Good Practice Report in the near future, which will map out good practices, and particular approaches, measures and tools that have proved successful in promoting integrity in public procurement in countries across the world.⁴⁹

K. Security Interests

Hague Conference

26. A commercial edition of the Explanatory Report on the Hague Convention on the Law Applicable to Certain Rights in Respect of Securities held with an Intermediary (Hague Securities Convention) was published in 2005. The Report provides the most authoritative and comprehensive explanations of the Convention and is available on the website of the Hague Conference. On 5 July 2006, the USA and Switzerland both signed the Securities Convention. The consultation process within the EC regarding the ratification of the Convention by its Member States and the accession by the EC continues. The Hague Conference also continued to offer some guidance on the conflict-of-laws chapter of the draft Legislative Guide on Secured Transactions prepared by UNCITRAL.

Unidroit

Draft convention on substantive rules regarding intermediated securities

27. At its third meeting, held in Rome from 6 to 15 November 2006, the Unidroit committee of governmental experts considered the Preliminary draft Convention on Substantive Rules regarding Intermediated Securities, as adopted by the Committee at its second session, held in Rome, from 6 to 14 March 2006 (Unidroit 2006 Study LXXVIII Doc. 42; hereinafter the “draft Convention”). The fourth session of the committee is expected to take place in Rome from 21 to 25 May 2007.

28. At its thirty-ninth session in 2006, UNCITRAL considered and approved in principle the recommendations of the UNCITRAL draft Legislative Guide on Secured Transactions (hereinafter “the draft Guide”). At its eleventh and twelfth sessions held in December 2006 and February 2007, Working Group VI (Security Interests) completed its work on the draft Guide and submitted it for adoption by the Commission at its current session (for the reports of Working Group VI, see A/CN.9/617 and A/CN.620; for the draft Guide see A/CN.9/631 and Addenda).

29. At its eleventh session, Working Group IV (Security Interests) agreed that the draft Guide should cover security rights in directly held securities (see A/CN.9/617, paras. 14-16). At the twelfth meeting of Working Group VI (Security Interests), the

⁴⁸ SIGMA is a joint initiative of the OECD and the European Union, principally financed by the EU. See www.oecd.org/LongAbstract/0,2546,en_2649_34121_2345021_119817_1_1_1,00.html.

⁴⁹ Further information and documents from the forum and symposium are available at www.oecd.org/gov/ethics.

Working Group considered the matter again. Various views were expressed as to whether the draft Guide should address security rights in certain directly held securities (see A/CN.9/620, paras. 99-107). At that session, the Working Group agreed that the exclusion of directly-held securities from the scope of the draft Guide should be retained in square brackets for the Commission to consider the matter (see A/CN.9/631, recommendation 4, subparagraph (c), in which the term “intermediated” is retained in square brackets and in which reference is made to the definitions of the Unidroit draft Convention).

Principles and rules on trading in securities in emerging markets

30. Unidroit is preparing an instrument on principles and rules capable of enhancing trading in securities on emerging markets. The Secretariat has commenced preparatory work. The setting up of one or more (regional) Study Group has been authorized by the Governing Council. However, no meeting is expected to be convened before the Committee of governmental experts on intermediated securities will have finalised its work.

Other work relating to capital-markets

31. Studies have been announced on Standardized “global shares”, the legal framework regarding “delocalized” transactions and worldwide take-over bids.

Preliminary draft model law on leasing

32. To further coordination efforts, the Secretariat of Unidroit and UNCITRAL agreed to make a joint proposal to the Unidroit Committee of governmental experts for the preparation of a draft model law on leasing, which will hold its first session in Johannesburg from 7 to 10 May 2007.

33. The purpose of this proposal is to avoid overlap and conflict between the draft Guide and the draft Model Law on leasing. According to this proposal, the terms “security right” (a term used in the context of the unitary approach to acquisition financing) and “acquisition financing right” (a term used in the context of the non-unitary approach to acquisition financing) are defined in the draft Guide in such a way as to include only those leases that are the functional equivalent of a secured transaction and the preliminary draft model law will not apply to a leasing agreement that creates a security right or an acquisition financing right, as defined in the draft Guide.

Protocols to the Cape Town Convention

34. The Luxembourg Protocol to the Convention on International Interests in Mobile Equipment on Matters specific to Railway Rolling Stock (the Rail Protocol) was adopted and opened to signature on 23 February 2007 by a diplomatic Conference held in Luxembourg, under the joint auspices of Unidroit and the Intergovernmental Organisation for International Carriage by Rail (OTIF), at the invitation of the Government of Luxembourg.

35. Intersessional work continues in respect of the preliminary draft Protocol to the Convention on International Interests in Mobile Equipment on Matters specific to Space Assets. This intersessional work, which includes a Government/industry forum, hosted by the Royal Bank of Scotland in London on 24 April 2006, is designed to permit the reconvening of the Unidroit Committee of governmental

experts for the preparation of a draft Protocol to the Convention on International Interests in Mobile Equipment on Matters specific to Space Assets and the timely completion of said draft Protocol. It is hoped that a further joint Government/industry meeting, to be held in New York on 19 and 20 June 2007, will pave the way for reconvening the Committee of governmental experts in Autumn 2007.

36. An additional Protocol to the Cape Town Convention on Matters specific to Agriculture, Mining and Construction Equipment is also under consideration.

EC

The proposal for a regulation on the law applicable to contractual obligations (Rome I)

37. On 15 December 2005, the European Commission published its proposal (COM (2005) 650 final, 2005/0261) for a regulation of the European Parliament and the Council on the law applicable to contractual obligations (Rome I).⁵⁰ Article 13 (3) adopts the law of the assignor's habitual residence for third-party effects of assignment. According to the comment to article 13 (3), the approach adopted is the approach of the United Nations Assignment Convention. Article 18, however, defines habitual residence by reference to the principal place of business (the term "establishment" is used) and, if there is a branch office, the location of the branch office. There is no comment to article 18 pointing out the difference with the location rule in the United Nations Assignment Convention (referring to the place of the assignor's central administration), as a result of which the law applicable under the proposed regulation article 13 (3) may be different from the law applicable under article 22 of the United Nations Assignment Convention.

38. On 13 September 2006, the European Economic and Social Committee issued an opinion (INT/307, Contractual obligations (Rome I)) on the Proposal for a Regulation of the European Parliament and of the Council on the law applicable to contractual obligations (Rome I).⁵¹ The Committee welcomed the Commission's plan for a regulation on conflict-of-law rules in the field of contractual obligations and expressed its belief that the regulation will develop European conflict-of-law rules in a logical way and close a loophole in the current system of Community law. According to the Committee, the regulation is useful and necessary for the development of a single European area of justice, since the 1980 Rome Convention that currently regulates this field is in need of modernization but, as a multilateral agreement, the prospects of that happening are doubtful and would in any case involve time-consuming negotiations. The Committee urged the Community legislative bodies to incorporate certain amendments.⁵²

39. With respect to the law applicable to the proprietary effects of assignments of receivables, the Committee noted that: "Voluntary assignment and contractual subrogation of the creditor's rights from the creditor to a third party discharging the debt, which is a feature of many systems of law, serve the same purpose in economic terms. The proposed text does well to deal with both in Article 13. Article 13 (3) introduces a new conflict-of-law rule on the question of which law

⁵⁰ http://eur-lex.europa.eu/LexUriServ/site/en/com/2005/com2005_0650en01.pdf.

⁵¹ <http://eescopinions.eesc.europa.eu/eescopiniondocument.aspx?language=en&docnr=1153&year=2006>.

⁵² <http://europa.eu/bulletin/en/200609/p119008.htm>.

should determine whether the assignment may be relied on against third parties. This rule rightly follows the solution adopted by the United Nations Convention on the assignment of receivables in international trade of 12 December 2001”.⁵³

OAS⁵⁴

40. The OAS, through its sixth Inter-American Specialized Conference on Private International Law (CIDIP VI), continued its work on the development of uniform Inter-American registration forms as well as regulatory guidelines for secured transactions registries, and the electronic operation thereof, for implementation in conjunction with the Model Law.⁵⁵

WIPO

41. WIPO cooperated with the Secretariat in the organization of a Colloquium on Security Interests in Intellectual Property, which was held in Vienna on 18 and 19 January 2007. The Commission will have before it a report on the Colloquium with suggestions for future work by the Commission (see A/CN.9/632).

Part Three

ANNEXES

I. SUMMARY RECORDS OF THE MEETINGS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW DEVOTED TO THE DRAFT UNCITRAL LEGISLATIVE GUIDE ON SECURED TRANSACTIONS AND POSSIBLE FUTURE WORK

Summary record of the 836th meeting, held at the Vienna International Centre on Monday, 25 June 2007, at 10 a.m.

[A/CN.9/SR.836]

Temporary Chairman: Mr. Sekolec (Secretary of the Commission)

Chairman: Mr. Mitrović (Serbia),

(Later) Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 10.05 a.m.

Opening of the session

1. **The Temporary Chairman** opened the fortieth session of the United Nations Commission on International Trade Law (UNCITRAL, hereinafter referred to as “the Commission”).

Election of officers

2. **Mr. Borisov** (Russian Federation) nominated Mr. Dorbosav Mitrović (Serbia) for the office of Chairman.

3. **Ms. Sabo** (Canada) seconded the nomination.

4. *Mr. Dorbosav Mitrović (Serbia) was elected Chairman by acclamation.*

Adoption of the agenda (A/CN.9/613)

5. *The agenda was adopted.*

6. **The Chairman**, noting that the Commission was meeting as a Committee of the Whole for the consideration of agenda item 4, invited members to elect a Chairperson.

7. **Mr. Deniau** (France) nominated **Ms. Kathryn Sabo** (Canada) for the office of Chairperson.

8. **Mr. Sigman** (United States of America) and **Mr. Patch** (Australia) seconded the nomination.

9. *Ms. Sabo (Canada) was elected Chairperson of the Committee of the Whole by acclamation and took the Chair.*

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (A/CN.9/617, 620, 631 and Add.1-11, 632 and 633)

10. **The Chairperson** drew attention to documents A/CN.9/631 and Add.1 to 11 containing revised recommendations and commentaries pertaining to the draft UNCITRAL Legislative Guide on Secured Transactions (hereinafter referred to as “the Guide”) and to documents A/CN.9/617 and A/CN.9/620 containing the reports of Working Group VI (Security Interests) on its eleventh and twelfth sessions.

11. She invited the Commission to begin its consideration of the draft Guide with chapter VII concerning the priority of a security right as against the rights of competing claimants.

VII: Priority of a security right as against the rights of competing claimants (A/CN.9/631 and Add.4)

A. General recommendations (recommendations 74 to 98)

Recommendations 74 to 83

12. *Recommendations 74 to 83 were adopted.*

Recommendation 84

13. **Mr. Bazinas** (Secretariat) said that recommendation 84, which was in square brackets, addressed the question of whether a transferee of an encumbered asset took the asset free of a security right that had been made effective against third parties by registration in a specialized registry or notation on a title certificate. The Committee might wish to consider whether recommendation 85 was sufficient to cover that situation.

14. **Ms. Walsh** (Canada) said that, in her view, recommendation 85 needed to be supplemented. However, recommendation 84, as currently worded, failed to reflect the applicable rule, namely that priority should be given to an interest that came within the scope of a specialized registry, whether the interest was that of a buyer, a secured creditor or any other party whose rights were to be protected. She noted that recommendation 93, which dealt with a similar issue in the context of registration of an attachment in an immovable property registry, stated that any right — of a buyer, a lessee or any other party — registered in the immovable property registry had priority over a security right registered only in a general security rights registry. She therefore suggested that the wording of recommendation 84 should be aligned with that of recommendation 93.

15. **Mr. Umarji** (India) expressed support for that proposal.

16. **Mr. Sigman** (United States of America) expressed support for the Canadian proposal in principle. He pointed out, however, that recommendation 93 dealt with the priority contest between any type of right registered in an immovable property or specialized registry and a security right registered in the general registration system, whereas recommendations 84 and 85 dealt with the situation of any type of transferee vis-à-vis a security right.

17. **Ms. Walsh** (Canada) proposed deleting the word “security” before “right” in recommendation 84 in order to extend its coverage to rights other than security rights.

18. **Mr. Riffard** (France) said it was unclear to him what kind of conflict of priority such an amended version of recommendation 84 was intended to address. If it was a conflict of priority between the holder of “a right” registered in a

specialized registry and a buyer or transferee, he wondered whether it came within the scope of the draft Guide.

19. **Mr. Deschamps** (Canada) noted that recommendation 85 provided that the buyer of an asset subject to a security right that was effective against third parties at the time of the transfer took its rights subject to the security right, except as provided in recommendations 86 to 88. The aim of recommendation 84 was to establish a similar rule for security rights in assets made effective against third parties by registration in a specialized registry or notation on a title certificate. If a security right had been registered only in the general security rights registry, the buyer would acquire the asset free of the security right.

20. **Mr. Riffard** (France) suggested combining the principles underlying the two recommendations in a single text for the sake of clarity. The draft Guide was intended as a tool for legislators and must therefore be easy to understand for all users, including those without specialized knowledge in the area of secured transactions.

21. **Mr. Sigman** (United States of America) said he was not convinced that combining the two recommendations would simplify matters because recommendation 84 addressed the question of registration or non-registration in a specialized registry, while recommendation 85 addressed registration in a general security rights registry except as provided in recommendations 86 to 88.

22. In any case, he proposed replacing “the security right” in the second line of both recommendation 84 and recommendation 85 by “a security right”.

23. **Mr. Bazinas** (Secretariat) explained that recommendation 84 had been drafted separately because of the importance of the principle that a security right or any other right registered under a specialized regime should have priority over a security right registered in the general security rights registry. The intellectual property community, for example, had highlighted the need for a clear rule on the matter.

24. **Ms. McCreath** (United Kingdom) proposed amending the first sentence of recommendation 84 to read: “... if a right in an encumbered asset is transferred and that right is made effective ...”.

25. **Mr. Sigman** (United States of America) said he disagreed with the amendment proposed by the representative of the United Kingdom. The word “security” before “right in an encumbered asset” in the opening phrase of recommendation 84 had been deleted, so that the phrase now referred to any type of transferee and a distinction had to be made between the right in question and a security right in the asset.

26. **The Chairperson** said she took it that the Commission wished to delete the word “security” in the first line of recommendation 84 and to replace the words “the security right” by “a security right” in the second line of recommendations 84 and 85.

27. *It was so decided.*

28. *Recommendations 84 and 85, as amended, were adopted.*

Recommendation 86

29. **Mr. Riffard** (France) expressed support for the suggestion made in the “Note to the Commission” to delete subparagraph (b)(ii) of recommendation 86.

30. **The Chairperson** said she took it that the Committee wished to delete subparagraph (b)(ii).

31. *It was so decided.*

32. *Recommendation 86, as amended, was adopted.*

Recommendation 87

33. **Mr. Sigman** (United States of America) proposed deleting the words “or consumer goods” in recommendation 87 (a). If consumer goods were purchased in the ordinary course of a seller’s business, they constituted inventory for the seller and consumer goods only for the buyer.

34. **Ms. Walsh** (Canada) said that both “consumer goods” and “inventory” referred to the use to which goods were put by a particular person rather than to qualities inherent in the goods. She therefore proposed amending the opening phrase of recommendation 87 (a) to read: “A buyer of goods sold in the ordinary course of a seller’s business ...”. Similarly, the opening phrase of recommendation 87 (b) would read: “... a person that accepts a lease of goods leased in the ordinary course of the lessor’s business ...”.

35. **Mr. Voulgaris** (Greece), **Mr. Sigman** (United States of America) and **Mr. Ekedede** (Nigeria) supported the amendment proposed by the representative of Canada.

36. **Mr. Schneider** (Germany) said that while he concurred with the comment by the representative of Canada regarding the use of the terms “inventory” and “consumer goods”, he felt it might be preferable to replace “goods” with “tangible property”.

37. **The Chairperson** noted that the proposal would also obviate potential difficulties in translating the term “goods”.

38. **Mr. Weise** (Observer for the American Bar Association) said that if the term “consumer goods” was deleted, the sale of consumer goods by individuals in their personal capacity, which by definition did not constitute transactions carried out in the ordinary course of business, would not be covered by the recommendation.

39. **Ms. Walsh** (Canada) expressed the view that such situations were covered by recommendation 85. The “ordinary course of business” rule was an exception to the rule contained in that recommendation.

40. She noted that the word “goods” was used in recommendation 106 regarding goods covered by a negotiable document.

41. **Mr. Weise** (Observer for the American Bar Association) said that he was concerned that a buyer of consumer goods might be unable to take its rights free of the security right where the buyer did not know that it was violating the rights of the secured creditor of the seller of the consumer goods.

42. **Mr. Patch** (Australia) agreed that a consumer who bought goods informally from another consumer should take them free of any security interest pertaining to the seller.

43. **Ms. Walsh** (Canada) suggested stating in the recommendation that in consumer-to-consumer transactions States might wish to consider such an exception in respect of very low-value goods, but that as a general rule a consumer who had made a purchase on secure financing terms should not be free to sell a high-value item free of the security right.

44. **Mr. Umarji** (India) agreed that security rights must continue to apply to consumer-to-consumer

transactions. It was unacceptable for buyers to extinguish the security right by selling valuable consumer goods to a third party.

45. **Ms. Stanivuković** (Serbia) proposed that the original wording should be retained, since the terms “inventory” and “consumer goods” had been defined in document A/CN.9/631/Add.1. She felt it might be dangerous to broaden the scope of the exception to the general rule contained in recommendation 87.

46. **Mr. Bazinas** (Secretariat) said that the term “tangible property” could be used in place of both “inventory” and “consumer goods”.

47. **Ms. Walsh** (Canada), supported by **Mr. Wiegand** (Switzerland), said that using terms such as “inventory” or “consumer goods” in conjunction with the phrase “in the ordinary course of business” implied that a person, in order to qualify for protection, must show both that it had purchased the goods in the ordinary course of business and that the goods qualified as inventory or consumer goods, whereas “in the ordinary course of business” was the key criterion for obtaining protection. She proposed that the references to consumer goods and inventory in recommendation 87 (a) and (b) should be replaced by the phrase “tangible property other than negotiable instruments and negotiable documents”.

48. **Mr. Sigman** (United States of America) expressed support for the proposal.

49. **The Chairperson** said she took it that the Committee wished to adopt the amendment proposed by the representative of Canada.

50. *It was so decided.*

51. *Recommendation 87, as amended, was adopted.*

Recommendations 88 to 98

52. *Recommendations 88 to 98 were adopted.*

B. Asset-specific recommendations (recommendations 99 to 107)

Recommendations 99 to 106

53. **Ms. Perkins** (United Kingdom) said that recommendation 99 was ambiguous in terms of its application to securities.

54. Moreover, recommendations 99 to 106 were inconsistent in terms of their application to financial

contracts, since they addressed security rights in letters of credit and rights to payment of funds credited to a bank account but not in derivatives.

55. **The Chairperson** suggested deferring discussion of those issues until it took up the question of the application of the draft Guide to securities and financial contracts.

56. *It was so decided.*

Recommendation 107

57. **The Chairperson** drew attention to the alternative wording of recommendation 107 suggested by the Secretariat.

58. **Ms. Walsh** (Canada) expressed support for the Secretariat’s version because the current wording dealt only with a situation involving competition between two security rights in a negotiable document, whereas competition could arise between the holder of a security right and a person such as a buyer of goods covered by the document of title to whom the document was transferred in the ordinary course of business. For instance, a buyer who had purchased goods by accepting possession of a document of title such as a bill of lading would take precedence over the holder of a registered security right because that was the accepted practice and the reasonable expectation in shipping circles.

59. **Mr. Riffard** (France) also expressed support for the Secretariat’s version but proposed adding the words “covering the goods” after “the security agreement” at the end of the recommendation.

60. **Mr. Umarji** (India) expressed a preference for the Secretariat’s version, since it upheld the primacy of the law governing negotiable documents.

61. **Mr. Sigman** (United States of America) expressed support for the Secretariat’s version without the amendment proposed by the representative of France. Under recommendation 29, a security right in a negotiable document automatically entailed a security right in the goods covered by the document. The proposed amendment might cast doubt on that principle.

62. **Mr. Weise** (Observer for the American Bar Association) noted that the Secretariat’s version considerably broadened the scope of the recommendation. In the new version, a security right in a negotiable document took precedence over a security right in the goods covered by that

document, even if the latter right had been obtained before or after the period to which the negotiable document related.

63. **Mr. Deschamps** (Canada) proposed deleting “in good faith” since its meaning overlapped with that of the phrase “without knowledge that the transfer is in violation of the rights of the secured creditor”.

64. **Mr. Affaki** (Observer for the International Chamber of Commerce) suggested that it would be preferable to delete the phrase beginning “without knowledge ...”. To the extent that the security right was taken through possession of the negotiable document for value in good faith, it was no longer necessary — indeed it would be contrary to established practice in the shipping world — to require the secured party who took possession of the negotiable document to make sure that there was no earlier security right.

The meeting rose at 12.30 p.m.

**Summary record of the 837th meeting, held at the Vienna International Centre
on Monday, 25 June 2007, at 2 p.m.**

[A/CN.9/SR.837]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 2.05 p.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (continued) (A/CN.9/617, 620, 631 and Add.1-11, 632 and 633)

VII: Priority of a security right as against the rights of competing claimants (continued) (A/CN.9/ 631 and Add.4)

B. Asset-specific recommendations (continued) (recommendations 99 to 107)

Recommendation 107 (continued)

1. **Mr. Wiegand** (Switzerland) expressed support for the proposal by the representative of Canada to delete the reference to “good faith” from the Secretariat’s proposed new version of recommendation 107. The phrase “without knowledge that the transfer is in violation of the rights of the secured creditor under the security agreement” should be retained since in many jurisdictions a secured creditor, buyer or other transferee was not permitted to acquire rights if it knew of any competing rights.

2. **Mr. Pendón Meléndez** (Spain) said that while recommendations 99 to 105 referred explicitly to priority, recommendation 106 adopted a negative approach, referring to subordination. He submitted that if recommendation 106 were expressed more clearly and brought into line with the other recommendations, it might be possible to dispense with recommendation 107 altogether. If it was retained, however, recommendation 107 would need to be redrafted for ease of interpretation. For instance, it referred to “taking possession” of a negotiable document, whereas the key issue was that of title. He also had reservations about the term “violation” of the rights of the secured creditor since two security rights could validly coexist.

3. **Mr. Riffard** (France) said that the Secretariat’s version of recommendation 107 rightly accorded

priority to a secured creditor, buyer or other transferee that was in possession of the negotiable document. However, it failed to address a potential conflict, which had been dealt with in the original version, between a creditor that had a security right in a negotiable document made effective by registration and a creditor that had a security right in the goods covered by the document. If the new version was adopted, it would be necessary to rectify that omission.

4. **Mr. Kohn** (Observer for the Commercial Finance Association) said that the Secretariat’s suggested version had serious implications for inventory acquisition financiers. Under the previous version, for instance, where a borrower deposited goods obtained from an inventory acquisition financier in a warehouse and pledged the warehouse receipts to a new lender, the first lender would retain priority. Under the new version, the borrower could deposit the goods in a warehouse, pledge the receipts and defeat the inventory acquisition financier’s security interest. His organization therefore considered that the original wording should be retained.

5. **Mr. Schneider** (Germany) concurred with the previous speaker.

6. If the new version was nonetheless adopted, it should maintain the references both to “good faith” and to “without knowledge that the transfer is in violation of the rights ...”.

7. **Ms. Walsh** (Canada) said that while she shared the concern expressed by the observer for the Commercial Finance Association regarding a situation in which the same grantor created two security rights, one made effective by registration and the other by handing over possession of a document of title, it was her understanding that the recommendation was intended to deal with the contest between a secured creditor that took security from a grantor that owned inventory and a second

secured creditor that took security from a buyer of the inventory by taking possession of a bill of lading representing the inventory. The problem could be resolved by amending the text of the Secretariat's suggested version of the recommendation to read: "The law should provide that a security right in goods covered by a negotiable document is subordinate to the rights of a secured creditor, buyer or other transferee that takes possession of a document of title in the grantor's, seller's or other transferor's ordinary course of business ...". That wording would exclude the situation in which a grantor handed over a document of title to a second secured creditor, since that was not a transaction conducted in the ordinary course of business but double dealing with security rights.

8. To deal with the reservation regarding recommendation 106 expressed by the representative of France, she proposed amending it to read: "The law should provide that a security right in a negotiable document or the goods covered thereby is subordinate to the rights of a secured creditor, buyer or other transferee who takes possession of the negotiable document in the grantor's, seller's or other transferor's ordinary course of business."

9. **Mr. Weise** (Observer for the American Bar Association) expressed the view that it was appropriate to deal with security rights arising in connection with bills of lading separately from those arising in connection with warehouse receipts. The risk of double financing of the same goods was less likely to arise in the case of a bill of lading than in the case of a warehouse receipt.

10. **Ms. Walsh** (Canada) said that warehouse receipts should be addressed because in shipping transactions the bill of lading was frequently replaced by a warehouse receipt at the port of unloading before delivery to the purchaser. Of course, the warehouse receipt had to comply with the definition of a document of title and the law of the State concerned must recognize the negotiability of such a receipt. The issue could be resolved by simply deleting recommendation 107, but the Working Group had felt that secure transactions law should spell out the substantive law as clearly as possible.

11. **Mr. Pendón Meléndez** (Spain) said that a prior security right in goods took precedence over a subsequent "document of title", a term that he felt was creating confusion. The security right that a bank obtained from the mere possession of a bill of lading or a warehouse receipt was very different from a security right stemming from a securities regime or from a previously constituted security right. It would perhaps be preferable to emphasize the general rule contained in recommendation 106 and to dispense with recommendation 107.

12. **Mr. Bazinas** (Secretariat) said that, as he understood it, recommendation 106 was intended to deal with a conflict between a secured creditor that had obtained a security right under the law on secured transactions and a secured creditor that had obtained a security right under the law governing negotiable documents by negotiating the negotiable document. Recommendation 107, on the other hand, was intended to deal with a conflict of priority between two secured creditors that had both obtained security rights under the law on secured transactions, one by taking possession of the negotiable document and the other by obtaining a security interest in the goods or by some means other than taking possession of the negotiable document, in which case the former would prevail. However, the Committee might still consider that recommendation 106 was sufficient and that recommendation 107 could be deleted.

13. **Mr. Kohn** (Observer for the Commercial Finance Association) said that, in his opinion, recommendation 107 was worth retaining. He supported the wording suggested by the Secretariat, with the amendment proposed by Canada. He also proposed that the commentary address the concerns that had been raised in the discussion.

14. **Mr. Cohen** (United States of America) said that, as he understood it, recommendations 106 and 107 dealt with different situations. Recommendation 106 preserved the rights of a person to whom a negotiable document had been duly negotiated and made it clear that the recommendations of the draft Guide did not lessen those rights. Recommendation 107 went beyond that and dealt with the rights of competing parties even where there had not been due negotiation. It seemed in the light of the discussion to deal with a greater

variety of factual situations than had been envisaged at the time of drafting.

15. The amendment proposed by the representative of Canada was a potential solution, but the Committee should see it in writing and consider all its possible implications before deciding whether to adopt it.

16. **Mr. Deschamps** (Canada) said he felt that, in the light of the explanation given by the Secretariat, it might be better to retain the original version of recommendation 107, at least in substance. It should be made clear that recommendation 107 dealt only with a competition between a secured creditor that had taken possession of a negotiable document and a secured creditor that had employed some other means. On balance, he would be willing to omit the question of protection of third-party purchasers from recommendation 107, relying instead on the general principle set out in recommendation 106. If a purchaser was protected, it followed that the secured creditor of the protected purchaser would also be protected.

17. Canada would submit a draft revised text of recommendation 107 to the Committee.

18. **Mr. Affaki** (Observer for the International Chamber of Commerce) said that recommendation 107 addressed a paramount conflict, namely that between a secured creditor that had taken possession of a negotiable document and a secured creditor that had directly obtained security rights in the inventory. He suggested that recommendation 107 should concentrate on that case by reverting to the original wording drawn up by the Working Group. It would then be clear that a secured creditor in possession of a negotiable document, such as a bill of lading, automatically had priority during the period when the negotiable document was in effect, i.e. during the period of the shipment in the case of a bill of lading, without having to demonstrate good faith or the absence of knowledge of any pre-existing security rights.

19. **The Chairperson** suggested that the delegation of Canada, in informal consultation with other interested delegations, should prepare a new draft of recommendation 107 for consideration in due course.

20. *It was so decided.*

Recommendations 101 and 102

21. **Ms. McCreath** (United Kingdom) noted that Working Group VI had agreed at a previous session that recommendation 101 should not be mandatory and that the flexibility of the rule should be highlighted. As the current wording was not sufficiently flexible, she proposed amending the third sentence to read: "If the secure creditor is the depositary bank, unless it otherwise agrees, its security right has priority ...".

22. Recommendation 102 should also be amended to read: "... has priority, unless it otherwise agrees, as against the security right ...".

23. She felt that some of the material in the commentary (A/CN.9/631/Add.4, para. 112) should be reflected in the text of the recommendation itself.

24. **Mr. Deschamps** (Canada), supported by **Mr. Sigman** (United States of America) and **Mr. Rehbein** (Germany), pointed out that there was already a general rule, laid down in recommendation 77, that any secured party might agree to subordinate its priority in favour of another competing claimant. Inserting a provision to that effect in a recommendation dealing with priority might cast doubt on the other priority sections.

25. **Ms. McCreath** (United Kingdom) withdrew her proposed amendment.

26. *Recommendations 99 to 106 were adopted.*

Commentary to chapter VII: Priority of a security right as against the rights of competing claimants (A/CN.9/631/Add.4)

27. **Mr. Bazinas** (Secretariat) said that the commentary consisted of a general part and an asset-specific part. The recommendations, as adopted by the Committee, would be inserted at the end of each chapter. The Committee would need to decide whether a consolidated appendix or separate document containing all the recommendations should also be prepared. The commentary would describe the approaches to secured transactions that the Working Group had deemed to be feasible and the advantages and disadvantages of different approaches to policy issues. It would also present any additional reasoning that would shed light on the final form of the recommendation.

Section A.1 (paras. 1 to 11)

Paragraph 1

28. **Mr. Sigman** (United States of America), replying to a point raised by **Mr. Umarji** (India), proposed clarifying the second sentence of paragraph 1 by amending it to read: “These rules apply whenever at least one of the competing claimants is a secured creditor ...”.

29. *It was so decided.*

30. **Mr. Sigman** (United States of America) said that the most important paragraphs in section A.1 were paragraphs 6 to 9 which clarified the purpose and value of clear and comprehensive priority rules. He therefore suggested, with the support of **Mr. Wiegand** (Switzerland) and **Mr. Riffard** (France), that those paragraphs should be moved to immediately after paragraph 1.

31. **Mr. Macdonald** (Canada) noted that throughout the commentary the drafter frequently signalled an important idea at the outset and subsequently developed its full implications. Paragraph 1, for instance, drew attention to the fact that the term “priority” had different meanings in different legal systems. He was against changing the order of the paragraphs. Some readers might not be familiar with the term “priority” as used in the draft Guide; paragraphs 2 to 5 explained the concept and paragraphs 6 to 9 went on to explain why it was so important.

32. **Mr. Kohn** (Observer for the Commercial Finance Association) supported retaining the original order.

33. **Ms. McCreath** (United Kingdom) suggested that the desired emphasis on the key paragraphs might be achieved by adding the subtitle “Importance of the priority concept” before paragraph 6.

34. *It was so decided.*

Paragraph 4

35. **Ms. Walsh** (Canada) said that paragraph 4 implied that a judgement creditor was always subordinate to a secured creditor. That was not always the case, as the Guide itself stated in recommendation 90. In some cases, a judgement

creditor could obtain priority over later advances by giving notice to a secured creditor. The language of the paragraph should be made less categorical.

36. **Mr. Bazinas** (Secretariat) said that paragraph 4 merely stated the general principle that secured creditors had priority over unsecured creditors and went on to cite the exceptions to that rule.

37. **Mr. Voulgaris** (Greece) said that time was also a factor. Judgement creditors that notified third parties of the ranking of their rights had priority over secured creditors existing at the time the judgement was delivered and afterwards, but not over earlier secured creditors.

38. **The Chairperson** said she took it that the Committee wished to refer in the first sentence to security rights that were effective against third parties and to explain the concept of third-party effectiveness and its relationship to the concept of priority.

39. **Mr. Voulgaris** (Greece) suggested that specific examples should be included, as far as possible, to illustrate the principles stated.

40. *It was so decided.*

Paragraph 5

41. **Ms. Walsh** (Canada) said that a secured creditor that had not made its security rights effective against third parties was in the same position as an unsecured creditor. The first sentence of paragraph 5 stated that principle, but the second sentence added nothing and might even prove confusing. The Secretariat should either reword or delete it. It should be made clear earlier in the text that there could be no issue of priority at all unless the secured creditor had made its security rights effective against third parties.

42. **The Chairperson** said she took it that the Committee wished to make it clear in the second sentence that no issue of priority could arise between security rights that were not effective against third parties.

43. *It was so decided.*

Paragraph 8

44. **Ms. Walsh** (Canada) said that paragraph 8 laid down the important principle that a secured creditor should be able to take priority with respect to the residual value of an encumbered asset after payment of the amount owed to a first secured creditor. The text should perhaps describe the two ways in which that might be done, namely by stating in the registered notice the maximum amount secured by the first-priority ranking security right or, alternatively, by a subordination agreement.

45. **The Chairperson** said she took it that the Committee wished to amend paragraph 8 as proposed by the representative of Canada.

46. *It was so decided.*

Paragraphs 9 to 11

47. **Ms. Walsh** (Canada) expressed the view that paragraph 9 repeated much of the material in paragraphs 6 to 8. Paragraph 10 merely referred to the “Purpose” section of the recommendations on priority without adding anything and paragraph 11 made a statement about conflict of laws that was in fact applicable to all chapters.

48. **Mr. Kohn** (Observer for the Commercial Finance Association) endorsed the comments by the representative of Canada.

49. **The Chairperson** said she took it that the Committee wished to redraft paragraph 9 to make it less repetitive, to flesh out paragraph 10 and to delete paragraph 11.

50. *It was so decided.*

51. *The substance of paragraphs 1 to 11 was approved subject to the agreed amendments.*

*Section A.2 (paras. 12 to 25)**Paragraphs 15 to 18*

52. **Ms. Walsh** (Canada) said that the statement in paragraph 15 that some States did not require registration in the case of consumer goods because a security right in such goods was automatically effective against third parties properly belonged in chapter V, “Effectiveness of a security right against third parties”. Moreover, no explanation for the

adoption of such a rule and no indication of the advantages or disadvantages was provided.

53. Paragraphs 16 to 18 dealt with the point at which third-party effectiveness was achieved and therefore also belonged in chapter V. She suggested that a cross-reference to that chapter should be inserted wherever appropriate in the discussion of priority rules based on registration.

54. **The Chairperson** said she took it that the Committee wished to limit the content of paragraphs 15 to 18 to priority issues.

55. *It was so decided.*

Paragraphs 20 to 22

56. **Mr. Riffard** (France) proposed moving paragraphs 21 and 22 to chapter V, since they seemed to be more relevant to third-party effectiveness than to priority.

57. He further noted that paragraphs 21 and 22 referred to three disadvantages of priority based on possession. A fourth disadvantage was that possession by the secured creditor created problems vis-à-vis the secured creditor’s own creditors inasmuch as it conveyed the impression that the asset was actually owned by the secured creditor.

58. **Ms. Walsh** (Canada) said that the points made in paragraphs 20, 21 and most of 22 had already been made in the commentary to chapter V. They dealt largely with third-party effectiveness based on possession, which was a different concept from priority based on possession. Following a cross-reference to chapter V, the discussion should begin with the question addressed in paragraph 22 concerning whether making a security right effective by possession should give special priority status compared with some other method.

59. **The Chairperson** said she took it that the Committee wished to limit the content of paragraphs 20 to 22 to priority issues and to include a reference to the fourth disadvantage of priority based on possession.

60. *It was so decided.*

Paragraph 23

61. **Ms. Walsh** (Canada) said that paragraph 23 referred to “possession” and “control” as though they were analogous concepts. The difference was that in the case of possession a third party was able to ascertain that the grantor no longer had possession of the encumbered asset, whereas in the case of control a third party would be unable to tell that control had passed from the grantor.

62. **Mr. Sigman** (United States of America) noted that there were elements relating specifically to priority in the concept of control, which should be maintained in the text. However, it was important to keep the concept of possession separate from that of control. The latter had not evolved from the former, as stated in the current text. Moreover, paragraph 23 described control as a form of deemed possession, while the draft Guide went out of its way to explain that there was no such thing as constructive or deemed possession and that the term should be understood to mean actual possession.

63. **The Chairperson** said she took it that the Committee wished to clarify in paragraph 23 that the concept of “control” did not flow from the concept of “possession” and focus on the rule that control gave a superior priority right.

64. *It was so decided.*

Paragraphs 24 and 25

65. **Mr. Schneider** (Germany) said that the section on alternative priority rules (paras. 24 and 25) described only the disadvantages of the “first-to-create” rule, according to which priority was based on the time at which the security right was created. That rule also had advantages, including the fact that credit could be extended immediately after creation of the security right, whereas under the “first-to-register” rule credit could be extended only when the security right had been registered. The disadvantages of the “first-to-create” rule were overstated or even wrongly stated, as in the case of financial leasing.

The meeting was suspended at 3.55 p.m. and resumed at 4.15 p.m.

66. **Mr. Bazinas** (Secretariat) asked for guidance regarding the changes that the Committee wished to

make to paragraphs 24 and 25. It was a fundamental principle of the draft Guide that registration of security rights was a good thing and hence that priority should be given, subject to certain qualifications, to the first-to-register rule. It was therefore inappropriate to give the impression that the first-to-create rule was equally effective. He pointed out in that regard that registration could take place in advance of the creation of a security right.

67. **Ms. Walsh** (Canada) said that paragraphs 24 and 25 dealt with the distinction between legal regimes in which a security agreement automatically became effective against third parties upon conclusion of the agreement and regimes in which further action, referred to by the draft Guide as an act of third-party effectiveness such as registration or taking possession, was required. Those were not alternative priority rules. However, even where a security right became effective against third parties on creation, further priority rules were required to provide for possible exceptions to the general rule, for instance in the case of retention-of-title buyers.

68. **The Chairperson** said she took it that the Committee wished to have paragraphs 24 and 25 recast in a more objective way and to limit their content to issues of priority, avoiding third-party effectiveness issues.

69. *It was so decided.*

70. **Mr. Bazinas** (Secretariat) said that section A.2 was intended as a general introduction, describing the approaches to priority taken in different legal systems. With regard to paragraphs 24 and 25, the problem was that some legal systems made no distinction between creation of a security right, third-party effectiveness and priority. It was therefore difficult to avoid some repetition in the three relevant chapters in order to avoid leaving gaps. However, the Secretariat would revise the text in the light of the discussion and add cross-references where necessary.

Paragraphs 16 and 17

71. **Ms. McCreath** (United Kingdom) said that the system described in paragraphs 16 and 17, in which a security right registered within a “grace period” could take priority over an earlier-registered security right, was currently employed very successfully in

her country. She took issue with the statement in the last sentence of paragraph 17 that the system created “significant uncertainty”. She proposed either deleting the sentence or replacing the word “significant” with “theoretical”.

72. **Mr. Kohn** (Observer for the Commercial Finance Association) said that the need to wait until the expiration of a grace period to achieve certainty with respect to priority entailed a real and significant risk for practitioners in cross-border lending. He felt that the paragraph was accurate as it stood.

73. **Mr. Umarji** (India) said that the grace-period system also existed in his country and made it difficult to obtain the release of a loan before the grace period had expired. The “first-to-register” priority rule advocated in the draft Guide was preferable.

74. **The Chairperson** suggested deleting the final clause of the last sentence in paragraph 17, which would then end with the words “creditor’s priority ranking”.

75. *It was so decided.*

76. **Mr. Macdonald** (Canada) said that in drafting the Guide the Committee had examined a number of effective secured transactions regimes, many of which had proved successful because the practices of the primary players were in line with the existing legal regime in the country concerned. It should be borne in mind, however, that while it was relatively easy for States seeking guidance on secured transactions systems to import legislative regimes, it was far more difficult for them to import complex practices and understandings that had been developed over a long period. The draft Guide should avoid any implication that successful regimes might therefore prove dysfunctional and should seek instead to analyse the reasons for their success so that other States could make judgements regarding the approach that suited them best.

77. **Mr. Burman** (United States of America) said that the purpose of the draft Guide was not to describe existing systems but to assist States that needed to improve their commercial finance law in order to upgrade their economic base. At all stages of the drafting, the Working Group had worked closely with international financial institutions and

international capital market interests to ensure that the suggested solutions could be effectively implemented in developing economies. The Committee should keep that aim in mind rather than merely comparing different systems or defending the merits of a particular regime.

78. **Mr. Kemper** (Germany) said he felt that the wording of paragraph 17 as amended was still too rigid. It did not sufficiently recognize that there could be legitimate grounds for introducing grace periods and that such regimes could operate successfully.

79. **Mr. Voulgaris** (Greece) said that, in his opinion, the draft Guide should describe the existing situation for the benefit of practitioners. It should not suggest solutions or state which solution was the best — that was the task of a model law.

80. **The Chairperson** said that the draft Guide was intended for legislators who wished to introduce or update a secured transactions system. As the objectives approved by the Commission and the discussions in the Working Group had made clear, it was not intended to be a survey of all existing systems. It sought instead to evaluate the options that best met the approved objectives and to provide guidance for legislators, who would have to make the necessary policy decisions.

81. **Mr. Wiegand** (Switzerland) said that the draft Guide should not express a preference for a particular system but make it clear that each system was associated with certain transaction costs. For instance, a system that allowed a grace period would involve some uncertainty.

82. *The substance of paragraphs 12 to 25 was approved subject to the agreed amendments.*

Sections A.3 to A.5 (paras. 26 to 37)

Paragraphs 26 to 33

83. **Ms. Walsh** (Canada) said that paragraphs 26 to 33 (section A.3, “Extent of priority”) dealt with two priority issues. The question of whether a security right secured only the amount extended at the time of conclusion of the security agreement or whether it could also secure future obligations was not a priority issue and had been dealt with in chapter IV of the recommendations entitled

“Creation of a security right”. The priority issue was whether the priority that a secured creditor obtained at the moment of achieving third-party effectiveness or at the time of registration extended to future advances. The Guide recommended that it should. The commentary should make that clear, with appropriate cross-references to chapter IV.

84. Paragraph 31 dealt with the issue of whether it was necessary to specify the maximum amount of a security right in the notice registered in the public registry and in the security agreement. If not, a separate subordination agreement would be required.

85. **The Chairperson** suggested that paragraphs 26 to 33 should refer back to the chapter on creation with respect to the creation of a security right in future advances and clarify that priority extended to future advances as of the time the security right became effective against third parties.

She further suggested that paragraph 31 should be recast to clarify that it addressed an issue that was distinct from the issue of priority in future advances, and to refer to a statement of the maximum amount and subordination.

86. *It was so decided.*

87. *The substance of paragraphs 26 to 37 was approved subject to the agreed amendments.*

The meeting rose at 5 p.m.

**Summary record of the 838th meeting, held at the Vienna International Centre
on Tuesday, 26 June 2007, at 9.30 a.m.**

[A/CN.9/SR.838]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 9.30 a.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work
(continued)** (A/CN.9/617, 620, 631 and Add.1-11,
632 and 633)

*Commentary to chapter VII: Priority of a security
right as against the rights of competing claimants
(A/CN.9/631/Add.4)*

Sections A.6 to A.17 (paras. 38 to 105)

Paragraph 75

1. **Mr. Umarji** (India) proposed that the phrase “the lease is entered into” in the first sentence of paragraph 75 should be replaced by the phrase “the licence is entered into”.
2. *It was so decided.*
3. *The substance of paragraphs 38 to 105 was approved subject to the agreed amendment.*

Sections B.1 to B.5 (paras. 106 to 120)

Paragraph 110

4. **Ms. Walsh** (Canada) said that she was unable to accept the assertion in paragraph 110 that the existence of a control agreement functioned like a specialized security rights registry. Third parties had no notice of a control agreement and the draft Guide expressly stated that a bank was not required to disclose the existence of such an agreement. The last sentence of the paragraph was therefore misleading and should be deleted.
5. **Ms. McCreath** (United Kingdom) expressed support for the deletion of the last sentence.
6. *It was so decided.*

Paragraph 112

7. **Ms. McCreath** (United Kingdom) said that paragraph 112 required a change of emphasis since

its current wording was unduly prescriptive and overstated the strength of the depositary bank’s position. Contrary to the statement that banks would be reluctant to enter into control agreements if their set-off rights — which in English law were not security rights — were not preserved, banks in the United Kingdom regularly entered into such agreements and the draft Guide should allow for that practice. Moreover, the paragraph stated that the depositary bank would generally win a priority contest by virtue of its right of set-off. Under English law, however, that was not so to the extent that set-off rights had not already become due, owing or incurred at the time that the new security interest was created. The paragraph was also inconsistent in its description of set-off rights, referring to a “right of set-off under non-secured transactions law” at one point and later placing set-off rights within the confines of the secured transactions regime. She therefore proposed rewording the phrase “by reason of its right of set-off under non-secured transactions law” to read “by reason of its present right of set-off under non-secure transactions law unless it has disappplied such rights”. She further proposed replacing the words “secured transactions regime” by “priorities regime” and deleting the final sentence.

8. **Mr. Smith** (United States of America) said that while he was willing to have the text amended in order to address the specific legal regime and practice of the United Kingdom, the language should nevertheless be general enough to take account of other regimes whose rules were less rigid.
9. **Ms. Walsh** (Canada) said that the law of set-off in her jurisdiction also recognized that, once notification was provided, rights of set-off arising under future obligations were crystallized.
10. **Mr. Voulgaris** (Greece) said that the insertion of the phrase “unless it had disappplied such rights”

and the deletion of the final sentence would create confusion for other legal systems.

11. **The Chairperson** said she took it that the Committee wished to leave it to the Secretariat to find a form of words that met all the points that had been raised.

12. *It was so decided.*

13. *The substance of paragraphs 106 to 120 was approved subject to the agreed amendments.*

14. *The substance of document A/CN.9/631/Add.4 as a whole was approved subject to the agreed amendments.*

*VIII: Rights and obligations of the parties
(A/CN.9/631 and Add.5)*

Recommendations 108 to 113

15. *Recommendations 108 to 113 were adopted.*

Commentary to chapter VIII (A/CN.9/631/Add.5)

Sections A, B and C (paras. 1 to 69)

16. *The substance of paragraphs 1 to 69 was approved.*

17. *The substance of document A/CN.9/631/Add.5 as a whole was approved subject to any modifications necessitated by other amendments to the draft Guide.*

*IX: Rights and obligations of third-party obligors
(A/CN.9/631 and Add.6)*

Recommendations 114 to 127

18. *Recommendations 114 to 127 were adopted.*

Commentary to chapter IX: Rights and obligations of third-party obligors (A/CN.9/631/Add.6)

19. **Mr. Bazinas** (Secretariat) said that the Working Group's approach in drafting chapter IX regarding the rights and obligations of third-party obligors — debtors of receivables, depository banks, issuers of letters of credit or negotiable documents or the persons obligated under a negotiable instrument — had been to defer to other legislation in order to ensure that such assets could be used as collateral for credit without interfering with existing law and practice.

Section A (paras. 1 to 35)

Paragraph 22

20. **Ms. Walsh** (Canada) said that, as it stood, paragraph 22 appeared to imply that banks were afforded special treatment in all jurisdictions and were not required to respond to a notification of a security right in a bank account in favour of a third-party secured creditor. However, some legal systems treated bank accounts in exactly the same way as receivables, and the whole of the commentary relating to receivables was therefore applicable to the obligations of a depository bank in its capacity as a debtor on a receivable. In those jurisdictions, the depository bank had no special status, its consent to an assignment was not required, and it was required to obey a notification for payment to the secured creditor when it was received. The wording of paragraph 22 should be modified to reflect those different approaches.

21. **The Chairperson** said she took it that the Committee wished to approve paragraph 22 subject to the addition of a reference to an approach whereby depository banks were treated in the same way as debtors of receivables and their consent was not required for a security right to be created in a right to payment of funds credited to a bank account.

22. *It was so decided.*

23. *The substance of paragraphs 1 to 35 was approved subject to the agreed amendments.*

24. *The substance of document A/CN.9/631/Add.6 as a whole was approved subject to further editorial amendments.*

X: Post-default rights (A/CN.9/631 and Add.6)

A. General recommendations (recommendations 128 to 161)

Recommendation 128

25. **Ms. McCreath** (United Kingdom) said that the phrase "in a commercially reasonable manner" was unclear and was not addressed in detail in the commentary.

26. **Ms. Walsh** (Canada) said that the draft Guide sought to allow the secured creditor a measure of flexibility in determining the time, manner and

mode of enforcement of security rights in order to ensure that the maximum value was obtained for the collateral in the marketplace. Such flexibility required objective standards to ensure that the secured creditor behaved in a manner that protected the interests of the grantor and third-party creditors. The requirement for rights to be enforced in a commercially reasonable manner aimed at ensuring that the secured creditor acted in a market-sensitive way when liquidating the collateral. That principle was reflected in all jurisdictions.

27. **Mr. Umarji** (India) said that when a secured creditor exercised its right to take possession of securities and sell them, the sale must be conducted in a commercially reasonable manner, which could mean, for example, that food grains seized by a secured creditor could not be sold in the chemicals market. The notion implied that the sale must be properly advertised and that every effort was made to obtain the best price. For the sake of clarity, examples of “commercially reasonable” conduct should be included in the commentary to chapter X.

28. **Ms. McCreath** (United Kingdom) welcomed that suggestion. However, commercial reasonableness on the part of a secured creditor was not limited to achieving the best possible price. She submitted that the phrase was vague and meant different things to different people.

29. **The Chairperson** said that “commercially reasonable” conduct depended on a number of factors, including context-specific circumstances and legislation outside the secured transactions regime. Notwithstanding the difficulty of providing a universally valid definition, the Secretariat would seek to provide guidance in the commentary.

30. **Mr. Bazinas** (Secretariat) said that virtually all legal systems that provided for some flexibility in the enforcement of security rights contained clauses or notions concerning good morals, sound practices and propitious conditions in the local market. Even the most rigid codes tended to provide both for certainty and for a certain amount of flexibility to adjust to local conditions. He pointed out that the draft Guide was not an international convention and that any law enacted would be domestic law referring to domestic notions and applicable in domestic courts.

31. **Ms. McCreath** (United Kingdom) insisted that the examples of what was deemed to be “commercially reasonable” should not focus on achieving the best price but should be more prescriptive regarding the scope of the concept.

32. **Mr. Smith** (United States of America) agreed that commercial reasonableness was not synonymous with obtaining the best price in the marketplace. While the conduct of a secured creditor might be commercially reasonable in terms of standard practice for the sale of encumbered assets, a higher price might have been obtained if the merchant had taken a great deal more trouble to investigate potential buyers; however, such conduct might, in retrospect, be viewed as “unreasonable”. The concept should therefore be interpreted as meaning that the secured creditor obtained a price by making commercially reasonable efforts to dispose of the encumbered asset.

33. **Ms. McCreath** (United Kingdom) suggested that “commercially reasonable” might best be described as “obtaining the best price reasonably obtainable”.

34. **Mr. Ghia** (Italy) expressed support for the Secretariat’s comment on the recommendation and also for the idea of including examples of commercially reasonable conduct in the commentary. The need for adequate publicity and visibility of the sale procedure should be stressed.

35. **The Chairperson** said she took it that the Committee wished to adopt recommendation 128 on the understanding that examples of commercial reasonableness would be included in the commentary.

36. *It was so decided.*

37. *Draft recommendation 128 was adopted.*

Recommendations 129 to 131

38. *Recommendations 129 to 131 were adopted.*

Recommendation 132

39. **Mr. Smith** (United States of America) said that, for the sake of clarity, the phrase “does not affect” in the first sentence of draft recommendation 132 should be amended to read “may not adversely affect”.

40. *Recommendation 132, as amended, was adopted.*

Recommendations 133 to 140

41. *Recommendations 133 to 140 were adopted.*

Recommendation 141

42. **Mr. Macdonald** (Canada) said that he agreed with the suggestion in the Secretariat's note that the last sentence of draft recommendation 141 should be placed in the commentary to chapter X.

43. **The Chairperson** said she took it that the Committee wished to delete the last sentence and place it in the commentary.

44. *Recommendation 141 was adopted on that understanding.*

Recommendation 142

45. *Recommendation 142 was adopted.*

Recommendation 143

46. **Ms. McCreath** (United Kingdom) noted that the provision for objection by a grantor in recommendation 143 (c) was liable to be used by grantors as a delaying tactic to prevent a secured creditor from obtaining possession of an encumbered asset.

47. **The Chairperson** said that the wording of recommendation 143 was a compromise reached after lengthy discussions in the Working Group and reflected a very fine balance struck among the participants.

48. **Mr. Bazinas** (Secretariat) said that the provision had been included because even where a grantor had given its approval at the time of conclusion of the security agreement for extrajudicial possession by the secured creditor of an encumbered asset, the actual act of possession might involve a violation of the grantor's rights, for instance where the grantor had not been duly informed or where the secured creditor had sought to obtain possession in an inappropriate way.

49. *Recommendation 143 was adopted.*

Recommendations 144 to 146

50. *Recommendations 144 to 146 were adopted.*

Recommendation 147

51. **Ms. Okino Nakashima** (Japan), referring to the choice in square brackets between notice "given to" and "received by" addressees of the secured creditor's intention to sell or otherwise dispose of, lease or licence an encumbered asset, asked for clarification of the point at which notice was deemed to have been received. A situation might arise, for example, where written notice delivered by mail failed to reach an absent recipient in due time. She therefore preferred the words "given to".

52. **Mr. Riffard** (France) said that the question of whether notice should be "given" or "received" was of considerable importance. In addition to the time factor described by the representative of Japan, the requirement for a creditor to prove that a debtor had received notice entailed substantial costs. Simple proof of notice given, on the other hand, could be provided easily and at virtually no cost.

53. **Mr. Rehbein** (Germany) said that the question of whether a writing became effective from the point of sending or receipt in a mailbox or by email was a matter for the domestic law of each enacting State. It would not be helpful to lay down a rule that was inconsistent with existing practice in the State concerned.

54. **Mr. Bazinas** (Secretariat) said that there was a third alternative implicit in the text. One could refrain from including any special rule regarding notices in secured transactions law, because of the time and cost implications and hence the possible impact on credit transactions, and instead leave the question to be resolved under other branches of domestic law.

55. **Mr. Smith** (United States of America) said that, in his view, the issue should be addressed in secured transactions law because there were separate considerations as to what constituted notice in the context of secured transactions that might not be reflected in general law. As noted by the representative of France, placing the burden of proof that notice had been received on the secured creditor might increase the cost of credit. The question of what constituted receipt also arose. If the rule

consisted merely of “giving” notice, the secured creditor still had the burden of proving that it had used a specific means of transmission.

56. He proposed stating in the commentary that the general chapter X requirement of good faith and commercial reasonableness was applicable, so that a secured creditor must use a method of providing notice that was reasonably designed to facilitate receipt. Grantors were sufficiently well protected by the notions of good faith and commercial reasonableness without imposing the additional burden on the secured creditor of proving actual receipt.

57. **Mr. Voulgaris** (Greece) expressed support for the point made by the representative of Germany. However, should the Committee wish to establish a universal rule, it would be preferable to opt for receipt of notice, which would also be more consistent with the concept of good faith.

58. **Mr. Macdonald** (Canada), noting that recommendation 145 was expressed in terms of “giving” rather than “receiving” notice, submitted that once a State had decided to permit extrajudicial enforcement, i.e. enforcement outside the normal regime of civil execution of judgements, the standards set forth in recommendation 146 provided adequate protection for the grantor. He also argued that couching recommendations 149 and 150 in terms of “giving” rather than “receiving” would be more compatible with the overall framework of the draft Guide pertaining to extrajudicial enforcement.

59. **Mr. Umarji** (India) said that the way in which notice should be served depended on domestic law. Different provisions could not be applied to service of notice for secured transactions from service of notice for some other purpose.

60. **Mr. Wiegand** (Switzerland) said that the Working Group had decided after much deliberation that notice should be given in the context of extrajudicial disposition of an encumbered asset and that the draft Guide should therefore provide for a special regime governing such notice rather than deferring to local rules.

61. **Mr. Bazinas** (Secretariat) drew attention to article 16 of the United Nations Convention on the Assignment of Receivables in International Trade (United Nations Assignment Convention), according

to which notification of an assignment or a payment instruction was effective when received by the debtor if it was in a language that was reasonably expected to inform the debtor about its contents. It was thus couched in terms of “receiving” and the last phrase was similar to recommendation 147 (c) and the requirement of good faith and commercially reasonable standards referred to by the representative of the United States.

62. **Mr. Ghia** (Italy) said that he preferred the wording “received by”, although it was true that some grantors attempted to shirk their responsibilities by avoiding taking receipt of the notice. Hence receipt should not be a condition *sine qua non*, but “notice given” and good faith principles should prevail in accordance with the relevant domestic law.

63. **Mr. Karako** (Observer for the Commercial Finance Association) said that either wording was acceptable to his organization. However, he suggested that the commentary should describe the benefits of the two options and urge States to set standards and provide definitions of the option chosen. For instance, if the wording “received by” was used, the State should make it clear whether a notice delivered to the borrower’s last known address would be deemed to have been received.

The meeting was suspended at 10.55 a.m. and resumed at 11.25 a.m.

64. **Mr. Smith** (United States of America) said that it had been necessary to use the wording “received by” in the United Nations Assignment Convention because of the potential impact of notification of an assignment or a payment instruction on the debtor of a receivable who was not a party to the secured transaction. A more relevant example was the 2001 Convention on International Interests in Mobile Equipment (“Cape Town Convention”), which required notice to be given by the secured creditor when an international object was the subject of a foreclosure sale and which contained no rule requiring receipt.

65. **Ms. McCreath** (United Kingdom) expressed strong support for the words “given to”. The exact procedure would have to be defined in the contract between the parties.

66. **Mr. Voulgaris** (Greece) said that the procedure for giving notice should be as flexible as possible

because of the difficulty of providing a comprehensive definition of the act of sending or receiving.

67. **The Chairperson** suggested that, in the light of the difficulties involved in defining “receipt”, as highlighted by a number of speakers, the words “received by” should be deleted on the understanding that the commentary would provide a detailed explanation for legislators of the implications of the various ways of giving notice in terms of cost-effectiveness and balancing the interests of the parties. The chapeau of recommendation 147 (a) would thus read: “Provide that the notice must be given to”.

68. *It was so decided.*

69. *Recommendation 147, as amended, was adopted.*

Recommendation 148

70. *Recommendation 148 was adopted.*

Recommendation 149

71. **The Chairperson** suggested that the words “given to” should be used instead of “received by” and “received” in recommendation 149.

72. *It was so decided.*

73. *Recommendation 149, as amended, was adopted.*

Recommendation 150

74. **The Chairperson** said she took it that the Committee also wished to replace the word “received” in square brackets in recommendation 150 with “given”.

75. *It was so decided.*

76. **Mr. Bazinas** (Secretariat) said that the second sentence of recommendation 150, which was enclosed in square brackets, was intended to provide additional protection for a grantor by requiring its affirmative consent in cases where a secured creditor proposed to accept an encumbered asset only in partial satisfaction of a secured obligation.

77. **Mr. Umarji** (India) proposed that the sentence should be included in the recommendation.

78. **Mr. Macdonald** (Canada) said that where a debt was only partially extinguished by the taking of an encumbered asset, it was important for the grantor to know the extent to which it had been released from its obligation. He therefore supported the proposal to remove the square brackets from the second sentence.

79. *It was so decided.*

80. *Recommendation 150, as amended, was adopted.*

Recommendations 152 and 153

81. *Recommendations 152 and 153 were adopted.*

Recommendation 154

82. **Ms. Stanivuković** (Serbia) pointed out that, although the section of the draft Guide under discussion was entitled “Distribution of proceeds of extrajudicial disposition of an encumbered asset”, recommendation 154 dealt with proceeds realized by a judicial disposition or other officially administered enforcement process.

83. **The Chairperson** said that, according to the Secretariat, it would be possible either to delete the word “extrajudicial” from the title of the section or to move recommendation 154 to another section of the draft Guide. She suggested that the matter should be left to the discretion of the Secretariat.

84. *It was so decided.*

85. *Recommendation 154 was adopted on that understanding.*

Recommendations 155 to 161

86. *Recommendation 155 to 161 were adopted.*

B. Asset-specific recommendations (recommendations 162 to 172)

Recommendations 162 to 168

87. *Recommendations 162 to 168 were adopted.*

Recommendation 169

88. **Ms. McCreath** (United Kingdom), asked why a secured creditor needed a court order to enforce a security right in funds deposited with a bank. That

provision was based on the presumption that banks enjoyed a special status, although in some jurisdictions they were treated as debtors of account holders.

89. **Mr. Umarji** (India) said that when an account holder deposited funds with a bank, any withdrawal of the funds was governed by a contract between the account holder and the bank. A third party who was a creditor of the depositor could not direct the bank to transfer funds from the account without a court order unless a prior agreement to that effect existed between the depositor, the creditor and the bank.

90. **Mr. Bazinas** (Secretariat) said that the recommendations defined the term receivable as excluding bank accounts. The Working Group had agreed that receivables owed by banks merited special treatment because the right to payment of funds credited to a bank account was commonly used as collateral.

91. **Mr. Smith** (United States of America) said that it had been the understanding of the Working Group that the rule referred to in recommendation 169 was not specific to banks. It also applied to independent undertakings and to other actors not covered in the draft Guide, such as brokers and other securities intermediaries. When dealing with financial market players and payment, securities and settlement systems, it was important for banks and securities intermediaries to know their customers and to be able to react quickly when funds and securities were being transferred. Trade receivables were an entirely different matter. He noted that, owing to the different regulatory practices involved, payment and securities settlement systems and independent undertakings had been excluded from the United Nations Assignment Convention.

92. **Mr. Deschamps** (Canada) said that while he would not go as far as to say that the aforementioned rule was required for the integrity of the financial system, he could see the rationale for ensuring that a bank account or a bank deposit could not be assigned without the consent of the depository bank. The United Nations Assignment Convention contained a provision to the effect that an anti-assignment clause was not effective against the assignee in the case of a trade receivable, but it recognized the effectiveness of such a clause in the case of other types of receivables.

93. *Recommendation 169 was adopted.*

Recommendations 170 to 172

94. *Recommendations 170 to 172 were adopted.*

Commentary to chapter X: Post-default rights (A/CN.9/631/Add.7)

Section A (paras. 1 to 69)

Paragraphs 38 and 39

95. **Mr. Bazinas** (Secretariat) drew attention to a note following paragraph 39 of the commentary, in which the Secretariat suggested that the Commission consider adding a draft recommendation, in the light of paragraphs 38 and 39 of the commentary, concerning the grantor's right to cure the default and reinstate the secured obligation.

96. **Mr. Cohen** (United States of America) said that he was not in favour of drafting a new recommendation. The primary focus of the draft Guide should remain the law of security rights and the Commission should avoid making a recommendation in an area that pertained to the law of obligations.

97. **Mr. Umarji** (India) said that, to avoid complicating the issue, the grantor's right to cure the default and reinstate the secured obligation should remain a matter for agreement between the parties involved.

98. **Mr. Macdonald** (Canada) suggested inserting a paragraph after paragraph 39 pointing out that such a right was a matter for agreement between the parties.

99. **Mr. Rehbein** (Germany) said that a recommendation on the reinstatement of a secured obligation could be misleading in the context of the draft Guide since it might seem to contradict default clauses in other contexts. He therefore joined the other speakers in rejecting the idea.

100. **The Chairperson** said she took it that the Committee did not wish to issue another draft recommendation but would like to have its views reflected in the commentary.

101. *The substance of paragraphs 38 and 39 was approved subject to the agreed amendments.*

Paragraphs 57 and 58

102. **Mr. Bazinas** (Secretariat) drew attention to a note following paragraph 58 of the commentary, in which the Secretariat suggested that the Commission consider adding a draft recommendation, in the light of paragraphs 57 and 58 of the commentary, concerning the secured creditor's right to take over the management of a business and to sell its assets.

103. **Mr. Umarji** (India) said that, in the event of default on a loan, it was not standard practice for banks to enforce securities in a piecemeal fashion. Following a default in one category of loan, a bank would normally have the option of recalling all loans or even of selling the debtor's entire business as a going concern. While a reference to such practices should be included in the text of the commentary, there was no need for an additional recommendation since it was a matter of contract that should be left to the parties concerned.

104. **Ms. McCreath** (United Kingdom) said she believed it might be useful to contemplate drafting a recommendation.

105. **Mr. Macdonald** (Canada) said that the central issue was not the relationship between the parties but rather the rights of third parties. For instance, some States believed that third parties should be notified about ongoing receivership, whereas other States did not.

106. **Mr. Rehbein** (Germany) said that he would be reluctant to accept a recommendation that encouraged a creditor, especially a bank, to take over the management of a debtor's business. There was abundant jurisprudence regarding the damages and liability incurred by banks in that regard and the commentary could adequately cover that area without the need for an additional recommendation.

107. **Mr. Bazinas** (Secretariat) noted that the draft Guide covered the concept of "all-asset security", i.e. cases where the creditor had a security right in all assets of a debtor's business. The question was whether the recommendations were sufficient to cover the sale of a business as a going concern as opposed to liquidation of its assets in a piecemeal fashion, or whether additional text should be added to the commentary to clarify the issue. For instance, the commentary might indicate that in some cases good faith and reasonable market standards might

oblige the secured creditor to sell the business as a going concern in order to obtain higher value.

108. **Mr. Ghia** (Italy) said that he was reluctant to accept the proposal for a recommendation because it might lead to some overlapping and inconsistency with insolvency legislation. The interests of all creditors needed to be safeguarded in the event of default and, to that end, other kinds of procedures with more general guarantees should be encouraged.

109. **Mr. Riffard** (France) said that he was also reluctant to see the addition of such a recommendation since doing so would open up a Pandora's box, assigning a non-traditional and even inappropriate role to secured creditors. In addition to raising issues of liability, it would also raise issues pertaining to the relationship between the secured creditor and employees of the business.

110. **Mr. Kohn** (Observer for the Commercial Finance Association) said that he fully agreed with the representatives of Germany, Italy and France that there should not be an additional recommendation since the remedies set forth in the existing recommendations were sufficient.

111. **Ms. McCreath** (United Kingdom) said that she was not advocating a mandatory recommendation but merely seeking to ensure that such action remained an available option. Perhaps some text in the commentary to that effect would be acceptable.

112. **The Chairperson** said she took it that the Committee did not wish to issue another recommendation but would like to have its views reflected in the commentary.

113. *The substance of paragraphs 57 and 58 was approved subject to the agreed amendments.*

*Section B (paras. 70 to 99)**Paragraph 92*

114. **Mr. Bazinas** (Secretariat) drew attention to a note following paragraph 92 of the commentary, in which the Secretariat suggested that the Commission consider adding a recommendation that specifically addressed enforcement against proceeds, stating that where proceeds took the form of a special category of assets, such as receivables, enforcement should follow the rules applicable to that category of asset.

115. **The Chairperson** said that, having heard no comments from delegations, she took it that the Committee did not wish to support the proposal for an additional recommendation. She suggested that the commentary should state that where proceeds were of a special category of assets, enforcement should follow the rules applicable to that category of assets.

116. **Mr. Cohen** (United States of America) said that it would be helpful to include a sentence in the commentary to that effect.

117. *The substance of paragraph 92 was approved subject to the agreed amendment.*

Paragraph 93

118. **The Chairperson** asked the Committee whether it wished to consider adding a recommendation that specifically addressed enforcement of security rights in attachments.

119. **Mr. Umarji** (India) said that it was not necessary to add a recommendation in view of the difficulty of enforcing such rights in practice.

120. **Mr. Macdonald** (Canada) noted that the chapters on creation and third-party effectiveness contained specific comments and recommendations regarding a whole series of assets such as attachments to movable property. He took it that the basic purpose of the notes was to have the Commission reflect on whether enforcement should be expressed only in general terms or whether more specific recommendations should be made.

The meeting rose at 12.30 p.m.

**Summary record of the 839th meeting, held at the Vienna International Centre
on Tuesday, 26 June 2007, at 2 p.m.**

[A/CN.9/SR.839]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 2.10 p.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work**
(continued) (A/CN.9/617, 620, 631 and Add.1-11,
632 and 633)

Commentary to chapter X: Post-default rights
(continued) (A/CN.9/631/Add.7)

Section B (paras. 70 to 99)

Paragraph 93 (continued)

1. **The Chairperson**, summing up the earlier discussion on the note following paragraph 93, said she took it that the Committee did not wish to add a recommendation that specifically addressed enforcement of security rights in attachments.

2. *It was so decided.*

3. **The Chairperson** said she took it that the Committee agreed with the assumption in the penultimate sentence of paragraph 93 that it would create unnecessary confusion if an enforcement regime other than that generally applicable were to be enacted, and also agreed that the commentary should explicitly state that the draft Guide adopted a similar rule for enforcement against security rights in attachments that were effective as against third parties.

4. *The substance of paragraph 93 was approved subject to the agreed amendment.*

Paragraph 94

5. **The Chairperson** drew attention to a note following paragraph 94, in which the Secretariat suggested that the Commission consider adding a recommendation that specifically addressed how enforcement of security rights in attachments and commingled property was to be effected, depending on separability.

6. **Mr. Macdonald** (Canada) said that, since it had not been considered necessary to insert a new recommendation in the light of paragraph 93, it should not be necessary, by parity of reasoning, to insert a new recommendation in the light of paragraph 94.

7. **The Chairperson** said she took it that the Committee did not wish to issue an additional recommendation in response to the note following paragraph 94.

8. *It was so decided.*

9. *The substance of paragraph 94 was approved.*

Sections A and B (paras. 1 to 99)

Paragraphs 1 to 30

10. *The substance of paragraphs 1 to 30 was approved.*

Paragraphs 31 and 32

11. **Mr. Macdonald** (Canada) reminded the Committee that it had earlier decided to use the wording “given to” rather than “received by” in recommendations 147, 149 and 150 and suggested that the most appropriate place to explain the difference between those terms would be either paragraph 31 or paragraph 32 of the commentary.

12. **The Chairperson** said that the Secretariat would make the necessary changes to incorporate that suggestion.

13. *The substance of paragraphs 31 and 32 were adopted subject to the agreed amendments.*

Paragraphs 33 to 99

14. **The Chairperson** noted that the substance of paragraphs 38, 39, 57, 58, 92 and 94 had already been approved subject to the agreed amendments.

15. *The substance of the remaining text of the commentary in paragraphs 33 to 99 was approved.*

16. *The substance of document A/CN.9/631/Add.7 as a whole was approved subject to the agreed amendments.*

XII: Acquisition financing rights (A/CN.9/631 and Add.9)

A. Unitary approach to acquisition security rights (recommendations 184 to 201)

Recommendations 184 to 191

17. *Recommendations 184 to 191 were adopted.*

Recommendation 192

18. **Mr. Kemper** (Germany) said that the decision taken by the Commission regarding registration and retention of title might ultimately prevent Germany from adopting the draft Guide. As noted by the observer for the European Union, important traditions relating to the issue of retention of title existed under European Community law.

19. **Mr. Schneider** (Germany) expressed concern about the different rules applied in recommendations 189 and 192: while a grace period was allowed in the case of tangible property other than inventory, notification was required in the case of inventory. The recommendations thus catered for the interests of financiers, while sellers of inventory were placed at a disadvantage by the lack of a grace period and the need to provide notification or risk losing their property. The draft Guide had a duty to balance the interests of financiers and sellers of inventory. He therefore proposed that the rule applicable to tangible property other than inventory should also apply to inventory. In any case, the notification provided for in recommendation 192 was unnecessary and would hinder immediate delivery.

20. **Mr. Kemper** (Germany) said that the rules set out in recommendation 189 would be an acceptable framework both for rights in tangible property other than inventory and for rights in inventory.

21. **Mr. Cohen** (United States of America) said he agreed that recommendations which made distinctions between different types of transactions should be explained and justified. In that connection,

he drew attention to paragraphs 114 to 118 of the commentary to chapter XII (A/CN.9/631/Add.9), which explained in detail why the rules on acquisition security rights pertaining to inventory differed from those pertaining to other types of tangible collateral.

22. **Mr. Macdonald** (Canada) said that he was currently unsure whether the commentary dealt either specifically or generally with the observations made by the representatives of Germany.

23. **Mr. Ghia** (Italy) expressed support for the proposal made by the representatives of Germany and requested that its precise content be made available to delegations.

24. **The Chairperson**, noting that the commentary to chapter XII was not yet available in French, suggested that the Committee should resume its discussion of the proposal by the representatives of Germany when the commentary became available in all working languages.

25. **Mr. Kemper** (Germany) said that the amendment that his delegation proposed related to recommendation 192 itself. The wording of the commentary, while also unsatisfactory, remained a side issue.

26. **The Chairperson** said that the additional information contained in the commentary might help other delegations to reach a decision on the recommendation. She took it that the Committee wished to defer a decision until the commentary became available in French.

27. *It was so decided.*

Recommendations 193 to 198

28. *Recommendations 193 to 198 were adopted.*

Recommendation 199

29. **Mr. Bazinas** (Secretariat) said that the question for the Committee to decide was whether the approach taken by recommendation 199 with respect to receivables should also be taken with respect to the proceeds of inventory other than receivables. If it considered that it should, it must then decide whether the rule should be formulated in the same way or, if those types of proceeds were excluded, whether the recommendation should be

reformulated to provide that the super-priority of an acquisition security right should not extend to proceeds of inventory.

30. **Mr. Wezenbeek** (Observer for the European Union) said that the European Community and its member States, as stated in their submission (A/CN.9/633), felt that further work was needed on chapter XII before they could fully support the draft Guide. With regard to the issue of retention of title, a sale of goods in which the vendor contractually retained property until receipt of full payment should be recognized as effective against third parties even without registration of a notice in a security rights registry. A similarly flexible approach should also apply to financial leasing.

31. He also took the opportunity to raise four other concerns mentioned in document A/CN.9/633: the need for the draft Guide to be fully compatible with the Unidroit draft Convention on Substantive Rules regarding Intermediated Securities; the importance of finding the right solution to conflict-of-law issues; a carve-out for the use of collateral comprising “financial contracts”; and the incorporation of relevant intellectual property rights in the draft Guide.

32. **Mr. Schneider** (Germany) expressed concern that property rights had been recharacterized as security rights in the draft Guide and had thereby been downgraded in such areas as financial leasing, sale and lease-back, retention of title, repurchase agreements and other financial contracts. The consequence of such recharacterization in chapter XII, for example, was that registration had become necessary even where the seller or financial lessor was still the owner. As a result, it had also become necessary to employ new terminology. The Committee should be aware that industry in his country was becoming extremely concerned about such developments. One of the main issues was registration of retention of title in cases of financial leasing, which should not be required under any circumstances.

33. **Mr. Riffard** (France) said that a satisfactory agreement on the retention-of-title issue, involving a distinction between the unitary and non-unitary approaches to security rights, had been reached after considerable discussion. Agreement had also been reached on the issue of registration of acquisition

security rights and the debate should not be reopened.

34. He stressed that the draft Guide was intended to assist legislators in drafting new laws and not to amend existing legislation. The idea was to elaborate the best system conceivable in a transnational context and without reference to any individual State.

35. **Mr. Burman** (United States of America) said that he fully agreed with the representative of France that the purpose of the draft Guide was not to compile an inventory of the various legal systems and economic methodologies that provided for secured interest financing. Its purpose was to provide useful guidance for countries — often developing countries and emerging States — with a special need for economic upgrades. The draft Guide had been elaborated in close collaboration with international financial institutions, all of which agreed that approaches which worked well in the markets of developed countries might not be as effective for the extension of new commercial credit into countries where substantial upgrades in the law were necessary. Moreover, the draft Guide was not a binding instrument. States were free to accept or reject its recommendations, wholly or partially. As the proposal to apply special rules to certain financing instruments would effectively undo the economic advantages offered by the draft Guide, he strongly supported retaining the relevant recommendations in their current form.

36. **Ms. McCreath** (United Kingdom) said that while she understood the point of view of the representatives of France and the United States, she saw no reason why the draft Guide should not describe the different approaches available so that countries could make an informed choice. Any guide’s effectiveness would be measured by the number of countries that eventually made use of it. If the opportunity was not taken to ensure that the draft Guide was as correct as possible, it risked being ineffective and hence ignored.

37. **Mr. Wiegand** (Switzerland) expressed strong support for the statement by the representative of France.

38. **The Chairperson** said that the Commission had mandated a working group some time

previously to prepare a legislative guide which included a public notice filing system or registry. The recommendations in the draft Guide had been approved in principle at the Commission session held in 2006, including the recommendations pertaining to registration and retention of title. While those issues would not be reopened by the Committee, the importance of retention of title to certain delegations had been recognized and an accommodation had been reached in the form of a unitary and a non-unitary approach. She stressed, however, that registration was fundamental to the effective operation of the regime that had been designed.

39. Reverting to recommendation 199, she invited the Committee to consider whether the exception in respect of receivables should be extended to proceeds in the form of negotiable instruments, funds credited in a bank account and obligations to pay under an independent undertaking.

40. **Mr. Wezenbeek** (Observer for the European Union) said that, while he acknowledged the fact that the Committee did not wish to reopen the debate regarding registration and retention of title, he felt it should be stressed that some member States of the European Community still had concerns about recommendation 199, so that the whole package might need to be reassessed if the current wording remained unchanged.

41. **Mr. Smith** (United States of America) said that, as he saw it, the rule in recommendation 199 did not extend the super-priority of the inventory acquisition financier to receivables because those lending against receivables were averse to checking the registry on a regular basis to determine whether the receivable against which they were lending arose from inventory on which there was a super-priority. Moreover, when the receivable was created from the sale of inventory, the receivable financier would lend against the receivable and the proceeds would be used to pay the inventory financier or supplier. There were thus strong policy reasons for the rule and he saw no reason why they should not extend to other payment rights.

42. A receivable financier might not necessarily lend against receivables as strictly defined in the draft Guide. Business people were interested in rights to payment and did not make credit

judgements based on whether a particular receivable matched a definition in the draft Guide. Removing the square brackets and retaining the language it enclosed would be consistent with business concepts of what constituted receivable financing.

43. **The Chairperson** said she took it that the Committee wished to remove the square brackets from recommendation 199 and retain the text they enclosed, and that it requested the Secretariat to reformulate the recommendation along the lines indicated in the note.

44. *It was so decided.*

45. *Recommendation 199, as amended, was adopted.*

B. Non-unitary approach to acquisition financing rights (recommendations 184 to 201)

Recommendations 184 to 190

46. *Recommendations 184 to 190 were adopted.*

Recommendation 191

47. **Mr. Bazinas** (Secretariat) said that recommendation 191 dealt with a conflict of priority between different providers of acquisition financing in the context of the non-unitary approach. It followed the approach taken in systems where retention-of-title sellers or financial lessors had priority as against general secured creditors and stated the principle that suppliers of goods had priority over other acquisition financiers, provided that they had made the right effective against third parties, in accordance with recommendation 189 (b).

48. The note to the Commission following recommendation 191 drew attention to the fact that the latter recommendation was based on the assumption that the draft Guide contained an additional recommendation along the following lines: "The law should provide that, in a non-unitary system, a lender may acquire an acquisition security right or an acquisition financing right through an assignment of the secured obligation from a supplier. If the lender acquires an acquisition security right, the rules applicable to acquisition security rights in a unitary system apply to that acquisition security right. If the lender acquires an acquisition financing right, the rules applicable to

acquisition financing rights in a non-unitary system apply.”

49. The note invited the Commission to consider whether such super-priority of acquisition secured creditors would be compatible with the concept of a non-unitary system. If it was incompatible, recommendation 191 as well as subparagraph (b) of the “Purpose” section should be deleted. If it was compatible, an explicit recommendation such as that just suggested should be added.

50. The note also invited the Commission to consider whether another recommendation enabling suppliers to take an acquisition security right should be included. In such a case, suppliers would be treated in the same way as secured creditors and a non-unitary approach might not be necessary.

51. **Ms. Walsh** (Canada) expressed concern that the terminology used in the non-unitary approach failed to respect the concept of retention-of-title financing and lease financing. In a system that treated retention of ownership as something that was formally distinct from security, priority rules were not expressed in terms of priority rules as such. Rather, priority was effectively obtained because ownership had never passed from the creditor to the buyer. While she appreciated that the intention of recommendation 191 was to bring the consequences of retention-of-title and financial lease security closer to the effective result in a system that adopted a functional approach, the manner in which that purpose had been expressed seemed to eliminate any difference, either in form or in substance, between the unitary and the non-unitary approach. She therefore suggested that the Committee should revert to an approach that respected the form of retained ownership as a basis for third-party effectiveness.

The meeting was suspended at 3.30 p.m. and resumed at 4 p.m.

52. **Mr. Macdonald** (Canada) said that the answers to the questions raised in the note to the Commission would depend on the language used to reflect the Committee’s conceptual framework in the recommendations pertaining to the non-unitary approach.

53. **The Chairperson** asked whether the delegation of Canada was proposing that all the

recommendations in the non-unitary approach section should be redrafted to reflect a property-based terminology.

54. **Ms. Walsh** (Canada) said that in a legal regime in which the concept of security was limited to property owned by the grantor, retention of title under a sale agreement or a financial lease was not a security right. In a retention-of-title transaction, property was owned by the creditor and security was created functionally by not allowing property to pass to the other party to the transaction. Where the seller or lessor entered into competition with a creditor of or a buyer from that other party, it was appropriate to refer to ownership rights rather than to priority because the creditor never ceded ownership and the buyer or lessee was not in a position to transfer ownership of or grant a security right in the property concerned.

55. **Mr. Smith** (United States of America) suggested replacing the term “priority” with “opposability”.

56. If the position of the representative of Canada was that a seller in an ownership regime retained full ownership of an asset so that it was impossible for a buyer to grant any form of security right in the asset, that position ran counter to the policy underlying the draft Guide of enabling credit to be available at cheaper rates. One of the draft Guide’s innovations was its sanctioning of junior security rights as a way in which grantors could obtain credit based on the value of assets. If an ownership regime precluded the buyer from granting a security right, albeit of inferior status to that of the seller, the substantive result would be different from that pertaining to security rights and hence contrary to the policy of the draft Guide.

57. **Mr. Bazinas** (Secretariat) said that the Working Group had discussed at length whether to use opposability or similar notions and had finally decided on “priority”, which was an imperfect solution but the only basis on which agreement could be reached. The Commission had approved the Working Group’s policy decision at its last session.

58. **Mr. Schneider** (Germany) said that he shared the concern of the representatives of Canada that more than a drafting issue was at stake in

recommendation 191, the fundamental problem being that the unitary and non-unitary approaches had essentially the same content.

59. **The Chairperson** pointed out that the text had already been considered by the Working Group and the Commission. Bearing in mind also the time constraints, she urged the Committee to be circumspect in proposing any last-minute changes.

60. **Ms. Kaller** (Austria) expressed support for the point made by the representatives of Canada regarding the terminological problems in the non-unitary approach. Legislators would have difficulty in deciding how to deal with retention-of-title issues and required clear guidance, especially on how to explain the legal situation to industry.

61. **Ms. Gibbons** (United Kingdom) said she shared the concern expressed by the representatives of Canada regarding the treatment of ownership rights and security rights in the draft Guide. It was as though the concept of ownership was being forcibly converted into a concept of security. The Law Commission for England and Wales had recently discussed whether to adopt the North American security model and had decided against doing so largely on account of the recharacterization of ownership rights as security issues.

62. **The Chairperson** urged the Committee to refrain from revisiting decisions that had already been taken by the Working Group with regard to the non-unitary approach. She pointed out that terminological concerns could be adequately dealt with in the commentary.

63. **Mr. Burman** (United States of America) concurred with the Chairperson.

64. **Mr. Umarji** (India) said that, in substance, retention-of-title and loan transactions were both credit transactions whereby funds were provided for the purchase of assets. It had therefore been agreed that the two types of transaction should be held to be equally valid. However, owing to the fact that some jurisdictions had found it difficult to characterize both as secured transactions, it had been decided to provide for a unitary and a non-unitary approach on the understanding that as much equivalence as possible should be sought.

65. He suggested amending the text so that it referred to ownership rights instead of priority. For instance, one could state that the owner of an asset under a retention-of-title arrangement was entitled to retain its ownership rights and retrieve the asset from the buyer.

66. **Mr. Wiegand** (Switzerland) took issue with the charge that property rights were being recharacterized. He pointed out that when an asset was sold through a retention-of-title arrangement, the nature of the property changed by virtue of that transaction and it was a matter of drawing the appropriate consequences rather than recharacterization.

67. **The Chairperson** reiterated her suggestion that the problems raised should be addressed in the commentary.

68. **Mr. Voulgaris** (Greece) expressed support for the Chairperson's suggestion.

69. **The Chairperson** asked whether there was support for the proposals contained in the note following recommendation 191.

70. **Ms. Walsh** (Canada) expressed support for the proposal in the third paragraph of the note, namely that recommendation 191 should be deleted as unnecessary together with subparagraph (b) of the "Purpose" section. The concept of the non-unitary system was based on suppliers retaining ownership as a means of financing acquisitions, and the solution for ordinary secured creditors was to negotiate with any prior secured creditors. Retention of recommendation 191 was incompatible with that concept because it implied that it was possible to have an acquisition security right of the same kind as in the unitary system.

71. **Mr. Cohen** (United States of America) said he was opposed to the deletion of recommendation 191 since it would upset the delicate balance between two parallel systems that had been designed to achieve similar results. Moreover, he did not recall any decision in either the Working Group or the Commission to the effect that in a non-unitary system third-party creditors could not extend acquisition credit and obtain a security right. The deletion of recommendation 191 on the grounds stated by the representative of Canada would

therefore be incompatible with the decisions taken to date.

72. **Mr. Riffard** (France) asked for clarification regarding the types of creditors that would benefit from super-priority.

73. **Mr. Schneider** (Germany) said that there would be no need for super-priority if the proposal by the representative of Canada was adopted, since the seller would remain the owner. If recommendation 191 was retained, it should remain in its current form and the seller should enjoy super-priority.

74. **Ms. Walsh** (Canada) said that there were a number of different financing scenarios for acquisition security. A jurisdiction that wished to adopt the unitary approach could achieve the same substantive results for sellers, financial lessors and institutional lenders through a functional concept of security. In that case, a recommendation such as 191 was necessary because there were different categories of creditors who would have security as between suppliers and lenders.

75. The non-unitary approach was presented in the draft Guide as an alternative to the unitary approach. However, if the logic of retention of title or leasing was retained, while at the same time provision was made for an acquisition security right with super-priority, the non-unitary approach would merely supplement the unitary approach.

76. If the non-unitary approach was treated as an alternative to the unitary approach, the substantive results of the two approaches were broadly the same. There were two ways in which a lender could contribute to acquisition secured financing. It could take an assignment of the supplier's right in return for paying out the supplier, thereby acquiring super-priority through assignment of the title enjoyed by the retention-of-title seller. Alternatively, a lender could take security in the buyer's right under the retention-of-title sale so as to claim ownership under that sale upon satisfaction of the purchase price. In so doing, the lender would acquire the residual value after the seller had been paid. As the lender was taking only an ordinary security right, it would rank second in priority to the seller, who retained ownership and thereby had first claim. Thus, the final result was the same: the supplier ranked ahead of the acquisition lender. Both scenarios were unproblematic, unlike the current approach, which combined a concept of acquisition security rights for lenders with a concept of retention of title and financial lease for suppliers.

77. **Mr. Voulgaris** (Greece) said that there could be no super-priority in the case of retention-of-title or financial lease arrangements, since super-priority presupposed full ownership.

The meeting rose at 5 p.m.

**Summary record of the 840th meeting, held at the Vienna International Centre
on Wednesday, 27 June 2007, at 9.30 a.m.**

[A/CN.9/SR.840]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 9.45 a.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work
(continued)** (A/CN.9/617, 620, 631 and Add.1-11,
632 and 633)

XII: Acquisition financing rights (continued)
(A/CN.9/631 and Add.9)

*B. Non-unitary approach to acquisition financing
rights (continued) (recommendations 184 to 201)*

1. **The Chairperson** noted that some delegations had voiced concern that the absence of references to property-based concepts made the recommendations on the non-unitary approach to acquisition financing rights less accessible to the reader. She invited members to suggest possible courses of action to resolve the matter promptly and effectively.

2. **Mr. Riffard** (France) said that it had emerged from informal consultations that greater clarity could be achieved through redrafting. However, it would first be necessary to decide whether it was wise to use the concept of priority in the non-unitary approach.

3. Consensus had been achieved on the purpose of acquisition financing rights, namely to confer preferential status on the acquisition financier. In the context of the unitary approach, which treated all secured creditors equally, the objective of conferring such status could be achieved only by proposing that the lawmaker should accord super-priority to acquisition financiers. In the context of the non-unitary approach, preferential status resulted simply from the acquisition financier's retention of title to the asset. An acquisition financier in a non-unitary system must thus acquire a security right giving it a right to the title either through a retention-of-title clause or indirectly through the assignment of a receivable with a security right attached.

4. The sole remaining stumbling-block was whether, in the context of the non-unitary system, a secured lender that financed the acquisition of tangible property should be accorded preferential status. If so, it would be necessary to introduce the concept of priority into the non-unitary approach. There would then be two categories of acquisition financiers with preferential status, those who derived that status from their retention of title and those who had been given super-priority, and it would be necessary to determine how conflicts between them should be settled.

5. He proposed that the recommendations should be redrafted without changing the substance as soon as the Committee reached agreement in principle.

6. **Mr. Voulgaris** (Greece) said that another pending issue was the formalities to be completed in order to establish third-party effectiveness in the case of retention-of-title transactions, which should be registered in the same way as other security rights. The principle was laid down in recommendation 186 in the unitary approach section.

7. **Mr. Macdonald** (Canada) said that some of the language used in the draft Guide might lack transparency for first-time users, who might be confused to find that rules apparently governing security rights were equally applicable to retention-of-title rights. The recommendations should therefore be elaborated to make it clear how they were to be applied in an ownership regime and in a security rights regime and how the principle of functional equivalence was to be upheld. He therefore strongly supported the proposal made by the representative of France.

8. **Mr. Burman** (United States of America) said that he also supported that proposal.

9. **Mr. Voulgaris** (Greece) expressed support for the proposal provided that the substance of recommendation 189 (a) and (b) was retained.

10. **The Chairperson** said she took it that the Committee wished to redraft the recommendations concerning acquisition financing rights in the non-unitary approach section.

11. *It was so decided.*

Recommendation 191 (continued)

12. **Mr. Macdonald** (Canada) said that the idea expressed in the second paragraph of the note to the Commission following recommendation 191 should be reflected in the non-unitary approach section of the draft Guide so that readers understood how the principle of equivalence should be applied in practice.

13. **Mr. Burman** (United States of America) said that it was unclear why a third-party acquisition financier should be limited to acquiring an acquisition security right or an acquisition financing right through assignment. One of the benefits of creating the notion of a third-party acquisition financier was to give buyers a competitive choice, i.e. either to borrow money from a bank or obtain credit from the seller. Restricting the third-party financier's possibilities in the aforementioned manner precluded competition and placed sellers in a position where they could request a share in the interest chargeable by the bank, because they would be able to withhold the assignment.

14. Furthermore, the scope of application of recommendation 191 would be relatively limited, since it would involve concurrent acquisition financing from a third party and a seller. Moreover, such a rule, while acceptable, would tend to favour the seller.

15. **Mr. Macdonald** (Canada) said that the second paragraph of the note to the Commission clearly stated that lenders were free to acquire either an acquisition security right or an acquisition financing right, the latter through an assignment from the seller. Lenders could thus avail themselves of the full range of options and he had not intended to suggest that they should be barred from acquiring acquisition security rights.

16. **Mr. Kohn** (Observer for the Commercial Finance Association) cautioned the Committee against deleting subparagraph (b) of the "Purpose" section, as suggested in the third paragraph of the

note to the Commission. The subparagraph stated the key concept of functional equivalence and should be retained irrespective of any redrafting of recommendation 191.

17. **The Chairperson** said she took it that the Committee was satisfied with the policy expressed in recommendation 191 and supported the inclusion of the second paragraph of the note to the Commission, on the understanding that lenders would have the full range of options at their disposal.

18. *It was so decided.*

19. *Recommendation 191 was adopted on that understanding.*

Recommendation 192

20. **Mr. Kemper** (Germany) said that the additional requirements imposed by recommendation 192 on an acquisition financier, particularly a retention-of-title seller, were unjustified if the goods constituted inventory for the buyer. Such cases should be dealt with according to the rule set out in recommendation 189 for tangible property other than inventory or consumer goods.

21. **The Chairperson** said that paragraphs 114 to 118 of the commentary to chapter XII might require further elaboration since they failed to explain adequately the reasoning behind the different treatment accorded to tangible property and inventory.

22. **Mr. Schneider** (Germany) asked whether the term "inventory" was to be defined from the seller's or the buyer's perspective. Tangibles might constitute inventory for the seller but not for the buyer, or vice versa. The delegation of the United States might be able to provide some enlightenment on that point, since the recommendation appeared to be based on article 9 of the United States Uniform Commercial Code. He would also appreciate an explanation of how a seller was supposed to establish whether any earlier-registered non-acquisition security right existed in the buyer's country. The seller would have to inspect the country's registry, probably with the assistance of a lawyer, and then notify the holder of the earlier-registered acquisition security right, all of which would delay delivery of the goods.

23. **Mr. Cohen** (United States of America) noted that the term “inventory” was used extensively throughout the draft Guide. Recommendation 87 in chapter VII on priorities, for example, stated that a buyer of inventory in the ordinary course of the seller’s business took free of the security right. He agreed with the representative of Germany that problems might arise where goods constituted inventory in the hands of the seller but equipment in the hands of the buyer. In the case of recommendation 87, the commentary and the terminology guide in document A/CN.9/631/Add.1 made it clear how the term inventory was to be interpreted. The same approach could be adopted in the case of recommendation 192.

24. Problems pertaining to international sales of goods, international acquisition finance and conflict-of-law situations also arose throughout the draft Guide. Those difficulties should not prevent the Commission from recommending rules that were appropriate for domestic transactions, and as more and more States followed those rules, the problems arising in an international context should diminish.

25. **Mr. Kemper** (Germany) said that the draft Guide was intended for States wishing to enact legislation that covered both domestic trade and international trade transactions involving, for example, imports of goods under retention-of-title arrangements. Such legislation would also spell out the requirements for obtaining priority through registration. However, he considered that the policy choice made in recommendation 192 was unsound. As currently worded, it favoured financial institutions to the detriment of retention-of-title sellers. The latter needed a reasonable and uncomplicated registration system to ensure speedy trade transactions.

26. **Mr. Mitrović** (Serbia) said that if the recommendations in the draft Guide were modelled on existing national legislation, as in the example cited by Germany, the commentary might usefully include a cross-reference to that legislation.

27. **Mr. Sigman** (United States of America) said that the draft Guide was not based on policy choices but on economic efficiency. It did not focus on exporters or importers but on the buyer as debtor. For instance, where a buyer purchased machinery from suppliers in six different countries, the

six sellers that exported their goods would be competing in the event of the buyer’s insolvency with the buyer’s other creditors. The draft Guide, by advocating a modern efficient electronic registry, should speed up trade dramatically because the seller would be able to access information about the registry in the buyer’s country in order to determine where it must register and who prior registrants were.

28. **Mr. Kemper** (Germany) said that by policy choice he had meant the choice of a legislator who had to balance policies and interests. It was not merely a technical issue.

29. **Mr. Bazinas** (Secretariat) said he gathered that the main objection to recommendation 192 was that it seemed to make a policy choice in favour of general financiers to the detriment of sellers of goods on credit with retention of title because of the registration and notification requirements. However, in recommendation 191 sellers were accorded priority over general financiers, a situation that reflected to some extent the current practice in countries where retention of title was the main non-possessory security interest.

30. Although registration would be required, the burden on the supplier would depend on the registry concerned. If it was well organized, registration could be speedy and inexpensive and notification could be provided for all transactions likely to take place over a period of years.

31. With regard to international trade, sellers that sold goods subject to retention of title to buyers in countries where retention-of-title rights were currently not recognized would be comforted to know that, once legislation modelled on the draft Guide had been enacted in the country of destination of the goods, the retention-of-title seller would have a security right and would be recognized in the event of insolvency provided that the necessary steps for third-party effectiveness had been taken.

32. **Mr. Schneider** (Germany) said that the first important issue to address was how to define inventory. He welcomed the implication in an earlier statement by a representative of the United States that inventory should be defined from the point of view of the seller and not of the buyer since inventory could be equipment in the hands of the

buyer. He proposed that the commentary should reflect such a definition. While he understood why notification should be provided to an inventory financier, he saw no reason why a financier of equipment should expect to receive notification.

33. Under recommendation 192, while the seller could retain ownership, such retention was being made unnecessarily difficult and fast delivery was being impeded by the registration and notification requirements. While his delegation had come to accept the need for registration, it still saw no need for notification.

34. **Mr. Kemper** (Germany) said that the draft Guide was becoming increasingly sophisticated and lengthy. He therefore proposed merging recommendations 189 and 192 so that one rule along the lines of recommendation 189 would apply to both inventory and tangible property other than inventory.

35. **Mr. Kohn** (Observer for the Commercial Finance Association) said that one of the virtues of the non-unitary approach section was that it protected all the parties and provided a simple way for the seller of goods to acquire super-priority. Sellers already had to understand import and export laws, to make credit decisions regarding buyers and to perform other due diligence activities when making a sale, especially to a buyer in another country. While it was true that additional registration and notification were required under the non-unitary approach, they were essentially simple administrative acts that would not slow down the process. Another virtue of the approach was that existing inventory financiers would be protected, since they would be notified in cases where they were financing inventory subject to a prior super-priority claim. Although the terminology section of the draft Guide defined inventory in terms of property held in the ordinary course of the grantor's business, it should be a simple matter for the seller to determine the facts as part of its due diligence when making a decision to sell goods to a particular buyer.

36. **The Chairperson** noted the concerns expressed by the representatives of Germany regarding recommendation 192 and suggested that its proposal should be reflected in the commentary so that legislators were at least aware of it.

37. **Mr. Kemper** (Germany) said that a legislative guide was normally less stringent than a model law and he felt that the draft Guide should offer more options to legislators. He therefore proposed presenting two options with respect to the current issue: the first option would be to maintain differential treatment for inventory and tangible property other than inventory, along the lines of recommendations 189 and 192; the second option would be to treat both in the same way, along the lines of recommendation 189. In the latter case, recommendation 192 would be deleted and the commentary would explain the choices proposed in recommendation 189. He added that his proposal also applied to the unitary approach section.

The meeting was suspended at 11.15 a.m. and resumed at 11.45 a.m.

38. **Mr. Ghia** (Italy) expressed support for the proposed optional approach since it offered more flexibility.

39. **Ms. McCreath** (United Kingdom) said that, as far as she was aware, the electronic registration system mentioned by a representative of the United States was not yet available throughout Europe and was unlikely to be available to speed up registration for some time.

40. She expressed support for the flexible option proposed by the representative of Germany.

41. **Ms. Kaller** (Austria), **Mr. Bellenger** (France), **Ms. Kolibabska** (Poland), **Mr. Voulgaris** (Greece) and **Mr. Brink** (Observer for Europafactoring) also expressed support for the proposal.

42. **Mr. Smith** (United States of America) said that he wished to defer a decision on the proposal until all the recommendations in the non-unitary section had been discussed, since the proposal needed to be considered in the light of the entire chapter.

43. **Mr. Patch** (Australia) said that the Commission needed to show leadership to jurisdictions that were contemplating implementing the draft Guide and should therefore leave no doubt or ambiguity as to the preferred course of action. Thus, while the draft Guide should express a view, the commentary could forcefully put forward the alternatives.

44. **Mr. Umarji** (India) said that under normal circumstances, even without registration, disclosure by the grantor was required in a retention-of-title transaction where third-party rights were being created. The registration requirement would merely serve as an additional guarantee.

45. **Mr. Kohn** (Observer for the Commercial Finance Association) drew attention to the economic consequences of any decision to move from the current balanced approach that protected all parties to an approach that favoured the seller to the detriment of the inventory financier. Should such a decision be taken, it would be important for the commentary to explain the economic consequences, which would include a widespread contraction of credit.

46. **Mr. Kemper** (Germany) said that if the proposed option was adopted, the commentary would take such consequences into account. However, it would not state that the option to merge the two recommendations into recommendation 189 favoured the seller and that the other option represented a balanced approach.

47. **The Chairperson** agreed that the commentary should instruct the legislator to consider the economic consequences arising from either option and that it should also address considerations pertaining to the efficiency of the registry. While she had noted the request by the representative of the United States to defer a decision, she gathered from the strong support expressed by a number of speakers that the Committee wished to offer an alternative approach to recommendations 189 and 192 in both the unitary and the non-unitary sections. Under that approach, a new recommendation along the lines of recommendation 189 would address the priority position applicable to an acquisition security right or an acquisition financing right in tangible property.

48. *It was so decided.*

Recommendation 193

49. *Recommendation 193 was adopted.*

Recommendation 194

50. **Ms. Stanivuković** (Serbia) noted that in recommendation 194 the word “right” had been

omitted after the word “financing” in the fourth line of the English version. Moreover, recommendation 194 (a) was confusing because it seemed to refer to a judgement obtained after a security right was created but before it was made effective against third parties.

51. **The Chairperson** said she took it that the Committee wished to clarify the wording of the recommendation.

52. *It was so decided.*

53. *Recommendation 194 was adopted on that understanding.*

Recommendations 195 to 197

54. *Recommendations 195 to 197 were adopted.*

Recommendations 198 and 199

55. **Mr. Smith** (United States of America) asked whether the alternative approach adopted to recommendations 189 and 192 had implications for recommendations 198 and 199, which dealt, respectively, with proceeds of tangible property other than inventory or consumer goods and proceeds of inventory.

56. **Mr. Kohn** (Observer for the Commercial Finance Association) said that the representative of the United States had raised a pertinent issue, since the Committee’s decision regarding recommendations 189 and 192 would, in his view, reduce the credit provided by inventory financiers. He cautioned against taking a further decision that would have an impact on the credit available from receivables financiers.

57. **Mr. Schneider** (Germany) said that if the second option — involving the merger of recommendations 189 and 192 — was adopted, recommendation 199 would become irrelevant and should be deleted.

58. **Mr. Bazinas** (Secretariat) said that, although many legal systems followed the approach set out in the second option with regard to goods that were subject to retention of title, very few extended priority to the proceeds of goods. Moreover, in some of the latter jurisdictions priority was lost if the proceeds were commingled and no longer identifiable.

59. **Mr. Smith** (United States of America) said that, in his view, recommendation 199 set forth a strong policy of encouraging receivables financing arising from the sale of inventory, because receivables financiers would not have to check the registry constantly. Whatever the fate of recommendations 189 and 192, recommendation 199 should stand on its own as the sole recommendation for dealing with super-priority on proceeds relating to sales of inventory.

60. **Mr. Weise** (Observer for the American Bar Association) said that the Committee's previous decision on whether notice should be given to the inventory-secured lender, which related to the convenience of the seller, had no bearing on the present issue, which related to the financing of the buyer's receivables. If recommendations 189 and 192 were merged, there was nothing to prevent recommendation 198 from being deleted and recommendation 199 becoming the general rule, although he would not necessarily advocate such an approach.

61. **Mr. Schneider** (Germany) said that he had been hesitant about the notification requirement from the outset and the problem would be compounded if it were extended to recommendation 199. Assuming that the second option was adopted, it would be preferable to retain recommendation 198 and delete recommendation 199. The Secretariat had rightly noted that different jurisdictions had different rules regarding proceeds, but proceeds were in all cases substitutes for goods delivered and retention of title should therefore continue.

62. **Mr. Kohn** (Observer for the Commercial Finance Association) said that the notion of extended retention of title, as reflected in recommendation 198, existed, as far as he knew, in only one jurisdiction. It should not therefore be proposed as an option in the draft Guide without very serious consideration. The Working Group had drafted recommendation 199 after lengthy deliberation to provide balance and to maximize the amount of credit available by encouraging both receivables finance and inventory finance. Adoption of recommendation 198, by contrast, would discourage receivables finance. Even presenting it as an option would send out the wrong message, since the purpose of the draft Guide was to promote

credit by encouraging certainty for lenders. Recommendation 199 provided that kind of certainty for both acquisition and receivables financiers.

63. **Mr. Smith** (United States of America) concurred. With regard to the question of whether notification was required for proceeds, he had understood that, under the alternative approach, the seller would have obtained priority as to the goods and would be given a grace period for registration. If super-priority extended to the proceeds, however, as envisaged under recommendation 198, the draft Guide's encouragement of receivables financing would be seriously undermined and the seller's rights would exceed those existing in most jurisdictions, in which the seller's retention-of-title rights did not extend to proceeds. The deletion of recommendation 199 would seriously undermine the balance achieved by the compromise agreement reached earlier in the meeting.

64. **Mr. Wezenbeek** (Observer for the European Union) said that it was clear from discussions among member States of the European Union that the observer for the Commercial Finance Association had been wrong to imply that Germany was the only country that wished to retain the provision contained in recommendation 198. On the contrary, the provision had relatively wide support and should be accommodated in the draft Guide. He added that he was not fully convinced that registration was the ideal system.

65. **Mr. Burman** (United States of America) expressed concern that issues previously resolved by the Working Group and the Commission were being raised again at every meeting. If there was a substantial level of support for a given change, his delegation would accept it. In the case of recommendations 189 and 192, for instance, although it had doubted the strength of support for a change of policy, it had raised no objection in a spirit of compromise. However, it would strongly oppose the continued reconsideration of points on which agreement had already been reached.

66. **Mr. Kemper** (Germany) said that he had no specific proposal to amend either recommendation 198 or recommendation 199. He simply wished to draw attention to the implications, especially for recommendation 198 which echoed the wording of

recommendation 189, of the adoption of the second option.

67. **The Chairperson** said that a distinction should be made between drafting changes and policy changes. The decision on the two options would entail drafting changes to recommendations 198 and 199.

68. **Mr. Bazinas** (Secretariat) assured the Committee that recommendations 198 and 199 would be reformulated to take into account the changes that had been agreed.

The meeting rose at 12.30 p.m.

**Summary record of the 841st meeting, held at the Vienna International Centre
on Wednesday, 27 June 2007, at 2 p.m.**

[A/CN.9/SR.841]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 2 p.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (continued) (A/CN.9/617, 620, 631 and Add.1-11, 632 and 633)

XII: Acquisition financing rights (continued)
(A/CN.9/631 and Add.9)

Non-unitary approach to acquisition financing rights (continued) (recommendations 184 to 201)

Recommendations 198 and 199

1. **The Chairperson** said that, if she heard no objection, she would take it that the Committee agreed on the substance of recommendations 198 and 199 and would leave it to the Secretariat to make the necessary editorial changes. She also took it that the Committee wished to remove the square brackets from recommendation 199 and to retain the text they enclosed, as had been done in the case of recommendation 199 in the unitary approach section.

2. *Recommendations 198 and 199 were adopted on that understanding.*

Recommendations 200 and 201

3. *Recommendations 200 and 201 were adopted.*

Commentary to chapter XII: Acquisition financing rights (A/CN.9/631/Add.9)

4. **The Chairperson** said she took it that the Committee wished to approve the substance of the commentary to chapter XII, subject to any changes required to reflect the amendments to recommendations 184 to 201 (unitary and non-unitary approaches).

5. *The substance of the commentary to chapter XII was adopted on that understanding.*

XIII: Private international law (A/CN.9/631 and Add.10)

6. **Mr. Deschamps** (Canada), supported by **Mr. Voulgaris** (Greece) and **Mr. Riffard** (France), said that he was not convinced of the wisdom of changing the title of the chapter from “Conflicts of laws” to “Private international law”. While conflict-of-law rules certainly formed part of private international law, chapter XIII dealt exclusively with the rules governing the law applicable to security rights. The scope of private international law was far broader and included rules that were unrelated to conflict-of-law issues, such as the jurisdiction of courts and the recognition and enforcement of foreign judgements. It would therefore be preferable to retain the heading used in the past.

7. **Mr. Marca Paco** (Bolivia) said that neither the title “Private international law” nor the title “Conflicts of laws” was appropriate. The purpose of the chapter was to determine the applicable law, regardless of whether a conflict of law existed. The most appropriate title would therefore be “Applicable law”.

8. **The Chairperson** said she took it that the Committee wished to replace the title “Private international law” by a more appropriate title, leaving the choice of the most suitable title for each language version to the terminology specialists.

9. *It was so decided.*

10. **Mr. Wezenbeek** (Observer for the European Union) suggested deleting the footnote referring to cooperation with the Hague Conference on Private International Law, which seemed inappropriate.

11. **The Chairperson** said that cooperation with the Permanent Bureau of the Hague Conference was an example of inter-agency cooperation that the Working Group felt should be encouraged by acknowledging it in a footnote.

12. **Mr. Kemper** (Germany) suggested inserting the words “Permanent Bureau of” before “the Hague Conference on Private International Law”.

13. *It was so agreed.*

Recommendation 202

14. **The Chairperson** asked whether the Committee wished to include the text currently in square brackets in recommendation 202.

15. **Ms. Okino Nakashima** (Japan) proposed including the text. In cases where movable assets were subject to a specialized registration system, the law of the State under the authority of which the registry was maintained should prevail.

16. **Mr. Voulgaris** (Greece), **Mr. Sigman** (United States of America) and **Ms. McCreath** (United Kingdom) concurred.

17. **Mr. Wezenbeek** (Observer for the European Union) said that the subject matter of chapter XIII was highly controversial. The Convention on the Law Applicable to Certain Rights in respect of Securities Held with an Intermediary (the Hague Securities Convention) had been adopted quite speedily in 2002 but so far only two States had signed it. Opinions within Europe were deeply divided on whether or not to sign. A proposed regulation on the law applicable to contractual arrangements (Rome I), which contained provisions on assignments of receivables and conflicts of law, was also currently the subject of heated debate in the European Union. Chapter XIII was a crucial component of the draft Guide and, given the complexity of the underlying issues, should not be adopted hastily.

18. **The Chairperson** noted that the rule contained in recommendation 202 was consistent with the United Nations Convention on the Assignment of Receivables in International Trade (United Nations Assignment Convention). The European Commission had in the past stated its willingness to work towards a solution that would be consistent with that instrument so that European Union member States could adopt it.

19. **Mr. Rögner** (Observer for the European Insurance and Reinsurance Federation) expressed support for the comments made by the observer for

the European Commission and for the inclusion of the text in square brackets, which explained why *lex situs* should be the applicable law.

20. **Mr. Marca Paco** (Bolivia) asked whether the proposal contained in the note to the Commission had been inserted on the assumption that the text in square brackets would be retained as part of recommendation 202. The question of whether the text was included would, in his view, influence the Committee’s decision on whether to add a recommendation in the light of the note.

21. **Mr. Bazinas** (Secretariat) said that the note had not been intended to prejudge the Committee’s decision on the text in square brackets.

22. **The Chairperson** said she took it that the Committee wished to include the text in square brackets in recommendation 202.

23. *It was so decided.*

24. *Recommendation 202, as amended, was adopted.*

25. **The Chairperson** invited the Committee to consider the proposal contained in the note to the Commission following recommendation 202.

26. **Mr. Bazinas** (Secretariat) said that the Commission was invited to consider whether it wished to include a recommendation that would address the priority conflict between two creditors, one with a possessory security right in a negotiable document and the other with a non-possessory security right in the goods covered by the document. The recommendation would state explicitly, in line with current practice, that the law of the location of the document should apply in order to preserve the negotiability of the negotiable document. The matter could be clarified in the commentary to chapter XIII but the Committee might wish to address it in a separate recommendation.

27. **Mr. Deschamps** (Canada) expressed support in principle for the addition of a recommendation. However, it might be best to defer a decision on the matter pending the outcome of the discussion of the revised version of recommendation 107, which concerned the question of whether a secured creditor that held a bill of lading had priority as against a competing claimant that held a right in the goods under another mechanism.

28. **Mr. Pendón Meléndez** (Spain) reiterated his dissatisfaction with the draft Guide's approach to negotiable instruments. Before acting on the note to the Commission, the Committee should take a clear-cut decision on recommendation 107. He therefore endorsed the proposal made by the representative of Canada.

29. **Mr. Bazinas** (Secretariat) said that the Committee might also wish to consider situations in which there was a conflict of priority between a security right in a negotiable document and a security right in the goods covered by the document, where the latter security right was subject to a specialized registration system. While he considered that the law of the location of the negotiable document should be applicable, the Committee might wish to discuss the matter in the light of the revised version of recommendation 107.

30. **The Chairperson** said she took it that the Committee wished to defer a decision regarding the note to the Commission until it had an opportunity to discuss the revised version of recommendation 107.

31. *It was so decided.*

Recommendation 203

32. **Mr. Pendón Meléndez** (Spain) said he took it that recommendation 203 applied only to tangible property in transit for which no negotiable instrument or negotiable document had been issued. If so, there should be a reference to that exclusion in the commentary to chapter XIII.

33. **Mr. Bazinas** (Secretariat) said that recommendation 203 applied irrespective of whether the goods were covered by a negotiable document or whether the document travelled with the goods. The reference to tangible property other than negotiable instruments or negotiable documents referred to the goods only and had no bearing on the issue of whether a negotiable document existed.

34. **Mr. Voulgaris** (Greece) said he agreed that goods in transit should be considered separately from the documents by which they might be covered. The recommendation should further specify that the transit must be completed within seven days.

35. **Mr. Pendón Meléndez** (Spain) said that, since the issue was related to the general regime applicable to negotiable documents and affected other recommendations, it would be useful to include a general explanatory note in the commentary. There was a general unwritten rule in international transport that, once tangible property in transit was covered by a negotiable document, any action affecting the property, for example the exercise of security rights, must be taken on the basis of the negotiable document.

36. **Mr. Voulgaris** (Greece) called for a substantive discussion of the matter. If, for example, a bill of lading had been issued in respect of goods in transit, the law governing bills of lading should clearly be applied.

37. **The Chairperson** suggested that the issue should be addressed once a decision had been taken on recommendation 107 and on the note following recommendation 202.

38. *It was so decided.*

39. **Mr. Riffard** (France) said that the question of the applicable law in the case of transfer of a security right by way of assignment of a receivable had not been resolved. He proposed inserting a recommendation to address that question, which had major practical implications.

40. **The Chairperson** expressed the view that the relevant rule in the United Nations Assignment Convention should apply.

41. **Mr. Deschamps** (Canada) said that it could be inferred from article 22 of the Assignment Convention concerning the law applicable to competing rights that the law governing priority would determine whether the assignee was entitled to benefit from the security right in a receivable. The implicit rule was that the law of the grantor would determine whether formalities were required to enable the assignee to benefit from the security right in the receivable. However, the issue was complex and required further in-depth consideration.

42. **The Chairperson** suggested deferring consideration of the issue and of recommendation 203 until all the recommendations in chapter XIII had been considered.

43. *It was so decided.*

Recommendation 204

44. **Ms. Perkins** (United Kingdom) said that recommendation 204 was an inappropriate rule for intangible property, which was the currency of the financial markets. Under certain circumstances, the recommendation would give rise to irreconcilable ambiguities for the forum court, and uncertainty was the very thing that the Commission was seeking to eliminate. Some delegations considered that the practical advantages of recommendation 204 for regular transactions involving the bulk assignment of receivables or the assignment of future receivables outweighed the disadvantages of uncertainty in respect of irregular transactions. However, it could be inferred from the comprehensive carve-out in the Assignment Convention for financial contracts and financial instruments, i.e. other intangibles, that recommendation 204 did not work for situations other than the bulk assignment of receivables or the assignment of future receivables.

45. By way of illustration, she described a situation in which an assignor granted a first security interest (interest A) in one location and then moved location and, retaining possession, granted a second security interest (interest B) in the second location. The forum court could then be faced with a situation in which either both interests or neither interest had priority. If, for example, interest A in the intangible had been created first but registered second and interest B had been created second but registered first, and if the law of the first location provided that priority was determined by the date of creation and the law of the second location provided that priority was determined by the date of registration, both security interests would take priority over one another under recommendation 204.

46. Similarly, if an assignment of a letter of credit by the assignor for security purposes in one location was followed by a reassignment by the assignee from a different location, and notice to the issuing bank was not required by the law of the first location in order to acquire priority but was required by the law of the second location, the forum court would again be faced with a situation in which both interests had priority. It followed that

recommendation 204 was inappropriate, possibly in all cases but certainly for intangibles other than the bulk assignment of receivables and the assignment of future receivables.

47. **Mr. Deschamps** (Canada) said that situations such as those just described potentially arose not only in respect of financial contracts but also in respect of other kinds of intangible property or trade receivables. If an assignor located in one State granted an assignment to a first secured creditor, and the assignor's chief place of business was subsequently moved to a second State from which the assignor granted an assignment to a second secured creditor in respect of the same receivable, letter of credit or financial contract, it was unclear which law should apply to the competing claims of the two secured creditors, especially if the law of the first State gave priority to the first creditor and the law of the second State to the second creditor. He submitted that the solution lay in recommendation 216, according to which, in the situations described by the representative of the United Kingdom, the law of the new location of the grantor would determine priority as between competing claimants.

48. **Mr. Bazinas** (Secretariat) said that the draft Guide treated assignments from assignor A to assignee B in different countries that were subsequently assigned to assignee C on the basis of the Assignment Convention as subsequent assignments that did not create a priority conflict because the first assignee took the position of the assignor. It was thus not a matter of competing claims giving rise to a conflict of priority.

The meeting was suspended at 3.35 p.m. and resumed at 4.05 p.m.

49. **Ms. Perkins** (United Kingdom) said that, while recommendation 216 might settle matters for the forum court, it did so in a manner that was largely arbitrary as between the assignees of the first and second security interests. In situations where there were competing assignments and the priority rules were different in the two locations of the assignments, the forum court was required to apply the priority rules of the second location. Such a rule was disadvantageous for the first assignee who could not be sure that it was guaranteed priority at the time the security interest was granted, since future

changes in the location of the grantor might affect the priority and effectiveness of its security interest vis-à-vis future assignees. Hence, recommendation 216 did not provide an adequate solution to the issues arising from recommendation 204.

50. Her objection to recommendation 204 would perhaps have been better phrased as a concern about the position of the debtor, who was often a financial markets debtor, rather than about the dilemma for the forum court. Where a security interest was created in a financial contract, it was important for the debtor under that contract, who could be an out-of-money party under a derivatives or foreign exchange contract or the issuer of a letter of credit, to know whom to pay if the debt was assigned. If the law governing those issues was identified according to the location of the grantor or assignor and that location was subject to change, the financial markets debtor would be unable to identify with any certainty the law applicable to priority questions and vis-à-vis new assignees.

51. **Mr. Bazinas** (Secretariat) said that recommendation 216, which provided that the relevant location was that of the grantor at the time the priority conflict arose, might create the impression that the assignee in the original location would automatically lose priority. However, under recommendation 46 the assignee in the initial location could preserve its third-party effectiveness and priority by meeting the requirements for third-party effectiveness of the new location within a grace period. A separate rule contained in recommendation 208 governed the creation, third-party effectiveness, priority, enforcement and rights and obligations of the issuer of a letter of credit.

52. **Ms. Kaller** (Austria) said that she agreed with the comment of the representative of the European Commission on the complexity of the issues addressed in chapter XIII, which had been discussed in a number of forums. While she was uneasy about its inclusion in the draft Guide, she respected the fact that decisions had already been taken, inter alia in the context of the United Nations Assignment Convention, which could not easily be reversed. However, the solution provided in recommendation 204 was unsatisfactory. In the context of the European Commission proposal for a regulation of the European Parliament and the

Council on the law applicable to contractual obligations (Rome I), the law of the assignor's location and the law governing the assigned receivable were being discussed as the options for the law applicable to third-party effects of assignments.

53. **Mr. Ghia** (Italy) endorsed the statements by the representatives of the United Kingdom and Austria. He expressed a preference for the application of the *lex contractus* chosen by the parties.

54. **Ms. Walsh** (Canada) said that recommendation 213 addressed the concern raised by the representative of the United Kingdom regarding the need for a debtor to know whom it must pay so as to be discharged from its obligation. The recommendation confirmed that the applicable law was that governing the payment obligation, in other words the contract that gave rise to the obligation that had been the subject of an assignment or the creation of a security right. Whether the person entitled to payment was also entitled to priority was a matter to be agreed among the competing assignees or secured creditors. Account debtors that fulfilled their payment obligations in accordance with the law governing the contract out of which the obligation arose were always protected. That law also governed the existence and extent of any right of set-off.

55. **Mr. Weise** (Observer for the American Bar Association) said that it should be borne in mind that the choice of applicable law also governed effectiveness against third parties. If the law that governed the receivable also governed third-party effectiveness, there would potentially be multiple registrations in multiple States. It should also be borne in mind that rules concerning applicable law were generally based on the assumption that other States had comparable laws, so that the hypothetical situation described by the representative of the United Kingdom in which effectiveness against third parties occurred upon creation would rarely arise.

56. **Mr. Murray** (United Kingdom) said that the structure of the draft Guide, which required legislators to refer to recommendations 204, 216 and 46 when addressing the issue under discussion, was inconvenient. Moreover, recommendation 46 appeared to require a vigilance on the part of the

assignee that was inconsistent with financial-market expectations.

57. While recommendation 213 stated the formal position with regard to debtor protection, debtors of financial claims were frequently not indifferent as to whether the ultimate owner of the debt was their relationship bank or a vulture fund. They usually wished to be certain that the law which they had agreed should govern the debt they owed would also determine the question of the assignability of a claim.

58. **The Chairperson** reminded the Committee that the pending debate on financial contracts might help to resolve some of the issues raised. She did not see any justification in the light of the discussion for amending recommendation 204.

59. **Ms. McCreath** (United Kingdom) reiterated her delegation's serious concern about recommendation 204, which she felt was shared by several other delegations. She proposed deferring a final decision on the recommendation until after the discussion of financial contracts.

60. **Mr. Kemper** (Germany) expressed support for that proposal.

61. **Mr. Deschamps** (Canada), referring to the question of the debtor of a receivable under a financial contract that was opposed to having payment obligations to a vulture fund, said that the issue of whether the receivable was assignable was addressed in recommendation 213 (b). If the contract giving rise to the receivable contained an anti-assignment clause, and if that clause was valid under the law governing the contract, the clause would be effective unless the receivable was a trade receivable.

62. **Mr. Burman** (United States of America) expressed strong support for the wording of recommendation 204. He was unwilling to engage in any further discussion of the matter.

63. **The Chairperson** said that the Working Group had discussed the question at length and that the Commission had taken a decision. Despite the concerns expressed by some delegations, there did not seem to be majority support for reopening the debate on the substance of recommendation 204. Moreover, she trusted that the discussion of

financial contracts would allay any remaining concerns.

64. **Ms. McCreath** (United Kingdom) said she disagreed with that conclusion. A number of delegations had expressed valid concerns. Once adopted, the draft Guide would be held to represent best practice and if there were already real doubts about the applicability of certain recommendations, further discussion was essential. It was unhelpful and undermined consensus merely to state that the issue was closed. She suggested, for example, that some form of cross-referencing should be included in recommendation 204. At all events, the discussion should be deferred until the recommendations on financial contracts had been considered.

65. **The Chairperson** said that the decision on recommendation 204 had been based not only on the discussions in the Working Group and the Commission but also on six years of negotiations regarding the Assignment Convention, in which the United Kingdom had participated. She took it, however, that the Committee agreed to include cross-references to the group of relevant recommendations.

66. *Recommendation 204 was adopted on that understanding.*

67. **Mr. Voulgaris** (Greece) drew attention to the issue of industrial and intellectual property rights, which were subject to registration. In his view, registered industrial and intellectual property rights should be governed by the law of the State in which the registration took place.

68. **Mr. Bazinas** (Secretariat) said that the language that had been included in a previous version of recommendation 204 concerning the law that would determine the location of the registry for intangibles subject to registration had been deleted pending discussion of a project relating to security rights in intellectual property and the proposals emanating from the Colloquium on Security Interests in Intellectual Property Rights held in Vienna in January 2007 (A/CN.9/632). The commentary would explain how the draft Guide should be applied in principle to security rights in intellectual property pending completion of any future project, on the understanding that some recommendations might prove to be inappropriate

and that enacting States might need to adjust their legislation. In cases of inconsistency, intellectual property law would prevail.

Recommendation 205

69. **Mr. Bazinas** (Secretariat) said that the note to the Commission following recommendation 205 related to the second sentence of that recommendation, which stipulated that in a priority conflict involving the rights of competing creditors that were registered in an immovable property registry, the law of the location of the registry should be applied. The note suggested restricting the scope of that rule to situations in which registration in the immovable property registry had priority consequences. If registration had no bearing on priority issues, the law of the location of the assignor would apply.

70. **Mr. Sigman** (United States of America) expressed support for the suggestion in the note to the Commission. The same principle would be applicable to recommendation 202 and to any other provision relating to a registry. He therefore proposed that each reference to an asset-based registry should be reviewed in order to determine whether registration had priority consequences, as opposed to tax or other consequences unrelated to priority.

71. **The Chairperson** said that, if she heard no objection, she would take it that the Committee concurred with the proposal made by the representative of the United States and wished to act on the suggestion contained in the note to the Commission.

72. *It was so decided.*

73. *Recommendation 205, as amended, was adopted.*

Recommendation 206

74. **The Chairperson** reminded the Committee that the Working Group had decided, after extensive and inconclusive discussion, to present two alternatives, A and B, in the recommendation.

75. **Mr. Wiegand** (Switzerland) expressed strong support for alternative B, which effectively balanced the interests of the client and the bank on the basis

of party autonomy. He had so far failed to hear any convincing argument regarding the interests that alternative A was designed to protect.

76. **Mr. Umarji** (India) expressed support for alternative A, which established that the law of the State in which the bank maintaining the account had its place of business should be applied. As banks were required to comply with a variety of rules concerning, inter alia, taxation, suspicious transactions and money-laundering, it was only logical that matters relating to security rights in a bank account should be governed by the law of the location of the bank.

77. **Mr. Riffard** (France), supported by **Ms. Kaller** (Austria), said that alternative A did not seek to protect the interests of any particular party and was thus the most objective solution.

78. **Mr. Sigman** (United States of America), supported by **Ms. McCreath** (United Kingdom), said that although he strongly felt that alternative B was more neutral and easier to apply, he proposed, in the light of the persistent divergence of opinion, that both options should be retained.

79. **Ms. Kolibabska** (Poland) said that, in the light of an extensive debate in Poland on the subject matter of recommendation 206, she supported alternative A as the option that was more conducive to stability.

80. **Mr. Cochard** (Observer for the Association française des entreprises privées) expressed support for alternative A, which was preferable both on account of its consistency with other regulations applicable to banks and in the interests of legal certainty. It was far easier to determine the applicable law on the basis of the location of a bank than by seeking to obtain access to an account agreement.

81. **Mr. Patch** (Australia) asked how alternative A would apply to a situation in which a bank account was not to be found in any physical location but was maintained by an Internet bank.

82. **The Chairperson** said that the issue had been discussed in the Working Group and had given rise to conflicting views.

83. She took it that, in view of the strongly held views on both sides, the Committee wished to retain

both alternative A and alternative B. The commentary would reflect the policy reasons underlying each approach.

84. *It was so decided.*

85. *Recommendation 205 was adopted.*

The meeting rose at 5.05 p.m.

**Summary record of the 842nd meeting, held at the Vienna International Centre
on Thursday, 28 June 2007, at 9.30 a.m.**

[A/CN.9/SR.842]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 9.45 a.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work**
(continued) (A/CN.9/617, 620, 631 and Add.1-11,
632 and 633)

*XIII: Private international law (A/CN.9/631 and
Add.10)*

Recommendations 207 to 213

1. *Recommendations 207 to 213 were adopted.*

Recommendation 214

2. **Mr. Bazinas** (Secretariat) said that recommendation 214 was the result of a last-minute compromise reached by Working Group VI. It stated that the enforcement of a security right in tangible property should be governed by the law of the State where enforcement took place, while the enforcement of a security right in intangible property should be governed by the law of the State whose law governed the priority of a security right.

3. As the term enforcement might refer to acts such as notification, repossession, sale or redistribution of proceeds occurring in different countries, and as collateral might be tangible property before a sale but intangible property afterwards, the Secretariat had suggested in a note following the recommendation that the Commission might wish to consider whether one law — the law governing priority — should be made applicable to the enforcement of security rights in both tangible and intangible property. In the case of tangible property, the place of enforcement of security rights would in most cases be the place where the asset was located and the law of that State would govern priority. In the case of intangible property, enforcement would take place in the State of the location of the grantor and the law of that State would govern priority.

4. **Mr. Deschamps** (Canada) expressed support for the Secretariat's suggestion.

5. **Ms. Kaller** (Austria) expressed a preference for the wording as it stood because there could be cases in which tangible property was located in a different State from the State whose law governed enforcement.

6. **Mr. Riffard** (France), referring to the statement in the Secretariat note to the effect that the place of enforcement of security rights in tangible property in most instances would be the place of location of the asset, asked whether the words "in most instances" referred to the exceptions mentioned in recommendation 202, on the one hand with respect to security rights in tangible property of a type ordinarily used in more than one State, which were governed by the law of the State in which the grantor was located, and on the other hand with respect to security rights in the same kind of tangible property that were subject to a specialized registration system, which were governed by the law of the State under the authority of which the registry was maintained. If so, he could foresee a potential inconsistency between the suggestion in the note to the Commission and recommendation 202.

7. **Mr. Deschamps** (Canada) said that the law governing priority and the law applicable to enforcement should ideally be the same because difficulties would arise where a State's enforcement rules prevented it from giving full effect to another State's priority rules. In the case of property subject to a specialized registration system, the property would in all likelihood be located in the State under whose authority the register was maintained, so that there would be few cases in which the law applicable to enforcement was different from that of the location of the property.

8. **Mr. Smith** (United States of America) said that, while he was unable to support either the wording as it stood or the Secretariat's suggestion,

he had been persuaded by the representative of Canada that there was some virtue in aligning the conflict-of-law rules on enforcement with those on priority.

9. **Mr. Ghia** (Italy) expressed a preference for the existing text, which ensured greater balance and effectiveness of enforcement.

10. **Ms. Okino Nakashima** (Japan), supported by **Mr. Kemper** (Germany), said that she agreed with the representative of Italy. Matters affecting the enforcement of a security right included both substantive and procedural matters, and enforcement might involve either judicial or extrajudicial remedies. She therefore believed, as stated in recommendation 214 (a), that the enforcement of a security right in tangible property should be governed by the law of the forum.

11. **Mr. Bazinas** (Secretariat) said that the words “in most instances” referred to the fact that the place of enforcement of security rights in tangible property was usually — but not always — the place of location of the asset, since it could, for instance, be the place where the registry was maintained. That was also true of certain intangibles, as stipulated in recommendation 107.

12. **Mr. Riffard** (France) said that the Secretariat’s suggestion, according to which the place of enforcement of security rights in tangible property would — in most instances — be the place of location of the asset, was a clearer and more objective option.

13. **Mr. Deschamps** (Canada) said that the term “place of enforcement” was vague since it was not always clear where enforcement took place. For example, a secure creditor in State A might apply to a court in that State to enforce a security right in property located in State B. State A might thus be regarded as the “place of enforcement” although the property was located elsewhere. He proposed including both the existing text and the Secretariat’s suggestion as alternative options.

14. **Ms. Kaller** (Austria) expressed support for the existing text. Difficulties would arise if the judgement of a court in one State had to be recognized by courts in other States. Moreover, there were procedural and not just conflict-of-law issues involved. States that did not recognize

extrajudicial enforcement would not tolerate a foreign creditor entering a debtor’s home to seize property in settlement of a debt.

15. **Mr. Sigman** (United States of America) expressed support for the proposal by the representative of Canada that alternative options should be presented. He also agreed with the point made by the representative of Austria regarding judicial and extrajudicial enforcement. As there was no forum in the context of non-judicial enforcement, a rule was needed that worked equally well for both types of enforcement. While he would not normally support alternative options in a conflict situation, he was willing to make an exception in the current case because the existing recommendation failed to provide the certainty required of a conflicts rule.

16. **Mr. Bazinas** (Secretariat) asked the Committee how a rule referring to the law governing priority would be applied in jurisdictions where there was no concept of priority or, more generally, where priority was not distinguished from creation and third-party effectiveness. He also asked how such a rule would be applied to acquisition financing rights, given that even part of the draft Guide did not use the term “priority” for the non-unitary approach.

17. **Mr. Perezniето Castro** (Mexico) expressed support for the existing text and noted that the procedural aspects of enforcement dealt with by the courts should not be confused with the law applicable to enforcement. The draft Guide provided sufficient clarity in that regard and expanding it further could lead to confusion.

18. **Mr. Riffard** (France) said that the note to the Commission provided an answer to the question raised by the Secretariat regarding the concept of priority. He proposed deleting the phrase “and the law of that State would govern priority” in the second and third sentences of the note referring to tangible and intangible property respectively.

19. **Mr. Bazinas** (Secretariat) asked whether in that case the reference to the location of the asset for tangible property and to the location of the grantor for intangible property should become a clear-cut rule, or whether provision should be made for exceptions, for instance the law of the State maintaining a registry.

20. **Mr. Deschamps** (Canada) said that amending the text in the manner proposed by the representative of France would create problems because, as the Secretariat had just pointed out, exceptions would need to be made. However, the Committee should not be unduly concerned about the fact that the non-unitary approach in the acquisition financing chapter did not use the term “priority”, since the conflict rules would be construed as being applicable to the non-unitary system and the terms used would be adapted accordingly. Thus, the term “priority”, interpreted broadly, would cover any situation in which there was a conflict between competing rights.

21. **Mr. Sigman** (United States of America), supported by **Mr. Ghia** (Italy), proposed explaining the broad interpretation of the term “priority” in the commentary.

22. **Ms. Stanivuković** (Serbia) said that it was important to make a distinction between substantive and procedural issues. The term “priority” related to substantive issues, which would be governed by the priority rules already established. Procedural issues, on the other hand, could be governed only by the law of the place of enforcement — the *lex fori*. She therefore suggested inserting the word “procedural” before “matters” in the chapeau of the existing text of recommendation 214. She also wondered whether subparagraph (b) of the recommendation might be superfluous.

23. **Mr. Bazinas** (Secretariat) drew attention to the commentary on the law applicable to the enforcement of a security right, contained in paragraphs 56 to 58 of document A/CN.9/631/Add.10, which provided clarifications on substantive and procedural matters.

24. **Mr. Sigman** (United States of America) asked whether extrajudicial enforcement was in any way procedural. If not, he proposed that the commentary should state clearly that the distinction between substance and procedure was relevant only in the case of judicial action and that it was irrelevant in the case of extrajudicial enforcement.

25. **Mr. Bazinas** (Secretariat) said that procedural issues might arise at some point in extrajudicial enforcement and that those issues could be discussed in the commentary.

26. **Mr. Ghia** (Italy) expressed support for the original wording of recommendation 214. Any additional relevant points could be included in the commentary.

27. **The Chairperson** said she took it that the Committee wished to adopt the original version of recommendation 214 and to discuss other approaches, including that contained in the note to the Commission, in the commentary.

28. *It was so decided.*

29. *Recommendation 214 was adopted.*

Recommendation 215

30. **Mr. Voulgaris** (Greece) noted that recommendation 215 reflected the approach adopted in the United Nations Convention on the Assignment of Receivables in International Trade (the United Nations Assignment Convention), namely that the location of the grantor meant the place where the grantor’s central administration was exercised. He would have preferred a reference to the location of the branch of the grantor that was most closely connected to the security agreement.

31. *Recommendation 215 was adopted.*

Recommendation 216

32. **Mr. Voulgaris** (Greece) said that the reference to the “time of the creation” of a security right in recommendation 216 (a) was unduly vague and might cause confusion.

33. **Mr. Bazinas** (Secretariat) said that “the time of creation” was dealt with in recommendation 12.

34. **Mr. Cohen** (United States of America) said that the representative of Greece had been right to draw attention to the problems arising from the phrase “time of the creation”. A conflict-of-law issue would arise if the States involved had different rules as to what constituted creation. Simply to refer to the time of creation failed to resolve that issue, since in some States a security right could be created orally, while in other States it had to be created in writing. It might be preferable to use a form of words along the following lines: “the time at which it is asserted that the right was created”.

35. **Ms. Walsh** (Canada) said that the appropriate term might be “putative creation” of the security right.

36. **Ms. Stanivuković** (Serbia) suggested the phrase “purported creation”.

37. **The Chairperson** said she took it that the Committee wished to amend the recommendation along those lines and that it would leave the final wording to the Secretariat.

38. *It was so decided.*

39. *Recommendation 216 was adopted on that understanding.*

Recommendation 217

40. *Recommendation 217 was adopted.*

The meeting was suspended at 11.05 a.m. and resumed at 11.35 a.m.

Recommendation 218

41. **Mr. Deschamps** (Canada) proposed amending recommendation 218 (c) to read: “The rules in subparagraph (a) and (b) of this recommendation do not permit the application of the provisions of the substantive law of the forum on third-party effectiveness or priority of a security right as against the rights of competing claimants.” That wording was based on the corresponding provision of the Assignment Convention. The purpose of subparagraph (c) was to make it clear that if the conflict rules of the draft Guide called for the application of a foreign law to third-party effectiveness or priority, the forum court could not invoke public-policy principles to disregard those rules. However, public-policy principles could be invoked to prevent the application of a foreign law to other matters such as creation. If, for instance, the foreign law permitted the creation of a security right in wages and the public-policy rules of the forum did not, those rules could be invoked to disregard the foreign law.

42. **Mr. Bazinas** (Secretariat) asked whether the addition of the word “substantive” was necessary in the light of the rule in recommendation 217. He assumed that the reason for deleting the final phrase of the original version, which read “unless the law of the forum is the applicable law under the

provisions of this law on private international law”, was that it could be tacitly understood.

43. **Ms. Walsh** (Canada) said that the exclusion of the renvoi rule in recommendation 217 dealt with a different point. The proposed insertion of the word “substantive” in recommendation 218 (c) was intended to clarify that the substantive provisions of the law of the forum on third-party effectiveness or priority of a security right could not be applied. She drew attention to an analogous use of the word “substantive” in recommendation 220.

44. **The Chairperson** pointed out that that the word “law” had been taken to mean “substantive law” throughout the draft Guide. She said she took it that the Committee agreed to adopt the amended version of the recommendation with the deletion of the word “substantive”.

45. *It was so decided.*

46. *Recommendation 218, as amended, was adopted.*

Recommendations 219 and 220

47. **The Chairperson** drew attention to the suggestion in a note following recommendation 220 that recommendation 219 (b) should be deleted since it was covered, in substance, by recommendation 220.

48. **Mr. Deschamps** (Canada) expressed support for the proposal.

49. **The Chairperson** said she took it that the Committee wished to delete recommendation 219 (b) and leave it to the Secretariat to make any consequential changes to the wording of recommendations 219 and 220.

50. *It was so decided.*

51. *Recommendations 219 and 220 were adopted on that understanding.*

Recommendations 221 and 222

52. *Recommendations 221 and 222 were adopted.*

Commentary to chapter XIII: Private international law (A/CN.9/631/Add.10)

Paragraph 1

53. *The substance of paragraph 1 was approved.*

Paragraph 2

54. **Mr. Deschamps** (Canada) said that paragraph 2 of the commentary was inconsistent with the principles underlying the pertinent recommendations in the draft Guide. It stated that courts must determine whether a case was domestic or international as a prerequisite for the application of conflict-of-law rules. The criteria on which the court would base that decision were not specified in the commentary, which merely referred to the general rules of private international law of the forum. It followed that a court might decide that a case was not international even if the conflict rule set out in the draft Guide indicated that a foreign law was applicable. Such an approach would be inconsistent with recommendation 218 and the relevant sentences should be deleted from paragraph 2.

55. **Mr. Sigman** (United States of America) expressed strong support for the proposal by the representative of Canada.

56. **Mr. Voulgaris** (Greece) also expressed support for the proposal. He further proposed deleting the terms “forum”, “tribunal” and “court”, since they gave the impression that contentious issues were invariably involved. He therefore suggested amending the phrase “only if the forum is in a State” in the first sentence to read “only if the transaction is examined in a State”.

57. **The Chairperson** said that, while the terms to which the representative of Greece objected were not ideal, she doubted whether there were any generally acceptable alternative terms. However, she took it that the Committee wished to leave it to the Secretariat to redraft the paragraph in the light of the proposals made by the representatives of Canada and Greece.

58. *It was so decided.*

59. *The substance of paragraph 2 was approved subject to the agreed amendments.*

Paragraphs 3 to 13

60. *The substance of paragraphs 3 to 13 was approved.*

Paragraph 14

61. **Mr. Voulgaris** (Greece) proposed that paragraph 14 should be reviewed to avoid any implication that all legal systems adopted an identical position on the application of the law of the location of the asset to the creation of a security right as between the parties.

62. *The substance of paragraph 14 was approved subject to the agreed amendment.*

Paragraphs 15 to 34

63. *The substance of paragraphs 15 to 34 was approved.*

Paragraphs 35 to 47

64. **Ms. McCreath** (United Kingdom), drawing attention to the links between paragraphs 35 to 40 and recommendation 204, proposed including cross-references in those paragraphs along the lines of those agreed in respect of the recommendation. Moreover, as overlapping issues pertaining to financial contracts remained pending, she proposed that approval of paragraphs 35 to 40 should be deferred.

65. **Mr. Wezenbeek** (Observer for the European Union) expressed support for the points made by the representative of the United Kingdom. The issue addressed in recommendation 204 was the subject of intense debate in the European Union in the context of the European Commission proposal for a regulation on the law applicable to contractual obligations (Rome I). Given the highly complex nature of the issue, the discussions were likely to continue for some time.

66. **Mr. Bazinas** (Secretariat) said that UNCITRAL had taken six years to negotiate the United Nations Assignment Convention, which had been adopted by the General Assembly. The Commission had therefore resolved the issue of the law governing receivables versus the law of the assignor. The adoption of a consistent rule in the draft Guide was the product of yet another six years of negotiations.

67. No reference had been made in the recommendations or the commentary to the proposed regulation on the law applicable to

contractual obligations (Rome I) because it had not been finalized. The only draft available adopted the assignor's law with certain differences in the definition of the location rule. Moreover, the only official statement in that regard at the Commission's thirty-ninth session had been to the effect that the European Commission shared UNCITRAL's concerns regarding the potential impact of the adoption of a different law on receivables financing as a whole and was prepared to develop a consistent approach so that a uniform conflict-of-law rule could be adopted. Although UNCITRAL appreciated that the finalization of the Rome I document was a complex and time-consuming process, it could not be expected to amend rules adopted after lengthy negotiations to achieve consistency with a draft instrument. While it had always been open to regional harmonization efforts, it could not be bound by such efforts inasmuch as the United Nations and UNCITRAL were required to represent the international community as a whole.

68. **Ms. McCreath** (United Kingdom) said that the aim of the current discussion was to reach consensus on the best possible draft Guide. To that end, efforts must be made to adapt to the needs of a changing global environment. The receivables financing industry in the United Kingdom was arguably the largest in Europe and operated on the basis of a very different conflicts law from that proposed in the draft Guide at present.

The meeting rose at 12.30 p.m.

**Summary record of the 843rd meeting, held at the Vienna International Centre
on Thursday, 28 June 2007, at 2 p.m.**

[A/CN.9/SR.843]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 2.10 p.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work
(continued)** (A/CN.9/617, 620, 631 and Add.1-11,
632 and 633)

*Commentary to chapter XIII: Private international
law (continued)* (A/CN.9/631/Add.10)

Paragraphs 35 to 47 (continued)

1. **The Chairperson** said that the Committee's discussion later in the meeting of financial contracts might affect the scope of the draft Guide, which might in turn affect the impact — though not the substance — of recommendation 204 and hence the text of paragraphs 35 to 40 of the commentary to chapter XIII.

2. **Mr. Burman** (United States of America) said that all the relevant transactions had been exhaustively discussed by the Commission when the United Nations Convention on the Assignment of Receivables in International Trade (the United Nations Assignment Convention) was being drafted. That process had led not only to the selective treatment of financial contracts in the Convention but also to the inclusion of exceptions and the listing of diverse practices. While transactional practices were continually evolving, all the fundamentals were addressed in the Convention and no substantial changes had occurred that would warrant reconsideration of the issues involved.

3. **Mr. Cochard** (Association française des entreprises privées), referring to paragraphs 42 to 44 of the commentary and the two alternatives set out under recommendation 206, suggested that, in the light of the report of Working Group VI (Security Interests) on the work of its twelfth session (A/CN.9/620), the commentary should state that the majority of member States supported alternative A, i.e. the law of the State in which the bank that

maintained the account had its place of business or, in the case of more than one place of business, the law of the State in which the branch maintaining the account was located.

4. **The Chairperson** said that the Working Group had decided to place the two alternatives on an equal footing. The question of whether a majority of members of the Working Group had supported either alternative was therefore no longer relevant and it would be inappropriate to mention it in the commentary, which was to be adopted by consensus.

5. **Ms. Kaller** (Austria) proposed mentioning in paragraph 38 of the commentary that there were alternative solutions to those set out in the Assignment Convention.

6. **Ms. Walsh** (Canada) said that, while it was possible for reasonable people to disagree on any legal issue, the issue under discussion was one of choice of law relating to priority between competing third-party rights. A choice-of-law rule would not achieve its purpose if States could shop around between different choice-of-law rules governing issues of priority and third-party effectiveness. The consequence of providing options in that area was that one secured creditor might be awarded priority under the law applicable pursuant to State A's choice-of-law rule, while another secured creditor might enjoy a superior claim under the law applicable in State B, which applied a different choice-of-law rule. That state of affairs was not conducive to predictability or certainty in the ordering of priorities. Leaving States free to choose between different approaches would encourage a race to different forums in order to take advantage of the most favourable choice-of-law rule. Although it was unfortunate that States, for instance those engaged in negotiations on the European Commission proposal for a regulation on the law applicable to contractual obligations (Rome I), had been unable to reach agreement on a rule that was consistent with

that laid down in the Assignment Convention, the Commission could not change the decisions adopted in the context of such an instrument, which, unlike a legislative guide, was intended to promote uniformity. The whole object of adopting a choice-of-law rule had been to ensure global uniformity.

7. **Mr. Bazinas** (Secretariat), thanking the representative of Canada for her vote of confidence in the Commission, expressed disappointment at other States' lack of confidence in the Assignment Convention that they had actively helped to draft. The recommendations on receivables contained in the draft Guide had not been formulated as general recommendations with alternatives because the Working Group and the Commission had decided to adopt the approach set out in the Assignment Convention. It would be somewhat odd if the Commission were to undermine in a legislative guide the acceptability of one of its own recent instruments, especially in order to reinforce a particular negotiating position in a standard-setting process under way in another forum.

8. **The Chairperson** said she took it that the Committee wished to approve the substance of paragraphs 35 to 47, subject to any modifications that might become necessary in the light of the discussion of financial contracts and with the cross-referencing proposed by the representative of the United Kingdom at the previous meeting.

9. *It was so decided.*

10. *The substance of paragraphs 35 to 47 was approved on that understanding.*

Paragraphs 48 to 64

11. **Mr. Bazinas** (Secretariat), referring to paragraph 56, said that every effort would be made to ensure that the commentary reflected the main points raised during the discussion at the previous meeting regarding recommendations on the law applicable to enforcement, including the point that, in the absence of judicial enforcement, the question of whether an issue was procedural or substantive was irrelevant. The commentary would clarify that recommendation 214 was intended to deal with substantive matters of enforcement and not to undermine the generally accepted rule that

procedural matters were subject to the law of the place where enforcement occurred.

12. *The substance of paragraphs 48 to 64 was approved subject to the agreed amendments.*

Paragraphs 65 to 75

13. *The substance of paragraphs 65 to 75 was approved.*

Preliminary discussion of financial contracts

14. **Mr. Murray** (United Kingdom) said that it was the position of the United Kingdom that financial contracts constituted a special type of intangible property that was used in the context of special types of markets, i.e. financial markets, and that further technical work on the topic was needed to ensure that the rules in the draft Guide were appropriately applicable and did not interfere with common financial-market practice and the requirements of efficiency and transparency. As the Working Group had not yet focused on financial contracts as a specific type of collateral, financial contracts could not be properly addressed in the draft Guide at the current stage of the discussions.

15. Financial contracts should be treated as a form of collateral rather than as collateral arrangements. While the definition of financial contracts in the Assignment Convention could serve as a starting point, there was some concern that its scope needed to be broadened. Financial contracts were, broadly speaking, assignments of positions entered into on regulated exchanges, financial contracts governed by a netting agreement and foreign exchange transactions. Other types of financial contracts, such as bank deposits and independent undertakings, had already been defined in the draft Guide and were subject to separate rules. He would therefore focus on over-the-counter derivatives, which were typically subject to netting agreements, spot foreign exchanges, repurchase agreements and securities lending as forms of collateral rather than as collateralized transactions, which was somewhat confusing since they served both purposes. In the context of structured financings, they virtually all now included hedging transactions, involving interest rates, currencies and occasionally credit. The core transaction of synthetic securitization was actually a credit derivative. The benefits of hedging

contracts entered into by the special-purpose vehicle in structured financing were always made part of the security package. It followed that such types of intangible property were used as collateral and must therefore be subject to clear rules.

16. With regard to the conflict-of-law rule relating to security in a financial contract, he submitted that it would not be inconsistent with the Assignment Convention to develop a separate rule because financial contracts were carved out of the Convention.

17. He strongly believed that the best way of establishing priority in financial contracts as a form of collateral was via the concept of control. The definition of control in the draft Guide was limited to bank deposits and independent undertakings and was not broad enough to cover what he meant by financial contracts. It should be made clear that control was the principal and, ideally, the exclusive means of perfecting security in a financial contract and that control trumped registration. In fast-moving financial markets, even if registration was unnecessary, it could create confusion if some parties believed that they should register to be on the safe side. It would therefore be preferable to make it clear that control was the way to perfect a security interest in a financial contract.

18. Recommendation 25, which contained the prohibition of anti-assignment clauses, was in theory limited to receivables, but he doubted whether the current definition of a receivable effectively excluded financial contracts. He noted that the recommendation included a carve-out referring to contracts for the supply of financial contracts, but he did not think that that concept was clear and broad enough to cover everything that was denoted by the term financial contract.

19. **Mr. Burman** (United States of America) said that the representative of the United Kingdom had raised important points, some aspects of which might well be included in the draft Guide following careful deliberation in the light of practice and of the Assignment Convention. The issues raised could be discussed intersessionally and recommendations drafted in informal consultations for consideration by the Commission at its resumed session in December 2007.

20. **Mr. Smith** (United States of America) welcomed the willingness of the representative of the United Kingdom to work with the definitions and exclusions set out in the Assignment Convention as a way of limiting any adjustments that might need to be made for the purposes of the draft Guide. He noted that while the Assignment Convention excluded financial contracts, as defined in that instrument, it only excluded those that were subject to netting agreements and some others such as foreign exchange contracts and securities lending arrangements. As the draft Guide contained asset-specific recommendations, any further consideration of the issue of financial contracts should be guided by the aim of including, with possible adjustments, asset-specific rules on financial contracts that were consistent with the definition and scope of treatment of those devices in the Assignment Convention.

21. **Mr. Murray** (United Kingdom) asked whether the representative of the United States, who had mentioned the possibility of adjustments, had any views on the question of perfecting a security interest in financial contracts.

22. **Mr. Smith** (United States of America) said that his delegation had an open mind on the question of control as an exclusive or non-exclusive means of creating effectiveness against third parties. The concept existed in the United States only in relation to securities and other investment property, deposit accounts and letters of credit.

23. **Mr. Werner** (International Swaps and Derivatives Association) said that the global derivatives industry was very much concerned with the issue of financial contracts. In general, the industry regarded the draft Guide as a helpful tool, particularly for law reform in emerging markets, which played an increasingly important role in financial, capital and “developed” markets. The inclusion in the draft Guide of financial contracts and securities and their treatment as a form of collateral was of crucial importance to the derivatives industry. However, the definition of financial contracts must be both sound and up to date, and many of the technical details clearly remained to be discussed. As whatever definition was adopted would remain set in stone for many years to come, he suggested setting aside the issue of financial contracts for the time being so that the

Commission could adopt the remaining parts of the draft Guide. Financial contracts could then be discussed in more detail in whatever deliberative body was deemed to be appropriate.

24. **Ms. McCreath** (United Kingdom) said that she was encouraged to note the willingness of the United States delegation to consider arguments in support of the concept of control. However, as the Committee was engaged in a preliminary discussion, it was unnecessary for the time being to examine the desirability of including or excluding such concepts, since it might lead to a lengthy and premature discussion of the respective positions of States.

25. **The Chairperson** said that it was unclear whether the financial contracts enumerated by the representative of the United Kingdom were intended as a closed or an illustrative list.

26. **Mr. Smith** (United States of America) said that the Committee needed to have a stable idea of what it meant by a financial contract. While he appreciated the fact that the financial contract industry was constantly developing new products, it should be borne in mind that the Assignment Convention contained a definition of a financial contract that had been heavily influenced by contributions from the International Swaps and Derivatives Association and other market players and that was also flexible because it referred not only to specific transactions but also to “similar” transactions. He suggested that, in order to ensure consistency with that Convention, the Committee should maintain that definition and explain in the commentary why UNCITRAL believed that new products developed since the Convention’s entry into force would fall within the definition of financial contract as “similar” transactions.

27. **Mr. Murray** (United Kingdom) said that while the definition of financial contracts contained in chapter II, article 5 (k), of the Assignment Convention might be a useful starting point, and while he recognized the value of stability and consistency, his understanding of the term was that it included not only many of the transactions listed in article 4 (2) of the Convention but also other transactions that he would identify in due course. The definition should therefore be broad enough to encompass what the financial markets deemed to be financial contracts and to ensure that the instrument

remained valid and did not need to be reviewed in the light of developments in the markets. In early netting legislation, for example, it was common to include relatively prescriptive and closed lists of financial contract types. As a result, virtually every jurisdiction, including the United States, had been obliged to review and amend its definition of financial contracts on more than one occasion. The Commission should therefore be ambitious in seeking a broad, flexible and open definition.

28. **Mr. Bazinas** (Secretariat) said that the Commission, when drafting the Assignment Convention, had excluded financial contracts governed by netting agreements and a number of other transactions because it considered that some of the provisions of the Convention were not appropriately applicable to such transactions. Two main issues had been identified: the applicable law rule and the prohibition of anti-assignment clauses. The question of whether to include certain financial and other similar contracts in the draft Guide, adjusting the draft accordingly, or to exclude them would have to be considered in the context of the discussion of securities, since the outcome of that discussion would have implications for the discussion of financial contracts. The Assignment Convention focused on exclusions and other limitations, and the definitions served as tools to achieve that result. It might therefore be difficult to identify definitions before deciding whether the goal was to be inclusion or exclusion. Any inclusions should be consistent with the Convention, and so should any modifications of the provisions on anti-assignment clauses or applicable law introduced to address the practices involved in financial contracts.

29. **Mr. Deschamps** (Canada) said that the speakers who were suggesting that different rules from those proposed in the draft Guide should apply in some instances to financial contracts seemed to assume that existing law worked well. He invited the observer for the International Swaps and Derivatives Association or the representative of the United Kingdom to provide examples of existing laws that worked well in respect of, for instance, the perfection of a security interest in the rights of a counterparty under a derivative contract or under a foreign exchange agreement.

30. **Mr. Murray** (United Kingdom) said that the issue raised by the representative of Canada could not be adequately addressed in a preliminary discussion but would form part of the technical work needed to decide on what adjustments should be made to the draft Guide.

31. Noting that the Secretariat had not mentioned the issue of appropriate ways of perfecting a security interest in a financial contract, he requested reassurance that that was one of the issues that would be discussed.

32. The concept of control did not exist under English law but it had recently been introduced into the United Kingdom by the European Union Financial Collateral Arrangements Directive. A related issue was the question of characterization, i.e. whether assignment of a receivable was characterized as a transfer of title to the receivable or as a security transaction. He suggested that it might be addressed in the context of securities.

33. **Mr. Burman** (United States of America) noted the importance of coordination with the work of the International Institute for the Unification of Private Law (Unidroit) on a preliminary draft Convention on Substantive Rules regarding Intermediated Securities.

34. **Mr. Umarji** (India) asked whether the receivable under a financial contract involving, for instance, hedging against changes in interest rates or exchange rates would be accepted in practice as a valid security and whether money would be advanced against it despite the uncertainties involved.

35. **Mr. Murray** (United Kingdom) said that while it was true that a financial contract which was an over-the-counter derivative would typically have an uncertain value or indeed no value at all at the time it was assigned by way of security to the secured party, if an enforcement occurred before the contract had matured or resulted in a payment obligation, the secured party stood in the place of the grantor in relation to the contract. Any ultimate pay-out under the derivative would go to the secured party. Thus, if a corporate borrower entered into an interest-rate hedge in relation to its loan, it might be entitled to a close-out payment, for example in the event of a default by the bank that had provided the hedge.

It would typically assign the benefit of that contingent payment to the lenders.

36. **Ms. McCreath** (United Kingdom) stressed that any further work on the topic under discussion should be undertaken by Working Group VI rather than by an intersessional group.

37. **Mr. Burman** (United States of America) said that while he agreed that it should be a Working Group project, informal intersessional consultations could assist in clarifying the issues before the Commission met in formal session. The outcome of the consultations would not, of course, be in any way binding.

38. **Mr. Riffard** (France) said that it was important not to lose sight of the fact that the draft Guide was intended primarily for legislators who lacked effective legislation and that it should therefore be simple, understandable and readable. He had already expressed concern that proposals to include asset-specific provisions such as security rights in proceeds under an independent undertaking might render the draft Guide unduly sophisticated and complex. The same applied to financial contracts. If security rights in financial contracts necessitated a special study and adaptation of the general rules of the draft Guide, it might be necessary to defer work on the topic and address it in an annex that could be used by legislators who were familiar with financial contracts.

39. **Mr. Bazinas** (Secretariat) said that securities and financial contracts might be referred to Working Group VI as areas for future work. The question of security interests in intellectual property would probably also be referred to the Working Group, subject to approval by the Commission. In the meantime, however, a decision must be taken on how to deal with the remainder of the text of the draft Guide. He drew attention to the qualified inclusions in recommendation 4 (a) and (b) and to the question of the qualified inclusion or exclusion of securities raised in recommendation 4 (c). If the Committee opted for full exclusion of securities, it might wish to develop, as a first step, three or four rules pertaining to financial contracts, such as applicable law, assignment provisions, perfection and characterization. If it opted for the qualified exclusion of securities, it would also have to

consider the implications of that approach for the treatment of financial contracts.

40. **Mr. Burman** (United States of America) said that the Committee might wish to defer its decision on recommendation 4 (c) until the resumed session of the Commission in December 2007. If a decision was to be taken in the coming days, there may be greater justification for exclusion, since the Committee would not have the time needed to examine the issues concerned and to be assured of the support of industry and trade in that regard.

41. **Mr. Pereznieto Castro** (Mexico) expressed support for the comments made by the representative of France. The emerging countries for which the draft Guide was intended needed to use it as a tool as soon as possible. The drafting process, which had begun six years previously, appeared to be interminable, since new issues were added at every session and the instrument was turning into a veritable encyclopaedia of security rights. If States wished to consider other issues, the outcome of their deliberations could be included in annexes to the draft Guide or in other documents.

42. **Mr. Voulgaris** (Greece) and **Mr. Ghia** (Italy) expressed support for the statements by the representatives of France and Mexico.

43. **Ms. McCreath** (United Kingdom) said that she wished to avoid giving the impression that her delegation was seeking to overburden the Working Group and delay finalization of the draft Guide. If the Committee opted for exclusion of financial contracts for the time being, it would be happy to go along with that decision.

44. **The Chairperson** said that it was clear from the preliminary discussion of financial contracts that further technical work was required. Indeed, given the sophisticated nature of such contracts, it might be preferable to hold the topic over for future work. However, if a resumed session of the Commission was held in December 2007, the Committee might wish to consider whether some preliminary work on the subject should be undertaken at that session.

The meeting was suspended at 3.40 p.m. and resumed at 4.15 p.m.

XIV: Transition (A/CN.9/631 and Add.11)

Recommendations 223 to 230

45. *Recommendations 223 to 230 were adopted.*

Commentary to chapter XIV: Transition (A/CN.9/631/Add.11)

46. *The substance of the commentary to chapter XIV was approved.*

VII: Priority of a security right as against the rights of competing claimants (continued) (A/CN.9/631 and Add.4)

Recommendation 107 (continued)

47. **The Chairperson** said that the delegations of the United States of America and Canada had engaged in informal consultations with other interested delegations with a view to preparing a revised version of recommendation 107 concerning priority between competing security rights in property that was subject to a negotiable document.

48. **Mr. Cohen** (United States of America) said that the result of the discussions had been a general recognition, with a limited exception, of the principle that a party that had a security right in tangible property represented by a negotiable document and that had made that security right effective against third parties by possession of the document would have priority over a competing secured party that had a security right made effective by other means. That was consistent with many principles discussed by the Working Group relating to the importance of reliance on negotiable documents. The primary exception arose in cases where at least one of the security rights not only existed but had been made effective against third parties before the goods became subject to the negotiable document. Expectations in such cases might be somewhat different from those in cases where the security rights had been created after the negotiable document came into existence. The proposed new text therefore provided that where the security right had been made effective against third parties before the goods became subject to the negotiable document, the normal rules of priority would apply; thus, the first security right to be made effective against third parties or to become the subject of a registration would apply. However, that

provision did not apply in the case of inventory, because a party that extended credit on the basis of inventory had reason to expect that those goods would be put into commerce, perhaps using a negotiable document such as a bill of lading. With regard to certain contracts that provided for issuance of a document of title, the primary rule was that the document of title prevailed except in a situation where one of the security rights had been made effective against third parties before the goods became subject to the document, and the goods were not inventory.

49. **Mr. Bazinas** (Secretariat), referring to a situation in which a security interest existed before goods had become subject to a negotiable document, in which case the general priority rules would apply, asked how a secured creditor who subsequently took possession of the negotiable document would be affected and how the interests of that person were protected by existing priority rules.

50. **Mr. Cohen** (United States of America) said that there was always a winner and a loser in such circumstances. The proposed revised recommendation provided in the general case that the party in possession of the document would have priority and would therefore be the winner. In the exceptional case, the party that had the pre-existing right in the goods would have priority. As there was a winner and a loser in both cases, the parties had an interest in being able to determine in advance, to the extent possible, whether their position was of first or second priority. There was no perfect solution, since if both parties were acting in good faith, they could both be regarded as deserving of priority.

51. Where the party in possession of the negotiable document prevailed, the party that had extended credit and had made its security right effective against third parties by a means other than possession of the document had, in a sense, chosen to risk being junior in priority. That party would still have reason to determine that the goods were subject to a document, because if they were, the grantor did not have possession of them. If the goods were inventory, even if they were not yet represented by a negotiable document, the very fact that they were inventory would alert the creditor to that possibility.

52. In a situation where the exception applied and a party had made its security right effective against third parties before the goods became represented by the document and those goods were not inventory, the other party, i.e. the party that took possession of the document, would need to be able to ascertain whether it was at risk. As the only other way a security right could be made effective against third parties was by registration, it could, of course, check the registry.

53. Admittedly, neither type of ability to ascertain was perfect and both required work. However, some diligence would also be required under recommendation 107 as currently drafted and under the version suggested in the note to the Commission.

54. **Mr. Voulgaris** (Greece) expressed support for the proposal presented by the representatives of the United States. The solution was fair and complete. As exceptions would be very rare, they were in effect only theoretical.

55. **Ms. Walsh** (Canada) said that the revised recommendation as currently drafted did not appear to produce the policy result envisaged, despite agreement on the policy itself. The delegations concerned therefore needed more time to agree on the precise wording of the text.

56. **The Chairperson** said she took it that the Committee agreed to defer consideration of recommendation 107.

57. *It was so decided.*

XIII: Private international law (continued)
(A/CN.9/631 and Add.10)

Recommendation 202 (continued)

58. **Mr. Bazinas** (Secretariat) said that the note to the Commission following recommendation 202 was designed to address a conflict of priority between a secured creditor with a possessory security right in a negotiable document and a secured creditor with a non-possessory security right in the goods covered by the document. The question was whether the law of the location of the document should be applicable to the conflict. The representative of Spain had suggested expanding that rule to state that wherever goods were subject to a negotiable document and the goods and the document were not in the same place,

all issues with respect to the creation, priority and third-party effectiveness of a security right should be governed by the law of the location of the document. If the Committee wished to include such a recommendation, it would have to consider whether that rule would prevail also with respect to goods in transit or export goods, the subject matter of recommendation 203.

59. The representative of Bolivia had noted that if goods subject to specialized registration were represented by a negotiable document, a possible issue was whether the law applicable to the creation, third-party effectiveness and priority of the security right would be the law of the location of the document or the law of the State in which the specialized registry was maintained.

60. **Mr. Sigman** (United States of America) expressed support for the suggestion in the note to the Commission but not for the suggestion to expand the rule it contained. A rule stipulating that effectiveness was governed by the location of the negotiable document would undermine the basic policy that everything was registrable and that it was necessary to register and to search in only one place. Similarly, it seemed less practical and efficient to have multiple rules governing creation and third-party effectiveness.

61. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to insert a new recommendation based on the wording of note to the Commission following recommendation 202.

62. *It was so decided.*

Recommendations 203 and 204 (continued)

63. **The Chairperson** noted that the representative of France had raised the issue, during the discussion of recommendations 203 and 204, of whether a recommendation to address the law applicable to the transfer of security rights by way of assignment should be included in the draft Guide.

64. **Mr. Riffard** (France) said that it was important to determine what law was applicable to the transfer of a security right in the case of assignment of the receivable to which the security right was attached. There were two possibilities: either the law applicable to the assignment contract or the law applicable to the security right that had been transferred.

65. **Mr. Macdonald** (Canada) said that the key question was the extent to which the draft Guide should go beyond secured transactions law and address general conflict-of-law rules. He cautioned against recommending a special conflicts rule governing the transfer of obligations where those obligations were backed by a security right of the type identified by the draft Guide, since it would require States to ascertain whether that rule was in conformity with the general conflicts rule they applied to the transfer of obligations. While the point raised was very important, he felt that it should be addressed in the commentary rather than in a recommendation.

66. **Mr. Riffard** (France) said that he agreed with the representative of Canada that an additional recommendation was unnecessary and could potentially raise more questions than it resolved. He would therefore be satisfied if the issue were addressed in the commentary.

67. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to have the issue addressed in the commentary.

68. *It was so decided.*

The meeting rose at 5 p.m.

**Summary record of the 844th meeting, held at the Vienna International Centre
on Friday, 29 June 2007, at 9.30 a.m.**

[A/CN.9/SR.844]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 9.50 a.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work**
(continued) (A/CN.9/617, 620, 631 and Add.1-11,
632 and 633; A/CN.9/XL/CRP.7)

XII: Acquisition financing rights (continued)
(A/CN.9/631)

*Section B: Non-unitary approach to acquisition
financing rights (continued) (recommendations 184
to 201)*

Terminology and rules of interpretation
(A/CN.9/631/Add.1)

*Proposal by the Canadian delegation on acquisition
financing (non-unitary approach)*
(A/CN.9/XL/CRP.7)

1. **The Chairperson** invited the Canadian delegation to introduce document A/CN.9/XL/CRP.7 containing a proposed revised version of recommendations 184 to 201 of the draft Guide concerning the non-unitary approach to acquisition financing rights. She noted that other delegations had been given an opportunity to comment on an earlier draft.

2. **Mr. Macdonald** (Canada) said that his delegation had not sought to change the substance of the recommendations. Its main objective had been to reformulate them in a manner that was consistent with the idea of security arising from ownership and, as far as possible, to follow the logic and order of the recommendations contained in the unitary approach section.

3. For the sake of clarity, some of the relevant definitions contained in document A/CN.9/631/Add.1 had been reformulated. As the term “acquisition financing right”, however accurately or appropriately defined by Working Group VI, was not a well-known or easily understood concept, it had been decided, for the sake of transparency, to

repeat the terms “retention-of-title right” and “financial lessor’s right” in the section, as appropriate.

4. Recommendation 184 stated clearly that the law should provide for a regime of acquisition security rights in the non-unitary system identical to that adopted in the unitary system. However, in the non-unitary system the law should also provide for a regime of acquisition financing based on retention-of-title arrangements and financial leases. Furthermore, a lender that was an acquisition financier should be able to acquire not only ordinary acquisition financing rights but also the rights of a retention-of-title seller by obtaining an assignment of the obligations owed.

5. The fundamental principle set out in recommendation 185 was that the rights exercised by a retention-of-title seller should be functionally equivalent to those of an acquisition financier.

6. As everything in the unitary approach could be expressed in terms of security rights, any issues that arose could be comprehensively expressed as priority issues. However, in a non-unitary system, retention-of-title sellers retained ownership, so that their relationship with acquisition financiers could not be expressed in terms of priority because the seller’s priority was the natural consequence of its being the owner. It had therefore been decided to recast what was expressed as a priority right in the unitary system as a right that was the consequence of a retention-of-title seller or financial lessor having a right that was effective against third parties.

7. In the unitary system, if an acquisition financier had not fully complied with the requirements to obtain an acquisition financing right and the super-priority attached thereto, the secured creditor would merely lose the super-priority attached to being an acquisition financier but it would retain its other rights. However, in a

non-unitary system where retention of title was an issue, a retention-of-title seller that did not fully comply with the requirements to retain third-party effectiveness of the ownership right would lose its right of ownership to the purchaser. In view of that discrepancy, recommendation 198 had been reformulated to state clearly that if a seller or lessor failed to comply with the requirements for obtaining third-party effectiveness of a retention-of-title or financial lessor's right, the seller or lessor had a security right in the tangible property subject to the sale or lease, and the general regime for security rights applied.

8. **The Chairperson** invited comments on the definitions contained in A/CN.9/XL/CRP.7.

9. **Mr. Macdonald** (Canada), introducing the definitions section, said that the definitions of "acquisition secured creditor" and "acquisition security right" in document A/CN.9/631/Add.1 had been left unchanged. Similarly, the new definition of "financial lessor's right" was broadly the same as the existing definition of "financial lease" and had merely been brought into line with the definition of the term "retention-of-title right". The major change was that the terms "acquisition financing right" and "acquisition financing transferee" were no longer used as generic concepts. Instead, subparagraph (iv) of the former definition of "acquisition financing right" had been inserted at the end of the broadly unchanged definition of "retention-of-title right".

10. In response to a question from **Mr. Kemper** (Germany), he said that the original reason for the drafting of the section of chapter XII on the non-unitary approach to acquisition financing rights had been the desire to address, *inter alia*, the question as to whether retention-of-title arrangements and financial leases were the only types of devices whereby creditors could use ownership in order to secure an obligation. The Working Group had determined that they were not the only devices available for the purpose, but rather than specifying all such devices in each recommendation, it had decided to use the generic term "acquisition financing right" to cover not only retention-of-title arrangements and financial leases but also all other ownership transactions. The Committee therefore had three choices: it could adopt the new generic term; it could retain the primary term "retention-of-

title right", with backing from the "basket clause" in subparagraph (c) of the "Purpose" section at the beginning of chapter XII; or it could decide to recommend in the draft Guide that no other ownership arrangement should be permitted.

11. **Mr. Smith** (United States of America) suggested stating in the commentary that the basket clause had been inserted to cover any additional ownership devices that might exist in particular countries, but that a State in which no such devices existed might wish to omit the basket clause so as to avoid creating a new device.

12. **The Chairperson** pointed out that the definitions themselves were not intended to form part of a piece of legislation or a code but simply to serve as a working glossary for legislators.

13. **Mr. Kemper** (Germany) said that the suggestion by the representative of the United States would certainly reduce the confusion that might be caused by the new definition of "retention-of-title right". It was unclear from the second half of that definition that it related only to a situation in which the creditor had ownership. It was important to avoid extending the retention-of-title right into areas where there might be ambiguity.

14. **The Chairperson** pointed out that the proposal was a restatement of a policy that had already been decided.

15. **Mr. Umarji** (India) said that a clear distinction must be made between a retention-of-title seller that had purchased the asset it was selling with its own funds and a seller that had borrowed funds to obtain the asset. In the latter case, the creditor could obtain assignment of the retention-of-title contract and the situation might be further complicated in the event of non-asset-specific borrowing.

16. **Mr. Bazinas** (Secretariat) said that it had already been agreed as a matter of policy that a lender could obtain what was referred to in the original version of the draft Guide as an "acquisition financing right", a general term that covered the situation referred to by the representative of India. As that general term had been omitted from the proposed new version, the idea of the lender possessing an "acquisition financing right" had been included in the definition of the "retention-of-title right".

17. **Ms. Stanivuković** (Serbia) supported the points made by the representatives of India and Germany. She proposed that the situation of the lender should be omitted from the definition of the retention-of-title right, especially in light of the explicit provision in the proposed new version of recommendation 184 that a lender could acquire the benefit of a retention-of-title right.

18. **Ms. Walsh** (Canada) proposed inserting the word “irrevocably” before “transferred from the seller to the buyer” in the first part of the new definition of “retention-of-title right” to cover a case in which a seller transferred title but reserved the right to recover ownership if the payment obligation was not satisfied.

19. With regard to the aim of the non-unitary approach to enable lenders to obtain retention-of-title rights, it would be difficult in legislation dealing with sale and lease to justify referring to a party that did not have ownership at the outset as retaining ownership. It would therefore be more logical to deal with the matter solely in recommendation 184, which stated that lenders could obtain acquisition security rights through assignment by the seller or lessor. She noted that the redrafting process had been motivated by the concern of some States to preserve the consistency of their legal systems based on retained ownership.

20. **The Chairperson** noted that it had already been decided as a matter of policy that lenders should be able to obtain the rights in question directly as well as by way of an assignment.

21. **Mr. Voulgaris** (Greece) said that the proposal before the Committee accurately reflected the policy decisions already taken. He suggested, however, merging subparagraphs (ii) and (iii) of the definition of the “financial lessor’s right”.

22. **Mr. Riffard** (France) said that the proposed new text clarified the principles and policies that had been developed to date, namely that in the non-unitary system there was a general category of acquisition financing rights with two subcategories. The first subcategory consisted of creditors with a right in tangible property that either retained the title or transferred it subject to payment of the purchase price as well as lenders who obtained the right through assignment of a receivable. That

subcategory was covered both by the definition of a retention-of-title right and by revised recommendation 184. The second subcategory consisted of creditors or lenders that obtained an acquisition security right without retention of title. That subcategory was also covered by revised recommendation 184 as well as by the definition of a “security right” in document A/CN.9/631/Add.1.

23. **Mr. Bazinas** (Secretariat) asked whether revised recommendation 184 was designed to bring about the same result as the definition of a “retention-of-title right” in document A/CN.9/CRP.7. While the second part of the recommendation appeared to suggest that a lender could obtain a retention-of-title right only by assignment of the secured obligation, the second part of the definition seemed to imply that a lender could also obtain such a right directly. The latter approach would be consistent with the understanding reached in earlier discussions of the text approved by the Working Group, an understanding that had been motivated, *inter alia*, by the practical impact on the cost of credit.

24. **Ms. Walsh** (Canada) said that the purpose of the “catch-all” category in the second part of the definition of “retention-of-title right” was to cover situations in which a seller transferred ownership to a buyer subject to the right to recover ownership if the payment obligation was not satisfied. It did not introduce any new concepts and could therefore be deleted, subject to the inclusion of a reference to irrevocable ownership in the first part of the definition.

25. Document A/CN.9/CRP.7 had been drafted on the assumption that assignment would be required for a lender to obtain retention-of-title rights. The original version of the draft Guide did not state that all categories of creditors could obtain acquisition security rights in the non-unitary system. The note to the Commission following recommendation 191 had suggested including a rule whereby creditors could obtain such a right as an alternative to a retention-of-title right. The Committee had acted on that suggestion and, as a result, the non-unitary system now provided for both acquisition security rights and retention-of-title rights, with the limitation that lenders could obtain the latter only by way of assignment. A rule whereby a lender could

obtain retention-of-title rights without ownership of tangible property was likely to prove incompatible with existing property legislation in many jurisdictions.

26. **Mr. Marca Paco** (Bolivia) said that he failed to understand why delegations should be permitted to put forward new proposals that were inconsistent with policies on which the Committee had already agreed.

27. **The Chairperson** reminded the Committee that it had decided to accept the proposal made by the representative of France at its 840th meeting to redraft the recommendations on acquisition financing rights in the non-unitary approach section. Some delegations seemed to view that decision and its outcome as entailing a change of policy, while others disagreed.

28. **Mr. Perezniето Castro** (Mexico) endorsed the proposal contained in document A/CN.9/CRP.7. Rather than introduce new concepts, it reformulated the concepts underlying the original version of recommendation 184. While it was true that the principles were not easily incorporated into civil-law systems, Mexico had already successfully incorporated similar provisions from the Model Inter-American Law on Secured Transactions. His sole reservation concerned the second part of the definition of retention-of-title rights, which needed to be clarified.

The meeting was suspended at 11.10 a.m. and resumed at 11.35 a.m.

29. **Mr. Kemper** (Germany) said that lenders who were not owners of property should be accorded retention-of-title rights only by assignment. That approach was consistent with revised recommendation 184. He wished to be reminded of the exact terms of the earlier decision referred to by the Chairperson.

30. **Mr. Bazinas** (Secretariat) said that the Working Group had decided to provide not only for equal treatment for all acquisition credit providers but also for functional equivalence. Accordingly, lenders, sellers and other acquisition credit providers would be treated equally. Functional equivalence meant that no credit provider should enjoy an advantage that would distort competition and hence have an adverse impact on the availability

or the cost of credit. Furthermore, the Committee had decided that the second paragraph of the note to the Commission following recommendation 191 in the non-unitary approach section should be reflected in the final version of the text. The representative of Canada had expressed the view that it was not the intention of that paragraph to preclude lenders from obtaining acquisition financing rights by means other than assignment.

31. **Mr. Macdonald** (Canada), referring to the definition of an acquisition financing right in document A/CN.9/631/Add.1, said that the first subparagraph was intended to encompass classic retention-of-title transactions; the second subparagraph covered traditional financial leases; the third subparagraph was intended to cover any other clause or technique whereby a seller would use title to secure the performance of an obligation; and the purpose of the fourth subparagraph was to indicate that complete functional equivalence would involve enabling lenders that were not owners of property to acquire a property right directly. The text of the fourth subparagraph had been inserted at the end of the revised version of the definition of a retention-of-title right because that was clearly the place for a transfer of title involving a lender. However, Committee members had obviously not all understood the definition of acquisition financing rights in the same way. Some considered that it encompassed lender title security, while others thought that it did not. As a result, some considered that the proposal contained in document A/CN.9/CRP.7 represented a change of policy, while others disagreed. If the Committee took the view that lenders should not be entitled to acquire a property right directly, the second part of the proposed definition of a retention-of-title right could be deleted.

32. **Ms. Stanivuković** (Serbia) proposed deleting the second part of the definition and inserting the word “irrevocably” in the first part, as proposed by the delegation of Canada.

33. **Mr. Riffard** (France) said that he had construed the word “creditor” in the second part of the retention-of-title definition to mean a seller with a title to tangible property. Clearly, many others had construed it more broadly as permitting a lender to acquire a retention-of-title right directly, which was

not possible in the context of the non-unitary approach. He therefore supported the proposal by the representative of Serbia. It should, however, be borne in mind that a seller could obtain a security right comparable to a retention-of-title right through an agreement that property would revert to it in the event of buyer default. That eventuality was covered by the definition of an acquisition security right but it was not a retention-of-title right.

34. **Mr. Pendón Meléndez** (Spain) expressed support for the deletion of the second part of the definition of a retention-of-title right. While he considered the insertion of the word “irrevocably” unnecessary, he would not object to its inclusion.

35. **Mr. Smith** (United States of America) said that the Commission had already taken a policy decision in support of the principle of functional equivalence. The second part of the proposed definition of a retention-of-title right supported that principle. He noted, for example, that proposed recommendation 199 concerning post-default enforcement in document A/CN.9/XL/CRP.7 seemed to include provisions for retention-of-title sellers that were different from those applicable to holders of security rights — hence the importance of retaining the clause in the definition that supported functional equivalence. Permitting a lender to obtain the rights of a retention-of-title seller was also consistent with the law of countries that provided for such an eventuality by subrogation. He added that the new version of recommendation 184 failed to solve the problem because it required the consent of the seller to the assignment whereby a lender could obtain functional equivalence.

36. **Mr. Umarji** (India) said that in States in which the retention-of-title system was prevalent, it should be possible under the general law for a retention-of-title holder to assign its rights to a lender. In other jurisdictions, secured creditors would be free under the general law to convert their security rights into retention-of-title rights. There was therefore no need for a specific provision in that regard in the draft Guide.

37. **Mr. Kohn** (Observer for the Commercial Finance Association) expressed support for the comments by the representative of the United States. The draft Guide should make it clear that a lender could acquire retention-of-title rights by subrogation

or assignment from a retention-of-title seller, or alternatively that a lender should be able to create acquisition security rights. The remedies available to a lender in respect of acquisition security rights in a non-unitary jurisdiction should be functionally equivalent to those available to a retention-of-title seller. In other words, neither should have an advantage over the other.

38. **Mr. Riffard** (France) said that the proposed amendment to the definition of a retention-of-title right was not intended to undermine the principle of functional equivalence. It was merely intended to ensure consistency by reserving that definition for creditors with a security right based on ownership and dealing with lenders possessing ordinary security rights in the definition of acquisition security rights. Functional equivalence was clearly guaranteed by the revised “Purpose” section, subparagraph (b) of which provided for equal treatment of all providers of acquisition financing. If there was a problem with the proposed new version of recommendation 199, it could be addressed when that recommendation was considered.

39. **Mr. Macdonald** (Canada) proposed revising the new version of recommendation 184 to enable a lender to acquire title rights not only by assignment but also by subrogation, which would not require the seller’s consent. However, it would have to be made clear in the general law of subrogation that the seller’s claim still took precedence.

40. **Ms. Kasule** (Uganda), referring to the draft Guide’s objective of promoting fair competition, suggested examining the potential disadvantages that sellers might suffer if the full text of the right-of-title definition was retained, i.e. if lenders could acquire a right in property not only through assignment but also directly.

41. **Mr. Sigman** (United States of America) said that the element of competition was also absent in the case of an assignment, which required the consent of the seller.

42. If it was important to preserve the distinction between a lender and a seller in the definitions, he was prepared to accept the deletion of the second half of the proposed definition of a retention-of-title right. He supported the proposal by the representative of Canada to insert a provision in the

new version of recommendation 184 or elsewhere enabling a lender to acquire title rights by subrogation. It should further be made clear that an assignment was operable and that it was also possible for a lender to obtain acquisition security rights directly without relying on assignment or subrogation, provided that it had extended credit for the purpose of acquiring possessory use of tangible property.

43. **Ms. Walsh** (Canada) said that there had been a unanimous policy decision to the effect that a transfer of title from a borrower to a creditor could not be treated as vesting ownership in the creditor. She was therefore pleased to note that the representative of the United States was prepared to accept subrogation as an indirect way of achieving retention-of-title status for lenders.

The meeting rose at 12.30 p.m.

**Summary record of the 845th meeting, held at the Vienna International Centre
on Friday, 29 June 2007, at 2 p.m.**

[A/CN.9/SR.845]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 2.05 p.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (continued) (A/CN.9/617, 620, 631 and Add.1-11, 632 and 633; A/CN.9/XL/CRP.7)

XII: Acquisition financing rights (continued)
(A/CN.9/631)

Section B: Non-unitary approach to acquisition financing rights (recommendations 184 to 201)
(continued)

Terminology and rules of interpretation
(A/CN.9/631/Add.1)

Proposal by the Canadian delegation on acquisition financing (non-unitary approach) (continued)
(A/CN.9/XL/CRP.7)

Definition of a retention-of-title right

1. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to adopt the following amended version of the definition of a retention-of-title right in document A/CN.9/XL/CRP.7: “‘Retention-of-title right’, a term used only in the context of a non-unitary approach, means a seller’s right in tangible property, other than negotiable instruments or negotiable documents, pursuant to an agreement with the buyer by which ownership of the tangible property that is the object of the sale is not transferred or not irrevocably transferred from the seller to the buyer until the purchase price is paid.”

2. *The definition of a retention-of-title right, as amended, was adopted.*

3. **The Chairperson** said she also took it that the Committee accepted, as a policy matter, that a lender could acquire rights both through assignment and by subrogation.

4. *It was so decided.*

Definition of a financial lessor’s right

5. **Mr. Bazinas** (Secretariat) suggested replacing the term “financial lessor’s right” by “financial lease right” in order to bring it into line with the term “retention-of-title right”.

6. **The Chairperson** said she took it that, the Committee wished to amend the term itself in the interests of consistency and to adopt the proposed definition.

7. *The definition of a financial lease right was adopted.*

Definitions of an acquisition secured creditor and an acquisition security right.

8. *The definitions of an acquisition secured creditor and an acquisition security right were adopted.*

Proposed new recommendation 184

9. **Mr. Macdonald** (Canada) suggested that the words “or by subrogation” should be added at the end of the last sentence of proposed new recommendation 184.

10. **Mr. Riffard** (France) expressed support for the proposed amendment and suggested that an explanation of subrogation should be included in the commentary.

11. **Ms. Stanivuković** (Serbia) suggested deleting the words “of the obligation owing to the seller or lessor” and ending proposed new recommendation 184 with the words “through an assignment or by subrogation”.

12. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to leave the final drafting of the amendment to the Secretariat.

13. *It was so decided.*

14. *Proposed new recommendation 184, as amended, was adopted.*

Proposed new recommendation 185

15. *Proposed new recommendation 185 was adopted.*

Proposed new recommendation 186

16. **Mr. Cohen** (United States of America) asked whether the recommendation that a retention-of-title right and a financial lessor's right must be evidenced in writing "before" the buyer or lessee obtained possession was intended to exclude not only a subsequent writing but also a situation in which the right was evidenced in writing simultaneously with the buyer or lessee obtaining possession.

17. **Mr. Macdonald** (Canada) said he believed that that was the intention. The word "before" had been taken from the original version of recommendation 185.

18. **Mr. Cohen** (United States of America) proposed making it clear that the right must be evidenced in writing before or at the same time as the buyer or lessee obtained possession.

19. **Mr. Macdonald** (Canada) said that the proposal by the representative of the United States was probably what the original recommendation had intended to say. The amendment would also be consistent with the decision already taken regarding acquisition financing rights.

20. **The Chairperson** said, if she heard no objection, she would take it that the Committee wished to amend the recommendation along the lines proposed, leaving the final wording to the Secretariat.

21. *It was so decided.*

22. *Proposed new recommendation 186, as amended, was adopted.*

Proposed new recommendation 187

23. **Mr. Macdonald** (Canada) said that the second sentence of the proposed new recommendation made it clear, albeit inelegantly, that the right of the acquisition or other secured creditor arose

immediately and would therefore be opposable in bankruptcy proceedings.

24. **Mr. Kemper** (Germany) said that the proposed new recommendation implied that a buyer could legally expect to become the owner of a security right. He wondered how that could be deemed to constitute a retention-of-title right.

25. **Ms. Walsh** (Canada) said that the proposed new recommendation did not refer to a retention-of-title right but to a security right. A buyer could create a security right notwithstanding the fact that title had not yet been transferred.

26. **Mr. Bazinas** (Secretariat) said that the proposed new recommendation reflected provisions of German law whereby the buyer had "expectancy of ownership", the value of which was part of the purchase price paid. Such value could be used by the buyer to create a security right, although full legal ownership remained with the seller.

27. **Mr. Kemper** (Germany) wondered whether it was appropriate to refer to such a right during the "expectancy of ownership" period as a retention-of-title right.

28. **Mr. Macdonald** (Canada) said that while the retention-of-title seller retained ownership, the expectancy right in the hands of the purchaser was sufficient to support the granting of a security right but not the acquisition of a retention-of-title right.

29. **Mr. Kohn** (Observer for the Commercial Finance Association) said that the second sentence of proposed new recommendation 187 implied that the security right could not be enforced until the obligation to the seller had been paid in full. He therefore suggested the following alternative wording: "The security right is enforceable only to the extent of the value of the tangible property in excess of the obligation owing to the seller or financial lessor."

30. **Ms. Walsh** (Canada) said that she could support that suggestion because the proposed new recommendation was intended to limit the value of the security right to the value remaining after satisfaction of the obligation owing to the seller and not to dictate the time at which the right could be enforced. As with all the retention-of-title and financial lease rules, there was an implicit priority

rule to the effect that the retention-of-title seller was entitled to first payment from the value of the property and the secured creditor ranked second and received only the excess. In a unitary system that situation would be referred to as priority.

31. **Mr. Sigman** (United States of America) said he agreed that the rule in the proposed new recommendation was not concerned with how or when enforcement took place but merely with the relative priorities. He therefore proposed deleting the reference to enforcement in the second sentence of the proposed new recommendation.

32. **The Chairperson** suggested wording along the following lines: “The security right is limited to the value remaining in the tangible property in excess of the obligation owing to the seller or financial lessor.” The final drafting could be left to the Secretariat. Having heard no objections, she said she took it that the Committee wished to adopt proposed new recommendation 187, as amended.

33. *Proposed new recommendation 187, as amended, was adopted.*

Proposed new recommendation 188

34. **Mr. Kemper** (Germany) asked whether the provision requiring a retention-of-title and a financial lessor’s right in consumer goods to be evidenced in writing was really necessary and whether a retention-of-title right was effective against third parties on the basis of creation.

35. **Mr. Macdonald** (Canada) noted that original recommendation 187, on which proposed new recommendation 188 was based, read: “The law should provide that an acquisition financing right relating to consumer goods is effective against third parties upon its creation.” As “acquisition financing right” had been replaced by “retention-of-title right” and “financial lessor’s right” in the new recommendation, the notion of creation was no longer relevant. What mattered was the time at which the agreement between the parties took place, since that was when the right became effective against third parties. He therefore agreed that there was no need for the reference to a writing.

36. **The Chairperson** suggested deleting the words “by a writing” but retaining the reference to new recommendation 186. Having heard no

objections, she said she took it that the Committee wished to adopt recommendation 188, as amended.

37. *Recommendation 188, as amended, was adopted.*

Proposed new recommendations 189 and 190 (options A and B)

38. **Mr. Macdonald** (Canada) said that proposed new recommendation 190 under both options A and B was based on original recommendation 192. Original recommendation 190, which referred only to consumer goods, had become redundant because its content had been addressed in proposed new recommendation 188, under which retention of title in consumer goods was effective against third parties upon conclusion of the sales contract. Original recommendation 191 had also become redundant because its substance had been addressed in proposed new recommendation 184.

39. **Ms. Stanivuković** (Serbia), supported by **Mr. Macdonald** (Canada), proposed stating in subparagraph (b) of new recommendation 189 under both options that a notice relating to the retention-of-title or financial lessor’s right should be registered in the general security rights registry.

40. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to adopt the proposed amendment.

41. *Proposed new recommendations 189 and 190 (options A and B), as amended, were adopted.*

Proposed new recommendation 191

42. *Proposed new recommendation 191 was adopted.*

Proposed new recommendations 192 and 193

43. **Ms. Stanivuković** (Serbia) said that proposed new recommendation 192 belonged under option A because notification of inventory financiers on record was required only under that option. She therefore proposed moving new recommendation 192 so that it followed new recommendation 190 under option A.

44. **Ms. Walsh** (Canada) expressed support for the proposal by the representative of Serbia. She also proposed that the heading of recommendation 192 should be amended to read “One notification

sufficient” and that of recommendation 193 to “One registration sufficient”.

45. **Mr. Riffard** (France) expressed support for the proposal to change the order of the new recommendations. He pointed out that the drafting committee had decided that the term “notification” should be used only in the context of the assignment of receivables. The term “notice” should be used for all other types of written communication. Accordingly, the titles of proposed new recommendations 192 and 193 should read “One notice sufficient” and “One registered notice sufficient” respectively.

46. **The Chairperson** said she took it that the Committee wished to move proposed new recommendation 192 so that it followed new recommendation 190 under option A and to amend the titles of proposed new recommendations 192 and 193 in accordance with the proposal by the representative of France.

47. *It was so decided.*

48. *Proposed new recommendations 192 and 193, as amended, were adopted.*

Proposed new recommendations 194 to 197

49. **Ms. Walsh** (Canada) said that proposed new recommendations 194 to 197 would have to be corrected to take account of the policy decision to offer two options with respect to acquisition financing. Pursuant to that decision, a secured creditor with an acquisition security right in inventory had super-priority with respect to the inventory but not with respect to proceeds in the form of receivables, negotiable instruments or rights to payment of funds credited to a bank account. The current draft implied that a retention-of-title right extended to proceeds in the form of receivables, so that a retention-of-title seller would also have super-priority in the proceeds. The proposed text should be amended to make it clear that there was no retention-of-title right vis-à-vis proceeds from the sale of inventory as against third parties, where the proceeds took the form of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account. A retention-of-title seller in that situation would instead obtain a security right that would be effective against third parties in the

receivables concerned. That would parallel the situation with regard to acquisition security rights, i.e. there would be no super-priority vis-à-vis prior lenders in respect of proceeds of inventory that took the form of liquid assets of that kind.

50. She noted that option A had special rules for acquisition financing relating to inventory proceeds as opposed to proceeds of property other than inventory inasmuch as it required notification of an earlier-registered secured creditor with a security right in proceeds of the same kind. Option B made no such distinction.

51. **Mr. Bazinas** (Secretariat) said he had understood from earlier discussions of priority in respect of proceeds that the separate options for goods subject to retention of title would not be applicable to proceeds, but that two different rules, depending on the type of proceeds, would apply to both option A and option B. A retention-of-title right would extend to proceeds from tangible property other than inventory or consumer goods but it would not extend to proceeds of inventory in the form of the payment rights described in proposed new recommendation 197. Depending on whether a State chose option A or B, the effectiveness of the retention-of-title right would be achieved in different ways

52. **Mr. Macdonald** (Canada) said that it might be useful to specify in the case of proposed new recommendation 197 that the right in question must have been made effective against third parties. He suggested modelling any amendments to the proposed new recommendations on the rule stated in proposed new recommendation 198, which was applicable to a different context.

53. **Mr. Bazinas** (Secretariat) said he took it that the proposal by the Canadian delegation implied that recommendations 195 and 196 would be deleted and that a recommendation would be added after proposed new recommendation 197 to the effect that in the case of proceeds of inventory to which the retention-of-title right did not extend, the retention-of-title seller retained a security right.

54. **Ms. Walsh** (Canada) said that proposed new recommendations 195 and 196 addressed the question of how to achieve third-party effectiveness of the extension of retention-of-title rights to

proceeds. They reflected the rules contained in general recommendations 40 and 41 on achieving third party effectiveness of security rights in chapter V of the draft Guide.

55. **Mr. Rehbein** (Germany) recalled that his delegation had opposed the wording of original recommendations 189 and 192 because of the difficulty of making a clear distinction between inventory and other tangible property. It had therefore been decided to adopt alternative approaches: option A and option B. Under option B no distinction was made between inventory and other property. He was therefore opposed to the distinction made between inventory and other property in proposed new recommendation 194.

56. **Mr. Bazinas** (Secretariat) asked whether it would be acceptable to avoid making a distinction between inventory and goods other than inventory and to make it clear that retention-of-title and financial lease rights did not extend to proceeds.

57. **The Chairperson** said that, if she heard no objections, she would take it that there was no policy disagreement on that point.

58. *It was so decided.*

59. **Mr. Smith** (United States of America) said that most retention-of-title jurisdictions did not permit retention-of-title sellers to have a right in proceeds, and even those that did referred to a security right rather than to a retention-of-title right. The only reason to extend the retention-of-title right to proceeds in the non-unitary approach recommendations would be to maintain the principle of functional equivalence. He therefore suggested that retention-of-title sellers should have a normal security right in proceeds, with the priority rules being those set out in recommendations 198 and 199.

The meeting was suspended at 3.45 p.m. and resumed at 4.15 p.m.

60. **Mr. Bazinas** (Secretariat), summing up the proposals, said that the retention-of-title right would not extend to proceeds in the form of receivables, negotiable instruments, funds credited in a bank account and the obligation to pay under an independent undertaking. The retention-of-title seller would instead have a security right and the general rules applicable to such a right would apply,

namely recommendations 40 and 41 concerning third-party effectiveness of a security right in proceeds.

61. **Mr. Smith** (United States of America) said that his proposal was somewhat different because of the importance he attached to the principle of functional equivalence between the unitary and non-unitary approaches. Under the unitary system, an acquisition secured creditor automatically had a security right in proceeds, even in the form of receivables, money or instruments. To ensure functional equivalence, a similar right should be available to retention-of-title sellers in the non-unitary system. Similarly, a retention-of-right seller should enjoy the same priority for its security right in proceeds as an acquisition financier under the unitary system.

62. **Ms. Walsh** (Canada) said she believed that the delegation of Germany had requested an option B in respect of proceeds that would dispense with any distinction between proceeds from a buyer's resale of equipment and inventory and that would give the seller an ordinary security right in proceeds from either source. That would be slightly different from the situation with respect to acquisition security rights, in which super-priority existed for proceeds from equipment even in the form of receivables.

63. **Mr. Bazinas** (Secretariat) asked for confirmation that retention-of-title rights did not extend to proceeds in the form of the payment rights described in proposed new recommendation 197.

64. **Mr. Smith** (United States of America) said that he would be unable to support a recommendation whereby different rules governing priority in proceeds were applicable to sellers in unitary and non-unitary systems. The principle of functional equivalence demanded that the results under the two systems were identical. Retention-of-title sellers in the non-unitary system should have exactly the same priority as their counterparts in the unitary system.

65. **Mr. Macdonald** (Canada) said he wished to clarify the differences between the proposals before the Committee. He understood that the representative of the United States suggested amending the proposed new recommendations so that they referred to all kinds of proceeds, in which case the retention-of-title seller's right in the

proceeds would not be an ownership right but a security right and the rules governing the existence or non-existence of super-priority in respect of that right would be identical to the rules under the unitary system. He asked for confirmation from the delegation of Germany that it was proposing a proceeds rule that did not distinguish between inventory and property other than inventory, as well as a proceeds right that was an ordinary security right and that never had super-priority.

66. **Mr. Kemper** (Germany) said that he could concede the principle that rights in proceeds from inventory and equipment should be dealt with in the same way.

67. **The Chairperson** said she took it that the Committee wished to ask the Secretariat to redraft proposed new recommendations 194 to 197 in the light of the discussion.

68. *It was so decided.*

Proposed new recommendation 198

69. **Mr. Macdonald** (Canada) said that the rule in proposed new recommendation 198 would be clearer if the words “ownership passes to the buyer or lessee but” were added after “if a seller or lessor fails to comply with the requirements for obtaining third-party effectiveness of a retention-of-title or financial lessor’s right”.

70. **Mr. Kemper** (Germany) said that failure to fulfil the requirements for obtaining third-party effectiveness was essentially an issue involving the retention-of-title seller and other creditors. He was therefore unable to understand why a seller’s failure to meet those requirements should result in the property being transferred to the buyer.

71. **Ms. Walsh** (Canada) said she agreed that ownership could not pass from the seller to the buyer until the purchase price had been paid. The seller’s retention-of-title right would be reduced to the status of a security right solely for the purpose of ascertaining third-party effectiveness. It would therefore be more accurate to state that the buyer was considered to be the owner of the property as against third parties. The proposed new recommendation had been included in order to parallel the acquisition security rights approach. Thus, even though a retention-of-title seller would

no longer have ownership vis-à-vis third parties if it failed to register within the applicable grace period, it would retain a security right.

72. **Mr. Voulgaris** (Greece) proposed amending the final clause of the proposed new recommendation to read “the seller or lessor can have a security right in the tangible property subject to the sale or lease if the general regime for security rights applies”.

73. **Mr. Riffard** (France) said that the retention-of-title arrangement continued to be effective between the parties. However, if the creditor failed to fulfil the requirements for obtaining third-party effectiveness, it bore the traditional consequences. Third parties would be entitled to treat the buyer as the owner, and the seller would be “demoted” to the rank of an ordinary creditor.

74. **Mr. Kemper** (Germany) said that he still had doubts about the need for the proposed new recommendation. Its scope appeared to extend beyond the mere failure to give notice within the prescribed period.

75. **Ms. Walsh** (Canada) said that where a seller in a non-unitary system registered ownership within a specified grace period for the purpose of third-party effectiveness, that ownership would prevail over a prior lender’s registered security right in the buyer’s after-acquired property. If the seller did not register within the grace period, the logical legal consequence was that retained ownership was no longer effective against third parties. In the unitary system, a secured creditor that failed to register lost its super-priority over prior lenders and was left with an ordinary security right. It was thus subordinated to prior lenders but had a security right against other third parties. In order to achieve the same result in a retention-of-title system, in which super-priority was based on retained ownership, that ownership had to be converted into an ordinary security right. The seller would then retain a real right in the asset but would not prevail over prior lenders.

76. **Mr. Riffard** (France) pointed out that an ordinary security right would also have to be registered in order to be effective against third parties.

77. **The Chairperson** asked the delegation of Germany whether its concerns had been met.

78. **Mr. Kemper** (Germany) said that his delegation would not request the deletion of proposed new recommendation 198.

79. **Ms. McCreath** (United Kingdom) suggested that the explanations provided with respect to the recommendation should be added to the commentary.

80. **The Chairperson** said she took it that the Committee wished to amend proposed new recommendation 198 to include a reference to effectiveness against third parties and to clarify that failure to comply with registration formalities would result in the seller or lessor acquiring a security right, which would also have to be registered.

81. *It was so decided.*

82. *Proposed new recommendation 198, as amended, was adopted.*

The meeting rose at 5.00 p.m.

**Summary record of the 846th meeting, held at the Vienna International Centre
on Monday, 2 July 2007, at 9.30 a.m.**

[A/CN.9/SR.846]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 9.40 a.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (*continued*) (A/CN.9/617, 620, 631 and Add.1-11, 632 and 633; A/CN.9/XL/CRP.4 and 7)

XII: Acquisition financing rights (continued)
(A/CN.9/631)

Section B. Non-unitary approach to acquisition financing rights (recommendations 184 to 201)
(*continued*)

Proposal by the Canadian delegation on acquisition financing (non-unitary approach) (continued)
(A/CN.9/XL/CRP.7)

Proposed new recommendations 199 to 201

1. *Proposed new recommendations 199 to 201 were adopted.*

VII: Priority of a security right as against the rights of competing claimants (continued) (A/CN.9/631)

Recommendation 107 (continued)

2. **Mr. Cohen** (United States of America) said that his delegation proposed the following amended version of recommendation 107:

“The law should provide that a security right in tangible property made effective against third parties by possession of a negotiable document has priority over a competing security right made effective against third parties by another method. This rule does not apply if (i) the tangible property is not inventory and (ii) the security right of the secured creditor not in possession of the negotiable document was made effective against third parties before the earlier of (x), the time that the tangible property became represented by the negotiable document, and (y), the time when an agreement was made between the grantor and the secured creditor in

possession of the negotiable document providing for the tangible property to be represented by a negotiable document, so long as the tangible property became so represented within [30 days] from the date of the agreement.”

3. Both the original version and the amended version of recommendation 107 were intended to deal with a conflict between two legitimate interests: (a) that of a person with a security right in a document, and hence in the goods they represented, that had made the right effective against third parties by taking possession of the document; and (b) that of a person with a security right in the goods that had been made effective against third parties by a method other than the document. The original text had failed to provide for the wide variety of transactions in which such a conflict might arise. The proposed amended version gave substantial protection to a party whose interest was made effective against third parties by possession of a document, but it made an exception in some cases where goods became subject to a security right of at least one of the parties before the goods were represented by a document. For instance, a person that made a security right effective against third parties by registration of a notice prior to the existence of a document had a legitimate interest and the person that was in possession of the document also had a legitimate interest. Where the grantor defaulted and the goods were not valuable enough to satisfy both obligations, the law would have to determine who had priority. The proposed text of the recommendation provided that, where the tangible property was inventory and the secured creditor could have anticipated that the grantor would put the goods into the flow of commerce and that they might therefore be represented by a document, the holder of the document would prevail. Where the tangible property was not inventory and the security

right was made effective before the document was issued, the holder of the document would not prevail. The clause following “(y)” in the text dealt with a situation in which the issuance of a document had been anticipated but was delayed. In such cases too, the security right of the creditor that was not in possession of the document had to be made effective against third parties.

4. **The Chairperson** said that, if she heard no objections, she would take it that the Committee wished to adopt the proposed text.

5. *Recommendation 107, as amended, was adopted.*

6. **Mr. Deschamps** (Canada) said he trusted that the commentary would contain an explanation of the recommendation.

XIII: Private international law

Note following recommendation 202 (continued)

7. **Mr. Deschamps** (Canada) reminded the Committee that it had decided to defer action on the note following recommendation 202 until it had taken a decision on recommendation 107.

8. **Mr. Bazinas** (Secretariat) said that the Committee had agreed in principle that a new recommendation should be added after recommendation 202 to deal with the law applicable to priority conflicts between a secured creditor having possession of a negotiable document and a secured creditor with a perfected security right in the goods.

9. **The Chairperson** said she took it that the Committee agreed to insert a new recommendation along those lines.

10. *It was so decided.*

XI: Insolvency (continued) (A/CN.9/631 and Add.8)

Section A: UNCITRAL Legislative Guide on Insolvency Law: definitions and recommendations

11. **Mr. Bazinas** (Secretariat) said that chapter XI was the result of coordination between Working Group V (Insolvency) and Working Group VI (Security Interests). At its thirty-ninth session, the Commission had decided that the draft Guide would reflect the recommendations of the *UNCITRAL*

Legislative Guide on Insolvency Law (the Insolvency Guide) and would be fully consistent with its provisions. The definitions were set out in the draft Guide in order to facilitate understanding of insolvency terminology. The new recommendations in section B and the commentary to the chapter should be read in the context of the Insolvency Guide. The recommendations highlighted issues relating to secured transactions that had been discussed in the Insolvency Guide but were not the subject of specific recommendations. The commentary to chapter XI drew attention to differences between the two guides, such as the different usage of the terms “security interests” and “security rights”.

12. **Ms. McCreath** (United Kingdom) noted that the Committee might need to reconsider the definition of a “financial contract” in the light of its discussion of financial contracts.

13. **The Chairperson** said that, although the definitions reproduced from the Insolvency Guide were not open to discussion, the Committee might need to establish a different definition for the draft Guide.

14. **Mr. Kemper** (Germany) enquired about the status of the selected recommendations from the Insolvency Guide included in section A of chapter XI.

15. **The Chairperson** said that it had been decided that the most effective way of achieving consistency between the guides on insolvency and on secured transactions would be to incorporate the pertinent Insolvency Guide recommendations in the draft Guide.

16. **Mr. Bazinas** (Secretariat) said that if the draft Guide had simply made a general reference to the Insolvency Guide, legislators would have had to study the entire document to identify issues that were relevant to secured transactions. He noted that the commentary to chapter XI also drew attention to several relevant passages in the commentary to the Insolvency Guide. The recommendations in section B did not introduce new concepts but dealt with the applicability of the principles underlying the Insolvency Guide to secured transaction regimes.

17. **Mr. Kemper** (Germany) suggested inserting a note before the list of recommendations from the

Insolvency Guide emphasizing its non-exhaustive nature.

18. **Ms. Walsh** (Canada) expressed support for that proposal. She suggested presenting the recommendations as a unified text, deleting the original numbering of the Insolvency Guide, referring to those numbers in a footnote, and inserting the following explanatory introductory sentence: “The following recommendations from the *UNCITRAL Legislative Guide on Insolvency Law* are pertinent to secured transactions.” A cohesive presentation of existing and new recommendations dealing with similar subject matter would also be helpful.

19. **Mr. Redmond** (American Bar Association) said that Working Group V and Working Group VI had agreed at their two joint sessions that the inclusion of pertinent recommendations from the Insolvency Guide would greatly assist legislators in understanding the draft Guide. His organization supported draft chapter XI as currently structured. The numbering of the recommendations in section A should be identical to that of the Insolvency Guide to facilitate parallel use of the two documents.

20. **Mr. Burman** (United States of America) rejected the proposal to restructure the recommendations from the Insolvency Guide. Combining the two sets of recommendations would blur the distinction between them and it should be clear from the layout that chapter XI was not simply a restatement of insolvency law.

21. **Mr. Riffard** (France) suggested placing the recommendations from the Insolvency Guide in the introductory section of the commentary to chapter XI. The commentary would then be followed by the new recommendations. He further suggested including a consolidated set of all recommendations as an annex to the draft Guide.

22. **Ms. Walsh** (Canada) suggested moving chapter XI to the end of the draft Guide because the recommendations it contained concerned the enacting State’s insolvency law, whereas all other recommendations concerned secured transactions law.

23. **The Chairperson** said that the Committee’s various proposals regarding the presentation of chapter XI would be discussed in due course.

24. **Ms. McCreath** (United Kingdom), referring to the report of the Working Group on the work of its eleventh session (A/CN.9/617), said that her delegation had suggested at that session that recommendation 63 of the Insolvency Guide be included in the draft Guide.

25. **Ms. Clift** (Secretariat) said that recommendation 63 had not been included in the draft Guide because it did not refer specifically to secured creditors. Some recommendations that had not been selected for inclusion were nevertheless germane to the way in which insolvency regimes operated and concerned all types of creditors. An annex to the Insolvency Guide referred to those recommendations and their specific impact on secured creditors.

26. **Ms. McCreath** (United Kingdom) said that she had suggested including recommendation 63 so that readers of the draft Guide would be aware that the provisions relating to post-commencement finance cited in the draft Guide were not the only ones that existed.

27. **Mr. Smith** (United States of America) expressed support for the proposal by the representative of the United Kingdom.

28. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to include recommendation 63 of the Insolvency Guide in chapter XI.

29. *It was so decided.*

Section B. Additional insolvency recommendations of the guide on secured transactions (recommendations 173 to 183)

Recommendation 173

30. *Recommendation 173 was adopted.*

Recommendation 174

31. **Mr. Bazinas** (Secretariat) said that recommendation 174 (non-unitary approach) would have to be amended in the light of the Committee’s decision that the term “acquisition financing right” would be replaced by “retention-of-title right” and “financial lease right” in the context of the non-unitary approach to acquisition financing.

32. *Recommendation 174, as amended, was adopted.*

Recommendations 175 to 180

33. *Recommendations 175 to 180 were adopted.*

Recommendation 181

34. **Mr. Burman** (United States of America) proposed amending recommendation 181 to make it clear that a subordination agreement in insolvency proceedings would be binding on the debtor only to the extent that it was effective under law other than insolvency law.

35. *Recommendation 181, as amended, was adopted.*

Recommendations 182 and 183

36. *Recommendations 182 and 183 were adopted.*

The meeting was suspended from 11 a.m. and resumed at 11.30 a.m.

Commentary to chapter XI: Insolvency (A/CN.9/631/Add.8)

37. **Mr. Bazinas** (Secretariat) noted that the introduction to the commentary referred the reader to the recommendations of the Insolvency Guide and the commentary thereto. The new recommendations in the draft Guide would follow the commentary to chapter XI.

Paragraphs 1 to 15

38. **Mr. Redmond** (Observer for the American Bar Association) suggested that the commentary should refer more clearly to relevant recommendations and discuss additional recommendations of the Insolvency Guide. He further suggested that section 4 entitled “Applicable law in insolvency proceedings” (paras. 11-15) should be moved for greater clarity to the end of the commentary, i.e. to just before the new recommendations.

39. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to act on the suggestions made by the observer for the American Bar Association.

40. *It was so decided.*

41. *The substance of paragraphs 1 to 15 was approved on that understanding.*

Paragraphs 61 to 76

42. *The substance of paragraphs 16 to 76 was approved.*

43. *The substance of the commentary to chapter XI as a whole was approved, subject to the agreed amendments.*

Coordination with the preliminary draft Unidroit Model Law on Leasing (A/CN.9/XL/CRP.4)

44. **Mr. Bazinas** (Secretariat) drew attention to the comments by the International Institute for the Unification of Private Law (Unidroit) contained in document A/CN.9/XL/CRP.4. He expressed appreciation of Unidroit coordination with UNCITRAL on the drafting of definitions of the terms “acquisition financing right”, “financial lease”, “retention-of-title right” and “security right”.

45. The participants in the forthcoming UNCITRAL Congress on Modern Law for Global Commerce would have the opportunity to hear how cooperation between UNCITRAL, Unidroit and other bodies had contributed to the development of comprehensive guidance for States that wished to improve their secured transactions laws.

46. **Mr. Kronke** (Secretary-General of Unidroit) said that the draft Guide and the preliminary draft Unidroit Model Law on Leasing (the draft Model Law) were part of an effort that had begun in the 1970s to harmonize legislation on secured transactions, including through the drafting of a model law. However, the standardization effort had proved too ambitious at the time and a number of different instruments had been drawn up instead: the 1988 Convention on International Financial Leasing; the 2001 Convention on International Interests in Mobile Equipment (the Cape Town Convention) and its protocols; and the 2001 United Nations Convention on the Assignment of Receivables in International Trade. The current draft Guide was intended to draw all those instruments together.

47. The elements of a joint proposal regarding the relationship between the draft Model Law and the draft Guide had been worked out at a meeting

in 2006 between representatives of UNCITRAL, Unidroit and the Hague Conference on Private International Law. First, the draft Model Law had to clarify that a leasing contract that created a security right or an acquisition financing right was to be treated as a security right, which would not come within the scope of the draft Model Law. Second, the definition of an “acquisition security right” was to be reviewed to reflect the fact that not all “financial leases” created security rights. Third, the draft Model Law would defer for that definition to the draft Guide. Fourth, it was unnecessary to include applicable law provisions in the draft Model Law since that issue would be dealt with in the draft Guide. Fifth, article 3 of the draft Model Law would be expanded to illustrate how and why there were States in which the law implementing the draft Guide was applicable to certain types of leasing transactions. The joint proposal had been endorsed by the Unidroit Committee of Governmental Experts.

48. **Mr. Bazinas** (Secretariat) noted that account would have to be taken of the Committee’s decision to replace the term “acquisition security right” by “retention-of-title right” and “financial lease right”. He also suggested that the commentary should explain that the term “financial lease right” had been defined to ensure that only financial leases that created a security right would be covered by the draft Guide.

49. **The Chairperson** said she took it that the Committee wished to endorse the proposed coordinated approach.

50. *It was so decided.*

Future work on the draft Guide

51. **The Chairperson** asked the Secretariat to inform the Committee about the extent of the work that remained to be done.

52. **Mr. Bazinas** (Secretariat) said that chapters I to VI of the draft Guide (A/CN.9/631 and Add.1 to 3) remained to be discussed. With regard to chapters VII to XIV, a further review might be necessary of recommendations 194 to 197 on the extension of a retention-of-title right or a financial lease right to proceeds (non-unitary approach) and of the commentary on the options pertaining to

recommendations 189 and 192 on the third-party effectiveness of a retention-of-title right or a financial lease right to proceeds (unitary and non-unitary approaches). He referred to the possibility of convening a resumed session of the Commission in December 2007.

53. **The Chairperson** asked whether the Committee had any objections to the convening of a renewed session.

54. **Mr. Burman** (United States of America), supported by **Mr. Kemper** (Germany), said that he would welcome the holding of a resumed session, adding that it would be helpful if delegations could receive the revised versions of the chapters that had already been adopted as soon as possible.

55. **The Chairperson** said she took it that the Committee wished to recommend to the Commission that a resumed session be held from 10 to 14 December 2007 in order to complete the review and approval of the draft Guide.

56. *It was so decided.*

The meeting rose at 12.30 p.m.

**Summary record of the 847th meeting, held at the Vienna International Centre
on Monday, 2 July 2007, at 2 p.m.**

[A/CN.9/SR.847]

Chairman: Ms. Sabo (Chairperson of the Committee of the Whole) (Canada)

The meeting was called to order at 2.10 p.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (*continued*) (A/CN.9/617, 620, 631 and Add. 1-11, 632 and 633; A/CN.9/XL/CRP.3, 4 and 5)

Future work on security rights in intellectual property (A/CN.9/631 and 632; A/CN.9/XL/CRP.3)

1. **The Chairperson** invited the Committee to consider the question of the treatment of intellectual property in recommendation 4 (b) of the draft Guide (A/CN.9/631) in the light of documents A/CN.9/632 and A/CN.9/XL/CRP.3.

2. **Mr. Bazinas** (Secretariat) said that recommendation 4 (b) reflected the Working Group's approach to security interests in intellectual property, namely that the draft Guide should apply in general to such interests, but that, in the event of inconsistencies between secured transactions law as recommended by the draft Guide and national law or international treaties pertaining to intellectual property, the latter should prevail. The commentary broadly explained how such a deferral to national law or international treaties would work and also noted that States might need to review their internal law to ensure consistency between secured transactions law and intellectual property law. The commentary could also include a reference to future work by the Commission with respect to intellectual property.

3. He noted that the Working Group had not reached agreement on the text in square brackets in recommendation 4 (b), which read "and the matters covered by this law are addressed in that national law or international agreement" and which had been added as a suggestion to the Commission aimed at bringing recommendation 4 (b) into line with recommendation 4 (a).

4. Document A/CN.9/XL/CRP.3 reflected the decisions reached by the Working Group regarding matters that should be clarified in the commentary to the draft Guide.

5. Document A/CN.9/632 suggested possible future work on security rights in intellectual property aimed at promoting effective implementation of the draft Guide in that area.

6. **Mr. Lawrence** (Observer for the Independent Film and Television Alliance) said that the intellectual property community in the United States would support the deletion of the text in square brackets because it unnecessarily limited the scope of the exclusion.

7. **The Chairperson** said that, if she heard no objection, she would take it that the Committee wished to adopt recommendation 4 (b) without the text in square brackets.

8. *It was so decided.*

9. *Recommendation 4 (b), as amended, was adopted.*

10. **The Chairperson** invited the Committee to consider document A/CN.9/XL/CRP.3 concerning additions to the commentary to various parts of the draft Guide that had a bearing on intellectual property.

11. **Mr. Smith** (United States of America) said that the second sentence of section 1 (f) concerning an addition to the commentary to chapter X on post-default rights went well beyond intellectual property rights when it stated that the rule in the first sentence, namely that the secured creditor could only enforce the grantor's right in the encumbered asset, was not intended to override restrictions on the grantor's right to sell or otherwise dispose of, lease or license an encumbered asset. It suggested that a secured creditor was bound by contractual restrictions relating to the encumbered asset which

might have nothing to do with intellectual property rights. He therefore suggested that the first sentence should read as follows: "The secured creditor may only enforce the secured creditor's security right to the extent of the grantor's rights in the encumbered asset." The second sentence would then be deleted and the rest of the paragraph would remain in its current form.

12. **The Chairperson** said that, if she heard no objection, she would take it that the Committee agreed to the proposed amendment.

13. *The substance of section 1 (f) was approved, subject to the agreed amendment.*

14. **The Chairperson** said she took it that the Committee wished to add the content of document A/CN.9/XL/CRP.3, as amended, to the commentaries to the draft Guide.

15. *It was so decided.*

16. **The Chairperson** invited the Committee to consider document A/CN.9/632 concerning possible future work on security rights in intellectual property. While it had been agreed that the finalization of the draft Guide should not be delayed in order to deal with the specificities of intellectual property, it would be appropriate for the Committee to agree on an appropriate course of action.

17. **Mr. Bazinas** (Secretariat) said that document A/CN.9/632 was largely based on suggestions made at the Colloquium on Security Interests in Intellectual Property Rights prepared in cooperation with the World Intellectual Property Organization (WIPO) and held in Vienna on 18 and 19 January 2007.

18. **The Chairperson** said that the Committee was grateful to the representatives of WIPO and other experts from the intellectual property community for the quality of the materials before it.

19. **Mr. Goodger** (Observer for the Association of European Trade Mark Owners) said that his organization supported the draft Guide and its aims. He noted, however, that, given the critical importance of intellectual property in the modern economy, it was essential for issues pertaining to the securitization of intellectual property assets to be dealt with in a separate annex to the draft Guide. Such an annex should be submitted for adoption as

soon as possible and the draft Guide should contain an explicit reference thereto.

20. **Ms. Longcroft** (Observer for the World Intellectual Property Organization), noting the unprecedented importance of intellectual property in the commercial sphere and the recognized inconsistencies between the draft Guide, on the one hand, and existing national law and international treaties pertaining to intellectual property, on the other, said that further work on asset-specific recommendations relating to intellectual property should be undertaken as soon as possible to avoid sending the wrong message to States and lenders about the feasibility and desirability of lending on the basis of intellectual property. A rapid timetable for such work would also ensure that intellectual property considerations and proposed adjustments to the recommendations were placed before all member States of the Commission when they received the finalized text of the draft Guide. She further suggested that States should be invited to include representatives from intellectual property ministries in future discussions of the Working Group.

21. **Mr. Agthe** (Observer for the International Trademark Association) expressed strong support for the idea of an annex to the draft Guide. Work on the annex should proceed as rapidly as possible and the draft Guide should contain a specific reference thereto.

22. **Mr. Rivers** (Observer for the Association of Commercial Television in Europe) said that intellectual property and the need for external finance were extremely important matters for the television companies represented by his organization, which had taken a keen interest in the Commission's work. His organization would also be more than willing to contribute its expertise to any future work on security rights in intellectual property, which he trusted would be carried out as soon as possible.

23. **Mr. Lawrence** (Observer for the Independent Film and Television Alliance) expressed appreciation of the Commission's concern to ensure that the views of all interested parties were sought and heard. At the UNCITRAL Colloquium held in January 2007, he had been encouraged by the Commission's flexibility in considering aspects of

intellectual property that were difficult to reconcile with the current text of the draft Guide. His organization agreed with the comment by the European Community and its member States in document A/CN.9/633 that further work was required on security interests in intellectual property. It supported the proposal to finalize the remainder of the draft Guide and to supplement it with an annex on intellectual property in due course. He cautioned against any overlap between the draft Guide and the drafting work being carried out by the International Institute for the Unification of Private Law (Unidroit). As acknowledged by the Commission, the draft Guide's primary focus was on core commercial assets such as commercial property, inventory and equipment, and trade receivables.

24. As an example of the need for further in-depth discussion, he noted that in the context of intellectual property even the word "receivables" had a very different meaning. It did not mean direct payment for goods stocked or purchased, but ongoing income from licence distribution on behalf of intellectual property rights holders by third parties with a shared interest in earnings, although they did not have ownership of the intellectual property contained in distributed goods. Future work should also provide the opportunity to further differentiate between application to patents, trademarks, copyright and related rights.

25. His organization stood ready to contribute its commercial expertise to future work and hoped that recommendations could be submitted to Working Group VI by May 2008.

26. **Mr. Cohen** (United States of America) expressed broad support for the plan for future work set out in document A/CN.9/632.

27. **Mr. Bazinas** (Secretariat), replying to a question by **Mr. Wezenbeek** (Observer for the European Union), said that it had become clear during the Committee's discussion not only of intellectual property issues but also of securities and financial contracts that a compromise would have to be reached between the desirable and the feasible. Several delegations had stressed that further delays in issuing the draft Guide would reduce its usefulness. He therefore took it that the Committee wished to complete its work on the draft Guide at

the current session and to address questions pertaining to intellectual property, securities and financial contracts at a later date.

28. **Mr. Riffard** (France) expressed support for the suggestion that the current version of the draft Guide should be adopted at the resumed session in December 2007 and that supplementary work should begin thereafter on an annex dealing with intellectual property and possibly also securities and financial contracts.

29. **Mr. Markus** (Switzerland) also expressed support for the programme just outlined. He hoped that work on security rights in intellectual property could begin as soon as the draft Guide had been finalized. Moreover, it should be understood that the text of the future annex on intellectual property would prevail if there were any inconsistencies between it and the text of the draft Guide.

30. **The Chairperson** said that there would be no inconsistencies because the Committee had already adopted recommendation 4 (b), which stated that national law and international treaties would prevail over the draft Guide in the event of inconsistencies, and also because the asset-specific recommendations of the draft Guide would be applicable.

31. **Mr. Voulgaris** (Greece) said that he supported the proposed programme provided that account was taken of work being conducted in the same area by other international and regional organizations.

32. **The Chairperson** pointed out that UNCITRAL was an international forum that must adopt solutions suited to a global context.

33. She said she took it that the Committee wished to suggest to the Commission that, following the adoption of the draft Guide, it should entrust Working Group VI with the task of preparing an asset-specific text on security rights in intellectual property as an annex thereto. If the Commission agreed, it would be useful to insert a reference to the future annex in the draft Guide. The Working Group should be guided by document A/CN.9/623 and take into account relevant work currently being conducted by other international organizations.

34. *It was so decided.*

*Securities and financial contracts**(a) Securities (A/CN.9/631; A/CN.9/XL/CRP.4 and 5)*

35. **Mr. Bazinas** (Secretariat) drew attention to recommendation 4 (c) of the draft Guide (A/CN.9/631), most of which was in square brackets. In the Secretariat's note following recommendation 4 (c), the Commission was invited to consider whether all types of securities should be excluded from the draft Guide or only intermediated securities as defined in the preliminary draft Unidroit Convention on Substantive Rules regarding Intermediated Securities (the draft Convention). Section II of document A/CN.9/XL/CRP.4 contained comments and suggestions by Unidroit on the matter. Document A/CN.9/XL/CRP.5 contained a proposal by the Commercial Finance Association regarding the treatment of securities in the draft Guide or in its future work on the subject.

36. **Mr. Kronke** (International Institute for the Unification of Private Law) said that efforts at an early stage in the process of coordination between Unidroit and UNCITRAL to develop a clear-cut definition of intermediated securities had failed. UNCITRAL's Working Group VI had therefore contemplated an outright exclusion of securities because such a complex issue encompassing several different branches of law would overburden its proceedings. Unidroit's Committee of Governmental Experts, which was currently preparing the draft Convention, had decided at its first session to use the term "indirectly held securities", i.e. securities that were not held by the ultimate investor directly but through various layers of intermediaries. However, it had subsequently discovered that the term was an inadequate description of many of the holding patterns that the draft Convention should address. For example, the Nordic countries, Spain, Brazil, Colombia, China and Malaysia had developed what were known as "transparent systems", in which the central securities depository kept securities accounts for identified investors and knew what kinds of transactions were taking place. Such hybrid holding patterns had been satisfactorily taken into account in the current version of the draft Convention.

37. The Committee of Governmental Experts had considered at its last session the question of whether some systems that might not be indirect holding

patterns should be covered by the draft Guide. The consensus at the end of the session, at which the UNCITRAL Secretariat had been represented, was that there had been good reasons for excluding securities from the scope of the draft Guide in the early stages of the Working Group's proceedings and that additional research was required, for instance on repurchase agreements and certain intra-group transactions. It would also be necessary to test proposals and models against real-life cases and operational market customs.

38. He assured the Committee that Unidroit would be happy to participate in any further discussions of how to proceed on all those fronts.

39. **Mr. Kohn** (Commercial Finance Association) said that his organization wished to recharacterize its proposal contained in document A/CN.9/XL/CRP.5 as a request for future work by the Commission. The categories of securities and transactions described in the document were extremely important in that they made secured credit available to privately held companies with just a few shareholders and perhaps one or more wholly owned subsidiaries. The companies' securities were not traded on any recognized market but played an important role as non-intermediated securities in many kinds of financing transactions, for instance where insufficient other assets in the form of inventory, receivables or equipment existed to justify requested financing, or where the application of financial assistance or corporate governance laws or tax considerations made it impossible for the companies to obtain financing based on their other assets. His organization considered that including non-intermediated securities of that type within the scope of the draft Guide would greatly promote credit for many companies in a large number of countries. However, as it recognized that certain issues needed to be fully aired and understood before the Commission could take a decision, it urged the Committee to recommend that those issues be made the subject of future work.

40. **Mr. Burman** (United States of America) said that although he would have preferred to address more aspects of securities transactions in the main body of the draft Guide, he had been won over by the concerns expressed regarding the risk of failing

to complete the Commission's work on a timely basis. He was now in favour of a broad exclusion.

41. He questioned the use of the term "intermediated", since it was now clear that the Unidroit draft Convention would deal with some aspects of non-intermediated interests. He had similar reservations regarding the term "securities" as defined in the draft Convention. There was strong support for future Commission work on the appropriate scope of coverage of the securities field, including the transactions mentioned by the observer for the Commercial Finance Association. Recommendation 4 (c) should therefore be left open, providing for the exclusion of whatever was covered by the Unidroit draft Convention and for the incorporation of material included in an annex to the draft Guide.

42. **Mr. Kemper** (Germany) said he was in favour of a broad exclusion of securities. Moreover, he felt that any decision on the future work of the Commission should be postponed until the resumed session in December 2007. However, he would not oppose the insertion of a reference in the version of the draft Guide adopted at that session to the possibility of more precise rules being drafted later on to deal, *inter alia*, with certain kinds of securities.

43. **Mr. Voulgaris** (Greece) expressed support for a broad exclusion of both intermediated and non-intermediated securities, since inclusion of the latter might lead to confusion.

44. **Ms. Perkins** (United Kingdom) expressed support for a general exclusion of securities. She also sounded a note of caution regarding any work that might be undertaken on securities. As long as the definition of "intermediated" remained unsettled, the concept of "non-intermediated securities" would also remain unclear and it would be odd to develop rules governing an asset that could not be identified. Second, if both Unidroit and UNCITRAL undertook work on securities, the outcome should not involve the application of wholly different regimes to matters that were essentially unitary in terms of the underlying concept. Third, any carve-out for intermediated and tradable securities contemplated in future work would leave a gap around tradable non-intermediated securities.

45. The areas on which future work should focus were: (a) revision of the early definitions and scoping sections of the draft Guide to make it clear that the legal form of title transfer arrangements in relation to securities was preserved; (b) a hard look at the registration provisions to determine whether they should apply at all to securities; (c) consideration of the asset-specific provisions on possession, since possession was an inappropriate concept and it would probably be necessary to develop a concept of control instead; and (d) a hard look at the conflicts rule. Although the conflicts rule in recommendation 204 would presumably be applicable by default, her delegation's views on the application of that recommendation to financial contracts and securities was well known.

46. **Mr. Deschamps** (Canada) said he believed that, whatever decision was taken about complete or partial exclusion and about future work, the rules on intermediated securities should be integrated into and made conceptually consistent with the rules on non-intermediated securities. For instance, he failed to see how title transfer could be admitted as a security device for intermediated securities if it was not admitted for non-intermediated securities, or vice versa. The anomaly seemed even greater in light of the fact that the distinction between intermediated securities and non-intermediated securities was not obvious and that directly held securities might also be viewed as intermediated securities.

47. **Mr. Branciforte** (Italy) expressed support for the general exclusion of securities.

48. **The Chairperson** said that, if she heard no objection, she would take it that the Committee agreed that all types of securities should be excluded from the draft Guide and that UNCITRAL should develop as part of its future work an annex to the draft Guide that would address certain types of securities, including, *inter alia*, certain non-intermediated and non-traded securities. She also took it that the Committee wished to leave it to the Secretariat to make the necessary changes to recommendation 4 (c).

49. *It was so decided.*

(b) Financial contracts

50. **The Chairperson** said she believed that, with the broad exclusion of securities, a number of issues pertaining to financial contracts had been resolved.

51. **Mr. Burman** (United States of America) expressed support for a broad exclusion of financial contracts.

52. **Mr. Smith** (United States of America) noted that article 4 (2)(b) of the United Nations Convention on the Assignment of Receivables in International Trade (United Nations Assignment Convention) excluded financial contracts governed by netting agreements, except a receivable owed on the termination of all outstanding transactions. Article 4 (2)(c) also excluded foreign exchange contracts, which should likewise be excluded from the draft Guide. If the Committee decided to exclude financial contracts, he proposed that they be considered for future work at the same time as securities.

53. **Mr. Murray** (United Kingdom) said that he would support the exclusion of financial contracts from the scope of the draft Guide. If any further work was undertaken on the subject, a number of points, such as terminology, should be addressed. By any normal commercial understanding of the term “financial contract”, a foreign exchange contract belonged within the scope of the definition. Hence, although the definitions in the Assignment Convention might be perceived as a logical starting point, they were not necessarily appropriate for the Commission’s work on an annex to the draft Guide, given the different purposes of the two instruments and their different focus. Similarly, limiting the exclusion to financial contracts that were subject to netting agreements made sense in the context of the Assignment Convention but not necessarily in the context of the draft Guide because of its different policy, purpose and scope.

54. **Mr. Deschamps** (Canada) expressed support for the proposal by the delegation of the United States. The policy considerations that applied when the Assignment Convention was being drafted were also applicable to the draft Guide. Moreover, the Assignment Convention dealt with security interests in receivables.

55. **Mr. Kemper** (Germany) expressed support for the exclusion of financial contracts. He pointed out that the recently adopted UNCITRAL Legislative Guide on Insolvency Law contained a definition of “financial contract”, which could serve as a guideline for the scope of the exclusion.

56. **The Chairperson** noted that the latter definition was consistent with that in the Assignment Convention.

57. **Ms. Perkins** (United Kingdom) said that although her delegation felt that a different definition of “financial contract” might now be more appropriate, it would not be opposed to a carve-out of financial contracts as defined by the Assignments Convention. She further suggested a carve-out of derivatives and similar transactions that were not supported by a netting agreement and, lastly, a carve-out of foreign exchange transactions, especially spot foreign exchange agreements.

58. **Ms. Walsh** (Canada) pointed out that financial contracts, derivative contracts and foreign exchange transactions were not items of property that could be the subject of an assignment or the creation of a security right. Rather, as recognized by the Assignment Convention, it was the obligations that arose under such transactions that constituted the asset that became the subject of an assignment or a grant of security. It would be helpful if the representatives proposing a broader exclusion than that in the Assignment Convention could explain what their policy objection was to applying the general rules of the draft Guide to a receivable owed on the termination of all outstanding transactions.

59. **Mr. Bazinas** (Secretariat) noted that the draft report already reflected the Committee’s agreement at the current session that references to financial contracts in the draft Guide denoted contingent payment rights that might arise under a financial contract. He suggested that the Committee might wish to focus on the two outstanding issues: (a) whether derivatives and similar instruments that were not supported by a netting agreement might be excluded; and (b) the treatment of receivables owed on the termination of all outstanding transactions.

60. **Mr. Murray** (United Kingdom) said that the definition of financial contract in the Assignment Convention covered both derivatives and similar

contracts that were subject to a netting agreement and those that were not subject to such an agreement. Article 4 (2)(b) of the Convention had excluded financial contracts governed by netting agreements largely because its anti-assignment clauses would potentially disrupt netting arrangements.

61. Different issues arose, however, when it came to creating a security right in that type of intangible property. His delegation therefore felt that financial contracts in general, and not just those subject to a netting agreement, should be excluded for the time being and studied separately. In his practical experience, security was created on a daily basis in financial contracts, some of which were subject to a netting agreement, in financial exchange contracts and in the receivable owed on close-out of all transactions. It was therefore clearly necessary to seek an appropriate means of ensuring third-party effectiveness of that type of security, for instance through registration or control. A separate question was that of the applicable law.

62. He would therefore prefer to start out with the general definition of financial contracts in article 5 of the Assignment Convention and to expand that definition to cover foreign exchange transactions.

63. **Mr. Smith** (United States of America) said that he was opposed to an exclusion that went beyond that set out in the Assignment Convention. He agreed that the primary concern that had led to the exclusion of financial contracts was the protection of netting arrangements. However, where a single receivable was owing, whether it arose from close-out netting or under a single financial contract, the policy relating to the assignment of that receivable was exactly the same as the policy relating to the sale of goods or the provision of services.

64. **Mr. Murray** (United Kingdom) said that, notwithstanding that clarification, he felt that it was potentially unhelpful to focus on the Assignment Convention policy. It was preferable to examine the policy issues that arose, particularly third-party effectiveness, when a variety of financial receivables were included within the scope of the draft Guide.

65. **The Chairperson** said that, if she heard no objection, she would take it that the Committee agreed to apply the definitions used and the approach adopted in article 4 (2)(b) and (c) and article 5 (k) and (l) of the Assignment Convention.

66. *It was so decided.*

67. **Ms. Perkins** (United Kingdom) suggested that interested experts might look into the scope of the exclusion in the context of preparatory work for the resumed session in December.

68. **Mr. Bazinas** (Secretariat) requested guidance as to what was expected of the Secretariat in that regard. Was it expected to draft a recommendation to the effect that security rights in payment rights arising under financial contracts were perfected or made effective against third parties by control or by control and registration? A second recommendation might state that a security right perfected by control would have priority, and a third recommendation might deal with the law applicable to the security right.

69. **Mr. Kemper** (Germany), noting that the delegation of the United Kingdom clearly had a strong interest in widening the scope of the exclusion, proposed that the issue should be left open so that delegations could look into the matter in greater detail prior to the resumed December session.

70. **Ms. Perkins** (United Kingdom) said that she was arguing for a wide exclusion so that future work could be undertaken with all due care and attention. She noted that the Committee had in effect just decided, by adopting the approach set out in article 4 (2)(c) of the Assignment Convention, to exclude foreign exchange transactions.

71. Although the Committee had agreed not to reopen the applicable law rule contained in recommendation 204, it now seemed about to do so. It had also agreed not to overload the draft Guide with sophisticated treatment of complicated instruments. Yet that was precisely what it was doing.

72. **Mr. Deschamps** (Canada) said that, as he saw it, the only difference of opinion related to a very narrow type of receivable, namely the net amount payable on termination where a financial contract

contained a netting agreement. That kind of receivable was covered by the Assignment Convention and the question was whether it should be excluded from the draft Guide. He agreed with the suggestion that the issue might be resolved by exploring whether special rules governing third-party effectiveness and priority should be applicable to such receivables. The Assignment Convention left those matters to applicable law, namely the law of the location of the assignor. The question arose whether the Commission could propose a conflict rule that was different from the one applicable under the Assignment Convention to that type of receivable.

73. **Ms. Kaller** (Austria) said she agreed that all types of financial contracts mentioned by the representatives of the United Kingdom should be carved out from the draft Guide because it might be risky to introduce modifications that delegations had not had sufficient time to examine.

74. **Mr. Smith** (United States of America) said that he would not be in favour of future work that would produce an applicable law rule that was inconsistent with that contained in the Assignment Convention. However, he would be willing to explore, prior to the resumed session in December 2007, other possible adjustments to receivables arising from close-out netting or from a single financial contract, provided that they were compatible with the rules in the Assignment Convention.

75. **Mr. Wezenbeek** (Observer for the European Union) said that he agreed with the representative of Austria that more time was required to ponder the implications of the matters under discussion. He took issue with the argument that the provisions of the Assignment Convention were set in stone. In the real world things evolved and new developments had to be accommodated. Future work should not consist solely in elaborating on what had already been decided.

76. **The Chairperson**, summing up the discussion, noted that the Committee had agreed to adopt the approach to financial contracts set out in the Assignment Convention, not only to ensure consistency with that Convention and the UNCITRAL Legislative Guide on Insolvency Law but also because the same policy considerations applied in the context of the draft Guide.

77. She invited the delegation of the United Kingdom to draw up proposals to deal with third-party effectiveness and priority for submission to the Committee at the resumed session in December. The proposals should be made available ten weeks in advance so that they could be translated into all working languages.

78. **Ms. McGrath** (United Kingdom) said that her delegation would be pleased to act on that suggestion.

79. **The Chairperson** said that, if she heard no objection, she would take it that the Committee agreed that the question of future work on financial contracts after adoption of the draft Guide should be raised with the Commission in due course.

80. *It was so decided.*

Presentation of the draft Guide

81. **The Chairperson** said that, if she heard no objection, she would take it that the Committee agreed that each chapter of the draft Guide would consist of a commentary followed by recommendations, and that the final chapter would be followed by a consolidated set of recommendations and a terminology list.

82. *It was so decided.*

83. **The Chairperson** said that, if she heard no objection, she would take it that the Committee agreed to move chapter XI on insolvency so that it became the last chapter of the draft Guide, the reason being that all the recommendations it contained involved legislation other than secured transactions legislation.

84. *It was so decided.*

The meeting rose at 5 p.m.

**Summary record of the 853rd meeting, held at the Vienna International Centre
on Friday, 6 July 2007, at 10 a.m.**

[A/CN.9/SR.853]

Chairman: Mr. Mitrović (Serbia)

The meeting was called to order at 10.05 a.m.

Adoption of the report of the Commission

(A/CN.9/XL/CRP.1/Add.1-21)

The discussion covered in the summary record began at 10.15 a.m.

III: Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (A/CN.9/XL/CRP.1/Add.1-6)

A. Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions (A/CN.9/XL/CRP.1/Add.1)

1. **Ms. Sabo** (Canada) proposed inserting the following sentence at the end of paragraph 1: “The Committee expressed its great appreciation to the Secretariat for its work in preparing the materials.”

2. **The Chairman** suggested replacing “great appreciation” by “special appreciation” because otherwise the same sentence would have to be inserted in each section of the draft report.

3. *It was so decided.*

1. Chapter VII: Priority of a security right as against the rights of competing claimants

(a) Recommendations (A/CN.9/631, recommendations 74-107) and (b) Commentary (A/CN.9/631/Add.4)

4. **Mr. Bazinas** (Secretariat) suggested moving the words “from a consumer to a consumer” in the third sentence of paragraph 5 to immediately after the words “in a sale” so that the phrase would read: “in a sale from a consumer to a consumer of assets encumbered by a security right”.

5. *It was so decided.*

6. **Mr. Bazinas** (Secretariat) suggested deleting the reference “definition (eee)” from paragraph 6.

7. *It was so decided.*

8. **Mr. Bazinas** (Secretariat) suggested inserting a reference at the end of paragraph 7 to the discussion on securities and financial contracts summarized in paragraphs 17 to 22 of document A/CN.9/XL/CRP.1/Add.4 and in paragraphs 16 to 22 of document A/CN.9/XL/CRP.1/Add.6.

9. *It was so decided.*

10. **Mr. Bazinas** (Secretariat) suggested inserting the word “priority” before “conflict” in the fourth sentence of paragraph 11.

11. *It was so decided.*

12. **Mr. Bazinas** (Secretariat) suggested inserting a reference to paragraphs 3 to 6 of document A/CN.9/XL/CRP.1/Add.6 at the end of paragraph 12.

13. *It was so decided.*

14. *Document A/CN.9/XL/CRP.1/Add.1, as amended, was adopted.*

*A. Adoption of the draft UNCITRAL Legislative Guide on Secured Transactions (continued)
(A/CN.9/XL/CRP.1/Add.2)*

1. Chapter VII: Priority of a security right as against the rights of competing claimants (continued)

(b) Commentary (continued) (A/CN.9/631/Add.4)

15. **Mr. Smith** (United States of America) said that he opposed the amendment referred to in subparagraph 14 (xviii), namely inserting the word “present” before “right of set-off” in paragraph 112 of the commentary to chapter VII (A/CN.9/631/Add.4) and the words “unless it has disappplied such right” after “non-secured transactions law”. The Committee had not, in his recollection, reached a consensus on those amendments.

16. **Ms. Sabo** (Canada) said that the amendments appeared to reflect what the Committee had decided and that she would therefore prefer to maintain them.

17. **Mr. Weise** (Observer for the American Bar Association) said that, according to his notes, there had been some disagreement among delegations regarding the relevant rule and no consensus had been reached.

18. **Ms. Sabo** (Canada) said she was prepared in that case to accept the deletion proposed by the representative of the United States.

19. **The Chairman** said he took it that the Commission wished to delete the portion of paragraph 14 (xviii) relating to the fifth line of paragraph 112.

20. *It was so decided.*

21. *The section of the draft report on chapter VII and the commentary thereto, as amended, was adopted.*

2. Chapter VIII: Rights and obligations of the parties

(a) Recommendations (A/CN.9/631, recommendations 108-113) and (b) Commentary (A/CN.9/631/Add.5)

22. *The section of the draft report on chapter VIII and the commentary thereto was adopted.*

3. Chapter IX: Rights and obligations of third-party obligors

(a) Recommendations (A/CN.9/631, recommendations 114-127) and (b) Commentary (A/CN.9/631/Add.6)

23. *The section of the draft report on chapter IX and the commentary thereto was adopted.*

4. Chapter X: Post-default rights

(a) Recommendations (A/CN.9/631, recommendations 128-172) and (b) Commentary (A/CN.9/631/Add.7)

24. **Mr. Bazinas** (Secretariat) suggested moving the words “for example” in the fifth sentence of paragraph 5 to immediately before the words “a secured creditor”. He further suggested inserting the following sentence at the end of paragraph 5: “It was agreed that the commentary should explain the term ‘commercially reasonable standards’, giving examples.”

25. **The Chairman** said he took it that the Commission wished to adopt the Secretariat’s suggestions.

26. *It was so decided.*

27. **Mr. Bazinas** (Secretariat) suggested amending the first sentence of paragraph 8 to read: “With respect to the reference in recommendations 147, subparagraph (a), 149 and 150 to receiving or sending a notice, different views were expressed.”

28. *It was so decided.*

29. **Mr. Bazinas** (Secretariat) suggested inserting the phrase “as it referred to distribution of proceeds realized by a judicial disposition” at the end of the first sentence of paragraph 11. Furthermore, the reference to “recommendations 114-127” in paragraph 13 should be corrected to read “recommendations 128-172”.

30. **The Chairman** said that he took it that the Commission wished to adopt the Secretariat’s suggestions.

31. *It was so decided.*

32. *The section of the draft report on chapter X and the commentary thereto, as amended, was adopted.*

5. Chapter XII: Acquisition financing rights

(a) Recommendations (A/CN.9/631, recommendations 184-201)

33. *The section of the draft report on chapter XII contained in document A/CN.9/XL/CRP.1/Add.2 was adopted.*

34. *Document A/CN.9/XL/CRP.1/Add.2 as a whole, as amended, was adopted.*

A. Adoption of the draft UNCITRAL Legislative Guide on Secured Transactions (continued)
(A/CN.9/XL/CRP.1/Add.3)

5. Chapter XII: Acquisition financing rights (continued)

(a) Recommendations (A/CN.9/631, recommendations 184-201) (continued)

(ii) Non-unitary approach (continued)

(b) Commentary (A/CN.9/631/Add.9)

35. **Mr. Rehbein** (Germany) proposed replacing the words “proceeds other than inventory” in the fifth line of paragraph 8 with the words “proceeds of inventory”.

36. **Mr. Bazinas** (Secretariat) suggested amending the sentence to read: “Accordingly, the priority provided in the new recommendation should extend to proceeds of tangible property other than inventory, for example equipment, as well as to proceeds of inventory except proceeds of inventory in the form of receivables or other payment rights.”

37. **Mr. Rehbein** (Germany) said that the suggested new wording was acceptable.

38. **Ms. Sabo** (Canada) proposed replacing the term “tangible property” in the Secretariat’s suggested wording by the term “tangible assets” in order to reflect the preference expressed by one delegation during the Committee’s discussion.

39. **The Chairman** said that he took it that the Commission wished to adopt the Secretariat’s suggested wording as amended by the representative of Canada.

40. *It was so decided.*

41. *The section of the draft report on chapter XII contained in document A/CN.9/XL/CRP.1/Add.3 and the commentary thereto, as amended, was adopted.*

6. Chapter XIII: Private international law

(a) *Recommendations (A/CN.9/631, recommendations 202-222)*

42. **Mr. Salam-Alada** (Nigeria), referring to paragraph 12, noted that the Committee had agreed not only that the title to chapter XIII should be changed to “Conflicts of laws” or “Applicable law” but also that United Nations terminologists should be allowed to suggest any other suitable title. He therefore proposed that the phrase “or any other title suggested by United Nations terminological experts” should be inserted at the end of the paragraph.

43. *It was so decided.*

44. **Mr. Smith** (United States of America) proposed replacing the words “that were not” in paragraph 20 with the words “that may not be” because the Committee had not yet determined that

recommendation 204 was not appropriate for security rights.

45. *It was so decided.*

46. *The section of the draft report on chapter XIII contained in document A/CN.9/XL/CRP.1/Add.3, as amended, was adopted.*

47. *Document A/CN.9/XL/CRP.1/Add.3 as a whole, as amended, was adopted.*

A. Adoption of the draft UNCITRAL Legislative Guide on Secured Transactions (continued) (A/CN.9/XL/CRP.1/Add.4)

6. Chapter XIII: Private international law (continued)

(a) *Recommendations (continued) (A/CN.9/631, recommendations 202-222)*

48. **Mr. Voulgaris** (Greece) proposed placing the title of chapter XIII, “Private international law”, in square brackets because it might be replaced by a more appropriate term.

49. **Ms. Sabo** (Canada) said that the draft report reflected the status of the text at the time of the discussion. It was therefore preferable to leave the title unchanged.

50. *It was so decided.*

(b) *Commentary (A/CN.9/631/Add.10)*

51. **Mr. Bazinas** (Secretariat) suggested amending the end of paragraph 12 (v) to read: “and that, in some States, such matters could arise only in the context of judicial enforcement”.

52. *It was so decided.*

53. *The section of the draft report on chapter XIII and the commentary thereto, as amended, was adopted.*

7. Priority of a security right in a negotiable document or goods covered by a negotiable document/law applicable to the priority of a security right in a negotiable document or goods covered by a negotiable document

54. **Mr. Smith** (United States of America), referring to the third sentence of paragraph 13, said that there was only one exception to which the

general priority recommendations would apply. He therefore proposed replacing “two exceptions” in that sentence by “one exception”. In addition, the words “first exception” in the fourth sentence and “other exception” in the sixth sentence should be replaced with the word “exception”.

55. *It was so decided.*

56. *Section A.7 of the draft report, as amended, was adopted.*

8. Chapter XIV: Transition

(a) *Recommendations (A/CN.9/631, recommendations 223-230) and (b) Commentary (A/CN.9/631/Add.11)*

57. *The section of the draft report on chapter XIV and the commentary thereto was adopted.*

9. Financial contracts

58. *Section A.9 of the draft report was adopted.*

59. *Document A/CN.9/XL/CRP.1/Add.4 as a whole, as amended, was adopted.*

A. Adoption of the draft UNCITRAL Legislative Guide on Secured Transactions (continued)
(A/CN.9/XL/CRP.1/Add.5)

10. Chapter XII: Acquisition financing rights/non-unitary approach (continued)

60. **Mr. Bazinas** (Secretariat) suggested linking the discussion in paragraph 1 to an earlier decision by the Committee regarding the revision of certain definitions and recommendations by deleting the words “The Committee had before it” at the beginning of the paragraph and inserting the following text: “Recalling its decision that the recommendations of the non-unitary approach should use terminology based on the notion of ownership (see document A/CN.9/XL/CRP.1/Add.3, paras. 8 and 10), the Committee considered a proposal ...”.

61. **Mr. Marca Paco** (Bolivia) expressed concern that some of the Secretariat’s suggested amendments appeared to affect the substance of the report. It was difficult for delegations to consider such amendments when the Committee was on the point of adopting the text.

62. **Mr. Sekolec** (Secretary of the Commission) said that the report had been drafted immediately after each day’s meetings and that the original draft might therefore not have reflected the discussions with absolute accuracy. The amendments that had been suggested were not intended to change the outcome of the deliberations but rather to reflect them more accurately.

63. **Ms. Sabo** (Canada), speaking in her capacity as Chairperson of the Committee of the Whole, apologized for the fact that the Committee had made the Secretariat’s work difficult by proceeding in a somewhat fragmented manner and occasionally changing its views. The suggested amendments were intended to ensure that the draft report reflected the whole discussion on each issue and she therefore endorsed them.

64. **Mr. Marca Paco** (Bolivia) said that caution should be exercised under such circumstances to avoid introducing changes of substance or new ideas.

65. **The Chairman** said he took it that the Commission wished to adopt the amendment suggested by the Secretariat.

66. *It was so decided.*

67. **Mr. Smith** (United States of America) proposed replacing the words “the goods” in the phrase in brackets in the third sentence of paragraph 1 with “equipment”, and inserting the words “in equipment” after “priority” in the phrase in brackets at the end of the paragraph. The clauses within brackets were intended to remind the reader of the means whereby an acquisition financier achieved super-priority. However, they would be incomplete if they referred to all goods because additional conditions were required for a super-priority in inventory. The clauses would be accurate only if they were confined to super-priority of a security right in equipment.

68. **Mr. Kemper** (Germany) said that he was reluctant to accept the United States proposal because the Committee had decided that there would be two options for recommendations 189 and 192. One of those options would provide for equal treatment of equipment and inventory in terms of registration requirements. It might therefore be preferable to leave the wording more open than had

been suggested by the representative of the United States.

69. **Mr. Smith** (United States of America) said that it was on account of the existence of the two options that he had proposed confining the reference in the clauses in brackets to equipment. The result for equipment was, in fact, the same for the two options.

70. **Mr. Al-Anbaki** (Observer for Iraq) expressed a preference for the word “goods”, since it was more general and flexible and was in keeping with the technical and legal terms used by most countries.

71. **Mr. Salam-Alada** (Nigeria) proposed retaining the word “goods” and inserting the words “other than inventory” immediately afterwards.

72. **Mr. Smith** (United States of America) expressed support for that proposal.

73. **The Chairman** said he took it that the Commission wished to adopt the wording proposed by the representative of the United States as amended by the representative of Nigeria.

74. *It was so decided.*

75. **Mr. Kemper** (Germany), referring to paragraph 34, said that very few delegations had participated in the debate reflected in paragraph 33 and that proposed new recommendations 194 to 197 had not been adopted. It had been agreed that they should be redrafted, but his delegation had not yet seen the new version. He proposed that they should be considered at the Commission’s resumed session in December 2007 and that paragraph 34 should be reworded along the following lines: “While there seemed to be a tendency to reach agreement on the basis of this discussion, one delegation said that it first wished to see a draft of the text on rights in proceeds that would replace recommendations 194 to 197.”

76. **Mr. Bazinas** (Secretariat) suggested the following wording to reflect the point raised by the representative of Germany: “The Committee approved the substance of the proposed approach to recommendations 194 to 197 and agreed to review those recommendations at its resumed session.” That sentence would be followed by a reference in brackets to paragraph 25 of document A/CN.9/XL/CRP.1/Add.6, which reflected the

decision of the Committee to review those recommendations at its resumed session.

77. **Ms. Sabo** (Canada) said she agreed that paragraph 34 did not accurately reflect the Committee’s decision. The wording suggested by the Secretariat was preferable.

78. **Mr. Kemper** (Germany) said that he was unable to agree to the statement that the Committee had approved the substance of the proposed approach to the recommendations. Moreover, the text suggested by the Secretariat failed to mention a new draft version of the recommendations.

79. **Ms. Sabo** (Canada) proposed the following alternative wording: “The Committee expressed initial approval for the substance of recommendations 194 to 197 but agreed to review a draft of the recommendations in December 2007.” It would then be clear that the Committee would be considering both the drafting and the policy at the resumed session.

80. **Mr. Kemper** (Germany) said that he could accept the wording proposed by the representative of Canada, although he still took issue with the statement that the Committee had approved the substance of the recommendations.

81. **Mr. Burman** (United States of America) expressed support for the wording proposed by the representative of Canada.

82. The Chairman said he took it that the Commission wished to adopt the wording proposed by the representative of Canada.

83. *It was so decided.*

The meeting was suspended at 11.35 a.m. and resumed at 11.55 a.m.

84. **Ms. Walsh** (Canada), referring to paragraph 19, proposed replacing the word “goods” in the second sentence with “tangible asset”, the words “paid portion of their purchase price” in the same sentence with “value in excess of the obligation owing to the seller or lessor”, and the words “tangible property after” in the quoted material in the fourth sentence with “tangible asset in excess of”.

85. **Mr. Smith** (United States of America) said that while he had no objection to the proposed amendment to the fourth sentence, he objected to the

proposed amendments to the second sentence, since that sentence was intended to draw attention to a flaw in the recommendation that was corrected by the revised version in the fourth sentence.

86. **The Chairman** said he took it that the Commission wished to replace the words “property after” in the fourth sentence of paragraph 19 with “asset in excess of”.

87. *It was so decided.*

88. **Ms. Walsh** (Canada), referring to paragraph 36, proposed inserting the words “ownership would pass to the buyer or lessee” after “revised to provide that” in the third sentence and inserting the word “and” before “the seller or lessor”. The phrase in question would then read: “... the suggestion was made that the proposed text should be revised to provide that ownership would pass to the buyer or lessee ‘as against third parties’ and the seller or lessor would have a security right ...”.

89. *It was so decided.*

90. *Document A/CN.9/XL/CRP.1/Add.5, as amended, was adopted.*

A. Adoption of the draft UNCITRAL Legislative Guide on Secured Transactions (continued)
(A/CN.9/XL/CRP.1/Add.6)

10. Chapter XII: Acquisition financing rights/non-unitary approach (continued)

91. **Mr. Smith** (United States of America) said that paragraph 5 should be brought into line with the amendment to paragraph 13 of document A/CN.9/XL/CRP.1/Add.4 adopted earlier in the meeting. He proposed replacing the words “two exceptions” in the second line of paragraph 5 with “an exception” and deleting the word “first” in the second sentence and the word “other” in the fifth sentence.

92. *It was so decided.*

93. *The section of the draft report on chapter XII as a whole, as amended, was adopted.*

11. Insolvency

(a) Definitions and recommendations (A/CN.9/631, chapter XI) and (b) Commentary
(A/CN.9/631/Add.8)

94. **Mr. Redmond** (Observer for the American Bar Association) said that the second part of the first sentence of paragraph 11 was confusing in that it referred to “enacting States”. He suggested replacing it with the following phrase: “and, if necessary, in order to clarify the commentary, include additional recommendations from the Insolvency Guide”.

95. **The Chairman** said he took it that the Commission wished to adopt the suggestion by the observer for the American Bar Association.

96. *It was so decided.*

97. *The section of the draft report on chapter XI and the commentary thereto, as amended, was adopted.*

12. Securities and financial contracts

(a) Securities and (b) Financial contracts

98. **Mr. Kemper** (Germany) proposed deleting the last two sentences of paragraph 18, since Working Group VI had not been mandated to prepare an annex to the draft Guide on certain types of securities.

99. **Mr. Burman** (United States of America) said that, according to his notes, the Committee had decided to refer the matter to the Commission for a decision.

100. **Ms. Sabo** (Canada), speaking in her capacity as Chairperson of the Committee of the Whole, said she recollected that the Committee had agreed on the need for further work in order to define the precise scope of securities. The Committee had also noted that the matter would have to be referred to the Commission and that priority was to be given to intellectual property in the Working Group’s timetable. She therefore proposed adding the words “for future work” at the end of paragraph 18.

101. **Mr. Cochard** (Association française des entreprises privées) expressed support for the proposal made by the Chairperson of the Committee of the Whole.

102. **Mr. Kemper** (Germany) said that he was prepared to accept the amendment proposed by the Chairperson of the Committee of the Whole.

103. **The Chairman** said he took it that the Commission wished to adopt the amendment proposed by the Chairperson of the Committee of the Whole.

104. *It was so decided.*

105. *Section A.12 of the draft report, as amended, was adopted.*

13. Coordination with the draft Unidroit Model Law on Leasing

106. *Section A.13 of the draft report was adopted.*

14. Future work on the draft Guide

107. **Mr. Bazinas** (Secretariat) suggested amending paragraph 25 to reflect the exact wording of paragraph 12 of document A/CN.9/XL/CRP.1, which referred to the approval by the Commission of the decisions of the Committee of the Whole.

108. *It was so decided.*

109. *Section A.14 of the draft report, as amended, was adopted.*

15. Future work on security rights in intellectual property

110. *Section A.15 of the draft report was adopted.*

111. *Document A/CN.9/XL/CRP.1/Add.6, as amended, was adopted.*

The discussion covered in the summary record ended at 12.20 p.m.

**Summary record of the 855th meeting, held at the Vienna International Centre
on Monday, 10 December 2007, at 10 a.m.**

[A/CN.9/SR.855]

Temporary Chairperson: Mr. Sekolec (Secretary of the Commission)

Chairperson: Ms. Sabo (Vice-Chairperson) (Canada)

The meeting was called to order at 10.15 a.m.

Opening of the session

1. **The Temporary Chairperson** opened the resumed fortieth session of the United Nations Commission on International Trade Law (UNCITRAL, hereinafter referred to as “the Commission”).

Appointment of an acting Chairperson

2. **The Temporary Chairperson** announced that the Chairperson, Mr. Mitrović (Serbia), was unable to attend the resumed session and had suggested that he be replaced by Ms. Sabo (Canada), Vice-Chairperson.

3. *It was so decided.*

4. *Ms. Sabo took the Chair.*

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (A/CN.9/617, 620, 631 and Add. 1-11, and 637 and Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1) (*continued*)

5. **The Chairperson** noted that at the first part of its fortieth session the Commission had adopted recommendation 4, subparagraphs (b) and (c), on the scope of the draft UNCITRAL Legislative Guide on Secured Transactions (hereinafter referred to as “the Guide”) with respect to intellectual property, securities and financial contracts as well as recommendations 74 to 230 (A/CN.9/631, chapters I and VII to XIV) and had approved the substance of the commentary on intellectual property (A/CN.9/631/Add.1), the substance of the commentaries to chapters VII to XIV (A/CN.9/631/Add.4 to 11) and the terminology (A/CN.9/631). She further noted that the following material considered at the first part of the session

could be reviewed: the recommendations on the extension of a retention-of-title right or a financial lease right to proceeds (non-unitary approach) and the commentary on the alternatives to the recommendations on the third-party effectiveness of a retention-of-title right or a financial lease right to proceeds (unitary and non-unitary approaches).

6. **Mr. Bazinas** (Secretariat) said that the Commission now had before it a complete set of revised recommendations and revised commentaries prepared by the Secretariat in the light of the decisions taken at the first part of the session (A/CN.9/637 and Add. 1 to 8). It also had before it documents containing commentaries that had not yet been approved (A/CN.9/631/Add.1 to 3). Two documents containing proposed revisions to the introduction, chapter I, section C of chapter II and chapter III (A/CN.9/XL/CRP.11 and Add.1), which had been prepared by the Secretariat to make the draft Guide more user-friendly, and a document submitted by the delegation of the United States containing proposals for amendments to some of the recommendations (A/CN.9/XL/CRP.10) were about to be distributed.

7. **The Chairperson** noted that the material relating to chapters IV to VI was already available. She therefore suggested that the Commission should begin by discussing chapter IV concerning the creation of a security right (effectiveness as between the parties).

8. *It was so decided.*

*Chapter IV: Creation of a security right
(effectiveness as between the parties)
(A/CN.9/631/Add.1 and 637)*

*Recommendations (recommendations 13 to 28)
(A/CN.9/637)*

Recommendation 13

9. *Recommendation 13 was adopted.*

Recommendation 14

10. **The Chairperson** drew attention to a note following the recommendation concerning the requirement in recommendation 14(b) to identify the secured creditor and the grantor in a security agreement. The Commission was asked to decide whether it would be sufficient, on grounds of confidentiality, for the security agreement to identify a representative of the secured creditor rather than the secured creditor itself.

11. **Mr. Umarji** (India) pointed out that a security agreement, unlike a notice of registration, was not accessible to the public. It would serve as the basis for action, however, in the event of enforcement either through the courts or on the part of the secured creditor. It followed that all particulars of the secured creditor must be disclosed.

12. *Recommendation 14 was adopted.*

Recommendation 15

13. **Mr. Sigman** (United States of America), supported by **Mr. Macdonald** (Canada), proposed inserting the words “by itself or” between the phrase “the agreement must be concluded in or evidenced by a writing that” and “in conjunction with the course of conduct between the parties” because the recommendation, as currently drafted, suggested that an investigation into the course of conduct was required in all cases, whereas the writing might be sufficient in itself.

14. *Recommendation 15, as amended, was adopted.*

Recommendations 16 to 28

15. *Recommendations 16 to 28 were adopted.*

Commentary to chapter IV: Creation of a security right (effectiveness as between the parties)
(A/CN.9/631/Add.I, paras. 142-247)

16. **The Chairperson** drew attention to a note by the Secretariat following paragraph 168 requesting the Commission to consider whether recommendation 14 should be revised in order to

clarify that, in cases where the secured creditor relinquished possession of an encumbered asset in which a security had been created by oral agreement and transfer of possession, a written agreement was necessary for the security right to continue to exist.

17. **Mr. Umarji** (India) said that in his view a written agreement was necessary in such circumstances.

18. **Mr. Macdonald** (Canada) proposed making that point clear in the commentary rather than amending recommendation 14.

19. *It was so decided.*

20. **Ms. Walsh** (Canada) proposed amending paragraphs 174 to 176 so that they presented the advantages and disadvantages of the following two options in a more balanced way: (a) requiring the security agreement to specify the maximum amount for which obligations could be secured; and (b) permitting unlimited future extensions of credit. The commentary seemed to favour the unlimited future advance option, although the recommendations were neutral on that point and left the policy decision to individual States. In the case of the first option, the purpose of specifying a maximum amount, which would be disclosed in a registered notice, was to alert third-party secured creditors to their potential priority position. The sentence in paragraph 175 to the effect that a maximum amount would protect the debtor from over-indebtedness and enable it to obtain additional credit from another party failed to provide States with sufficient guidance.

21. *It was so decided.*

22. **Ms. Walsh** (Canada) proposed amending the fourth sentence of paragraph 182, which stated that the lease agreement “must identify that asset as a lease” to read “must identify that asset as the grantor’s right as a lessee under the lease”.

23. *It was so decided.*

24. **Ms. Walsh** (Canada) noted that the second sentence of paragraph 184 concerning the right of parties to agree to create a security right in a future asset stated that the disposition was a present one but became effective as to the future asset only when the grantor became the owner of the asset or the asset came into existence. Two possibilities were

thus recognized but the distinction between them was unclear. In the first case, the grantor subsequently acquired an asset that already existed. In the second case, the asset only came into existence at a later point because it was manufactured. It was not logical to refer to the current disposition of a future asset, which implied that a property right was being transferred. She proposed amending the sentence to make it clear that the creation of the security right required either the acquisition or the coming into existence of the asset.

25. *It was so decided.*

26. **Ms. Walsh** (Canada) asked whether the Secretariat would be in a position to make editorial as opposed to substantive amendments in order to clarify the text after the Commission had concluded its deliberations.

27. **The Chairperson** said that the dividing line between editorial changes and substantive changes was sometimes difficult to establish. However, if she heard no objection from the members of the Commission, she would instruct the Secretariat to make such editorial changes as it deemed to be appropriate provided that there was no doubt as to their status. At the same time, she encouraged Commission members to suggest editorial changes that seemed, in their view, to be important and that could be dealt with speedily.

28. **Ms. Walsh** (Canada) noted that the last sentence of paragraph 190 recommended that general descriptions of present and future inventory be permitted, although paragraphs 188 and 189 dealt not just with inventory but with generic categories of future assets. She therefore proposed replacing “inventory” with “assets”.

29. *It was so decided.*

30. **Ms. Walsh** (Canada) pointed out that while paragraph 190 mentioned that some legal systems restricted security rights in future-acquired assets in the interests of consumer protection, section (d) concerning security in all assets of a grantor (paras. 191 to 199) failed to mention that limitation. She proposed either inserting such a reference or, alternatively, merging sections (c) and (d).

31. **The Chairperson** said she took it that the Commission agreed to leave it to the Secretariat to take Ms. Walsh’s comment into account.

32. *It was so decided.*

33. **Ms. McCreath** (United Kingdom) objected to the following phrase in the first sentence of paragraph 196: “all-asset security rights take the form of a so-called ‘floating charge’ that is merely a potential security right”. She proposed deleting the word “so-called” and indicating that a floating charge was indeed a security right rather than a potential security right.

34. *It was so decided.*

35. **Ms. Walsh** (Canada), referring to paragraph 222 concerning tangible property commingled in a mass or product, proposed placing greater emphasis on the fact that the automatic security right in a manufactured or processed product was limited to the value of the tangible asset prior to the commingling.

36. *It was so decided.*

37. **Ms. Walsh** (Canada) noted that section B.2 concerning the effectiveness of an assignment of receivables made despite an anti-assignment clause (paras. 229 to 232) set out the policy rationale for discouraging anti-assignment clauses in the case of certain categories of receivables but failed to explain why such clauses were acceptable in some cases and unacceptable in others. She proposed amending the commentary to make it clear why anti-assignment clauses were invalidated with respect to the assignment of certain types of receivables and upheld with respect to the assignment of other types.

38. *It was so decided.*

39. **Ms. Walsh** (Canada) proposed amending the second sentence of paragraph 247 concerning the creation of a security right in a negotiable document or goods covered by a negotiable document to read: “As a result, ... provided that the security right in the document is created while the goods are covered by the document of title.”

40. *It was so decided.*

41. *The substance of the commentary to chapter IV was approved subject to the agreed amendments.*

Chapter V: Effectiveness of a security right against third parties (A/CN.9/631/Add.2 and 637)

Recommendations (recommendations 29 to 53) (A/CN.9/637)

42. *Recommendations 29 to 53 were adopted.*

Commentary to chapter V: Effectiveness of a security right against third parties (A/CN.9/631/Add.2, paras. 1-130)

43. **Ms. Walsh** (Canada) drew attention to the second sentence of paragraph 17, which stated that specialized “control” rules were often enacted to apply to a security right in a right to payment of funds credited to a bank account and in a right to proceeds under an independent undertaking. As that approach, which the draft Guide was recommending, would be novel for most States, she proposed amending the opening phrase to read: “Some jurisdictions have enacted specialized ‘control’ rules.”

44. *It was so decided.*

45. **Ms. Walsh** (Canada) proposed amending the second last sentence of paragraph 20, which referred to an exception to the principle of non-exclusivity flowing from the particular character of letter of credit transactions, to make it clear that that approach was being recommended by the draft Guide.

46. *It was so decided.*

47. **Ms. Walsh** (Canada) drew attention to paragraph 42, which referred to the policy in some States of allowing a judgement creditor to obtain a security right in an encumbered asset through registration in the security rights registry and to the consequences of that policy in cases of insolvency. In her view, the comment to the effect that the judgement debtor’s insolvency representative was generally entitled to claim the monetary benefit of a registered judgement creditor’s priority for the benefit of all unsecured creditors did not accurately reflect the treatment of judicial hypothecs in most States. She therefore proposed deleting the first sentence and amending the second sentence to read: “In States that adopt this approach it is necessary to ensure that the judgement creditor’s rights are compatible with insolvency policies.” The final

sentence to the effect that the draft Guide made no recommendation on that point because it was an issue for insolvency law should be retained.

48. *It was so decided.*

49. **Ms. Walsh** (Canada) noted that some passages in section 8 (paras. 95 to 98) concerning continued third-party effectiveness of a security right after a change in the location of the asset or the grantor failed to make it clear that the recommended rule was applicable in all cases to both situations, namely a change in the location of the grantor, where that was the relevant connecting factor for the application of choice-of-law rules, or a change in the location of the asset, where that was the relevant connecting factor. She proposed that the commentary on section 8 should be clarified.

50. *It was so decided.*

51. **Ms. Walsh** (Canada) proposed replacing “Other States” at the beginning of paragraph 115 with “Some States”.

52. *It was so decided.*

53. **Ms. Walsh** (Canada) drew attention to the comparison in paragraph 117 between (a) the approach that gave priority among secured creditors with a security right in accounts to the security creditor that was the first to register, and (b) the approach that gave priority first to the depositary bank and then to any other secured creditor that had achieved control by replacing the grantor as the bank’s customer on the account. The first approach was described as ensuring transparency and permitting the grantor to create a security right without obtaining the consent of the depositary bank. The second approach was then stated to be “more in line with banking practice”, which was not strictly true since only a few States had opted for that approach. She therefore proposed that the commentary should explain in greater detail why States had opted for the first approach and why the draft Guide was recommending that they opt for the second approach. A more appropriate justification than banking practice was, in her view, the need to protect depositary banks from interference with their control over accounts and to protect their set-off rights in line with existing obligations.

54. *It was so decided.*

55. *The substance of the commentary to chapter V was approved subject to the agreed amendments.*

Chapter VI: The registry system (A/CN.9/631/Add.3 and 637)

Recommendations (recommendations 54 to 72) (A/CN.9/637)

Recommendations 54 to 56

56. *Recommendations 54 to 56 were adopted.*

Recommendation 57

57. *Recommendation 57 was adopted.*

Proposed additional recommendations X, Y and Z

58. **The Chairperson** drew attention to a note by the Secretariat following recommendation 57 concerning the required content of a notice, which proposed inserting three additional recommendations (X, Y and Z) that might be entitled “Erroneous notices”.

59. **Mr. Cohen** (United States of America), referring to recommendation X concerning an error in the identifier or address of the secured creditor or its representative, proposed amending the phrase “ineffective as long as it has not seriously misled a reasonable searcher” at the end of the recommendation to read “ineffective unless it would seriously mislead a reasonable searcher”. The new wording would set an objective standard and would not depend on evidence that a particular searcher had been misled. It was also consistent with the wording of recommendation 58.

60. **Mr. Riffard** (France), supported by **Mr. Cohen** (United States of America), suggested introducing the same rule into recommendation Y, which dealt with an error in the description of certain encumbered assets. As currently worded, recommendation Y stated that such an error would not render a registered notice ineffective “with respect to other assets”. He proposed adding a second sentence to the effect that the error would not render the notice ineffective with respect to the insufficiently described assets unless it would seriously mislead a reasonable searcher.

61. **Mr. Bazinas** (Secretariat) suggested making that point instead in recommendation X and leaving

recommendation Y unchanged because it addressed the separate issue of whether an error in the description of certain assets invalidated the notice with respect to other sufficiently described assets.

62. **Mr. Sigman** (United States of America) said that another alternative was to add a free-standing recommendation that would apply the “reasonable searcher” test not only to the description of encumbered assets but also to any other content of the notice except for the duration and maximum amount, which were dealt with in recommendation Z, and the provision of recommendation 58, which had already been approved by the Commission.

63. **Mr. Umarji** (India) said that the point made in recommendation Y was simply that in a notice containing two descriptions, one that was sufficient and the other insufficient, the validity of the former would not be affected. The question of misleading information did not arise in that context.

64. **Mr. Schöfisch** (Germany) queried the use of the term “error”, which could be construed as meaning an error on the part of the reader, whereas the recommendations were in fact referring to the provision of incorrect information.

65. **The Chairperson** said that the term “error” referred to incorrect statements made by the party registering the notice, a fact that should perhaps be made clear in the text.

66. **Mr. Weise** (Observer for the American Bar Association) said that the point raised by the representative of France was already addressed in recommendation 63, according to which a description of the encumbered assets was sufficient if it met the requirements of recommendation 14(d), namely that such assets should be described in a manner that reasonably allowed their identification. Recommendation Y could therefore refer to descriptions of encumbered assets that failed to meet the requirements of recommendation 63.

67. **Mr. Riffard** (France) said that the point he had raised was somewhat different. He had been referring, for example, to a registrant who described an encumbered asset such as a BMW vehicle as a Z4 model when it was actually a Z3 model. His proposed amendment was designed to ensure that such minor errors of description did not render a notice ineffective.

68. **Mr. Sigman** (United States of America) said that an incorrect statement such as that described by the representative of France should clearly be ignored if the remainder of the description was complete and accurate.

69. **Mr. Marca Paco** (Bolivia) said that a law which highlighted the possibility of registrants entering mistaken information in a notice was likely to cause concern and create confusion among creditors. He therefore proposed that the recommendations concerning erroneous notices should be deleted.

70. **The Chairperson** said that the policy considerations underlying the proposed new recommendations were how to balance the need for certainty with the need to ensure that a debtor could not seize on a minimal error in a notice to invalidate the registration. The idea was to set a standard in the light of which an incorrect statement could be assessed.

71. **Mr. Bazinas** (Secretariat) said that the proposed new recommendations were designed to preserve the validity of a notice containing a minor incorrect statement regarding items that were not indexing or search criteria and to prevent uncertainty as to whether a legitimate creditor had obtained a security right that was effective against third parties and that enjoyed priority based on registration of the notice.

72. **Mr. Riffard** (France) expressed support for the proposed new recommendations, since they sent an important message to legislators, namely that care should be taken to maintain balance between the interests of creditors and grantors. Debtors or grantors operating in bad faith or judges who were inclined to protect grantors against what they assumed to be bullying creditors should not be permitted to seize on a minor error in order to invalidate a security right and its registration on unreasonable grounds.

73. Recommendation Z stated that an error in the information provided in the notice with respect to the duration of registration and the maximum amount secured did not render a registered notice ineffective. It might therefore be concluded that an error had absolutely no consequences, in which case a reasonable registrant would refrain from entering any maximum amount. He proposed describing in the commentary to recommendation Z the practical consequences of the provision of erroneous information regarding the duration of registration and the maximum amount secured.

The meeting rose at 12.30 p.m.

**Summary record of the 856th meeting, held at the Vienna International Centre
on Monday, 10 December 2007, at 2 p.m.**

[A/CN.9/SR.856]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 2.10 p.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work**

(A/CN.9/617, 620, 631 and Add. 1-11, and 637 and
Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1)

(continued)

*Chapter VI: The registry system (A/CN.9/631/Add.3
and 637) (continued)*

*Recommendations (recommendations 54 to 72)
(A/CN.9/637) (continued)*

*Proposed additional recommendations X, Y and Z
(continued)*

1. **The Chairperson** said she took it that the Commission agreed to include proposed additional recommendations X, Y and Z in chapter VI.

2. *It was so decided.*

3. **Ms. Walsh** (Canada) proposed replacing the phrase “does not render a registered notice ineffective” in recommendations X, Y and Z with the phrase “does not render the registration of a notice ineffective”. The recommendations on third-party effectiveness in the draft Guide described the registration of a notice as a mode of third-party effectiveness. The question to be addressed was thus whether an error in the notice would invalidate registration as a mode of third-party effectiveness.

4. The representative of France had made the point that a debtor or grantor might seek to render a registration ineffective. She pointed out that such a tactic would have no impact on the effectiveness of the registration of a security right as between the parties but might impinge on its effectiveness against third parties. With that proviso, she agreed with his point that it might be in the interest of third parties to argue that a minor error rendered the registration ineffective.

5. With regard to recommendation Z, the representative of France had pointed out that an error in the description of the duration of registration or the maximum amount secured seemed to have no consequences whatsoever. In practice, if a security agreement specified \$100,000 as the maximum amount for which security was created and the registered notice set the amount at \$50,000, third parties would be entitled to rely on the lower amount. A subordinate creditor would conclude from the notice that it would have priority for any loans made above \$50,000. On the other hand, registration would not be ineffective for the first secured creditor, which would be bound by the amount of \$100,000. However, in the converse situation where the registered notice stated \$100,000 and the security agreement only \$50,000, the secured creditor would be limited to the latter amount. Similarly, if a shorter period was specified in the registered notice than in the security agreement, the registered duration would be conclusive from the point of view of third parties.

6. Lastly, she noted that recommendation Y, as currently worded, might not cover all conceivable situations. She therefore proposed first stating that an error in the description of encumbered assets did not render a notice ineffective unless it would be seriously misleading and then making the point that if an error as seriously misleading the registration was ineffective only with respect to assets that were inaccurately described and not with respect to other assets that were accurately described.

7. In response to a question from **Mr. Bazinas** (Secretariat) regarding her comment that third parties should be entitled to rely on the duration or the maximum amount stated in the notice of registration, **Ms. Walsh** (Canada) said that her point related only to recommendation Z and not to recommendations X and Y.

8. **Mr. Cohen** (United States of America), supported by **Mr. Schöfisch** (Germany), proposed moving recommendations X, Y and Z to after recommendation 58.

9. **The Chairperson** suggested leaving it to the Secretariat to decide on the most logical order of the recommendations.

10. **Mr. Schöfisch** (Germany) noted that recommendation 58 referred to an “incorrect statement”. He suggested establishing as the main rule that an incorrect statement was ineffective only when it would seriously mislead a reasonable searcher. In his view, it was not really necessary to differentiate between different aspects of the same rule. The draft Guide was not supposed to deal with every conceivable topic but to provide general recommendations to States and legislators.

11. **Mr. Smith** (United States of America), referring to the proposal by the representative of Canada to replace the phrase “does not render a registered notice ineffective” with “does not render the registration of a notice ineffective”, said that he found the original wording more accurate since registration occurred in due form but the notice contained erroneous information.

12. He proposed clarifying in recommendation Z that third parties should be entitled to rely on the duration or the maximum amount stated in the notice of registration.

13. **Mr. Patch** (Australia), referring also to recommendation Z, said that a person that entered a shorter duration in the notice of registration than that contained in the security agreement must obviously be bound by the shorter duration. Another issue arose, however, where the period stated in the notice of registration was longer than that permitted by the relevant legislation. He proposed stating in recommendation Z that the default period under such circumstances was the maximum period permitted by law. Similarly, where the legislation prohibited a secured party from specifying a maximum amount that exceeded a certain proportion of the debtor’s assets and the amount stated in the notice of registration exceeded that proportion, the default amount should, in his view, be the maximum permitted by the relevant legislation.

14. **Ms. Walsh** (Canada) said that the recommendations did not purport to deal with errors of law but with errors involving a difference between the way in which the terms agreed on by the grantor and the secured creditor were reflected in the security agreement and the notice of registration in jurisdictions that adopted the system recommended by the draft Guide. The issue raised by the representative of Australia would arise only in connection with the duration of the registration, where there were two possibilities: the parties could either self-select or States could specify a maximum amount in their legislation. She did not think that the recommendations should cover errors occurring in that context. A registered duration which exceeded that permitted by law would clearly be ineffective, but the registry would normally be designed to prevent such errors from occurring.

15. She did not consider it necessary to state in recommendation Z that third parties were entitled to rely on the maximum amount registered.

16. With regard to the proposal to establish as the main rule that an incorrect statement was not fatal to the status of the registration unless it was seriously misleading, she felt that it would be more helpful to spell out all the possibilities, which were, broadly speaking, an error in description, an error in duration (in systems that opted for self-selection) and an error in the name.

17. Although she was not convinced by the argument put forward by the representative of the United States, she would not insist on her proposal to replace “does not render a registered notice ineffective” with “does not render the registration of a notice ineffective”. She had merely sought to align the wording with that used in the chapter on third-party effectiveness.

18. **Mr. Sigman** (United States of America) said that it should be made clear when spelling out the consequences of errors that a person who had relied to its detriment on false information was protected from those consequences.

19. He agreed that errors with respect to duration were different from other kinds of errors. Where a jurisdiction imposed a specific duration, errors would be corrected by the registry system. If there were no such restraints on the registrant,

discrepancies would also be corrected, since if the registrant paid for 5 years and stated 10 years on the notice, the notice would be cancelled after the expiry of the five-year term, while if the registrant paid for 10 years and stated 5 years on the notice, the registrant could amend the notice at any time. In cases where the grantor might be harmed, the draft Guide already contained provisions requiring the secured creditor to terminate the notice and entitling the grantor to institute legal proceedings or to have the notice amended in the registry.

20. **Mr. Riffard** (France) noted that in the case of recommendations X and Y, the consequence of an error was that the notice was still effective and, where the error was minor, it was effective vis-à-vis third parties that had consulted the registry and could employ reasonable means to remedy the situation. The notice was thus effective vis-à-vis the actual situation and not vis-à-vis the erroneous statement in the notice. He submitted that the consequence of an error should be similar in the case of recommendation Z. For example, where a notice stated a maximum amount or duration that exceeded the amount or duration in the security agreement, the erroneous figure should be ineffective vis-à-vis third parties that had no access to the security agreement and were therefore unable to take action to correct the error.

21. **Ms. Walsh** (Canada) **Mr. Umarji** (India) concurred with that view.

22. **The Chairperson** invited the Secretariat to summarize the discussion on the proposed new recommendations.

23. **Mr. Bazinas** (Secretariat) noted that the Commission seemed to agree that the word “error” should be replaced by “incorrect statement”.

24. If a reference to the description of encumbered assets were included in recommendation X, the following wording might be acceptable: “The law should provide that an incorrect statement in the identifier or address of the secured creditor or its representative or in the description of the encumbered assets does not render a notice or registration ineffective unless it would seriously mislead a reasonable searcher.”

25. **The Chairperson** said that, if she heard no objection, she would take it that the Commission

approved the amended wording of recommendation X. The commentary should make it clear that the term “incorrect statement” referred to a statement made by the registering party.

26. *Recommendation X, as amended, was adopted.*

27. **Mr. Bazinas** (Secretariat) noted that the Commission seemed to agree that recommendation Y could remain unchanged apart from the replacement of the word “error” by “incorrect statement”.

28. **The Chairperson** said she took it that the Commission approved the amended wording of recommendation Y.

29. *Recommendation Y, as amended, was adopted.*

30. **Mr. Bazinas** (Secretariat) said that there seemed to be broad agreement in the case of recommendation Z on the principle that a third party that suffered damage on account of having relied on incorrect statements in notices of registration should be protected. However, he sensed that there was some difference of opinion regarding the status of third parties in the event of discrepancies between the maximum amount stated in the security agreement and the notice of registration.

31. **Mr. Patch** (Australia) enquired about the practical consequences of the receipt by the registry of a notice specifying a duration of registration that exceeded the maximum period permitted by law.

32. **Mr. Bazinas** said that the registry’s response would depend on its structure. However, in a jurisdiction that prescribed a maximum duration of registration, the result would be the same regardless of the registry’s response. It followed that there was no need to amend recommendation Z.

33. **Mr. Patch** (Australia) said he understood that if the electronic message sent by the registrant specified a period greater than the maximum duration permitted by the legislation, the registration would be effective only for the maximum period allowed by the legislation.

34. **Ms. Walsh** (Canada) suggested that the question of an error in law by the registrant should be addressed in the commentary.

35. She confirmed that third parties should be protected where the security agreement specified a

maximum amount that was greater than the amount appearing in the registered notice. In that eventuality, the registrant could enforce its security right against the grantor up to the outstanding amount of the secured obligation, but would have priority over competing claimants only up to the lower amount mentioned in the notice. Conversely, where the amount specified in the security agreement was less than the amount that appeared in the registered notice, the registrant could enforce its security right with priority only up to the amount mentioned in the security agreement. Recommendation Z did not need to address those situations since they were covered elsewhere in the draft Guide.

36. **Mr. Sigman** (United States of America) said that he was opposed in principle to the inclusion of a maximum amount in the registered notice. However, in jurisdictions that adopted that approach it was important to protect a person that reasonably relied on erroneous information from suffering the consequences. In most transactions, a prospective lender would obtain a copy of the security agreement from the grantor or the prior registered secured creditor. If the amount appearing in the notice was less than that in the security agreement, it would not be misled by the error in the notice.

37. **Ms. McCreath** (United Kingdom) asked who would be held responsible where a party was misled by an error.

38. **Mr. Sigman** (United States of America) said that the question of responsibility would not normally arise. It was rather an issue of consequences, and the consequences would vary in terms of the extent to which the secured right was enforceable with priority vis-à-vis the protected party.

39. **Ms. Kaller** (Austria) said that the term “reasonable searcher” seemed to imply that a third party was required to search for information beyond the registry in order to determine, for example, whether an error had been made in the notice.

40. **Mr. Bazinas** (Secretariat) said that the function of the registry was not to provide all available information about the existence of a security right but to serve as a warning signal to a reasonable searcher that a certain asset might be

subject to another security right. To ascertain whether that was the case, information outside the registry would have to be sought. The commentary made it clear that a reasonable searcher had to search the registry on the basis of the name of the grantor in order to identify a notice. If it wished to check whether the assets of a party to which it proposed to extend credit were already encumbered, it would have to search outside the registry.

41. **Ms. Walsh** (Canada) said that the concern expressed by the representative of Austria was valid, since the term “reasonable searcher” might be construed as suggesting that an additional enquiry obligation arose in the event of an error in the notice. The commentary should make it clear that the question of whether a reasonable searcher was misled related solely to the information provided in the registry.

42. **The Chairperson** noted that there was broad agreement that recommendation Z should make it clear that, in systems requiring the specification of a maximum amount, protection should be provided for third parties that might have relied on that amount to their detriment. In systems where the law prescribed a maximum duration of registration, the registry would normally be structured in such a way as to prevent periods greater than the maximum duration from being registered. In any case, users of the system would presumably be aware of the rules. Where a system left the registering party free to select any period of time, third parties should, of course, be able to rely on the duration specified in the notice.

43. If she heard no objection, she would take it that the Commission wished to adopt recommendation Z, replacing the word “error” by “incorrect statement” and adding a clause dealing with the consequences that would flow from a third party relying on an incorrect statement. The question of an error in law by the registrant would be addressed in the commentary.

44. *Recommendation Z was adopted on that understanding.*

45. **Mr. Macdonald** (Canada) said that he had noticed a possible discrepancy between an earlier chapter of the draft Guide and the chapter on the registry system under discussion. According to

recommendation 57 (d), in cases where a State determined that a maximum monetary amount would help to facilitate subordinate lending, the notice should contain a statement of that maximum amount. However, recommendation 14 in chapter IV concerning the form of a security agreement failed to refer to that eventuality. In his view, it was important to include a statement of maximum amount in the security agreement because otherwise a secured creditor might unilaterally set a maximum amount in the registered notice without reference to any prior agreement with the grantor.

The meeting was suspended at 3.30 p.m. and resumed at 3.55 p.m.

46. **The Chairperson** said she took it that the Commission wished to include wording along the lines of recommendation 57 (d) in recommendation 14.

47. *It was so decided.*

48. **Ms. Walsh** (Canada) proposed emphasizing in the commentary that the minimum content requirements could be satisfied in the case of recommendation 14 by means of a number of different agreements on condition that they were cross-referenced. It was not necessary to set out all relevant information in a single security agreement.

49. *It was so decided.*

50. **Ms. McCreath** (United Kingdom) queried the inclusion of the word “only” in the chapeau of recommendation 57: “The law should provide that the following information only is required to be provided in the notice.” In her view, that wording was unduly restrictive. For instance, certain information that was not listed in recommendation 57 had to be included in a notice of registration in the United Kingdom.

51. **The Chairperson** said that the wording of recommendation 57 had been discussed at length by Working Group VI (Security Interests) and had already been approved in principle by the Commission.

52. **Ms. Walsh** (Canada) said that the purpose of the restriction on the amount of information provided in the registered notice was to prevent confusion by standardizing the information that third parties would need to see in order to protect

their interests. Any additional information would place an additional burden on the registry and make it more difficult for third parties to identify aspects that were relevant to their legal rights.

53. **Mr. Sigman** (United States of America) said that limiting the content of the notice would promote the acceptability of a registry in countries that were unaware of the existence of such a device. If the information to be registered was short and simple, States could design an inexpensive electronic registration system that could be used by both laypersons and financial institutions.

Recommendations 58 to 60

54. *Recommendations 58 to 60 were adopted.*

Recommendations 61 and 62

55. **Mr. Umarji** (India) said that recommendation 62 concerning the impact of a transfer of an encumbered asset on the effectiveness of the registration placed the onus of amending the registration within a specified time on the secured creditor rather than on the grantor or the transferee. That approach was not workable in practice and was incompatible with the object of the draft Guide, which was to encourage secured credit. The rights of a secured creditor should be protected in cases where, for instance, a grantor concealed the transfer of an encumbered asset. He therefore proposed amending the recommendation to place the onus of amending the registration on the grantor or the transferee.

56. **Mr. Smith** (United States of America) said that the representative of India had raised an important policy issue. Where an asset was transferred subject to a security right, the transferee might wish to obtain credit from another secured creditor or to sell the encumbered asset. The secured creditor of the transferee would in any case have a duty of due diligence to clarify the chain of title of the asset. Hence, it would be a sensible policy judgement to place the burden of determining whether the security right had been released on the secured creditor of the transferee or on the buyer from the transferee rather than on the original secured creditor.

57. **Ms. Walsh** (Canada) said that placing the burden on the transferee seemed illogical in light of the policy objective of the recommendation, which was to protect a transferee or subsequent secured creditor in dealings with a grantor that had dealt with a prior secured creditor under a different identifier.

58. **Mr. Patch** (Australia) said that the obligation to update the registered notice should be on the original secured creditor but recommendation 62 should be amended to extend the period during which the secured party, which might initially be unaware of the transfer of the asset, could update the registration. The transferee or the transferee's secured creditor had no incentive to effect a registration that would protect the interest of the transferor's secured creditor.

59. **Mr. Bazinas** (Secretariat) suggested that the proposal by the representative of India might be reflected in recommendation 62 by stating that the grantor or the transferee should inform the secured creditor of the transfer of an encumbered asset. The onus would then be on the secured creditor to take the necessary action.

60. **Mr. Umarji** (India) said that the Secretariat's suggestion was acceptable. Due notice of the transfer should be given to the original security creditor, which, if it consented to the transfer, would amend the registered notice. The original security right would continue after the transfer.

61. **Ms. McCreath** (United Kingdom) said that if the amendment suggested by the Secretariat was accepted, the words "after the transfer" in the second sentence of the recommendation should be amended to read "after notice of the transfer is given".

62. **Mr. Smith** (United States of America) the situation under discussion arose when a grantor transferred an encumbered asset subject to a security right. In many cases, however, the secured creditor would be unaware of the transfer. If the transferee had consulted the public filing system, it would have found a notice against the grantor covering the encumbered asset. The transferee might, however, fail to do so and seek to borrow money from another lender on the basis of the encumbered asset. The question was whether the second lender had an

obligation of due diligence to establish whether the asset came free of a security right or whether it could simply rely on the registration system. A rule requiring the transferee to correct the record would serve no purpose if the transferee neglected to search the registry and was unaware of the security right. Moreover, a rule requiring the secured creditor of the transferor to correct the public record when it was notified of the transfer would not affect the obligation of due diligence of the secured creditor of the transferee because the latter could not be sure that there was no secured creditor of the transferor that was unaware of the transfer. It followed that the best option was to place the risk on the secured creditor of the transferee rather than imposing monitoring costs on the secured creditor of the transferor, which would drive up the cost of credit.

63. **Mr. Patch** (Australia) said that he agreed to some extent with the approach just described. The grantor and the transferee had little incentive to register because they were probably acting contrary to the security agreement. The question was whether to impose monitoring costs on the transferee and the transferee's creditor or, alternatively, on the transferor's creditor. He suggested that the grantor's secured creditor should be required to register within a period of, say, five days of becoming aware of the transfer of the asset. After that period expired without registration, a secured creditor of the transferee could be confident of taking a security right in the asset. If the grantor's secured creditor was unaware of the transfer, it would continue to have priority over the security rights of the transferee's secured creditor, but if the transferee's secured creditor became aware of the security right through due diligence, it could put the grantor's secured creditor on notice, wait for the grace period to expire and take a security right in the asset if the grantor's secured creditor failed to register. The transferee's secured creditor thus had an incentive to give notice to the grantor's creditor.

64. **Ms. Walsh** (Canada) said that she did not think it would be helpful for the draft Guide to impose an obligation on the grantor to inform its secured creditor of a transfer of the collateral, since the problem being addressed was a situation in which the grantor transferred collateral without the authorization or consent of its secured creditor. That

would normally constitute a breach of the security agreement.

65. The draft Guide assumed that anybody purchasing or taking security in an asset would undertake a search of the registry. It followed that the transferee ought to have checked the registry and realized that it was acquiring the asset subject to a prior security right. Where the transferee then approached a new secured creditor or buyer, a search of the registry by the lender or buyer would fail to reveal the security right because it was indexed in the name of the grantor and not in the name of the transferee. There were therefore two innocent victims: the first secured creditor whose asset was transferred without consent or authorization, and the buyer or secured creditor that was dealing with the transferee in the belief that it was the unencumbered owner of the asset. The question was whether the resulting loss should be borne by the secured creditor or buyer that dealt with the transferee or by the original secured creditor. The Working Group had decided that it was important to protect the reliability of the registry system, which was grantor-based. If the transferee's secured creditor or the buyer found no security right in the registry, it was not encumbered by the existing right.

66. Her delegation was not averse to adopting a rule which stated that the original secured creditor would not be at risk for failing to amend the registry following a transfer unless it failed to amend it within a short period after finding out about the transfer. As a compromise, she proposed applying that rule where the encumbered asset was transferred to another secured creditor that would presumably have the expertise and resources to investigate whether there was a prior security right. On the other hand, where a buyer acquired the asset from the transferee before the amendment was made, the buyer should be protected in all cases.

67. **Mr. Schneider** (Germany) said that he agreed with the representative of India that recommendation 62 was unsatisfactory, since it placed the burden of amending the registration on the secured creditor although it might well be unaware of the transfer of the encumbered asset. There was no incentive for the grantor to inform the secured creditor. Moreover, if the grantor was not the debtor, no contractual relationship and hence no

statutory duty existed. He wondered why it was necessary to amend the registration of a security right and why the secured creditor would lose its rights if there was no amendment.

68. **Mr. Sigman** (United States of America) said he took it that the representative of Germany was suggesting that recommendation 62 should be deleted. In his view, that was the simplest solution. The proposed amendment to recommendation 62 to protect two presumably innocent secured parties would merely increase the complexity of the draft Guide. If the recommendation was deleted, the original secured party would be relieved of the monitoring burden imposed by a provision requiring it to amend the record at some point. Requiring knowledge on the part of the secured creditor could lead to litigation regarding issues such as whether the secured creditor had knowledge, what constituted knowledge and when knowledge was required. The least costly overall burden on the system was to dispense with the duty to amend the record. The idea of having separate rules for buyers and secured parties was particularly undesirable in terms of the objective of keeping the draft Guide as simple as possible.

69. **Mr. Umarji** (India) said that the draft Guide should not be perceived as condoning the behaviour of a grantor that transferred an encumbered asset without disclosing the transfer to the secured creditor.

70. **Mr. Voulgaris** (Greece) expressed support for the point made by the representative of India. It should be borne in mind that the secured creditor held a security right in rem. If it was made responsible for the subsequent transfer of the encumbered asset, responsibilities were in effect being reversed. The secured creditor could not be expected to play the role of a detective vis-à-vis the grantor. Recommendation 62 should therefore either be deleted or amended in such a way as to require the grantor to inform the secured creditor of any transfer of an encumbered asset. Failure to do so should under no circumstances entail the loss of the secured creditor's security right.

71. **Mr. Boulet** (Observer for Belgium) said that, as noted by the representative of Canada, there were two potential innocent victims, the buyer and the original secured creditor. The rule stated in

recommendation 62 was therefore unsound, since it would be inappropriate to punish the original secured creditor for a transfer of the encumbered asset for which it was not responsible. The grantor could perhaps be required to inform the original secured creditor of the transfer, following which it would be more reasonable to require the latter to amend the notice. The situation was somewhat different in the case of a buyer inasmuch as it could be expected to check the registry in order to determine whether the asset transferred by the grantor was encumbered by a prior security right.

72. **Mr. Deschamps** (Canada) said that his delegation was in favour of retaining a revised version of recommendation 62. He proposed amending the second sentence of the recommendation to read: “If the secured creditor does not register the amendment within [a short period of time to be specified] days after acquiring knowledge of the transfer, the security right is ineffective against ...”.

73. **Mr. Markus** (Switzerland) expressed support for the proposal to delete recommendation 62 for the reasons stated by the representative of the United States. The concept of acquired knowledge was difficult to prove and the occasions in which an original secured creditor would wish to amend a registered notice were, in his view, extremely rare.

The meeting rose at 5 p.m.

**Summary record of the 857th meeting, held at the Vienna International Centre
on Tuesday, 11 December 2007, at 9.30 a.m.**

[A/CN.9/SR.857]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 9.40 a.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work**

(A/CN.9/617, 620, 631 and Add. 1-11, and 637 and
Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1)

(continued)

*Chapter VI: The registry system (A/CN.9/631/Add.3
and 637) (continued)*

*Recommendations (recommendations 54 to 72)
(A/CN.9/637) (continued)*

Recommendations 61 and 62 (continued)

1. **The Chairperson** said that she had reviewed the policy considerations that had led Working Group VI (Security Interests) to include recommendation 62 in the draft Guide. One consideration had been the need to balance the interests of different parties and another to maintain the integrity of the registry system. If the interest of the transferee was allowed to prevail over that of the original secured creditor, it would greatly undermine the integrity of the registry system. Those policy considerations should be taken into account in any proposal to amend or delete the recommendation. She drew attention in that connection to recommendation 31 (Continued third-party effectiveness after a transfer of the encumbered asset), which stated the default rule. If recommendation 62 were to be deleted, the rights of the original secured creditor would prevail pursuant to recommendation 31. However, it had been agreed in the discussion at the previous meeting that a buyer, a transferee or the secured creditor of a transferee should also be afforded some protection.

2. **Mr. Riffard** (France) said that, in his view, it was impossible to provide a satisfactory answer to the question raised in a grantor-based registry system. The task before the Commission was to balance the interests of two innocent parties: the

original secured creditor of the grantor, which was perhaps unaware of the transfer of the encumbered asset, and a subsequent purchaser from or secured creditor of the transferee that had no way of obtaining knowledge of the transfer from the registered notice. None of the three possible solutions was satisfactory. The first solution was to ensure that the interests of the secured creditor prevailed because it should not suffer the consequences of the debtor's fraudulent conduct. A second was to protect a third party that was acting in good faith and that could not have obtained knowledge of the security right. The third solution, which might at first glance seem to be an acceptable compromise, consisted in requiring the grantor to inform the secured creditor of the transfer so that the latter could then amend the registered notice. Unfortunately, that solution had to be rejected on reflection because, on the one hand, it was unrealistic inasmuch as the grantor had already breached its contractual obligation to retain possession of the encumbered asset. On the other hand, it was unclear what kind of amendment should be made by the secured creditor when it learned of the transfer. The name of the grantor could not be amended without undermining the integrity of the registry system.

3. It followed that legislators would be faced with a policy decision as to whether the law should protect the secured creditor or third parties acting in good faith. States with civil law systems would tend to give precedence to third parties, but legislators should remain free to decide. He therefore proposed deleting recommendation 62 and discussing the options instead in the commentary, emphasizing that although the issue was theoretically important, it rarely arose in practice.

4. **Mr. Bazinas** (Secretariat) asked whether the representative of France had reservations regarding the requirement for the grantor to inform the secured

party because a breach of that obligation would create a contractual cause of action.

5. **Ms. Stanivuković** (Serbia) said that if recommendation 62 were to be deleted, it would also be necessary to delete recommendation 61 since they were both designed to protect the good faith of third parties that had relied on information contained in the registry.

6. The protected person in recommendations 61 (a) and 62 (a) was a subsequent secured creditor that was unaware of the existence of an earlier security right because it relied on the result of a registry search, and the protected person in recommendations 61 (b) and 62 (b) was a subsequent buyer. Deletion of the two recommendations would undermine the registry system. If the sale was made in the ordinary course of business, the buyer did not need to check the registry because it would obtain ownership without the security right. If the sale was not made in the ordinary course of business, there was no point in checking the registry because no amendment had been made. She therefore proposed retaining the two recommendations but placing an obligation on the grantor and transferee rather than on the secured creditor and including a provision regarding liability for damages. The chapeau of recommendation 62 would then read:

“The law should provide that, if, after a notice is registered, the grantor transfers the encumbered asset, the grantor and the transferee have a duty to amend the registered notice, changing the identifier of the grantor to the name of the transferee. The secured creditor may also make such an amendment. If no amendment is made within [a short period of time to be specified] days after the transfer, the security right is ineffective against: ...”

Subparagraphs 62 (a) and 62 (b) would remain unchanged and the following sentence would be added at the end of the recommendation:

“The grantor and the transferee shall be jointly and severally liable to the secured creditor for any damages arising from their failure to register the amendment referred to in this recommendation.”

7. **The Chairperson** noted that the proposed amendment would convert the secured creditor’s

interest into a right of action against the grantor and the transferee.

8. **Ms. Deschamps** (Canada) said he agreed that recommendations 61 and 62 should be considered jointly.

9. In reply to a question raised by the representative of France, he said that in the case of recommendation 61, the secured creditor would be required to amend the registered notice to indicate the new identifier of the grantor. In the case of recommendation 62, it would indicate that the asset was now owned by the transferee.

10. He was in favour of retaining recommendations 61 and 62 on condition that the time period for amendment of the registration began on the date on which the secured creditor acquired knowledge of the change. The practice currently followed in Canada was similar to that contemplated in recommendation 62. Transferees or prospective lenders to transferees advised the original secured creditor of the transfer and were then assured of acquiring title free of the previous encumbrance in the absence of an amendment to the registered notice within a fixed number of days. That *modus operandi* was considered in some cases to be simpler than obtaining a discharge from the previous secured creditor, which could often prove cumbersome.

11. **Mr. Voulgaris** (Greece) said that recommendation 62 was illogical and, even if amended, would not be accepted by States. A secured creditor that had correctly registered an asset could not be required, on account of the misconduct of a grantor, to forfeit its rights or to play the role of a detective. It should be left to ordinary law to establish which party was liable for the damages sustained.

12. **Mr. Umarji** (India) drew attention to recommendation 76 concerning priority in the event of transfer, which protected the secured creditor. He noted that the grantor’s obligation to inform was also applicable in the case of recommendation 61. In India, for example, where two companies planned a merger and both had borrowed against the security of their assets, the merger could not take place without the approval of the secured creditors.

13. **Mr. Sigman** (United States of America) said that his delegation continued to support the deletion of recommendation 62 in the interests of keeping the draft Guide as simple as possible and producing the cheapest credit available in the most efficient manner. The representative of France had ably stated the arguments in support of that position. It was not an issue of the integrity of the registry but of its utility. Secured creditors were assured that if they registered accurately and in a timely manner they would be protected. Integrity did not mean that a searcher should be able to obtain complete answers to every possible question in all circumstances. Where a grantor transferred an encumbered asset and the transferee made a further transfer, the subsequent buyer or lender was actually a fourth party which had a duty of due diligence to clarify the chain of title. No new burdens were imposed and there was no question of the registry being inaccurate.

14. A provision regarding liability for damages would serve no purpose, especially in the event of the grantor's insolvency. Grantors or transferees that were not acting in good faith would be liable in any case under other legislation.

15. **The Chairperson**, reviewing the options before the Commission, said that strong grounds would need to be invoked in order to amend provisions that had been discussed at length in the Working Group and that had already been reviewed by the Commission. There seemed to be a consensus that recommendation 62 was not entirely satisfactory but, as the representative of France had noted, there seemed to be no perfect solution to the problem. At the same time, a number of delegations were opposed to the deletion of recommendation 62. As concern had been expressed about the burden of monitoring placed on the original secured creditor, it had been suggested that the grantor and the transferee should be required to inform the secured creditor of any transfer. Such an obligation had, however, been deemed unrealistic inasmuch as the grantor was in most cases already breaching the terms of the security agreement by transferring the asset. Another option was to require the original secured creditor to amend the registered notice only where it acquired knowledge or had been notified in writing of the transfer. In all other cases its interests would continue to be protected. Some speakers had

noted that it was in the interest of the transferee and the transferee's secured creditor to ensure that the grantor's secured creditor was informed. She asked whether the Commission was prepared to accept that option.

16. **Mr. Smith** (United States of America) said that if deletion was not an option, his delegation would prefer to retain recommendation 62 as it stood since a knowledge test would merely create grounds for litigation. He pointed out that the recommendation in its current form would protect subsequent parties.

17. **Mr. Schöfisch** (Germany) said that his delegation would have preferred to delete recommendation 62. He agreed with the point made by the United States regarding the knowledge test. For instance, if the secured creditor acquired knowledge only one year after the transfer had occurred, there would be considerable uncertainty regarding the situation during the intervening period. By way of a compromise, however, his delegation would be prepared to support an amendment along the lines of that proposed by the delegation of Canada.

18. **Mr. Patch** (Australia) said that the secured creditor's interests should be protected until it acquired knowledge of the transfer. However, he opposed the idea of requiring the grantor or the transferee to give notice to the secured creditor. Although there was a contest between two innocent parties, the original secured creditor lost its innocence once it became aware of the transfer and failed to amend the registered notice. He supported the compromise proposed by the representative of Canada.

19. **Mr. Macdonald** (Canada) said that it was a principle of the draft Guide that the secured creditor retained a right in the proceeds of disposition of an asset subject to a security right. However, if the original secured creditor could always assert its right against transferred assets, regardless of the hands into which they passed, nobody would ever be able to lend on any asset unless it had precise knowledge of the history of the asset. The purpose of the rule proposed by Canada was to make it possible for the secured creditor to protect itself when knowledge was acquired but also to make it possible for a transferee to use the value of an asset

that it acquired to sustain a loan from its own creditor. He proposed that the commentary should set out all the competing policies in detail.

20. **Mr. Bazinas** (Secretariat) suggested adopting written notification of the original secured creditor as the rule in both recommendations 61 and 62. The subjective aspect of the issue of acquisition of knowledge would thus be avoided and the interests of innocent parties would be balanced.

21. **Mr. Voulgaris** (Greece) said that if the proposal to delete recommendation 62 was unacceptable, he would support any alternative solution only if it was workable.

22. **Mr. Fall** (Senegal) pointed out that the term “transfer” was somewhat vague in legal terms. In principle, if an asset was encumbered, the grantor was not entitled to effect a transfer during the period of registration. If the implications of recommendation 62 could not be clarified, his delegation would prefer to delete it.

23. **The Chairperson** said that the commentary should set out the different policy considerations and recognize the difficulties involved in reconciling conflicting interests.

24. The Commission needed to consider not only how the recommendations in the draft Guide might be reflected in legislation but also how they would work in practice. A mechanism that protected all parties’ interests would be based on a combination of legislation, the operation of the registry and action by the parties themselves. Commercial parties clearly had an interest in avoiding litigation by taking a simple step that would ensure protection of their rights. It was thus in the interest of the transferee to ensure that the secured creditor had knowledge of the transfer. No support had been expressed for the option of a written notification requirement but she again invited the Commission to consider a compromise solution involving a knowledge test.

25. **Mr. Weise** (Observer for the American Bar Association), referring to the question of whether recommendations 61 and 62 should be treated in the same way, said that it was far less difficult and costly for the grantor’s secured creditor to find out about a change of name under recommendation 61 than to ascertain whether its grantor had transferred

the encumbered asset. Hence it did not necessarily follow that the balance of equity determined for recommendation 62 would also be applicable to recommendation 61.

26. **Mr. Cercone** (Italy) suggested that, in the absence of a balanced solution, the Commission should recognize the existence of a trade-off and offer States a number of options from which to choose.

27. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to amend recommendation 62 to state that the law should address the issue. The commentary would then spell out the advantages and disadvantages of the different policy options.

28. *Recommendation 62 was adopted on that understanding.*

29. **Mr. Smith** (United States of America), supported by **Mr. Umarji** (India) noted that the policy issues discussed in recommendation 62 were equally applicable to recommendation 61. Where an encumbered asset existed at the time of a change in the grantor’s identifier, the effect was the same as if the grantor had transferred the asset. He therefore proposed leaving recommendation 61 unchanged with respect to future assets but making it clear in the commentary that the same points regarding policy options were applicable to existing assets at the time of change of the identifier.

30. **Ms. Kaller** (Austria) expressed support for the proposal to leave recommendation 61 unchanged. It was important to ensure that prospective secured creditors were able to find the grantor’s identifier. In recommendation 62, on the other hand, a transferee that failed to consult the registry and find a prior security right would be at fault.

31. **Ms. Walsh** (Canada) said that the person protected under recommendation 62 was not the initial transferee, which should have searched the registry, but the secured creditor or buyer that subsequently dealt with the transferee. The issue of whether recommendation 61 should be treated differently should, in her view, be addressed from the standpoint of the monitoring burden. Her delegation was not averse to leaving the recommendation unchanged but it would not support

the proposal to make a distinction between present and future assets.

32. **Ms. McCreath** (United Kingdom) said that it was difficult to decide how to address recommendation 61 without knowing the exact content of the commentary to recommendation 62. She proposed that the commentary to recommendation 61 should deal with the possible implications of the policy choices discussed in the commentary to recommendation 62.

33. **Ms. Walsh** (Canada) further proposed that the commentary should set out the rationale for the adoption of different approaches to recommendations 61 and 62.

34. **The Chairperson** said she took it that the Commission wished to leave recommendation 61 unchanged and to ensure that the commentary reflected the points made by the representatives of the United Kingdom and Canada.

35. *It was so decided.*

36. *Recommendation 61 was adopted.*

Recommendations 63 to 72

37. *Recommendations 63 to 72 were adopted.*

The meeting was suspended at 11 a.m. and resumed at 11.30 a.m.

Commentary to chapter VI: The registry system (A/CN.9/631/Add.3, paras. 1-92)

38. **Mr. Macdonald** (Canada) proposed including in the introduction (paras. 1 to 8) a more systematic explanation of why an entire chapter of the draft Guide was devoted to the registry system. It should clarify the difference between property and personal rights and explain why a registry system was an important mechanism for indicating the potential existence of rights in assets.

39. *It was so decided.*

40. **Ms. Walsh** (Canada) noted that, according to the second sentence of paragraph 8, the specific features of different models for implementing a registry system were reviewed in the various sections of chapter VI. However, the bulk of chapter VI was devoted to an examination of the diverse features of a notice-based general security

rights regime, while the comparison of alternative approaches to registration was confined to the earlier paragraphs. She therefore proposed amending the description of the content to state that the objective was to examine in detail the distinctive nature of a notice-based general security rights registry in light of the diversity of possible approaches.

41. *It was so decided.*

42. **Ms. Walsh** (Canada) said that the first sentence of paragraph 18, which *stated* that there were typically no restrictions on who was permitted to make a registration in States that adopted a notice registration system, implied that the principle of public access arose only in the context of notice-based registry systems, which was untrue. She proposed amending the paragraph and others elsewhere in the chapter to remove that implication.

43. *It was so decided.*

44. **Ms. Walsh** (Canada), referring to the first two sentences of paragraph 22, noted that States might have a legitimate concern about equality of access for users even in electronic systems. She proposed making that point clear in the text.

45. *It was so decided.*

46. **Ms. Walsh** (Canada) proposed moving the last sentence of paragraph 27 to paragraph 28, which summarized the draft Guide's position that public searching by the name of the secured creditor should not be permitted. It should, however, also be emphasized that States were permitted to build in a technical search functionality for internal purposes.

47. *It was so decided.*

48. **Ms. Walsh** (Canada) noted that paragraph 34 in the section of chapter VI concerning grantor as compared to asset indexing dealt with the possibility of building in a limited supplementary asset-based search capability in which searches could be conducted against, for instance, the serial number of assets such as road vehicles. She proposed expanding the commentary to emphasize the need for certain qualifications where such a capability was established. For instance, the numerical identifier of the asset had to be unique and reliable. Moreover, searching should be restricted to

relatively high-value assets for which there was a significant resale market.

49. *It was so decided.*

50. **The Chairperson** drew attention to a note by the Secretariat following paragraph 34 inviting the Commission to consider whether the rule stated in the last sentence, namely that the mandatory requirement for serial number identification should be limited to cases where the serially numbered property was not held as inventory, should be reflected in a recommendation.

51. **Ms. Walsh** (Canada) noted that the draft Guide did not contain any recommendation dealing with supplementary asset-based searching. She therefore proposed confining the rule stated in paragraph 34 to the commentary.

52. *It was so decided.*

53. **Ms. Walsh** (Canada) noted that the Commission had decided in chapter IV concerning the creation of a security right (effectiveness as between the parties) that the commentary should strike an appropriate balance in its discussion of the advantages and disadvantages of requiring that a maximum amount of the secured obligation be stated in the registered notice. There was a similar problem of balance in paragraphs 57 and 58. Part of the problem seemed to stem from the reference in the comparison between the two approaches to some States' position that it was not possible to secure future obligations. The draft Guide rejected that position absolutely and it should make that point separately. A comparison should be made solely between, on the one hand, the approach that allowed future obligations but did not require specification of a maximum amount and, on the other, the approach that allowed future obligations but required the parties to state a maximum amount without otherwise restricting their rights. She proposed amending the commentary to ensure a more balanced discussion of those points.

54. *It was so decided.*

55. **Mr. Macdonald** (Canada) noted that paragraph 66 contained a brief discussion of the distinction between natural and legal persons. He proposed expanding the commentary to discuss the status of a person that was operating a partnership or

conducting business in a name other than the personal identifier of the grantor.

56. *It was so decided.*

57. **The Chairperson** noted that paragraphs 67 to 69 of the commentary would need to be expanded to reflect the decisions just taken regarding recommendations 61 and 62.

58. *The substance of the commentary to chapter IV was approved subject to the agreed amendments.*

Revisions to and reordering of the introduction, chapter I (Key objectives) and section C of chapter II (Scope of application and other general rules) (A/CN.9/631/Add.1 and 637 and A/CN.9/XL/CRP.11)

59. **The Chairperson** drew attention to document A/CN.9/XL/CRP.11, which contained proposals for reordering and revising the following material contained in document A/CN.9/631/Add.1: the introduction, chapter I (Key objectives) and section C of chapter II (Scope of application and other general rules). The revised material would form part of a new introduction to the draft Guide.

60. **Mr. Bazinas** (Secretariat) said that the purpose of document A/CN.9/XL/CRP.11 was to make the draft Guide more user-friendly, particularly for readers in jurisdictions that had a different secured transactions law from that recommended. It did not replace the whole of document A/CN.9/631/Add.1 but restructured its content and added material to provide for a smooth transition from general to specific information.

61. Section A of the new introductory chapter, which stated the purpose of the draft Guide, remained unchanged from the original introduction. Section B brought forward the examples of financing practices covered in the draft Guide that had originally been contained in section C of chapter II (paras. 57 to 77 of document A/CN.9/631/Add.1). Section C, entitled "Key objectives and fundamental principles of an effective and efficient secured transactions regime" incorporated the material originally contained in chapter I (paras. 20 to 31 of document A/CN.9/631/Add.1) as well as additional material. The purpose of the section was to provide a bridge between the general objectives of the draft Guide and the detailed recommendations by setting out

certain fundamental principles of a modern secure transactions system, such as comprehensive scope, the integrated and functional approach, and security rights in future assets. A new section D entitled “Implementing a new secured transactions law” was intended to provide guidance to national legislators on the different ways in which the recommendations in the draft Guide could be implemented, taking into account existing legislation, legislative methods and drafting techniques. It also emphasized the need for dissemination of information to lawyers, judges and practitioners who would be called upon to implement the law. Section E contained the terminology set out in document A/CN.9/637 and section F contained recommendation 1.

62. **The Chairperson** said she took it that the Commission agreed to the proposed revision and reordering of the material, which now constituted a new introductory chapter.

63. *It was so decided.*

Introduction (A/CN.9/631/Add.1 and 637 and A/CN.9/XL/CRP.11)

Introduction: section A: Purpose of the Guide (A/CN.9/631/Add.1, paras. 1-12)

64. *The substance of section A was approved.*

Introduction: section B: Examples of financing practices covered in the Guide (A/CN.9/631/Add.1, paras. 57-77, to be renumbered 13-33)

65. *The substance of section B was approved.*

Introduction: section C: Key objectives and fundamental principles of an effective and efficient secured transactions regime (A/CN.9/XL/CRP.11, paras. 34 to 62)

66. **Ms. Walsh** (Canada) proposed adding a key objective concerning the need to harmonize secured transactions law and insolvency law.

67. In response to a question from **Mr. Bazinas** (Secretariat), **Ms. Walsh** (Canada) confirmed that it would be acceptable instead to incorporate that point in objective (j) entitled “To balance the interests of affected persons”.

68. *It was so decided.*

69. **Mr. Riffard** (France) noted that the second last sentence of paragraph 53 concerning the integrated and functional approach seemed, in its current form, to advocate the unitary approach and rule out the non-unitary approach. He therefore proposed amending it to read: “... to the maximum extent possible, all transactions that create a right in all types of asset meant to secure the performance of an obligation ... should be considered as security rights and regulated by the same rules or, at least, the same principles”.

70. **Mr. Macdonald** (Canada) expressed support for the proposed amendment. It would be useful to signal the existence of a bifurcated approach to acquisition financing at an early stage in the draft Guide.

71. *It was so decided.*

72. **Ms. Okino Nakashima** (Japan) said that she had some difficulty in understanding the relationship between the heading of paragraph 58, “Priority among multiple security rights”, and the first two sentences, which emphasized the importance of the availability of multiple security rights in the same movable asset. She suggested that the title should cover both the need for a clear priority rule and the importance of the availability of multiple security rights.

73. **Mr. Macdonald** (Canada) said that the distinction noted by the representative of Japan was of such importance that it might be preferable for the commentary to discuss separately the significance of multiple security rights and the importance of establishing a clear priority rule governing such rights.

74. *It was so decided.*

75. **Ms. Walsh** (Canada) noted that paragraph 61 provided two examples of cases in which extrajudicial enforcement was traditionally permitted. The example of pawnbrokers was correct but that of creditors holding general company security rights was, in her view, inaccurate. She proposed that it be deleted.

76. *It was so decided.*

77. **Ms. Walsh** (Canada) drew attention to the second last sentence of paragraph 62 concerning equal treatment of sellers and lenders, which stated

that retention-of-title sellers would be able to benefit from the complete range of rights given to secured creditors, which in some ways exceeded the rights available to retention-of-title sellers under existing law in most States. She considered that statement to be inaccurate inasmuch as sellers, by virtue of their retained ownership, were just as frequently given rights that exceeded those of traditional secured creditors. She therefore proposed deleting the sentence.

78. **Mr. Bazinas** (Secretariat) said that the sentence had been included because the recommendations in the draft Guide would provide retention-of-title sellers with security rights that enjoyed priority if registration took place within a grace period after delivery of the goods. They would also enjoy a security right in the proceeds of assets, with the exception of cash proceeds, and the draft Guide's conflict-of-law recommendations provided for cross-border recognition of the security right.

79. **Ms. Walsh** (Canada) noted that cash proceeds, receivables and bank deposits would all be excluded. It was therefore somewhat imbalanced to suggest that retention-of-title sellers would enjoy new rights. The fundamental principle stated in paragraph 62 was that all creditors that provided credit to enable grantors to acquire tangible assets should be treated equally.

80. **Mr. Umarji** (India) expressed support for the proposal by the representative of Canada.

81. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to delete the second last sentence of paragraph 62.

82. *It was so decided.*

83. *The substance of section C was approved subject to the agreed amendments.*

Introduction: section D: Implementing a secured transactions law (A/CN.9/XL/CRP.11, paras. 63 to 79)

84. *The substance of section D was approved.*

Introduction: section E: Terminology (A/CN.9/637, paras. 1-6, renumbered as paras. 80-85)

85. **The Chairperson** drew attention to a note to the Commission at the beginning of the terminology section in document A/CN.9/637 regarding a proposal made earlier in the session to reproduce the terminology and all recommendations in a separate appendix to the draft Guide.

86. **Mr. Smith** (United States of America) and **Mr. Umarji** (India) expressed support for that proposal.

87. *It was so decided.*

The meeting rose at 12.30 p.m.

**Summary record of the 858th meeting, held at the Vienna International Centre
on Tuesday, 11 December 2007, at 2 p.m.**

[A/CN.9/SR.858]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 2.10 p.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (A/CN.9/617, 620, 631 and Add. 1-11, and 637 and Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1) (continued)

Introduction (A/CN.9/631/Add.1 and 637 and A/CN.9/XL/CRP.11) (continued)

Introduction: section E: Terminology (A/CN.9/637, paras. 1 -6, renumbered as paras. 80-85) (continued)

1. *The substance of section E was approved.*
2. *The substance of the commentary to the new introductory chapter as a whole was approved, subject to the agreed amendments.*

Recommendation 1 (A/CN.9/637)

3. *Recommendation 1 was adopted.*

Revisions to and reordering of chapters II and III (A/CN.9/631/Add.1 and 637 and A/CN.9/CRP.11/Add.1)

4. **Mr. Bazinas** (Secretariat) said that document A/CN.9/CRP.11/Add.1 contained a proposal to revise and reorder chapter II on the scope of application and other general rules and chapter III on basic approaches to security, as set out in document A/CN.9/631/Add.1, and to combine them in a new chapter I entitled "Scope of application and basic approaches to secured transactions". Section A on the scope of application reproduced the corresponding section of chapter II in document A/CN.9/631/Add.1 with some modifications and additions aimed at reflecting decisions taken earlier in the session. Section B on basic approaches to security reproduced paragraphs 78 to 141 of document A/CN.9/631/Add.1 containing chapter III with some minor amendments. Section C entitled "Two key themes common to all chapters of the Guide" was based on section B of chapter II

concerning party autonomy and electronic communications.

5. **The Chairperson** said she took it that the Commission agreed to the proposed revision and reordering of the material, which now constituted a new chapter 1.

6. *It was so decided.*

Commentary to chapter I (A/CN.9/631/Add.1 and 637 and A/CN.9/XL/CRP.11/Add.1)

Section A: Scope of application (A/CN.9/XL/CRP.11/Add.1, paras. 86-122)

7. **Ms. McCreath** (United Kingdom), referring to paragraph 118, reminded the Commission of her delegation's position that security rights in payment rights arising under or from a financial contract should be excluded from the draft Guide regardless of whether the financial contract was governed by a netting agreement.

8. *The substance of section A was approved.*

Section B: Basic approaches to security (A/CN.9/631/Add.1, paras. 78-141, to be renumbered as 123-186, and A/CN.9/XL/CRP.11/Add.1)

9. **Mr. Macdonald** (Canada) proposed adding a sentence here and there throughout the section in order to provide a historical context and explain as fully as possible the rationale for the adoption of different approaches to security rights over time.

10. *It was so decided.*

11. *The substance of section B was approved on that understanding.*

Section C: Two key themes common to all chapters of the Guide (A/CN.9/XL/CRP.11/Add.1, paras. 187-196)

12. *The substance of section C was approved.*

13. *The substance of the commentary to new chapter I as a whole was approved, subject to the agreed amendments.*

Recommendations 2 to 12 (A/CN.9/637)

Recommendations 2 to 6

14. *Recommendations 2 to 6 were adopted.*

Recommendation 7

15. **Mr. Bazinas** (Secretariat), referring to the note from the Secretariat following recommendation 7, said that a previous version of the recommendation had recommended excluding security rights in employment benefits. However, the Commission had taken a policy decision to avoid mentioning examples of practices that should be excluded lest it encourage States to restrict the scope of application of the law. The first sentence of recommendation 7 now simply stated that the law should not include other limitations to its scope of application, and the second sentence urged legislators that decided to introduce additional limitations to spell them out clearly in the law. The latter wording was based on a recommendation regarding privileged claims that had already been adopted.

16. **Mr. Burman** (United States of America) expressed support for the new version of the recommendation.

17. *Recommendation 7 was adopted.*

Recommendations 8 to 12

18. *Recommendations 8 to 12 were adopted.*

Chapter XI: Acquisition financing (A/CN.9/637 and Add.5)

Recommendations (recommendations 174-199) (A/CN.9/637)

19. **The Chairperson** noted that the Commission had adopted most of the recommendations relating to chapter XI concerning acquisition financing during the earlier part of the session. However, some outstanding issues needed to be settled.

Recommendations 176, 182, 189 and 196

20. **Mr. Bazinas** (Secretariat) noted that the Commission had agreed earlier in the session that alternative approaches to the priority position applicable to an acquisition security right or an acquisition financing right in tangible property should be offered in sections A and B of chapter XI (the unitary and non-unitary approaches). Alternative A in recommendation 176 in the section on the unitary approach drew a distinction between inventory and tangible assets other than inventory. The rule in the case of the latter was that the acquisition secured creditor would have to register within a grace period after delivery of the tangible assets in order to obtain priority. In the case of inventory, two conditions had to be met to secure priority: (a) registration of a transaction in the general security rights registry prior to delivery of the inventory to the grantor; and (b) notification of inventory financiers, since they would otherwise have to check the registry upon each delivery cycle in order to ensure that their priority had not changed. Alternative B made no distinction between inventory and goods other than inventory. It merely stated that an acquisition secured creditor obtained priority if it registered a notice about the transaction in the general security rights registry within a certain period of time after delivery of the tangible assets. Recommendation 189 offered similar alternatives with respect to the non-unitary approach.

21. Notes following recommendations 182 and 196 raised the question of whether the Commission wished to adopt the same approach in the case of acquisition security rights in proceeds.

22. **Mr. Schöfisch** (Germany) expressed support for recommendations 176 and 189 and for the proposals made in the notes following recommendations 182 and 196.

23. **Mr. Smith** (United States of America) expressed opposition to the proposals to extend super-priority to the proceeds of inventory since it would discourage receivables financing.

24. **Mr. Bazinas** (Secretariat) said while an acquisition security right would have special priority in the original collateral, the right in the

proceeds would be a normal security right without special priority.

25. **Mr. Smith** (United States of America) withdrew his objection.

26. *Recommendations 176 and 189 and the new recommendations suggested in the notes to recommendations 182 and 196 were adopted.*

Placement of recommendations 183 and 198

27. **Mr. Bazinas** (Secretariat) said that recommendations 183 and 198 dealt with the treatment of acquisition security rights, in the case of the unitary approach, and retention-of-title or financial lease rights, in the case of the non-unitary approach, in insolvency proceedings. Concern had been expressed that the placement of those recommendations in the chapter on insolvency might give the impression that the characterization of acquisition financial transactions as security or ownership devices was a matter of insolvency law, a position that would be inconsistent with the UNCITRAL Legislative Guide on Insolvency Law. The recommendations had therefore been moved to the chapter on acquisition financing.

28. **The Chairperson** said she took it that the Commission approved the decision to place recommendations 183 and 198 in chapter XI.

29. *It was so decided.*

Recommendation 178

30. **Mr. Bazinas** (Secretariat) drew attention to a note following paragraph 178 of the commentary to the chapter on acquisition financing (document A/CN.9/637/Add.5) concerning recommendation 178, which dealt with priority between competing acquisition security rights and gave priority to a supplier's right over that of a lender. The note invited the Commission to consider whether a recommendation along similar lines should be included in the non-unitary approach section of chapter XI. Alternatively, the commentary could explain that in the context of the non-unitary approach a retention-of-title seller or a financial lessor would always have priority by virtue of its ownership rights.

31. **Mr. Macdonald** (Canada) said that the principle set out in recommendation 178 was applicable as a matter of course in the non-unitary approach because of the seller's retention of title. An additional recommendation was therefore unnecessary, but he proposed making it clear in the commentary that it flowed from the concept of ownership that the right of a retention-of-title seller would have priority over an acquisition security right granted by the buyer.

32. **Mr. Schneider** (Germany) expressed support for that proposal.

33. **The Chairperson** said that, if she heard no objection, she would take it that the Commission agreed that it was unnecessary to insert an additional recommendation but that the commentary should be expanded to reflect the point made by the representative of Canada.

34. *It was so decided.*

Recommendation 193

35. **Mr. Bazinas** (Secretariat) drew attention to a note following paragraph 182 of the commentary to the chapter on acquisition financing (document A/CN.9/637/Add.5) inviting the Commission to consider whether it should add a recommendation along the lines of recommendation 193 (Existence of a security right in proceeds of a tangible asset subject to a retention-of-title or financial lease right) to address cases in which a retention-of-title seller or a financial lessor was deprived of its rights of ownership. For instance, where the seller of an asset that became an attachment to immovable property was not registered in a timely way, the seller or lessor would lose its ownership rights. As noted in paragraph 182 of the commentary, however, once third-party effectiveness was achieved, the seller or lessor could claim an ordinary security right.

36. **Mr. Schneider** (Germany) said that the issue raised in paragraph 182 was very important in practice. He was in favour of inserting a new recommendation to address the point.

37. **Mr. Smith** (United States of America) said that he was not convinced of the need for a recommendation since a retention-of-title right would automatically be converted into a normal security right under the circumstances.

38. **Mr. Macdonald** (Canada) proposed separating paragraph 182 from the preceding paragraphs, giving it a title and expanding its content. He was also in favour of adding a recommendation because, unlike in the previous case, it did not follow as a matter of course in the case of an attachment to immovable property that a retention-of-title right would be converted into a security right.

39. **Mr. Smith** (United States of America) withdrew his objection to the inclusion of a new recommendation.

40. **The Chairperson** said she took it that the Commission wished to insert a new recommendation along the lines of that suggested in the note following paragraph 182 of the commentary.

41. *It was so decided.*

Commentary to chapter XI: Acquisition financing (A/CN.9/637/Add.5, paras. 118-182)

42. **The Chairperson** noted that the substance of the commentary to chapter XI had been approved during the first part of the session. It would be amended in the light of the decisions just taken.

43. *The substance of the commentary to chapter XI explaining the recommendations just adopted was approved.*

The meeting was suspended at 3.30 p.m. and resumed at 4.05 p.m.

Chapter X: Enforcement of a security right (A/CN.9/637 and Add.4 and A/CN.9/XL/CRP.10)

Recommendations (recommendations 128-173) (A/CN.9/637 and A/CN.9/XL/CRP.10)

44. **The Chairperson** noted that the recommendations pertaining to chapter X had already been adopted during the first part of the session. However, some changes might be necessary to address issues that had arisen when the commentary was being finalized by the Secretariat.

Recommendation 137

45. **Mr. Bazinas** (Secretariat) drew attention to the note following recommendation 137 concerning the extinction of a security right after full satisfaction of the secured obligation. The recommendation

currently stated that the right to satisfy a secured obligation in full could be exercised until the disposition, acceptance or collection of an encumbered asset by the secured creditor. The question raised in the note was whether the Commission wished to include text in square brackets covering the situation in which a secured creditor had concluded an agreement to dispose of the encumbered asset before the actual disposition took place.

46. **Mr. Smith** (United States of America) expressed support for retention of the bracketed text. It was a common practice for the secured creditor to enter into a contract to dispose of an encumbered asset. In the absence of such a clause, dispositions might be discouraged and potential buyers might be unwilling to raise finance or to incur the cost of due diligence unless they were sure of being able to purchase the asset.

47. **Mr. Bazinas** (Secretariat) drew attention to a further amendment proposed in paragraph 19 of document A/CN.9/XL/CRP.10, namely to add the words “earlier of the” to the sentence containing the bracketed text, which would then read: “This right may be exercised until the earlier of the disposition, acceptance or collection of an encumbered asset by the secured creditor or the conclusion of an agreement by the secured creditor to dispose of the encumbered asset.”

48. **Mr. Sigman** (United States of America) expressed support for the amendment.

49. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to retain the bracketed text and to add the clarification proposed in document A/CN.9/XL/CRP.10.

50. *Recommendation 137, as amended, was adopted.*

Recommendation 142

51. **Mr. Bazinas** (Secretariat) drew attention to a note following recommendation 142 concerning the right of a higher-ranked secured creditor to take over enforcement, in which the Secretariat suggested amending the text to add the same bracketed text as had just been adopted in the case of recommendation 137, namely “or the conclusion

of an agreement by the secured creditor to dispose of the encumbered asset". He further suggested inserting the words "earlier of the" at the appropriate point in the sentence.

52. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to adopt the amendments suggested by the Secretariat.

53. *It was so decided.*

54. **Mr. Bazinas** (Secretariat) drew attention to a further issue raised in the note following recommendation 142, namely whether the collection of a receivable should be addressed instead in recommendation 164 in the section containing asset-specific recommendations with respect to the collection of receivables. The note to recommendation 164 included a draft recommendation based on the wording of recommendation 142 which addressed the application of the net proceeds of enforcement to the secured obligation. The second sentence of the text was intended to give protection to a secured creditor with higher priority than that of the enforcing secured creditor.

55. **Mr. Cohen** (United States of America) said that the fact that the secured creditor with higher priority was entitled to take over at any time before disposition or collection was a point that must be made explicit. The draft text in the note following recommendation 164 was similar to that contained in recommendation 149, which, as currently worded, did not state the right of the prior secured creditor to take over. Deletion of the phrase "or collection" in recommendation 142 would serve no purpose unless new language stating that right was added to either recommendation 149 or the draft text following recommendation 164.

56. **Mr. Macdonald** (Canada) expressed support for that position.

57. **The Chairperson** said she took it that the Commission wished to remove the square brackets from around the words "or collection" in recommendation 142.

58. *It was so decided.*

59. *Recommendation 142, as amended, was adopted.*

Recommendation 144

60. **Mr. Bazinas** (Secretariat) noted that the Commission had already agreed that a secured creditor could obtain possession of an encumbered asset extrajudicially only if three conditions were met: (a) that the grantor had consented to that approach in the security agreement; (b) that the secured creditor had given the grantor and any person in possession of the encumbered notice of default and of its intention to obtain possession extrajudicially; and (c) that the grantor raised no objection at the time when the secured creditor sought to obtain possession of the asset. A note by the Secretariat following the recommendation raised the question of whether those conditions needed to be met if the grantor and any other person in possession of the encumbered asset had affirmatively consented to extrajudicial repossession of the asset. If they did not, the Secretariat suggested inserting a sentence in the recommendation, which would become subparagraph (d), to that effect.

61. **Mr. Smith** (United States of America) and **Mr. Riffard** (France) expressed support for the addition of the text suggested by the Secretariat.

62. **Mr. Macdonald** (Canada) said that he also agreed in principle with the suggested amendment. However, he requested clarification of the practical implications of such a provision where, for instance, a subsequent creditor took a security right in the encumbered asset on the basis that there was no statement in the security agreement permitting extrajudicial enforcement.

63. **Mr. Smith** (United States of America) said that in practice other secured creditors tended to rely on receiving notice prior to a disposition by the secured creditor or prior to an acceptance by the secured creditor of the encumbered asset in satisfaction of the secured obligation, but they did not rely on the absence of a repossession clause in making their credit decisions.

64. **Mr. Morse** (Observer for the Commercial Finance Association) confirmed that the existence or otherwise of such a clause in a security agreement would normally have no bearing on a subsequent creditor's decision.

65. **Mr. Macdonald** (Canada) said that his delegation was reassured by the previous two statements.

66. **Mr. Umarji** (India) said that the requirement in subparagraph (b) of recommendation 144 that the secured creditor should give notice of default and of its intent to obtain possession extrajudicially should be retained in all circumstances. On receiving notice, the grantor might, for instance, wish to remedy the default and pay off the loan, which served the interests of the secured creditor. A notice was also necessary for other interested parties such as guarantors.

67. In response to a question from **Mr. Bazinas** (Secretariat), **Mr. Smith** (United States of America) said that his previous statement to the effect that secured creditors tended to rely on receiving notice prior to a disposition did not refer to the notice mentioned in subparagraph (b) of recommendation 144 but to the notice that any secured creditor gave to other secured creditors when it sold or otherwise disposed of an encumbered asset or agreed to accept the asset in satisfaction of a secured obligation. If a grantor affirmatively consented to the repossession, it should be irrelevant, in his view, whether the notice referred to in subparagraph (b) was given.

68. **Mr. Voulgaris** (Greece) said that he also saw no need for the prior notice referred to in subparagraph (b) if the grantor and any other person in possession of the encumbered asset indicated their consent explicitly at the time of extrajudicial repossession of the encumbered asset by the secured creditor. He not only supported the additional text suggested by the Secretariat but suggested that it might be recast in such a way as to replace the entire recommendation. He was not proposing to change the substance of recommendation 144 but simply to make the wording less cumbersome.

69. **Ms. Walsh** (Canada) said that if the aim of recommendation 144 was to protect the grantor, it should be sufficient if the grantor's consent was obtained at any time, including at the time of default, rather than in the security agreement, as proposed in subparagraph (a). She noted that the law was normally more suspicious of consent given in the security agreement, because a grantor requiring money would be prepared to consent to any condition at that stage. Moreover, if the reference to

the security agreement in subparagraph (a) was deleted, the additional text suggested by the Secretariat could be omitted.

70. **The Chairperson** pointed out that the text of the recommendation had been discussed at length by Working Group VI (Security Interests) and had already been adopted by the Commission during the first part of the session. As a compromise solution, she asked whether the additional text suggested by the Secretariat might be acceptable if it referred only to subparagraphs (a) and (c), so that the requirement in subparagraph (b) would still have to be met.

71. **Mr. Riffard** (France) said that he was in favour of inserting the additional text as subparagraph (d) without any amendment. He pointed out that recommendation 144 was not intended to address the issue of default under all circumstances but only in the event of repossession by the secured creditor of an encumbered asset held by the grantor or another person in possession. The question of whether it was necessary to notify other creditors in the event of default was addressed elsewhere in the draft Guide.

72. **Mr. Boulet** (Observer for Belgium) drew attention to recommendation 130, which entitled the grantor and any other person owing performance of a secured obligation to waive their rights unilaterally under the provisions on enforcement after default. He wondered whether it was necessary in the light of that recommendation to insert proposed subparagraph (d). Perhaps the rule should be mentioned instead in the commentary.

73. **Ms. Walsh** (Canada) concurred with that view. The only reason to restate the rule in recommendation 144 would be to ensure that it could not be argued after the fact that consent had been obtained through an abuse of good faith.

74. If the Commission decided to insert new subparagraph (d) concerning affirmative consent, it was somewhat illogical to state that the requirement of subparagraph (c) was no longer applicable inasmuch as the latter referred to non-objection on the part of the grantor.

75. **Mr. Riffard** (France) said that he also agreed with the point made by the representative of Belgium. However, he was in favour of restating the

rule in recommendation 144 so that the situation was absolutely clear.

76. **Ms. Walsh** (Canada) pointed out that if the rule in recommendation 130 was restated in recommendation 144, it should also be restated in the case of other analogous recommendations in which there was no explicit reference to waiver of rights. She therefore supported the proposal to leave the text of recommendation 144 unchanged and to discuss the content of proposed subparagraph (d) in the commentary.

77. **The Chairperson** invited the Commission to review the various options before resuming the discussion at its next meeting.

The meeting rose at 5.05 p.m.

**Summary record of the 859th meeting, held at the Vienna International Centre
on Wednesday, 12 December 2007, at 9.30 a.m.**

[A/CN.9/SR.859]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 9.40 a.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (A/CN.9/617, 620, 631 and Add. 1-11, and 637 and Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1) *(continued)*

Chapter X: Enforcement of a security right (A/CN.9/637 and Add.4) *(continued)*

Recommendations (recommendations 128-173) (A/CN.9/637) *(continued)*

Recommendation 144 (continued)

1. **The Chairperson** said that she took it, in light of the discussion at the previous meeting that the Commission wished to reflect the content of the Secretariat's note following recommendation 144 in the commentary to chapter X.

2. *It was so decided.*

3. **The Chairperson** drew attention to the suggestion in the same note that subparagraph (c) of recommendation 144 should refer not just to the grantor but also to the person in possession of the encumbered asset.

4. **Mr. Macdonald** (Canada) expressed support for that amendment because the main purpose of the provision was to permit extrajudicial enforcement without a breach of the peace. The key actor envisioned by subparagraph (c) was therefore the person in possession of the encumbered asset.

5. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to amend subparagraph (c) to reflect the suggestion made in the Secretariat's note.

6. *It was so decided.*

7. *Recommendation 144, as amended, was adopted.*

Recommendation 148

8. **The Chairperson** drew attention to the Secretariat's note following recommendation 148, which invited the Commission to consider whether subparagraph (c) of the recommendation should be amended to bring it into line with article 16 (1) of the United Nations Convention on the Assignment of Receivables in International Trade (United Nations Assignment Convention). It was suggested that the following sentence should be added to the subparagraph: "It is sufficient if the notice is in the language of the security agreement being enforced."

9. **Mr. Ginting** (Observer for Indonesia) said that it would be more equitable for both the grantor and the secured creditor if the notice were drawn up in the language of the security agreement being enforced.

10. **Mr. Cohen** (United States of America) pointed out that article 16 (a) of the United Nations Assignment Convention dealt only with a notice to a debtor that had entered into an agreement in the language concerned. A parallel provision in recommendation 148 should therefore state that it was sufficient if the notice "to the grantor" was in the language of the security agreement being enforced. The other recipients of the notice might have been dealing in a language other than that of the security agreement.

11. **Mr. Macdonald** (Canada) said that he agreed with the point just made. For instance, a debtor in France that had signed a security agreement in English with a creditor in the United Kingdom might have signed other security agreements in France with parties that had an interest in the same property but did not do business in English. It was a reasonable assumption that those parties were also entitled to receive notices in a language that they understood.

12. **Mr. Bazinas** (Secretariat) noted that subparagraph (a) of recommendation 148 listed all parties to whom notice must be given. It could perhaps be assumed that third-party secured creditors with rights in the encumbered asset would make a point of checking the content of the security agreement with the grantor.

13. **The Chairperson** pointed out that the first sentence of subparagraph (c), which stated that notice must be provided in a language that was reasonably expected to inform its recipients about its contents, would cover the case of third parties.

14. **Mr. Cohen** (United States of America), referring to the example provided by the representative of Canada, said that the parties referred to in subparagraph 148 (a) (iii), namely other secured creditors that registered a notice with respect to a security right in the encumbered asset, would in that case have registered in France where the grantor was located. While they would certainly have checked the registry, it was unlikely that they would have been given access to the security agreement, which was a private document, and they would therefore be unaware of the language in which it was drafted.

15. **Mr. Voulgaris** (Greece) said that he had reservations concerning the addition of the sentence suggested by the Secretariat, since other concerned parties might not be familiar with the language of the security agreement. Even if it was amended as proposed by the delegation of the United States, the grantor might not be assured of receiving the notice in due time if, under the rules of civil procedure, it had to be provided in the local language. However, he was willing to go along with whatever the Commission decided in that regard.

16. **The Chairperson** said she took it that the Commission agreed to add the sentence suggested by the Secretariat, which would be amended to read: "It is sufficient if the notice to the grantor is in the language of the relevant security agreement."

17. *It was so decided.*

18. *Recommendation 148, as amended, was adopted.*

Recommendation 149

19. **Mr. Bazinas** (Secretariat) said that the Commission might wish to consider in the case of recommendation 149 whether the distribution of proceeds of the disposition of an encumbered asset, where it was a receivable, should be addressed in a separate recommendation along the lines of the text set out in the note following recommendation 164. The suggested text provided that the enforcing secured creditor must apply the net proceeds of its enforcement to the secured obligation, and that it must pay any surplus to competing claimants that had notified it of their claim to the extent of that claim. Any balance remaining would be remitted to the grantor. The sentence concerning competing claimants was designed to protect a secured creditor with higher priority status than the enforcing secured creditor. A senior secured creditor was protected because its security right in the asset disposed of continued.

20. **Mr. Ginting** (Observer for Indonesia), referring to the original text of recommendation 149, said that it was unclear whether it was the grantor or another party that notified the enforcing secured creditor. He also wished to know why the whole of the remaining surplus was not remitted by the enforcing secured creditor to the grantor instead of to any subordinate competing claimant, since there was no direct business between the secured creditor and that claimant.

21. **Mr. Bazinas** (Secretariat) said that the subordinate claimants would notify the enforcing secured creditor. With regard to the second question, he noted that recommendation 149 should be read in conjunction with recommendation 150, so that if the enforcing secured creditor was convinced that the subordinate claimants had a valid claim, it would pay the surplus to them. If there was any dispute as to their entitlement, it would pay the surplus, in accordance with generally applicable procedural rules, to a competent judicial or other authority or to a public deposit fund for distribution.

22. **The Chairperson** asked the Commission whether it wished to retain the phrase in square brackets in recommendation 149, which read "or collection of a receivable, negotiable instrument or other obligation".

23. **Mr. Umarji** (India) proposed replacing the bracketed text by the suggested new recommendation set out in the note following recommendation 164, which made a distinction between extrajudicial disposition of an asset and collection of a receivable.

24. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to replace recommendation 149 with the new asset-specific recommendation set out in the note following recommendation 163.

25. *It was so decided.*

Recommendation 152

26. **The Chairperson** drew attention to the note by the Secretariat following recommendation 152, which suggested deleting the bracketed text “unless otherwise agreed” because party autonomy was already covered by recommendations 8 and 130. If she heard no objection, she would take it that the Commission agreed to the suggested deletion.

27. *It was so decided.*

28. *Recommendation 152, as amended, was adopted.*

Recommendation 163

29. **The Chairperson** drew attention to recommendation 163, which was enclosed in square brackets because it was a suggested new recommendation designed to address the issue of enforcement of a security right in an attachment to movable property. If she heard no objection, she would take it that the Commission agreed to include the new recommendation.

30. *Recommendation 163 was adopted.*

Recommendation 164

31. **Ms. Walsh** (Canada) proposed referring in recommendation 164 (a) not only to recommendation 128, which laid down the general standard of conduct in the context of enforcement, but also to recommendation 129, which stipulated that that standard of conduct could not be waived unilaterally or varied by agreement.

32. **The Chairperson** said that, if she heard no objection, she would take it that the Commission agreed to add a reference to recommendation 129.

33. *It was so decided.*

34. *Recommendation 164, as amended, was adopted.*

Commentary to chapter X: Enforcement of a security right (A/CN.9/637/Add.4)

35. **The Chairperson** noted that the substance of the commentary to chapter X had been approved during the first part of the session. It would be amended in the light of the decisions just taken.

36. *The substance of the commentary to chapter X explaining the recommendations just adopted was approved.*

Chapter XII: Conflict of laws (A/CN.9/637 and Add.6)

Recommendations (recommendations 200-224) (A/CN.9/637)

37. **The Chairperson** noted that the recommendations pertaining to chapter XII had already been adopted during the first part of the session. However, some remaining issues needed to be addressed.

Recommendation 214

38. **Mr. Bazinas** (Secretariat) said that the Commission had requested the Secretariat to ensure that the draft Guide was consistent with the draft UNCITRAL convention on the carriage of goods. Following consultations with Working Group III (Transport Law), the Secretariat had decided to suggest deleting the reference in recommendation 214 (a) to the law applicable to the relationship “between the issuer of a negotiable document and the holder of a security right in the document” in order to avoid any inconsistency with the draft convention on the carriage of goods or other State transport legislation.

39. **The Chairperson** said that, if she heard no objection, she would take it that the Commission agreed to delete the phrase in recommendation 214 (a) referred to by the Secretariat.

40. *It was so decided.*

41. *Recommendation 214, as amended, was adopted.*

Recommendation 220

42. **Mr. Bazinas** (Secretariat) said that recommendation 220 had been moved from chapter XIV on the impact of insolvency on a security right in order to avoid inconsistencies with the UNCITRAL Legislative Guide on Insolvency Law (the UNCITRAL Insolvency Guide), which dealt with the law applicable to the validity and effectiveness of rights and claims but not with the law applicable to the general priority or the enforcement of a security right. The text of recommendation 220 had been amended slightly for purposes of clarity. The conflict-of-law rule that it contained was both generally acceptable and in line with the UNCITRAL Insolvency Guide, since the second sentence preserved the application of the *lex fori concursus*.

43. **The Chairperson** said that, if she heard no objection, she would take it that the Commission agreed to move recommendation 220 to chapter XII and to adopt the amended text.

44. *It was so decided.*

45. *Recommendation 220, as amended, was adopted.*

46. **Mr. Wezenbeek** (Observer for the European Commission) requested permission to make a proposal regarding recommendation 205 at the next meeting, following informal consultations with the members of the Commission.

47. **The Chairperson** said that the Commission had discussed recommendation 205 at great length during the earlier part of the session and she was reluctant to reopen the debate.

48. **Mr. Wezenbeek** (Observer for the European Commission) said that he had expressed reservations regarding the conflict-of-law chapter earlier in the session because there had been equally lengthy and difficult discussions within the European Union regarding the rule contained in recommendation 205. It was one of the core elements of the proposed regulation on the law applicable to contractual arrangements (Rome I), which would be applicable

to all States members of the European Union. A proposal made by the European Commission in 2005 that reflected the UNCITRAL rule had failed to secure the necessary support. The European Commission was now required to report to the European Council and the European Parliament on what it considered to be the best rule. It could either recommend the rule contained in the United Nations Assignment Convention or another rule, the law of the underlying claim, which was not even mentioned in the commentary to chapter XII but which was strongly supported by the securitization industry. As he felt that it was not just a European issue but had broader international importance, he wished to engage in informal consultations with the members of the Commission before suggesting any amendment.

49. **The Chairperson** said that it would be unfair to the members of the Commission, who had spent a great deal of time discussing the content of recommendation 205, not just at the current session but also during the previous session, to reopen the debate. However, she invited interested parties to engage in informal consultations during the suspension of the meeting with a view to finding a way to address the European Commission's concerns without reopening the discussion.

The meeting was suspended at 10.40 a.m. and resumed at 11.15 a.m.

50. **The Chairperson** suggested that the Commission should deal with the remaining chapters of the draft Guide and other outstanding issues before returning to the issue raised by the observer for the European Commission.

51. *It was so decided.*

Commentary to chapter XII: Conflict of laws (A/CN.9/637/Add.6)

52. **The Chairperson** noted that the substance of the commentary to chapter XII had been approved during the first part of the session. It would be amended in the light of the decisions just taken.

53. *The substance of the commentary to chapter XII explaining the recommendations just adopted was approved.*

Chapter XIII: Transition (A/CN.9/637 and Add.7)

Recommendations (recommendations 225-231)
(A/CN.9/637)

54. **The Chairperson** noted that the recommendations pertaining to chapter XIII had already been adopted during the first part of the session. However, two issues still needed to be addressed.

Recommendation 226

55. **Mr. Bazinas** (Secretariat) drew attention to the note following recommendation 226. The second sentence of the recommendation stated that if enforcement of a security right had commenced before the effective date of a new law, enforcement could continue under the law in force prior to the effective date. If the Commission considered that initiation of a post-default remedy before the effective date of the new law should result in the application of the prior law to the entire process of enforcement, it might wish to replace the word “may” in the second sentence by a stronger term should as “should” or “must”.

56. **Mr. Umarji** (India) said that any new law enacted pursuant to the draft Guide would be a procedural law that would not change the substantive character of the process of creation of security interests or the rights of secured creditors. Enacting States should be allowed a measure of flexibility in deciding whether the new law could be applied to pending cases or whether they would continue to be governed by the old law. He was therefore in favour of retaining “may” in the second sentence.

57. **Mr. Macdonald** (Canada) said that, in his view, the second sentence addressed the issue of the status of the enforcing creditor rather than the policy that the legislature should adopt. The question raised by the Secretariat was whether the Commission considered that, once a person had initiated enforcement proceedings under the prior law, it would be deprived of the option of abandoning the proceedings and initiating a fresh action under the new law. That approach would seriously undermine the normal principles of civil procedure. He was therefore in favour of maintaining the text as currently drafted, because it properly left the decision as to whether to continue the proceedings or to abandon them with the enforcing creditor.

58. **Mr. Sigman** (United States of America) proposed dealing with the situations described by the representatives of both India and Canada in the commentary so that legislators would understand that the purpose of the recommendation was to enhance flexibility.

59. **The Chairperson** said she took it that the Commission wished to leave recommendation 226 unchanged but to explain in the commentary that a secured creditor that had initiated enforcement proceedings under the law in force before the effective date of the new law should have the option of continued those proceedings under the old law or abandoning them and initiating proceedings under the new law.

60. *It was so decided.*

Recommendation 231

61. **Mr. Bazinas** (Secretariat) said that the purpose of recommendation 231 was to explain what recommendation 230 meant by a change in the status of a security right. The question raised in the note following recommendation 231 was whether recommendation 231 might be deleted if it was already clear that recommendation 230 was referring to the priority status of a security right. The substance of recommendation 231 could then be dealt with in the commentary.

62. **Mr. Cohen** (United States of America), supported by **Mr. Umarji** (India), proposed retaining recommendation 231, since recommendation 230 would be more difficult to understand if it were deleted. However, the word “priority” should be inserted before “status” in the chapeau of recommendation 231.

63. *Recommendation 231, as amended, was adopted.*

Commentary to chapter XIII: Transition
(A/CN.9/637/Add.7)

64. **The Chairperson** noted that the substance of the commentary to chapter XIII had been approved during the first part of the session. It would be amended in the light of the decisions just taken.

65. *The substance of the commentary to chapter XIII explaining the recommendations just adopted was approved.*

Chapter XIV: The impact of insolvency on a security right (A/CN.9/637 and Add.8)

Recommendations (recommendations 232-239) (A/CN.9/637)

66. **The Chairperson** noted that the recommendations pertaining to chapter XIV had already been adopted during the first part of the session. Some had been taken from the UNCITRAL Insolvency Guide.

67. **Ms. McCreath** (United Kingdom) pointed out that the definition of a “financial contract” taken from the UNCITRAL Insolvency Guide was inconsistent with the definition agreed on in paragraph 6 (s) of the “Terminology” section of the draft Guide.

68. **The Chairperson** said that both definitions, which should be viewed as forming part of a glossary rather than as strict legal definitions, were based on the United Nations Assignment Convention.

69. **Mr. Bazinas** (Secretariat) drew attention to a footnote to the definition in paragraph 6 (s), which referred the reader to article 5, subparagraph (k), of the United Nations Assignment Convention and to the relevant definition in the UNCITRAL Insolvency Guide. The paragraph following the definition explained that the reference to “any other transaction similar to any transaction referred to above entered into in financial markets” was intended to include the full range of transactions entered into in financial markets. A note to the Commission following the definition in the chapter on insolvency also referred the reader to article 5, subparagraph (k), of the Assignment Convention.

70. **Mr. Smith** (United States of America) said that the purpose of the reference to “any other transaction similar to any transaction referred to above” was to ensure flexibility, in other words to take account of future categories of transactions that should fall under the definition of financial contracts.

71. **Ms. McCreath** (United Kingdom) proposed reproducing the explanatory paragraph in the “Terminology” section in the insolvency chapter.

72. **The Chairperson** pointed out that the definitions in the insolvency chapter were extracts from the UNCITRAL Insolvency Guide. She suggested including an explanation instead in the commentary.

73. *It was so decided.*

Commentary to chapter XIV: The impact of insolvency on a security right (A/CN.9/637/Add.8)

74. **The Chairperson** noted that the substance of the commentary to chapter XIII had been approved during the first part of the session. It would be amended in the light of the decision just taken.

75. *The substance of the commentary to chapter XIV was approved.*

Proposals by the delegation of the United States of America (A/CN.9/637 and A/CN.9/XL/CRP.10)

76. **The Chairperson** invited the delegation of the United States to explain the intent of the proposals contained in document A/CN.9/XL/CRP.10.

77. **Mr. Sigman** (United States of America) said that the proposals, which covered the “Terminology” section and recommendations contained in document A/CN.9/637, were for the most part drafting proposals or suggested clarifications that would not affect any policy decisions already taken. Moreover, some of the proposals had already been addressed in the discussion and others had been withdrawn.

Terminology (A/CN.9/637 and A/CN.9/XL/CRP.10)

Proposed amendment to the definition of the term “control” with respect to a right to payment of funds credited to a bank

78. **Mr. Sigman** (United States of America) proposed clarifying the definition of “control” with respect to a right to payment of funds credited to a bank in subparagraph (n) (ii). As currently worded, it referred to a “control agreement” although that term had not been defined in the draft Guide. He therefore proposed deleting the portion of the

subparagraph that began with the word “evidenced” and inserting instead the following definition:

“‘Control agreement’ means an agreement between the depositary bank, the grantor and the secured creditor, evidenced by a signed writing, according to which the depositary bank has agreed to follow instructions from the secured creditor with respect to the payment of funds credited to the bank account without further consent from the grantor.”

79. **Mr. Schöfisch** (Germany) said that he had no objection to the proposal. He pointed out, however, that it constituted a new definition rather than a clarification.

80. **Mr. Deschamps** (Canada) asked whether the proposed definition of the term “control agreement” was used elsewhere in the draft Guide.

81. **Mr. Sigman** (United States of America) said that he was unsure whether the term was used elsewhere. He pointed out, however, that the wording of the proposed definition reproduced that already contained in subparagraph (n) (ii). If the word “agreement” was deleted, he would have no objection to retaining the original wording.

82. **The Chairperson** noted that the term “control agreement” was used in recommendations 100 and 123.

83. **Mr. Deschamps** (Canada) said that in that case he would support the proposal by the delegation of the United States.

84. *The proposed amendment was adopted.*

Proposed amendment to the definition of an “issuer”

85. **Mr. Sigman** (United States of America) proposed amending the phrase “whether that person performs all obligations or not” at the end of the definition of an “issuer” to read “whether or not that person has agreed to perform all obligations”.

86. **Mr. Pendón Maléndez** (Spain) expressed support for the proposal.

87. **Mr. Deschamps** (Canada) said that the words “all obligations” were somewhat vague. He proposed adding the words “arising from the document” to make it clear which obligations were being referred to.

88. **The Chairperson** said that, if she heard no objection, she would take it that the Commission agreed to the proposal by the United States delegation, as amended by the representative of Canada.

89. *The proposed amendment was adopted.*

Proposed insertion of a new definition

90. **The Chairperson**, referring to the proposal to add a new definition of a “registrable asset”, said that the Secretariat had informed her that no such term was used in the draft Guide.

91. **Mr. Sigman** (United States of America) said that his delegation proposed introducing the term because there were provisions in virtually every chapter dealing with specialized assets that were not defined. The references to such assets were sometimes incomplete or inconsistent. For instance, recommendation 38 referred to “a security right in movable assets that is subject to registration” and recommendation 202 contained the phrase “if a tangible asset is subject to registration”. In all cases, such phrases added to the length of the provisions and made them less intelligible. If a single defined term was used, all references would be identical, consistent and complete. The term proposed by his delegation denoted an asset the ownership of which was registered in a specialized registry and with respect to which a security right might also be registered.

92. **The Chairperson** said that term used in the draft Guide was “assets subject to registration in a specialized registry”.

93. **Mr. Schöfisch** (Germany) said that he had no objection to the inclusion of the new definition provided that it did not entail any change in the substance.

94. **Mr. Umarji** (India) and **Mr. Voulgaris** (Greece) said that if the new definition was not used in the text of the draft Guide, they saw no reason to include it.

95. **The Chairperson** said she understood that the object was to replace certain language in the draft Guide by the new term, which might indeed amount to a substantive change.

96. **Mr. Riffard** (France) said that while he could sympathize with the aim of making the language of the draft Guide more concise, he was unsure that it was wise to use the term “registrable asset”, since it might be misinterpreted.

97. **The Chairperson** noted that there was insufficient support for the inclusion of the new definition.

Proposed amendment to the definition of a “Right to receive the proceeds under an independent undertaking”

98. **Mr. Sigman** (United States of America) noted that the first paragraph of the definition stated that the term “right to receive the proceeds under an independent undertaking” did not include what was received upon honour of an independent undertaking. He proposed repeating “what is received upon honour” in the explanatory second sentence of the second paragraph in order to avoid giving the impression that a different standard was being proposed.

99. **Mr. Deschamps** (Canada) expressed support for the proposal.

100. *The proposed amendment was adopted.*

Alphabetical symbols preceding the definition of terms

101. **Ms. Stanivuković** (Serbia) proposed deleting the alphabetical symbols preceding the definitions in the “Terminology” section because the definitions themselves were set out in alphabetical order.

102. **The Chairperson** suggested requesting the Secretariat to consider deleting the symbols provided that such a step would not be inconsistent with United Nations editorial rules.

103. *It was so decided.*

Recommendations (A/CN.9/637 and A/CN.9/XL/CRP.10)

Proposed amendment to recommendation 5

104. **Mr. Sigman** (United States of America) said that recommendation 5 was designed to provide reassurance that the law recommended by the draft Guide did not apply to immovable property, except

as provided in recommendations 25 and 48 relating to the creation of a security right. However, other recommendations also had a bearing on immovable property, namely those concerning attachments to such property. The purpose of the proposed amendment was to state more accurately the full list of exceptions to the exclusion of immovable property from the scope of the draft Guide.

105. **Mr. Riffard** (France) expressed support for the amendment provided that it related solely to attachments to immovable property.

106. **Mr. Macdonald** (Canada) noted that the purpose of the proposed amendment was to ensure consistency. It should be quite clear from the wording, however, that a movable asset did not itself become immovable when it was attached to an immovable asset.

107. **The Chairperson** invited the Commission to reflect on the proposed amendment before its next meeting.

The meeting rose at 12.30 p.m.

Summary record of the 860th meeting, held at the Vienna International Centre
on Wednesday, 12 December 2007, at 2 p.m.

[A/CN.9/SR.860]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 2.05 p.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (A/CN.9/617, 620, 631 and Add. 1-11, and 637 and Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1) (continued)

Recommendations (A/CN.9/637 and A/CN.9/XL/CRP.10) (continued)

Proposed amendment to recommendation 5 (continued)

1. **The Chairperson** invited the Commission to resume its consideration of the amendment to recommendations proposed by the delegation of the United States in document A/CN.9/XL/CRP.10.

2. **Mr. Bazinas** (Secretariat) asked whether it might be sufficient for the commentary to state that in cases where tangible assets that became attached to immovable property were treated as immovable property, recommendation 5 should be understood as excluding such assets. The clarification would be unnecessary in a legal system where a tangible asset remained movable property to the extent that it could be easily separated from the immovable property.

3. **Mr. Sigman** (United States of America) said that while he would welcome such an addition to the commentary, it failed to address all the points that arose. For instance, some recommendations discussed the remedies after default available to a person with a security right in an asset that became an attachment to immovable property. Such provisions clearly affected persons with an interest in immovable property.

4. **Mr. Macdonald** (Canada) expressed support for the proposed amendment because some recommendations could have a collateral effect on rights in immovable property. He proposed searching the draft Guide for all occurrences

of the word “immovable” and listing those recommendations.

5. **The Chairperson** said she took it that the Commission wished to amend the recommendation so that the first sentence merely stated that the law should not apply to immovable property, and the second sentence listed all recommendations that might affect rights in immovable property.

6. *It was so decided.*

Proposed amendments to recommendation 40

7. **Mr. Sigman** (United States of America) said that the purpose of the proposed amendments was to bring the structure of recommendation 40 into line with that of recommendation 45 which dealt with similar circumstances. In both cases a security right was effective against third parties for a fixed period of time and continued to be effective thereafter if a certain condition was met. In addition, the proposed new version of the recommendation was prefaced by the phrase “The law should provide that” and the word “or” before “do not consist of” was replaced by “and”, which was more logical.

8. **Mr. Deschamps** (Canada) expressed support for the proposed amendments.

9. *The proposed amendments to recommendation 40 were adopted.*

Proposed amendments to recommendation 54 (h)

10. **Mr. Sigman** (United States of America) noted that the provision stating the required content of a notice in the registry (recommendation 57 (a)) referred to the “identifier” rather than to the “name” of the grantor. He therefore proposed replacing the word “name” with “identifier” in recommendation 54 (h). Secondly, he proposed amending “or according to some other reliable identifier of the grantor” to read “and according to any other reliable identifying information specified

in the law". There were many countries where millions of people had the same given name and family name. It would be reasonable in such cases to use the name as a basic identifier but to add, for instance, an identity or health insurance number.

11. **Ms. McCreath** (United Kingdom) proposed replacing "reliable identifying information specified in the law" with something along the lines of "reliable and legally enforceable identifying information".

12. **Mr. Deschamps** (Canada) expressed support for the proposal by the representative of the United States. However, he proposed inserting the words "that may be" after the word "information" to make it clear that the provision of such information was not mandatory.

13. **Mr. Sigman** (United States of America) said that the phrase "specified in the law" had been included because it could not be left to registrants to decide what kind of additional identifier was acceptable. The registry should establish a rule governing second identifiers in cases where, for instance, given and family names were deemed to be insufficient. It was not mandatory for a jurisdiction to do so, but where the registry established such a rule, both identifiers should be indexed and retrievable. He understood the intention of the proposal by the representative of Canada, which he thought had been covered by the word "any" before "other reliable identifying information".

14. **Mr. Umarji** (India) said that the use of the word "and" rather than "or" with respect to the other identifying information was misleading because it gave the impression that both the identifier and the other identifying information had to be checked in all circumstances.

15. **Mr. Sigman** (United States of America) said that in that case the use of the word "or" was acceptable.

16. **Mr. Bazinas** (Secretariat) drew attention to recommendation 57 (a), which stated that the identifier of the grantor satisfying the standards laid down in recommendations 58 to 60 was required in the notice; recommendation 58, which referred to the grantor's correct identifier; and recommendation 59, which stated that where the grantor was a natural person, the identifier of the grantor for the purposes

of effective registration was the grantor's name and that, where necessary, additional information, such as the birth date or identity card number, should be required to uniquely identify the grantor. The term "identifier" thus already included the name and additional information. He also asked the representative of the United States whether the law referred to in the phrase "specified in the law" was secured transactions law or some other branch of law.

17. **Mr. Sigman** (United States of America) proposed ensuring that the wording of recommendation 54 (h) and recommendations 57 to 59 was consistent.

18. **The Chairperson** suggested requesting the Secretariat to review the wording of the recommendations mentioned by the representative of the United States to ensure that the use of the word "identifier" was consistent.

19. *It was so decided.*

Proposed amendments to recommendation 61

20. **Mr. Sigman** (United States of America) said that the first sentence of recommendation 61 referred to a change in "the identifier of the grantor used in the notice", whereas what had changed was the grantor's identifier as such. His delegation therefore proposed amending the first part of the sentence to read:

"The law should provide that, if, after a notice is registered, the identifier of the grantor changes and as a result the grantor's identifier provided in the notice does not meet the standard ...".

21. **Mr. Deschamps** (Canada) expressed support for the proposal.

22. *The first proposed amendment to recommendation 61 was adopted.*

23. **Mr. Sigman** (United States of America) proposed inserting the phrase "after the change in the grantor's identifier but" before the words "before registration of the amendment" in subparagraphs (a) and (b) of recommendation 61. He believed that the additional wording was consistent with the previous day's policy discussion regarding the need to protect innocent parties that

relied on the record. If it were omitted, a person that bought an encumbered asset from a grantor, taking it subject to a security right at the time when the grantor's original identifier was valid, would suddenly, if the grantor changed its identifier, take the asset free of the security right even though it had not been misled by the identifier on the public record. However, if the Commission considered that the proposal amounted to a substantive amendment, his delegation was willing to withdraw it.

24. **Ms. Walsh** (Canada) said that her delegation did not view the amendment as a substantive change but as a clarification. It therefore supported the proposal.

25. **Ms. Stanivuković** (Serbia) also expressed support for the proposal.

26. *The second proposed amendment to recommendation 61 was adopted.*

Proposed amendment to recommendation 64

27. **Mr. Sigman** (United States of America) said that his delegation proposed repeating the words "before and after" before "conclusion of the security agreement" in order to make the meaning crystal clear. The amended version would read: "The law should provide that a notice with respect to a security right may be registered before or after creation of the security right, or before or after conclusion of the security agreement."

28. **Mr. Deschamps** (Canada) expressed support for the proposal.

29. **Mr. Ginting** (Observer for Indonesia) asked how a security right could be registered before conclusion of the security agreement, since the agreement constituted the basis for the creation of the security right. He therefore proposed deleting the word "before or" in the phrase "before or after conclusion of the security agreement".

30. **Mr. Bazinas** (Secretariat) said that the Commission had considered cases in which the lender, following negotiations with the borrower, registered a notice prior to the conclusion of the security agreement. The notice did not create a security right but once the security agreement was concluded, it was backdated to the time of registration of the notice. If no security agreement

was concluded, the registration was without effect and the grantor could take steps to ensure its immediate deletion from the record.

31. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to adopt the proposed amendment to recommendation 64.

32. *The proposed amendment to recommendation 64 was adopted.*

Proposed amendment to recommendation 66

33. **Mr. Sigman** (United States of America) proposing replacing the word "time" with "duration" in the following phrase in the third sentence: "If the law specifies the time of effectiveness of the registration".

34. **Mr. Deschamps** (Canada) expressed support for the proposal.

35. *The proposed amendment to recommendation 66 was adopted.*

Insertion of a new recommendation after recommendation 76

36. **Mr. Smith** (United States of America) said that his delegation had decided, in the light of informal consultations, to withdraw the proposal contained in document A/CN.9/XL/CRP.10 to insert a new recommendation after recommendation 76. However, it now proposed addressing the problem in the commentary.

37. The Commission had discussed the situation in which a grantor gave a security right to a secured creditor that was effective against third parties, but then sold the encumbered asset to a buyer that obtained the encumbered asset subject to the security right. Where that buyer also had a secured creditor which had made its security right effective against third parties with respect to the buyer, a priority conflict with respect to the encumbered asset would arise between the grantor's secured creditor and the buyer's secured creditor. The draft Guide's priority rule in recommendation 73 was designed to resolve such conflicts, but if both secured creditors had filed a notice, the priority dispute would be resolved under recommendation 73 in favour of the secured creditor that had filed

the notice first. That outcome made no sense in a situation where either the buyer's or the grantor's secured creditor might have filed first. The proposed new recommendation that his delegation had withdrawn had sought to resolve the conflict in favour of the grantor's secured creditor provided that the security right concerned remained effective against third parties. However, given the complexity of the issue, his delegation was now requesting that the commentary should make clear that recommendation 73 was intended to apply to priority disputes where the competing security rights were granted by the same grantor.

38. **Mr. Bazinas** (Secretariat) said that the issue had been discussed on a number of occasions. The commentary already explained that a priority conflict arose only where competing claimants had taken a security right from the same person. As the conflict just described by the representative of the United States was not a priority conflict under the draft Guide, it was unclear to him what should be inserted in the commentary. A reference might perhaps be made to general property law principles.

39. **Mr. Deschamps** (Canada) noted that "priority" was defined in the draft Guide as "the right of a person to derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant". It was also clear that the definition of a competing claimant referred to competition between two or more persons that derived their interest from the same grantor. Moreover, the chapter on creation of a security right made it clear that a security right could not provide a secured creditor with more rights than the grantor enjoyed (*nemo dat quod non habet*). If those principles were to be made abundantly clear, the words "claimants holding" could be inserted in the first line of recommendation 73, which would then read: "The law should provide that priority between competing claimants holding security rights ...".

40. **Mr. Marca Paco** (Bolivia) said that his delegation was opposed to any amendment to recommendation 73.

41. **The Chairperson** suggested that the commentary should explain that recommendation 73 did not apply to priority conflicts between secured creditors that took a security right in an asset from different grantors. Accordingly, where a secured

creditor took a security right in an encumbered asset from a buyer of the asset, it took the asset subject to the security right granted in it by the seller, in accordance with the *nemo dat quod non habet* principle.

42. *It was so decided.*

Insertion of a new recommendation after recommendation 79

43. **Mr. Smith** (United States of America) said that his delegation was withdrawing its proposal contained in document A/CN.9/XL/CRP.10 to insert a new recommendation after recommendation 79 because it would amount to a substantive change. However, it now proposed that the issue should be addressed in the commentary.

44. If a grantor that had created a security right in an encumbered asset subsequently sold the asset, the sale was subject to the secured creditor's security right. However, if the secured creditor knew of the sale and took all steps necessary to ensure that the security right would continue, but nevertheless continued to lend money so that the total amount of secured obligations continued to increase even though all credit was now going to the grantor, some jurisdictions considered that there should be a cut-off point at which the transferee would take the asset free of the security right. Under the draft Guide, all future credit extended to the grantor under such circumstances continued to be secured by the encumbered asset.

45. **Mr. Deschamps** (Canada) proposed explaining in the commentary that States had two options. They could either apply the rule as it stood, so that the buyer would take the asset subject to a security right that would continue to guarantee all obligations, or they could opt for the alternative proposed by the representative of the United States.

46. **Mr. Smith** (United States of America) said he agreed that both options should be explained. However, the commentary should support the rule contained in the draft Guide.

47. **The Chairperson** said she took it that the Commission supported that approach.

48. *It was so decided.*

Proposed amendment to recommendation 108

49. **Mr. Smith** (United States of America) said that recommendation 108, as currently worded, required the secured creditor to preserve not only the encumbered asset itself but also its value. The secured creditor could easily preserve an asset such as a gold bar by making sure that it was not stolen, but it was unclear what action could be taken to preserve its value if the price of gold fell. As his delegation doubted whether it was the intention of the Commission to impose that kind of burden on the secured creditor, it proposed deleting the words “and its value” at the end of the recommendation. However, it was prepared to withdraw the proposed amendment if it had misinterpreted the rule.

50. **The Chairperson** said she feared that the amendment would amount to a substantive change.

51. **Mr. Kohn** (Observer for the Commercial Finance Association) said that there were many situations in which it was impossible for a secured creditor to preserve the value of an asset. His Association therefore considered that the amendment proposed by the United States was sensible in practical terms.

52. **Mr. Voulgaris** (Greece) said that he was opposed to the amendment because the party in possession of an encumbered asset was required only to take “reasonable steps” to preserve the value of the asset.

53. **Mr. Marca Paco** (Bolivia) also expressed a preference for retaining the text as it stood.

54. **Mr. Deschamps** (Canada) referred by way of example to the case of a promissory note pledged to a secured creditor. Under the laws of many jurisdictions, the note would have to be presented for payment on its maturity date in order to preserve the holder’s recourse against an endorser. Recommendation 108, as currently worded, seemed to require the pledgee of the promissory note to present it for payment on maturity. However, the secured creditor would have the option in many jurisdictions of protecting itself by negotiating a waiver in the security agreement. If the parties had not negotiated such a waiver, the default rule should perhaps be that set out in recommendation 108.

55. **Mr. Pendón Meléndez** (Spain) pointed out that the term “value” had many different shades of meaning, not just in economic terms or in terms of profitability, but also in legal and social terms. Those shades of meaning also had a bearing on the idea of “preservation”. He was therefore in favour of maintaining the recommendation as it stood.

56. **Mr. Porreca** (Italy) expressed the view that deletion of the reference to the asset’s value would defeat the purpose of recommendation 108.

57. **Mr. Schneider** (Germany) said that his delegation was strongly opposed to any amendment. If the encumbered asset was a car, for instance, and the grantor retained possession, it was clearly liable for payment of insurance, repairs and other similar costs.

58. **Mr. Sigman** (United States of America) said that his delegation withdrew its proposed amendment but proposed that the commentary should reflect the discussion, explaining that the rule applied only to security rights in tangible assets subject to possession.

59. **The Chairperson** said she took it that the Commission agreed that the commentary should include that explanation.

60. *It was so decided.*

The meeting was suspended at 3.45 p.m. and resumed at 4.05 p.m.

Proposed amendment to recommendation 109

61. **Mr. Sigman** (United States of America) noted that the question of what happened when a secured obligation was extinguished was addressed in recommendations 69, 109 and 137. Recommendation 69 dealt with cases in which the secured creditor was obliged to terminate its notice and spelt out the grantor’s correlative right in that regard. Recommendation 109 dealt with the physical return of an encumbered asset if it was in the possession of the secured creditor at the time of extinction of the obligation, and recommendation 137 dealt with enforcement provisions, indicating how to achieve extinction of the security right. Recommendations 69 and 109 both simply contained the phrase “extinguished by full payment or otherwise”. The third sentence of

recommendation 137, on the other hand, contained in addition the phrase “[i]f all commitments to extend credit have terminated”. His delegation was proposing a slight different amendment to that contained in document A/CN.9/XL/CRP.10, namely to insert the phrase “as provided in the last sentence of recommendation 137” after the word “extinguished” in recommendations 69 and 109.

62. **Mr. Umarji** (India) expressed support for the proposed amendment, which would be applicable, in particular, to banks’ practice of extending revolving credit.

63. **Mr. Riffard** (France) said that he had no objection to the substance of the proposed amendment. However, his delegation would prefer to amend recommendation 109 to read:

“The secured creditor must return an encumbered asset in its possession if, all commitments to extend credit having been terminated, the security right has been extinguished by full payment or otherwise.”

64. **Mr. Deschamps** (Canada) said that his delegation would be prepared to support either amendment.

65. **Mr. Sigman** (United States of America) indicated that the amendment proposed by the representative of France would be acceptable to his delegation, provided that recommendation 69 was also brought into conformity with recommendation 137.

66. **The Chairperson** said that, if she heard no objection, she would take it that the Commission agreed to adopt the amendment proposed by the representative of France and to leave it to the Secretariat to ensure that the three recommendations were consistent.

67. *It was so decided.*

Proposed amendment to recommendation 124 (b)

68. **Mr. Sigman** (United States of America) said that the purpose of the proposed amendment to recommendation 124 (b) was to make it clear that the phrase “acquired from or created by the transferor” referred to the security right and not to the rights of the transferee. His delegation therefore proposed deleting the words “acquired from”.

69. **Mr. Ginting** (Indonesia) expressed support for the proposed amendment. However, to prevent misunderstanding, he proposed restructuring the second half of the sentence to read: “... right to receive the proceeds created by the transferor or any prior transferor under the independent undertaking”.

70. **The Chairperson** pointed out that the draft Guide had defined “proceeds under an independent undertaking”, the phrase contained in the original version of the subparagraph, in its “Terminology” section. She took it that the Commission wished to adopt the amendment proposed by the delegation of the United States.

71. *The proposed amendment to recommendation 124 (b) was adopted.*

Proposed amendment to recommendation 156

72. **Mr. Sigman** (United States of America) said that his delegation was withdrawing its proposal in document A/CN.9/XL/CRP.10 to delete recommendation 156 but remained concerned about its implications. Recommendations 153 to 155 described the process whereby a secured creditor proposed to acquire encumbered assets in satisfaction of a secured obligation. Moreover, under recommendation 156, the grantor was given the option of proposing to the secured creditor that it exercise that remedy. If the secured creditor agreed, it was required to proceed in accordance with recommendations 154 and 155. It was unclear whether the grantor was also under an obligation not to object to the terms involved. He proposed that the commentary should spell out the consequences of the provision contained in recommendation 156.

73. **Mr. Bazinas** (Secretariat) said that the commentary had been prepared on the understanding that once the grantor had asked the secured creditor to make the proposal, the secured creditor would be required under recommendation 154 to give notice to all the parties listed in that recommendation, and that any addressee of the proposal would be entitled under recommendation 155 to object.

74. **Mr. Umarji** (India) said that the Secretariat’s understanding was, in his view, correct. The only outstanding question was whether the grantor,

having formally made the proposal, could subsequently withdraw it.

75. **Mr. Bazinas** (Secretariat) expressed the view that the grantor would be entitled to object to the terms of the secured creditor's proposal if they were unreasonable.

76. **Mr. Macdonald** (Canada) said that the question had been raised when recommendation 156 was adopted during the first part of the session. It was his understanding that the sole purpose of the provision was to allow the grantor to take the initiative. He expressed support for the proposal by the delegation of the United States to spell out its implications in the commentary.

77. **The Chairperson** said she took it that the Commission agreed to entrust the Secretariat with the task of clarifying the situation in the commentary.

78. *It was so decided.*

Proposed amendment to recommendation 165

79. **Mr. Sigman** (United States of America) said that the purpose of his delegation's proposed amendment to recommendation 165 was to ensure that the wording was consistent with the definition of "assignment" in the "Terminology" section, which first referred to the creation of a security right in a receivable by way of assignment and then stated that the term also included an outright transfer of a receivable for convenience of reference. Recommendation 165, as currently worded, mentioned in the first sentence "a receivable assigned by an outright transfer" and in the second sentence "a receivable assigned by way of security" without referring to a security right. His delegation proposed replacing the phrase in the second sentence with "a receivable assigned otherwise than by an outright transfer", although it might have been more appropriate, in light of the definition, to introduce a reference to a security right.

80. **The Chairperson** said that, if she heard no objection, she would take it that the Commission approved the amendment proposed by the delegation of the United States.

81. *The proposed amendment to recommendation 165 was adopted.*

Proposed amendment to recommendation 187

82. **Mr. Sigman** (United States of America) said that the purpose of his delegation's proposed amendment to recommendation 187 was to make it clear that a security right did not "encumber" an asset only to the extent of the asset's value. The beginning of the second sentence should be amended to read: "The maximum amount realizable from the security right is the asset's value...".

83. **The Chairperson** said that, if she heard no objection, she would take it that the Commission approved the amendment proposed by the delegation of the United States. She asked the Secretariat to search the draft Guide for any other references to a security right "encumbering" an asset and to make the requisite amendments in order to ensure consistency.

84. *The proposed amendment to recommendation 187 was adopted.*

Proposed amendment to recommendation 188

85. **Mr. Sigman** (United States of America) drew attention to a difference between the wording of recommendation 186, which used the phrase "is concluded in or evidenced by a writing", and that of recommendation 188, which merely stated "is evidenced in accordance with recommendation 186". His delegation proposed to reproduce the wording of recommendation 186 in recommendation 188.

86. **Mr. Macdonald** (Canada) noted that the wording of recommendation 15 was the same as that used in recommendation 186.

87. **The Chairperson** pointed out that both recommendation 15 and recommendation 186 were referring to an agreement, whereas recommendation 188 was referring to a right.

88. **Mr. Sigman** (United States of America) withdrew his delegation's proposal.

Proposed amendment to recommendation 204

89. **Mr. Sigman** (United States of America) said that the purpose of his delegation's proposed restructuring of recommendation 204 was simply to make it clear, by bringing forward the phrase "provided that the asset reaches the State of its

ultimate destination within [...] days after the time of creation of the security right”, that that proviso referred only to the alternative place of registration.

90. **Mr. Deschamps** (Canada) expressed support for the proposed amendment.

91. **The Chairperson** said that, if she heard no objection, she would take it that the Commission approved the amendment proposed by the delegation of the United States.

92. *The proposed amendment to recommendation 204 was adopted.*

93. **The Chairperson** noted that the Commission had thus concluded its consideration of document A/CN.9/XL/CRP.10 containing proposed amendments by the delegation of the United States.

94. **Mr. Riffard** (France) proposed giving a mandate to the Secretariat to review the entire draft Guide with a view to removing any redundant material and making it as concise and reader-friendly as possible.

95. **Mr. Macdonald** (Canada) expressed support for the proposal, noting that repetition occurred mostly in introductory paragraphs and did not affect substantive points.

96. **Mr. Schöfisch** (Germany) expressed the view that it might be difficult for the Secretariat to be sure that its changes were strictly editorial and not substantive.

97. **The Chairperson** suggested that the Secretariat should err on the side of caution.

98. **Mr. Sekolec** (Secretary of the Commission) reassured the Commission that the guidance it had received was sufficient to enable it to carry out its review assignment with full confidence.

Recommendation 205: Proposal by the observer for the European Commission

99. **The Chairperson** invited the observer for the European Commission to introduce his proposal regarding recommendation 205. She urged him to bear in mind, however, that most of the participants were not members of the European Union.

100. **Mr. Wezenbeek** (Observer for the European Commission) said that the European Union had a problem with chapter XII of the draft Guide concerning conflict of laws, particularly in the context of its proposed regulation on the law applicable to contractual arrangements (Rome I). In his view, it was not a purely European issue but had potential implications for global industry. The European Commission was not proposing to amend recommendation 205, since it had already been adopted. However, it would circulate text referring to different options that were available and used by industry. For instance, the law of the underlying claim was not mentioned in the commentary to chapter XII, although it was already being successfully applied, particularly by the securitization industry. It would be unfortunate, also for developing countries, if the draft Guide remained silent on such developments.

101. **Mr. Burman** (United States of America) said that informal consultations had begun on the text mentioned by the observer for the European Commission. While his delegation would be very reluctant to add text to recommendation 205, it would not be averse to including appropriate references to the issues raised in the commentary to chapter XII.

The meeting rose at 5 p.m.

Summary record of the 861st meeting, held at the Vienna International Centre
on Thursday, 13 December 2007, at 9.30 a.m.

[A/CN.9/SR.861]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 9.40 a.m.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions and possible future work (A/CN.9/617, 620, 631 and Add. 1-11, and 637 and Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1)
(continued)

Recommendation 205: Proposal by the observer for the European Commission (continued)

1. **The Chairperson** invited the Commission to resume its consideration of the proposal made by the observer for the European Commission.

2. **Ms. Perkins** (United Kingdom) said that her delegation had grave concerns about the current wording of recommendation 205 because it went a great deal further than the European Union's proposed regulation on the law applicable to contractual arrangements (Rome I). Recommendation 205 provided that the law applicable to the creation of a security right was the law of the State in which the grantor was located. In her view, that matter had been settled under European Community law in the 1980 Rome Convention on the law applicable to contractual obligations.

3. Her delegation had consistently voiced its concern about the recommendation's implications for financial contracts that had not been excluded from the scope of the draft Guide, financial contracts that were not governed by netting agreements, spot trading and some forward trading of commodities, and the assignment of positions under such trading. Moreover, some over-the-counter equity derivatives and bond options might not be backed up by netting agreements, for instance because they were old agreements, because there had been an oversight or due to pressures of fast trading. There was also no indication that receivables arising from insurance contracts had been excluded from the scope of the draft Guide. As

the beneficiaries of insurance policies might be natural persons, ships or mobile businesses, it was extremely common for the grantor's location to change frequently. Recommendation 205 was not an appropriate conflict-of-law rule either for securitization transactions, residential or commercial mortgage-backed securities, collateralized debt obligations (CDOs), collateralized bond obligations (CBOs) and collateralized loan obligations (CLOs).

4. While her delegation appreciated the important role of recommendation 205 with respect to certain financial practices, it had a number of proposals for additional wording that would create a measure of flexibility for jurisdictions that wished to apply a different conflict-of-law rule to the key markets and industries that she had mentioned. One option discussed in informal consultations with other delegations was to provide for two alternatives, A and B, so that States could either apply recommendation 205 as currently worded or apply it as the basic rule with a carve-out for cases where the underlying intangible asset was created by a contract. If that solution was considered to be too radical, her delegation was prepared to propose instead that the word "ordinarily" should be inserted in the opening phrase of recommendation 205, which would then read: "The law should ordinarily provide that ...". The commentary would then explain that some key financial markets and medium-level financing practices were not adequately served by the rule laid down in recommendation 205.

5. **Ms. Gibbons** (United Kingdom) said that she was both an adviser to the British Government and a partner in a law firm with responsibility, inter alia, for framing legal opinions regarding securitization transactions.

6. Noting that certainty was one of the key objectives of the draft Guide, she said that if a rule such as that in recommendation 205 were to be

applied without any provision for derogation, it would undermine certainty in the securitization market. A key feature of securitization transactions, which were now an international phenomenon and by no means confined to the London-based market, was that rating agencies required a measure of certainty, which was achieved through an assessment of the commercial risks involved in the transaction and through legal opinions.

7. For example, an originator whose “centre of main interest” under the European Community Regulation on Insolvency Proceedings was in France might also enter into contracts with grantors in Germany and Spain. The benefit of those contracts might be assigned by the originating company in the form of an outright transfer to a special purpose vehicle, which in turn might assign its interest in the contracts to a security trustee. Both assignments would be covered by the terms of the draft Guide. Under current practice, the assignments would be governed by the law of the underlying contract, in other words by French law. Under recommendation 205, however, it would be necessary to determine the current location of the grantor, which was not always clear. Many businesses had branches in a large number of different countries and a grantor’s place of residence could change. Each time an originator made further issuances, new legal opinions would become necessary to establish its location and it would be extremely difficult to present rating agencies with a reliable assessment of the legal risks involved.

8. **Mr. Deschamps** (Canada) noted that securitization had frequently been cited some years previously as a branch that benefited from the assignor location rule under the United Nations Convention on the Assignment of Receivables in International Trade (United Nations Assignment Convention). His company had recently been consulted by an international law firm about a securitization transaction involving an originator with its centre of main interest in France and with customers in some ten other countries, including Canada. The firm’s lawyer had commented that it was unfortunate that France did not apply the same conflict-of-law rule as Canada, namely the assignor location rule.

9. **Mr. Umarji** (India) said that in the event of default and enforcement of a loan, the grantor could not be required to move from one jurisdiction to another in response to actions for recovery. The grantor’s interests should also be protected. He was therefore opposed to any amendment of recommendation 205.

10. **Mr. Smith** (United States of America) expressed support for the views expressed by the previous two speakers. Securitization transactions were commonly undertaken in jurisdictions that applied the conflict-of-law rule set out in recommendation 205 without entailing any systemic risk or trouble with rating agencies. No rule was perfect, but the Commission had concluded after lengthy deliberations that, on balance, the rule contained in recommendation 205 was the best available. It would work, for example, in situations where financing was sought against a pool of receivables involving contracts that were governed by the laws of a number of different countries. He was aware that the “centre of main interest” criterion had given rise to litigation in Europe, but the problems addressed in the cases concerned were relatively unusual. In most transactions it was quite clear where the grantor was located and the financing documents would normally restrict the grantor’s freedom to change location. He strongly supported recommendation 205 because it ensured certainty and low transaction cost, furthered the purposes of the draft Guide and was consistent with the United Nations Assignment Convention.

11. **Mr. Schöfisch** (Germany) said that the purpose of the draft Guide was to give advice to States and to provide them with information. Unfortunately, recommendation 205 omitted relevant information by failing to mention that some States had opted for different approaches, which could be explained in the commentary. The concerns described by the delegation of the United Kingdom underscored the usefulness of such a clarification, which should be couched in neutral terms in the text of the recommendation.

12. **Mr. Kalns** (Latvia) expressed support for the proposal by the representative of Germany.

13. **The Chairperson** pointed out that the purpose of the recommendation was to present the Commission’s decision regarding what it considered

to be the best solution and that of the commentary was to present the different options. Working Group VI (Security Interests) and the Commission had discussed the issues raised by the delegation of the United Kingdom at length and had taken a decision in full knowledge of the implications of the rule in recommendation 205. As already noted, the matter had also been discussed in the context of the negotiations on the United Nations Assignment Convention. The Commission could not now reverse its decisions in those two cases.

14. **Mr. Porreca** (Italy) expressed support for the comments and proposals made by the delegation of the United Kingdom. Although the Commission had already adopted a decision, he saw no reason why it should not show some flexibility in such a complex matter in order to accommodate all concerns. Its main aim should be to promote the widest possible utilization of the draft Guide by legislators.

15. **Mr. Kohn** (Observer for the Commercial Finance Association) said that one of the goals of the draft Guide was to minimize transaction costs, which could make financing prohibitively expensive. As such costs were particularly high in the case of securitization transactions, the rule in recommendation 205 would make it easier for many companies to obtain access to secured credit. He submitted that in the vast majority of situations, it was easy to determine the location of the grantor. On the other hand, where the pool of receivables involved customers in many jurisdictions, the process of determining the applicable law could be time-consuming. In many cases, there was no express choice of law in the documents generating the receivable, and considerable due diligence was required to determine which law was applicable and what the law stipulated regarding the creation, effectiveness and priority of a security right.

16. **Mr. Markus** (Switzerland) said that he agreed with the Chairperson that it would be inappropriate to change the Commission's decision regarding recommendation 205. On the other hand, as serious concerns had been raised, he proposed showing some flexibility in the commentary by outlining options that could be viewed as the second best approach. Moreover, to promote legal certainty regarding possible changes in the location of the grantor, he proposed referring in the commentary to

the possibility of establishing a point in time that would be decisive for the purpose of determining the grantor's location.

17. **Mr. Voulgaris** (Greece) and **Mr. Riffard** (France) expressed support for the proposal by the representative of Switzerland.

18. **Ms. Kaller** (Austria), **Ms. Kolibabska** (Poland), **Ms. Gavrilesco** (Observer for Romania) and **Mr. Urminský** (Observer for Slovakia) expressed support for the position stated by the delegation of the United Kingdom and also for previous speakers who had called for flexibility so that as many jurisdictions as possible could apply the draft Guide.

19. **Mr. Bazinas** (Secretariat) said that the commentary, as it stood, sought to reflect the different approaches adopted in different jurisdictions and could be expanded if the Commission so desired.

20. He pointed out that conventions prepared by UNCITRAL were draft conventions that were submitted for adoption by diplomatic conferences or the General Assembly. Once an instrument had been adopted by either of those bodies, it could be amended only in accordance with the rule laid down in the text. Under the United Nations Assignment Convention, one third of the Contracting States could request the holding of a diplomatic conference to revise or amend the Convention. The Commission, as a subsidiary body of the General Assembly, could not circumvent the amendment or revision process by introducing a change of policy through a model law, guide or recommendation.

21. According to practitioners in many parts of the world, the advantages of the rule laid down in recommendation 205 were mainly felt in the context of receivables financing. Where there was a bulk assignment of receivables, a key concern was the insolvency of the assignor. That consideration had strongly influenced the decision by the Commission and the General Assembly to recommend that the applicable law should be the law of the most likely location of the main insolvency proceedings with respect to the assignor, grantor or borrower, thus ensuring that the same law would govern priority and the ranking of claims in insolvency proceedings.

22. **The Chairperson** said that it was important to try to resolve all concerns within the constraints under which the Commission was operating. However, she had been present during the negotiation of the United Nations Assignment Convention and at the drafting sessions of Working Group VI on the draft Guide and she had heard no new arguments at the present meeting on either side. Although certain financial practices had become more prominent in recent years, the fundamental reasoning that had led to the policy decisions remained unchanged. In that context, she invited the Commission to consider how the helpful proposal by the delegation of Switzerland might be reflected in the commentary.

23. **Mr. Wezenbeek** (Observer for the European Commission) said that the European Commission had been requested to undertake an impact assessment on the issue under discussion and to report its findings to the European Council in two years' time. The member States of the European Union had discussed chapter XII of the draft Guide and concluded that it should be placed on hold. However, he felt that such a request to the Commission would be inappropriate and would fail to do justice to the fine work it had accomplished to date. Nevertheless, sections of industry throughout the European Union were dissatisfied with the rule laid down in recommendation 205 and only one member State had signed the United Nations Assignment Convention. It would therefore be unfortunate if there was no possibility of considering a minor amendment to the recommendation, such as inserting the word "ordinarily", as proposed by the delegation of the United Kingdom, and then expanding the commentary to explain other practices.

24. **Ms. McCreath** (United Kingdom) said that her delegation did not view its proposal as a formal amendment but rather as a pointer to other practices. She noted that the draft Guide expanded on the definition of a financial contract in the United Nations Assignment Convention in order to clarify what normally occurred in financial markets.

25. **Ms. Gibbons** (United Kingdom) said that in the securitization industry it was necessary in all cases involving several grantors of significant size in different jurisdictions to examine the

enforceability of contracts in the grantors' local jurisdictions in order to inform rating agencies of the risks involved. The rule laid down in recommendation 205 did not detract from the need to be aware of the rules governing grantors by virtue of the contracts into which they had entered with the originator and the jurisdiction in which they were located. It simply introduced an additional jurisdiction to investigate. Moreover, it was not always easy to determine and deliver a legal opinion on where a company's centre of main interest was located. The due diligence involved might in fact prove quite costly.

26. **Ms. Perkins** (United Kingdom) said that the commentary failed to address her delegation's concerns regarding the applicable law, since it referred to the law of the grantor's residence and the *lex situs* of the intangible asset but not to the law in the contract that created the intangible asset, in other words the law of the receivable.

27. She wondered whether the creation of security rights in shipping insurance contracts had been discussed when the United Nations Assignment Convention was being negotiated. The common practice of repeatedly assigning an insurance policy relating to a ship and its contents had given rise to a substantial amount of case law on the subject in the United Kingdom. She had been informed by English judges that the rule contained in recommendation 205 was not applicable to such cases.

28. There was clearly no consensus in the Commission that one rule could be identified as the best for all States in every circumstance. While one rule was certainly the best for a wide range of financial situations, a different rule might be more appropriate for other kinds of secured transactions. She submitted that her delegation's proposal to add a single word to the recommendation and to explain different options in the commentary was not excessive.

29. **Mr. Deschamps** (Canada) said that his delegation agreed that the commentary should be more detailed and expand on the various alternatives, presenting the law governing the receivable as an alternative to the *lex situs*.

30. With regard to recommendation 205, the delegation of the United Kingdom had proposed excluding cases where the underlying intangible asset was created by a contract or, if that was too radical, inserting the word “ordinarily” in the opening phrase. If intangible assets arising from contracts were excluded, however, recommendation 205 might as well be omitted from the draft Guide because financial contracts, securities and other items were already excluded. He urged delegations that were in favour of replacing the grantor’s location rule by a rule based on the law governing the receivable to compare the advantages and disadvantages of the two rules not only with regard to an assignment of a specific receivable but also with regard to a bulk assignment, especially one including future receivables. If the priority of the assignee with respect to future receivables was unknown, as it might well be if a rule based on the law governing the receivable was adopted, it would be difficult to provide sound advice to a rating agency.

31. The word “ordinarily” was too vague to be included in the recommendation itself but it could be inserted in the commentary, which might state, for instance, that the general rule proposed in the recommendation would ordinarily be applicable to situations involving trade receivables.

32. **Mr. Umarji** (India) said that it was debatable whether the draft Guide covered marine insurance policies relating to ships and the receivables under such policies. In any case, assignments in that context would constitute a very limited area in terms of the scope of the draft Guide.

33. **Mr. Smith** (United States of America) expressed support for the comments by the representative of Canada. However, he had reservations about the use of the word “ordinarily” in the commentary because it would be undesirable, for instance, to apply one conflict-of-law rule to a loan and another to a related securitization transaction. A single conflict-of-law rule was essential in order to determine priority.

34. A rule based on the law governing the receivable would be inconsistent with the draft Guide’s aim of encouraging countries with emerging economies to improve their secured transactions law. Developed countries were enacting

sophisticated laws to accommodate securitization transactions and anyone entering into a commercial transaction would clearly wish to have it governed by such a law rather than by the law of a developing country.

35. **The Chairperson** said she took it that, in view of the strong objections that had been raised to any reopening of the debate on recommendation 205, the Commission agreed to address the concerns expressed by a number of its members in the commentary.

36. *It was so decided.*

37. **Ms. McCreath** (United Kingdom) requested that the official record of the session reflect her delegation’s position that recommendation 205 was not the best rule and its concern about the rule’s possible adverse impact on the industries mentioned in its earlier statements.

The meeting was suspended at 11.35 a.m. and resumed at 12.05 p.m.

38. **Mr. Smith** (United States of America) read out the following paragraph, which he described as a starting point for further elaboration of the commentary:

“Some countries have a different conflict-of-law rule for intangibles from the rule in recommendation 205. Those countries contemplate capital market or other transactions, which seek perhaps greater certainty established by looking not to the law of the grantor’s location, but rather to the law governing the intangible. The rule that looks to the law governing the intangible has the advantages of avoiding the risk of a subsequent change of location of the grantor and a single, stable conflict-of-law rule for transactions involving successive assignments of the intangibles among assignors located in different countries. It is not as advantageous for the assignment of intangibles in bulk that may be governed by the laws of multiple countries. Moreover, it shifts the risk of a change of location of the grantor to the risk of a change in the law governing the intangible.”

39. **Mr. Wezenbeek** (Observer for the European Commission) said that the representatives of

member States of the European Union attending the session very much regretted the decision not to reopen the debate on recommendation 205 notwithstanding the considerable support that had been expressed for the proposal by the delegation of the United Kingdom to insert the word “ordinarily” in the opening phrase of the recommendation. They requested that their position should be reflected in the record.

40. The preliminary response of the same delegations to the text proposed by the representative of the United States was that the last two sentences were not sufficiently factual and should be deleted.

41. **The Chairperson** pointed out that, in the view of a number of delegations of member States of the Commission, the insertion of the word “ordinarily” in the recommendation would have amounted to a substantive amendment to a text that had already been adopted by the Commission.

42. **Mr. Burman** (United States of America) suggested that the record should also reflect the fact that other delegations had withdrawn a number of proposed amendments regarding substantive matters that they considered to be important.

43. **Mr. Schöfisch** (Germany), welcoming the proposal to expand the commentary to reflect different options, expressed a preference for a neutral approach that would refrain from stating that one option was better than another.

44. **The Chairperson** said that the Commission had been careful in the draft Guide to ensure that the commentary covered all options but at the same time explained why a particular option was being recommended. On the other hand, where alternatives were offered, as in the recommendations regarding the unitary and non-unitary approaches, it had adopted a more neutral and balanced approach.

45. She took it that the Commission wished to give a mandate to the Secretariat to reflect the discussion that had taken place at the meeting as well as the content of the proposal by the delegation of the United States in the commentary.

46. *It was so decided.*

Revised commentary to chapter VII: Priority of a security right (A/CN.9/637/Add.1)

47. **The Chairperson**, noting that the Commission had approved the substance of the original commentary to chapter VII during the first part of the session, asked whether members had any comments on the revised version.

48. **Ms. Walsh** (Canada) proposed clarifying that the rules on priorities were designed to deal with competing rights of claimants all of which were derived from the same grantor.

49. She further proposed making a clearer distinction between third-party effectiveness issues and priority issues and, in general, avoiding repetition in the commentary.

50. *The substance of the revised commentary was approved subject to those amendments and any necessary editorial modifications.*

Revised commentaries to chapter VIII: Rights and obligations of the parties; chapter IX: Rights and obligations of third-party obligors; chapter X: Enforcement of a security right; and chapter XI: Acquisition financing (A/CN.9/637/Add.7-5)

51. **The Chairperson** noted that the Commission had approved the substance of the original versions of the commentaries to chapters VIII to XI during the first part of the session. It had also decided earlier in the resumed session to reflect the changes to the recommendations under chapter XI in the commentary.

52. *The substance of the revised commentaries was approved subject to any necessary editorial modifications.*

Revised commentary to chapter XII: Conflict of laws (A/CN.9/637/Add.6)

53. **The Chairperson** noted that the Commission had approved the substance of the original commentary to chapter XII at the first part of the session.

54. **Ms. Perkins** (United Kingdom) said that the revised commentary failed to explain the interrelationship between recommendations 45, 205 and 217. Uncertainty arose where an assignor changed location and different priority rules were

applicable under the laws of the first and second location. Under recommendation 217, the law of the new location would govern third-party effectiveness and priority, but that rule would leave the first assignee unduly exposed. Under recommendation 45, however, the assignee was given a brief period during which it could close its exposure window by making its security right effective against parties under the law of the assignor's new location. The procedure for remedying uncertainty was thus somewhat tortuous. Moreover, recommendation 45 might not be applicable in the forum State.

55. **The Chairperson** said she took it that the commentary should explain the interaction between recommendations 45, 205 and 217, in particular with a view to explaining how the problem of a change in the grantor's location was addressed under the draft Guide.

56. *The substance of the revised commentary was approved subject to that decision and any necessary editorial modifications.*

The meeting rose at 12.35 p.m.

**Summary record of the 862nd meeting, held at the Vienna International Centre
on Thursday, 13 December 2007, at 2 p.m.**

[A/CN.9/SR.862]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 2.05 p.m.

**Adoption of a draft UNCITRAL Legislative Guide
on Secured Transactions and possible future work**

(A/CN.9/617, 620, 631 and Add. 1-11, and 637 and
Add.1-8; A/CN.9/XL/CRP.10 and 11 and Add.1)

(continued)

*Revised commentaries to chapter XIII: Transition;
and chapter XIV: Insolvency (A/CN.9/637/Add.7
and 8)*

1. **The Chairperson** noted that the Commission had approved the substance of the original versions of the commentaries to chapters XIII to XIV during the first part of the session. It had also decided earlier in the resumed session to reflect the changes to the recommendations under the chapter XIII in the commentary.

2. *The substance of the revised commentaries was approved subject to any necessary editorial modifications.*

3. **The Chairperson** said that the discussion of the draft Guide had thus been concluded. She recalled that when the project of a legislative guide on secured transactions had first been proposed, the idea had been received with a certain amount of scepticism. The Commission had nevertheless produced what would certainly be recognized as a valuable tool for legislators. Although there had been heated discussions on many points, she urged members to rise above those points and focus instead on the draft Guide as a whole, which was a tremendous accomplishment. She warmly thanked all those who had contributed to the process, including, in particular, the Secretariat.

4. **Mr. Schneider** (Germany) expressed warm thanks on behalf of the Commission to the Chairperson and the Secretariat.

The discussion covered in the summary record ended at 2.15 p.m.

**Summary record (partial) of the 863rd meeting, held at the Vienna International Centre
on Friday, 14 December 2007, at 9.30 a.m.**

[A/CN.9/SR.863]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 9.45 a.m.

The discussion covered in the summary record began at 11.35 a.m.

Adoption of the report of the Commission
(continued)

1. **The Chairperson** invited the Rapporteur, Mr. Umarji (India), to introduce the draft report of the Commission on the work of its resumed session.

2. **Mr. Umarji** (India), Rapporteur, said that it had been a difficult task to produce a legislative guide that could be applied by the world's many different legal systems. He was confident that the enactment of laws based on the recommendations in the draft Guide in the years ahead would make an important contribution to the harmonization of international trade practices.

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions (A/CN.9/XL/CRP.9/Add.1-4)
(continued)

Draft report on chapters IV to VI
(A/CN.9/XL/CRP.9/Add.1 and Add.2)

1. Chapter IV: Creation of a security right (effectiveness as between the parties):
(a) Recommendations (A/CN.9/637, recommendations 13-28) and (b) Commentary (A/CN.9/631/Add.1, paras. 142-247)

3. **Mr. Sigman** (United States of America), referring to subparagraph 6 (i) of document A/CN.9/XL/CRP.9/Add.1 concerning the commentary to chapter IV, proposed inserting the phrase "if one did not previously exist" after "agreement" to make it clear that a new written agreement would not be required if one already existed.

4. *It was so decided.*

5. **Ms. McCreath** (United Kingdom) referred to the text in square brackets following paragraph 16

of document A/CN.9/XL/CRP.9/Add.2, which stated that a new subparagraph 6 (vi) would be inserted in document A/CN.9/XL/CRP.9/Add.1 to the effect that paragraph 196 of the commentary should be revised to indicate that a floating charge was indeed a security right and that the difference between a floating charge should be briefly discussed. She requested that when paragraph 196 was revised, the word "so-called" before "floating charge" should also be deleted because of its negative connotation.

6. *It was so decided.*

7. **Mr. Weise** (Observer for the American Bar Association), referring to paragraph 6 (viii) concerning the reasons why anti-assignment clauses were invalidated with respect to the assignment of some types of receivables and not with respect to others, suggested replacing the word "upheld" by "not invalidated".

8. *It was so decided.*

9. *The section of the draft report on chapter IV, as amended, was adopted.*

2. Chapter V: Effectiveness of a security right against third parties: (a) Recommendations (A/CN.9/637, recommendations 29-53) and (b) Commentary (A/CN.9/631/Add.2)

10. *The section of the draft report on chapter V was adopted.*

3. Chapter VI: The registry system:
(a) Recommendations (A/CN.9/637, recommendations 54-72)

11. **Mr. Weise** (Observer for the American Bar Association) suggested inserting small roman numerals in paragraph 9 of document A/CN.9/XL/CRP.9/Add.1, which would then read:

"... it was noted that recommendation 57 required only the information necessary for third parties so as: (i) to avoid unnecessary

information that could confuse third parties or lead to errors that might invalidate notices; (ii) to standardize the information required; and (iii) to send the message that, unlike immovable property title registries, movable property security right registries required minimal information.”

12. *It was so decided.*

13. **Mr. Weise** (Observer for the American Bar Association) suggested amending the second sentence of paragraph 16 of document A/CN.9/XL/CRP.9/Add.1 to read: “...if the law prescribed a limited duration of registration (...), an erroneous statement would not affect the duration of the registration to the extent permitted by the law”.

14. *It was so decided.*

15. *Document A/CN.9/XL/CRP.9/Add.1, as amended, was adopted.*

Draft report on chapter VI (continued), the introductory chapter, and chapters I, II, X and XI (A/CN.9/XL/CRP.9/Add.2)

3. *Chapter VI: The registry system:*

(a) *Recommendations (A/CN.9/637, recommendations 54-72) (continued) and*
(b) *Commentary (A/CN.9/631/Add.3)*

16. **Mr. Weise** (Observer for the American Bar Association) suggested replacing the words “reliability of the registry” in the second sentence of paragraph 3 of document A/CN.9/XL/CRP.9/Add.2 by “effectiveness of the registry”.

17. **Ms. Walsh** (Canada) said that she interpreted the reference to reliability as referring to the reliability of the registry records from the point of view of a third-party searcher.

18. **Mr. Weise** (Observer for the American Bar Association) suggested referring in that case to the “ability to rely on a search of the registry”.

19. **Mr. Riffard** (France) proposed covering all eventualities by using the phrase “reliability and effectiveness of the registry”.

20. **Mr. Sigman** (United States of America) cautioned against introducing a casual reference to “effectiveness” in the draft report, since the term might be misinterpreted.

21. **The Chairperson** said that he took it that the Commission would prefer to leave the wording unchanged.

22. *It was so decided.*

23. **Mr. Weise** (Observer for the American Bar Association) suggested inserting the words “in effect” before “involved” in the third sentence of paragraph 6 of document A/CN.9/XL/CRP.9/Add.2 because the original grantor would retain its name but the new owner of the encumbered asset would, in effect, have become the grantor.

24. *It was so decided.*

25. *The section of the draft report on chapter VI, as amended, was adopted.*

4. *Reordering of the introduction, chapter I (Key objectives) and section C of chapter II (Scope of application and other general rules) (A/CN.9/631/Add.1, paras 1-12, 20-31 and 55-57; A/CN.9/637, paras. 1-6; A/CN.9/XL/CRP.11/Add.1))*

5. *Chapter II: Scope of application and other general rules; and chapter III: Basic approaches to security: (a) Recommendations (A/CN.9/637, recommendations 2-12) and (b) Commentary (A/CN.9/631/Add.1, paras. 23-56 and 78-141)*

26. **Mr. Macdonald** (Canada) proposed amending subparagraph 14 (iv) of document A/CN.9/XL/CRP.9/Add.2 to read: “Section D should include recommendations 2-12 from document A/CN.9/637 ordered in accordance with subparagraphs (i), (ii) and (iii).”

27. *It was so decided.*

28. *The section of the draft report on the reordering of the introduction, chapter I and section C of chapter II, and the section on chapter II, as amended, were adopted.*

6. *Chapter X: Enforcement of a security right: (a) Recommendations (A/CN.9/637, recommendations 128-173) and (b) Commentary (A/CN.9/637/Add.4)*

7. *Chapter XI: Acquisition financing: (a) Recommendations (A/CN.9/637,*

*recommendations 174-199) and
(b) Commentary (A/CN.9/631/Add.5)*

29. **The Chairperson** noted that document A/CN.9/XL/CRP.9/Add.2 contained only part of the draft report on chapter X.

30. *The section of the draft report on chapter XI was adopted.*

31. *Document A/CN.9/XL/CRP.9/Add.2, as amended, was adopted.*

Draft report on chapter X (continued), chapters XII to XIV and proposed amendments to the terminology and recommendations contained in document A/CN.9/XL/CRP.10 (A/CN.9/XL/CRP.9/Add.3)

32. *The section of the draft report on chapter X was adopted.*

*8. Chapter XII: Conflict of laws:
(a) Recommendations (A/CN.9/637,
recommendations 200-224) and
(b) Commentary (A/CN.9/631/Add.6)*

*9. Chapter XIII: Transition:
(a) Recommendations (A/CN.9/637,
recommendations 225-241) and
(b) Commentary (A/CN.9/631/Add.7)*

33. *The sections of the draft report on chapters XII and XIII were adopted.*

*10. Chapter XIV: Insolvency:
(a) Recommendations (A/CN.9/637,
recommendations 232-239) and
(b) Commentary (A/CN.9/631/Add.8)*

34. **Ms. McCreath** (United Kingdom) drew attention to paragraph 21 of document A/CN.9/XL/CRP.9/Add.3, which stated that it had been agreed that the commentary should explain that the term “financial contract” was defined in both the draft Guide and the UNCITRAL Legislative Guide on Insolvency Law in accordance with article 5 (k) of the United Nations Convention on the Assignment of Receivables in International Trade. She proposed specifying at the end of the paragraph that the definition in the draft Guide was contained in paragraph (s) of the “Terminology” section.

35. **The Chairperson** noted that it had been decided to remove the paragraph lettering before the

definitions. However, the location of the definition could no doubt be identified by some other means. If she heard no objection, she would take it that the Commission wished to adopt the proposed amendment.

36. *It was so decided.*

37. *The section of the draft report on chapter XIV, as amended, was adopted.*

11. Proposed amendments to the terminology and recommendations contained in document A/CN.9/XL/CRP.10

38. **Mr. Sigman** (United States of America) proposed inserting the phrase “effective against third parties and” after “took the asset subject to a security right” in the second sentence of paragraph 30 of document A/CN.9/XL/CRP.9/Add.3.

39. *It was so decided.*

40. *The section of the draft report dealing with proposed amendments to the terminology and recommendations contained in document A/CN.9/XL/CRP.10 was adopted.*

41. *Document A/CN.9/XL/CRP.9/Add.3, as amended, was adopted.*

The discussion covered in the summary record ended at 12.20 p.m.

**Summary record (partial) of the 864th meeting, held at the Vienna International Centre
on Friday, 14 December 2007, at 2 p.m.**

[A/CN.9/SR.864]

Chairperson: Ms. Sabo (Canada)

The meeting was called to order at 2.10 p.m.

Adoption of the report of the Commission
(continued)

Adoption of a draft UNCITRAL Legislative Guide on Secured Transactions (A/CN.9/XL/CRP.9/Add.1-4)
(continued)

Draft report on recommendation 205, the commentaries to chapters VII to IX and XII and the decision by the Commission to adopt the draft Guide (A/CN.9/XL/CRP.9/Add.4)

12. Recommendation 205

1. **The Chairperson** invited the Commission to resume its consideration of the draft report on the draft Guide. The first five paragraphs of document A/CN.9/XL/CRP.9/Add.4 dealt with the Commission's discussion of recommendation 205.

2. **Mr. Schöfisch** (Germany) proposed inserting the words "by a group of States" after "concern was expressed" in the first sentence of paragraph 1.

3. **Mr. Riffard** (France) said that the word "group" might be construed as referring to a structured grouping. He proposed instead inserting the words "by a number of States".

4. *It was so decided.*

5. **Mr. Bazinas** (Secretariat) suggested that, in light of the amendment just adopted, the last sentence of the paragraph should be replaced by the following three sentences:

"In order to address that concern, several suggestions were made. One was that recommendation 205 should be revised to provide more flexibility, indicating that there were other possible approaches (with the addition, for example, of the word 'primarily' after the words 'the law should ...'). Another was that the commentary should address the

merits of an approach based on the law governing the receivable."

6. **Ms. McCreath** (United Kingdom) proposed replacing the word "primarily" within brackets by the word "ordinarily".

7. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to adopt the text suggested by the Secretariat as amended by the representative of the United Kingdom.

8. *It was so decided.*

9. **Mr. Weise** (Observer for the American Bar Association) suggested adding the words "that registers" after the words "the secured creditor (assignee)" in the penultimate sentence of paragraph 2.

10. **Mr. Bazinas** (Secretariat) pointed out that the second part of the sentence referred to meeting the requirements of third-party effectiveness because the secured creditor would not know whether registration was the mode of achieving third-party effectiveness in the jurisdiction of the grantor's new location. He therefore suggested inserting the words "that met the requirements for third-party effectiveness" instead of "that registers".

11. **The Chairperson** said she took it that the Commission wished to adopt the suggested amendment as revised by the Secretariat.

12. *It was so decided.*

13. **Mr. Smith** (United States of America) proposed inserting the words "in the commentary" after "elaboration" in the first sentence of paragraph 3.

14. *It was so decided.*

15. **Mr. Schöfisch** (Germany) proposed inserting the following two sentences before the last sentence of paragraph 3: "One delegation proposed deleting the sentences. Another delegation suggested that the commentary should provide a neutral explanation."

He further proposed replacing the phrase “In response, it was stated that” in the last sentence by “It was noted that”.

16. *It was so decided.*

17. **Mr. Weise** (Observer for the American Bar Association) suggested inserting the words “with respect to future receivables” at the end of the third sentence of paragraph 4.

18. **The Chairperson** said that, if she heard no objection, she would take it that the Commission wished to adopt the suggested amendment.

19. *It was so decided.*

20. **Ms. McCreath** (United Kingdom) proposed amending the opening phrase of the first sentence of paragraph 5, which currently stated that, after discussion, “the Commission decided that recommendation 205 should remain unchanged”, to read: “the Commission decided that recommendation 205 could not be changed at such a late stage”.

21. **Mr. Burman** (United States of America) said that there had clearly been no consensus on the proposed amendment to recommendation 205. It would therefore be inaccurate to give the impression that the Commission had decided not to act on a consensus because the recommendation had already been adopted.

22. **Mr. Ghia** (Italy) expressed support for the amendment proposed by the delegation of the United Kingdom.

23. **The Chairperson** pointed out that the reasoning that had led to the Commission’s decision was set out in paragraphs 3 and 4.

24. **Mr. Bazinas** (Secretariat) said that paragraph 3 described the broad support that had been expressed for further elaboration in the commentary of the approach based on the law governing the receivable. Paragraph 4 set out the reasons invoked by those who had opposed any amendment to the recommendation, for instance the fact that it had already been adopted and that it was consistent with the rule contained in the United Nations Convention on the Assignment of Receivables in International Trade, as well as other substantive arguments.

25. **Mr. Schöfisch** (Germany) said that, in his view, a broad majority had been in favour of revising recommendation 205, since almost all European Union member States had expressed support for the amendment proposed by the delegation of the United Kingdom. Although the Chairperson’s ruling against any change had been accepted, there had been no agreement that the rule laid down in recommendation 205 was sound. He therefore supported the amendment to the draft report proposed by the representative of the United Kingdom.

26. **Mr. Riffard** (France) pointed out that the Commission had decided against reopening the debate on recommendation 205 and against amending it because there was no consensus on such action. Indeed several delegations had raised formal objections to any amendment.

27. **Ms. McCreath** (United Kingdom) said that, in her view, there had been a broad consensus in favour of change. However, she would accept alternative wording that explained in greater detail why the recommendation had been left unchanged.

28. **Mr. Pinto Ribeiro** (Observer for Portugal) said that he concurred with the representative of Germany. He suggested amending the opening phrase of paragraph 5 to read: “After discussion, it was decided that no consensus had been reached by the Commission on reopening the discussion on recommendation 205.”

29. **Mr. Burman** (United States of America) and **Mr. Patch** (Australia) said that they were willing to support the amendment suggested by the observer for Portugal.

30. **Mr. Schöfisch** (Germany) and **Ms. McCreath** (United Kingdom) expressed a preference for the following wording: “After discussion, it was decided that recommendation 205 should not be reopened for discussion.”

31. **Mr. Pinto Ribeiro** (Observer for Portugal) said that he could also support that proposal.

32. **Mr. Marca Paco** (Bolivia) pointed out that a number of delegations had in fact reopened the debate on recommendation 205. In his view, the first sentence of paragraph 5 should remain unchanged.

33. **Mr. Burman** (United States of America) expressed support for the wording proposed by the representatives of Germany and the United Kingdom.

34. **The Chairperson** said that, if she heard no objection, she would take it that the Commission agreed to adopt the amendment proposed by the representatives of Germany and the United Kingdom.

35. *It was so decided.*

36. *The section of the draft report on recommendation 205, as amended, was adopted.*

13. Commentaries to chapters VII to IX and XII

37. *The section of the draft report on the commentaries to chapters VII to IX and XII was adopted.*

14. Decision by the Commission to adopt the draft Guide

38. **Mr. Schöfisch** (Germany) proposed adding a preambular paragraph expressing the Commission's appreciation of the work of the Chairperson and the Secretariat.

39. *It was so decided.*

40. *The section of the draft report on the decision by the Commission to adopt the draft Guide, as amended, was adopted.*

41. *Document A/CN.9/XL/CRP.9/Add.4, as amended, was adopted.*

42. *The portion of the Commission's report on the adoption of a draft UNCITRAL Legislative Guide on Secured Transactions, as a whole, as amended, was adopted.*

The discussion covered in the summary record ended at 2.55 p.m.

IV. LIST OF DOCUMENTS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW REPRODUCED IN PREVIOUS VOLUMES OF THE *YEARBOOK*

The present list indicates the particular volume, year, part, chapter and page where documents relating to the work of the United Nations Commission on International Trade Law were reproduced in previous volumes of the *Yearbook*; documents that do not appear in the list here were not reproduced in the *Yearbook*. The documents are divided into the following categories:

1. Reports on the annual sessions of the Commission
2. Resolutions of the General Assembly
3. Reports of the Sixth Committee
4. Extracts from the reports of the Trade and Development Board, United Nations Conference on Trade and Development
5. Documents submitted to the Commission (including reports of the meetings of Working Groups)
6. Documents submitted to the Working Groups:
 - (a) Working Group I:
Time-Limits and Limitation (Prescription), (1969 to 1971); Privately Financed Infrastructure Projects (2001 to 2003); Procurement (as of 2004)
 - (b) Working Group II:
International Sale of Goods (1968 to 1978); International Contract Practices (1981 to 2000);
International Commercial Arbitration and Conciliation (as of 2000)
 - (c) Working Group III:
International Legislation on Shipping (1970 to 1975); Transport Law (as of 2002)**
 - (d) Working Group IV:
International Negotiable Instruments (1973 to 1987); International Payments (1988 to 1992);
Electronic Data Interchange (1992 to 1996); Electronic Commerce (as of 1997)
 - (e) Working Group V:
New International Economic Order (1981 to 1994); Insolvency Law (1995 to 1999);
Insolvency Law (as of 2001)*
 - (f) Working Group VI:
Security Interests (as of 2002)**
7. Summary records of discussions in the Commission
8. Texts adopted by Conferences of Plenipotentiaries
9. Bibliographies of writings relating to the work of the Commission.

* For its 23rd session (Vienna, 11-22 December 2000), this Working Group was named Working Group on International Contract Practices (see the report of the Commission on its 33rd session A/55/17, para.186).

** At its 35th session, the Commission adopted one-week sessions, creating six working groups.
