NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

The footnote numbering follows that used in the original documents on which this *Yearbook* is based. Any footnotes added subsequently are indicated by lower-case letters.

Changes of and additions to wording that appeared in earlier drafts of conventions, model laws and other legal texts are in italics, except in the case of headings to articles, which are in italics as a matter of style.

A. Report of the Working Group on Procurement on the work of its tenth session (Vienna, 25-29 September 2006) (A/CN.9/615)	971

B.	Note by the Secretariat on possible revisions to the UNCITRAL Model Law on Procurement of Goods, Construction and Services — drafting materials addressing the use of electronic communications in public procurement and electronic publication of procurement-related information, submitted to the Working Group on Procurement at its tenth session (A/CN.9/WG.I/WP.47)	991
C.	Note by the Secretariat on possible revisions to the UNCITRAL Model Law on Procurement of Goods, Construction and Services — drafting materials addressing the use of electronic reverse auctions in public procurement, submitted to the Working Group on Procurement at its tenth session (A/CN.9/WG.I/WP.48)	1003
D.	Report of the Working Group on Procurement on the work of its eleventh session (New York, 21-25 May 2007) (A/CN.9/623)	1011
E.	Note by the Secretariat on revisions to the UNCITRAL Model Law on Procurement of Goods, Construction and Services — drafting materials addressing the use of electronic communications in public procurement, publication of procurement-related information, and abnormally low tenders, submitted to the Working Group on Procurement at its eleventh session (A/CN.9/WG.I/WP.50)	1033
F.	Note by the Secretariat on revisions to the UNCITRAL Model Law on Procurement of Goods, Construction and Services — drafting materials for the use of electronic reverse auctions in public procurement, submitted to the Working Group on Procurement at its eleventh session (A/CN.9/WG.I/WP.51)	1048
G.	Note by the Secretariat on possible revisions to the UNCITRAL Model Law on Procurement of Goods, Construction and Services — drafting materials for the use of framework agreements and dynamic purchasing systems in public procurement, submitted to the Working Group on Procurement at its eleventh session (A/CN.9/WG.I/WP.52 and Add.1)	1066
III.	INTERNATIONAL COMMERCIAL ARBITRATION AND CONCILIATION	1091
A.	Report of the Working Group on Arbitration on the work of its forty-fifth session (Vienna, 11-15 September 2006) (A/CN.9/614)	1091
B.	Note by the Secretariat on settlement of commercial disputes: Revision of the UNCITRAL Arbitration Rules, submitted to the Working Group on Arbitration at its forty-fifth session (A/CN.9/WG.II/WP.143 and Add.1)	1117
C.	Report of the Working Group on Arbitration on the work of its forty-sixth session (New York, 5-9 February 2007) (A/CN.9/619)	1146
D.	Note by the Secretariat on settlement of commercial disputes: Revision of the UNCITRAL Arbitration Rules, submitted to the Working Group on Arbitration at its forty-sixth session (A/CN.9/WG.II/WP.145 and Add.1)	1174
E.	Report of the Secretary-General of the Permanent Court of Arbitration on its activities under the UNCITRAL Arbitration Rules since 1976 (A/CN.9/634)	1215
IV.	TRANSPORT LAW	1221
A.	Report of the Working Group on Transport Law on the work of its eighteenth session (Vienna, 6-17 November 2006) (A/CN.9/616)	1221
B.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Limitation of carrier liability, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.72)	1285

C.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Comments and proposals by the International Chamber of Shipping, BIMCO and the International Group of P&I Clubs on topics on the agenda for the 18th session, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.73)	1292
D.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Shipper's liability for delay: Document presented for the information of the Working Group by the Government of Sweden, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.74)	1301
E.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Chapter 16: Jurisdiction, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.75)	1309
F.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Rights of suit and time for suit: Document presented for information by the Government of Japan, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.76)	1314
G.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Procedure for amendment of limitation amounts — drafting proposal by the Government of the United States of America, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.77)	1329
H.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Relation with other conventions, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.78)	1333
I.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Identity of Carrier — Drafting proposal by the Governments of Italy and the Netherlands, submitted to the Working Group on Transport Law at its eighteenth session (A/CN.9/WG.III/WP.79)	1349
J.	Report of the Working Group on Transport Law on the work of its nineteenth session (New York, 16-27 April 2007) (A/CN.9/621)	1351
K.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea], submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.81 and Corr.1)	1416
L.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Position of the French National Committee of the International Chamber of Commerce (ICC France), submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.82)	1478
M.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Position of the European Shippers' Council, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.83)	1482
N.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposal of the United States of America on the definition of "maritime performing party", submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.84)	1487

O.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Shipper's Obligations: Drafting proposal by the Swedish delegation, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.85).	1488
P.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposal of the delegations of Denmark, Norway and Finland on draft article 37 (1)(a) regarding contract particulars, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.86).	1492
Q.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Comments of the International Chamber of Shipping (ICS), BIMCO and the International Group of P&I Clubs on the draft convention, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.87).	1494
R.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Joint proposal by Australia and France concerning volume contracts, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.88).	1501
S.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposals of France, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.89).	1502
T.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposals by the International Road Transport Union (IRU) concerning articles 1 (7), 26 and 90 of the draft convention, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.90).	1505
U.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Proposal of the United States of America on carrier and shipper delay, submitted to the Working Group on Transport Law at its nineteenth session (A/CN.9/WG.III/WP.91).	1507
V.	Note by the Secretariat on the preparation of a draft convention on the carriage of goods [wholly or partly] [by sea] — Joint proposal by Australia and France on freedom of contract under volume contracts, submitted to the Commission at its thirty-ninth session (A/CN.9/612)	1516
V.	INSOLVENCY LAW	1521
A.	Report of the Working Group on Insolvency Law on the work of its thirty-first session (Vienna, 11-15 December 2006) (A/CN.9/618)	1521
B.	Note by the Secretariat on the treatment of corporate groups in insolvency, submitted to the Working Group on Insolvency Law at its thirty-first session (A/CN.9/WG.V/WP.74 and Add.1-2)	1535

III.	CHECK-LIST OF DOCUMENTS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW	2037
IV.	LIST OF DOCUMENTS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW REPRODUCED IN PREVIOUS VOLUMES OF THE <i>YEARBOOK</i>	2047

INTRODUCTION

This is the thirty-seventh volume in the series of *Yearbooks* of the United Nations Commission on International Trade Law (UNCITRAL).¹

The present volume consists of three parts. Part one contains the Commission's report on the work of its fortieth session, which was held in Vienna, from 25 June-12 July 2007 and from 10- 14 December 2007, and the action thereon by the United Nations Conference on Trade and Development (UNCTAD) and by the General Assembly.

In part two most of the documents considered at the fortieth session of the Commission are reproduced. These documents include reports of the Commission's Working Groups as well as studies, reports and notes by the Secretary-General and the Secretariat. Also included in this part are selected working papers that were prepared for the Working Groups.

Part three contains summary records, the bibliography of recent writings related to the Commission's work, a list of documents before the fortieth session and a list of documents relating to the work of the Commission reproduced in the previous volumes of the *Yearbook*.

Annex

List of documents before the Commission at its fortieth session

I. Introduction

1. The present report of the United Nations Commission on International Trade Law (UNCITRAL) covers the first part of the fortieth session of the Commission, held in Vienna from 25 June to 12 July 2007 (see para. 3 below for the decision of the Commission to hold its fortieth session in two parts).
2. Pursuant to General Assembly resolution 2205 (XXI) of 17 December 1966, this report is submitted to the Assembly and is also submitted for comments to the United Nations Conference on Trade and Development.

II. Organization of the session

A. Opening of the session

3. The fortieth session of the Commission was opened on 25 June 2007. At its 837th meeting,¹ on 25 June, the Commission agreed that its fortieth session would be held in two parts. For the agenda and dates of the resumed session, see paragraphs 11 and 247 below.

B. Membership and attendance

4. The General Assembly, in its resolution 2205 (XXI), established the Commission with a membership of 29 States, elected by the Assembly. By its resolution 3108 (XXVIII) of 12 December 1973, the Assembly increased the membership of the Commission from 29 to 36 States. By its resolution 57/20 of 19 November 2002, the Assembly further increased the membership of the Commission from 36 to 60 States. The current members of the Commission, elected on 17 November 2003 and on 22 May 2007, are the following States, whose term of office expires on the last day prior to the beginning of the annual session of the Commission in the year indicated:² Algeria (2010), Armenia (2013), Australia (2010), Austria (2010), Bahrain (2013), Belarus (2010), Benin (2013), Bolivia (2013), Bulgaria (2013), Cameroon (2013), Canada (2013), Chile (2013), China (2013), Colombia (2010), Czech Republic (2010), Ecuador (2010), Egypt (2013),

¹ This number was assigned to the first meeting of the fortieth session in order to align the numbering of Commission meetings with the numbering of summary records of the Commission meetings at its thirty-ninth session (see in particular A/CN.9/SR.835, a summary record of the penultimate meeting of the thirty-ninth session of the Commission). This resulted in a discrepancy with paragraph 12 of the report of the Commission on the work of its thirty-ninth session (*Official Records of the General Assembly, Sixty-first Session, Supplement No. 17* (A/61/17)), which indicates the 834th meeting as the last meeting of that session.

² Pursuant to General Assembly resolution 2205 (XXI), the members of the Commission are elected for a term of six years. Of the current membership, 30 were elected by the Assembly at its fifty-eighth session, on 17 November 2003 (decision 58/407), and 30 were elected by the Assembly at its sixty-first session, on 22 May 2007 (decision 61/417). By its resolution 31/99, the Assembly altered the dates of commencement and termination of membership by deciding that members would take office at the beginning of the first day of the regular annual session of the Commission immediately following their election and that their terms of office would expire on the last day prior to the opening of the seventh regular annual session following their election.

El Salvador (2013), Fiji (2010), France (2013), Gabon (2010), Germany (2013), Greece (2013), Guatemala (2010), Honduras (2013), India (2010), Iran (Islamic Republic of) (2010), Israel (2010), Italy (2010), Japan (2013), Kenya (2010), Latvia (2013), Lebanon (2010), Madagascar (2010), Malaysia (2013), Malta (2013), Mexico (2013), Mongolia (2010), Morocco (2013), Namibia (2013), Nigeria (2010), Norway (2013), Pakistan (2010), Paraguay (2010), Poland (2010), Republic of Korea (2013), Russian Federation (2013), Senegal (2013), Serbia (2010), Singapore (2013), South Africa (2013), Spain (2010), Sri Lanka (2013), Switzerland (2010), Thailand (2010), Uganda (2010), United Kingdom of Great Britain and Northern Ireland (2013), United States of America (2010), Venezuela (Bolivarian Republic of) (2010) and Zimbabwe (2010).

5. With the exception of Benin, Chile, Ecuador, Fiji, Gabon, Guatemala, Israel, Madagascar, Malta, Mongolia, Namibia, Senegal, Sri Lanka and Zimbabwe, all the members of the Commission were represented at the first part of the session.

6. The first part of the session was attended by observers from the following States: Argentina, Azerbaijan, Belgium, Brazil, Cuba, Democratic Republic of the Congo, Dominican Republic, Finland, Hungary, Indonesia, Iraq, Jordan, Kuwait, Libyan Arab Jamahiriya, Panama, Peru, Philippines, Portugal, Qatar, Romania, Slovakia, Tunisia, Turkey, United Republic of Tanzania and Yemen.

7. The first part of the session was also attended by observers from the following international organizations:

(a) *United Nations system*: Economic and Social Commission for Western Asia and World Intellectual Property Organization;

(b) *Intergovernmental organizations*: European Community and International Institute for the Unification of Private Law;

(c) *Non-governmental organizations invited by the Commission*: American Bar Association, American Intellectual Property Law Association, Association française des entreprises privées, Association of Commercial Television in Europe, Association of European Trade Mark Owners, Commercial Finance Association, European Association of Insurance Companies, European Law Students' Association, Federation of European Factoring Associations, Independent Film and Television Alliance, International Bar Association, International Chamber of Commerce, International Swaps and Derivatives Association and International Trademark Association.

8. The Commission welcomed the participation of international non-governmental organizations with expertise in the major items on the agenda. Their participation was crucial for the quality of texts formulated by the Commission and the Commission requested the Secretariat to continue to invite such organizations to its sessions.

C. Election of officers

9. The Commission elected the following officers:

Chairperson: Dobrosav Mitrović (Serbia)

Vice-Chairpersons: Biu Adamu Audu (Nigeria)
Horacio Bazoberry (Bolivia)

Kathryn Sabo (Canada)

Rapporteur:

T. K. Viswanathan (India)

D. Agenda

10. The agenda of the first part of the session, as adopted by the Commission at its 837th meeting, on 25 June 2007, was as follows:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Adoption of a draft UNCITRAL legislative guide on secured transactions and possible future work.
5. Procurement: progress report of Working Group I.
6. Arbitration and conciliation: progress report of Working Group II.
7. Transport law: progress report of Working Group III.
8. Insolvency law: progress report of Working Group V.
9. Possible future work in the area of electronic commerce.
10. Possible future work in the area of commercial fraud.
11. Monitoring implementation of the 1958 New York Convention.
12. Endorsement of texts of other organizations: Unidroit Principles of International Commercial Contracts 2004.
13. Technical assistance to law reform.
14. Status and promotion of UNCITRAL legal texts.
15. Coordination and cooperation:
 - (a) General;
 - (b) Reports of other international organizations.
16. Willem C. Vis International Commercial Arbitration Moot competition.
17. Relevant General Assembly resolutions.
18. Other business.
19. Date and place of future meetings.
20. Adoption of the report of the Commission.
21. Congress 2007.

11. At its 852nd meeting, on 4 July, the Commission agreed that the agenda of the resumed fortieth session would include agenda item 4 and a separate agenda item entitled “Working methods of UNCITRAL”. During the resumed session, the Commission would also adjust dates of future meetings, as appropriate. (For the dates of future meetings considered by the Commission at the first part of its fortieth session, see paras. 247-252 below.)

E. Establishment of the Committee of the Whole

12. The Commission established a Committee of the Whole and referred to it for consideration agenda item 4. The Commission elected Kathryn Sabo (Canada) Chairperson of the Committee. The Committee met from 25 June to 2 July 2007 and held 12 meetings. At its 849th meeting, on 3 July, the Commission considered the report of the Committee of the Whole and agreed to include it in the present report. (The report of the Committee of the Whole is reproduced in paragraphs 14-157 below.)

F. Adoption of the report

13. At its 853rd and 854th meetings, on 6 July 2007, the Commission adopted the present report by consensus.

III. Adoption of the draft UNCITRAL Legislative Guide on Secured Transactions and possible future work

A. Adoption of the draft UNCITRAL Legislative Guide on Secured Transactions

14. The Committee (see para. 12 above) had before it a complete set of revised recommendations and revised commentaries on the draft UNCITRAL Legislative Guide on Secured Transactions (A/CN.9/631 and Add.1-11) and the reports of the eleventh (Vienna, 4-8 December 2006) and twelfth (New York, 12-16 February 2007) sessions of Working Group VI (Security Interests) (A/CN.9/617 and A/CN.9/620, respectively). It also had before it a note by the Secretariat transmitting comments of the European Community and its member States on the draft Guide (A/CN.9/633). The Committee established a drafting group and referred to it the terminology of the draft Guide (A/CN.9/631/Add.1, para. 19). The Committee expressed its great appreciation to the Secretariat for its work in preparing the documents for the session.

15. The Committee noted that, in view of the need to conclude consultations and make subsequent amendments in the revised commentaries following the conclusion of the twelfth session of the Working Group, some documents had been submitted late and were not available in all language versions at the beginning of the session (specifically A/CN.9/631/Add.1-3, dealing with chapters I-VI). The Committee therefore decided to begin its consideration of the draft Guide with chapter VII, which dealt with the priority of a security right as against the rights of competing claimants.

1. Chapter VII. Priority of a security right as against the rights of competing claimants

(a) Recommendations (A/CN.9/631, recommendations 74-107)

16. With regard to recommendation 84, the Committee noted that it was intended to address the question whether a transferee of an encumbered asset took the asset free of a security right that had been made effective against third parties by

registration in a specialized registry or by notation on a title certificate. While some doubt was expressed as to whether that question should be addressed in recommendation 85 or not at all in the draft Guide, there was sufficient support for the retention of recommendation 84. However, the concern was expressed that it failed to address the transfer of rights other than security rights. In order to address that concern, it was suggested that, following the formulation of recommendation 85 or 93, reference should be made to the transfer of a “right in an encumbered asset” (not of “a security right”) and to “a security right” in that asset (not “the security right”). That suggestion received sufficient support.

17. Noting that a security right registered before it was created was not effective against third parties and that, as a result, no issue of priority arose, the Committee decided to delete recommendation 86, subparagraph (b) (ii).

18. With respect to recommendation 87, subparagraph (a), the concern was expressed that the reference to “inventory or consumer goods” might be confusing, since the same tangible assets could be inventory for the seller and consumer goods for the buyer. In order to address that concern, it was suggested that the reference to consumer goods should be deleted. While the view was expressed that, in a sale from a consumer to a consumer of assets encumbered by a security right created by the seller, the buyer should take the assets free of the security right, there was sufficient support for the suggestion to delete the reference to “consumer goods”. It was stated that a rule providing that a consumer buying an encumbered asset outside the ordinary course of business of the seller would take the asset free of an existing security right could interfere with existing financing transactions involving assets of high value.

19. In addition, with respect to recommendation 87, subparagraphs (a) and (b), it was observed that, as long as reference was made to sales and leases in the ordinary course of business, a reference to the type of asset involved was not necessary and, thus, reference to “tangible property other than negotiable instruments and negotiable documents” (as “tangible property” was defined to include negotiable instruments and negotiable documents (A/CN.9/631/Add.1, para. 19)) would be sufficient.

20. With respect to recommendation 99, the view was expressed that it was ambiguous in its application to securities. In addition, the view was expressed that the fact that the draft Guide addressed security rights in letters of credit and rights to payment of funds credited to a bank account but not in derivatives raised some concern with respect to the rules applying to financial contracts. The Committee decided to defer discussion of those issues until it had had the opportunity to consider the application of the draft Guide as a whole to securities and financial contracts (see paras. 145-151 below).

21. With respect to recommendations 101 and 102, the concern was expressed that they did not sufficiently clarify that priority could be modified by agreement between competing claimants. In order to address that concern, it was suggested that wording along the lines of “unless otherwise agreed” should be added to those recommendations. That suggestion was objected to. It was stated that recommendation 77 was sufficient to clarify that priority could be modified by agreement between competing claimants. It was also observed that the addition of the suggested wording could cast doubt as to whether other priority rules were subject to a contrary agreement between competing claimants.

22. Some doubt was expressed as to whether recommendation 107 was necessary. It was stated that recommendation 106 was sufficient to give priority to rights acquired through due negotiation of a negotiable document under the law governing negotiable documents. However, the Committee agreed that recommendation 107 was necessary in that it went further and dealt with rights acquired without due negotiation of a negotiable document.

23. With respect to the formulation of recommendation 107, general support was expressed in favour of an alternative formulation. Under that formulation the right of a secured creditor, buyer or other transferee of a negotiable document that took possession of the negotiable document would have priority over a security right in the goods covered by the negotiable document, as long as the goods were covered by the document and the secured creditor, buyer or other transferee gave value in good faith and without knowledge that the transfer was in violation of the security right in the goods.

24. However, at the same time, several concerns were expressed with respect to that alternative formulation of recommendation 107. One concern was that it might inadvertently result in defeating a security right in a situation where a grantor, having created a security right in inventory in favour of secured creditor A, placed the inventory in a warehouse, had a warehouse receipt issued and obtained new financing by transferring possession of the warehouse receipt to secured creditor B. In order to address that concern, the suggestion was made that reference should be made to a secured creditor, buyer or other transferee of a negotiable document taking possession of the document in the grantor's, seller's or other transferor's ordinary course of business. Another concern was that the alternative formulation failed to address a conflict between the right of a secured creditor that took possession of the negotiable document and the right of a secured creditor in a negotiable document that was made effective against third parties other than by transfer of possession. In order to address that concern, the suggestion was made that the alternative text should be revised to address that priority conflict. A further concern was that the reference to both good faith and the absence of knowledge that the transfer was in violation of an existing security right was superfluous, as those two notions had the same meaning. In order to address that concern, the suggestion was made that the reference to good faith or the absence of such knowledge should be deleted. Yet another concern was that, unlike other recommendations, recommendation 107 was formulated in a negative way (a right was subordinate to another right instead of having priority over another right).

25. The Committee deferred adoption of recommendation 107, pending its consideration of a revised formulation (see paras. 130-133 below).

26. Subject to the changes mentioned above, the Committee adopted recommendations 74-106.

(b) Commentary (A/CN.9/631/Add.4)

27. The Committee approved the substance of the commentary to chapter VII subject to the following changes:

(a) Paragraph 1, second sentence, should make clear that, for the priority rules to apply, at least one of the competing claimants had to be a secured creditor;

(b) Paragraph 4, first sentence, should refer to security rights that were effective against third parties, and explain with examples the concept of “third-party effectiveness” and its relationship to the concept of “priority”;

(c) Paragraph 5, second sentence, should clarify that no issue of priority could arise between security rights that were not effective against third parties;

(d) Before paragraph 6, the heading “Importance of the priority concept” should be added;

(e) Paragraph 8 should refer to the two ways by which a secured creditor could take priority with respect to the residual value of an asset, namely by stating in the registered notice the maximum amount secured by the first-priority ranking security right or by a subordination agreement;

(f) Paragraph 9 should be reconsidered as it appeared to repeat points made in paragraphs 6-8;

(g) Paragraph 10 should be completed;

(h) Paragraph 11 should be deleted;

(i) Paragraphs 15-18 appeared to address third-party effectiveness issues and should be limited to priority issues;

(j) Paragraph 17, the second part of the second sentence should be deleted;

(k) Paragraphs 21-22 and 24-25 should be limited to issues of priority and avoid addressing third-party effectiveness issues;

(l) Paragraph 23 should clarify that the concept of “control” did not flow from the concept of “possession” and should focus on the rule that control gave a superior priority right;

(m) Paragraphs 24 and 25 should be recast in a more objective way;

(n) Paragraphs 26-33 should refer back to the chapter on creation with respect to the creation of a security right in future advances and clarify that priority extended to future advances as of the time the security right became effective against third parties;

(o) Paragraph 31 should be recast to clarify that it addressed an issue that was distinct from the issue of priority in future advances and to refer to a statement of the maximum amount and subordination;

(p) In paragraph 75, in the phrase “the lease is entered into”, the word “lease” should be replaced with the word “licence”;

(q) In paragraph 110, the last sentence should be deleted, to reflect the fact that there was no obligation to disclose the existence of a control agreement, by contrast with the publicity regime inherent in the operation of a specialized registry;

(r) In paragraph 112, the word “present” should be inserted before the phrase “right of set-off”, and the words “unless it has disapplied such right” should be inserted after the words “non-secured transactions law”; and the last sentence should be deleted.

2. Chapter VIII. Rights and obligations of the parties**(a) Recommendations (A/CN.9/631, recommendations 108-113)**

28. The Committee adopted recommendations 108-113.

(b) Commentary (A/CN.9/631/Add.5)

29. The Committee approved the substance of the commentary to chapter VIII.

3. Chapter IX. Rights and obligations of third-party obligors**(a) Recommendations (A/CN.9/631, recommendations 114-127)**

30. The Committee adopted recommendations 114-127.

(b) Commentary (A/CN.9/631/Add.6)

31. The Committee approved the substance of the commentary to chapter IX, subject to the addition in paragraph 22 of a reference to another approach, under which depositary banks were treated in the same way as debtors of receivables and their consent was not required for a security right to be created in a right to payment of funds credited to a bank account.

4. Chapter X. Post-default rights**(a) Recommendations (A/CN.9/631, recommendations 128-172)**

32. With respect to recommendation 128, some doubt was expressed as to whether reference should be made to commercially reasonable standards of conduct. It was stated that reference to good faith was sufficient. It was also observed that commercially reasonable standards were not universally understood in the same way. In response, it was noted that the draft Guide was designed to strike a balance between the need to allow the secured creditor some flexibility in the enforcement of its rights and the need to protect the rights of the grantor and its other creditors. It was also stated that that standard of conduct would require, for example, a secured creditor to obtain possession of the encumbered assets in a way that would be acceptable under local market conditions and to sell the assets in the relevant market with a view to obtaining the best possible price. In that connection, it was pointed out that the standard did not focus on the result (for example, that the creditor should obtain the best price) but on the enforcement procedure (for example, best price reasonably obtainable). It was agreed that the commentary should explain the term “commercially reasonable standards” giving examples.

33. With respect to recommendation 132, it was agreed that the phrase “does not affect” should be replaced with the phrase “may not adversely affect”, since only an adverse effect would be objectionable.

34. With respect to recommendation 141, it was agreed that the last sentence should be removed from the recommendation and included in the commentary to the chapter.

35. With respect to the reference in recommendations 147, subparagraph (a), 149 and 150 to “receiving” or “sending” a notice, differing views were expressed. One view was that, in order to effectively protect the interests of the grantor and its other creditors, receipt of the notice should be required. Another view was that the matter

should be left to other law, since it was well developed and should not be interfered with. However, the prevailing view was that it would be sufficient to require that the secured creditor should give notice to the grantor and its other creditors. It was stated that requiring receipt of the notice could create uncertainty, as there were different theories as to what constituted receipt (for instance, entry into a mailbox versus actual reading of the notice). In addition, it was observed that requiring that notice be received would increase the evidentiary burden of the secured creditor and thus have an adverse impact on the cost of credit. Moreover, it was said that leaving the matter to other law could result in failing to address sufficiently the potential impact of notice requirements on the cost of credit. It was also pointed out that the requirement that the secured creditor act in good faith and in a commercially reasonable manner, in conjunction with the general requirements regarding notice set out in recommendation 146, were sufficient to protect the interests of the grantor and its other creditors.

36. The Committee agreed that reference should be made in recommendations 147, subparagraph (a), 149 and 150 to the notice being “given to” the grantor and its other creditors. It was further agreed that the commentary (A/CN.9/631/Add.7, paras. 30-32) should address that matter in greater detail.

37. With respect to recommendation 150, it was agreed that the square brackets around the last sentence should be deleted, so that the recommendation would require the positive consent of the grantor to any proposal of the secured creditor to accept an encumbered asset in partial satisfaction of the grantor’s obligation. It was widely felt that, unlike the situation where the secured obligation was fully paid and the grantor was fully discharged, in situations where the secured obligation was only partially discharged, positive consent of the grantor should be required so that the grantor would have actual knowledge of the extent of the unsatisfied portion of the obligation, for which the grantor would remain liable.

38. With respect to recommendation 154, it was observed that it did not fit under the heading “Distribution of proceeds of extrajudicial disposition of an encumbered asset” as it referred to distribution of profits realized by a judicial disposition. It was agreed that either the heading should be changed or recommendation 154 should be placed elsewhere in the text.

39. With respect to recommendation 169, some doubt was expressed as to whether the consent of the depositary bank should be required for out-of-court enforcement by a secured creditor that had no control with respect to a right to payment of funds credited to a bank account. In response, it was explained that the reason for that approach was that the bank-client relationship should not be interfered with. It was also stated that, unlike debtors of trade receivables, depositary banks were involved in different kinds of practices subject to regulatory law that justified different treatment.

40. Subject to the above-mentioned changes and consequential amendments to the commentary to the chapter, the Committee adopted recommendations 128-172.

(b) Commentary (A/CN.9/631/Add.7)

41. The Committee approved the substance of the commentary to chapter X subject to the changes referred to above and to the following changes:

(a) In paragraphs 38-39, it should be explained that the right of the grantor to cure the default and reinstate the secured obligation was a matter for the agreement of the parties and the law of obligations;

(b) In paragraphs 57-58, it should be clarified that the right of the secured creditor to take over the management of the grantor's business and to sell it as a going concern could raise difficult issues, including the liability of the secured creditor for management acts and the protection of rights of other creditors;

(c) In paragraph 92, it should be clarified that, if the proceeds took the form of a type of asset, such as receivables, with respect to which special enforcement rules applied, enforcement should follow the rules applicable to that type of asset.

5. Chapter XI. Insolvency

(a) Definitions and recommendations (A/CN.9/631, recommendations 173-183)

42. The Committee noted that the definitions and the recommendations contained in part A of chapter XI of the draft Guide were taken from the UNCITRAL Legislative Guide on Insolvency Law,³ while the recommendations in part B of that chapter expressed specific principles relating to security rights in a manner that was consistent with the Insolvency Guide. General support was expressed for that approach.

43. It was also noted that the presentation of the insolvency chapter differed from the presentation of other chapters of the draft Guide in order to accommodate selected recommendations and material from the commentary of the Insolvency Guide. In addition, it was noted that those recommendations and explanatory material were included to ensure that readers and users of the draft Guide were provided with sufficient background information to understand the intersection of secured transactions law and insolvency law, and to ensure consistency between the two guides.

44. In order to facilitate a clearer understanding of the relationship between the commentary and the two sets of recommendations, it was suggested that the recommendations in part A and part B should be presented with separate commentary. In response, it was noted that that presentation might inadvertently give the wrong impression that the matters addressed in the recommendations in part B had not been discussed in the Insolvency Guide, and might result in duplication and inconsistencies. It was also suggested that the insolvency chapter should be placed at the end of the draft Guide on the basis that it addressed what should be included in the insolvency law, rather than in the secured transactions law. There was sufficient support for that suggestion.

45. With respect to the definition of the term "financial contract" taken from the Insolvency Guide, it was stated that it might need to be reviewed depending on the decision of the Committee on the treatment of financial contracts in the draft Guide. In response, it was noted that the definition was based on article 5, subparagraph (k), of the United Nations Convention on the Assignment of Receivables in International Trade (2001).⁴ It was also noted that, if the Committee agreed on a different definition for the purpose of the draft Guide, the interrelationship between the two definitions would need to be explained, but the

³ United Nations publication, Sales No. E.05.V.10.

⁴ General Assembly resolution 56/81, annex.

definition of the Insolvency Guide could not be changed (see paras. 137-142 below).

46. Other proposals for clarification included: adding recommendation 63 from the Insolvency Guide, which would serve as additional background to the recommendations on post-commencement finance; and, if necessary in order to clarify the commentary, including additional recommendations from the Insolvency Guide. There was sufficient support for those suggestions.

47. With respect to recommendation 174 (non-unitary approach), it was agreed that it should be revised to reflect the decision of the Committee to refer to “retention-of-title right” and “financial lease right” in the context of the non-unitary approach to acquisition financing (see paras. 69-75 below).

48. With respect to recommendation 181, it was agreed that it should be revised to clarify that a subordination agreement would only be binding in insolvency to the extent that it was effective under law other than insolvency law.

49. Subject to the above-mentioned changes, the Committee confirmed the appropriateness of the presentation of the definitions and recommendations and adopted recommendations 173-183.

(b) Commentary (A/CN.9/631/Add.8)

50. Noting that the commentary to chapter XI was consistent with the Insolvency Guide, the Committee approved the substance of the commentary subject to the following changes:

(a) The discussion in the commentary should refer more clearly to the relevant recommendations and discuss additional recommendations of the Insolvency Guide;

(b) The origin of material from the Insolvency Guide should be clearly explained for the reader;

(c) The discussion of applicable law should be further developed and placed at the end of the commentary.

6. Chapter XII. Acquisition financing rights

(a) Recommendations (A/CN.9/631, recommendations 184-201)

51. The concern was expressed that requiring a notice in the general security rights registry for a retention-of-title sale or financial lease to be effective against third parties might inappropriately interfere with useful practices and undermine the notion of “ownership”. It was stated that recharacterization of ownership as a security device could create significant problems not only in retention-of-title sales and financial leases but also in repurchase transactions and other financial contracts. It was also observed that the notion of “grantor” was not appropriate in a retention-of-title sale or financial lease, and, in any case, registration of ownership should not be required. Furthermore, it was mentioned that lack of flexibility might undermine the acceptability of the draft Guide, as flexibility would be one important criterion in determining the value of the draft Guide. It was emphasized that there were significant concerns that needed to be addressed for consensus on that matter to be reached. In order to address those concerns, it was suggested that retention-of-title

sales and financial leases should not be recharacterized as security devices or be made subject to registration of a notice in the general security rights registry.

52. That suggestion was objected to. It was stated that the draft Guide did not recharacterize retention-of-title sales or financial leases. It was simply drawing the consequences from the fact that ownership in a retention-of-title sale or financial lease was diminished to the extent of the value of the amount of the purchase price or rent outstanding. It was also stated that retention-of-title related to tangible property other than negotiable instruments and negotiable documents and was not relevant to securities and financial contracts, which still remained to be discussed. It was also said that what was registered was a notice about a transaction that functioned as a warning to third parties that the person in possession of the assets might not be the owner. Furthermore, it was pointed out that, as the work of many international organizations and international financial institutions indicated, a modern law on secured transactions could not achieve its objective of increasing access to secured credit, which was a matter of high priority in particular for developing countries and countries with economies in transition, if it were not comprehensive in coverage and did not provide for registration of all transactions that performed security functions. It was also emphasized that the draft Guide was not a binding treaty or model law and it was up to States to enact or reject its recommendations in whole or in part. The Committee, recalling that the Commission, at its thirty-ninth session, had adopted the substance of the recommendations, including on acquisition financing devices,⁵ noted the policy decisions of the Commission with respect to the chapter on acquisition financing rights.

(i) *Section A. Unitary approach to acquisition financing rights*

53. With respect to recommendation 192 (unitary approach), the concern was expressed that the different treatment of inventory (for instance, the fact that no grace period was provided and notification of inventory financiers on record was required) could undermine inventory financing. In order to address that concern, it was suggested that recommendation 189 should apply to inventory as well.

54. That suggestion was objected to. It was observed that paragraphs 114-118 of the commentary to chapter XII (A/CN.9/631/Add.9) sufficiently explained the need for a different treatment of acquisition security rights in inventory.

55. With respect to recommendation 199 (unitary approach), the suggestion was made that, for the same reasons for which the super-priority for security rights in inventory did not extend to receivables, it should not extend to other payment rights, such as negotiable instruments, rights to the payment of funds credited to a bank account and rights to payment under independent undertakings. That suggestion received sufficient support. The Committee decided that the text in square brackets in recommendation 199 should be retained without the square brackets.

56. Subject to the above-mentioned changes, the Committee adopted recommendations 184-201 in section A (unitary approach) of chapter XII of the draft Guide.

⁵ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 63-70.

(ii) *Section B. Non-unitary approach to acquisition financing rights*

57. With respect to recommendation 191 (non-unitary approach), the concern was expressed that, to the extent that it referred to the notion of priority, which was not appropriate for ownership devices, it did not really constitute an alternative approach and was thus not useful.

58. In order to address that concern, the suggestion was made that recommendation 191 and other recommendations in section B (non-unitary approach) of chapter XII of the draft Guide should be revised to refer to terminology that would be compatible with ownership devices. There was sufficient support for that suggestion. The Committee agreed that the recommendations in section B should be reformulated with that objective in mind. It was also agreed that recommendation 191 (non-unitary approach) should be revised to provide that a lender could obtain an acquisition security right directly from the grantor or an acquisition financing right through an assignment of the secured obligation from the supplier (see paras. 77-79 and 89 below).

59. With respect to recommendation 192 (non-unitary approach), a number of concerns were expressed. One concern was that it might not be easy to determine whether recommendation 189 or recommendation 192 should apply, as inventory in the hands of the seller could be equipment in the hands of the buyer, and the draft Guide did not make it clear in whose hands the assets had to constitute inventory. Another concern was that third-party financiers would have no way of ascertaining whether inventory or tangible property other than inventory was involved in a particular transaction. Yet another concern was that the requirement for registration of a notice in the general security rights registry and notification of inventory financiers on record before delivery of the goods could delay and complicate transactions, in particular cross-border transactions, involving different registries and languages. Yet another concern was that the requirements of registration and notification resulted in favouring the general inventory financier over the supplier of goods on credit. In order to address those concerns, the suggestion was made that recommendations 189 and 192 should be merged so that one rule along the lines of recommendation 189 would apply to the priority of security rights in both inventory and tangible property other than inventory.

60. That suggestion was objected to. It was stated that the term “inventory” was widely used in most legal systems and was defined and referred to in the draft Guide in several recommendations. It was also observed that whether tangible property constituted inventory depended on whether it was held as inventory by the grantor (for example, the buyer in an acquisition financing transaction). In addition, it was said that a modern registry system and the use of one registration and one notice covering one or more acquisition financing transactions between the same parties over a long period of time (for instance, five years; see recommendation 196) would not create costs or delays to trade. Moreover, it was pointed out that the difficulty of cross-border transactions was not a problem that arose only in the context of acquisition financing transactions. It was also said that recommendation 192 achieved a balance among the various interests in that a supplier’s right would be given priority subject to normal due diligence (including on whether the goods constituted inventory), an inventory financier’s right would be sufficiently protected through the requirements for registration and notification and the buyer would benefit from competitive credit terms. Finally, it was mentioned that the regime contemplated by the draft Guide would be an improvement over the current situation in many legal systems, in which retention of title was lost if the assets

concerned were exported to or through a State that did not recognize retention of title. Under the draft Guide, instead of losing its security entirely, the retention-of-title supplier would in such circumstances retain a security right.

61. In response, it was stated that a more flexible approach should be taken, as the conditions for trade and financing would not be the same in all countries. It was also observed that such flexibility was inherent in a guide that, by definition, was designed to provide non-binding guidance to States. Therefore, the suggestion was made that two alternatives should be presented on that matter, one treating differently inventory and tangible property other than inventory (along the lines set out in recommendations 189 and 192) and another treating both in the same way (along the lines set out in recommendation 189).

62. Diverging views were expressed as to the economic consequences of such an approach. One view was that it would have a negative impact on inventory financing, which might in turn result in a general contraction of credit. Another view was that the usefulness of the draft Guide might be diminished if it offered alternatives on important issues such as the issue of priority. Yet another view was that that approach struck an appropriate balance among all interests concerned and should be adopted.

63. The Committee agreed that, in order to ensure the flexibility of the draft Guide to meet the needs of States with differing needs, an alternative approach to recommendations 189 and 192 should be offered in both sections A and B of chapter XII (the unitary and the non-unitary approaches). Under this alternative approach, a new recommendation along the lines of recommendation 189 would address the priority position applicable to an acquisition security right or an acquisition financing right in tangible property. It was also agreed that the commentary should draw the attention of legislators to the economic and other consequences of each option (see paras. 88-90 below).

64. With respect to recommendation 194, it was suggested that it might be usefully clarified, as it seemed to refer to a judgement obtained after a security right was created but before it was made effective against third parties (see para. 92 below).

65. With respect to recommendations 198 and 199, it was agreed that their formulation should be adjusted to fit the alternative approach to recommendations 189 and 192 without, however, changing their underlying policy. Accordingly, the priority provided in the new recommendation should extend to proceeds of tangible property other than inventory (for example, equipment), as well as to proceeds of inventory except proceeds in the form of receivables or other payment rights.

66. It was widely felt that an extension of the priority given to an acquisition financing right to such proceeds of inventory could have an adverse impact on receivables financing. It was also generally considered that such a result would mean an unnecessary departure from current law in most States, under which such priority was limited to the assets subject to the acquisition financing right and did not extend to their proceeds. It was also observed that, in the few jurisdictions in which such priority extended to proceeds of inventory, priority was lost if the assets were commingled with other assets of the same type and lost their separate identity (see para. 98 below).

67. Recalling its decision that the recommendations in section B (non-unitary approach) of chapter XII of the draft Guide should use terminology based on the

notion of “ownership” (see para. 58 above), the Committee considered a proposal with respect to certain definitions and the recommendations dealing with the non-unitary approach to acquisition financing. It was stated that the proposed revisions were intended to: deploy terminology relating to ownership rather than security rights, which was the essence of the non-unitary approach; track the order and the structure of the recommendations of the unitary approach; implement the principle of the functional equivalence of security rights and uses of ownership for security purposes; and implement the principle of equal treatment of all acquisition financing providers. It was noted that, as a result of those two principles, not only sellers and financial lessors but also lenders could obtain an acquisition financing right that enjoyed super-priority (in other words, priority as of the time of the delivery of tangible property other than inventory, provided that a notice was registered in the general security rights registry within the applicable grace period). It was also noted that, if sellers or financial lessors failed to register a notice in the general security rights registry within the relevant grace period, they would obtain a normal security right to which the general priority rules would apply (that is to say, priority of a security right in tangible property other than inventory would be achieved as of the time of registration of a notice with respect to the security right, which would be after the expiry of the grace period).

68. While it was widely felt that the proposal formed a good basis for discussion, it was stated that no final decision could be made. In that connection, it was observed that the proposal constituted a reformulation of recommendations the substance of which (in other words, the underlying policies) had already been approved by the Commission at its thirty-ninth session⁶ and by Working Group VI (Security Interests) at its twelfth session (A/CN.9/620, paras. 84-90). It was also said that, for the Commission to be able to adopt the draft Guide at the resumed fortieth session, it was essential to finalize considerations with respect to the matters covered during the first part of the session. The Committee, therefore, agreed to proceed with its consideration of the proposal with a view to adopting the relevant definitions and recommendations.

69. With respect to the definitions, it was suggested that the draft Guide should use the terms “retention-of-title right” and “financial lessor’s right” rather than the term “acquisition financing right” (A/CN.9/631/Add.1, para. 19). It was widely felt that use of those terms would be more consistent with terminology relating to ownership devices.

70. With respect to the term “retention-of-title right”, the following text was proposed:

“‘Retention-of-title right’, a term used only in the context of a non-unitary approach, means a seller’s right in tangible property, other than negotiable instruments or negotiable documents, pursuant to an agreement with the buyer by which ownership of the tangible property that is the object of the sale is not transferred from the seller to the buyer until the purchase price is paid, and includes any arrangement by which a creditor that has provided credit to enable a person to acquire possession or use of tangible property, other than negotiable instruments or negotiable documents, reserves the right to become the irrevocable owner of the tangible property in satisfaction of the repayment obligation.”

⁶ Ibid.

71. It was noted that the first part of the proposed text was based on the definition of the term “retention-of-title right”, while the second part (“and includes ... repayment obligation”) was based on part (iv) of the definition of the term “acquisition financing right” (A/CN.9/631/Add.1, para. 19). It was also noted that the second part was intended to address situations in which a seller transferred ownership to a buyer but retained the right to recover ownership if the purchase price was not paid in full within the time period agreed upon. However, it was stated that the second part could be read as also referring to a lender being able to retain ownership in goods, the acquisition of which the lender had financed. It was also observed that such an understanding of the term “retention-of-title right” would be inconsistent with the meaning given to that term in most jurisdictions. In addition, it was said that it was not necessary to complicate the notion of “retention-of-title right”, as long as the recommendations made it clear that a lender could obtain a retention-of-title or financial lease right. It was widely felt that that result was necessary to ensure the economic equivalence of ownership and security devices and to treat equally all acquisition financing providers.

72. Subject to consideration in the context of recommendation 184 (see paras. 77-79 below) of the issue of whether a lender could obtain a retention-of-title or financial lease right, the Committee agreed that the second part of the definition could be deleted. It was also agreed that words along the lines “or irrevocably transferred” might be added to the first part of the definition.

73. With respect to the definition of the term “financial lessor’s right”, the following text was proposed:

“‘Financial lessor’s right’, a term used only in the context of the non-unitary approach, means a lessor’s right in tangible property, other than negotiable instruments or negotiable documents, that is the object of a lease agreement under which, at the end of the term of the lease:

“(i) The lessee automatically becomes the owner of the tangible property that is the object of the lease;

“(ii) The lessee may acquire ownership by paying no more than a nominal price; or

“(iii) The tangible property has no more than a nominal residual value.

“The term includes a hire-purchase agreement.”

74. The Committee noted that the proposed text was based on the definition of the term “financial lease” (A/CN.9/631/Add.1, para. 19), and agreed that, for the sake of consistency with the term “retention-of-title right”, it should be revised to refer to “financial lease right”.

75. The Committee adopted the above-mentioned definitions, subject to minor editorial changes made by the Drafting Group. It was agreed that the meaning of the definitions should be explained in the commentary.

76. The Committee adopted the “Purpose” subsection of the recommendations in section B (non-unitary approach) of chapter XII of the draft Guide.

77. The Committee considered the following proposal for a new recommendation 184:

“Alternative methods of acquisition financing

“184. The law should provide for a regime of acquisition security rights identical to that adopted in the unitary system. All creditors, both suppliers and lenders, may acquire an acquisition security right in conformity with that regime. In addition, the law should provide for a regime of acquisition financing based on retention-of-title sales and financial leases. The law should further provide that a lender may acquire the benefit of a retention-of-title right and a financial lessor’s right through an assignment of the obligations owing to the seller or lessor.”

78. It was agreed that the first three sentences were sufficient in reflecting the principle of functional equivalence of retention-of-title sales (and financial leases) with secured transactions and the principle of equal treatment of all acquisition financing providers. However, with respect to the last sentence, the concern was expressed that, if a lender could obtain a retention-of-title right or a financial lease right only by way of an assignment of the obligation owed to the seller or the financial lessor, the consent of the seller or the financial lessor would be required. It was explained that, as a result, the lender would have to give value in return, a result that could eliminate any benefits that buyers or lessees could obtain as a result of the competition of acquisition financing providers. In order to address that concern, it was suggested that reference should be made in recommendation 184 to the possibility of a lender acquiring a retention-of-title or financial lease right by paying the seller or financial lessor and being subrogated in the latter’s rights towards the buyer or lessee. There was sufficient support for that suggestion.

79. Subject to the addition at the end of words along the lines “or subrogation”, the Committee adopted the proposed new recommendation 184. It was also agreed that a summary explanation of subrogation and the manner in which retention-of-title or financial lease rights could be acquired by lenders through subrogation would be included in the commentary.

80. The Committee considered the following proposal for a new recommendation 185:

“Equivalence of a retention-of-title and a financial lessor’s right to an acquisition security right

“185. The rules governing acquisition financing should produce functionally equivalent economic results regardless of whether the creditor’s right is a retention-of-title right, a financial lessor’s right or an acquisition security right.”

81. It was noted that the proposed text was based on the original text of recommendation 184 in document A/CN.9/631. The Committee adopted the proposed new recommendation 185.

82. The Committee considered the following proposal for a new recommendation 186:

“Evidentiary requirement for retention-of-title and financial lessor’s rights

“186. The law should provide that a retention-of-title right and a financial lessor’s right must be evidenced in writing before the buyer or lessee obtains possession of the tangible property that is the object of the right.”

83. It was noted that, unlike the original text of recommendation 185 in document A/CN.9/631, on which the proposed new recommendation 186 was based and which referred to “creation”, the proposed new recommendation referred to evidentiary requirements. It was explained that a retention-of-title sale established a kind of an expectancy of ownership on the part of the buyer, the value of which was equal to the amount of the paid portion of the purchase price, but did not “create” ownership as such. The Committee adopted the proposed new recommendation 186.

84. The Committee considered the following proposal for a new recommendation 187:

“Right of buyer or lessee to create a security right in residual value of sold or leased property

“187. The law should provide that a buyer or lessee may create a security right in tangible property that is the object of a retention-of-title right or a financial lessor’s right. The security right is enforceable only to the extent of the value remaining in the tangible property after the obligation owing to the seller or financial lessor is satisfied.”

85. It was noted that the first sentence of the proposed text was based on the original text of recommendation 185 bis in document A/CN.9/631. However, it was widely felt that the second sentence went beyond its intended meaning to limit the security right created by the buyer in the tangible assets to the paid portion of their purchase price. It was stated that the text was not intended to deal with enforcement but rather to set out a priority rule, according to which the retention-of-title seller or financial lessor would be paid ahead of a secured creditor that obtained a right in the goods from the buyer or lessee. It was agreed that the second sentence should be revised to read along the following lines: “The security right is limited to the value remaining in the tangible asset in excess of the obligation owing to the seller or financial lessor.” Subject to that change, the Committee adopted the proposed new recommendation 187.

86. The Committee considered the following proposal for a new recommendation 188:

“Effectiveness of a retention-of-title or financial lessor’s right in consumer goods against third parties

“188. The law should provide that a retention-of-title and a financial lessor’s right in consumer goods is effective against third parties upon conclusion of the sale or lease provided that the right is evidenced by a writing in accordance with recommendation 186.”

87. It was noted that the proposed text was based on the original text of recommendation 190 in document A/CN.9/631. It was also noted that: the substance of the original text of recommendation 186 was covered in the proposed new recommendations 188-190 (see para. 86 above as regards new recommendation 188 and para. 88 below as regards new recommendations 189-190); the original text of recommendations 187 and 193 was not necessary as a retention-of-title or financial lease right in consumer goods would normally not be subject to registration in a title registry; the original text of recommendation 188 was not necessary, as the issue addressed therein would normally be framed as one of effectiveness against third parties rather than priority. The Committee adopted the proposed new recommendation 188.

88. The Committee considered the following proposal for new recommendations 189 and 190 (alternative A) and a new recommendation 189 (alternative B):

“Alternative A

“Effectiveness of a retention-of-title or financial lessor’s right in tangible property other than inventory or consumer goods against third parties

“189. The law should provide that a retention-of-title or financial lessor’s right in tangible property other than inventory or consumer goods is effective against third parties only if:

“(a) The seller or lessor retains possession of the tangible property that is the object of the sale or lease; or

“(b) A notice relating to the right is registered not later than [specify a short time period, such as 20 or 30 days] days after delivery of possession of the tangible property to the buyer or lessee.

“Effectiveness of a retention-of-title or financial lessor’s right in inventory against third parties

“190. The law should provide that a retention-of-title or financial lessor’s right in inventory is effective against third parties only if:

“(a) The seller or lessor retains possession of the inventory; or

“(b) Before delivery of the inventory to the buyer or lessee:

“(i) A notice relating to the right is registered in the general security rights registry; and

“(ii) A secured creditor with an earlier registered non-acquisition security right created by the buyer or lessee in tangible property of the same kind as the inventory is notified in writing that the seller or lessor intends to claim a retention-of-title or financial lessor’s right. The notification should describe the inventory sufficiently to enable the secured creditor to determine the nature of the inventory subject to the retention-of-title or financial lessor’s right.

“Alternative B

“Effectiveness of a retention-of-title or financial lessor’s right in tangible property other than consumer goods against third parties

“189. The law should provide that a retention-of-title or financial lessor’s right in tangible property other than consumer goods is effective against third parties only if:

“(a) The seller or lessor retains possession of the tangible property; or

“(b) A notice relating to the right is registered not later than [specify a short time period, such as 20 or 30 days] days after delivery of the tangible property to the buyer or lessee.”

89. The Committee noted that alternative A was based on the original text of recommendations 189 and 192 in document A/CN.9/631, while alternative B implemented the agreement of the Committee that no distinction should be drawn between inventory and tangible property other than inventory (see para. 63 above). It was also noted that the original text of recommendation 190 in

document A/CN.9/631 was not necessary, since the matter was addressed in the proposed new recommendation 188, under which a retention-of-title sale of consumer goods was effective against third parties upon the conclusion of the sales contract. It was also noted that the original text of recommendation 191 in document A/CN.9/631 was not necessary, as its substance was addressed in the proposed new recommendation 184 (see paras. 77-79 above).

90. It was stated that reference should be made in both alternative A and alternative B to registration of a notice in the general security rights registry for both retention-of-title and financial lease rights so as to ensure that the registry would cover all the various rights in a comprehensive way, a result that would promote efficiency and transparency. The Committee adopted the proposed new recommendations 189 and 190 (alternative A) and the proposed new recommendation 189 (alternative B).

91. The Committee considered the following proposal for a new recommendation 191:

“Effectiveness of a retention-of-title or financial lessor’s right in an attachment to immovable property as against earlier competing rights registered in the immovable property

“191. The law should provide that a retention-of-title or financial lessor’s right in tangible property that is to become an attachment to immovable property is effective against existing rights in the immovable property that are registered in the immovable property registry (other than an existing right that secures a loan financing the construction of the immovable property) only if it is registered in the immovable property registry no later than [specify a short time period, such as 20-30 days] days after the tangible property becomes an attachment.”

92. It was noted that the substance of the original text of recommendation 193 in document A/CN.9/631 was covered in the proposed new recommendation 188, under which the retention-of-title seller or financial lessor did not need to register in any title registry. It was also noted that the original text of recommendation 194 in document A/CN.9/631 was no longer necessary, as the retention-of-title seller or financial lessor as an owner would always prevail over a judgement creditor of the buyer or lessor. In addition, it was noted that the proposed new recommendation 191 was an appropriate reformulation of the original text of recommendation 195. The Committee adopted the proposed new recommendation 191.

93. The Committee considered the following proposal for a new recommendation 192:

“One notification or notice sufficient

“192. The law should provide that a single notification to secured creditors with earlier registered non-acquisition security rights pursuant to recommendation 190 may cover retention-of-title and financial lessor’s rights under one or more than one retention-of-title sales or financial leases between the same parties without the need to specifically identify each transaction. However, the notification is effective only for rights in tangible property that is delivered into the possession of the buyer or lessee within a period of [specify time, such as five years] years after the notification is given.”

94. It was noted that the proposed text was based on the original text of recommendation 196 in document A/CN.9/631. It was agreed that, as notification of inventory financiers on record was required only in the context of alternative A in recommendation 190 (non-unitary approach), the new proposed recommendation 192 should follow the new proposed recommendation 190 in alternative A (see para. 88 above). It was also agreed that reference should be made to “notice” rather than to “notification” since, in some languages, the two terms had the same meaning, and the draft Guide used the term “notification” only with the qualifying words “of the assignment”. Subject to those changes, the Committee adopted the proposed new recommendation 192.

95. The Committee considered the following proposal for a new recommendation 193:

“One registration or notice sufficient

“193. The law should provide that registration of a single notice is sufficient to ensure the third-party effectiveness of retention-of-title and financial lessor’s rights under multiple transactions entered into between the same parties, whether concluded before or after the registration, to the extent they cover tangible property that falls within the description contained in the notice.”

96. It was noted that the proposed text was based on the original text of recommendation 197 in document A/CN.9/631. Subject to referring only to registration in the heading, the Committee adopted the proposed new recommendation 193.

97. The Committee considered the following proposal for new recommendations 194-197:

“Extension of a retention-of-title or financial lessor’s right in proceeds of tangible property other than inventory or consumer goods

“194. The law should provide that a retention-of-title or financial lessor’s right in tangible property other than inventory or consumer goods extends to the proceeds of such property (including proceeds of proceeds).”

“Third-party effectiveness of a retention-of-title or financial lessor’s right in proceeds of tangible property other than inventory or consumer goods

“195. The law should provide that a retention-of-title or a financial lessor’s right in proceeds is effective against third parties only if the proceeds are described in a generic way in the registered notice by which the seller’s or lessor’s rights were made effective against third parties or the proceeds consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account.

“196. If recommendation 195 does not apply, the right in the proceeds is effective against third parties for [to be specified] days after the proceeds arise and continuously thereafter, provided a notice of the right in the proceeds is registered in the general security rights registry before the expiry of that period.

“Extension of a retention-of-title or financial lessor’s right in proceeds of inventory

“197. The law should provide that a retention-of-title or financial lessor’s right in inventory extends to its proceeds, other than proceeds in the form of receivables, negotiable instruments, funds credited in a bank account and the obligation to pay under an independent undertaking (including proceeds of proceeds), provided that the seller or lessor notifies earlier-registered secured creditors with security rights in tangible property of the same kind as the proceeds before the proceeds arise.”

98. It was noted that the proposed new recommendations 194 and 197 were based on the original text of recommendations 198 and 199 in document A/CN.9/631, while the proposed new recommendations 195 and 196 were based on the original text of recommendations 40 and 41 in document A/CN.9/631.

99. It was stated that the proposed new recommendations 194 and 197 should be aligned with the approach taken in most jurisdictions in which retention-of-title and financial lease rights were known as devices separate from secured transactions; they did not extend to proceeds; and no distinction was drawn between proceeds of inventory and tangible property other than inventory. In response, it was observed that a solution that would avoid inconsistency with the regime applicable to ownership devices would be to provide that a retention-of-title or financial lease right would not extend to proceeds and that the retention-of-title seller or financial lessor would have instead a normal security right in proceeds, to which the general third-party effectiveness and priority rules would apply (pursuant to recommendations 40, 41 and 80). In addition, it was said that, in order to ensure the same results in the unitary and the non-unitary approach, that security right should have super-priority in proceeds in the form of equipment but not in proceeds of inventory in the form of the payment rights described in the proposed new recommendation 197.

100. Subject to those changes, the Committee expressed initial approval for the substance of the proposed new recommendations 194 and 197 but agreed to recommend to the Commission that a revised text of the recommendations should be reviewed at the resumed fortieth session of the Commission.

101. The Committee considered the following proposal for new recommendation 198:

“Effect of failure to obtain third-party effectiveness of a retention-of-title or financial lessor’s right

“198. The law should provide that if a seller or lessor fails to comply with the requirements for obtaining third-party effectiveness of a retention-of-title or financial lessor’s right, the seller or lessor has a security right in the tangible property subject to the sale or lease, and the general regime for security rights applies.”

102. The suggestion was made that the proposed new text should be revised to make it clear that, if a retention-of-title seller or a financial lessor failed to register a notice in the general security rights registry within the applicable grace period, such a seller or lessor would retain a security right as against third parties (provided that they registered a notice), but ownership would pass to the buyer. In connection with that suggestion, the concern was expressed that, at least between the seller and the buyer (or the lessor and the lessee), ownership could not pass before full payment of

the price. In order to address that concern, the suggestion was made that the proposed text should be revised to provide that ownership would pass to the buyer or lessee “as against third parties” and the seller or lessor would have a security right, provided that it registered a notice in the general security rights registry after the expiry of the grace period. That suggestion received sufficient support. Subject to that change, the Committee adopted the proposed new recommendation 198. It was also agreed that the new recommendation (as for all new or revised recommendations) should be explained in the commentary.

103. The Committee considered the following proposal for new recommendations 199-201:

“Post-default enforcement of retention-of-title and financial lessor’s rights

“199. The law should provide a regime for the post-default enforcement of retention-of-title and financial lessor’s rights that deals with:

“(a) The manner in which the seller or lessor may obtain possession of the tangible property subject to the sale or lease;

“(b) Whether the seller or lessor is required to dispose of the tangible property and, if so, how;

“(c) Whether the seller or lessor may retain any surplus; and

“(d) Whether the seller or lessor has a claim for any deficiency against the buyer or lessee.

“200. The law should provide that the regime that applies to the post-default enforcement of a security right applies to the post-default enforcement of a retention-of-title or financial lessor’s right except to the extent necessary to preserve the coherence of the regime applicable to sale and lease.

“Law applicable to retention-of-title and financial lessor’s rights

“201. The law should provide that the provisions of this law on private international law apply to retention-of-title and financial lessor’s rights.”

104. It was noted that the proposed text was based on the original text of recommendations 200 and 201 in document A/CN.9/631. Subject to referring to a “financial lease right” rather than to a “financial lessor’s right” (see para. 74 above), the Committee adopted the proposed new recommendations 199-201.

105. Subject to the above-mentioned changes and consequential amendments to the commentary to the chapter, the Committee adopted recommendations 184-201 of section B (non-unitary approach) of chapter XII of the draft Guide.

(b) Commentary (A/CN.9/631/Add.9)

106. Subject to any changes consequential upon the revisions to recommendations 184-201 (unitary and non-unitary approaches), the Committee approved the substance of the commentary to chapter XII.

7. Chapter XIII. Private international law

(a) Recommendations (A/CN.9/631, recommendations 202-222)

107. The view was expressed that the title of the chapter should be adjusted to fit its contents (in other words, the law applicable to security rights). It was widely felt

that the term “private international law” was broader than the terms “conflict of laws” or “applicable law”, since it included issues of jurisdiction, recognition and enforcement of foreign judgements. It was agreed that the title to the chapter should be changed to “conflicts of laws” or “applicable law” or any other title that may be suggested by United Nations terminology experts.

108. In response to a question with respect to the footnote to the chapter, it was noted that the footnote emphasized the contribution of the Permanent Bureau of the Hague Conference on Private International Law to the chapter. Expressing its appreciation for that contribution, the Committee agreed that reference should be made to the Permanent Bureau rather than to the Conference.

109. With respect to recommendation 202, it was agreed that the law of the State under which a specialized registration system was maintained should govern security rights in tangible property subject to a specialized registration system.

110. The suggestion was also made that, with respect to security rights in goods covered by a negotiable instrument, reference should be made to the law of the State in which the negotiable document was located. The Committee agreed to defer consideration of that suggestion to a later time in the session after it had had an opportunity to discuss the revised version of recommendation 107 (priority of a security right in a negotiable document or goods covered by a negotiable document) (see paras. 130-134 below). The suggestion was also made that the Committee should consider the law applicable to the transfer of a security right. In that connection, the view was expressed that the approach taken in the United Nations Assignment Convention should be followed. The Committee decided to postpone consideration of that suggestion until it had had an opportunity to consider all the recommendations in chapter XIII (see para. 127 below).

111. With respect to recommendation 204, a number of concerns were expressed. One concern was that, while the rule might be appropriate for assignments of future trade receivables or of trade receivables assigned in bulk, it would be inappropriate for receivables arising from financial contracts. Another concern was that the rule might be inappropriate even for trade receivables. In that connection, reference was made to the European Commission proposal for a regulation of the European Parliament and the Council on the law applicable to contractual obligations (the proposed Rome I regulation), in the context of which the law of the assignor’s location and the law governing the assigned receivable were discussed as the options for the law applicable to third-party effects of assignments. Yet another concern was that the rule in recommendation 204 would result in the application of two different laws in a situation where a person made an assignment in State X and then moved to State Y and made a second assignment of the same receivables. It was added that the same problem would arise in a situation where A in State X assigned to B in State Y and B assigned to C in State Z. Yet another concern was that it would be difficult for debtors of receivables to determine which law applied to their discharge or to ensure that they would not have to deal with an inconvenient or unacceptable creditor. In view of the above-mentioned concerns, support was expressed in favour of the law governing the receivable.

112. In response, it was stated that the issue of financial contracts still remained to be discussed (see paras. 137-142 below). As to trade receivables, it was observed that the draft Guide adopted the approach of the United Nations Assignment Convention. In that connection, the Committee recalled that the Commission at its thirty-ninth session, in 2006, “noted with appreciation that the European

Commission shared the concerns expressed in the note by the Secretariat (see A/CN.9/598/Add.2, para. 34) and admitted that the adoption in a European Union binding instrument of an approach to the law applicable to third-party effects of assignments that would be different from the approach taken in the United Nations Assignment Convention would undermine the certainty reached at the international level and might have a negative impact on the availability and the cost of credit. In addition, the Commission noted with appreciation that the European Commission had expressed its willingness to cooperate closely with the UNCITRAL secretariat to ensure, as far as possible, coherence between the two instruments and the facilitation of ratification of the United Nations Assignment Convention by European Union member States”.⁷

113. In addition, it was observed that, under recommendation 216, the governing law would be that of the State in which the grantor was located at the time a priority conflict arose, rather than two governing laws. It was also said that, under recommendation 46, an assignee in State X could preserve its third-party effectiveness and priority if it met the third-party effectiveness requirements in State Y within a certain period of time. It was further emphasized that, under the draft Guide, no issue of priority arose (to which recommendation 204 could apply) in a situation where two competing claimants took a right from different persons (as in an assignment from A to B and from B to C). Moreover, it was pointed out that, under recommendation 213, subparagraph (a), the debtor of a receivable could obtain a discharge if it paid in accordance with the law governing the receivable, without being concerned whether the person that received the payment was entitled to retain proceeds as against competing claimants. It was also mentioned that whether a receivable was assignable was, under recommendation 213, subparagraph (b), also a matter for the law governing the receivable. Finally, it was noted that, after six years of intergovernmental negotiations in UNCITRAL that had led to the preparation of the United Nations Assignment Convention and another six years of equally detailed negotiations that had led to the preparation of the draft Guide, it was clear that the law governing the receivable would inadvertently result in the application of several laws, in the typical case of a receivables financing transaction that involved the assignment of receivables in bulk, and in uncertainty as to the applicable law, in the equally typical case of a receivables financing transaction involving the assignment of future receivables.

114. The Committee agreed that recommendation 204 provided the appropriate law and recalled the decision taken by the Commission at its thirty-ninth session to approve the substance of the recommendations of the draft Guide, including recommendation 204.⁸ It was also agreed that the commentary to the chapter should fully discuss the policy reasons justifying the approach taken in recommendation 204. In addition, it was agreed that the concerns expressed with regard to the law applicable to financial contracts would be discussed at a later stage in the session.

115. In the discussion, it was noted that recommendation 204 was one of the recommendations that might not be appropriate for security rights in intellectual property and would need to be reviewed in the context of any possible future work by the Commission on security rights in intellectual property (see paras. 155-157 below and A/CN.9/632, paras. 81-86).

⁷ Ibid., para. 243.

⁸ Ibid., para. 74.

116. With respect to recommendation 205, it was agreed that reference should be made, in this recommendation and in other relevant recommendations, to the law under which a specialized registration system was organized, but only if registration in such a system had priority consequences (and not tax or other consequences unrelated to priority).

117. As to recommendation 206, it was agreed that, in view of the strongly held views in support of both alternatives A and B, both alternatives should be retained. It was also agreed that the commentary should fully reflect the policy reasons underlying each alternative.

118. With respect to recommendation 214, the concern was expressed that reference to the law of the State where enforcement took place would create uncertainty, because: the place of enforcement could not be predicted at the time of conclusion of a transaction; in cases where the encumbered assets included both tangible and intangible assets, such an approach could result in the application of more than one law; and enforcement could involve several acts in several places, including places other than the place of the location of the encumbered assets.

119. In order to address that concern, it was suggested that reference should be made — for the enforcement of security rights in both tangible and intangible assets — to the law governing priority. In support of that suggestion, it was observed that, under such an approach, the law applicable to the enforcement of a security right in a tangible asset would be the law of the location of the asset (except in the case of tangible assets subject to a specialized registration system; see the second sentence of recommendation 202). It was also said that the law applicable to the enforcement of a security right in an intangible asset would be the law of the location of the grantor (except in the case of certain payment rights; see recommendations 206-210). In response to a question, it was explained that that approach could apply even in States that did not use the term “priority”, since the term “priority”, interpreted broadly, would cover any situation in which there was a conflict between competing rights.

120. That suggestion was objected to. It was stated that the compromise reached in recommendation 214 after long and difficult negotiations was a better result. It was also observed that application of the rule in recommendation 214, subparagraph (a), would result in the application of the law of the State where enforcement takes place to both procedural and substantive matters, while the reference to the law of the location of the grantor was appropriate with respect to the enforcement of security rights in intangible property (except with respect to certain payment rights; see recommendations 206-210).

121. In response, it was observed that, in the case of extrajudicial enforcement, no procedural matters arose and thus the certainty apparently offered by the rule in recommendation 214, subparagraph (a), could be said to be illusory. It was also stated that recommendation 214, subparagraph (a), appeared to be based on the potentially wrong assumption that enforcement would always take place in the State in which the assets were located. In addition, it was said that priority was so closely linked to enforcement that the same law should apply to both priority and enforcement.

122. Accordingly, it was proposed that both alternatives could be preserved. However, that suggestion did not attract sufficient support. It was widely felt that the importance of certainty with respect to the law applicable to the enforcement of a security right outweighed the benefits of the flexibility to be provided by

alternative recommendations. It was agreed that the recommendation should contain only the current text of recommendation 214 and that other approaches should be discussed in the commentary.

123. With respect to recommendation 215, the suggestion was made that it should refer to the location of the branch of the grantor, which was most closely connected to the security agreement. Noting that recommendation 215 reflected appropriately the correct approach of the United Nations Assignment Convention (article 5, subparagraph (h)), the Committee recalled the decision of the Commission at its thirty-ninth session to adopt the substance of recommendation 215.⁹

124. With respect to recommendation 216, subparagraph (a), it was widely felt that it should refer to the creation of a security right as a matter of fact rather than of law. In order to reflect that understanding, it was suggested that reference should be made to “putative” or “purported” creation. There was sufficient support for that suggestion.

125. With respect to recommendation 218, subparagraph (c), it was agreed that it should be revised along the following lines: “The rules in subparagraphs (a) and (b) of this recommendation do not permit the application of the provisions of the law of the forum on third-party effectiveness or the priority of a security right as against the rights of competing claimants.” That formulation, it was said, would ensure that the forum could not use principles of public policy to apply its own substantive law rules on third-party effectiveness or priority. On the other hand, it was observed, the forum could set aside the creation rules of the applicable law and apply instead its own substantive law rules on the creation of a security right. As a result, the forum could refuse to recognize that a security right had been effectively created, if that was not permitted under the substantive law of the forum (for instance, a security right in wages).

126. With respect to recommendation 219, subparagraph (b), it was agreed that it should be deleted, as recommendation 220 addressed the same point.

127. Recalling its decision to consider the law applicable to the transfer of a security right once it had completed its discussion of the recommendations in chapter XIII (see para. 110 above), the Committee agreed that the commentary could discuss the effect of a transfer of a receivable on a right securing payment of the receivable and the law applicable thereto, describing approaches taken in various legal systems, without, however, making any recommendation, as that matter related to the law applicable to contractual obligations.

128. Subject to the above-mentioned changes and consequential amendments to the commentary to the chapter, the Committee adopted recommendations 202-222.

(b) Commentary (A/CN.9/631/Add.10)

129. The Committee approved the substance of the commentary to chapter XIII subject to the changes referred to above and the following changes:

(a) In paragraph 2, as making the determination of the internationality of a case a condition precedent to the application of conflict-of-laws rules could undermine their application, the third and fourth sentences should be deleted;

⁹ Ibid.

(b) References to courts and, to the extent possible, to the forum in chapter XIII should be replaced by references to “authorities” and to the State in which a case “was examined” respectively;

(c) In paragraph 14, the text should be reviewed to avoid any implication that all legal systems took an identical stance on the application of the law of the location of the asset to the creation of a security right as between the parties;

(d) In paragraphs 35-40, any limitations that the Committee might introduce to the scope of recommendation 204 with respect to financial contracts (see paras. 137-142 below) should be discussed;

(e) In paragraph 56, it should be clarified that recommendation 214 was not designed to apply to procedural enforcement matters and that, in some States, such matters could arise only in the context of judicial enforcement.

8. Priority of a security right in a negotiable document or goods covered by a negotiable document/law applicable to the priority of a security right in a negotiable document or goods covered by a negotiable document

130. Recalling its decision to defer discussion of recommendation 107 to a later time in the session (see para. 25 above), the Committee considered the following proposal for a revised version of recommendation 107:

“107. The law should provide that a security right in tangible property made effective against third parties by possession of a negotiable document has priority over a competing security right made effective against third parties by another method. This rule does not apply if (i) the tangible property is not inventory and (ii) the security right of the secured creditor not in possession of the negotiable document was made effective against third parties before the earlier of (x) the time that the tangible property became represented by the negotiable document, and (y) the time when an agreement was made between the grantor and a secured creditor in possession of the negotiable document providing for the tangible property to be represented by a negotiable document so long as the tangible property became so represented within [30] days from the date of the agreement.”

131. It was noted that, under the proposed reformulation, recommendation 107 would provide that a security right that was made effective against third parties through the transfer of possession of a negotiable document to the secured creditor would have priority over a security right that was made effective against third parties in any other way. It was widely felt that that text would better reflect the policy of preserving the negotiability of negotiable documents and reflecting relevant commercial practices.

132. It was also generally considered that, in order to properly address the relevant commercial practices, the rule should be made subject to an exception, with respect to which the general priority recommendations would apply (in other words, priority should be determined as of the time of registration). It was stated that the exception referred to a security right in tangible property other than inventory (for instance, equipment). It was observed that, unlike inventory, equipment was not normally expected to be represented by a negotiable document and be made subject to a security right in the negotiable document. Therefore, a security right in equipment should be protected in the sense that the general priority rules should apply. It was also observed that the exception involved a security right that was made effective

against third parties before title to the tangible property became represented by the negotiable document or before conclusion of the agreement between the grantor and the secured creditor providing that title in the tangible property were represented by a negotiable document. It was stated that that exception was justified by the fact that a person taking possession of a negotiable document should first check the registry and determine whether the assets covered by the document were subject to a security right.

133. The Committee adopted the proposed new recommendation 107.

134. The Committee recalled its decision to revert to the question of the law applicable to a priority conflict between a possessory security right in a negotiable document and a non-possessory security right in the tangible property covered by the document (see para. 110 above). The Committee agreed that such a priority conflict should be referred to the law of the State in which the negotiable document was located. It was widely felt that such an approach would be in line with applicable principles of negotiable document law.

9. Chapter XIV. Transition

(a) Recommendations (A/CN.9/631, recommendations 223-230)

135. The Committee adopted recommendations 223-230.

(b) Commentary (A/CN.9/631/Add.11)

136. The Committee approved the substance of the commentary to chapter XIV.

10. Financial contracts

137. The Committee engaged in a preliminary discussion with respect to the application of the draft Guide to contingent payment rights arising under or from financial contracts. At the outset, it was stated that the draft Guide applied to contingent payment rights arising under or from financial contracts as it applied to intangible assets in general. It was also observed that, if all types of securities were excluded from the scope of the draft Guide, the draft Guide would still apply to certain types of payment rights arising under or from financial contracts (for instance, foreign exchange contracts). In addition, it was said that those types of payment rights should either be excluded from the draft Guide or be made subject to certain asset-specific rules. Moreover, it was pointed out that such rules should deal with several issues, such as those mentioned below.

138. One such issue was the definition of the term “financial contract”. In that connection, it was pointed out that the definition contained in the United Nations Assignment Convention (article 5, subparagraph (k)) was a good starting point but would need to be updated so as to take into account recent developments in practice. Another issue was the law applicable to security rights in payment rights arising under or from financial contracts. It was observed that the law of the grantor’s location, provided in recommendation 204, would not be appropriate with respect to such payment rights. Yet another issue was the way in which a security right in a payment right arising from or under a financial contract could be made effective against third parties and whether third-party effectiveness achieved by control would result in that security right having a superior priority ranking. Yet another issue was that anti-assignment agreements contained in financial contracts should be respected, a result that would require an adjustment to the definition of the term

“receivable” and recommendation 25. Yet another issue was the recharacterization of the transfer of a financial contract as a secured transaction.

139. It was also noted that the above-mentioned considerations would apply even more if only some types of securities were excluded from the draft Guide (see paras. 145-147 below). In any case, it was stated, further work would be required in order to prepare asset-specific rules to fully reflect financial contract practice.

140. In response, it was observed that any exclusion from or inclusion in the draft Guide of payment rights arising under or from financial contracts should be based on the definition of the term “financial contract” contained in the United Nations Assignment Convention, as the definition was sufficiently flexible to accommodate new practices. It was also pointed out that the Convention excluded only payment rights arising under or from financial contracts governed by netting agreements (article 4, subparagraph 2 (b), and article 5, subparagraphs (k) and (l), of the Convention). In addition, it was pointed out that the suggestion that different rules should apply to security rights in payment rights from or under financial contracts was based on the potentially wrong assumption that existing law was sufficiently developed and worked well.

141. At the same time, it was emphasized that work on security rights in payment rights arising under or from financial contracts should be deferred to the future, since the relevant issues required significant additional work and, in any case, the draft Guide should not be made even more complex or delayed. It was widely felt that such a result could adversely affect the acceptability or the usefulness of the draft Guide. As to any future work in this area, it was mentioned that it could take the form of another asset-specific part of the draft Guide. As to the question of the provisional treatment of financial contracts in the draft Guide, the various approaches taken in recommendation 4 were mentioned.

142. The Committee decided to postpone a final decision on the treatment of financial contracts in the draft Guide until it had had an opportunity to consider the treatment of securities and coordination with the work of the International Institute for the Unification of Private Law (Unidroit) on the draft Unidroit Convention on Substantive Rules regarding Intermediated Securities (see paras. 145-151 below).

11. Chapter II. Scope of application and other general rules

(a) Security rights in intellectual property (A/CN.9/631, recommendation 4, subparagraph (b), and related commentary)

143. The Committee noted that recommendation 4, subparagraph (b), deferred to intellectual property law if any inconsistency arose between the draft Guide and intellectual property law. While support was expressed for the substance of the recommendation, the concern was expressed that the bracketed text, adding the condition that intellectual property law should address matters relating to security rights in intellectual property, could complicate the application of intellectual property law. In order to address that concern, the suggestion was made that the bracketed text should be deleted. There was sufficient support for that suggestion. Subject to that change, the Committee adopted recommendation 4, subparagraph (b).

144. With respect to the commentary on intellectual property issues, it was widely felt that the revisions to the commentary agreed upon by Working Group VI (Security Interests) at its twelfth session (A/CN.9/620, paras. 111-120) should be

included in the commentary. Subject to those changes, the Committee approved the substance of the commentary on intellectual property issues.

(b) Securities (A/CN.9/631, recommendation 4, subparagraph (c))

145. With respect to recommendation 4, subparagraph (c), the Committee considered the question of whether the draft Guide should exclude all types of securities or intermediated securities only. The concern was expressed that an exclusion of intermediated securities only could result in overlap and conflict with the draft Unidroit Convention on Substantive Rules regarding Intermediated Securities and other regional and national texts. It was stated that a distinction between intermediated and non-intermediated securities was not easy to draw. It was also observed that, in some cases, the term “intermediated securities” might cover directly held securities in the so-called transparent holding systems, in which central securities depositories held securities for investors. In addition, it was said that securities raised different issues and should be subject to specific rules, the preparation of which would require careful study and discussion.

146. In that connection, it was suggested that possible future work of UNCITRAL in the area of securities should focus on directly held and non-traded securities, which were often the main asset that many small and medium-sized companies could offer as security for credit. On the other hand, it was also suggested that possible future work should: avoid drawing unnecessary distinctions between tradable and non-tradable securities and thus creating too many regimes; preserve title transfers; ensure that control was available as a method of third-party effectiveness and provided a security right with superior priority; and provide appropriate applicable law provisions. In addition, it was suggested that the rules on intermediated and non-intermediated securities should be integrated, as the distinction was not obvious. It was also suggested that title transfers and security rights in receivables arising from securities should be subject to the same regime.

147. It was agreed that all types of securities should be excluded from the draft Guide. Subject to that change, the Committee adopted recommendation 4, subparagraph (c). The Committee recommended to the Commission that future work should be undertaken with a view to preparing an annex to the draft Guide on certain types of securities, taking into account work by other organizations, in particular Unidroit.

(c) Financial contracts

148. Pursuant to its earlier decision to postpone a final decision on the treatment of payment rights arising under or from financial contracts in the draft Guide until it had had an opportunity to consider the treatment of securities and coordination with the work of Unidroit on the draft Unidroit Convention on Substantive Rules regarding Intermediated Securities (see para. 142 above), the Committee continued its discussion of whether security rights in payment rights arising under or from financial contracts and other similar contracts should also be excluded from the draft Guide. It was agreed that payment rights arising under or from financial contracts and foreign exchange contracts should be excluded. It was widely felt that security rights in such payment rights raised different issues and required in some respects different treatment. In addition, it was generally considered that in particular the recommendations dealing with anti-assignment agreements, set-off

rights of the debtor of the receivable and applicable law were not appropriate with respect to such payment rights.

149. As to the meaning of the term “financial contract” and thus as to the scope of the exclusion, differing views were expressed. One view was that a broad definition of the term “financial contract” should be adopted to ensure that all contracts encompassed by present and future practice in financial markets would be excluded from the scope of the draft Guide. It was stated that payment rights arising under or from financial contracts should be excluded whether they were subject to a netting agreement or not. It was also observed that a receivable payable upon termination of all outstanding transactions should also be excluded. In addition, it was pointed out that in particular the law applicable to a security right in such a receivable should be reviewed.

150. However, the prevailing view was that the definition of the term “financial contract” and the approach taken in the United Nations Assignment Convention (article 4, subparagraph (2) (b), and article 5, subparagraphs (k) and (l)) should be adopted. It was stated that such an approach was appropriate and would also ensure consistency with the Convention. It was also observed that, in line with the approach taken in article 4, subparagraph (2) (b), of the Convention, payment rights arising under or from financial contracts should be excluded only to the extent that they were subject to netting agreements (as a result, for example, a security right in a single receivable would not be excluded), and receivables payable upon termination of all outstanding obligations should not be excluded. In that connection, it was pointed out that the Commission, in its possible future work in that area, could examine the question of whether a special rule was required with respect to the third-party effectiveness and priority of a security right in such a receivable, as the United Nations Assignment Convention did not address that matter. However, it was added that the law applicable to a security right in such a receivable could not be reconsidered, as the United Nations Assignment Convention addressed it appropriately. While some doubt was expressed in that regard on the ground that there was a need for a new approach in view of new developments, it was widely felt that UNCITRAL could not and should not recommend an applicable law rule that would be inconsistent with the United Nations Assignment Convention.

151. The Committee agreed that security rights in payment rights arising under or from financial contracts and foreign exchange contracts should be excluded from the scope of the draft Guide based on the relevant exclusions of article 4, subparagraphs 2 (b) and (c), and the definitions of “financial contract” and “netting agreement” contained in article 5, subparagraphs (k) and (l), of the United Nations Assignment Convention. It was also agreed to recommend to the Commission that efforts should be made to consider at the resumed fortieth session of the Commission any proposals submitted in that regard. In addition, it was agreed to recommend to the Commission that it should consider at a future session possible future work on financial contracts.

12. Coordination with the draft Unidroit Model Law on Leasing

152. The Committee noted with appreciation efforts undertaken by delegates and the secretariats of Unidroit and UNCITRAL to ensure effective coordination between the draft Unidroit Model Law on Leasing and the draft Guide. It was also noted that those efforts had resulted in a proposal that the draft Model Law: defer to the draft Guide for financial leases that created a security right or an acquisition

financing right; refer to the draft Guide for the definitions of those terms; and leave applicable law issues to the draft Guide. It was also noted that, under the proposed approach, the draft Guide should cover only those financial leases that created a security right or an acquisition financing right.

153. Noting that reference should be made to the terms “retention-of-title right” and “financial lease right”, rather than to the term “acquisition financing right” (see para. 69 above), and that the term “financial lease right” was defined to ensure that only financial leases that created a security right would be covered by the draft Guide (see paras. 73-75 above), the Committee approved the proposed approach.

13. Recommendations by the Committee of the Whole to the Commission with respect to future work on the draft UNCITRAL Legislative Guide on Secured Transactions

154. Expressing once again its appreciation to the Secretariat for the preparation of an extremely large number of complex documents in a very short period of time, the Committee noted that it had adopted recommendations 4 (b) and (c) (on the scope of the draft Guide as to intellectual property, securities and financial contracts) and 74-230 (chapters VII-XIV) and approved the substance of the commentaries on chapters VII-XIV and on intellectual property, subject to the changes agreed upon by the Committee. The Committee also noted that, subject to the changes agreed upon by the Committee, it had approved the substance of the terminology of the draft Guide on the understanding that the terminology would be reviewed at the resumed fortieth session of the Commission. The Committee recommended that the Commission approve the decisions of the Committee. The Committee also recommended to the Commission that, at its resumed fortieth session, the Commission should consider recommendations 1-73 and the commentaries of chapters I-VI. In addition, the Committee recommended to the Commission that it would not need to review at its resumed fortieth session the recommendations and commentaries considered at the first part of the session, with the exception of the following materials, if necessary: recommendations on the extension of a retention-of-title right or a financial lease right to proceeds (non-unitary approach); and the commentary on the alternatives to the recommendations on the third-party effectiveness of a retention-of-title right or a financial lease right to proceeds (unitary and non-unitary approaches). A suggestion to include in the matters to be further reviewed the recommendation dealing with the law applicable to security rights in intangible property did not attract sufficient support. The Committee also recommended to the Commission that the question of whether the definitions and recommendations of the draft Guide should be reproduced, in addition to the relevant chapter of the commentaries, in a separate annex to the draft Guide, should be deferred to the resumed fortieth session.

B. Possible future work on security rights in intellectual property

155. The Committee considered a note by the Secretariat entitled “Possible future work on security rights in intellectual property” (A/CN.9/632). The Committee expressed its appreciation to the Secretariat for preparing the note and for organizing in cooperation with the World Intellectual Property Organization (WIPO) a colloquium on security rights in intellectual property,¹⁰ as requested by the

¹⁰ The UNCITRAL Second International Colloquium on Secured Transactions: Security Interests in Intellectual Property Rights, held in Vienna on 18 and 19 January 2007; for further

Commission at its thirty-ninth session.¹¹ It was noted that the colloquium, attended by representatives of Governments and of international and national governmental and non-governmental organizations with expertise in intellectual property law, had indicated the importance of intellectual property as security for credit and the need for adjustments to the draft Guide that would ensure the appropriate coordination between secured transactions and intellectual property law. It was further noted that the commentary of the draft Guide (A/CN.9/631/Add.1, para. 47) drew the attention of States to the need to consider adjusting their laws to avoid any inconsistencies between secured transactions and intellectual property law without, however, providing any specific guidance in that regard.

156. Broad support was expressed in favour of future work by the Commission on security rights in intellectual property. It was stated that a significant part of corporate wealth was embodied in intellectual property assets. It was also observed that the coordination between secured transactions law and intellectual property law under the regimes existing in many countries was not sufficiently developed to accommodate financing practices in the context of which credit was extended with intellectual property being used as security. In addition, it was said that the draft Guide did not provide sufficient guidance to States as to the adjustments that would need to be made to address the needs of financing practices relating to intellectual property. Moreover, it was emphasized that work should be undertaken as expeditiously as possible to ensure that the draft Guide gave a complete and comprehensive guidance in that regard. It was also suggested that, subject to the decision by the Commission, States might be alerted, by reference in the draft Guide, to upcoming work by the Commission on the preparation of an annex to the Guide specific to intellectual property that would modify the general considerations of the draft Guide in the same way that existing asset-specific parts of the draft Guide did so. It was finally pointed out that intellectual property law experts from Governments and from international governmental and non-governmental organizations should be invited to participate in future work in that area. There was general support for those statements and suggestions.

157. The Committee decided to recommend to the Commission that Working Group VI (Security Interests) should be entrusted with the preparation of an annex to the draft Guide specific to security rights in intellectual property. It was widely felt that the preparation of such an annex would usefully supplement the work of the Commission on the draft Guide by providing specific guidance to States as to the appropriate coordination between secured transactions and intellectual property law. The Committee was of the view that inviting international organizations with expertise in the area of intellectual property, such as WIPO, and international governmental and non-governmental organizations with expertise in secured transactions and intellectual property law to participate actively in the preparation of such an annex would help ensure the successful completion of this work within a reasonable period of time.

information about the Colloquium, see the UNCITRAL website (www.uncitral.org/uncitral/en/commission/colloquia/2secint.html).

¹¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 86.

C. Decisions by the Commission with respect to agenda item 4

158. Upon recommendation of the Committee of the Whole (see para. 154 above), the Commission approved the decisions of the Committee and, subject to the changes agreed upon by the Committee, adopted recommendations 4 (b) and (c) (on the scope of the draft Guide as to intellectual property, securities and financial contracts) and 74-230 (chapters VII-XIV) and approved the substance of the commentaries on chapters VII-XIV and on intellectual property. In addition, the Commission, subject to the changes agreed upon by the Committee, approved the substance of the terminology of the draft Guide on the understanding that the terminology would be reviewed at its resumed fortieth session.

159. Upon recommendation of the Committee of the Whole (see para. 154 above), the Commission, in addition, decided that, at its resumed fortieth session, it would consider recommendations 1-73 and the commentaries of chapters I-VI. The Commission agreed that it would not need to review at that time the recommendations and commentaries considered at the first part of the session, with the exception of the following materials, if necessary: recommendations on the extension of a retention-of-title right or a financial lease right to proceeds (non-unitary approach); and the commentary on the alternatives to the recommendations on the third-party effectiveness of a retention-of-title right or a financial lease right to proceeds (unitary and non-unitary approaches). The Commission agreed to defer to its resumed fortieth session the question of whether the definitions and recommendations of the draft Guide should be reproduced, in addition to the relevant chapter of the commentaries, in a separate annex to the draft Guide.

160. With respect to securities, on the recommendation of the Committee of the Whole (see para. 147 above), the Commission decided that future work should be undertaken with a view to preparing an annex to the draft Guide on certain types of securities, taking into account work by other organizations, in particular Unidroit.

161. With respect to financial contracts, on the recommendation of the Committee of the Whole (see para. 151 above), the Commission decided that efforts should be made to consider at its resumed fortieth session any proposals submitted in that regard. In addition, it decided to consider at a future session possible future work on financial contracts.

162. With respect to future work on security rights in intellectual property, on the recommendation of the Committee of the Whole (see para. 157 above), the Commission decided to entrust Working Group VI (Security Interests) with the preparation of an annex to the draft Guide specific to security rights in intellectual property. (For the next session of the Working Group, see para. 251 (f) below.)

IV. Procurement: progress report of Working Group I

163. At its thirty-sixth and thirty-seventh sessions, in 2003 and 2004, respectively, the Commission considered the possible updating of the UNCITRAL Model Law on Procurement of Goods, Construction and Services and its Guide to Enactment¹² on

¹² Ibid., *Forty-ninth Session, Supplement No. 17* and corrigendum (A/49/17 and Corr.1), annex I; see also *UNCITRAL Model Law on Procurement of Goods, Construction and Services with Guide to Enactment* (United Nations publication, Sales No. E.05.V.10).

the basis of the notes by the Secretariat (A/CN.9/539 and Add.1 and A/CN.9/553).^{13, 14} At its thirty-seventh session, the Commission agreed that the Model Law would benefit from being updated to reflect new practices, in particular those that resulted from the use of electronic communications in public procurement, and the experience gained in the use of the Model Law as a basis for law reform in public procurement as well as possible additional issues. The Commission decided to entrust the preparation of proposals for the revision of the Model Law to its Working Group I (Procurement) and gave the Working Group a flexible mandate to identify the issues to be addressed in its considerations. The Commission noted that, in updating the Model Law, care should be taken not to depart from the basic principles of the Model Law and not to modify the provisions whose usefulness had been proven.¹⁵

164. The Working Group commenced its work pursuant to that mandate at its sixth session (Vienna, 30 August-3 September 2004). At that session, it decided to proceed with the in-depth consideration of the topics suggested in the notes by the Secretariat (A/CN.9/WG.I/WP.31 and A/CN.9/WG.I/WP.32)¹⁶ in sequence at its future sessions (A/CN.9/568, para. 10).

165. At its thirty-eighth and thirty-ninth sessions, in 2005 and 2006, respectively, the Commission took note of the reports of the sixth (Vienna, 30 August-3 September 2004), seventh (New York, 4-8 April 2005), eighth (Vienna, 7-11 November 2005) and ninth (New York, 24-28 April 2006) sessions of the Working Group (A/CN.9/568, A/CN.9/575, A/CN.9/590 and A/CN.9/595, respectively).^{17, 18}

166. At its current session, the Commission took note of the reports of the tenth (Vienna, 25-29 September 2006) and eleventh (New York, 21-25 May 2007) sessions of the Working Group (A/CN.9/615 and A/CN.9/623, respectively).

167. The Commission was informed that the Working Group, at its tenth and eleventh sessions, had continued its work on the elaboration of proposals for the revision of the Model Law and in this regard had considered the following topics: (i) the use of electronic means of communication in the procurement process; (ii) aspects of the publication of procurement-related information, including revisions to article 5 of the Model Law and the publication of forthcoming procurement opportunities; (iii) the procurement technique known as the electronic reverse auction; (iv) abnormally low tenders; and (v) the method of contracting known as the framework agreement. It used the notes by the Secretariat (A/CN.9/WG.I/WP.43 and Add.1, A/CN.9/WG.I/WP.44 and Add.1, A/CN.9/WG.I/WP.47, A/CN.9/WG.I/WP.48, A/CN.9/WG.I/WP.50 and A/CN.9/WG.I/WP.51) as a basis for its deliberations (A/CN.9/615, paras. 10 and 11, and A/CN.9/623, paras. 12 and 13).

168. The Commission was further informed that the Working Group, at its eleventh session, had held a preliminary exchange of views on document A/CN.9/WG.I/WP.52 and the drafting materials regarding framework agreements contained therein, and had decided to consider the document in depth at its next

¹⁵ Ibid., paras. 81 and 82.

¹⁶ Ibid., *Sixtieth Session, Supplement No. 17* (A/60/17), para. 171.

¹⁷ Ibid., paras. 170-172.

¹⁸ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), paras. 190-192.

session. The Commission noted that the Working Group had deferred consideration of documents A/CN.9/WG.I/WP.45 and Add.1 and A/CN.9/WG.I/WP.52/Add.1 to a future session (A/CN.9/623, para. 12).

169. The Commission recalled that, at its thirty-ninth session, it had recommended that the Working Group, in updating the Model Law and the Guide, should take into account the question of conflicts of interest and should consider whether any specific provisions addressing that question in the Model Law would be warranted.¹⁹ The Commission took note of the decision of the Working Group at its tenth session to add the issue of conflicts of interest to the list of topics to be considered in the revision of the Model Law and the Guide (A/CN.9/615, para. 11), and that the Working Group, at its eleventh session, had noted that any time frame to be agreed for the completion of the revisions to the Model Law and the Guide should take into account the time necessary to consider and address this question (A/CN.9/623, para. 13).

170. The Commission commended the Working Group for the progress made in its work, and reaffirmed its support for the review being undertaken and for the inclusion of novel procurement practices and techniques in the Model Law. It recommended that the Working Group should adopt a concrete agenda for its forthcoming sessions in order to expedite progress in its work. (For the next two sessions of the Working Group, see para. 251 (a) below.)

V. Arbitration and conciliation: progress report of Working Group II

171. The Commission recalled that at its thirty-ninth session, in 2006, it had agreed that Working Group II (Arbitration and Conciliation) should undertake a revision of the UNCITRAL Arbitration Rules.²⁰

172. At that session, the Commission noted that, as one of the early instruments developed by UNCITRAL in the field of arbitration, the UNCITRAL Arbitration Rules were widely recognized as a very successful text, having been adopted by many arbitration centres and used in many different instances, for example, in investor-State disputes. In recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of the Rules should not alter the structure of the text, its spirit or its drafting style, and should respect the flexibility of the text rather than make it more complex. It was suggested that the Working Group should undertake to define carefully the list of topics that might need to be addressed in a revised version of the UNCITRAL Arbitration Rules.²¹

173. At its current session, the Commission commended the Working Group for the progress made regarding the revision of the UNCITRAL Arbitration Rules, as reflected in the reports of the forty-fifth (Vienna, 11-15 September 2006) and forty-sixth (New York, 5-9 February 2007) sessions of the Working Group (A/CN.9/614 and A/CN.9/619, respectively). The Commission also had before it a note by the

¹⁹ Ibid., para. 192.

²⁰ Ibid., para. 187; for the text of the UNCITRAL Arbitration Rules, see *Official Records of the General Assembly, Thirty-first Session, Supplement No. 17* (A/31/17), para. 57.

²¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17* (A/61/17), para. 184.

Secretariat transmitting the report of the Secretary-General of the Permanent Court of Arbitration on its activities under the UNCITRAL Arbitration Rules since 1976 (A/CN.9/634).

174. The Commission noted that the UNCITRAL Arbitration Rules had not been amended since their adoption in 1976 and that the review should seek to modernize the Rules and to promote greater efficiency in arbitral proceedings. The Commission generally agreed that the mandate of the Working Group to maintain the original structure and spirit of the UNCITRAL Arbitration Rules had provided useful guidance to the Working Group in its deliberations to date and should continue to be a guiding principle for its work.

175. The Commission noted that broad support had been expressed in the Working Group for a generic approach that sought to identify common denominators that applied to all types of arbitration irrespective of the subject matter of the dispute, in preference to dealing with specific situations. However, the Commission noted that the extent to which the revised UNCITRAL Arbitration Rules should take account of investor-State dispute settlement or administered arbitration remained to be considered by the Working Group at future sessions.

176. The Commission noted with satisfaction that the Working Group was progressing rapidly with the preparation of the revised UNCITRAL Arbitration Rules. The Working Group was expected to complete its work so that the final review and adoption of the revised Rules would take place at the latest at the forty-second session of the Commission, in 2009. It was agreed that, should the Working Group complete its proposals early enough for them to be considered by the Commission at its forty-first session, in 2008, that option would also be acceptable.

177. With respect to future work in the field of settlement of commercial disputes, the Commission recalled that, at its thirty-ninth session, it had agreed that the issue of arbitrability was a topic that the Working Group should also consider. As to the issue of online dispute resolution, it was agreed that the Working Group should maintain the topic on its agenda but, at least in an initial phase, should consider the implications of electronic communications in the context of the revision of the UNCITRAL Arbitration Rules.²²

178. The Commission was informed that 2008 would mark the fiftieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958²³ (the “New York Convention”) and that conferences to celebrate that anniversary were being planned in different regions, which would provide opportunities to exchange information on how the New York Convention had been implemented around the world. The Secretariat was requested to monitor the conferences and make full use of events associated with that anniversary to encourage further treaty actions in respect of the New York Convention and promote a greater understanding of that instrument. The Commission was informed that a one-day conference organized jointly by the United Nations and the International Bar Association was scheduled to be held in New York on 1 February 2008. (For the next two sessions of the Working Group, see para. 251 (b) below.)

²² Ibid., para. 187.

²³ United Nations, *Treaty Series*, vol. 330, No. 4739.

VI. Transport law: progress report of Working Group III

179. At its thirty-fourth session, in 2001, the Commission established Working Group III (Transport Law) to prepare, in close cooperation with interested international organizations, a legislative instrument on issues relating to the international carriage of goods by sea, such as the scope of application, the period of responsibility of the carrier, the obligations of the carrier, the liability of the carrier, the obligations of the shipper and transport documents.²⁴ At its thirty-fifth session, in 2002, the Commission approved the working assumption that the draft convention on transport law should cover door-to-door transport operations.²⁵ At its thirty-sixth to thirty-ninth sessions, in 2003-2006, respectively, the Commission noted the complexities involved in the preparation of the draft Convention on the Carriage of Goods [Wholly or Partly] [by Sea] and authorized the Working Group, on an exceptional basis, to hold its sessions on the basis of two-week sessions.^{26, 27, 28, 29}

180. At its current session, the Commission took note with appreciation of the progress made by the Working Group at its eighteenth (Vienna, 6-17 November 2006) and nineteenth (New York, 16-27 April 2007) sessions (for the reports of the sessions, see A/CN.9/616 and A/CN.9/621, respectively).

181. The Commission was informed that the Working Group, at its eighteenth session, had continued and largely completed its second reading of the draft Convention, and had made significant progress with respect to a number of difficult issues, including those regarding transport documents and electronic transport records, shipper's liability for delay, time for suit, limitation of the carrier's liability, the relationship of the draft Convention with other conventions, general average, jurisdiction and arbitration. Also considered by the Working Group was the issue of rights of suit pursuant to the draft Convention and it was decided that, while an attempt to offer uniform solutions for rights of suit was a laudatory goal, the chapter should be deleted from the draft Convention in the light of its complexity and of the Working Group's goal for completion of the text. The Commission was also informed that the Secretariat had facilitated consultations between experts from Working Group III (Transport Law) and experts from Working Group II (Arbitration and Conciliation) and that a common understanding had been reached that accommodated the needs and general approach of both working groups regarding the provisions on arbitration in the draft Convention.

182. The Commission was further informed that the Working Group, at its nineteenth session, had commenced its third reading of the draft Convention and that significant progress had been made in that regard. The third reading of a number of chapters of the draft Convention had been completed, including of related definitions, regarding the scope of application, electronic transport records, the period of responsibility of the carrier, the obligations of the carrier, the liability of the carrier, additional provisions relating to particular stages of carriage, the

²⁴ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17 and corrigendum (A/56/17 and Corr.3)*, para. 345.

²⁵ *Ibid.*, *Fifty-seventh Session, Supplement No. 17 (A/57/17)*, para. 224.

²⁶ *Ibid.*, *Fifty-eighth Session, Supplement No. 17 (A/58/17)*, para. 208.

²⁷ *Ibid.*, *Fifty-ninth Session, Supplement No. 17 (A/59/17)*, para. 133.

²⁸ *Ibid.*, *Sixtieth Session, Supplement No. 17 (A/60/17)*, para. 238.

²⁹ *Ibid.*, *Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 270.

validity of contractual terms, liability for delay in the delivery of goods, the relationship of the draft Convention with other conventions and the obligations of the shipper. The Commission was further informed that the third reading had also largely been completed of the chapter regarding transport documents and electronic transport records.

183. The Commission commended the Working Group for the progress made in its work, particularly in the light of its goal of presenting the draft Convention to the Commission for its consideration in 2008. Nevertheless, some serious concerns were raised regarding the treatment of certain substantive issues in the draft Convention, such as freedom of contract in volume contracts, and it was suggested that those issues should receive further examination prior to finalization of the draft Convention. One delegation indicated that the treatment of the issue of freedom of contract in volume contracts would determine its position with regard to the adoption of a final convention.

184. With respect to the time frame for completion of the draft Convention, the Commission was informed that the Working Group planned to complete its third and final reading at the end of 2007, with a view to presenting the draft Convention for finalization by the Commission in 2008. In order to accommodate that goal and to allow for the possibility that the Working Group might need additional time beyond the end of its twentieth session to complete the final reading, the Commission agreed to schedule the twenty-first session of the Working Group for 14 to 25 January 2008, so as to provide sufficient time to complete the final reading of the draft Convention and circulate it for comments to Governments prior to the forty-first session of the Commission, in 2008. Further, the Commission agreed to move the twenty-first session of the Working Group from New York to Vienna, given that, if the final reading were completed at that session, it would require the participation of a formal drafting group, including translators and editors, which was possible only in Vienna. The Commission further noted that the Working Group could decide at the conclusion of its twentieth session whether it required a one-week or a two-week session in January 2008, but that, generally, noting the complexities and magnitude of the work involved in the preparation of the draft Convention, the Commission authorized the Working Group to hold its sessions on the basis of two-week sessions. (For the next two sessions of the Working Group, see para. 251 (c) below.)

VII. Insolvency law

A. Progress report of Working Group V

185. The Commission recalled that, at its thirty-ninth session, in 2006, it had agreed that: (a) the topic of the treatment of corporate groups in insolvency was sufficiently developed for referral to Working Group V (Insolvency Law) for consideration in 2006 and that the Working Group should be given the flexibility to make appropriate recommendations to the Commission regarding the scope of its future work and the form it should take, depending upon the substance of the proposed solutions to the problems that the Working Group would identify under that topic; and (b) post-commencement finance should initially be considered as a component of work to be undertaken on insolvency of corporate groups, with the Working

Group being given sufficient flexibility to consider any proposals for work on additional aspects of the topic.³⁰

186. The Commission noted with appreciation the progress of the Working Group regarding consideration of the treatment of corporate groups in insolvency as reflected in the reports of its thirty-first (Vienna, 11-15 December 2006) and thirty-second (New York, 14-18 May 2007) sessions (A/CN.9/618 and A/CN.9/622, respectively) and commended the Secretariat for the working papers and reports prepared for those sessions.

187. The Commission reaffirmed that the mandate of the Working Group was to consider the treatment of corporate groups in insolvency, with post-commencement finance to be included as a component of that work (see para. 185 above).

188. The Commission took note of the agreement of the Working Group, at its thirty-first session, that the Insolvency Guide³¹ and the UNCITRAL Model Law on Cross-Border Insolvency³² provided a sound basis for the unification of insolvency law and that the current work on corporate groups was intended to complement those texts, not to replace them (A/CN.9/618, para. 69). The Commission also took note of the suggestion made at that session of the Working Group that a possible method of work would be to consider the provisions contained in those existing texts that might be relevant in the context of corporate groups and identify those issues that required additional discussion and the preparation of additional recommendations. The Commission further took note that other issues, although relevant to corporate groups, could be treated in the same manner as in the Insolvency Guide and the UNCITRAL Model Law on Cross-Border Insolvency (A/CN.9/618, para. 70).

189. Concerns were expressed in the Commission with respect to some components of that work, in particular substantive consolidation and its effect on the separate identity of individual members of a corporate group. In addition, the possibility of submitting a solvent member of a corporate group to collective procedures was seriously questioned. The Commission noted those concerns and requested the Working Group to bear them in mind in its deliberations. (For the next two sessions of the Working Group, see para. 251 (e) below.)

B. Facilitation of cooperation and coordination in cross-border insolvency proceedings

190. The Commission recalled that at its thirty-ninth session, in 2006, it had agreed that initial work to compile practical experience with negotiating and using cross-border insolvency protocols should be facilitated informally through consultation with judges and insolvency practitioners and that a preliminary progress report on that work should be presented to the Commission for further consideration at its fortieth session, in 2007.³³

³⁰ Ibid., para. 209 (a) and (b).

³¹ United Nations publication, Sales No. E.05.V.10.

³² *Official Records of the General Assembly, Fifty-second Session, Supplement No. 17 (A/52/17)*, annex I.

³³ Ibid., *Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 209 (c).

191. The Commission had before it a note by the Secretariat on facilitation of cooperation, direct communication and coordination in cross-border insolvency proceedings (A/CN.9/629). The Commission emphasized the practical importance of facilitating cross-border cooperation in insolvency cases. It expressed its satisfaction with respect to the progress made on the work of compiling practical experience with negotiating and using cross-border insolvency protocols based on the draft outline of contents in document A/CN.9/629. It reaffirmed that that work should continue to be developed informally by the Secretariat in consultation with judges, practitioners and other experts.

VIII. Possible future work in the area of electronic commerce

192. The Commission recalled that Working Group IV (Electronic Commerce), after it had completed its work on the draft Convention on the Use of Electronic Communications in International Contracts, in 2004, requested the Secretariat to continue monitoring various issues related to electronic commerce, including issues related to cross-border recognition of electronic signatures, and to publish the results of its research with a view to making recommendations to the Commission as to whether future work in those areas would be possible (A/CN.9/571, para. 12).

193. The Commission further recalled that, at its thirty-eighth session, in 2005, it took note of the work undertaken by other organizations in various areas related to electronic commerce, summarized in a note by the Secretariat (A/CN.9/579). At that session, the Commission requested the Secretariat to prepare a more detailed study, which should include proposals as to the form and nature of a comprehensive reference document discussing the various elements required to establish a favourable legal framework for electronic commerce, which the Commission might in the future consider preparing with a view to assisting legislators and policymakers around the world.³⁴

194. It was also recalled that at its thirty-ninth session, in 2006, the Commission had considered a note by the Secretariat prepared pursuant to that request (A/CN.9/604). The note identified the following areas as possible components of a comprehensive reference document: (a) authentication and cross-border recognition of electronic signatures; (b) liability and standards of conduct for information service providers; (c) electronic invoicing and legal issues related to supply chains in electronic commerce; (d) transfer of rights in tangible goods and other rights through electronic communications; (e) unfair competition and deceptive trade practices in electronic commerce; and (f) privacy and data protection in electronic commerce. The note also identified other issues that could be included, although in a more summary fashion, in such a document: (a) protection of intellectual property rights; (b) unsolicited electronic communications (spam); and (c) cybercrime. At that session, there had been support for the view that the task of legislators and policymakers, in particular in developing countries, might be greatly facilitated if the Commission were to formulate a comprehensive reference document dealing with the topics identified by the Secretariat. It had been also said at that session that such a document might also assist the Commission in identifying areas in which it might itself undertake future harmonization work. However, concerns had also been expressed that the range of issues identified was too wide and that the scope of the comprehensive reference document might need to be reduced. At that session, the

³⁴ Ibid., *Sixtieth Session, Supplement No. 17* (A/60/17), para. 214.

Commission had requested the Secretariat to prepare a sample portion of the comprehensive reference document dealing specifically with issues related to authentication and cross-border recognition of electronic signatures, for review at the Commission's fortieth session, in 2007.³⁵

195. At its current session, the Commission considered the sample chapter that had been prepared by the Secretariat pursuant to that request (A/CN.9/630 and Add.1-5). The Commission reviewed the structure, level of detail, nature of discussion and type of advice provided in the sample chapter. The Commission commended the Secretariat for the preparation of the sample chapter, which the Commission regarded as very informative and useful. It was suggested that it would be desirable for the Secretariat to prepare other chapters following the same model, to deal with other issues that the Commission might wish to select from among those proposed earlier, in particular the transfer of rights in tangible goods and other rights through electronic communications. However, the Commission was not in favour of requesting the Secretariat to undertake similar work in other areas with a view to preparing a comprehensive reference document. The Commission agreed to request the Secretariat to continue to follow closely legal developments in the relevant areas, with a view to making appropriate suggestions in due course. In view of the valuable work that had already been done, the Commission requested the Secretariat to publish the sample chapter as a stand-alone publication.

IX. Possible future work in the area of commercial fraud

A. Background

196. It was recalled that the Commission at its thirty-fifth to thirty-ninth sessions, from 2002 to 2006, had considered possible future work on commercial fraud^{36, 37, 38, 39, 40} It was in particular recalled that at its thirty-seventh session, in 2004, with a view towards education, training and prevention, the Commission had agreed that the preparation of lists of common features present in typical fraudulent schemes could be useful as educational material for participants in international trade and other potential targets of perpetrators of fraud to the extent that such lists would help potential targets protect themselves and avoid becoming victims of fraudulent schemes. While it was not proposed that the Commission itself or its intergovernmental working groups should be directly involved in that activity, it was agreed that the Secretariat should consider preparing, in close consultation with experts, such materials listing common features present in typical fraudulent schemes and that the Secretariat would keep the Commission informed of progress in that regard.⁴¹

197. It was further recalled that the attention of the Commission had been drawn at its thirty-eighth session, in 2005, to Economic and Social Council resolution 2004/26 of 21 July 2004, pursuant to which the United Nations Office on Drugs and

³⁵ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), paras. 203-206.

³⁶ Ibid., *Fifty-seventh Session, Supplement No. 17* (A/57/17), paras. 279-290.

³⁷ Ibid., *Fifty-eighth Session, Supplement No. 17* (A/58/17), paras. 231-241.

³⁸ Ibid., *Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 108-112.

³⁹ Ibid., *Sixtieth Session, Supplement No. 17* (A/60/17), paras. 216-220.

⁴⁰ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), paras. 211-217.

⁴¹ Ibid., *Fifty-ninth Session, Supplement No. 17* (A/59/17), para. 112.

Crime (UNODC) had convened an intergovernmental expert group meeting in March 2005 to prepare a study on fraud and the criminal misuse and falsification of identity, and to develop on the basis of such a study relevant practices, guidelines or other materials, taking into account in particular the relevant work of UNCITRAL.⁴² The results of that meeting were reported to the Commission on Crime Prevention and Criminal Justice (the “Crime Commission”) at its fourteenth session (Vienna, 23-27 May 2005) (E/CN.15/2005/11), where it was agreed that a study of the problem should be undertaken on the basis of the responses received to a questionnaire on fraud and the criminal misuse and falsification of identity. The UNCITRAL secretariat had participated in the expert group meeting, the progress of which was reported to the Crime Commission at its fifteenth session (Vienna, 24-28 April 2006) (E/CN.15/2006/11 and Corr.1). As the UNCITRAL secretariat had worked with UNODC in the drafting and dissemination of the questionnaire in preparation for the study, the Commission expressed its support for the assistance of the UNCITRAL secretariat in the UNODC project.⁴³

198. It was also recalled that, at its thirty-ninth session, in 2006, the Commission heard a progress report on work by the Secretariat on materials listing common features present in typical fraudulent schemes. At that session, the Commission took note of the suggested format for the materials as set out in document A/CN.9/600, paragraph 14, and that the materials could contain additional information, such as explanations regarding how to effectively perform due diligence (A/CN.9/600, para. 16). The Commission agreed with statements made at that session to the effect that commercial fraud deterred legitimate trade and undermined confidence in established contract practices and instruments and that the UNCITRAL transactional and private law perspective and expertise were necessary for a full understanding of the problem of commercial fraud and were most useful in the formulation of measures to fight it. The Commission concluded that its secretariat should continue its work in conjunction with experts and other interested organizations with respect to identifying common features of fraudulent schemes, with a view to presenting interim or final materials for the consideration of the Commission at a future session; it should continue to cooperate with UNODC in its study on fraud, the criminal misuse and falsification of identity and related crimes; and it should keep the Commission informed of the progress of that work.⁴⁴

B. Work on indicators of commercial fraud

199. At its current session, the Commission was informed that the Secretariat had, as requested, continued its work in conjunction with experts and other interested organizations with respect to identifying common features of fraudulent schemes in order to prepare materials of an educational nature for the purpose of preventing the success of fraudulent schemes. The results of that work were reflected in a note by the Secretariat entitled “Indicators of commercial fraud” (A/CN.9/624 and Add.1 and 2). It was explained that, as noted in the introduction to the materials before the Commission (A/CN.9/624, annex, chapter I), the intended audience was very broad and included individuals, professionals, businesspersons, regulators, law enforcement officers, litigants and, potentially, arbitration tribunals and courts in cases involving commercial fraud. It was further explained that the materials were

⁴² Ibid., *Sixtieth Session, Supplement No. 17* (A/60/17), para. 217.

⁴³ Ibid., paras. 218-219.

⁴⁴ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), paras. 214-217.

intended to be instructive reference materials to provide guidance to the intended audience, regardless of their particular level of sophistication with respect to investments or commercial transactions. The presentation of each of the indicators was similar: first, the potential indicator of fraud was identified; this was followed by a more detailed description of the indicators; and, lastly, instances and examples of the particular indicator were given, as found in a commercial fraud in a variety of contexts. Advice was then provided regarding what could be done to avoid or to counteract the effects of the behaviour identified in each indicator, as appropriate. Finally, since it was not possible to identify discrete indicators with absolutely clear demarcations between them, it was explained that many of the indicators could or should overlap, and cross references to other related indicators were included, where relevant. However, the Commission was also informed that, as noted in the introduction to the materials, each of the indicators taken alone or in combination was not intended to indicate definitively the presence of commercial fraud; rather, the presence of a single warning sign was intended to send a signal that commercial fraud was a possibility, while the presence of several of the indicators was intended to heighten that concern. The Commission was informed that the text of the indicators of commercial fraud that was before it was an interim text, and that it was proposed to the Commission that the indicators of commercial fraud should be circulated by the Secretariat to Governments, international organizations and interested bodies for comment, and for consideration by the Commission at its next session.

200. The Commission commended the Secretariat, the experts and the other interested organizations that had collaborated on the preparation of the indicators of commercial fraud for their work on the difficult task of identifying the issues and in drafting materials that could be of great educational and preventive benefit. The Commission agreed with the proposal to circulate the materials on indicators of commercial fraud prior to the next session of the Commission for comment, and welcomed the opportunity to consider the document and related comments at its next session. At the same time, concern was expressed regarding future work in the area of commercial fraud, given that other international organizations, including UNODC, were working on the problem of commercial fraud and its impact. It was suggested that commercial fraud was primarily a concern of criminal law and that any future work in the area by UNCITRAL should bear in mind the mandate of UNCITRAL and whether it was possible for it to make a contribution in the area. Other views were expressed along the lines that broad cooperation and dialogue between criminal law authorities and commercial law interests with respect to commercial fraud had not been achieved until UNCITRAL had commenced its work on the indicators and its cooperation with UNODC and that that cooperation was critical to maintaining a constructive dialogue on commercial fraud and sharing information in an effective manner. It was suggested that UNCITRAL, in providing information and education on commercial fraud, had made a useful contribution to strengthening efforts to reduce the impact of fraud globally.

C. Collaboration with the United Nations Office on Drugs and Crime with respect to commercial and economic fraud

201. The Commission had before it for information the report of the Secretary-General on the results of the second meeting of the Intergovernmental Expert Group

to Prepare a Study on Fraud and the Criminal Misuse and Falsification of Identity (E/CN.15/2007/8 and Add.1-3), held in Vienna from 16 to 19 January 2007.

202. The Commission was informed that the study confirmed the difficulty of measuring fraud, and that most Governments underestimated the seriousness of that rapidly expanding global problem, which was associated with the increasing use of information technology. In addition, it was noted in the study that Governments were concerned about commercial entities sometimes being reluctant to report incidents of fraud and that the high proceeds and low risks involved had made fraud attractive to both organized criminal organizations and terrorist organizations. The Commission was informed that the Crime Commission had considered the study at its sixteenth session.⁴⁵ At that session, the Crime Commission proposed for adoption by the Economic and Social Council a draft resolution by which the Council would: (a) request the Secretary-General to disseminate its report containing the conclusions of the study as widely as possible; (b) encourage Member States to take a number of actions, including availing themselves of the recommendations of the report when developing effective strategies for responding to the problems addressed in the report and consulting and collaborating with appropriate commercial and other private-sector entities to the extent feasible, with a view to more fully understanding the problems of economic fraud and identity-related crime and cooperating more effectively in the prevention, investigation and prosecution of such crime; (c) encourage the promotion of mutual understanding and cooperation between public- and private-sector entities through initiatives aimed at bringing together various stakeholders and facilitating the exchange of views and information among them; and (d) request UNODC to facilitate such cooperation in consultation with the UNCITRAL secretariat, pursuant to Economic and Social Council resolution 2004/26 of 21 July 2004.⁴⁶

203. The Commission noted with interest and appreciation the report of the Secretary-General and the draft resolution proposed by the Crime Commission for adoption by the Economic and Social Council. The Commission requested the Secretariat to continue to cooperate with and to assist UNODC in its work with respect to commercial and economic fraud and to report to the Commission regarding any developments or efforts made in that respect.

X. Monitoring implementation of the New York Convention

204. The Commission recalled that, at its twenty-eighth session, in 1995, it had approved a project, undertaken jointly with Committee D (now known as the Arbitration Committee) of the International Bar Association, aimed at monitoring the legislative implementation of the New York Convention.⁴⁷ It was also recalled that the Secretariat had presented an interim report to the Commission at its thirty-eighth session, in 2005 (A/CN.9/585), which set out the issues raised by the

⁴⁵ See the report on the sixteenth session of the Commission on Crime Prevention and Criminal Justice (E/2007/30, chap. III), to be issued subsequently as *Official Records of the Economic and Social Council, 2007, Supplement No. 10* (E/2007/30/Rev.1).

⁴⁶ E/2007/30, chap. I, sect. B, draft resolution II.

⁴⁷ *Official Records of the General Assembly, Fiftieth Session, Supplement No. 17* (A/50/17), paras. 401-404.

replies received in response to the questionnaire circulated in connection with the project.⁴⁸

205. It was further recalled that the Commission, at its thirty-eighth session, had welcomed the progress reflected in the interim report, noting that the general outline of replies received had served to facilitate discussions as to the next steps to be taken and highlighted areas of uncertainty where more information could be sought from States parties or further studies could be undertaken. It was suggested that one possible future step could be the development of a legislative guide to limit the risk that State practice would diverge from the spirit of the New York Convention.⁴⁹

206. It was noted that, at its thirty-ninth session, in 2006, the Commission had taken note of an oral presentation by the Secretariat on additional questions it proposed to put to States (as noted in document A/CN.9/585, para. 73) in order to obtain more comprehensive information regarding various aspects of implementation of the New York Convention, including legislation, case law and practice. The Commission had agreed at that session that the project should aim at the development of a legislative guide, with a view to promoting a uniform interpretation of the New York Convention. At the same session, the Commission had reaffirmed the decisions made at its thirty-eighth session, in 2005, that a level of flexibility should be left to the Secretariat in determining the time frame for completion of the project and the level of detail that should be reflected in the report that the Secretariat would present for consideration by the Commission in due course.⁵⁰

207. At its current session, the Commission was informed that a written report was intended to be presented at its forty-first session, in 2008, which would coincide with the fiftieth anniversary of the New York Convention. The Commission commended the Secretariat for the work accomplished so far in respect of that project. The Commission was further informed that the Arbitration Committee of the International Bar Association had proposed to actively assist the Secretariat in gathering information required to complete the report. The Commission further noted that the Commission on Arbitration of the International Chamber of Commerce had created a task force to examine the national rules of procedure for recognition and enforcement of foreign arbitral awards on a country-by-country basis, with the aim of issuing in 2008 a report on national rules of procedure. The Commission encouraged the Secretariat to seek possible cooperation with the International Chamber of Commerce in order to avoid duplication of work in that respect.

208. It was proposed that, in the context of monitoring implementation of the New York Convention, the recommendation adopted by the Commission at its thirty-ninth session, in 2006,⁵¹ regarding the interpretation of article II, paragraph 2, and article VII, paragraph 1, of the New York Convention be circulated to States in order to seek comments as to the impact of that recommendation in their jurisdictions. That proposal received support.

⁴⁹ Ibid., paras. 190 and 191.

⁵⁰ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), para. 220.

⁵¹ Ibid., annex II.

XI. Endorsement of texts of other organizations: Unidroit Principles of International Commercial Contracts 2004

209. The Commission recalled its decision made at its thirty-ninth session, in 2006, that the 2004 edition of the Unidroit Principles of International Commercial Contracts⁵² be circulated to States with a view to possible endorsement by the Commission at its current session.⁵³ The Commission noted that, pursuant to that decision, the Secretariat had circulated the text of the Principles to all States.

210. The Commission noted that the Principles, first published in 1994, provided a comprehensive set of rules for international commercial contracts. It further noted that the new edition, completed in 2004, contained five new chapters and revisions to take into account electronic contracting. The Commission recognized that the Unidroit Principles 2004 complemented a number of international trade law instruments, including the United Nations Convention on Contracts for the International Sale of Goods (1980).⁵⁴ It was observed that unofficial translations of the Principles had been published in over 12 languages, including all official languages of the United Nations except Arabic. The observer for Unidroit indicated that a version in Arabic was expected to be published in the near future.

211. General support was expressed for recognizing the value of the Unidroit Principles 2004. It was noted that the Principles were widely recognized and had been applied in a variety of circumstances. A question was raised as to the relationship between the United Nations Sales Convention and the Principles. It was observed that the United Nations Sales Convention contained comprehensive specialized rules governing contracts for the international sale of goods and applied in accordance with its scope-of-application provisions to the exclusion of the Principles. Equally, questions concerning matters governed by the United Nations Sales Convention that were not expressly settled in it were to be settled, as provided in article 7 of the Convention, in conformity with the general principles on which the Convention was based or, in the absence of such principles, in conformity with the law applicable by virtue of the rules of private international law. Thus, the optional use of the Principles was subordinate to the rules governing the applicability of the United Nations Sales Convention.

212. It was noted that the preamble of the Principles referred to their application “when the parties have agreed that their contract be governed by general principles of law, the *lex mercatoria* or the like”. It was clarified that, depending on the circumstances, the Principles might be regarded as one possible expression of the *lex mercatoria* but that that issue ultimately depended on applicable law, existing contractual arrangements and the interpretation taken by users of the Principles.

213. Bearing in mind the above considerations, the Commission, at its 851st meeting, on 4 July 2007, adopted the following decision regarding the Unidroit Principles 2004:

⁵² Available on the Unidroit website (www.unidroit.org/english/principles/contracts/main.htm).

⁵³ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 234.

⁵⁴ United Nations, *Treaty Series*, vol. 1489, No. 25567.

“The United Nations Commission on International Trade Law,

“Expressing its appreciation to the International Institute for the Unification of Private Law (Unidroit) for transmitting to it the text of the 2004 edition of the Unidroit Principles of International Commercial Contracts,

“Taking note that the Unidroit Principles 2004 complement a number of international trade law instruments, including the United Nations Convention on Contracts for the International Sale of Goods (1980),

“Noting that the preamble of the Unidroit Principles 2004 states that the Unidroit Principles 2004 set forth general rules for international contracts and that:

“They shall be applied when the parties have agreed that their contract be governed by them,

*“They may be applied when parties have agreed that their contract be governed by general principles of law, the *lex mercatoria* or the like,*

“They may be applied when the parties have not chosen any law to govern their contract,

“They may be used to interpret or supplement international uniform law instruments,

“They may be used to interpret or supplement domestic law,

“They may serve as a model for national and international legislators,

“Congratulating Unidroit on having made a further contribution to the facilitation of international trade by preparing general rules for international commercial contracts,

“Commends the use of the Unidroit Principles 2004, as appropriate, for their intended purposes.”

XII. Technical assistance to law reform

A. Technical cooperation and assistance activities

214. The Commission had before it a note by the Secretariat (A/CN.9/627) describing the technical cooperation and assistance activities undertaken subsequent to the date of the note on that topic submitted to the Commission at its thirty-ninth session, in 2006 (A/CN.9/599). The Commission emphasized the importance of such technical cooperation and expressed its appreciation for the activities undertaken by the Secretariat referred to in document A/CN.9/627, paragraphs 6-28.

215. The Commission noted that the continuing ability to participate in technical cooperation and assistance activities in response to specific requests of States was dependent upon the availability of funds to meet associated UNCITRAL costs. The Commission in particular noted that, despite efforts by the Secretariat to solicit new donations, funds remaining in the UNCITRAL Trust Fund for Symposia would be sufficient only for technical cooperation and assistance activities already planned for 2007. Beyond the end of 2007, requests for technical cooperation and assistance involving the expenditure of funds for travel or to meet other associated costs would

have to be declined unless new donations to the Trust Fund were received or other alternative sources of funds could be found.

216. The Commission reiterated its appeal to all States, international organizations and other interested entities to consider making contributions to the UNCITRAL Trust Fund for Symposia, if possible in the form of multi-year contributions, or as specific-purpose contributions, so as to facilitate planning and enable the Secretariat to meet the increasing requests from developing countries and countries with economies in transition for technical assistance and cooperation activities. The Commission expressed its appreciation to Mexico and Singapore for contributing to the Trust Fund since the Commission's thirty-ninth session and to organizations that had contributed to the programme by providing funds or by hosting seminars. The Commission also expressed its appreciation to France and the Republic of Korea, which had funded junior professional officers to work in the Secretariat.

217. The Commission also appealed to the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund established to provide travel assistance to developing countries that were members of the Commission, noting that no contributions to the trust fund for travel assistance had been received since the thirty-sixth session of the Commission.

B. Technical assistance resources

218. The Commission noted with appreciation the continuing work under the system established for the collection and dissemination of case law on UNCITRAL texts (CLOUT). As at 18 April 2007, 63 issues of compiled case-law abstracts from the CLOUT system had been prepared for publication, dealing with 686 cases relating mainly to the United Nations Sales Convention and the UNCITRAL Model Law on International Commercial Arbitration.⁵⁵

219. It was widely agreed that the CLOUT system continued to be an important aspect of the overall technical assistance activities undertaken by UNCITRAL and that its broad dissemination in all six official languages of the United Nations promoted the uniform interpretation and application of UNCITRAL texts. The Commission expressed its appreciation to the national correspondents and other contributors for their work in developing the CLOUT system.

220. The Commission noted that the digest of case law on the United Nations Sales Convention, published in December 2004,⁵⁶ had been reviewed and edited and that the revised draft would be presented to the CLOUT national correspondents meeting on 5 July 2007.

221. The Commission also noted developments with respect to the UNCITRAL website (www.uncitral.org), emphasizing its importance as a component of the overall UNCITRAL programme of information and technical assistance activities. The Commission expressed its appreciation for the availability of the website in the six official languages of the United Nations and encouraged the Secretariat to maintain and further upgrade the website in accordance with existing guidelines.

⁵⁵ *Official Records of the General Assembly, Fortieth Session, Supplement No. 17 (A/40/17)*, annex I.

⁵⁶ Available on the UNCITRAL website (www.uncitral.org/uncitral/en/case_law/digests/cisg.html).

It was noted that, since the holding of the thirty-ninth session of the Commission, the website had received on average more than 2,500 visitors per day.

222. The Commission took note of developments with respect to the UNCITRAL Law Library and UNCITRAL publications.

XIII. Status and promotion of UNCITRAL legal texts

223. The Commission considered the status of the conventions and model laws emanating from its work and the status of the New York Convention, on the basis of a note by the Secretariat (A/CN.9/626) and updated information available on the UNCITRAL website. The Commission noted with appreciation the new actions and enactments of States and jurisdictions since its thirty-ninth session regarding the following instruments:

(a) [Unamended] Convention on the Limitation Period in the International Sale of Goods, 1974 (New York):⁵⁷ new action by Montenegro; 27 States parties;

(b) United Nations Convention on the Carriage of Goods by Sea, 1978 (Hamburg):⁵⁸ new action by Albania; 32 States parties;

(c) United Nations Convention on Contracts for the International Sale of Goods (1980):⁵⁹ new actions by El Salvador, Montenegro and the former Yugoslav Republic of Macedonia; 70 States parties;

(d) United Nations Convention on the Use of Electronic Communications in International Contracts (2005):⁶⁰ signatures by China, Madagascar, Paraguay, the Russian Federation, Sierra Leone, Singapore and Sri Lanka;

(e) Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958):⁶¹ new actions by the Bahamas, Gabon, the Marshall Islands, Montenegro and the United Arab Emirates; 142 States parties;

(f) UNCITRAL Model Law on International Commercial Arbitration (1985):⁶² legislation enacted by Cambodia (2006), Estonia (2006), Uganda (2000) and Venezuela (Bolivarian Republic of) (1998) based on the Model Law;

(g) UNCITRAL Model Law on Procurement of Goods, Construction and Services (1994):⁶³ legislation enacted by Afghanistan (2006) based on the Model Law;

(h) UNCITRAL Model Law on Electronic Commerce (1996):⁶⁴ legislation enacted by the United Arab Emirates (2006) and Viet Nam (2005) based on the Model Law;

⁵⁷ United Nations, *Treaty Series*, vol. 1511, No. 26119; see also *Official Records of the United Nations Conference on Prescription (Limitation) in the International Sale of Goods, New York, 20 May-14 June 1974* (United Nations publication, Sales No. E.74.V.8), part I.

⁵⁸ United Nations, *Treaty Series*, vol. 1695, No. 29215.

⁵⁹ *Ibid.*, vol. 1489, No. 25567.

⁶⁰ United Nations publication, Sales No. E.07.V.2.

⁶¹ United Nations, *Treaty Series*, vol. 330, No. 4739.

⁶² *Official Records of the General Assembly, Fifty-second Session, Supplement No. 17 (A/52/17)*, annex I.

⁶³ *Ibid.*, *Forty-ninth Session, Supplement No. 17* and corrigendum (A/49/17 and Corr.1), annex I.

(i) UNCITRAL Model Law on Cross-Border Insolvency (1997):⁶⁵ legislation enacted by Colombia (2006) and New Zealand (2006) based on the Model Law;

(j) UNCITRAL Model Law on Electronic Signatures (2001):⁶⁶ legislation enacted by the United Arab Emirates (2006) and Viet Nam (2005) based on the Model Law.

224. The Commission heard that, in the context of the treaty event⁶⁷ to be held from 25 to 27 September and on 1 and 2 October 2007, the following three treaties related to the work of UNCITRAL would be highlighted: the New York Convention, the United Nations Sales Convention and the United Nations Convention on the Use of Electronic Communications in International Contracts.

225. States were invited to consider participating in the 2007 treaty event by undertaking appropriate treaty actions relating to those treaties. In particular, it was recalled that the United Nations Convention on the Use of Electronic Communications in International Contracts would close for signature on 16 January 2008 and that therefore the 2007 treaty event might provide one of the last high-level opportunities for signature of that text.

XIV. Coordination and cooperation

A. General

226. The Commission had before it a note by the Secretariat (A/CN.9/628 and Add.1) providing a brief survey of the work of international organizations related to the harmonization of international trade law, focusing upon substantive legislative work. The Commission commended the Secretariat for the preparation of that document, recognizing its value to coordination of the activities of international organizations in the field of international trade law, and welcomed the revision of the survey on an annual basis.

227. It was recalled that the Commission at its thirty-seventh session, in 2004, had agreed that it should adopt a more proactive attitude, through its Secretariat, to fulfilling its coordination role.⁶⁸ Recalling the endorsement by the General Assembly, most recently in its resolution 61/32 of 4 December 2006, paragraph 5, of UNCITRAL efforts and initiatives towards coordination of activities of international organizations in the field of international trade law, the Commission noted with appreciation that the Secretariat was taking steps to engage in a dialogue, on both legislative and technical assistance activities, with a number of organizations,

⁶⁴ Ibid., *Fifty-first Session, Supplement No. 17* (A/51/17), annex I; see also *UNCITRAL Model Law on Electronic Commerce with Guide to Enactment 1996 with Additional Article 5 bis as Adopted in 1998* (United Nations publication, Sales No. E.99.V.4).

⁶⁵ *Official Records of the General Assembly, Fifty-second Session, Supplement No. 17* (A/52/17), annex I.

⁶⁶ Ibid., *Fifty-sixth Session, Supplement No. 17* and corrigendum (A/56/17 and Corr.3), annex II.

⁶⁷ The treaty event is a yearly exercise aimed at promoting the international rule of law through broader participation in multilateral treaties deposited with the Secretary-General. It usually takes place at United Nations Headquarters during the general debate of the General Assembly.

⁶⁸ *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 113-115.

including the Hague Conference on Private International Law, the Organization for Economic Cooperation and Development, the Organization of American States, Unidroit, the World Bank and the World Trade Organization. The Commission noted that that work often involved travel to meetings of those organizations and the expenditure of funds allocated for official travel. The Commission reiterated the importance of coordination work being undertaken by UNCITRAL as the core legal body in the United Nations system in the field of international trade law and supported the use of travel funds for that purpose.

B. Reports of other international organizations

228. The Commission heard a statement on behalf of Unidroit, reporting on progress with a number of projects outlined in document A/CN.9/628 and Add.1, including the following:

(a) The Working Group on the Principles of International Commercial Contracts held its second session in June 2007 and made substantial progress on the unwinding of failed contracts, plurality of obligors and of obligees, termination of long-term contracts for just cause and initial progress on illegality. An intersessional meeting of a drafting committee would be held;

(b) The fourth session of the Unidroit Committee of Governmental Experts was held in May 2007 to further consider the draft Convention on Substantive Rules regarding Intermediated Securities. That meeting considered a number of additional systems regulating the trading, custody, clearing and settlement of securities, including in Asia (China and Malaysia), Europe (Spain and several Nordic countries) and Latin America (Brazil and Colombia). A diplomatic conference was scheduled for 2 to 13 June 2008;

(c) The drafting of a legislative guide on principles and rules on trading in securities in emerging markets was currently suspended to concentrate on the draft Convention on Substantive Rules regarding Intermediated Securities;

(d) The Convention on International Interests in Mobile Equipment (2001)⁶⁹ and the Protocol to that Convention on Matters specific to Aircraft Equipment (2001)⁷⁰ each currently had 16 States parties. The Diplomatic Conference to Adopt a Rail Protocol to the Convention on International Interests in Mobile Equipment, held in Luxembourg from 12 to 23 February 2007, adopted the Luxembourg Protocol to the Convention on International Interests in Mobile Equipment on Matters specific to Railway Stock (2007).⁷¹ The Luxembourg Protocol had been signed by four States on 23 February 2007, the date of adoption. The third session of the Unidroit Committee of Governmental Experts, expected to be held in late 2007, would continue to discuss the preliminary draft protocol on matters specific to space assets;

(e) The relationship between the Convention on International Interests in Mobile Equipment and the Protocols thereto and the draft Unidroit Model Law on

⁶⁹ Available on the Unidroit website (www.unidroit.org/english/conventions/mobile-equipment/main.htm).

⁷⁰ Available on the Unidroit website (www.unidroit.org/english/conventions/mobile-equipment/main.htm).

⁷¹ Available on the Unidroit website (www.unidroit.org/english/conventions/mobile-equipment/main.htm).

Leasing continued to be examined, most recently by the Unidroit Committee of Governmental Experts in Johannesburg, South Africa. A further session was scheduled for December 2007 or early 2008, and it was anticipated that the Unidroit General Assembly would consider the draft Model Law in early 2008.

XV. Willem C. Vis International Commercial Arbitration Moot competition

229. It was noted that the Institute of International Commercial Law at Pace University School of Law in White Plains, New York, had organized the Fourteenth Willem C. Vis International Commercial Arbitration Moot in Vienna, from 30 March to 5 April 2007. As in previous years, the Moot had been co-sponsored by the Commission. It was noted that legal issues dealt with by the teams of students participating in the Fourteenth Moot had been based on the United Nations Sales Convention,⁷² the Arbitration Rules of the Court of International Commercial Arbitration attached to the Chamber of Commerce and Industry of Romania,⁷³ the Arbitration Model Law⁷⁴ and the New York Convention.⁷⁵ A total of 177 teams from law schools in 51 countries had participated in the Fourteenth Moot. The best team in oral arguments was that of the University of Freiburg, Germany. The Fifteenth Willem C. Vis International Commercial Arbitration Moot would be held in Vienna from 14 to 20 March 2008.

XVI. Relevant General Assembly resolutions

230. The Commission took note with appreciation of General Assembly resolutions 61/32, on the report of the Commission on the work of its thirty-ninth session, and 61/33 of 4 December 2006, on the revised articles of the Model Law on International Commercial Arbitration, and of the recommendation regarding the interpretation of article II, paragraph 2, and article VII, paragraph 1, of the New York Convention.⁷⁶

231. The Commission also took note of General Assembly resolution 61/39 of 4 December 2006, on the rule of law at the national and international levels, and heard an oral report from the Secretariat on the status of implementation of the resolution. In particular, as regards the preparation of an inventory requested by the General Assembly in the resolution, the Commission noted that the UNCITRAL secretariat, based on replies to a circulated questionnaire, had submitted a detailed inventory of all activities of UNCITRAL and its secretariat related to the promotion of the rule of law at the national and international levels, and, as was requested, identified problems commonly encountered in those activities and possible solutions.

⁷² United Nations, *Treaty Series*, vol. 1489, No. 25567.

⁷³ Available on the website of the Chamber of Commerce and Industry of Romania (<http://arbitration.ccir.ro/engleza/rulesarb.htm>).

⁷⁴ *Official Records of the General Assembly, Fortieth Session, Supplement No. 17 (A/40/17)*, annex I.

⁷⁵ United Nations, *Treaty Series*, vol. 330, No. 4739.

⁷⁶ *Ibid.*

232. The Commission was apprised of the pertinent statement made by the Chairman of the thirty-ninth session of the Commission at the sixty-first session of the General Assembly upon introduction of the annual report of the Commission to the Sixth Committee of the Assembly. The Commission was informed that the Chairman, in his statement made on behalf of UNCITRAL, had welcomed consideration in a comprehensive and coherent manner by the Assembly of ways and means to promote the rule of law at the national and international levels. He noted current sporadic and fragmented approaches within the United Nations in that regard. With the primary focus on criminal justice, transitional justice and judicial reform, these approaches, he stated, often overlooked the economic dimension of the rule of law, including the need for commercial law reforms as an essential foundation for long-term stability, development, empowerment and good governance. He further stated that, as United Nations experience in various areas of its operation had shown, approaches to building and promoting the rule of law had to be comprehensive and coherent in order to achieve sustained results.

233. The Commission reiterated its conviction that its work to establish modern private law standards on international trade in a manner that was acceptable to States with different legal, social and economic systems and to promote such standards significantly contributed to the development of harmonious international relations, respect for the rule of law, peace and stability, and was indispensable for supporting economic development and for designing a sustainable economy. It therefore highlighted the need for more effective integration of resources and expertise of UNCITRAL, as the only United Nations expert body in the field of international commercial law, in the programmes within and outside the United Nations aimed at promoting the rule of law at the national and international levels. The hope was expressed that the areas of work, resources and expertise of UNCITRAL, together with the problems encountered in the implementation of its mandate and the actions and resources needed to overcome those problems, would be duly taken into account in the implementation of General Assembly resolution 61/39.

XVII. Other business

A. Observations and proposals by France on the methods of work of the Commission

234. The Commission had before it observations and proposals by France on the working methods of the Commission (A/CN.9/635). It was stated by the proponents that the fortieth anniversary of the Commission was a particularly timely moment to review its working methods, which were said to be uncertain and to deviate from rules of procedure generally followed by subsidiary organs of the General Assembly. Of particular concern to the proponents of such a review was the perception that the working methods of the Commission and its working groups might not sufficiently encourage effective participation in the creation of UNCITRAL standards or the subsequent enactment of those standards by a broad range of States. Examples were given of instruments adopted by UNCITRAL that had so far not been widely ratified or enacted by States. The proposed changes in the working methods of the Commission were described as a means through which member States might increase their sense of ownership and responsibility in respect of UNCITRAL through stronger control over the standard-making activity of the

Commission. Among the various proposals outlined in the observations by France, emphasis was placed on the decision-making process in the Commission and its working groups. From the point of view of the delegation of France, it was appropriate to better define the notion “consensus”, on which the decision-making process was based. The role of non-State entities in the elaboration of uniform law standards was also questioned and it was proposed that a clearer distinction should be made between the phase of negotiation, during which non-governmental organizations might make useful contributions, and the phase of decision-making, in which only member States should take part.

235. In response to those observations and proposals, it was stated that any input aimed at maintaining the tradition of excellence of UNCITRAL and ensuring its effectiveness should be welcomed. It was pointed out that, as a technical body, UNCITRAL had decided in its earliest sessions that it would develop working methods that were appropriate for the performance of its functions. Over its 40 years of existence, it had developed several conventions, model laws, legislative guides and other standards with input from elected members from all regions of the world. As a result, UNCITRAL texts had been welcomed and adopted all over the world. It was recalled that the nature of UNCITRAL work (namely, the field of private law) required expert input from professional associations outside governments who had insight into the areas of law being considered for work by the Commission. In view of the need for the participation of such observers from private international associations, the Commission was urged to prevent any circumstances that could affect their willingness to participate in UNCITRAL meetings. It was noted that recognizing the key role of participants from non-State entities and encouraging their continued input was not incompatible with clarifying to invited non-governmental organizations their role as contributors and not decision-makers. It was also stated that the fact that UNCITRAL decisions had so far been made without the need for a vote should be regarded as a positive feature that reflected efforts to seek commonly acceptable solutions as opposed to quick results through voting. By seeking to find solutions that were acceptable to a broad spectrum of countries, UNCITRAL had avoided entrenched disagreements and had been an effective standard-setting organization.

236. In the general discussion that ensued, it was widely felt that, while the current working methods had demonstrated their efficiency, a comprehensive review of the working methods of the Commission might be timely, particularly in view of the recent increase in membership of the Commission and the number of topics being dealt with by the Commission and its six full-membership working groups to which non-member States also were invited. It was agreed that the guiding principles for such a comprehensive review should be those of inclusiveness, transparency and flexibility. Tolerance and professionalism were also mentioned. Particular mention was made of the need to preserve flexibility and discretion in the adjustment of its working methods by the Secretariat. Views were also expressed to the effect that existing rules of procedure of the Commission were insufficiently known, characterized by a high degree of flexibility and informality, and difficult to access and to assess.

237. It was suggested that continuation of the discussion might be greatly facilitated if the Secretariat could present a compilation of procedural rules and practices established by UNCITRAL itself or by the General Assembly in its resolutions regarding the work of the Commission. The Commission requested the

Secretariat to prepare such a document for consideration by the Commission, if possible as early as its resumed fortieth session.

238. As to the substance of the proposals, various views were expressed. With respect to the decision-making process, while general preference was expressed in favour of adopting decisions by consensus, it was stated that further clarification might be required, in particular regarding the possibility of better reflecting the views of minorities and the criteria to be applied by chairpersons in assessing the level of consensus or in recognizing the exceptional circumstances where voting might be unavoidable. In that context, it was suggested that one could envisage the preparation of a comprehensive set of rules of procedure or a set of principles or guidelines to be applied by the Commission and its subsidiary bodies.

239. With respect to participation by non-governmental organizations, it was generally agreed that active participation from relevant commercial circles represented by invited non-governmental organizations was essential to the quality of the work of UNCITRAL. It was suggested that attention should be given to establishing rules to guarantee transparency in the selection of such organizations and to clarify the advisory nature of their role. Reference was made to the arrangements for consultation with non-governmental organizations established by the Economic and Social Council.⁷⁷ While it was stated that such arrangements might be a useful source, it was pointed out that they were not necessarily binding on the Commission as a subsidiary organ of the General Assembly. It was also pointed out that the role of observer States and intergovernmental organizations in the decision-making process would need to be clarified.

240. With respect to the use of languages, general sympathy was expressed for broader use, in addition to English, of French and other official languages of the United Nations, including in documents circulated informally, subject to the availability of resources. As to multilingualism in official documentation, it was recalled that that was an essential characteristic of the work of UNCITRAL as a United Nations body.

241. As to the manner in which the discussion on the working methods should continue, it was agreed that the issue would be placed as a specific item on the agenda of the Commission at its resumed fortieth session (see para. 11 above). Noting that it was highly desirable for the Commission at its resumed fortieth session to finalize, in meetings of a Committee of the Whole, the adoption of the draft Legislative Guide on Secured Transactions, it was considered that the Commission would be able to devote time to the question of working methods at its resumed fortieth session only as far as permitted by the work on the draft Guide. In order to facilitate informal consultations among all interested States, the Secretariat was requested to prepare a report on existing rules and practices (see para. 237 above) and make the necessary arrangements, as resources permitted, for representatives of all interested States to meet on the day prior to the opening of the resumed fortieth session of the Commission and, if possible, during the resumed session.

⁷⁷ Economic and Social Council resolution 1996/31.

B. Internship programme

242. An oral report was presented on the internship programme at the UNCITRAL secretariat. While general appreciation was expressed for the programme, which is designed to give young lawyers the opportunity to become familiar with the work of UNCITRAL and to increase their knowledge of specific areas in the field of international trade law, it was observed that only a small proportion of interns were nationals of developing countries. A suggestion was made that consideration should be given to establishing the financial means of supporting wider participation by young lawyers from developing countries. That suggestion was supported.

C. Evaluation of the role of the Secretariat in facilitating the work of the Commission

243. The Commission was informed that the proposed programme budget for the biennium 2008-2009 listed among the "Expected accomplishments of the Secretariat" its contribution to facilitating the work of UNCITRAL. The performance measure of that expected accomplishment was the satisfaction of UNCITRAL with the services provided, as evidenced by a rating on a scale ranging from 1 to 5 (5 being the highest rating).⁷⁸ The Commission agreed to provide feedback to the Secretariat.

D. Bibliography

244. The Commission had before it a bibliography of recent writings related to its work (A/CN.9/625).

XVIII. Congress 2007

245. The Commission recalled that, at its thirty-eighth and thirty-ninth sessions, in 2005 and 2006, respectively, it had approved a plan, in the context of its fortieth session, to hold a congress similar to the UNCITRAL Congress on Uniform Commercial Law in the Twenty-first Century, held in New York from 18 to 22 May 1992.⁷⁹ The Commission had envisaged that the congress would review the results of the past work programme of UNCITRAL and of related work of other organizations active in the field of international trade law, assess current work programmes and consider and evaluate topics for future work programmes.^{80, 81}

⁷⁸ Proposed programme budget for the biennium 2008-2009, Part III, International justice and law, Section 8, Legal affairs (Programme 6 of the biennial programme plan and priorities for the period 2008-2009), Subprogramme 5, Progressive harmonization, modernization and unification of the law of international trade (A/62/6 (Sect. 8), table 8.19 (d)).

⁷⁹ For the proceedings of the Congress, see *Uniform Commercial Law in the Twenty-first Century: Proceedings of the Congress of the United Nations Commission on International Trade Law, New York, 18-22 May 1992* (A/CN.9/SER.D/1).

⁸⁰ *Official Records of the General Assembly, Sixtieth Session, Supplement No. 17* (A/60/17), para. 231.

⁸¹ *Ibid.*, *Sixty-first Session, Supplement No. 17* (A/61/17), paras. 256-258.

246. At its current session, the Commission noted with appreciation the preparations by the Secretariat for the Congress “Modern Law for Global Commerce”, which was to be held in Vienna after the close of the formal deliberations of the Commission, from 9 to 12 July 2007. The Commission requested the Secretariat to publish the proceedings of the Congress in the official languages of the United Nations to the extent permitted by available resources.

XIX. Date and place of future meetings

A. Dates of the resumed fortieth session

247. The Commission agreed to hold its resumed fortieth session in Vienna from 10 to 14 December 2007 (for the agenda of the resumed fortieth session, see para. 11 above).

B. Forty-first session of the Commission

248. The Commission approved the holding of its forty-first session in New York, from 16 June to 11 July 2008, subject to confirmation or possible shortening of the session, to be decided during its resumed fortieth session, in particular in the light of the progress of work in Working Group II (Arbitration and Conciliation) and Working Group III (Transport Law). (United Nations Headquarters in New York would be closed on Friday, 4 July 2008.)

C. Sessions of working groups up to the forty-first session of the Commission

249. At its thirty-sixth session, in 2003, the Commission agreed that: (a) working groups should normally meet for a one-week session twice a year; (b) extra time, if required, could be allocated from the unused entitlement of another working group provided that such arrangement would not result in an increase of the total number of 12 weeks of conference services per year currently allotted to sessions of all six working groups of the Commission; and (c) if any request by a working group for extra time resulted in an increase in the 12-week allotment, it should be reviewed by the Commission, with proper justification being given by that working group regarding the reasons for which a change in the meeting pattern was needed.⁸²

250. In view of the magnitude and complexities of the project before Working Group III (Transport Law), the Commission decided to authorize two-week sessions of the Working Group to be held in the second half of 2007 and the first half of 2008, utilizing the entitlement of Working Group IV (Electronic Commerce), which would not meet before the forty-first session of the Commission (see paras. 184 above and 251 (c) and (d) below).

251. Subject to possible review at its resumed fortieth session (see para. 11 above), the Commission approved the following schedule of meetings for its working groups:

⁸² Ibid., *Fifty-eighth Session, Supplement No. 17* (A/58/17), para. 275.

(a) Working Group I (Procurement) would hold its twelfth session in Vienna from 3 to 7 September 2007 and its thirteenth session in New York from 7 to 11 April 2008;

(b) Working Group II (Arbitration and Conciliation) would hold its forty-seventh session in Vienna from 10 to 14 September 2007 and its forty-eighth session in New York from 4 to 8 February 2008;

(c) Working Group III (Transport Law) would hold its twentieth session in Vienna from 15 to 25 October 2007 (the United Nations offices in Vienna are closed on 26 October), and its twenty-first session in Vienna from 14 to 25 January 2008, with possible reduction of the duration of the session to one week (see para. 184 above);

(d) No session of Working Group IV (Electronic Commerce) was envisaged;

(e) Working Group V (Insolvency Law) would hold its thirty-third session in Vienna from 5 to 9 November 2007 and its thirty-fourth session in New York from 3 to 7 March 2008;

(f) Working Group VI (Security Interests) would hold its thirteenth session in New York from 19 to 23 May 2008.

D. Sessions of working groups in 2008 after the forty-first session of the Commission

252. The Commission noted that tentative arrangements had been made for working group meetings in 2008 after its forty-first session (the arrangements were subject to the approval of the Commission at its forty-first session):

(a) Working Group I (Procurement) would hold its fourteenth session in Vienna from 8 to 12 September 2008;

(b) Working Group II (Arbitration and Conciliation) would hold its forty-ninth session in Vienna from 15 to 19 September 2008;

(c) Working Group III (Transport Law) would hold its twenty-second session in Vienna from 20 to 24 October 2008;

(d) Working Group IV (Electronic Commerce) would hold its forty-fifth session in Vienna from 27 to 31 October 2008;

(e) Working Group V (Insolvency Law) would hold its thirty-fifth session in Vienna from 17 to 21 November 2008;

(f) Working Group VI (Security Interests) would hold its fourteenth session in Vienna from 24 to 28 November 2008.

List of documents before the Commission at its resumed fortieth session	

I. Introduction

1. The present report of the United Nations Commission on International Trade Law (UNCITRAL) covers the resumed fortieth session of the Commission, held in Vienna from 10 to 14 December 2007.
2. Pursuant to General Assembly resolution 2205 (XXI) of 17 December 1966, this report is submitted to the Assembly and is also submitted for comments to the United Nations Conference on Trade and Development.

II. Organization of the session

A. Opening of the session

3. The resumed fortieth session of the Commission was opened on 10 December 2007.

B. Membership and attendance

4. The General Assembly, in its resolution 2205 (XXI), established the Commission with a membership of 29 States, elected by the Assembly. By its resolution 3108 (XXVIII) of 12 December 1973, the Assembly increased the membership of the Commission from 29 to 36 States. By its resolution 57/20 of 19 November 2002, the Assembly further increased the membership of the Commission from 36 to 60 States. The current members of the Commission, elected on 17 November 2003 and on 22 May 2007, are the following States, whose term of office expires on the last day prior to the beginning of the annual session of the Commission in the year indicated:⁸³ Algeria (2010), Armenia (2013), Australia (2010), Austria (2010), Bahrain (2013), Belarus (2010), Benin (2013), Bolivia (2013), Bulgaria (2013), Cameroon (2013), Canada (2013), Chile (2013), China (2013), Colombia (2010), Czech Republic (2010), Ecuador (2010), Egypt (2013), El Salvador (2013), Fiji (2010), France (2013), Gabon (2010), Germany (2013), Greece (2013), Guatemala (2010), Honduras (2013), India (2010), Iran (Islamic Republic of) (2010), Israel (2010), Italy (2010), Japan (2013), Kenya (2010), Latvia (2013), Lebanon (2010), Madagascar (2010), Malaysia (2013), Malta (2013), Mexico (2013), Mongolia (2010), Morocco (2013), Namibia (2013), Nigeria (2010), Norway (2013), Pakistan (2010), Paraguay (2010), Poland (2010), Republic of Korea (2013), Russian Federation (2013), Senegal (2013), Serbia (2010), Singapore (2013), South Africa (2013), Spain (2010), Sri Lanka (2013), Switzerland (2010), Thailand (2010), Uganda (2010), United Kingdom of Great Britain and Northern Ireland (2013), United States of America (2010), Venezuela (Bolivarian Republic of) (2010) and Zimbabwe (2010).

5. With the exception of Armenia, Bahrain, Benin, China, Colombia, Ecuador, Fiji, Gabon, Honduras, Israel, Kenya, Madagascar, Malta, Mongolia, Morocco, Nigeria and Singapore, all the members of the Commission were represented at the resumed fortieth session.

6. The resumed fortieth session was attended by observers from the following States: Argentina, Belgium, Brazil, Burundi, Croatia, Democratic Republic of the

⁸³ Pursuant to General Assembly resolution 2205 (XXI), the members of the Commission are elected for a term of six years. Of the current membership, 30 were elected by the Assembly at its fifty-eighth session, on 17 November 2003 (decision 58/407), and 30 were elected by the Assembly at its sixty-first session, on 22 May 2007 (decision 61/417). By its resolution 31/99, the Assembly altered the dates of commencement and termination of membership by deciding that members would take office at the beginning of the first day of the regular annual session of the Commission immediately following their election and that their terms of office would expire on the last day prior to the opening of the seventh regular annual session following their election.

Congo, Dominican Republic, Indonesia, Libyan Arab Jamahiriya, Panama, Peru, Philippines, Portugal, Romania, Slovakia, Slovenia, Tunisia, Turkey and Zambia.

7. The resumed fortieth session was also attended by observers from the following organizations:

(a) *United Nations system*: World Bank and International Monetary Fund;

(b) *Intergovernmental organizations*: Commission of the African Union, East African Community, European Community and International Institute for the Unification of Private Law;

(c) *Non-governmental organizations invited by the Commission*: American Bar Association, Association française des entreprises privées, Commercial Finance Association, European Centre for Peace and Development, European Law Students' Association, Forum for International Commercial Arbitration, International Bar Association, International Insolvency Institute, International Swaps and Derivatives Association, International Union of Marine Insurance and Union internationale des avocats.

8. The Commission welcomed the participation of international non-governmental organizations with expertise in the major items on the agenda. Their participation was crucial for the quality of texts formulated by the Commission, and the Commission requested the Secretariat to continue to invite such organizations to its sessions.

C. Election of officers

9. The following officers, elected during the first part of the fortieth session, continued in their offices:

Chairperson: Dobrosav Mitrović (Serbia)

Vice-Chairpersons: Biu Adamu Audu (Nigeria)

Horacio Bazoberry (Bolivia)

Kathryn Sabo (Canada)

10. In the absence of the Chairperson, the Commission, at its 855th meeting, on 10 December 2007, decided that Kathryn Sabo (Canada) would be the acting Chairperson at the resumed fortieth session.

11. At its 859th meeting, on 12 December, the Commission elected M. R. Umarji (India) Rapporteur of its resumed fortieth session.

D. Agenda

12. The agenda of the resumed fortieth session, as adopted by the Commission at its 855th meeting, on 10 December 2007, was as follows:

1. Opening of the resumed fortieth session.
2. Adoption of the agenda.

3. Adoption of a draft UNCITRAL legislative guide on secured transactions and possible future work.
4. Working methods of UNCITRAL.
5. Dates of future meetings.
6. Adoption of the report.

E. Adoption of the report

13. At its 863rd and 864th meetings, on 14 December 2007, the Commission adopted the present report by consensus.

III. Draft UNCITRAL Legislative Guide on Secured Transactions

A. General considerations

14. The Commission had before it a complete set of revised recommendations and revised commentaries on the draft UNCITRAL Legislative Guide on Secured Transactions (A/CN.9/637 and Add.1-8 and A/CN.9/631/Add.1-3) and the reports of Working Group VI (Security Interests) on its eleventh session (A/CN.9/617), held in Vienna from 4 to 8 December 2006, and its twelfth session (A/CN.9/620), held in New York from 12 to 16 February 2007. The Commission expressed its appreciation to the Secretariat for the preparation of an extremely large number of complex documents (about 300 pages) in a short period of time (between the first part of the fortieth session and the resumed fortieth session).

15. The Commission recalled that, during the first part of its fortieth session (A/62/17 (Part I), para. 158), it had adopted recommendation 4, subparagraphs (b) and (c), on the scope of the draft Guide as to intellectual property, securities and financial contracts (A/CN.9/631, chapter II), and recommendations 74-230 (A/CN.9/631, chapters VII-XIV); and had approved the substance of the commentaries to chapters VII-XIV (A/CN.9/631/Add.4-11) and on intellectual property (A/CN.9/631/Add.1) and the substance of the terminology (A/CN.9/631/Add.1, paras. 13-19). The Commission also recalled that, as decided during the first part of its fortieth session (A/62/17 (Part I), para. 159), the following materials would be reviewed by the Commission at its resumed session: recommendations 1-73 (A/CN.9/631, as revised in document A/CN.9/637); the commentaries to chapters I-VI (A/CN.9/631/Add.1-3); recommendations on the extension of a retention-of-title right or a financial lease right to proceeds (non-unitary approach), if necessary; and the commentary on the alternatives to the recommendations on the third-party effectiveness of a retention-of-title right or a financial lease right to proceeds (unitary and non-unitary approaches), if necessary. Moreover, the Commission recalled that the question of whether the terminology and the recommendations of the draft Guide should be reproduced not only at the end of each chapter but also in a separate annex to the draft Guide had been referred to its resumed fortieth session (A/62/17 (Part I), para. 159).

B. Consideration of the draft Guide

1. Introduction, chapter I (Key objectives) and section C of chapter II (Scope of application and other general rules)

16. It was noted that the material in the introduction, in chapter I and in chapter II, section C, of the draft Guide (A/CN.9/631/Add.1) could be revised and reorganized into a new introduction as follows:

(a) Section A (Purpose of the Guide) should include the material contained in document A/CN.9/631/Add.1, paragraphs 1-12;

(b) Section B (Examples of financing practices covered in the Guide) should include the material contained in document A/CN.9/631/Add.1, paragraphs 57-77;

(c) Section C with a new heading (Key objectives and fundamental principles of an effective and efficient secured transactions regime) should include the material contained in document A/CN.9/631/Add.1, paragraphs 20-31, and additional material discussing some fundamental principles of the draft Guide that would link the general key objectives of the draft Guide to the specific recommendations;

(d) A new section D (Implementing a new secured transactions law) should be added to provide guidance to national legislators on the different ways in which the recommendations in the draft Guide could be implemented, taking into account existing legislation, legislative methods and drafting techniques and the need for dissemination of information to all those who would implement the law (judges, arbitrators and practitioners) in order to ensure a cohesive regime;

(e) Section E (Terminology) should include the material contained in document A/CN.9/637, paragraphs 1-6;

(f) Section F (Recommendations) should contain recommendation 1 from chapter I (Key objectives) of document A/CN.9/637, appropriately aligned with section C of the new introduction (see subparagraph (c) above).

17. The Commission considered drafting suggestions on those new sections. With regard to the key objective of balancing the interests of affected persons, it was suggested that the commentary should make an express reference to the efforts of the Commission to harmonize secured transactions and insolvency laws. With regard to the fundamental principle of an integrated and functional approach, it was suggested that, to properly reflect both the unitary and the non-unitary approaches to acquisition financing, the commentary should include a provision that, to the maximum extent possible, all transactions that create a right in all types of asset meant to secure the performance of an obligation (i.e. fulfil security functions) should be considered as security rights and regulated by the same rules or, at least, by the same principles. With regard to the fundamental principle of priority among multiple security rights, it was suggested that the commentary should discuss separately the significance of the availability of multiple security rights and the importance of a clear priority rule governing multiple security rights granted by the same grantor in the same assets. With regard to the fundamental principle of equality of treatment of all creditors that provided credit to enable grantors to acquire tangible assets, it was suggested to remove the earlier reference whereby retention-of-title sellers would be able to benefit from the complete range of rights

given to secured creditors, which in some ways exceeded the rights available to retention-of-title sellers under existing law in most States. There was sufficient support for all those suggestions.

18. With regard to the terminology contained in document A/CN.9/637, the following changes were agreed upon:

(a) In subparagraph (n)(ii), the definition of the term “control” with respect to a right to payment of funds credited to a bank account, the text commencing with the word “evidenced” to the end of the subparagraph should be deleted, and a new definition — of the term “control agreement” — should be added along the following lines: “‘Control agreement’ means an agreement between the depositary bank, the grantor and the secured creditor, evidenced by a signed writing, according to which the depositary bank has agreed to follow instructions from the secured creditor with respect to the payment of funds credited to the bank account without further consent from the grantor;”

(b) The definition of an “issuer” of a negotiable document should be revised to read as follows: “‘Issuer’ of a negotiable document means the person that is obligated to deliver the tangible assets covered by the document under the law governing negotiable documents, whether or not that person has agreed to perform all obligations arising from the document;”

(c) To align it with the note to the definition in document A/CN.9/637, the note following the definition of “Right to receive the proceeds under an independent undertaking” should be revised as follows: “... Thus, what is received upon honour of (i.e. as a result of a complying presentation under) an independent undertaking constitutes the ‘proceeds’ of the right to receive the proceeds under an independent undertaking.”

19. The Secretariat was also requested to consider deleting the subparagraph indications before the definitions, if that would not be inconsistent with the editorial rules of the United Nations.

20. Subject to the above-mentioned changes and any consequential editorial amendments, the Commission: (a) approved the reorganizing of the material in the introduction, chapter I and chapter II, section C, of the draft Guide into a new introduction, as set out in paragraph 16 above; (b) approved the substance of the commentary on the new introduction; (c) adopted recommendation 1; and (d) agreed that the terminology should be included not only in section E of the new introduction but also, together with the recommendations (that would also be reproduced at the end of each chapter), in a separate annex to the draft Guide.

2. Chapter II (Scope of application and other general rules) and chapter III (Basic approaches to security)

(a) Recommendations (A/CN.9/637, recommendations 2-12)

21. With regard to recommendation 3, the Commission noted that the commentary would explain the reasons why recommendations in the draft Guide (with the exception of certain recommendations on enforcement) applied to all assignments of receivables, without transforming outright transfers into security rights.

22. With regard to recommendation 5, it was agreed that reference should also be made to the recommendations dealing with security rights in attachments to

immovable property along the following lines: “The law should not apply to immovable property. However, recommendations 21, 25 (chapter on the creation of a security right), 34, 43, 48 (chapter on the effectiveness of a security right against third parties), 84, 85 (chapter on the priority of a security right), 161, 162 (chapter on the enforcement of a security right), 180 and 192 (chapter on acquisition financing) may affect rights in immovable property.”

23. After discussion, the Commission adopted recommendations 2-12, reordered in accordance with the order of the revised commentary (see para. 24 (d) below).

(b) Commentary (A/CN.9/631/Add.1, paras. 32-56 and 78-141)

24. It was noted that the material in chapters II and III of the draft Guide contained in document A/CN.9/631/Add.1 could be revised and reorganized into a new chapter I (Scope of application and basic approaches to secured transactions) as follows:

(a) Section A (Scope of application) should include the material contained in document A/CN.9/631/Add.1, paragraphs 32-54, appropriately updated to reflect the decisions of the Commission during the first part of its fortieth session (A/62/17 (Part I), para. 158);

(b) Section B (Basic approaches to security) should include the material contained in document A/CN.9/631/Add.1, paragraphs 78-141, appropriately updated to reflect the decisions of the Commission during the first part of its fortieth session (A/62/17 (Part I), para. 158);

(c) Section C (Two key themes common to all chapters of the Guide) should include the material contained in document A/CN.9/631/Add.1, paragraphs 55 and 56, appropriately updated to reflect the decisions of the Commission during the first part of its fortieth session (A/62/17 (Part I), para. 158);

(d) Section D should include recommendations 2-12 from document A/CN.9/637, ordered in accordance with subparagraphs (a)-(c) above.

25. The Commission considered drafting suggestions with regard to those new sections. With regard to new chapter I, section B (Basic approaches to security), it was suggested that the draft Guide should further explain the rationale for all the different approaches taken with respect to security rights and their historical evolution. There was sufficient support for that suggestion. It was also suggested that security rights in payment rights arising under or from a financial contract should be excluded from the draft Guide, whether the financial contract was governed by a netting agreement or not. The Commission recalled that it had already adopted recommendation 4, subparagraph (c), in document A/CN.9/631, excluding only payment rights arising under or from financial contracts governed by netting agreements, during the first part of its fortieth session (in document A/CN.9/637, the issues are addressed in recommendation 4, subparagraphs (c) and (d)) (A/62/17 (Part I), paras. 148-151 and 158).

26. Subject to the above-mentioned changes and any consequential editorial amendments, the Commission approved: (a) the reorganizing of the material in chapters II and III of the draft Guide into a new chapter I, as set out in paragraph 24 above; and (b) the substance of the commentary on the new chapter I.

3. Chapter IV (Creation of a security right (effectiveness as between the parties))**(a) Recommendations (A/CN.9/637, recommendations 13-28)**

27. With regard to recommendation 14, the Commission confirmed that it was necessary that the secured creditor (and not just its representative) be identified in the security agreement, because: (a) the agreement would be the basis for the enforcement of the security right; and (b) no confidentiality concerns arose as, unlike a notice, the agreement would not be publicly available. It was also agreed that recommendation 14 would need to include language along the lines of recommendation 57, subparagraph (d), in order to provide a basis for the inclusion in the registered notice of the maximum amount for which the security right might be enforced. In that connection, it was agreed that the commentary should explain that the requirement for a maximum amount could be satisfied even if it was mentioned in a series of documents that referred to each other rather than in a single document.

28. With regard to recommendation 15, it was agreed that the text should be revised to provide that writing was sufficient by itself or in conjunction with a course of conduct.

29. Subject to the changes mentioned above, the Commission adopted recommendations 13-28.

(b) Commentary (A/CN.9/631/Add.1, paras. 142-247)

30. The Commission approved the substance of the commentary to chapter IV subject to the following changes and any consequential editorial amendments:

(a) Paragraph 167 should explain that, if the grantor relinquished possession of an encumbered asset and a written agreement did not already exist, a written agreement would be necessary for a security right to continue to exist after the grantor relinquished possession of the asset;

(b) Paragraphs 174-176 should be revised to provide a more balanced presentation of the two approaches with respect to a maximum amount to be set out in the security agreement and to separate that issue from the issue of security rights securing future obligations;

(c) Paragraph 182, fourth sentence, should be modified along the following lines: "Subject to rules ..., ... the agreement must identify that asset as the grantor's right as a lessee under the lease;"

(d) Paragraph 184, second sentence, should be modified to clearly identify future assets as assets acquired by the grantor or coming into existence after the conclusion of the security agreement, while referring to the creation of a security right rather than to a disposition;

(e) Paragraph 190, last sentence, should refer to assets in general and not just to inventory;

(f) Paragraph 196 should be revised to indicate that a floating charge was indeed a security right (and accordingly the words "so called" and "merely" should be deleted) and should briefly discuss the difference between a floating charge and a fixed charge;

(g) Paragraphs 191-199 should refer to limitations with respect to security rights in all assets based on consumer-protection law or, alternatively, that discussion should be merged with the discussion on identification of assets;

(h) Paragraph 222 should elaborate on the limitation of a security right in tangible assets to the value of those assets before they were commingled in a mass or processed into a product;

(i) Paragraphs 229-232 should explain the reasons why anti-assignment clauses were invalidated with respect to the assignment of certain types of receivables but not with respect to the assignment of other types of receivables;

(j) Paragraph 247, second sentence, should be revised along the following lines: “As a result, ... , provided that the security right in the document is created while the goods are covered by the document of title.”

4. Chapter V (Effectiveness of a security right against third parties)

(a) Recommendations (A/CN.9/637, recommendations 29-53)

31. With regard to recommendation 40, it was agreed that, to align it with the formulation of recommendation 45, the text should be revised along the following lines:

“The law should provide that, if the proceeds are not described in the registered notice as provided by recommendation 39 and do not consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account, the security right in the proceeds continues to be effective against third parties for [a short period of time to be specified] days after the proceeds arise. If the security right in such proceeds is made effective against third parties by one of the methods referred to in recommendation 32 or 34 before the expiry of that time period, the security right in the proceeds continues to be effective against third parties thereafter.”

32. Subject to the above-mentioned change, the Commission adopted recommendations 29-53.

(b) Commentary (A/CN.9/631/Add.2)

33. The Commission approved the substance of the commentary to chapter V subject to the following changes and any consequential editorial amendments:

(a) Paragraph 17 should discuss “specialized control” as a concept existing in some jurisdictions only;

(b) Paragraph 20 should further explain that the approach addressed was the approach recommended in the draft Guide;

(c) Paragraph 42 should explain that the approach, under which judgement creditors were given a kind of a property right in an encumbered asset, should be compatible with insolvency law;

(d) Paragraphs 95-98 should clearly state that the issue was a change in the location of the asset or the grantor where that was the connecting factor for the application of the conflict-of-law rules;

(e) Paragraph 115 should refer to “some States” rather than to “other States” and should discuss the various approaches in a balanced way.

5. Chapter VI (The registry system)

(a) Recommendations (A/CN.9/637, recommendations 54-72)

34. With regard to recommendation 54, subparagraph (h), and recommendations 57-59, it was agreed that reference to the term “identifier” should be made in a consistent way.

35. In response to a question, it was noted that recommendation 57 required only the information necessary for third parties in order: (a) to avoid unnecessary information that could confuse third parties or lead to errors that might invalidate notices; (b) to standardize the information required; and (c) to send the message that, unlike immovable property title registries, movable property security right registries required minimal information.

36. The Commission considered the following new recommendations in document A/CN.9/637 (contained in the note after recommendation 57):

“X. The law should provide that an error in the identifier or address of the secured creditor or its representative does not render a registered notice ineffective as long as it has not seriously misled a reasonable searcher.

“Y. The law should provide that an error in the description of certain encumbered assets does not render a registered notice ineffective with respect to other assets sufficiently described.

“Z. The law should provide that an error in the information provided in the notice with respect to the duration of registration and the maximum amount secured, if applicable, does not render a registered notice ineffective.”

37. It was noted that the suggested new recommendations were intended to deal with errors with respect to information in the notice other than the grantor’s identifier (which was dealt with in recommendation 58).

38. While some doubt was initially expressed as to whether those recommendations were necessary, the Commission decided after discussion that they should be retained, as they struck an appropriate balance between the interests of registrants and the interests of searchers by preserving the effectiveness of a registered notice in cases in which a reasonable searcher would not be seriously misled by an erroneous statement in the notice.

39. However, several suggestions were made as to the formulation of the suggested new recommendations. One suggestion was that recommendation X should be recast in a positive way to provide that a notice containing an incorrect statement of the identifier or the address of the secured creditor or its representative would not be ineffective unless it would seriously mislead a reasonable searcher. Another suggestion was that the same rule should apply to notices with erroneous descriptions of the encumbered assets, a matter addressed in recommendation Y. Another suggestion was that recommendation Y could refer to descriptions of encumbered assets that did not meet the requirements of recommendation 63. Another suggestion was that recommendation Z should include a provision whereby protection would be afforded to third parties that suffered damage after reasonably

relying on notices with an erroneous statement of the maximum amount of the secured obligation or the duration of the registration. Yet another suggestion was that reference should be made not to “errors” (which included both a subjective and an objective criterion) but to “incorrect statements” (i.e. the factual result of a subjective error) by a registrant.

40. There was sufficient support for all those suggestions. It was agreed that recommendation X could address incorrect statements with respect to the description of the encumbered assets as well, while recommendation Y could be retained as it was, as it addressed a separate matter (i.e. whether an incorrect statement as to the description of certain assets invalidated the notice with respect to other assets covered in the notice although they were sufficiently described).

41. In addition, the suggestion was made that reference should be made to the fact of registration rather than to the registered notice, as the objective of those recommendations was to preserve registration as a mode of achieving third-party effectiveness. That suggestion was opposed on the grounds that registration should be effective, as, in any case, something was registered and the question was whether the particular registered notice was effective.

42. In response to a question, it was noted that the notion of “reasonable searcher” did not mean that, in order to be reasonable, a searcher would have to search for matters outside the registry to determine, for example, whether an error had been made in the notice. In response to another question, it was noted that, if the law prescribed a limited duration of registration (see recommendation 66), an erroneous statement would not affect the duration of the registration to the extent permitted by the law. It was also noted that whether or not the registry would reject an erroneous statement in that regard was a matter of the technical design of the registry that would not affect the duration of registration under the law. In addition, it was noted that, if the law allowed parties to determine the duration of registration (see recommendation 66), erroneous statements of the duration of registration would be corrected by the system, as, if the registrant paid for 5 years but stated 10 years on the notice, the notice would be cancelled after the expiry of 5 years, while, if the registrant paid for 10 years but wrote 5 years on the notice, the registrant could amend the notice at any time (see recommendation 70).

43. With respect to the maximum amount addressed in the suggested new recommendation Z, it was noted that, if the notice referred to a higher amount than the amount mentioned in the security agreement, the registrant could only enforce its security right with priority up to the amount mentioned in the security agreement. It was also noted that, if the notice referred to a lower amount than the amount mentioned in the security agreement, the registrant could enforce its security right against the grantor up to the outstanding amount of the secured obligation, but would have priority over other competing claimants only up to the lower amount mentioned in the notice. That discussion confirmed that a reference should be made to the maximum amount in the security agreement in order for recommendation 57, subparagraph (d), and new recommendation Z to operate (see para. 27 above).

44. With regard to recommendation 61, it was agreed that the words “after the change in the grantor’s identifier but” should be inserted before the words “before registration of the amendment” in subparagraphs (a) and (b).

45. With regard to recommendation 62, it was noted that the main policy consideration at issue was how to balance the rights of two innocent parties subsequent to a transfer of an encumbered asset (i.e. the original secured creditor of the grantor and a subsequent secured creditor of the transferee of the encumbered asset).

46. Diverging views were expressed. One view was that a secured creditor that held a security right in assets of a grantor but that was not aware of the transfer of an encumbered asset by the grantor should be protected in the sense that the third-party effectiveness of its security right should be preserved (even though the security right would extend to the proceeds received by the grantor). It was stated that such an approach would be in line with the general rule in recommendation 31 (Continued third-party effectiveness after a transfer of the encumbered asset) and would provide an appropriate result. It was also observed that, otherwise, a grantor could defeat the right of a secured creditor by transferring an encumbered asset, a result that could discourage the extension of secured credit. In addition, it was said that the secured creditor of the transferee would have to conduct due diligence and clarify the chain of title of the asset in any case, and could thus discover the existence of security rights granted by prior owners of the asset. In that connection, it was mentioned that the general security rights registry was not designed to replace due diligence or confirmation of the chain of title of assets.

47. Another view was that the secured creditor of the transferee of the asset, having searched the registry against the name of the transferee and having found no previously registered security right, should also be protected in the sense that the security right of the secured creditor of the grantor would not be effective as against the secured creditor of the transferee. It was stated that, otherwise, the secured creditor of the transferee could not rely on the registry to ensure its priority, a result that could undermine the reliability of the registry and lead to the transferee being unable to obtain secured credit.

48. Several suggestions were made in an effort to bridge the gap between the above-mentioned views, including the following: (a) imposing on the grantor or the transferee an obligation to inform the secured creditor of the grantor; and (b) providing that the right of the secured creditor of the transferor remained effective against third parties until a short period of time after the secured creditor acquired knowledge or was notified of the transfer, and then only if the secured creditor had registered a notice against the name of the transferee. Those proposals failed to attract sufficient support. It was stated that the breach of the grantor's obligation to inform the secured creditor would simply create another contractual cause of action, which would be of no use to the secured creditor in the case of the grantor's insolvency. It was also observed that requiring knowledge on the part of the secured creditor would inadvertently lead to litigation with respect to matters such as whether the secured creditor had knowledge, what constituted knowledge and when knowledge was acquired. In addition, it was said that requiring that written notice be given to the secured creditor would not assist secured creditors of the transferee, as they would be unaware of that notice.

49. Recognizing that there was no fully satisfactory solution and that the various suggested solutions had both advantages and disadvantages, the Commission decided that recommendation 62 should be revised to state that the law should

address the issue and that the commentary should discuss the various policy options and their advantages and disadvantages.

50. In the discussion of recommendation 62, diverging views were also expressed as to the relationship between recommendations 61 and 62. One view was that those recommendations were closely linked and that, therefore, the same decision should be made for both. It was stated that a change in the name of the grantor was in effect involved also in the case of the transfer of an encumbered asset. Another view was that the issues addressed in those recommendations were slightly different and, therefore, could be addressed differently. It was stated that, while a secured creditor could find out with relative ease a name change of its grantor, that was not the case with a security right granted by a person that acquired the asset from the grantor. After deliberation, it was decided that recommendation 61 should remain unchanged and that the commentary should explain the rationale for the difference in the approaches followed in recommendations 61 and 62.

51. With regard to recommendation 64, it was agreed that the text should be revised to ensure that a notice could be registered before or after the creation of a security right or before or after the conclusion of a security agreement.

52. With regard to recommendation 66, it was agreed that the word “time” in the third sentence should be replaced with the word “duration”.

53. Subject to the changes mentioned above, the Commission adopted recommendations 54-72.

(b) Commentary (A/CN.9/631/Add.3)

54. The Commission approved the substance of the commentary to chapter VI subject to the following changes and any consequential editorial amendments:

(a) The introductory section to the commentary should include a more systematic explanation as to why the Guide contained a separate chapter addressing the registry system, the difference between property and personal rights and why a registry system was an important mechanism to indicate the potential existence of rights in assets;

(b) Paragraph 8 should clarify that it was the very diversity of approaches that had led to the solution of a notice-based general rights registry;

(c) Paragraph 18 should avoid implying that the issue of public access arose only in the context of notice-based registry systems;

(d) Paragraph 22 should make it clear that even in electronic systems equality of access was a point of general concern;

(e) In paragraph 27, the last sentence should be moved to paragraph 28, and the latter paragraph should make it clear that the prohibition against searching against the creditor name was intended to prevent public searching but not searching for internal purposes;

(f) Paragraph 34, in which searching against certain classes of assets is discussed, should be expanded to address the criteria that would need to be satisfied to permit that type of search (for instance, using a unique identifier for the asset concerned, such as a serial number, and restricting searching to high-value assets for which there was a resale market);

(g) Paragraphs 57 and 58 should be revised to ensure a balanced discussion of the advantages and disadvantages of requiring a maximum amount of the secured obligation to be stated in the notice (discussing separately security rights in future obligations);

(h) In paragraph 66 all legal structures under which legal and natural persons could conduct business, including partnerships, should be discussed;

(i) Paragraphs 67-69 should be redrafted in the light of the decisions of the Commission regarding recommendations 61 and 62 (see paras. 44-50 above).

6. Chapter VII (Priority of a security right)

(a) Recommendations (A/CN.9/637, recommendations 73-106)

55. With regard to recommendation 73, it was agreed that the text should be revised to clarify that it did not apply to priority conflicts between secured creditors that took a security right in an asset from different grantors (see also para. 57 (a), below). It was also agreed that the commentary to recommendations 73 and 76 should clarify that a secured creditor that took a security right in an encumbered asset from a buyer of the asset took the asset subject to a security right (that was granted in the asset by the seller of the asset and was effective against third parties) on the basis of the general principle that a person cannot give to another person more rights than it has (*nemo dat quod non habet*).

56. Recalling that it had adopted the recommendations of chapter VII during the first part of its fortieth session (A/62/17 (Part I), para. 158), and subject to the above-mentioned change, the Commission adopted revised recommendations 73-106.

(b) Commentary (A/CN.9/637/Add.1)

57. Recalling that it had approved the substance of the commentary to chapter VII during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary subject to the following changes and any consequential editorial amendments:

(a) It should be clarified (in the definitions, in the recommendations and in the commentary) that rules on priority were designed to deal with competing rights of claimants that were granted a right from the same grantor;

(b) Third-party effectiveness issues should be clearly distinguished from priority issues and repetition should be avoided;

(c) With regard to recommendation 79, the commentary should include discussion of a different approach, under which a transferee of an encumbered asset would take the asset free of the security right if the security right secured a credit extended after the expiry of a certain period of time.

7. Chapter VIII (Rights and obligations of the parties to a security agreement)

(a) Recommendations (A/CN.9/637, recommendations 107-113)

58. With regard to recommendation 109 and, by extension, recommendation 69, it was agreed that, to align the text with recommendation 137, recommendations 109 and 69 should refer to the termination of all commitments to extend credit.

Accordingly, it was agreed that recommendation 109 should be revised along the following lines:

“The secured creditor must return an encumbered asset in its possession if, all commitments to extend credit having been terminated, the security right has been extinguished by full payment or otherwise.”

59. Recalling that it had adopted the recommendations of chapter VIII during the first part of its fortieth session (A/62/17 (Part I), para. 158), and subject to the above-mentioned change, the Commission adopted revised recommendations 107-113.

(b) Commentary (A/CN.9/637/Add.2)

60. Recalling that it had approved the substance of the commentary to chapter VIII during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary subject to the following change and any consequential editorial amendments: with regard to recommendation 108, the commentary should explain that it applied only to security rights in tangible assets subject to possession, with respect to which the secured creditor in possession should be obliged to preserve both the asset and its value.

8. Chapter IX (Rights and obligations of third-party obligors)

(a) Recommendations (A/CN.9/637, recommendations 114-127)

61. With regard to recommendation 124, subparagraph (b), it was agreed that, to make it clear that reference was made to a security right created by a transferor of an independent undertaking, the text should be revised along the following lines:

“The rights of a transferee of an independent undertaking are not affected by a security right in the right to receive the proceeds under the independent undertaking created by the transferor or any prior transferor.”

62. Recalling that it had adopted the recommendations of chapter IX during the first part of its fortieth session (A/62/17 (Part I), para. 158), and subject to the above-mentioned change, the Commission adopted revised recommendations 114-127.

(b) Commentary (A/CN.9/637/Add.3)

63. Recalling that it had approved the substance of the commentary to chapter IX during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary and requested the Secretariat to make any consequential changes to reflect the above-mentioned change in the recommendations.

9. Chapter X (Enforcement of a security right)

(a) Recommendations (A/CN.9/637, recommendations 128-173)

64. Recalling that it had already adopted the recommendations of chapter X during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission noted that some changes might be necessary in order to address issues that had arisen during the finalization of the commentaries after the close of the first part of the fortieth session.

65. With regard to recommendation 137, it was agreed that the grantor should be entitled to exercise its right to pay the secured obligation not “until the disposition of the encumbered asset by the secured creditor” but until the earlier of either such disposition or the conclusion of an agreement of the secured creditor to dispose of the encumbered asset. It was also agreed that the same change should be made in recommendation 142.

66. With regard to recommendation 144, subparagraph (c), which addressed the secured creditor’s remedy of obtaining possession of an encumbered asset extrajudicially, the Commission agreed that reference should be made not only to the grantor but also to the person in possession of the asset, as the main purpose of the provision was to permit extrajudicial enforcement but without a breach of the peace or public order.

67. The suggestion was also made that a new subparagraph should be added to recommendation 144 to provide that the requirements of subparagraphs (a), (b) and (c) did not need to be met if the grantor affirmatively consented at the time the secured creditor sought to obtain possession of the encumbered asset extrajudicially. The Commission noted that, under recommendation 130, after default, the grantor and any other person owing performance of the secured obligation were entitled to waive their rights under the provisions on enforcement. It also noted that, if the suggested new subparagraph were added in recommendation 144, it could place in doubt the application of the rule contained in recommendation 130 in the case of other recommendations in which there was no explicit reference to waiver of rights and remedies. For those reasons, the Commission decided that a new subparagraph was not necessary, but that the matter could usefully be discussed in the commentary.

68. With regard to recommendation 148, subparagraph (c), it was agreed that, to ensure consistency with article 16, paragraph 1, of the United Nations Convention on the Assignment of Receivables in International Trade (2001),⁸⁴ the text should be revised to ensure that it was sufficient if the notice to the grantor was in the language of the security agreement. With regard to the notice to other parties, it was widely felt that it should be in a language that was reasonably expected to be understood by its recipients.

69. With regard to recommendation 149, it was agreed that the bracketed text should be replaced with a new asset-specific recommendation along the following lines:

“The law should provide that, in the case of collection or other enforcement of a receivable, negotiable instrument or enforcement of a claim, the enforcing secured creditor must apply the net proceeds of its enforcement (after deducting costs of enforcement) to the secured obligation. The enforcing secured creditor must pay any surplus remaining to the competing claimants that, prior to any distribution of the surplus, notified the enforcing secured creditor of the competing claimant’s claim, to the extent of that claim. The balance remaining, if any, must be remitted to the grantor.”

70. With regard to recommendation 152, it was agreed that the bracketed text should be deleted, because: (a) it was superfluous in the light of recommendations 8

⁸⁴ General Assembly resolution 56/81, annex.

and 130, which provided for party autonomy; and (b) if that text were retained, a similar proviso would need to be added to all recommendations to which party autonomy would apply.

71. With regard to recommendation 156, it was agreed that the commentary should explain that, once the grantor asked the secured creditor to make a proposal, the secured creditor had to notify all the parties listed in recommendation 154, including the grantor, who could object, as the grantor's proposal did not need to be so specific as to make it impossible for the grantor to object to the specific terms of the secured creditor's proposal.

72. The Commission agreed that, to deal with the enforcement of a security right in an attachment to a movable asset, a new recommendation should be added along the following lines:

“The law should provide that a secured creditor with a security right in an attachment to a movable asset is entitled to enforce its security right in the attachment. A creditor with higher priority is entitled to take control of the enforcement process, as provided in recommendation 142. A creditor with lower priority may pay off the obligation secured by the security right of the enforcing secured creditor in the attachment. The enforcing secured creditor is liable for any damage to the movable asset caused by the act of removal other than any diminution in its value attributable solely to the absence of the attachment.”

73. With regard to recommendation 164, subparagraph (a), it was agreed that the text should refer not only to recommendation 128 (which provided the general standard of conduct in the context of enforcement) but also to recommendation 129 (which provided that that standard could not be waived unilaterally or varied by agreement).

74. With regard to recommendation 165, it was agreed that the recommendation should be revised to make it consistent with the definition of “assignment” in the terminology section and should refer to a receivable assigned “otherwise than by an outright transfer” rather than “by way of security”.

75. Recalling that it had adopted the recommendations of chapter X during the first part of its fortieth session (A/62/17 (Part I), para. 158), and subject to the changes mentioned above, the Commission adopted revised recommendations 128-173.

(b) Commentary (A/CN.9/637/Add.4)

76. Recalling that it had approved the substance of the commentary to chapter X during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary and requested the Secretariat to make any consequential changes in order to reflect the above-mentioned changes in the recommendations and the decisions taken by the Commission with respect to the commentary in the context of its discussion of the recommendations.

10. Chapter XI (Acquisition financing)**(a) Recommendations (A/CN.9/637, recommendations 174-199)**

77. Recalling that it had already adopted the recommendations of the chapter on acquisition financing rights (which was chapter XII in A/CN.9/631) during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission noted that two alternatives were presented in recommendations 176 and 189 to implement the decision taken by the Commission during the first part of its fortieth session (A/62/17 (Part I), para. 63). It was also noted that, unlike alternative A, which drew a distinction between tangible assets other than inventory and inventory and provided different rules for those types of asset, alternative B did not draw such a distinction and provided the same rule for all tangible assets (namely that registration of a notice within a certain period of time after delivery of the tangible assets was sufficient).

78. In addition, the Commission noted a suggestion by the Secretariat that the same approach might be followed with respect to acquisition security rights in proceeds,⁸⁵ with the difference that the right in the proceeds would be a normal security right and not an acquisition security right. Moreover, the Commission noted that recommendations 183 and 198 had been moved from the chapter on the impact of insolvency on a security right to the chapter on acquisition financing to avoid giving the impression that the characterization of acquisition financing transactions as security or ownership devices was a matter of insolvency law, a result that would run counter to the UNCITRAL Legislative Guide on Insolvency Law⁸⁶ (see, for example, footnote 6 to recommendation 35 of that Guide, which is reproduced as footnote 41 of the draft UNCITRAL Legislative Guide on Secured Transactions contained in document A/CN.9/637). It was also noted that a new recommendation should be added to provide that, if a seller failed to register within the prescribed time period a retention-of-title right in a tangible asset that became an attachment to immovable property, it should have a normal security right.⁸⁷ Furthermore, it was noted that the commentary would explain that it flowed from the concept of ownership that the right of a retention-of-title seller would have priority over an acquisition security right granted by the buyer.⁸⁸

79. With regard to recommendation 187, it was agreed that, to align it with recommendation 22, the text should be revised along the following lines:

“The law should provide that a buyer or lessee may create a security right in a tangible asset that is the object of a retention-of-title right or a financial lease right. The maximum amount realizable from the security right is the asset’s value in excess of the amount owing to the seller or financial lessor.”

80. The Commission adopted revised recommendations 174-199 subject to the above-mentioned changes.

⁸⁵ See in A/CN.9/637, the notes in recommendations 182 and 196.

⁸⁶ United Nations publication, Sales No. E.05.V.10.

⁸⁷ See in A/CN.9/637/Add.5, the note in para. 182.

⁸⁸ See in A/CN.9/637/Add.5, the note in para. 178.

(b) Commentary (A/CN.9/637/Add.5)

81. Recalling that it had approved the substance of the commentary to the chapter on acquisition financing rights during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary and requested the Secretariat to make any consequential changes to reflect the above-mentioned changes in the recommendations.

11. Chapter XII (Conflict of laws)

(a) Recommendations (A/CN.9/637, recommendations 200-224)

82. With regard to recommendation 202, it was agreed that the commentary should explain that a possible effect of the recommendation might be that lenders could not confidently lend against existing tangible assets without investigating both the history of the location of the assets and whether they constituted assets subject to specialized registration under the law of any State in which they were previously located or whether they might be the subject of a specialized registration in any other State. It was mentioned that the same point applied to title certificates. It was also mentioned that recommendation 202 gave no guidance in cases of assets being registered in specialized registries in more than one State.

83. With regard to recommendation 204, it was agreed that the text should be revised along the following lines:

“The law should provide that a security right in a tangible asset (other than a negotiable instrument or a negotiable document) in transit or to be exported from the State in which it is located at the time of the creation of the security right may be created and made effective against third parties under the law of the State of the location of the asset at the time of creation as provided in recommendation 200 or, provided that the asset reaches the State of its ultimate destination within [a short period of time to be specified] days after the time of creation of the security right, under the law of the State of its ultimate destination.”

84. With regard to recommendation 205, the concern was expressed by some member States that it might not provide an appropriate applicable law rule for a number of important practices, such as receivables arising under or from financial contracts that were not governed by netting agreements (and were not excluded from the scope of the draft Guide), receivables arising from insurance contracts and receivables assigned in the context of securitization transactions. It was stated that recommendation 205 could create problems for those practices, as: (a) the place of the grantor's central administration was not always easy to determine; (b) the grantor could change the place of its central administration; and (c) the debtor of the receivable could not be protected through application of the law of the grantor's location. It was observed that certainty could be achieved through a rule that would provide that the applicable law would be the law governing the receivable, as the parties to that contract would always be familiar with the law governing the receivable (or the contract from which the receivable arose) and that law would meet their expectations. In order to address that concern, several suggestions were made. One suggestion was that recommendation 205 should be revised to provide more flexibility, indicating that there were other possible approaches (by the addition, for example, of the word “ordinarily” after the words “the law should”).

Another suggestion was that the commentary should further explain the merits of an approach based on the law governing the receivable.

85. The concern was also expressed that the interrelationship among recommendations 45, 205 and 217 was not clear. It was stated that, in particular in cases where an assignor made an assignment, changed the place of its central administration and then made another assignment, the draft Guide did not provide a clear solution as to what the law applicable to those assignments would be. It was noted that, under recommendation 217: (a) the creation of the security right (the proprietary effects as between the parties) would be subject to the law of the grantor's central administration at the time of the creation of the security right (so both assignments would be effective as between the parties); and (b) the third-party effectiveness and priority of the security right would be subject to the law of the grantor's central administration at the time the issue arose (which would mean that the law of the new location of the grantor-assignor would govern third-party effectiveness and priority). However, it was also noted that, under recommendation 45, a secured creditor (assignee) that met the requirements for third-party effectiveness in the first location of the grantor (assignor in the case of a receivable) would have a short period of time to make its security right effective against parties under the law of the new location of the grantor in order to maintain its third-party effectiveness and priority (so the first grantor-assignor would be protected). While some doubt was expressed as to whether that analysis provided a fully satisfactory solution to the problem of the change of the grantor's location, it was widely felt that the commentary should include that useful analysis to clarify the interaction among recommendations 45, 205 and 217.

86. Broad support was expressed for further elaboration in the commentary on the approach based on the law governing the receivable (separately from the approach based on the "location" of the receivables (*lex situs*)). It was suggested that a starting point in that direction might be a text along the following lines: "Some States have a conflict-of-laws rule for intangibles that differs from the rule in recommendation 205. Those States contemplate capital market or other transactions and seek perhaps to establish greater certainty by looking not to the law of the grantor's location but rather to the law governing the intangible. The rule that looks to the law governing the intangible has the advantages of avoiding the risk of a subsequent change of location of the grantor and a single, stable conflict-of-laws rule for transactions involving successive assignments of intangibles among assignors located in different countries. It is not as advantageous for financing practices involving the assignment of intangibles in bulk, as those practices may be governed by laws of multiple countries. Moreover, it shifts the risk of a change of location of the grantor to the risk of a change in the law governing the intangible." While it was agreed that that text was a good starting point, some concern was expressed for the last two sentences. To address that concern, it was suggested that the last two sentences should be deleted or, at least, replaced with more neutral language. In response, it was noted that, in the conflict-of-laws chapter, the same approach should be followed as in all the chapters of the draft Guide, and thus the commentary of the conflict-of-laws chapter should discuss the various approaches setting out their advantages and disadvantages in a way that would ultimately explain the rationale of the recommendation adopted by the Commission.

87. However, the suggestion to revise recommendation 205 was objected to. It was stated that recommendation 205 had already been adopted by the Commission during the first part of its fortieth session (A/62/17 (Part I), para. 158). It was observed that recommendation 205 was in line with the United Nations Assignment Convention, adopted relatively recently, in 2001, on the basis of a draft convention prepared by UNCITRAL. It was also said that all the arguments mentioned in the discussion of recommendation 205 had been considered at length in the process that had led to the preparation of the United Nations Assignment Convention and had been reconsidered during the preparation of the draft Guide. In addition, it was mentioned that, while the law governing the receivable could apply well to practices that involved one existing receivable, it could not provide certainty in the typical case in receivables financing of present and future receivables assigned in bulk, because, at the time of the assignment, parties could not determine the law applicable to matters such as third-party effectiveness and priority with respect to future receivables. Moreover, it was said that the law governing the receivable could not provide certainty in the case of insolvency of the grantor (assignor), which was the main risk in receivables financing, unless the assignor, the assignee and the debtor were located in the same country. By contrast, it was stated, the law of the grantor's location: (a) could be easily determined in most cases (even if, in some exceptional cases, there could be some doubt as to the location of the central administration of the grantor-assignor); and (b) more importantly, was likely to be the place in which the main insolvency proceeding with respect to the grantor would be opened, thus ensuring that the law governing priority and the law governing the ranking of claims in insolvency proceedings would be the law of one and the same jurisdiction.

88. After discussion, the Commission decided that recommendation 205 should not be reopened, although the commentary could further elaborate on the approach based on the law governing the receivable (as an approach distinct from the *lex situs* approach). It was widely felt that, as was done in all commentaries, the commentary on that issue should discuss the approaches taken in the various legal systems, setting out their advantages and disadvantages in a way that would explain the reasons why, on balance, the Commission recommended the rule contained in recommendation 205. It was agreed that the commentary should explain the interaction among recommendations 45, 205 and 217, in particular with a view to explaining how the problem of a change of the grantor's location would be addressed under the draft Guide.

89. With regard to recommendation 214, subparagraph (a), it was agreed that the reference to the law applicable to the relationship between the issuer of a negotiable document and the holder of a security right in the document should be deleted, in order to avoid any inconsistency with the approaches currently taken in the transport laws of different States and a draft convention on the carriage of goods [wholly or partly] [by sea] being prepared by UNCITRAL.

90. With regard to recommendation 220, it was noted that it had been moved from chapter XIV (on the impact of insolvency on a security right) and had been revised in order to avoid inconsistencies with the UNCITRAL Legislative Guide on Insolvency Law. The latter text, it was noted, addressed the law applicable to the validity and effectiveness of rights and claims in insolvency, and not the law applicable to the general priority or the enforcement of a security right. It was also

noted that the commentary would: (a) explain that the first sentence of the recommendation introduced a conflict-of-laws rule that was both generally acceptable and in line with the UNCITRAL Legislative Guide on Insolvency Law (in that its second sentence preserved the application of the *lex fori concursus*); and (b) would cross-refer to the commentary to chapter XIV addressing the impact of insolvency on a security right.

91. Recalling that it had adopted the recommendations of the chapter on private international law (which was chapter XIII in document A/CN.9/631) during the first part of its fortieth session (A/62/17 (Part I), para. 158), and subject to the changes mentioned above, the Commission adopted revised recommendations 200-224.

(b) Commentary (A/CN.9/637/Add.6)

92. Recalling that it had approved the substance of the commentary to the chapter on private international law during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary and requested the Secretariat to make any consequential changes to reflect the above-mentioned changes in the recommendations and the decisions taken by the Commission with respect to the commentary in the context of its discussion of the recommendations.

12. Chapter XIII (Transition)

(a) Recommendations (A/CN.9/637, recommendations 225-231)

93. With regard to recommendation 226, it was agreed that the recommendation should not be changed but that the commentary should explain that a secured creditor that had initiated enforcement proceedings under the law in force before the effective date of the new law should have the option of continuing those proceedings under the old law or abandoning those proceedings and initiating proceedings under the new law.

94. With regard to recommendation 231, it was agreed that the reference to “status” should be changed to “priority status” in order to clarify that recommendation 231 simply explained the meaning of the term “priority status” used in recommendation 230.

95. Recalling that it had adopted the recommendations of the chapter on transition (which was chapter XIV in document A/CN.9/631) during the first part of its fortieth session (A/62/17 (Part I), para. 158), and subject to the changes mentioned above, the Commission adopted revised recommendations 225-231.

(b) Commentary (A/CN.9/637/Add.7)

96. Recalling that it had approved the substance of the commentary to the chapter on transition during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary and requested the Secretariat to make any consequential changes to reflect the decisions taken by the Commission with respect to the commentary in the context of its discussion of the recommendations.

13. Chapter XIV (The impact of insolvency on a security right)

(a) Recommendations (A/CN.9/637, recommendations 232-239)

97. Recalling that it had adopted the definitions and recommendations of the chapter on insolvency (which was chapter XI in document A/CN.9/631) during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission adopted the revised recommendations 232-239.

(b) Commentary (A/CN.9/637/Add.8)

98. Recalling that it had adopted the commentary to the chapter on insolvency during the first part of its fortieth session (A/62/17 (Part I), para. 158), the Commission approved the substance of the revised commentary to chapter XIV on the impact of insolvency on a security right. It also agreed that the commentary should explain that the term “financial contract” was defined in both the draft UNCITRAL Legislative Guide on Secured Transactions and the UNCITRAL Legislative Guide on Insolvency Law in accordance with article 5, subparagraph (k), of the United Nations Assignment Convention and that the note to the definition of the term in the draft Guide⁸⁹ merely explained the definition.

C. Adoption of the UNCITRAL Legislative Guide on Secured Transactions

99. At the close of its deliberations on the draft Guide, the Commission agreed that the Secretariat should be given a mandate to make the changes approved by the Commission, as well as any consequential editorial amendments, avoiding making changes where it was not clear whether a change was editorial or substantive. The Commission also agreed that the Secretariat should review the entire draft Guide with a view to removing any redundant material.

100. At its 864th meeting, on 14 December 2007, the Commission adopted the following resolution:

The United Nations Commission on International Trade Law,

Recognizing the importance to all countries of efficient secured transactions regimes promoting access to secured credit,

Recognizing also that access to secured credit is likely to assist all countries, in particular developing countries and countries with economies in transition, in their economic development and in fighting poverty,

Noting that increased access to secured credit on the basis of modern and harmonized secured transactions regimes will demonstrably promote the movement of goods and services across national borders,

Noting also that the development of international trade on the basis of equality and mutual benefit is an important element in promoting friendly relations among States,

⁸⁹ See A/CN.9/637, para. 6, note to the definition of “financial contract”.

Noting further the importance of balancing the interests of all stakeholders, including grantors of security rights, secured and unsecured creditors, retention-of-title sellers and financial lessors, privileged creditors and the insolvency representative in the grantor's insolvency,

Taking into account the need for reform in the field of secured transactions laws at both the national and international levels as demonstrated by the numerous national law reform efforts under way and the work of international organizations, such as the Hague Conference on Private International Law, the International Institute for the Unification of Private Law (Unidroit) and the Organization of American States, and of international financial institutions, such as the Asian Development Bank, the European Bank for Reconstruction and Development, the Inter-American Development Bank, the International Monetary Fund and the World Bank,

Expressing its appreciation to international intergovernmental and non-governmental organizations active in the field of secured transactions law reform for their participation in and support for the development of the draft UNCITRAL Legislative Guide on Secured Transactions,

Expressing also its appreciation to Kathryn Sabo, Chairperson of Working Group VI (Security Interests) and the acting Chairperson at the resumed fortieth session of the Commission, as well as to the Secretariat, for their special contribution to the development of the draft UNCITRAL Legislative Guide on Secured Transactions,

Noting with satisfaction that the draft UNCITRAL Legislative Guide on Secured Transactions is consistent with the UNCITRAL Legislative Guide on Insolvency Law with regard to the treatment of security rights in insolvency proceedings,

1. *Adopts* the UNCITRAL Legislative Guide on Secured Transactions, consisting of the text contained in documents A/CN.9/631/Add.1-3 and A/CN.9/637 and Add.1-8, with the amendments adopted by the Commission at its fortieth session, and authorizes the Secretariat to edit and finalize the text of the Guide pursuant to the deliberations of the Commission at that session;

2. *Requests* the Secretary-General to disseminate broadly the text of the UNCITRAL Legislative Guide on Secured Transactions, transmitting it to Governments and other interested bodies, such as national and international financial institutions and chambers of commerce;

3. *Recommends* that all States utilize the UNCITRAL Legislative Guide on Secured Transactions to assess the economic efficiency of their secured transactions regimes and give favourable consideration to the Guide when revising or adopting legislation relevant to secured transactions, and invites States that have used the Guide to advise the Commission accordingly.

IV. Working methods of UNCITRAL

101. The Commission recalled that, during the first part of its fortieth session, it had had before it observations and proposals made by France on the working methods of the Commission (A/CN.9/635) and had engaged in a preliminary exchange of views on those observations and proposals. The Commission also

recalled that, at that session, it had been agreed that the issue of working methods would be placed as a specific item on the agenda of the Commission at its resumed fortieth session (A/62/17 (Part I), para. 11). The Commission further recalled that, in order to facilitate informal consultations among all interested States, the Secretariat had been requested to prepare a compilation of procedural rules and practices established by UNCITRAL or by the General Assembly in its resolutions regarding the work of the Commission. It was further recalled that the Secretariat had been requested to make the necessary arrangements, as resources permitted, for representatives of all interested States to meet on the day prior to the opening of the resumed fortieth session of the Commission and, if possible, during the resumed session (A/62/17 (Part I), paras. 234-241).

102. At its resumed session, the Commission had before it, in addition to the observations and proposals made by France on the working methods of the Commission (A/CN.9/635), observations made by the United States of America on the same topic (A/CN.9/639) and, as requested, a note by the Secretariat on the rules of procedure and methods of work of the Commission (A/CN.9/638 and Add.1-6). The Commission noted that, in accordance with its request made during the first part of its fortieth session (see para. 101 above), the Secretariat had made arrangements for representatives of all interested States to meet prior to the opening of the resumed fortieth session in order to hold informal consultations on the rules of procedure and methods of work of the Commission. It was reported that the informal consultations were held among all interested States on 7 December 2007.

103. It was recalled that the Commission, during the first part of its fortieth session, had decided to engage in a comprehensive review of its rules of procedure and methods of work (A/62/17 (Part I), para. 236), and that the General Assembly, in its resolution 62/64 of 6 December 2007, had welcomed that decision. Delegations welcomed the opportunity to review the rules of procedure and methods of work of the Commission and expressed appreciation for the documents submitted to facilitate such a review.

104. Several speakers expressed the view that the elaboration of new rules of procedure for UNCITRAL would not be necessary and that the Commission should continue applying the relevant rules of procedure of the General Assembly with the necessary flexibility, as dictated by the specific nature of the work of the Commission. They pointed out in this regard that the existing flexible approach to the application and interpretation of the relevant rules had proved its effectiveness and contributed to the productivity and success of the Commission. Nevertheless, support was expressed for introducing more clarity in respect of the few issues where uncertainty might exist as to which rules of procedure and methods of work were applicable or where such rules might be applied diversely by the subsidiary organs of the Commission. The competence of the Commission to determine its rules of procedures and methods of work was acknowledged. However, the Commission was urged to exercise utmost caution before entering areas, such as a possible definition of consensus, where its decisions might impact other bodies of the General Assembly.

105. Some speakers expressed the view that it would be premature to decide that the Commission did not need any specific rules of procedure or to make any conclusion as to the form in which future work on the topic might be undertaken, for example through guidelines for chairmen and other officers of working groups

or a manual compiling best practices. It was concluded that only at the end of the review of its rules of procedure and working methods would the Commission be able to decide on its future course of action on the topic.

106. The point was made that, in the course of that review, the Commission should continue reflecting on practical ways to facilitate the participation of representatives of developing countries and non-governmental organizations from those countries in the work of UNCITRAL, including in any preparatory work, in order to ensure that the legislation and practices of these countries were adequately taken into account.

107. The Commission agreed that: (a) any future review should be based on the previous deliberations on the subject in the Commission, the observations made by France (A/CN.9/635) and the United States (A/CN.9/639) and the note by the Secretariat (A/CN.9/638 and Add.1-6), which was considered to provide a particularly important historical overview of the establishment and evolution of UNCITRAL rules of procedure and methods of work; (b) the Secretariat should be entrusted with the preparation of a working document describing current practices of the Commission with the application of rules of procedure and methods of work, in particular as regards decision-making and the participation of non-State entities in the work of UNCITRAL, distilling the relevant information from its previous note (A/CN.9/638 and Add.1-6); the working document would serve as a basis for future formal and informal deliberations of the Commission on the matter, it being understood that, where appropriate, the Secretariat should indicate its observations on rules of procedure and methods of work for consideration by the Commission; (c) the Secretariat should circulate the working document to all States for comment and should compile any comments it might receive; (d) informal consultations among all interested States might be held, if possible, before the forty-first session of the Commission; and (e) the working document might be discussed as early as at the forty-first session of the Commission, time permitting.

V. Dates of future meetings

108. The Commission recalled that, during the first part of its fortieth session (A/62/17 (Part I), para. 248), it had approved the holding of its forty-first session in New York from 16 June to 11 July 2008, subject to confirmation or possible shortening of the session, to be decided during its resumed fortieth session, in particular in the light of the progress of work in Working Group II (Arbitration and Conciliation) and Working Group III (Transport Law). The Commission also recalled that, at that session, it had approved the schedule of meetings for its working groups, subject to possible review at its resumed fortieth session (A/62/17 (Part I), para. 251).

109. At its resumed fortieth session, the Commission decided to shorten the duration of its forty-first session by one week, the new dates of the session thus being from 16 June to 3 July 2008 (United Nations Headquarters in New York would be closed on Friday, 4 July 2008), and to reserve the first nine days of the session, from 16 to 26 June, for the finalization and adoption of a draft convention on the carriage of goods [wholly or partly] [by sea]. The Commission confirmed the schedule of meetings for its working groups approved during the first part of its fortieth session (A/62/17 (Part I), para. 251).

110. It was noted that decisions of the Commission regarding the duration of its sessions were to be made bearing in mind the amount of time needed for the completion of work on its agenda and the fact that lengthy sessions imposed a burden on some States.

VI. Other business

111. The attention of the Commission was brought to General Assembly resolution 62/64 on the report of the United Nations Commission on International Trade Law on the work of its fortieth session, Assembly resolution 62/65 of 6 December 2007 on the fiftieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958, and Assembly resolution 62/70 of 6 December 2007 on the rule of law at the national and international levels.

112. The Commission took note of the resolutions and deferred their consideration to its forty-first session. The Commission noted that, by paragraph 3 of General Assembly resolution 62/70, the Assembly invited the Commission to comment, in its report to the Assembly, on the current role of the Commission in promoting the rule of law.

113. The Commission decided to include the item “Role of UNCITRAL in promoting the rule of law” in the agenda of its forty-first session and invited all States members of UNCITRAL and observers to exchange their views on the item at that session.

Rapporteur: Mr. Adam Mulawarman **Tugio** (Indonesia)

I. Introduction

1. At its 3rd plenary meeting, on 21 September 2007, the General Assembly, on the recommendation of the General Committee, decided to include in the agenda of its sixty-second session the item entitled “Report of the United Nations Commission on International Trade Law on the work of its fortieth session” and to allocate it to the Sixth Committee.
2. The Sixth Committee considered the item at its 11th, 12th and 28th meetings, on 22 and 23 October and 19 November 2007. The views of the representatives who spoke during the Committee’s consideration of the item are reflected in the relevant summary records (A/C.6/62/SR.11, 12 and 28).
3. For its consideration of the item, the Committee had before it the first part of the report of the United Nations Commission on International Trade Law on the work of its fortieth session.¹
4. At the 11th meeting, on 22 October, the Vice-Chairperson of the United Nations Commission on International Trade Law at its fortieth session introduced the first part of the report of the Commission on the work of that session.

II. Consideration of proposals

A. Draft resolution A/C.6/62/L.16

5. At the 28th meeting, on 19 November, the representative of Austria, on behalf of Albania, Algeria, Argentina, Australia, Austria, Azerbaijan, Belarus, Belgium, Brazil, Bulgaria, Cameroon, Chile, China, Colombia, Croatia, Cyprus, the Czech Republic, the Democratic Republic of the Congo, Denmark, Ecuador, El Salvador, Estonia, Ethiopia, Finland, France, Gabon, Germany, Greece, Guatemala, Hungary, Iceland, India, Iran (Islamic Republic of), Ireland, Israel, Italy, Japan, Jordan, Kenya, Latvia, Liechtenstein, Lithuania, Luxembourg, Madagascar, Malaysia, Mexico, Mongolia, Morocco, the Netherlands, Norway, the Philippines, Poland, Portugal, the Republic of Korea, Romania, the Russian Federation, Serbia, Sierra Leone, Singapore, Slovakia, Slovenia, Spain, Sri Lanka, Sweden, Switzerland, Thailand, the former Yugoslav Republic of Macedonia, Trinidad and Tobago, Tunisia, Turkey, Uganda, Ukraine, the United Kingdom of Great Britain and Northern Ireland and Uruguay, subsequently joined by Belize and Burkina Faso, introduced a draft resolution entitled “Report of the United Nations Commission on International Trade Law on the work of its fortieth session” (A/C.6/62/L.16).

¹ *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17 (A/62/17 (Part I)).*

6. At the same meeting, the Committee adopted draft resolution A/C.6/62/L.16 without a vote (see para. 10, draft resolution I).

7. After the adoption of the draft resolution, the representatives of the United States of America, Canada and France made statements in explanation of position (see A/C.6/62/SR.28).

B. Draft resolution A/C.6/62/L.17

8. At the 28th meeting, on 19 November, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled “Fiftieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958” (A/C.6/62/L.17).

9. At the same meeting, the Committee adopted draft resolution A/C.6/62/L.17 without a vote (see para. 10, draft resolution II).

III. Recommendations of the Sixth Committee

10. The Sixth Committee recommends to the General Assembly the adoption of the following draft resolutions:

Draft resolution I

Report of the United Nations Commission on International Trade Law on the work of its fortieth session

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting the developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission on the work of the first part of its fortieth session,¹

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law on the work of the first part of its fortieth session;¹

2. *Commends* the Commission for its work on the preparation of a legislative guide on secured transactions, which has been designed to facilitate secured financing, thus promoting increased access to low-cost credit and enhancing

¹ A/62/17 (Part I). For the final text, see *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17*.

national and international trade, and notes with satisfaction that the Commission expects to complete that work in the nearest future;

3. *Welcomes* the progress made by the Commission in its work on a revision of its Model Law on Procurement of Goods, Construction and Services² and of the Arbitration Rules of the United Nations Commission on International Trade Law,³ and on the preparation of a draft instrument on transport law and on future developments in insolvency law, and endorses the decision of the Commission to undertake further work in the area of security interests;

4. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law, as well as promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their legal activities with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law;

5. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical assistance and cooperation in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical assistance and cooperation programme, and in that respect, encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work;

(b) Expresses its appreciation to the Commission for carrying out technical assistance and cooperation activities, including at the country, subregional and regional levels, and for providing assistance with legislative drafting in the field of international trade law;

(c) Expresses its appreciation to the Governments whose contributions enabled the technical assistance and cooperation activities to take place, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law Trust Fund for Symposia and, where appropriate, to the financing of special projects, and otherwise to assist the secretariat of the Commission in carrying out technical assistance activities, in particular in developing countries;

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission, in the light of the relevance and importance of the work and programmes of the Commission for promotion of the rule of law at the national and international levels

² *Official Records of the General Assembly, Forty-ninth Session, Supplement No. 17* and corrigendum (A/49/17 and Corr.1), annex I.

³ United Nations publication, Sales No. E.77.V.6.

and for the implementation of the United Nations development agenda, including the achievement of the Millennium Development Goals;

6. *Takes note with regret* that, since the thirty-sixth session of the Commission, no contributions have been made to the trust fund established to provide travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General,⁴ stresses the need for contributions to the trust fund in order to increase expert representation from developing countries at sessions of the Commission and its working groups, necessary to build local expertise and capacities in the field of international trade law in those countries to facilitate the development of international trade and the promotion of foreign investment, and reiterates its appeal to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund;

7. *Decides*, in order to ensure full participation by all Member States in the sessions of the Commission and its working groups, to continue, in the competent Main Committee during the sixty-second session of the General Assembly, its consideration of granting travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General;

8. *Welcomes* the decision by the Commission to hold a comprehensive review of its working methods, in particular in the light of the recent increase in membership of the Commission and the number of topics being dealt with by the Commission, which should ensure the high quality of the work of the Commission and international acceptability of its instruments, and in this regard recalls its previous resolutions related to this matter;⁵

9. *Recalls* its resolutions on partnerships between the United Nations and non-State actors, in particular the private sector,⁶ and its resolutions in which it encouraged the Commission to further explore different approaches to the use of partnerships with non-State actors in the implementation of its mandate, in particular in the area of technical assistance, in accordance with the applicable principles and guidelines and in cooperation and coordination with other relevant offices of the Secretariat, including the Global Compact Office;⁷

10. *Reiterates its request* to the Secretary-General, in conformity with the General Assembly resolutions on documentation-related matters,⁸ which, in particular, emphasize that any reduction in the length of documents should not adversely affect either the quality of the presentation or the substance of the documents, to bear in mind the particular characteristics of the mandate and work of the Commission in implementing page limits with respect to the documentation of the Commission;

11. *Requests* the Secretary-General to continue providing summary records of the meetings of the Commission relating to the formulation of normative texts;

⁴ Resolution 48/32, para. 5.

⁵ See in particular resolutions 36/32, 37/106, 38/134, 39/82, 40/71, 41/77, 42/152, 43/166 and 57/20.

⁶ Resolutions 55/215, 56/76, 58/129 and 60/215.

⁷ Resolutions 59/39, 60/20 and 61/32.

⁸ Resolutions 52/214, sect. B, 57/283 B, sect. III, and 58/250, sect. III.

12. *Recalls* its resolution approving the establishment of the *Yearbook of the United Nations Commission on International Trade Law*, with the aim of making the work of the Commission more widely known and readily available,⁹ expresses its concern regarding the timeliness of the publication of the *Yearbook*, and requests the Secretary-General to explore options to facilitate the timely publication of the *Yearbook*;

13. *Stresses* the importance of bringing into effect the conventions emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urges States that have not yet done so to consider signing, ratifying or acceding to those conventions;

14. *Welcomes* the preparation of digests of case law relating to the texts of the Commission, such as a digest of case law relating to the United Nations Convention on Contracts for the International Sale of Goods¹⁰ and a digest of case law relating to the Model Law on International Commercial Arbitration of the United Nations Commission on International Trade Law,¹¹ with the aim of assisting in the dissemination of information on those texts and promoting their use, enactment and uniform interpretation;

15. *Notes with satisfaction* that the Congress “Modern Law for Global Commerce”, held in Vienna from 9 to 12 July 2007 in the context of the Commission’s fortieth session, reviewed the results of the past work of the Commission as well as related work of other organizations active in the field of international trade law, assessed current work programmes and considered topics and areas for future work, and, acknowledging the importance of the results of the Congress for the coordination and promotion of activities aimed at the modernization and harmonization of international trade law, requests the Secretary-General to ensure the publication of the proceedings of the Congress to the extent permitted by available resources;

16. *Recalls* its resolutions affirming the importance of high-quality, user-friendly and cost-effective United Nations websites and the need for their multilingual development, maintenance and enrichment,¹² commends the restructured website of the Commission in the six official languages of the United Nations, and welcomes the continuous efforts of the Commission to maintain and improve its website in accordance with the applicable guidelines.

Draft resolution II
Fiftieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958

The General Assembly,

Recalling the adoption of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards¹ on 10 June 1958 by the United Nations Conference on International Commercial Arbitration (New York, 20 May to 10 June 1958),²

Noting that one hundred and forty-two States have become parties to the Convention, making it one of the most successful treaties in the area of commercial law,

Recognizing the value of arbitration as a method of settling disputes in international commercial relations, contributing to harmonious commercial relations, stimulating international trade and development and promoting the rule of law at the international and national levels,

Convinced that the Convention, by establishing a fundamental legal framework for the use of arbitration and its effectiveness, has strengthened respect for binding commitments, inspired confidence in the rule of law and ensured fair treatment in the resolution of disputes arising over contractual rights and obligations,

Noting that the Convention has served as a model for subsequent multilateral and bilateral treaties and other international legislative texts on arbitration,

Taking note with appreciation of the work of the United Nations Commission on International Trade Law relating to the promotion of the Convention and its uniform interpretation and effective implementation,

Emphasizing the necessity for further national efforts and enhanced international cooperation to achieve universal adherence to the Convention and its uniform interpretation and effective implementation, with a view to fully realizing the objectives of the Convention,

Expressing its hope that States that are not yet parties to the Convention will soon become parties thereto, which would ensure that the legal certainty afforded by the Convention is universally enjoyed, decreasing the level of risk and transactional costs associated with doing business and thus promoting international trade,

1. *Welcomes* the initiatives being undertaken by various organs and agencies within and outside the United Nations system to organize conferences and other similar events to celebrate the fiftieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards¹ and to provide a forum for an exchange of views on experiences worldwide with the implementation of the Convention;

2. *Encourages* the use of these events for the promotion of wider adherence to the Convention and greater understanding of its provisions and their uniform interpretation and effective implementation;

¹ United Nations, *Treaty Series*, vol. 330, No. 4739.

² E/CONF.26/8/Rev.1.

3. *Invites* all States that have not yet done so to consider becoming parties to the Convention;

4. *Requests* the Secretary-General to increase efforts to promote wider adherence to the Convention and its uniform interpretation and effective implementation.

**D. General Assembly resolutions 62/64, 62/65
and 62/70 of 6 December 2007
Resolutions adopted by the General Assembly on the
report of the Sixth Committee (A/62/449)**

**62/64. Report of the United Nations Commission on International Trade Law
on the work of its fortieth session**

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting the developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission on the work of the first part of its fortieth session,¹

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law on the work of the first part of its fortieth session;¹

2. *Commends* the Commission for its work on the preparation of a legislative guide on secured transactions, which has been designed to facilitate secured financing, thus promoting increased access to low-cost credit and enhancing national and international trade, and notes with satisfaction that the Commission expects to complete that work in the nearest future;

3. *Welcomes* the progress made by the Commission in its work on a revision of its Model Law on Procurement of Goods, Construction and Services² and of the

¹ A/62/17 (Part I). For the final text, see *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17*.

Arbitration Rules of the United Nations Commission on International Trade Law,³ and on the preparation of a draft instrument on transport law and on future developments in insolvency law, and endorses the decision of the Commission to undertake further work in the area of security interests;

4. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law, as well as promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their legal activities with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law;

5. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical assistance and cooperation in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical assistance and cooperation programme, and in that respect, encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work;

(b) Expresses its appreciation to the Commission for carrying out technical assistance and cooperation activities, including at the country, subregional and regional levels, and for providing assistance with legislative drafting in the field of international trade law;

(c) Expresses its appreciation to the Governments whose contributions enabled the technical assistance and cooperation activities to take place, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law Trust Fund for Symposia and, where appropriate, to the financing of special projects, and otherwise to assist the secretariat of the Commission in carrying out technical assistance activities, in particular in developing countries;

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission, in the light of the relevance and importance of the work and programmes of the Commission for promotion of the rule of law at the national and international levels and for the implementation of the United Nations development agenda, including the achievement of the Millennium Development Goals;

6. *Takes note with regret* that, since the thirty-sixth session of the Commission, no contributions have been made to the trust fund established to provide travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General,⁴ stresses the need for contributions to the trust fund in order to increase expert

⁴ Resolution 48/32, para. 5.

representation from developing countries at sessions of the Commission and its working groups, necessary to build local expertise and capacities in the field of international trade law in those countries to facilitate the development of international trade and the promotion of foreign investment, and reiterates its appeal to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund;

7. *Decides*, in order to ensure full participation by all Member States in the sessions of the Commission and its working groups, to continue, in the competent Main Committee during the sixty-second session of the General Assembly, its consideration of granting travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General;

8. *Welcomes* the decision by the Commission to hold a comprehensive review of its working methods, in particular in the light of the recent increase in membership of the Commission and the number of topics being dealt with by the Commission, which should ensure the high quality of the work of the Commission and international acceptability of its instruments, and in this regard recalls its previous resolutions related to this matter;⁵

9. *Recalls* its resolutions on partnerships between the United Nations and non-State actors, in particular the private sector,⁶ and its resolutions in which it encouraged the Commission to further explore different approaches to the use of partnerships with non-State actors in the implementation of its mandate, in particular in the area of technical assistance, in accordance with the applicable principles and guidelines and in cooperation and coordination with other relevant offices of the Secretariat, including the Global Compact Office;⁷

10. *Reiterates its request* to the Secretary-General, in conformity with the General Assembly resolutions on documentation-related matters,⁸ which, in particular, emphasize that any reduction in the length of documents should not adversely affect either the quality of the presentation or the substance of the documents, to bear in mind the particular characteristics of the mandate and work of the Commission in implementing page limits with respect to the documentation of the Commission;

11. *Requests* the Secretary-General to continue providing summary records of the meetings of the Commission relating to the formulation of normative texts;

12. *Recalls* its resolution approving the establishment of the *Yearbook of the United Nations Commission on International Trade Law*, with the aim of making the work of the Commission more widely known and readily available,⁹ expresses its concern regarding the timeliness of the publication of the *Yearbook*, and requests the Secretary-General to explore options to facilitate the timely publication of the *Yearbook*;

13. *Stresses* the importance of bringing into effect the conventions emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urges States that have not yet done so to consider signing, ratifying or acceding to those conventions;

⁵ See in particular resolutions 36/32, 37/106, 38/134, 39/82, 40/71, 41/77, 42/152, 43/166 and 57/20.

⁶ Resolutions 55/215, 56/76, 58/129 and 60/215.

⁷ Resolutions 59/39, 60/20 and 61/32.

⁸ Resolutions 52/214, sect. B, 57/283 B, sect. III, and 58/250, sect. III.

⁹ Resolution 2502 (XXIV), para. 7.

14. *Welcomes* the preparation of digests of case law relating to the texts of the Commission, such as a digest of case law relating to the United Nations Convention on Contracts for the International Sale of Goods¹⁰ and a digest of case law relating to the Model Law on International Commercial Arbitration of the United Nations Commission on International Trade Law,¹¹ with the aim of assisting in the dissemination of information on those texts and promoting their use, enactment and uniform interpretation;

15. *Notes with satisfaction* that the Congress “Modern Law for Global Commerce”, held in Vienna from 9 to 12 July 2007 in the context of the Commission’s fortieth session, reviewed the results of the past work of the Commission as well as related work of other organizations active in the field of international trade law, assessed current work programmes and considered topics and areas for future work, and, acknowledging the importance of the results of the Congress for the coordination and promotion of activities aimed at the modernization and harmonization of international trade law, requests the Secretary-General to ensure the publication of the proceedings of the Congress to the extent permitted by available resources;

16. *Recalls* its resolutions affirming the importance of high-quality, user-friendly and cost-effective United Nations websites and the need for their multilingual development, maintenance and enrichment,¹² commends the restructured website of the Commission in the six official languages of the United Nations, and welcomes the continuous efforts of the Commission to maintain and improve its website in accordance with the applicable guidelines.

62/65. Fiftieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958

The General Assembly,

Recalling the adoption of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards¹ on 10 June 1958 by the United Nations Conference on International Commercial Arbitration (New York, 20 May to 10 June 1958),²

Noting that one hundred and forty-two States have become parties to the Convention, making it one of the most successful treaties in the area of commercial law,

Recognizing the value of arbitration as a method of settling disputes in international commercial relations, contributing to harmonious commercial relations, stimulating international trade and development and promoting the rule of law at the international and national levels,

Convinced that the Convention, by establishing a fundamental legal framework for the use of arbitration and its effectiveness, has strengthened respect for binding commitments, inspired confidence in the rule of law and ensured fair treatment in the resolution of disputes arising over contractual rights and obligations,

Noting that the Convention has served as a model for subsequent multilateral and bilateral treaties and other international legislative texts on arbitration,

Taking note with appreciation of the work of the United Nations Commission on International Trade Law relating to the promotion of the Convention and its uniform interpretation and effective implementation,

Emphasizing the necessity for further national efforts and enhanced international cooperation to achieve universal adherence to the Convention and its uniform interpretation and effective implementation, with a view to fully realizing the objectives of the Convention,

Expressing its hope that States that are not yet parties to the Convention will soon become parties thereto, which would ensure that the legal certainty afforded by the Convention is universally enjoyed, decreasing the level of risk and transactional costs associated with doing business and thus promoting international trade,

1. *Welcomes* the initiatives being undertaken by various organs and agencies within and outside the United Nations system to organize conferences and other similar events to celebrate the fiftieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards¹ and to provide a forum for an exchange of views on experiences worldwide with the implementation of the Convention;

2. *Encourages* the use of these events for the promotion of wider adherence to the Convention and greater understanding of its provisions and their uniform interpretation and effective implementation;

3. *Invites* all States that have not yet done so to consider becoming parties to the Convention;

62/70. The rule of law at the national and international levels

The General Assembly,

Recalling its resolution 61/39 of 4 December 2006,

Reaffirming its commitment to the purposes and principles of the Charter of the United Nations and international law, which are indispensable foundations of a more peaceful, prosperous and just world, and reiterating its determination to foster strict respect for them and to establish a just and lasting peace all over the world,

Reaffirming also that human rights, the rule of law and democracy are interlinked and mutually reinforcing and that they belong to the universal and indivisible core values and principles of the United Nations,

Reaffirming further the need for universal adherence to and implementation of the rule of law at both the national and international levels and its solemn commitment to an international order based on the rule of law and international law, which, together with the principles of justice, is essential for peaceful coexistence and cooperation among States,

Convinced that the advancement of the rule of law at the national and international levels is essential for the realization of sustained economic growth, sustainable development, the eradication of poverty and hunger and the protection of all human rights and fundamental freedoms, and acknowledging that collective security depends on effective cooperation, in accordance with the Charter and international law, against transnational threats,

Reaffirming the duty of all States to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes and principles of the United Nations and to settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered, in accordance with Chapter VI of the Charter, and calling upon States that have not yet done so to consider accepting the jurisdiction of the International Court of Justice in accordance with its Statute,

Convinced that the promotion of and respect for the rule of law at the national and international levels, as well as justice and good governance, should guide the activities of the United Nations and of its Member States,

Recalling paragraph 134 (e) of the 2005 World Summit Outcome,¹

1. *Reiterates its request* to the Secretary-General to prepare an inventory of the current activities of the various organs, bodies, offices, departments, funds and programmes within the United Nations system devoted to the promotion of the rule of law at the national and international levels for submission at its sixty-third session, and welcomes the interim report thereon submitted to the General Assembly at the sixty-second session;²

2. *Also reiterates its request* to the Secretary-General to prepare and submit, after having sought the views of Member States, at its sixty-third session, a report identifying ways and means for strengthening and coordinating the activities listed in the inventory to be prepared pursuant to paragraph 1 above, with special regard to the effectiveness of assistance that may be requested by States in building capacity for the promotion of the rule of law at the national and international levels;

3. *Invites* the International Court of Justice, the United Nations Commission on International Trade Law and the International Law Commission to comment, in

¹ See resolution 60/1.

² A/62/261.

their respective reports to the General Assembly, on their current roles in promoting the rule of law;

4. *Notes with appreciation* the report of the Secretary-General entitled “Uniting our strengths: enhancing United Nations support for the rule of law”³ supports the Rule of Law Coordination and Resource Group, supported by the rule of law unit in the Executive Office of the Secretary-General, under the leadership of the Deputy Secretary-General, and requests the Secretary-General to provide details on the staffing and other requirements for the unit without delay to the General Assembly for its consideration during the sixty-second session in accordance with existing relevant procedures;

5. *Decides* to include in the provisional agenda of its sixty-third session the item entitled “The rule of law at the national and international levels”.

I. Introduction

1. At its eleventh session, Working Group VI (Security Interests) continued its work on the preparation of a legislative guide on secured transactions pursuant to a decision taken by the Commission on International Trade Law (UNCITRAL) at its thirty-fourth session, in 2001.¹ The Commission's decision to undertake work in the area of secured credit law was taken in response to the need for an efficient legal regime that would remove legal obstacles to secured credit and could thus have a beneficial impact on the availability and cost of credit.²

II. Organization of the session

2. The Working Group, which was composed of all States members of the Commission, held its eleventh session in Vienna from 4 to 8 December 2006. The session was attended by representatives of the following States members of the Working Group: Algeria, Argentina, Australia, Austria, Belgium, Canada, China, Colombia, Czech Republic, France, Germany, Guatemala, India, Iran (Islamic Republic of), Italy, Japan, Jordan, Mexico, Nigeria, Pakistan, Paraguay, Poland, Qatar, Republic of Korea, Russian Federation, Spain, Sweden, Switzerland, Thailand, Tunisia, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland and United States of America.

3. The session was attended by observers from the following States: Congo, Dominican Republic, Indonesia, Ireland, Kuwait, Latvia, Libyan Arab Jamahiriya, Malaysia, Mauritius, Peru, Philippines, Romania and Slovakia.

4. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: International Monetary Fund and World Bank;

(b) *International non-governmental organizations invited by the Commission*: American Bar Association, Center for International Legal Studies, Commercial Finance Association, Forum for International Commercial Arbitration, International Association of Restructuring, Insolvency and Bankruptcy Professionals (INSOL International), International Chamber of Commerce, International Swaps and Derivatives Association, Max Planck Institute for Foreign and Private International

¹ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17* and corrigendum (A/56/17 and Corr.3), para. 358. For a history of the project, see A/CN.9/WG.VI/WP.31. The reports of the first to the tenth sessions of the Working Group are contained in documents A/CN.9/512, A/CN.9/531, A/CN.9/532, A/CN.9/543, A/CN.9/549, A/CN.9/570, A/CN.9/574, A/CN.9/588, A/CN.9/593 and A/CN.9/603. The reports of the first and the second joint sessions of Working Group V (Insolvency Law) and VI (Security Interests) are contained in documents A/CN.9/535 and A/CN.9/550. The consideration of those reports by the Commission is reflected in the *Official Records of the General Assembly, Fifty-seventh Session, Supplement No. 17* (A/57/17), paras. 202-204, *Fifty-eighth Session, Supplement No. 17* (A/58/17), paras. 217-222, *Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 75-78, *Sixtieth Session, Supplement No. 17* (A/60/17), paras. 186-187, and *Sixty-first Session, Supplement No. 17* (A/61/17), paras. 13-78.

² *Official Records of the General Assembly, Fifty-fifth Session, Supplement No. 17* (A/55/17), para. 455, and *Fifty-sixth Session, Supplement No. 17* and corrigendum (A/56/17 and Corr.3), para. 347.

Law, Moot Alumni Association, European Law Students' Association and Union internationale des avocats.

5. The Working Group elected the following officers:

Chairman: Kathryn SABO (Canada)

Rapporteur: Maria Mercedes BUONGERMINI (Paraguay)

6. The Working Group had before it document A/CN.9/WG.VI/WP.29, containing revised recommendations for inclusion in the draft guide.

7. The Working Group adopted the following agenda:

1. Opening of the session and scheduling of meetings.
2. Election of officers.
3. Adoption of the agenda.
4. Preparation of a legislative guide on secured transactions.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

8. The Working Group considered recommendations in chapters I (Key objectives of an effective and efficient secured transactions law), II (Scope of application), VI (The registry system), VII (Priority of a security right as against the rights of competing claimants), X (Default and enforcement), XI (Insolvency) and XII (Acquisition financing devices). The deliberations and decisions of the Working Group are set forth below in chapter IV of the present report. The Secretariat was requested to revise the recommendations in the above chapters of the draft guide to reflect the deliberations and decisions of the Working Group.

IV. Preparation of a legislative guide on secured transactions

Chapter I. Key objectives of an effective and efficient secured transactions law

Purpose

9. The Working Group approved the substance of the purpose section unchanged.

Recommendation 1 (key objectives)

10. Subject to clarifying the importance of predictability and transparency of security rights by registration as a separate key objective of the draft guide, the Working Group approved the substance of recommendation 1.

Chapter II. Scope of application

Purpose

11. The Working Group approved the substance of the purpose section unchanged.

Recommendation 2 (assets, parties, secured obligations and security rights)

12. With respect to recommendation 2, paragraph (e), it was agreed that the commentary should explain that regional or international obligations of a State might require that exceptions to the recommendation be made. In particular, it was noted that States members of the European Union might need to exclude transfer of title in financial collateral, such as securities, cash and funds in bank accounts, as under Directive 2002/47/EC of the European Parliament and of the Council of the European Union of 6 June 2002 on financial collateral arrangements, transfer of title had to be recognized according to its terms.

Recommendation 4 (aircraft, railway rolling stock, space objects, ships and intellectual property)

13. With regard to recommendation 4, paragraph (a), it was agreed that it should be revised to reflect the understanding reached with respect to the relationship between the United Nations Convention on the Assignment of Receivables in International Trade (the “United Nations Assignment Convention”) and the Convention on International Interests in Mobile Equipment (Cape Town, 2001). As to recommendation 4, paragraph (b), it was agreed that reference should be made to special laws in general rather than to existing laws only.

Recommendation 5 (securities and immovable property)

14. With respect to recommendation 5, it was agreed that it should be divided into two parts, one dealing with securities and another dealing with immovable property.

15. With respect to securities, the Working Group agreed that the draft guide should cover directly held securities to ensure that the draft guide applied to important financial transactions, such as transactions in which a parent company obtained credit by offering a security right in the shares of its wholly owned subsidiaries. It was also agreed that the exclusion in recommendation 5 should apply to indirectly held securities.

16. As to whether the draft guide should apply to proceeds of directly and indirectly held securities, it was agreed that no additional wording was necessary. It was widely felt that proceeds of directly held securities would be covered in any case, while proceeds of indirectly held securities would be covered only to the extent they were not covered in another international instrument.

17. With respect to immovable property, it was agreed that it should be excluded from the scope of the draft guide, as the law in that regard was well settled and did not lend itself to unification. As to proceeds of immovable property, with respect to whose characterization as immovable or movable property legal systems differed, it was agreed that, if the proceeds took the form of receivables, they could be covered subject to the inclusion of language along the lines of article 4, paragraph 5 (a), of the United Nations Assignment Convention. It was noted that that text was aimed at ensuring that the creation and the priority of a security right under the law governing immovable property would not be affected. As to proceeds of immovable

property other than receivables, it was agreed that they could be covered in the draft guide, if a security right in such proceeds was created by application of the law governing the immovable property or by agreement of the parties.

18. Subject to the changes mentioned above, the Working Group approved the substance of recommendations 2 to 7.

Chapter V. Effectiveness of a security right against third parties

Purpose

19. The Working Group approved the substance of the purpose section unchanged.

Recommendation 39 (lapse in advance registration or third-party effectiveness of a security right)

20. While it was stated that the second sentence of recommendation 39 might be superfluous as it reiterated a priority rule reflected in recommendation 78, it was agreed that recommendation 39 was important and should be retained. However, to clarify the meaning of recommendation 39, it was also agreed that it should be separated into two sections, one referring to third-party effectiveness including registration after creation of a security right and another referring to advance registration (i.e. before creation of a security right).

Recommendation 40 (third-party effectiveness of a security right in tangibles by possession)

21. It was widely felt that, although “possession” was a defined term, recommendation 40 would be easier to understand if it referred to “the transfer of possession to the secured creditor” rather than to third-party effectiveness “through possession”.

22. It was suggested that, to avoid creating the impression that transfer of possession was a condition for the creation of a security right rather than a formal requirement aimed at facilitating the proof of the security agreement (see recommendation 13), either recommendation 34 should refer to transfer of possession as well, or wording along the lines of the language of recommendation 34 should be included in recommendation 40. There was agreement that the proposed text should be included in the commentary. It was widely felt that the statement contained in recommendation 34, which was aimed at clarifying that registration under the regime envisaged in the draft guide was different from other types of registration known to most legal systems (such as registration in immovable property registries), was extremely important and should not be diluted by an additional reference to possession. It was also generally felt that recommendation 13 was sufficient in reflecting the understanding that possession was an element of proof rather than a condition for the creation of a security right.

Recommendation 41 (third-party effectiveness of a non-acquisition security right in low-value consumer goods)

23. Noting that, at the thirty-ninth session of the Commission, broad support had been expressed for the deletion of recommendation 41,³ the Working Group agreed that recommendation 41 should be deleted. It was widely felt that recommendation 41 was not necessary, since there were no financing practices involving non-acquisition security rights in low-value consumer goods and referring to value would create uncertainty as third parties would have to find out the value of the consumer goods to determine whether a notice about a security right in such goods should be registered. The Working Group also agreed that recommendation 35, paragraph (b), which merely referred to recommendation 41, was superfluous and should be deleted as well.

Recommendations 43 and 44 (third-party effectiveness of a security right in proceeds)

24. The view was expressed that alternative A should be retained. It was stated that ensuring that a security right in proceeds became automatically effective against third parties when the proceeds arose without any further act being necessary would promote the overall goal of the draft guide to promote low-cost secured credit. It was also observed that, in any case, well-advised secured creditors would include a generic or specific reference to proceeds in their notices. So, it was pointed out that the main objective of alternative A was to avoid creating a trap for unwary secured creditors.

25. However, the prevailing view was that only alternative B should be retained. It was stated that both alternative A and alternative B were relevant only if the original encumbered assets were described in the notice by reference to a specific category of assets or to a specific asset, as a generic description of the original encumbered assets (e.g. "all assets") would cover all proceeds of any type. It was also observed that, under alternative B, if proceeds were in the form of money and similar assets, the notice would not need to be amended when the proceeds arose. In addition, it was pointed out that the notice would need to be amended only if proceeds took other forms (e.g. of a specific category of assets or a specific asset). Moreover, it was said that, if the grantor wanted to grant a security right in a specific category of assets or in a specific asset, the notice would need to be revised accordingly after the proceeds arose to ensure that the security right would not extend to proceeds other than those described in the notice registered with respect to the original encumbered assets. It was also mentioned that, unlike grantors, which could even be individuals, secured creditors were businesses, which were typically well advised and did not need special protection in that regard.

26. In the discussion, the suggestion was made that alternative A should be retained, while a priority rule could be devised along the lines of alternative B to protect buyers outside the ordinary course of business, as buyers in the ordinary course of business were sufficiently protected by recommendation 82 and subsequent financiers did not need to be protected as, in any case, they would do a search outside the registry to determine which assets were covered by the notice. That suggestion was objected to for the reasons mentioned above (see para. 25).

³ See *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 25.

27. After discussion, the Working Group decided to delete alternative A and retain alternative B. It was also decided that alternative A should be discussed in the commentary along with the reasoning underlying alternative B. It was also agreed that the brief reference in recommendation 35, paragraph (d), to the rule in recommendations 43 and 44 should be aligned with the revised formulation of those recommendations.

Recommendation 45 (third-party effectiveness of a security right in a right that secures a receivable, negotiable instrument or any other obligation)

28. The concern was expressed that the title and the text of recommendation 45 failed to use neutral language in that it referred to a “security right in a security right”, which was not appropriate in some legal systems, and to its third-party effectiveness. To address that concern, the suggestion was made that recommendation 45 should be revised or deleted. In support of deletion, it was observed that recommendation 24 was sufficient to ensure, for example, that a right securing an assigned receivable would follow the receivable. However, the prevailing view was that recommendation 45 was useful and should be retained, but should be revised to track the language of recommendation 24 referring to the benefits of rights securing an assigned receivable.

Recommendation 54 (third-party effectiveness of a security right in a mass or product)

29. Differing views were expressed as to which alternative would be preferable in recommendation 54. In support of alternative A, it was stated that, unlike proceeds with respect to which the secured creditor retained a security right in the encumbered assets and acquired in addition a security right in another asset as proceeds, in the case of a mass of goods or product, the secured creditor did not acquire a broader right, as provided in recommendation 29. In support of alternative B, it was observed that, as in the case of proceeds, a different asset from the original encumbered asset was involved in situations where goods were commingled in a mass of goods or product (e.g. shoes or handbags were made of leather) and third parties needed to be informed about a security right in that new asset that would be effective against them. However, it was widely felt that there was a difference between proceeds and masses of goods or products, at least to the extent that the resulting product would mostly take the form of inventory and buyers of inventory in the ordinary course of business of the seller were already protected by recommendation 83. It was also generally considered that the objectives of the draft guide would better be served by a simple rule along the lines of alternative A. After discussion, the Working Group decided that alternative A should be retained and alternative B should be deleted.

30. Subject to the changes mentioned above, the Working Group approved the substance of recommendations 30 to 54.

Chapter VI. The registry system

Recommendation 55 (operational framework of the registration and searching process)

31. With respect to recommendation 55, paragraph (c), it was agreed that the commentary could explain that the effectiveness of the registration was not

dependent on who the registrant was but instead on the existence at the time of registration or thereafter of authority to register for which the creation of the security right should be sufficient.

32. With respect to recommendation 55, paragraph (j), it was agreed that it should be revised to provide that, in the case of an electronic registry, operation could be continuous with the exception of scheduled maintenance hours.

Recommendation 56 (security and integrity of the registry)

33. With respect to recommendation 56, paragraph (c), differing views were expressed. One view was that the obligation to send a copy of the notice should be placed on the registry. It was stated that the registry, as a third, neutral party, was better placed to send the notice. It was also observed that any costs ensuing from that obligation would be covered by registration fees paid by registrants but ultimately borne by grantors. In addition, it was said that the registry could not be held liable for any error that was the result of inaccurate information on the notice.

34. The prevailing view, however, was that the secured creditor should be obliged to send a copy of the notice to the grantor. It was stated that the secured creditor was in a better place than the registry to send the notice to the grantor in a time- and cost-efficient way. In addition, it was observed that placing that obligation on the registry could potentially increase not only the operational cost of the registry but also the cost to cover any potential liability of the registry.

35. In the discussion, the question of the legal consequences of failure of the person obligated to send a copy of the notice to the grantor was raised. It was widely felt that such a failure could not affect the effectiveness of the security right or the registration and that any consequences should be limited to nominal penalties.

36. After discussion, it was agreed that the obligation to send a copy of the registered notice to the grantor should be placed on the secured creditor. As to the legal consequences of failure of the secured creditor to meet that obligation, it was agreed that the recommendation should include wording to limit such consequences to nominal penalties and any damages, resulting from the failure of the secured creditor to send the notice, that might be proven.

Recommendation 57 (responsibility for loss or damage)

37. The suggestion was made that responsibility for loss or damage caused by an error of the registry should be limited to malfeasance on the part of registry personnel rather than extend to system malfunction. There was no support for that suggestion.

Recommendation 58 (required content of notice)

38. The Working Group agreed that recommendation 58, paragraph (d), should be retained outside square brackets to permit a State to require that the notice include the maximum amount for which the security right could be enforced if it determined that that was useful for subordinate lending.

Recommendation 62 (change of the grantor's identifier)

39. Support was expressed in favour of all the alternatives in recommendation 62, dealing with a change in the identifier of the grantor. After discussion, the Working

Group decided to retain alternative B giving the secured creditor sufficient time to discover a change in the identifier of the grantor and revise the notice on record. It was stated that the recommendation, as originally formulated, was based on a distinction between assets existing at the time of registration and assets acquired thereafter, which was irrelevant to the need to inform third parties about the change. It was also stated that alternative A might be unworkable as it required the grantor to notify the secured creditor, which would permit the grantor to render a security right ineffective against third parties.

40. At the end of the discussion of recommendation 62, the Secretariat was requested to prepare a new recommendation to address a change of the grantor resulting from a sale of the encumbered assets, a merger, an acquisition or a similar transaction.

Recommendation 64 (time of registration)

41. It was agreed that the commentary could usefully explain that advance registration could take place before any element of creation (i.e. agreement, writing or acquisition of the assets by the grantor) was completed.

Recommendations 68 and 71 (cancellation or amendment of notice)

42. With respect to recommendation 68, it was agreed that the words “by full payment or otherwise” usefully clarified when a security right would be extinguished and should be retained outside square brackets.

43. With regard to recommendation 71, it was agreed that it should be retained outside square brackets to address the question of whether the notice needed to be amended when the secured creditor changed as a result of an assignment of the secured obligation. With respect to the alternatives in the recommendation, it was agreed that the language in the first set of square brackets should be retained to permit an amendment of the notice while, at the same time, ensuring the effectiveness of an unamended notice. It was also agreed that the commentary should explain that third parties relying on the notice should be protected.

44. Subject to the changes mentioned above, the Working Group approved the substance of recommendations 55 to 71.

Chapter VII. Priority of a security right as against the rights of competing claimants

Recommendation 72 (extent of priority)

45. Recalling its decision with respect to recommendation 58, paragraph (d), (see para. 38 above) the Working Group agreed that the language in square brackets, referring to the maximum amount indicated in the notice, should be aligned with the text in recommendation 58, paragraph (d), and retained outside square brackets.

Recommendation 80 (priority of a security right in proceeds)

46. It was agreed that recommendation 80 should list all the exceptions to the rule that the security right in the proceeds had the same priority as the security right in the original encumbered assets.

Recommendations 82 and 83 (rights of buyers, lessees and licensees of encumbered assets)

47. With respect to recommendation 82, it was agreed that subparagraph (a) (ii) should be deleted since the grantor could not grant a security right in an asset that had already been sold to a third party. It was also agreed that subparagraph (b) (ii) could be retained as the grantor could grant a lease or a license in an encumbered asset.

48. With respect to recommendation 83, paragraph (a), it was agreed that buyers of consumer goods should take the goods free of any security right in the goods, as acquisition security rights in consumer goods were not subject to registration (see recommendation 185). It was also agreed that the language in the definition of “buyer in the ordinary course of business” (as well as the other definitions relevant to recommendation 83) should be added to the text of recommendation 83 for the sake of clarity, in particular as the definitions did not form part of the recommendations.

Recommendation 86 (priority of rights of judgement creditors)

49. With respect to the rule in the first sentence of recommendation 86, it was agreed that a security right should have priority over the right of a judgement creditor “unless” the judgement creditor obtained a judgement and took steps to enforce it before the security right was made effective against third parties. As an exception to that rule, it was also agreed that an acquisition security right should have priority over the right of a judgement creditor even if it was made effective after initiation of enforcement proceedings by the judgement creditor but within the grace period provided for in recommendation 184 (see also recommendation 188).

50. With respect to the rule in the second sentence of recommendation 86, differing views were expressed. One view was that that rule should be deleted or clarified to state that a security right should have priority over the right of a judgement creditor as long as credit was extended (i.e. actually paid) or committed (i.e. promised) before the judgement creditor notified the secured creditor. It was stated that the issuance of a judgement against the grantor of a security right at the initiative of an unsecured creditor did not always constitute an event of default permitting the secured creditor to terminate a lending commitment. As a result, a rule along those lines would discourage transactions based on lending commitments, such as a revolving credit facility. It was also observed that, even in cases where issuance of a judgement against the grantor of a security right constituted an event of default which entitled the secured creditor to terminate a lending commitment, the rule would still be inappropriate as it would result in termination of credit, a result that would be contrary to the overall objectives of the draft guide. In addition, it was said that, in some cases, termination of lending commitments was not possible (e.g. in the case of irrevocable letters of credit).

51. Another view was that the rule in the second sentence of recommendation 86 was appropriate and should be retained. It was stated that a security right would have priority if it were made effective against third parties before initiation of enforcement proceedings by an unsecured creditor. It was also observed that a security right would have priority even after initiation of enforcement proceedings up to the time when the judgement creditor notified the secured creditor. In addition, it was said that it was essential that after that time the judgement creditor would know whether there would be any value left in the grantor’s assets for the judgement to be enforced. In order to

achieve that result, it was said, it might suffice to set out and protect types of transaction that involved an irrevocable commitment to lend money.

52. After discussion, the Working Group agreed that the second sentence of recommendation 86 should be revised to reflect both views (see, however, para. 53 below).

53. At the end of its deliberations, the Working Group considered a proposal to ensure that a security right would have priority over the right of a judgement creditor not only with respect to advances but also with respect to irrevocable commitments made before the secured creditor was notified about the judgement. There was broad support for that suggestion. The Secretariat was requested to prepare appropriate wording to reflect that understanding.

Recommendation 87 (priority of rights of persons adding or preserving value of encumbered assets)

54. Differing views were expressed as to whether recommendation 87 should give priority to persons rendering services (e.g. repairers, storers or transporters) with respect to encumbered assets up to the value of the services, up to the value added or preserved as a result of the services rendered or up to the amount of reasonable expenses at the option of the parties. One view was that only claims up to the value added or preserved should be given priority over security rights. It was stated that subordinating a security right to claims of people that did not add to or preserve the value of encumbered assets might create uncertainty that could affect the availability or the cost of credit.

55. The prevailing view, however, was that priority should be given to the rights of persons rendering services with respect to encumbered assets up to the reasonable value of the services. It was stated that that was a limited rule that applied under law other than secured transactions law and only if the person rendering services was in possession of the encumbered assets. It was also observed that the intention of such a rule was to protect non-sophisticated persons that rendered services in the ordinary course of their business and did not have the bargaining power to obtain a security right. In addition, it was said that referring to value added or preserved might inadvertently give rise to a difficult and costly evidentiary burden for such non-sophisticated service providers.

56. After discussion, it was agreed that recommendation 87 should be revised to give priority to claims of service providers up to an amount covering a reasonable value of the services rendered.

Recommendation 92 (priority of a security right in a right to payment of funds credited to a bank account)

57. In response to a question, it was noted that no priority rule was mandatory as recommendation 75 provided that any competing claimant might at any time subordinate its priority unilaterally or by agreement in favour of any other existing or future competing claimant.

58. In response to another question as to whether the draft guide accommodated a system drawing a distinction between a “floating charge” (i.e. a security right in all assets of a grantor) and a “fixed charge” (i.e. a security right in specified assets), it was noted that the draft guide provided for a security right in all assets of a grantor where the grantor could retain possession of the encumbered assets and a licence to

deal with them, but subsumed that right under the general notion of “security right” and did not subordinate it to a security right in specified assets. In that connection, it was stated that it would be for the legislator in each State enacting legislation based on the recommendations of the draft guide to review other bodies of existing domestic law and make any necessary adjustments.

59. In response to yet another question, it was noted that if, by claiming priority under the third sentence of recommendation 92 even over a person with whom the depositary bank had concluded a control agreement, the depositary bank committed a breach of contract, it might be liable to damages under law other than the secured transactions law.

60. After discussion, it was agreed that all those matters should be clarified in the commentary.

Recommendation 95 (priority of a security right in money)

61. It was agreed that the commentary should give examples of transactions in which a security right in money was granted and explain the meaning of the notion of “money” (i.e. notes and coins).

Recommendations 101 and 102 (priority of a security right in attachments to movable property subject to a specialized registration or title certificate system)

62. It was agreed that recommendation 101 could be deleted on the understanding that recommendation 79 would be revised to cover security rights in attachments as well.

63. It was also agreed that recommendation 102 could be retained to cover certain types of attachment to movable property, such as large aircraft engines or parts of motor vehicles, which were subject to separate registration in registries other than the registries in which security rights in the movable property were registrable.

Recommendations 103-105 (priority of a security right in a mass or product)

64. It was agreed that the reference to “the remainder of the aggregate value” in recommendation 104 could be usefully clarified.

65. Subject to the changes mentioned above, the Working Group approved the substance of recommendations 72 to 105.

Chapter X. Default and enforcement

Recommendation 131 (liability)

66. It was agreed that the commentary could explain that recommendation 128 was sufficient to address a waiver or variation of liability of the secured creditor for failure to comply with its obligations under the provisions of the law on default and enforcement, which was the subject of recommendation 131.

Recommendation 136 (summary judicial proceedings)

67. It was agreed that recommendation 136 or the commentary could elaborate on the meaning of summary judicial proceedings by referring to: (a) the need of the

process to be available promptly upon request; (b) notice and opportunity to all interested parties to be heard in accordance with minimum procedural safeguards available in the relevant jurisdiction; and (c) the cost of the proceedings.

Recommendation 140 (court relief)

68. It was widely felt that recommendation 140 could not include a uniform list of measures aimed at deterring unfounded applications to a court or improper interference with the enforcement process because procedures differed from State to State. However, it was agreed that one measure that might be recommended was to shift the burden of paying the costs of the proceedings on the losing party, which could be useful, at least, if the debtor was not insolvent or a solvent third-party guarantor was involved.

Recommendation 142 (secured creditor's right to take possession of an encumbered asset)

69. It was agreed that paragraph (a) of recommendation 142, which was common to both alternative A and alternative B, should be retained. It was widely felt that including in the security agreement a reference to the right of the secured creditor to take possession of the encumbered asset out of court put the grantor on notice at the outset.

70. It was also agreed that paragraph (c) of recommendation 142 should be retained to reflect the rule that out-of-court repossession of the encumbered assets by the secured creditor was permitted only in the absence of any objection by the grantor at that time. It was widely felt that objection would be evident in the case of use or threat of use of force, duress or similar illegal behaviour on the part of the secured creditor. It was also agreed that requiring positive consent could create uncertainty as to the meaning, the time and the scope of such consent.

71. As to paragraph (b) of recommendation 142, differing views were expressed. One view was that alternative A was preferable as it put the grantor on notice without giving the opportunity to a bad faith grantor to conceal the assets or otherwise wrongfully remain in possession of the assets or requiring the secured creditor to describe all the enforcement process at a time when that might not be possible, problems that alternative B was said to raise. Another view was that alternative B was preferable as, by requiring the secured creditor to give a notice of its intention to pursue extrajudicial enforcement with details, it gave the grantor a real opportunity to object, if the grantor so wished.

72. However, it was stated that paragraph (b) did not need to be so broad since: (a) recommendation 141 provided for the right of the secured creditor to take possession of the encumbered asset out of court in the event of default on the part of the grantor; (b) notice of default was sufficient to inform the grantor that it had defaulted; (c) the security agreement was sufficient to put the grantor on notice that the secured creditor had a right to take possession of the encumbered assets out of court; and (d) recommendations 145 and 148 were sufficient to deal with extrajudicial disposition of an encumbered asset and out-of-court acceptance of an encumbered asset by the secured creditor in total or partial satisfaction of the secured obligation. It was also observed that it was important to devise a rule that would encourage grantors to pay rather than use the judicial system to delay enforcement, which was a problem that was generally considered to have a negative impact on the availability and the cost of credit. In addition, it was said that the

typical cases would involve business parties and commercial assets, such as inventory or equipment, rather than automobiles of consumers, with respect to which consumer-protection law would in any case prevail (see recommendation 2, paragraph (b)).

73. In the discussion, the suggestion was made that paragraph (b) of recommendation 142 could include a requirement that the secured creditor inform the grantor of the time it intended to take possession of the encumbered asset out of court. That suggestion was objected to. It was stated that reference to time could create questions, such as whether a notice that failed to mention the time would be effective, what would be the legal consequences of the secured creditor missing the time or what would happen if the grantor requested a change of time.

74. After discussion, it was agreed that paragraph (b) of recommendation 142 should be limited to extrajudicial repossession, focus on the notice of default and the right of the secured creditor to take possession of the encumbered asset out of court under recommendation 141, as well as on the consent of the grantor to out-of-court repossession by the secured creditor given in the security agreement.

Recommendations 144-146 (advance notice of extrajudicial disposition)

75. It was agreed that paragraph (d) of recommendation 145 should be deleted as: (a) recommendation 131 dealt with the liability of the secured creditor for failure to comply with its obligations under the law; (b) recommendation 140 entitled the grantor to obtain judicial relief if a secured creditor pursuing extrajudicial enforcement violated its obligations under the law; and (c) a new recommendation could be included to deal with the consequences of a failure of the secured creditor to comply with its obligations with regard to the rights acquired by a good-faith buyer, lessee or licensee.

76. It was also agreed that recommendation 146 was useful in that it stated the objectives of the notice and the manner in which it should be given and could thus be retained and placed before recommendation 145 or at its beginning.

Recommendations 157 and 158 (rights acquired through extrajudicial disposition)

77. It was agreed that a new recommendation could be included in the draft guide to address the consequences of failure of the secured creditor to comply with any of its obligations under the provisions of the law governing default and enforcement on the rights of a good-faith buyer, lessee or licensee of an encumbered asset.

78. With respect to recommendations 157 and 158, it was agreed that the reference to good faith could be deleted. It was widely felt that, in the case of an extrajudicial sale, lease or licence in compliance with the rules set forth in the law, the question of whether the buyer, lessee or licensee was in good faith would not arise. As to the remedies of the grantor in the case of an extrajudicial sale, lease or licence by the secured creditor not in compliance with the rules of the law to a person in bad faith, it was agreed that that matter could be addressed in recommendation 140.

79. Subject to the changes mentioned above, the Working Group approved the substance of recommendations 126 to 170.

Chapter XI. Insolvency

80. It was noted that the recommendations on insolvency were the result of a significant amount of coordination between Working Group V and Working Group VI and had been approved in principle by the Commission at its thirty-ninth session.⁴ It was stated, however, that some drafting changes might still be needed in the additional insolvency recommendations of the draft guide on valuation of assets and post-commencement financing. It was also observed that some more recommendations from the *UNCITRAL Legislative Guide on Insolvency Law*⁵ might need to be added (e.g. recommendation 63).

81. With respect to recommendation 172, support was expressed for both alternative A and alternative B. With respect to alternative B, it was suggested that some reference should be included to the principle of functional equivalence of secured transactions and retention-of-title devices. It was also suggested that, for reasons of clarity, a recommendation along the lines of alternative A should be added to reflect the unitary approach, which would otherwise be the understanding under the *UNCITRAL Insolvency Guide* (i.e. that references to security right in the *UNCITRAL Insolvency Guide* would apply to retention of title and functionally equivalent devices if a unitary approach were to be followed).

82. After discussion, the Working Group requested the Secretariat to prepare a recommendation along the lines of alternative A to reflect the unitary approach and referred the other suggestions made with respect to recommendation 172 to the Commission. In addition, recalling its decision (see para. 84 below) to refer in the non-unitary approach recommendation to retention of title only and have a separate text for functional equivalents of retention of title, the Working Group agreed that the same approach should be followed in recommendation 172.

Chapter XII. Acquisition financing devices

Terminology

83. The Working Group considered definitions (a) (“security right”) and (b) (“acquisition security right”), as well as the definitions suggested in the note to definition (b) (“acquisition financing devices”, “retention-of-title devices” and “ownership right under a retention-of-title device”).

84. It was noted that, pursuant to consultations between the secretariat of the International Institute for the Unification of Private Law (Unidroit) and the secretariat of the Commission, it was tentatively agreed that, to avoid overlap and conflict between the law recommended in the draft guide and a draft model law on leasing that Unidroit was preparing, that draft model law would defer with respect to leases that created a security right and to the definition of “security right” to the law recommended in the draft guide. However, to implement that approach, it was noted that the Working Group needed to devise a definition of “security right” that would cover both “acquisition security right” (which definition (a) already did) and “retention-of-title ownership (which definition (a) did not currently cover as it was not adjusted to the non-unitary approach developed in the draft guide). In addition, it was noted that financial leases needed to be defined so as to cover those that

⁴ Ibid., para. 62.

⁵ United Nations publication, Sales No. E.05.V.10.

created a security right or the functional equivalent of a security right, but not other leases. After discussion, the Working Group requested the Secretariat to prepare the necessary definitions to ensure effective coordination between the law recommended in the draft guide and the draft model law on leasing being prepared by Unidroit.

85. It was agreed that the definition of “acquisition financing devices” could be retained. With respect to the definitions of “retention-of-title devices” and “ownership under a retention-of-title device”, it was suggested that they should refer only to retention of title, seller and buyer, as, although the same rules should apply to functional equivalents of retention-of-title devices, such as financial leases and purchase-money lending transactions, those latter transactions did not fall terminologically under the notion of “retention-of-title devices”. That suggestion received support subject to ensuring that language would be added in the recommendations on the non-unitary approach to ensure that the recommendations on retention-of-title devices would apply to functionally equivalent transactions, such as financial leases and purchase-money lending transactions.

86. In that connection, it was suggested that the term “financial lease” needed to be defined to ensure that the law recommended in the draft guide would apply to a lease, at the end of the term of which the lessee would retain the asset subject to payment of a price, but not to a lease at the end of the term of which the lessee would return the asset to the lessor. There was support for that suggestion.

87. With respect to the definition of “ownership under a retention-of-title device”, it was also agreed that it should be revised to reflect the conditional character of the sale and the resulting transfer (“until or under the condition that the price is paid”).

88. Subject to the changes mentioned above, the Working Group approved the substance of the definitions of the terms “security right”, “acquisition security right”, “acquisition financing devices”, “retention-of-title devices” and “ownership right under a retention-of-title device”. The Working Group also agreed that text should be added to the recommendations on retention-of-title devices to ensure that they applied to functionally equivalent transactions, such as financial leases and purchase-money transactions. In addition, it was agreed that a definition of the term “financial lease” should also be included in the terminology.

A. Unitary approach to acquisition financing devices

Recommendation 183 (creation of an acquisition security right)

89. It was agreed that the rule applicable to the creation of a non-acquisition security right (i.e. recommendation 13) should also apply to the creation of an acquisition security right and, as a result, recommendation 183 (unitary approach) should be deleted.

Recommendation 185 (exceptions to the requirement of registration with respect to an acquisition security right)

90. It was agreed that the reference to “possession” in the second sentence of recommendation 185, which was intended to ensure that the exception from the registration rule in the first sentence for acquisition security rights in consumer goods did not affect methods of third-party effectiveness other than registration in the general security rights registry, could be deleted. It was widely felt that “possession” would be generally part of creation.

Recommendation 186 (priority of an acquisition security right in goods other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same goods)

91. It was agreed that the priority given by recommendation 186 to an acquisition security right in goods other than inventory or consumer goods should also be given to an acquisition security right in consumer goods. It was widely felt that sales of consumer goods to consumers should be protected. It was stated that the absence of registration would not adversely affect general, non-acquisition financing of consumer goods, as normally the general financier would not extend credit with future consumer goods as security.

Recommendation 192 (priority of an acquisition security right in proceeds of inventory)

92. It was widely felt that the super-priority given under recommendation 187 to acquisition security rights in inventory should not be extended to proceeds of inventory in the form of receivables. It was stated that such an approach would not discourage inventory acquisition financing as, in most jurisdictions, the rights of the inventory acquisition financier were extinguished after the sale of the inventory in the ordinary course of business. It was also observed that failure to exclude receivables from the rule in recommendation 192 would discourage receivables financing as the receivables financier would lose to the inventory financier. After discussion, it was agreed that the words “other than receivables” should be retained outside square brackets in recommendation 192.

B. Non-unitary approach to acquisition financing devices**Purpose**

93. The Working Group postponed consideration of the text in square brackets in paragraph (b) of the purpose section until it had an opportunity to consider recommendation 193 where the issue of compatibility with the regime governing the enforcement of ownership rights arose (see para. 103 below). It was agreed that paragraph (c) of the purpose section should be aligned with paragraph (c) of the purpose section under the unitary approach.

Recommendation 182 (equivalence of an ownership right under a retention-of-title device to a security right)

94. The Working Group postponed consideration of the text in square brackets in recommendation 182 until it had an opportunity to consider recommendation 193 where the issue of compatibility with the regime governing the enforcement of ownership rights arose.

Recommendation 183 (creation of an ownership right under a retention-of-title device)

95. It was agreed that a minimal writing requirement should be adopted, permitting the use of electronic records and any evidence of the intention of the seller to retain title to the goods sold under retention of title. It was also agreed that an additional recommendation should be included to ensure that a buyer that bought goods under retention of title by the seller would be entitled, even before full payment and acquisition of ownership in the goods, to use the value paid for the goods to obtain

credit secured by the goods. It was stated that that was possible even in jurisdictions in which retention-of-title devices were the main forms of non-possessory security under various theories, such as the theory that the buyer had an expectation of ownership.

96. In addition, it was stated that the reference to the creation of ownership rights should be revised as a retention-of-title sale did not actually “create” ownership. It was also observed that a rule of interpretation could be added to ensure that a purchase-money security right could be created and have priority, while making clear that the purchase-money lender would not become the owner. After discussion, the Secretariat was requested to revise the formulation of recommendation 183, as well as any other recommendation that used the same formulation.

Recommendations 185 (exceptions to the requirement of registration with respect to an acquisition security right), 186 (priority of an acquisition security right in goods other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same goods) and 192 (priority of an acquisition security right in proceeds of inventory)

97. It was agreed that the same changes made to recommendations 185, 186 and 192 in the context of the unitary approach should be made to those recommendations in the context of the non-unitary approach.

Recommendation 187 (priority of an ownership right under a retention-of-title device in inventory as against an earlier registered non-acquisition security right in inventory of the same kind)

98. Doubt was expressed as to whether priority was an appropriate concept to use with respect to ownership rights under retention-of-title devices (although it was admitted that priority was an appropriate concept for rights under financial leases and purchase-money lending transactions). However, it was clarified that that put into question neither the usefulness of recommendations 187 and 188 nor the need for registration of a notice about retention-of-title devices and their functional equivalents in the general security rights registry.

99. In that connection, serious concern was expressed as to the requirement to register ownership rights on the grounds that such an approach was contrary to current practice in many jurisdictions. In that connection, it was noted that, at its thirty-ninth session, the Commission had approved the substance of all the recommendations of the draft guide⁶ and thus fundamental policy issues on which the Commission had reached a decision were no longer open for discussion by the Working Group. In any case, it was stated that the draft guide did not require registration of ownership rights but rather a notice informing third parties that the buyer in possession of the goods bought under retention of title might not be the owner. In addition, it was observed that the functional approach (requiring that the same or equivalent rules, including the rules on registration, applied to all devices serving security functions), had been approved both by the Working Group (see A/CN.9/574, para. 46 and A/CN.9/588, para. 52) and the Commission,⁷ as it was essential for a secured transactions regime that would promote the availability of low-cost credit.

⁶ See *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 13-78.

⁷ *Ibid.*, para. 18.

100. In the discussion, it was explained that, at least for some of those that expressed concern with regard to registration of retention-of-title rights, there was no fundamental objection to the notion of registration of retention-of-title rights as long as it was made clear that the draft guide did not require registration of ownership but rather of a notice aimed at informing third parties that the buyer might not be the owner of the goods in its possession.

Recommendation 193 (enforcement of an ownership right under a retention-of-title device)

101. It was agreed that both alternative A and alternative B should be retained. It was widely felt that, with respect to the enforcement of ownership rights under retention-of-title devices, the principle of functional equivalence should be followed but only to the extent that it was not incompatible with the regime applicable to the enforcement of ownership rights. It was stated that, to the extent that enforcement of ownership rights differed from State to State, application of the principle embodied in alternative B would result in non-uniform results. In addition, it was agreed that the commentary should explain the application of both alternative A and alternative B.

102. Recalling its decision to postpone consideration of the text in square brackets in paragraph (b) of the purpose section until it had had an opportunity to consider recommendation 193, the Working Group agreed that the bracketed text in paragraph (b) of the purpose section and recommendation 182 could be deleted. It was widely felt that the matter addressed in the bracketed text had been sufficiently dealt with in alternative B of recommendation 193 (non-unitary approach).

103. Also recalling its decision to refer in the non-unitary approach to retention of title, buyers and sellers only (see para. 85 above), the Working Group agreed that appropriate wording should be added to ensure that the non-unitary approach recommendations applied not only to retention of title but also to functionally equivalent devices, such as financial leases (properly defined to cover only those at the end of the term of which the assets would be transferred to the lessee) and other acquisition financing transactions.

104. Subject to the changes mentioned above, the Working Group approved the substance of recommendations 182 to 194 (unitary and non-unitary approach).

V. Future work

105. It was noted that the twelfth session of the Working Group was scheduled to take place in New York from 12 to 16 February 2007 and the fortieth session of the Commission was scheduled to take place in Vienna from 25 June to 12 July 2007. The Working Group also noted that the draft guide was expected to be considered by the Commission from 25 June to 2 July with final adoption expected to take place on 6 July 2007. In addition, the Working Group noted that from 9 to 12 July 2007 a congress on international trade law would take place in the context of the Commission session for delegates and experts to discuss relevant issues for future reference.

**B. Note by the Secretariat on the draft legislative guide on secured transactions:
terminology and recommendations, submitted to the Working Group on Security
Interests at its eleventh session

C.	Special rules when the applicable law is the law of a multi-unit State	214-217
XIV.	Transition	218-227

Terminology and rules of interpretation¹

1. The present Guide adopts terminology to express the concepts that underlie an effective secured transactions regime. The terms used are not drawn from any particular legal system. Even when a particular term appears to be the same as that found in a particular national law, the meaning given to the term may differ. This approach is taken to provide readers with a common vocabulary and conceptual framework and to encourage harmonization of the law governing security rights.

2. “Or” is not intended to be exclusive; use of the singular also includes the plural and vice versa; “include” and “including” are not intended to indicate an exhaustive list; “may” indicates permission and “should” indicates instruction; and

¹ The definitions and the rules of interpretation are part of the commentary, not of the recommendations of the Guide. They are included in the present document for the Working Group’s ease of reference. They are based on the definitions and rules of interpretation contained in document A/CN.9/WG.VI/WP.27/Add.1, unless otherwise indicated.

“such as” and “for example” are to be interpreted in the same manner as “include” or “including”. [“Creditors” should be interpreted as including both the creditors in the forum State and foreign creditors, unless otherwise specified.] References to “person” should be interpreted as including both natural and legal persons, unless otherwise specified. The term “law” throughout the Guide is intended to include both statutory and non-statutory law. The phrase “law governing negotiable instruments” or any similar expression encompasses all law that applies to negotiable instruments, including not only negotiable instrument law but also contract and other law that might be applicable. The same rule applies to the phrase “law governing negotiable documents”.

3. The following paragraphs identify the principal terms used and the core meaning given to them in the Guide. The meaning of those terms is further refined when they are used in subsequent chapters, which also define and use additional terms (as is the case, for example, with the chapter on insolvency). The definitions should be read together with the relevant recommendations.

(a) “Security right” means a consensual property right in movable property and attachments that secure payment or other performance of one or more obligations, regardless of whether the parties have designated it as a security right. It includes acquisition security rights and non-acquisition security rights. With respect to receivables, security right also means an outright transfer of a receivable, as well as a transfer by way of security. References to a “security right” in the Guide also refer to the “right of an assignee”;

(b) “Acquisition security right” means [, in the context of a unitary approach,] a security right in an asset that secures the obligation to pay any unpaid portion of the purchase price of the asset or an obligation incurred to enable the grantor to acquire the asset. Acquisition security rights include rights, which are denominated as security rights, as well as rights acquired under retention-of-title sales, hire-purchase transactions, financial leases and purchase-money lending transactions. “Grantor” of an acquisition security right includes a buyer, financial lessee or grantor in a purchase-money lending transaction. “Acquisition financier” means the secured creditor with an acquisition security right and includes a retention-of-title seller, financial lessor or purchase-money lender;

[Note to the Working Group: The Working Group may wish to define “acquisition financing devices” along the following lines:

“Acquisition financing devices [in the context of a unitary approach] are arrangements that, whether denominated as security devices or not, enable a person to acquire possession or use of assets subject to an obligation to pay their price to a person that retains a security right in them until the price is paid.”

This definition could be placed right before the definition of “acquisition security right”.

The Working Group may also wish to consider that additional definitions are necessary for the non-unitary approach along the following lines:

(a) “Retention of title devices” [in the context of a non-unitary approach] are arrangements that enable a person to acquire possession or use of assets subject to an obligation to pay their price to a person who retains title in them until the price is paid. Retention-of-title devices [in the context of a non-unitary approach] include

retention-of-title sales, hire-purchase agreements, financial leases and purchase-money lending transactions; and

(b) “Ownership right under a retention of-title device” [in the context of a non-unitary approach] is ownership in an asset that secures the obligation to pay any unpaid portion of the purchase price of the asset or other obligation incurred to enable the buyer, financial lessee or grantor to acquire the asset.” (For this note, see A/CN.9/WG.VI/WP.24/Add.5, note to the definitions).]

(c) “Secured obligation” means the obligation secured by a security right;

(d) “Secured creditor” means a creditor that has a security right. References to the “secured creditor” in the Guide also refer to the “assignee”;

(e) “Debtor” means a person that owes performance of the secured obligation [and includes secondary obligors, such as guarantors of a secured obligation]. The debtor may or may not be the person that grants the security right to a secured creditor (see grantor);

(f) “Grantor” means a person that creates a security right in one or more of its assets in favour of a secured creditor to secure either its own obligation or that of another person (see debtor of the receivable). References to the “grantor” in the Guide also refer to the “assignor”;

[Note to the Working Group: The Working Group may wish to note that the third sentence in the definitions of “security right”, and the second sentence in the definitions of “secured creditor” and “grantor” is intended to ensure that the general recommendations apply to security rights in receivables and to outright transfers of receivables, unless otherwise provided.]

(g) “Security agreement” means an agreement between a grantor and a creditor, in whatever form or terminology, that creates a security right;

(h) “Encumbered asset” means tangible or intangible movable property that is subject to a security right;

(i) “Tangible property” means all forms of corporeal movable property. Among the categories of tangibles are inventory, equipment, attachments, negotiable instruments and negotiable documents;

(j) “Inventory” means a stock of tangibles held for sale or lease in the ordinary course of business and also raw and semi-processed materials (work-in-process);

(k) “Equipment” means tangibles used by a person in the operation of its business;

(l) “Attachments to immovable property” means tangibles that are so physically attached to immovable property as to be treated as immovable property without however losing their identity as movables under the law of the State where the immovable property is located;

[Note to the Working Group: The Working Group may wish to note that the commentary will set forth examples of attachments to immovable property, such as air-conditioning equipment or furnace but not bricks or cement (for this note, see A/CN.9/WG.VI/WP.26/Add.4, definitions).]

(m) “Attachments to movable property” means tangibles that are so physically attached to other movable property [as to be treated as part of that movable property], without however losing their identity under law other than this law;

[Note to the Working Group: The Working Group may wish to note that the commentary will set forth examples of attachments to movable property, such as tires and aircraft engines (for this note, see A/CN.9/WG.VI/WP.26/Add.4, definitions).]

(n) “Mass or product” means tangibles other than money that are so physically associated or united with each other that they lose their separate identity under law other than this law;

(o) “Intangible property” means all forms of movable property other than tangibles. Among the categories of intangibles are receivables and other rights to the performance of non-monetary obligations;

(p) “Receivable” means a right to payment of a monetary obligation and a contractual right to performance of a non-monetary obligation excluding rights to payment evidenced by a negotiable instrument, the obligation to pay under an independent undertaking and the obligation of a bank to pay funds credited to a bank account;

[Note to the Working Group: The Working Group may wish to note that the definition of “receivable” has been revised to reflect the understanding of the Working Group that the general recommendations, as supplemented by the recommendations on receivables, should apply to: (a) contractual non-monetary receivables (see A/CN.9/603, para. 35); and (b) non-contractual receivables (see A/CN.9/603, para. 36). In addition, language has been added in definition (w), “original contract”, to ensure that reference to “original contract” includes any other non-contractual source of a receivable. Moreover, language has been added within square brackets to: (a) recommendation 22 (effectiveness of a bulk assignment and an assignment of future, parts of and undivided interests in receivables) to ensure that statutory limitations on the assignability of non-contractual receivables is not interfered with; and (b) to recommendation 109 (representations of the assignor) to ensure that the recommendations dealing with representations of the assignor do not apply to an assignment of a non-contractual receivable (see A/CN.9/603, para. 36; see also notes to recommendations 2, subparagraph (a), 22 and 109).]

(q) “Assignment” means the creation of a security right in a receivable, including an outright transfer of a receivable;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the creation of a security right in a receivable includes an outright transfer of receivables by way of security, which is treated in the Guide as a security right.]

(r) “Assignor” means the person that makes an assignment of a receivable;

(s) “Assignee” means the person to which an assignment of a receivable is made;

(t) “Subsequent assignment” means an assignment by the initial or any other assignee. In the case of a subsequent assignment, the person that makes that

assignment is the assignor and the person to which that assignment is made is the assignee;

(u) “Debtor of the receivable” means a person liable for payment of a receivable. “Debtor of the receivable” includes a guarantor, as an accessory guarantee is a receivable;

[Note to the Working Group: The Working Group may wish to recall that, at its tenth session, it agreed that the word “account” should be deleted from the references to “the account debtor”. The term “account debtor” has been replaced with the term “debtor of the receivable”. Thus, the word “debtor” continues to refer to the debtor of the secured obligation and confusion with that term is avoided. In addition, this approach is consistent with the United Nations Assignment Convention, in which reference is made to “the debtor” to denote “the debtor of the receivable”. The slight difference in the terminology is due to the fact that the Convention uses the term “assignor” to refer to the debtor of the secured obligation.]

(v) “Notice” means a communication in writing [, except where otherwise provided in the Guide]. “Notification of the assignment” means a communication in writing that reasonably identifies the assigned receivable and the assignee. The writing requirement is met by an electronic communication if the information contained therein is accessible so as to be usable for subsequent reference (see article 6 of the UNCITRAL Model Law on Electronic Commerce and article 9 (2) of the Electronic Contracting Convention);

[Note to the Working Group: The Working Group may wish to note that the Guide refers to several types of notice (i.e. notice registered in the general security rights registry, notice of default, notice of intention to pursue extrajudicial enforcement, notification of the assignment and notification of inventory financiers on record). The Working Group may wish to consider whether any of these notices should not be in writing and whether the same term should be used for all notices or a different term should be used for some of them (e.g. “notice” or “registered notice” for the notice registered in the general security rights registry and “notification” for all other notices).

The Working Group may wish to note that the rule that “writing” includes electronic communications is reflected in recommendation 10. Depending on whether the reference to a “signed writing” is retained in recommendations 13 (creation) and 116, subparagraph (c) (agreement not to raise defences of the debtor of the receivable), the Working Group may wish to consider whether the rule contained in recommendation 11 that “signature” includes electronic signature should be reflected in the definitions as well as in recommendation 11.]

(w) “Original contract” in the context of an assignment means the contract between the assignor and the debtor of the receivable from which the receivable arises. With respect to the non-contractual receivables, “original contract” means the non-contractual source of the receivable;

(x) “Negotiable instrument” means an instrument that embodies a right to payment, such as a cheque, bill of exchange or promissory note, which satisfies the requirements for negotiability under the law governing negotiable instruments;

(y) “Negotiable document” means a document that embodies a right for delivery of tangibles, such as a warehouse receipt or a bill of lading, and satisfies the requirements for negotiability under the law governing negotiable documents;

(z) “Independent undertaking” means a letter of credit (commercial or standby), a confirmation of a letter of credit, an independent guarantee (demand, first demand, bank guarantee or counter-guarantee) or any other undertaking recognized as independent by law or practice rules, such as the United Nations Convention on Independent Guarantees and Standby Letters of Credit (“the United Nations Guarantee and Standby Convention”), the Uniform Customs and Practice for Documentary Credits, the International Standby Practices, and the Uniform Rules for Demand Guarantees;

(aa) “Proceeds under an independent undertaking” means the right to receive a payment due, a draft accepted or deferred payment incurred or another item of value, in each case to be delivered by the guarantor/issuer honouring or by a nominated person giving value for a draw under an independent undertaking. The term does not include:

- (i) The right to draw (i.e. to request payment) under an independent undertaking; or
- (ii) What is received under an independent undertaking or upon disposition of proceeds under an independent undertaking (i.e. the proceeds themselves);

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the definition refers to “proceeds under an independent undertaking” to be consistent with terminology generally used in independent undertaking law and practice. The term as used in the Guide means the right of the grantor as beneficiary of an independent undertaking to receive whatever payment or other value is given under the independent undertaking contingent upon the beneficiary’s compliance with the terms and conditions of the independent undertaking. The term does not include the proceeds themselves, that is, what is actually received upon honour of a drawing from the guarantor/issuer, confirmer or nominated person (a beneficiary’s receipt of value from a negotiating bank should not be characterized as honour or disposition) or upon disposition of a right to proceeds under an independent undertaking.]

The term “proceeds under an independent undertaking” refers to a right to receive even though the term “proceeds” as used in independent undertaking law and practice may refer either to the right to receive or to whatever is received under the independent undertaking and even though the term “proceeds” as used elsewhere in the Guide refers to whatever is received. The commentary will highlight the distinction between a security right in proceeds under an independent undertaking (as an original encumbered asset) and the “proceeds” (a key concept of the Guide) of assets covered in the Guide.]

(bb) “Guarantor/issuer” means a bank or other person that issues an independent undertaking;

(cc) “Confirmer” means a bank or other person that adds its own independent undertaking to that of the guarantor/issuer;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, in line with article 6, subparagraph (e), of the United Nations Guarantee and Standby Convention, a confirmation provides the

beneficiary with the option of demanding payment from the confirmer in conformity with the terms and conditions of the confirmed independent undertaking instead of from the guarantor/issuer.]

(dd) “Nominated person” means a bank or other person that is identified in an independent undertaking by name or type (e.g. “any bank in country X”) as being nominated to give value under an independent undertaking and that acts pursuant to that nomination;

(ee) A secured creditor has “control” [as against a guarantor/issuer, confirmer or nominated person] with respect to proceeds under an independent undertaking:

- (i) Automatically upon the creation of the security right if the guarantor/issuer, confirmer or nominated person is the secured creditor; or
- (ii) If the guarantor/issuer, confirmer or nominated person has made an acknowledgment in favour of the secured creditor.

[Note to the Working Group: The Working Group may wish to refer with respect to the bracketed text to the note to recommendation 96 (priority of a security right in proceeds under an independent undertaking).]

(ff) “Acknowledgment” with respect to proceeds under an independent undertaking means that the guarantor/issuer, confirmer or nominated person that will pay or otherwise give value upon a draw under an independent undertaking has, unilaterally or by agreement:

- (i) Acknowledged or consented to (however acknowledgement or consent is evidenced) the creation of a security right (whether denominated as an assignment or otherwise) in favour of the secured creditor in the proceeds from an independent undertaking; or
- (ii) Has obligated itself to pay or give value to the secured creditor upon a draw under an independent undertaking.

(gg) “Bank account” means an account that is maintained by a bank into which funds may be deposited or credited. The term includes a checking or other current account, as well as a savings or time deposit account. The term does not include a claim against the bank arising under law governing negotiable instruments;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the right to payment of funds credited to a bank account covers a right to the payment of funds transferred into an internal account of the bank and not applied to any obligations owing to the bank. The commentary will also explain that funds transferred to the bank by way of anticipated reimbursement of a future payment obligation that the bank has accepted in the ordinary course of its banking business is also covered to the extent that the person that gave the bank instructions has a claim to those funds if the bank does not make the future payment.]

(hh) A secured creditor has “control” with respect to a right to payment of funds credited to a bank account:

- (i) Automatically upon the creation of a security right if the depositary bank is the secured creditor;

(ii) If the depositary bank has concluded a control agreement with the grantor and the secured creditor, according to which the depositary bank has agreed to follow instructions from the secured creditor with respect to the right to payment of funds credited to the bank account without further consent of the grantor; or

(iii) If the secured creditor is the account holder;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that: (a) there is no obligation on a depositary bank to enter into a control agreement; (b) that a secured creditor's rights will be subject to the rights and obligations of the depositary bank under law and practice governing bank accounts; and (c) a control agreement requires the consent of the grantor (as well as of the depositary bank) and the grantor retains the right to deal with the funds in the bank account until the secured creditor instructs the depositary bank otherwise (although in some control agreements the funds would be blocked from the time of the conclusion of the control agreement). The commentary will also explain that subparagraph (c) covers situations where: (a) an existing account is transferred to the secured creditor; (b) the secured creditor agrees with the grantor that funds should be deposited to an account to be opened later; and (c) the secured creditor is the only account holder (i.e. not merely a joint account holder).]

(ii) "Intellectual property right" includes patents, trademarks, service marks, trade secrets, copyright and related rights and designs. It also includes rights under licences of such rights;

(jj) "Proceeds" means whatever is received in respect of encumbered assets. For example, proceeds include what is received as a result of sale or other disposition, collection, lease or licence of an encumbered asset, proceeds of proceeds, civil and natural fruits, dividends, distributions, insurance proceeds and claims arising from defects, damage or loss;

(kk) "Priority" means the right of a person to derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant;

(ll) "Competing claimant" means:

(i) Another secured creditor with a security right in the same encumbered asset (whether as an original encumbered asset or proceeds);

(ii) In the context of the non-unitary system for acquisition security rights, the seller, financial lessor or purchase-money lender of the same encumbered asset that has retained title to it;

(iii) Another creditor of the grantor asserting a right in the same encumbered asset (e.g. by operation of law, attachment or seizure or similar process);

(iv) The insolvency representative in the insolvency of the grantor;² or

(v) Any buyer or other transferee (including a lessee or licensee) of the encumbered asset;

² In the chapter on insolvency, reference is made to "the insolvency of the debtor" for reasons of consistency with the terminology used in the *UNCITRAL Legislative Guide on Insolvency Law* (see footnote 55).

(mm) “Possessory security right” means a security right in tangibles that are in the actual possession of the secured creditor or of another person (other than the debtor or other grantor) holding the asset for the secured creditor;

(nn) “Non-possessory security right” means a security right in: (i) tangibles that are not in the actual possession of the secured creditor or another person holding the tangibles for the benefit of the secured creditor, or (ii) intangibles;

[Note to the Working Group: The Working Group may wish to consider whether subparagraphs (mm) and (nn) are necessary after the decision not to make such a distinction between possessory and non-possessory security rights. The terms are used only in recommendations 1, subparagraph (e) (key objectives), and 2, subparagraph (d) (assets, parties, secured obligations and security rights).]

(oo) “Possession”, except as the term is used in recommendations 27 and 48-50 with respect to the issuer of a negotiable document, means the actual possession of tangibles by a person or an agent or employee of that person, or by another person holding on behalf of that person, or an independent person that acknowledges that it holds for that person. It does not include constructive, fictive or symbolic possession;

(pp) “Issuer” of a negotiable document means the person that is obligated to deliver the tangibles covered by the document under the law governing negotiable documents;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, in the case of a so-called multimodal bill of lading (if it qualifies as a negotiable document under the applicable law), the “issuer” may be a person that subcontracts various portions of the transport of the goods to other persons but still takes responsibility for their transport and for any damage that might occur during carriage.]

(qq) “Insolvency court” means a judicial or other authority competent to control or supervise an insolvency proceeding;

(rr) “Insolvency estate” means assets and rights of the debtor that are controlled or supervised by the insolvency representative and subject to the insolvency proceedings;

(ss) “Insolvency proceedings” means collective judicial or administrative proceedings for the purposes of either reorganization or liquidation of the debtor’s business conducted according to the insolvency law;

(tt) “Insolvency representative” means a person or body responsible for administering the insolvency estate;

(uu) “Buyer in the ordinary course of business” means a person that buys inventory in the ordinary course from a person in the business of selling tangibles of that kind and without knowledge that the sale violates the rights of the secured creditor under the security agreement [or other rights of another person in the tangibles];

(vv) “Lessee in the ordinary course of business” means a person that leases inventory in the ordinary course from a person in the business of leasing tangibles of that kind and without knowledge that the lease violates the rights of the secured creditor under the security agreement [or other rights of another person in the tangibles];

(ww) “Licensee in the ordinary course of business” means a person that licenses intangible property in the ordinary course from a person in the business of licensing property of that kind and without knowledge that the license violates the rights of the secured creditor under the security agreement [or other rights of another person in the property];

[Note to the Working Group: The Working Group may wish to note that the terms “buyer in the ordinary course of business”, “lessee in the ordinary course of business” and “licensee in the ordinary course of business” are referred to in recommendation 83 (rights of buyers, lessees and licensees of encumbered assets). The commentary will clarify that it is possible for a buyer, lessee or licensee to know of the existence of a security right but not know whether the transfer violates the terms of the security agreement. The commentary will also explain that, in the rare cases in which the buyer of inventory has knowledge not only of the security right but also that the sale violates the terms of the security agreement, the buyer will not qualify as a buyer in the ordinary course of business and, therefore, not take free under recommendation 83, subparagraph (a). The commentary will also clarify that the test in recommendations 83 is the same as in recommendations 94 priority of a security right in a right to payment of funds credited to a bank account) and 95 (priority of a security right in money).]

(xx) “Consumer goods” means goods intended to be used for personal, family or household purposes.

Recommendations³

I. Key objectives of an effective and efficient secured transactions law⁴

Purpose

The purpose of the recommendation on key objectives is to provide a broad policy framework for the establishment and development of an effective and efficient secured transactions law. This recommendation could be included in a preamble to the secured transactions law as a guide to the underlying legislative policies to be taken into account in the interpretation and the application of the secured transactions law (hereinafter referred to as “the law”).

Key objectives

1. The law should be designed:
 - (a) To promote secured credit;
 - (b) To allow utilization of the full value inherent in a broad range of assets to support credit in the widest possible array of credit transactions;
 - (c) To enable parties to obtain security rights in a simple and efficient manner;

³ The recommendations in the present document are based on recommendations contained in the document indicated in a footnote next to the title of each chapter, unless otherwise indicated in a footnote next to the title of a particular recommendation or note.

⁴ See A/CN.9/WG.VI/WP.26/Add.7.

- (d) To provide for equal treatment of diverse sources of credit and of diverse forms of secured transactions;
- (e) To validate non-possessory security rights;
- (f) To encourage responsible behaviour on the part of all parties by enhancing predictability and transparency;
- (g) To establish clear and predictable priority rules;
- (h) To facilitate enforcement of creditor's rights in a predictable and efficient manner;
- (i) To balance the interests of affected persons;
- (j) To recognize party autonomy; and
- (k) To harmonize secured transactions laws, including conflict-of-laws rules.

II. Scope of application⁵

Purpose

The purpose of the scope provisions of the law is to establish a single comprehensive regime for secured transactions. It should specify the assets, the parties, the secured obligations and the security rights to which the law applies.

Assets, parties, secured obligations and security rights

2. The law should apply:

(a) To all types of movable property and attachment, tangible or intangible, present or future, including inventory, equipment and other goods, contractual and non-contractual receivables, contractual non-monetary obligations, negotiable instruments, negotiable documents, rights to payment of funds credited to a bank account, proceeds under an independent undertaking and intellectual property rights;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the general recommendations, as supplemented by the recommendations on receivables apply to: (a) contractual and non-contractual receivables (however, recommendations 22 and 109 do not apply to non-contractual receivables); and (b) contractual non-monetary obligations. The commentary will also explain that law other than the law recommended in the Guide applies to the rights of obligors of contractual non-monetary obligations (see also notes to definition (p), "receivable" and recommendations 22 and 109).]

(b) To all legal and natural persons, including consumers, without, however, affecting their rights under consumer-protection legislation;

(c) To all types of obligation, present or future, determined or determinable, including fluctuating obligations and obligations described in a generic way;

(d) To all types of possessory and non-possessory security right in movable property;

⁵ See A/CN.9/WG.VI/WP.26/Add.7.

(e) To all types of property right created contractually to secure the payment or other performance of an obligation, irrespective of the form of the relevant transaction, including the various forms of retention of title, financial leases and hire-purchase agreements, as well as transfers of title by way of security.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that, while the Guide applies to security rights (defined as consensual security rights), the chapter on priority applies to priority contests between consensual and non-consensual security rights.]

Outright transfers of receivables⁶

3. The law should apply to outright transfers of receivables, subject to recommendation 160 (application of the chapter on enforcement to outright transfers of receivables).

[Note to the Working Group: The Working Group may wish to note that, as definition (p), “receivable”, excludes rights to payment under a negotiable instrument, the obligation to pay under an independent undertaking and the obligation of a bank to pay funds credited to a bank account, recommendation 3 does not apply to an outright transfer of a negotiable instrument, proceeds under an independent undertaking or a right to payment of funds credited to a bank account. However, the recommendations of the Guide apply to transfers of such assets for security purposes, as they are treated as secured transactions.]

The commentary will explain that outright transfers of negotiable instruments, proceeds under an independent undertaking and funds credited to a bank account have been excluded as: (a) they raise different issues and would require special rules; and (b) unlike receivables in which a security transfer and an outright transfer would compete for priority based on the order of registration, with respect to negotiable instruments a secured creditor could always obtain a superior right by taking possession of the instrument. Similarly, with respect to proceeds under an independent undertaking and rights to payment of funds credited to a bank account, a secured creditor could always obtain a superior right by control. The commentary will also discuss issues arising in outright transfers of negotiable instruments other than cheques for the benefit of States that may wish to address them in the law (for this note, see A/CN.9/611, note to recommendation 3, subparagraph (f)).

In that connection, the Working Group may wish to note that the commentary will explain that, while principles of secured transactions law can easily be made to apply to the outright transfer of promissory notes and, perhaps, bills of exchange other than cheques, in a manner similar to the Guide’s coverage of the outright transfer of receivables, those principles do not apply well to the outright transfer of cheques. The latter topic is sufficiently covered by the law of negotiable instruments and the law of bank collections.

The commentary will also explain that an enacting State that wishes to expand the scope of its secured transactions law to apply to outright transfers of negotiable instruments that are either promissory notes or bills of exchange (and to expand its definition of “security right” to cover the right of the transferee in such a transaction) might wish to consider providing that a security right that is an outright transfer of such a negotiable instrument is automatically effective against

⁶ See A/CN.9/611, recommendation 3, subparagraph (f).

third parties upon the transfer. Such a rule would avoid disrupting existing financial practices.

In addition, the commentary will explain that, with respect to the priority of such a security right, the general principles of priority would apply. Most particularly, the general principle in recommendation 76, as qualified by recommendations 89 and 90, would govern. As in the case of an outright transfer of a receivable, the outright transferee of such a negotiable instrument should be able to enforce the instrument without further consent of the assignor subject to the rights of the obligors on the negotiable instrument as described in the chapter on enforcement (for the preceding 3 paragraphs, see A/CN.9/611/Add.1, note to recommendation 3, subparagraph (f)).]

Aircraft, railway rolling stock, space objects, ships and intellectual property

4. Notwithstanding recommendation 2, subparagraph (a), the law should not apply:

(a) To aircraft, railway rolling stock, space objects, ships and attachments thereto to the extent that the recommendations of this law are inconsistent with existing special laws or international obligations of the State relating to these types of asset. Where a direct inconsistency exists, the law should expressly confirm that the special laws and international obligations govern those assets to the extent of that inconsistency;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the reference to “aircraft, railway rolling stock, space objects and ships” should be understood pursuant to the meaning of those terms in national law or international conventions dealing with them.]

(b) To intellectual property rights to the extent that the recommendations of this law are inconsistent with existing laws or international obligations of the State relating to these assets.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that a State enacting secured transactions legislation in accordance with the Guide should consider whether it might be appropriate to adjust certain of the recommendations as they apply to security rights in intellectual property. In this regard, a State should examine its existing intellectual property laws and the State’s obligations under intellectual property treaties, conventions and other international agreements and, in the event that the recommendations of the Guide are directly inconsistent with any such existing laws or obligations, the State’s secured transactions law should expressly confirm that those existing intellectual property laws and obligations govern such issues to the extent of the inconsistency.]

In considering whether any adjustments of the recommendations as they apply to security rights in intellectual property are appropriate, a State should analyse each circumstance on an issue-by-issue basis and should have proper regard both to establishing an efficient secured transactions regime and to ensuring the protection and exercise of intellectual property rights in accordance with international conventions and national laws.

The Working Group may wish to note that, at its thirty-ninth session, the Commission requested the Secretariat to prepare a paper on intellectual property

financing for consideration at its fortieth session with a view to providing further guidance to States with respect to intellectual property financing.]

Securities and immovable property

5. The law should provide that it does not apply to [indirectly held] securities and immovable property, although it may affect such assets, as provided in recommendations 24 and 45.

[Note to the Working Group: The Working Group may wish to note that securities and immovable property are excluded from the scope of the Guide as original encumbered assets. However, they may be affected by the recommendations of the Guide.]

If a security right in securities or a mortgage secures a receivable, negotiable instrument or other obligation and the receivable, negotiable instrument or other obligation is assigned, the security right in the securities or the mortgage follows. This rule does not affect any third-party rights, priority and enforcement requirements existing under securities or immovable property law. For example, a security right in intermediated securities that was made effective against third parties by a book entry or control under securities law will have priority.

The Working Group may wish to consider whether, if securities or immovable property are proceeds of an asset covered in the Guide, the security right extends to such proceeds. If so, language may need to be added to ensure that third-party rights, priority and enforcement of the security right in securities or immovable property as proceeds are subject to securities or immovable property law as applicable.

In addition, the Working Group may wish to note that the bracketed text in recommendation 5 is intended to avoid excluding from the scope of the Guide directly held securities to the extent they are not subject to any special legislation (even the UNIDROIT draft Convention on Substantive Rules Regarding Intermediated Securities does not apply to directly held securities). Thus, no gap would be left with respect to, for example, security rights in shares of a subsidiary all held by the parent company, since such security rights are involved in significant commercial loan transactions.]

Employment payments

6. The law should provide that it does not apply to receivables in the form of remunerations, retirement payments, employment benefits and other payments accruing from employment contracts or relations, as well as other similar payments (e.g. family support payments) to the extent that law other than this law restricts the grant of security rights in or the transfer of such receivables.

Other exceptions

7. The law should limit any other exceptions to its scope of application and, to the extent any other exceptions are made, they should be set forth in the law in a clear and specific way.

III. Basic approaches to security and other general rules⁷

Purpose

The purpose of the recommendations on basic approaches to security is to ensure that the law covers in an integrated and consistent manner all forms of rights in movable property that serve security purposes.

Integrated and functional approach

8. The law should establish an integrated and consistent set of provisions on security rights in tangibles and intangibles. Its rules should apply to all contractually created rights (regardless of form) in movable property that secure an obligation, including rights under a transfer of title to tangibles or an assignment of receivables for security purposes, a retention of title sale, a financial lease or a hire-purchase agreement [, except to the extent otherwise provided in recommendations 171 (non-unitary approach to acquisition financing devices, alternative B) and 193 (enforcement of ownership rights under retention-of-title devices, non-unitary approach, alternative B)].

Party autonomy

9. The law should provide that, except as otherwise provided in [specify the provisions that may not be derogated from or varied by agreement, e.g. standard of conduct in the context of enforcement], the secured creditor and the grantor or the debtor may derogate from or vary by agreement its provisions relating to their respective rights and obligations. Such an agreement does not affect the rights of any person that is not a party to the agreement.

Electronic communications

10. The law should provide that, where it requires that a communication or a contract should be in writing, or provides consequences for the absence of a writing, that requirement is met by an electronic communication if the information contained therein is accessible so as to be usable for subsequent reference.

[Note to the Working Group: The Working Group may wish to note that this recommendation tracks the language of article 9 (2) of the United Nations Electronic Contracting Convention, which is consistent with article 6 of the UNCITRAL Model Law on Electronic Commerce.]

11. [The law should provide that, where the law requires that a communication or a contract should be signed by a person, or provides consequences for the absence of a signature, that requirement is met in relation to an electronic communication if:

(a) A method is used to identify the party and to indicate that person's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

⁷ See A/CN.9/WG.VI/WP.26/Add.7.

- (ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence].

[Note to the Working Group: The Working Group may wish to note that this recommendation tracks the language of article 9 (3) of the United Nations Electronic Contracting Convention, which is consistent with article 7 of the UNCITRAL Model Law on Electronic Commerce. The Working Group may also wish to note that according to recommendation 116, subparagraph (c) (agreement not to raise defences or rights of set-off), a signed writing is required for a waiver of the defences of the debtor of a receivable.]

IV. Creation of a security right (effectiveness as between the parties)⁸

Purpose

The purpose of the provisions of the law dealing with creation is to specify the way in which a security right in movable property is created (i.e. becomes effective as between the parties).

A. General recommendations

Creation of a security right

12. The law should provide that a security right is created by agreement between the grantor and the secured creditor that identifies the secured creditor and the grantor and reasonably describes the secured obligation and the assets to be encumbered. A generic description of the encumbered assets is sufficient (e.g. “all assets” or “all inventory”).

13. The law should provide that the agreement may be oral if accompanied by transfer of possession of the encumbered asset. Otherwise, the agreement must be in a writing [signed by the grantor in accordance with recommendation 11] [that evidences the intent of the grantor to grant a security right].

Time of creation

14. The law should provide that a security right is created when the requirements for the security agreement under recommendations 12 and 13 (creation of a security right) are fulfilled and the grantor has rights in the assets or the right to encumber the assets, unless the parties agree to a later date.

Obligations subject to a security agreement⁹

15. The law should provide that a security right may secure any type of obligation, present or future, determined or determinable, as well as conditional and fluctuating obligations.

⁸ See A/CN.9/WG.VI/WP.26/Add.7.

⁹ See A/CN.9/611.

Assets subject to a security agreement

16. The law should provide that a security right may be given in any type of asset, including parts of assets and undivided interests in assets. A security agreement may cover assets that, at the time the security agreement is concluded, may not yet exist or that the grantor may not yet own or have the power to encumber. Any exceptions to these rules should be limited and described in the law in a clear and specific way.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that a security right in future assets or assets belonging to third parties is not created until the grantor acquires a right in those assets. Other law (e.g. sales or property law) may permit a person to grant a security right or otherwise dispose of assets that it does not own (e.g. a rule that protects a good faith transferee that acquires a right from a grantor in possession of assets it does not own).]

17. The law should provide that a security right may be granted in all assets of a grantor.

[Note to the Working Group: The Working Group may wish to note that the commentary discusses an approach taken in some legal systems of preserving in the case of insolvency of a person that has granted a security right in all its assets (for a discussion of all-asset security, see A/CN.9/WG.VI/WP.11/Add.2, paras. 20-25) a certain percentage of the value of the encumbered assets for unsecured creditors (see A/CN.9/WG.VI/WP.9/Add.6, paras. 33-35). However, for the reasons set forth in the commentary, the Guide does not recommend this approach (see recommendation 85 (priority of preferential claims)).]

Creation of a security right in proceeds¹⁰

18. The law should provide that, unless otherwise agreed by the parties to the security agreement, the security right in the encumbered asset extends to its identifiable proceeds.

19. [The law should provide that, notwithstanding recommendation 18, the security right extends to proceeds in the form of civil and natural fruits of encumbered assets, only if the parties so provide in the security agreement.]

[Note to the Working Group: The Working Group may wish to note that recommendation 19 introduces a different approach to civil and natural fruits of encumbered assets from the approach taken in recommendation 18 with respect to other types of proceeds. However, the notion of “proceeds”, as defined in the terminology section, includes civil and natural fruits, and the natural expectation may be that the security right will extend automatically to civil and natural fruits. Thus, the Working Group may wish to consider deleting recommendation 19.]

In addition, the Working Group may wish to consider all the definitions and recommendations on security rights in proceeds together (i.e. definition (jj) and recommendations 18-21, 43-44, 80, 173-174, 191-192 and 198). The Working Group may also wish to note that the commentary will make clear that these recommendations have to be read together.]

¹⁰ See A/CN.9/WG.VI/WP.26/Add.4, recommendations 29, 29 bis and 30.

Commingled proceeds

20. The law should provide that, where proceeds in the form of money have been commingled with other property so that the proceeds are not identifiable, the amount of the proceeds immediately before they were commingled with other property is to be treated as identifiable proceeds, provided that, at any time after commingling, the total amount of the property was more than the amount of the proceeds. If, at any time after commingling, the total amount of the property was less than the amount of the proceeds, the total amount of the property at the time that its amount was lowest plus the amount of any proceeds later commingled with the property is to be treated as identifiable proceeds.

21. The law should provide that, where proceeds other than money have been commingled with other property of the same type so that the proceeds are not identifiable, the share of the total property which the value of the proceeds bears to the total value of the property is to be treated as identifiable proceeds.

[Note to the Working Group: The Working Group may wish to note that recommendation 20 focuses on money as: (a) commingled proceeds other than money, is a fairly rare phenomenon; and (b) tracing rules for those situations are also rare. However, recommendation 21 might be applied in cases in which proceeds are fungible items that are commingled with other items of the same type (e.g. when the proceeds of a barter transaction consist of grain stored in a common grain elevator).]

B. Asset-specific recommendations

Effectiveness of a bulk assignment and an assignment of future, parts of and undivided interests in receivables¹¹

22. The law should provide that:

(a) An assignment of [contractual] receivables that are not specifically identified, future receivables and parts of or undivided interests in receivables is effective as between the assignor and the assignee and as against the debtor of the receivable, as long as, at the time of the assignment or, in the case of future receivables, at the time they arise, they can be identified to the assignment to which they relate; and

(b) Unless otherwise agreed, an assignment of one or more future receivables is effective without a new act of transfer being required to assign each receivable.

[Note to the Working Group: The Working Group may wish to note that the bracketed text in subparagraph (a) of this recommendation is intended to ensure that statutory limitations to the assignability of non-contractual receivables are not interfered with (see A/CN.9/603, para. 36 and notes to definition (p), "receivable", and recommendations 2, subparagraph (a), and 109). The Working Group may wish to consider all the definitions and recommendations on security rights in receivables together (i.e. definitions (a), (p)-(w) and recommendations 18-20, 22-24, 45, 108-118, 160-162, 172, 192, 197, 207 and 213). The Working Group may wish to

¹¹ For recommendations 22-24, see A/CN.9/611, recommendations 14-16.

note that the commentary will make clear that these recommendations, as well as all the other-specific recommendations, have to be read together.]

Effectiveness of an assignment made despite an anti-assignment clause

23. The law should provide that:

(a) An assignment is effective as between the assignor and the assignee and as against the debtor of the receivable notwithstanding an agreement between the initial or any subsequent assignor and the debtor of the receivable or any subsequent assignee limiting in any way the assignor's right to assign its receivables;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that subparagraph (a) of this recommendation makes ineffective only an agreement between an obligor and an obligee that limits the obligee's right to assign a receivable owed by the obligor to the obligee. If such a receivable is assigned, the obligor is the "debtor of the receivable" and the obligee is the "assignor".

For example, if an agreement for the lease of goods limits the lessor's right to assign the rents due to it under the lease, subparagraph (a) makes the limitation on assignment ineffective, because the agreement is between the obligor (the lessee) and the obligee (the lessor) of the receivable (the rent arising from the lease agreement). By way of contrast, if the lease agreement between the lessor and the lessee limits the lessee's right to assign a receivable consisting of the lessee's claim to rents due to the lessee from the sublessee under a sublease, subparagraph (a) has no application and nothing in the Guide makes the limitation ineffective. That is because the agreement limiting the right of the lessee to assign its claim for rents due to it from the sublessee under the sublease is not an agreement between the lessee (sublessor and obligee in a sublease) and the sublessee (obligor in the sublease). Whether the limitation in the lease is enforceable against the lessee would be determined by the law other than the law recommended in the Guide.

The same analysis would apply if the restriction on transfer was contained in a licence of intellectual property. Subparagraph (a), would render ineffective a term in the licence agreement that restricted the licensor from assigning fees due from the licensee. However, it would not render ineffective a term in the licence agreement restricting the licensee from assigning sublicense fees. Whether the latter term would be effective would be determined by law other than that recommended in the Guide.

The commentary will also explain that States that cannot protect themselves through statutory limitations on assignment may wish to consider an exception to this recommendation along the lines of article 40 of the United Nations Assignment Convention.]

(b) Nothing in this recommendation affects any obligation or liability of the assignor for breach of such an agreement, but the other party to such an agreement may not avoid the original contract or the assignment contract on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement;

- (c) This recommendation applies only to assignments of receivables:
 - (i) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;
 - (ii) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;
 - (iii) Representing the payment obligation for a credit card transaction;
 - (iv) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that the contract avoidance referred to in subparagraph (b) means contract termination in general.]

Creation of a security right in a right that secures a receivable, a negotiable instrument or any other obligation

24. The law should provide that:

(a) A secured creditor with a security right in a receivable, negotiable instrument or any other obligation covered as an encumbered asset by this law automatically has the benefit, without further action by either the grantor or the secured creditor, of any personal or property right that secures payment or other performance of the receivable, negotiable instrument or other obligation;

(b) If the personal or property right is an independent undertaking, the security right automatically extends to the proceeds under the independent undertaking but does not extend to the right to draw under the independent undertaking;

(c) This recommendation does not apply to a right in immovable property that under law other than this law is transferable separately from a receivable, negotiable instrument or other obligation that it may secure;

(d) A secured creditor with a security right in a receivable, negotiable instrument or any other obligation has the benefit of any personal or property right securing payment or other performance of the receivable, negotiable instrument or other obligation notwithstanding any agreement between the grantor and the debtor of the receivable or the obligor of the negotiable instrument or other obligation limiting in any way the grantor's right to create a security right in the receivable, negotiable instrument or other obligation, or in any personal or property right securing payment or other performance of the receivable, negotiable instrument or other obligation;

(e) Nothing in this recommendation affects any obligation or liability of the grantor for breach of the agreement mentioned in subparagraph (d) of this recommendation, but the other party to such an agreement may not avoid the contract from which the receivable, negotiable instrument or other obligation arises, or the security agreement creating the personal or property security right on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement;

(f) Subparagraphs (d) and (e) of this recommendation apply only to security rights in receivables, negotiable instruments or other obligations:

(i) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;

(ii) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;

(iii) Representing the payment obligation for a credit card transaction;

(iv) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.

(g) The rule in subparagraph (a) of this recommendation does not affect any duties of the grantor to the debtor of the receivable or to the obligor of the negotiable instrument or other obligation;

(h) To the extent that the automatic effects under subparagraph (a) of this recommendation and the automatic third-party effectiveness under recommendation 45 of a security right in any personal or property security right securing payment or other performance of a receivable, negotiable instrument or other obligation is not impaired, this recommendation does not affect any requirement under law other than this law relating to the form or registration of the creation of security rights in any assets, securing payment or other performance of a receivable, negotiable instrument or other obligation, that are outside the scope of this law.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the purpose of this recommendation is to facilitate financing transactions, such as securitizations of pools of loans secured by security rights in movable and immovable property. In these cases the buyer of the loans will want to be able to look to the security rights securing the loans but would not want to incur, at the outset of the purchase, the additional expense of a separate act of transfer (if required under law other than the law recommended in the Guide) for each loan in the pool of loans, which could number in the hundreds or thousands. Separate acts of transfer, if any, would be necessary (if required under other law) to enforce only those loans which are later in default, typically a small proportion of the loans in the pool actually purchased. The buyer could decide whether to accept the expense of separate acts of transfer at the time of enforcement, whether voluntarily from the seller or with the assistance of a court. In deciding whether to purchase the loans and at what price, however, the buyer would take into account the expense of separate acts of transfer only for the small portion of the loans expected to be in default, not for the entire pool of loans. As a result of the expense savings, the seller should be able to obtain a higher purchase price, thereby making more funds available to the seller.]

The commentary will also make it clear that this recommendation applies to outright transfers of receivables (but not of negotiable instruments or other obligations), as the Guide generally applies only to outright transfers of receivables.

The commentary will also clarify that subparagraphs (a) to (c) track the language of article 10, paragraph (1), of the United Nations Assignment Convention with appropriate adjustments necessary in view of the nature of the law in the Guide

as domestic law, while subparagraphs (e) and (f) track the language of recommendation 23, subparagraphs (b) and (c), as well as article 10, paragraphs (3) and (4), of the United Nations Assignment Convention.

In addition, the commentary will clarify that subparagraph (g) tracks the language of article 10, paragraph (5), of the United Nations Assignment Convention, according to which, if the security right involves the delivery of possession of an asset and such delivery causes damage to the debtor of the receivable or the obligor of the negotiable instrument or other obligation, any liability that may exist under law applicable outside the law recommended in the Guide is not affected. Such liability may arise, for example, in the case of a delivery of possession of an item of valuable tangible property if the secured creditor or transferee damages or loses the property.

Furthermore, the commentary will clarify that subparagraph (h), which tracks the language of article 10, paragraph (6), of the United Nations Assignment Convention, makes it clear that the form of transfer of a security right in an asset outside the scope of this law (e.g. an immovable) is left to law other than this law, at least to the extent that the automatic creation and third-party effectiveness of a security right is not impaired. Accordingly, a notarized document and registration may be necessary for the transferee of a mortgage to obtain various rights under immovable property law, such as the right to enforce the mortgage. The commentary will further explain that the form of transfer of a security right in an asset within the scope of this law will be subject to this law.]

Creation of a security right in a negotiable instrument¹²

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, pursuant to recommendations 12 and 13, a security right in a negotiable instrument may be created by a written and possibly signed agreement between the grantor and the secured creditor or by an oral agreement and transfer of possession of the negotiable instrument. The commentary will also explain that creation of a security right pursuant to these recommendations will not affect rights obtained by endorsement of the negotiable instrument under the law governing negotiable instruments.]

In addition, the Working Group may wish to consider all the definitions and recommendations on security rights in negotiable instruments together (i.e. definition (x), and recommendations 45, 89-90, 119, 163-164, 195, 209 and 213). The Working Group may also wish to note that the commentary will make clear that these recommendations have to be read together.]

Creation of a security right in a right to payment of funds credited to a bank account¹³

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, pursuant to recommendations 12 and 13, a security right in a right to payment of funds credited to a bank account may be created by agreement between the grantor and the secured creditor. The commentary will also explain that the purpose of recommendation 25 is to validate as between the grantor

¹² See A/CN.9/611/Add.1.

¹³ See A/CN.9/611/Add.1, recommendation 26.

and the secured creditor (but not as against the depositary bank) a security right created in a right to payment of funds credited to a bank account despite an anti-assignment agreement between the depositary bank and the grantor (holder of the account).]

25. The law should provide that a security right in a right to payment of funds credited to a bank account is effective notwithstanding an agreement between the grantor and the depositary bank limiting in any way the grantor's right to create a security right in its right to payment of funds credited to the bank account. However, the depositary bank has no duty to recognize the secured creditor and no obligation is otherwise imposed on the depositary bank with respect to the security right without the depositary bank's consent.

[Note to the Working Group: The Working Group may wish to note that the commentary to recommendation 2, subparagraph (b), will clarify that enacting States may wish to take into account any impact that the recommendations in the Guide might have on consumer-protection law.]

In addition, the Working Group may wish to consider all the definitions and recommendations on rights to payment of funds credited to a bank account together (i.e. definitions (gg) and (hh), as well as recommendations 25, 46, 92-94, 120-121, 165-167, 208-209 and 213). The Working Group may also wish to note that the commentary will make clear that these recommendations have to be read together.]

Creation of a security right in proceeds under an independent undertaking¹⁴

26. The law should provide that a beneficiary may grant a security right in proceeds under an independent undertaking, even if the right to draw under the independent undertaking is itself not transferable under law and practice governing independent undertakings. The grant of a security right in proceeds under an independent undertaking is not a transfer of the right to draw under an independent undertaking. [Whether the right to draw under an independent undertaking may be transferred is a matter governed by the law and practice governing independent undertakings.]

[Note to the Working Group: The Working Group may wish to note that the commentary will make clear that the second part of the first sentence clarifies the important point that transferability of an independent undertaking itself (i.e. the right to draw) is irrelevant to the right to create a security right in the proceeds under the independent undertaking. The commentary will also explain that the second sentence distinguishes a right to request payment under an independent undertaking from a right to receive the proceeds under an independent undertaking.]

The Working Group may wish to consider whether the bracketed third sentence should be part of the recommendation or the commentary as it states what other law provides and not what this law should provide. In addition, the Working Group may wish to consider all the definitions and recommendations on security rights in proceeds under an independent undertaking together (i.e. definitions (z) and (aa)-(ff), and recommendations 26, 47, 96, 122-124, 168 and 210-212). The Working Group may also wish to note that the commentary will make clear that these recommendations have to be read together.]

¹⁴ See A/CN.9/611/Add.1, recommendation 25.

Creation of a security right in a negotiable document¹⁵

27. The law should provide that the creation of a security right in a negotiable document also creates a security right in the goods represented by the document, provided that the issuer is in possession of the goods, directly or indirectly, at the time the security right in the document is created.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that a security right in goods covered by a negotiable document may be created pursuant to recommendations 12 and 13 (by a written and possibly signed agreement between the grantor and the secured creditor or even by an oral agreement and transfer of possession of the document) directly in the goods or pursuant to recommendation 27 through the creation of a security right in the negotiable document covering the goods. In addition, the commentary will clarify that recommendation 27 is intended to obviate that, in situations where a security right exists in a negotiable document, a separate security right needs to be created in the goods covered by the document. Moreover, the commentary will explain that neither recommendations 12 and 13 nor recommendation 27 nor any other recommendation affects rights in negotiable documents acquired under the law governing negotiable documents.]

For the benefit of enacting States that may wish to consider addressing multi-modal transport documents, the commentary will also explain that, as the definition of a negotiable document in the Guide is left to the law governing negotiable documents, the negotiability of multi-modal transport documents is also left to that law. The Working Group may wish to consider all the definitions and recommendations on security rights in negotiable documents together (i.e. definitions (y), (oo) and (pp), and recommendations 27, 48-50, 97-98, 169, 125, 195 and 213). The Working Group may also wish to note that the commentary will make clear that these recommendations have to be read together.]

Creation of a security right in attachments¹⁶

28. The law should provide that a security right may be created in tangibles that are attachments at the time of creation of the security right or continue in tangibles that become attachments subsequently. Security rights in attachments to immovable property may be created under this law or law on immovable property.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, if the security right in attachments to immovable property is created under the law of immovable property, the security right may at the same time be effective against third parties. The commentary will also explain that, if such a security right is created under the secured transactions law, rights of persons that have rights under immovable property law may not be affected. For example, a security right created under secured transactions law may be enforced only if there are no competing rights created under immovable property law or has no priority over competing rights acquired under immovable property law (see recommendation 99).]

In addition, the Working Group may wish to consider all the definitions and recommendations on security rights in attachments together (i.e. definitions (l) and

¹⁵ See A/CN.9/611/Add.1, recommendation 28.

¹⁶ See A/CN.9/WG.VI/WP.26/Add.4, recommendation 31.

(m), as well as recommendations 28, 51-53, 99-102, 170, 189, 195 and 200-201). The Working Group may also wish to note that the commentary will make clear that these recommendations have to be read together.]

Creation of a security right in a mass or product¹⁷

29. The law should provide that a security right may not be created in tangibles that are commingled in a mass or product. However, a security right created in tangibles before they were commingled in a mass or product continues in the mass or product. The security right is limited to the value of the tangibles immediately before they became part of the mass or product.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that a security right may not be created in tangibles that are commingled in a mass or product as, at the time of creation of the security right, they do not exist as separate tangibles (see definition (n), “mass or product”). The commentary will also explain that a security right in the goods before they became commingled in a mass or product continues in the mass or product according to the formula contained in the third sentence of this recommendation. Under this formula, if the value of flour is 5 and the value of sugar is 5, while the value of the cake produced is 20 and there are two secured creditors, each secured creditor will get 5, while the remaining value of 10 will be preserved for the grantor and its unsecured creditors. If the value of the cake is lower than the value of the ingredients, the secured creditors will share the loss proportionately (e.g. if the value of the cake is 8, each secured creditor will get 4). This means that: (a) the secured creditor cannot get more than owed; and (b) if the value of the mass or product is less, the secured creditor will suffer a proportionate diminution (this is a priority issue).]

In addition, the Working Group may wish to consider all the definitions and recommendations on security rights in masses or products together (i.e. definition (n) and recommendations 29, 54, 103-105 and 195). The Working Group may also wish to note that the commentary will make clear that these recommendations have to be read together.]

V. Effectiveness of a security right against third parties¹⁸

Purpose

The purpose of the requirements of the law for the effectiveness of a security right against third parties is to create a foundation for the predictable, fair and efficient ordering of priorities by:

(a) Requiring registration as a precondition for the effectiveness of a security right against third parties, except where exceptions and alternatives to registration are appropriate in light of countervailing commercial policy considerations; and

(b) Establishing a legal framework to create and support a simple, cost-efficient and effective public registry system for the registration of notices with respect to security rights.

¹⁷ See A/CN.9/WG.VI/WP.26/Add.4, recommendation 32.

¹⁸ See A/CN.9/WG.VI/WP.26/Add.5.

A. General recommendations

Meaning of third-party effectiveness

30. The law should provide that a security right is effective against third parties only if it is created in accordance with this law and one of the methods referred to in recommendation 33, 35 or 36 has been followed.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that recommendation 30 is intended to clarify the meaning of third-party effectiveness because of its importance for both the third-party effectiveness and the priority chapter and the fact that third-party effectiveness separate from effectiveness as between the parties is a new notion to many legal systems. Recommendation 30 is supplemented by recommendations 31 and 32 that further clarify the meaning of third-party effectiveness.]

Effectiveness of a security right that is not effective against third parties

31. The law should provide that a security right that has been created in accordance with the provisions of the law on creation is effective against the grantor even if it is not effective against third parties.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that a security right that is not effective against third parties has no effects as against general creditors or secured creditors whose security rights are not effective against third parties. This approach is consistent with the meaning of third-party effectiveness adopted in the Guide. The practical result of this approach is that no issue of priority arises in the case of security rights that are not effective against third parties and, therefore, such rights would be equal between them and with the rights of general creditors (unless they become judgement creditors, see recommendation 86).]

Continued effectiveness of a security right against third parties after a transfer of the encumbered asset

32. The law should provide that, except as provided in recommendations 82 to 84, after transfer of a right in an encumbered asset, a security right that is effective against third parties at the time of the transfer continues to encumber the asset and remains effective against third parties.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation reflects the rule that the mere transfer of an encumbered asset does not make a security right ineffective against third parties (droit de suite). This rule is restated somewhat differently in recommendation 81. The Working Group may wish to consider whether the rule should be stated in this chapter or in the chapter on priority.]

General method for achieving third-party effectiveness of a security right

33. The law should provide that a security right created in accordance with the provisions of the law on creation is effective against third parties if a notice with respect to the security right is registered in the general security rights registry referred to in recommendations 55-71.

34. [The law should provide that registration of such a notice does not create a security right and is not necessary for the creation of a security right.]

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that registration of a notice of a security right is a pre-condition for it to become effective against third parties but does not create the security right, nor is it necessary to create a security right. Creation requires mainly an agreement between the parties as provided in the recommendations of the chapter on creation.]

Alternative methods for achieving third-party effectiveness of a security right

35. The law should provide that a security right may also be made effective against third parties by one of the following alternatives to registration methods:

(a) In tangibles, by transfer of possession of an encumbered asset, as provided in recommendations 40 and 48-50;

(b) [In consumer goods of a value less than [specify value] at the time of creation of the security right, automatically upon creation of a non-acquisition security right (for acquisition security rights in consumer goods, see recommendation 185), as provided in recommendation 41];

(c) In movable property subject to registration in a specialized registry or notation on a title certificate, by such registration or notation, as provided in recommendation 42;

(d) In proceeds, automatically by achieving third-party effectiveness with respect to the proceeds, as provided in recommendations 43 and 44;

(e) In a personal or property right securing payment or other performance of a receivable, negotiable instrument or other obligation, by achieving third-party effectiveness with respect to the receivable, negotiable instrument or other obligation, as provided in recommendation 45;

(f) In a right to payment of funds credited to a bank account, by control, as provided in recommendation 46;

(g) In attachments, by registration as provided in recommendations 51-53; and

(h) In a mass or product by achieving third-party effectiveness [in a tangible before it becomes part of a mass or product] [in the mass or product within a certain time period after the tangible becomes part of the mass or product], as provided in recommendation 54.

Exclusive method for achieving third-party effectiveness of a security right in proceeds under an independent undertaking

36. The law should provide that, except as provided in recommendation 45, a security right in drawing proceeds under an independent undertaking is made effective against third parties only by control, as provided in recommendation 47.

Different third-party effectiveness methods for different types of asset

37. The law should provide that different methods for achieving third-party effectiveness may be used for different items or kinds of encumbered assets, whether they are encumbered pursuant to the same security agreement or not.

Continuity in third-party effectiveness of a security right

38. The law should provide that third-party effectiveness of a security right is continuous notwithstanding a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

[Note to the Working Group: The Working Group may wish to note that this recommendation makes no separate reference to registration (i.e. advance registration before creation), as, if there is a change in the method of third-party effectiveness before registration lapses, the security will have been created and thus made effective against third parties.]

Lapse in advance registration or third-party effectiveness of a security right

39. The law should provide that, if notice of a security right has been registered or made effective against third parties and subsequently there is a period at which the security right is neither registered nor effective against third parties, registration or third-party effectiveness may be re-established. In such a case, registration or third-party effectiveness dates from the earliest time thereafter at which the security right is either registered or made effective against third parties.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that reference is made in this recommendation to registration separately from third-party effectiveness as registration may be made before the creation of a security right (see recommendation 64), while third-party effectiveness requires creation of the security right and completion of a method of third-party effectiveness (see recommendation 31).]

The Working Group may wish to note that this recommendation tracks the language of recommendations 77 and 78, under which priority dates from the time when third-party effectiveness is re-established or a notice with respect to the security right is registered. The Working Group may wish to consider whether the first sentence of recommendation 39 should be retained in this chapter as it deals with the lapse of registration or third-party effectiveness and the second sentence should be reflected only in the chapter on priority as it essentially deals with priority.

The Working Group may also wish to note that the commentary will explain that third-party effectiveness may lapse where, for example, the secured creditor does not renew its registration before expiry of its initial term or where third-party effectiveness was obtained by delivery of possession of the encumbered assets to the secured creditor but the secured creditor later returns possession to the grantor. The commentary will also explain that third-party effectiveness does not lapse in such cases if the security right is registered or made effective against third parties before the lapse of the particular method of third-party effectiveness.

The commentary will include the following examples of situations where continuity in third-party effectiveness is preserved notwithstanding lapse in a particular method of third-party effectiveness:

(a) On day 1, the grantor creates a security right in favour of the secured creditor who on the same day takes possession of the encumbered assets. On day 2, the secured creditor registers a notice about its security right and then relinquishes possession. Third-party effectiveness is continuous from day 1;

(b) On day 1, the grantor creates a security right in favour of the secured creditor on day 1 who, on the same day, registers a notice of its security right. On day 2, the secured creditor takes possession of the encumbered assets while registration lapses on day 3. Third-party effectiveness is continuous from day 1. The result is the same if the secured creditor registers again on day 4 and surrenders possession of the encumbered assets to the grantor on day 5.]

Third-party effectiveness of a security right in tangibles by possession

40. The law should provide that a security right in tangibles may also be made effective against third parties through possession.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, as the term “tangibles” covers negotiable instruments and negotiable documents (see definition (i)), this recommendation applies to third-party effectiveness of security rights in negotiable instruments and negotiable documents. As a result, a security right in a negotiable instrument or in a negotiable document may be made effective against third parties by registration or possession. Recommendations 48 to 50 add special rules with respect to third-party effectiveness of security rights in negotiable documents and goods covered by negotiable documents.]

[Third-party effectiveness of a non-acquisition security right in low-value consumer goods]

41. A non-acquisition security right in consumer goods of a value less than [specify value] at the time of creation of the security right (for acquisition security rights in consumer goods, see recommendation 185) that is not subject to a specialized registration or title certificate system is effective against third parties automatically upon creation of the security right.]

[Note to the Working Group: The Working Group may wish to note that, as there is no significant financing that involves non-acquisition security rights in consumer goods, there was broad support in the Commission at its thirty-ninth session for the deletion of recommendation 41 (and, therefore, recommendation 35, subparagraph (b); see A/61/17, para. 25). If this recommendation is retained, the Working Group may wish to consider that, as low value in one country may be high value in another country, the determination of low value should be based on a cost-benefit analysis that compares the potential realization value of an asset to the cost of registration.]

Third-party effectiveness of a security right in movables with respect to which there is a specialized registration or a title certificate system

42. The law should provide that a security right in movable property that is subject to registration in a specialized registry or notation on a title certificate under law other than this law may also be made effective against third parties by:

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that registration in a specialized registry may have constitutive rather than third-party effects and may involve registration of documents rather than a mere notice. The commentary will also explain that recommendation 42 is formulated to avoid addressing that issue which is a matter for other law. In addition, the commentary will explain that registration in the general security rights registry and registration in the specialized registry are the only available methods for achieving third-party effectiveness of a security right in movable property of the kind referred to in this recommendation (i.e. third-party effectiveness may not be achieved by possession), if so provided in the relevant special legislation (for attachments subject to specialized registration, see recommendation 53).

The commentary will also explain that recommendation 42 is supplemented by recommendation 79, under which a security right registered in the specialized registry or with respect to which a notation was made in a title certificate has priority over a security right registered in the general security rights registry. Consequently, to ensure maximum priority over all classes of competing creditors, the security right should be made effective by registration in accordance with recommendation 42 rather than recommendation 33. This approach is justified by the need to preserve the reliability of the specialized registry or title certificate system for buyers of encumbered assets or secured creditors that rely on these systems to ensure protection of their rights.]

Third-party effectiveness of a security right in proceeds¹⁹

Alternative A

43. The law should provide that, if a security right in an encumbered asset is effective against third parties, a security right in any proceeds of the encumbered asset is effective against third parties when the proceeds arise, provided that:

- (a) The security right in the encumbered asset was made effective against third parties by registration of a notice in the general security rights registry, registration in a specialized registry or notation on a title certificate and remains effective at that time; or

[Note to the Working Group: The Working Group may wish to note that subparagraph (a) would not apply, for example, to a security right that was made effective against third parties by possession. The residual rule in recommendation 44 would apply to such a right. The Working Group may also wish

¹⁹ For recommendations 43 and 44, see A/CN.9/WG.VI/ WP.26/Add.4, recommendations 41 and 41 bis.

to note that, at its thirty-ninth session, the Commission referred the alternatives to the Working Group with a view to trying, to the extent possible, to reach agreement on one of them (see A/61/17, para. 26).]

(b) The proceeds are money, receivables, negotiable instruments or rights to payment of funds credited to a bank account.

44. If recommendation 43 does not apply, the security right in the proceeds is effective against third parties for [...] days after the proceeds arise and continuously thereafter, if it was made effective against third parties by one of the methods referred to in recommendation 33 or 35 before the expiry of that time period.

Alternative B

43. The law should provide that, if a security right in an encumbered asset is effective against third parties, a security right in any proceeds of the encumbered asset is effective against third parties when the proceeds arise, provided that the proceeds are money, receivables, negotiable instruments or rights to payment of funds credited to a bank account.

44. If recommendation 43 does not apply, the security right in the proceeds is effective against third parties for [...] days after the proceeds arise and continuously thereafter, if it was made effective against third parties by one of the methods referred to in recommendation 33 or 35 before the expiry of that time period.

[Note to the Working Group: The Working Group may wish to note that, in view of the difference of opinion in the Working Group as to whether the right in proceeds should be automatically effective or whether a separate act of third-party effectiveness should take place when the proceeds arose (see A/CN.9/593, paras. 26-32), recommendation 43 includes two alternatives.

Under alternative A, a security right in proceeds is automatically effective against third parties, if the security right in the originally encumbered assets was made effective against third parties by registration or if the security right was in money and the like. If the security right was made effective against third parties by possession, according to recommendation 44, the security right in the proceeds would be effective for a short period of time and thereafter only subject to a separate act of third-party effectiveness.

Under alternative B, automatic third-party effectiveness would be limited to proceeds in the form of money and the like, while recommendation 44 would apply to all other cases. As a result of this approach, a security right in proceeds would remain effective against third parties for a few days after the proceeds arose and thereafter only if a notice was registered with respect to the security right in the proceeds or by possession. The commentary will clarify that civil and natural fruits are automatically covered as they are defined as “proceeds” (see definition (jj)).

The Working Group may also wish to consider that, to balance the needs to protect a secured creditor and third parties, the time period referred to in recommendation 44 should be as short as the grace period in the third-party effectiveness recommendation applicable to acquisition security rights (i.e. 20-30 days, see recommendation 184).]

B. Asset-specific recommendations

Third-party effectiveness of a security right in a right that secures a receivable, negotiable instrument or any other obligation²⁰

45. The law should provide that, if a security right in a receivable, negotiable instrument or any other obligation covered as an encumbered asset by this law is effective against third parties, the security right is automatically effective against third parties with respect to any personal or property right that secures payment or performance of the receivable, negotiable instrument or other obligation, without further action by either the grantor or the secured creditor. If the personal or property right is an independent undertaking, a security right in the proceeds under the independent undertaking is automatically effective against third parties (but, as provided in recommendation 24, subparagraph (b), the security right does not extend to the right to draw under the independent undertaking). This recommendation does not apply to a right in immovable property that under law other than this law is transferable separately from a receivable, negotiable instrument or other obligation that it may secure.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the general third-party effectiveness recommendations apply to security rights in receivables, as well as to outright transfers of receivables. The commentary will also explain that the language in parenthesis in the second sentence explains that the security right does not extend to the right to draw (i.e. to demand payment) under an independent undertaking. As there is no security right in the right to draw, there is no issue of third-party effectiveness in that regard.]

Third-party effectiveness of a security right in a right to payment of funds credited to a bank account²¹

46. The law should provide that a security right in a right to payment of funds credited to a bank account may also be made effective against third parties by the secured creditor obtaining control with respect to the right to payment of funds credited to the bank account.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, pursuant to recommendation 33, a security right in a right to payment of funds credited to a bank account may also become effective against third parties by registration of a notice in the general security rights registry.]

Third party effectiveness of a security right in proceeds under an independent undertaking²²

47. The law should provide that, except as provided in recommendation 45, a security right in proceeds under an independent undertaking may be made effective against third parties only by the secured creditor obtaining control with respect to the proceeds under the independent undertaking.

²⁰ See A/CN.9/611, recommendation 37.

²¹ See A/CN.9/611/Add.1, recommendation 43.

²² See A/CN.9/611/Add.1, recommendation 49.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that neither possession of an independent undertaking nor registration of a notice should be a method of achieving third-party effectiveness of a security right in a right to proceeds under an independent undertaking. Possession of an independent undertaking (even when it is in tangible form) plays only a limited role in the modern use of independent undertakings. In addition, if possession were included in the Guide as a method of achieving effectiveness against third parties, there would be a need for complex rules dealing with priority and conflict of laws. It should be noted, however, that, although possession does not constitute a method of achieving effectiveness against third parties, as a practical matter, possession would give protection to a secured creditor when the terms of the independent undertaking require the physical presentation of the independent undertaking to make a draw under the independent undertaking. In such a circumstance, the beneficiary could not make an effective draw without the secured creditor's cooperation, so the secured creditor could take steps to assure itself of payment (e.g. the secured creditor could require the beneficiary to obtain an acknowledgement that would achieve control for the secured creditor before surrendering the independent undertaking and allowing it to be presented to the guarantor/issuer or nominated person that gave the acknowledgement).]

Third-party effectiveness of a security right in a negotiable document²³

48. The law should provide that a security right in a negotiable document may also be made effective against third parties by the secured creditor obtaining possession of the document.

49. The law should provide that, if a security right in a negotiable document is effective against third parties, the corresponding security right in the goods covered by the document is also effective against third parties. As long as a negotiable document covers goods, a security right in the goods may be made effective against third parties by the secured creditor obtaining possession of the document.

50. The law should provide that a security right in a negotiable document that was made effective against third parties by the secured creditor obtaining possession of the document remains effective against third parties for a short period of [to be specified] days after the negotiable document has been relinquished to the grantor or other person for the purpose of ultimate sale or exchange, loading or unloading, or otherwise dealing with the goods covered by the negotiable document.

Third-party effectiveness of a security right in attachments²⁴

51. The law should provide that, if a security right in a tangible is effective against third parties at the time when the tangible becomes an attachment, the security right remains effective against third parties thereafter.

52. The law should provide that a security right in an attachment to immovable property may also be made effective against third parties by registration in the immovable property registry.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, in accordance with recommendation 33, a security

²³ See A/CN.9/611/Add.1, recommendations 44-44 ter.

²⁴ See A/CN.9/WG.VI/WP.26/Add.4, recommendations 45 and 46.

right in a tangible that is an attachment when the security right is made effective against third parties or becomes an attachment subsequently may be made effective against third parties by registration of a notice in the general security rights registry. The commentary will also explain that recommendation 51 is intended to clarify that no additional step is necessary to make effective against third parties a security right in an attachment that was effective against third parties before the tangible became an attachment. In addition, the commentary will explain that recommendation 52 makes it clear that a security right in an attachment to immovable property may be made effective against third parties by registration in the general security rights registry or in the immovable property registry.

This recommendation is designed to protect the integrity and reliability of the immovable property registry. It is supplemented by recommendation 99, pursuant to which a security right in attachments to immovable property made effective against third parties in accordance with immovable property law has priority over a security right in such attachment made effective against third parties in accordance with this law. Recommendation 52 is also supplemented by recommendation 100, pursuant to which a security right in attachments to immovable property, which became effective against third parties by registration in the immovable property registry under recommendation 52 has priority over a security right in the related immovable that was registered subsequently. The commentary will also explain that, if a security right in an attachment to immovable property is made effective against third parties under this recommendation, what is registered is, in principle, a matter of immovable property law. However, the attention of the legislator may have to be drawn to the need to amend immovable property law so as to permit registration of a notice about a security right rather than only notarial documents. One difficulty in third parties finding that notice is that registration in the immovable property registry is made against the asset and not the grantor.

The commentary will further explain that the security right will be in the immovable property as a whole but the notice should describe the attachment and priority should be limited to the value of the attachment, if it were detached. The question whether the attachment could be detached and how the secured creditor would be paid would also need to be addressed as a matter of enforcement (see recommendation 170). The Working Group may wish to consider whether a creditor with a right acquired under immovable property law should have a right to pay off the debt owed to the secured creditor with a security right acquired under movable property law. This matter may be left to inter-creditor agreements.

The commentary will also discuss approaches taken in recent legislation under which a security right in an attachment is registered only in the general security rights registry and the registry forwards a notice of such registration to the immovable registry.]

Third-party effectiveness of a security or other right in attachments to movable property subject to a specialized registration system or title certificate system²⁵

53. The law should provide that a security right in an attachment to movable property that is subject to registration in specialized registry or notation on a title certificate under law other than this law may also be made effective against third parties by:

²⁵ See A/CN.9/WG.VI/WP.26/Add.4, recommendation 46 bis.

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

[Note to the Working Group: The Working Group may wish to note that this recommendation tracks the language of recommendation 42.]

Third party effectiveness of a security right in a mass or product²⁶

Alternative A

54. The law should provide that, if a security right in a tangible is effective against third parties when it becomes part of a mass or product, the security right in the mass or product created under this law as provided in recommendation 29 is effective against third parties thereafter without the need for any further act.

Alternative B

54. The law should provide that, if a security right in a tangible is effective against third parties when it becomes part of a mass or product, the security right in the mass or product created under this law as provided in recommendation 29 is effective against third parties thereafter for [...] days after the mass or product is created. The security right remains effective against third parties thereafter if it is made effective against third parties by one of the methods referred to in recommendation 33 or 35 before the expiry of that time period.

VI. The registry system²⁷

Purpose

The purpose of the provisions of the law on the registry system is to establish a general security rights registry and to regulate its operation. The purpose of the registry system is to provide:

- (a) A method by which an existing or future security right in a grantor's existing or future assets may be made effective against third parties;
- (b) A basis for priority rules that depend on the time when third-party effectiveness of a security right is achieved; and
- (c) An objective source of information for third parties dealing with a grantor's assets (such as prospective secured creditors and buyers, judgement creditors and the grantor's insolvency representative) as to whether the assets may be encumbered by a security right.

The registry system should be designed to ensure that the registration and searching process is simple, time- and cost-efficient, user-friendly and publicly accessible.

[Note to the Working Group: The Working Group may wish to note that the commentary will relate the purpose section of this chapter to recommendations 12 and 13 (creation), 30 (distinguishing creation from third-party effectiveness),

²⁶ See A/CN.9/WG.VI/WP.26/Add.4, recommendation 47.

²⁷ See A/CN.9/WG.VI/WP.26/Add.5.

34 (making the point that registration does not create a security right), 42 (registration in a specialized registry) and 64 (making the point that registration may take place before creation of a security right).

The commentary will also explain that registry systems that: (a) require registration of documents (rather than of a notice as provided in recommendation 55, subparagraph (b) and 58); (b) require scrutiny or verification of the documents (rather than no scrutiny or verification by anybody other than the registrant as provided in recommendation 55, subparagraph (c)); (c) have constitutive effects (rather than the effects described in recommendation 33 or 35); and (c) require high (e.g. ad valorem) registration fees (rather than nominal fees based on cost recovery as provided in recommendation 55, subparagraph (h)) are not suitable for a speedy, efficient, inexpensive and user-friendly registry, which is crucial for a secured transactions law in movable property that promotes increased access to lower-cost credit.]

Operational framework of the registration and searching process

55. The law should provide an administrative framework to ensure that the registration and searching process operates as follows:

(a) Clear and concise guides to registration and searching procedures are widely available and information about the existence and role of the registry is widely disseminated;

(b) Registration is effected by registering a notice, containing the information specified in recommendation 58, as opposed to a copy of the underlying security agreement or other document;

(c) A notice may be registered without verification or scrutiny by anybody other than the registrant;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that false or misleading notices could be cancelled under recommendation 68, while the question whether any penalties for knowingly registering a false or misleading notice should be imposed is left to tort, penal or other law. The commentary will also provide guidance as to types of possible penalty.]

(d) A search may be made without the need for the searcher to justify the reasons for the search;

(e) The record of the registry is centralized and contains all notices of security rights registered under this law;

(f) Notices are indexed and can be retrieved by searchers according to the name of the grantor or according to some other reliable identifier of the grantor, such as State-issued identification or commercial registration number;

(g) The registry is open to the public;

(h) Fees for registration and searching are set at a level no higher than necessary to permit cost recovery;

(i) Registrants may choose among multiple modes and points of access to the registry;

(j) The registry operates reliable and consistent service hours compatible with the needs of potential registry users; and

(k) To the extent the infrastructural capacity of the State permits, the registration system is computer-based. In particular,

(i) Notices are stored in electronic form in a computer database;

(ii) Registrants and searchers have immediate access to the registry record by electronic or similar means, including Internet and electronic data interchange;

(iii) The system is programmed to minimize the risk of entry of incomplete or irrelevant information (e.g. by requiring essential data fields to be completed); and

(iv) The system is programmed to facilitate speedy and complete retrieval of information and to minimize the practical consequences of human error.

Security and integrity of the registry

56. In order to ensure the security and integrity of the registry record, the operational and legal framework of the registry should reflect the following characteristics:

(a) A registrant can obtain a record of the registration as soon as the registration information is entered into the registry record;

(b) The identity of a registrant is requested and entered into the registry record;

(c) [The registry] [The secured creditor] is obligated to forward a copy of a notice to the grantor named in the notice;

(d) The registry is obligated to send a copy of any changes to a notice to the secured creditor named in the notice;

(e) Although the day-to-day operation of the registry may be delegated to a private authority, the State retains the responsibility to ensure that it is operated in accordance with the governing legal framework; and

(f) The registry record can be reconstructed.

Responsibility for loss or damage

57. The law should provide for the allocation of responsibility for loss or damage caused by an error in the administration or operation of the registration and searching system. If the system is designed to permit direct registration and searching by registry users without the intervention of registry personnel, the responsibility of the registry should be limited to a system malfunction.

Required content of notice

58. The law should provide that the notice must contain only:

(a) The identity of the grantor, as provided in recommendations 59-61, and the secured creditor or its representative and their addresses;

(b) A description of the asset covered by the notice as provided in recommendation 63;

(c) The duration of the registration as provided in recommendation 64; and

[(d) A statement of the maximum monetary amount for which the security right may be enforced [if the State determines that such information is helpful to facilitate subordinate lending.]]

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, while the meaning of the term “representative” may be subject to law other than this law, it includes agent, trustee or other person acting on behalf or in favour of the secured creditor.]

Sufficiency of grantor identifier

59. The law should provide that a notice is effective only if it states the grantor’s correct identifier or, in the case of an incorrect statement, if the notice can be retrieved by searching the registry record according to the correct identifier.

60. The law should provide that, where the grantor is a natural person, the identifier of the grantor for the purposes of effective registration is the grantor’s name, as it appears in a specified official document, such as a birth certificate, identity card or passport. Where necessary, additional information, such as the birth date or identity card number, should be required to uniquely identify the grantor.

61. The law should provide that, where the grantor is a legal entity, the grantor’s identifier for the purposes of effective registration is the name that appears in the documents constituting the entity.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that where the name of the grantor is listed in a separate record maintained by the State, for example, a commercial or company register, the State may wish to set up links between the two registers to facilitate accurate data entry. The commentary will also explain that an identifier other than the name (e.g. birth date) is required for natural persons to distinguish between natural persons with the same name. Such identifier is not required for corporations as their name has to be unique to be accepted by the company registry.]

Change of the grantor’s identifier

62. The law should provide that, if the identifier of the grantor used in the notice changes after the notice is registered:

(a) A security right in an encumbered asset in which the grantor has rights at the time of the change remains effective against third parties;

(b) A security right in an asset acquired by the grantor or created within [...] days after the time of the change is effective against third parties; and

(c) A security right in an asset acquired by the grantor or created more than [...] days after the time of the change is not effective against third parties unless the notice is amended to provide the new identifier of the grantor.

[Note to the Working Group: The Working Group may wish to consider the following alternatives to recommendation 62:]

“Alternative A

The law should provide that, if the identifier of the grantor changes after a notice is registered, the security right remains effective against third parties until the grantor notifies the secured creditor of the name change. The secured creditor then has [...] days to amend the notice. Failure to do so means that the security right is ineffective against secured creditors that register and buyers that acquire a right in the encumbered asset after the expiry of the time period, unless the secured creditor amends the notice before the competing security right is registered or the buyer acquires a right in the asset.

Alternative B

The law should provide that, if the identifier of the grantor changes after a notice is registered, the secured creditor has [...] days to amend the notice. Failure to do so means that the security right is ineffective against secured creditors that register and buyers that acquire a right in the encumbered asset after the expiry of [...] days from the time of the change, unless the secured creditor amends the notice before the competing security right is registered or the buyer acquires a right in the asset.”

In addition, the Working Group may wish to note that the commentary will provide guidance as to the length of the time period referred to in recommendation 62 (e.g. 60, 90 or 120 days). The commentary will also discuss various circumstances in which an entity may change its name (e.g. merger or acquisition).]

Sufficiency of description of assets covered by a notice

63. The law should provide that a description of the assets covered by a notice is sufficient if it identifies the assets covered by the notice in a manner that distinguishes those assets separately from other assets of the grantor. A generic description of the encumbered assets is sufficient.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that descriptions such as “all inventory” or “all present and future assets” would be sufficient.]

Time of registration

64. The law should provide that a notice with respect to a security right may be registered before or after creation of the security right.

[Note to the Working Group: The Working Group may wish to note that the purpose of this recommendation is to confirm that registration may take place before creation of the security right. The commentary will explain that the purpose of allowing advance registration is to enable secured creditors to ensure their priority position by registering (especially as against potential competing claimants) at the earliest time possible in order to facilitate the extension of credit upon conclusion of the formal security agreement (see also recommendation 76, according to which priority dates back from the time of registration (i.e. before creation of a security right, assuming that a security right comes into existence subsequently) or at the time of third-party effectiveness (i.e. creation plus registration or possession). The commentary will also explain that the grantor is not affected by inaccurate or false notices as they do not produce any legal consequences and, in any case, the debtor may always seek a cancellation of the

notice under recommendation 68 or exercise other remedies under tort, penal or other law.]

One notice for multiple security agreements between the same parties

65. The law should provide that registration of a single notice is sufficient to ensure the third-party effectiveness of security rights created or to be created by all security agreements entered into between the same parties to the extent they cover items or kinds of movable property that fall within the description contained in the notice.

Duration and extension of notice

66. The law should specify the duration of a notice or else permit the registrant to select the duration of a notice at the time of registration and extend it at any time before its expiry.

Time of effectiveness of notice or amendment

67. The law should provide that a notice or its amendment takes effect when the information contained in the notice or its amendment is entered into the registry record so as to be available to searchers of the registry record.

[Note to the Working Group: The Working Group may wish to note that, if the registration system permits the submission of paper notices to the registry (as opposed to direct data entry by registrants), there will be some delay between receipt of the notice by the registrar and the time the information on the notice is entered into the record by registry staff so as to become available to searchers. In such circumstances, the question arises as to the time when the registration should be effective, the time of receipt of the notice at the registry or the time the notice is entered into the record and becomes available to searchers. If the registration is effective when received by the registrar, a search will not disclose all legally effective registrations. To protect the information needs of third parties, therefore, this recommendation makes the time of registration concomitant with searchability. Although this puts the risk associated with any delay on the secured creditor, the secured creditor is in a better position to take steps to protect itself than third parties. Moreover, the recommendations earlier outlined on the design and operation of the registry should ensure speedy and efficient registration procedures. In a fully electronic system that requires no intervention by registry staff, entry of the notice and its availability to searchers is virtually simultaneous and this problem is significantly reduced.]

The Working Group may also wish to note that the commentary will explain that an amendment may involve various changes, such as: (a) adding or deleting items or kinds of encumbered assets; (b) adding or deleting the identifier of a grantor; (c) recording a change in the identifier of a grantor or secured creditor; (d) disclosing an assignment of the security right by the secured creditor named in the original registration to a new secured creditor; or (e) disclosing a subordination agreement or undertaking that affects a registered security right.]

Cancellation or amendment of notice

68. The law should provide that, if no security agreement has been completed, the security right has been terminated [by full payment or otherwise] or the notice contains information not authorized by the grantor:

(a) The secured creditor must cancel or amend the notice within [...] days after the written request of the grantor;

(b) The grantor is entitled to compel cancellation or amendment of the notice through a summary procedure;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the grantor may seek to cancel the notice under subparagraph (b) even before expiry of the period referred to in subparagraph (a). In such a case, however, the grantor may have to bear any costs involved (see A/CN.9/593, para. 54). The Working Group may also wish to note that the commentary will provide guidance to States as to the length of the time period referred to in this recommendation (e.g. 20-30 days).]

69. The law should provide that the secured creditor is entitled to cancel or amend a notice at any time.

70. The law should provide that, where a notice has been cancelled, the record of the notice should be removed from the searchable records of the registry within a short time after its cancellation. However, the information in the cancelled notice and the fact of the cancellation should be archived so as to be capable of retrieval if necessary.

71. [The law should provide that, in the case of an assignment of the secured obligation, [the notice may be amended to indicate the name of the new secured creditor but the unamended notice remains effective] [to remain effective, the notice must be amended to indicate the name of the new secured creditor].]

[Note to the Working Group: The Working Group may wish to consider which of the alternatives reflected in this recommendation within square brackets is preferable (see A/CN.9/593, para. 56).]

VII. Priority of a security right as against the rights of competing claimants²⁸

Purpose

The purpose of the provisions of the law on priority is to:

(a) Provide an efficient and predictable regime to determine the order of priority of a security right as against the rights of all possible competing claimants; and

(b) Facilitate transactions by which a grantor may create more than one security right in the same asset and thereby use the full value of its assets to obtain credit.

²⁸ See A/CN.9/WG.VI/WP.26/Add.6.

A. General recommendations

Extent of priority

72. The law should provide that the priority of a security right extends to all obligations secured under the security agreement [up to the maximum monetary amount indicated in the notice].

Irrelevance of knowledge of the existence of the security right

73. The law should provide that knowledge of the existence of a security right on the part of a competing claimant does not affect its rights under the provisions of the law on priority.

Priority of security rights securing future obligations

74. [Subject to recommendation 86,] the priority of a security right does not depend on the date when the secured obligation was incurred.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that if a security right securing a credit facility is made effective against third parties on day 1 and credit is extended on day 2 and then on day 3 and 4, priority dates back from the time the security right was made effective against third parties (i.e. day 1). The commentary will also explain that an exception to this rule is stated in recommendation 86, which provides that, if the secured obligation was incurred after a judgement creditor acquires rights in the encumbered asset, the security right is subordinate to the rights of the judgement creditor. The Working Group may wish to consider whether further exceptions should be introduced (e.g. the super-priority of an acquisition security right should be limited to secured obligations incurred up to the time of the acquisition of the relevant assets by the transferee).]

Subordination agreements

75. The law should provide that a competing claimant entitled to priority may at any time subordinate its priority unilaterally or by agreement in favour of any other existing or future competing claimant.

[Note to the Working Group: The Working Group may wish to note that the commentary will make clear that, under this recommendation, a subordination agreement would be possible not only between competing claimants with a different priority ranking but also between competing claimants with the same priority ranking (see A/CN.9/593, para. 61). The Working Group may also wish to note that subordination agreements in the case of the grantor's insolvency are addressed in recommendation 179.]

Priority between security rights in the same encumbered assets

76. The law should provide that, except as provided in recommendations [...], a security right in movable property registered or made effective against third parties, whichever occurs first, has priority over a security right in the same property subsequently registered or that is made effective against third parties. The date of registration determines priority of a security right with respect to all encumbered

assets irrespective of whether they are acquired by the grantor or come into existence before, on or after the date of registration.

[Note to the Working Group: The Working Group may wish to note that the commentary will make clear that the reference to registration means registration before creation of a security right pursuant to recommendation 64, while the reference to third party effectiveness means creation plus a step to achieve third party effectiveness pursuant to recommendation 33, 35 or 36. The commentary will also explain that issues of priority arise where there are competing rights in the same assets, the debtor defaults on the secured obligation and the value of the encumbered assets is not sufficient to satisfy all secured obligations. The commentary will also make clear that:

- (a) As between two security rights registered in the general security rights registry, the first registered wins;*
- (b) As between two security rights registered in a specialized registry or noted on a title certificate, the first registered wins;*
- (c) As between a security right registered in the general security rights registry and a security right registered in a specialized registry or noted on a title certificate, the latter wins (as a result of recommendation 79); and*
- (d) As between a security right registered (in advance of creation) in the general security rights registry or in a specialized registry or noted on a title certificate and a security right (created and) made effective against third parties, the first registered or made effective against third parties wins.*

In addition, the Working Group may wish to note that the commentary will also clarify that, if a security right is not effective against third parties, no issue of priority arises and, therefore, such security rights have the same ranking. The commentary will also explain that recommendation 76 applies to a conflict between two security rights in the same encumbered assets (as to whether it should apply to conflicts with a buyers and judgement creditor; see note to recommendation 82).

Moreover, the Working Group may wish to note that the commentary will also explain that the reasons why a security right registered in advance of its creation is given priority as of the time of registration are to encourage advance registration (which provides notice to third parties) and to provide certainty to secured creditors by enabling them to determine the priority of their security rights before they extend credit. This reason does not apply to advance possession. Furthermore, such a rule would not be necessary with respect to negotiable instruments and negotiable documents, since possession of them gives a superior right than is obtained by registration (see recommendations 89, 90, 97 and 98). As to other tangibles, the assumption is that advance possession is not practised (delivery of possession will always be based on an agreement about the security right). Accordingly, no general rule along the lines of recommendation 76 is introduced with respect to advance possession. The Working Group may wish to consider whether there are substantial financing practices in which the secured creditor may take possession of the encumbered assets in advance of such agreement and, if so, whether the secured creditor that took advance possession should have priority as of that time (see A/CN.9/593, para. 68).]

Continuity in priority

77. The law should provide that the priority of a security right is not affected by a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

78. The law should provide that, if a security right has been registered or made effective against third parties and subsequently there is a period during which the security right is neither registered nor effective against third parties, the priority of that security right dates from the earliest time thereafter at which the security right is either registered or made effective against third parties.

[Note to the Working Group: The Working Group may wish to note that, under recommendation 39, third-party effectiveness is continuous. If it lapses, it dates back from the time it was re-established (see also examples set forth in the note to recommendation 39).]

Priority of a security or other right registered in a specialized registry or noted on a title certificate

79. The law should provide that a security right or other right (such as the right of a buyer or lessor) in movable property other than attachments that is made effective against third parties as provided in recommendation 42 has priority over:

(a) A security right in the same asset with respect to which a notice is registered in the general security rights registry or which is made effective against third parties by any other method regardless of the order; and

(b) A security right that is subsequently registered in the specialized registry or noted on a title certificate.

Priority of a security right in proceeds²⁹

80. Except as provided in recommendations [...], the law should provide that a security right in the proceeds of an encumbered asset that is effective against third parties has the same priority as the security right in the encumbered asset.

Rights of buyers, lessees and licensees of encumbered assets

81. The law should provide that, if a security right is effective against third parties, the security right continues in the encumbered assets in the hands of a third party except as provided in recommendations 82, 83 and 84.

[Note to the Working Group: The Working Group may wish to note that this recommendation is designed to state the rule that the secured creditor may follow the asset in the hands of a transferee (droit de suite, a rule stated somewhat differently in recommendation 32).]

82. The law should provide that:

(a) A security right does not continue in an encumbered asset that the grantor sells or otherwise disposes of, if [:

(i)] The secured creditor authorizes the sale or other disposition free of the security right [; or

²⁹ See A/CN.9/WG.VI/WP.26/Add.4, recommendation 67.

- (ii) In the case of a security right registered before creation, the secured creditor has knowledge of the sale]; and
- (b) The rights of a lessee or licensee of an encumbered asset are not affected by a security right if [
 - (i)] The secured creditor authorizes the grantor to lease or license the asset [unaffected by the security right] [; or
 - (ii) In the case of a security right registered before creation, the secured creditor has knowledge of the lease or licence.]

[Note to the Working Group: The Working Group may wish to note that the formulation of subparagraph (b) of this recommendation has been changed to address a concern expressed at the thirty-ninth session of the Commission (see A/61/17, para. 37; for the same reason, similar changes were made to the formulation of recommendations 83, subparagraphs (b) and (c), and 84, second sentence) and the matter is addressed in the following paragraphs of this note.]

Under recommendation 76, registration of a notice before the creation of a security right gives priority over another security right that was (created and) made effective against third parties later. The Working Group may wish to consider whether this recommendation should apply to priority conflicts between a secured creditor and a buyer, lessee or licensee of encumbered assets acquiring a right in the assets after registration of a notice but before actual creation of a security right in them. It may be considered that the buyer, lessee or licensee should take free of the security right in these circumstances on the basis that by the time the security right is created, the encumbered assets are no longer owned by the seller or are subject to the possession or use rights of the lessee or licensee. The disadvantage of such an approach would be that the secured creditor would then be able to rely on its act of advance registration to preserve priority only as against other secured creditors. As against intervening transferees, the secured creditor would have to undertake further inquiries before being able to safely advance credit once the security right comes into existence.

A similar issue arises when a judgement creditor acquires rights in the encumbered assets after advance notice of a security right is registered but before the security right is actually created. The considerations are somewhat different in this case, since a secured creditor is not subordinated to the rights of the judgement creditor, under the recommendations in this chapter, until it acquires actual knowledge of the judgement creditor's rights and is then subordinated for advances made after receiving knowledge. Consequently, if the security right has not yet been created when the judgement creditor advises the secured creditor of its intervening rights, the secured creditor can protect itself either by requiring the grantor to discharge the judgement or by reducing the credit the secured creditor plans to extend. A similar rule could be adopted for intervening buyers. Under this approach, a buyer, lessee or licensee of assets would take free of a prior-registered security right that has not yet come into existence provided the secured creditor had knowledge of the sale, lease or licence. Buyers, lessees and licensees could then protect themselves by giving notice of their transaction rather than having to secure a positive waiver of priority from the secured creditor. The secured creditor would likewise be protected because it would have actual knowledge of the intervening transaction before entering into the security agreement. The language included in

square brackets in subparagraphs (a) (ii) and (b) (ii) are intended to address this point.

The Working Group may also wish to note that application of the rule in recommendation 82 requires a comparison of the date at which a security right was made effective against third parties with the date of the sale, lease or licence of the encumbered asset (as a security right that was not effective against third parties would not produce effects as against buyers, lessees or licensees). While the date at which the security right was made effective against third parties will usually be obvious (inasmuch as the registry's records will reveal when a notice was registered), it may not be clear when a sale has taken place. For example, a contract to sell goods that are encumbered assets may have been entered into between the grantor/seller and the buyer on date 1, they may have been shipped to the buyer on date 2 (either because the contract provided for shipment on that date or otherwise), the goods may have been received by the buyer on date 3 and the buyer may have paid for them on date 4; under applicable law, the sale by the grantor/seller to the buyer may have occurred on any of those dates or on still another date. Application of the rule in recommendation 82 requires knowing which of those dates is the date on which the sale took place because the date that the security right was made effective against third parties might precede some but not all of those dates. The Working Group may thus wish to consider whether recommendation 82 (or the commentary accompanying it) should provide additional guidance as to when a sale should be considered to have taken place for purposes of determining the status of the buyer's rights to the goods as against the secured creditor. The commentary will also make clear that, if the grantor of an asset sells it with a retention of title, the buyer takes free of the retention of title when it pays the price. Before that, the retention-of-title seller has the rights of an owner (or secured creditor, depending on whether a unitary or a non-unitary approach is followed).]

83. The law should also provide that:

(a) A buyer in the ordinary course of business [and a buyer of consumer goods] takes free of a security right;

(b) The rights of a lessee in the ordinary course of business are not affected by a security right; and

(c) The rights of a licensee in the ordinary course of business under a non-exclusive license are not affected by a security right.

[Note to the Working Group: The Working Group may wish to note that, according to definition (uu), "buyer in the ordinary course of business" is a buyer of inventory in the ordinary course of business that has no knowledge that the sale violates a security or other right. The Working Group may also wish to recommend that buyers of consumer goods [of low value] that have no knowledge of a security right in the goods should take free of a security right in the goods. In that connection, the Working Group may wish to take into account that such buyer would have no way of finding out about the existence of a security right in the goods as, under recommendations 41 and 185, non-acquisition security rights in low-value consumer goods and acquisition security rights in consumer goods are exempt from registration (see A/CN.9/593, para. 77). With respect to paragraphs (b) and (c), the commentary will explain that the security right does not cease to exist but that, for the duration of the lease or license, the right of the secured creditor was limited to the lessor's or licensor's interest.]

84. The law should provide that, where a buyer or transferee acquires an encumbered asset free of a security right, any person that subsequently acquires a right in that asset from that buyer or transferee also takes free of the security right. Where the rights of a lessee or licensee are not affected by a security right, the rights of a sublessee or sublicensee are also unaffected by the security right.

Priority of preferential claims

85. The law should limit, both in number and amount, preferential claims arising by operation of law that have priority over security rights and, to the extent preferential claims exist, they should be described in the law in a clear and specific way.

[Note to the Working Group: The Working Group may wish to consider whether buyers, lessees and licensees should take free of any preferential claims. As this question does not involve a priority conflict with a security right, it may be addressed in the commentary.]

Priority of rights of judgement creditors

86. The law should provide that [, except as provided in recommendation 188,] a security right has priority over the rights of an unsecured creditor, provided that it was made effective against third parties before the unsecured creditor [, under law other than this law,] obtained a judgement or provisional court order against the grantor and took the steps necessary to acquire rights in assets of the grantor by reason of the judgement or provisional court order. The priority of the security right extends to credit extended by the secured creditor within a specified period of days after the unsecured creditor notified the secured creditor of the existence of the unsecured creditor's rights in the assets but does not extend to credit extended after the expiry of that period.

[Note to the Working Group: The Working Group may wish to consider: (a) whether it is possible for a security right in a particular asset to become effective against third parties at the same time that an unsecured creditor acquires, by reason of judgement or provisional court order, a right in that asset; and (b) if so, which of those rights has priority over the other.

The problem is most important in the case of a security right in future assets of a grantor. The Working Group may wish to consider the following example. A secured creditor takes a security right in all present and future assets of the grantor and advances credit to the grantor. The secured creditor registers a notice that covers present and future assets. Subsequently, under law other than the secured transactions law, an unsecured creditor of the grantor obtains a judgement or provisional court order entitling the unsecured creditor to a right in the grantor's present and future assets. Still later, the grantor buys and receives delivery of new assets. At that moment, the grantor acquires rights in those assets and the security right in those assets is created and, because of the earlier registration of the notice, the security right is immediately effective against third parties. At the same time, the unsecured creditor obtains a right in those goods because of the previously granted judgement or provisional court order providing for such a right. The current draft of recommendation 86 provides that the unsecured creditor's right has priority over the security right of the secured creditor.

The Working Group may wish to consider whether in such cases the secured creditor should have priority rather than the judgement creditor. This result would seem to further the goals of the Guide in creating greater certainty for the secured creditor with a view to making more credit available at lower cost. The result could be easily accomplished, without extensive redrafting, by adding in the first sentence of recommendation 86 the words “at the same time as or” immediately prior to the words “before the enforcing unsecured creditor”.

The Working Group may also wish to consider whether an exception to this recommendation should be introduced for acquisition security rights that are made effective against third parties within the relevant grace period (see recommendation 184). Acquisition security rights that are made effective against third parties during the relevant grace period should not lose to a judgement creditor described in this recommendation whose right in the encumbered asset arose after the creation of the security right but before it was made effective against third parties. If this were not the case, utilizing the grace period would be too risky for acquisition financiers.

In addition, the Working Group may wish to note that the commentary will explain that the priority under recommendation 84 does not extend to credit committed but not extended before the judgement creditor took the necessary steps to acquire rights in the encumbered assets. This approach is based on the assumption that the judgement will be an event of default under the credit facility enabling the secured creditor to cease extending any credit.

The commentary will also explain the implications of this recommendation for certain practices in which the credit facility does not provide for an event of default, such as a commitment consisting of an independent undertaking where the issuer may not revoke the independent undertaking if it does not permit revocation as a result of a judgement against assets securing the grantor’s obligation to reimburse the issuer for a payment under the independent undertaking.

Furthermore, the commentary will explain that, if the priority were to be limited to an amount mentioned in the notice registered, the issue might be resolved since the remaining assets of the grantor would be available for the payment of claims of unsecured creditors (see A/CN.9/593, paras. 80-82). The commentary will also give guidance as to the length of the time period referred to in this recommendation.]

Priority of rights of persons adding or preserving value of encumbered assets

87. If law other than this law gives rights equivalent to security rights to a creditor that has added value to goods (e.g. by repairing them) or preserved the value of goods (e.g. by storing or transporting them), such rights are limited to the goods, whose value has been improved or preserved and which are in the possession of that creditor, up to the value so added or preserved, and have priority over pre-existing security rights in the goods.

[Note to the Working Group: The Working Group may wish to note that limiting the priority given to storage and repair claims over security rights by reference to the extent to which they add to or preserve the value of the encumbered assets may give rise to a difficult and costly evidentiary burden for repairers, storers or transporters. The Working Group may wish to consider referring instead to the value (or the reasonable value) of the repair, transport or storage services rendered

in respect of the encumbered assets. Alternatively, reference could be made to the reasonable expenses of the repairer, storer or transporter. These formulations would still ensure that the priority of the repairer, storer or transporter is limited to services rendered with respect to the encumbered assets while avoiding difficult questions of proof as to the relative value of the encumbered assets before and after the services are rendered.]

Priority of a supplier's reclamation claim

88. If law other than this law provides that suppliers of goods have the right to reclaim the goods, the law should provide that the right to reclaim the goods is subordinate to security rights in such goods.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation establishes a commercial law rule designed to accord priority to secured creditors over reclamation claims. Reclamation claims may arise by operation of law upon default or financial insolvency of the grantor. If an insolvency proceeding has commenced, applicable insolvency law will determine the extent to which the secured creditors and the reclamation claimants would be stayed or their rights would otherwise be affected (see recommendations 39-51 of the UNCITRAL Insolvency Guide). However, the priority rule established by this recommendation would be unaffected by the insolvency proceeding as provided in recommendation 179. The commentary will also explain, for the benefit of States that do adopt a non-unitary approach, that the reclamation claim does not include retention of title.]

Priority of a security right in insolvency proceedings

[Note to the Working Group: See recommendation 178 in the insolvency chapter.]

B. Asset-specific recommendations

Priority of a security right in a receivable³⁰

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the general priority recommendations apply to security rights in receivables as well as to outright transfers of receivables.]

Priority of a security right in a negotiable instrument³¹

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the general priority recommendations apply to priority with respect to security rights in negotiable instruments, while recommendations 89 and 90 deal with additional priority conflicts.]

89. The law should provide that a security right in a negotiable instrument that is made effective against third parties by possession of the instrument has priority over a security right in a negotiable instrument that is made effective against third parties by any other method.

³⁰ See A/CN.9/611.

³¹ For recommendations 90 and 91, see A/CN.9/611/Add.1, recommendations 74 and 74 bis.

90. The law should provide that a security right in a negotiable instrument that is made effective against third parties by a method other than possession of the instrument is subordinate to the rights of a secured creditor, buyer or other transferee (in a consensual transaction) that:

(a) Qualifies as a protected holder under the law governing negotiable instruments; or

(b) Takes possession of the negotiable instrument and gives value in good faith and without knowledge that the transfer is in violation of the rights of the secured creditor under the security agreement.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, to preserve the unfettered negotiability of instruments, knowledge of the existence of a security right on the part of a transferee of an instrument does not mean, by itself, that the transferee did not act in good faith.]

91. [...]

Priority of a security right in a right to payment of funds credited to a bank account³²

92. The law should provide that a security right in a right to payment of funds credited to a bank account, which is made effective against third parties by control, has priority over a competing security right, which is made effective against third parties by any other method. If a depositary bank concludes control agreements with more than one secured creditor, priority among those secured creditors is determined according to the order in which the control agreements were concluded. If the secured creditor is the depositary bank, its security right has priority over any other security right (including a security right made effective against third parties by a control agreement with the depositary bank even if the depositary bank's security right is later in time) other than a security right of a secured creditor that has acquired control by becoming the account holder.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that third-party effectiveness of a security right in a right to payment of funds credited to a bank account may be achieved by either registration or control. If the security right is effective against third parties, it is effective against and has priority over a competing claimant (e.g. an insolvency representative or a later in time secured creditor). The commentary will also explain that control has an added priority benefit in that the secured creditor not only achieves effectiveness against third parties but it also has priority over an earlier secured creditor whose security interest is effective against third parties by a method other than control.]

In addition, the commentary will explain that a security right of the depositary bank always has priority even over a security right with respect to which the depositary bank has earlier entered into a control agreement because: (a) a security right of the depositary bank should have the same priority as its set-off right, which always has priority; (b) if the depositary bank's security right had no priority, the bank would not enter into any control agreement; and (c) a secured creditor could

³² For recommendations 93-95, see A/CN.9/611/Add.1, recommendations 76-78.

always seek to obtain a subordination agreement from the depositary bank. The commentary will also explain that, depending on the terms of the control agreement, the depositary bank may have a contractual obligation to a secured creditor with a control agreement even though the secured creditor might not have priority.

The Working Group may wish to recall that, at its tenth session, it had agreed that tracing of funds credited to a bank account would be discussed together with the issue of tracing of proceeds (see A/CN.9/603, para. 67). The Working Group may wish to deal with that issue as an issue of priority. The commentary to this recommendation will make clear that, if a secured creditor has control of a right to payment of funds credited to a bank account, its security right has priority over a security right in cash proceeds of an encumbered asset of another secured creditor that are credited to the same bank account, even if the other secured creditor is able to trace proceeds to the bank account. This is the case even if the competing security right became effective against third parties earlier than the security right held by the secured creditor with control.]

93. The law should provide that any right of the depositary bank to set off obligations owed to the depositary bank by the grantor against the grantor's right to payment of funds credited to a bank account has priority over the security right of any secured creditor other than a secured creditor that has acquired control by becoming the account holder.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that recommendations 92 and 93 mean that third parties are taken to know that they cannot rely on a right to payment of funds credited to a bank account as a primary source of security for extensions of credit and can do so only by obtaining a subordination agreement from the depositary bank or having the account entered in their own name. Consequently, the absence of publicity of the security right is not seen as problematic. The commentary will also explain that, unlike recommendation 120, subparagraph (b), recommendation 93 deals with priority conflicts between rights of set-off of the depositary bank and security rights of other persons. In addition, the commentary will explain that recommendation 93 does not create any rights of set-off, a matter that remains subject to other law. Moreover, the commentary will explain that the exception in recommendation 93 refers to a secured creditor that acquired control by becoming the sole account holder. Where the secured creditor would be just a joint account holder, the grantor will still be able to dispose of the funds credited to the account and thus the secured creditor would not have control (see definition (hh), "control").]

94. In the case of a transfer of funds from a bank account initiated by the grantor, the law should provide that the transferee of the funds takes free of a security right in the right to payment of funds credited to the bank account, unless the transferee has knowledge that the transfer violates the rights of the secured creditor under the security agreement. This recommendation does not lessen the rights of transferees of funds from bank accounts under law other than this law.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the general priority recommendations apply to security rights in rights to payment of funds credited to a bank account subject to recommendations 120 and 121. The commentary will also explain that the test in recommendation 83, subparagraph (a) (see definition (uu), "buyer in the ordinary course of business"), and in recommendations 93 and 94 essentially the same (i.e. whether the buyer or transferee had knowledge that the sale or transfer violates the

rights of the secured creditor under the security agreement). The commentary will also explain that the term “transfer of funds” is intended to cover a variety of transfers, including by cheque and electronic means of communication (see A/61/17, para. 38).]

Priority of a security right in money

95. The law should provide that a person that obtains possession of money that is subject to a security right takes the money free of the security right, whether the money constitutes an original encumbered asset or proceeds, unless that person has knowledge that the transfer violates the rights of the secured creditor under the security agreement. This recommendation does not lessen the rights of holders of money under law other than this law.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation is designed to promote the important policy of maximizing the negotiability of money, limiting negotiability only to the extent necessary to protect the holder of a security right in the money against collusion by a transferee of money and its transferor. It is intended that this recommendation be consistent with recommendation 94 dealing with security rights in funds transferred from a bank account.

The Working Group may also wish to note that the commentary will clarify that the term “money” in the Guide is intended to refer to, and only to, legal tender, that is, the currency currently in use as a medium of exchange authorized by a Government. Other forms of property are casually spoken of as money, but they are not money for purposes of the Guide. For example, if one deposits currency into one’s bank account, reference is often made to money in the bank (or cash in the bank), but the depositor’s asset is no longer money, it is instead, under the Guide, “funds credited to a bank account”. And the claim of the depositor against the bank is referred to in the Guide as the “right to payment of funds credited to a bank account”. Similarly, the deposit of a cheque would result in the depositor’s asset no longer being a negotiable instrument, but instead would be funds credited to a bank account. In addition, money held by a coin dealer as part of a collection is not “money” under the Guide.

The Guide addresses security rights in money both as original encumbered assets and as proceeds of another form of encumbered asset. An example of the latter case would be the receipt, by a seller that has granted a security right in its receivables, of payment of its outstanding invoices in currency (not by cheque or electronic funds transfer). Under the Guide, the money in the seller’s hands would be the proceeds of the seller’s receivable and the secured creditor would have a security right in the money as proceeds. Similarly, if a person that has granted a security right in an item of equipment sells it to a person who pays for it in cash, the money in the seller’s hands constitutes proceeds of the equipment and is subject to the security right.

Like money, funds credited to a bank account may be the subject of security rights either as original encumbered assets or as proceeds. If the currency and the cheques were subject to a security right in favour of the depositor’s creditor, the funds credited to the bank account would in both cases be the proceeds of the pre-existing encumbered asset (the money or the negotiable instrument). If the credit to the depositor’s bank account results from an electronic funds transfer from a third party in payment of a receivable owed by the transmitter to the depositor, the funds

credited to the bank account would be the proceeds of the pre-existing encumbered asset (the receivable).

Each provision of the Guide (e.g. rules for creation, effectiveness against third parties, priority and so on) applies to all encumbered assets, except to the extent a special rule is provided for a particular type of asset. Thus, it is always necessary to ascertain whether a special rule exists with respect to money or the right to payment of funds credited to a bank account.

An important example of a special rule is that which governs the rights of a transferee of: (a) money that, in the hands of a transferor, was subject to a security right; and (b) funds that were transferred from a bank account in which those funds, while owned by the transferor and credited to that bank account, were subject to a security right. Because of the need to preserve the negotiability of money and funds transferred from bank accounts, special rules are provided in the Guide to protect transferees of such assets.

With respect to money and funds credited to a bank account, it is important to focus on whether the issue under consideration concerns: (a) those two assets as property of the grantor; or (b) the rights of third-party transferees from the grantor of money or of funds transferred from the grantor's bank account. The preceding paragraph, which deals with the rule that governs the rights of transferees (the second category), illustrates this distinction. It is separate from the rule (the first category) that governs a priority contest between a security right in money or in funds credited to a bank account vis-à-vis a competing claimant when the grantor still owns (i.e. has not transferred) the encumbered asset.]

Priority of a security right in proceeds under an independent undertaking³³

96. The law should provide that a security right in proceeds under an independent undertaking, which has been made effective against third parties by control has, with respect to a particular guarantor/issuer, confirmer or nominated person giving value under an independent undertaking, priority over the rights of all other secured creditors that have, with respect to that person, made their security right effective against third parties by a method other than control. If control has been achieved by acknowledgement and inconsistent acknowledgements have been given to more than one secured creditor by a person, priority among those secured creditors is determined according to the order in which the acknowledgements were given.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, as the typical method of achieving control is by obtaining an acknowledgment, in the case of several potential payors (e.g. the guarantor/issuer, confirmer and several nominated persons), control is achieved only vis-à-vis the particular guarantor/issuer(s), confirmer(s) or nominated person(s) who gave the acknowledgment(s). Thus, the priority rule must focus on the particular person that is the payor. The basic priority rule makes clear that a secured creditor that has control of the right to proceeds under an independent undertaking has priority over a secured creditor whose security right became effective against third parties automatically. The commentary will also explain that a guarantor/issuer, confirmer or nominated person may, without regard to priority, have a contractual right or obligation to pay an acknowledged secured creditor.]

³³ See A/CN.9/611/Add.1, recommendation 62.

Priority of a security right in a negotiable document³⁴

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that the general priority recommendations apply to security rights in negotiable documents, while recommendations 97 and 98 deal with additional priority conflicts.]

97. The law should provide that a security right in goods covered by a negotiable document, which is made effective against third parties by making the security right in the negotiable document effective against third parties, has priority over a security right in the goods, which is otherwise made effective against third parties while the goods are covered by the document.

98. The law should provide that a security right in a negotiable document and the goods covered thereby is subject to the rights under the law governing negotiable documents of a person to which the negotiable document has been duly negotiated.

Priority of a security right in attachments to immovable property³⁵

99. The law should provide that a security right or any other right (such as the right of a buyer or lessor) in attachments to immovable property, which is created and made effective against third parties under immovable property law, has priority over a security right in those attachments, which is made effective against third parties by one of the methods referred to in recommendation 33 or 35.

100. The law should provide that a security right in tangibles that are attachments to immovable property at the time the security right is made effective against third parties or that become attachments to immovable property subsequently, which is made effective against third parties by registration in the immovable property registry under recommendation 52, has priority over a security right or any other right (such as the right of a buyer or lessor) in the related immovable, which is registered subsequently.

[Note to the Working Group: The Working Group may wish to consider recommendations 99 and 100 together with the relevant recommendation in the chapter on acquisition financing devices (see recommendation 189). The commentary will explain that the words "any other right" refers to any right registrable under immovable property law.]

Priority of a security right in attachments to movable property subject to a specialized registration or title certificate system³⁶

101. The law should provide that a security right or other right (such as the right of a buyer or lessor) in attachments to movable property, which is made effective against third parties under law other than this law by registration in a specialized registry [or by notation on a title certificate], has priority over a security right in those attachments, which is made effective against third parties by one of the methods referred to in recommendations 33 or 35.

³⁴ For recommendations 97 and 98, see A/CN.9/611/Add.1, recommendations 80 and 81.

³⁵ For recommendations 99 and 100, see A/CN.9/WG.VI/WP.26/Add.4, recommendations 82 and 83.

³⁶ For recommendations 101 and 102, see A/CN.9/WG.VI/WP.26/Add.4, recommendations 84 and 84 bis.

[Note to the Working Group: The Working Group may wish to note that this recommendation is intended to determine priority between a security right in the attachment registered in the general security rights registry and a security right or other right in the same attachment registered in the specialized registry or noted on a title certificate. As recommendation 79 may be sufficient to address this contest, recommendation 101 may not be necessary.]

102. A security right or any other right (such as the right of a buyer or lessor) in attachments to movable property, which is made effective against third parties by registration in a specialized registry or by notation on a title certificate under recommendation 53, has priority over a security right or other right in the related movable property, which is registered subsequently.

[Note to the Working Group: The Working Group may wish to note that this recommendation is intended to determine priority between a security right or other right in an attachment registered in a specialized registry and a security right or other right in the related movable registered subsequently in the specialized registry. The Working Group may wish to consider whether there is any practical need for this recommendation in view of the absence of specialized registry systems that contemplate separate registration of security rights in an attachment. While aircraft registries do often provide for separate registration of engines they are not considered to become automatically part of the airframe but instead they are financed and registered separately.]

Priority of a security right in a mass or product³⁷

[Note to the Working Group: The Working Group may wish to note that priority between creditors with security rights in property that is commingled and becomes part of a mass or product and unsecured creditors require no special treatment since the regular priority rules apply once it is determined that the security right continues into the mass or product. There are, however, three types of potential priority contests between creditors each of which has a security right with respect to the resulting mass or product: (a) contests between security rights taken in the same tangibles that ultimately become part of a mass or product (e.g. sugar and sugar); (b) contests involving security rights in different tangibles that ultimately become part of a mass or product (e.g. sugar and flour); and (c) contests involving a security right originally taken in the separate tangibles and a security right in the mass or product (e.g. sugar and cake). In order to deal with all these situations, the relevant recommendation has been reformulated in three parts.]

103. The law should provide that a security right in the same separate tangibles, which continues in a mass or product and is effective against third parties, has the same priority, as against other security rights granted in the separate tangibles, it had immediately before the tangibles became part of the product or mass.

[Note to the Working Group: The Working Group may wish to note that the effect of the first sentence of this recommendation is to treat all security rights in tangibles that become commingled as having the same priority vis-à-vis each other as they had in the separate property. The rationale for this suggested rule is that the incorporation of goods into a mass or product should have no bearing on the respective rights of creditors with competing security rights in the separate goods.]

³⁷ For recommendations 103-105, see A/CN.9/WG.VI/WP.26/Add.4, recommendations 85, 85 bis and 85 ter.

The Working Group may wish to note that the rule is framed to respect both the general priority rules and to cover the super-priority afforded to creditors who may claim “acquisition security rights”. This recommendation is predicated on the assumption stated in recommendation 29 (creation) that a secured creditor may not receive an amount greater than the value of the tangible immediately before they became part of the mass or product.]

104. The law should provide that, if more than one security right in separate tangibles continues in the same mass or product and each security right is effective against third parties, the secured creditors are entitled to share in the aggregate value of their security rights in the mass or product according to the ratio of the value of the separate tangibles immediately before they became part of the mass or product. If there is more than one other security right, the holders of those other security rights are entitled to share in the remainder of the aggregate value of their security rights in the mass or product in the same ratio. If there is only one other security right, the holder of that other security right is entitled to the remainder of the value of its security right in the mass or product.

[Note to the Working Group: The Working Group may wish to note that, according to recommendation 104, if the value of the sugar is 2 and the flour 5, while the value of the cake is 6 and the amount of the secured obligation 7, the creditors will receive 2/7 and 5/7 of 6. In any case, if the value of the mass or product is less than the amount of the secured obligations, there will be no value left for unsecured creditors. The secured creditors have the same ranking and the object of the rule is to determine the relative value of their rights.]

105. The law should provide that a security right in separate tangibles, which continues in a mass or product and is effective against third parties, has priority over a security right granted by the same debtor in the mass or product, if it is an acquisition security right.

[Note to the Working Group: The Working Group may wish to note that the effect of the first sentence of this recommendation is to apply the general priority rules. Security rights in initial property have priority over all security rights in the mass or product that have been taken so as to cover future property, only if the former are acquisition security rights.]

VIII. Rights and obligations of the parties³⁸

Purpose

The purpose of the provisions of the law on rights and obligations of the parties is to enhance efficiency of secured transactions and reduce transaction costs and potential disputes by:

- (a) Providing rules on additional terms for the security agreement;
- (b) Eliminating the need to negotiate and draft terms to be included in the security agreement where the rules provide an acceptable basis for agreement;

³⁸ See A/CN.9/611/Add.2, purpose and recommendations 86-87.

- (c) Providing a drafting aid or checklist of issues the parties may wish to address at the time of negotiation and conclusion of the security agreement; and
- (d) Encouraging party autonomy.

A. General recommendations

Suppletive rules relating to the rights of the secured creditor

106. The law should provide that, unless otherwise agreed:

- (a) The secured creditor is entitled to be reimbursed for reasonable expenses incurred for the preservation of encumbered assets in its possession;
- (b) The secured creditor is entitled to make reasonable use of the encumbered assets in its possession and to inspect encumbered assets in the possession of the grantor.

Mandatory rules relating to the obligations of the party in possession

107. The law should provide that:

- (a) The secured creditor or the grantor in possession of the encumbered assets must take any steps necessary to preserve the encumbered assets;
- (b) The secured creditor must return the encumbered assets in its possession or terminate the notice registered upon full payment of the secured obligation and termination of all commitments to extend credit.

B. Asset-specific recommendations

Rights and obligations of the assignor and the assignee³⁹

[Note to the Working Group: The Working Group may wish to note that recommendations 108-111 are based on articles 11-14 of the United Nations Assignment Convention. The commentary will explain that they deal with the rights and obligations of the assignor and the assignee as between them.]

108. The law should provide that:

- (a) The mutual rights and obligations of the assignor and the assignee arising from their agreement are determined by the terms and conditions set forth in that agreement, including any rules or general conditions referred to therein;
- (b) The assignor and the assignee are bound by any usage to which they have agreed and, unless otherwise agreed, by any practices they have established between themselves.

³⁹ For recommendations 108-111, see A/CN.9/611, recommendations 16 bis-16 quinquies.

Representations of the assignor

109. [With respect to an assignment of a contractual receivable,] the law should provide that:

(a) Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of conclusion of the contract of assignment that:

- (i) The assignor has the right to assign the receivable;
- (ii) The assignor has not previously assigned the receivable to another assignee; and
- (iii) The debtor of the receivable does not and will not have any defences or rights of set-off;

(b) Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor of the receivable has, or will have, the ability to pay.

[Note to the Working Group: The Working Group may wish to note that the bracketed language in the chapeau of this recommendation is intended to reflect the understanding of the Working Group that this recommendation should not apply to an assignment of a non-contractual receivable (see A/CN.9/603, para. 36; see also notes to definition (p), "receivable", and recommendations 2, subparagraph (a), and 22).]

Right to notify the debtor of the receivable

110. The law should provide that:

(a) Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor of the receivable notification of the assignment and a payment instruction, but after notification has been sent only the assignee may send such an instruction; and

(b) Notification of the assignment or a payment instruction sent in breach of any agreement referred to in subparagraph (a) of this recommendation is not ineffective for the purposes of recommendation 114 by reason of such breach. However, nothing in this recommendation affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

Right to payment

111. The law should provide that:

(a) As between the assignor and the assignee, unless otherwise agreed and whether or not notification of the assignment has been sent:

- (i) If payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and goods returned in respect of the assigned receivable;
- (ii) If payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and also to goods returned to the assignor in respect of the assigned receivable; and

(iii) If payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and also to goods returned to such person in respect of the assigned receivable.

(b) The assignee may not retain more than the value of its right in the receivable.

IX. Rights and obligations of third-party obligors

A. Rights and obligations of the debtor of the receivable⁴⁰

Protection of the debtor of the receivable

[Note to the Working Group: The Working Group may wish to note that recommendations 112-118 are based on articles 15-21 of the United Nations Assignment Convention. The commentary will explain that these recommendations deal with the rights and obligations of the debtor of the receivable. The commentary will also explain that, if the debtor of the receivable makes payment in accordance with the recommendations in this part, the debtor of the receivable may obtain a valid discharge, irrespective of whether payment was made to the competing claimant with priority. Which one of several competing claimants will finally obtain the proceeds of the payment by the debtor of the receivable is a matter settled in the priority recommendations of the Guide (see, e.g. recommendation 152).]

112. The law should provide that:

(a) Except as otherwise provided in this law, an assignment does not, without the consent of the debtor of the receivable, affect the rights and obligations of the debtor of the receivable, including the payment terms contained in the original contract;

(b) A payment instruction may change the person, address or account to which the debtor of the receivable is required to make payment, but may not change:

(i) The currency of payment specified in the original contract; or

(ii) The State specified in the original contract in which payment is to be made to a State other than that in which the debtor of the receivable is located.

Notification of the debtor of the receivable

113. The law should provide that:

(a) Notification of the assignment or a payment instruction is effective when received by the debtor of the receivable if it is in a language that is reasonably expected to inform the debtor of the receivable about its contents. It is sufficient if notification of the assignment or a payment instruction is in the language of the original contract; and

(b) Notification of the assignment or a payment instruction may relate to receivables arising after notification; and

⁴⁰ For recommendations 112-118, see A/CN.9/611, recommendations 17-23.

(c) Notification of a subsequent assignment constitutes notification of all prior assignments.

Discharge of the debtor of the receivable by payment

114. The law should provide that:

(a) Until the debtor of the receivable receives notification of the assignment, it is entitled to be discharged by paying in accordance with the original contract;

(b) After the debtor of the receivable receives notification of the assignment, subject to subparagraphs (c)-(h) of this recommendation, it is discharged only by paying the assignee or, if otherwise instructed in the notification of the assignment or subsequently by the assignee in a writing received by the debtor of the receivable, in accordance with such payment instruction;

(c) If the debtor of the receivable receives more than one payment instruction relating to a single assignment of the same receivable by the same assignor, it is discharged by paying in accordance with the last payment instruction received from the assignee before payment;

(d) If the debtor of the receivable receives notification of more than one assignment of the same receivable made by the same assignor, it is discharged by paying in accordance with the first notification received;

(e) If the debtor of the receivable receives notification of one or more subsequent assignments, it is discharged by paying in accordance with the notification of the last of such subsequent assignments;

(f) If the debtor of the receivable receives notification of the assignment of a part of or an undivided interest in one or more receivables, it is discharged by paying in accordance with the notification or in accordance with this recommendation as if the debtor of the receivable had not received the notification. If the debtor of the receivable pays in accordance with the notification, it is discharged only to the extent of the part or undivided interest paid;

(g) If the debtor of the receivable receives notification of the assignment from the assignee, it is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment from the initial assignor to the initial assignee and any intermediate assignment have been made and, unless the assignee does so, the debtor of the receivable is discharged by paying in accordance with this recommendation as if the notification from the assignee had not been received. Adequate proof of an assignment includes but is not limited to any writing emanating from the assignor and indicating that the assignment has taken place; and

(h) This recommendation does not affect any other ground on which payment by the debtor of the receivable to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor of the receivable.

Defences and rights of set-off of the debtor of the receivable

115. The law should provide that:

(a) In a claim by the assignee against the debtor of the receivable for payment of the assigned receivable, the debtor of the receivable may raise against

the assignee all defences and rights of set-off arising from the original contract, or any other contract that was part of the same transaction, of which the debtor of the receivable could avail itself as if the assignment had not been made and such claim were made by the assignor;

(b) The debtor of the receivable may raise against the assignee any other right of set off, provided that it was available to the debtor of the receivable at the time notification of the assignment was received by the debtor of the receivable; and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, defences and rights of set-off that the debtor of the receivable may raise pursuant to recommendation 23 or 24, against the assignor for breach of an agreement limiting in any way the assignor's right to make the assignment are not available to the debtor of the receivable against the assignee.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, under recommendation 2, paragraph (b), the Guide applies to consumers but does not affect the rights of consumers under consumer-protection law.]

Agreement not to raise defences or rights of set-off

116. The law should provide that:

(a) The debtor of the receivable may agree with the assignor in a writing signed by the debtor of the receivable not to raise against the assignee the defences and rights of set-off that it could raise pursuant to recommendation 115. Such an agreement precludes the debtor of the receivable from raising against the assignee those defences and rights of set-off;

(b) The debtor of the receivable may not waive defences:

(i) Arising from fraudulent acts on the part of the assignee; or

(ii) Based on the incapacity of the debtor of the receivable; and

(c) Such an agreement may be modified only by an agreement in a writing signed by the debtor of the receivable. The effect of such a modification as against the assignee is determined by recommendation 117, subparagraph (b).

[Note to the Working Group: The Working Group may wish to note that this recommendation is based on article 19 of the United Nations Assignment Convention, which refers to a signed writing only for a waiver of defences or its modification. If the Working Group decides not to refer to signature in recommendation 13 but rather to evidence that the grantor intended to grant a security right, it may wish to reconsider the reference to signature in recommendation 116. If reference to signature is retained in recommendation 13, an electronic signature should be sufficient (see note to definition (v), "notification of the assignment", and recommendation 11.)]

Modification of the original contract

117. The law should provide that:

(a) An agreement concluded before notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is effective as against the assignee, and the assignee acquires corresponding rights;

(b) An agreement concluded after notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is ineffective as against the assignee unless:

- (i) The assignee consents to it; or
- (ii) The receivable is not fully earned by performance and either the modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification; and

(c) Subparagraphs (a) and (b) of this recommendation do not affect any right of the assignor or the assignee arising from breach of an agreement between them.

Recovery of payments

118. The law should provide that failure of the assignor to perform the original contract does not entitle the debtor of the receivable to recover from the assignee a sum paid by the debtor of the receivable to the assignor or the assignee.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation does not affect any liability of the assignor towards the debtor of the receivable for breach of contract.]

B. Rights and obligations of the obligor under a negotiable instrument⁴¹

119. The law should provide that a secured creditor's rights in a negotiable instrument as against a person obligated on the negotiable instrument or any other person claiming rights under the law governing negotiable instruments are subject to the law governing negotiable instruments.

C. Rights and obligations of the depositary bank⁴²

120. The law should provide that:

(a) The creation of a security right in a right to payment of funds credited to a bank account does not affect the rights and obligations of the depositary bank without its consent; and

(b) The rights of set-off of the depositary bank are not impaired by reason of any security right that the depositary bank may have in a right to payment of funds credited to a bank account.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that recommendations 120 and 121 are supplemented by recommendations 92 and 93 (to the extent that there is a priority conflict between a security right or right of set-off of the depositary bank and a security right of another person), as well as recommendations 165-167 (enforcement of a security right in a right to payment of funds credited to a bank account).]

⁴¹ See A/CN.9/611/Add.1, recommendation X.

⁴² For recommendations 123-124, see A/CN.9/611/Add.1, recommendations V and W.

The commentary will also explain that recommendation 120, subparagraph (b), does not deal with a priority conflict but with the situation where the depositary bank itself has both a right of set-off against and a security right in a right to payment of funds credited to a bank account. In this situation, according to recommendation 120, subparagraph (b), the bank's rights of set-off are not impaired or subsumed into (i.e. they remain distinct from) the bank's security right.]

121. The law should provide that nothing in these recommendations obligates a depositary bank:

(a) To pay any person other than a person that has control with respect to funds credited to a bank account; or

(b) To respond to requests for information about whether a control agreement or a security right in its own favour exists and whether the grantor retains the right to dispose of the funds credited in the account.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation does not affect the bank-customer relationship and the rights and obligations arising from other law governing bank accounts (e.g. money-laundering and bank secrecy).]

D. Rights and obligations of the guarantor/issuer, confirmer or nominated person of an independent undertaking⁴³

122. The law should provide that:

(a) A secured creditor's rights in proceeds under an independent undertaking are subject to the rights, under the law and practice governing independent undertakings, of the guarantor/issuer, confirmer or nominated person and of any other beneficiary named in the undertaking or to whom a transfer of drawing rights has been effected;

(b) The rights of a transferee-beneficiary of an independent undertaking are [not affected by] [superior to] a security right in a right to proceeds under the independent undertaking acquired from the transferor [or any prior transferor]; and

(c) The independent rights of a guarantor/issuer, confirmer, nominated person or transferee-beneficiary under an independent undertaking are not impaired by reason of any security right it may have in rights to proceeds under the independent undertaking, including any right in proceeds under the independent undertaking resulting from a transfer of drawing rights to a transferee-beneficiary.

[Note to the Working Group: The Working Group may wish to note that the commentary will make clear that this recommendation is intended to ensure that the rights of holders of independent rights to payment, notably nominated persons that have given value and transferee-beneficiaries to whom a transfer has been effected, are superior to the rights of mere assignees of rights in proceeds under a drawing by the original beneficiary. The commentary will also explain that their independent rights are distinct and are not impaired because of their rights as secured creditors of the original beneficiary (in other terms, their status as protected holders of independent rights should not be confused with their incidental status as secured

⁴³ For recommendations 120-122, see A/CN.9/611/Add.1, recommendations 25 bis, ter and quater.

creditors). When a nominated person gives value and obtains reimbursement from the issuer, it does so on the basis of its independent reimbursement rights and not as an acquirer of the rights of the beneficiary.]

123. The law should provide that a guarantor/issuer, confirmer or nominated person is not obligated to pay any person other than a confirmer, a nominated person, a named beneficiary, an acknowledged transferee-beneficiary of the independent undertaking or an acknowledged assignee of the proceeds under an independent undertaking.

124. The law should provide that, if a secured creditor obtains control by becoming an acknowledged assignee of the proceeds under an independent undertaking, the secured creditor has the right to enforce the acknowledgement against the guarantor/issuer, confirmer or nominated person that made the acknowledgement.

E. Rights and obligations of the issuer of a negotiable document⁴⁴

125. The law should provide that a secured creditor's rights in a negotiable document as against the issuer or any other person obligated on the negotiable document are subject to the law governing negotiable documents.

X. Default and enforcement⁴⁵

Purpose

The purpose of the provisions of the law on default and enforcement is to provide:

- (a) Clear and simple procedures for the enforcement of security rights after debtor default in a predictable and efficient manner;
- (b) Procedures that maximize the realization value of the encumbered assets for the benefit of the grantor, the debtor or any other person that owes payment of the secured obligation, the secured creditor and other creditors with a right in the encumbered assets;
- (c) Expeditious judicial and, subject to appropriate safeguards, non-judicial methods for the secured creditor to realize the value of the encumbered assets.

A. General recommendations

General standard of conduct in the context of enforcement

126. The law should provide that a person must exercise its rights and perform its obligations under the provisions of this law governing default and enforcement in good faith and in a commercially reasonable manner.

Limitations on party autonomy

127. The law should provide that rights and obligations under recommendation 126 cannot be waived unilaterally or varied by agreement at any time.

⁴⁴ See A/CN.9/611/Add.1, recommendation Z.

⁴⁵ See A/CN.9/611/Add.2, recommendations 89-124.

128. The law should provide that, subject to recommendation 127, the grantor and any other person that owes payment or other performance of the secured obligation may waive unilaterally or vary by agreement any of their rights and remedies under the provisions of this law governing default and enforcement, but only after default.

129. The law should provide that, subject to recommendation 127, the secured creditor may waive unilaterally or vary by agreement any of its rights and remedies under the provisions of this law governing default and enforcement at any time.

130. The law should provide that a variation of rights and remedies by agreement does not affect the rights of any person not a party to the agreement. A person challenging an agreement has the burden of showing that it was made prior to default or is inconsistent with recommendation 127.

Liability

131. The law should provide that a person is liable for damages arising from its failure to comply with its obligations under the provisions of this law governing default and enforcement.

[Note to the Working Group: The Working Group may wish to consider whether a waiver or variation of the liability arising under recommendation 131 should be addressed in recommendation 131 or left to other law.]

Rights and remedies after default

132. The law should provide that after default the grantor and the secured creditor have the rights and remedies set out in the provisions of this law governing default and enforcement, in the security agreement (except to the extent inconsistent with the provisions of this law) and in any other law.

Secured creditor rights and remedies

133. The law should provide that after default the secured creditor is entitled to exercise one or more of the following remedies with respect to an encumbered asset:

(a) Obtain possession of a tangible encumbered asset, as provided in recommendations 141 and 142;

(b) Sell or otherwise dispose of, lease or license an encumbered asset, as provided in recommendation 143;

(c) Propose to the grantor that the secured creditor accept an encumbered asset in total or partial satisfaction of the secured obligation, as provided in recommendations 147-150;

(d) Collect on or otherwise enforce a security right in an encumbered asset that is a receivable, negotiable instrument, right to payment of funds credited to a bank account or proceeds under an independent undertaking, as provided in recommendations 160-168;

(e) Enforce rights under a negotiable document, as provided in recommendation 169;

(f) Enforce its security right in an attachment to immovable property, as provided in recommendation 170; and

(g) Exercise any other right or remedy provided in the security agreement (except to the extent inconsistent with the provisions of this law) or any other law.

Judicial and extrajudicial enforcement

134. The law should provide that after default the secured creditor may exercise its rights and remedies provided in recommendation 133 by applying to a court or other authority. Subject to the general standard of conduct provided in recommendation 126 and the requirements provided in recommendations 141-146 with respect to extrajudicial possession and disposition, the secured creditor may elect to exercise its rights and remedies provided in recommendation 133 without having to apply to a court or other authority.

Grantor rights and remedies

135. The law should provide that after default the grantor is entitled to exercise one or more of the following remedies:

(a) Pay in full the secured obligation and obtain a release from the security right of all encumbered assets, as provided in recommendation 139;

(b) Apply to a court or other authority for relief if the secured creditor is not complying with its obligations under the provisions of this law governing default and enforcement relating to extrajudicial enforcement, as provided in recommendation 140;

(c) Propose to the secured creditor, or reject the proposal of the secured creditor, that the secured creditor accept an encumbered asset in total or partial satisfaction of the secured obligation, as provided in recommendations 147-150; and

(d) Exercise any other right or remedy provided in the security agreement (except to the extent inconsistent with the provisions of this law governing default and enforcement) or any other law.

Summary judicial proceedings

136. The law should provide for summary judicial proceedings with respect to the exercise of rights and remedies of the secured creditor, the grantor and any other person that owes performance of the secured obligation or claims to have a right in an encumbered asset.

Cumulative rights and remedies

137. The law should provide that the exercise of a right or remedy does not prevent the exercise of another right or remedy, unless the exercise of a right or remedy has made the exercise of another right or remedy impossible.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that the exercise of one remedy (e.g. repossession and disposition of an encumbered asset) may make the exercise of another remedy (e.g. acceptance of an encumbered asset in satisfaction of the secured obligation) impossible.]

Rights and remedies with respect to the secured obligation

138. The law should provide that the exercise of a right or remedy with respect to an encumbered asset does not prevent the exercise of a right or remedy with respect to the obligation secured by that asset, and vice versa.

Release of the encumbered assets after full payment

139. The law should provide that, after default and until the disposition, acceptance or collection of an encumbered asset by the secured creditor, the debtor, the grantor or any other interested person (e.g. a secured creditor whose security right has lower priority than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered assets) is entitled to pay the secured obligation in full, including interest and the costs of enforcement up to the time of full payment. If all commitments to extend credit have terminated, full payment extinguishes the security right in all encumbered assets and, to the extent provided in law other than this law, subrogates the person making the payment to the rights of the secured creditor.

Court relief

140. The law should provide that the debtor, the grantor or any other interested person (e.g. a secured creditor with a lower priority ranking than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered assets) is entitled at any time to apply to a court or other authority for relief from the secured creditor's failure to comply with its obligations under the provisions of this law governing default and enforcement. Unfounded applications and improper interference with or undue delay of the enforcement process should be discouraged and avoided.

[Note to the Working Group: The Working Group may wish to consider whether the principle with respect to the right to apply to court for relief by the debtor, grantor or other interested third persons should generally apply to the exercise of all rights and remedies under the recommendations of this chapter and not only with respect to extrajudicial enforcement. The Working Group may wish to consider specifying the safeguards necessary to discourage unfounded applications and improper interference with the enforcement process.]

Secured creditor's right to take possession of an encumbered asset

141. The law should provide that after default the secured creditor is entitled to possession of a tangible encumbered asset.

Alternative A

142. The law should provide that the secured creditor may elect to take possession of the encumbered asset without applying to a court or other authority only if:

- (a) The grantor has consented in the security agreement to the secured creditor obtaining possession without applying to a court or other authority;
- (b) The secured creditor has given the grantor and any person in possession of the encumbered asset notice of default; and
- (c) Possession can be taken without the use or threat of force.

Alternative B

142. The law should provide that the secured creditor may elect to take possession of the encumbered asset without applying to a court or other authority only if:

(a) The grantor has consented in the security agreement to the secured creditor obtaining possession without applying to a court or other authority;

(b) The secured creditor has given the grantor and any person in possession of the encumbered asset notice of default and of its intention to pursue extrajudicial enforcement with details as to the time and modalities of enforcement; and

(c) [Possession can be taken without the use or threat of force, or any other illegal act.] [At the time of extrajudicial enforcement the grantor does not object.]

[Note to the Working Group: The Working Group may wish to note that, while under either alternative the grantor has to consent in the security agreement, the alternatives differ as to the requirements for notices and the safeguards for the grantor.]

Disposition of encumbered assets

143. The law should provide that after default a secured creditor is entitled to sell or otherwise dispose of, lease or license an encumbered asset. Subject to recommendation 126, a secured creditor that elects to exercise this remedy without applying to a court or other authority may select the method, manner, time, place, and other aspects of the disposition, lease or license.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the purpose and effect of this recommendation is to provide a balance between the interests of both the grantor (and its other creditors) and the secured creditor in enabling flexibility in the methods used to dispose of the encumbered assets in order to obtain an economically effective enforcement, while at the same time protecting the grantor against actions taken by the secured creditor that, in the commercial context, are not reasonable. The commentary will also explain that the secured creditor need not be in possession of the encumbered assets to exercise its rights and remedies under this chapter.]

Advance notice of extrajudicial disposition

144. The law should provide that after default the secured creditor must give notice of its intention to pursue extrajudicial disposition, lease or licence of an encumbered asset.

145. The law should:

(a) Provide that the notice must be given:

(i) To the grantor, the debtor and any other person that owes payment of the secured obligation;

(ii) To any person with rights in the encumbered asset that, prior to the sending of the notice by the secured creditor to the grantor, notifies in writing the secured creditor of those rights, and

(iii) To any other secured creditor that, more than [...] days before the notice is sent to the grantor, registers a notice of a security right in the encumbered

asset under the name of the grantor or that is in possession of the encumbered asset at the time it is seized by the secured creditor;

(b) State the manner in which the notice must be given, its timing and its minimum contents, including whether the notice [to the grantor] must contain an accounting of the amount then owed and a reference to the right of the debtor or the grantor to obtain the release of the encumbered assets from the security right as provided in recommendation 139;

(c) Provide that the notice must be in a language that is reasonably expected to inform its recipients about its contents;

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the notice to the grantor is sufficient if it is in the language of the security agreement and, if the security right was made effective against third parties by registration, notice under this recommendation is sufficient if it is in the language of the registry.]

(d) Address the legal consequences of failure to comply with the recommendations governing the notice; and

[Note to the Working Group: The Working Group may wish to consider whether subparagraph (d) is necessary. Recommendation 131 deals with the liability of the secured creditor for failure to comply with its obligations under this law. In addition, recommendation 140 entitles the grantor to obtain judicial relief if a secured creditor pursuing extrajudicial enforcement violates its obligations under this law. Moreover, the note to recommendation 158 suggests the inclusion of a new recommendation dealing with the consequences of a failure of the secured creditor to comply with its obligations with regard to the rights acquired by a good faith buyer, lessee or licensee.]

(e) List circumstances in which the notice need not be given either because the delay associated with requiring advance notice could have a negative effect on the realization value of the encumbered assets (as in the case of perishable tangibles or other assets whose value may decline speedily) or because the encumbered assets are of a type sold on a recognized market and therefore have their value set by that market.

146. The law should provide rules ensuring that the notice referred to in recommendation 144 can be given in an efficient, timely and reliable way so as to protect the grantor or other interested parties, while, at the same time, avoiding having a negative effect on the secured creditor's remedies and the potential realization value of the encumbered assets.

[Note to the Working Group: The Working Group may wish to consider whether this recommendation 146 should be more specific or included in the commentary. The Working Group may also wish to note that the commentary will explain that these rules should balance the interest of the secured creditor in having the flexibility to dispose of the encumbered asset promptly in order to take advantage of favourable market conditions (an interest that also benefits the grantor and other interested parties) with the interest of the grantor and those other parties in obtaining notice of an extrajudicial disposition sufficiently before the disposition in order to take actions that might further protect their interests (such as locating potential buyers for the encumbered asset or attending a public disposition of the encumbered asset to verify the secured creditor's compliance with its

obligations under the provisions of the law governing default and enforcement). The commentary will also explain that the recommendation does not require registration of the notice because the notice meets the policy goals that could be served by registration.]

Acceptance of encumbered assets in satisfaction of the secured obligation

147. The law should provide that after default the secured creditor may propose in writing that the secured creditor accept one or more of the encumbered assets in total or partial satisfaction of the secured obligation.

148. The law should provide that a secured creditor that proposes that the secured creditor accept an encumbered asset in total or partial satisfaction of the secured obligation must send notice of the proposal, specifying the amount owed as of the date the proposal is sent and the amount of the obligation that is proposed to be satisfied by accepting the encumbered asset:

(a) To the grantor, the debtor and any other person that owes payment of the secured obligation (e.g. a guarantor);

(b) To any person with rights in the encumbered asset that, more than [...] days prior to the sending of the proposal by the secured creditor to the grantor, has notified in writing the secured creditor of those rights; and

(c) To any other secured creditor that, more than [...] days before the proposal is sent to the grantor, has registered a notice of a security right in the encumbered asset in the name of the grantor [more than [...] days before the proposal is sent to the grantor] or that was in possession of the encumbered asset at the time it was seized by the secured creditor.

149. The law should provide that, if any addressee of a proposal under recommendation 148 objects in writing within a short time, such as 20 days, after the proposal is sent, the secured creditor may not proceed with the proposal.

150. The law should provide that, if the grantor makes the proposal referred to in recommendation 147 and the secured creditor accepts it, the secured creditor must proceed as provided in recommendations 148 and 149.

Distribution of proceeds of enforcement

151. The law should provide that, in the case of extrajudicial disposition of an encumbered asset or collection of a receivable, negotiable instrument or other obligation, the enforcing secured creditor must apply the net proceeds of its enforcement (after deducting costs of enforcement) to the secured obligation. Except as provided in recommendation 152, the enforcing secured creditor must pay any surplus remaining to any subordinate competing claimant, that, prior to any distribution of the surplus, gave notice of its claim to the enforcing secured creditor, to the extent of that claim. Any balance remaining must be remitted to the grantor.

152. The law should also provide that, in the case of extrajudicial enforcement, whether or not there is any dispute as to the entitlement of any competing claimant or as to the priority of payment, the enforcing secured creditor may, in accordance with generally applicable procedural rules, pay the surplus to a competent judicial or other authority or to a public deposit fund for distribution. The surplus should be distributed in accordance with the priority rules of this law.

153. The law should provide that distribution of the proceeds realized by a judicial disposition or other officially administered enforcement process is to be made pursuant to the general rules of the State governing execution proceedings, but in accordance with the priority rules of this law.

154. The law should provide that, unless otherwise agreed, the debtor and any other person that owes payment of the secured obligation are liable for any shortfall still owing after application of the net proceeds of enforcement to the secured obligation.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation provides that the secured creditor has an unsecured claim for any shortfall remaining after payment of the secured obligation. The commentary will also explain that the secured creditor and the grantor may agree in the context of non-recourse or limited-recourse transactions that the secured creditor has no claim for any shortfall.]

Right of prior-ranking secured creditor to take over enforcement

155. The law should provide that, where a secured creditor or a judgement creditor has commenced enforcement, a secured creditor whose security right has priority over that of the enforcing secured creditor or the enforcing judgement creditor is entitled to take control of the enforcement process at any time before final disposition, acceptance or collection of an encumbered asset. The right to take control includes the right to enforce by any method available under this law.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the secured creditor with priority has the right to substitute its own enforcement process under this law for judgement enforcement proceedings initiated by a subordinate judgement creditor under other law but does not have the right to continue the enforcement process initiated by the judgement creditor under that other law.]

Rights acquired through judicial disposition

156. The law should provide that, if a secured creditor disposes of an encumbered asset through a judicial or other officially administered process, the rights acquired by the transferee are determined by the general rules of the State governing execution proceedings.

Rights acquired through extrajudicial disposition

157. The law should provide that, if a secured creditor disposes of an encumbered asset without applying to a court or other authority, a good faith purchaser acquires the grantor's right in the asset subject to rights that have priority over the security right of the enforcing secured creditor, but free of rights of the enforcing secured creditor and any competing claimant whose right has a lower priority than that of the enforcing secured creditor. The same rule applies to rights in an encumbered asset acquired by a secured creditor that has accepted the asset in total or partial satisfaction of the secured obligation.

158. The law should provide that, if a secured creditor leases or licenses an encumbered asset without applying to a court or other authority, a good faith lessee or licensee is entitled to the benefit of the lease or licence during the term thereof, except as against rights that have priority over the security right of the enforcing secured creditor.

[Note to the Working Group: The Working Group may wish to consider whether a new recommendation should be included in this chapter along the following lines: “The law should provide that failure of the secured creditor to comply with any of its obligations under the provisions of the law on default and enforcement does not affect the rights of a good faith buyer, lessee or licensee of the encumbered asset.”]

Intersection of movable and immovable property enforcement regimes

159. The law should provide that:

(a) The secured creditor may elect to enforce a security right in attachments to immovable property in accordance with this law or the law governing enforcement of encumbrances in immovable property; and

(b) If an obligation is secured by both movable and immovable property of a grantor, the secured creditor may elect to enforce:

(i) The security right in the movable property under this law and the encumbrance in the immovable property under the law governing enforcement of encumbrances in immovable property; or

(ii) Both rights under the law governing enforcement of encumbrances in immovable property.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the law should be coordinated with general civil procedure law to provide a right for secured creditors to intervene in court proceedings initiated by other creditors of the grantor so as to protect security rights and to ensure the same priority status of security rights as under the law.]

B. Asset-specific recommendations

Application of the chapter on enforcement to outright transfers of receivables⁴⁶

160. The law should provide that the provisions of the law on default and enforcement do not apply to an outright transfer of receivables with the exception of:

(a) Recommendation 126 in the case of an outright transfer with recourse; and

(b) Recommendations 161 and 162.

Enforcement of a security right in a receivable⁴⁷

161. The law should provide that, in the case of an outright transfer of a receivable, the assignee has the right to collect or otherwise enforce the receivable. In the case of a transfer of a receivable by way of security, the assignee is entitled, subject to recommendations 112 to 118, to collect or otherwise enforce the receivable after default, or before default with the agreement of the assignor.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the secured creditor may, as an alternative to

⁴⁶ See A/CN.9/611, recommendation 88.

⁴⁷ For recommendations 161 and 162, see A/CN.9/611, recommendations 102 and 103.

collection, elect to sell a receivable pursuant to recommendations 133, subparagraph (d), and 143. The commentary will also explain that a notification and a payment instruction sent in breach of an agreement between the assignee and the assignor not to notify the debtor of the receivable obligates the debtor of the receivable to pay the assignee but the assignee may be liable to the assignor for breach of contract (see recommendation 110, subparagraph (b)).]

162. The law should provide that the assignee's right to collect or otherwise enforce a receivable includes the right to collect or otherwise enforce any personal or property right that secures payment of the receivable (such as a guarantee or security right).

[Note to the Working Group: The Working Group may wish to note that the commentary will discuss how other recommendations of the chapter on enforcement may apply to the enforcement of a right securing payment of an assigned receivable.]

Enforcement of a security right in a negotiable instrument⁴⁸

163. The law should provide that after default, or before default with the agreement of the grantor, the secured creditor is entitled, subject to recommendation 119, to collect or otherwise enforce a negotiable instrument that is an encumbered asset against a person obligated on that instrument.

[Note to the Working Group: The Working Group may wish to note that commentary will explain that as between the secured creditor and the person obligated on the negotiable instrument or other persons claiming rights under the law governing negotiable instruments, the enforcement rights of the secured creditor are subject to the law governing negotiable instruments. The commentary will also include the following examples of such persons:

(a) The person obligated on the negotiable instrument may be obligated to pay only a holder or other person entitled to enforce the instrument under the law governing negotiable instruments; and

(b) The right of the person obligated on the instrument to raise defences to that obligation is determined by the law governing negotiable instruments.]

164. The law should provide that the secured creditor's right to collect or otherwise enforce a negotiable instrument includes the right to collect or otherwise enforce any personal or property right that secures payment of the negotiable instrument (such as a guarantee or security right).

Enforcement of a security right in a right to payment of funds credited to a bank account⁴⁹

165. The law should provide that after default, or before default with the agreement of the grantor, a secured creditor with a security right in a right to payment of funds credited to a bank account is entitled, subject to recommendations 119 and 120, to collect or otherwise enforce its right to payment of the funds.

⁴⁸ For recommendations 163 and 164, see A/CN.9/611/Add.1, recommendations 104 and 105.

⁴⁹ For recommendations 165-167, see A/CN.9/611/Add.1, recommendations 106 bis, 107 and 108.

166. The law should provide that after default, or before default with the agreement of the grantor, a secured creditor that has control is entitled, subject to recommendations 120 and 121, to enforce its security right without having to apply to a court or other authority.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, unlike a secured creditor that has to collect the funds to apply them to the secured obligation according to recommendation 151, a depositary bank as a secured creditor may apply the funds to the secured obligation directly. The commentary will also explain that enforcement of the bank's rights of set-off remains subject to other law.]

167. The law should provide that a secured creditor that does not have control is entitled, subject to recommendations 120 and 121, to collect or otherwise enforce the security right against the depositary bank only pursuant to a court order, unless the depositary bank agrees otherwise.

Enforcement of a security right in proceeds under an independent undertaking⁵⁰

168. The law should provide that after default, or before default with the agreement of the grantor, a secured creditor with a security right in proceeds under an independent undertaking is entitled, subject to recommendations 122 to 124, to collect or otherwise enforce its right in the proceeds under the independent undertaking.

[Note to the Working Group: The Working Group may wish to note that the commentary will make clear that no separate act of transfer by the grantor is necessary for the secured creditor to enforce a security right in a right to proceeds under an independent undertaking when the security right is created automatically under recommendation 24. The commentary will also explain that any obligations of the guarantor/issuer or nominated person to the secured creditor are governed by recommendations 122 to 124. Furthermore, the commentary will explain that recommendation 168 is not intended to disturb any pre-default arrangements agreed upon between the grantor and the secured creditor by which, prior to the grantor's default, the secured creditor may receive the proceeds under an independent undertaking.]

Enforcement of a security right in a negotiable document⁵¹

[Note to the Working Group: The Working Group may wish to note that the commentary will also explain that the general recommendations on enforcement of security rights apply here as well. Recommendation 169 deals with a special issue.]

169. The law should provide that after default, or before default with the agreement of the grantor, the secured creditor is entitled, subject to recommendation 125, to enforce a security right in a negotiable document against the issuer or any other person obligated on the negotiable document.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, under law governing negotiable documents, the issuer may be obligated to deliver the goods only to a holder of the negotiable document covering the goods.]

⁵⁰ See A/CN.9/611/Add.1, recommendation 106.

⁵¹ See A/CN.9/611/Add.1, recommendation 109.

Enforcement of a security right in attachments to immovable property⁵²

[Note to the Working Group: The Working Group may wish to consider that the general recommendations apply to the enforcement of a security right in attachments to movable property. As to the enforcement of security rights in attachments to immovable property, the Working Group may wish to consider an additional recommendation along the lines of recommendation 170.]

170. The law should provide that a secured creditor with a security right in an attachment to immovable property is entitled to enforce its security right only if it has priority over competing rights in the immovable property. In the case of such an enforcement, a creditor with a competing right in immovable property that has lower priority ranking is entitled to pay off the obligation secured by a security right in the attachment. The enforcing secured creditor is liable for any damage to the immovable property caused by the act of removal other than any diminution in its value attributable solely to the absence of the attachment.

XI. Insolvency⁵³**A. UNCITRAL Legislative Guide on Insolvency Law: definitions and recommendations****Definitions⁵⁴**

12. (b) “Assets of the debtor”:⁵⁵ property, rights and interests of the debtor, including rights and interests in property, whether or not in the possession of the debtor, tangible or intangible, movable or immovable, including the debtor’s interests in encumbered assets or in third party-owned assets;

12. (dd) “Party in interest”: any party whose rights, obligations or interests are affected by insolvency proceedings or particular matters in the insolvency proceedings, including the debtor, the insolvency representative, a creditor, an equity holder, a creditor committee, a government authority or any other person so affected. It is not intended that persons with remote or diffuse interests affected by the insolvency proceedings would be considered to be a party in interest;

⁵² See A/CN.9/WG.VI/WP.26/Add.4, note on the enforcement of a security right in attachments.

⁵³ See A/CN.9/WG.VI/WP.21/Add.3.

⁵⁴ These definitions are taken from the glossary of the *UNCITRAL Legislative Guide on Insolvency Law* (“the *Insolvency Guide*”) (Introduction, para. 12).

⁵⁵ For the purposes of this chapter, the term “debtor” as used in the recommendations taken from the *Insolvency Guide* should be read as referring to a person who meets the requirements for the commencement of insolvency proceedings (see *Insolvency Guide*, part two, chapter I, section A, paras. 1-11, and recommendation 8). Where the security right at issue (which secures the debtor’s obligation) is granted by the debtor, the term “debtor” also refers to the grantor. However, where the security right at issue is granted not by the debtor but by a third party (e.g. on the basis of some contractual arrangement with the debtor), the term “debtor” refers to the third-party grantor, since only in that third-party grantor’s insolvency is the secured creditor a secured creditor with a proprietary right in the encumbered assets. In the insolvency of a non-grantor debtor, the creditor is an unsecured creditor with an unsecured claim against the non-grantor debtor.

12. (pp) “Security interest”: a right in an asset to secure payment or other performance of one or more obligations.

[*Note to the Working Group: The Working Group may wish to note that the insolvency chapter may need to address other terms used in the Insolvency Guide and the Secured Transactions Guide.*]

Recommendations⁵⁶

Key objectives of an efficient and effective insolvency law

(1) In order to establish and develop an effective insolvency law, the following key objectives should be considered:

- (a) Provide certainty in the market to promote economic stability and growth;
- (b) Maximize value of assets;
- (c) Strike a balance between liquidation and reorganization;
- (d) Ensure equitable treatment of similarly situated creditors;
- (e) Provide for timely, efficient and impartial resolution of insolvency;
- (f) Preserve the insolvency estate to allow equitable distribution to creditors;
- (g) Ensure a transparent and predictable insolvency law that contains incentives for gathering and dispensing information; and
- (h) Recognize existing creditors rights and establish clear rules for ranking of priority claims.

(4) The insolvency law should specify that where a security interest is effective and enforceable under law other than the insolvency law, it will be recognized in insolvency proceedings as effective and enforceable.

(7) In order to design an effective and efficient insolvency law, the following common features should be considered:

- (a)-(d) ...
- (e) Protection of the insolvency estate against the actions of creditors, the debtor itself and the insolvency representative, and where the protective measures apply to secured creditors, the manner in which the economic value of the security interest will be protected during the insolvency proceedings;
- (f)-(r) ...

Law applicable to validity and effectiveness of rights and claims

(30) The law applicable to the validity and effectiveness of rights and claims existing at the time of the commencement of insolvency proceedings should be

⁵⁶ It should be noted that this chapter includes only the recommendations or parts of recommendations of the *Insolvency Guide* that relate specifically to security rights, with the original numbers from the *Insolvency Guide* (for the recommendations not reproduced in this chapter, see the *Insolvency Guide* available at <http://www.uncitral.org>). It should also be noted that the final text of the recommendations will include the necessary footnotes from the *Insolvency Guide*.

determined by the private international law rules of the State in which insolvency proceedings are commenced.

Law applicable in insolvency proceedings: lex fori concursus

(31) The insolvency law of the State in which insolvency proceedings are commenced (lex fori concursus) should apply to all aspects of the commencement, conduct, administration and conclusion of those insolvency proceedings and their effects. These may include, for example:

- (a)-(i) ...
- (j) Treatment of secured creditors;
- (k)-(n) ...
- (o) Ranking of claims;
- (p)-(s) ...

Assets constituting the estate

(35) The insolvency law should specify that the estate should include:

- (a) Assets of the debtor, including the debtor's interest in encumbered assets and in third party-owned assets;
- (b) Assets acquired after commencement of the insolvency proceedings; and
- (c) ...

Provisional measures

(39) The insolvency law should specify that the court may grant relief of a provisional nature, at the request of the debtor, creditors or third parties, where relief is needed to protect and preserve the value of the assets of the debtor or the interests of creditors, between the time an application to commence insolvency proceedings is made and commencement of the proceedings, including:

- (a) Staying execution against the assets of the debtor, including actions to make security interests effective against third parties and enforcement of security interests;
- (b)-(d) ...

Measures applicable on commencement

(46) The insolvency law should specify that, on commencement of insolvency proceedings:

- (a) Commencement or continuation of individual actions or proceedings concerning the assets of the debtor, and the rights, obligations or liabilities of the debtor are stayed;
- (b) Actions to make security interests effective against third parties and to enforce security interests are stayed;
- (c) Execution or other enforcement against the assets of the estate is stayed;

(d) The right of a counterparty to terminate any contract with the debtor is suspended; and

(e) The right to transfer, encumber or otherwise dispose of any assets of the estate is suspended.

Duration of measures automatically applicable on commencement

(49) The insolvency law should specify that the measures applicable on commencement of insolvency proceedings remain effective throughout those proceedings until:

(a) The court grants relief from the measures;

(b) In reorganization proceedings, a reorganization plan becomes effective; or

(c) In the case of secured creditors in liquidation proceedings, a fixed time period specified in the law expires, unless it is extended by the court for a further period on a showing that:

(i) An extension is necessary to maximize the value of assets for the benefit of creditors; and

(ii) The secured creditor will be protected against diminution of the value of the encumbered asset in which it has a security interest.

Protection from diminution of the value of encumbered assets

(50) The insolvency law should specify that, upon application to the court, a secured creditor should be entitled to protection of the value of the assets in which it has a security interest. The court may grant appropriate measures of protection that may include:

(a) Cash payments by the estate;

(b) Provision of additional security interests; or

(c) Such other means as the court determines.

Relief from measures applicable on commencement

(51) The insolvency law should specify that a secured creditor may request the court to grant relief from the measures applicable on commencement of insolvency proceedings on grounds that may include that:

(a) The encumbered asset is not necessary to a prospective reorganization or sale of the debtor's business;

(b) The value of the encumbered asset is diminishing as a result of the commencement of insolvency proceedings and the secured creditor is not protected against that diminution of value; and

(c) In reorganization, a plan is not approved within any applicable time limits.

Power to use and dispose of assets of the estate

(52) The insolvency law should permit:

(a) The use and disposal of assets of the estate (including encumbered assets) in the ordinary course of business, except cash proceeds; and

(b) The use and disposal of assets of the estate (including encumbered assets) outside the ordinary course of business, subject to the requirements of recommendations 55 and 58.

Further encumbrance of encumbered assets

(53) The insolvency law should specify that encumbered assets may be further encumbered, subject to the requirements of recommendations 65-67.

Use of third-party-owned assets

(54) The insolvency law should specify that the insolvency representative may use an asset owned by a third party and in the possession of the debtor provided specified conditions are satisfied, including:

(a) The interests of the third party will be protected against diminution in the value of the asset; and

(b) The costs under the contract of continued performance of the contract and use of the asset will be paid as an administrative expense.

Ability to sell assets of the estate free and clear of encumbrances and other interests

(58) The insolvency law should permit the insolvency representative to sell assets that are encumbered or subject to other interest free and clear of that encumbrance and other interest, outside the ordinary course of business, provided that:

(a) The insolvency representative gives notice of the proposed sale to the holders of encumbrances or other interests;

(b) The holder is given the opportunity to be heard by the court where they object to the proposed sale;

(c) Relief from the stay has not been granted; and

(d) The priority of interests in the proceeds of sale of the asset is preserved.

Use of cash proceeds

(59) The insolvency law should permit the insolvency representative to use and dispose of cash proceeds if:

(a) The secured creditor with a security interest in those cash proceeds consents to such use or disposal; or

(b) The secured creditor was given notice of the proposed use or disposal and an opportunity to be heard by the court; and

(c) The interests of the secured creditor will be protected against diminution in the value of the cash proceeds.

Burdensome assets

(62) The insolvency law should permit the insolvency representative to determine the treatment of any asset that is burdensome to the estate. In particular, the insolvency law may permit the insolvency representative to relinquish a burdensome asset following the provision of notice to creditors and the opportunity for creditors to object to the proposed action, except that where a secured claim exceeds the value of the encumbered asset, and the asset is not required for a reorganization or sale of the business as a going concern, the insolvency law may permit the insolvency representative to relinquish the asset to the secured creditor without notice to other creditors.

Security for post-commencement finance

(65) The insolvency law should enable a security interest to be granted for repayment of post-commencement finance, including a security interest on an unencumbered asset, including an after-acquired asset, or a junior or lower priority security interest on an already encumbered asset of the estate.

(66) The law should specify that a security interest over the assets of the estate to secure post-commencement finance does not have priority ahead of any existing security interest over the same assets unless the insolvency representative obtains the agreement of the existing secured creditor(s) or follows the procedure in recommendation 67.

(67) The insolvency law should specify that, where the existing secured creditor does not agree, the court may authorize the creation of a security interest having priority over pre-existing security interests provided specified conditions are satisfied, including:

- (a) The existing secured creditor was given the opportunity to be heard by the court;
- (b) The debtor can prove that it cannot obtain the finance in any other way; and
- (c) The interests of the existing secured creditor will be protected.

Effect of conversion on post-commencement finance

(68) The insolvency law should specify that where reorganization proceedings are converted to liquidation, any priority accorded to post-commencement finance in the reorganization should continue to be recognized in the liquidation.

Automatic termination and acceleration clauses

(70) The insolvency law should specify that any contract clause that automatically terminates or accelerates a contract upon the occurrence of any of the following events is unenforceable as against the insolvency representative and the debtor:

- (a) An application for commencement, or commencement, of insolvency proceedings;
- (b) The appointment of an insolvency representative.

(71) The insolvency law should specify the contracts that are exempt from the operation of recommendation 70, such as financial contracts, or subject to special rules, such as labour contracts.

(72) The insolvency law should specify that the insolvency representative may decide to continue the performance of a contract of which it is aware where continuation would be beneficial to the insolvency estate. The insolvency law should specify that:

(a) The right to continue applies to the contract as a whole; and

(b) The effect of continuation is that all terms of the contract are enforceable.

Performance prior to continuation or rejection

(80) The insolvency law should specify that the insolvency representative may accept or require performance from the counterparty to a contract prior to continuation or rejection of the contract. Claims of the counterparty arising from performance accepted or required by the insolvency representative prior to continuation or rejection of the contract should be payable as an administrative expense:

(a) If the counterparty has performed the contract the amount of the administrative expense should be the contractual price of the performance; or

(b) If the insolvency representative uses assets owned by a third party that are in the possession of the debtor subject to contract, that party should be protected against diminution of the value of those assets and have an administrative claim in accordance with subparagraph (a).

[Note to the Working Group: The Working Group may wish to note that the commentary will make it clear that rejection of a credit agreement does not terminate the security agreement and does not extinguish the security right.]

Avoidance of security interests

(88) The insolvency law should specify that notwithstanding that a security interest is effective and enforceable under law other than the insolvency law, it may be subject to the avoidance provisions of insolvency law on the same grounds as other transactions.

Financial contracts

(103) Once the financial contracts of the debtor have been terminated, the insolvency law should permit counterparties to enforce and apply their security interest to obligations arising out of financial contracts. Financial contracts should be exempt from any stay under the insolvency law that applies to the enforcement of a security interest.

Participation by creditors

(126) The insolvency law should specify that creditors, both secured and unsecured, are entitled to participate in insolvency proceedings and identify what that participation may involve in terms of the functions that may be performed.

Right to be heard and to request review

(137) The insolvency law should specify that a party in interest has a right to be heard on any issue in the insolvency proceedings that affects its rights, obligations or interests. For example, a party in interest should be entitled:

- (a) To object to any act that requires court approval;
- (b) To request review by the court of any act for which court approval was not required or not requested; and
- (c) To request any relief available to it in insolvency proceedings.

Right of appeal

(138) The insolvency law should specify that a party in interest may appeal from any order of the court in the insolvency proceedings that affects its rights, obligations or interests.

*Reorganization plan**Approval by classes*

(150) Where voting on approval of the plan is conducted by reference to classes, the insolvency law should specify how the vote achieved in each class would be treated for the purposes of approval of the plan. Different approaches may be taken, including requiring approval by all classes or approval by a specified majority of the classes, but at least one class of creditors whose rights are modified or affected by the plan must approve the plan.

(151) Where the insolvency law does not require a plan to be approved by all classes, the insolvency law should address the treatment of those classes which do not vote to approve a plan that is otherwise approved by the requisite classes. That treatment should be consistent with the grounds set forth in recommendation 152.

Confirmation of an approved plan

(152) Where the insolvency law requires court confirmation of an approved plan, the insolvency law should require the court to confirm the plan if the following conditions are satisfied:

- (a) The requisite approvals have been obtained and the approval process was properly conducted;
- (b) Creditors will receive at least as much under the plan as they would have received in liquidation, unless they have specifically agreed to receive lesser treatment;
- (c) The plan does not contain provisions contrary to law;
- (d) Administrative claims and expenses will be paid in full, except to the extent that the holder of the claim or expense agrees to different treatment; and
- (e) Except to the extent that affected classes of creditors have agreed otherwise, if a class of creditors has voted against the plan, that class shall receive under the plan full recognition of its ranking under the insolvency law and the distribution to that class under the plan should conform to that ranking.

Challenges to approval (where there is no requirement for confirmation)

(153) Where a plan becomes binding on approval by creditors, without requiring confirmation by the court, the insolvency law should permit parties in interest, including the debtor, to challenge the approval of the plan. The insolvency law should specify criteria against which a challenge can be assessed, which should include:

- (a) Whether the grounds set forth in recommendation 152 are satisfied; and
- (b) Fraud, in which case the requirements of recommendation 154 should apply.

Secured claims

(172) The insolvency law should specify whether secured creditors are required to submit claims.

Valuation of secured claims

(179) The insolvency law should provide that the insolvency representative may determine the portion of a secured creditor's claim that is secured and the portion that is unsecured by valuing the encumbered asset.

*Priority of claims**Secured claims*

(188) The insolvency law should specify that secured claims should be satisfied from the encumbered asset in liquidation or pursuant to a reorganization plan, subject to claims that are superior in priority to the secured claim, if any. Claims superior in priority to secured claims should be minimized and clearly set forth in the insolvency law. To the extent that the value of the encumbered asset is insufficient to satisfy the secured creditor's claim, the secured creditor may participate as an ordinary unsecured creditor.

B. Additional insolvency recommendations of the guide on secured transactions

Applicable law in insolvency proceedings

171. The insolvency law should provide that, notwithstanding the commencement of insolvency proceedings, the creation, effectiveness against third parties, priority and enforcement of a security right are governed by the law that would be applicable in the absence of the insolvency proceeding. This recommendation does not affect the application of any insolvency rules, including any rules relating to avoidance, priority or enforcement of security rights.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify the relationship between this recommendation and recommendations 30 and 31 of the Insolvency Guide. The commentary will also explain that this recommendation refers to insolvency rules without regard to whether they are characterized for any purpose as procedural, substantive, jurisdictional or otherwise.]

Assets subject to an acquisition security right (unitary approach)

172. The insolvency law should provide that, in the case of insolvency proceedings with respect to the grantor, assets subject to an acquisition security right are treated in the same way as assets subject to security rights generally.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, in line with recommendation 178, insolvency law would recognize any special priority granted to acquisition security rights over non-acquisition security rights under secured transactions law (e.g. the priority under recommendations 185 and 186).]

Assets subject to an ownership right under a retention-of-title device (non-unitary approach)**Alternative A**

172. The insolvency law should provide that, in the case of insolvency proceedings with respect to a buyer, financial lessee or grantor, assets subject to rights under a retention-of-title device are treated in the same way as assets subject to a security right.

Alternative B

172. The insolvency law should provide that, in the case of insolvency proceedings with respect to a buyer, financial lessee or grantor, assets subject to rights under a retention-of-title device are treated as third-party owned assets under the *UNCITRAL Legislative Guide on Insolvency Law*.

Receivables subject to an outright transfer before commencement

173. The insolvency law should provide that, if the debtor makes an outright transfer of a receivable before the commencement of the debtor's insolvency proceedings, the receivable is treated in the same way that the insolvency law would treat an asset that has been the subject of an outright transfer by the debtor before commencement. Like a pre-commencement transfer by the debtor of any other asset, the outright transfer of the receivable would be subject to any relevant avoidance rules of the insolvency law.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the Guide brings an outright transfer of a receivable (i.e. a transfer of a receivable not for security) within the scope of the Guide and defines a "security right" to include an outright transfer of a receivable. In referring to an outright transfer, the Guide does not affect the application of any rule under law, other than the insolvency law, by which a transaction may be re-characterized as a transfer for security even though the parties denominated the transaction as an outright transfer. In the event of such a re-characterization, the transfer would not qualify as an outright transfer for purposes of the Guide.]

If a security right granted by the debtor before the commencement of the debtor's insolvency proceeding consists, under law other than the insolvency law, of an outright transfer of a receivable, the insolvency law should treat the outright transfer of the receivable as it would treat a pre-commencement transfer by the debtor of any other asset where the transfer qualifies as an outright transfer under law other than the insolvency law. The receivable that is the subject of the outright transfer, like any other

asset transferred outright by the debtor before the commencement of the insolvency proceeding, should not be included in the insolvency estate of the debtor (see generally Insolvency Guide recommendation 35, subparagraph (a)).

However, as with the pre-commencement outright transfer by the debtor of any other asset and, indeed, as with any other pre-commencement transaction, the outright transfer of the receivable is nevertheless subject to the avoidance rules of the insolvency law (see Insolvency Guide recommendation 88). For example, the transfer may be avoided, and the receivable may be brought into the insolvency estate, if: (a) the transfer were not effective against third parties at the time of commencement of the insolvency proceeding; (b) the transfer could be avoided under the avoidance rules of the insolvency law relating to undervalued transactions; or (c) in the event that the transfer occurred on one date but was not made effective against third parties until a later date outside of any grace period and during the suspect transfer period, under the avoidance rules of the insolvency law relating to suspect transfers.

If the receivable is not in the insolvency estate and is not brought into the estate under the avoidance rules of the insolvency law, then, because the transferee is the true owner of the receivable, any stay arising under the insolvency law should generally not apply to the collection of the receivable by the transferee and the insolvency law should generally not apply to the receivable or to the transferee's collection of the receivable. Nevertheless, if, pursuant to a contract in effect at the time of the commencement of the insolvency proceeding, the debtor has been engaged by the transferee to collect the receivable for the benefit of the transferee, any stay under the insolvency law that is applicable with respect to contracts with the debtor generally (and thus applicable to that engagement contract) would, on that basis and notwithstanding the transferee's ownership of the receivable, prevent the transferee from collecting the receivable or otherwise interfering with the engagement contract until the termination of the stay as to the engagement contract or the rejection by the debtor of the engagement contract.]

Assets acquired after commencement

174. Except as provided in recommendation 175, the insolvency law should provide that an asset of the estate acquired after the commencement of insolvency proceedings is not subject to a security right created by the debtor before the commencement of the insolvency proceeding.

175. The insolvency law should provide that an asset of the estate acquired after the commencement of insolvency proceedings with respect to the debtor is subject to a security right created by the debtor before the commencement of the insolvency proceedings to the extent the asset is proceeds (whether cash or non-cash) of an encumbered asset that was an asset of the debtor before commencement.

Automatic termination clauses in insolvency proceedings

176. If the insolvency law provides that a contract clause that, upon the commencement of insolvency proceedings or the occurrence of another insolvency-related event, automatically terminates any obligation under a contract or accelerates the maturity of any obligation under a contract, is unenforceable as against the insolvency representative or the debtor, the insolvency law should also provide that such provision does not render unenforceable or invalidate a contract clause relieving a creditor from an obligation to make a loan or otherwise extend credit or other financial accommodations to the benefit of the debtor.

Effectiveness of a security right in insolvency proceedings

177. The insolvency law should provide that, if a security right is effective against third parties at the time of the commencement of insolvency proceedings, action may be taken after the commencement of the insolvency proceedings to continue, preserve or maintain the effectiveness against third parties of the security right to the extent and in the manner permitted under the secured transactions law.⁵⁷

Priority of a security right in insolvency proceedings

178. The insolvency law should provide that, if a security right is entitled to priority under law other than the insolvency law, the priority continues unimpaired in an insolvency proceeding except if, pursuant to the insolvency law, another claim is given priority. Such exceptions should be minimal and clearly set forth in the insolvency law. This recommendation is subject to recommendation 188 of the *UNCITRAL Legislative Guide on Insolvency Law*.

[Note to the Working Group: The Working Group may wish to note that commentary will provide examples of exceptions, such as post-commencement priority financing and privileged claims.]

Effect of a subordination agreement in insolvency proceedings

179. The insolvency law should provide that, if a holder of a security right in an asset of the insolvency estate subordinates its priority unilaterally or by agreement in favour of any existing or future competing claimant, such subordination is binding in insolvency proceedings with respect to the debtor.

[Note to the Working Group: The Working Group may wish to note that recommendation 75 sets forth the general rule on subordination applicable in the absence of insolvency proceedings. The Working Group may wish to consider that: "The general principle in insolvency of recognizing pre-commencement priorities should be interpreted to include priorities based upon a subordination agreement, provided that the agreement is not to provide a ranking higher than would otherwise be accorded to the particular creditor under the applicable law." (see Insolvency Guide, V, B, 1, para. 59, page 268).]

Costs and expenses of maintaining value of the encumbered asset in insolvency proceedings

180. The insolvency law should provide that the insolvency representative is entitled to recover on a first priority basis from the value of an encumbered asset reasonable costs and expenses (including overhead as appropriate) incurred by the insolvency representative in maintaining, preserving or increasing the value of the encumbered asset for the benefit of the secured creditor.

⁵⁷ See footnote to recommendation 46, subparagraph (b), of the Insolvency Guide, which provides that:

"If law other than the insolvency law permits those security interests to be made effective within certain specified time periods, it is desirable that the insolvency law recognize those periods and permit the interest to be made effective where the commencement of insolvency proceedings occurs before expiry of the specified time period. Where law other than the insolvency law does not include such time periods, the stay applicable on commencement would operate to prevent the security interest being made effective."

Valuation of encumbered assets in reorganization proceedings

181. The insolvency law should provide that, in determining the liquidation value of encumbered assets in reorganization proceedings, consideration should be given to the use of those assets and the purpose of the valuation. The liquidation value of those assets may be based on their value as part of a going concern.

[Note to the Working Group: The Working Group may wish to note that the commentary will note that the Insolvency Guide commentary provides the same rule for all assets (see para. 66, part two, chapter II, section B). The commentary on this chapter will make clear that, under recommendation 152 (b) of the Insolvency Guide, creditors in a reorganization proceeding will receive at least as much as they would have received in liquidation, unless they have specifically agreed to receive lesser treatment.]

XII. Acquisition financing devices⁵⁸**A. Unitary approach to acquisition financing devices****Purpose**

The purpose of the provisions of the law on acquisition financing devices is:

- (a) To recognize the importance and facilitate the use of acquisition financing as a source of affordable credit, in particular for small- and medium-size businesses;
- (b) To provide for equal treatment of all providers of acquisition financing, by applying to them the general regime governing security rights; and
- (c) To facilitate secured transactions in general by creating transparency with respect to acquisition financing devices.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that subparagraph (c) has been added in the purpose section of this Chapter since the lack of transparency with respect to acquisition financing in those jurisdictions where acquisition financing devices are not subject to a registration requirement is often a serious impediment to non-acquisition inventory and equipment financing (as well as receivables financing in jurisdictions that recognize extended retention-of-title arrangements). Creating transparency would significantly encourage these types of financing.]

Equivalence of an acquisition security right to a security right

182. The law should provide that an acquisition security right is a security right. Thus, the provisions of the law governing a security right generally, as supplemented by the specific provisions of the law on acquisition financing devices, should apply equally to all acquisition security rights.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the characterization of an acquisition security right as a security right, which means that the acquisition secured creditor is the secured creditor and the grantor is the owner of the encumbered assets, applies only to the secured financing aspect of the transaction. While the acquisition security right

⁵⁸ See A/CN.9/WG.VI/WP.24/Add.5.

secures the grantor's obligation to pay the balance of the purchase price, the underlying transaction is still a sale or a financial lease. Therefore, the law of sales or leases continues to apply to other aspects of the transaction (such as warranties of title and quality, right to re-sell or sub-lease, taxation, insurance and accounting). The commentary will also explain that, if, for example, a secured creditor under an acquisition financing device sold equipment to a buyer which was defective, the buyer would be able to rely on the terms of the contract including other relevant law to pursue such remedies as may be available to a buyer by that other law, such as rejection of the goods and repudiation of the contract by the buyer.]

Creation of an acquisition security right

183. The law should provide that an acquisition security right is created [in the same way as a security right under recommendation 13] [by agreement between the grantor and the secured creditor that need not be concluded in or evidenced by writing and is not subject to any other requirement as to form. It may be proved by any means, including witnesses].

[Note to the Working Group: The Working Group may wish to note that recommendation 183 (unitary approach) includes the same alternatives as recommendation 183 (non-unitary approach), so as to implement the equivalence principle. However, if the Working Group decides to retain the creation requirements applicable under the general recommendation 13, recommendation 183 may not be necessary as it would repeat the general rule.]

Effectiveness of an acquisition security right against third parties

184. Except as otherwise provided in recommendation 185, the law should provide that an acquisition security right becomes effective against third parties by registration of a notice of the right in the general security rights registry in the same manner as provided in the provisions of this law governing third-party effectiveness with respect to security rights in the same kind of encumbered assets. If the notice is registered not later than [specify a short time period, such as 20 or 30 days] days from the time of delivery of the goods to the grantor, the right is effective against third parties whose rights arose between the time the acquisition security right was created and its registration, as well as against third parties whose rights were registered subsequently. If the notice is registered after the expiration of that period, the acquisition security right is effective against third parties from the time the notice is registered.

Exceptions to the requirement of registration with respect to an acquisition security right

185. The law should provide that an acquisition security right in consumer goods becomes effective against third parties upon its creation. This provision does not affect security rights made effective against third parties by possession or by registration in a specialized registry or notation on a title certificate.

Priority of an acquisition security right in goods other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same goods

186. The law should provide that an acquisition security right in goods other than inventory or consumer goods has priority as against a non-acquisition security right in the same goods (even if a notice of that security right was registered in the general security rights registry before registration of a notice of the acquisition security right), provided that:

- (a) The acquisition financier retains possession of the goods; or
- (b) Notice of the acquisition security right is registered within a period of [the same number of days specified in recommendation 184] from the delivery of the goods to the grantor.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that a common situation in which this priority conflict arises is where a pre-existing secured creditor has a security right in all of the grantor's existing and future-acquired goods and another creditor finances the acquisition of specific goods.]

Priority of an acquisition security right in inventory as against an earlier registered non-acquisition security right in inventory of the same kind

187. The law should provide that an acquisition security right in inventory of the grantor has priority as against a non-acquisition security right in the grantor's inventory of the same kind (even if that security right became effective against third parties before the acquisition security right became effective against third parties), provided that:

- (a) The acquisition financier retains possession of the goods; or
- (b) Before delivery of the inventory to the grantor:
 - (i) A notice of the acquisition security right is registered in the general security rights registry; and
 - (ii) The holder of the earlier registered security right is notified in writing by the acquisition financier that the acquisition financier intends to enter into one or more acquisition financing transactions with respect to the inventory described in the notification. The notification should describe the inventory sufficiently to inform the holder of the earlier-registered security right of the inventory being financed.

Priority of an acquisition security right as against the right of a judgement creditor

188. The law should provide that, notwithstanding recommendation 86, an acquisition security right that is made effective against third parties within the grace period provided in recommendation 184 has priority as against the rights of an unsecured creditor that, under law other than this law:

- (a) Obtained a judgement or provisional court order against a grantor after the creation of the acquisition security right; and

(b) Took the steps necessary to acquire rights in encumbered assets of the grantor by reason of the judgement or provisional court order.

Priority of an acquisition security right in attachments to immovable property as against an earlier registered security right in the immovable property

189. The law should provide that an acquisition security right in tangibles that are to become attachments to immovable property, registered in the immovable property registry within [specify a short time period, such as 20-30 days] days after the tangibles become attachments, has priority as against an existing encumbrance in the related immovable property (other than an encumbrance securing a loan financing the construction of the immovable property).

One or more acquisition financing transactions

190. The law should provide that a single notification to holders of earlier registered non-acquisition security rights may cover encumbered assets acquired through one or more acquisition financing transactions between the same parties, without those transactions having to be identified in the notification. However, the notification should be effective only for acquisition security rights in encumbered assets delivered within a period of [specify time, such as five years] years after the notification is given.

Priority of an acquisition security right in proceeds of goods other than inventory or consumer goods

191. The law should provide that the priority, provided under recommendation 186 (unitary approach), for an acquisition security right in goods other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same goods extends to the proceeds of such goods.

Priority of an acquisition security right in proceeds of inventory

192. The law should provide that the priority, provided under recommendation 187 (unitary approach), for an acquisition security right in inventory as against an earlier registered security right in inventory of the same kind extends to the proceeds of such inventory [other than receivables]. However, the acquisition financier must notify earlier registered financiers with a security right in assets of the same kind as the proceeds before delivery of the inventory to the grantor or, at the latest, at the time the proceeds arise.

[Note to the Working Group: The Working Group may wish to reconsider the question whether the priority of recommendation 192 should be extended to proceeds consisting of receivables. The extension of the priority to receivables would significantly discourage receivables financing. In most instances, there may be no practical way for a receivables financier to determine which of the grantor's receivables would be subject to the acquisition financier's paramount security right. The result might be that the receivables financier may simply stop financing when it receives the notice contemplated by this recommendation. This possibility will either discourage receivables financing or, if the receivables financier agrees to continue financing only if there are no inventory acquisition financing devices, it will discourage acquisition financing. Neither possibility is consistent with the objectives of the Guide. A better solution would be for the priority of the inventory

financier not to extend to proceeds consisting of receivables so that the receivables financier is encouraged to provide credit against the receivables and the proceeds of that credit may be used by the grantor to pay the inventory financier. The Working Group may wish to note that, in most jurisdictions that recognize retention-of-title arrangements, the property right of the retention-of-title seller in the inventory sold does not extend to receivables arising from the sale of that inventory.]

Enforcement of an acquisition security right

193. The law should provide that the provisions of the law on default and enforcement apply to the enforcement of an acquisition security right.

[Note to the Working Group: The Working Group may also wish to consider additional text along the following lines:

“In the case of an ownership right under a retention-of-title device, if notice of the right is required to be registered in the security rights registry, but is not registered, or is registered only after the expiration of the time specified in recommendation 184, the retention-of-title seller, financial lessor or purchase money lender is entitled to repossess the goods only if they are still in the possession of the buyer, financial lessee or grantor and takes the goods back subject to any security rights granted by the buyer, financial lessee or grantor. However, in the case of a late registration, if the notice is registered before the sale of the goods by the original buyer, financial lessee or grantor, the seller, financial lessor or purchase-money lender may repossess the goods in the possession of the subsequent buyer, other than [a buyer of inventory in the ordinary course of business of the seller and any other person whose rights to the inventory derive from that buyer (even if such buyer or other person has knowledge of the existence of the security right)] [a good faith buyer]”.]

Acquisition security rights in insolvency proceedings

[Note to the Working Group: The Working Group may wish to note that the recommendations that deal with acquisition financing devices in insolvency proceedings are contained in the insolvency chapter.]

Applicable law to an acquisition security right

194. The law should provide that the provisions of this law on conflict of laws apply to acquisition security rights.

B. Non-unitary approach to acquisition financing devices

[Note to the Working Group: The Working Group may wish to note that, at its thirty-ninth session, the Commission approved the substance of the unitary approach and referred the non-unitary approach to the Working Group for further discussion (see A/61/17, para. 69).]

Purpose (non-unitary approach)

The purpose of the provisions of the law on retention-of-title devices is:

(a) To recognize the importance and facilitate the use of retention-of-title devices as a source of affordable credit, in particular for small- and medium-size businesses;

(b) To provide for equal treatment of all retention-of-title sellers, financial lessors and purchase-money lenders and apply to retention-of-title devices particular rules so as to produce outcomes that are functionally equivalent to the outcomes produced by a security rights regime [to the extent compatible with the regime governing the enforcement of ownership rights]; and

(c) To facilitate the use of security rights by creating transparency with respect to retention-of-title devices.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that a separate set of recommendations has been prepared for States that may wish to adopt a non-unitary approach with respect to retention-of-title devices. In order to use the relevant terminology and to reflect a slight difference in the issue, where necessary, separate titles have been added to the recommendations of the non-unitary approach. In addition, separate (but the same) numbers have been included to the recommendations of the non-unitary approach not only to facilitate their reading but also their possible later reproduction as a separate, consolidated set of recommendations at the end of the recommendations of the unitary approach.]

The Working Group may wish to note that the commentary will explain that the words “to the extent compatible with the regime governing the enforcement of ownership rights” have been added to align the purpose section with recommendations 172, alternative B (non-unitary approach), and 193, alternative B (non-unitary approach), on the enforcement of retention-of-title devices in and outside of insolvency proceedings. Under this alternative of the non-unitary approach, the treatment of the enforcement of acquisition security rights in and outside of insolvency proceedings would not be fully equivalent to the treatment of security rights but would rather conform to the treatment of enforcement of ownership rights (for a discussion of the differences, see A/CN.9/WG.VI/WP.17, paras. 39-42; see also the note to recommendation 193, non-unitary approach, alternative B). The commentary will discuss the consequences of such an approach (e.g. lack of uniformity, potential impact on the availability of credit) to assist States in making a choice.]

Equivalence of an ownership right under a retention-of-title device to a security right

182. If the law excludes ownership rights under retention-of-title devices from the definition of “security right”, the law should provide that a purchase-money lender has the same rights as a seller in a retention-of-title transaction. The provisions of this law applicable to security rights, as supplemented by the specific provisions applicable to ownership rights under retention-of-title devices in this chapter, apply to all retention-of-title devices in a manner that preserves the functional equivalence of rights under retention-of-title devices to security rights [to

the extent compatible with the relevant ownership regime in the case of enforcement].

[Note to the Working Group: The Working Group may wish to note that, in order to implement its decision to treat all providers of acquisition financing equally (see A/CN.9/574, para. 35), under the non-unitary approach, language has been added to recommendation 182 (non-unitary approach) to ensure that purchase-money lenders are treated as owners. The commentary will explain the words “to the extent compatible with the relevant ownership regime in the case of enforcement” and their consequences with respect to the enforcement of an ownership right under a retention-of-title device in and outside insolvency (see recommendations 172, alternative B (non-unitary approach), and 193, alternative B (non-unitary approach)).]

Creation of an ownership right under a retention-of-title device

183. The law should provide that an ownership right under a retention-of-title device is created [in the same way as a security right under recommendation 13] [by an agreement between the buyer, financial lessee or grantor and the seller, financial lessor or purchase-money lender that need not be concluded in or evidenced by writing and is not subject to any other requirement as to form. It may be proved by any means, including witnesses].

[Note to the Working Group: The Working Group may wish to note that, in order to ensure that all issues addressed by recommendation 13 are covered, recommendation 183 (non-unitary approach) refers to creation, although no new ownership right is created by a retention-of-title device. The Working Group may wish to consider alternative wording or an explanation for the commentary.]

Recommendation 183 (non-unitary approach) provides for two alternatives, one based on article 11 of the United Nations Sales Convention (“CISG”) and another based on the form requirements foreseen in recommendation 13 of the Guide.

With regard to recommendation 183 (non-unitary approach), the Working Group may wish to consider additional wording along the following lines:

“The law should also provide that a buyer, financial lessee or grantor has the power to grant a security right in the goods sold or leased notwithstanding the seller’s, lessor’s or purchase-money lender’s ownership rights.”]

Effectiveness of an ownership right under a retention-of-title device against third parties

184. Except as otherwise provided in recommendation 185, the law should provide that an ownership right under a retention-of-title device becomes effective against third parties by registration of a notice of the right in the general security rights registry in the same manner as provided in the provisions of this law governing third-party effectiveness with respect to security rights in the same kind of encumbered assets. If the notice is registered not later than [specify a short time period, such as 20 or 30 days] days from the time of delivery of the goods to the buyer, financial lessee or grantor, the right is effective against third parties whose rights arose between the time the retention of title device was concluded and its registration, as well as against third parties whose rights were registered subsequently. If the notice is registered after the expiration of that period, the

ownership right under the retention-of-title device is effective against third parties from the time the notice is registered.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, in the case of a retention-of-title device, effectiveness against third parties and priority over competing claimants means that the ownership right of the retention-of-title seller, financial lessor or purchase-money lender to the goods may be asserted against third parties, including competing claimants, claiming through the buyer, lessee or grantor.]

Exceptions to the requirement of registration with respect to an ownership right under a retention-of-title device

185. The law should provide that an ownership right under a retention-of-title device relating to consumer goods becomes effective against third parties upon its creation. This provision does not affect rights made effective against third parties by possession or by registration in a specialized registry or notation on a title certificate.

[Note to the Working Group: The Working Group may wish to consider whether all security rights in consumer goods (perhaps, with the exception of security rights in consumer goods that become attachments to immovable property) should be exempt from the requirement of registration (see note to recommendation 41).]

Priority of an ownership right under a retention-of-title device in goods other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same goods

186. The law should provide that an ownership right under a retention-of-title device in goods other than inventory or consumer goods has priority as against a security right in the same goods (even if a notice of that security right was registered in the general security rights registry before registration of a notice of the ownership right under the retention-of-title device), provided that:

(a) The seller, financial lessor or purchase-money lender retains possession of the goods; or

(b) Notice of the ownership right under the retention-of-title device is registered within a period of [the same number of days specified in recommendation 184] from the delivery of the goods to the buyer, financial lessee or grantor.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain the impact of recommendations 186 and 187 in non-unitary systems along the lines described in document A/CN.9/588, paragraph 60. The Working Group may also wish to consider whether subparagraph (a) could apply to a retention-of-title device in view of the fact that normally possession of the goods would be delivered to the buyer, financial lessee or grantor.]

Priority of an ownership right under a retention-of-title device in inventory as against an earlier registered non-acquisition security right in inventory of the same kind

187. The law should provide that an ownership right under a retention-of-title device in inventory has priority as against a security right in inventory of the same

kind (even if that right became effective against third parties before the ownership right under the retention-of-title device became effective against third parties), provided that:

- (a) The seller, the financial lessor or the purchase-money lender retains possession of the goods; or
- (b) Before delivery of the inventory to the buyer, financial lessee or grantor:
 - (i) A notice of the ownership right under the retention-of-title device is registered in the general security rights registry; and
 - (ii) The holder of an earlier registered security right is notified in writing that the seller, financial lessor or purchase-money lender intends to enter into one or more retention-of-title transactions with respect to the inventory. The notification should describe the inventory sufficiently to inform the holder of an earlier registered security right of the inventory being financed.

[Note to the Working Group: The Working Group may wish to consider whether subparagraph (a) could apply to a retention-of-title transaction or financial lease in view of the fact that normally possession of the goods would be delivered to the buyer, financial lessee or grantor. The Working Group may also wish to consider whether the registry should notify automatically inventory financiers on record (see A/61/17, para. 67). It should be noted that such an approach would require the registry to distinguish inventory financiers from other financiers. In addition, such an approach would require the grantor to ensure that the registry has given such notice before the grantor delivers the inventory to the acquisition financier.]

Priority of an ownership right under a retention-of-title device over the right of a judgement creditor

188. The law should provide that, notwithstanding recommendation 86, an ownership right under a retention-of-title device that is made effective against third parties within the grace period provided in recommendation 184 has priority as against the rights of an unsecured creditor that, under law other than this law:

- (a) Obtained a judgement against a buyer, financial lessee or grantor after the creation of the ownership right under the retention-of-title device; and
- (b) Took the steps necessary to acquire rights in the relevant assets of the buyer, financial lessee or grantor by reason of the judgement.

[Note to the Working Group: The Working Group may wish to consider that an acquisition security right that became effective against third parties during the relevant grace period should not lose to the rights of a judgement creditor described in this recommendation, whose interest in the encumbered asset arose after the creation of the acquisition security right but before it became effective against third parties. If this were not the case, utilizing the grace period would be too risky for acquisition financiers. The Working Group may wish to consider this recommendation together with recommendation 86.]

Priority of ownership rights under retention-of-title devices with respect to attachments to immovable property as against earlier registered security rights in the immovable property

189. The law should provide that an ownership right under a retention-of-title device in tangibles that are to become attachments to immovable property, registered in the immovable property registry within [specify a short time period, such as 20-30 days] days after the tangibles become attachments, has priority as against an existing encumbrance in the related immovable property (other than an encumbrance securing a loan financing the construction of the immovable property).]

[Note to the Working Group: The Working Group may wish to note that the priority introduced by this recommendation would not prejudice the rights of a holder of an existing mortgage on the related immovable property because the mortgagee would normally not rely upon subsequently added attachments. However, the priority created by this rule should not operate to grant priority over construction lenders that are presumed to rely upon all goods that become attachments to immovable property during the course of construction.]

One or more retention-of-title devices

190. The law should provide that a single notification to holders of earlier registered security rights may cover assets acquired through one or more retention-of-title devices between the same parties, without those devices having to be identified in the notification. However, the notification should be effective only for ownership rights in assets delivered within a period of [specify time, such as five years] years after the notification is given.

Priority of an ownership right under a retention-of-title device in proceeds of goods other than inventory or consumer goods

191. The law should provide that the priority, provided under recommendation 186 (non-unitary approach), for an ownership right under a retention-of-title device in goods other than inventory extends to the proceeds of such goods.

Priority of an ownership right under a retention-of-title device in proceeds of inventory

192. The law should provide that the priority of an ownership right under a retention-of-title device in inventory provided under recommendation 186 (non-unitary approach) extends to the proceeds of such inventory [other than receivables]. However, the retention-of-title seller, financial lessor or purchase-money lender must notify earlier-registered financiers with a security right in assets of the same kind as the proceeds before actual delivery of the inventory to the buyer, financial lessee or grantor, or, at the latest, at the time the proceeds arise.

Enforcement of an ownership right under a retention-of-title device**Alternative A**

193. The law should provide that, in the case of default, a retention-of-title device must be enforced in such a manner that:

(a) The same principles and objectives as those governing enforcement of security rights generally are complied with; and

(b) The same results are obtained.

[Note to the Working Group: The Working Group at its eighth session recommended formulation of the non-unitary approach along the lines set out above.]

Alternative B

193. The law should provide that the provisions of the law on default and enforcement apply to the enforcement of ownership rights under retention-of-title devices to the extent compatible with the regime applicable to the enforcement of ownership rights.

[Note to the Working Group: The Working Group may wish to note that the last words of the second alternative under a non-unitary approach would conform the non-unitary approach to the existing law in each State on the enforcement of ownership rights rather than to the enforcement recommendations of the Guide. For example, in some jurisdictions this would mean that, upon default, a seller that retained title and obtained possession of the assets would be permitted to retain, rather than dispose of, the assets and would not have to account to the buyer for any surplus of the value of those assets over the unpaid portion of the purchase price and would not have a claim against the buyer with respect to the unpaid portion of the purchase price (for a discussion of the differences, see A/CN.9/WG.VI/WP.17, paras. 39-42; see also the second alternative of the non-unitary approach recommendation on the enforcement of ownership rights under retention-of-title devices in insolvency proceedings below).]

Ownership rights under retention-of-title devices in insolvency proceedings

[Note to the Working Group: The Working Group may wish to note that the recommendations that deal with acquisition financing devices in insolvency proceedings are contained in the insolvency chapter.]

Applicable law to an ownership right under a retention-of-title device

194. The law should provide that the provisions of this law on conflict of laws apply to retention-of-title devices.

XIII. Conflict of laws^{*59}

Purpose

The purpose of conflict-of-laws rules is to determine the law applicable to each of the following issues: the creation of a security right; the pre-default rights and obligations between the secured creditor and the grantor; the effectiveness of a security right against third parties; the priority of a security right as against the rights of competing claimants; and the enforcement of a security right.⁶⁰

These rules are also applicable to:

(a) “Security rights” within the scope of the law, which includes rights under retention-of-title sales and financial leases, as well as outright transfers of receivables; and

(b) In States that enact a non-unitary system with respect to acquisition financing devices, the rights of a seller or a financial lessor of goods that retains title to the goods.

A. General recommendations

Law applicable to a security right in tangible property⁶¹

195. The law should provide that, except as otherwise provided in recommendations 196 and 209, the creation, the effectiveness against third parties and the priority as against the rights of competing claimants of a security right in tangible property are governed by the law of the State in which the encumbered asset is located. However, with respect to security rights in tangible property of a type ordinarily used in more than one State, the law should provide that such issues are governed by the law of the State in which the grantor is located. [With respect to security rights in the type of tangible property mentioned in the preceding sentence that is subject to a title registration system, the law should provide that such issues are governed by the law of the State under the authority of which the registry is maintained.]

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the application of recommendation 195 to negotiable instruments and rights to payment of funds credited to a bank account is subject to the limited exception provided in recommendation 209 that the law of the grantor's location determines in specified circumstances whether the effectiveness against third parties has been achieved by registration. The commentary will also explain that recommendation 196 provides an additional option for the creation and third-party effectiveness of security rights in goods in transit and export goods.]

The Working Group may wish to note that the commentary will explain that “tangible property of a type ordinarily used in more than one State” refers to

* The recommendations on conflict of laws were prepared in close cooperation with the Hague Conference on Private International Law.

⁵⁹ See A/CN.9/WG.VI/WP.24.

⁶⁰ The meaning of these terms is elaborated upon in chapters IV, V, VII, VIII and X.

⁶¹ See A/CN.9/611/Add.1, recommendation 136.

mobile goods, such as motor vehicles. The same term in the bracketed sentence in recommendation 195 refers to mobile goods, such as ships and aircraft.

In addition, the Working Group may wish to consider whether a rule along the lines of recommendation 209 should apply to security rights in tangible assets covered in recommendation 195. If that approach were to be followed, if the grantor's location provided for third-party effectiveness by registration, the only law applicable to third-party effectiveness of security rights in tangible assets other than by possession would be the law of the grantor's location and not the law of the location of the assets.

The Working Group may wish to note that a security right may be created in goods either pursuant to recommendation 12 or by the creation of a security right in a negotiable document representing those goods pursuant to recommendation 27. In either case, recommendation 195 provides that the creation, third-party effectiveness and priority of the security right are governed by the law of State of the location of the goods or document, as applicable. Because goods in transit and export goods, by their nature, move from State to State and, therefore, the location of the goods at any particular moment might be fortuitous and temporary, recommendation 196 provides an alternative method for creation and third-party effectiveness of a security right in such goods referring to the law of the State of the ultimate destination of the goods, provided that the goods reach that destination within a reasonable period of time. Recommendation 196 thus addresses the problems that could result from unwavering adherence to the "location of the tangible asset rule" in the context of goods whose location will certainly change as a result of the very nature of the financing transaction.

The Working Group may also wish to note that, in many financing transactions involving negotiable documents, the location of the negotiable document may change, as, for example, where a bill of lading is sent from the consignor to the consignee or the secured creditor. In such transactions, at any particular time the negotiable document might be located in a different State than the goods that it represents, even though the goods and the negotiable document will ultimately be located in the same State. In order to address the question of the law applicable to security rights in goods covered by a negotiable document, at the tenth session of the Working Group the suggestion was made that the practical issue with respect to the goods that is addressed by recommendation 196 might also be present for the negotiable document representing those goods and that, accordingly, there may be some advantage in broadening the rule in recommendation 196 to cover negotiable documents (see A/CN.9/603, para. 60).

Thus, the Working Group may wish to consider extending the application of recommendation 196 to negotiable documents. In that connection, the Working Group may wish to take into consideration that, under recommendations 97 and 98, the priority of a security right in goods covered by a negotiable document is always subject to the law of the location of the document. If the applicable law is the law of a State that has enacted the recommendations of the Guide, under recommendation 195, the security right in the goods that became effective against third parties as a result of the security right in the negotiable document becoming effective against third parties will have priority over a security right in the goods that became effective against third parties by another method. The Working Group may also wish to note that, under recommendation 200, the enforcement of the security right in the goods or the document is always subject to the law of the State where enforcement

takes place or the law governing the security agreement, depending on which alternative is retained (for this note, see A/CN.9/611/Add.1, note to recommendation 136).]

Law applicable to a security right in goods in transit and export goods

196. The law should provide that a security right in tangible property (other than negotiable instruments or negotiable documents) in transit or to be exported from the State in which it is located at the time of the creation of the security right may also be created and made effective against third parties under the law of the State of the ultimate destination, provided that the property reaches that State within a short time period of [to be specified] days after the time of creation of the security right.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that a security right in goods in transit and export goods can be created and made effective against third parties, under recommendation 195, in accordance with the law of the State of their location at the time of creation or, under recommendation 196, in accordance with the law of the State of their ultimate destination. The commentary will also explain that the law of the State of the ultimate destination that governs creation and third-party effectiveness will apply even in the case of a contest with competing rights that were created and made effective against third parties while the export goods were located in the State of origin.]

In addition, the commentary will explain that the rule in this recommendation: (a) is applicable to encumbered assets that travel whether or not negotiable documents relating to the goods accompany the goods; (b) is not applicable to encumbered goods that do not travel, whether or not negotiable documents relating to the goods do travel; and (c) is not applicable to encumbered negotiable documents whether or not they travel (for this note, see A/CN.9/611/Add.1, note to recommendation 142).]

Law applicable to a security right in intangible property⁶²

197. The law should provide that the creation, the effectiveness against third parties and the priority as against the rights of competing claimants of a security right in intangible property are governed by the law of the State in which the grantor is located. [However, with respect to security rights in intangible property that is subject to a title registration system, the law should provide that such issues are governed by the law of the State in which [...].]

*[Note to the Working Group: The commentary will explain that this recommendation, reflecting the principle in articles 22 and 30 of the United Nations Assignment Convention, applies, for example, to receivables. The second sentence within square brackets is intended to draw the attention of the Working Group to the possibility that a different law might apply to other intangible assets that are subject to title registration, such as intellectual property rights (e.g. the *lex loci protectionis* for patents and trademarks and the *lex loci protectionis* or the *lex originis* for copyrights).]*

⁶² See A/CN.9/611/Add.1, recommendation 137.

Law applicable to a security right in proceeds

198. The law should provide that:

(a) The creation of a security right in proceeds is governed by the law [of the State whose law governs] [governing] the creation of the security right in the original encumbered asset from which the proceeds arose; and

(b) The effectiveness against third parties and the priority as against the rights of competing claimants of a security right in proceeds are governed by the same law as the law [of the State whose law governs] [governing] the effectiveness against third parties and the priority over the rights of competing claimants of a security right in original encumbered assets of the same kind as the proceeds.

Law applicable to the rights and obligations of the grantor and the secured creditor

199. The law should provide that the mutual rights and obligations of the grantor and the secured creditor with respect to the security right, whether arising from the security agreement or by law, are governed by the law chosen by them and, in the absence of a choice of law, by the law governing the security agreement.

Law applicable to the enforcement of a security right

200. Except as provided in the provisions of this law on the law applicable to the enforcement of a security right after commencement of an insolvency proceeding with respect to the grantor, the law should provide that matters affecting the enforcement of a security right are governed by

Alternative A

the law of the State where enforcement takes place.

Alternative B

the law governing the security agreement. However, possession of an encumbered asset without the consent of the person in possession may be taken by the secured creditor only in accordance with the law of the State in which that asset is located at the time the secured creditor takes possession.

[Note to the Working Group: The Working Group may also wish to note that, at its thirty-ninth session, the Commission urged the Working Group to reach agreement, if at all possible, on one of the alternatives set out in recommendations 200 and 208.]

201. The enforcement of a security right in an attachment to immovable property is governed by the law of the State where the immovable property is located.

[Note to the Working Group: The Working Group may wish to consider that recommendation 195 is sufficient with respect to the law applicable to the creation, third-party effectiveness and priority of a security right in an attachment to movable property, while recommendation 200 is sufficient for the enforcement of such a security right (for this note, see A/CN.9/WG.VI/WP.26/Add.4, note on the law applicable to the enforcement of a security right in attachments).]

Impact of insolvency on the law applicable

[Note to the Working Group: The Working Group may wish to note that the recommendations on the law applicable to the enforcement of a security right in an insolvency proceeding are contained in the chapter on insolvency (see recommendation 171).]

Meaning of “location” of the grantor

202. The law should provide that, for the purposes of the provisions of this law on conflict of laws, the grantor is located in the State in which it has its place of business. If the grantor has a place of business in more than one State, the grantor's place of business is that place where the central administration of the grantor is exercised. If the grantor does not have a place of business, reference is to be made to the habitual residence of the grantor.

Relevant time when determining location

203. The law should provide that:

(a) Except as provided in subparagraph (b) of this recommendation, references to the location of the assets or of the grantor in the provisions of this law on conflict of laws refer, for creation issues, to that location at the time of the creation of the security right and, for third-party effectiveness and priority issues, to that location at the time the issue arises;

(b) If all rights of competing claimants in an encumbered asset arose before a change in location of the asset or the grantor, references in the provisions of this law on conflict of laws to the location of the asset or of the grantor (as relevant under the recommendations in this chapter) refer, with respect to third-party effectiveness and priority issues, to the location prior to the change in location.

Continued third-party effectiveness of a security right upon change of location

204. The law should provide that, if a security right in encumbered assets is effective against third parties under the law of the State in which the encumbered assets or the grantor (as relevant under the provisions of the law on conflict of laws) are located and that location changes to this State (i.e. the State that has enacted the law), the security right continues to be effective against third parties under the law of this State for a period of [to be specified] days after the location of the encumbered assets or the grantor (as relevant under the provisions of the law on conflict of laws) has changed to this State. If the requirements of the law of this State to make the security right effective against third parties are satisfied prior to the end of that period, the security right continues to be effective against third parties thereafter under the law of this State. For the purposes of any rule of this State in which time of registration or other method of achieving third-party effectiveness is relevant for determining priority, that time is the time at which that event occurred under the law of the State in which the encumbered assets or the grantor were located before their location changed to this State.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the application of this recommendation is not based on reciprocity, that is, it operates regardless of whether or not the State of the old location of the encumbered assets or of the grantor has enacted an equivalent

provision to cover the converse situation involving the relocation of encumbered assets or a grantor to that State. The commentary will also explain that this recommendation will apply if the asset or the grantor moves from an enacting State or a non-enacting State to an enacting State. This recommendation (or the Guide) will not apply if the asset or the grantor moves from an enacting State or a non-enacting State to a non-enacting State. Furthermore, the commentary will explain that the effect of the last sentence of this recommendation is that priority in the receiving State “relates back” to the time at which the relevant event for achieving third-party effectiveness occurred in the other State.]

Exclusion of renvoi

205. The law should provide that the reference in the provisions of the law on conflict of laws to “the law” of another State as the law governing an issue refers to the law in force in that State other than its conflict-of-laws rules.

Public policy and internationally mandatory rules

206. The law should provide that:

(a) The application of the law determined under the provisions of this law on conflict of laws may be refused by the forum only if the effects of its application would be manifestly contrary to the public policy of the forum;

(b) A forum may apply those provisions of its own law which, irrespective of rules of conflict of laws, must be applied even to international situations; and

(c) The rules in subparagraphs (a) and (b) of this recommendation do not permit the application of provisions of the law of the forum to third-party effectiveness or priority among competing claimants, unless the law of the forum is the applicable law under the provisions of this law on conflict of laws.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain the meaning of public policy and internationally mandatory rules referred to in this recommendation. Subparagraphs (a) and (b), which track the language of article 11, paragraphs 1 and 2, of the Hague Securities Convention, have been prepared pursuant to a suggestion made at the eighth session of the Working Group (see A/CN.9/588, para. 107). Subparagraph (c), which tracks the language of article 11, paragraph 3, of the Hague Securities Convention, is also in line with articles 30 to 32 of the United Nations Assignment Convention. It is intended to ensure that the certainty of the law applicable to third-party effectiveness and priority of a security right achieved with the recommendations in this chapter will not be compromised by application of the law of the forum.]

B. Asset-specific recommendations

Law applicable to receivables arising from a sale, lease or security agreement relating to immovable property

207. The law should provide that the law of the State in which the assignor is located governs the creation, third-party effectiveness and priority of a security right in a receivable arising from a sale, lease or security agreement relating to immovable property over the rights of competing claimants. However, a priority conflict involving the rights of a competing third party registered in the immovable

property registry of the State in which the immovable property is located is governed by the law of that State.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation is designed to address the law applicable to assignments of receivables owing to the grantor under an agreement for the sale or lease of an immovable or under a security agreement over an immovable. In a number of States, it is not possible to create rights in such receivables independently of the related immovable, with the result that the effectiveness as between the parties, the third-party effectiveness and the priority of a security right in the receivables are governed by the law (and, in particular, the registry regime) that applies to the related immovable. In other States, it is possible to grant a security right in such receivables independently of the related immovable, but the secured creditor is subordinated to third-party rights that are registered against the related immovable in the immovable property registry.]

The second sentence of this recommendation is designed to preserve the application of the law of the State where the related immovable is located in order to protect third parties that rely on the registration in the immovable property registry of that State. Reference is made to rights of a competing third party as the term "competing claimant" is defined by reference to security rights in movables. Reference is also made to "rights" of such parties, since rights of third parties could include not just competing mortgagees but also assignees or buyers of the immovable or the related intangible and indeed any class of third-party right for which the immovable property regime makes provision for registration. In addition, reference is made to a right "registered in the immovable property registry" rather than "that became effective against third parties by registration", since: (a) some immovable property registries do not distinguish between inter-parties and third party effectiveness; and (b) immovable property registries do not necessarily require registration for general third-party effectiveness but only for effectiveness against third parties whose rights are also registrable in the immovable property registry (e.g. registration may not be needed for effectiveness against an insolvency administrator or a judgement creditor.)

Law applicable to a security right in a right to payment of funds credited to a bank account⁶³

208. Except as otherwise provided in recommendation 209, the law should provide that the creation, the effectiveness against third parties, the priority as against the rights of competing claimants, the rights and duties of the depositary bank with respect to the security right and the enforcement of the security right in a right to payment of funds credited to a bank account are governed by

Alternative A

the law of the State expressly stated in the account agreement as the State whose law governs the account agreement or, if the account agreement expressly provides that another law is applicable to all such issues, that other law. However, the law of the State determined pursuant to the preceding sentence applies only if the depositary bank has, at the time of the conclusion

⁶³ See A/CN.9/611/Add.1, recommendation 139.

of the account agreement, an office in that State that is engaged in the regular activity of maintaining bank accounts. If the applicable law is not determined pursuant to the preceding two sentences, the applicable law is to be determined pursuant to fallback rules based on article 5 of the Hague Convention on the Law Applicable to Certain Rights in Respect of Securities Held with an Intermediary.

[Note to the Working Group: The Working Group may wish to note that alternative A is an abbreviated version of the approach followed in articles 4.1 and 5 of the Hague Convention on the Law Applicable to Certain Rights in Respect of Securities Held with an Intermediary (“the Hague Securities Convention”). The commentary will include the detailed fallback rules in article 5 of the Hague Securities Convention with sufficient explanation.]

Alternative B

the law of the State in which the bank that maintains the bank account has its place of business. In the case of more than one place of business, reference should be made to the place where the branch maintaining the account is located.

[Note to the Working Group: The Working Group may wish to consider, as an alternative or supplementary provision, the law governing the control agreement (see A/CN.9/603, para. 77). The Working Group may also wish to note that the commentary will explain that the recommendations on the impact of insolvency on the law applicable, as well as the other general recommendations in the conflict-of-laws chapter, apply to security rights in rights to payment of funds credited to a bank account.]

Law applicable to the third-party effectiveness of a security right in specified types of asset by registration⁶⁴

209. The law should provide that, if the State in which the grantor is located recognizes registration as a method of achieving effectiveness against third parties of a security right in a negotiable instrument or a right to payment of funds credited to a bank account, the law of the State in which the grantor is located determines whether the effectiveness against third parties of a security right in such encumbered asset has been achieved by registration under the laws of that State.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that this recommendation provides that the State whose law governs the achievement of third-party effectiveness by registration with respect to security rights in the specified types of asset is the same State whose law governs the achievement of third-party effectiveness with respect to security rights in intangible property. Thus, secured creditors seeking to achieve third-party effectiveness by registration for security rights in the specified types of assets and in intangible property will need to comply with the registration system of only one State. Similarly, third parties seeking to determine whether any secured creditor is claiming a security right in the specified types of asset or in intangible property will need to search in the registration system of only one State. The commentary will also explain recommendation 209 applies only to third-party effectiveness achieved by registration (not by control or

⁶⁴ See A/CN.9/611/Add.1, recommendation 140.

any other method) and does not determine the law governing priority. In addition, the commentary will explain that, under recommendation 89, a security right in a negotiable instrument made effective against third parties by registration is subordinate to a security made effective against third parties by possession with respect to the instrument. Similarly, under recommendation 92, a security right in a right to payment of funds credited to a bank account made effective by registration is subordinate to a security right made effective by control.]

Law applicable to a security right in proceeds under an independent undertaking⁶⁵

210. The law should provide that the law of the State specified in the independent undertaking of the guarantor/issuer, confirmer or nominated person governs:

(a) The rights and duties of the guarantor/issuer, confirmer or nominated person that has received a request for an acknowledgement or that has or may pay or otherwise give value under an independent undertaking;

(b) The right to enforce a security right in proceeds under an independent undertaking against a guarantor/issuer, confirmer or nominated person; and

(c) Except to the extent otherwise provided in recommendation 212, the effectiveness against third parties and the priority as against the rights of competing claimants of a security right in proceeds under the independent undertaking.

211. If the applicable law is not specified in the independent undertaking of the guarantor/issuer, confirmer or nominated person, the law governing the matters referred to in recommendation 210 is the law of the State of the location of the branch or office of the guarantor/issuer, confirmer or nominated person indicated in the independent undertaking. However, in the case of a nominated person that has not issued an independent undertaking, the applicable law is the law of the State of the location of the nominated person's branch or office that has or may pay or otherwise give value under the independent undertaking.

212. The law should provide that, if a security right in proceeds under an independent undertaking is created and is made effective against third parties automatically as a result of the effectiveness against third parties of a security right in a receivable, negotiable instrument or other obligation, the payment or other performance of which the independent undertaking secures, the creation and the effectiveness against third parties of the security right in the proceeds under the independent undertaking is governed by the law of the State whose law governs the creation and the effectiveness against third parties of the security right in the secured receivable, negotiable instrument or other obligation.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that recommendations 210 and 211 follow the conflict-of-laws rules applicable with respect to the rights and obligations of guarantor/issuers, confirmers or nominated persons. The only exception to the principle embodied in recommendations 210 and 211 is the rule in recommendation 212, for the limited issues of creation and third-party effectiveness in cases where a security right arises or is made effective against third parties automatically.]

⁶⁵ For recommendations 210-212, see A/CN.9/611/Add.1, recommendations 138 and 138 bis.

In addition, the commentary will explain that each bank (or sometimes non-bank) performing one of these roles acts pursuant to the law where it is located, meaning where its relevant branch or office is located (or the law it chooses, which is typically the law of the State where its relevant branch or office is located). Accordingly, different laws govern the different banks involved, and a choice of law in an independent undertaking governs only the particular issuer's obligations (see Uniform Rules for Demand Guarantees article 27, Uniform Commercial Code 5-116(b), and United Nations Assignment Convention article 29). The commentary will also explain that what recommendation 211 strives to do is be clear that a request for acknowledgement or for payment (without prior acknowledgement) made by a secured creditor (or the beneficiary on its behalf) is to be handled by the affected bank branch under its local law.

Under recommendations 210 and 211, all priority conflicts are subject to the law chosen by a guarantor/issuer, confirmer or nominated person or, in the absence of a choice of law, to the law of the relevant branch or office. The Working Group may wish to consider the question whether: (a) if a bank branch pays (or gives value to) a secured creditor, then that same law should apply to that secured creditor's priority contest with third parties; and (b) if the payment is to the beneficiary and the priority contest is among third parties, recommendations 210 and 211 should be inapplicable and residual conflict-of-laws rules apply (i.e. recommendation 197).

The commentary will further explain that: (a) creation of the security right is governed by the general conflict-of-laws rule in recommendation 197 for security rights in intangibles (except as provided in recommendation 212 for automatic creation); and (b) enforcement of the security right is governed by the general conflict-of-laws rule in recommendation 200, except to the extent otherwise provided in recommendations 210 and 211.]

Law applicable to the rights and obligations of third-party obligors and secured creditors⁶⁶

213. The law should provide that the following matters are governed by the law of the State whose law governs a receivable, negotiable instrument or negotiable document:

(a) The relationship between the debtor of the receivable and the assignee of the receivable, between an obligor under a negotiable instrument and the holder of a security right in the instrument or between the issuer of a negotiable document and the holder of a security right in the document;

(b) The conditions under which the assignment of the receivable, a security right in the negotiable instrument or in the negotiable document may be invoked against the debtor of the receivable, the obligor on the negotiable instrument or the issuer of the negotiable document; and

(c) The determination of whether the obligations of the debtor of the receivable, the obligor on the negotiable instrument or the issuer of the negotiable document have been discharged.

⁶⁶ See A/CN.9/611, recommendation 147.

C. Special rules when the applicable law is the law of a multi-unit State

[Note to the Working Group: The Working Group may wish to note that recommendations 214-217 are intended to provide ex ante certainty as to the application of the recommendations not only by a multi-unit State but also, most importantly, by a unitary State when the law applicable is the law of a multi-unit State. If the Working Group considers that these recommendations are too detailed for a guide, it may wish to consider whether these matters should be addressed with more general recommendations and appropriate explanations in the commentary.]

214. The law should provide that in applying the recommendations in this chapter to situations in which the State whose law governs an issue is a multi-unit State:

(a) Subject to subparagraph (b) of this recommendation, references to the law of a multi-unit State are to the law of the relevant territorial unit (as determined on the basis of the location of the grantor or of an encumbered asset or otherwise under the recommendations in this chapter) and, to the extent applicable in that unit, to the law of the multi-unit State itself;

(b) If the law in force in a territorial unit of a multi-unit State designates the law of another territorial unit of that State to govern third-party effectiveness or priority, the law of that other territorial unit governs that issue.

215. The law should provide that if, under the recommendations in this chapter, the applicable law is that of a multi-unit State or one of its territorial units, the internal choice of law rules in force in that multi-unit State shall determine whether the substantive rules of law of that multi-unit State or of a particular territorial unit of that multi-unit State shall apply.

[Note to the Working Group: The Working Group may wish to note that recommendations 214 and 215 track the language of article 12, paragraphs 2 and 3, of the Hague Securities Convention respectively. The Working Group may wish to consider a definition of “multi-unit State” along the lines of article 1, paragraph (1) (m) of that Convention (“multi-unit State” means a State within which two or more territorial units of that State, or both the State and one or more of its territorial units, have their own rules of law in respect of any of the issues specified in the recommendations in the Guide).]

216. The law should provide that, if the account holder and the depositary bank have agreed on the law of a specified territorial unit of a multi-unit State:

(a) The references to “State” in the first sentence of recommendation 208 (alternative A) are to that territorial unit;

(b) The references to “that State” in the second sentence of recommendation 208 (alternative A) are to the multi-unit State itself.

217. The law should provide that the law of a territorial unit applies if:

(a) Under recommendation 208 (alternative A) and 216, the designated law is that of a territorial unit of a multi-unit State;

(b) Under the law of that State the law of a territorial unit applies only if the depositary bank has an office within that territorial unit which satisfies the condition specified in the second sentence of recommendation 208 (alternative A); and

(c) The rule described in subparagraph (b) of this recommendation is in force at the time the security right in the bank account is created.

[Note to the Working Group: Recommendations 216 and 217, which track the language of article 12, paragraphs 1 and 4, of the Hague Securities Convention respectively, may be necessary if the Working Group decides to retain alternative A in recommendation 208.]

XIV. Transition⁶⁷

Purpose

The purpose of transition provisions of the law is to provide a fair and efficient transition from the regime before the enactment of the law to the regime after the enactment of the law.

Effective date

218. The law should specify either a date subsequent to its enactment, as of which it will enter into force (the “effective date”) or a mechanism by which the effective date may be specified.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that, in determining the effective date, the State should take into account:

(a) The impact of the effective date on credit transactions and in particular the maximization of benefits to be derived from the law;

(b) The necessary regulatory, institutional, educational and other arrangements or infrastructure improvements to be made by the State; the status of the pre-existing law and other infrastructure;

(c) The harmonization of the law with other legislation;

(d) The content of constitutional rules with respect to pre-effective date transactions; and standard or convenient practice for the entry into force of legislation (e.g. on the first day of a month); and

(e) The need to give affected persons sufficient time to prepare for the law.]

Inapplicability of the law to disputes in litigation

219. The law should provide that:

(a) It does not apply to the rights and obligations of the parties to a security agreement if, at the effective date, they are the subject of litigation (or a comparable dispute resolution system); and

(b) It does not affect enforcement of a security right to the extent the secured creditor has taken steps towards enforcing it.

⁶⁷ See A/CN.9/WG.VI/WP.26/Add.8.

Transition period

220. The law should provide a period of time after the effective date (the “transition period”), during which:

(a) A security right created under the law in effect immediately before the effective date continues to exist under this law;

(b) A security right made effective against third parties under the law in effect immediately before the effective date remains effective against third parties under this law.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the “law in effect immediately before the effective date” is the law of the State whose law governed an issue under the conflict-of-laws rules of the previous regime.]

Creation and third-party effectiveness of a security right

221. The law should provide that the existence of a security right created under the law in effect immediately before the effective date is determined by that law.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the main rule is that, while creation of a security right before the effective date of the new law is determined by the old law, third-party effectiveness and priority are in principle determined by the new law. The commentary will also explain that recommendations 222-224 are intended to preserve third-party effectiveness under the old law and to give some time to parties to achieve third-party effectiveness under the new law. Moreover the commentary will explain that recommendation 226 is designed to set out one exception to the rule on which law determines priority by providing that the old law applies if all competing rights were created and made effective against third parties under the old law and no change occurred since the effective date of the new law.]

222. The law should provide that a security right made effective against third parties under the law in effect immediately before the effective date remains effective against third parties during the transition period. If, during the transition period or such longer period described in recommendation 223, the secured creditor takes any steps necessary to ensure that the security right is made effective against third parties under this law, its existence and effectiveness against third parties is continuous.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that, in cases in which the steps taken under the rules of the previous legal regimes also satisfy the requirements for third-party effectiveness under the new law, no additional steps need be taken. However, the commentary will also explain that a registration of a notice of a security right in a registry of a State other than the enacting State or in a different registry of the enacting State than provided in this law does not satisfy the requirements of this law; in such cases, recommendation 223 provides the applicable transition rule.]

223. The law should provide that a security right created and made effective against third parties by registration of a notice under the law in effect immediately before the effective date remains effective against third parties until the earlier of:

- (a) The date the registration would cease to be effective under that other law; and
- (b) [...] years after the effective date.

224. The law should provide that [, for purposes of applying its priority rules to a security right that was effective against third parties under the law in effect immediately before the effective date and is continuously effective against third parties under this law,] the date on which the security right was made effective against third parties or became the subject of a registered notice, as applicable, is the date on which such security right was made effective against third parties or became the subject of a registered notice under the law in effect immediately before the effective date.

Priority of a security right

225. Subject to recommendation 227, the law should provide that the priority of a security right as against the right of a competing claimant is governed by this law.

226. The law should provide that the priority of a security right as against the right of a competing claimant is determined by the law in effect immediately before the effective date if:

- (a) Both the security right and the right of the competing claimant are created before the effective date; and
- (b) The status of neither right has changed since the effective date.

227. The status of a security right has changed if:

- (a) It was effective against third parties on the effective date in accordance with recommendation 222 and later ceased to be effective against third parties; or
- (b) It was not effective against third parties on the effective date and later became effective against third parties.

[Note to the Working Group: The Working Group may wish to note that the commentary will explain that the law should ensure that the transition should not entail any cost other than the nominal cost of registration of a notice of a security right.]

I. Introduction

1. At its twelfth session, Working Group VI (Security Interests) continued its work on the preparation of a legislative guide on secured transactions pursuant to a decision taken by the Commission on International Trade Law (UNCITRAL) at its thirty-fourth session, in 2001.¹ The Commission's decision to undertake work in the area of secured credit law was taken in response to the need for an efficient legal regime that would remove legal obstacles to secured credit and could thus have a beneficial impact on the availability and the cost of credit.²

II. Organization of the session

2. The Working Group, which was composed of all States members of the Commission, held its twelfth session in New York from 12 to 16 February 2007. The session was attended by representatives of the following States members of the

¹ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17 and corrigendum (A/56/17 and Corr.3)*, para. 358. For a history of the project, see A/CN.9/WG.VI/WP.31. The reports of the first to the eleventh sessions of the Working Group are contained in documents A/CN.9/512, A/CN.9/531, A/CN.9/532, A/CN.9/543, A/CN.9/549, A/CN.9/570, A/CN.9/574, A/CN.9/588, A/CN.9/593, A/CN.9/603 and A/CN.9/617. The reports of the first and the second joint sessions of Working Group V (Insolvency Law) and VI (Security Interests) are contained in documents A/CN.9/535 and A/CN.9/550. The consideration of those reports by the Commission is reflected in the Official Records of the General Assembly, Fifty-seventh Session, Supplement No. 17 (A/57/17), paras. 202-204, Fifty-eighth Session, Supplement No. 17 (A/58/17), paras. 217-222, Fifty-ninth Session, Supplement No. 17 (A/59/17), paras. 75-78, Sixtieth Session, Supplement No. 17 (A/60/17), paras. 186-187, and Sixty-first Session, Supplement No. 17 (A/61/17), paras. 13-78.

² *Ibid.*, *Fifty-fifth Session, Supplement No. 17 (A/55/17)*, para. 455, and *Fifty-sixth Session, Supplement No. 17 and corrigendum (A/56/17 and Corr.3)*, para. 347.

Working Group: Argentina, Australia, Austria, Belgium, Benin, Cameroon, Canada, Chile, China, France, Gabon, Germany, Guatemala, India, Iran (Islamic Republic of), Italy, Japan, Kenya, Lebanon, Mexico, Morocco, Nigeria, Pakistan, Paraguay, Poland, Republic of Korea, Russian Federation, South Africa, Spain, Sweden, Switzerland, Thailand, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

3. The session was attended by observers from the following States: Democratic Republic of the Congo, Egypt, Hungary, Ireland, Malaysia, Mauritius, Philippines, Tonga and Yemen.

4. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: International Monetary Fund, World Bank and World Intellectual Property Organization;

(b) *International Organizations*: Asian-African Legal Consultative Organization, Council of The Inter-Parliamentary Assembly of Member Nations of the Commonwealth of Independent States and European Community;

(c) *International non-governmental organizations invited by the Commission*: American Bar Association, Center for International Legal Studies, Commercial Finance Association, Forum for International Commercial Arbitration, International Bar Association, International Chamber of Commerce, International Insolvency Institute, International Trademark Association, Max-Planck Institute for Foreign and Private International Law, National Law Center for Inter-American Free Trade, New York City Bar Association and Union internationale des avocats.

5. The Working Group elected the following officers:

Chairman: Ms. Kathryn SABO (Canada)

Rapporteur: Ms. Maria del Pilar BONILLA DE ROBLES (Guatemala)

6. The Working Group had before it the following documents: A/CN.9/WG.VI/WP.29 (Revised recommendations); and A/CN.9/WG.VI/WP.31 and Addendum 1 (Revised commentaries).

7. The Working Group adopted the following agenda:

1. Opening of the session and scheduling of meetings.
2. Election of officers.
3. Adoption of the agenda.
4. Preparation of legislative guide on secured transactions.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

8. The Working Group considered the recommendations contained in chapters III (Basic approaches to security and other general rules), IV (Creation of a security right (effectiveness as between the parties)), VIII (Rights and obligations of the

parties), IX (Rights and obligations of third-party obligors), XIII (Conflict of laws), XIV (Transition) (see A/CN.9/WG.VI/WP.29), as well as revised recommendations contained in chapter XII (Acquisition financing devices) based on a proposal by the Secretariat. The Working Group also considered the terminology and rules of interpretation of the draft Guide (see A/CN.9/WG.VI/WP.31/Add.1), as well as issues relating to security rights in directly held securities, financial contracts and intellectual property, based on proposals by the Secretariat. The deliberations and decisions of the Working Group are set out below in chapter IV. The Secretariat was requested to revise the recommendations in those chapters, as well as the terminology and rules of interpretation, to reflect the deliberations and decisions of the Working Group.

IV. Preparation of a legislative guide on secured transactions

Chapter III. Basic approaches to security and other general rules

Recommendation 8 (integrated and functional approach)

9. While some doubt was expressed as to whether retention-of-title sales and financial leases should be treated as security devices, broad support was expressed for an integrated and functional approach that would result in the secured transactions law covering all devices serving security functions. It was also agreed that the bracketed text in recommendation 8 should be revised to ensure that the law would apply to all devices that served security functions, while stating the conditions under which that result would be achieved if a State adopted a non-unitary approach to acquisition financing. Subject to that change, the Working Group approved the substance of recommendation 8.

Recommendation 9 (party autonomy)

10. The Working Group approved the substance of recommendation 9 unchanged.

Recommendations 10 and 11 (electronic communications)

11. There was broad support for recommendations 10 and 11 that expressed the principle of functional equivalence of paper to electronic writing and signature reflected in article 9 (2) and (3) of the United Nations Convention on the Use of Electronic Communications in International Contracts. On the understanding that the meaning of writing for the purposes of the creation of a security agreement was a matter addressed in recommendation 13, the Working Group approved the substance of recommendations 10 and 11 unchanged.

12. Noting that a signed writing was required for the security agreement (recommendation 13) and for the agreement of the debtor of a receivable not to raise any defences or rights of set off against the assignee (see recommendation 116, subparagraph (c)), the Working Group decided to defer discussion of recommendation 11 until it had an opportunity to discuss recommendation 13 (see para. 16).

Chapter IV. Creation of a security right (effectiveness as between the parties)

A. General recommendations

Recommendations 12 and 13 (creation of a security right)

13. It was agreed that recommendation 12 should be revised to address all the requirements for the effective creation of a security right (i.e. the agreement should reflect the intent of the parties to create a security right, the grantor should have a proprietary right in the asset or the power to dispose of the asset and the agreement should reasonably identify the encumbered asset and the secured obligation).

14. With regard to recommendation 13, it was agreed that the second bracketed text (referring to evidence of the grantor's intent to grant a security right) should be retained. It was also agreed that the reference to signature should be deleted, as it raised a question as to the types of acts that would qualify as "signature" and unnecessarily created another formal requirement for the creation of a security right. To avoid an implication that both the offer and the acceptance ought to be in writing in the case of a non-possessory security right, the Working Group agreed that the second sentence of recommendation 13 should be revised to refer to the agreement "being evidenced by a writing" rather than the agreement "being in writing".

15. Subject to those changes, the Working Group approved the substance of recommendations 12 and 13.

16. After completing its discussion of recommendations 12 and 13, the Working Group went back to recommendation 11 (see para. 12). It was agreed that, while a signed writing was required only for the waiver of defences by the debtor of a receivable, recommendation 11 should be retained. It was broadly felt that recommendation 11 stated an appropriate principle in the appropriate context of general rules. After discussion, the Working Group approved the substance of recommendation 11 unchanged.

Recommendations 15 (obligations subject to a security agreement) and 16-17 (assets subject to a security agreement)

17. The Working Group approved the substance of recommendation 15 unchanged. As to recommendation 16, it was agreed that any changes necessary to ensure that, with the exception of recommendations 23 and 24, the draft Guide did not override statutory prohibitions with respect to the transferability of assets could be discussed later in the session (see para. 117). After discussion, the Working Group approved the substance of recommendation 17 unchanged.

Recommendations 18 and 19 (creation of a security right in proceeds)

18. Noting that the definition of "proceeds" (see A/CN.9/WG.VI/WP.31/Add.1, definition (kk)) included the "civil and natural fruits" of encumbered assets and that the parties to a security agreement could always agree that a security right would not extend to proceeds or some types of proceeds, the Working Group approved the substance of recommendation 18 unchanged.

19. Differing views were expressed as to whether recommendation 19 should be retained. One view was that, while a security right should automatically extend to assets taking the place of encumbered assets, it should not cover additional assets, such as civil and natural fruits of encumbered assets, unless otherwise agreed by the parties. However, the prevailing view was that a security right should automatically extend even to civil and natural fruits as that result would reflect the normal expectations of the parties. It was stated that a different approach would create unnecessary cost and a trap for unwary parties. After discussion, the Working Group decided to delete recommendation 19. It was also agreed that the commentary should discuss the approach suggested in recommendation 19.

Recommendations 20 and 21 (commingled proceeds)

20. It was agreed that, as recommendation 20 dealt with tracing of commingled assets, it was equally applicable to the tracing of commingled goods (i.e. a mass or product) and should thus include a cross-reference to recommendation 29 (creation of a security right in a mass or product). Subject to that change, the Working Group approved the substance of recommendation 20. After discussion, the Working Group also approved the substance of recommendation 21 unchanged.

B. Asset-specific recommendations

Recommendation 22 (effectiveness of a bulk assignment and an assignment of future, parts of and undivided interests in receivables)

21. It was agreed that the word “contractual”, contained in recommendation 22 within square brackets, should be retained without square brackets in order to limit the application of recommendation 22 to contractual receivables (as in the United Nations Convention on the Assignment of Receivables in International Trade; the “United Nations Assignment Convention”) and thus avoid interfering with statutory restrictions on the transferability of non-contractual receivables. Subject to that change, the Working Group approved the substance of recommendation 22.

Recommendations 23 (effectiveness of an assignment made despite an anti-assignment clause), 24 (creation of a security right in a right that secures a receivable, a negotiable instrument or any other obligation) and 25 (creation of a security right in a right to payment of funds credited to a bank account)

22. After discussion, the Working Group approved the substance of recommendations 22 to 25 unchanged.

Recommendation 26 (creation of a security right in proceeds under an independent undertaking)

23. It was agreed that the last sentence of recommendation 26, which appeared within square brackets, should be deleted. It was stated that the point that the transferability of the right to draw under an independent undertaking was a matter for the law and practice of independent undertakings could usefully be clarified in the commentary. Subject to that change, the Working Group approved the substance of recommendation 26.

Recommendations 27 (creation of a security right in a negotiable document), 28 (creation of a security right in attachments) and 29 (creation of a security right in a mass or product)

24. After discussion, the Working Group approved the substance of recommendations 27 to 29 unchanged.

Chapter VIII. Rights and obligations of the parties

A. General recommendations

Recommendations 106 (suppletive rules relating to the rights of the secured creditor) and 107 (mandatory rules relating to the obligations of the party in possession)

25. After discussion, the Working Group approved the substance of recommendations 106 and 107 unchanged. It was also agreed that the commentary should discuss the application of the principle of party autonomy with respect to the rights and obligations of the parties to the security agreement. In addition, it was agreed that the rights and obligations of parties to acquisition financing transactions in the context of a non-unitary approach could be discussed later in the session (see para. 130).

B. Asset-specific recommendations

Recommendations 108 (rights and obligations of the assignor and the assignee), 109 (representations of the assignor), 110 (right to notify the debtor of the receivable) and 111 (right to payment)

26. After discussion, the Working Group approved the substance of recommendation 108 unchanged. With respect to recommendation 109, it was agreed that the text in square brackets, limiting the application of recommendation 109 to contractual receivables, should be retained outside square brackets. Subject to that change, the Working Group approved the substance of recommendation 109. After discussion, the Working Group also approved the substance of recommendations 110 and 111 unchanged.

Chapter IX. Rights and obligations of third-party obligors

A. Rights and obligations of the debtor of the receivable

Recommendations 112 (protection of the debtor of the receivable), 113 (notification of the debtor of the receivable), 114 (discharge of the debtor of the receivable by payment), 115 (defences and rights of set-off of the debtor of the receivable), 116 (agreement not to raise defences or rights of set-off), 117 (modification of the original contract) and 118 (recovery of payments)

27. Noting that recommendations 112 to 118 reflected the principles embodied in articles 15 to 21 of the United Nations Assignment Convention, the Working Group approved their substance unchanged.

B. Rights and obligations of the obligor under a negotiable instrument**Recommendation 119**

28. After discussion, the Working Group approved the substance of recommendation 119 unchanged.

C. Rights and obligations of the depositary bank**Recommendations 120 and 121**

29. After discussion, the Working Group approved the substance of recommendations 120 and 121 unchanged.

D. Rights and obligations of the guarantor/issuer, confirmer or nominated person of an independent undertaking**Recommendations 122-124**

30. It was agreed that subparagraph (b) of recommendation 122 should refer to the rights of a transferee not being affected by a security right in proceeds under an independent undertaking created by the transferor, irrespective of the time of creation of the security right. Subject to that change, the Working Group approved the substance of recommendation 122. After discussion, the Working Group also approved the substance of recommendations 123 and 124 unchanged.

E. Rights and obligations of the issuer of a negotiable document**Recommendation 125**

31. After discussion, the Working Group approved the substance of recommendation 125 unchanged.

Chapter XIII. Conflict of laws**A. General recommendations****Recommendation 195 (law applicable to a security right in tangible property)**

32. It was generally agreed that the creation, third-party effectiveness and priority of a security right in tangible property should be subject to the law of State in which the property was located (*lex rei sitae*). It was also widely felt that that approach would result in uncertainty as to the law applicable to tangible property of a type ordinarily used in more than one State and thus security rights in such property should be subject to the law of the State in which the grantor was located. It was also generally thought that, while ships and aircraft would always fit into the category of mobile property, motor vehicles might not fit, at least in the case of island States in which motor vehicles would very rarely cross national borders.

33. As to the provision in the third sentence of recommendation 195 with respect to tangible property that was subject to title registration, while it was agreed that a recommendation along those lines would be useful, its current formulation raised a number of concerns. One concern was that the recommendation did not make clear which law applied to the question of whether title registration was required. Another concern was that, in the case of assets subject to multiple registrations, the recommendation might inadvertently result in the application of multiple laws.

34. Deferring that issue to a later time in the session (see para. 121), the Working Group approved the substance of the remainder of recommendation 195 unchanged.

Recommendation 196 (law applicable to a security right in goods in transit and export goods)

35. There was broad support for recommendation 196, which allowed a secured creditor with a security right in goods in transit or export goods to create and make effective against third parties its security right under the law of the ultimate destination of the goods (exclusively or in addition to the requirements of the law of the initial location of the goods under recommendation 195), provided that the goods reached that destination within a reasonable period of time. In response to a question, it was noted that priority would still be subject, under recommendations 195 and 203, to the law of the State in which the goods would be located at the time a priority dispute arose. It was also stated that the length of a reasonable period of time would depend on factors, such as the distance of the journey and the means of transport.

36. The concern was expressed, however, that, in the case of goods covered by a negotiable document, recommendation 196 might not provide a clear rule in situations where the document was located in one State and the goods were located in another State. In order to address that concern, the suggestion was made that the scope of recommendation 196 should be expanded to cover negotiable documents moving with the goods they covered. That suggestion was objected to. It was stated that recommendation 196 would in any case apply irrespective of whether the goods were accompanied by a negotiable document or not. It was also observed that recommendation 195 was sufficient to provide that the law applicable to a security right in a document of title would be the law of the location of the document. In addition, it was said that the reliability of documents of title would be enhanced since, if the State whose law was applicable were a State that had enacted the recommendations of the draft Guide, possession of the document would give a superior right with respect to goods covered by a negotiable document.

37. After discussion, the Working Group approved the substance of recommendation 196 unchanged.

Recommendation 197 (law applicable to a security right in intangible property)

38. Broad support was expressed for recommendation 197, which provided that the creation, third-party effectiveness and priority of a security right in intangible property should be subject to the law of the State in which the grantor was located. It was noted that recommendation 197 appropriately reflected the approach of articles 22 and 30 of the United Nations Assignment Convention.

39. However, some doubt was expressed as to whether the law of the grantor's location was appropriate for security rights in financial assets (such as derivatives or repurchase agreements), directly held securities and rights to payment of funds credited to a bank account. With respect to security rights in rights to payment of funds credited to a bank account, it was agreed that reference should be made to recommendation 208, which provided for the application of a law that might be other than the law of the grantor's location. As to directly held securities and financial contracts, the Working Group deferred discussion to a later time in the session (see paras. 99-110).

40. With respect to the text that appeared in square brackets in recommendation 197, it was agreed that it mainly raised the question of the law applicable to security rights in intellectual property. It was widely felt that, as the matter raised complex questions on which diverging views were expressed, the bracketed text should be deleted and the matter referred to future work (see para. 122).

41. Subject to those changes, the Working Group approved the substance of recommendation 197.

Recommendation 198 (law applicable to a security right in proceeds)

42. After discussion, the Working Group approved the substance of recommendation 198 unchanged.

Recommendation 199 (law applicable to the rights and obligations of the grantor and the secured creditor)

43. While broad support was expressed for recommendation 199, some doubt was expressed as to the appropriateness of referring the mutual rights and obligations of the parties to a law other than the law governing the creation of a security right. It was observed that a proposed regulation under preparation by the European Commission might take a different approach. In response, it was noted that recommendation 199 reflected a well-thought approach taken in article 28 of the United Nations Assignment Convention. It was also noted that the approach taken in recommendation 199 should be taken into account so as to achieve universally uniform conflict-of-laws rules that would greatly benefit parties to such financing transactions all over the world. In any case, it was noted that regional legislation could be referred to in the draft Guide for the benefit of States from the relevant region, but could not dictate international legislation, unless it was of interest to and attracted the support of the international community as a whole.

44. After discussion, the Working Group approved the substance of recommendation 199 unchanged.

Recommendations 200 and 201 (law applicable to the enforcement of a security right)

45. Differing views were expressed with regard to the law applicable to the enforcement of a security right. One view was that enforcement should be subject to the law governing the security agreement, with the specific exception of out-of-court repossession of encumbered assets by the secured creditor without the consent of the grantor, which should be subject to the law of the State in which the relevant assets were located (alternative B). It was stated that such an approach would result

in one law governing enforcement even where various enforcement actions took place in different States or related to out-of-court enforcement. It was also observed that, in particular with respect to intangible assets, that approach would be appropriate, as the location of intangible assets could not be easily determined and, in any case, could involve multiple jurisdictions.

46. However, the prevailing view was that enforcement of a security right should be subject to the law of the State in which enforcement took place (alternative A). It was stated that enforcement related to procedural matters or, in any case, matters of public policy, and thus could be subject only to the law of the place in which it took place. It was also stated that, in a priority contest with respect to the proceeds of enforcement between two secured creditors, alternative A would result in the application of a single law, while alternative B could result in the application of different laws. In addition, it was stated that the rule could not be structured on the basis of a distinction between judicial and extra-judicial enforcement as the type of enforcement involved in each case could not be predicted by the parties at the time of the conclusion of the financing transaction or even later before default.

47. While it was agreed that alternative A should be retained with respect to the enforcement of a security right in tangible assets, it was stated that, in the case of intangible assets, an approach based on the place of enforcement could lead to the application of multiple laws as different enforcement steps (e.g. notification, collection or sale) could take place in different States.

48. After discussion, it was agreed that a different rule should be prepared with respect to the enforcement of a security right in intangible assets based on the law applicable to the creation, third-party effectiveness and priority of a security right in intangible property.

49. Further to the deletion of alternative B in recommendation 200, which referred enforcement of a security right to the law governing the security agreement, the Working Group agreed that recommendation 201 should also be deleted, as, under revised recommendation 200, enforcement of a security right in an attachment to immovable property would always take place in the State in which the immovable property was located and be subject to the law of that State.

Applicable law in insolvency proceedings

50. It was agreed that, to ensure greater consistency between recommendation 171 and recommendations 30 and 31 of the UNCITRAL Legislative Guide on Insolvency Law, recommendation 171 might need to be revised. It was widely felt that the aim of recommendation 171 was to provide that the law applicable to creation, effectiveness against third parties, priority and enforcement of a security right was the law applicable in the absence of insolvency proceedings, except to the extent otherwise provided by the relevant insolvency law. Subject to that change, the Working Group approved the substance of recommendation 171.

Recommendations 202 (meaning of “location” of the grantor), 203 (relevant time when determining location), 204 (continued third-party effectiveness of a security right upon change of location), 205 (exclusion of *renvoi*) and 206 (public policy and internationally mandatory rules)

51. After discussion, the Working Group adopted the substance of recommendations 202 to 204 and 206 unchanged.

52. With regard to recommendation 204, the concern was expressed that, by requiring registration in the new jurisdiction to which the assets or the grantor might move, it might add to the cost of financing transactions. It was stated that, not only costs for double registration, namely in the country of the exporter and in the country of the importer, but also considerable costs for legal support in a foreign country in order to fulfil the requirements for registration, would be incurred. In response, it was observed that recommendation 204 reflected the approach taken under current law outside the draft Guide. It was also stated that recommendation 204 introduced a positive new element of preserving for some time after the change of location of the assets or the grantor the third-party effectiveness of a security right created and made effective against third parties under the law of another jurisdiction. In addition, it was said that recommendation 196 provided an exporter the possibility of ensuring third-party effectiveness of its security right exclusively in the country to which the relevant goods would be imported. Moreover, it was pointed out that further improvements could be left to practice. In that connection, reference was made to jurisdictions allowing national or even international registration, as well as to jurisdictions in which service providers handled multi-jurisdictional registrations at relatively low cost.

53. With regard to recommendation 205, it was agreed that a cross-reference should be included to recommendations 214 and 215, which allowed *renvoi* in the case the applicable law was the law of a multi-unit State. Subject to that change, the Working Group approved the substance of recommendation 205.

B. Asset-specific recommendations

Recommendation 207 (law applicable to receivables arising from a sale, lease or security agreement relating to immovable property)

54. After discussion, the Working Group approved the substance of recommendation 207 unchanged.

Recommendation 208 (law applicable to a security right in a right to payment of funds credited to a bank account)

55. Differing views were expressed as to the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in rights to payment of funds credited to a bank account, as well as the rights and duties of the depositary bank with respect to that security right. One view was that those matters should be subject to the law governing the bank account agreement or other law provided in the account agreement, under the condition that the bank had a branch in the State whose law would be applicable (alternative A). It was stated that that approach

provided certainty and was practical as the location of a bank account could not be determined.

56. However, the predominant view was that those matters should be referred to the law of the State in which the bank that maintained the account had its place of business or, in the case of more than one place of business, to the law of the State in which the branch maintaining the account was located. It was stated that that approach provided certainty and transparency as to the law applicable. It was also observed that that approach reflected the normal expectations of the parties and provided for the application of one law to issues relating to banking activities.

57. After discussion, despite the predominant view in favour of alternative B and in view of the strongly held views in favour of alternative A, the Working Group decided to retain both alternatives A and B. It was widely felt, however, that further efforts should be undertaken to reach agreement on one recommendation, since, if both alternative recommendations were retained and implemented by States, a different law would apply depending on the State in which a dispute arose, a result that would preserve the uncertainty as to the law applicable to that matter (for the continuation of the discussion, see paras. 123-128).

Recommendation 209 (law applicable to the third-party effectiveness of a security right in specified types of asset by registration)

58. After discussion, the Working Group approved the substance of recommendation 209 unchanged.

Recommendations 210-212 (law applicable to a security right in proceeds under an independent undertaking)

59. It was stated that recommendation 211 might need to be revised, as a nominated person would typically confirm a credit but not issue an independent undertaking. After discussion, the Working Group approved the substance of recommendations 210 to 212 unchanged.

Recommendation 213 (law applicable to the rights and obligations of third-party obligors and secured creditors)

60. After discussion, the Working Group approved the substance of recommendation 213 unchanged.

C. Special rules when the applicable law is the law of a multi-unit State

Recommendations 214-217

61. Some doubt was expressed as to whether it was appropriate to allow *renvoi* (i.e. that reference to the law of a State included the conflict-of-laws rules of the State), in cases where the applicable law was the law of a multi-unit State. In response, it was stated that, as long as the law of the State whose law was applicable applied, no uncertainty as to the applicable law would arise. It was also observed that that approach was necessary in cases where a notice about a security right had to be registered in a registry located in one of the units of a multi-unit State. After

discussion, the Working Group approved the substance of recommendations 214 to 217 unchanged (see para. 129).

Chapter XIV. Transition

62. It was widely felt that transition rules were of crucial importance for the acceptability and implementation of a new secured transactions law. It was thus agreed that the commentary should discuss steps to be taken by States to ensure the effectiveness of existing security rights under the new law, the need for commentaries, registration and other similar forms referred to in the law, as well as of educational programs to assist judges, arbitrators, practitioners and the industry in understanding and applying the new law.

Recommendation 218 (effective date)

63. The Working Group approved the substance of recommendation 218 unchanged. It was widely felt that the determination of the effective date of the new law (i.e. the date as of which it would enter into force) was an important factor for the acceptability of the new law. It was also agreed that the commentary could discuss additional criteria for the determination of the length of the effective date, such as the need to educate practitioners and enable them to participate in the implementation of the law, as well as the time necessary for parties to register a notice in the registry established by the new law.

Recommendation 219 (inapplicability of the law to disputes in litigation)

64. It was agreed that the new law should not apply to the rights of any claimant involved in litigation or other dispute resolution mechanism with respect to one or more security rights (and not just the parties to a security agreement as provided in subparagraph (a) of recommendation 219). It was also agreed that the new law should leave unaffected not only the enforcement (as provided in subparagraph (b) of recommendation 219) but also the priority of a security right if the process towards its enforcement had been initiated before the effective date of the new law. Subject to those changes, the Working Group approved the substance of recommendation 219.

Recommendation 220 (transition period)

65. With respect to subparagraph (a) of recommendation 220, it was stated that it was unnecessary, as the issue of the existence under the new law of a security right created under the old law was sufficiently addressed by recommendation 221. It was also observed that recommendation 221 was more appropriate in that it provided that a right created under the old law would exist under the new law without any time limitation. As to subparagraph (b) of recommendation 220, it was pointed out that it was equally unnecessary, as the issue of the third-party effectiveness under the new law of a security right that had been made effective against third parties under the old law was sufficiently addressed by recommendation 222.

66. It was stated, however, that the definition of the term “transition period” should be retained perhaps in recommendation 222, while criteria for the determination of its length should be discussed in the commentary. In that

connection, it was stated that the principal criterion for the determination of the length of the transition period was the need to ensure that persons affected by the new law would be given the time necessary for them to become familiar with the new law and to take the action required to preserve their rights. It was also observed that, in some States, the loss of priority as a result of failure of a party to meet the requirements of third-party effectiveness under the new law might be treated as illegal deprivation of property, unless the transition period was found to be reasonable. It was also observed that the number of transactions with respect to which a notice would need to be registered in the new registry might also be taken into account in determining the length of the transition period.

67. After discussion, the Working Group decided that recommendation 220 should be deleted subject to the inclusion of the definition of the term “transition period” in recommendation 222. It was also agreed that the commentary should discuss criteria for determining the length of the transition period.

Recommendations 221-224 (creation and third-party effectiveness of a security right)

68. After discussion, the Working Group approved the substance of recommendations 221 to 223 unchanged. Subject to removing the brackets around the text in recommendation 224, the Working Group approved the substance of recommendation 224.

Recommendations 225-227 (priority of a security right)

69. After discussion, the Working Group approved the substance of recommendations 225 to 227 unchanged.

Chapter XII. Acquisition financing devices

General remarks

70. The Working Group considered a revised version of the recommendations on acquisition financing devices on the basis of a proposal by the Secretariat. It was noted that it was not possible for those recommendations to be made available well in advance of the present session of the Working Group, as they were prepared by the Secretariat to address the views expressed and the suggestions made during the eleventh session of the Working Group (Vienna, 4-8 December 2006). However, the view was expressed that final decision with respect to those recommendations would have to be postponed until the Commission session.

71. Differing views were expressed as to whether the presentation of the material in the chapter should remain as it was, with the unitary approach being followed by the non-unitary approach, or whether the unitary approach should be integrated into the other relevant chapters of the draft Guide, leaving the discussion of the non-unitary approach in a separate Chapter.

72. One view was that the discussion and the recommendations of the unitary approach should be integrated into the other relevant chapters. It was stated that in that way the unitary approach would be simpler and easier for legislators to

understand and implement. It was also observed that, in order to keep a parallel structure, the unitary approach was made more complicated than it actually was.

73. The prevailing view, however, was that the current parallel structure should be preserved. It was stated that such a presentation of the material would be of greater assistance to those States considering which approach to adopt or seeking to understand the changes that a law reform in the direction of the unitary approach would involve. It was also observed that having a chapter only on the non-unitary approach might result in that approach appearing as the only approach recommended in the draft Guide with respect to acquisition financing rights.

74. After discussion, the Working Group agreed that the current presentation of the material with a discussion of the unitary and the non-unitary approach to acquisition financing devices should be preserved.

75. It was also agreed that the commentary could usefully clarify that two alternative approaches were proposed with regard to acquisition financing devices and provide some guidance as to the consequences for the ownership of an asset subject to an acquisition financing device (e.g. consequences of failure to effect registration of a notice with respect to a retention-of-title sale).

Terminology

76. The Working Group approved the substance of the definitions of the terms “acquisition security right”, “acquisition secured creditor” and “acquisition financier” unchanged.

77. With regard to the definition of the term “acquisition financing right”, it was observed that, while it listed some typical acquisition financing transactions, it also included language that would cover any transaction in which title was used to finance the acquisition of a tangible asset. The example was given of sales with deferred transfer-of-title provisions that could be acquisition financing devices or not, depending on whether title was used to secure the payment of the price.

78. The Working Group agreed to include in the definition of the term “acquisition security right” an express reference to another common type of acquisition financing transaction, hire-purchase agreements. The Working Group also agreed to replace references to the terms “assets” or “goods” with the term “tangible property” to ensure that the recommendations on acquisition financing would apply only to tangible assets (see para. 113). Subject to those changes, the Working Group approved the substance of the definition of the term “acquisition financing right”.

79. In the discussion, the question was raised as to whether the definition of “acquisition financing right” would cover repurchase transactions (“repos”). It was noted that repos typically involved indirectly held securities and would thus fall outside the scope of the draft Guide (see recommendation 5). It was also noted, however, that repos of tangible assets would be covered by the definition of “security right” and, as a result, the recommendations of the draft Guide would apply to such repos.

80. The Working Group approved the substance of the definition of an “acquisition financing transferee”, noting that the commentary should provide guidance on the interpretation of the definition (e.g. that it covered a lessee although it was not a transferee).

81. With regard to the definition of the term “retention-of-title right”, it was suggested that it should be revised to reflect the understanding in several jurisdictions that retention of title involved a conditional transfer of title. There was support for that suggestion on the understanding that the definition of the term “acquisition financing right” would include language to ensure that other types of retention-of-title clauses were also covered.

82. After discussion, the Working Group approved the substance of the definition of the term “financial lease” unchanged, noting that it included language to cover hire-purchase agreements.

A. Unitary approach to acquisition financing devices

83. After discussion, the Working Group approved the substance of recommendations 181 to 197 unchanged.

B. Non-unitary approach to acquisition financing rights

84. An objection was raised with respect to the principle of functional equivalence of security rights and acquisition financing rights and in particular with respect to the registration of a notice about a retention-of-title sale or a financial lease. However, it was widely felt that that principle was one of the fundamental elements of a modern secured transactions regime and should be preserved. It was stated, in particular, that a modern notice-registration system that would apply to all devices serving security functions was a *conditio sine qua non* (a necessary condition) for an effective and efficient secured transactions regime.

85. The concern was expressed that the functional approach might inadvertently result in re-characterization of a title device to a security device. In response, it was stated that the re-characterization of certain title devices as security devices was common practice in most jurisdictions (in particular in the case of insolvency). It was also observed that, even in jurisdictions in which retention of title was the main acquisition-financing device, title was bifurcated to the extent that the seller retained ownership and the buyer acquired an expectation of ownership (i.e. a sufficient right to encumber the goods purchased). In addition, it was said that, in any case, that result did not affect fundamental notions of property or other law.

86. In response to a question as to the differences between the unitary and the non-unitary approach, it was stated that the main difference arose in the case of enforcement (within and outside insolvency). It was also observed that, in the context of a unitary approach, the principles applicable to the enforcement of any security right would apply equally to the enforcement of an acquisition security right. In addition, it was said that, in the context of a non-unitary approach, functional equivalence would be preserved to the extent compatible with the regime applicable to the enforcement of ownership rights.

87. While in view of that difference, some doubt was expressed as to whether a distinction between a unitary and a non-unitary approach was useful, strong support was expressed for preserving the non-unitary approach for States that would prefer to enact the recommendations of the draft Guide while relying on existing laws to

some extent and without having to undertake a major overhaul of their secured transactions regimes. It was stated that the non-unitary approach to acquisition financing devices constituted one of the major achievements of the draft Guide in promoting harmonization of the law of security interests.

88. The Working Group reiterated its approval of the functional approach and the distinction between unitary and non-unitary approach to acquisition financing devices. It was also agreed that a different set of recommendations should apply in the context of each approach and decided to delete a recommendation leading to the contrary result.

89. After discussion, the Working Group approved the substance of recommendations 181 bis-195 and 197 unchanged. With respect to the creation and third-party effectiveness of a security right in consumer goods, it was agreed that the commentary should clarify that the threshold of the written form requirement was low and related to an indication of the financier's intent to have an acquisition security right, and that no registration was required for security rights in consumer goods.

90. With respect to the enforcement of an acquisition financing right (recommendation 196), the Working Group approved a text along the following lines:

“The law should provide, with respect to post-default rights relating to an acquisition financing right, that:

(a) The same principles and objectives indicated in the Guide's recommendations with respect to post-default rights relating to security rights are applicable;

(b) Even if the rules effectuating those principles and objectives in the context of acquisition financing rights differ from those applicable to security rights, the rules should produce results that are the functional equivalent of results obtained in the context of security rights; and

(c) In seeking to provide for functionally equivalent results, the rules applicable to post-default enforcement of an acquisition financing right under a current regime be modified to the extent necessary to produce congruity with the security rights regime recommended by the Guide to the greatest extent possible without compromising the coherence of the ownership regime, and divergences from the rules applicable to security rights under the Guide be made only to the extent necessary to preserve the coherence of the ownership regime. Any divergences from the rules applicable to post-default rights relating to security rights under the Guide should not have the effect of limiting, overriding or otherwise affecting the application of the Guide's recommendations relating to creation, third-party effectiveness, registration and priority of acquisition financing rights.”

Terminology and rules of interpretation

91. Having completed its discussion of the recommendations of the draft Guide (see A/CN.9/WG.VI/WP.29), the Working Group considered terminology and rules

of interpretation (for the terminology and rules of interpretation, see A/CN.9/WG.VI/WP.31/Add.1).

92. The Working Group approved the substance of recommendations (a) to (z) unchanged. The Working Group also agreed that a definition of the term “money” should be added along the following lines: “‘Money’ means currency in use as a medium of exchange authorized by a Government.” It was noted that, under the draft Guide: money meant tangible money and not just a book entry, which could be a “receivable”; money in a bank account was “funds credited to a bank account”; a cheque was a “negotiable instrument”; and money held by a coin dealer as part of a collection was not “money”.

93. With respect to definition (aa) (“independent undertaking”), it was agreed that it should be revised to clarify that the list of types of independent undertaking in parenthesis was indicative and not exhaustive.

94. With respect to definition (bb) (“proceeds under an independent undertaking”), it was agreed that the commentary should explain that a draft accepted or obligation incurred could give rise to proceeds under an independent understanding only together with payment. In that connection, it was agreed that the term “honour” in the context of an independent undertaking, which meant a two-step process (i.e. acceptance of a draft or incurring an obligation and payment), could be usefully defined. It was also agreed that definition (bb) should be conformed to the terminology used in the latest version of the Uniform Customs and Practice for Documentary Credits (i.e. UCP 600).

95. Subject to those changes, the Working Group approved the substance of definitions (aa) and (bb).

96. After discussion, the Working Group approved the substance of definitions (cc)-(uu) and (yy) unchanged.

97. With respect to definitions (vv), (ww) and (xx) (“buyer in the ordinary course of business”, “lessee in the ordinary course of business” and “licensee in the ordinary course of business”), the Working Group confirmed its earlier decision that the thrust of those definitions would be moved to the appropriate recommendations (A/CN.9/617, para. 48) and agreed that the language in square brackets could be left out, while the definitions could be deleted.

98. In the discussion, the view was expressed that the definitions should be listed in alphabetical order in all language versions. That suggestion received support. Subject to the editorial rules of the United Nations, the Secretariat was requested to list the definitions in alphabetical order so as to make the terminology more user-friendly.

Security rights in directly held securities

99. Recalling its decision to address in the draft Guide directly held securities, i.e. securities held directly by their owner and not through an intermediary (see A/CN.9/WG.VI/WP.29, recommendation 5, and A/CN.9/617, para. 15), the Working Group noted that directly held securities might be represented by certificates, such as stock certificates or bonds (“certificated” securities) or reflected

as a book entry (“uncertificated” or “dematerialized” securities, which should not be confused with certificated securities held in a securities account through an intermediary).

100. It was also noted that: with respect to directly held certificated securities, the Working Group might wish to consider whether the recommendations should closely parallel the recommendations applicable to negotiable instruments; and with respect to directly held dematerialized securities, the Working Group might wish to consider whether the recommendations should closely parallel the recommendations applicable to rights to payment of funds credited to a bank account.

101. Differing views were expressed as to whether certain types of directly held securities should be covered in the draft Guide. One view was that the draft Guide should address certain types of directly held securities along the lines proposed above. It was stated that transactions relating to directly held securities, such as those in which a parent company obtained credit by offering as security shares of its wholly-owned subsidiaries, were extremely important in facilitating small- and medium-size- enterprises’ access to credit. It was also observed that failure to address such directly held securities in the draft Guide would leave a big gap in the draft Guide and inadvertently result in depriving many enterprises from access to credit. In that connection, it was noted that neither the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary, prepared by the Hague Conference on Private International Law, nor the draft UNIDROIT Convention on harmonized substantive rules regarding securities held with an intermediary, currently being prepared by the International Institute for the Unification of Private Law (UNIDROIT), addressed securities that were not held through an intermediary.

102. Another view was that directly held securities should not be addressed in the draft Guide at all. It was stated that addressing directly held securities in the draft Guide would be extremely difficult as there was no universally acceptable definition of directly held securities. In addition, it was said that that addressing directly held securities in the draft Guide at the present time might create overlap and conflict with the draft Convention being prepared by UNIDROIT. Moreover, it was pointed out that conflict with the UNIDROIT draft Convention could arise, for example, because the UNIDROIT draft Convention treated title-transfer transactions as functionally equivalent but did not equate them fully to security rights. Moreover, it was pointed out that addressing directly held securities in the draft Guide might create overlap and conflict with European Union law. In that connection, it was mentioned that the re-characterization of title transactions as security transactions and the application of the law of the grantor’s location were matters of particular concern.

103. Yet another view was that addressing issues relating to directly held securities should be treated as a subject for future work. It was stated that it would be useful to address the taking of security in directly held securities but such work needed further careful study. It was also observed that deferring the matter to future work would allow States to take stock of the achievements of the UNIDROIT draft Convention and then decide whether further work could be undertaken. Matters that mentioned among those that required additional work included: definitions of the relevant terms; identification and exclusion of title-transfer arrangements, such as repurchase agreements, stock loans and other title-transfer collateral arrangements,

all of which could relate to directly or indirectly held securities; anti-assignment agreements; priority issues (e.g. control giving a right superior to registration); and applicable-law issues.

104. In an effort to reach agreement, several suggestions were made. One suggestion was to ensure that intermediated securities were excluded in a clear and unambiguous way. It was stated that most of the transactions mentioned as not fitting in the draft Guide related to intermediated securities. Another suggestion was to include transactions in which an individual investor or enterprise granted a security in shares held directly without the involvement of any intermediary to obtain credit. Yet another suggestion was to exclude financial contracts relating to securities. A further suggestion was to address directly held securities in the draft Guide, but only to the extent that its provisions were not inconsistent with national law or international agreements governing securities, while the Commission could be invited to consider future work on directly held securities. While interest was expressed in all those suggestions, it was widely felt that further work was necessary before a decision could be made.

105. An additional suggestion was to list in the draft Guide a limited number of specific transactions to be covered (in which securities held directly by their owner could be used as security for credit), while financial contracts relating to securities and any intermediated securities covered by Unidroit's work could be excluded. Examples of securities that would be covered included shares of a subsidiary held by a parent company and untraded shares of small- and medium-size companies.

106. While interest was expressed in proceeding on the basis of a concrete and limited list of transactions to be covered, it was widely felt that more work was necessary to define those transactions and to reach agreement as to how they should be covered. On the other hand, there was support for the idea that that suggestion, supplemented by the principles reflected above as to how to address the relevant issues in the draft Guide (see para. 100), provided a reasonable basis for further discussion. It was stated that a proposal along those lines could be prepared by interested States to assist the Commission in addressing the treatment of those transactions in the draft Guide.

107. After discussion, the Working Group agreed that the text that appeared in recommendation 5 within square brackets, limiting the exclusion to indirectly held securities, should be retained within square brackets. It was also agreed that the Commission might wish to consider whether certain defined and limited types of securities should be covered in the draft Guide or whether that matter should be addressed in the context of future work.

Security rights in financial contracts

108. Leaving aside securities-related transactions discussed above (e.g. repurchase agreements and stock-lending transactions), the Working Group focused on other financial contracts relating to netting agreements (e.g. derivatives). The suggestion was made that those transactions should be excluded from the scope of the draft Guide or, at least, of recommendation 197 (law applicable to security rights in intangible property). It was stated that the law of the State in which the grantor was located was not appropriate, as the debtor of the receivable would not be able to

know which law applied to priority issues. It was also stated that excluding such financial contracts at least from the scope of recommendation 197 would be consistent with the approach taken in the United Nations Assignment Convention (see articles 4, paragraph 2 (b), and 5, subparagraphs (k) and (l)), and would ensure that the draft Guide would not be inconsistent with other law.

109. The suggestion to exclude financial contracts relating to netting agreements from the scope of the draft Guide or just recommendation 197 (see para. 108) was objected to. It was stated that the basic approach taken in the draft Guide was that, with limited specific exceptions with respect to which the law was well developed and application of the draft Guide was not necessary or appropriate, all types of movable property, whether tangible or intangible, could be used as security for credit. It was also observed that, under the United Nations Assignment Convention, issues of priority and the law applicable to priority were separate from issues of debtor protection and the law applicable thereto, and did not concern the debtor of a receivable. In addition, it was said that the proposed exclusion of financial contracts would inadvertently result in the draft Guide failing to provide guidance to States on a number of important issues. Moreover, it was pointed out that the scope of the Convention as an international text and of the draft Guide as a text relating to national law had to be different. In that connection, it was mentioned that the Convention referred priority issues to domestic law and the Guide was designed to provide guidance precisely on the contents of domestic law.

110. After discussion, the Working Group confirmed its decision that, with the exception of a specific and limited number of assets, all types of movable property, whether tangible or intangible, including financial contracts, could be used as security for credit in accordance with the provisions recommended in the draft Guide.

Security rights in intellectual property

111. It was noted that, at its thirty-ninth session in 2006, the Commission had requested the Secretariat to prepare, in cooperation with other organizations and in particular the World Intellectual Property Organization, a note discussing future work by the Commission on security rights in intellectual property. It was also noted that, at that session, the Commission had also requested the Secretariat to organize a colloquium to obtain the views of governmental and non-governmental experts (A/61/17, paragraph 86).

112. The Working Group noted that that colloquium had taken place in Vienna on 18 and 19 January 2007, and that, while support had been expressed for work by the Commission, at the same time several concerns had been expressed with respect to the treatment of security rights in intellectual property in the draft Guide. It was also noted that some of those concerns could be addressed by clarifying the text of some definitions and recommendations without changing policy decisions made by the Working Group. In addition, it was noted that other concerns would be discussed in a note by the Secretariat on future work to be considered by the Commission at its upcoming fortieth session (Vienna, 25 June-12 July 2007).

Terminology

113. With regard to the definitions of the terms “acquisition security right”, “acquisition financing right”, “retention-of-title right” and “financial lease”, the Working Group agreed to refer explicitly to “tangible property”, so as to ensure that those definitions and the relevant recommendations applied only to tangible property and not to intellectual property, leaving the important issue of financing of the acquisition of intellectual property to future work (see para. 78).

114. It was also agreed to delete from the definition of the term “receivable” the reference to “the performance of non-monetary obligations”, so as to clarify that the definition and the recommendations relating to receivables applied only to receivables and not, for example, to the rights of a licensee or the obligations of a licensor under a contractual licence of intellectual property.

115. In addition, it was agreed that reference should be added to the definition of the term “intellectual property” to service marks, trade secrets and designs. It was also agreed that the commentary should refer to the main international agreements concerned, such as, for example, article 2 (viii) of the Convention Establishing the World Intellectual Property Organization and the Agreement on Trade-Related Aspects of Intellectual Property Rights (“TRIPS”).

Recommendation 4 (aircraft, railway rolling stock, space objects, ships and intellectual property)

116. The Working Group noted that the draft Guide would not apply to intellectual property to the extent of any inconsistency between the secured transactions law and national or international intellectual property laws (see A/CN.9/WG.VI/WP.29, recommendation 4 (b)) and that the commentary would draw the attention of States to the need to adjust their laws in order to avoid any inconsistency. In addition, the Working Group noted that the commentary would list some examples of recommendations that might need to be adjusted, such as: recommendation 197 on the law applicable to security rights in intangible property; recommendations 41 and 79 on registration in a specialized registry; recommendation 83 (c) on a licensee in the ordinary course of business; and recommendations in which the question arose as to whether a security right in goods should extend to any intellectual property involved in their use or operation.

Recommendations 16 and 17 (assets subject to a security agreement)

117. It was agreed that, to avoid overriding statutory limitations to the transferability of assets (with the exception of the limited rules of recommendations 23 and 24 dealing with receivables), a new recommendation should be added in the draft Guide along the following lines:

“The law should provide that, except as provided in recommendations 23 and 24, it does not override provisions of any other law to the extent that they limit the creation or enforcement of a security right in, or the transferability of, specific types of asset.”

Recommendation 23 (effectiveness of an assignment made despite an anti-assignment clause)

118. It was agreed that the term “receivable” should be added after the term “assignment” so as to ensure that that recommendation (as well as all recommendations dealing with receivables) would apply only to receivables, and not to intellectual property.

Specialized registration

119. Noting that registration was not necessary for the creation of some intellectual property rights, such as copyright, and in order to avoid any implication that the draft Guide might require registration in that respect, it was agreed that the commentary should clarify that whether registration in a specialized registry was required was a matter for other law. It was also agreed that the commentary should also explain that, if other law required registration in a specialized registry, a right so registered would be superior to a right registered in the general security rights registry (see recommendation 79).

Recommendation 143 (disposition of encumbered assets)

120. In order to ensure that the secured creditor could enforce only the grantor’s rights in the encumbered asset, it was agreed that recommendation 143 should be revised along the following lines: “The law should provide that after default a secured creditor is entitled to sell or otherwise dispose of, lease or license an encumbered asset to the extent of the grantor’s rights in the encumbered asset.”

Other matters**Recommendation 195 (law applicable to a security right in tangible property)**

121. Recalling that it had deferred to a later time in the session discussion of the bracketed text in recommendation 195 (see para. 34), the Working Group resumed its discussion and requested the Secretariat to prepare a revised text and place it in square brackets for the consideration of the Commission. It was widely felt that the revised text should take into account the following considerations: refer to asset registration rather than specialized registration; refer also to title certificate systems; and refer to such a specialized registration system only if that system allowed registration of security rights.

Recommendation 197 (law applicable to a security right in intangible property)

122. Recalling its decision to delete the bracketed text in recommendation 197 (see para. 40) and its discussion of security rights in intellectual property (see para. 116), the Working Group agreed that the commentary should explain that recommendation 197 was not appropriate for security rights in intellectual property and that the matter should be considered in the context of future work.

Recommendation 208 (law applicable to a security right to payment of funds credited to a bank account)

123. Recalling its decision to retain both alternatives A and B, despite the predominant view in favour of alternative B and in view of the strongly-held views in favour of alternative A (see para. 57), the Working Group resumed its discussion in an effort to reach agreement. Another alternative along the following lines was suggested:

“(a) The law of that State in which the depositary bank conducts its operations, in the case where the depositary bank conducts operations in only one State;

“(b) Otherwise, the law of the State expressly stated in the account agreement as the State whose law governs the account agreement or, if the account agreement expressly provides that another law is applicable in all such issues, that other law. However, the law of the State determined pursuant to the preceding sentence applies only if the depositary bank has at the time of the conclusion of the account agreement, an office in that State that is engaged in the regular activity of maintaining bank accounts; or

“(c) If none of the above rules apply, the applicable law would be determined by fallback rules based on article 5 of the Hague Convention on the Law Applicable to Certain Rights of Securities Held with an Intermediary.”

124. That suggestion did not receive sufficient support. It was felt that it was essentially identical with alternative A.

125. With respect to alternative B, a number of suggestions were made. One suggestion was that reference should be made to “places of business in more than one State” rather than to “more than one place of business”. It was stated that if more than one place of business was in the same State, the same law would apply, except in the context of a multi-unit State, which would address the conflict of laws of its various units in its internal law. That suggestion received sufficient support.

126. Another suggestion was that reference should be made in alternative B to the law of the State whose law governed the bank-client relationship. That suggestion was objected to on the grounds that a branch might be subject both to the regulatory law of the State of its location and of the State in which the head office was located. It was also stated that regulatory law would apply irrespective of which law applied to the bank-client relationship. Yet another suggestion was that reference should be made in alternative B to the law of the State in which a bank account was opened, as a bank account could be maintained in another State, a fact that might not be known to the account holder or third parties. While interest was expressed in that suggestion, there was not sufficient support for it.

127. In the discussion, it was stated that one of the disadvantages of alternative B was that it was not appropriate for bank accounts opened through electronic means of communication with a bank, which might be incorporated in a certain jurisdiction without, however, maintaining a physical office in any State.

128. Subject to the change referred to above (see para. 125), the Working Group approved the substance of alternative B.

Special rules when the applicable law is the law of a multi-unit State

129. Recalling that, under recommendations 214 and 215, *renvoi* was allowed if the applicable law was the law of a multi-unit State (see para. 61), the Working Group agreed that the commentary should explain that those recommendations were applicable to federal States but not to other States with multiple units and jurisdictions in which application of *renvoi* could lead to great uncertainty with respect to the law applicable. It was widely felt that the commentary should also explain that in such States those recommendations would not need to be enacted into national law.

Rights and obligations of parties to acquisition financing transactions (non-unitary approach)

130. The Working Group agreed that the commentary should explain that the rights and obligations of parties to acquisition financing transactions (non-unitary approach) that would not be covered by recommendations 106 and 107 would be left to other law (e.g. sale or lease law). It was stated that such matters were typically addressed in general terms and conditions, which differed from case to case depending on the type of transaction involved.

V. Future work

131. It was noted that the thirteenth session of the Working Group was scheduled to take place in Vienna from 24 to 28 September 2007, those dates being subject to approval by the Commission at its fortieth session, which was scheduled to take place in Vienna from 25 June to 12 July 2007. The Working Group also noted that the draft Guide was expected to be considered by the Commission from 25 June to 2 July with final adoption expected to take place on 6 July 2007. In addition, the Working Group noted that from 9 to 12 July 2007 a congress on international trade law would take place in the context of the Commission session for delegates and experts to discuss relevant issues for future reference.

**D. Note by the Secretariat on the draft legislative guide on secured transactions,
submitted to the Working Group on Security Interests at its twelfth session
(A/CN.9/WG.VI/WP.31 and Add.1) [Original: English]**

A/CN.9/WG.VI/WP.31

Background remarks

1. At its thirty-third session, in 2000, the United Nations Commission on International Trade Law considered a report of the Secretary-General on possible future work in the area of secured credit law (A/CN.9/475). At that session, the Commission agreed that security interests was an important subject and had been brought to the attention of the Commission at the right time, in particular in view of the close link of security interests with the work of the Commission on insolvency law. It was widely felt that modern secured credit laws could have a significant impact on the availability and the cost of credit and thus on international trade. It was also widely felt that modern secured credit laws could alleviate the inequalities in the access to lower-cost credit between parties in developed countries and parties in developing countries, and in the share such parties had in the benefits of international trade. A note of caution was struck in that regard, however, to the effect that such laws needed to strike an appropriate balance in the treatment of privileged, secured and unsecured creditors so as to become acceptable to States. It was also stated that, in view of the divergent policies of States, a flexible approach aimed at the preparation of a set of principles with a guide, rather than a model law, would be advisable. Furthermore, in order to ensure the optimal benefits from law reform, including financial-crisis prevention, poverty reduction and facilitation of debt financing as an engine for economic growth, any effort on security interests would need to be coordinated with efforts on insolvency law.¹

2. At its thirty-fourth session, in 2001, the Commission considered a note by the Secretariat on security interests (A/CN.9/496). At that session, the Commission agreed that work should be undertaken in view of the beneficial economic impact of a modern secured credit law. It was stated that experience had shown that deficiencies in that area could have major negative effects on a country's economic and financial system. It was also stated that an effective and predictable legal framework had both short- and long-term macroeconomic benefits. In the short term, namely, when countries faced crises in their financial sector, an effective and predictable legal framework was necessary, in particular in terms of enforcement of financial claims, to assist the banks and other financial institutions in controlling the deterioration of their claims through quick enforcement mechanisms and to facilitate corporate restructuring by providing a vehicle that would create incentives for interim financing. In the longer term, a flexible and effective legal framework for security rights could serve as a useful tool to increase economic growth. Indeed, without access to affordable credit, economic growth, competitiveness and international trade could not be fostered, with enterprises being prevented from expanding to meet their full potential.² As to the form of work, the Commission

¹ *Official Records of the General Assembly, Fifty-fifth Session, Supplement No. 17 (A/55/17)*, para. 459.

² *Ibid.*, *Fifty-sixth Session, Supplement No. 17 (A/56/17)*, para. 351.

considered that a model law might be too rigid and noted the suggestions made for a set of principles with a legislative guide that would include, where feasible, model legislative provisions.³

3. After discussion, the Commission decided to entrust a working group with the task of developing “an efficient legal regime for security rights in goods involved in a commercial activity, including inventory, to identify the issues to be addressed, such as the form of the instrument, the exact scope of the assets that can serve as collateral, ...”.⁴ Emphasizing the importance of the matter and the need to consult with representatives of the relevant industry and practice, the Commission recommended that a two- to three-day colloquium be held.⁵

4. At its first session (New York, 20-24 May 2002), Working Group VI (Security Interests) had before it a first, preliminary draft legislative guide on secured transactions, prepared by the Secretariat (A/CN.9/WG.VI/WP.2 and Add.1-12), a report on an UNCITRAL-Commercial Finance Association international colloquium, held in Vienna from 20 to 22 March 2002 (A/CN.9/WG.VI/WP.3), and comments by the European Bank for Reconstruction and Development (A/CN.9/WG.VI/WP.4). At that session, the Working Group considered chapters I to V and X of the draft legislative guide (A/CN.9/WG.VI/WP.2 and Add.1-5 and 10), and requested the Secretariat to revise those chapters (A/CN.9/512, para. 12). At the same session, the Working Group considered suggestions for the presentation of modern registration systems in order to provide the Working Group with information necessary to address concerns expressed with respect to registration of security rights in movable property (see A/CN.9/512, para. 65). In addition, the Working Group agreed on the need to ensure, in cooperation with Working Group V (Insolvency Law), that issues relating to the treatment of security rights in insolvency proceedings would be addressed consistently with the conclusions of Working Group V on the intersection of the work of Working Group V and Working Group VI (see A/CN.9/512, para. 88; see also A/CN.9/511, paras. 126 and 127).

5. At its thirty-fifth session, in 2002, the Commission had before it the report of Working Group VI (Security Interests) on the work of its first session (A/CN.9/512). The Commission expressed its appreciation to the Working Group for the progress made in its work. It was widely felt that, with the legislative guide, the Commission had a great opportunity to assist States in adopting modern secured transactions legislation, which was generally thought to be a necessary, albeit not sufficient in itself, condition for increasing access to low-cost credit, thus facilitating the cross-border movement of goods and services, economic development and ultimately friendly relations among States.⁶ In that connection, the Commission noted with satisfaction that the project had attracted the attention of international, governmental and non-governmental organizations and that some of those took an active part in the deliberations of the Working Group. The comments submitted to Working Group VI, in particular by the European Bank for Reconstruction and Development (A/CN.9/WG.VI/WP.4), were mentioned as an indication of that interest.

6. At that session, the feeling was widely shared that the timing of the Commission’s initiative was most opportune both in view of the relevant legislative

³ Ibid., para. 357.

⁴ Ibid., para. 358.

⁵ Ibid., para. 359.

⁶ Ibid., *Fifty-seventh Session, Supplement No. 17* (A/57/17), para. 202.

initiatives under way at the national and the international level and in view of the Commission's own initiative in the field of insolvency law. In that connection, the Commission noted with particular satisfaction the efforts undertaken by Working Group V (Insolvency Law) and Working Group VI towards coordinating their work on a subject of common interest, such as the treatment of security rights in the case of insolvency proceedings. Strong support was expressed for such coordination, which was generally thought to be of crucial importance for providing States with comprehensive and consistent guidance with respect to the treatment of security rights in insolvency proceedings. The Commission endorsed a suggestion made to revise the insolvency chapter of the draft legislative guide on secured transactions in light of the core principles agreed by Working Groups V and VI (see A/CN.9/511, paras. 126 and 127 and A/CN.9/512, para. 88). The Commission stressed the need for continued coordination and requested the Secretariat to consider organizing a joint session of the two Working Groups in December 2002.⁷

7. After discussion, the Commission confirmed the mandate given at its thirty-fourth session to Working Group VI to develop an efficient legal regime for security rights in goods, including inventory. The Commission also confirmed that the mandate of the Working Group should be interpreted widely to ensure an appropriately flexible work product, which should take the form of a legislative guide.⁸

8. At its second session (Vienna, 17-20 December 2002), the Working Group considered chapters VI (Filing system), VII (Priority) and IX (Default and enforcement) (A/CN.9/WG.VI/WP.2/Add.6, 7 and 9) of the first preliminary draft guide on secured transactions, prepared by the Secretariat. At that session, the Working Group requested the Secretariat to prepare revised versions of those chapters (see A/CN.9/531, para. 15). In conjunction with that session and in accordance with suggestions made at the first session of the Working Group (see A/CN.9/512, para. 65), an informal presentation of the registration systems of security rights in movable property of New Zealand and Norway was held. Immediately before the second session of Working Group VI, Working Groups V (Insolvency Law) and VI (Security Interests) held their first joint session (Vienna, 16 and 17 December 2002), during which the revised version of former chapter X (new chapter IX; A/CN.9/WG.VI/WP.6/Add.5) on insolvency was considered. At the joint session, the Secretariat was requested to prepare a revised version of that chapter (see A/CN.9/535, para. 8).

9. At its third session (New York, 3-7 March 2003), Working Group VI considered chapters VIII (Pre-default rights and obligations of the parties), XI (Conflict of laws and territorial application) and XII (Transition) of the first preliminary draft guide on secured transactions (A/CN.9/WG.VI/WP.2/Add.8, 11 and 12) and chapters II (Basic approaches to security) and III (Creation) of the second version of the draft guide (A/CN.9/WG.VI/WP.6/Add.2 and 3) and requested the Secretariat to prepare revised versions of those chapters (A/CN.9/532, para. 13). In conjunction with that session, an informal presentation was made of the recently completed secured transactions law in Slovakia, which was supported by the World Bank and by the European Bank for Reconstruction and Development.

10. At its thirty-sixth session, in 2003, the Commission had before it the reports of Working Group VI (Security Interests) on the work of its second and third sessions

⁷ Ibid., para. 203.

⁸ Ibid., para. 204.

(A/CN.9/531 and A/CN.9/532), as well as the report of the first joint session of Working Groups V and VI (A/CN.9/535). The Commission commended Working Group VI for the progress in its work and expressed its appreciation to Working Group V and Working Group VI for the coordination of their work in relation to the treatment of security rights in insolvency proceedings. The Commission also noted with appreciation the presentation of modern registration systems of security rights in movable property.⁹

11. In addition, the Commission emphasized the importance of coordination with organizations with interest and expertise in the field of secured transactions law, such as the International Institute for the Unification of Private law (Unidroit), the Hague Conference on Private International Law, the World Bank, the International Monetary Fund, the European Bank for Reconstruction and Development and the Asian Development Bank. Reference was made to the current work of Unidroit on security rights in securities, to the World Bank's *Principles and Guidelines for Effective Insolvency and Creditor Rights Systems* to the extent they concerned secured transactions, to the Model Law on Secured Transactions and the "Core principles for a secured transactions law" of the European Bank for Reconstruction and Development, to the Asian Development Bank's *Guide to Movable Registries* and to the Model Inter-American Law on Secured Transactions of 2002 prepared by the Organization of American States. Reference was also made to the need to coordinate with the Hague Conference with respect to the conflict-of-laws chapter of the draft legislative guide on secured transactions, in particular with respect to the law applicable to the enforcement of security rights in the case of insolvency.¹⁰

12. With respect to the scope of work, the Commission noted suggestions that the Working Group should consider covering, in addition to goods (including inventory), trade receivables, letters of credit, deposit accounts and intellectual property rights in view of their economic importance as security for credit. As to the substance of the draft legislative guide, the Commission noted statements that, while the draft guide should discuss various workable approaches, it should also include recommendations and that, if alternative recommendations had to be prepared, their relative merits, in particular for developing countries and for countries with economies in transition, should also be discussed.¹¹

13. After discussion, the Commission confirmed the mandate given at its thirty-fourth session to Working Group VI to develop an efficient legal regime for security rights in goods, including inventory, and its decision at its thirty-fifth session that the mandate should be interpreted widely to ensure an appropriate work product, which should take the form of a legislative guide. The Commission also confirmed that it was up to the Working Group to consider the exact scope of its work and, in particular, whether trade receivables, letters of credit, deposit accounts and intellectual and industrial property rights should be covered in the draft legislative guide.¹²

14. At its fourth session (Vienna, 8-12 September 2003), the Working Group considered chapters I (Introduction), II (Key objectives), IV (Creation) and IX (Insolvency) and paragraphs 1 to 41 of chapter VII (Priority) (A/CN.9/WG.VI/WP.6/Add.1 and 3 and A/CN.9/WG.VI/WP.9/Add.3 and 6) and requested the Secretariat to prepare revised versions of those chapters (see A/CN.9/543, para. 15).

⁹ Ibid., *Fifty-eighth Session, Supplement No. 17* (A/58/17), para. 217.

¹⁰ Ibid., para. 218.

¹¹ Ibid., paras. 220 and 221.

¹² Ibid., para. 222.

15. At its fifth session (New York, 22-25 March 2004), the Working Group considered the summary and recommendations of chapters V (Publicity), VII (Priority) and X (Conflict of laws) (A/CN.9/WG.VI/WP.9/Add.2, 3 and 7), and requested the Secretariat to prepare revised versions of those chapters (see A/CN.9/549, para. 16).

16. At their second joint session (New York, 26 and 29 March 2004), Working Groups V (Insolvency Law) and VI (Security Interests) considered the treatment of security rights in the draft legislative guide on insolvency law on the basis of document A/CN.9/WG.V/WP.71 (see A/CN.9/550, para. 11).

17. At its thirty-seventh session, in 2004, the Commission had before it the reports of Working Group VI (Security Interests) on the work of its fourth and fifth sessions (A/CN.9/543 and A/CN.9/549), as well as the report of the second joint session of Working Groups V and VI (A/CN.9/550). The Commission commended Working Group VI for the progress achieved thus far and expressed its appreciation to Working Groups V and VI for the progress made during their second joint session, at which they had considered pending issues of common interest.¹³

18. In addition, the Commission noted with appreciation the progress made by the Working Group in the coordination of its work on conflict of laws with the Hague Conference on Private International Law and in particular the plans for a joint meeting of experts. The Commission also commended the efforts to coordinate with Unidroit, which was preparing a text on security rights in securities. The Commission also expressed its appreciation for the coordination with the World Bank, which was preparing principles and guidelines for effective insolvency and creditor rights systems, and in particular for the agreement that the World Bank text would form with the draft legislative guide on secured transactions a single international standard.¹⁴

19. The Commission noted with interest that a preliminary consolidated set of recommendations might be ready by early 2005. The Commission also welcomed the preparation of additional chapters on various types of asset, such as negotiable instruments and documents, bank accounts, letters of credit and intellectual property rights. In that connection, while the importance of those types of asset was generally recognized, it was stated that including them in the draft guide should not be at the expense of slowing down work with respect to the core assets within the scope of the draft guide (i.e. goods, including inventory, and receivables).¹⁵

20. After discussion, the Commission confirmed the mandate given to Working Group VI at the thirty-fourth session of the Commission and subsequently confirmed at its thirty-fifth and thirty-sixth sessions. The Commission also requested the Working Group to expedite its work so as to submit the draft guide to the Commission for final adoption as soon as possible and, hopefully, in 2006.¹⁶

21. At its sixth session (Vienna, 27 September-1 October 2004), the Working Group considered chapters I (Introduction), II (Key objectives), III (Basic approaches to security), IV (Creation), V (Effectiveness against third parties), VII (Pre-default rights and obligations of the parties), VIII (Default and enforcement), X (Conflict of laws) and XI (Transition) (A/CN.9/WG.VI/WP.9/

¹³ Ibid., *Fifty-ninth Session, Supplement No. 17* (A/59/17), para. 75.

¹⁴ Ibid., para. 76.

¹⁵ Ibid., para. 77.

¹⁶ Ibid., para. 78.

Add.1, 4 and 8, A/CN.9/WG.VI/WP.11/Add.1 and 2, A/CN.9/WG.VI/WP.13 and A/CN.9/WG.VI/WP.14 and Add.2 and 4) and requested the Secretariat to revise those chapters to reflect the deliberations and decisions of the Working Group (see A/CN.9/570, para. 8). At that session, the Working Group noted with appreciation that the conflict-of-laws chapter of the guide was being prepared in close cooperation with the Hague Conference on Private International Law (see A/CN.9/570, para. 75).

22. At its seventh session (New York, 24-28 January 2005), the Working Group considered chapters X (Conflict of laws), XII (Acquisition financing devices) and XVI (Security rights in bank accounts) (A/CN.9/WG.VI/WP.16/Add.1, A/CN.9/WG.VI/WP.17 and Add.1 and A/CN.9/WG.VI/WP.18 and Add.1) and requested the Secretariat to revise those chapters to reflect the deliberations and decisions of the Working Group (see A/CN.9/574, para. 8).

23. At its thirty-eighth session, in 2005, the Commission had before it the reports of Working Group VI (Security Interests) on the work of its sixth and seventh sessions (A/CN.9/570 and A/CN.9/574). The Commission commended the Working Group for the progress achieved thus far, noted with interest the progress made by the Working Group in the coordination of its work with the Hague Conference on Private International Law, Unidroit, the World Bank and the World Intellectual Property Organization (WIPO) and requested the Working Group to expedite its work so as to submit the draft legislative guide to the Commission, at least for approval in principle, in 2006, and for final adoption in 2007.¹⁷

24. At its eighth session (Vienna, 5-9 September 2005), the Working Group considered recommendations in chapters VII (Pre-default rights and obligations of the parties), VIII (Default and enforcement), IX (Insolvency), X (Acquisition financing devices) and XI (Conflict of laws) (A/CN.9/WG.VI/WP.21/Add.2-5). It also considered terminology and recommendations related to (a) negotiable instruments and negotiable documents (definitions (w) and (x), as well as recommendations 3 (d) and 24 (see A/CN.9/WG.VI/WP.21 and A/CN.9/WG.VI/WP.22/Add.1); (b) proceeds from a drawing under an independent undertaking (definitions (y), (z), (aa) and (bb), as well as recommendations 25, 49, 62, 106 and 138) (see A/CN.9/WG.VI/WP.21/Add.1 and 5 and A/CN.9/WG.VI/WP.22/Add.1); and (c) intellectual property rights (definition (dd), and recommendation 3 (h)) (see A/CN.9/WG.VI/WP.21 and A/CN.9/WG.VI/WP.22/Add.1) (see A/CN.9/588, para. 8).

25. At its ninth session (New York, 30 January-3 February 2006), the Working Group considered recommendations in chapters V (Effectiveness against third parties), VI (Priority) and X (Acquisition financing devices) (see A/CN.9/WG.VI/WP.24/Add.3-5) and requested the Secretariat to revise those chapters to reflect the deliberations and decisions of the Working Group (see A/CN.9/593, para. 8). At that session, in view of the expectation of the Commission to approve in principle the substance of the recommendations of the draft guide at its thirty-ninth session, which was scheduled to take place in New York from 19 June to 7 July 2006, the Working Group agreed to hold an extra session, its tenth session, in New York from 1 to 5 May 2006 (see A/CN.9/593, para. 97).

26. At its tenth session (New York, 1-5 May 2006), the Working Group considered recommendations on security rights in receivables, negotiable instruments,

¹⁷ Ibid., *Sixtieth Session, Supplement No. 17* (A/60/17), paras. 186 and 187.

negotiable documents, rights to payment of funds credited to bank accounts, rights to proceeds under independent undertakings, as well as recommendations on pre-default rights and obligations of the parties and recommendations 88 to 111 on default and enforcement (see A/CN.9/WG.VI/WP.24 and Add.1 and 2 and A/CN.9/WG.VI/WP.26 and Add.1-3 and Add.3/Corr.1). The Secretariat was requested to revise those recommendations to reflect the deliberations and decisions of the Working Group (see A/CN.9/603, para. 8). At that session, the Working Group noted that the Commission was expected to approve in principle the substance (i.e. the policy, not the formulation) of the recommendations of the draft guide at its thirty-ninth session (New York, 19 June-7 July 2006).

27. At its thirty-ninth session, in 2006, the Commission had before it the reports of Working Group VI (Security Interests) on the work of its eighth, ninth and tenth sessions (A/CN.9/588, A/CN.9/593 and A/CN.9/603 respectively). The Commission expressed its satisfaction with the progress achieved thus far by Working Group VI (Security Interests) in developing a legislative guide on secured transactions and approved, in substance, the recommendations contained in documents A/CN.9/WG.VI/WP.21/Add.3, A/CN.9/WG.VI/WP.24 and Add.5, A/CN.9/WG.VI/WP.26/Add.4-8 and A/CN.9/611 and Add.1 and 2. After conclusion of its discussion of the recommendations of the draft guide, the Commission expressed its appreciation to the Working Group for the results achieved thus far in the development of the draft guide and noted that the views expressed and the suggestions made by the Commission would be taken into account in the subsequent version of the draft guide.¹⁸

28. At that session, the Commission noted that, as the draft guide dealt with security rights in intellectual property rights (such as patents, trademarks and copyrights) in general terms, more work might be required to provide guidance to States in that regard.¹⁹ After discussion, the Commission requested the Secretariat to prepare, in cooperation with relevant organizations and in particular WIPO, a note discussing the scope of future work of the Commission on security rights in intellectual property rights. In order to obtain the input of experts in Government and the private sector, the Commission requested the Secretariat to organize a colloquium.²⁰

5. Term-loan financing	67-69
6. Transfer of title for security purposes	70
7. Sale and leaseback transactions	71
<i>Recommendations 2-7</i>	

Introduction

A. Purpose of the Guide

1. The purpose of the UNCITRAL Legislative Guide on Secured Transactions (hereinafter referred to as “the Guide”) is to assist States in the development of modern secured transactions laws with a view to promoting the availability of low-cost secured credit. The Guide is intended to be useful to States that do not currently have efficient and effective secured transactions laws, as well as to States that already have workable laws but wish to review or modernize them, or to harmonize or coordinate their laws with those of other States.

2. The Guide is based on the premise that sound secured transactions laws can have significant economic benefits for States that adopt them, including attracting credit from domestic and foreign lenders and other credit providers, promoting the development and growth of domestic businesses (particularly small and medium-sized enterprises) and generally increasing trade. Such laws also benefit consumers by lowering prices for goods and services and making low-cost consumer credit more readily available. To be effective, such laws must be supported by efficient and effective judicial systems and other enforcement mechanisms. They must also be supported by insolvency laws that respect rights derived from secured transactions laws (see the UNCITRAL *Legislative Guide on Insolvency Law*¹).

3. The Guide seeks to rise above differences among legal regimes to suggest pragmatic and proven solutions that can be accepted and implemented in States having divergent legal traditions. The focus of the Guide is on developing laws that achieve practical economic benefits for States that adopt them. While it is possible

¹ United Nations publication, Sales No. E.05.V.10.

that States will have to incur predictable, yet limited, costs to develop and implement these laws, substantial experience suggests that the resulting short- and long-term benefits to such States should greatly outweigh the costs.

4. All businesses, whether manufacturers, distributors, service providers or retailers, require working capital to operate, to grow and to compete successfully in the marketplace. It is well established, through studies conducted by such organizations as the International Bank for Reconstruction and Development (the World Bank), the International Monetary Fund, the Asian Development Bank and the European Bank for Reconstruction and Development, that one of the most effective means of providing working capital to commercial enterprises is through secured credit.

5. The key to the effectiveness of secured credit is that it allows businesses to use the value inherent in their assets as a means of reducing risk for the creditor. Risk is reduced because credit secured by assets gives creditors access to the assets as another source of payment in the event of non-payment of the secured obligation. As the risk of non-payment is reduced, the availability of credit increases and the cost of credit falls.

6. A legal system that supports secured credit transactions is critical to reducing the perceived risks of credit transactions and promoting the availability of secured credit. Secured credit is more readily available to businesses in States that have efficient and effective laws that provide for consistent, predictable outcomes for creditors in the event of non-performance by debtors. On the other hand, in States that do not have efficient and effective laws, where creditors perceive the legal risks associated with credit transactions to be high, the cost of credit increases as creditors require increased compensation to evaluate and assume the increased risk. In some States, the absence of an efficient and effective secured transactions regime, or of an insolvency law regime under which security rights are recognized, has resulted in the virtual elimination of credit for small and medium-sized commercial enterprises, as well as for consumers.

7. By aiding in the cultivation and growth of individual businesses, creating a legal regime that promotes secured credit can have a positive effect upon the general economic prosperity of a State. Thus, States that do not have an efficient and effective secured transactions regime may deny themselves valuable economic benefits.

8. To best promote the availability of low-cost secured credit, the Guide suggests that secured transactions laws should be structured to enable businesses to utilize the value inherent in their property to the maximum extent possible to obtain credit. In this regard, the Guide adopts two of the most essential concepts of successful secured transactions laws, the concepts of priority and effectiveness against third parties. The concept of priority allows for the concurrent existence of security rights having different priority status in the same assets. This makes it possible for a business to utilize the value of its assets to the maximum extent possible to obtain secured credit from more than one creditor using the same assets as security, while at the same time allowing each creditor to know the priority of its security right. The concept of effectiveness against third parties, in the form of a system allowing, inter alia, the achievement of third-party effectiveness by registration of a simple notice concerning security rights, is designed to promote legal certainty with regard to the relative priority status of creditors and thus to reduce the risks and costs associated with secured transactions.

9. The legal regime envisaged in the Guide is a purely domestic regime. The recommendations of the Guide are addressed to national legislators considering reform of domestic secured transactions laws. However, because secured transactions often involve parties and assets located in different jurisdictions, the Guide also seeks to address the recognition of security rights and title-based security devices, such as retention of title and financial leases, effectively created in other jurisdictions. This would represent a marked improvement for the holders of those rights over the laws currently in effect in many States, under which such rights often are lost once an encumbered asset is transported across national borders, and would go far towards encouraging creditors to extend credit in cross-border transactions.

10. Throughout, the Guide seeks to establish a balance among the interests of debtors, creditors (whether secured, privileged or unsecured), affected third persons, buyers and other transferees, and the State. In so doing, the Guide adopts the premise, supported by substantial empirical evidence, that all creditors will accept such a balanced approach and will thereby be encouraged to extend credit, as long as the laws (and supporting legal and governmental infrastructure) are effective to enable the creditors to assess their risks with a high level of predictability and with confidence that they will ultimately realize the economic value of the encumbered assets in the event of non-payment by the debtor. Essential to this balance is a close coordination between the secured transactions and insolvency law regimes, including provisions pertaining to the treatment of security rights in the event of a reorganization or liquidation of a business. Additionally, certain debtors, such as consumer debtors, require additional protections. Thus, although the regime envisioned by the Guide will apply to many forms of consumer transactions, it is not intended to override consumer-protection laws or to discuss consumer-protection policies, since these matters do not lend themselves to unification.

11. In the same spirit, the Guide also addresses concerns that have been expressed with respect to secured credit. One such concern is that providing a creditor with a priority claim to all or substantially all of a person's assets may appear to limit the ability of that person to obtain financing from other sources. Another concern is the potential ability of a secured creditor to exercise influence over a business, to the extent that the creditor may seize, or threaten seizure of, the encumbered assets of that business upon default. Yet another concern is that in some cases secured creditors may take most or all of a person's assets in the case of insolvency and leave little for unsecured creditors, who may not be in a position to bargain for a security right in those assets. The Guide discusses these concerns and, in those situations where the concerns appear to have merit, suggests solutions.

12. The Guide builds on the work of UNCITRAL and other organizations. Such work includes the European Bank for Reconstruction and Development Model Law on Secured Transactions, completed in 1994; the European Bank for Reconstruction and Development "Core principles for a secured transactions law", completed in 1997; the Organization for Harmonization of Business Law in Africa Uniform Act Organizing Securities, prepared in 1997; the study on secured transactions law reform in Asia,² prepared by the Asian Development Bank in 2000; the United Nations Convention on the Assignment of Receivables in International Trade

² *Law and Policy Reform at the Asian Development Bank 2000*, vol. II (Asian Development Bank, 2000).

(United Nations Assignment Convention),³ adopted in 2001; the Convention on International Interests in Mobile Equipment, adopted in 2001, and the relevant protocols thereto; the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary, adopted in 2001; the Organization of American States Model Inter-American Law on Secured Transactions, prepared in 2002; the UNCITRAL *Legislative Guide on Insolvency Law*, completed in 2004; [the Unidroit Convention on Substantive Rules regarding Intermediated Securities; and [...]].

B. Terminology and rules of interpretation

13. The Guide adopts terminology to express the concepts that underlie an effective secured transactions regime. The terms used are not drawn from any particular legal system. Even when a term appears to be the same as that found in a particular national law, the Guide does not intend to adopt the meaning of the term in that national law. Rather, the Guide provides definitions giving a specific meaning to each key term. Many definitions also have the effect of delimiting the scope of the recommendations in the Guide that use those terms. Some recommendations use terms that are defined in those recommendations and some definitions are further elaborated in recommendations that use a defined term. Thus, the scope and content of each recommendation depend on the meaning of the defined terms used.

14. The Guide's approach of using defined terms is taken to facilitate precise communication, independent of any particular national legal system, and to enable readers of the Guide to understand its recommendations uniformly, providing them with a common vocabulary and conceptual framework. The definitions should be read with care and should be referred to whenever the defined terms are encountered.

15. While the terms are not of themselves an imperative element of the Guide's recommendations, legislation based on the Guide will typically include specific definitions for the terms that are used. Even if the terms used in the legislation differ from those used in the Guide, the definitions provided in the terminology might be used. This would avoid unintended substantive change and would make it most likely that the terms used will be understood uniformly by judges, commercial parties and their counsel, both inside and outside of the enacting State, from the outset, to maximize uniform interpretation immediately upon the effective date of the new legislation, thereby avoiding periods of doubt pending judicial interpretation. Use of the terms and, more importantly, the definitions provided in the Guide will also encourage harmonization of the law governing security rights.

16. The word "or" is not intended to be exclusive; use of the singular also includes the plural and vice versa; "include" and "including" are not intended to indicate an exhaustive list; "may" indicates permission and "should" indicates instruction; and "such as" and "for example" are to be interpreted in the same manner as "include" or "including". "Creditors" should be interpreted as including both the creditors in the forum State and foreign creditors, unless otherwise specified. References to "person" should be interpreted as including both natural and legal persons, unless otherwise specified.

³ General Assembly resolution 56/81, annex.

17. Some States may choose to implement the recommendations of the Guide by enacting a single comprehensive statute (a method more likely to produce coherence and avoid errors of omission or misunderstanding), while other States may seek to modify their existing body of law by insertions of specific rules in various places. The Guide refers to the entire body of recommended rules, whichever method is chosen for implementation, as “the law” or “this law”.

18. The Guide also uses the term “law” in various other contexts. Except when otherwise expressly provided, throughout the Guide: (a) all references to law refer to both statutory and non-statutory law; (b) all references to law refer to internal law, excluding conflict-of-laws rules (so as to avoid *renvoi*); (c) all references to “law other than the secured transactions law” refer to the entire body of a State’s law (whether substantive or procedural) other than that embodying the law governing secured transactions over movable property (whether pre-existing or newly enacted or modified pursuant to the recommendations of the Guide); (d) all references to “the law governing ... (e.g., negotiable instruments)” refer not only to a special statute or body of law denominated as “negotiable instruments law” but include also all contract and other general law that might be applicable to transactions or situations involving a negotiable instrument; and (e) all references to “insolvency law” are similarly all-encompassing, but refer only to law that might be applicable after the commencement of an insolvency proceeding.

19. The following paragraphs identify the principal terms used and the core meaning given to them in the Guide. The meaning of these terms is further refined when they are used in subsequent chapters. Those chapters also define and use additional terms (as is the case, for example, with the insolvency chapter). The definitions should be read together with the relevant recommendations. The principal terms are defined as follows:

(a) “Security right” means a consensual property right in movable property and attachments that secure payment or other performance of one or more obligations, regardless of whether the parties have designated it as a security right. It includes acquisition security rights and non-acquisition security rights. With respect to receivables, security right also means the right acquired by an outright transfer of a receivable, as well as a transfer by way of security. In order to ensure that the general recommendations apply to security rights in receivables and to outright transfers of receivables, unless otherwise provided, references to a “security right” in the Guide also refer to the “right of an assignee”;

(b) “Acquisition security right” means [, in the context of a unitary approach,] a security right in an asset that secures the obligation to pay any unpaid portion of the purchase price of the asset or an obligation incurred to enable the grantor to acquire the asset. Acquisition security rights include not only rights that are denominated as security rights but also rights retained or derived under retention-of-title sales, hire-purchase transactions, financial leases and purchase-money lending transactions. “Grantor” of an acquisition security right includes a buyer, financial lessee or grantor in a purchase-money lending transaction. “Acquisition financier” means the secured creditor with an acquisition security right and includes a retention-of-title seller, financial lessor or purchase-money lender;

[*Note to the Working Group: See note after definition (b) in document A/CN.9/WG.VI/WP.29.*]

(c) “Secured obligation” means the obligation secured by a security right;

(d) “Secured creditor” means a creditor that has a security right. In order to ensure that the general recommendations apply to security rights in receivables and to outright transfers of receivables, unless otherwise provided, references to the “secured creditor” in the Guide also refer to the “assignee”;

(e) “Debtor” means a person that owes performance of the secured obligation [and includes secondary obligors, such as guarantors of a secured obligation]. The debtor may or may not be the person that grants the security right to a secured creditor (see grantor);

(f) “Grantor” means a person that creates a security right in one or more of its assets in favour of a secured creditor to secure either its own obligation or that of another person (see debtor of the receivable). In order to ensure that the general recommendations apply to security rights in receivables and to outright transfers of receivables, unless otherwise provided, references to the “grantor” in the Guide also refer to the “assignor”;

(g) “Security agreement” means an agreement between a grantor and a creditor, in whatever form or terminology, that creates a security right;

(h) “Encumbered asset” means tangible or intangible movable property that is subject to a security right;

(i) “Tangible property” means all forms of corporeal movable property. Among the categories of tangible property are inventory, equipment, attachments, negotiable instruments, negotiable documents and money;

(j) “Inventory” means a stock of tangible property held for sale or lease in the ordinary course of the grantor’s business and also raw and semi-processed materials (work-in-process);

(k) “Equipment” means tangible property used by a person in the operation of its business;

(l) “Attachments to immovable property” means tangible property that is so physically attached to immovable property that, despite the fact that it has not lost its separate identity, is treated as immovable property under the law of the State where the immovable property is located;

(m) “Attachments to movable property” means tangible property that is so physically attached to other tangible property that, despite the fact that it has not lost its separate identity, it is treated as part of that movable property under law other than this law;

(n) “Mass or product” means tangible property other than money that is so physically associated or united with other tangible property that it has lost its separate identity;

(o) “Intangible property” means all forms of movable property other than tangible property and includes incorporeal rights, receivables and rights to the performance of obligations other than receivables;

(p) “Receivable” means a right to payment of a monetary obligation and a contractual right to performance of a non-monetary obligation excluding rights to payment evidenced by a negotiable instrument, the obligation to pay under an independent undertaking and the obligation of a bank to pay funds credited to a bank account;

[Note to the Working Group: See note after definition (p) in document A/CN.9/WG.VI/WP.29.]

(q) “Assignment” means the creation of a security right in a receivable and includes an outright transfer of a receivable. The creation of a security right in a receivable includes an outright transfer by way of security;

(r) “Assignor” means the person that makes an assignment of a receivable;

(s) “Assignee” means the person to which an assignment of a receivable is made;

(t) “Subsequent assignment” means an assignment by the initial or any other assignee. In the case of a subsequent assignment, the person that makes that assignment is the assignor and the person to which that assignment is made is the assignee;

(u) “Debtor of the receivable” means a person liable for payment of a receivable. “Debtor of the receivable” includes a guarantor or other person secondarily liable on the receivable.

A guarantor is not only a debtor of the receivable, the payment of which it has guaranteed, but also a debtor of the receivable that is constituted by the guarantee, as a guarantee is itself a receivable (i.e. there are two receivables);

(v) “Notice” means a communication in writing, except where otherwise provided in the Guide;

(w) “Notification of the assignment” means a communication in writing that reasonably identifies the assigned receivable and the assignee. The writing requirement is met by an electronic communication if the information contained therein is accessible so as to be usable for subsequent reference (see article 6 of the UNCITRAL Model Law on Electronic Commerce⁴ and article 9, paragraph 2, of the United Nations Convention on the Use of Electronic Communications in International Contracts⁵);

[Note to the Working Group: See note after definition (v) in document A/CN.9/WG.VI/WP.29.]

(x) “Original contract” in the context of an assignment means the contract between the assignor and the debtor of the receivable from which the receivable arises. With respect to non-contractual receivables, “original contract” means the non-contractual source of the receivable;

(y) “Negotiable instrument” means an instrument that embodies a right to payment, such as a cheque, bill of exchange or promissory note, which satisfies the requirements for negotiability under the law governing negotiable instruments;

(z) “Negotiable document” means a document that embodies a right for delivery of tangible property, such as a warehouse receipt or a bill of lading, and satisfies the requirements for negotiability under the law governing negotiable documents;

(aa) “Independent undertaking” means a letter of credit (commercial or standby), a confirmation of a letter of credit, an independent guarantee (demand,

⁴ United Nations publication, Sales No. E.99.V.4.

⁵ General Assembly resolution 60/21, annex.

first demand, bank guarantee or counter-guarantee) or any other undertaking recognized as independent by law or practice rules, such as the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (“the United Nations Guarantee and Stand-by Convention”), the Uniform Customs and Practice for Documentary Credits, the rules on International Standby Practices, and the Uniform Rules for Demand Guarantees;

(bb) “Proceeds under an independent undertaking” means the right to receive a payment due, a draft accepted or deferred payment incurred or another item of value, in each case to be delivered by the guarantor/issuer honouring or by a nominated person giving value for a draw under an independent undertaking. The term does not include:

- (i) The right to draw (i.e. to request payment) under an independent undertaking; or
- (ii) What is received upon honour of an independent undertaking or upon disposition of proceeds under an independent undertaking (i.e. the proceeds derived from collection or disposition of the proceeds under an independent undertaking).

This definition refers to “proceeds under an independent undertaking” to be consistent with terminology generally used in independent undertaking law and practice. The term as used in the Guide means the right of the grantor as beneficiary of an independent undertaking to receive whatever payment or other value is given under the independent undertaking contingent upon the beneficiary’s compliance with the terms and conditions of the independent undertaking. The term does not include the proceeds themselves, i.e. what is actually received upon honour of a drawing by the guarantor/issuer, confirmer or nominated person (a beneficiary’s receipt of value from a negotiating bank should not be characterized as honour or disposition) or upon disposition of a right to proceeds under an independent undertaking.

The term “proceeds under an independent undertaking” refers to a right to receive even though the term “proceeds” as used in independent undertaking law and practice may refer either to the right to receive or to whatever is received under the independent undertaking, and even though the term “proceeds” as used elsewhere in the Guide refers to whatever is received. A security right in proceeds under an independent undertaking (as an original encumbered asset) is different from a security right in “proceeds” (a key concept of the Guide) of assets covered in the Guide;

(cc) “Guarantor/issuer” means a bank or other person that issues an independent undertaking;

(dd) “Confirmer” means a bank or other person that adds its own independent undertaking to that of the guarantor/issuer.

In line with article 6 (e) of the United Nations Guarantee and Stand-by Convention, a confirmation provides the beneficiary with the option of demanding payment from the confirmer in conformity with the terms and conditions of the confirmed independent undertaking instead of from the guarantor/issuer;

(ee) “Nominated person” means a bank or other person that is identified in an independent undertaking by name or type (e.g. “any bank in country X”) as being nominated to give value under an independent undertaking and that acts pursuant to that nomination;

(ff) A secured creditor has “control” with respect to proceeds under an independent undertaking:

- (i) Automatically upon the creation of the security right if the guarantor/issuer, confirmer or nominated person is the secured creditor; or
- (ii) If the guarantor/issuer, confirmer or nominated person has made an acknowledgment in favour of the secured creditor;

(gg) “Acknowledgment” with respect to proceeds under an independent undertaking means that the guarantor/issuer, confirmer or nominated person that will pay or otherwise give value upon a draw under an independent undertaking has, unilaterally or by agreement:

- (i) Acknowledged or consented to (however acknowledgement or consent is evidenced) the creation of a security right (whether denominated as an assignment or otherwise) in favour of the secured creditor in the proceeds from an independent undertaking; or
- (ii) Has obligated itself to pay or give value to the secured creditor upon a draw under an independent undertaking;

(hh) “Bank account” means an account that is maintained by a bank into which funds may be deposited or credited. The term includes a checking or other current account, as well as a savings or time-deposit account. The term does not include a claim against the bank evidenced by a negotiable instrument.

The right to payment of funds credited to a bank account covers a right to the payment of funds transferred into an internal account of the bank and not applied to any obligations owing to the bank. Funds transferred to the bank by way of anticipated reimbursement of a future payment obligation that the bank has accepted in the ordinary course of its banking business is also covered to the extent that the person that gave the bank instructions has a claim to those funds if the bank does not make the future payment;

(i) A secured creditor has “control” with respect to a right to payment of funds credited to a bank account:

- (i) Automatically upon the creation of a security right if the depositary bank is the secured creditor;
- (ii) If the depositary bank has concluded a control agreement evidenced by an authenticated record with the grantor and the secured creditor, according to which the depositary bank has agreed to follow instructions from the secured creditor with respect to the payment of funds credited to the bank account without further consent of the grantor; or
- (iii) If the secured creditor is the account holder.

There is no obligation on a depositary bank to enter into a control agreement. In addition, a secured creditor’s rights will be subject to the rights and obligations of the depositary bank under law and practice governing bank accounts. Moreover, a control agreement requires the consent of the grantor (as well as of the depositary bank) and the grantor retains the right to deal with the funds in the bank account until the secured creditor instructs the depositary bank otherwise (although in some control agreements, the funds would be blocked from the time of the conclusion of the control agreement). This covers situations where: (a) an existing account is

transferred to the secured creditor, (b) the secured creditor agrees with the grantor that funds should be deposited to an account to be opened later, and (c) the secured creditor is the only account holder (i.e. not merely a joint account holder);

(jj) “Intellectual property right” includes patents, trademarks, service marks, trade secrets, copyright and related rights and designs. It also includes rights of a licensee under licences of such rights;

(kk) “Proceeds” means whatever is received in respect of encumbered assets, including what is received as a result of sale or other disposition or collection, lease or licence of an encumbered asset, proceeds of proceeds, civil and natural fruits, dividends, distributions, insurance proceeds and claims arising from defects, damage to or loss of an encumbered asset;

(ll) “Priority” means the right of a person to derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant;

(mm) “Competing claimant” means:

(i) Another secured creditor with a security right in the same encumbered asset (whether as an original encumbered asset or proceeds);

(ii) In the context of the non-unitary system for acquisition security rights, the seller, financial lessor or purchase-money lender of the same encumbered asset that has retained title to it;

(iii) Another creditor of the grantor that has a right in the same encumbered asset (e.g. by operation of law, attachment or seizure or similar process);

(iv) The insolvency representative in the insolvency of the grantor;⁶ or

(v) Any buyer or other transferee (including a lessee or licensee) of the encumbered asset;

(nn) “Possessory security right” means a security right in tangible property that is in the possession of the secured creditor;

(oo) “Non-possessory security right” means a security right in tangible property that is not in the possession of the secured creditor;

[Note to the Working Group: See note after definition (nn) in document A/CN.9/WG.VI/ WP.29.]

(pp) “Possession”, except as the term is used in recommendations 27 and 48 to 50 with respect to the issuer of a negotiable document, means the actual possession of tangible property by a person or an agent or employee of that person, or by an independent person that acknowledges that it holds for that person. It does not include constructive, fictive, deemed or symbolic possession;

(qq) “Issuer” of a negotiable document means the person who is obligated to deliver the tangible property covered by the document under the law governing negotiable documents.

In the case of a so-called multimodal bill of lading (if it qualifies as a negotiable document under the applicable law), the “issuer” may be a person who

⁶ In the chapter on insolvency, reference is made to “the insolvency of the debtor” for reasons of consistency with the terminology used in the UNCITRAL *Legislative Guide on Insolvency Law* (see footnote 55 of document A/CN.9/WG.VI/ WP.29, chapter XI on insolvency).

subcontracts various portions of the transport of the goods to other persons but still takes responsibility for their transport and for any damage that might occur during carriage;

(rr) “Insolvency court” means a judicial or other authority competent to control or supervise an insolvency proceeding;

(ss) “Insolvency estate” means assets and rights of the debtor that are controlled or supervised by the insolvency representative and subject to the insolvency proceedings;

(tt) “Insolvency proceedings” means collective judicial or administrative proceedings for the purposes of either reorganization or liquidation of the debtor’s business conducted according to the insolvency law;

(uu) “Insolvency representative” means a person or body responsible for administering the insolvency estate;

(vv) “Buyer in the ordinary course of business” means a person that buys inventory in the ordinary course of the seller’s business from a seller in the business of selling tangible property of that kind and without knowledge that the sale violates the rights of the secured creditor under the security agreement [or other rights of another person in the property];

(ww) “Lessee in the ordinary course of business” means a person that leases inventory in the lessor’s ordinary course from a lessor in the business of leasing tangible property of that kind and without knowledge that the lease violates the rights of the secured creditor under the security agreement [or other rights of another person in the property];

(xx) “Licensee in the ordinary course of business” means a person that licenses intangible property in the licensor’s ordinary course from a licensor in the business of licensing property of that kind and without knowledge that the licence violates the rights of the secured creditor under the security agreement [or other rights of another person in the property].

The terms “buyer in the ordinary course of business”, “lessee in the ordinary course of business” and “licensee in the ordinary course of business” are referred to in recommendation 83 dealing with the rights of buyers, lessees and licensees of encumbered assets (see A/CN.9/WG.VI/WP.29, chap. VII). It is possible for a buyer, lessee or licensee to know of the existence of a security right but not know whether the transfer violates the terms of the security agreement. In the rare cases in which the buyer of inventory has knowledge not only of the security right but also that the sale violates the terms of the security agreement, the buyer will not qualify as a buyer in the ordinary course of business and, therefore, not take free under recommendation 83, subparagraph (a). The test in recommendation 83 is the same as in recommendations 94 (priority of a security right in a right to payment of funds credited to a bank account) and 95 (priority of a security right in money);

(yy) “Consumer goods” means goods that the grantor uses or intends to use for personal, family or household purposes.

I. Key objectives of an effective and efficient secured transactions regime

20. In the spirit of providing practical, effective solutions, the Guide explores and develops the following key objectives and themes of an effective and efficient secured transactions regime. These objectives are designed to provide a broad policy framework for the establishment and development of such a regime.

A. Promoting secured credit

21. The primary overall objective of the Guide is to promote low-cost secured credit for persons in jurisdictions that adopt legislation based on the Guide's recommendations, thereby enabling such persons and the economy as a whole to obtain the economic benefits that flow from access to such credit (see para. 2 above).

B. Allowing utilization of the full value inherent in a broad range of assets to support credit in the widest possible array of credit transactions

22. A key to a successful legal regime governing secured transactions is to enable a broad array of businesses to utilize the full value inherent in their assets to obtain credit in a broad array of credit transactions. In order to achieve this objective, the Guide emphasizes the importance of comprehensiveness, by: (a) permitting a broad range of assets (including present and future assets) to serve as encumbered assets; (b) permitting the widest possible array of obligations (including future and conditional and monetary and non-monetary obligations) to be secured by security rights in encumbered assets; and (c) extending the benefits of the regime to the widest possible array of debtors, creditors and credit transactions.

C. Enabling parties to obtain security rights in a simple and efficient manner

23. The cost of credit will be reduced if security rights can be obtained in an efficient manner. For this reason, the Guide suggests methods for streamlining the procedures for obtaining security rights and otherwise reducing transaction costs. These methods include eliminating unnecessary formalities; providing for a single method for creating security rights rather than a multiplicity of security devices for different kinds of encumbered assets; and permitting security rights in future assets and for future advances of credit without any additional documentation or actions by the parties.

D. Providing for equal treatment of diverse sources of credit

24. Because healthy competition among all potential creditors is an effective way of reducing the cost of credit, the Guide recommends that the secured transactions

regime apply equally to various creditors, including banks and other financial institutions, as well as domestic and non-domestic creditors.

E. Validating non-possessory security rights

25. Because the granting of a security right should not make it difficult or impossible for the debtor or other grantor to continue to operate its business, the Guide recommends that the legal regime provide for non-possessory security rights in a broad range of assets coupled with a mechanism in the form of a public registry system for publicizing the existence of such security rights.

F. Encouraging responsible behaviour on the part of all parties by enhancing predictability and transparency

26. Because an effective secured transactions regime should also encourage responsible behaviour by all parties to a credit transaction, the Guide seeks to promote predictability and transparency to enable the parties to assess all relevant legal issues and to establish appropriate consequences for non-compliance with applicable rules, while at the same time respecting and addressing confidentiality concerns.

G. Establishing clear and predictable priority rules

27. A security right will have little or no value to a creditor unless the creditor is able to ascertain, at the time a transaction takes place, its priority in the property relative to other creditors (including an insolvency representative). Thus, the Guide proposes the establishment of a system for registering public notices with respect to security rights and, based on that system, clear rules that allow creditors to determine the priority of their security rights at the outset of the transaction in a reliable, timely and cost-efficient manner.

H. Facilitating enforcement of creditors' rights in a predictable and efficient manner

28. A security right will also have little or no value to a creditor unless the creditor is able to enforce the security right in a predictable and efficient manner. Thus, the Guide proposes procedures that allow creditors to so enforce their security rights, subject to judicial or other official control, supervision or review when appropriate. The Guide also recommends that there be a close coordination between a State's secured transactions laws and its insolvency laws with a view to respecting the pre-insolvency effectiveness and priority, as well as the economic value, of a security right subject to the appropriate rules of insolvency law.

I. Balancing the interests of affected persons

29. Because secured transactions affect the interests of various persons, including the debtor, other grantors, competing creditors, such as secured, privileged and

unsecured creditors, purchasers and other transferees, and the State, the Guide proposes rules that take into account their legitimate interests and seek to achieve, in a balanced way, all the objectives mentioned above.

J. Recognition of party autonomy

30. Because an effective secured transactions regime should provide maximum flexibility and durability to encompass a broad array of credit transactions, and also accommodate new and evolving forms of credit transactions, the Guide stresses the need to keep mandatory rules to a minimum so that parties may tailor their credit transactions to their specific needs. At the same time, the Guide takes into account that other legislation may protect the legitimate interests of consumers or other persons and specifies that a secured transactions regime should not override such legislation.

K. Harmonization of secured transactions laws, including conflict-of-laws rules

31. Adoption of legislation based on the recommendations contained in the Guide will result in harmonization of secured transactions laws (through the adoption of similar substantive laws which will facilitate the cross-border recognition of security rights). This result in itself will promote the financing of international trade and the movement of goods and services across national borders. Furthermore, to the extent complete harmonization of national secured transactions laws might not be achieved, conflict rules would be particularly useful to facilitate cross-border transactions. In any event, conflict-of-laws rules would be useful in order, for example, to help secured creditors determine how to make their security rights effective against third parties.

Recommendation 1 [Note to the Working Group: The Working Group may wish to note that the recommendations will be set out immediately after the relevant commentary. Accordingly, recommendation 1 will be inserted here in the final version of the Guide.]

II. Scope of the Legislative Guide

32. The regime envisioned by the Guide is intended to be a single, comprehensive regime for secured transactions, affecting the widest possible array of assets, parties, secured obligations, security rights and financing practices.

A. Assets covered

33. The primary focus of the Guide is on core commercial assets, such as commercial goods (inventory and equipment) and trade receivables. However, the Guide proposes that all types of assets are capable of being the object of a security right, including all present and future assets of a business, and covers all assets, both tangible and intangible, with the exception of assets specifically excluded.

34. The Guide covers all types of movable property and attachment, tangible or intangible, present or future, including inventory, equipment and other goods,

contractual and non-contractual receivables, contractual non-monetary obligations, negotiable instruments, negotiable documents, rights to payment of funds credited to a bank account, proceeds under an independent undertaking, and intellectual property rights. With respect to receivables, the general recommendations, as supplemented by the recommendations on receivables apply both to: (a) contractual and non-contractual receivables, except that recommendations 22 (effectiveness of a bulk assignment and an assignment of future, parts of, and undivided interests in receivables) and 109 (representations of the assignor) do not apply to non-contractual receivables; and (b) contractual non-monetary obligations. Law other than the law recommended in the Guide applies to the rights of obligors of contractual non-monetary obligations.

35. Some assets, such as aircraft, railway rolling stock, space objects, ships and intellectual property rights are in whole or in part subject to special laws. Security rights in such assets are covered by the Guide but, in the case of any inconsistency between such a special law and secured transactions law, the special law (e.g. the special registration system) prevails to the extent of the inconsistency. Where a direct inconsistency exists, the law should expressly confirm that the special laws and international obligations govern those assets to the extent of that inconsistency. The reference to aircraft, railway rolling stock, space objects, ships and intellectual property rights should be understood pursuant to the meaning of those terms in national law or international conventions dealing with them.

36. In developing its secured transactions law, a State should take account of the increasing importance and economic value of intellectual property assets to companies seeking to obtain low-cost secured credit.

37. A State enacting secured transactions legislation in accordance with the Guide should consider whether it might be appropriate to adjust certain of those recommendations as they apply to intellectual property rights. In this regard, a State should examine its existing intellectual property laws and the State's obligations under international conventions and, if the recommendations of the Guide are inconsistent with any such laws or conventions, the State's secured transactions law should confirm that those existing laws and conventions govern such issues to the extent of the inconsistency. In considering whether any adjustments of the recommendations as they apply to security rights in intellectual property are appropriate, a State should analyse each circumstance on an issue-by-issue basis and should have proper regard both to establishing an efficient secured transactions regime and to ensuring the protection and exercise of intellectual property rights in accordance with international conventions and national laws.

38. The Guide stresses the need to enable a grantor to create security rights not only in its existing assets but also in its future assets (i.e. assets acquired or created after the conclusion of the security agreement), without requiring the grantor or secured creditor to execute any additional documents or to take any additional action at the time such assets are acquired or created. This approach is consistent, for example, with the United Nations Assignment Convention, which provides for the creation of security rights in future receivables without requiring any additional steps to be taken. In addition, the Guide recommends recognition of a security right in all existing and future assets of a business grantor through a single security agreement, a concept that already exists in some legal systems as an "enterprise mortgage" or as a combination of fixed and floating charges.

B. Assets excluded

39. Immovable property, securities and employment payments are types of asset that are subject to an outright exclusion from the Guide.

40. Immovable property (with the exception of attachments, which are covered by the Guide and can be subjected to security rights) is excluded as it raises different issues and is subject to a special title registration system indexed by asset and not by grantor.

41. In addition, the Guide does not cover security rights in securities because the nature of securities and their importance for the functioning of financial markets raise a broad range of issues that merit special legislative treatment. The substantive law issues relating to security and other rights in securities held with an intermediary are dealt with in a draft convention being prepared by the International Institute for the Unification of Private Law (Unidroit).

42. The private international law issues with respect to that subject matter are not addressed in the Guide since they are dealt with in the Hague Convention on the Law Applicable to Certain Rights in Respect of Securities (The Hague, December 2002).

43. The Guide is structured in such a way that the State enacting legislation based on the regime envisaged in the Guide can, at the same time, implement the texts prepared by Unidroit and the Hague Conference, as well as relevant texts prepared by UNCITRAL, such as the United Nations Convention on the Assignment of Receivables in International Trade (New York, December 2001; hereinafter referred to as “the United Nations Assignment Convention”) and the UNCITRAL *Legislative Guide on Insolvency Law*.

44. Although immovable property and securities are excluded from the scope of the Guide as original encumbered assets, they may be affected by the Guide’s recommendations. If a security right in a mortgage or securities secures a receivable, negotiable instrument or other obligation and the receivable, negotiable instrument or other obligation is assigned, the security right in the securities or the mortgage follows. This rule does not affect any third-party rights, priority and enforcement requirements existing under immovable property law or securities law. For example, the priority of a security right in intermediated securities will be determined under securities law (see A/CN.9/WG.VI/WP.29, chap. IV, recommendation 24, and chap. V, recommendation 45).

[Note to the Working Group: The Working Group may wish to note that whether directly held securities and whether immovable property or securities as proceeds are to be covered remain open questions (see A/CN.9/WG.VI/WP.29, chap. II, note to recommendation 5).]

45. Security rights in employment payments are excluded based on the policy of protecting individual and family life. Any additional exclusions based on competing policy objectives should be limited in number and in scope, should be clearly stated in the law and should be adopted only after their potential benefit has been carefully weighed against the social and economic policy of promoting the availability of low-cost credit which underlies the secured transactions law envisaged in the Guide.

C. Parties covered

46. Any person, physical or legal, may be a debtor, grantor or secured creditor under the Guide. The Guide may also apply to consumers as there is no reason why consumers should be deprived of the benefits of the regime envisaged in the Guide. However, to the extent a rule of the regime envisaged in the Guide conflicts with consumer-protection law, consumer-protection law would prevail. States that do not have a body of law for the protection of consumers may wish to consider whether the enactment of a law based on the recommendations of the Guide would affect the rights of consumers and would thus require the introduction of consumer-protection legislation.

D. Obligations covered

47. The Guide also recommends that a broad range of obligations, monetary and non-monetary, may be secured and that both physical and legal persons may be parties to a secured transaction, including consumers, subject to consumer-protection laws. In addition, the Guide is intended to cover a broad range of transactions that serve security functions, including those related to possessory and non-possessory security rights, as well as transactions not denominated as secured transactions (such as retention of title, transfer of title for security purposes, assignment of receivables for security purposes, financial leases, and sale and leaseback transactions and the like).

E. Rights covered

48. The Guide deals with consensual security rights. However, it contains references to non-consensual rights, such as those provided by statute or judicial process, when the same property is subject to both consensual and non-consensual security rights and the law must provide for the relative priority of such rights (see A/CN.9/WG.VI/WP.29, chap. VII, recommendations 85-88).

49. To ensure a comprehensive coverage of all devices that serve security functions, the Guide also deals with rights that, while they are not denominated as security rights, nevertheless serve security purposes (see A/CN.9/WG.VI/WP.29, chap. XII, recommendations 182-194).

50. The Guide also deals with rights that are not security rights (i.e. outright sales of receivables) where it is necessary to avoid characterization issues and to ensure that the registry system and the priority rules of the Guide apply to all such rights.

F. Examples of financing practices covered in the Legislative Guide

51. Set forth below are short examples of the types of secured credit transactions that the Guide is designed to encourage and to which reference will be made throughout the Guide to illustrate specific points. These examples represent only a few of the numerous forms of secured credit transactions currently in use and an effective secured transactions regime must be sufficiently flexible to accommodate many existing methods of financing, as well as methods that may evolve in the future.

1. Inventory and equipment acquisition financing

52. Businesses often obtain financing for specific purchases of inventory or equipment. In many cases, the financing is provided by the seller of the tangible property (inventory and equipment) purchased. In other cases, the financing is provided by a lender. Sometimes the lender is an independent third party, but in other cases the lender may be an affiliate of the seller. The seller retains title or the lender is granted a security right in the tangible property purchased to secure the repayment of the credit or loan.

53. Here is an illustration of acquisition financing: ABC Manufacturing Company (ABC), a manufacturer of furniture, wishes to acquire certain inventory and equipment for use in manufacturing operations. ABC desires to purchase paint (constituting raw materials and, therefore, inventory) from Vendor A. ABC also wishes to purchase certain drill presses (constituting equipment) from Vendor B and certain conveyor equipment from Vendor C. Finally, ABC wishes to lease certain computer equipment from Lessor A.

54. Under the purchase agreement with Vendor A, ABC is required to pay the purchase price for the paint within 30 days of Vendor A's invoice to ABC, and ABC grants to Vendor A a security right in the paint to secure the purchase price. Under the purchase agreement with Vendor B, ABC is required to pay the purchase price for the drill presses within 10 days after they are delivered to ABC's plant. ABC obtains a loan from Lender A to finance the purchase of the drill presses from Vendor B, secured by a security right in the drill presses. ABC also maintains a bank account with Lender A and has granted Lender A a security right in the bank account as additional security for the repayment of the loan.

55. Under the purchase agreement with Vendor C, ABC is required to pay the purchase price for the conveyor equipment when it is installed in ABC's plant and rendered operational. ABC obtains a loan from Lender B to finance the purchase and installation of the conveyor equipment from Vendor C, secured by a security right in the conveyor equipment.

56. Under the lease agreement with Lessor A, ABC leases the computer equipment from Lessor A for a period of two years. ABC is required to make monthly lease payments during the lease term. ABC has the option (but not the obligation) to purchase the equipment for a nominal purchase price at the end of the lease term. Lessor A retains title to the equipment during the lease term but title will be transferred to ABC at the end of the lease term if ABC exercises the purchase option. This type of lease is often referred to as a "financial lease". Under some forms of financial lease, title to the leased property is transferred to the lessee automatically at the end of the lease term. A financial lease is to be distinguished from what is usually called an "operating lease". Under an operating lease, the leased property is expected to have a remaining useful life at the end of the lease term and the lessee does not have an option to purchase the leased property at the end of the lease term for a nominal price, nor is title to the leased property transferred to the lessee automatically at the end of the lease term.

57. In each of the above four cases, the acquisitions are made possible by means of acquisition financing provided by another person (seller, lender or financial lessor) who holds rights in the acquired property for the purpose of securing the acquisition financing granted. As the illustrations make clear, acquisition financing can occur with respect to both inventory and equipment.

2. Inventory and receivable revolving loan financing

58. Businesses generally have to expend capital before they are able to generate and collect revenues. For example, before a typical manufacturer can generate receivables and collect payments, the manufacturer must expend capital to purchase raw materials, to convert the raw materials into finished goods and to sell the finished goods. Depending on the type of business, this process may take up to several months. Access to working capital is critical to bridge the period between cash expenditures and revenue collections.

59. One highly effective method of providing such working capital is a revolving loan facility. Under this type of credit facility, loans secured by the borrower's existing and future inventory and receivables are made from time to time at the request of the borrower to fund the borrower's working capital needs. The borrower typically requests loans when it needs to purchase and manufacture inventory, and repays the loans when the inventory is sold and the sales price is collected. Thus, borrowings and repayments are frequent (though not necessarily regular) and the amount of the credit is constantly fluctuating. Because the revolving loan structure matches borrowings to the borrower's cash conversion cycle (that is, acquiring inventory, processing inventory, selling inventory, creating receivables, receiving payment and acquiring more inventory to begin the cycle again), this structure is, from an economic standpoint, highly efficient and beneficial to the borrower, and helps the borrower to avoid borrowing more than it actually needs.

60. Here is an illustration of this type of financing: It typically takes four months for ABC to manufacture, sell and collect the sales price for its products. Lender B agrees to provide a revolving loan facility to ABC to finance this process. Under the loan facility, ABC may obtain loans from time to time in an aggregate amount of up to 50 per cent of the value of its inventory that Lender B deems to be acceptable for borrowing (based upon the type and quality of the inventory, as well as other criteria) and of up to 80 per cent of the value of its receivables that Lender B deems to be acceptable for borrowing (based upon criteria such as the creditworthiness of the account debtors). ABC is expected to repay these loans from time to time as it receives payments from its customers. The loan facility is secured by all of ABC's existing and future inventory and receivables. In this type of financing, it is also common for the lender to obtain a security right in the bank account into which customer payments (i.e. the proceeds of inventory and receivables) are deposited.

3. Factoring

61. Factoring is a highly effective form of receivables financing that can trace its roots back thousands of years. In general, factoring involves the outright purchase of receivables from the grantor, as seller (assignor) to the factor (assignee). Such an outright transfer of receivables falls within the definition of a security right for purposes of the Guide (see definition (a) "security right" above).

62. There are a number of different types of factoring arrangement. The factor may pay a portion of the purchase price for the receivables at the time of the purchase ("discount factoring"), only when the receivables are collected ("collection factoring"), or on the average maturity date of all of the factored receivables ("maturity factoring"). The assignment of the receivables can be with or without recourse to the assignor in the event of non-payment of the receivables by the debtors of the receivables (i.e. the customers of the assignor). Finally, the debtors of the receivables may be notified that their receivables have been factored

(“notification factoring”), or they may not be so notified (“non-notification factoring”). When notice is given to the customers, it is often accomplished by requiring the assignor to place a legend on the invoices that the assignor sends to its customers. The factor may also perform various services for the assignor in respect of the receivables, ranging from approving and evaluating the creditworthiness of the debtors of the receivables, performing bookkeeping duties and engaging in collection efforts with respect to receivables that are not paid when due. These services can provide a useful benefit to companies that do not have their own credit and collection departments.

63. Here is an illustration of a typical factoring arrangement: ABC enters into a discount factoring arrangement with Factor, pursuant to which Factor agrees to purchase receivables that Factor deems to be creditworthy. Factor advances to ABC an amount equal to 90 per cent of the face value of such receivables, holding the remaining 10 per cent as a reserve to cover potential customer claims and allowances that would reduce the value of the receivables. The factoring arrangement is with notification to ABC’s customers.

4. Securitization

64. Another highly effective form of financing involving the use of receivables is securitization. Securitization is a sophisticated form of financing under which a business enterprise can obtain less-expensive financing based on the value of its receivables by transferring them to a wholly owned “special purpose vehicle” (“SPV”) that will issue commercial paper or other securities in the capital markets secured by the stream of income generated by such receivables. For example, this technique is commonly used in situations where a company’s receivables consist of credit card receivables, rents or home mortgages, although the securitization of many other types of receivables is also possible. Securitization transactions are complex financing transactions that are also dependent upon a jurisdiction’s securities laws as well as its secured lending laws.

65. Securitization is intended to lower the cost of financing because the SPV is structured in a way to make the risk of its insolvency “remote” (e.g. theoretically not possible) by restricting the amount of debt that the SPV can incur. That significantly reduces one risk that the lender has to take into account when deciding what interest rate to charge for the loan. In addition, because the source of credit is the capital markets rather than the banking system, securitization can generate greater amounts of credit than bank loans and at lower costs than the normal bank loan costs.

66. Here is an illustration of a securitization transaction: An SPV is created by a subsidiary of an automobile manufacturer to purchase automobile leases from automobile dealers throughout a geographically defined market. The automobile leases are purchased from the dealers for a discount from the projected value of the payment streams expected to be generated by such leases. The SPV then issues debt securities, under applicable securities laws, to investors in the capital market secured by such income stream. As payments are made under the leases, the SPV will use such proceeds to make payments on the debt securities.

5. Term-loan financing

67. Businesses often need financing for large, non-ordinary-course expenditures, such as the acquisition of significant equipment or the acquisition of a business.

In these situations, businesses generally seek loans that are repayable over a fixed period of time (with principal being repaid in monthly, quarterly or other periodic instalments pursuant to an agreed-upon schedule or in a single payment at the end of the loan term).

68. As is the case with many other types of financing, a business that does not have strong, well-established credit ratings will have difficulty obtaining term-loan financing, unless the business is able to grant security rights in its assets to secure the financing. The amount of the financing will be based in part on the creditor's estimate of the net realizable value of the assets to be encumbered. In many States, immovable property is the only type of asset that typically is accepted by lenders to secure term-loan financing and, as a result, in such States term-loan financing is often not available for other important asset types, such as equipment or the enterprise value of an entire business. This is most likely the case in States that do not have a modern secured transactions regime. However, many businesses, in particular newly established businesses, do not own any immovable property and, therefore, may not have access to term-loan financing. In other States, term loans secured by movable property, such as equipment, intellectual property and the enterprise value of the business, are common.

69. Here is an illustration of this type of financing: ABC desires to expand its operations and purchase a business. ABC obtains a loan (predicated on the value of, and secured by, substantially all of the assets of the business being acquired) from Lender C to finance such acquisition. The loan is repayable in equal monthly instalments over a period of 10 years and is secured by existing and future assets of ABC and the entity being acquired.

6. Transfer of title for security purposes

70. In States that honour a form of transfer of ownership even when it does not entail a transfer of possession and is done for financing purposes, a transaction denominated as a transfer of title by way of security (or sometimes as a "fiduciary" transfer of title) is recognized. These transactions are essentially non-possessory security rights, and they are primarily used in States where the secured transactions law has not yet appropriately recognized non-possessory security rights.

7. Sale and leaseback transactions

71. A sale and leaseback transaction provides a method by which a company can obtain credit based upon its existing tangible property (usually equipment) while still retaining possession and the right to use the tangible property in the operation of its business. In a sale and leaseback transaction, the company will sell its assets to another person for a specific sum (which the company may then use as working capital, to make capital expenditures or for other purposes). Simultaneously with the sale, the company will lease the equipment back from that other person for a lease term and at a rental rate specified in the lease agreement. Often, the lease is a "financial lease" as opposed to an "operating lease" (see para. 27 above for a definition of both terms).

Recommendations 2-7 [Note to the Working Group: The Working Group may wish to note that recommendations 2-7 will be inserted here in the final version of the Guide.]

E. Note by the Secretariat on recommendations of the UNCITRAL draft Legislative Guide on Secured Transactions, submitted to the Working Group on Security Interests at its twelfth session

[Note to the Commission: The Commission may wish to note that all the recommendations of the draft guide on secured transactions have been included in the present document (which is a revised version of document A/CN.9/WG.VI/WP.29) so as to assist the Commission in its consideration of the recommendations. Commentaries are included in addenda to this document. Once the Commission adopts the draft guide as a whole, the recommendations will be placed at the end of each chapter. The terminology of the draft guide, which was included in document A/CN.9/WG.VI/WP.29, will be included in part B of the introduction to the draft guide. As the term “secured transactions” may not be readily understood as referring to proprietary (as opposed to personal) security rights in movable property (as opposed to immovable property), the Commission may wish to include in the terminology a definition of the term “secured transactions” or name the draft guide the “UNCITRAL Legislative Guide on Proprietary Security Rights in Movable Property”.]

I. Key objectives of an effective and efficient secured transactions law

Purpose

The purpose of the recommendation on key objectives is to provide a broad policy framework for the establishment and development of an effective and efficient secured transactions law. This recommendation could be included in a preamble to the secured transactions law as a guide to the underlying legislative policies to be taken into account in the interpretation and the application of the secured transactions law (hereinafter referred to as “the law” or “this law”).

Key objectives

1. The law should be designed:
 - (a) To promote secured credit;
 - (b) To allow utilization of the full value inherent in a broad range of assets to support credit in the widest possible array of secured transactions;
 - (c) To enable parties to obtain security rights in a simple and efficient manner;
 - (d) To provide for equal treatment of diverse sources of credit and of diverse forms of secured transactions;
 - (e) To validate security rights in assets that remain in the possession of the grantor;
 - (f) To enhance predictability and transparency with respect to rights serving security purposes by providing for registration of a notice in a general security rights registry;
 - (g) To establish clear and predictable priority rules;
 - (h) To facilitate enforcement of creditor's rights in a predictable and efficient manner;
 - (i) To balance the interests of affected persons;
 - (j) To recognize party autonomy; and
 - (k) To harmonize secured transactions laws, including private international law rules.

II. Scope of application and other general rules**Purpose**

The purpose of the scope provisions of the law is to establish a single comprehensive regime for secured transactions. They specify the assets, the parties, the obligations and the security rights and other rights to which the law applies.

Assets, parties, obligations and security and other rights

2. Subject to recommendations 3-7, the law should apply to:
 - (a) All types of movable property and attachment, tangible or intangible, present or future, including inventory, equipment and other goods, contractual and non-contractual receivables, contractual non-monetary claims, negotiable instruments, negotiable documents, rights to payment of funds credited to a bank account, proceeds under an independent undertaking, and intellectual property;
 - (b) All legal and natural persons, including consumers, without, however, affecting their rights under consumer-protection legislation;
 - (c) All types of obligation, present or future, determined or determinable, including fluctuating obligations and obligations described in a generic way;
 - (d) All types of security right in movable property;
 - (e) All types of property right created contractually to secure the payment or other performance of an obligation, irrespective of the form of the relevant

transaction, including transfers of title to tangible property or assignments of receivables for security purposes, the various forms of retention-of-title sales, financial leases and hire-purchase agreements.

Outright transfers of receivables

3. The law should apply to outright transfers of receivables as provided in recommendation 162.

Aircraft, railway rolling stock, space objects, ships, intellectual property and securities

4. Notwithstanding recommendation 2, subparagraph (a), the law should not apply to:

(a) Aircraft, railway rolling stock, space objects, ships as well as other categories of mobile equipment, in so far as such property is covered by a national law or an international agreement to which the State enacting legislation based on these recommendations (hereinafter referred to as “the State” or “this State”) is a party and the matters covered by this law are addressed in that national law or international agreement;

(b) Intellectual property in so far as the provisions of this law are inconsistent with national law or international agreements, to which the State is a party, relating to intellectual property [and the matters covered by this law are addressed in that national law or international agreement]; and

[Note to the Commission: The Commission may wish to consider whether the bracketed text should be retained. It has been added to conform subparagraph (b) to subparagraph (a) and to ensure that no gap would be left if this law would not apply.]

(c) [Intermediated] securities [as defined in the International Institute for the Unification of Private Law (UNIDROIT) preliminary draft convention on substantive rules regarding intermediated securities, and securities traded on a regulated exchange].

[Note to the Commission: The Commission may wish to consider whether all securities should be excluded from the scope of the guide or just intermediated securities as defined in the UNIDROIT preliminary draft convention on substantive rules regarding intermediated securities (as adopted by the Committee of Governmental Experts at its third session, held in Rome, 6-15 November 2006).]

Under this UNIDROIT draft convention, the term “securities” “means any shares, bonds or other financial instruments or financial assets (other than cash), which are capable of being credited to a securities account and of being acquired and disposed of in accordance with the provisions of this Convention”. Under the same draft convention the term “intermediated securities” “means securities credited to a securities account or rights or interests in securities resulting from the credit of securities to a securities account”.

If the Commission were to exclude all securities, no guidance would be given to States with respect to security rights in securities other than intermediated securities. In particular, no guidance would be given with respect to important financing practices in which privately held securities that are not traded in any capital market and are not intermediated securities are used as security for credit.

If the Commission were to decide to exclude only intermediated securities, it may wish to consider appropriate adjustments to certain recommendations of the draft guide in order for the draft guide to apply to such securities.]

Immovable property

5. The law should provide that, although it may affect immovable property, as provided in recommendations 26 and 49, it does not apply to immovable property.

Proceeds of excluded types of asset

6. The law should provide that law other than this law determines whether a security right in excluded types of property (e.g. immovable property) confers a security right in types of proceeds to which the law applies (e.g. receivables). If, under that other law, there is a security right in types of proceeds to which the law applies, the law applies to that security right except to the extent that that other law applies to [the third-party effectiveness, priority or enforcement of that security right] [that security right].

Other exceptions

7. The law should limit any other exceptions to its scope of application and, to the extent any other exceptions are made, they should be set out in the law in a clear and specific way.

Party autonomy

8. The law should provide that, except as otherwise provided in recommendations 14, 109, 129-132, 202-211 and 213-222, the secured creditor and the grantor or the debtor may derogate from or vary by agreement its provisions relating to their respective rights and obligations. Such an agreement does not affect the rights of any person that is not a party to the agreement.

Electronic communications

9. The law should provide that, where it requires that a communication or a contract should be in writing, or provides consequences for the absence of a writing, that requirement is met by an electronic communication if the information contained therein is accessible so as to be usable for subsequent reference.

10. The law should provide that, where the law requires that a communication or a contract should be signed by a person, or provides consequences for the absence of a signature, that requirement is met in relation to an electronic communication if:

(a) A method is used to identify the party and to indicate that person's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

[Note to the Commission: The Commission may wish to note that recommendations 9 and 10 are based on article 9, paragraphs 2 and 3, of the United Nations Convention on the Use of Electronic Communications in International Contracts.]

III. Basic approaches to security

Purpose

The purpose of the recommendations on basic approaches to security is to ensure that the law covers in an integrated and consistent manner all forms of rights in movable property that serve security purposes.

Integrated and functional approach

11. The law should establish an integrated and consistent set of provisions on security rights in tangible and intangible property. Its provisions should apply to all contractually created rights (regardless of form) in movable property that secure an obligation, including rights under a transfer of title to tangible property or an assignment of receivables for security purposes, the various forms of a retention-of-title sale, a financial lease or a hire-purchase agreement. [The provisions of the law apply to security rights that are extended in proceeds by operation of this law. The priority provisions of the law apply to rights arising by operation of law (e.g. preferential claims) or from a court judgement.]

[Note to the Commission: The Commission may wish to consider whether the text in square brackets should be retained. It is intended to clarify that the law may have an impact on rights that are not created contractually.]

IV. Creation of a security right (effectiveness as between the parties)

Purpose

The purpose of the provisions of the law dealing with creation is to specify the way in which a security right in movable property is created (i.e. becomes effective as between the parties).

A. General recommendations

Creation of a security right

12. The law should provide that a security right in movable property is created by an agreement concluded between the grantor and the secured creditor. In the case of property with respect to which the grantor has rights or the power to encumber at the time of the conclusion of the agreement, the security right in that property is created at that time. In the case of property with respect to which the grantor acquires rights or the power to encumber thereafter, the security right in that asset is created when the grantor acquires rights in the property or the power to encumber the property.

Essential elements of a security agreement

13. The law should provide that, for a security agreement to be effective, it must reflect the intent of the parties to create a security right, identify the secured creditor and the grantor, and describe the secured obligation and the encumbered assets. A generic description of the encumbered assets is sufficient (e.g. “all present and future assets” or “all present and future inventory”).

Form of the security agreement

14. The law should provide that a security agreement may be oral if accompanied by transfer of possession of the encumbered asset. Otherwise, the agreement must be concluded in or evidenced by a writing that in conjunction with the course of conduct between the parties indicates the grantor’s intent to create a security right.

Obligations subject to a security agreement

15. The law should provide that a security right may secure any type of obligation, present or future, determined or determinable, as well as conditional and fluctuating obligations.

Assets subject to a security agreement

16. The law should provide that a security agreement may cover any type of asset, including parts of assets and undivided interests in assets. A security agreement may cover assets that, at the time the security agreement is concluded, may not yet exist or that the grantor may not yet own or have the power to encumber. It may also cover all assets of a grantor. Any exceptions to these rules should be limited and described in the law in a clear and specific way.

17. The law should provide that, except as provided in recommendations 24-26, it does not override provisions of any other law to the extent that they limit the creation or enforcement of a security right in, or the transferability of, specific types of asset.

Creation of a security right in proceeds

18. The law should provide that, unless otherwise agreed by the parties to the security agreement, the security right in the encumbered asset extends to its identifiable proceeds.

Commingled proceeds

19. The law should provide that, where proceeds in the form of money or funds credited to a bank account have been commingled with other property of the same kind so that the proceeds are no longer identifiable, the amount of the proceeds immediately before they were commingled is to be treated as identifiable proceeds after commingling. However, if, at any time after commingling, the total amount of the property is less than the amount of the proceeds, the total amount of the property at the time that its amount is lowest plus the amount of any proceeds later commingled with the property is to be treated as identifiable proceeds.

20. The law should provide that, where proceeds other than money or funds credited to a bank account have been commingled with other property of the same kind so that the proceeds are not identifiable, the share of the total property that the

value of the proceeds bears to the total value of the property, is to be treated as identifiable proceeds.

Tangible property commingled in a mass or product

21. The law should provide that recommendations 19 and 20 apply also to items of tangible property commingled in a mass or product.

Creation of a security right in an attachment

22. The law should provide that a security right may be created in tangible property that is an attachment at the time of creation of the security right or continues in tangible property that becomes an attachment subsequently. A security right in an attachment to immovable property may be created under this law or under the law governing immovable property.

Creation of a security right in a mass or product

23. The law should provide that a security right may not be created in items of tangible property that are commingled in a mass or product. However, a security right created in items of tangible property before they are commingled in a mass or product continues in the mass or product. The security right that continues in the mass or product is limited to the value of the items immediately before they become part of the mass or product.

B. Asset-specific recommendations

[Note to the Commission: The Commission may wish to note that recommendations 24-26 are based on articles 8-10 of the United Nations Convention on the Assignment of Receivables in International Trade (hereinafter referred to as "the United Nations Assignment Convention").]

Effectiveness of a bulk assignment of receivables and an assignment of future, parts of and undivided interests in receivables

24. The law should provide that:

(a) An assignment of contractual receivables that are not specifically identified, future receivables and parts of or undivided interests in receivables is effective as between the assignor and the assignee and as against the debtor of the receivable, as long as, at the time of the assignment or, in the case of future receivables, at the time they arise, they can be identified to the assignment to which they relate; and

(b) Unless otherwise agreed, an assignment of one or more future receivables is effective without a new act of transfer being required to assign each receivable.

Effectiveness of an assignment of receivables made despite an anti-assignment clause

25. The law should provide that:

(a) An assignment of a receivable is effective as between the assignor and the assignee and as against the debtor of the receivable notwithstanding an

agreement between the initial or any subsequent assignor and the debtor of the receivable or any subsequent assignee limiting in any way the assignor's right to assign its receivables;

(b) Nothing in this recommendation affects any obligation or liability of the assignor for breach of the agreement mentioned in subparagraph (a) of this recommendation, but the other party to such an agreement may not avoid the original contract or the assignment contract on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement;

(c) This recommendation applies only to assignments of receivables:

(i) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;

(ii) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;

(iii) Representing the payment obligation for a credit card transaction;

(iv) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.

Creation of a security right in a personal or property right securing a receivable, a negotiable instrument or any other obligation

26. The law should provide that:

(a) A secured creditor with a security right in a receivable, negotiable instrument or any other intangible asset covered by this law has the benefit of any personal or property right that secures payment or other performance of the receivable, negotiable instrument or other obligation automatically, without further action by either the grantor or the secured creditor;

(b) If the personal or property right is an independent undertaking, the security right automatically extends to the proceeds under the independent undertaking but does not extend to the right to draw under the independent undertaking;

(c) This recommendation does not affect a right in immovable property that under law other than this law is transferable separately from a receivable, negotiable instrument or other obligation that it may secure;

(d) A secured creditor with a security right in a receivable, negotiable instrument or any other intangible asset covered by this law has the benefit of any personal or property right securing payment or other performance of the receivable, negotiable instrument or other obligation notwithstanding any agreement between the grantor and the debtor of the receivable or the obligor of the negotiable instrument or other obligation limiting in any way the grantor's right to create a security right in the receivable, negotiable instrument or other obligation, or in any personal or property right securing payment or other performance of the receivable, negotiable instrument or other obligation;

(e) Nothing in this recommendation affects any obligation or liability of the grantor for breach of the agreement mentioned in subparagraph (d) of this recommendation, but the other party to such an agreement may not avoid the contract from which the receivable, negotiable instrument or other obligation arises,

or the security agreement creating the personal or property security right on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement;

(f) Subparagraphs (d) and (e) of this recommendation apply only to security rights in receivables, negotiable instruments or other obligations:

(i) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;

(ii) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;

(iii) Representing the payment obligation for a credit card transaction;

(iv) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties;

(g) Subparagraph (a) of this recommendation does not affect any duties of the grantor to the debtor of the receivable or to the obligor of the negotiable instrument or other obligation;

(h) To the extent that the automatic effects under subparagraph (a) of this recommendation and recommendation 49 are not impaired, this recommendation does not affect any requirement under law other than this law relating to the form or registration of the creation of a security right in any asset, securing payment or other performance of a receivable, negotiable instrument or other obligation, that is not covered by this law.

Creation of a security right in a right to payment of funds credited to a bank account

27. The law should provide that a security right in a right to payment of funds credited to a bank account is effective notwithstanding an agreement between the grantor and the depositary bank limiting in any way the grantor's right to create such a security right. However, the depositary bank has no duty to recognize the secured creditor and no obligation is otherwise imposed on the depositary bank with respect to the security right without the depositary bank's consent (for the depositary bank's rights and obligations, see recommendations 122 and 123).

Creation of a security right in proceeds under an independent undertaking

28. The law should provide that a beneficiary may grant a security right in proceeds under an independent undertaking, even if the right to draw under the independent undertaking is itself not transferable under law and practice governing independent undertakings. The creation of a security right in proceeds under an independent undertaking is not a transfer of the right to draw under an independent undertaking.

Creation of a security right in a negotiable document or goods covered by a negotiable document

29. The law should provide that a security right in a negotiable document extends to the goods covered by the document, provided that the issuer is in possession of the goods, directly or indirectly, at the time the security right in the document is created.

V. Effectiveness of a security right against third parties

Purpose

The purpose of the requirements of the law for the effectiveness of a security right against third parties is to create a foundation for the predictable, fair and efficient ordering of priority by:

(a) Requiring registration as a precondition for the effectiveness of a security right against third parties, except where exceptions and alternatives to registration are appropriate in light of countervailing commercial policy considerations; and

(b) Establishing a legal framework to create and support a simple, cost-efficient and effective public registry system for the registration of notices with respect to security rights.

A. General recommendations

Meaning of third-party effectiveness

30. The law should provide that a security right is effective against third parties only if it is created in accordance with this law and one of the methods referred to in recommendation 33, 35 or 36 has been followed.

Effectiveness against the grantor of a security right that is not effective against third parties

31. The law should provide that a security right that has been created in accordance with the provisions of the law on creation is effective between the grantor and the secured creditor even if it is not effective against third parties.

Continued third-party effectiveness of a security right after a transfer of the encumbered asset

32. The law should provide that, after transfer of a right other than a security right in an encumbered asset, a security right in the encumbered asset that is effective against third parties at the time of the transfer continues to encumber the asset except as provided in recommendations 85-87, and remains effective against third parties except as provided in recommendation 62.

[Note to the Commission: The Commission may wish to note that recommendations 33-37 are not intended to state the relevant rules but rather to list, for the ease of the reader, the various methods for achieving third-party effectiveness and to refer to the following recommendations that state the relevant rules.]

General method for achieving third-party effectiveness of a security right

33. The law should provide that a security right created in accordance with the provisions of the law on creation is effective against third parties if a notice with respect to the security right is registered in the general security rights registry referred to in recommendations 55-73.

34. The law should provide that registration of a notice does not create a security right and is not necessary for the creation of a security right.

Alternatives and exceptions to registration for achieving third-party effectiveness of a security right

35. The law should provide that:

(a) A security right may also be made effective against third parties by one of the following alternative methods:

(i) In tangible property, by transfer of possession, as provided in recommendation 38;

(ii) In goods covered by a negotiable document, by transfer of possession of the document, as provided in recommendations 52-54;

(iii) In movable property subject to registration in a specialized registry or notation on a title certificate, by such registration or notation, as provided in recommendation 39;

(iv) In a right to payment of funds credited to a bank account, by control, as provided in recommendation 50; and

(v) In an attachment to immovable property, by registration in the general security rights registry or in the immovable property registry, as provided in recommendation 43;

(b) A security right is effective against third parties automatically:

(i) In proceeds, if the security right in the original encumbered assets is effective against third parties, as provided in recommendations 40 and 41;

(ii) In an attachment to movable property, if the security right in the separate movable property is effective against third parties before it becomes an attachment, as provided in recommendation 42;

(iii) In a mass or product, if the security right in the separate movable property is effective against third parties before it becomes part of the mass or product, as provided in recommendation 45; and

(iv) In movable property, upon a change in the location of the property or the grantor to this State, as provided in recommendation 46; and

(c) A security right in a personal or property right securing payment or other performance of a receivable, negotiable instrument or other obligation is effective against third parties, as provided in recommendation 49.

Exclusive method for achieving third-party effectiveness of a security right in proceeds under an independent undertaking

36. The law should provide that, except as provided in recommendation 49, a security right in proceeds under an independent undertaking is made effective against third parties only by control, as provided in recommendation 51.

Different third-party effectiveness methods for different types of asset

37. The law should provide that different methods for achieving third-party effectiveness may be used for different types of encumbered asset, whether they are encumbered pursuant to the same security agreement or not.

Third-party effectiveness of a security right in tangible property by possession

38. The law should provide that a security right in tangible property may be made effective against third parties by registration as provided in recommendation 33 or through transfer of possession to the secured creditor.

Third-party effectiveness of a security right in movable property with respect to which there is a specialized registration or a title certificate system

39. The law should provide that a security right in movable property that is subject to registration in a specialized registry or notation on a title certificate under law other than this law may be made effective against third parties by registration as provided in recommendation 33 or by:

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

Automatic third-party effectiveness of a security right in proceeds

40. The law should provide that, if a security right in an encumbered asset is effective against third parties, a security right in any proceeds of the encumbered asset (including any proceeds of proceeds) is effective against third parties when the proceeds arise, provided that the proceeds are described in a generic way in a registered notice or that the proceeds consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account.

41. If recommendation 40 does not apply, the security right in the proceeds is effective against third parties for [to be specified] days after the proceeds arise and continuously thereafter, if it was made effective against third parties by one of the methods referred to in recommendation 33 or 35 before the expiry of that time period.

Automatic third-party effectiveness of a security right in an attachment

42. The law should provide that, if a security right in tangible property is effective against third parties at the time when the tangible property becomes an attachment, the security right remains effective against third parties thereafter.

Third-party effectiveness of a security right in an attachment with respect to which there is a specialized registration or a title certificate system

43. The law should provide that a security right in an attachment to movable property that is subject to registration in a specialized registry or notation on a title certificate under law other than this law may be made effective against third parties automatically as provided in recommendation 42 or by:

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

44. The law should provide that a security right in an attachment to immovable property may be made effective against third parties automatically as provided in recommendation 42 or by registration in the immovable property registry.

Automatic third-party effectiveness of a security right in a mass or product

45. The law should provide that, if a security right in tangible property is effective against third parties when it becomes part of a mass or product, the security right that continues in the mass or product, as provided in recommendation 23, is effective against third parties.

Continuity in third-party effectiveness of a security right upon change of location

46. The law should provide that, if a security right in an encumbered asset is effective against third parties under the law of the State in which the encumbered asset or the grantor (as may be the case) is located and that location changes to this State, the security right continues to be effective against third parties under the law of this State for a period of [to be specified] days after the location of the encumbered asset or the grantor has changed to this State. If the requirements of the law of this State to make the security right effective against third parties are satisfied prior to the end of that period, the security right continues to be effective against third parties thereafter under the law of this State. For the purposes of any rule of this State in which time of registration or other method of achieving third-party effectiveness is relevant for determining priority, that time is the time when that event occurred under the law of the State in which the encumbered assets or the grantor were located before their location changed to this State.

Continuity in third-party effectiveness of a security right upon change of method of third-party effectiveness

47. The law should provide that third-party effectiveness of a security right is continuous notwithstanding a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

Lapse in third-party effectiveness or advance registration of a security right

48. The law should provide that, if a security right has been made effective against third parties and subsequently there is a period during which the security right is not effective against third parties, third-party effectiveness may be re-established. In such a case, third-party effectiveness takes effect from the time thereafter when the security right is made effective against third parties. Similarly, if registration made before creation of a security right as provided in recommendation 65 expires as provided in recommendation 67, it may be re-established. In such a case, registration takes effect from the time thereafter when a notice with respect to the security right is registered.

B. Asset-specific recommendations**Third-party effectiveness of a security right in a personal or property right securing payment of a receivable, negotiable instrument or any other obligation**

49. The law should provide that, if a security right in a receivable, negotiable instrument or any other intangible asset covered by this law is effective against third parties, such third-party effectiveness extends to any personal or property right that secures payment or other performance of the receivable, negotiable instrument

or other obligation, without further action by either the grantor or the secured creditor. If the personal or property right is an independent undertaking, its third-party effectiveness automatically extends to the proceeds under the independent undertaking (but, as provided in recommendation 26, subparagraph (b), the security right does not extend to the right to draw under the independent undertaking). This recommendation does not affect a right in immovable property that under law other than this law is transferable separately from a receivable, negotiable instrument or other obligation that it may secure.

Third-party effectiveness of a security right in a right to payment of funds credited to a bank account

50. The law should provide that a security right in a right to payment of funds credited to a bank account may be made effective against third parties by registration as provided in recommendation 33 or by the secured creditor obtaining control with respect to the right to payment of funds credited to the bank account.

Third-party effectiveness of a security right in proceeds under an independent undertaking

51. The law should provide that, except as provided in recommendation 49, a security right in proceeds under an independent undertaking may be made effective against third parties only by the secured creditor obtaining control with respect to the proceeds under the independent undertaking.

Third-party effectiveness of a security right in a negotiable document or goods covered by a negotiable document

52. The law should provide that a security right in a negotiable document may be made effective against third parties by registration as provided in recommendation 33 or by the secured creditor obtaining possession of the document.

53. The law should provide that, if a security right in a negotiable document is effective against third parties, the corresponding security right in the goods covered by the document is also effective against third parties. As long as a negotiable document covers goods, a security right in the goods may be made effective against third parties by the secured creditor obtaining possession of the document.

54. The law should provide that a security right in a negotiable document that was made effective against third parties by the secured creditor obtaining possession of the document remains effective against third parties for a short period of [to be specified] days after the negotiable document has been relinquished to the grantor or other person for the purpose of ultimate sale or exchange, loading or unloading, or otherwise dealing with the goods covered by the negotiable document.

VI. The registry system

Purpose

The purpose of the provisions of the law on the registry system is to establish a general security rights registry and to regulate its operation. The purpose of the registry system is to provide:

(a) A method by which an existing or future security right in a grantor's existing or future assets may be made effective against third parties;

(b) An efficient point of reference for priority rules based on the time of registration of a notice with respect to a security right; and

(c) An objective source of information for third parties dealing with a grantor's assets (such as prospective secured creditors and buyers, judgement creditors and the grantor's insolvency representative) as to whether the assets may be encumbered by a security right.

To achieve this purpose, the registry system should be designed to ensure that the registration and searching processes are simple, time- and cost-efficient, user-friendly and publicly accessible.

Operational framework of the registration and searching processes

55. The law should provide a framework to ensure that the registration and searching processes operate as follows:

(a) Clear and concise guides to registration and searching procedures are widely available and information about the existence and role of the registry is widely disseminated;

(b) Registration is effected by registering a notice that provides the information specified in recommendation 58, as opposed to requiring the submission of the original or a copy of the security agreement or other document;

(c) The registry must accept a notice presented by an authorized medium of communication (e.g. paper, electronic) except if:

(i) It is not accompanied by the required fee;

(ii) It fails to provide a grantor identifier sufficient to allow indexing; or

(iii) It fails to provide some information with respect to any of the other items required under recommendation 58;

(d) The registrar may not require verification of the identity of the registrant or the existence of authorization for registration of the notice or conduct further scrutiny of the content of the notice;

(e) The record of the registry is centralized and contains all notices of security rights registered under this law;

(f) The information provided on the record of the registry is available to the public;

(g) A search may be made without the need for the searcher to justify the reasons for the search;

(h) Notices are indexed and can be retrieved by searchers according to the name of the grantor or according to some other reliable identifier of the grantor;

(i) Fees for registration and for searching, if any, are set at a level no higher than necessary to permit cost recovery;

(j) Registrants may choose among multiple modes and points of access to the registry;

(k) The registry, to the extent it is electronic, operates continuously except for scheduled maintenance, and, to the extent it is not electronic, operates during

reliable and consistent service hours compatible with the needs of potential registry users; and

- (l) If possible, the registration system is electronic. In particular,
 - (i) Notices are stored in electronic form in a computer database;
 - (ii) Registrants and searchers have immediate access to the registry record by electronic or similar means, including internet and electronic data interchange;
 - (iii) The system is programmed to minimize the risk of entry of incomplete or irrelevant information; and
 - (iv) The system is programmed to facilitate speedy and complete retrieval of information and to minimize the practical consequences of human error.

Security and integrity of the registry

56. In order to ensure the security and integrity of the registry, the law should provide that the operational and legal framework of the registry should reflect the following characteristics:

- (a) Although the day-to-day operation of the registry may be delegated to a private authority, the State retains the responsibility to ensure that it is operated in accordance with the governing legal framework;
- (b) The identity of a registrant is requested and maintained by the registry (as to verification of the registrant's identity, see recommendation 55, subparagraph (d));
- (c) The registrant is obligated to forward a copy of a notice to the grantor named in the notice. Failure of the secured creditor to meet this obligation may result only in nominal penalties and any damages resulting from the failure that may be proven;
- (d) The registry is obligated to send promptly a copy of any changes to a registered notice to the person identified as the secured creditor in the notice;
- (e) A registrant can obtain a record of the registration as soon as the registration information is entered into the registry record; and
- (f) Multiple copies of all the information in the records of a registry are maintained and the entirety of the registry records can be reconstructed in the event of loss or damage.

Responsibility for loss or damage

57. The law should provide for the allocation of responsibility for loss or damage caused by an error in the administration or operation of the registration and searching system. If the system is designed to permit direct registration and searching by registry users without the intervention of registry personnel, the responsibility of the registry should be limited to a system malfunction.

Required content of notice

58. The law should provide that only the following information is required to be provided in the notice:

(a) The identifier of the grantor, satisfying the standard provided in recommendations 59-61, and the secured creditor or its representative and their addresses;

(b) A description of the asset covered by the notice, satisfying the standard provided in recommendation 64;

(c) The duration of the registration as provided in recommendation 67; and

(d) If the State determines that the maximum monetary amount for which the security right may be enforced is helpful to facilitate subordinate lending, a statement of that maximum amount.

Sufficiency of grantor identifier

59. The law should provide that a notice is effective only if it states the grantor's correct identifier or, in the case of an incorrect statement, if the notice would be retrieved by a search of the registry record under the correct identifier.

60. The law should provide that, where the grantor is a natural person, the identifier of the grantor for the purposes of effective registration is the grantor's name, as it appears in a specified official document. Where necessary, additional information, such as the birth date or identity card number, should be required to uniquely identify the grantor.

61. The law should provide that, where the grantor is a legal person, the grantor's identifier for the purposes of effective registration is the name that appears in the documents constituting the legal person.

Impact of a change of the grantor's identifier on the effectiveness of the registration

62. The law should provide that, if, after a notice is registered, the identifier of the grantor used in the notice changes and as a result the grantor's identifier does not meet the standard provided in recommendations 59-61, the secured creditor may amend the registered notice to provide the new identifier in compliance with that standard. If the secured creditor does not register the amendment within [to be specified] days after the change, the security right is ineffective against:

(a) A competing security right with respect to which a notice is registered or which is otherwise made effective against third parties before the registration of such an amendment; and

(b) A person that buys [, leases or licenses] the encumbered asset before the registration of such an amendment.

Impact of a transfer of an encumbered asset on the effectiveness of the registration

63. The law should provide that, if, after a notice is registered, the grantor transfers the encumbered asset, the secured creditor has [to be specified] days to amend the registered notice to provide the identifier of the transferee. If the secured

creditor does not register the amendment within [to be specified] days after the transfer, the security right is ineffective against:

(a) A competing security right with respect to which a notice is registered or which is otherwise made effective against third parties before the registration of such an amendment; and

(b) A person that buys [, leases or licenses] the encumbered asset before the registration of such an amendment.

Sufficiency of description of assets covered by a notice

64. The law should provide that a description of the assets covered by a notice is sufficient if it reasonably describes the assets covered by the notice. A generic description of the encumbered assets, as provided in recommendation 13, is sufficient.

Time of registration

65. The law should provide that a notice with respect to a security right may be registered before or after creation of the security right, or conclusion of the security agreement.

One notice sufficient for multiple security rights arising from multiple agreements between the same parties

66. The law should provide that registration of a single notice is sufficient to achieve third-party effectiveness of more than one security right arising from more than one security agreement between the same parties, whether the security rights exist at the time of registration or are created only thereafter.

Duration and extension of the registration of a notice

67. The law should either specify the duration of the effectiveness of the registration of a notice or permit the registrant to specify the duration in the notice at the time of registration and extend it at any time before its expiry. In either case, the secured creditor should be entitled to extend the period of effectiveness by submitting a notice of amendment to the registry at any time before the expiry of the effectiveness of the notice. If the law specifies the time of effectiveness of the registration, the extension period resulting from the registration of the notice of amendment should be an additional period equal to the initial period. If the law permits the registrant to specify the duration of the effectiveness of the registration, the extension period should be that specified in the notice of amendment.

Time of effectiveness of registration of a notice or amendment

68. The law should provide that registration of a notice or an amendment becomes effective when the information contained in the notice or the amendment is entered into the registry records so as to be available to searchers of the registry record.

Authority for registration

69. The law should provide that registration of a notice is ineffective unless authorized by the grantor in writing. The authorization may be given before or after registration. A written security agreement is sufficient to constitute authorization for

the registration. The effectiveness of registration does not depend on the identity of the registrant.

Cancellation or amendment of notice

70. The law should provide that, if no security agreement has been concluded, the security right has been extinguished by full payment or otherwise, or a registered notice is not authorized by the grantor:

(a) The secured creditor is obliged to submit to the registry a notice of cancellation or amendment, to the extent appropriate, with respect to the relevant registered notice not later than [to be specified] days after the secured creditor's receipt of the written request of the grantor;

(b) The grantor is entitled to seek cancellation or appropriate amendment of the notice through a summary judicial or administrative procedure;

(c) The grantor is entitled to seek cancellation or appropriate amendment of the notice, as provided in subparagraph (b), even before the expiry of the period provided in subparagraph (a), provided that there are appropriate mechanisms to protect the secured creditor.

[Note to the Commission: The Commission may wish to add a recommendation addressing the right of the secured creditor to amend the notice, for example to change its address or name, or the description of the encumbered asset.]

71. The law should provide that the secured creditor is entitled to submit to the registry a notice of cancellation or amendment, to the extent appropriate, with respect to the relevant registered notice at any time.

72. The law should provide that promptly after a registered notice has expired as provided in recommendation 67 or has been cancelled as provided in recommendation 70 or 71, the information contained in the notice should be removed from the records of the registry, which are accessible to the public. However, the information provided in the expired or cancelled or amended notice and the fact of expiration or cancellation or amendment should be archived so as to be capable of retrieval if necessary.

73. The law should provide that, in the case of an assignment of the secured obligation, the notice may be amended to indicate the name of the new secured creditor but the unamended notice remains effective.

VII. Priority of a security right as against the rights of competing claimants

Purpose

The purpose of the provisions of the law on priority is:

(a) To provide an efficient and predictable regime to determine the priority of a security right as against the rights of competing claimants; and

(b) To facilitate transactions by which a grantor may create more than one security right in the same asset and thereby use the full value of its assets to obtain credit.

A. General recommendations

Extent of priority

74. The law should provide that the priority of a security right extends to all obligations secured under the security agreement. If the security right is made effective against third parties by registration and the notice registered sets out the maximum monetary amount secured if required pursuant to recommendation 58, subparagraph (d), the priority of the security right extends to all secured obligations up to that maximum amount.

Irrelevance of knowledge of the existence of the security right

75. The law should provide that knowledge of the existence of a security right on the part of a competing claimant does not affect its rights under the provisions of the law on priority (as for the impact of knowledge that a transaction violates the rights of a secured creditor, see recommendations 87, 100, subparagraph (b), 103 and 104).

Priority of security rights securing future obligations

76. The law should provide that, subject to recommendation 90, the priority of a security right does not depend on the time when the secured obligation was incurred.

Subordination

77. The law should provide that a competing claimant entitled to priority may at any time subordinate its priority unilaterally or by agreement in favour of any other existing or future competing claimant.

Priority between security rights in the same encumbered assets

78. The law should provide that, except as provided in recommendations 83, 84, 93-107, 189-195, 198 and 199, priority between competing security rights in the same encumbered assets is determined as follows, based on the earliest time when it may be asserted:

(a) As between security rights that were made effective against third parties by registration of a notice, priority is determined by the order of registration, regardless of the order of creation of the security rights;

(b) As between security rights that were made effective against third parties otherwise than by registration, priority is determined by the order of third-party effectiveness;

(c) As between a security right that was made effective against third parties by registration and a security right that was made effective against third parties otherwise than by registration, priority is determined by the order of registration (regardless of when creation occurs) and third-party effectiveness [whichever occurs first].

Priority of a security right in after-acquired property

79. The law should provide that, if the priority of a security right is determined by the time of the registration of a notice, the time of registration determines the priority of a security right with respect to all encumbered assets irrespective of

whether they are acquired by the grantor or come into existence before, on or after the time of registration.

Priority of a security right in proceeds

80. The law should provide that, for purposes of recommendation 78, the time of registration or third-party effectiveness as to a security right in an encumbered asset is also the time of registration or third-party effectiveness of a security right in proceeds.

Continuity in priority

81. The law should provide that the priority of a security right is not affected by a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

82. The law should provide that, if a security right has been registered or made effective against third parties and subsequently there is a period during which the security right is neither registered nor effective against third parties, the priority of that security right dates from the earliest time thereafter when the security right is either registered or made effective against third parties.

Priority of a security or other right registered in a specialized registry or noted on a title certificate

[Note to the Commission: The Commission may wish to note that the priority rules in recommendations 83 and 84 apply unless the specialized registration regime has different priority rules.]

83. The law should provide that a security right in an asset that is made effective against third parties by registration in a specialized registry or notation on a title certificate, as provided in recommendation 39, has priority as against:

(a) A security right in the same asset with respect to which a notice is registered in the general security rights registry or which is made effective against third parties by a method other than registration in a specialized registry or notation on a title certificate regardless of the order; and

(b) A security right that is subsequently registered in the specialized registry or noted on a title certificate.

84. [The law should provide that, if a security right in an encumbered asset is transferred and the security right in that asset is made effective against third parties by registration in a specialized registry or notation on a title certificate as provided in recommendation 39 before the transfer, the transferee takes its rights subject to the security right except as provided in recommendations 86-88. However, if the security right has not been made effective against third parties by registration in a specialized registry or notation on a title certificate, a buyer, lessee or licensee takes its rights free of the security right.]

[Note to the Commission: The Commission may wish to note that recommendation 84, which tracks the language of recommendation 85, has been added to deal with a conflict between a security right made effective against third parties by registration in a specialized registry or notation on a title certificate and a transferee of the encumbered asset. It provides that: a transferee takes its rights subject to the security right except as provided in recommendations 86-88; and a transferee for value (i.e. a buyer, lessee or licensee) takes its rights free of the

security right if it was not effective against third parties. The Commission may wish to consider whether recommendation 85 is sufficient to reflect this rule, in which case recommendation 84 could be deleted.]

Rights of buyers, lessees and licensees of an encumbered asset

85. The law should provide that, if a right in an encumbered asset is transferred and the security right in that asset is effective against third parties at the time of the transfer, a transferee takes its rights subject to the security right except as provided in recommendations 86-88.

86. The law should provide that:

(a) A security right does not continue in an encumbered asset that the grantor sells or otherwise disposes of, if the secured creditor authorizes the sale or other disposition free of the security right; and

(b) The rights of a lessee or licensee of an encumbered asset are not affected by a security right if:

(i) The secured creditor authorizes the grantor to lease or license the asset unaffected by the security right; or

(ii) In the case of a security right registered before creation, the secured creditor has knowledge of the lease or licence.

[Note to the Commission: The Commission may wish to consider whether subparagraph (b)(ii) should be deleted. If a security right is registered before it is created, it is not effective against third parties and no issue of priority arises. Thus, whether the secured creditor has knowledge of the lease or license is irrelevant.]

87. The law should provide that:

(a) A buyer of inventory or consumer goods in the ordinary course of the seller's business that does not have knowledge that the sale violates the rights of a secured creditor under a security agreement takes free of the security right;

(b) The rights of a person that accepts a lease of inventory in the lessor's ordinary course of business without knowledge that the lease violates the rights of a secured creditor under a security agreement are not affected by the security right; and

(c) The rights of a person that accepts non-exclusive licence of intangible property in the licensor's ordinary course of business without knowledge that the licence violates the rights of a secured creditor under a security agreement are not affected by the security right.

88. The law should provide that, where a buyer acquires a right in an encumbered asset free of a security right, any person that subsequently acquires a right in that asset from that buyer also takes free of the security right. Where the rights of a lessee or licensee are not affected by a security right, the rights of a sublessee or sublicensee are also unaffected by the security right.

Priority of preferential claims

89. The law should limit, both in number and amount, preferential claims arising by operation of law that have priority as against security rights and, to the extent preferential claims exist, they should be described in the law in a clear and specific way.

Priority of rights of judgement creditors

90. The law should provide that, except as provided in recommendation 194, a security right has priority as against the rights of an unsecured creditor, unless the unsecured creditor, under law other than this law, obtained a judgement or provisional court order against the grantor and took the steps necessary to acquire rights in assets of the grantor by reason of the judgement or provisional court order before the security right was made effective against third parties. The priority of the security right extends to credit extended by the secured creditor:

(a) Before the expiry of [to be specified] days after the unsecured creditor notified the secured creditor that it had taken steps necessary to acquire rights in the encumbered asset; or

(b) Pursuant to an irrevocable commitment (in a fixed amount or an amount to be fixed pursuant to a specified formula) of the secured creditor to extend credit, if the commitment was made before the unsecured creditor notified the secured creditor that it had taken the steps necessary to acquire rights in the encumbered asset.

Priority of rights of persons providing services with respect to an encumbered asset

91. If law other than this law gives rights equivalent to security rights to a creditor that has provided services with respect to an encumbered asset (e.g. by repairing, storing or transporting it), such rights are limited to the assets in the possession of that creditor up to the reasonable value of the services rendered and have priority as against pre-existing security rights in the asset.

Priority of a supplier's reclamation right

92. If law other than this law provides that a supplier of goods has the right to reclaim the goods, the law should provide that the reclamation right is subordinate to a security right that was made effective against third parties before the supplier exercised its reclamation right.

Priority of a security right in an attachment

93. The law should provide that a security right or any other right (such as the right of a buyer or lessee) in an attachment to immovable property that is created and made effective against third parties under immovable property law, as provided in recommendations 22 and 44, has priority as against a security right in that attachment that is made effective against third parties by one of the methods referred to in recommendation 33 or 35.

94. The law should provide that a security right in tangible property that is an attachment to immovable property at the time the security right is made effective against third parties or that becomes an attachment to immovable property subsequently and that is made effective against third parties by registration in the immovable property registry as provided in recommendation 44, has priority as against a security right or any other right (such as the right of a buyer or lessor) in the related immovable property that is registered subsequently.

95. A security right or any other right (such as the right of a buyer or lessee) in an attachment to movable property that is made effective against third parties by registration in a specialized registry or by notation on a title certificate under

recommendation 43, has priority as against a security right or other right in the related movable property that is registered subsequently.

Priority of a security right in a mass or product

96. The law should provide that, where two or more security rights in the same tangible property continue in a mass or product as provided in recommendation 23, they retain the same priority as the security rights in the tangible property had as against each other immediately before the tangible property became part of the mass or product.

97. The law should provide that, if security rights in separate tangible property continue in the same mass or product and each security right is effective against third parties, the secured creditors are entitled to share in the aggregate maximum value of their security rights in the mass or product according to the ratio of the value of the respective security rights. For purposes of this formula, the maximum value of a security right is the lesser of the value provided in recommendation 23 and the amount of the secured obligations.

98. The law should provide that a security right in separate tangible property that continues in a mass or product and is effective against third parties, has priority as against a security right granted by the same grantor in the mass or product, if it is an acquisition security right.

B. Asset-specific recommendations

Priority of a security right in a negotiable instrument

99. The law should provide that a security right in a negotiable instrument that is made effective against third parties by possession of the instrument, as provided in recommendation 38, has priority as against a security right in a negotiable instrument that is made effective against third parties by any other method.

100. The law should provide that a security right in a negotiable instrument that is made effective against third parties by a method other than possession of the instrument is subordinate to the rights of a secured creditor, buyer or other transferee (in a consensual transaction) that:

(a) Qualifies as a protected holder under the law governing negotiable instruments; or

(b) Takes possession of the negotiable instrument and gives value in good faith and without knowledge that the transfer is in violation of the rights of the secured creditor under the security agreement.

Priority of a security right in a right to payment of funds credited to a bank account

101. The law should provide that a security right in a right to payment of funds credited to a bank account that is made effective against third parties by control, as provided in recommendation 50, has priority as against a competing security right that is made effective against third parties by any other method. If a depositary bank concludes control agreements with more than one secured creditor, priority among those secured creditors is determined according to the order in which the control agreements were concluded. If the secured creditor is the depositary bank, its

security right has priority as against any other security right (including a security right made effective against third parties by a control agreement with the depositary bank even if the depositary bank's security right is later in time) other than a security right of a secured creditor that has acquired control by becoming the account holder.

102. The law should provide that any right of the depositary bank, existing under law other than this law, to set off obligations owed to the depositary bank by the grantor against the grantor's right to payment of funds credited to a bank account has priority as against the security right of any secured creditor other than a secured creditor that has acquired control by becoming the account holder.

103. In the case of a transfer of funds from a bank account initiated by the grantor, the law should provide that the transferee of the funds takes free of a security right in the right to payment of funds credited to the bank account, unless the transferee has knowledge that the transfer violates the rights of the secured creditor under the security agreement. This recommendation does not lessen the rights of transferees of funds from bank accounts under law other than this law.

Priority of a security right in money

104. The law should provide that a person that obtains possession of money that is subject to a security right takes the money free of the security right, whether the money constitutes an original encumbered asset or proceeds, unless that person has knowledge that the transfer violates the rights of the secured creditor under the security agreement. This recommendation does not lessen the rights of holders of money under law other than this law.

Priority of a security right in proceeds under an independent undertaking

105. The law should provide that a security right in proceeds under an independent undertaking that has been made effective against third parties by control, as provided in recommendation 51, has, with respect to a particular guarantor/issuer, confirmer or nominated person giving value under an independent undertaking, priority as against the rights of all other secured creditors that have, with respect to that person, made their security right effective against third parties by a method other than control. If control has been achieved by acknowledgement and inconsistent acknowledgements have been given to more than one secured creditor by a person, priority among those secured creditors is determined according to the order in which the acknowledgements were given.

Priority of a security right in a negotiable document or goods covered by a negotiable document

106. The law should provide that a security right in a negotiable document and the goods covered thereby is subordinate to the rights under the law governing negotiable documents of a person to which the negotiable document has been duly negotiated.

107. The law should provide that a security right in a negotiable document that is made effective against third parties (which extends to the goods covered by the document as provided in recommendation 29) has priority as against a security right in the goods covered by the negotiable document that is made effective against third parties by a method other than that provided in recommendation 52 (by making the

security right in the document effective against third parties) while the goods are covered by the document.

[Note to the Commission: The Commission may wish to substitute recommendation 107 with wording along the following lines: “The law should provide that a security right in goods covered by a negotiable document is subordinate to the rights of a secured creditor, buyer or other transferee of the document (in a consensual transaction) that takes possession of the negotiable document while the goods are covered by the document and gives value in good faith and without knowledge that the transfer is in violation of the rights of the secured creditor under the security agreement.”]

VIII. Rights and obligations of the parties

Purpose

The purpose of the provisions of the law on rights and obligations of the parties is to enhance efficiency of secured transactions and reduce transaction costs and potential disputes by:

- (a) Providing rules on additional terms for the security agreement;
- (b) Eliminating the need to negotiate and draft terms to be included in the security agreement where the rules provide an acceptable basis for agreement;
- (c) Providing a drafting aid or checklist of issues the parties may wish to address at the time of negotiation and conclusion of the security agreement; and
- (d) Encouraging party autonomy.

A. General recommendations

Non-mandatory rules relating to the rights of the secured creditor

108. The law should provide that, unless otherwise agreed:

- (a) The secured creditor is entitled to be reimbursed for reasonable expenses incurred for the preservation of encumbered assets in its possession;
- (b) The secured creditor is entitled to make reasonable use of the encumbered assets in its possession and to inspect encumbered assets in the possession of the grantor.

Mandatory rules relating to the obligations of the party in possession

109. The law should provide that:

- (a) The secured creditor or the grantor in possession of the encumbered assets must take any steps necessary to preserve the encumbered assets;
- (b) The secured creditor must return the encumbered assets in its possession or terminate the notice registered upon full payment of the secured obligation and termination of all commitments to extend credit.

B. Asset-specific recommendations

Rights and obligations of the assignor and the assignee

[Note to the Commission: The Commission may wish to note that recommendations 110-113 are based on articles 11-14 of the United Nations Assignment Convention.]

110. The law should provide that:

(a) The mutual rights and obligations of the assignor and the assignee arising from their agreement are determined by the terms and conditions set forth in that agreement, including any rules or general conditions referred to therein;

(b) The assignor and the assignee are bound by any usage to which they have agreed and, unless otherwise agreed, by any practices they have established between themselves.

Representations of the assignor

111. With respect to an assignment of a contractual receivable, the law should provide that:

(a) Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of conclusion of the contract of assignment that:

(i) The assignor has the right to assign the receivable;

(ii) The assignor has not previously assigned the receivable to another assignee; and

(iii) The debtor of the receivable does not and will not have any defences or rights of set-off;

(b) Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor of the receivable has, or will have, the ability to pay.

Right to notify the debtor of the receivable

112. The law should provide that:

(a) Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor of the receivable notification of the assignment and a payment instruction, but after notification has been sent only the assignee may send such an instruction; and

(b) Notification of the assignment or a payment instruction sent in breach of any agreement referred to in subparagraph (a) of this recommendation is not ineffective for the purposes of recommendation 116 by reason of such breach. However, nothing in this recommendation affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

Right to payment

113. The law should provide that:

(a) As between the assignor and the assignee, unless otherwise agreed and whether or not notification of the assignment has been sent:

(i) If payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and goods returned in respect of the assigned receivable;

(ii) If payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and also to goods returned to the assignor in respect of the assigned receivable; and

(iii) If payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and also to goods returned to such person in respect of the assigned receivable;

(b) The assignee may not retain more than the value of its right in the receivable.

IX. Rights and obligations of third-party obligors**A. Rights and obligations of the debtor of the receivable****Protection of the debtor of the receivable**

[Note to the Commission: The Commission may wish to note that recommendations 114-120 are based on articles 15-21 of the United Nations Assignment Convention.]

114. The law should provide that:

(a) Except as otherwise provided in this law, an assignment does not, without the consent of the debtor of the receivable, affect the rights and obligations of the debtor of the receivable, including the payment terms contained in the original contract; (b) A payment instruction may change the person, address or account to which the debtor of the receivable is required to make payment, but may not change:

(i) The currency of payment specified in the original contract; or

(ii) The State specified in the original contract in which payment is to be made to a State other than that in which the debtor of the receivable is located.

Notification of the debtor of the receivable

115. The law should provide that:

(a) Notification of the assignment or a payment instruction is effective when received by the debtor of the receivable if it is in a language that is reasonably expected to inform the debtor of the receivable about its contents. It is sufficient if notification of the assignment or a payment instruction is in the language of the original contract;

(b) Notification of the assignment or a payment instruction may relate to receivables arising after notification; and

(c) Notification of a subsequent assignment constitutes notification of all prior assignments.

Discharge of the debtor of the receivable by payment

116. The law should provide that:

(a) Until the debtor of the receivable receives notification of the assignment, it is entitled to be discharged by paying in accordance with the original contract;

(b) After the debtor of the receivable receives notification of the assignment, subject to subparagraphs (c)-(h) of this recommendation, it is discharged only by paying the assignee or, if otherwise instructed in the notification of the assignment or subsequently by the assignee in a writing received by the debtor of the receivable, in accordance with such payment instruction;

(c) If the debtor of the receivable receives more than one payment instruction relating to a single assignment of the same receivable by the same assignor, it is discharged by paying in accordance with the last payment instruction received from the assignee before payment;

(d) If the debtor of the receivable receives notification of more than one assignment of the same receivable made by the same assignor, it is discharged by paying in accordance with the first notification received;

(e) If the debtor of the receivable receives notification of one or more subsequent assignments, it is discharged by paying in accordance with the notification of the last of such subsequent assignments;

(f) If the debtor of the receivable receives notification of the assignment of a part of or an undivided interest in one or more receivables, it is discharged by paying in accordance with the notification or in accordance with this recommendation as if the debtor of the receivable had not received the notification. If the debtor of the receivable pays in accordance with the notification, it is discharged only to the extent of the part or undivided interest paid;

(g) If the debtor of the receivable receives notification of the assignment from the assignee, it is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment from the initial assignor to the initial assignee and any intermediate assignment have been made and, unless the assignee does so, the debtor of the receivable is discharged by paying in accordance with this recommendation as if the notification from the assignee had not been received. Adequate proof of an assignment includes but is not limited to any writing emanating from the assignor and indicating that the assignment has taken place; and

(h) This recommendation does not affect any other ground on which payment by the debtor of the receivable to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor of the receivable.

Defences and rights of set-off of the debtor of the receivable

117. The law should provide that:

(a) In a claim by the assignee against the debtor of the receivable for payment of the assigned receivable, the debtor of the receivable may raise against the assignee all defences and rights of set-off arising from the original contract, or any other contract that was part of the same transaction, of which the debtor of the

receivable could avail itself as if the assignment had not been made and such claim were made by the assignor;

(b) The debtor of the receivable may raise against the assignee any other right of set off, provided that it was available to the debtor of the receivable at the time notification of the assignment was received by the debtor of the receivable; and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, defences and rights of set-off that the debtor of the receivable may raise pursuant to recommendation 25, subparagraph (b), or recommendation 26, subparagraph (e), against the assignor for breach of an agreement limiting in any way the assignor's right to make the assignment are not available to the debtor of the receivable against the assignee.

Agreement not to raise defences or rights of set-off

118. The law should provide that:

(a) The debtor of the receivable may agree with the assignor in a writing signed by the debtor of the receivable not to raise against the assignee the defences and rights of set-off that it could raise pursuant to recommendation 117. Such an agreement precludes the debtor of the receivable from raising against the assignee those defences and rights of set-off;

(b) The debtor of the receivable may not waive defences:

- (i) Arising from fraudulent acts on the part of the assignee; or
- (ii) Based on the incapacity of the debtor of the receivable; and

(c) Such an agreement may be modified only by an agreement in a writing signed by the debtor of the receivable. The effect of such a modification as against the assignee is determined by recommendation 119, subparagraph (b).

Modification of the original contract

119. The law should provide that:

(a) An agreement concluded before notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is effective as against the assignee, and the assignee acquires corresponding rights;

(b) An agreement concluded after notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is ineffective as against the assignee unless:

- (i) The assignee consents to it; or
- (ii) The receivable is not fully earned by performance and either the modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification; and

(c) Subparagraphs (a) and (b) of this recommendation do not affect any right of the assignor or the assignee arising from breach of an agreement between them.

Recovery of payments

120. The law should provide that failure of the assignor to perform the original contract does not entitle the debtor of the receivable to recover from the assignee a sum paid by the debtor of the receivable to the assignor or the assignee.

B. Rights and obligations of the obligor under a negotiable instrument

121. The law should provide that a secured creditor's rights in a negotiable instrument are, as against a person obligated on the negotiable instrument or any other person claiming rights under the law governing negotiable instruments, subject to the law governing negotiable instruments.

C. Rights and obligations of the depositary bank

122. The law should provide that:

(a) The creation of a security right in a right to payment of funds credited to a bank account does not affect the rights and obligations of the depositary bank without its consent; and

(b) Any rights of set-off that the depositary bank may have under law other than this law are not impaired by reason of any security right that the depositary bank may have in a right to payment of funds credited to a bank account.

123. The law should provide that nothing in the law obligates a depositary bank:

(a) To pay any person other than a person that has control with respect to funds credited to a bank account; or

(b) To respond to requests for information about whether a control agreement or a security right in its own favour exists and whether the grantor retains the right to dispose of the funds credited in the account.

D. Rights and obligations of the guarantor/issuer, confirmer or nominated person of an independent undertaking

124. The law should provide that:

(a) A secured creditor's rights in proceeds under an independent undertaking are subject to the rights, under the law and practice governing independent undertakings, of the guarantor/issuer, confirmer or nominated person and of any other beneficiary named in the undertaking or to whom a transfer of drawing rights has been effected;

(b) The rights of a transferee of an independent undertaking are not affected by a security right in proceeds under the independent undertaking acquired from the transferor or any prior transferor; and

(c) The independent rights of a guarantor/issuer, confirmer, nominated person or transferee of an independent undertaking are not adversely affected by reason of any security right it may have in rights in proceeds under the independent undertaking, including any right in proceeds under the independent undertaking resulting from a transfer of drawing rights to a transferee.

125. The law should provide that a guarantor/issuer, confirmer or nominated person is not obligated to pay any person other than a confirmer, a nominated person, a named beneficiary, an acknowledged transferee of the independent undertaking or an acknowledged assignee of the proceeds under an independent undertaking.

126. The law should provide that, if a secured creditor obtains control by becoming an acknowledged assignee of the proceeds under an independent undertaking, the secured creditor has the right to enforce the acknowledgement against the guarantor/issuer, confirmer or nominated person that made the acknowledgement.

E. Rights and obligations of the issuer of a negotiable document

127. The law should provide that a secured creditor's rights in a negotiable document are, as against the issuer or any other person obligated on the negotiable document, subject to the law governing negotiable documents.

X. Post-default rights

Purpose

The purpose of the provisions of the law on post-default rights is to provide:

(a) Clear and simple methods for the enforcement of security rights after debtor default in a predictable and efficient manner;

(b) Methods that maximize the amount realized from the encumbered assets for the benefit of the grantor, the debtor or any other person that owes payment of the secured obligation, the secured creditor and other creditors with a right in the encumbered assets;

(c) Expeditious judicial and, subject to appropriate safeguards, non-judicial methods for the secured creditor to realize the value of the encumbered assets.

A. General recommendations

General standard of conduct in the context of enforcement

128. The law should provide that a person must enforce its rights and perform its obligations under the provisions of this law governing post-default rights in good faith and in a commercially reasonable manner.

Limitations on party autonomy

129. The law should provide that the general standard of conduct provided in recommendation 128 cannot be waived unilaterally or varied by agreement at any time.

130. The law should provide that, subject to recommendation 129, the grantor and any other person that owes payment or other performance of the secured obligation may waive unilaterally or vary by agreement any of its rights under the provisions of this law governing post-default rights, but only after default.

131. The law should provide that, subject to recommendation 129, the secured creditor may waive unilaterally or vary by agreement any of its rights under the provisions of this law governing post-default rights at any time.

132. The law should provide that a variation of rights by agreement does not affect the rights of any person not a party to the agreement. A person challenging the agreement has the burden of showing that it was made prior to default or is inconsistent with recommendation 128 or 129.

Liability

133. The law should provide that, if a person fails to comply with its obligations under the provisions of this law governing post-default rights, it is liable to damages.

[Note to the Commission: The Commission may wish to note that recommendations 134 and 135 are not intended to state the relevant rules but rather to list, for the ease of the reader, the various post-default rights of the secured creditor and the grantor, and to refer to the following recommendations that state the relevant rules.]

Post-default rights of the secured creditor

134. The law should provide that after default the secured creditor is entitled to exercise one or more of the following rights with respect to an encumbered asset:

(a) Obtain possession of a tangible encumbered asset, as provided in recommendations 142 and 143;

(b) Sell or otherwise dispose of, lease or license an encumbered asset, as provided in recommendations 144-147;

(c) Propose to the grantor that the secured creditor accept an encumbered asset in total or partial satisfaction of the secured obligation, as provided in recommendations 148-150;

(d) Collect on or otherwise enforce a security right in an encumbered asset that is a receivable, negotiable instrument, right to payment of funds credited to a bank account or proceeds under an independent undertaking, as provided in recommendations 162-170;

(e) Enforce rights under a negotiable document, as provided in recommendation 171;

(f) Enforce its security right in an attachment to immovable property, as provided in recommendation 172; and

(g) Exercise any other right provided in the security agreement (except to the extent inconsistent with the provisions of this law) or any law.

Post-default rights of the grantor

135. The law should provide that after default the grantor is entitled to exercise one or more of the following rights:

(a) Pay in full the secured obligation and obtain a release from the security right of all encumbered assets, as provided in recommendation 140;

(b) Apply to a court or other authority for relief if the secured creditor is not complying with its obligations under the provisions of this law, as provided in recommendation 141;

(c) Propose to the secured creditor, or reject the proposal of the secured creditor, that the secured creditor accept an encumbered asset in total or partial satisfaction of the secured obligation, as provided in recommendation 151; and

(d) Exercise any other right provided in the security agreement or any law.

Judicial and extrajudicial methods of exercising post-default rights

136. The law should provide that after default the secured creditor may exercise its rights provided in recommendation 134 by applying to a court or other authority. Subject to the general standard of conduct provided in recommendation 128 and the requirements provided in recommendations 142-147 with respect to extrajudicial obtaining of possession and disposition of an encumbered asset, the secured creditor may elect to exercise its rights provided in recommendation 134 without having to apply to a court or other authority.

Expeditious judicial proceedings

137. The law should provide for expeditious judicial proceedings with respect to the exercise of post-default rights of the secured creditor, the grantor and any other person that owes performance of the secured obligation or claims to have a right in an encumbered asset.

Cumulative post-default rights

138. The law should provide that the exercise of a post-default right does not prevent the exercise of another right, except to the extent that the exercise of a right has made the exercise of another right impossible.

Post-default rights with respect to the secured obligation

139. The law should provide that the exercise of a post-default right with respect to an encumbered asset does not prevent the exercise of a post-default right with respect to the obligation secured by that asset, and vice versa.

Release of the encumbered assets after full payment

140. The law should provide that, after default and until the disposition, acceptance or collection of an encumbered asset by the secured creditor, the debtor, the grantor or any other interested person (e.g. a secured creditor whose security right has lower priority than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered asset) is entitled to pay the secured obligation in full, including interest and the costs of enforcement up to the time of full payment. If all commitments to extend credit have terminated, full payment extinguishes the security right in all encumbered assets, subject to any rights of subrogation in favour of the person making the payment.

Judicial or other relief for non-compliance

141. The law should provide that the debtor, the grantor or any other interested person (e.g. a secured creditor with a lower priority ranking than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered assets) is

entitled at any time to apply to a court or other authority for relief from the secured creditor's failure to comply with its obligations under the provisions of this law governing post-default rights. Unfounded applications and improper interference with or undue delay of the enforcement process should be discouraged and avoided.

[Note to the Commission: The Commission may wish to consider whether the last sentence of this recommendation should be retained in the recommendation or placed in the commentary.]

Secured creditor's right to possession of an encumbered asset

142. The law should provide that after default the secured creditor is entitled to possession of a tangible encumbered asset.

Extrajudicial obtaining of possession of an encumbered asset

143. The law should provide that the secured creditor may elect to obtain possession of a tangible encumbered asset without applying to a court or other authority only if:

(a) The grantor has consented in the security agreement to the secured creditor obtaining possession without applying to a court or other authority;

(b) The secured creditor has given the grantor and any person in possession of the encumbered asset notice of default and of the secured creditor's intent to obtain possession without applying to a court or other authority; and

(c) At the time the secured creditor seeks to obtain possession of the encumbered asset the grantor does not object.

Extrajudicial disposition of an encumbered asset

144. The law should provide that after default a secured creditor is entitled to sell or otherwise dispose of, lease or license an encumbered asset to the extent of the grantor's rights in the encumbered asset. Subject to the standard of conduct provided in recommendation 128, a secured creditor that elects to exercise this right without applying to a court or other authority may select the method, manner, time, place and other aspects of the disposition, lease or licence.

Advance notice of extrajudicial disposition of an encumbered asset

145. The law should provide that after default the secured creditor must give notice of its intention to sell or otherwise dispose of, lease or licence an encumbered asset without applying to a court or other authority. The notice need not be given if the encumbered asset is perishable, may decline in value speedily or is of a kind sold on a recognized market.

146. The law should provide rules ensuring that the notice referred to in recommendation 145 can be given in an efficient, timely and reliable way so as to protect the grantor or other interested parties, while, at the same time, avoiding having a negative effect on the secured creditor's remedies and the potential net realization value of the encumbered assets.

147. With respect to the notice referred to in recommendation 145, the law should:

(a) Provide that the notice must be [given to] [received by]:

(i) The grantor, the debtor and any other person that owes payment of the secured obligation;

(ii) Any person with rights in the encumbered asset that, more than [to be specified] days before the sending of the notice by the secured creditor to the grantor, notifies in writing the secured creditor of those rights; and

(iii) Any other secured creditor that, more than [to be specified] days before the notice is sent to the grantor, registered a notice of a security right in the encumbered asset under the name of the grantor; and

(iv) Any other secured creditor that was in possession of the encumbered asset at the time when the enforcing secured creditor took possession of the asset;

(b) State the manner in which the notice must be given, its timing and its minimum contents, including whether the notice must contain an accounting of the amount then owed and a reference to the right of the debtor or the grantor to obtain the release of the encumbered assets from the security right as provided in recommendation 140; and

(c) Provide that the notice must be in a language that is reasonably expected to inform its recipients about its contents.

Acceptance of encumbered assets in satisfaction of the secured obligation

148. The law should provide that after default the secured creditor may propose in writing that the secured creditor accept one or more of the encumbered assets in total or partial satisfaction of the secured obligation.

149. With respect to the proposal referred to in recommendation 148, the law should:

(a) Provide that the proposal must be [given to] [received by]:

(i) The grantor, the debtor and any other person that owes payment of the secured obligation (e.g. a guarantor);

(ii) Any person with rights in the encumbered asset that, more than [to be specified] days prior to the sending of the proposal by the secured creditor to the grantor, has notified in writing the secured creditor of those rights; and

(iii) Any other secured creditor that, more than [to be specified] days before the proposal is [sent to] [received by] the grantor, registered a notice of a security right in the encumbered asset in the name of the grantor;

(iv) Any other secured creditor that was in possession of the encumbered asset at the time it was seized by the secured creditor; and

(b) Provide that the proposal must specify the amount owed as of the date the proposal is [sent] [received] and the amount of the obligation that is proposed to be satisfied by accepting the encumbered asset.

150. The law should provide that the secured creditor may proceed with the proposal referred to in recommendation 148, unless any addressee of a proposal under recommendation 149 objects in writing within a short time, such as [to be specified] days, after the proposal is [sent] [received]. [In the case of a proposal for

the acceptance of the encumbered asset in partial satisfaction, affirmative consent by any addressee of the proposal is necessary.]

151. The law should provide that the grantor may make a proposal such as that referred to in recommendation 148 and if the secured creditor accepts it, the secured creditor must proceed as provided in recommendations 149 and 150.

Distribution of proceeds of extrajudicial disposition of an encumbered asset

152. The law should provide that, in the case of extrajudicial disposition of an encumbered asset or collection of a receivable, negotiable instrument or other obligation, the enforcing secured creditor must apply the net proceeds of its enforcement (after deducting costs of enforcement) to the secured obligation. Except as provided in recommendation 153, the enforcing secured creditor must pay any surplus remaining to any subordinate competing claimant, that, prior to any distribution of the surplus, notified the enforcing secured creditor of the subordinate competing claimant's claim, to the extent of that claim. Any balance remaining must be remitted to the grantor.

153. The law should also provide that, in the case of extrajudicial enforcement, whether or not there is any dispute as to the entitlement of any competing claimant or as to the priority of payment, the enforcing secured creditor may, in accordance with generally applicable procedural rules, pay the surplus to a competent judicial or other authority or to a public deposit fund for distribution. The surplus should be distributed in accordance with the priority rules of this law.

154. The law should provide that distribution of the proceeds realized by a judicial disposition or other officially administered enforcement process is to be made pursuant to the general rules of the State governing execution proceedings, but in accordance with the priority rules of this law.

155. The law should provide that, unless otherwise agreed, the debtor and any other person that owes payment of the secured obligation are liable for any shortfall still owing after application of the net proceeds of enforcement to the secured obligation.

Right of prior-ranking secured creditor to take over enforcement

156. The law should provide that, where a secured creditor or a judgement creditor has commenced enforcement, a secured creditor whose security right has priority as against that of the enforcing secured creditor or the enforcing judgement creditor is entitled to take control of the enforcement process at any time before final disposition, acceptance or collection of an encumbered asset. The right to take control includes the right to enforce by any method available under this law.

Rights acquired through judicial disposition

157. The law should provide that, if a secured creditor disposes of an encumbered asset through a judicial or other officially administered process, the rights acquired by the transferee are determined by the general rules of the State governing execution proceedings.

Rights acquired through extrajudicial disposition

158. The law should provide that, if a secured creditor sells or otherwise disposes of an encumbered asset without applying to a court or other authority, in accordance with this

law, a person that acquires the grantor's right in the asset takes the asset subject to rights that have priority as against the security right of the enforcing secured creditor, but free of rights of the enforcing secured creditor and any competing claimant whose right has a lower priority than that of the enforcing secured creditor. The same rule applies to rights in an encumbered asset acquired by a secured creditor that has accepted the asset in total or partial satisfaction of the secured obligation.

159. The law should provide that, if a secured creditor leases or licenses an encumbered asset without applying to a court or other authority, in accordance with the law, a lessee or licensee is entitled to the benefit of the lease or licence during the term thereof, except as against rights that have priority as against the security right of the enforcing secured creditor.

160. The law should provide that if the secured creditor sells or otherwise disposes of, leases or licenses the encumbered asset not in accordance with the law, a good faith acquirer, lessee or licensee of the encumbered asset acquires the rights or benefits described in recommendations 158 and 159.

Intersection of movable and immovable property enforcement regimes

161. The law should provide that:

(a) The secured creditor may elect to enforce a security right in an attachment to immovable property in accordance with this law or the law governing enforcement of encumbrances in immovable property; and

(b) If an obligation is secured by both movable and immovable property of a grantor, the secured creditor may elect to enforce:

(i) The security right in the movable property under this law and the encumbrance in the immovable property under the law governing enforcement of encumbrances in immovable property; or

(ii) Both rights under the law governing enforcement of encumbrances in immovable property.

B. Asset-specific recommendations

Application of the chapter on post-default rights to outright transfers of receivables

162. The law should provide that the provisions of the law on post-default rights do not apply to the collection or other enforcement of a receivable transferred by an outright transfer with the exception of:

(a) Recommendation 128 in the case of an outright transfer with recourse; and

(b) Recommendations 163 and 164.

Enforcement of a security right in a receivable

163. The law should provide that, in the case of a receivable transferred by an outright transfer, the assignee has the right to collect or otherwise enforce the receivable. In the case of a receivable transferred by way of security, the assignee is entitled, subject to recommendations 114-120, to collect or otherwise enforce the receivable after default, or before default with the agreement of the assignor.

164. The law should provide that the assignee's right to collect or otherwise enforce a receivable includes the right to collect or otherwise enforce any personal or property right that secures payment of the receivable.

Enforcement of a security right in a negotiable instrument

165. The law should provide that after default, or before default with the agreement of the grantor, the secured creditor is entitled, subject to recommendation 121, to collect or otherwise enforce a negotiable instrument that is an encumbered asset against a person obligated on that instrument.

166. The law should provide that the secured creditor's right to collect or otherwise enforce a negotiable instrument includes the right to collect or otherwise enforce any personal or property right that secures payment of the negotiable instrument.

Enforcement of a security right in a right to payment of funds credited to a bank account

167. The law should provide that after default, or before default with the agreement of the grantor, a secured creditor with a security right in a right to payment of funds credited to a bank account is entitled, subject to recommendations 122 and 123, to collect or otherwise enforce its right to payment of the funds.

168. The law should provide that a secured creditor that has control is entitled, subject to recommendations 122 and 123, to enforce its security right without having to apply to a court or other authority.

169. The law should provide that a secured creditor that does not have control is entitled, subject to recommendations 122 and 123, to collect or otherwise enforce the security right against the depositary bank only pursuant to a court order, unless the depositary bank agrees otherwise.

Enforcement of a security right in proceeds under an independent undertaking

170. The law should provide that after default, or before default with the agreement of the grantor, a secured creditor with a security right in proceeds under an independent undertaking is entitled, subject to recommendations 124-126, to collect or otherwise enforce its right in the proceeds under the independent undertaking.

Enforcement of a security right in a negotiable document or goods covered by a negotiable document

171. The law should provide that after default, or before default with the agreement of the grantor, the secured creditor is entitled, subject to recommendation 127, to enforce a security right in a negotiable document against the issuer or any other person obligated on the negotiable document.

Enforcement of a security right in an attachment to immovable property

172. The law should provide that a secured creditor with a security right in an attachment to immovable property is entitled to enforce its security right only if it has priority as against competing rights in the immovable property. A creditor with a competing right in immovable property that has lower priority ranking is entitled to pay off the obligation secured by the security right of the enforcing secured creditor in the attachment. The enforcing secured creditor is liable for any damage to the

immovable property caused by the act of removal other than any diminution in its value attributable solely to the absence of the attachment.

XI. Insolvency

A. *UNCITRAL Legislative Guide on Insolvency Law*:¹ definitions and recommendations

Definitions

12. (b) “Assets of the debtor”: property, rights and interests of the debtor, including rights and interests in property, whether or not in the possession of the debtor, tangible or intangible, movable or immovable, including the debtor’s interests in encumbered assets or in third-party-owned assets;

12. (r) “Financial contract”: any spot, forward, future, option or swap transaction involving interest rates, commodities, currencies, equities, bonds, indices or any other financial instrument, any repurchase or securities lending transaction, and any other transaction similar to any transaction referred to above entered into in financial markets and any combination of the transactions mentioned above;

12. (x) “*Lex fori concursus*”: the law of the State in which the insolvency proceedings are commenced;

12. (y) “*Lex rei sitae*”: the law of the State in which the asset is situated;

12. (z) “Netting”: the setting-off of monetary or non-monetary obligations under financial contracts;

12. (aa) “Netting agreement”: a form of financial contract between two or more parties that provides for one or more of the following:

(i) The net settlement of payments due in the same currency on the same date whether by novation or otherwise;

(ii) Upon the insolvency or other default by a party, the termination of all outstanding transactions at their replacement or fair market values, conversion of such sums into a single currency and netting into a single payment by one party to the other; or

(iii) The set-off of amounts calculated as set forth in subparagraph (ii) of this definition under two or more netting agreements.²

12. (dd) “Party in interest”: any party whose rights, obligations or interests are affected by insolvency proceedings or particular matters in the insolvency proceedings, including the debtor, the insolvency representative, a creditor, an equity holder, a creditor committee, a government authority or any other person so affected. It is not intended that persons with remote or diffuse interests affected by the insolvency proceedings would be considered to be a party in interest;

12. (ff) “Preference”: a transaction which results in a creditor obtaining an advantage or irregular payment;

¹ United Nations publication, E.05.V.10.

² United Nations Convention on the Assignment of Receivables in International Trade (United Nations publication, Sales No. E.04.V.14), article 5, subparagraph (1).

12. (gg) “Priority”: the right of a claim to rank ahead of another claim where that right arises by operation of law;
12. (hh) “Priority claim”: a claim that will be paid before payment of general unsecured creditors;
12. (ii) “Protection of value”: measures directed at maintaining the economic value of encumbered assets and third-party-owned assets during the insolvency proceedings (in some jurisdictions referred to as “adequate protection”). Protection may be provided by way of cash payments, provision of security interests over alternative or additional assets or by other means as determined by a court to provide the necessary protection;
12. (pp) “Security interest”: a right in an asset to secure payment or other performance of one or more obligations.

Recommendations

Key objectives of an efficient and effective insolvency law

(1) In order to establish and develop an effective insolvency law, the following key objectives should be considered:

- (a) Provide certainty in the market to promote economic stability and growth;
- (b) Maximize value of assets;
- (c) Strike a balance between liquidation and reorganization;
- (d) Ensure equitable treatment of similarly situated creditors;
- (e) Provide for timely, efficient and impartial resolution of insolvency;
- (f) Preserve the insolvency estate to allow equitable distribution to creditors;
- (g) Ensure a transparent and predictable insolvency law that contains incentives for gathering and dispensing information; and
- (h) Recognize existing creditors’ rights and establish clear rules for ranking of priority claims.

(4) The insolvency law should specify that where a security interest is effective and enforceable under law other than the insolvency law, it will be recognized in insolvency proceedings as effective and enforceable.

(7) In order to design an effective and efficient insolvency law, the following common features should be considered:

(a)-(d) ...

(e) Protection of the insolvency estate against the actions of creditors, the debtor itself and the insolvency representative, and where the protective measures apply to secured creditors, the manner in which the economic value of the security interest will be protected during the insolvency proceedings;

(f)-(r) ...

Law applicable to validity and effectiveness of rights and claims

(30) The law applicable to the validity and effectiveness of rights and claims existing at the time of the commencement of insolvency proceedings should be

determined by the private international law rules of the State in which insolvency proceedings are commenced.

Law applicable in insolvency proceedings: lex fori concursus

(31) The insolvency law of the State in which insolvency proceedings are commenced (*lex fori concursus*) should apply to all aspects of the commencement, conduct, administration and conclusion of those insolvency proceedings and their effects. These may include, for example:

- (a)-(i) ...
- (j) Treatment of secured creditors;
- (k)-(n) ...
- (o) Ranking of claims;
- (p)-(s) ...

Assets constituting the insolvency estate

(35) The insolvency law should specify that the estate should include:

- (a) Assets of the debtor,³ including the debtor's interest in encumbered assets and in third-party-owned assets;
- (b) Assets acquired after commencement of the insolvency proceedings; and
- (c) ...

*Provisional measures*⁴

(39) The insolvency law should specify that the court may grant relief of a provisional nature, at the request of the debtor, creditors or third parties, where relief is needed to protect and preserve the value of the assets of the debtor⁵ or the interests of creditors, between the time an application to commence insolvency proceedings is made and commencement of the proceedings,⁶ including:

- (a) Staying execution against the assets of the debtor, including actions to make security interests effective against third parties and enforcement of security interests;
- (b)-(d) ...

³ Ownership of assets would be determined by reference to the relevant applicable law, where the term "assets" is defined broadly to include property, rights and interest of the debtor, including the debtor's rights and interests in third-party-owned assets.

⁴ These articles follow the corresponding articles of the UNCITRAL Model Law on Cross-Border Insolvency, see article 19 (see annex III of the *UNCITRAL Insolvency Guide*).

⁵ The reference to assets in paragraphs (a)-(c) is intended to be limited to assets that would be part of the insolvency estate once proceedings commence.

⁶ The insolvency law should indicate the time of effect of an order for provisional measures, for example, at the time of the making of the order, retrospectively from the commencement of the day on which the order is made or some other specified time (see para. 44 of the *UNCITRAL Insolvency Guide*).

Measures applicable on commencement

(46) The insolvency law should specify that, on commencement of insolvency proceedings:⁷

(a) Commencement or continuation of individual actions or proceedings⁸ concerning the assets of the debtor, and the rights, obligations or liabilities of the debtor are stayed;

(b) Actions to make security interests effective against third parties and to enforce security interests are stayed;⁹

(c) Execution or other enforcement against the assets of the estate is stayed;

(d) The right of a counterparty to terminate any contract with the debtor is suspended;¹⁰ and

(e) The right to transfer, encumber or otherwise dispose of any assets of the estate is suspended.¹¹

Duration of measures automatically applicable on commencement

(49) The insolvency law should specify that the measures applicable on commencement of insolvency proceedings remain effective throughout those proceedings until:

(a) The court grants relief from the measures;¹²

(b) In reorganization proceedings, a reorganization plan becomes effective;¹³
or

⁷ These measures would generally be effective as at the time of the making of the order for commencement.

⁸ See UNCITRAL Model Law on Cross-Border Insolvency, article 20 (see annex III of the *UNCITRAL Insolvency Guide*). It is intended that the individual actions referred to in subparagraph (a) of recommendation 46 would also cover actions before an arbitral tribunal. It may not always be possible, however, to implement the automatic stay of arbitral proceedings, such as where the arbitration does not take place in the State but in a foreign location.

⁹ If law other than the insolvency law permits those security interests to be made effective within certain specified time periods, it is desirable that the insolvency law recognize those periods and permit the interest to be made effective where the commencement of insolvency proceedings occurs before expiry of the specified time period. Where law other than the insolvency law does not include such time periods, the stay applicable on commencement would operate to prevent the security interest being made effective. (For further discussion see para. 32 of the *UNCITRAL Insolvency Guide*, and the UNCITRAL Legislative Guide on Secured Transactions.)

¹⁰ See *UNCITRAL Insolvency Guide*, paragraphs 114-119. This recommendation is not intended to preclude the termination of a contract if the contract provides for a termination date that happens to fall after the commencement of insolvency proceedings.

¹¹ The limitation on the right to transfer, encumber or otherwise dispose of assets of the estate may be subject to an exception in those cases where the continued operation of the business by the debtor is authorized and the debtor can transfer, encumber or otherwise dispose of assets in the ordinary course of business.

¹² Relief should be granted on the grounds included in recommendation 51 of the *UNCITRAL Insolvency Guide*.

¹³ A plan may become effective upon approval by creditors or following confirmation by the court, depending upon the requirements of the insolvency law (see *UNCITRAL Insolvency Guide*, chap. IV, paras. 54 and following).

(c) In the case of secured creditors in liquidation proceedings, a fixed time period specified in the law expires,¹⁴ unless it is extended by the court for a further period on a showing that:

- (i) An extension is necessary to maximize the value of assets for the benefit of creditors; and
- (ii) The secured creditor will be protected against diminution of the value of the encumbered asset in which it has a security interest.

Protection from diminution of the value of encumbered assets

(50) The insolvency law should specify that, upon application to the court, a secured creditor should be entitled to protection of the value of the asset in which it has a security interest. The court may grant appropriate measures of protection that may include:

- (a) Cash payments by the estate;
- (b) Provision of additional security interests; or
- (c) Such other means as the court determines.

Relief from measures applicable on commencement

(51) The insolvency law should specify that a secured creditor may request the court to grant relief from the measures applicable on commencement of insolvency proceedings on grounds that may include that:

- (a) The encumbered asset is not necessary to a prospective reorganization or sale of the debtor's business;
- (b) The value of the encumbered asset is diminishing as a result of the commencement of insolvency proceedings and the secured creditor is not protected against that diminution of value; and
- (c) In reorganization, a plan is not approved within any applicable time limits.

Power to use and dispose of assets of the estate

(52) The insolvency law should permit:

- (a) The use and disposal of assets of the estate (including encumbered assets) in the ordinary course of business, except cash proceeds; and
- (b) The use and disposal of assets of the estate (including encumbered assets) outside the ordinary course of business, subject to the requirements of recommendations 55 and 58.

Further encumbrance of encumbered assets

(53) The insolvency law should specify that encumbered assets may be further encumbered, subject to the requirements of recommendations 65-67.

¹⁴ It is intended that the stay should apply to secured creditors only for a short period of time, such as between 30 and 60 days, and that the insolvency law should clearly state the period of application.

Use of third-party-owned assets

(54) The insolvency law should specify that the insolvency representative may use an asset owned by a third party and in the possession of the debtor provided specified conditions are satisfied, including:

- (a) The interests of the third party will be protected against diminution in the value of the asset; and
- (b) The costs under the contract of continued performance of the contract and use of the asset will be paid as an administrative expense.

Ability to sell assets of the estate free and clear of encumbrances and other interests

(58) The insolvency law should permit the insolvency representative to sell assets that are encumbered or subject to other interest free and clear of that encumbrance and other interest, outside the ordinary course of business, provided that:

- (a) The insolvency representative gives notice of the proposed sale to the holders of encumbrances or other interests;
- (b) The holder is given the opportunity to be heard by the court where they object to the proposed sale;
- (c) Relief from the stay has not been granted; and
- (d) The priority of interests in the proceeds of sale of the asset is preserved.

Use of cash proceeds

(59) The insolvency law should permit the insolvency representative to use and dispose of cash proceeds if:

- (a) The secured creditor with a security interest in those cash proceeds consents to such use or disposal; or
- (b) The secured creditor was given notice of the proposed use or disposal and an opportunity to be heard by the court; and
- (c) The interests of the secured creditor will be protected against diminution in the value of the cash proceeds.

Burdensome assets

(62) The insolvency law should permit the insolvency representative to determine the treatment of any asset that is burdensome to the estate. In particular, the insolvency law may permit the insolvency representative to relinquish a burdensome asset following the provision of notice to creditors and the opportunity for creditors to object to the proposed action, except that where a secured claim exceeds the value of the encumbered asset, and the asset is not required for a reorganization or sale of the business as a going concern, the insolvency law may permit the insolvency representative to relinquish the asset to the secured creditor without notice to other creditors.

Security for post-commencement finance

(65) The insolvency law should enable a security interest to be granted for repayment of post-commencement finance, including a security interest on an unencumbered asset, including an after-acquired asset, or a junior or lower priority security interest on an already encumbered asset of the estate.

(66) The law¹⁵ should specify that a security interest over the assets of the estate to secure post-commencement finance does not have priority ahead of any existing security interest over the same assets unless the insolvency representative obtains the agreement of the existing secured creditor(s) or follows the procedure in recommendation 67.

(67) The insolvency law should specify that, where the existing secured creditor does not agree, the court may authorize the creation of a security interest having priority over pre-existing security interests provided specified conditions are satisfied, including:

- (a) The existing secured creditor was given the opportunity to be heard by the court;
- (b) The debtor can prove that it cannot obtain the finance in any other way; and
- (c) The interests of the existing secured creditor will be protected.¹⁶

Effect of conversion on post-commencement finance

(68) The insolvency law should specify that where reorganization proceedings are converted to liquidation, any priority accorded to post-commencement finance in the reorganization should continue to be recognized in the liquidation.¹⁷

Automatic termination and acceleration clauses

(70) The insolvency law should specify that any contract clause that automatically terminates or accelerates a contract upon the occurrence of any of the following events is unenforceable as against the insolvency representative and the debtor:

- (a) An application for commencement, or commencement, of insolvency proceedings;
- (b) The appointment of an insolvency representative.¹⁸

(71) The insolvency law should specify the contracts that are exempt from the operation of recommendation 70, such as financial contracts, or subject to special rules, such as labour contracts.

Continuation or rejection

(72) The insolvency law should specify that the insolvency representative may decide to continue the performance of a contract of which it is aware where

¹⁵ This rule may be in a law other than the insolvency law, in which case the insolvency law should note the existence of the provision.

¹⁶ See *UNCITRAL Insolvency Guide*, paragraphs 63-69.

¹⁷ The same order of priority may not necessarily be recognized. For example, post-commencement finance may rank in priority after administrative claims relating to the costs of the liquidation.

¹⁸ This recommendation would apply only to those contracts where such clauses could be overridden (see commentary of the *UNCITRAL Insolvency Guide*, paras. 143-145, on exceptions) and is not intended to be exclusive, but to establish a minimum: the court should be able to examine other contractual clauses that would have the effect of terminating a contract on the occurrence of similar events.

continuation would be beneficial to the insolvency estate.¹⁹ The insolvency law should specify that:

- (a) The right to continue applies to the contract as a whole; and
- (b) The effect of continuation is that all terms of the contract are enforceable.

Performance prior to continuation or rejection

(80) The insolvency law should specify that the insolvency representative may accept or require performance from the counterparty to a contract prior to continuation or rejection of the contract. Claims of the counterparty arising from performance accepted or required by the insolvency representative prior to continuation or rejection of the contract should be payable as an administrative expense:

- (a) If the counterparty has performed the contract the amount of the administrative expense should be the contractual price of the performance; or
- (b) If the insolvency representative uses assets owned by a third party that are in the possession of the debtor subject to contract, that party should be protected against diminution of the value of those assets and have an administrative claim in accordance with subparagraph (a).

Avoidance of security interests

(88) The insolvency law should specify that notwithstanding that a security interest is effective and enforceable under law other than the insolvency law, it may be subject to the avoidance provisions of insolvency law on the same grounds as other transactions.

Financial contracts

(103) Once the financial contracts of the debtor have been terminated, the insolvency law should permit counterparties to enforce and apply their security interest to obligations arising out of financial contracts. Financial contracts should be exempt from any stay under the insolvency law that applies to the enforcement of a security interest.

Participation by creditors

(126) The insolvency law should specify that creditors, both secured and unsecured, are entitled to participate in insolvency proceedings and identify what that participation may involve in terms of the functions that may be performed.

¹⁹ Provided the automatic stay on commencement of proceedings applies to prevent termination (pursuant to an automatic termination clause) of contracts with the debtor, all contracts should remain in place to enable the insolvency representative to consider the possibility of continuation, unless the contract has a termination date that happens to fall after the commencement of insolvency proceedings.

Right to be heard and to request review

(137) The insolvency law should specify that a party in interest has a right to be heard on any issue in the insolvency proceedings that affects its rights, obligations or interests. For example, a party in interest should be entitled:

- (a) To object to any act that requires court approval;
- (b) To request review by the court of any act for which court approval was not required or not requested; and
- (c) To request any relief available to it in insolvency proceedings.

Right of appeal²⁰

(138) The insolvency law should specify that a party in interest may appeal from any order of the court in the insolvency proceedings that affects its rights, obligations or interests.

*Reorganization plan**Approval by classes*

(150) Where voting on approval of the plan is conducted by reference to classes, the insolvency law should specify how the vote achieved in each class would be treated for the purposes of approval of the plan. Different approaches may be taken, including requiring approval by all classes or approval by a specified majority of the classes, but at least one class of creditors whose rights are modified or affected by the plan must approve the plan.

(151) Where the insolvency law does not require a plan to be approved by all classes, the insolvency law should address the treatment of those classes which do not vote to approve a plan that is otherwise approved by the requisite classes. That treatment should be consistent with the grounds set forth in recommendation 152.

Confirmation of an approved plan

(152) Where the insolvency law requires court confirmation of an approved plan, the insolvency law should require the court to confirm the plan if the following conditions are satisfied:

- (a) The requisite approvals have been obtained and the approval process was properly conducted;
- (b) Creditors will receive at least as much under the plan as they would have received in liquidation, unless they have specifically agreed to receive lesser treatment;
- (c) The plan does not contain provisions contrary to law;
- (d) Administrative claims and expenses will be paid in full, except to the extent that the holder of the claim or expense agrees to different treatment; and

²⁰ In accordance with the key objectives, the insolvency law should provide that appeals in insolvency proceedings should not have suspensive effect unless otherwise determined by the court, in order to ensure that insolvency can be addressed and resolved in an orderly, quick and efficient manner without undue disruption. Time limits for appeal should be in accordance with generally applicable law, but in insolvency need to be shorter than otherwise to avoid interrupting insolvency proceedings.

(e) Except to the extent that affected classes of creditors have agreed otherwise, if a class of creditors has voted against the plan, that class shall receive under the plan full recognition of its ranking under the insolvency law and the distribution to that class under the plan should conform to that ranking.

Challenges to approval (where there is no requirement for confirmation)

(153) Where a plan becomes binding on approval by creditors, without requiring confirmation by the court, the insolvency law should permit parties in interest, including the debtor, to challenge the approval of the plan. The insolvency law should specify criteria against which a challenge can be assessed, which should include:

- (a) Whether the grounds set forth in recommendation 152 are satisfied; and
- (b) Fraud, in which case the requirements of recommendation 154 should apply.

Secured claims

(172) The insolvency law should specify whether secured creditors are required to submit claims.

Valuation of secured claims

(179) The insolvency law should provide that the insolvency representative may determine the portion of a secured creditor's claim that is secured and the portion that is unsecured by valuing the encumbered asset.

Priority of claims

Secured claims

(188) The insolvency law should specify that secured claims should be satisfied from the encumbered asset in liquidation or pursuant to a reorganization plan, subject to claims that are superior in priority to the secured claim, if any. Claims superior in priority to secured claims should be minimized and clearly set forth in the insolvency law. To the extent that the value of the encumbered asset is insufficient to satisfy the secured creditor's claim, the secured creditor may participate as an ordinary unsecured creditor.

B. Additional insolvency recommendations of the guide on secured transactions

Law applicable to security rights in insolvency proceedings

173. The insolvency law should provide, as set out in recommendation 30 of the *UNCITRAL Legislative Guide on Insolvency Law*, that, notwithstanding the commencement of insolvency proceedings, the creation, effectiveness against third parties, priority and enforcement of a security right are governed by the law that would be applicable in the absence of the insolvency proceedings. However, this recommendation does not affect the application of the insolvency law of the State in which insolvency proceedings are commenced (*lex fori concursus*) on matters such as avoidance, treatment of secured creditors, ranking of claims or distribution of proceeds, as provided in recommendation 31 of the *UNCITRAL Insolvency Guide*.

[Note to the Commission: The Commission may wish to note that recommendation 174 is included in this chapter and not in the chapter on acquisition financing rights to ensure that all insolvency-related issues are addressed in the chapter on insolvency. There are three versions of recommendation 174, one for the unitary approach and two for the non-unitary approach (one with and the other without functional equivalence.)]

Assets subject to an acquisition security right (unitary approach)

174. The insolvency law should provide that, in the case of insolvency proceedings with respect to the debtor, assets subject to an acquisition security right are treated in the same way as assets subject to security rights generally.

Assets subject to an acquisition financing right (non unitary approach)

Alternative A

174. The insolvency law should provide that, in the case of insolvency proceedings with respect to the debtor, assets subject to an acquisition financing right are treated in the same way as assets subject to security rights generally.

Alternative B

174. The insolvency law should provide that, in the case of insolvency proceedings with respect to the debtor, assets subject to an acquisition financing right are treated as third-party-owned assets as provided in the *UNCITRAL Insolvency Guide*.

Receivables subject to an outright transfer before commencement

175. The insolvency law should provide that, if the debtor makes an outright transfer of a receivable before the commencement of the debtor's insolvency proceedings, the receivable is treated in the same way that the insolvency law would treat an asset that has been the subject of an outright transfer by the debtor before commencement. Like a pre-commencement transfer by the debtor of any other asset, the outright transfer of the receivable would be subject to any relevant avoidance rules of the insolvency law.

Assets acquired after commencement

176. Except as provided in recommendation 177, the insolvency law should provide that an asset of the estate acquired after the commencement of insolvency proceedings is not subject to a security right created by the debtor before the commencement of the insolvency proceeding.

177. The insolvency law should provide that an asset of the estate acquired after the commencement of insolvency proceedings with respect to the debtor is subject to a security right created by the debtor before the commencement of the insolvency proceedings to the extent the asset is proceeds (whether cash or non-cash) of an encumbered asset that was an asset of the debtor before commencement.

Automatic termination clauses in insolvency proceedings

178. If the insolvency law provides that a contract clause that, upon the commencement of insolvency proceedings or the occurrence of another insolvency-related event, automatically terminates any obligation under a contract or accelerates the maturity of any obligation under a contract, is unenforceable as

against the insolvency representative or the debtor, the insolvency law should also provide that such provision does not render unenforceable or invalidate a contract clause relieving a creditor from an obligation to make a loan or otherwise extend credit or other financial accommodations to the benefit of the debtor.

Third-party effectiveness of a security right in insolvency proceedings

179. The insolvency law should provide that, if a security right is effective against third parties at the time of the commencement of insolvency proceedings, action may be taken after the commencement of the insolvency proceedings to continue, preserve or maintain the effectiveness against third parties of the security right to the extent and in the manner permitted under the secured transactions law.

Priority of a security right in insolvency proceedings

180. The insolvency law should provide that, if a security right is entitled to priority under law other than insolvency law, the priority continues unimpaired in insolvency proceedings except if, pursuant to insolvency law, another claim is given priority. Such exceptions should be minimal and clearly set forth in the insolvency law. This recommendation is subject to recommendation 188 of the *UNCITRAL Insolvency Guide*.

Effect of a subordination agreement in insolvency proceedings

181. The insolvency law should provide that, if a holder of a security right in an asset of the insolvency estate subordinates its priority unilaterally or by agreement in favour of any existing or future competing claimant, such subordination is binding in insolvency proceedings with respect to the debtor.

Costs and expenses of maintaining value of the encumbered asset in insolvency proceedings

182. The insolvency law should provide that the insolvency representative is entitled to recover on a first priority basis from the value of an encumbered asset reasonable costs and expenses (including overhead as appropriate) incurred by the insolvency representative in maintaining, preserving or increasing the value of the encumbered asset for the benefit of the secured creditor.

Valuation of encumbered assets in reorganization proceedings

183. The insolvency law should provide that, in determining the liquidation value of encumbered assets in reorganization proceedings, consideration should be given to the use of those assets and the purpose of the valuation. The liquidation value of those assets may be based on their value as part of a going concern.

XII. Acquisition financing rights

[Note to the Commission: The Commission may wish to note that this chapter contains two parallel sets of recommendations, one set for States that wish to enact a unitary approach to security rights and an alternative set for States that wish to adopt a non-unitary approach. To maintain a parallel numbering with the non-unitary approach recommendations, certain recommendations in the context of the

unitary approach were retained although they repeat general rules and may thus be redundant (see recommendations 185, 186, 188 and 197).]

A. Unitary approach to acquisition security rights

Purpose

The purpose of the provisions of the law on acquisition security rights is:

- (a) To recognize the importance and facilitate the use of acquisition financing as a source of affordable credit, in particular for small- and medium-sized businesses;
- (b) To provide for equal treatment of all providers of acquisition financing; and
- (c) To facilitate secured transactions in general by creating transparency with respect to acquisition security rights.

Equivalence of an acquisition security right to a security right

184. The law should provide that an acquisition security right is a security right under this law. Thus, the provisions of this law governing security rights generally, as supplemented by the specific provisions of this law on acquisition security rights, should apply equally to all acquisition security rights.

Creation of an acquisition security right

185. The law should provide that an acquisition security right is created in the same way as a security right under recommendations 12-14.

Effectiveness of an acquisition security right against third parties

186. Except as otherwise provided in recommendation 187, the law should provide that an acquisition security right becomes effective against third parties in the same manner as provided in the provisions of this law governing third-party effectiveness with respect to security rights in the same type of encumbered asset.

Exception to the requirement of registration with respect to an acquisition security right in consumer goods

187. The law should provide that an acquisition security right in consumer goods is made effective against third parties upon its creation.

Applicability of general priority rules to acquisition security rights

188. The law should provide that, except as provided in recommendations 189-195, 198 and 199, the general provisions of this law on priority apply to acquisition security rights.

Priority of an acquisition security right in tangible property other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same tangible property

189. The law should provide that, except as provided in recommendation 193, an acquisition security right in tangible property other than inventory or consumer

goods has priority as against a non-acquisition security right in the same tangible property created by the grantor (even if a notice of that security right was registered in the general security rights registry before registration of a notice of the acquisition security right), provided that:

(a) The acquisition secured creditor retains possession of the tangible property; or

(b) A notice relating to the acquisition security right is registered not later than [specify a short time period, such as 20 or 30 days] after the delivery of the tangible property to the grantor.

Priority of an acquisition security right in consumer goods as against an earlier registered non-acquisition security right in the same goods

190. The law should provide that, except as provided in recommendation 193, an acquisition security right in consumer goods has priority as against a non-acquisition security right in the same goods created by the grantor.

Priority between competing acquisition security rights in the same encumbered assets

191. The law should provide that an acquisition security right of a supplier of encumbered assets that has been made effective against third parties within the period specified in recommendation 189, subparagraph (b), has priority as against any other acquisition security right in the same encumbered assets.

Priority of an acquisition security right in inventory as against an earlier registered non-acquisition security right in inventory of the same kind

192. The law should provide that, except as provided in recommendation 193, an acquisition security right in inventory of the grantor has priority as against a non-acquisition security right in the grantor's inventory of the same kind (even if that security right became effective against third parties before the acquisition security right became effective against third parties), provided that:

(a) The acquisition secured creditor retains possession of the inventory; or

(b) Before delivery of the inventory to the grantor:

(i) A notice relating to the acquisition security right is registered in the general security rights registry; and

(ii) The holder of the earlier registered security right is notified in writing by the acquisition secured creditor that the acquisition secured creditor intends to enter into one or more acquisition financing transactions with respect to the inventory described in the notification. The notification should describe the inventory sufficiently to inform the holder of the earlier-registered security right of the inventory, the acquisition of which is being financed.

193. The law should provide that the priority provided under the rule in recommendation 189, 190 or 192 does not override the priority under recommendation 83 (specialized registration).

Priority of an acquisition security right as against the right of a judgement creditor

194. The law should provide that, notwithstanding recommendation 90, an acquisition security right that is made effective against third parties within the period provided in recommendation 189, subparagraph (b), has priority as against the rights of an unsecured creditor that, before the security right was made effective against third parties, under law other than this law:

(a) Obtained a judgement or provisional court order against a grantor after the creation of the acquisition security right; and

(b) Took the steps necessary to acquire rights in encumbered assets of the grantor by reason of the judgement or provisional court order.

Priority of an acquisition security right in an attachment to immovable property as against an earlier registered encumbrance in the immovable property

195. The law should provide that an acquisition security right in tangible property that is to become an attachment to immovable property, registered in the immovable property registry within [specify a short time period, such as 20-30 days] days after the tangible property became an attachment, has priority as against an existing encumbrance in the related immovable property (other than an encumbrance securing a loan financing the construction of the immovable property).

One notification or notice sufficient for one or more acquisition financing transactions between the same parties

196. The law should provide that a single notification to holders of earlier registered non-acquisition security rights pursuant to recommendation 192, subparagraph (b)(ii), may cover encumbered assets acquired through one or more acquisition financing transactions between the same parties, without those transactions having to be identified in the notification. However, the notification should be effective only for acquisition security rights in tangible property delivered within a period of [specify time, such as five years] years after the notification is given.

197. The law should provide that, as provided in recommendation 66, registration of a single notice is sufficient to ensure the third-party effectiveness of an acquisition security right created or to be created by all acquisition financing transactions entered into between the same parties to the extent they cover tangible property that falls within the description contained in the notice.

Priority of an acquisition security right in proceeds of tangible property other than inventory or consumer goods

198. The law should provide that the priority provided under recommendation 189 for an acquisition security right in tangible property other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same tangible property extends to the proceeds of such property (including proceeds of proceeds).

Priority of an acquisition security right in proceeds of inventory

199. The law should provide that the priority provided under recommendation 192 for an acquisition security right in inventory as against an earlier registered security right in inventory of the same kind extends to the proceeds of such inventory other than receivables [, negotiable instruments, funds credited in a bank account and the obligation to pay under an independent undertaking] (including proceeds of proceeds). However, the acquisition secured creditor must notify earlier registered financiers with a security right in assets of the same kind as the proceeds before the time the proceeds arise.

[Note to the Commission: The Commission may wish to note that the priority conflict addressed here is between an inventory acquisition financier claiming a right in the receivables as proceeds of inventory and a receivables financier claiming the receivables as original encumbered assets (if the receivable is paid with a cheque, both are claiming a right in the cheque as proceeds). The Commission may wish to consider that, for the same policy reasons receivables are excluded from the super-priority in this recommendation, other proceeds of inventory consisting of rights to payment such as negotiable instruments, funds credited in a bank account and obligations to pay under an independent undertaking, should also be excluded. If the Commission decides to exclude all those types of proceeds, it may wish to consider whether this recommendation should be reformulated to provide that the super-priority of an acquisition security right does not extend to proceeds of inventory. This result would be in line with the approach taken in most legal systems. In that case, the Commission may wish to delete the second sentence of this recommendation.]

Enforcement of an acquisition security right

200. The law should provide that the provisions of the law on post-default rights apply to the enforcement of an acquisition security right.

Law applicable to acquisition security rights

201. The law should provide that the provisions of this law on private international law apply to acquisition security rights.

B. Non-unitary approach to acquisition financing rights

Purpose (non-unitary approach)

The purpose of the provisions of the law on acquisition financing rights (including, inter alia, retention-of-title and financial leases) is:

(a) To recognize the importance and facilitate the use of acquisition financing rights as a source of affordable credit, in particular for small- and medium-sized businesses;

(b) To provide for equal treatment of all acquisition financiers in the same manner as acquisition secured creditors, and to apply to acquisition financing rights rules that produce outcomes that are functionally equivalent to the outcomes produced by an acquisition security right regime in a unitary approach; and

(c) To facilitate secured transactions in general by creating transparency with respect to acquisition financing rights.

Equivalence of an acquisition financing right to an acquisition security right

184. The rules governing different types of acquisition financing rights should bring about economic results that are functionally equivalent to each other and, as more fully provided in recommendations 185-201, these economic results should be functionally equivalent to those brought about by the rules applicable to acquisition security rights.

Creation of an acquisition financing right

185. The law should provide that an acquisition financing right is created by an agreement between the acquisition financing transferee and the acquisition financier, which, before the delivery of the tangible property to the acquisition financing transferee, is concluded in or evidenced by a writing indicating the intent of the acquisition financier to have an acquisition financing right.

185bis. The law should provide that, notwithstanding the existence of an acquisition financing right, an acquisition financing transferee has the power to grant a security right in the tangible property subject to the acquisition financing right.

Effectiveness of an acquisition financing right against third parties

186. Except as otherwise provided in recommendation 193, the law should provide that an acquisition financing right is made effective against third parties by registration of a notice relating to the right in the general security rights registry or any appropriate specialized registry in the same manner as provided in the provisions of this law governing third-party effectiveness with respect to security rights in the same type of encumbered asset.

Exception to the requirement of registration with respect to an acquisition financing right in consumer goods

187. The law should provide that an acquisition financing right relating to consumer goods is effective against third parties upon its creation.

Applicability of general priority rules to acquisition financing rights

188. The law should provide that, except as provided in recommendations 189-195, 198 and 199, the general priority rules in recommendations [to be specified] apply not only under the unitary approach but also apply to acquisition financing rights under the non-unitary approach.

Priority of an acquisition financing right in tangible property other than inventory or consumer goods as against an earlier registered non-acquisition security right in the same tangible property

189. The law should provide that, except as provided in recommendation 193, an acquisition financing right in tangible property other than inventory or consumer goods has priority as against a non-acquisition security right in the same tangible property created by the acquisition financing transferee (even if a notice relating to that security right was registered in the general security rights registry before registration of a notice relating to the acquisition financing right), provided that:

- (a) The acquisition financier retains possession of the tangible property; or

(b) A notice relating to the acquisition financing right is registered not later than [specify a short time period, such as 20 or 30 days] days after delivery of the tangible property to the acquisition financing transferee.

Priority of an acquisition financing right in consumer goods as against an earlier registered non-acquisition security right in the same goods

190. The law should provide that, except as provided in recommendation 193, an acquisition financing right in consumer goods has priority as against a non-acquisition security right in the same goods created by the acquisition financing transferee.

Priority between competing acquisition financing rights in the same encumbered assets

191. The law should provide that an acquisition financing right or acquisition security right of a supplier of tangible property that has been made effective against third parties within the period specified in recommendation 189, subparagraph (b), has priority as against any other acquisition financing right or acquisition security right.

[Note to the Commission: The Commission may wish to note that the priority rule in this recommendation assumes that this guide contains an explicit recommendation that secured lenders that finance the acquisition of tangible property in the non-unitary system should have a super-priority as against prior general secured creditors equivalent to that enjoyed by suppliers in the non-unitary system based on their retained ownership under retention-of-title and financial lease transactions. Such a recommendation could be along the following lines:

“The law should provide that, in a non-unitary system, a lender may acquire an acquisition security right or an acquisition financing right through an assignment of the secured obligation from a supplier. If the lender acquires an acquisition security right, the rules applicable to acquisition security rights in a unitary system apply to that acquisition security right. If the lender acquires an acquisition financing right, the rules applicable to acquisition financing rights in a non-unitary system apply.”

The Commission may wish to consider whether such super-priority of acquisition secured creditors would be compatible with the concept of a non-unitary system. If incompatible, recommendation 191 should be deleted as unnecessary along with subparagraph (b) of the purpose section. If compatible, such an explicit recommendation should be added. The Commission may also wish to consider whether another recommendation enabling suppliers to take an acquisition security right should also be included. In such a case, suppliers would be treated in the same way as secured creditors and a non-unitary approach may not be necessary.]

Priority of an acquisition financing right in inventory as against an earlier registered non-acquisition security right in inventory of the same kind

192. The law should provide that, except as provided in recommendation 193, an acquisition financing right in inventory of the acquisition financing transferee has priority as against a non-acquisition security right in the acquisition financing transferee’s inventory of the same kind (even if that right became effective against third parties before the acquisition financing right was made effective against third parties), provided that:

- (a) The acquisition financier retains possession of the inventory; or

- (b) Before delivery of the inventory to the acquisition financing transferee:
 - (i) A notice relating to the acquisition financing right is registered in the general security rights registry; and
 - (ii) The holder of an earlier registered non-acquisition security right is notified in writing that the acquisition financier intends to enter into one or more acquisition financing with respect to the inventory. The notification should describe the inventory sufficiently to inform the holder of an earlier registered non-acquisition security right of the inventory, the acquisition of which is being financed.

Application of priority rules in the case of specialized registration

193. The law should provide that the priority provided under the rule in recommendation 189, 190 or 192 does not override the priority provided under recommendation 83 (specialized registration).

Priority of an acquisition financing right as against the right of a judgement creditor

194. The law should provide that, notwithstanding recommendation 90, an acquisition financing right that is made effective against third parties within the period specified in recommendation 189, subparagraph (b), has priority as against the rights of an unsecured creditor that, before the acquisition financing was made effective against third parties, under law other than this law:

- (a) Obtained a judgement against an acquisition financing transferee after the creation of the acquisition financing right; and
- (b) Took the steps necessary to acquire rights in the relevant assets of the acquisition financing transferee by reason of the judgement.

Priority of an acquisition financing right in an attachment to immovable property as against earlier registered encumbrance in the immovable property

195. The law should provide that an acquisition financing right in tangible property that is to become attachments to immovable property, registered in the immovable property registry within [specify a short time period, such as 20-30 days] days after the tangible property became attachments, has priority as against an existing encumbrance in the related immovable property (other than an encumbrance securing a loan financing the construction of the immovable property).

One notification or notice sufficient for one or more acquisition financing transactions between the same parties

196. The law should provide that a single notification to holders of earlier registered non-acquisition security rights pursuant to recommendation 192, subparagraph (b)(ii), may cover goods transferred through one or more acquisition financing transactions between the same parties and individual transactions need not be identified in the notification. However, the notification should be effective only for acquisition financing rights in tangible property delivered within a period of [specify time, such as five years] years after the notification is given.

197. The law should provide that, as provided in recommendation 66, registration of a single notice is sufficient to ensure the third-party effectiveness of an

acquisition financing right created or to be created by all acquisition financing transactions entered into between the same parties to the extent they cover tangible property that falls within the description contained in the notice.

Priority of an acquisition financing right in proceeds of tangible property other than inventory or consumer goods

198. The law should provide that the priority provided under recommendation 189 for an acquisition financing right in tangible property other than inventory or consumer goods extends to the proceeds of such property (including proceeds of proceeds).

Priority of an acquisition financing right in proceeds of inventory

199. The law should provide that the priority of an acquisition financing right in inventory provided under recommendation 192 extends to the proceeds of such inventory, other than proceeds of inventory in the form of receivables [, negotiable instruments, funds credited in a bank account and the obligation to pay under an independent undertaking] (including proceeds of proceeds). However, the acquisition financier must notify earlier-registered secured creditors with a security right in assets of the same kind as the proceeds before the proceeds arise.

Post-default rights relating to an acquisition financing right

200. The law should provide rules for the post-default enforcement of acquisition financing rights that deal with:

- (a) The manner in which the acquisition financier may obtain possession of the encumbered assets;
- (b) Whether the acquisition financier may be required to dispose of the encumbered assets and, if so, how;
- (c) Whether the acquisition financier seller may retain any surplus; and
- (d) Whether the acquisition financier may pursue the acquisition transferee for any deficiency.

200 bis. The law should provide, with respect to post-default rights relating to an acquisition financing right, that:

- (a) The same principles and objectives indicated in the provisions of the law with respect to post-default rights relating to security rights are applicable even if the rules implementing those principles and objectives in the context of acquisition financing rights differ; and
- (b) In seeking to provide for functionally equivalent results, the provisions on post-default rights relating to an acquisition financing right under a current regime be modified to produce congruity with the provisions of the law on security rights to the greatest extent possible, and any divergences in the provisions on post-default rights be permitted only to the extent necessary to preserve the coherence of the ownership regime.

200 tres. The law should provide that post-default rights relating to an acquisition security right are governed by rules that, subject to recommendation 200bis, subparagraph (b), produce results functionally equivalent to the results produced by the provisions of the law governing post-default rights relating to an acquisition financing right.

Law applicable to acquisition financing rights

201. The law should provide that the provisions of this law on private international law apply to acquisition financing rights.

XIII. Private international law^{*}**Purpose**

The purpose of private international law rules is to determine the law applicable to each of the following issues: the creation of a security right; the pre-default rights and obligations between the secured creditor and the grantor; the effectiveness of a security right against third parties; the priority of a security right as against the rights of competing claimants; and the enforcement of a security right.

A. General recommendations**Law applicable to a security right in tangible property**

202. The law should provide that, except as otherwise provided in recommendations 203 and 207, the creation, the effectiveness against third parties and the priority as against the rights of competing claimants of a security right in tangible property are governed by the law of the State in which the encumbered asset is located. However, with respect to security rights in tangible property of a type ordinarily used in more than one State, the law should provide that such issues are governed by the law of the State in which the grantor is located. [With respect to security rights in the type of tangible property mentioned in the preceding sentence that is subject to a specialized registration or title certificate system, the law should provide that such issues are governed by the law of the State under the authority of which the registry is maintained or the title certificate is issued, if the registry provides for registration of security rights or notation of security rights on the title certificate is permitted.]

[Note to the Commission: The Commission may wish to consider whether a recommendation should be added to provide explicitly that the law of the location of the document should apply to a priority conflict between a secured creditor with a possessory security right in a negotiable document and a secured creditor with a non-possessory security right in the goods covered by a document.]

Law applicable to a security right in goods in transit and export goods

203. The law should provide that a security right in tangible property (other than negotiable instruments or negotiable documents) in transit or to be exported from the State in which it is located at the time of the creation of the security right may be created and made effective against third parties under the law of the State of the initial location of the property as provided in recommendation 202 or under the law of the State of its ultimate destination, provided that the property reaches that State within a short time period of [to be specified] days after the time of creation of the security right.

^{*} The recommendations on private international law were prepared in close cooperation with the Hague Conference on Private International Law.

Law applicable to a security right in intangible property

204. The law should provide that the creation, the effectiveness against third parties and the priority as against the rights of competing claimants of a security right in intangible property are governed by the law of the State in which the grantor is located.

Law applicable to receivables arising from a sale, lease or security agreement relating to immovable property

205. The law should provide that the law of the State in which the assignor is located governs the creation, third-party effectiveness and priority of a security right in a receivable arising from a sale, lease or security agreement relating to immovable property as against the rights of competing claimants. However, a priority conflict involving the rights of a competing third party registered in the immovable property registry of the State in which the immovable property is located is governed by the law of that State.

[Note to the Commission: The Commission may wish to confine the scope of recommendation 205 to instances where the law of the State of the registry attaches some priority effects to the registration of the rights of a competing claimant. The law of the grantor should continue to apply if registration in the land registry is irrelevant for priority issues.]

Law applicable to a security right in a right to payment of funds credited to a bank account

206. Except as otherwise provided in recommendation 207, the law should provide that the creation, the effectiveness against third parties, the priority as against the rights of competing claimants, the rights and duties of the depositary bank with respect to the security right and the enforcement of the security right in a right to payment of funds credited to a bank account are governed by

Alternative A

the law of the State in which the bank that maintains the bank account has its place of business. If the bank has places of business in more than one State, reference should be made to the place where the branch maintaining the account is located.

Alternative B

the law of the State expressly stated in the account agreement as the State whose law governs the account agreement or, if the account agreement expressly provides that another law is applicable to all such issues, that other law. However, the law of the State determined pursuant to the preceding sentence applies only if the depositary bank has, at the time of the conclusion of the account agreement, an office in that State that is engaged in the regular activity of maintaining bank accounts. If the applicable law is not determined pursuant to the preceding two sentences, the applicable law is to be determined pursuant to default rules based on article 5 of the Hague Convention on the Law Applicable to Certain Rights in Respect of Securities Held with an Intermediary.

Law applicable to the third-party effectiveness of a security right in specified types of asset by registration

207. The law should provide that, if the State in which the grantor is located recognizes registration as a method of achieving effectiveness against third parties of a security right in a negotiable instrument or a right to payment of funds credited to a bank account, the law of the State in which the grantor is located determines whether the effectiveness against third parties of a security right in such encumbered asset has been achieved by registration under the laws of that State.

Law applicable to a security right in proceeds under an independent undertaking

208. The law should provide that the law of the State specified in the independent undertaking of the guarantor/issuer, confirmer or nominated person governs:

(a) The rights and duties of the guarantor/issuer, confirmer or nominated person that has received a request for an acknowledgement or that has or may pay or otherwise give value under an independent undertaking;

(b) The right to enforce a security right in proceeds under an independent undertaking against a guarantor/issuer, confirmer or nominated person; and

(c) Except to the extent otherwise provided in recommendation 210, the effectiveness against third parties and the priority as against the rights of competing claimants of a security right in proceeds under the independent undertaking.

209. If the applicable law is not specified in the independent undertaking of the guarantor/issuer or confirmer, the law governing the matters referred to in recommendation 208 is the law of the State of the location of the branch or office of the guarantor/issuer or confirmer indicated in the independent undertaking. However, in the case of a nominated person, the applicable law is the law of the State of the location of the nominated person's branch or office that has or may pay or otherwise give value under the independent undertaking.

210. The law should provide that, if a security right in proceeds under an independent undertaking is created and is made effective against third parties automatically as a result of the creation and third-party effectiveness of a right in a receivable, negotiable instrument or other intangible asset, the payment or other performance of which the independent undertaking secures, the creation and the third-party effectiveness of the security right in the proceeds under the independent undertaking is governed by the law of the State whose law governs the creation and the third-party effectiveness of the right in the receivable, negotiable instrument or other intangible asset.

Law applicable to a security right in proceeds

211. The law should provide that:

(a) The creation of a security right in proceeds is governed by the law of the State whose law governs the creation of the security right in the original encumbered asset from which the proceeds arose; and

(b) The effectiveness against third parties and the priority as against the rights of competing claimants of a security right in proceeds are governed by the same law as the law of the State whose law governs the effectiveness against third parties and the priority as against the rights of competing claimants of a security right in original encumbered assets of the same kind as the proceeds.

Law applicable to the rights and obligations of the grantor and the secured creditor

212. The law should provide that the mutual rights and obligations of the grantor and the secured creditor with respect to the security right, whether arising from the security agreement or by law, are governed by the law chosen by them and, in the absence of a choice of law, by the law governing the security agreement.

Law applicable to the rights and obligations of third-party obligors and secured creditors

213. The law should provide that the following matters are governed by the law of the State whose law governs a receivable, negotiable instrument or negotiable document:

(a) The relationship between the debtor of the receivable and the assignee of the receivable, between an obligor under a negotiable instrument and the holder of a security right in the instrument or between the issuer of a negotiable document and the holder of a security right in the document;

(b) The conditions under which the assignment of the receivable, a security right in the negotiable instrument or a security right in the negotiable document may be invoked against the debtor of the receivable, the obligor on the negotiable instrument or the issuer of the negotiable document (including whether an anti-assignment agreement may be asserted by the debtor of the receivable, the obligor or the issuer); and

(c) The determination of whether the obligations of the debtor of the receivable, the obligor on the negotiable instrument or the issuer of the negotiable document have been discharged.

Law applicable to the enforcement of a security right

214. The law should provide that matters affecting the enforcement of a security right:

(a) In tangible property are governed by the law of the State where enforcement takes place; and

(b) In intangible property are governed by the law of the State whose law governs the priority of a security right.

This recommendation is subject to recommendation 173 on the law applicable to security rights in insolvency proceedings.

[Note to the Commission: The Commission may wish to consider whether enforcement of security rights in both tangible and intangible property should be referred to the law governing priority. The place of enforcement of security rights in tangible property in most instances would be the place of the location of the asset and the law of that State would govern priority. Similarly, enforcement of a security right in intangible property would take place in the State of the location of the grantor and the law of that State would govern priority.]

Meaning of “location” of the grantor

215. The law should provide that, for the purposes of the provisions of this law on private international law, the grantor is located in the State in which it has its place of business. If the grantor has a place of business in more than one State, the

grantor's place of business is that place where the central administration of the grantor is exercised. If the grantor does not have a place of business, reference is to be made to the habitual residence of the grantor.

Relevant time when determining location

216. The law should provide that:

(a) Except as provided in subparagraph (b) of this recommendation, references to the location of the assets or of the grantor in the provisions of this law on private international law refer, for creation issues, to that location at the time of the creation of the security right and, for third-party effectiveness and priority issues, to that location at the time the issue arises;

(b) If all rights of competing claimants in an encumbered asset were created and made effective against third parties before a change in location of the asset or the grantor, references in the provisions of this law on private international law to the location of the asset or of the grantor (as relevant under the recommendations in this chapter) refer, with respect to third-party effectiveness and priority issues, to the location prior to the change in location.

Exclusion of renvoi

217. The law should provide that the reference in the provisions of this law on private international law to "the law" of another State as the law governing an issue refers to the law in force in that State other than its private international law rules.

Public policy and internationally mandatory rules

218. The law should provide that:

(a) The application of the law determined under the provisions of this law on private international law may be refused by the forum only if the effects of its application would be manifestly contrary to the public policy of the forum;

(b) A forum may apply those provisions of its own law which, irrespective of rules of private international law, must be applied even to international situations; and

(c) The rules in subparagraphs (a) and (b) of this recommendation do not permit the application of provisions of the law of the forum to third-party effectiveness or priority of a security right as against the rights of competing claimants, unless the law of the forum is the applicable law under the provisions of this law on private international law.

B. Special rules when the applicable law is the law of a multi-unit State

219. The law should provide that in applying the recommendations in this chapter to situations in which the State whose law governs an issue is a multi-unit State:

(a) Subject to subparagraph (b) of this recommendation, references to the law of a multi-unit State are to the law of the relevant territorial unit (as determined on the basis of the location of the grantor or of an encumbered asset or otherwise under the recommendations in this chapter) and, to the extent applicable in that unit, to the law of the multi-unit State itself;

(b) If the law in force in a territorial unit of a multi-unit State designates the law of another territorial unit of that State to govern third-party effectiveness or priority, the law of that other territorial unit governs that issue.

220. The law should provide that if, under the provisions of the law on private international law, the applicable law is that of a multi-unit State or one of its territorial units, the internal choice of law rules in force in that multi-unit State determine whether the substantive rules of law of that multi-unit State or of a particular territorial unit of that multi-unit State apply.

[Note to the Commission: The Commission may wish to combine recommendations 219, subparagraph (b) and 220, as recommendation 219, subparagraph (b), is in substance covered by recommendation 220.]

221. The law should provide that, if the account holder and the depositary bank have agreed on the law of a specified territorial unit of a multi-unit State:

(a) The references to “State” in the first sentence of recommendation 206 (alternative B) are to that territorial unit;

(b) The references to “that State” in the second sentence of recommendation 206 (alternative B) are to the multi-unit State itself.

222. The law should provide that the law of a territorial unit applies if:

(a) Under recommendations 206 (alternative B) and 221, the designated law is that of a territorial unit of a multi-unit State;

(b) Under the law of that State the law of a territorial unit applies only if the depositary bank has an office within that territorial unit which satisfies the condition specified in the second sentence of recommendation 206 (alternative B); and

(c) The rule described in subparagraph (b) of this recommendation is in force at the time the security right in the bank account is created.

[Note to the Commission: The Commission may wish to note that recommendations 221 and 222, which track the language of article 12, paragraphs 1 and 4, of the Hague Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary respectively, may be necessary if the Commission decides to retain alternative B in recommendation 206.]

XIV. Transition

Purpose

The purpose of the provisions of the law on transition is to provide a fair and efficient transition from the regime before the enactment of the law to the regime after the enactment of the law.

Effective date

223. The law should specify either a date subsequent to its enactment, as of which it will enter into force (the “effective date”) or a mechanism by which the effective date may be specified.

Inapplicability of the law to matters in litigation or subject to enforcement

224. The law should provide that it does not apply to matters that, at the effective date, are subject to litigation (or a comparable dispute resolution system). If enforcement of a security right has commenced before the effective date, the enforcement may continue under the law in effect immediately before the effective date.

Creation of a security right

225. The law should provide that the existence of a security right created under the law in effect immediately before the effective date is determined by that law.

Third-party effectiveness of a security right

226. The law should provide that a security right made effective against third parties under the law in effect immediately before the effective date remains effective against third parties until the earlier of the time it would cease to be effective against third parties under the law in effect immediately before the effective date and the expiration of a period of [specify length of the transition period] after the effective date (“the transition period”). If, during that time of third-party effectiveness or such longer period provided in recommendation 227, the secured creditor takes any steps necessary to ensure that the security right is made effective against third parties under this law, its effectiveness against third parties is continuous.

227. The law should provide that the time when the security right was made effective against third parties or became the subject of a registered notice, as applicable, is the time when such security right was made effective against third parties or became the subject of a registered notice under the law in effect immediately before the effective date. This rule applies for purposes of determining priority of a security right that was effective against third parties under the law in effect immediately before the effective date and is continuously effective against third parties under this law.

Priority of a security right

228. Subject to recommendations 229 and 230, the law should provide that the priority of a security right as against the right of a competing claimant is governed by this law.

229. The law should provide that the priority of a security right as against the right of a competing claimant is determined by the law in effect immediately before the effective date if:

(a) Both the security right and the right of the competing claimant are created before the effective date; and

(b) The status of neither right has changed since the effective date.

230. The status of a security right has changed if:

(a) It was effective against third parties on the effective date in accordance with recommendation 226 and later ceased to be effective against third parties; or

(b) It was not effective against third parties on the effective date and later became effective against third parties.

B.	Asset-specific recommendations	228-247
	1. Effectiveness of a bulk assignment of receivables and an assignment of future, parts of and undivided interests in receivables	228
	2. Effectiveness of an assignment of receivables made despite an anti-assignment clause	229-232
	3. Creation of a security right in a personal or property right securing a receivable, a negotiable instrument or any other intangible asset	233-244
	4. Creation of a security right in proceeds under an independent undertaking	245-246
	5. Creation of a security right in a negotiable document or goods covered by a negotiable document	247
C.	Recommendations	

Introduction

A. Purpose of the Guide

1. The purpose of the UNCITRAL Legislative Guide on Secured Transactions (hereinafter referred to as “the Guide” or “this Guide”) is to assist States in the development of modern secured transactions (i.e. transactions creating a proprietary security right in movable property; for the definition of “secured transaction”, see para. 19 below) laws with a view to promoting the availability of secured credit. The Guide is intended to be useful to States that do not currently have efficient and effective secured transactions laws, as well as to States that already have workable laws but wish to review or modernize them, or to harmonize or coordinate their laws with those of other States.

2. The Guide is based on the premise that sound secured transactions laws can have significant economic benefits for States that adopt them, including attracting credit from domestic and foreign lenders and other credit providers, promoting the development and growth of domestic businesses (particularly small and medium-sized enterprises) and generally increasing trade. Such laws also benefit consumers by lowering prices for goods and services and making consumer credit more readily available. To be effective, such laws must be supported by efficient and effective judicial systems and other enforcement mechanisms. They must also be supported by insolvency laws that respect rights derived from secured transactions laws (see the *UNCITRAL Legislative Guide on Insolvency Law*).¹

3. The Guide seeks to rise above differences among legal regimes to offer pragmatic and proven solutions that can be accepted and implemented in States having divergent legal traditions. The focus of the Guide is on developing laws that achieve practical economic benefits for States that adopt them. While it is possible that States will have to incur predictable, though limited, costs to develop and implement these laws, substantial experience suggests that the resulting short- and long-term benefits to such States should greatly outweigh the costs.

4. All businesses, whether manufacturers, distributors, service providers or retailers, require working capital to operate, to grow and to compete successfully in the marketplace. It is well established, through studies conducted by such organizations as the International Bank for Reconstruction and Development (the World Bank), the International Monetary Fund, the Asian Development Bank and the European Bank for Reconstruction and Development (EBRD), that one of the most effective means of providing working capital to commercial enterprises is through secured credit.

5. The key to the effectiveness of secured credit is that it allows businesses to use the value inherent in their assets as a means of reducing risk for the creditor. Risk is reduced because credit secured by assets gives creditors access to the assets as another source of payment in the event of non-payment of the secured obligation. As the risk of non-payment is reduced, the availability of credit is likely to increase and the cost of credit is likely to fall.

6. A legal system that supports secured credit transactions is critical to reducing the perceived risks of credit transactions and promoting the availability of secured credit. Secured credit is more readily available to businesses in States that have

¹ United Nations publication, Sales No. E.05.V.10.

efficient and effective laws that provide for consistent, predictable outcomes for creditors in the event of non-performance by debtors. On the other hand, in States that do not have efficient and effective laws, where creditors perceive the legal risks associated with credit transactions to be high, the cost of credit normally increases, as creditors require increased compensation to evaluate and assume the increased risk. In some States, the absence of an efficient and effective secured transactions regime, or of an insolvency law regime, under which security rights are recognized, has resulted in the virtual elimination of credit for small and medium-sized commercial enterprises, as well as for consumers.

7. By aiding in the cultivation and growth of individual businesses, a legal regime that promotes secured credit can have a positive effect upon the general economic prosperity of a State. Thus, States that do not have an efficient and effective secured transactions regime may deny themselves valuable economic benefits.

8. In order to best promote the availability of secured credit, the Guide suggests that secured transactions laws should be structured to enable businesses to utilize the value inherent in their movable property to the maximum extent possible to obtain credit. In this regard, the Guide adopts two of the most essential concepts of successful secured transactions laws: the concepts of priority and effectiveness against third parties. The concept of priority allows for the concurrent existence of security rights having different priority status in the same assets. This makes it possible for a business to utilize the value of its assets to the maximum extent possible to obtain secured credit from more than one creditor using the same assets as security, while at the same time allowing each creditor to know the priority of its security right. The concept of the effectiveness of a security right against third parties, in the form of a system allowing, *inter alia*, the achievement of third-party effectiveness by registration of a simple notice in a quick and inexpensive way, is designed to promote legal certainty with regard to the relative priority status of rights of creditors and thus to reduce the risks and costs associated with secured transactions.

9. The legal regime envisaged in the Guide is a purely domestic regime. The Guide is addressed to national legislators considering reform of domestic secured transactions laws. However, because secured transactions often involve parties and assets located in different jurisdictions, the Guide also seeks to address the recognition of security rights and title-based security devices, such as retention of title in tangible property and financial leases, effectively created in other jurisdictions. This would represent a marked improvement for the holders of those rights over the laws currently in effect in many States, under which such rights often are lost once an encumbered asset is transported across national borders, and would go far towards encouraging creditors to extend credit in cross-border transactions, a result that could enhance international trade.

10. Throughout, the Guide seeks to establish a balance among the interests of debtors, creditors (whether secured, privileged or unsecured), affected third persons, such as buyers and other transferees of encumbered assets, and the State. In so doing, the Guide adopts the premise, supported by substantial empirical evidence, that all creditors will accept such a balanced approach and will thereby be encouraged to extend credit, as long as the laws (and supporting legal and governmental infrastructure) are effective to enable the creditors to assess their risks with a high level of predictability and with confidence that they will ultimately obtain the economic value of the encumbered assets in the event of non-payment by

the debtor. Essential to this balance is a close coordination between the secured transactions and insolvency law regimes, including provisions pertaining to the treatment of security rights in the event of a reorganization or liquidation of a business. Additionally, certain debtors, such as consumer debtors, require additional protections. Thus, although the regime envisioned by the Guide will apply to many forms of consumer transaction, it is not intended to override consumer-protection laws or to discuss consumer-protection policies, since these matters do not lend themselves to unification.

11. In the same spirit, the Guide also addresses concerns that have been expressed with respect to secured credit. One such concern is that providing a creditor with a priority claim to all or substantially all of a person's assets may appear to limit the ability of that person to obtain financing from other sources. Another concern is the potential ability of a secured creditor to exercise influence over a business, to the extent that the creditor may seize, or threaten seizure of, the encumbered assets of that business upon default. Yet another concern is that, in some cases, secured creditors may take most or all of a person's assets in the case of insolvency and leave little for unsecured creditors, who may not be in a position to bargain for a security right in those assets. The Guide discusses these concerns and, in those situations where the concerns appear to have merit, suggests balanced solutions.

12. The Guide builds on the work of UNCITRAL and other organizations. Such work includes the EBRD Model Law on Secured Transactions, completed in 1994; the EBRD "Core principles for a secured transactions law", completed in 1997; the Organization for Harmonization of Business Law in Africa Uniform Act Organizing Securities, prepared in 1997; the study on secured transactions law reform in Asia, prepared by the Asian Development Bank in 2000;² the United Nations Convention on the Assignment of Receivables in International Trade³ (the "United Nations Assignment Convention"), adopted in 2001; the Convention on International Interests in Mobile Equipment, adopted in 2001, and the relevant protocols thereto; the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary, adopted by the Hague Conference on Private International Law in 2001; the Organization of American States (OAS) Model Inter-American Law on Secured Transactions, prepared in 2002; the *UNCITRAL Insolvency Guide*, completed in 2004; and the UNIDROIT preliminary draft convention on harmonized substantive rules regarding intermediated securities.

B. Terminology and rules of interpretation

13. The Guide adopts terminology to express the concepts that underlie an effective secured transactions regime. The terms used are not drawn from any particular legal system. Even when a term appears to be the same as that found in a particular national law, the Guide does not intend to adopt the meaning of the term in that national law. Rather, the Guide provides definitions giving a specific meaning to each key term. It is important to note that many definitions also have the effect of delimiting the scope of the recommendations in the Guide that use those terms. Some recommendations use terms that are defined in those recommendations and the meaning of some terms defined in this chapter is further elaborated in

² See *Law and Policy Reform at the Asian Development Bank 2000*, vol. I (Manila, Asian Development Bank, April 2000).

³ Ibid., Sales No. E.04.V.14.

recommendations that use those terms. Thus, the scope and content of each recommendation depend on the meaning of the defined terms used.

14. The Guide's approach of using defined terms is taken to facilitate precise communication, independent of any particular national legal system, and to enable readers of the Guide to understand its recommendations uniformly, providing them with a common vocabulary and conceptual framework. The definitions should be read with care and should be referred to whenever the defined terms are encountered.

15. While the terms are not of themselves an imperative element of the Guide's recommendations, legislation based on the Guide will typically include specific definitions for the terms that are used. Even if the terms used in the legislation differ from those used in the Guide, the definitions provided in the terminology might nevertheless be used. This would avoid unintended substantive change and would make most likely the uniform understanding of the terms used, from the outset, to maximize uniform interpretation immediately upon the effective date of the new legislation. Use of the terms and, more importantly, the definitions provided in the Guide will also encourage harmonization of the law governing security rights.

16. The word "or" is not intended to be exclusive; use of the singular also includes the plural and vice versa; "include" and "including" are not intended to indicate an exhaustive list; "may" indicates permission and "should" indicates instruction; and "such as" and "for example" are to be interpreted in the same manner as "include" or "including". "Creditors" should be interpreted as including both the creditors in the enacting State and foreign creditors, unless otherwise specified. References to "person" should be interpreted as including both natural and legal persons, unless otherwise specified.

17. Some States may choose to implement the recommendations of the Guide by enacting a single comprehensive statute (a method more likely to produce coherence and avoid errors of omission or misunderstanding), while other States may seek to modify their existing body of law by insertion of specific rules in various places. The Guide refers to the entire body of recommended rules, whichever method is chosen for implementation, as "the law" or "this law".

18. The Guide also uses the term "law" in various other contexts. Except when otherwise expressly provided, throughout the Guide (a) all references to law refer to both statutory and non-statutory law; (b) all references to law refer to internal law, excluding private international law rules (so as to avoid renvoi); (c) all references to "law other than the secured transactions law" refer to the entire body of a State's law (whether substantive or procedural) other than that embodying the law governing secured transactions (whether pre-existing or newly enacted or modified pursuant to the recommendations of the Guide); (d) all references to "the law governing negotiable instruments" refer not only to a special statute or body of law denominated as "negotiable instruments law" but include also all contract and other general law that might be applicable to transactions or situations involving a negotiable instrument (the same rule applies to similar expressions); and (e) all references to "insolvency law" are similarly all-encompassing, but refer only to law that might be applicable after the commencement of insolvency proceedings.

19. The following paragraphs identify the principal terms used and the core meaning given to them in the Guide. The meaning of these terms is further refined when they are used in subsequent chapters. Those chapters also define and use additional terms (as is the case, for example, with chapter XI on insolvency;

see A/CN.9/631/Add.8). The definitions should be read together with the relevant recommendations. The principal terms are defined as follows:

(a) “Acknowledgment” with respect to proceeds under an independent undertaking means that the guarantor/issuer, confirmer or nominated person that will pay or otherwise give value upon a draw under an independent undertaking has, unilaterally or by agreement:

(i) Acknowledged or consented to (however acknowledgement or consent is evidenced) the creation of a security right (whether denominated as an assignment or otherwise) in favour of the secured creditor in the proceeds under an independent undertaking; or

(ii) Has obligated itself to pay or give value to the secured creditor upon a demand for payment (“draw”) under an independent undertaking;

(b) “Acquisition financier”, a term used only in the context of the non-unitary approach to acquisition financing rights, means a person that has an acquisition financing right (and, thus, includes a retention-of-title seller, a financial lessor and the obligee under hire-purchase transactions, or a creditor under any other acquisition financing transaction and any other transaction described in subparagraphs (iii) and (iv) of definition (c));

(c) “Acquisition financing right”, a term used only in the context of the non-unitary approach to acquisition financing rights, means any of the following rights:

(i) A retention-of-title right;

(ii) The right of a lessor under a financial lease;

(iii) The retained ownership and related rights arising under any arrangement that enables a person to acquire possession or use of tangible property other than negotiable instruments or negotiable documents and whereby pursuant to the arrangement title to that property does not vest irrevocably in the person possessing or using the property until or under the condition that the price is paid; and

(iv) A right under any arrangement by which a creditor that has provided credit to enable a person to acquire possession or use of tangible property other than negotiable instruments or negotiable documents, reserves the right to become the irrevocable owner of the property in satisfaction of the repayment obligation;

(d) “Acquisition financing transferee”, a term used only in the context of the non-unitary approach to acquisition financing rights, means the person whose right to assets is subject to an acquisition financing right and, thus, includes a retention-of-title buyer, a financial lessee or a creditor under any other acquisition financing transaction;

(e) “Acquisition secured creditor”, in the context of both the unitary and the non-unitary approach to acquisition financing rights, means a secured creditor that has an acquisition security right and, in the context of a unitary approach, includes a retention-of-title seller, financial lessor, hire-purchase lessor or other acquisition financier;

(f) “Acquisition security right”, in the context of both the unitary and the non-unitary approach to acquisition financing rights, means a security right in tangible property other than negotiable instruments or negotiable documents that secures the obligation to pay any unpaid portion of the purchase price of the property or an obligation incurred or credit otherwise provided to enable the grantor to acquire the property. An acquisition security right need not be denominated as such. Under the unitary approach, the term includes a creditor’s rights in the property under a retention-of-title sale, hire-purchase transaction, financial lease or other acquisition financing transaction;

(g) “Assignee” means the person to which an assignment of a receivable is made;

(h) “Assignment” means the creation of a security right in a receivable and includes an outright transfer of a receivable. The creation of a security right in a receivable includes an outright transfer by way of security;

(i) “Assignor” means the person that makes an assignment of a receivable;

(j) “Attachment to immovable property” means tangible property that is so physically attached to immovable property that, despite the fact that it has not lost its separate identity, is treated as immovable property under the law of the State where the immovable property is located;

(k) “Attachment to movable property” means tangible property that is so physically attached to other tangible property that, despite the fact that it has not lost its separate identity, it is treated as part of that movable property under law other than this law;

(l) “Bank account” means an account that is maintained by a bank into which funds may be deposited or credited. The term includes a checking or other current account, as well as a savings or time deposit account. The term does not include a claim against the bank evidenced by a negotiable instrument;

The right to payment of funds credited to a bank account covers a right to the payment of funds transferred into an internal account of the bank and not applied to any obligations owed to the bank. Funds transferred to the bank by way of anticipated reimbursement of a future payment obligation that the bank has accepted in the ordinary course of its banking business is also covered to the extent that the person that gave the bank instructions has a claim to those funds if the bank does not make the future payment;

(m) “Competing claimant” means:

(i) Another secured creditor with a security right in the same encumbered asset (whether as an original encumbered asset or proceeds);

(ii) In the context of the non-unitary approach to acquisition financing rights, the seller, financial lessor or other acquisition financier of the same encumbered asset that has retained title to it;

(iii) Another creditor of the grantor that has a right in the same encumbered asset (e.g. by operation of law, attachment, seizure or similar process);

(iv) The insolvency representative in the insolvency of the grantor (in the chapter on insolvency, reference is made to “the insolvency of the debtor” for

reasons of consistency with the terminology used in the *UNCITRAL Legislative Guide on Insolvency Law*); or

(v) Any buyer or other transferee (including a lessee or licensee) of the encumbered asset;

(n) “Confirmer” means a bank or other person that adds its own independent undertaking to that of the guarantor/issuer;

In line with article 6, subparagraph (e), of the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit⁴ (the “United Nations Guarantee and Stand-by Convention”), a confirmation provides the beneficiary with the option of demanding payment from the confirmer in conformity with the terms and conditions of the confirmed independent undertaking instead of from the guarantor/issuer;

(o) “Consumer goods” means goods that the grantor uses or intends to use for personal, family or household purposes;

(p) “Control” with respect to proceeds under an independent undertaking exists:

(i) Automatically upon the creation of the security right if the guarantor/issuer, confirmer or nominated person is the secured creditor; or

(ii) If the guarantor/issuer, confirmer or nominated person has made an acknowledgment in favour of the secured creditor;

(q) “Control” with respect to a right to payment of funds credited to a bank account exists:

(i) Automatically upon the creation of a security right if the depositary bank is the secured creditor;

(ii) If the depositary bank has concluded a control agreement evidenced by an authenticated record with the grantor and the secured creditor, according to which the depositary bank has agreed to follow instructions from the secured creditor with respect to the payment of funds credited to the bank account without further consent of the grantor; or

(iii) If the secured creditor is the account holder.

There is no obligation on a depositary bank to enter into a control agreement. In addition, a secured creditor’s rights will be subject to the rights and obligations of the depositary bank under law and practice governing bank accounts. Moreover, a control agreement requires the consent of the grantor (as well as of the depositary bank) and the grantor retains the right to deal with the funds in the bank account until the secured creditor instructs the depositary bank otherwise (although in some control agreements, the funds would be blocked from the time of the conclusion of the control agreement). This covers situations where (a) an existing account is transferred to the secured creditor; (b) the secured creditor agrees with the grantor that funds should be deposited to an account to be opened later; and (c) the secured creditor is the only account holder (i.e. not merely a joint account holder);

(r) “Debtor” means a person that owes performance of the secured obligation and includes secondary obligors, such as guarantors of a secured

⁴ United Nations publication, Sales No. E.97.V.12.

obligation. The debtor may or may not be the person that grants the security right to a secured creditor (see the definition of the term “grantor”);

(s) “Debtor of the receivable” means a person liable for payment of a receivable. “Debtor of the receivable” includes a guarantor or other person secondarily liable on the receivable;

A guarantor in an accessory guarantee is not only a debtor of the receivable, the payment of which it has guaranteed, but also a debtor of the receivable that is constituted by the guarantee, as a guarantee is itself a receivable (i.e. there are two receivables);

(t) “Encumbered asset” means tangible or intangible property that is subject to a security right;

(u) “Equipment” means tangible property used by a person in the operation of its business;

(v) “Financial lease” means a lease, at the end of the term of which:

(i) The lessee automatically becomes the owner of tangible property other than negotiable instruments or negotiable documents subject to the lease;

(ii) The lessee may acquire the assets subject to the lease by paying no more than a nominal price; or

(iii) The tangible property subject to the lease has no more than a nominal residual value.

The term includes a hire-purchase agreement.

(w) “Grantor” means a person that creates a security right in one or more of its assets in favour of a secured creditor to secure either its own obligation or that of another person (see the definition of the term “debtor of the receivable”). Under the unitary approach, “grantor” of an acquisition security right includes a retention-of-title buyer, hire-purchase buyer, financial lessee or grantor in a purchase-money lending transaction. Because the general recommendations of the Guide apply not only to security rights in receivables but also to security transfers and outright transfers of receivables, unless otherwise provided, references to the “grantor” in the general recommendations also refer to the “assignor” (see definition of the term “debtor”);

(x) “Guarantor/issuer” means a bank or other person that issues an independent undertaking;

(y) “Independent undertaking” means a letter of credit (commercial or standby), a confirmation of a letter of credit, an independent guarantee (including demand, first demand, bank guarantee or counter-guarantee) or any other undertaking recognized as independent by law or practice rules, such as the United Nations Guarantee and Stand-by Convention, the Uniform Customs and Practice for Documentary Credits, the Rules on International Standby Practices and the Uniform Rules for Demand Guarantees;

(z) “Insolvency court” means a judicial or other authority competent to control or supervise insolvency proceedings;

(aa) “Insolvency estate” means assets and rights of the debtor that are controlled or supervised by the insolvency representative and subject to the insolvency proceedings;

(bb) “Insolvency proceedings” means collective judicial or administrative proceedings for the purposes of either reorganization or liquidation of the debtor’s business conducted according to the insolvency law;

(cc) “Insolvency representative” means a person or body responsible for administering the insolvency estate;

(dd) “Intangible property” means all forms of movable property other than tangible property and includes incorporeal rights, receivables and rights to the performance of obligations other than receivables;

(ee) “Intellectual property” means copyrights, trademarks, patents, service marks, trade secrets and designs and any other asset that is considered to be intellectual property under the domestic law of the enacting State or an international agreement to which it is a party;

(ff) “Inventory” means tangible property held for sale or lease in the ordinary course of the grantor’s business and also raw and semi-processed materials (work-in-process);

(gg) “Issuer” of a negotiable document means the person that is obligated to deliver the tangible property covered by the document under the law governing negotiable documents;

In the case of a so-called multimodal bill of lading (if it qualifies as a negotiable document under the applicable law), the “issuer” may be a person that subcontracts various portions of the transport of the goods to other persons but still takes responsibility for their transport and for any damage that might occur during carriage;

(hh) “Knowledge” means actual knowledge;

(ii) “Mass or product” means tangible property other than money that is so physically associated or united with other tangible property that it has lost its separate identity;

(jj) “Money” means currency currently authorized as legal tender by any State. It does not include funds credited to a bank account or negotiable instruments, such as cheques.

(kk) “Negotiable document” means a document, such as a warehouse receipt or a bill of lading, that embodies a right for delivery of tangible property and satisfies the requirements for negotiability under the law governing negotiable documents;

(ll) “Negotiable instrument” means an instrument, such as a cheque, bill of exchange or promissory note, that embodies a right to payment and satisfies the requirements for negotiability under the law governing negotiable instruments;

(mm) “Nominated person” means a bank or other person that is identified in an independent undertaking by name or type (e.g. “any bank in country X”) as being nominated to give value under an independent undertaking and that acts pursuant to that nomination and, in the case of a freely available independent undertaking, any bank or other person;

(nn) “Non-possessory security right” means a security right in (i) tangible property that is not in the actual possession of the secured creditor or another person holding the tangible property for the benefit of the secured creditor, or (ii) intangible property;

(oo) “Notice” means a communication in writing;

(pp) “Notification of the assignment” means a communication in writing that reasonably identifies the assigned receivable and the assignee;

(qq) “Original contract” in the context of an assignment means the contract between the assignor and the debtor of the receivable from which the receivable arises. With respect to non-contractual receivables, “original contract” means the non-contractual source of the receivable;

(rr) “Possession”, except as the term is used in recommendations 29 and 52-54 with respect to the issuer of a negotiable document, means the actual possession of tangible property by a person or an agent or employee of that person, or by an independent person that acknowledges that it holds for that person. It does not include constructive, fictive, deemed or symbolic possession;

(ss) “Possessory security right” means a security right in tangible property that is in the actual possession of the secured creditor or of another person (other than the debtor or other grantor) holding the asset for the benefit of the secured creditor;

(tt) “Priority” means the right of a person to derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant;

(uu) “Proceeds” means whatever is received in respect of encumbered assets, including what is received as a result of sale or other disposition or collection, lease or licence of an encumbered asset, proceeds of proceeds, civil and natural fruits, dividends, distributions, insurance proceeds and claims arising from defects, damage to or loss of an encumbered asset;

(vv) “Proceeds under an independent undertaking” means the right to receive a payment due, a draft accepted or deferred payment incurred or another item of value, in each case to be paid or delivered by the guarantor/issuer, confirmer or nominated person giving value for a draw under an independent undertaking. The term also includes the right to request the purchase by a negotiating bank of a negotiable instrument or a document under a complying presentation. The term does not include:

(i) The right to draw (i.e. to request payment) under an independent undertaking; or

(ii) What is received upon honour of an independent undertaking or upon disposition of proceeds under an independent undertaking (i.e. the proceeds derived from collection or disposition of the proceeds under an independent undertaking).

This definition refers to “proceeds under an independent undertaking” to be consistent with terminology generally used in independent undertaking law and practice. The term as used in the Guide means the right of the grantor as beneficiary of an independent undertaking to receive whatever payment or other value is given under the independent undertaking contingent upon the beneficiary making a presentation complying with the terms and conditions of the independent

undertaking. The term does not include the proceeds themselves, i.e. what is actually received upon honour of a drawing by the guarantor/issuer, confirmer or nominated person (a beneficiary's receipt of value from a negotiating bank should not be characterized as honour or disposition) or upon disposition of a right to proceeds under an independent undertaking.

The term "proceeds under an independent undertaking" refers to a right to receive even though the term "proceeds" as used in independent undertaking law and practice may refer either to the right to receive or to whatever is received under the independent undertaking, and even though the term "proceeds" as used elsewhere in the Guide refers to whatever is received. A security right in proceeds under an independent undertaking (as an original encumbered asset) is different from a security right in "proceeds" (a key concept of the Guide) of assets covered in the Guide;

(ww) "Receivable" means a right to payment of a monetary obligation excluding rights to payment evidenced by a negotiable instrument, the obligation to pay under an independent undertaking and the obligation of a bank to pay funds credited to a bank account;

(xx) "Retention-of-title right", a term used only in the context of a non-unitary approach, means a seller's right in tangible property other than negotiable instruments or negotiable documents pursuant to an arrangement with the buyer by which title to the tangible property is not transferred from the seller to the buyer until the condition that the unpaid portion of the purchase price of the property be paid has been satisfied;

(yy) "Secured creditor" means a creditor that has a security right. With respect to a receivable, the term means the "assignee" of the receivable (see the definition of the term "assignment");

(zz) "Secured obligation" means the obligation secured by a security right;

(aaa) "Secured transaction" means a transaction that creates a proprietary (as opposed to personal) security right in movable property (as opposed to immovable property);

(bbb) "Security agreement" means an agreement between a grantor and a creditor, in whatever form or terminology, that creates a security right;

(ccc) "Security right" means a property right in movable property and attachments that is created by agreement and secures payment or other performance of one or more obligations, regardless of whether the parties have denominated it as a security right. In the context of a unitary approach, the term includes both acquisition security rights and non-acquisition security rights, but in the context of a non-unitary approach it does not include an acquisition financing right. With respect to receivables, security right also means the right of the assignee (see the definition of "assignment" and other definitions below relating to assignments of receivables);

(ddd) "Subsequent assignment" means an assignment by the initial or any other assignee. In the case of a subsequent assignment, the person that makes that assignment is the assignor and the person to which that assignment is made is the assignee; and

(eee) "Tangible property" means all forms of corporeal movable property. Among the categories of tangible property are inventory, equipment, attachments, negotiable instruments, negotiable documents and money.

I. Key objectives of an effective and efficient secured transactions regime

20. In the spirit of providing practical, effective solutions, the Guide explores and develops the following key objectives and themes of an effective and efficient secured transactions regime. These objectives are designed to provide a broad policy framework for the establishment and development of such a regime and could be reflected in a preamble of the law enacted by States. These objectives should be taken into account in the interpretation of the law (for such an approach, see, for example, art. 7, para. 1, of the United Nations Assignment Convention).

A. To promote secured credit

21. The primary overall objective of the Guide is to promote low-cost secured credit for persons in jurisdictions that adopt legislation based on the Guide's recommendations, thereby enabling such persons and the economy as a whole to obtain the economic benefits that flow from access to such credit (see para. 2 above).

B. To allow utilization of the full value inherent in a broad range of assets to support credit in the widest possible array of secured transactions

22. A key to a successful legal regime governing secured transactions is to enable a broad array of businesses to utilize the full value inherent in their assets to obtain credit in a broad array of credit transactions. In order to achieve this objective, the Guide emphasizes the importance of comprehensiveness, by (a) permitting a broad range of assets (including present and future assets) to serve as encumbered assets; (b) permitting the widest possible array of obligations (including future and conditional and monetary and non-monetary obligations) to be secured by security rights in encumbered assets; and (c) extending the benefits of the regime to the widest possible array of debtors, creditors and credit transactions.

C. To enable parties to obtain security rights in a simple and efficient manner

23. The cost of credit will be reduced if security rights can be obtained in an efficient manner. For this reason, the Guide suggests methods for streamlining the procedures for obtaining security rights and otherwise reducing transaction costs. These methods include eliminating unnecessary formalities; providing for a single method for creating security rights rather than a multiplicity of security devices for different kinds of encumbered assets; and permitting security rights in future assets and for future advances of credit without any additional documentation or action by the parties.

D. To provide for equal treatment of diverse sources of credit and of diverse forms of secured transaction

24. Because healthy competition among all potential credit providers is an effective way of reducing the cost of credit, the Guide recommends that the secured transactions regime apply equally to various credit providers, including banks and other financial institutions, and suppliers, as well as domestic and non-domestic creditors.

E. To validate non-possessory security rights

25. Because the granting of a security right should not make it difficult or impossible for the debtor or other grantor to continue to operate its business, the Guide recommends that the legal regime provide for non-possessory security rights in a broad range of assets coupled with a mechanism in the form of a public registry for providing notice to third parties as to the possible existence of such security rights.

F. To enhance predictability and transparency with respect to rights serving security purposes by providing for registration of a notice in a general security rights registry

26. Because an effective secured transactions regime should also encourage responsible behaviour by all parties to a secured transaction, the Guide seeks to promote predictability and transparency to enable the parties to assess all relevant legal issues and to establish appropriate consequences for non-compliance with applicable rules, while at the same time respecting and addressing confidentiality concerns. A primary means of accomplishing this goal is the establishment of a general security rights registry in which notices of security rights are registered.

G. To establish clear and predictable priority rules

27. A security right in assets will have little or no value to a creditor unless the creditor is able to ascertain, at the time a transaction is concluded, the priority of its right in such assets relative to the rights of other creditors (including an insolvency representative). Thus, the Guide proposes the establishment of a general security rights registry and, based on that registry, clear rules that allow creditors to determine the priority of their security rights at the outset of the transaction in a reliable, timely and cost-efficient manner.

H. To facilitate enforcement of creditors' rights in a predictable and efficient manner

28. A security right will also have little or no value to a secured creditor unless the creditor is able to enforce the security right in a predictable and time- and cost-efficient manner. Thus, the Guide proposes procedures that allow secured creditors to so enforce their security rights, subject to judicial or other official control, supervision or review when appropriate. The Guide also recommends that there be a

close coordination between a State's secured transactions laws and its insolvency laws with a view to respecting the pre-insolvency effectiveness and priority, as well as the economic value, of a security right subject to the appropriate rules of insolvency law.

I. To balance the interests of affected persons

29. Because secured transactions affect the interests of various persons, including the debtor, other grantors, competing creditors, such as secured, privileged and unsecured creditors, purchasers and other transferees of the encumbered assets, and the State, the Guide proposes rules that take into account their legitimate interests and seek to achieve, in a balanced way, all the objectives mentioned above.

J. To recognize party autonomy

30. Because an effective secured transactions regime should provide maximum flexibility to encompass a broad array of secured transactions, and also to accommodate new and evolving forms of secured transactions, the Guide stresses the need to keep mandatory rules to a minimum so that parties may tailor their secured transactions to their specific needs. At the same time, the Guide takes into account that other legislation may protect the legitimate interests of consumers or other persons and specifies that a secured transactions regime should not override such legislation.

K. To harmonize secured transactions laws, including private international law rules

31. Adoption of legislation based on the recommendations contained in the Guide will result in harmonization of secured transactions laws (through the adoption of similar substantive laws that will facilitate the cross-border recognition of security rights). This result in itself will promote the financing of international trade and the movement of goods and services across national borders. Furthermore, to the extent complete harmonization of national secured transactions laws might not be achieved, private international law rules would be particularly useful to facilitate cross-border transactions. In any event, private international law rules would be useful in order, for example, to help secured creditors to determine how to make their security rights effective against third parties (i.e. under the law of the location of the encumbered assets, the law of the location of the grantor or another law).

II. Scope of application and other general rules

A. Scope of application

32. The regime envisioned by the Guide is intended to be a single, comprehensive regime for secured transactions, affecting the widest possible array of assets, parties, secured obligations, security rights and other rights and financing practices.

1. Assets, parties, obligations and security and other rights

33. The primary focus of the Guide is on core commercial assets, such as commercial goods (inventory and equipment) and trade receivables. However, the Guide proposes that all types of asset are capable of being the object of a security right, including all present and future assets of a business, and covers all assets, both tangible and intangible (see A/CN.9/631, recommendation 2, subpara. (a)), with the exception of assets specifically excluded (see A/CN.9/631, recommendations 4-6).

34. The Guide covers all types of movable property and attachment, tangible or intangible, present or future, including inventory, equipment and other goods, contractual and non-contractual receivables, contractual non-monetary claims, negotiable instruments, negotiable documents, rights to payment of funds credited to a bank account, proceeds under an independent undertaking and intellectual property. With respect to receivables (which do not include negotiable instruments, negotiable documents and bank accounts; see the definition of “receivable” in para. 19 above), the general recommendations, as supplemented by the recommendations on receivables, apply both to (a) contractual and non-contractual receivables, except that recommendations 24 (Effectiveness of a bulk assignment of receivables) and an assignment of future, parts of and undivided interests in receivables) and 111 (Representations of the assignor) do not apply to non-contractual receivables; and (b) contractual non-monetary obligations. However, the rights of obligors of contractual non-monetary obligations are subject to law other than the law recommended in the Guide.

35. The Guide stresses the need to enable a grantor to create security rights not only in its existing assets but also in its “future” or “after-acquired” assets (i.e. assets acquired by the grantor or created after the conclusion of the security agreement), without requiring the grantor or secured creditor to sign any additional documents or to take any additional action at the time such assets are acquired or created. This approach is consistent, for example, with the United Nations Assignment Convention, which provides for the creation of security rights in future receivables without requiring any additional steps to be taken. In addition, the Guide recommends recognition of a security right in all existing and future assets of a grantor through a single security agreement, a concept that already exists in some legal systems as an “enterprise mortgage”, as a combination of fixed and floating charges, or as an “all-asset security right”.

36. Any person, physical or legal, may be a debtor, grantor or secured creditor under the Guide. Unless specifically indicated otherwise, the Guide also applies to consumers, inasmuch as there is no reason why consumers should be deprived of the benefits of the regime envisaged in the Guide. However, to the extent a rule of the regime envisaged in the Guide conflicts with consumer-protection law, consumer-protection law would prevail. States that do not have a body of law for the protection of consumers may wish to consider whether the enactment of a law based on the recommendations of the Guide would affect the rights of consumers and would thus require the introduction of consumer-protection legislation (see A/CN.9/631, recommendation 2, subpara. (b)).

37. The Guide also recommends that a broad range of obligations, monetary and non-monetary, may be secured. In addition, the Guide is intended to cover a broad range of transactions that serve security functions, including those related to

possessory and non-possessory security rights (see A/CN.9/631, recommendation 2, subparas. (c) and (d)).

38. The Guide deals with security rights created by agreement. However, it contains references to other rights, such as those provided by statute or judicial process, when the same property is subject to both security rights created by agreement and statutory or other rights, and the law must provide for the relative priority of such rights (see A/CN.9/631, recommendations 89-92).

39. To ensure a comprehensive coverage of all devices that serve security functions, the Guide also deals with rights that, while they are not denominated as security rights, nevertheless serve security purposes (e.g. transfers of title in tangible property for security purposes, outright transfers of receivables for security purposes and the various forms of retention of title (see A/CN.9/631, recommendation 2, subpara. (e)).

40. The only devices dealt with in the Guide that do not serve security functions, are those that involve purely outright transfers of receivables. This approach is justified by the need to avoid characterization issues and to ensure that the registry system and the priority rules of the Guide apply to all assignments of receivables (see paras. 41-45 below).

2. Outright transfers of receivables

41. The Guide does not apply to devices that do not serve security functions. The only exception to this rule relates to purely outright transfers of receivables, to which the Guide applies in order to ensure that all assignments of receivables are subject to the same rules (see A/CN.9/631, recommendations 3 and 162-164). However, as the definition of “receivable” (for the definition of “receivable”, see para. 19 above), excludes rights to payment under a negotiable instrument, the obligation to pay under an independent undertaking and the obligation of a bank to pay funds credited to a bank account, the Guide does not apply to purely outright transfer of such assets (the Guide applies, though, to transfers of such assets if they are made for security purposes).

42. Purely outright transfers of negotiable instruments, proceeds under an independent undertaking and rights to payment of funds credited to a bank account have been excluded because they raise different issues and would require special rules (the same considerations would apply to non-intermediated securities, if they were to be covered by the Guide). Moreover, in the case of receivables, a security transfer and an outright transfer would compete for priority based on the order of registration. However, the situation is different with negotiable instruments, proceeds under an independent undertaking and rights to payment of funds credited to a bank account. In the case of a negotiable instrument, a secured creditor can always obtain a superior right by taking possession of the instrument. Similarly, with respect to proceeds under an independent undertaking and rights to payment of funds credited to a bank account, a secured creditor can always obtain a superior right by control.

43. While principles of secured transactions law can easily be made applicable to the outright transfer of a promissory note, and perhaps a bill of exchange other than a cheque, in a manner similar to the Guide’s coverage of the outright transfer of receivables, those principles do not apply well to the outright transfer of cheques. The latter topic is sufficiently covered by the law of negotiable instruments and the law of bank collections.

44. An enacting State that wishes to expand the scope of its secured transactions law to apply to outright transfers of negotiable instruments that are either promissory notes or bills of exchange (and to expand its definition of “security right” to cover the right of the transferee in such a transaction) might wish to consider providing that a security right that is an outright transfer of such a negotiable instrument is automatically effective against third parties upon the transfer. Such a rule would avoid disrupting existing financial practices.

45. With respect to the priority of such a security right, the general principles of priority would apply. Most particularly, the general principle in recommendation 99 would govern. As in the case of an outright transfer of a receivable, the outright transferee of such a negotiable instrument should be able to enforce the instrument without further consent of the assignor subject to the rights of the obligors on the negotiable instrument as described in chapter X on post-default rights (see A/CN.9/631/Add.7).

3. Aircraft, railway rolling stock, space objects, ships, securities and intellectual property

46. The Guide does not apply to assets, such as aircraft, railway rolling stock, space objects and ships, as well as other categories of mobile equipment, in so far as such property is covered by national laws or international agreements to which the State enacting legislation based on the Guide is a party and the matters covered by this law are addressed in such national laws or international agreements (see A/CN.9/631, recommendation 4, subpara. (a)). The reference to aircraft, railway rolling stock, space objects and ships should be understood pursuant to the meaning of those terms in national law or international conventions dealing with them.

47. In view of the increasing importance and economic value of intellectual property assets to businesses seeking to obtain secured credit, the Guide applies in principle to security rights in intellectual property. However, as the recommendations have not been prepared with intellectual property issues in mind, in the case of any inconsistencies with national law or international agreements to which a State is a party, the Guide would not apply (see A/CN.9/631, recommendation 4, subpara. (b)). In order to avoid such inconsistencies, enacting States should examine their existing intellectual property laws and national laws or international agreements to which the State is a party and, if the recommendations of the Guide are inconsistent with any such laws or conventions [and the specific matters covered by the Guide’s recommendations are addressed in such national laws and international agreements], the State’s secured transactions law should confirm that those existing laws and conventions govern such issues. In considering whether any adjustments of the recommendations as they apply to security rights in intellectual property are appropriate, a State should analyse each case on an issue-by-issue basis and should have proper regard both to establishing an efficient secured transactions regime and to ensuring the protection and exercise of intellectual property rights in accordance with its national laws and international agreements.

48. Recommendation 4, subparagraphs (a) and (b), have been prepared against the background of whether there exist relevant special laws and international agreements that address the special matters covered by this law. For example, most countries have registries and detailed rules on security and other rights in ships, aircraft and the other types of mobile equipment described in recommendation 4, subparagraph (a). The registries are either recent or have been kept current as a

result of the need for financing of these types of property. The special laws and international agreements for mobile goods all cover, in varying degrees of precision, security rights. In contrast, various types of intellectual property are often not registered, or the registries are only evidence that a right has been issued or recognized by the Government and are not designed for the registration of security rights. In addition, some types of intellectual property have not traditionally been the subject of security rights and intellectual property law does not typically address the special matters covered by this law.

49. In addition, the Guide does not cover security rights in securities because the nature of securities and their importance for the functioning of financial markets raise a broad range of issues that merit special legislative treatment. The substantive law issues relating to security and other rights in securities held with an intermediary are dealt with in a draft convention being prepared by the International Institute for the Unification of Private Law (Unidroit). The law applicable to rights in [intermediated] securities is not addressed in the Guide since they are dealt with in the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary. [However, the Guide does cover non-intermediated securities because of the importance of such securities to secured transactions involving small- and medium-sized businesses (see A/CN.9/631, recommendation 4, subpara. (c))].

[Note to the Commission: If the Commission decides that, pending future work on non-intermediated securities, such securities should be covered in the Guide, language would have to be included in recommendation 4, subparagraph (c), tracking the language of subparagraph (a) or (b), to safeguard the application of certain provisions of securities law at least until the necessary asset-specific recommendations on non-intermediated securities are prepared. In addition, non-intermediated securities would have to be excluded from the definition of "receivables" to ensure that the rules on receivables do not apply to such securities. Moreover, reference would need to be made to the definitions of "securities" and "intermediated securities" contained in the Unidroit preliminary draft convention on substantive rules regarding intermediated securities (see Unidroit document Study LXXVIII-Doc. 57, November 2006, article 1, subparas. (a) and (b)).]

50. The Guide is structured in such a way that the State enacting legislation based on the regime envisaged in the Guide can, at the same time, implement the texts prepared by Unidroit and the Hague Conference on Private International Law, as well as relevant texts prepared by UNCITRAL, such as the United Nations Assignment Convention and the *UNCITRAL Insolvency Guide* (see para. 12 above).

4. Immovable property

51. Immovable property (with the exception of attachments to immovable property, which can be subjected to security rights covered by the Guide) is excluded as it raises different issues and is subject to a special title registration system indexed by asset and not by grantor.

52. Although immovable property is excluded from the scope of the Guide as an originally encumbered asset, it may nevertheless be affected by the Guide's recommendations. For example, if a security right in a mortgage secures a receivable, negotiable instrument or other intangible asset, and the receivable, negotiable instrument or other intangible asset is assigned, the security right in the mortgage follows. This rule does not affect any third-party rights, priority and

enforcement requirements existing under immovable property law (see A/CN.9/631, recommendation 26).

5. Proceeds of excluded types of asset

53. If an asset is excluded from the scope of the Guide, law other than the secured transactions law should determine whether a security right in that asset nevertheless confers a security right in types of proceed to which the secured transactions law does apply (e.g. receivables representing proceeds of immovable property). Under the Guide, if such other law provides that a security right in such proceeds does exist, then the secured transactions law applies to that security right, except to the extent that the other law applies to [the third-party effectiveness, priority or enforcement of that security right][that security right] (see A/CN.9/631, recommendation 6).

6. Other exceptions

54. Because the objectives of the Guide are best achieved by a comprehensive secured transactions regime, the Guide recommends that any other exceptions to its scope of application not specifically set out in the Guide should be limited and, if there are any such exceptions, they should be set out in the law in a clear and specific way (see A/CN.9/631, recommendation 7).

B. Other general rules

1. Party autonomy

55. In modern secured transactions regimes, great emphasis is placed on party autonomy, namely the ability of the parties to derogate from, or vary, particular rules of the secured transactions regime except as limited by certain specified mandatory rules that reflect strong policy considerations. Modern secured transactions regimes also make it clear, however, that such agreements do not affect the rights of third parties that are not parties to the agreement. Such an approach is necessary in order to give the parties to secured transactions the greatest flexibility possible so as to enable them to tailor their transactions to meet their specific needs in a way that is consistent with the public policy of the enacting State. This is one of the most important ways in which a secured transactions regime can promote secured credit. The Guide adopts this approach (see A/CN.9/631, recommendation 8).

2. Electronic communications

56. Modern secured transactions regimes not only reflect modern concepts of secured transactions law, but also accommodate modern business practices by facilitating electronic communications. In this spirit, and consistent with article 9, paragraphs 2 and 3, of the United Nations Convention on the Use of Electronic Communications in International Contracts⁵ and articles 6 and 7 of the UNCITRAL Model Law on Electronic Commerce,⁶ the Guide contains a number of recommendations recognizing the ability of parties to conduct business using electronic communications (see A/CN.9/631, recommendations 9 and 10; see also

⁵ See United Nations publication, Sales No. E.07.V.2.

⁶ Ibid., Sales No. E.99.V.4.

article-by-article remarks on the United Nations Electronic Contracting Convention, paras. 143-165,⁵ and the *UNCITRAL Model Law on Electronic Commerce with Guide to Enactment 1996* with additional article 5 bis as adopted in 1998, paras. 47-61).⁶

C. Examples of financing practices covered in the Guide

57. Short examples of the types of secured credit transaction that the Guide is designed to encourage and to which reference is made throughout the Guide to illustrate specific points are set out below. These examples represent only a few of the numerous forms of secured credit transaction currently in use and an effective secured transactions regime must be sufficiently flexible to accommodate many existing methods of financing, as well as methods that may evolve in the future.

1. Inventory and equipment acquisition financing

58. Businesses often obtain financing for specific purchases of inventory or equipment. In many cases, the financing is provided by the seller of the tangible property (inventory and equipment) purchased. In other cases, the financing is provided by a lender. Sometimes the lender is an independent third party, but in other cases the lender may be an affiliate of the seller. The seller retains title or the lender is granted a security right in the tangible property purchased to secure the repayment of the credit or loan.

59. Here is an illustration of acquisition financing: ABC Manufacturing Company (ABC), a manufacturer of furniture, wishes to acquire certain inventory and equipment for use in manufacturing operations. ABC desires to purchase paint (constituting raw materials and, therefore, inventory) from Vendor A. ABC also wishes to purchase certain drill presses (constituting equipment) from Vendor B and certain conveyor equipment from Vendor C. Finally, ABC wishes to lease certain computer equipment from Lessor A.

60. Under the purchase agreement with Vendor A, ABC is required to pay the purchase price for the paint within 30 days of Vendor A's invoice to ABC, and ABC grants to Vendor A a security right in the paint to secure the purchase price. Under the purchase agreement with Vendor B, ABC is required to pay the purchase price for the drill presses within 10 days after they are delivered to ABC's plant. ABC obtains a loan from Lender A to finance the purchase of the drill presses from Vendor B, secured by a security right in the drill presses. ABC also maintains a bank account with Lender A and has granted Lender A a security right in the right to payment of funds credited to the bank account as additional security for the repayment of the loan.

61. Under the purchase agreement with Vendor C, ABC is required to pay the purchase price for the conveyor equipment when it is installed in ABC's plant and rendered operational. ABC obtains a loan from Lender B to finance the purchase and installation of the conveyor equipment from Vendor C, secured by a security right in the conveyor equipment.

62. Under the lease agreement with Lessor A, ABC leases the computer equipment from Lessor A for a period of two years. ABC is required to make monthly lease payments during the lease term. ABC has the option (but not the obligation) to purchase the equipment for a nominal purchase price at the end of the lease term.

Lessor A retains title to the equipment during the lease term but title will be transferred to ABC at the end of the lease term if ABC exercises the purchase option. This type of lease is often referred to as a “financial lease”. Under some forms of financial lease, title to the leased property is transferred to the lessee automatically at the end of the lease term. A financial lease is to be distinguished from what is usually called an “operating lease”. Under an operating lease, the leased property is expected to have a remaining useful life at the end of the lease term and the lessee does not have an option to purchase the leased property at the end of the lease term for a nominal price, nor is title to the leased property transferred to the lessee automatically at the end of the lease term.

63. In each of the above four cases, the acquisitions are made possible by means of acquisition financing provided by another person (seller, lender or financial lessor) who holds rights in the acquired property for the purpose of securing the acquisition financing granted. As the illustrations make clear, acquisition financing can occur with respect to both inventory and equipment.

2. Inventory and receivable revolving loan financing

64. Businesses generally have to expend capital before they are able to generate and collect revenues. For example, before a typical manufacturer can generate receivables and collect payments, the manufacturer must expend capital to purchase raw materials, to convert the raw materials into finished goods and to sell the finished goods. Depending on the type of business, this process may take up to several months. Access to working capital is critical to bridge the period between cash expenditures and revenue collections.

65. One highly effective method of providing such working capital is a revolving loan facility. Under this type of credit facility, loans secured by the borrower's existing and future inventory and receivables are made from time to time at the request of the borrower to fund the borrower's working capital needs. The borrower typically requests loans when it needs to purchase and manufacture inventory, and repays the loans when the inventory is sold and the sales price is collected. Thus, borrowings and repayments are frequent (though not necessarily regular) and the amount of the credit is constantly fluctuating. Because the revolving loan structure matches borrowings to the borrower's cash conversion cycle (that is, acquiring inventory, processing inventory, selling inventory, creating receivables, receiving payment and acquiring more inventory to begin the cycle again), this structure is, from an economic standpoint, highly efficient and beneficial to the borrower, and helps the borrower to avoid borrowing more than it actually needs.

66. Here is an illustration of this type of financing: It typically takes four months for ABC to manufacture, sell and collect the sales price for its products. Lender B agrees to provide a revolving loan facility to ABC to finance this process. Under the loan facility, ABC may obtain loans from time to time in an aggregate amount of up to 50 per cent of the value of its inventory that Lender B deems to be acceptable for borrowing (based upon the type and quality of the inventory, as well as other criteria) and of up to 80 per cent of the value of its receivables that Lender B deems to be acceptable for borrowing (based upon criteria such as the creditworthiness of the debtors of the receivables). ABC is expected to repay these loans from time to time as it receives payments from its customers. The loan facility is secured by all of ABC's existing and future inventory and receivables. In this type of financing, it is also common for the lender to obtain a security right in the right to payment of

funds credited to the bank account into which customer payments (i.e. the proceeds of inventory and receivables) are deposited.

3. Factoring

67. Factoring is a highly effective form of receivables financing that can trace its roots back thousands of years. In general, factoring involves the outright purchase of receivables from the grantor, as seller (assignor) to the factor (assignee). Such an outright transfer of receivables falls within the definition of a security right for purposes of the Guide (for the definition of “security right”, see para. 19 above).

68. There are a number of different types of factoring arrangement. The factor may pay a portion of the purchase price for the receivables at the time of the purchase (“discount factoring”), only when the receivables are collected (“collection factoring”), or on the average maturity date of all of the factored receivables (“maturity factoring”). The assignment of the receivables can be with or without recourse to the assignor (“recourse” and “non-recourse” factoring) in the event of non-payment of the receivables by the debtors of the receivables (i.e. the customers of the assignor). Finally, the debtors of the receivables may be notified that their receivables have been the subject of factoring (“notification factoring”), or they may not be so notified (“non-notification factoring”). When notice is given to the customers, it is often accomplished by requiring the assignor to place a legend on the invoices that the assignor sends to its customers. The factor may also perform various services for the assignor in respect of the receivables, ranging from approving and evaluating the creditworthiness of the debtors of the receivables, performing bookkeeping duties and engaging in collection efforts with respect to receivables that are not paid when due. These services can provide a useful benefit to companies that do not have their own credit and collection departments.

69. Here is an illustration of a typical factoring arrangement: ABC enters into a discount factoring arrangement with Factor, pursuant to which Factor agrees to purchase receivables that Factor deems to be creditworthy. Factor advances to ABC an amount equal to 90 per cent of the face value of such receivables, holding the remaining 10 per cent as a reserve to cover potential customer claims and allowances that would reduce the value of the receivables. The factoring arrangement is with notification to ABC’s customers.

4. Securitization

70. Another highly effective form of financing involving the use of receivables is securitization. Securitization is a sophisticated form of financing under which a business enterprise can obtain less expensive financing based on the value of its receivables by transferring them to a wholly owned “special purpose vehicle” (“SPV”) that will issue securities in the capital markets secured by the stream of income generated by such receivables. For example, this technique is commonly used in situations where a company’s receivables consist of credit card receivables, rents or home mortgages, although the securitization of many other types of receivables is also possible. Securitization transactions are complex financing transactions that are also dependent upon a jurisdiction’s securities laws as well as its secured transactions laws.

71. Securitization is intended to lower the cost of financing because the SPV is structured in a way to make the risk of its insolvency “remote” (e.g. theoretically not possible) by restricting the amount of debt that the SPV can incur.

That significantly reduces one risk that the lender has to take into account when deciding what interest rate to charge for the loan. In addition, because the source of credit is the capital markets rather than the banking system, securitization can generate greater amounts of credit than bank loans and at lower costs than the normal bank loan costs.

72. Here is an illustration of a securitization transaction: an SPV is created by a subsidiary of an automobile manufacturer to purchase automobile leases from automobile dealers throughout a geographically defined market. The automobile leases are purchased from the dealers for a discount from the projected value of the payment streams expected to be generated by such leases. The SPV then issues debt securities, under applicable securities laws, to investors in the capital market secured by such income stream. As payments are made under the leases, the SPV will use such proceeds to make payments on the debt securities.

5. Term loan financing

73. Businesses often need financing for large, non-ordinary-course-of business expenditures, such as the acquisition of significant equipment or the acquisition of a business. In these situations, businesses generally seek loans that are repayable over a fixed period of time (with principal being repaid in monthly, quarterly or other periodic instalments pursuant to an agreed-upon schedule or in a single payment at the end of the loan term).

74. As is the case with many other types of financing, a business that does not have strong, well-established credit ratings will have difficulty obtaining term loan financing, unless the business is able to grant security rights in its assets to secure the financing. The amount of the financing will be based in part on the creditor's estimate of the net realizable value of the assets to be encumbered. In many States, immovable property is the only type of asset that typically is accepted by lenders to secure term loan financing and, as a result, in such States term loan financing is often not available for other important asset types, such as equipment or the enterprise value of an entire business. This is most likely the case in States that do not have a modern secured transactions regime. However, many businesses, in particular newly established businesses, do not own any immovable property and, therefore, may not have access to term loan financing. In other States, term loans secured by movable property, such as equipment, intellectual property and the enterprise value of the business, are common.

75. Here is an illustration of this type of financing: ABC desires to expand its operations and purchase a business. ABC obtains a loan (predicated on the value of, and secured by, substantially all of the assets of the business being acquired) from Lender C to finance such acquisition. The loan is repayable in equal monthly instalments over a period of 10 years and is secured by existing and future assets of ABC and the entity being acquired.

6. Transfer of title for security purposes

76. In States that honour a form of transfer of ownership even when it does not entail a transfer of possession and is done for financing purposes, a transaction denominated as a transfer of title by way of security (or sometimes as a "fiduciary" transfer of title) is recognized. These transactions are essentially non-possessory security rights, and they are primarily used in States where the secured transactions law has not yet generally recognized non-possessory security rights.

7. Sale and leaseback transactions

77. A sale and leaseback transaction provides a method by which a company can obtain credit based upon its existing tangible property (usually equipment) while still retaining possession and the right to use the tangible property in the operation of its business. In a sale and leaseback transaction, the company will sell its assets to another person for a specific sum (which the company may then use as working capital, to make capital expenditures or for other purposes). Simultaneously with the sale, the company will lease the equipment back from that other person for a lease term and at a rental rate specified in the lease agreement. Often, the lease is a “financial lease” as opposed to an “operating lease”.

D. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

III. Basic approaches to security

A. General remarks

1. Introduction

78. Over time, a broad variety of legal institutions have been developed by different States to encourage lenders and sellers to extend credit to borrowers and buyers. Often, States have enacted special statutory rights for lenders and sellers so as to encourage them to extend credit. Commonly, States have also established regimes to enable creditors and debtors to contract between themselves for special rights. In both cases, the objective was to give the creditor a preference over other creditors in the distribution of the proceeds generated by the seizure and sale of a debtor’s property in the event the debtor failed to perform the promised obligation. These various types of rights can, broadly speaking, be understood as security rights (for the definition of “security right”, see para. 19 above).

79. The main purpose of this chapter is to provide a survey of the major approaches to affording security to creditors. The chapter discusses the advantages and disadvantages of each approach to the immediate parties involved (i.e. creditor and grantor) and to third parties and outlines the major policy options for legislators in selecting among the various possible approaches. The chapter also stresses the reasons why modernization of the law in this area is necessary in order to promote secured credit and the contexts in which the need for modernization is most pressing.

80. In general terms, the devices that are currently being used for purposes of security fall into three broad categories: first, specific devices designed for, and openly denominated as, security (see sect. A.2 below); second, title (ownership) devices combined with various types of contractual arrangement (see sect. A.3 below); and third, integrated, comprehensive security devices that comprise a functionally defined generic concept of a security right (see sect. A.4 below).

81. As noted, in many States today, not all legal devices used by lenders, sellers and other parties to extend credit are based on an agreement. Some arise by operation of law. The more important of these will be noted in each section below, but since statutory security rights are, for the most part, outside the scope of this Guide (with the exception of chapter VII on priority; see A/CN.9/631/Add.4), the following discussion will focus on security devices based on an agreement.

2. Instruments traditionally designed for security

(a) Security rights in tangible property

82. Most States distinguish between security rights in tangible property and security rights in intangible property (for the definitions of “intangible property” and “tangible property”, see para. 19 above). Because tangible property may be the subject of physical possession, and because many States attach significant legal consequences to the possession of tangible property, it is often the case that States permit types of security right to be taken in tangible property that are not available for intangible property.

83. With respect to security rights in tangible property, most States draw a distinction between possessory and non-possessory security rights (for the definitions of “non-possessory security right” and “possessory security right”, see para. 19 above). In the case of possessory security rights, possession of the encumbered asset is transferred to the secured creditor or a third party, or to a person acting on behalf of the secured creditor. In the case of non-possessory security rights, the grantor, which is usually the debtor but can also be a third party, retains possession of the encumbered asset (for the definitions of “debtor”, “encumbered asset”, “grantor” and “secured creditor”, see para. 19 above).

(i) Pledges

84. By far the most common type of security right in tangible property is the pledge. Traditionally, a pledge requires for its validity that the grantor relinquish possession of the encumbered asset. Today, many States have extended the term “pledge” to situations where the grantor retains physical possession of the encumbered asset. In this Guide, these modern types of pledge are considered to be non-possessory security rights and not pledges.

85. An ordinary pledge arises where the grantor effectively gives up possession of the encumbered asset to the secured creditor or to a third party agreed upon by the parties (e.g. a warehouse). The actual holder may also be an agent or trustee that holds the security in the name or for the account of the creditor, or a syndicate of creditors. The required dispossession of the grantor must not only occur when the security right is created, but must also be maintained during the duration of the pledge. The return of the encumbered asset to the grantor usually extinguishes the pledge.

86. In many States, dispossession need not always require physical removal of the encumbered assets from the grantor’s premises, provided that the grantor’s access to the assets is precluded in another way. This can be achieved, for example, by giving to the secured creditor the keys to the warehouse in which the encumbered assets (merchandise or raw materials) are stored, provided that doing so prevents any unauthorized access by the grantor. The same result can be achieved by delivering the encumbered assets to a third party. For example, an independent “warehousing”

company may be engaged to exercise control over the encumbered assets, as agent for the secured creditor, on the grantor's premises. Under such an arrangement (sometimes known as "field warehousing"), the encumbered assets are stored in an area of the grantor's premises that is delineated or in some manner under the exclusive control of the warehousing company. For these types of arrangement to be valid, several conditions must usually be fulfilled. It must be obvious to a third party that the grantor does not have free access to the encumbered assets. In addition, there cannot be any unauthorized access by the grantor to the area in which the pledged assets are stored. Furthermore, the employees of the warehousing company cannot work for the grantor. If they are drawn from the grantor's workforce because of their expertise or for other reasons, their terms of employment must be adjusted so that they no longer work for the grantor.

87. While most pledges are taken over items of tangible property, tangible property also embraces a wider set of property. Assets of a special nature, such as documents and instruments (whether negotiable or non-negotiable), embody rights in tangible property (e.g. bills of lading or warehouse receipts) or in intangible payment rights (e.g. negotiable instruments). In such cases, the grantor is dispossessed through the transfer of physical possession of the document or instrument to the secured creditor.

88. As a security right, the pledge presents five important advantages for the secured creditor, arising from the fact that the grantor is dispossessed and the secured creditor has actual possession of the encumbered assets. First, the grantor is unable to dispose of the pledged assets without the secured creditor's consent. Second, the secured creditor does not run the risk that the actual value of the pledged assets will be reduced through the grantor's failure to provide any necessary upkeep or maintenance. Third, in cases where the creditor can use the pledged assets, the parties will often agree that the creditor may do so as long as it takes proper care of them. Fourth, if the pledged asset is an instrument that bears interest payable to the holder, the pledge facilitates the creditor's collection of the repayment obligation as instalments come due. Fifth, if enforcement becomes necessary, the secured creditor is saved the trouble, time, expense and risk of having to seek to obtain delivery of the encumbered assets from the grantor.

89. The pledge also has advantages for third parties, especially when these third parties are the grantor's other creditors. The required dispossession of the grantor avoids any risk of creating a false impression of the grantor's wealth (e.g. that the grantor actually owns the pledged assets or owns them free of any encumbrances) and also minimizes the risk of fraud.

90. On the other hand, the pledge also has major disadvantages. The greatest disadvantage for the grantor is the required dispossession itself, which precludes the grantor from using the encumbered assets in its business. This disadvantage is acute in situations where possession of the encumbered assets is necessary for commercial grantors to generate the income from which to repay the loan, as is the case, for example, with raw materials, semi-finished goods (work-in-process), equipment and inventory. This disadvantage alone makes the pledge economically impractical in many business contexts. Another important disadvantage is that assets that do not exist or in which the grantor does not have rights at the time of the pledge, cannot be pledged. This means that a number of practices, such as inventory financing on the basis of a revolving credit facility, cannot be accommodated.

91. For the secured creditor, the pledge has the disadvantage that the secured creditor has to store, preserve and maintain the encumbered assets, unless a third party assumes this task. Where secured creditors themselves are neither able nor willing to perform these tasks, entrusting third parties to do so will involve additional costs that will be directly or indirectly borne by the grantor. Another disadvantage is that a secured creditor in possession of encumbered assets (e.g. a pledgee or holder of a warehouse warrant or a bill of lading) may, depending upon the type of asset involved, be exposed to potential liability in various circumstances for loss or damage caused by the encumbered assets, which may exceed the amount of the credit extended, as is the case where the encumbered asset causes contamination of the environment (see chapter IV on creation of a security right; para. 200 below).

92. However, where the parties are able to avoid these disadvantages, the pledge can be utilized successfully and efficiently as a security device. There are two major fields of application. The first field of application is where the encumbered assets are already held by, or can easily be brought into the possession of, a third party, especially a person, such as a warehouse, engaged in the business of maintaining possession of assets owned by other persons. The second field of application is negotiable instruments and negotiable documents, which can be easily held by the secured creditor itself.

(ii) *Right of retention of possession*

93. Although statutory rights of retention of an asset are generally outside the scope of this Guide (with the exception of chapter VII on priority; see A/CN.9/631/Add.4), they are briefly discussed here, since they secure payment of an obligation. Many States have extensive regimes governing statutory retention rights. Typically, these regimes cover carriers, warehouses, repairers and improvers. In some States, lawyers, accountants, architects and other professionals are also given a right of retention over documents belonging to their clients. All of these types of right of retention arise from the general legal principle of contract law that a party is not required to perform its obligation until the other party is ready, willing and able to perform the correlative obligation. Most of these types of legal retention right do not give the retainer any special enforcement rights, and some do not even permit the retainer that seizes and sells the retained property to claim a priority in the proceeds of the sale in the context of enforcement.

94. In addition to these limited statutory rights of retention, many States permit contracting parties to extend the scope of the general legal principle and to agree that, should one of them be in breach of a contractual obligation, the other may withhold its own performance even when the performance relates to a different contract between the parties. In particular, these States permit a party to withhold an asset that, under the terms of some other contract, the withholding party is obliged to deliver to the party in breach. For example, a bank need not return a negotiable document (such as a bill of lading) or negotiable instrument (such as a bill of exchange or a promissory note) that it holds for its customer or allow withdrawals from the customer's bank account, if the customer is in default on repayment of a credit and had agreed to grant the bank a right of retention. Where such a right of retention is reinforced by a valid power to sell the retained item, some legal systems regard such a reinforced right of retention as a type of pledge, although the method of its creation deviates from that of the pledge proper. Alternatively, a reinforced right of retention may be regarded as having some of the effects of a pledge.

The most important consequence of such assimilation to a pledge is that the creditor in possession has a priority in the assets retained, unless they are subject to an earlier created and effective security right not effected by possession.

(iii) *Non-possessory security rights*

95. As noted above (see para. 90), a pledge in tangible property required for production or sale (such as equipment, raw materials, semi-finished goods and inventory) is economically impractical. In the case of a commercial grantor, the grantor must have possession of these goods in order to operate its business. Without access to the goods and the right to dispose of them, the grantor would not be able to earn the necessary income to repay the loan.

96. To address this problem, States, especially in the second half of the twentieth century, began to recognize security rights in movable property outside the narrow confines of pledges. While in some cases this recognition was reflected in the enactment of new laws, in many cases it resulted from practice and court decisions. Although some States introduced a new security right encompassing various arrangements serving security purposes, most States continued the tradition of the nineteenth century (which disregarded an earlier, more liberal attitude) and insisted on the possessory pledge as the only legitimate method of creating security in movable property. During the twentieth century, legislators and courts in many of those States have come to acknowledge the urgent economic need to provide for some form of non-possessory security right.

97. Individual States attempted to find appropriate solutions according to particular local needs and in conformity with the general framework of their legal system. The result is a diverse range of solutions. An external indication of the existing diversity is the variety of names for the relevant devices, sometimes differing even within a single State. The more common names and techniques are fictive dispossession of the grantor, non-possessory pledge, registered pledge, *nantissement*, warrant, *hypothèque mobilière*, contractual privilege, bill of sale, chattel mortgage, floating charge and trust receipt. That is, while some States sought to create a denominated non-possessory security device over movable property, other States simply modified the rules governing existing devices like the pledge, in order to permit non-possessory security rights.

98. An even more relevant feature of these legislative reforms is that most were conceived as limited responses to particular problems and were therefore given a restricted scope of application. For example, in some States, there is one type of non-possessory security device applicable to business and commercial equipment, another applicable to the financing of raw materials and a third only applicable to retail inventory. Only a few States have enacted a general statute creating a non-possessory security right applicable to all forms of movable property. Furthermore, some States have different sets of legislation on non-possessory security rights depending on the type of business enterprise in question: one dealing with security for financing of industrial and artisan enterprises, another with security for financing of farming, fishing and fishing enterprises, another with security for financing of mining and extractive industries, and a fourth dealing with transactions between individuals. Finally, in many States, there is a variety of statutes on non-possessory security rights, each covering only a small economic sector, such as the acquisition of cars or farm machinery, or the production of films.

99. Some States have addressed the matter through a device known as a “fixed charge” or a “floating charge”. Under this type of device, a security right is denominated as a “fixed charge” or a “floating charge” depending upon the degree of control that the secured creditor exerts with respect to the encumbered asset. In general, the creditor has a fixed charge on an encumbered asset if the grantor is not permitted to sell or otherwise dispose of the asset without the creditor’s consent (generally the case with equipment that the grantor uses in its business) and has a floating charge on an encumbered asset if the grantor is permitted to sell or otherwise dispose of the asset without the consent of the secured creditor (generally the case with inventory that the grantor is free to sell in the ordinary course of its business). The relevance of the difference between a fixed charge and a floating charge on an asset relates to the priority of the charge: a fixed charge generally represents a paramount charge on the asset, while a floating charge may be subject to certain preferential claims in favour of tax authorities and other third parties, or a carve-out in favour of unsecured creditors (see also para. 196 below).

100. In some States, there is some reluctance to allow non-possessory security rights in inventory. This is sometimes based upon an alleged inconsistency between the creditor’s security right and the grantor’s right to sell, which is indispensable for converting the inventory to cash with which the grantor will repay a secured loan. Another reason is that the disposition of inventory often gives rise to difficult conflicts between multiple transferees of the encumbered assets or multiple secured creditors. A third reason may arise from a policy decision to reserve inventory for the satisfaction of the claims of the grantor’s unsecured creditors.

101. Varied as the legislation providing for non-possessory security rights may be, it shares one common feature, namely that some form of publicity of the security right is usually required or available. The purpose of publicity, such as that provided by the possession of a pledged asset, is to dispel the false impression of wealth that might arise if the security right in assets held by the grantor is not apparent to third parties. It is often argued, however, that in a modern credit economy, parties should assume that assets may be encumbered by a lender’s security right or may be subject to a seller’s retention of title. For this reason, the argument goes, a general requirement that non-possessory security rights be published is not necessary to protect third parties. Such general assumptions, however, are bound to increase the cost of credit. Even in cases where the person in possession is the owner and the assets are not encumbered, a creditor will not run the risk of there being a hidden encumbrance and will adjust the cost of credit accordingly. Alternatively, the creditor will try to avoid the risk (only partially) through an extensive, time-consuming and costly search. Finally, in systems based on the general assumption that assets will be encumbered and which, consequently, do not have integrated and fully transparent registries, there is no objective basis for a creditor to know the actual extent to which assets are encumbered and the relative priority of competing security rights. The result is that grantors may not be able to use the full value of their assets to obtain credit.

102. There appears to be a generally recognized need to bridge the gap between the general economic demand for non-possessory security rights and the often-limited access to such security under current law in many States. A major purpose of legal reform in the area of secured transactions is to improve in the field of non-possessory security rights and in the related field of security in intangible property (see sect. A.2 (b) below).

103. While modern regimes demonstrate that difficulties can be overcome, experience shows that legislation on non-possessory security rights requires more effort than simply “modernizing” the traditional possessory pledge. This is due mainly to the following four key characteristics of non-possessory security rights. First, as the grantor retains possession, it has the power to dispose of the encumbered asset or create a competing right in it, even against the secured creditor’s will. This situation necessitates the introduction of rules concerning the effects and priority of such dispositions (see chapter VII on priority; A/CN.9/631/Add.4). Second, the secured creditor must ensure that the grantor in possession takes proper care of, duly insures and protects the encumbered assets to preserve their commercial value, matters which must all be addressed in the security agreement between the secured creditor and the grantor (see chapter VIII on rights and obligations of the parties; A/CN.9/631/Add.5). Third, if enforcement of the security right becomes necessary, the secured creditor will usually prefer to obtain the encumbered assets. However, if the grantor is not willing to part with possession of those assets, judicial or extrajudicial proceedings may have to be instituted. Proper remedies, and possibly accelerated enforcement proceedings, may have to be provided for (see chapter X on post-default rights; A/CN.9/631/Add.7). Fourth, the appearance of false wealth in the grantor created by “secret” security rights of third persons in assets held by the grantor, may have to be counteracted by various forms of publicity (see chapter VI on the registry system; A/CN.9/631/Add.3).

104. In the light of the generally recognized economic need for allowing non-possessory security rights and the basic differences discussed above between possessory and non-possessory security rights, new legislation will be necessary in many States taking account of the relative advantages and disadvantages.

105. In view of the legislative models discussed above, legislators may be faced with three options. One option may be to adopt integrated legislation for both possessory and non-possessory security rights (see sect. A.4 below). This is the approach, for example, of the OAS Model Inter-American Law on Secured Transactions, adopted in February 2002. A second option may be to adopt integrated legislation for non-possessory security rights, leaving the regime on possessory security rights to other domestic law. A third approach may be to maintain a fragmented system of different security rights for different types of grantor, different types of asset and different types of security (possessory and non-possessory), but to ensure that all issues relating to third-party effectiveness, priority and enforcement are dealt with under the same set of rules.

106. The prevailing trend in modern legislation, both at the national and the international level, is towards an integrated approach, at least as far as non-possessory security rights are concerned. A selective regulation of specific types of non-possessory security right is likely to result in gaps, overlaps, inconsistencies and lack of transparency, as well as in discontent in those sectors of industry that might be excluded. In addition, such selective regulation makes it more difficult to address conflicts of priority between possessory and non-possessory security rights in States that choose to retain separate regimes for these two types of security right.

(iv) *Non-possessory statutory rights*

107. Many States do not have an integrated regime governing non-possessory security rights or even an array of specialized regimes for non-possessory security rights. In these States, credit is encouraged through statutes granting particular

non-contractual rights to certain categories of creditors. Among the more common beneficiaries of these statutory rights are sellers, suppliers of materials, artisans, tradesmen and repairers. The regimes in question typically do not give the designated creditor a right to exercise special enforcement remedies. The beneficiary of the right must obtain judgement and then seize the property of the debtor in the ordinary way. The sole advantage that the creditor obtains is a priority for payment (or privilege) that may be claimed in the proceeds of the sale in the context of enforcement. Moreover, because the beneficiary of the right normally does not have to publicize its non-possessory statutory right, it is rare that the right can be claimed in property that no longer belongs to the debtor.

108. The existence of these types of statutory non-possessory right does go some way in encouraging the designated beneficiaries to advance credit to their debtors. But they have several disadvantages. They are not available to all types of credit provider. They are secret, in the sense that there is no easy way for other third parties to know of their existence. They do not give creditors access to expeditious enforcement remedies that are likely to generate a higher price upon the sale of the asset. Finally, they provide only a fragile protection to creditors since they cannot be claimed once the debtor no longer owns the property. For all these reasons, the modern trend is for States to cut back on the number of these non-possessory rights and privileges and to expand both the categories of creditors that may contract for a non-possessory security right and the types of asset over which a non-possessory security right may be taken by agreement.

(b) Security rights in intangible property

109. Intangible property comprises a broad variety of rights, such as receivables and intellectual property (for the definitions of “intangible property”, “intellectual property” and “receivable”, see para. 19 above). In view of the dramatic increase in the economic importance of intangible property in recent years, there is a growing demand to use these rights as assets for security. Intangible property (especially in the form of intellectual property) often represents a significant component of the value of other assets, as in the case of inventory and equipment (e.g. goods bearing a valuable trademark and software essential to the operation of equipment). Furthermore, proceeds of inventory or equipment may take the form of intangible property. [Except for certain types of non-intermediated securities,] the Guide does not deal with securities, since they raise a range of issues requiring special treatment and these issues are addressed in a text being prepared by Unidroit and in the Convention on the Law Applicable to Certain Matters Relating to Securities held with an Intermediary. The Guide does, however, discuss security rights in receivables, as well as security rights in other types of intangible property.

110. By definition, intangible property is incapable of being physically possessed. Nevertheless, codes in many States (including “civil law” States) have dealt with the creation of security rights in intangible property, at least in the case of receivables, by modifying the regime governing the creation of possessory pledges. Some codes have attempted to create the semblance of dispossession by requiring the grantor to transfer any writing or document relating to the pledged receivable (such as the contract from which the receivable is derived) to the creditor. However, such a transfer, in itself, is not sufficient to create the pledge. Rather, the grantor’s “dispossession” is, in many States, symbolized by requiring that a notice of the pledge be given to the debtor of the receivable.

111. In some States, techniques have been developed that achieve ends comparable to those attained by the possession of tangible property. The most radical method is the full transfer of the encumbered right (or the encumbered share of it) to the secured creditor. However, this goes beyond creation of a security right and amounts to a transfer of title, whether conditionally or absolutely (see sect. A.3 (a) below). Under a more restrained approach, title to the encumbered assets is not affected, but dispositions by the grantor that are not authorized by the secured creditor are blocked. In the case of a bank account, if the grantor (the creditor of the encumbered account), as holder of the account, agrees that its account can be blocked in favour of the secured creditor, the latter has the equivalent of possession of tangible property. That is especially the case if the depositary bank itself is the secured creditor.

112. Such techniques of obtaining “possession” of intangible property are sometimes referred to as “control” in modern secured transactions regimes. In general, a secured creditor is deemed to have control of an asset if it has the contractual right to direct the disposition of the asset. For example, in some States a secured creditor may be deemed to have control of the right to payment of funds in a bank account if the depositary bank has contractually bound itself (in a document often referred to as a “control agreement”) to dispose of the funds in the account exclusively at the direction of the secured creditor (for the definition of “control” with respect to a right to payment of funds credited to a bank account, see para. 19 above). The degree of control may vary. In some cases, the control is absolute and any disposition by the grantor is prevented. In other cases, the grantor is allowed to make certain dispositions or dispositions up to a fixed maximum aggregate amount, or until the occurrence of a specified event (sometimes referred to as a “triggering event”).

113. In the context of efforts to create comprehensive regimes for non-possessory security rights in tangible property (see sect. A.2 (a) above), it is common for security rights in one of the most important types of intangible property, receivables, to be integrated into the legal regime applicable to possessory security rights to tangible property. This approach serves consistency, since the sale of inventory results, as a rule, in receivables being generated and it is often desirable to extend the security in inventory to the resulting proceeds. The general registry system used for security in tangible property can perform its salutary functions for security in intangible property, such as receivables, as well (for details concerning the registry system, see A/CN.9/631/Add.3). This may have the additional benefit of dispensing with the notification of the debtor of the receivable, which in certain secured transactions involving a pool of present and future assets that are not specifically identified may not be practical or feasible. Even if such notification is practical or feasible, it may not be desirable for reasons of confidentiality.

114. In the light of experience with different models for governing security rights in intangible property, new legislation will be necessary in many States. Taking account of the advantages and disadvantages of these approaches, States will face a basic choice. They may either attempt to regulate security rights in intangible property in a regime separate from that governing security rights in tangible property (in which case the technique for generating security will closely resemble a transfer of title) or they may attempt to create an integrated regime that seeks to create a common set of principles governing creation, third-party effectiveness, priority and enforcement of security rights in tangible and intangible property.

115. The predominant tendency in modern legislation is to develop regimes that treat security rights in intangible property under an integrated regime that also governs security rights in tangible property. Such an approach permits grantors and creditors to determine at the outset of their transaction the assets to be encumbered, to establish the relationship between rights in receivables that arise as proceeds and rights that arise when the same receivables are the initially encumbered asset, and to avoid inconsistency and lack of transparency.

3. Use of title for security purposes

116. In many States, alongside various devices and techniques that are intended to function as security rights (see sect. A.2 above), there exists a variety of other legal instruments that can be deployed to generate the equivalent of a security right. Most of these instruments developed through commercial practices, the validity of which was confirmed by courts, but some were either established by or refined through legislation. In so far as creating the equivalent of non-possessory security rights in tangible and intangible property is concerned, the most commonly found alternative instruments and techniques involve the use of title (or ownership) to the asset that is being deployed for security purposes. Title may be used in this way either by the grantor transferring title to the creditor (see sect. A.3 (a) below) or by a creditor (typically a seller or lessor) retaining title to the property that is sold or leased (see sect. A.3 (b) below). Both transfer of title and retention of title enable the creditor to benefit from rights that are equivalent to non-possessory security rights, which, as previously discussed, are essential from an economic standpoint.

(a) Transfer of title

117. Because the various regimes failed to address non-possessory security rights, debtors and creditors looked elsewhere in the law to find principles that could be used to fill gaps or address obstacles to the creation of non-possessory security rights. The transfer of title of the assets to the secured creditor (either conditionally until the loan is repaid or subject to a retransfer to the borrower under a second sale by which the creditor retains title until the loan is repaid) is the most usual technique deployed for this purpose.

118. Today, there are two features that continue to make the security transfer of title attractive for creditors in many States. First, the formal and substantive requirements for transferring title in tangible or intangible property to another person are often less onerous, and therefore less costly, than the requirements for creating a security right. Second, in the case of enforcement, and in the case of the grantor's insolvency, a creditor often has a better position as an owner than as a holder of a security right. This is especially the case where the owner's assets, although in the grantor's possession, are determined to not be part of the insolvency estate, by contrast with the situation where the grantor's assets, if merely encumbered by a security right for the creditor, are deemed to be part of the insolvency estate (see chapter XI on insolvency; A/CN.9/631/Add.8). These two features are not, however, invariably present in national law. For example, in many States the formal difference between title for security purposes and security rights with respect to the requirements for creation or enforcement has been eliminated, to the extent that title devices and security rights are treated the same with respect to their creation. In other States, security transfers are generally subject to the rules applicable to transfers of title while, in the case of enforcement and insolvency, they are treated as security devices.

119. The security transfer of title has been established by law in some States (usually under regimes dealing with sales with a right to reclaim or repurchase) and by practice and courts in other States. Today, there is a variety of approaches that States take to the transfer of title for security purposes. As noted, in some States, its creation is subject to the less demanding rules governing transfers of title and it has the effect of a full transfer of title. In other States, its creation is subject to the more cumbersome rules governing security rights and it has only the effect of a secured transaction. In yet other States, especially from the civil law world, many if not all such transfers of title are regarded as a circumvention of the ordinary regime of security instruments and are, therefore, held to be null and void. In States that have adopted a comprehensive and integrated regime for non-possessory security rights, transfer of title for security purposes is available but is treated as a security device. In these States, the creation, third-party effectiveness, priority and enforcement of a transfer of title for security purposes are subject to the same requirements applicable to security rights (see sect. A.4 below).

120. With respect to the treatment of transfers of title for security purposes, legislators are faced with two policy options. One option is to admit security transfers of title with the (usually) reduced requirements and the greater effects of a full transfer, thus avoiding the general regime for security rights. This option results in enhancing the secured creditor's position (although at the risk of increasing the liability of the creditor; see chapter IV on creation of a security right, para. 200 below), while weakening the position of the grantor and the grantor's other creditors.

121. The other option is to allow security transfers of title, but to limit either the requirements or the effects or both to those of a mere security right. This can be done in one of two ways. On the one hand, States could specify the transfer-of-title transactions that will be permitted, prohibiting all others, and subject these permitted devices to the creation, third-party effectiveness, priority and enforcement regime applicable to security rights. Some civil law States have taken this approach. On the other hand, States could simply provide that these security transfer-of-title transactions will be characterized as security rights. Many common law States have taken this approach. Under both these alternatives, a graduated reduction of the secured creditor's advantages and of the other parties' corresponding disadvantages is possible, especially if the requirements of a transfer of title or its effects, or both, are limited to those relating to a security right. The second alternative is the approach followed in States with an integrated, comprehensive secured transactions regime, and is also the approach recommended by this Guide (see A/CN.9/631, recommendation 11).

(b) Retention of title

122. The second method of using title as security is effected by techniques that permit sellers to use their title to tangible property being sold to a buyer as a means to secure payment of the purchase price. The most common, but not exclusive, means for doing so is through a contractual retention-of-title (reservation-of-ownership) arrangement. Nonetheless, there are several other mechanisms by which sellers may deploy title, some arising by statute and others arising by agreement between the parties.

123. In many States, the law of sale permits creditors that have actually transferred title to the buyer to seek the annulment of the sale if the buyer does not pay the price. Upon annulment, the seller may then reclaim ownership and possession of the

property free and clear of any encumbrances that the buyer may have created in it. These reclamation rights typically arise by operation of law, although in some States sellers are able to extend the reclamation right by contract beyond that provided in the law of sale. As this Guide focuses on security rights created by agreement, these statutory seller's remedies will not be discussed further here (for a more complete discussion, see chapter XII on acquisition financing rights; A/CN.9/631/Add.9).

124. In a simple retention-of-title arrangement, the seller may retain title to the goods sold until full payment of the purchase price for those goods. Lenders may also participate in such financings by accepting an assignment of the secured obligation from the seller. There are several variations on retention-of-title transactions. Sometimes, the seller merely promises to sell the property to the buyer and the sale (and transfer of title) is completed only upon full payment. Sometimes, the sale is made conditional upon the purchaser paying the full price. Most often, however, the sale is immediate, and it is only the transfer of title that is made conditional upon the buyer paying the price. The common thread to all these variations is that, even though the buyer may have possession and the use of the property (and in some cases may even have the right to dispose of the property), it does not actually obtain rights in the property until the purchase price is fully paid. Until that moment, title continues to vest in the seller.

125. States also permit variations in the scope of retention-of-title agreements. Sometimes these relate to the obligation secured and sometimes to the property that is subject to the retention of title. For example, in an "all-monies" or "current-account" retention-of-title arrangement, the seller retains title to the goods sold until all obligations owed by the buyer have been discharged, whether such obligations relate to those goods or to other goods purchased by that buyer from the seller. In an "extended" retention-of-title arrangement, the seller's rights may also extend to receivables or other proceeds arising upon the sale of the goods. However, such an arrangement exists in very few States. In any case, even in those States, the right to the proceeds generally is extinguished when the proceeds are commingled with other proceeds. In the vast majority of States, retention of title does not extend to proceeds. Also, in almost all States, retention of title extends to goods only while they retain their identity and the right is extinguished once the goods are incorporated into other goods in the manufacturing process, or otherwise lose their original identity.

126. An alternative to a retention-of-title arrangement, but with the same economic result, can be achieved by combining a lease contract with an option of the lessee to purchase the leased object at a nominal price, which may only be exercised after the lessee has paid most of the notional "purchase price" through rent instalments (see the example given in chapter II, section C.1, para. 62 above). In some cases, where the lease covers the full useful life of the leased equipment, it is equivalent to a retention-of-title arrangement even without an option to buy. These variations are all intended to function as devices to enable a borrower to finance the "acquisition" of either equipment or inventory (see chapter XII on acquisition financing rights; A/CN.9/631/Add.9). In the following paragraphs, at least with respect to leases that serve a security function, the term "seller" includes the term "lessor", and the term "buyer" includes the term "lessee".

127. Economically, a retention-of-title arrangement provides a security right that is particularly well adapted to the needs of sellers in securing credit extended for the purchase price of goods. In many States, this kind of credit, which is typically made available by suppliers, is widely used as an alternative to general bank financing and

is given preferential status in view of the importance for the economy of small- and medium-sized suppliers of goods. In other States, banks also provide acquisition financing on a more regular basis and, as a result, have developed practices that enable them to take advantage of the retention-of-title mechanism. For example, a seller can sell goods to a bank for cash and the bank then can resell the goods to the buyer on credit under a retention-of-title arrangement; or a buyer might pay the seller in cash from a loan and then transfer title to the bank as security for the loan. In those States, this source of credit and its attendant specific security is often accorded a special privilege in the form of a heightened priority over conflicting security rights in the same goods, provided that certain formal requirements are complied with.

128. Due to its origin as a term of a contract of sale or lease, many States (including a number of States that treat security transfer-of-title devices as the equivalent of security devices) still regard the retention-of-title arrangement as a mere quasi-security. As a result, they do not subject retention-of-title devices to the general rules applicable to security rights, notably as to form for creation, method of third-party effectiveness, priority and enforcement. Further advantages are that it can be created in a cost-effective way since, in many States, it is not subject to publicity. Retention of title is also well suited to short-term financing and, in some States, it gives rise to a proprietary right of the buyer. In States that permit the creation of non-possessory security rights only in certain types of asset, but not in inventory, retention of title is used for inventory financing. Another advantage is that the seller retaining title has, in many States, a privileged status. This may be justified by the desire to support normally small- and medium-sized suppliers and to promote acquisition financing by suppliers as an alternative to general bank credit.

129. At the same time, retention-of-title arrangements present certain disadvantages. The position of the buyer and the buyer's creditors is weakened and, in the absence of publicity, third parties have to rely on the buyer's representations or take the time and incur the cost to collect information from other sources. Another disadvantage is that it may prevent, or at least impede, the buyer from using the purchased assets for granting a second-ranking security to another creditor. Yet another disadvantage is that enforcement by the buyer's other creditors is impossible or difficult without the seller's consent. For these reasons, in some States retention-of-title arrangements are treated in the same way as security rights in every respect, while, in other States, they are treated as security rights in some but not in all respects (e.g. they are subject to publicity but are given a special priority status). In yet other States, retention-of-title arrangements are ineffective as against third parties in general or only if they relate to certain assets, especially inventory, on the theory that the seller's retention of title is incompatible with the seller granting to the buyer the right and power of disposition over the inventory.

130. Several policy options may be considered by States. One option is to preserve the special character of retention of title as a title device. Under this approach, retention of title would not be subject to any requirements as to form or publicity. Another, slightly different, option would be to preserve the special character of retention of title but to limit its effects to securing only the purchase price of the affected asset to the exclusion of any other credit; and to restrict it to the purchased asset to the exclusion of proceeds or products. A third option is to integrate retention-of-title arrangements into the ordinary system of security rights. In such a case, the creation, third-party effectiveness, priority and enforcement, even in the buyer's insolvency, of a retention-of-title arrangement would be subject to the same

rules applicable to security rights. Under such an approach, for the policy reasons mentioned above, it would be possible to grant the seller certain advantages (e.g. priority as of the time of the conclusion of the sales contract in which the retention of title was contained or as of the time of delivery of the goods). A fourth option might be to keep the retention of title as a separate transaction, but to place it on a par with any other security right (i.e. without granting the retention-of-title seller any special privileges relating to creation, third-party effectiveness, priority and enforcement). These options are discussed in greater detail in chapter XII on acquisition financing rights (see A/CN.9/631/Add.9).

4. Integrated and functional approach to security

131. Throughout the twentieth century, the credit demands of business were often frustrated by the lack of a suitable legal framework through which borrowers could grant security rights to lenders and other credit providers. Sometimes, the law explicitly prohibited the granting of security over certain types of asset. Sometimes, an appropriate legal device simply did not exist. Sometimes, parties were able to cobble together a legal device to serve their purposes, but it was inefficient, costly and complex to operate. These problems were at the source of many of the developments just reviewed. For example, they led to contractual practices and legislative innovations permitting fictitious “pledges” and the creation of specialized legal transactions meant to solve problems created in particular sectors of economic activity; they also stimulated the development of a variety of transfer-of-title mechanisms; and they lay behind both the extensive deployment of retention-of-title agreements and the different variations on retention of title intended to increase its efficiency as a legal device for securing the performance of an obligation.

132. Faced with the complexity, inefficiency and gaps created by this ad hoc approach to adjusting legal regimes to meet the credit needs of business, by the middle of the twentieth century some States decided to rethink the whole field of security rights in movable property. The creation of a single, integrated, comprehensive and functionally defined security right in all types of movable property was the result of this reflection. This approach to security rights was inspired by the observation that the many different types of non-possessory security right, the traditional possessory pledge and the several variations on title-transfer and retention-of-title devices were all based upon a few identical guiding principles that aimed at achieving the same functional outcomes.

133. The main theme in this new approach to security rights is that substance must prevail over form. It is no accident that this idea first developed in federal States, such as the United States of America and Canada. The United States Uniform Commercial Code, a model law now adopted by all 50 states (including the mixed common law and civil law state of Louisiana), created a single, comprehensive security right in movable property unifying numerous and diverse possessory and non-possessory rights in tangible property and intangible property, including transfer- and retention-of-title arrangements, that existed under state statutes and common law. The idea spread to Canada (including the civil law jurisdiction of Quebec), New Zealand, India and various other States (many of which are civil law jurisdictions in Central and Eastern Europe). The OAS Inter-American Model Law on Secured Transactions follows a similar approach in many respects. The EBRD Model Law on Secured Transactions follows a similar approach to the extent that it

creates a specific “security interest” which can work side by side with other security devices (e.g. leasing) and re-characterizes retention of title as a security right.

134. As an approach to creating an efficient regime that enhances the provision of low-cost credit to businesses and consumers, an integrated comprehensive security system presents certain important advantages.

135. First, all relevant statutes dealing with non-possessory security rights (which are often great in number) may be merged into one text, an approach that ensures comprehensiveness, consistency and transparency of the rules. Second, the rules on possessory security rights, especially the possessory pledge, may be covered and at the same time adapted to contemporary requirements (e.g. by introducing the notion of control in relation to security rights in intangible property). Third, title devices, such as security transfer and retention of title, may be integrated into the system in a way that not only gives sellers the protection they desire, but also enables buyers to use whatever value they have acquired in property purchased to obtain additional credit. Fourth, contractual arrangements that fulfil a security function, such as leasing contracts, sale and resale, may also be included and covered in a way that minimizes conflict and confusion about the priority of the rights of different creditors.

136. In addition, under this approach, a creditor that envisages granting a secured loan need not investigate various alternative security devices and evaluate their respective prerequisites and limits as well as advantages and disadvantages. Correspondingly, the burden borne by the grantor’s creditors, or the insolvency representative for the grantor that must consider their rights (and duties) vis-à-vis the secured creditor, is lessened if only one regime, characterized by a comprehensive security right, has to be examined rather than several different regimes. Further, this will reduce the cost of creating security rights and, concomitantly, the cost of secured credit.

137. In cross-border situations, the recognition of security rights created in assets in one State that are then moved to another State will also be facilitated if the State into which the assets are moved recognizes a comprehensive security right. Such a system can much more easily accept a broad variety of foreign security rights, whether of a narrow or an equally comprehensive character.

138. There are, however, some disadvantages to the integrated, comprehensive approach. First, this approach may require re-characterization of certain transactions (e.g. transfer of title for security purposes or retention of title), at least for the purpose of secured transactions laws. For States that do not already accept the “relativity of title” to movable property, it will be necessary to have an extensive re-education for lawyers and business people as to how such a re-characterization would operate in practice. In addition, this approach requires adjusting the basic legal logic that has heretofore underpinned the law relating to security rights in many States. In these States, security rights are conceived to be exceptions to the general principle of equality of creditors and must therefore be restrictively interpreted. Moreover, security is usually conceived as a specific right, over specific assets, to secure a specific obligation, owed by a specific debtor to a specific creditor. The integrated and comprehensive approach presumes that these traditional limitations will be displaced by a general principle favouring the spread of secured credit. Finally, this approach normally assumes that the new regime will be brought into force in a single piece of legislation. For some States this will involve

significant adjustment to the manner in which their civil codes, commercial codes or other statutes are organized.

139. Many of these disadvantages can be reduced or eliminated by careful attention to the manner in which a State chooses to develop legislation creating an integrated and comprehensive security right. For example, it would be possible to achieve most of the advantages while avoiding most of the disadvantages through (a) a comprehensive reform of existing laws relating to security rights, title devices serving security purposes, the assignment of receivables and financial leases; and (b) the enactment of specific statutory rules to regulate contractual practices that have been developed to overcome gaps in the law. In any case, the effort required to do so in a manner that would achieve consistency, transparency, efficiency and the establishment of genuine competition among all providers of credit on the basis of price would be considerable.

140. If a State were to adopt an approach that favoured the enactment of a comprehensive, integrated regime, technically either of two different approaches could be used. Under one approach, the names of the old security devices, such as pledge, floating charge, transfer of title for security purposes and retention of title, would be preserved and used. However, their creation and effects as security rights would be made subject to an integrated set of rules, even though they would continue to have their full title effects for other purposes (e.g., taxation or accounting). Under a slightly different approach, all types of rights serving security purposes would be subsumed into a unitary notion of security right and the rules applicable to certain basic types of contract that may be used for purposes of security, such as sales, leases or assignments, would be supplemented by certain specified additional rules (e.g. with respect to third-party effectiveness, priority and enforcement).

141. The Guide recommends the establishment of an integrated, comprehensive secured transactions regime as the approach that will most effectively promote secured credit. In principle, it also recommends that States adopt the second of the two techniques just presented for doing so (an approach that may be described as a functional and unitary approach). However, the Guide also recognizes that some States may not be in a position to adopt the functional and unitary approach to acquisition financing rights and therefore contemplates that, in this particular situation, States might choose to adopt the first approach to achieving a comprehensive and integrated regime, an approach that might be characterized as a functional and non-unitary approach (for a more detailed discussion, see chapter XII on acquisition financing rights; A/CN.9/631/Add.9).

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

IV. Creation of a security right (effectiveness as between the parties)

A. General remarks

1. Introduction

142. A security right under the Guide is a property right (as opposed to a personal right) in movable property (as opposed to immovable property) created by agreement (as opposed to statutory or judgement rights) between the grantor and the secured creditor that is meant to secure the performance of an obligation owed by the grantor or another person to that creditor (for the definition of “security right”, see para. 19 above). A key issue, therefore, is to determine the steps necessary for a security right to become fully effective between the parties and as against third parties.

143. In some States, a fully effective security right in an asset only comes into being upon conclusion of a security agreement and completion of an additional act, such as delivery of possession of the encumbered asset. Depending on the nature of the asset, notification of a third party may be required (as in the case of receivables) or registration (as in the case of ships or aircraft). Until these acts have occurred, the security right is not considered as having been created and is not, therefore effective, even as between the parties. However, once these acts have occurred, the security right is effective not only as between the parties, but also as against any person whether party to the security agreement or not (this is often referred to as the *erga omnes* effect of property rights).

144. In other States, a distinction is made between the effectiveness of a security right as between the parties (*inter partes*) and its effectiveness as against third parties. The security right comes into existence upon conclusion of the security agreement, but is effective only as between the parties. An additional act is required for the security right to become effective against third parties. This additional act also serves as a basis for determining the priority of the security right as against competing claimants (for the definitions of “competing claimant” and “priority”, see para. 19 above). The main advantage of this approach is practical, making it possible for a grantor to offer the same assets as security to more than one creditor (thereby increasing the amount of credit that a grantor can obtain based upon the value of the assets), while creating a basis for determining the priority ranking of those creditors.

145. This approach is based on the idea that a security right has two distinct elements. There is, first, a relationship between the parties; and there is, second, a property element to the security that will produce effects that directly affect the rights of third parties. In other words, the security agreement is sufficient for the security right to be effective as between the parties, but insufficient to establish effectiveness against third parties, such as other secured creditors, judgement creditors or the insolvency representative in the insolvency of the grantor. Furthermore, this approach is based on the assumption that there is no need to subject effectiveness as between the parties to notification or registration and, to the contrary, such an approach could create an obstacle to transactions that serve security purposes but are based on informal sale or lease techniques (e.g. retention-of-title sales, financial leases or hire-purchase agreements).

146. Some States adopt a third approach, which is a hybrid between the first two approaches. It involves treating a security right as effective against all upon its creation (including the grantor's unsecured creditors, judgement creditors, the grantor's insolvency representative, donees and transferees of encumbered assets outside the ordinary course of business of the grantor), but provides for the application of special rules of third-party effectiveness and priority in the case of competing claimants that assert specific rights in the encumbered assets (e.g. competing secured creditors or transferees of encumbered assets in the ordinary course of business). This approach generally leads to the same results as the second approach, with a slight variation in relation to the rights of certain creditors, such as unsecured creditors, judgement creditors and the insolvency representative (see A/CN.9/631/Add.2, paras. [...]).

147. This Guide adopts the second of the three general approaches to creation and effectiveness of security rights just reviewed. That is, it recommends an approach that distinguishes between the requirements necessary for a security right to be effective as between the parties and those necessary for parties to achieve third-party effectiveness of the security right (see paras. 144 and 145 above). This chapter deals with issues relating to the creation of a security right in an asset by agreement and its effectiveness as between the parties to the security agreement. The effectiveness of a security right against third parties is discussed in chapter V on effectiveness against third parties (see A/CN.9/631/Add.2). The rules for the priority ranking of creditors with claims in the same assets are discussed in chapter VII on priority (see A/CN.9/631/Add.4). Matters related to the effectiveness of a security right in the case of insolvency are discussed in chapter XI on insolvency (see A/CN.9/631/Add.8).

2. Creation of a security right

148. Two separate issues must be addressed in a consideration of the creation of a security right and its effectiveness as between the grantor and the secured creditor. Most importantly, there is the question of creation, that is, when and under what conditions a security right is created. There is also the question of effectiveness as between the parties generally, that is, when and under what conditions a security right becomes effective between the parties. Normally these two questions have the same answer. When the steps for creation of a security right have been accomplished, it becomes effective as between the parties at that moment. However, it may be that a security right that has been created later ceases to be effective as between the parties. In such cases, it is important to determine exactly when the right has ceased to be effective even as between the parties. These two facets of the question are considered in turn.

149. In most States, the creation of a security right in movable property requires that an agreement (for the definition of "security agreement", see para. 19 above) between the grantor and the secured creditor providing for such creation be concluded (see A/CN.9/631, recommendation 12).

150. The security agreement may fulfil several functions, including (a) providing the legal basis for granting a security right; (b) establishing the connection between the security right and the obligation it secures; (c) generally regulating the relationship between the grantor and the secured creditor (for pre-default rights, see chapter VIII; A/CN.9/631/Add.5); and (d) minimizing the risk of disputes with respect to the contents of the security agreement and the risk of manipulation after default (for post-default rights, see chapter X, A/CN.9/631/Add.7).

151. While the security agreement sometimes may be a separate agreement between the parties, often it is contained in the underlying financing contract or other similar contract between the grantor and the secured creditor, such as a contract for the sale of goods on credit.

152. As previously noted, in many States, the security agreement is itself sufficient to create the security right as between the grantor and the secured creditor. In other States, however, in addition to the security agreement, another act is required for a security right to be created even as between the parties (i.e. transfer of possession, notification or registration). What that act might be varies from State to State, and even within individual States, according to the type of security right or asset involved.

153. Certain agreements relating to title to movable property may serve security purposes. These include, for example, a seller's retention of title, transfer of title for security purposes, assignment of receivables for security purposes, as well as sale and resale, sale and leaseback and hire-purchase and financial lease (for the definitions of "assignment", "financial lease" and "retention-of-title right", see para. 19 above).

154. In legal systems with a comprehensive and integrated secured transactions regime, title-based devices that serve security purposes are generally required to be created in the same way as any other security right. They are either replaced by a uniform notion of security right or, while their various terms are preserved, the specific requirements necessary for their creation as between the parties are the same as those applicable to security rights

155. In other legal systems, title-based devices are the main mechanism by which non-possessory security rights may be created. In such States, title devices are usually regulated according to the rules applicable to the specific transaction by which title is meant to pass between the parties (e.g. a sale, an exchange, a lease with option to purchase and so on). Sometimes, given their function as security, these transactional rules are also overlain with various statutory and court developed rules. The detail of the regimes in legal systems that preserve the specificity of title devices can differ widely from State to State. In some legal systems, only retention of title is subject to a specific regime, while transfer of title for security purposes from a borrower to a lender and the assignment of receivables for security purposes are subject to the same rules governing the creation of security rights. In other legal systems, some transfer of title devices, such as a sale with a right of redemption, are also subjected to a specific regime in the same manner as retention-of-title devices.

156. The treatment of retention-of-title devices is a key indicator of how a legal system generally conceives of title-based security. Legal systems that do not treat title-based devices as constituting security rights usually place particular emphasis on retention of title, even though they can have quite different requirements for the creation of retention-of-title devices. That is, in these systems, retention of title is used widely and is effective as against all parties. In other legal systems, however, retention of title plays an insignificant role and is generally ineffective, or at least ineffective as against the insolvency representative in the buyer's insolvency. One point on which many legal systems converge is that only simple retention-of-title agreements are treated as a genuine title device, while agreements that contain all-sums clauses or proceeds and products clauses are treated as true security devices. Another point on which many legal systems converge is that only the seller may retain title. Other suppliers of credit may benefit from a retention of title only

if they receive an assignment of the outstanding balance of the purchase price from the seller (see chapter XII on acquisition financing rights; A/CN.9/631/Add.9).

157. In most legal systems that recognize retention of title, the seller's rights derive from a clause in the sale agreement. In a few States, retention of title is presumed in all sales on credit and the seller's retention right need not even be explicitly stated in the sale agreement. In other States, the contractual right of retention may be concluded between the parties even orally or by reference to printed general terms in a supply document or invoice. In still other legal systems, some type of writing, a certain date for the agreement and even registration may be required.

158. Legal systems also differ substantially in the terminology used and the requirements for transfers of title for security purposes. For example, these can be called fiduciary transfers of title for security purposes, sales with a right to reclaim, double sales and sale-leaseback with an option to purchase. A first point to note is that, in some legal systems, a security transfer of title is void as against third parties, and occasionally even as between the transferor and the transferee. In other legal systems, while a security transfer of title is effective, it is not widely used in view of the existence of other non-possessory security rights. In most of the legal systems that recognize the security transfer of title, the rules with respect to its creation are the same as those applicable to secured transactions in general or at least in the case of the transferor's insolvency. So, for example, a sale with a right to reclaim or a double sale will usually be with respect to the form and content of the agreement subject to the same rules as those applicable to secured transactions.

159. Many legal systems also recognize that transactions built around the idea of a lease (hire-purchase and financial lease in the context of acquisition financing and sale-leaseback in the context of a lending transaction) often perform security functions. In some legal systems, they are treated as security devices and the requirements for their creation and effectiveness as between the parties are those applicable to all other security devices. In other legal systems, they are treated not as security devices but as contractual arrangements creating personal rights. In these legal systems, the requirements for their creation will normally be those applicable to the creation of a contractual right of that type as between the parties.

160. The second issue that States face when deciding the basic requirements for the creation of a security right is to determine when the security right actually becomes effective between the parties. In most States, because the security right arises from an agreement between the parties, it becomes effective between them as soon as it is concluded. The parties may, of course, agree to defer the effectiveness of the security right to a later time, but normally do not do so (in any case, they cannot agree to a time earlier than the time of the conclusion of the agreement). It is also necessary to determine when the security right begins to affect the assets that are encumbered. Here a distinction must be drawn between present assets of the grantor and future assets. Where the security agreement provides for the creation of a security right in assets with respect to which the grantor has rights, or the power to encumber, at the time the security agreement is concluded, the security right is effective between the parties in relation to those assets as of that time, subject to any agreement between the parties to defer effectiveness in respect of some or all those assets. Where, however, the security agreement provides for the creation of a security right in assets with respect to which the grantor expects to acquire rights, or the power to encumber, in the future, the security right is effective between the parties in relation to those assets only from the time the grantor acquires such rights

or the right to encumber, unless of course, the parties agree to postpone the date of effectiveness (see A/CN.9/631, recommendation 12; see also para. 185 below).

3. Essential elements of a security agreement

161. Legal systems differ as to the essential elements that a security agreement must contain in order to be effective between the parties. Certain elements are, however, common to most legal systems. Typically, States require that the security agreement must (a) identify the parties; (b) state the obligation to be secured; and (c) describe the assets to be encumbered. Some States also impose a requirement that the security agreement set out the maximum amount for which the security right may be claimed in the encumbered assets.

162. The degree of specificity required for identification of the secured obligation and the encumbered assets varies from State to State. The advantage of a specific description is certainty, but the disadvantage is inflexibility to address important financing transactions involving changing amounts of secured obligations and a changing pool of encumbered assets, including after-acquired assets (such as, for example, revolving credit facilities relating to inventory or receivables). In any case, whether or not legislation lists the identification of the parties and the description of the obligation to be secured and the assets to be encumbered as the minimum contents of a security agreement, failure to deal with them in the security agreement may result in disputes concerning the scope of the assets encumbered and the obligation secured, unless the missing elements may be established through other means.

163. The parties to the security agreement may also use it to clarify additional matters, such as the duty of care on the part of the party in possession of the encumbered assets and representations with respect to the encumbered assets. In the absence of an agreement, default rules may apply to clarify the relationship between the parties (for pre-default issues, see chapter VIII, A/CN.9/631/Add.5; for post-default issues, see chapter X, A/CN.9/631/Add.7).

164. Many modern secured transactions regimes refrain from adopting elaborate requirements for the effectiveness of a security agreement and instead reflect the view that the promotion of secured credit is facilitated by providing that an agreement may be effective if it meets certain minimal requirements, such as (a) reflecting the intent of the parties to create a security right; (b) identifying the parties (e.g. the grantor and secured creditor); (c) describing the obligation to be secured by the security right; and (d) describing the assets to be encumbered (see A/CN.9/631, recommendation 13).

165. As more fully discussed below (see paras. 188-190), the Guide takes the position that a generic description of the encumbered assets is sufficient, such as “all present and future assets” or “all present and future inventory”.

4. Form of a security agreement

166. Legal systems also take different positions as to the form requirements for security agreements and the function of these requirements. In particular, some legal systems do not require that there be a written security agreement, while other legal systems require some kind of writing. In a few States, a simple, unsigned writing is sufficient. In other States, a signed writing is required. In yet other States, the security agreement must be in a notarized writing or an equivalent document.

Normally, written form performs the function of a warning to the parties of the legal consequences of their agreement, of evidence of the agreement and, in the case of authenticated documents, of protection for third parties against fraudulent antedating of the security agreement. Written form may also serve other purposes besides being a condition of effectiveness as between the parties. For example, in many States it is a condition of effectiveness as against third parties, or of priority among competing claimants. In many of these States, written form may also be a condition for obtaining possession of the encumbered assets or for invoking the security agreement in the case of enforcement, within or outside insolvency.

167. In some legal systems, a certification of the date by a public authority is required for possessory security rights, with the exception of small-amount loans where proof by way of witnesses is permitted. While such certification may address the problem of fraudulent antedating, it may raise a problem with respect to the time and cost required for a transaction. In other legal systems, a certified date or authentication of the security agreement is required for various types of non-possessory security (see, for example, articles 65, 70, 94 and 101 of the Uniform Act Organizing Securities of the Organization for Harmonization of Business Law in Africa). In some of those systems, such certification is required instead of registration. Where, however, registration is necessary, an additional certification of the date of the security agreement is not required.

168. In many legal systems, in the interest of saving time and cost, mandatory form requirements are kept to a minimum. A simple writing (including, for example, general terms and conditions on an invoice) is sufficient as long as it, either alone or in conjunction with the course of conduct of the parties, indicates the intention of the grantor to grant a security right. Consistent with the idea of simplifying as much as possible the process for creating a security right, which is one of the key objectives of the Guide (see para. 23 above), this is the position of the Guide (see A/CN.9/631, recommendations 1, subpara. (c), and 14). Writing includes an electronic communication (see A/CN.9/631, recommendation 9). The one exception to the above rules is that the security agreement may be oral if accompanied by a transfer of possession of the encumbered asset to the secured creditor (see A/CN.9/631, recommendation 14). However, if the security right is created by oral agreement and transfer of possession, and later the secured creditor relinquishes possession, a written agreement is necessary for the security right to continue to exist.

[Note to the Commission: The Commission may wish to consider revising recommendation 14 to clarify that, if the secured creditor relinquishes possession of an encumbered asset in which a security right was created by oral agreement and transfer of possession, a written agreement is necessary for the security right to continue to exist.]

169. The security agreement is typically concluded between the debtor as grantor of the security right and the secured creditor. Occasionally, if a third person grants the security for the benefit of the debtor, this person becomes a party to the agreement instead of, or in addition to, the debtor. In the case of large loans granted collectively by several lenders (especially in the case of syndicated loans), a third party, acting as agent or trustee for the lenders, may hold security rights on behalf of all of the lenders. Security agreements may be tailored to cover each of these situations. While some systems introduce limitations (e.g. only enterprises may grant an enterprise mortgage), in other systems both natural and legal persons may be parties to a security agreement.

5. Obligations subject to a security agreement

170. Security rights are accessory to, and dependent upon, the obligation they secure. This means that the validity and the terms of the security agreement depend on the validity and the terms of the agreement establishing the secured obligation. In particular, with respect to revolving loan transactions a security right is accessory in the sense that, while it can secure future advances and fluctuating obligations, it cannot be enforced if there is no advance on the loan and cannot surpass the amount of the obligation owed at the time of enforcement.

171. In some States, non-possessory security rights may relate only to specific types of obligation described in legislation (e.g. loans for the purchase of automobiles or loans to farmers). In other States with a general regime for possessory security rights only or for both possessory and non-possessory security rights, no such limitations exist. Such a comprehensive approach (see A/CN.9/631, recommendation 15) has the potential of spreading the main benefits derived from secured financing (i.e. greater availability and lower cost of credit) to a wide range of transactions. In addition, such an approach enhances consistency and equal treatment of all debtors and secured creditors. To the extent such special regimes are necessary for specific socio-economic reasons, adverse effects may be minimized if such regimes are established in a clear and transparent way and are limited to a narrow range of transactions.

172. States that do not link certain forms of security to certain types of obligation typically do not limit the types of obligation for which a security right may be granted. Moreover, unless there is a special regime for security rights in specific types of obligation (e.g. for loans by pawnbrokers), States usually do it to list in legislation all the types of obligation that can be secured. Given the pace at which new types of credit obligations are being created, it would be impossible to enact an exhaustive list that would not quickly be out of date. It is, however, common for States to provide an indicative list. Such a list would typically include obligations arising from loans and the purchase of goods, including inventory and equipment, on credit.

173. Legal systems take different positions on whether, and to what extent, a security agreement may be created to secure future obligations. They also differ on the definition of what a future obligation actually is. In some systems, future obligations are the obligations that have not been contracted for (this is the approach of the United Nations Assignment Convention; see article 5, subpara. (b)). In other systems, even obligations that have been contracted for but are not due at the time of the security agreement (because the loan has not yet been advanced or the loan involves a revolving loan facility) are treated as future obligations. In addition, obligations subject to a condition subsequent are invariably treated as present obligations, while obligations subject to a condition precedent are normally treated as future obligations.

174. The distinction between present and future obligations is significant in those legal systems in which, for reasons of certainty and debtor protection, future obligations may not be capable of being secured or may be secured only up to a maximum amount, or may not be secured if they are indeterminate (e.g. where the security agreement purports to cover “all present and future obligations of whatever type that may arise between the parties”). In States that impose limits on granting security rights to secure future obligations, debtors may not be able to benefit from certain transactions, such as revolving loan facilities or convertible term loans.

In other legal systems, future obligations may be freely secured. In these systems, one security agreement is sufficient to cover both present and future obligations. As a result, each extension or increase of credit does not require that the corresponding security right be modified or even newly created, and this has a positive impact on the availability and the cost of credit. While a security right may be created in a future obligation, it cannot be enforced until the obligation arises and becomes due. Some States impose various requirements as to the manner in which the type and amount of the secured obligation may be stated.

175. In some legal systems, it is necessary for the parties to describe the secured obligations in their agreement in specific terms to set a maximum limit to the amount for which the asset can be encumbered as security for the secured obligation, or even to reduce the amount of the security to reflect the current balance owed on that obligation. The assumption is that such a description or limit is in the interest of the debtor since the debtor would be protected from over-indebtedness and would have the option of obtaining additional credit from another party. However, such requirements may result in limiting the amount of credit available from the initial creditor or may lead creditors to indicate an amount well in excess of the actual amount that they agree to advance to the grantor. The result often is, consequently, that the grantor is deprived of the ability to use the full value of its assets to secure either additional obligations to its present creditor or new obligations contracted with other creditors.

176. Modern financing transactions often no longer involve a one-time payment but instead frequently foresee advances being made at different points of time depending on the needs of the grantor (for example, revolving credit facilities for the grantor to buy inventory). Such financing may be conducted on the basis of a current account, the balance of which fluctuates daily. If the amount of the secured obligation were to be reduced by each payment made, lenders would be discouraged from making further advances unless they were granted additional security. This would be highly inefficient as it would add to the cost and the time necessary for the grantor to acquire new goods required for the conduct of its business. Finally, a few States attempt to control credit by imposing limits on the amount for which an asset may be encumbered, calculated as a percentage of the credit advanced to the grantor (e.g. 125 per cent of the obligation owed). These types of legislative limit as to the amount to be secured are unavoidably arbitrary, usually cannot be fine-tuned to meet the credit needs of individual grantors and would normally need to be adjusted constantly to reflect changes in the credit relationship between the grantor and the secured creditor.

177. For all of the above reasons, many legal systems do not require specific descriptions of the secured obligations and allow parties to negotiate freely the amount to be secured, including all sums owed by the debtor to the secured creditor. In those legal systems, the secured obligation must be determined or determinable on the basis of the security agreement whenever a determination is needed (as is the case, for example, when the secured creditor enforces its security rights). Moreover, the grantor is protected because the secured creditor cannot claim from the encumbered assets more than it is owed and, if the obligation is fully secured, better credit terms are likely to be offered to the grantor by the secured creditor.

178. States also take different positions as to whether the actual amount of the secured obligation (including the rate of interest, if any) must be stated in the security agreement itself and whether that amount must be expressed in a currency and, if so, in what currency it must be expressed. For example, some States require

that the security agreement indicate not only the type of obligation being secured but also its amount (e.g. the actual amount of the credit being provided). Other States require only that the type of obligation be stated and leave the details to the loan or credit agreement. In addition some States require the obligation to be expressed in a currency, while others permit the parties to express the repayment obligation however they wish. Today, many States do not impose any restrictions on the currency in which the amount of the secured obligation may be expressed beyond those applicable to obligations generally.

179. Where there is debtor default (or insolvency) and disposition of the encumbered assets, the proceeds may be paid in a currency (for example, dollars) different from the currency (for example, euros) in which the secured obligation is expressed. In such cases, it will be necessary to convert the proceeds from the disposition of the encumbered assets so that the secured obligation and the encumbered assets are expressed in the same currency. This issue, however, is typically left to the contract from which the secured obligation arises and to the applicable law (e.g. in the absence of an agreement, the exchange rate prevailing at the place of enforcement or insolvency proceedings will prevail).

6. Assets subject to a security agreement

180. A central aspect of the security agreement is the identification of the assets that will be subject to the security right. States typically are required to address four separate issues when determining how the assets that may be subject to the security right should be identified. First is the question of whether security may be granted in property not owned, or not yet owned, by the grantor. Second is the question of whether certain types of asset should not be susceptible of encumbrance by a security right. Third is the question as to how the assets may be described (i.e. whether they must be described individually or they may be described generically). Finally, States have to decide whether a grantor should be permitted to create a security right that generally covers all its assets (i.e. an agreement that in many States takes the form of an “enterprise mortgage”).

(a) Future assets

181. In most legal systems, the grantor of the security has to be the owner of the assets to be encumbered or have some limited proprietary right (e.g. a right of use) in the encumbered assets. That is, the security agreement cannot be concluded until the grantor actually has rights in the assets that the agreement purports to cover. This immediately raises the question as to whether the security agreement can be concluded so as to cover (a) assets in which the grantor has only a contractual right (for example, in many legal systems a lessee has no proprietary rights in leased property); and (b) future assets (for example, assets that the grantor is in the process of acquiring or intends to acquire, but that still belong to the seller, or assets that will be manufactured in the future from raw materials that may or may not already be owned by the grantor — i.e. do not even exist yet).

182. In addressing these issues, most States start from the principle that the grantor cannot grant to the secured creditor more rights than the grantor has or may acquire in the future (*nemo dat quod non habet*). This means, for example, that, if the grantor has only a contractual right to use an asset, any security right that it grants can only affect its contractual right. A lessee may only grant security in the lease agreement and not directly in the object being leased. Subject to rules that States

adopt concerning the detail required for describing the encumbered asset, this means that the agreement must identify that asset as a lease, not as the leased object itself. Similarly, it means that if the grantor only has a limited right in the property (for example, a usufruct) the security right will only encumber the right of usufruct. Increasingly, however, States are confronted with the question of whether “future” assets may be covered by a security agreement.

183. In some States, future assets of whatever kind may not be used as security. This approach is partly based upon technical notions of property law (e.g. what does not exist cannot be transferred or encumbered). It is also based on the concern that allowing broad dispositions of future assets may inadvertently result in over-indebtedness and in making the grantor excessively dependent on one creditor, preventing the grantor from obtaining additional secured credit from other sources. Another argument offered for not permitting the creation of security rights in future assets is that permitting it may significantly reduce the possibility that unsecured creditors of the grantor will obtain satisfaction for their claims. However, technical notions of property law should not be invoked to pose obstacles to meeting the practical need of using future assets as security to obtain credit. In addition, business grantors can protect their own interests and do not need statutory limitations on the transferability of rights in future assets. Moreover, permitting future assets to be encumbered makes it possible for grantors with insufficient present assets to obtain credit, which is likely to enhance their business and benefit all creditors, including unsecured creditors.

184. In other States, the parties may agree to create a security right in a future asset. The disposition is a present one but it becomes effective as to the future asset only when the grantor becomes the owner of the asset or the asset comes into existence. The United Nations Assignment Convention takes this approach (see art. 8, para. 2, and art. 2, para. (a)). Permitting the use of future assets as security for credit is important, in particular, for securing claims arising under revolving loan transactions with a revolving pool of assets. Assets to which this technique is typically applied include inventory, which by its nature is to be sold and replaced, and receivables, which after collection are replaced by new receivables. The main advantage of this approach is that one security agreement may cover a changing pool of assets that fit the description in the security agreement. Otherwise, it would be necessary to continually amend security agreements or enter into new ones, a result that could increase transaction costs and decrease the amount of credit available, in particular on the basis of revolving credit facilities.

185. The Guide takes the position that a security agreement may cover future assets. Where the security agreement provides for the creation of a security right in assets with respect to which the grantor has rights, or the power to encumber, at the time the security agreement is concluded, the security right in those assets is created at the time the security agreement is concluded. Where, however, the security agreement provides for the creation of a security right in assets with respect to which the grantor expects to acquire rights, or the power to encumber, in the future, the security right is created if and when the grantor acquires such rights or right to encumber (see A/CN.9/631, recommendations 12 and 16).

(b) Excluded assets

186. In some legal systems, special laws for specific types of non-possessory security right introduce limitations as to the types of asset that may serve as security or as to the part of the value of assets that may be encumbered. Examples of

limitations justified for public policy reasons may include employment benefits (e.g. wages and pensions) under a certain minimum amount. In other legal systems, limitations are placed on the purposes for which certain classes of grantors may grant security. For example, some States do not permit grantors to create security over household goods unless the security right is created to secure payment of the purchase price of those assets. Still other States limit the capacity of certain grantors to create certain types of security right. For example, in some legal systems, persons not carrying on a business are prevented from granting non-possessory security rights and may only pledge their assets. In other legal systems, these same persons are not permitted to grant a security right in future assets or a security right in a category of assets. Security rights may be created only in existing assets and only where those assets are described individually.

187. All these limitations, which are usually intended to protect grantors, also prevent grantors from utilizing the full value of their assets to obtain credit. Therefore, the benefits and the negative impact of such limitations need to be carefully weighed. Some States undertake this necessary balancing not by including such limitations in the general legislation establishing the regime of security rights, but by elaborating specific rules setting out appropriate limitations on the creation of security rights in special legislation such as consumer-protection legislation. This approach has the advantage of enabling States to design the limitations in a targeted manner that furthers policy objectives directly related to the protection of those grantors deemed in need of such protection.

(c) Identification of assets

188. In some legal systems, the encumbered assets need to be specifically identified. While such a requirement is intended to protect the grantor from granting excessive security rights, it also limits availability of credit in many cases. For example, specific identification of individual items may not be practical or even possible for assets such as inventory and, to some degree, receivables. To address this issue, many States have developed rules that allow the parties to describe the assets to be encumbered only in general terms. The specific identification, generally required, is transposed from the individual items to an aggregate, which in turn has to be generally identified.

189. These general descriptions can take many forms. For example, parties may provide that the security right encumbers “all inventory”, or “all inventory in warehouse ABC”, or “all sailboats and canoes”, or “all cows”, or “all printing presses” or “all receivables”. The key is neither the type of asset (equipment, inventory, receivables) nor the extent or scope of the category (“all assets in ‘X’ location” or “all sailboats and canoes” as opposed to “all watercraft”). Rather, States that permit general descriptions simply require that the description be sufficient to enable third parties to know, at any given time, what assets are encumbered by the security agreement.

190. In some legal systems, it is possible to identify encumbered assets with a description cast at a very high level of generality. In these States, even a description referring to “all assets”, or “all present and future inventory”, is sufficient. The goal is to reduce the complexity and cost of creating a security right by permitting the parties to describe the encumbered assets in the simplest language possible. As noted, however, in many of those legal systems which permit identification by reference to a category of assets, such a generic identification of encumbered assets is not allowed with respect to assets of consumers or even individual small traders.

Subject to ensuring that the identification of encumbered assets is sufficiently clear and to public policy limitations that States may desire to impose for consumer-protection purposes, this Guide recommends that general descriptions of both present and future inventory be permitted (see A/CN.9/631, recommendations 13 and 16).

(d) Security in all assets of a grantor

191. Some States, as just mentioned, do not permit grantors to create a security right in assets that are described in general terms. By contrast, many other States do. Nonetheless, even in some legal systems that permit the general identification of categories of encumbered assets and even permit a general identification of present and future assets, grantors are often not permitted to create a security right in all of their assets (that is, in even “all present and future assets”). In other legal systems, grantors are permitted to create a security right in all of their assets, but only up to a certain percentage of their total value. Such limitations, which are intended to provide some protection for grantors and unsecured creditors, are bound to limit the credit available and increase the cost of credit.

192. In order to enhance the availability of secured credit, some legal systems impose no such limitations. Grantors are permitted to create a non-possessory security right in all of their assets, including tangible and intangible, movable and immovable (although different rules may apply to security in immovable property), and present and future assets. The most essential aspects of such an all-asset security right are, first, that it covers all assets of a grantor in a single security agreement, and second, that the grantor has the right to dispose of certain of its encumbered assets (such as inventory) in the ordinary course of its business (while the security is extended automatically to the proceeds of the disposed assets). States take different approaches as to both of these aspects of all-asset security rights.

193. In many legal systems, the essential elements both as to content and as to form for the creation of a security right covering all assets are more onerous than those applicable to ordinary security rights. In other legal systems, as long as no immovable property is encumbered by the security agreement, the requirements for creating the security right are identical to those for ordinary security rights. Where immovable property is also encumbered, it is necessary that the agreement respect the substantive and formal requirements for creation of an encumbrance in immovable property. As for the grantor’s right to dispose of encumbered assets without affecting the security right, most legal systems provide that the grantor may do so with the permission of the secured creditor. Some legal systems provide that, in such cases, the security right no longer encumbers the asset, while others provide that the security right still affects the asset. However, in some legal systems, dispositions of encumbered assets by the grantor, even if authorized by the creditor, are regarded as irreconcilable with the idea of a security right. In order to simplify the creation of a security right in all assets of an enterprise, where the provider of credit is financing the ongoing operation of the enterprise, this Guide recommends that single-document all-asset security agreements be permitted (see A/CN.9/631, recommendation 16).

(i) Enterprise mortgages

194. The concept of “all-asset security rights” is not novel. In some States, the idea of an all asset-security right has long existed in the form of what is often called an “enterprise mortgage”. Like an all-asset security right, an enterprise mortgage may

comprise all assets of an enterprise (including, in some States, even immovable property). It may cover, for example, incoming cash, new inventory and equipment, as well as future assets of an enterprise, while present assets that are disposed of in the ordinary course of business are released. The main advantage of an enterprise mortgage is that it allows an enterprise that has more value as a whole to obtain more credit and at a lower cost. An interesting feature of some forms of enterprise mortgage is that upon enforcement by the secured creditor and upon execution by another creditor, an administrator can be appointed for the enterprise. This may assist in avoiding liquidation and in facilitating reorganization of the enterprise with beneficial effects for creditors, the workforce and the economy in general. In practice, however, administrators appointed by the secured creditor may favour the secured creditor. This problem may be mitigated to some extent if the administrator is appointed and supervised by a court or other authority. This feature of an enterprise mortgage may be usefully expanded to all-asset security rights in the sense that the administrator could be appointed by agreement of the grantor and the secured creditor or by the court and be responsible for enforcement outside insolvency.

195. Enterprise mortgages may present certain disadvantages in practice. One disadvantage is that the secured creditor usually is or becomes the enterprise's major or even exclusive credit provider and this may affect competition among credit providers and thus negatively affect the availability and the cost of credit to the extent that other creditors are unprotected (although competition is not necessarily precluded since a single major credit provider may offer particularly competitive credit terms). In order to address this problem, some States have introduced limitations on the scope of enterprise mortgages, preserving a percentage of the value of the enterprise for unsecured creditors in the case of insolvency. However, such limitations may have an adverse impact on the availability of credit by effectively reducing the value of assets available to serve as security for credit. Another possible disadvantage of enterprise mortgages is that, in practice, the holder of the mortgage may fail to monitor sufficiently the enterprise's business activities and to participate actively in reorganization proceedings since the mortgagee is amply secured. In order to counterbalance the mortgagee's overly strong position, the debtor-enterprise may be given a claim for the release of grossly excessive security.

(ii) *Floating charges*

196. In other States, all-asset security rights take the form of a so-called "floating charge" that is merely a potential security right with a right for the grantor to dispose of certain of the encumbered assets (such as inventory) in the ordinary course of business. Dispositions are barred as of the time the debtor is in default, when the floating charge "crystallizes" to become a fully effective "fixed" charge. Once a legal system permits the creation of non-possessory security rights in all assets of a grantor while the grantor is allowed to dispose of certain of the assets in the ordinary course of its business, there is no need to preserve the construction or the terminology of enterprise mortgages or floating charges (see also para. 199 below).

(iii) *Over-collateralization*

197. Related to, though distinguishable from, concerns about all-asset security is the issue of over-collateralization. The problem of over-collateralization arises in

situations where the value of the encumbered assets significantly exceeds the amount of the secured obligation. While the secured creditor cannot claim more than the secured obligation plus interest and expenses (and perhaps damages), over-collateralization may create problems. The grantor's assets may be encumbered to an extent that makes it difficult or even impossible (at least in the absence of a subordination agreement between creditors) for the grantor to obtain a second-ranking security from another creditor. In addition, enforcement by the grantor's unsecured creditors may be precluded or at least be made more difficult (unless there is excess value).

198. A solution developed by courts in some States is to declare any security right grossly in excess of the secured obligation plus interest, expenses and damages void or to grant the grantor a claim for release of such excess security. This solution could work in practice, if a commercially adequate margin may be determined and granted to the secured creditor, which may not be easy in all cases. While the problem of over-collateralization is, in many cases, a real concern, the appropriate response to the concern is likely to vary from State to State and may sometimes lie in regulation of these practices in other law. For this reason, the Guide does not recommend adoption of the concept of a judicial declaration of over-collateralization (with a consequent reduction of the scope of the encumbered assets) as a solution.

(iv) *Conclusion*

199. Once a legal system permits the creation of non-possessory security rights in all present and future assets of a grantor under a regime that permits the grantor to dispose of certain of the assets in the ordinary course of its business, many of the particular devices that States have designed to permit businesses to obtain credit by granting security rights over the enterprise as a whole are no longer necessary. That is, concepts and terms like "enterprise mortgages" and "floating charges" were important because they performed a role in business financing that regular security rights were not able to accomplish. However, where States opt to create integrated and functionally organized regimes for the granting of security and enable grantors to encumber all their present and future assets in the same agreement, the need for these existing devices is significantly reduced, if not eliminated. While the Guide does not recommend that States dispense with "enterprise mortgages" and "floating charges", as noted it does recommend that States adopt the concept of all-asset security rights, which performs the functions performed by those other devices (see A/CN.9/631, recommendation 16).

(e) **Liability of the secured creditor for loss or damage caused by the encumbered assets**

200. While liability for loss or damage caused by encumbered assets (as a result of breach of contract or tort) is not a secured transactions issue, it is important that it be addressed since it may have an impact on the availability and the cost of credit. A particularly important issue is liability for environmental damage caused by assets subject to possessory or non-possessory security rights, since the monetary consequences and the prejudice to the reputation of the lender may substantially exceed the value of the encumbered assets. Some laws expressly exempt secured creditors from liability, while other laws limit such liability under certain conditions (e.g. where the secured creditor has no possession or control of the encumbered asset). When no such exemptions from or limitations of liability exist, the risk may

be too high for a lender to extend credit. Where insurance is available, it is bound to substantially increase the cost of credit.

7. Creation of a security right in proceeds

(a) Concept of proceeds

201. A characteristic feature of movable property is the fact that it is often made in order to be sold, leased or licensed. When encumbered assets are sold, exchanged or otherwise disposed of, or leased or licensed during the time in which the obligation they secure is outstanding, the grantor typically receives, in exchange for those assets, cash, tangible property (e.g. goods or negotiable instruments) or intangible property (e.g. receivables). This being the case, States must determine whether a security right that is taken in the initial property should extend to new property that is received in exchange for that property when it is sold or disposed of. So, for example, States are required to decide whether a security right in a piece of equipment like a printing press extends into the money that is received by the grantor when it sells the printing press, or into another printing press that is received in exchange for the press that has been sold. In the terminology of property law, such cash or other tangible or intangible property received in exchange upon a sale or other transfer is considered to be “proceeds of disposition”. Once again, for the purposes of secured transactions law, it is often much less important whether the property received upon disposition is another object, cash, a receivable or a negotiable instrument. What matters is whether the security right may extend to this new property.

202. In some cases, the proceeds of the originally encumbered assets may generate other proceeds when the grantor disposes of the original proceeds in return for other property. Such proceeds are sometimes referred to as “proceeds of proceeds”. If there is a right in proceeds of encumbered assets, it should extend to proceeds of proceeds. If the secured creditor loses its right in the proceeds once they take another form, the secured creditor would be subject to the same credit risks as would be the case if there were no rights in proceeds.

203. A further feature of movable property is that it is susceptible to numerous legal and physical transformations over time. For example, if tangible movable property is an animal, various modifications are possible. Female animals give birth to offspring and produce milk. Other animals may be shorn for their wool. Still other prize animals may produce marketable products. Bees may produce honey and silk worms may produce silk. In all these situations, encumbered assets may generate other property for the grantor even without a disposition of these assets. In many legal systems, this type of property is referred to as “natural fruits”.

204. Transformation also occurs in relation to intangible property. For example, a right to receive payment may carry interest; a lease of tangible property results in rental payments. These are often known as “civil fruits” or “revenues”. In addition, if the tangible property is an object, it may be manufactured or transformed. Wood may become a chair. Steel may become part of an automobile. Here, the initially encumbered asset is not disposed of, but the process of manufacture turns it into another, more valuable, object. Property that results from such transformation is often called “products”.

205. In other words, in the terminology of property law, these diverse new types of movable property are characterized as being “fruits, revenues, the natural increase

of animals, or products”. For the purposes of secured transactions law, however, the specific label is often not that important. What matters is the policy decision that States take concerning the effect of the security right in the fruits, revenues and products. That is, in each of these cases, States must decide whether a security right that is taken on the animal, steel, right to payment or the object subject to lease, may extend to any of the property “produced” by that original property.

206. In some legal systems, civil or natural fruits are clearly distinguished from proceeds arising from disposition of encumbered assets and are made subject to different rules. The difficulty in identifying proceeds of disposition and the need to protect rights of third parties in proceeds is often cited to justify this approach. Other legal systems do not distinguish between civil or natural fruits and proceeds of disposition and subject both to the same rules. The difficulty in distinguishing between civil or natural fruits and proceeds, the fact that both civil or natural fruits and proceeds flow from, take the place of or may affect the value of the encumbered assets are among the reasons mentioned to justify this approach. Moreover, parties typically provide in their security agreement that the security taken on the initial property extends into all these other forms of property. For this reason, some States consider all these transformations to constitute “proceeds” of the originally encumbered asset. Because this is the normal contractual practice in secured transactions regimes today, in this Guide all the above transformations are considered as “proceeds” arising from the initially encumbered assets (for the definition of “proceeds”, see para. 19 above).

(b) Scope of a security right in proceeds

207. A legal system governing security rights must address two distinct questions with respect to proceeds. The first issue is whether the secured creditor retains the security right if the encumbered asset is transferred from the grantor to another person in the transaction that generates the proceeds. Strictly speaking, this is not a proceeds question. Rather, it relates to the issue of whether a security right comprises what might be called a “right to follow” (for a discussion of this issue, see A/CN.9/631, recommendation 85; and chapter VII on priority of a security right as against the rights of competing claimants; A/CN.9/631/Add.4, para. 57).

208. The second issue concerns the secured creditor’s rights with respect to the proceeds. The justification for a security right in proceeds lies in the fact that, if the secured creditor does not obtain such a right, its rights in the encumbered assets could be defeated or reduced by a disposition of those assets and its expectation to receive any income generated by the assets would be frustrated. If the legal system did not permit the creation of a security right in proceeds upon disposition of encumbered assets, it would not adequately protect the secured creditor against default and thus the value of the encumbered assets as a source of credit would diminish. This result, which would have a negative impact on the availability and the cost of credit, would be the same even if the security right in the original encumbered assets were to survive their disposition to a third party. The reason for this result lies in the possibility that a transfer of the encumbered assets may increase the difficulty in locating the assets and obtaining possession thereof, increase the cost of enforcement and reduce the value of the assets.

209. A right in proceeds typically arises where the encumbered assets are disposed of because the proceeds replace the original encumbered assets as assets of the grantor. In systems that treat civil or natural fruits as proceeds, a right in such proceeds may arise even if no transaction takes place with respect to the

encumbered assets (e.g. dividends arising from stocks) because this is consistent with the expectations of the parties.

210. If the secured creditor's right in proceeds is a proprietary right, the secured creditor will not suffer a loss by reason of a transaction or other event, since a proprietary right produces effects against third parties. On the other hand, granting the secured creditor a proprietary right in proceeds might result in frustrating legitimate expectations of parties that obtained security rights in those proceeds as original encumbered assets. However, in legal systems in which creation is distinguished from third-party effectiveness and priority, this result would occur only if the creditor with a proprietary right in proceeds had priority over the creditors with a right in proceeds as originally encumbered assets and such priority is determined on the basis of time of registering of a notice about the transaction in a public register. Thus, in those systems, potential financiers are forewarned about the potential existence of a security right in assets of their potential borrower (including proceeds of such assets) and can take the necessary steps to identify and trace proceeds and to obtain inter-creditor subordination agreements where appropriate.

211. Slightly different considerations apply where the proceeds in question are not proceeds of disposition, but are fruits, revenues and the increase of animals or the products of manufacture. In the last case, it would be the normal expectation of the parties that raw materials would be manufactured. The policy question is, consequently, whether a State should adopt a rule that requires a security agreement to provide explicitly that the security is taken not only in the raw materials but also in any product that is manufactured from those raw materials, or whether the assumption should be that the manufactured products are automatically covered by the security right and, if the parties do not wish this to be the case, they should so state in the security agreement. Most States do not require parties to specify that the security right passes into property manufactured from raw materials, as long as it can be clearly identified as having resulted from those raw materials.

212. Similar considerations bear on the decision as to whether parties should specify that the security right extends to offspring of animals, or whether they are automatically covered. As the normal expectation of the parties is that newborns would be covered, most States provide that a security right in the mother also automatically covers offspring. As for natural fruits (for example, wool, milk, eggs not hatched and honey), States take different positions. Many States require parties to specify in the security agreement that these natural fruits will be covered by the agreement. Other States provide that natural fruits are automatically covered unless the parties provide otherwise. In keeping with the general orientation of this Guide to provide recommendations that would be consistent with the normal practice of parties to a security agreement, the approach adopted is to consider these natural fruits to be automatically covered by the security agreement in the animal that produces the fruits.

213. Finally, as concerns civil fruits or revenues, reasons of economic efficiency normally would suggest that a security right in the capital payment (e.g. a negotiable instrument or receivable) should also embrace a right to the interest payable. This is because payments on such instruments or receivables are often blended payments of capital and interest. Only where it is easy to separate the repayment of the capital from the interest charges, and where the parties agree that the security right in the capital sum will not extend to the separate interest

generated, should the law permit the interest to be several from the initial obligation.

(c) Creating a security right in proceeds

214. The discussion above shows that there are practical reasons why many legal systems extend security rights in encumbered assets to various forms of proceeds (including proceeds of proceeds) through default rules applicable in the absence of an agreement to the contrary. In other legal systems, where an automatic right in proceeds does not exist, whether in respect of proceeds of disposition or in relation to one or more categories of fruits, increase of animals, revenues or products, parties are typically permitted to specify that they will take security rights in all types of asset as originally encumbered assets. In such systems, parties may be free to provide, for example, that a security right is created in substantially all of the grantor's assets (cash, inventory, receivables, negotiable instruments, securities and intellectual property). In such a way, the proceeds themselves become originally encumbered assets and are covered by the security right of the creditor even without a legal rule automatically providing a right in proceeds. In some of those legal systems, parties may also extend by agreement certain title-based security rights (e.g. retention of title) to proceeds.

215. Regardless of whether a right in proceeds flows automatically from a right in the originally encumbered assets, or whether it must be explicitly mentioned in the security agreement, there are no additional formalities imposed on parties that seek to claim a right in any of these forms of proceeds. The only requirement is that, in the former case, the security agreement should specify a right in the proceeds and indicate the kinds of proceeds that are meant to be included in the same security right, while in the latter case, it is sufficient to identify clearly the assets that are subject to the initial security right. In line with its general objective of facilitating secured credit, this Guide recommends approaches that will reflect the normal expectations of grantors and secured creditors that a security right in encumbered assets automatically extends to its identifiable proceeds without the need for parties to so provide in their security agreement (see A/CN.9/631, recommendation 18).

8. Commingled proceeds

216. When the assets that constitute proceeds of encumbered assets are not kept separately from other assets of the grantor, the question arises as to whether the security right in the proceeds is preserved. The answer to this question usually depends on whether the assets constituting proceeds are identifiable. Proceeds in the form of tangible property kept with other assets of the grantor can be identified as proceeds in any manner that is sufficient to establish that the items of tangible property are proceeds. In this respect, many States provide that the same principle that governs the preservation of the secured creditor's right in originally encumbered assets that has been commingled should also apply to tangible property that constitutes commingled proceeds. So, for example, if a grantor receives a certain amount of petrol as a swap for crude oil that has been sold and the petrol is commingled in a tank, the security right should continue into a proportion of the petrol in the tank as long as the secured creditor can prove that that amount of petrol was received as proceeds, and no additional steps are required in order to create (or preserve) the security right in these commingled tangible proceeds.

217. If, by contrast, the property constituting proceeds is intangible, such as receivables or rights to payment of funds credited to a bank account, and is not maintained separately from the grantor's other assets of the same type, such intangible property may be identified as proceeds as long as it can be traced to the originally encumbered assets. For example, as long as the secured creditor can prove that a certain amount of cash has been deposited as proceeds of the disposition of encumbered assets, then a proceeds claim could arise. The difficulty is that money is constantly entering and exiting from bank accounts and it is difficult to know what percentage of the money actually originated as proceeds.

218. Many States have quite complicated rules developed within banking practice to determine when funds deposited in a bank account can be traced. Examples of different tracing rules include (a) "first-in, first-out" ("FIFO"), which assumes that the first property to become part of a commingled mass is the first property withdrawn from the mass; (b) "last-in, first-out" ("LIFO"), which assumes that the last property to become part of a commingled mass is the first property withdrawn from the mass; and (c) the "lowest intermediate balance rule" ("LIBR"), which assumes, to the extent possible, that withdrawals from the commingled mass are not proceeds of the encumbered assets. Many States protect the security right by providing that the identifiable proceeds will consist of all funds deposited as proceeds, as long as the balance of the account is greater than the amount deposited as proceeds. Where the total amount is less than the total amount of proceeds deposited to the account, the identifiable proceeds are determined by taking the lowest intermediate balance and adding to it any further money in the form of proceeds added to the fund since that lowest balance was recorded. As with the case of commingled tangible proceeds, as long as the source of the intangible proceeds can be traced, no further steps need be taken by the parties in order to create (or preserve) the security right in these commingled intangible proceeds (see A/CN.9/631, recommendations 19 and 20; for priority in proceeds, see chapter VII, A/CN.9/631/Add.4, paras. 48-51).

9. Commingled tangible property

219. Historically, secured transactions regimes did not face the problem of maintaining identification of encumbered assets. Because security rights could be taken only in individually identified assets, it was rare that commingling of fungible property could arise. Today, however, many States permit parties to create a security right in a general category of (usually fungible) property. For example, the security could be taken in assets described as "all my present inventory of personal computers"; alternatively, a seller could take security in all the personal computers that it sells to a purchaser. In both these cases, it may be that assets subject to the security right are commingled in a manner that prevents separate identification with other assets of the same type that are not subject to the security right.

220. Two approaches are possible. Some States provide that, once the property is commingled, it is no longer identifiable and the creditor's security right is lost. This approach places the burden on the secured creditor to ensure that the grantor keeps the encumbered assets separated from other assets of a similar nature to prevent commingling. Other States provide that the security right survives and may be claimed in the commingled assets in the same proportion as the encumbered asset bore to the total amount of the commingled assets. Under this approach, if \$100,000 worth of oil is commingled with \$50,000 worth of oil in the same tank, the secured

creditor is deemed to have security over two-thirds of whatever oil remains in the tank at the moment it becomes necessary to enforce the security.

221. As this Guide adopts the general principle that security rights should be protected as much as possible, it recommends that the second approach (i.e. preservation of the security right in the commingled property in the same proportion as the encumbered assets and the assets not encumbered by the security contributed to the mass) be adopted. In other words, once a security right is created in the encumbered assets, no further steps are necessary to preserve that security right should the encumbered asset ultimately be commingled with similar assets of the same type that are not subject to the security right (see A/CN.9/631, recommendation 21).

10. Tangible property commingled in a mass or product

222. When tangible property is so mixed with other tangible property that its separate identity is lost in a product or mass, it is necessary to determine the conditions under which a security right in the original asset may be claimed in the product that has been produced. For example, it may be that a security right is taken in flour that is destined to become bread through manufacturing or production. Two basic approaches are taken in various legal systems. In some States, once the flour loses its identity as flour, the security right is extinguished. If the parties wish the security right to pass into the bread, it is necessary to provide that the original security encumbers both flour and any product into which the flour may be transformed or manufactured. Other States take the position that the security right automatically passes into the manufactured product as long as it can be established that the product resulted from the raw materials subject to the security right. As it is the normal expectation of the parties that the raw materials will be manufactured, this Guide takes the position that it should not be necessary to provide in the security agreement that the security right passes into the manufactured product. The resulting product is in some sense the replacement or substitute for the security right in the no longer existing raw materials (see A/CN.9/631, recommendation 21).

11. Creation of a security right in an attachment

223. Movable property may be attached to movable or immovable property in such a way that its identity is not lost and it becomes an attachment (for the definitions of “attachment to movable property” and “attachment to immovable property”, see para. 19 above). In these cases, the question arises as to whether a security right, to which the original movable was subject before attachment, is preserved.

224. In some States, it is not possible to create a security right in an attachment that has already become attached to other property (whether movable or immovable). In order to be effective against the attachment, the security right has to be created prior to attachment. However, in these States, a security right in an item of movable property may continue if it becomes an attachment to immovable or movable property regardless of the cost or difficulty of removing the attachment from the property to which it was attached and regardless of whether the attachment has become an integral part of that property (see A/CN.9/631, recommendation 22). In other States, it is also possible to create a security right in an item of movable property that is already an attachment, whether the attachment is to immovable property or to other movable property. For these States, the cost or difficulty of detachment is also irrelevant to determining if the security right may be created.

In some States, a security right may be created in an item of movable property that is an attachment to immovable property. In both cases, whether the attachment may be readily removed without damage from the property to which it is attached is relevant for determining the priority among competing claimants (see A/CN.9/631, recommendations 93-95), but is not relevant to the question of whether the security right may be created.

225. The key issue is to determine whether any additional steps must be taken to create a security right in an item of property that is an attachment beyond those necessary to create an ordinary security right. Except in those States that do not distinguish between creation, third-party effectiveness and priority, no additional steps are required since this is an issue of creation, not priority.

12. Creation of a security right in a mass or product

226. As noted, an item of tangible property may be commingled with one or more other items of tangible property in such a way that its identity is lost. In this case, the question arises as to whether a security right to which the original item of tangible property was subject before commingling, is preserved. The general position of most States is that the security right is preserved following commingling, assuming that the source of at least some of the commingled property can be identified as being initially encumbered property (see A/CN.9/631, recommendation 23). The security right in the originally separate property is converted into a security right in the product or mass (as to priority of competing claims in commingled goods, see A/CN.9/631, recommendations 96-98).

227. However, and in contrast to the general approach taken to the creation of security rights in attachments, in most States a security right may not be created in items of tangible property after they have been commingled. That is, while an attachment can always be seen to have at least a notional separate identity, where oil is commingled in a tank, or flour is manufactured into bread, the separate identity of the initially encumbered asset disappears. For this reason, it is generally not possible to create a separate security right in items of property that have already been commingled. That is the approach adopted in this Guide (see A/CN.9/631, recommendation 23).

B. Asset-specific recommendations

1. Effectiveness of a bulk assignment of receivables and an assignment of future, parts of and undivided interests in receivables

228. With respect to the assignment of receivables, which is widely used in important financing transactions, a trend is developing whereby the assignment is subjected to the same provisions whether it involves an outright transfer, an outright transfer for security purposes or a security transfer. This trend is mainly justified by the fact that it would be very difficult for third parties to determine the nature of an assignment, as well as by the need to have the same priority rules govern all types of assignment. This trend is reflected in the United Nations Assignment Convention (see art. 2). However, legal systems differ as to the requirements for an effective assignment. Some legal systems require a writing or notification of the debtor of the receivable. Other legal systems require a writing for the assignment to be effective as between the assignor and the assignee and registration for it to be effective as against third parties. Legal systems also differ with respect to the effectiveness of

assignments of future receivables and receivables not specifically identified, as well as with respect to the effectiveness of assignments made despite anti-assignment clauses in the contracts from which the assigned receivables arise. The United Nations Assignment Convention validates all these assignments (see art. 8 of the Convention, reflected in A/CN.9/631, recommendation 24).

2. Effectiveness of an assignment of receivables made despite an anti-assignment clause

229. In some States, effect is given to contractual restrictions on dispositions in order to protect the interest of the party in whose favour the restriction is agreed upon (i.e. the assignor or the debtor of the receivable). In other States, no effect or only a limited effect is given to contractual restrictions on dispositions so as to preserve the grantor's freedom of disposition, in particular if the person acquiring a right in an asset is not aware of the contractual restriction.

230. The United Nations Assignment Convention takes a similar approach to support transferability of receivables, which is in the interest of the economy as a whole. If the assignor is able to obtain credit on the basis of its receivables, it is likely to extend credit to the debtor of the receivable; effectiveness of the assignment is also in the interest of an assignee that provides credit to the assignor. Debtors that require protection, such as a consumer or a State, may protect themselves through statutory prohibitions.

231. Under article 9, paragraph 1, of the United Nations Assignment Convention, an assignment is effective despite a contractual restriction on assignment agreed upon between the assignor ("grantor" in the terminology of the Guide) and the debtor ("debtor of the receivable" in the terminology of the Guide). However, the effect of this provision is limited in two ways. First, its application is limited to broadly defined trade receivables (see art. 9, para. 3, of the Convention); and second, if such a contractual restriction is valid under law applicable outside the Convention, article 9 does not invalidate it as between the assignor and the debtor of the receivable (see art. 9, para. 2). The grantor is free to claim damages from the assignor for breach of contract, if such a claim exists under law applicable outside the Convention, but may not raise this claim against the assignee by way of set-off (see art. 18, para. 3). In addition, mere knowledge of the existence of the restriction on the part of the assignee ("secured creditor" in the terminology of the Guide) is not enough for the avoidance of the contract from which the assigned receivable arises (see art. 9, para. 2).

232. This approach promotes receivables financing transactions since it relieves the assignee (i.e. the secured creditor) of the burden of having to examine the contracts from which the assigned receivables arose in order to ascertain whether transfer of the receivables has been prohibited or made subject to conditions. Otherwise, lenders would have to examine a potentially large number of contracts, which may be costly or even impossible (e.g. in the case of future receivables, see A/CN.9/631, recommendation 25).

3. Creation of a security right in a personal or property right securing a receivable, a negotiable instrument or any other intangible asset

233. If a grantor creates a security right in a receivable, negotiable instrument or any other intangible asset in favour of a secured creditor, the issue arises as to whether the secured creditor also has, automatically and without any further action

by the grantor or the secured creditor, the benefit of any personal right (e.g. a guarantee) or property right (e.g. a security right in other movable property or a mortgage on immovable property) that secures payment of the receivable, negotiable instrument or other payment claim.

234. A strong case can be made that the creation of the security right in the receivable, negotiable instrument or other intangible asset should also automatically give the secured creditor the full benefit of the grantor's full set of rights with respect to that receivable, negotiable instrument or intangible asset. Thus, if the obligation to pay the receivable, negotiable instrument or other intangible asset is itself secured by a security right in an asset of the obligor, the secured creditor should also receive the benefit of the grantor's rights with respect to the security right in the obligor's asset (see A/CN.9/631, recommendation 26, subpara. (a)).

235. The recommendation described in the preceding paragraph should apply regardless of whether the grantor is limited by any agreement with the debtor of the receivable or the obligor on the negotiable instrument or other intangible asset from creating a security right in (a) the receivable, negotiable instrument or other intangible asset; or (b) the personal or property right securing payment of performance of the receivable, negotiable instrument or other intangible asset (see A/CN.9/631, recommendation 26, subpara. (d)). However, nothing contained in such recommendation should affect the grantor's liability for breaching that agreement, except that the other party to the agreement may not avoid the agreement giving rise to the receivable, negotiable instrument or other intangible asset, or the property right securing the same, upon the sole ground of that breach (see A/CN.9/631, recommendation 26, subpara. (e)).

236. However, because the secured creditor's rights with respect to the personal or property right flows from the grantor's rights, the secured creditor's rights with respect to that personal or property right cannot be greater than the grantor's rights with respect to it.

237. Where the receivable, negotiable instrument or other intangible asset is secured by an independent undertaking, the secured creditor's security right does not extend to the right to draw under the independent undertaking, but rather extends only to the proceeds under an independent undertaking (see A/CN.9/631, recommendation 26, subpara. (b)). This is consistent with the theme of the Guide that a beneficiary of an independent undertaking may not transfer the right to draw without the consent of the guarantor/issuer, confirmer or other nominated person.

238. There are several practical reasons supporting the recommendation that the secured creditor should have a security right in the proceeds under an independent undertaking. First, this result merely eliminates the need for the secured creditor to take certain additional steps in its loan documentation with the grantor. That is because, even if the Guide were to make the distinction between an accessory right and an independent right, since that distinction is made under the laws of a number of States, that distinction would not prevent the secured creditor from obtaining a security right in proceeds under an independent undertaking. It would merely require the secured creditor to take the formalistic steps of including an express creation of a security right in the proceeds under an independent undertaking in its security agreement with the grantor. Eliminating the need for such formalism furthers the Guide's goal of reducing the costs of credit and making more credit available by reducing transaction costs.

239. Second, the automatic creation rule for a security right in proceeds under an independent undertaking would make sense in practice as being consistent with the parties' normal expectations. A secured creditor looking to the grantor's receivables as encumbered assets would normally expect that, regardless of how the receivables owed were paid (e.g. whether directly by the debtors of the receivables or by a draw under an independent undertaking securing one or more of the receivables, the secured creditor would have a security right in the payment as proceeds of the receivables. Indeed, in some cases a secured creditor may be willing to extend credit to a given borrower at a lower rate if the secured creditor knows that its security right in the receivables owed to its borrower includes a security right in the right to proceeds under an independent undertaking in so far as those receivables are secured by the independent undertaking. A rule that is consistent with the parties' normal expectations will avoid unfair surprise and create greater certainty in States that enact the recommendations of the Guide. Greater certainty will make credit providers more confident in extending credit and accordingly will further the goal of the Guide to encourage the greater availability of secured credit.

240. Third, the recommendation does not affect in any way the rights of the guarantor/issuer, confirmer or any nominated person under the independent undertaking. Neither the guarantor/issuer, nor any confirmer nor any nominated person has any obligation to accept a drawing from anyone other than the beneficiary of the independent undertaking, or has any obligation to pay anyone other than the beneficiary, without the consent of the guarantor/issuer, confirmer or nominated person.

241. The Guide qualifies the foregoing recommendation in a number of important respects. First, it does not affect a right in immovable property that, under law other than the secured transactions law, is transferable separately from the receivable, negotiable instrument or other intangible asset that it secures. This recommendation addresses the device that may exist in some States which permits an owner of immovable property to create a right (mortgage) in the immovable property even though at the time of creation the right does not secure any obligation. The owner may then transfer that right to a creditor that may in turn transfer the right to another creditor. Like an independent undertaking, the right in the immovable property appears to be a right in itself independent of any obligation.

242. The second qualification is that, consistent with the United Nations Assignment Convention, the recommendation applies only to certain types of receivable, negotiable instrument or other intangible asset (see A/CN.9/631, recommendation 26, subpara. (f), such as "trade receivables" (e.g. receivables evidencing the sale of goods and services).

243. The third qualification is that the recommendation does not affect any obligations of the grantor to the debtor of the receivables or the obligor on the negotiable instrument or other intangible asset (see A/CN.9/631, recommendation 26, subpara. (g)).

244. Finally, the recommendation would not affect any requirement under law other than the secured transactions law relating to the form or registration of the creation of a security right on any asset that secures payment or performance of a receivable, negotiable instrument or other intangible asset, but only to the extent that the automatic creation of the benefit of such security right is not impaired (see A/CN.9/631, recommendation 26, subpara. (h)).

4. Creation of a security right in proceeds under an independent undertaking

245. It is well established under the law and practice governing independent undertakings in many States that the right to draw under an independent undertaking may not be transferred without the consent of the guarantor/issuer, confirmer or nominated person under the independent undertaking. The Guide recognizes and respects this principle.

246. However, the Guide also draws a distinction between the right to draw under an independent undertaking and the right to receive the proceeds of a draw under an independent undertaking. Furthermore, the Guide takes the position that nothing in the law or practice governing independent undertakings prevents the beneficiary of an independent undertaking from creating a security right in the proceeds of the undertaking (i.e. the right to receive the proceeds once payment is made), even if the right to draw under the undertaking is itself not transferable under applicable law and practice (see A/CN.9/631, recommendation 28).

5. Creation of a security right in a negotiable document or goods covered by a negotiable document

247. When a negotiable document has been issued with respect to goods and is outstanding, the document embodies the title to the goods. As a result, it is appropriate that the creation of a security right in the negotiable document also operates as the creation of a security right in the goods themselves, provided that the security right in the document is created while the issuer is in possession of the goods (see A/CN.9/631, recommendation 29). For this purpose, possession may be direct (e.g. by the issuer of the document) or indirect (e.g. by an agent on behalf of the issuer of the document; for the definition of “possession”, see para. 19 above).

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

V. Effectiveness of a security right against third parties	1-130
A. General remarks	1-105
1. Introduction.	1-24
(a) Purpose of third-party effectiveness requirements	1-2
(b) Distinction between creation and third-party effectiveness	3-5
(c) Meaning of “third parties”.	6-11
(d) Relationship between third-party effectiveness and priority	12-14
(e) Overview of methods for achieving third-party effectiveness	15-21
(f) Outline of chapter.	22-24
2. Registration in a general security rights registry	25-42
(a) General	25-29
(b) Registration separate from creation of the security right	30-32
(c) Registration insufficient for third-party effectiveness.	33-36
(d) Extension of registry system to other transactions	37-42
3. Possession	43-61
(a) General	43-48
(b) Constructive possession insufficient.	49-50
(c) Possession by a third party	51-57
(d) Inapplicability of possession to intangible assets	58
(e) Adequacy of possession for the purposes of enforcement	59-61
4. Registration in a specialized registry or notation on a title certificate.	62-71
(a) General	62-63
(b) Registration in a specialized movable property registry	64-68
(c) Notation on a title certificate.	69-71

5.	Automatic third-party effectiveness of a security right in proceeds. . . .	72-78
6.	Third-party effectiveness of a security right in attachments.	79-86
	(a) General	79-80
	(b) Attachments to movable property.	81-82
	(c) Attachments to immovable property.	83-84
	(d) Attachments to movable property subject to a specialized registry	85
	(e) Coordination of registries	86
7.	Automatic third-party effectiveness of a security right in a mass or product.	87-94
8.	Continued third-party effectiveness of a security right after a change in the location of the asset or the grantor	95-98
9.	Continuity and lapse of third-party effectiveness	99-105
B.	Asset-specific remarks	106-130
	1. Third-party effectiveness of a security right in a personal or property right securing payment of a receivable, negotiable instrument or any other intangible asset	106-113
	2. Third-party effectiveness of a security right in a right to payment of funds credited to a bank account.	114-120
	3. Third-party effectiveness of a security right in proceeds under an independent undertaking	121-125
	4. Third-party effectiveness of a security right in a negotiable document or goods covered by a negotiable document.	126-130
C.	Recommendations.	

V. Effectiveness of a security right against third parties

A. General remarks

1. Introduction

(a) Purpose of third-party effectiveness requirements

1. In some States, a security right in movable property takes effect both between the parties and against third parties as soon as the security agreement is concluded without the need for any further act. This approach has the advantage of simplicity.

However, it does not provide a potential secured creditor with a reliable means of verifying whether assets in the grantor's possession are already encumbered. In addition, if the grantor sells or transfers possession of an encumbered asset, without the authorization of the secured creditor, to a buyer (and sometimes a pledgee) that purchases (or takes possession of) an asset without knowledge that it is already subject to a security right, a secured creditor may find its security right defeated. This result is likely to have a negative impact on the availability and the cost of credit.

2. Many States, therefore, require an additional step to be taken for the security right to become fully effective. This additional step is designed to provide some form of public notice of the actual (and in some cases merely the potential) existence of a security right in the grantor's assets. Examples of such acts include the transfer of possession of the encumbered assets to the secured creditor and the registration of a notice in a public registry. These types of acts contribute to the efficiency and effectiveness of a regime of secured lending in several ways. First, they enable a secured creditor to determine in advance of taking a security right whether the grantor's assets are already encumbered. Second, as they alert the grantor's creditors and other third parties to the existence of the security right, there is no need for special rules protecting third parties against the prejudice of "secret" security rights. Third, they provide a defined temporal event for the ordering of priority between a secured creditor and a competing claimant (for the definitions of "competing claimant" and "secured creditor", see A/CN.9/631/Add.1, para. 19).

(b) Distinction between creation and third-party effectiveness

3. Among States that require such an additional act, some treat it as a prerequisite to the effectiveness of the security right even as between the parties. The idea here is that, as a central goal of taking security is to obtain rights enforceable against the grantor and third parties, there is no utility in distinguishing between effectiveness between the parties and third-party effectiveness. In other States, the additional step is required only for the purposes of making the security right effective against third parties. This approach is based on the idea that, as the requirement for taking an additional step is aimed primarily at ordering the priority of rights between a secured creditor and a competing claimant, there is no reason why it should be a pre-condition to the right of the secured creditor to enforce its rights under the security agreement and secured transactions law as against the grantor (for the definition "security agreement", see A/CN.9/631/Add.1, para. 19).

4. Many States that have recently modernized their secured transactions law adopt the second approach. In States that do not recognize a distinction between *inter partes* and *erga omnes* effects of property rights generally, adoption of this approach may generate some conceptual concerns. For example, most States do not admit that a pledge may be created only between the parties. Nonetheless, the approach of the Guide is not entirely novel even in these States. It merely carries the idea of consensualism, which is now accepted as part of the law of sale in most States, into the realm of security rights. Moreover, concerns about recasting "property" agreements like pledge, do not apply if the additional step is registration, since in such cases the grantor always remains in possession of the encumbered asset. Finally, not drawing the distinction between *inter partes* and *erga omnes* effects adds an additional formality to the creation of a security rights without any

compensating advantage to grantors or secured creditors (see A/CN.9/631/Add.1, paras. 143-147).

5. In order to promote efficient secured credit, this Guide recommends adoption of the approach that distinguishes between steps required for creation (effectiveness between the parties) of a security right and those necessary to achieve third-party effectiveness. Once the conditions for creation of a security right addressed in chapter IV (see A/CN.9/631/Add.1) are satisfied, the security right becomes effective between the grantor and the secured creditor (see A/CN.9/631, recommendation 31). However, in order for the security right to affect third parties, the requirements for third-party effectiveness addressed in this chapter must also be satisfied (see A/CN.9/631, recommendation 30).

(c) Meaning of “third parties”

6. While it is normally not difficult to determine who are the parties to a security agreement (i.e. the grantor and the secured creditor) defining who is to be considered a “third party” is more complex. Indeed, States take quite different approaches to the categories of third parties against which a security right is ineffective unless the required additional step is taken. In some States, a security right has no effect against third parties, whatever their status, until the additional step is taken. Other States adopt a second, more qualified, approach. A security right is presumptively effective against third parties upon creation but can be defeated by specified categories of competing claimants if the additional step required for full-fledged effectiveness is not taken before their rights arise (see A/CN.9/631/Add.1, paras. 143-147).

7. In States that adopt the more qualified approach, the additional step is required only for effectiveness against secured creditors and transferees of the encumbered assets. As against the grantor’s unsecured creditors and the insolvency representative, the security right is fully effective upon its creation. The distinction between these categories of “third parties” is based on the idea that notice of a security right should matter only to creditors that are presumed to be those that have taken a security right or purchased or otherwise given value in reliance on the grantor’s unencumbered title. For example, unsecured creditors are presumed not to rely on the presence or absence of security rights in the grantor’s assets, since the very act of extending credit on an unsecured basis implies an informed acceptance of the risk of subordination to secured creditors that may later acquire security rights in the grantor’s assets.

8. There are, nonetheless, several reasons why this approach to rights of unsecured creditors, judgement creditors and insolvency representatives may not be well suited to an efficient secured transactions regime. First, while unsecured creditors base their decision to lend on the grantor’s general financial health, the presence or absence of security rights may be one of the factors upon which that assessment is based and may also be relied upon by credit reporting agencies on whose services unsecured creditors may rely. Second, the requirement for timely public registration or some equivalent additional step reduces the risk that an alleged security right is a collusive arrangement between an insolvent grantor and a preferred creditor to defeat the claims of other unsecured creditors. Third, it enables judgement creditors to determine in advance of initiating costly enforcement action whether the grantor’s assets are already encumbered. It also reduces the costs of insolvency proceedings

by giving the insolvency representative an efficient means of ascertaining which assets of the insolvent grantor are potentially encumbered. Finally, the risk of finding its security right defeated by intervening judgement enforcement or insolvency proceedings provides a significant incentive to secured creditors to make their security rights fully effective in a timely fashion.

9. In some States that generally protect the rights of subsequent secured creditors or transferees against security rights that have not been made effective against them through the required additional step, an exception is made where these subsequent secured creditors or buyers acquire their rights with actual knowledge of the existence of a prior security right. Again, there are reasons why this qualification is not well suited to an efficient secured transactions regime. First, a key objective of an efficient regime is to provide *a priori* (i.e. in advance of the conclusion of the security agreement and extension of credit) certainty in the ordering the competing rights to encumbered assets. A priority rule that depends on fact-specific *ex post facto* litigation is inimical to that goal. Second, mere knowledge of the existence of a prior security agreement does not imply bad faith on the part of a subsequent secured creditor. If the prior secured creditor has not taken the steps necessary to make its security right fully effective against third parties, the subsequent creditor may reasonably assume that it has implicitly consented to the risk of subordination. Third, establishing knowledge on the part of another party and the exact extent of knowledge raises difficult questions of proof.

10. Some States also deny protection to a subsequent donee of an encumbered asset on the theory that, as between a secured creditor that by definition has given value for its security right and a donee that has not, the secured creditor should be protected. For reasons similar to those just canvassed in the preceding paragraph, this qualification is not well suited to efficiency in the secured lending regime. Determining the status of a transferee of an encumbered asset invites *ex post facto* litigation contrary to the goals of achieving *a priori* certainty and predictability. Moreover, even if the donee's status is not contested, the donee may well have changed its position in reliance on the unencumbered status of the asset (for example, by creating a security right in favour of another creditor).

11. The above-mentioned discussion of different approaches to determining whether certain categories of competing claimants should either be (i) subordinated to even security rights that have not been made effective against third parties, or (ii) have priority even over security rights that have been made effective against third parties at a later time illustrates that such distinctions are generally inimical to efficiency, transparency and predictability in the secured transactions regime. For this reason, this Guide recommends the first approach noted above (see A/CN.9/631, recommendation 30). Until the conditions for third-party effectiveness are satisfied, the security right is ineffective against intervening rights in the encumbered assets acquired by third parties regardless of the type of the competing claimant.

(d) Relationship between third-party effectiveness and priority

12. Attaining third-party effectiveness does not, of itself, determine questions of priority. It does produce though some priority consequences in the sense that a security right that has not been made effective against third parties cannot be set up as against the rights of a competing claimant in the same encumbered assets. However, as between competing claimants, all of whom have achieved third-party

effectiveness of their rights, additional rules are required. As explained more fully in chapter VII (see A/CN.9/631/Add.4, paras. ...), priority depends upon the nature and status of the rights with which the security right is in competition. For example, if more than one security right have been made effective against third-parties, it will be necessary to rank the competing security rights as between themselves.

13. Moreover, the concept of priority is not identical in every State. Some States take the position that priority speaks only to the rights of competing secured and unsecured creditors in the assets of the grantor. The rights of other competing claimants such as transferees and lessees are determined by reference to rules governing the character of the transferor's title. Other States have a broader, functional, concept of priority. Every conflict between competing claimants is a priority dispute. This approach to priority is common whenever the secured transactions regime considers that, in relation to third-party effectiveness, no distinction should be drawn between different categories of claimant.

14. As this Guide adopts the latter concept of third-party effectiveness, it also adopts the broader concept of priority. In other words, even though third-party effectiveness and priority are distinct concepts, because the various priority rules set out in chapter VII conceive priority in relative terms, it is essential to take these priority rules into account in assessing the degree of protection afforded by third-party effectiveness or by particular methods of achieving third-party effectiveness. For example, this chapter recognizes that, once the requirements for third-party effectiveness have been satisfied, a security right continues in the asset even in the hands of a subsequent transferee (see A/CN.9/631, recommendation 32). However, the secured creditor's right to follow the assets (its *droit de suite*) is not absolute. Under the priority rules addressed in chapter VII, a buyer of an encumbered tangible asset and a holder of negotiable documents and instruments transferred in the ordinary course of the grantor's business generally take free of a security right even when it is effective against third parties (see A/CN.9/631, recommendations 85-87).

(e) Overview of methods for achieving third-party effectiveness

15. Historically, States devoted little attention to developing and reconciling different methods for achieving third-party effectiveness. This lack of attention can be traced to either a general prohibition on non-possessory security rights over movable property (movable property is not susceptible to hypothecation) or to the general unenforceability against third parties of non-possessory security rights in movable property. In these States, the pledge was the only available security device, and grantor dispossession served both to constitute the pledge, as well as provide the publicity function necessary for third-party effectiveness. As economies developed, however, the limits of the pledge became more obvious. A commercial grantor would normally wish to remain in possession of its business assets, so some alternative to possession had to be developed. Hence, States came to develop the concept of registration of rights as an additional means for achieving third-party effectiveness.

16. In many States, registration is the principal method for achieving third-party effectiveness. While there are different types of registration regimes in different States, a frequent approach is to establish a general security rights registry (see A/CN.9/631, recommendation 33). In addition to registration, alternative methods are also available, depending on the nature of the encumbered assets (see

A/CN.9/631, recommendation 35). For example, almost all States provide for the continuance of the “pledge” idea in the sense that a security right in tangible property may be made effective against third parties by a transfer of possession of the pledged asset to the secured creditor.

17. While registration in a general security rights registry and transfer of possession to the secured creditor are the most common methods for achieving third-party effectiveness, they are typically not exclusive. Specialized “control” rules are often enacted to apply to a security right in a right to payment of funds credited to a bank account and in a right to proceeds under an independent undertaking (for the definition of these terms, see A/CN.9/631/Add.1, para. 19). Furthermore, in most States a security right in an attachment to immovable property can be made effective against third parties by registration in the immovable property registry. Finally, under other law in many States, a security right in a specific type of movable property can be registered in a title registry (for example, a ship’s registry) or noted on a title certificate.

18. In some States, it is also possible to achieve third-party effectiveness of a security right in a receivable by notifying the debtor of the receivable. In practice, a secured creditor generally will not demand direct payment of receivable until there is a default on the part of the grantor. Indeed, even when receivables are assigned outright, the assignee will frequently wish to leave collection in the hands of the assignor. In light of these practicalities, the Guide treats a demand for payment simply as a collection or enforcement technique and not a method for achieving third-party effectiveness. In addition, registration offers a more efficient means for secured creditors and assignees to evaluate priority risk at the outset of the transaction particularly where the security right or assignment covers all of the grantor’s present and after-acquired receivables. Otherwise, they would be subject to the risk of a loss of priority based on the arbitrary timing of when a competing secured creditor or assignee happened to give notice to the debtor on the receivable.

19. Notwithstanding the principle that an additional step is required in order to achieve third-party effectiveness of a security right, some States provide that in a number of exceptional instances, a security right is automatically effective against third parties without the need for the secured creditor to register or take possession or perform any other positive step. However, as a general rule in most States, the security right becomes effective against third parties only if it is made effective against third parties by one or another of the alternative methods just outlined.

20. In most States, these alternative methods are not exclusive. For example, most States provide that where a security right may be made effective against third parties by transfer of possession to the secured creditor, it may also be made effective by registration. Moreover, even where assets are encumbered by the same security agreement, most States provide that different methods may be used for different assets (see A/CN.9/631, recommendation 37). The one exception to the principle of non-exclusivity flows from the particular character letter of credit transactions (the Guide uses the term “independent undertaking; for the definition, see A/CN.9/631/Add.1, para. 19). Invariably States provide that a security right created in proceeds under an independent undertaking can only be made effective against third-parties by the secured creditor taking control with respect to the proceeds (see A/CN.9/631, recommendation 36).

21. This said, in many States registration may, in practice, be an exclusive method in the sense that no other method is available to achieve third-party effectiveness for the particular type of encumbered asset in question. This is generally true, for example, for security rights in receivables and inventory.

(f) Outline of chapter

22. Sections A.2 through A.4 of this chapter discuss in detail the three most common methods for achieving third-party effectiveness (i.e. registration in a general security rights registry, possession and registration in a specialized registry). Sections A.5 through A.7 consider cases where a security right that has been made effective against third parties continues to be effective in assets not initially subjected to the security right. Sections A.8 and A.9 address other issues of continuity, for example where the asset or the grantor changes location, or where third-party effectiveness may have lapsed.

23. Part B is devoted to a discussion of particular methods for achieving third-party effectiveness that apply to specific types of asset. Section B.1 considers the important cases of security right in a personal or property right securing the payment of a receivable, negotiable instrument or any other intangible asset. Section B.2 reviews third-party effectiveness of security over the right to payment of funds credited to a bank account. Section B.3 assesses how third-party effectiveness may be achieved where the security encumbers the right to proceeds under an independent undertaking. Finally, section B.4 addresses third-party effectiveness of a security right in a negotiable document or in property covered by a negotiable document.

24. Part C sets out a series of recommendations about methods for achieving third-party effectiveness and the consequences of doing so.

2. Registration in a general security rights registry

(a) General

25. While public registration is a widely accepted method of achieving third-party effectiveness, registry systems differ widely. In many States, registration requirements have evolved incrementally over a long period of time, resulting in a patchwork of uncoordinated systems within the same State organized according to diverse criteria. For example, some of these systems may be organized by reference to the type of transaction (for example, retention-of-title and hire-purchase registries). Other systems may be organized by reference to the status of the grantor (for example, corporations or commercial enterprises), or by reference to the identity of the secured creditor (for example, banks). Still other systems may be organized by reference to the type of encumbered assets (for example, equipment or machinery or receivables registries).

26. States also take different approaches to the formalities that must be followed to register. Some require only a notice to be registered. Other States require that a full summary of the rights set out in the security agreement be registered. Still other States require that the full security documentation to be registered along with formal certificates or affidavits attesting to the identity of the participants and the authenticity of their signatures and legal capacity.

27. Beginning in the latter part of the twentieth century, an increasing number of States came to establish new registries or to significantly reorganize or replace their existing registry systems with respect to security rights in movable property. These reforms involved two distinct developments. In the first place, where existing systems were dispersed and fragmented, States replaced them with a central general registry covering all security rights in movable property, regardless of the identity of the parties, the nature of the encumbered assets or the form of the transaction giving rise to the security right. Likewise, States that established for the first time a registry for security rights in movable property invariably opted for a central general registry. Secondly, in most of these systems, States also substantially changed the mechanics of registration. The goal was to substitute the registration of a simple notice containing only minimal details about the security right to which it relates for the more cumbersome system of registering either the security documentation or a certified summary of it. That is, in these systems, the security agreement that creates the security right is not registered, nor is its existence or content verified by the system.

28. For many States, this second feature of modern registries constitutes a significant departure from the generally accepted concept of registration of security rights. Even in those States where full documentation is not registered, the idea is that the registry serves to inform searchers about an existing security right. The registration proves the right, and therefore can only be made once the right comes into existence. This explains why it is thought to be confusing, if not incoherent, to describe these modern registries as involving registration. As the secured creditor normally will simply register a notice about either its intention to take a security right (whether or not it has already acted on that intention), many States prefer to describe these registers not as registry systems, but as “notice filing” systems.

29. Regardless of the nomenclature used to describe these newer systems for achieving third-party effectiveness, it is apparent that they greatly simplify the process of providing a reliable source of information about potential security rights. When combined with advances in computer technology, a “notice-filing” system constitutes a highly efficient and cost-effective registration and searching process. For these reasons, this Guide recommends that States establish public registry systems that (i) are centralized, general and comprehensive of all security rights, and (ii) that require only the registration of a notice that sets out the basic details about the security right to which it does or may relate. It also endorses the idea that registration of a notice of a security right in such a registry should be established as a general method of achieving third-party effectiveness (see A/CN.9/631, recommendation 33). The design and operational details of different systems for establishing such a registry are addressed in chapter VI of this Guide (see A/CN.9/631/Add.3).

(b) Registration separate from creation of the security right

30. As noted in the preceding discussion, States have traditionally taken two different approaches to the relationship between registration and creation of a security right. In some States, the right itself is only created once registration has occurred. In other States, registration is required only as an additional step necessary to achieve third-party effectiveness. This Guide recommends adoption of the second approach (see A/CN.9/631, recommendation 30).

31. Several important consequences flow from the idea that registration of a simple notice containing only basic details about the security right concerns only third-party effectiveness. The security agreement to which the notice relates is not registered. Nor is its existence or content shown to or verified by the registry system. Creation of the security right (its effectiveness as between the parties) and registration are completely independent acts: registration does not create or evidence the creation of the security right; nor is registration necessary for creation of the security right (see A/CN.9/631, recommendation 34).

32. Whether a security right has actually come into existence cannot be determined from a search of the registry. Existence depends on establishing (by reviewing off-record evidence and documentation) that the parties have concluded a security agreement that satisfies certain formal and essential requirements, and that the grantor has rights in (or the power to encumber) the assets described in the security agreement (see A/CN.9/631, recommendations 12-14). Similarly, the scope of the encumbered assets depends primarily on the description set out in the security agreement, not in the registered notice (if the description in the security agreement covers a narrower range of assets than the description in the registered notice, the description in the security agreement is determinative). Only where the description of encumbered assets in the registered notice is narrower in scope than that in the security agreement, will the extent of third-party effectiveness be controlled by the description in the registered notice.

(c) Registration insufficient for third-party effectiveness

33. An important consequence of a “notice-filing” system of the type recommended in this Guide is that the registration is no guarantee of the actual existence of a security right. In other words, unlike traditional approaches to registration in many States, “notice” registration does not prove the existence of the security right. This means that registration by itself does not result in third-party effectiveness of the right described in the notice. That status is acquired only if and when the requirements for creation of a security right are also satisfied (see A/CN.9/631, recommendation 33).

34. There are two implications of this approach to registration, which increase the flexibility and efficiency of the secured transactions system. First, while creation is a prerequisite to third-party effectiveness, it need not precede registration. As explained in chapter VI (see A/CN.9/631/Add.3, paras. 73-75), a notice of a security right may be registered either before or after a security agreement is concluded. Second, while a security right covering after-acquired assets (i.e. acquired after the creation of the security right) comes into existence in respect of those assets only as they are acquired, it is possible to register of a notice describing them as potentially encumbered assets.

35. While it is often the case that no great consequences flow from differences in the order in which these two steps to achieve third-party effectiveness (i.e. creation of a security right and registration), this is not always true. The time of creation is important, if a third party acquires rights in assets described in a registered notice (for example, by gift or sale or as a result of insolvency or judgement enforcement proceedings) after registration takes place. If the requirements for creation have also been satisfied by the time a third party acquires rights in encumbered assets, the security right will be effective against the third party and its priority will be

determined according to the rules set out in chapter VII (see A/CN.9/631/Add.4). However, if the conditions for creation have not yet been satisfied, the third party will acquire the asset free of the subsequently created security right, notwithstanding that it has searched the registry and is aware of the notice filed by the secured creditor. Until both creation and registration have occurred, third-party effectiveness is not achieved.

36. The principle that third-party effectiveness dates from the time both requirements are met, and not necessarily from the time of registration, is subject to one important exception. As a general rule, in order to promote certainty and transparency among secured creditors, priority among competing security rights that have been made effective against third parties by registration is made to depend on the order of registration, not the time of creation (see A/CN.9/631, recommendation 78). That is, as between two secured creditors, one of which has registered first, but created its security right after the other has both created its security right and registered a notice, the first register will have priority.

(d) Extension of registry system to other transactions

37. The establishment of a general and comprehensive security rights registry system of the kind contemplated by this Guide enables searchers to discover potential encumbrances on a grantor's assets and to take steps to protect their rights. States that have adopted these types of registries have also tended to expand their scope. That is, these States have concluded that, even though the primary purpose of the registry is to serve as a repository of information about potential security rights, it can also serve to record information about other types of non-possessory rights in movable property. The registries have been extended to embrace registration of a wide variety of notices indicating that a non-possessory right exists, or that some other intangible right may exist in favour of a third party.

38. The idea of using a security rights registry for other purposes is not novel. Many States that have established specialized registries to record the pledge, hypothecation, mortgaging or assignment by way of security of claims to payment (for example, a right to an insurance payment, or commercial receivables) also provide that the outright assignment of an individual payment claim, or an entire category of payment claims may (and in some cases, must) be registered in the specialized registry in the same manner as if it were a security right. Typically, in States that have adopted comprehensive security rights registries, registration is mandatory in the sense, in the absence of registration or completion of another third-party effectiveness step, the security right is not effective against third parties (in other words, registration is non-mandatory in the sense that its absence does not affect the effectiveness of the security right as between the parties). An outright assignee of receivables is subject to the same registration requirements for third-party effectiveness and the same priority rules that apply to the holder of a security right in receivables. The rationale is that there is little practical difference, from the perspective of the rights of third parties, between an outright assignment and a security assignment and that, consequently, the rules for effectiveness against third parties of both types of transaction should be the same. This is the approach recommended by this Guide (see A/CN.9/631, recommendation 33).

39. In general, States have not sought to require owners of movable property to register their ownership. So, for example, while many States either require or enable

the registration of leases of immovable property, only a few extend this idea to movable property. Nonetheless, States that have established a general security rights registry tend also to make registration in this registry a condition for the third-party effectiveness of transactions where there is a disjuncture between the owner and the person that, over a period of time, has possession of an item of movable property and appears to use it as if it were an owner. The two most common situations involve true leases of significant duration (for example, one year or longer) and commercial consignments in which the consignee is in possession of inventory as an agent for sale on behalf of the owner. In States that adopt this approach, the rights of the lessor and the consignor against third parties are subject to the same third-party effectiveness and priority rules that apply to the holder of an acquisition security right. The rationale for this approach is that in the absence of registration, third parties dealing with the lessee's or consignee's business assets have no objective means of determining whether they belong to the lessee or consignee or to a lessor or consignor.

40. The extension of the registration requirements for security rights to true leases is reflected at the international level in the Convention on International Interests in Mobile Equipment, which extends the scope of the international registry contemplated by the Convention beyond security rights and financial leases to include leasing arrangements.

41. Many States have long known of the concept of a judicial hypothec, under which a judgement creditor may register the judgement for a sum of money against the immovable property of a judgement debtor, and thereby obtain a security right in that immovable property. As the concept of a registrable non-possessory security right in movable property developed, some States began to permit the registration of judgements against movable property. States that have adopted a general security rights registry tend to provide for registration of a notice of a judgement indexed according to the identity of the judgement debtor. In States that adopt this approach, registration creates the equivalent of a security right in the movable property of the judgement debtor in favour of the judgement creditor. This approach can indirectly promote the prompt voluntary satisfaction of judgement debts, since third parties will be reluctant to buy or take a security right in the encumbered assets until the judgement debtor has paid the judgement debt and brought about a termination of the registration.

42. In States that adopt this approach, the judgement debtor's insolvency representative is typically entitled to claim the monetary benefit of a registered judgement creditor's priority for the benefit of all unsecured creditors (sometimes subject to a special privilege in favour of the registered judgement creditor to compensate for expenses and efforts). The purpose of this rule is to ensure that the registered judgement creditor's rights do not conflict with insolvency policies requiring equality of treatment among the debtor's unsecured creditors. The Guide does not make a recommendation on this point, since it is an issue for law other than secured transactions law (as to the priority between a secured creditor and a judgement creditor, see A/CN.9/631, recommendation 90).

3. Possession

(a) General

43. In virtually all States, a transfer of possession of tangible assets to the secured creditor (the classic possessory pledge) is accepted as sufficient to both evidence the creation of a security right and make it effective against third parties. At the level of creation, this is based on the theory that the transfer of possession evidences the grantor's implicit consent to the security right and the scope of the assets encumbered by that security right. At the level of third-party effectiveness, while a transfer of possession does not positively publicize the existence of a security right (for example, it does not necessarily mean that the person in possession is a pledgee rather than a lessee, a borrower or a mere depositary), it does eliminate the risk that third parties will be misled by the grantor's possession into thinking that the grantor holds an unencumbered title to the property.

44. While historically possession was often the exclusive method for adverting third-parties to the existence of a security right, over the twentieth century many States also developed specialized registries for certain categories of movable property. For example, some States created registers for non-possessory pledges of commercial or industrial equipment. The existence of a register for non-possessory commercial pledges was not, however, accompanied by a general prohibition on the "true" pledge of this type of asset. As a result, it was often possible that competing possessory and registered security rights could encumber the same asset. A similar result is possible in States that have established general security rights registries. Registration of a notice in a registry system for security rights is seen as an alternative method for achieving third-party effectiveness that co-exists with specialized registration systems or grantor dispossession.

45. The idea of maintaining the approach that contemplates the co-existence of these methods of achieving third-party effectiveness is not without controversy. Two intertwined rationales are advanced for abolishing possession as a method for achieving third-party effectiveness wherever a general security rights registry exists. The first is that possession detracts from the reliability of the registry record as a comprehensive source of information about the potential existence of security rights in a grantor's assets. Prospective secured creditors or buyers cannot rely on a negative search of the registry to conclude that the relevant asset is unencumbered. They must also verify that the asset is in the grantor's possession. The second rationale relates to difficulties of proof. Whereas the registry offers a reliable public record of the relevant time for establishing priority between a security right and the right of a competing claimant, possession requires potentially contested evidence of when the physical transfer of possession actually occurred.

46. Despite these concerns, States that have established general security rights registries invariably also retain transfer of possession as an equally valid alternative method for achieving third-party effectiveness of a security right in tangible property. The reasons for doing so are several. The sufficiency of possession for third-party effectiveness is well established in commercial practice. Moreover, transfer of possession as a method of third-party effectiveness would need to remain available in any event for negotiable documents and negotiable instruments in order to preserve their negotiability and the associated priority. As for the intrusion on the comprehensiveness of the registry record, a prospective secured creditor or buyer

will usually need to verify whether the relevant assets actually exist and, for this purpose, it will typically be required to verify the grantor's continued possession. Similarly, evidentiary problems relating to the time of the transfer are unlikely to pose difficulties in practice. In its own self-interest, a prudent secured creditor will want to ensure that the time at which it acquired possession is well documented.

47. States that maintain both registration and creditor possession as methods for achieving third-party effectiveness also adopt the principle that, except in very limited cases, these two methods produce exactly the same consequences (both as to the time at which the security right actually becomes effective against third parties, and as to the priority consequences attaching to these additional steps). This said, however, as a practical matter these are not equal methods for achieving third-party effectiveness. First, transfer of possession is an available method of third-party effectiveness only if the asset in question may actually be possessed (that is, is a corporeal, tangible asset). Second, transfer of possession is viable only where the grantor is prepared to give up ongoing use and enjoyment of the encumbered assets. It is not feasible if the grantor needs to retain the encumbered assets in order to produce its services or products or otherwise generate income.

48. For these two reasons, once a comprehensive and efficient notice registration system becomes available, the vast majority of secured creditors tend to prefer registration to possession as a method for achieving third-party effectiveness. The two main exceptions are transaction-specific and usually involve short-term financing. So, for example, where possession confers a priority advantage, as in the case of negotiable instruments and negotiable documents, secured creditors will take possession even if they or any other party may have already registered a security right (see A/CN.9/631, recommendations 99 and 107). In addition, where the secured creditor is in the business of taking possessory security rights (as is the case with pawnbrokers) it is rare that it will also register its security right. Given that the possessory pledge is well-known and well-understood in most States, that there can be efficiencies in permitting possession as a method for achieving third-party effectiveness, and that the disruptions to the integrity of the registry are not significant, this Guide follows the position of those States that have adopted a general security rights registry and endorses both registration of a notice and transfer of possession to the secured creditor as a method for achieving third-party effectiveness (see A/CN.9/631, recommendation 38).

(b) Constructive possession insufficient

49. While the pledge originated in the actual transfer of a specific item of tangible property from the grantor (pledgor) to the secured creditor (pledgee), over time States sometimes relaxed the rules as to what might constitute creditor possession. In some States, constructive possession (for example, an agreement appointing the grantor as the secured creditor's agent) is now accepted as sufficient to constitute and give third-party effectiveness to a security right in tangible property. In other States, possession may be symbolic, as when a grantor affixes a notice to an object or to the door of an establishment stating that the object or contents of the establishment have been pledged to the secured creditor. These developments were usually the result of an absence of a more general mechanism for creating a non-possessory pledge (or security right) in movable property. This said, some States that today do not permit non-possessory security rights maintain a strict requirement

that the creditor's possession be real: public, continuous, peaceful and unequivocal (for a discussion of possession as condition of creating a possessory security right, see A/CN.9/631/Add.1, paras. ...).

50. States that have established a general security rights registry and that continue to allow creditor possession as a method of third-party notice invariably adopt the strict approach to possession. Creditor possession requires real relinquishment by the grantor of physical control over the encumbered assets. Continued possession by the grantor or anybody closely associated with the grantor would not provide a sufficient signal to third parties that the grantor's title is potentially encumbered. That is, because the existence of a security rights registry enables debtor-in-possession security, there is no need to relax the concept of possession to facilitate the creation of security rights. This is also the approach recommended by the Guide and its rationale (for the definition of "possession", see A/CN.9/631/Add.1, para. 9).

(c) Possession by a third party

51. It is widely accepted, regardless of whether a State has established a general security rights registry, that possession need not involve direct custody by the secured creditor. Possession by an agent or representative of the secured creditor is sufficient to possession by the secured creditor, provided that an objective bystander would not conclude that the encumbered assets remain in the grantor's possession. There are various means by which third-party possession may be effected.

52. In some cases, the secured creditor has neither the capacity nor the expertise to properly safeguard encumbered assets. Here, a depositary acting for the secured creditor will typically take or receive possession in the secured creditor's name. In other cases, the encumbered assets may already be in the custody of a third party at the time the security right is created. For example, these assets may be diamonds, gold, jewellery or other precious metals in the safe keeping of a security company. In these cases, it is necessary for the holder to be informed that the grantor has pledged the property, and that until receipt of a notice from the secured creditor it may not release the property to the grantor.

53. More commonly, existing third-party custody arises because a third-party carrier or warehouse-keeper holds the encumbered asset. Here, a form of third-party effectiveness through possession can occur when the third party issues a receipt in the name of the secured creditor or agrees to hold the encumbered assets on behalf of the secured creditor. In this case, the third party's actions confirm that it is in possession on behalf the secured creditor.

54. Alternatively, if the document of title is issued in negotiable form, this means the carrier or warehouse keeper is obligated to deliver the assets represented by the document to the person currently in possession of it. Delivery of the document with any necessary endorsement to the secured creditor therefore offers an alternative means of achieving third-party effectiveness of a security right in the assets it represents.

55. In some States, the idea of third-party possession by a depositary or warehouse-keeper has been extended to ad hoc arrangements between the parties. That is, in these States, a transfer of possession to the secured creditor's agent need not even require physical removal of the encumbered assets from the grantor's premises. In "field warehousing" arrangements, for example, a representative of the secured

creditor (typically an employee of the grantor) takes physical custody of the encumbered assets on the grantor's premises (for example by placing them in a locked store room to which only the representative has the key). Any release of the assets in the "field warehouse" to the grantor requires the consent of the secured creditor.

56. Field-warehousing arrangements are most common in States in which the possessory pledge is the only available form of security in movable property. Nonetheless, even in States that offer the alternative of a public registry, a secured creditor may still wish to engage in field warehousing as a practical monitoring technique. However, it will generally also register a notice of its security right to ensure real certainty with respect to third-party effectiveness and to avoid the risk that the arrangement will be challenged as involving constructive rather than real possession.

57. In States that maintain creditor possession as a method for achieving third-party effectiveness, the possibility that this creditor possession may be exercised through the custody of an agent or representative is an important feature of modern regimes of security rights. It enhances the efficiency and effectiveness of possessory security rights, while lowering its cost by permitting creditors to delegate custodial responsibility to experts. For these reasons, this Guide foresees that creditor possession may be effected through third-party custody (see definition of "possession" in A/CN.9/631/Add.1, para. 19).

(d) Inapplicability of possession to intangible assets

58. Underlying the idea of possession as a possible method of achieving third-party effectiveness is the idea that physical custody of an asset is transparent. This is why, both historically and today, States that authorize security through pledge agreements require the encumbered assets to be tangible property. Intangible assets are excluded because it is not physically possible to take possession of an intangible asset. Very often, a creditor seeks to take a security right in the grantor's receivables, but cannot achieve third-party effectiveness of its security right by possession. Only if the receivables are made corporeal in a negotiable instrument can creditor possession constitute a method for achieving third-party effectiveness. A deposit certificate or other instrument that merely evidences a debt, but that is not negotiable, cannot be the subject of "possession". Likewise, should a grantor seek to create a security right in a lease of a piece of equipment, it could not achieve third-party effectiveness by handing over either the equipment (which it does not own) or the lease contract to the secured creditor.

(e) Adequacy of possession for the purposes of enforcement

59. Not all secured creditors will immediately seek to achieve third-party effectiveness of a security right. For whatever reason, they may neither register a notice in the general security rights registry, nor take possession of the encumbered assets. In States that consider the pledge to be a property contract, the absence of creditor possession means that the pledge is never constituted, even as between the parties. In other States, most commonly those that have adopted a general security rights registry but that also provide for creditor possession as a method for achieving third-party effectiveness, the pledge may be constituted between the parties even without creditor possession. In these cases, it is necessary to determine

the conditions under which subsequent actual creditor possession will constitute a method for achieving third-party effectiveness.

60. In some States, a security right is not made effective against third parties by possession when possession results from seizure by the secured creditor as a result of the grantor's default. This approach has both a conceptual and policy rationale. Conceptually, the voluntary surrender of possession by the grantor to the secured creditor at the outset of the secured transaction involves recognition by both parties that the secured creditor's rights are to be protected in this way. Seizure for the purposes of enforcement usually involves the involuntary taking of the encumbered asset from the grantor as a result of the grantor's default. Moreover, even where the grantor voluntarily surrenders the asset, it does so under the coercive threat of enforcement proceedings. The policy rationale rests on the fact that seizure for enforcement purposes typically will be relied upon by a secured creditor that has failed to register notice of its security right or has failed to register it properly. Particularly in the context of a competition with the grantor's insolvency representative, there are concerns that recognition of seizure as a sufficient act of third-party effectiveness would reward imprudent conduct, encourage precipitous enforcement action, and involve difficult questions of proof as to whether the seizure occurred before or after the commencement of the insolvency proceedings.

61. In other States, by contrast, the motivation and context of creditor possession is held not to be relevant to determining its consequences. Creditor possession results in third-party effectiveness even when the secured creditor obtains possession through seizure of the encumbered assets for the purposes of enforcement. This approach is based on the theory that the function of possession is to ensure that third parties are not prejudiced by the grantor's remaining in possession of assets to which it does not hold unencumbered title. Possession by the secured creditor serves this goal regardless of the motive for taking possession. Because the primary context in which this policy issue arises involves a competition between the secured creditor and the grantor's insolvency representative, this Guide does not contain a recommendation on the point, but defers to a State's insolvency regime.

4. Registration in a specialized registry or notation on a title certificate

(a) General

62. The two main approaches to achieving third-party effectiveness just reviewed (registration in a general security rights registry and creditor possession) presuppose that the central objective is to alert third parties to the possible existence of a security right. Even in States that heretofore have established fragmented registries, that is, registries in which the organizational structure focuses on the type of transaction (for example, retention-of-title, or commercial pledge registries), or the status of the grantor (for example, corporation registries), or the identity of the secured creditor (for example, banks), or the type of encumbered assets (for example, equipment or receivables registries), the focus of the registry is on security rights. Only by exception are these registries open for registrations that are not, or not intended as, security rights (for example, outright assignments of receivables, long-term leases, commercial consignments).

63. In many States, however, there have traditionally existed other forms of publicizing rights. On occasion, a specialized, asset-specific registry may be

established to record all transactions related to that type of asset. The model for these types of registry is the standard register of rights in immovable property, in which title, encumbrances, public charges and even caveats about impending litigation can often be registered. States also create systems where certain types of movable property are identified by a title certificate, and various transactions relating to that property (including security rights) may be directly noted on the title certificate. The common features of these two approaches to publicizing rights are that (i) the mechanism in question is created only in respect of certain, identified assets and (ii) all types of rights (and not just security rights) may be recorded and publicized. These mechanisms have proved their usefulness over time, such that even in States that have established general security rights registries, they are often maintained as alternative methods to registration and creditor possession for achieving third-party effectiveness.

(b) Registration in a specialized movable property registry

64. As noted, a general security rights registry in which parties may register a notice about a potential or existing security right can be an effective way of alerting third parties to the need to verify carefully the status of a grantor's rights in the movable property with which it proposes to deal. However, sometimes a specialized registry for particular assets can be just as operationally efficient while also serving important broader functions that cannot be replicated by a general security rights registry. For example, ship and aircraft registries are two widely recognized instances where a specialized registry functions to address international regulatory concerns about safety and national concerns of State security in addition to facilitating commercial transactions.

65. For these reasons, many States recognize that registration in a specialized registry already existing under other law may be an alternative method of achieving third-party effectiveness for security rights in assets covered by the regime (see A/CN.9/631, recommendation 39). Typically, the logistics of registration in a specialized title registry are not addressed in secured transactions laws, since this is a matter for the specialized law governing that regime. Frequently, the existing system requires, in the manner of many security rights registers that developed in the nineteenth and twentieth centuries, the registration of the security documentation, or the registration of a summary of that documentation that is certified by the registrar. The rationale for adopting a "notice-filing" approach in the case of a general security rights registry should equally apply to these specialized asset registries. States maintaining such registries might, therefore consider whether they should adopt a notice system as a complementary reform aimed at enhancing the efficiency of the registry.

66. Registration of a notice about a security right in principle can be made available even in registry systems that function first and foremost as title registries. In the case of a transfer of ownership, these registries typically require evidence of the underlying transfer documentation, since registration of an unauthorized transfer may prejudice a secured creditor or purchaser that relies on the ownership registry record. However, the same level of proof is unnecessary for security rights, since a registry search that discloses a security right when none in fact exists has no detrimental effect in itself. Potential purchasers and secured creditors can protect themselves by refusing to purchase or to lend except on terms that take account of

the registered security right with the result that the grantor will take action to have any of (i) an unauthorized registration, (ii) a continuing registration after the secured obligation has been paid, or (iii) a registration in respect of which no security agreement was ever executed, expunged from the record.

67. States that maintain specialized registries must determine whether registration in the specialized registry will be the exclusive method of achieving third-party effectiveness of security rights over the assets covered by it. Some States take this position. No rights in the asset may be claimed as against third parties if notice of those rights is not given in the specialized registry. Other States adopt a less absolute position and permit alternative methods for achieving third-party effectiveness of security rights in assets covered by the specialized registry. In these States, the rationale is that, with the exception of competing claimants whose rights are sought to be protected by the specialized title regime and that have prejudicially relied on the register, there is no reason why third-party effectiveness against all other claimants could not be achieved by other generally available methods. It follows that the secured creditor should also be permitted to make its security right effective against third parties by registration in the general security rights registry or by a transfer of possession of the encumbered assets.

68. It is important to be clear about the scope of the stated exception for actual detrimental reliance. The idea is that, even though the security right is effective against third parties, its priority when made effective by one of these other methods is subordinated to competing secured creditors and buyers that register their rights in the specialized registry. The subordination exists regardless of the respective time of the registration in the two registries. This approach enables a secured creditor that takes a security right in all of the grantor's movable assets, or in generic categories of them, to protect itself against the grantor's insolvency representative or judgement creditors by making a single registration in the general security rights registry. Registration in the specialized registry is necessary only if the secured creditor concludes that the risk of an unauthorized grant of security to a competing secured creditor or sale to a buyer that registers in the specialized registry is sufficiently high to warrant the burden of making an additional registration in the specialized registry. In view of the limited number of these specialized registries and the types of assets they envision, the creation of a superior priority right to those that use the specialized registry does not significantly compromise the efficiency and integrity of the general security rights registry. For these reasons, the Guide recommends that, where specialized registries are maintained, third-party effectiveness may nonetheless be achieved by alternative methods such as registration in the general registry or creditor possession, subject to protecting the superior priority position of registrants in the specialized registry (see A/CN.9/631, recommendations 39, 83-84).

(c) Notation on a title certificate

69. Although most States have registration systems for the ownership and the transfer of ownership of motor vehicles and similar assets, these registry systems are generally not treated as establishing ownership for the purposes of commercial transactions and for that reason are not searchable by the public. Rather their purpose is primarily regulatory, namely to enable the authorities to trace ownership

in the event of an accident, or breach of criminal or safety standards and to allocate compulsory insurance liabilities and obligations.

70. These regimes usually provide the owner with a certificate of registration and a sale of the vehicle is invariably accompanied by the relinquishment of the old certificate to the appropriate regulatory authority and the issuance of a new certificate in the name of the new owner. In some States, notably those that have not established a general security rights registry, the title registration certificate is deployed as a basis for publicizing security rights in the asset represented by the registration certificate. In these States, a notation of the security right on the face of the certificate is treated as sufficient for third-party effectiveness of the indicated security right.

71. In States where this kind of certificate notation system is already in place and appears to be working well in practice, there may be little reason to abolish the system when a modernized regime of security rights is put into place. Nonetheless, it will be necessary to address the interrelationship of the existing system to the other methods of third-party effectiveness permitted under a new regime. Typically, notation on a title certificate is a sufficient method for obtaining third-party effectiveness of a security right in a tangible asset subject to the system. Registration in the general security rights registry and the taking of possession by the creditor are two other methods. However, if either of these latter methods is used, the priority of the security right to which they relate will be subordinated to the rights of a competing buyer or secured creditor that has relied on the certificate notation system. As with the approach taken to registration in a specialized title registry, this approach is intended to protect the reliability of and integrity of the title certificate system while enhancing the flexibility and efficiency of the general secured transactions system. The Guide recommends this approach (see A/CN.9/631, recommendations 39, 83 and 84).

5. Automatic third-party effectiveness of a security right in proceeds

72. It is inherent in the nature of movable property that it may be sold and re-sold during the period when the secured credit remains unpaid but not in default. The sale or other disposition of secured assets will normally give rise to proceeds (for the definition of “proceeds”, see A/CN.9/631/Add.1, para. 19), whether in the form of cash, negotiable instruments, receivables, other property received in exchange, or some combination of all of the above. In many States, a security right in any proceeds (including proceeds of proceeds) derived from the originally encumbered assets is automatically created as soon as these proceeds arise provided they remain identifiable. This is the approach recommended in this Guide (see A/CN.9/631, recommendation 18). However, this is not the only question that needs to be addressed. It is also necessary to determine whether the secured creditor should have to register or take some other step to make the security right in the proceeds effective against third parties.

73. While notices registered in a general security rights registry are organized and indexed by reference to the identity of the grantor, the registered notice must set out a description of the encumbered assets (see A/CN.9/631, recommendations 58 and 64). Thus, it is necessary to first distinguish the situation where the security right in the originally encumbered assets was made effective against third parties by registration and the proceeds are of a kind that falls within the description in the

registered notice. For example, if the registered notice describes the encumbered assets as “all present and after-acquired tangible property” and the grantor sells a farm tractor and uses the proceeds to purchase a sailing yacht, the description in the registered notice includes the proceeds as originally encumbered assets in the form of after-acquired tangible property. As registration may be made in advance of the creation of a security right, in principle the original registration is sufficient to give third-party effectiveness to the security right subsequently created in the proceeds when they arise. Most States that provide for an automatic right in proceeds also provide for automatic third-party effectiveness in these cases, and this is the result that is recommended in this Guide (see A/CN.9/631, recommendation 40).

74. More difficult questions arise when the security right in the originally encumbered assets is made effective against third parties by means of a notice in which the description would not point to the assets received as proceeds or by a method that would be insufficient if the proceeds were originally encumbered assets. In the above-mentioned example, to consider the first case, if the registered notice described the originally encumbered assets as “all present and after acquired farm equipment”, this description would not cover the sailing yacht. As for the second case, if the originally encumbered asset is a right to payment of funds credited to a bank account made effective against third parties by control, and the grantor withdraws funds without authority to purchase a sailing yacht, the method of third-party effectiveness used for the originally encumbered assets would not be sufficient for the proceeds.

75. These examples raise competing policy considerations. To give automatic third-party effectiveness to the security right in the proceeds undermines the policy underlying the third-party effectiveness requirements, since third parties would not be alerted to the potential existence of the security right in the proceeds. After all, a prospective purchaser of a sailing yacht from the grantor will not necessarily appreciate that a registered notice referring to a security right in farm equipment also covers the sailing yacht as proceeds. On the other hand, to require the secured creditor to take immediate steps to make the security right in the proceeds effective against third parties may impose an excessive monitoring burden and priority risk. The proceeds will often have arisen as a result of the grantor’s unauthorized dealing with the originally encumbered assets. In such cases, the secured creditor will usually not become aware of the unauthorized disposition until well after the fact. If the disposition were, in fact, unauthorized, the secured creditor would generally be entitled to follow the originally encumbered asset into the hands of a transferee, and would therefore not suffer any prejudice. However, it may not always be possible after the fact to locate the asset or the transferee, and in some cases the amount of the proceeds received might actually be higher than the value of the assets at the time it becomes necessary to enforce the security right.

76. In seeking to achieve a reasonable balance between these competing policies, most States that provide for an automatic creditor right in identifiable proceeds typically treat a security right in proceeds that would not be covered by the initial description of the encumbered assets as automatically effective against third parties, either permanently or only for a temporary period. The extent and duration of third-party effectiveness in these States depends on the nature of the initially encumbered assets and the nature of the proceeds.

77. Permanent third-party effectiveness is given to a security right in proceeds that take the form of money, receivables, negotiable instruments and rights to payment of funds credited to a bank account (for the definitions of these terms, see A/CN.9/631/Add.1, para. 19). This approach is based on the idea that the absence of an independent act of third-party effectiveness for these types of proceeds does not pose any significant risk of prejudicial reliance for third parties. In the case of money and negotiable instruments, this is because subsequent transferees or secured creditors that take possession generally take free of a security right in any event (see A/CN.9/631, recommendations 99 and 104). As money and negotiable instruments are typically derived by the grantor from the collection of receivables (proceeds of proceeds), it would be illogical and counterproductive to not extend automatic third-party effectiveness to the original proceeds, the receivables. Money and negotiable instruments collected from receivables are typically then credited to the grantor's bank account (proceeds of proceeds of proceeds). A transferee of funds from the account generally takes free of any security right so the absence of publicity does not prejudice their rights (see A/CN.9/631, recommendation 103). As for secured creditors and assignees that take security in the right to payment of the funds in the account, the Guide recommends that priority be given to a secured creditor that achieves third-party effectiveness by control and to the depository bank's right of set off (see A/CN.9/631, recommendations 101-102). Consequently, with respect to these types of asset, competing claimants must be taken to know that they risk subordination in any event unless they protect themselves by assuming control of the account. Given these considerations, in order to ensure the coherence of the regime governing proceeds in the form of money, receivables, negotiable instruments and rights to payment of funds credited to a bank account, most States provide that permanent third-party effectiveness in these assets is automatic. It is also the result recommended in this Guide (see A/CN.9/631, recommendation 40).

78. For other types of proceeds, a different set of policies are in play. It may well be that the disposition giving rise to the proceeds is unauthorized and that the creditor does not quickly become aware of the disposition. Hence, it is reasonable to provide that the security right is automatically effective against third parties. However, by contrast with money and money-like proceeds, proceeds that take the form of tangible assets appear to third parties as property of the grantor. Where they do not fall within the initial description therefore, third parties can easily be misled. For this reason, and in order to avoid unduly undermining the rights of third parties, most States provide that the automatic third-party effectiveness will last only for a short period of time after the proceeds arise. To achieve permanent third-party effectiveness, the secured creditor must register a notice or otherwise take positive steps to make the security right effective against third parties before the expiry of that period. Obviously, the temporary period must be relatively short and yet not so short as to deprive a reasonably prudent secured creditor from the opportunity to take steps to preserve the third-party effectiveness of its security right. A period of twenty to thirty days seems to be the compromise that most States find acceptable. This Guide adopts the logic of a short temporary automatic third-party effectiveness period within which the secured creditor must amend the description of secured assets so as to cover proceeds of a type different from the assets initially encumbered (see A/CN.9/631, recommendation 41).

6. Third-party effectiveness of a security right in attachments

(a) General

79. An asset encumbered by a security right that has been made effective against third parties may be attached, or may become attached, to other property (whether movable or immovable). For example, tires subject to a security right may later be attached to a truck, or a heating boiler subject to security right may later be attached to a building. In some States, attachment terminates the security right. This approach is based on policy concerns about protecting the position of buyers and other third parties that subsequently acquire rights in the property to which the encumbered asset is attached. In other States, only attachment to immovable property will terminate an existing security right in movable property that becomes an attachment. The policy in these States is to prevent subsequent detachment, and consequential deterioration of the immovable property while also preserving the priority of the rights of any creditor that has taken security over the immovable property prior to the attachment.

80. States that have adopted a comprehensive registry system for movable property resolve these policy concerns more directly by seeking a balance between competing rights. Most regimes are organized so as to permit the security right to survive attachment at least as between the parties. However, in order to address the respective rights of the secured creditor and third parties, these regimes also provide a full set of third-party effectiveness and priority rules. This is the general approach adopted by this Guide. Thus, chapter IV (see A/CN.9/631/Add.1) confirms that a security right may be created in tangible property that is an existing attachment, or that becomes an attachment subsequently, to the extent of the value of the tangible at the time of its attachment (see A/CN.9/631, recommendation 22). This chapter addresses the issue of third-party effectiveness, while chapter VII (see A/CN.9/631/Add.4) deals with priority.

(b) Attachments to movable property

81. If the tangible property subject to the security right is attached to other tangible property (that is, another movable object), the general requirements for third-party effectiveness apply. Attachments are not singled out for special treatment. Thus, if the security right is made effective against third parties by registration prior to attachment, it remains effective after attachment without the need for any further step (see A/CN.9/631, recommendation 42). This is because, unlike the situation where the originally encumbered asset is replaced by proceeds, attachments retain their discrete identity after they are attached to other property. Consequently, it is reasonable to assume that a third party that searches the registry for security rights in the property to which the attachment is attached (for example, an automobile) will understand that a registered notice that describes the attachment (for example, automobile tires) may refer to the tires installed on the automobile in which the third party is interested.

82. Theoretically, a security right in an attachment would also remain effective against third parties if the security right had been made effective prior to attachment by a transfer of possession to the secured creditor or to a third party agent of the creditor rather than by registration in the general security rights registry. However, as a practical matter, third-party effectiveness will typically cease upon attachment,

since the secured creditor will normally have to relinquish possession to allow the attachment to take place. Consequently, third parties that deal with the asset after attachment will take free of the security right, unless the secured creditor preserves its status by registering in the general security rights registry before giving up possession or before their rights arise. By contrast, if the secured creditor is also in possession of the movable property to which the attachment is made, or if an agent or representative of the creditor has possession of that property, third party-effectiveness is preserved (however, this will not be the usual case).

(c) Attachments to immovable property

83. If the encumbered asset is attached to immovable property, the policy considerations are more complex. This is because any rights that charge the immovable property will normally be registered in the immovable property registry. As between the parties, this Guide recommends that a security right in an attachment to immovable property may be created according to the principles elaborated in this Guide, or according to the regime governing rights in the immovable property. Consistently with this idea, the security right so created may be made effective against third parties either by registration in the general security rights registry or by registration in the immovable property registry (see A/CN.9/631, recommendation 43). However, if a security right is created under the regime governing movable property and the requirements for creation are not sufficient for creation under the regime governing immovable property, the rules governing the immovable property registry would have to be modified to nonetheless permit registration of the security right in the attachment. Moreover, the choice of method has priority consequences. Registration in the immovable property registry is necessary to achieve maximum protection against third parties. A secured creditor or buyer that registers in the immovable property registry has priority over a secured creditor that relies on registration in the general security rights registry (see A/CN.9/631, recommendation 93).

84. This special priority rule is necessary to preserve the reliability and integrity of the immovable property registry. It is workable only if registration of a security right in an attachment in the immovable property registry can be done easily and efficiently. The existing immovable property registry systems may require the submission of full security documentation or impose other formalities for registering security rights. If this is the case, land registration laws may need to be revised to authorize registration of a notice of a security right. Otherwise, the cost and expense involved in fully protecting their priority status by registering in the immovable property registry may deter secured creditors from engaging in secured financing that involves attachments to immovable property.

(d) Attachments to movable property subject to a specialized registry

85. It is quite common, in those States that have specialized title registries that the types of property subject to registration in these registries involve property to which other tangible property is normally attached (e.g. ships, aircraft, road vehicles). Because of the desire to protect the integrity of the special registry, States usually adapt the approach to a security right in tangible property that is attached to immovable property to the case of attachments to tangible property subject to a specialized title registry or title certificate system. The security right may be made

effective against third parties either by registration in the general security rights registry or by the creditor taking possession (although as noted above this will be rare), or by registration in the specialized registry or notation on the title certificate (see A/CN.9/631, recommendation 43). As with attachments to immovable property, registration in the specialized registry, or notation on the title certificate, is necessary to achieve maximum third-party protection. A secured creditor or buyer that relies on the specialized registry system has priority over a secured creditor that achieves third-party effectiveness by some other method (see A/CN.9/631, recommendation 93). In order to facilitate access to that system, it may be necessary to amend the law governing that system to ensure that the secured creditor can register a simple notice of the security right in the attachment or note it independently on the title certificate as the case may be.

(e) Coordination of registries

86. When States adopt the position that third-party effectiveness of a security right can be achieved by more than one method, they are required to decide whether all such methods produce identical consequences, or whether one or the other method may produce superior consequences. As noted, to preserve the integrity of registries other than the general security rights registry (the immovable property registry or the specialized title registry) registration in these registries gives the secured creditor the maximum priority protection. For this reason, it is invariably in the interest of a creditor that has registered in the general security rights registry to also register a notice in the specialized registry. Rather than requiring the secured creditor to itself effect a separate registration in the immovable property registry or specialized movable property registry, some States have a registry system in which security rights in attachments that are registered in the general security rights registry are automatically forwarded for registration in the other registry. However, since registrations in the immovable property registry system and in specialized movable property registries are indexed according to the asset, not the grantor, a registrant in the general security rights registry would have to provide the registry with the applicable asset description and specify expressly that a notice covering “all tangibles” includes attachments described specifically.

7. Automatic third-party effectiveness of a security right in a mass or product

87. For the reasons set out in chapter IV (see A/CN.9/631/Add.1, paras. ...), this Guide recommends that a security right in tangible assets that are later processed or commingled automatically continues in the finished product or commingled mass (see A/CN.9/631, recommendation 23). This recommendation does not, however, speak to whether the security right in the finished product or mass is effective against third parties. Assuming the security right in the component asset was made effective against third parties prior to the processing or commingling, the policy question is whether the security right that continues in the product or mass should be treated as automatically effective against third parties.

88. In the most common case, the security right in the originally encumbered assets will have been made effective against third parties by registration in the general security rights registry (since this is the only practically available method for inventory in the form of raw materials). It follows that States have to decide whether this initial registration is sufficient to achieve third-party effectiveness of the

security right in the product or mass derived from the processing or commingling of the originally encumbered assets.

89. As noted earlier, while notices in a general security rights registry are organized by reference to the identity of the grantor, the registered notice must set out a description of the encumbered assets (see A/CN.9/631, recommendations 58 and 64). Just as in the case in relation to third-party effectiveness of security rights in proceeds of disposition of encumbered assets, a distinction must be drawn based on the manner in which the initially encumbered assets are described. Consider first the situation where the registered notice describes the encumbered assets in a manner that covers both the originally encumbered asset and the resulting product or mass. For example, a registered notice may describe the encumbered assets as “wheat of xyz type or quality” and the grantor’s wheat is later commingled with other wheat of this same type or quality. Similarly, a security right may be taken in resin that is later manufactured into chipboard while the secured creditor registers a notice that describes the encumbered assets as “raw materials and finished inventory”. In both cases, a third party searcher will be alerted to the possible existence of a security right in the commingled mass or the manufactured product so there can be no policy objection to treating the original registration as sufficient to give third-party effectiveness to the security right that continues in the product or mass. Most States that have adopted a general security rights regime take this automatic third-party effectiveness approach to these types of cases.

90. More difficult policy concerns arise where the registered notice describes the encumbered assets in terms that include only the component but neither the commingled mass nor the finished product. For example, the secured creditor may have registered a notice that describes the encumbered asset as “wheat of xyz type or quality” and the wheat is then irretrievably commingled with a much greater quantity of wheat of “abc type or quality”. A third party searching the registry may not be able to discern the extent of the creditor’s rights in the commingled mass. An even more complicated situation arises where the secured creditor registers a notice that describes the encumbered asset as “resin” and the resin is later processed into chipboard. Here, a reasonable third party that searches the registry to determine whether there is any security right in the grantor’s chipboard may not understand that a notice referring to a security right in resin also extends to chipboard manufactured from the resin.

91. This second situation especially raises competing policy considerations. To give automatic third-party effectiveness to the security right in the chipboard may compromise the policy underlying the third-party effectiveness requirements, since the registered notice does not necessarily alert third-party searchers to the existence of the security right. On the other hand, to require a secured creditor to also include a description of the resulting product or mass in its registered notice may discourage financing against the security of a grantor’s raw materials or lead to the registration of notices containing overly broad descriptions (as in the example given above where the notice refers to “inventory” even though the security right is limited to resin) to the detriment of the grantor’s access to secured credit from other sources.

92. In resolving these competing policies, States take different approaches. In some States, the security right is treated as automatically effective against third parties without the need for any further act. This approach is based on the theory that the risk of detrimental reliance by third parties is minimal in practice. Subsequent

secured creditors will be sufficiently knowledgeable about the grantor's manufacturing operations to understand that a registered notice that refers to a security right that describes only the component assets also covers any finished product processed from those assets; and subsequent buyers will generally be protected since the finished product or commingled mass will typically constitute inventory sold in the ordinary course of the grantor's business and a buyer in the ordinary course takes free of a security right in any event.

93. In other States, the security right is treated as automatically effective only as against other secured creditors. If the competition is with someone other than another secured creditor (for example, a non-ordinary-course buyer or a judgement creditor or insolvency representative), the security right is ineffective unless a notice that describes the encumbered asset in terms that include the product or mass is registered before these other rights arise. This approach is based on the theory that, unlike the grantor's secured creditors, these other categories of third-party claimants are more likely to be misled by a description in a registered notice that includes only the raw materials and not the finished product into which they are incorporated.

94. The Guide recommends the first of the two approaches just outlined. That is, it recommends that States adopt a rule to the effect that if the security right in the component asset is effective against third parties, the security right in the resulting product is automatically effective against third parties without the need for the secured creditor to take any further step (see A/CN.9/631, recommendation 45). This choice is based on two considerations. First, in practice it is highly unlikely that a finished product or commingled mass will be sold to a buyer outside the ordinary course of business, since these assets will almost invariably form part of the grantor's inventory. Second, unsecured creditors generally do not look to a grantor's inventory for the purposes of satisfying their judgements, since the grantor is more likely to be in a position to pay their claims if it is able to continue selling its inventory in the ordinary course of business.

8. Continued third-party effectiveness of a security right after a change in the location of the asset or the grantor

95. A change of location is inherent in movable property and persons. Sometimes property or persons move to a different location within the same State. Sometimes, they move to a location in a different State. Where third-party effectiveness is achieved by registration in a general security rights registry, the criteria for searching the registry relate to the name of the grantor. Hence a change of physical location within the same State will not compromise a searcher's capacity to determine if a security right has been created, and therefore should have no impact on the continued third-party effectiveness of the security right. This is not the case, however, where the asset or the grantor moves from one State to another.

96. As explained in chapter XIII (see A/CN.9/631/Add.10, paras. 26-27 and 35-40), the law applicable to the third-party effectiveness of security rights is determined by reference to the current location of either the encumbered assets or the grantor depending on the nature of the encumbered assets (see A/CN.9/631, recommendations 202 and 204). This approach is based on the theory that third parties that deal with the encumbered assets following the change of location cannot be expected to undertake an extensive historical investigation into whether the encumbered assets were previously subject to a different law. However, this

approach creates significant risks for secured creditors. Third-party effectiveness ceases as soon as the location of the assets changes unless the security right is made effective against third parties under the law of the new location. While the secured creditor can protect itself if it has advance knowledge of the change of location, in the typical situation this will not be the case.

97. In an effort to balance the competing rights of secured creditors and third parties in this situation, some States provide a period of temporary automatic third-party effectiveness following a relocation of the assets within their own borders or the relocation of the grantor to that State. Under this approach, a security right that was made effective against third parties under the law of the previous location is treated under the law of the State to which the grantor or the assets are relocated as automatically effective against third parties for a short period after the relocation. If the security right is made effective against third parties in accordance with the law in the new location of the grantor or the assets before the expiry of this period, it continues to be effective against third parties that acquire rights in the encumbered assets after the relocation, even if these rights were acquired before the pre-existing security right was made effective against third parties under the law of the new location. If third-party effectiveness in accordance with the law in the new location of the grantor or the assets is not achieved before the expiry of this period, the security right is ineffective against third parties that acquired rights during the short period.

98. The Guide adopts this approach (see A/CN.9/631, recommendation 46), offering a reasonable balance between accommodating the rights of secured creditors and third parties that deal with the grantor or the assets following relocation. On the one hand, the secured creditor is given a reasonable time period to take action to protect its rights. On the other hand, a defined time period enables a third party that acquires rights in the encumbered asset after the relocation to take effective protective measures such as withholding a loan or extension of credit or the purchase price pending the expiry of the short period of automatic third-party effectiveness, since the third party can rely on taking free from any foreign security right not otherwise made effective against third parties before the expiry of that period.

9. Continuity and lapse of third-party effectiveness

99. As already mentioned, most States that have adopted a general security rights registry system as a method of achieving third-party effectiveness also permit alternative methods for achieving third-party effectiveness (e.g. possession by the creditor, the execution of a control agreement respecting funds in a bank account, registration in a specialized registry, notation on a title certificate). Often, a secured creditor may achieve third-party effectiveness using more than one method at the same time. Moreover, sometimes, a creditor may change the method by which third-party effectiveness is achieved (e.g. a secured creditor that has taken possession may later file a notice of the security in the general security rights registry). Most of these States provide that continuity of third-party effectiveness is preserved, notwithstanding a change in the method of third-party effectiveness, as long as there is no time when the security right is not effective against third parties under one or more method. This is the approach recommended in this Guide (see A/CN.9/631, recommendation 47).

100. Conversely, there can be situations where third-party effectiveness lapses. Consider the case where the requirements for third-party effectiveness under one method no longer apply and the secured creditor does not achieve third-party effectiveness through another permissible method before the time of lapse (e.g. registration may expire or be cancelled or the secured creditor may relinquish possession of the encumbered asset or the circumstances that resulted in automatic third-party effectiveness may no longer prevail, and the secured creditor has not taken steps to achieve third-party effectiveness using another method). In this situation, third-party effectiveness lapses, and would have to be re-established after the lapse. States take different approaches to the effect of a lapse and re-establishment.

101. Some States consider that the lapse is fatal to the continuity of the third-party effectiveness and any re-establishment can only produce effects from that moment onward. The policy here is to avoid requiring competing claimants having to go behind the registry record in order to determine if a security right ever existed. Other States provide for a grace period within which a lapsed registration may be re-established. In these States, if third-party effectiveness is re-established within a short delay, it will be deemed to have been continuous, and the initial priority of the secured creditor will be maintained, except as against competing claimants that acquired rights in the encumbered assets during the period of the lapse. The policy here is to permit a secured creditor that may have inadvertently let third-party effectiveness lapse to correct its mistake, as long as no third party suffers prejudice as a consequence.

102. In deciding which of these approaches to adopt it is helpful to analyse the general consequences likely to flow from a failure to preserve continuity of third-party effectiveness. Two situations are particularly telling. The first is where a third party (such as a buyer or insolvency representative or judgement creditor) acquires rights in the encumbered assets after a lapse and before third-party effectiveness is re-established. Since the security right was not effective against third parties at the relevant time, these intervening third parties will acquire the encumbered assets free of the security right. Either of the two approaches will produce this result.

103. The second instance of concern arises where the right of a secured creditor, prior to the lapse, had priority over the right of a competing secured creditor. Priority among competing secured creditors, as a general rule, is based on the order of registration or third-party effectiveness (see A/CN.9/631, recommendation 78). On one approach, if third-party effectiveness lapses, priority dates only from the time when it is re-established. The lapsed security right will be subordinated to a competing security right that is registered or made effective against third parties before or during the period of lapse. On the other approach, priority would be re-established as of the initial time as against all secured creditors that registered or made their rights effective as against third parties before the period of lapse, but not as against secured creditors that registered or made their security right effective as against third parties during the period of the lapse.

104. The discussion in the preceding paragraph refers to registration as distinct from third-party effectiveness. The reason for this is that registration, unlike the other modes of third-party effectiveness, may precede creation of the security right. While a registered security right cannot become effective against third parties until the requirements for creation are also satisfied, it ranks against competing security

rights from the time of registration, not the subsequent time of creation. As a result, the policy considerations addressed apply equally to situations where a notice is registered prior to the creation of a security right, and lapses before the security right is created, third party effectiveness may be re-established.

105. As noted, there are good policy reasons for both approaches. Nonetheless, because the efficient and effective functioning of a general security rights registry depends on the confidence that registrants and searchers have in its integrity, this Guide recommends that the first of the alternatives be adopted. If a registration lapses, or if third-party effectiveness lapses because one method for achieving it is no longer valid before another method is substituted, third-party effectiveness may be re-established, but it takes effect only from that time forward (see A/CN.9/631, recommendation 48).

B. Asset-specific remarks

1. Third-party effectiveness of a security right in a personal or property right securing payment of a receivable, negotiable instrument or any other intangible asset

106. Very often, receivables, negotiable instruments and other intangible assets are secured by a personal or property right (e.g. a personal guarantee or a security right). For example, a grantor in the business of selling goods on credit may have a security right in the goods to secure the buyers' payment obligations. Where the grantor is itself a lender, its customers' payment obligations may be backed up by a personal guarantee from a third party.

107. In most States, accessory personal or property security rights follow automatically the obligation payment of which they secure. That is, should the creditor of a receivable or holder of a negotiable instrument backed by one or more security rights transfer the receivable or negotiable instrument to a third party, the third-party transferee will also benefit from these security rights.

108. The idea that the accessory security rights follow the principal obligation (receivable, negotiable instrument) also generally applies to security rights that may be taken in the receivable or negotiable instrument. So, for example, because the accessory rights automatically follow the principal obligation, if the security right in the receivable or negotiable instrument has been made effective against third parties it should automatically extend to any accessory rights without the grantor or the secured creditor being required to undertake any further act. This result flows from general principles of the law of obligations in most States and is the approach recommended in this Guide (see A/CN.9/631, recommendation 49).

109. Additional policy considerations are present, however, if the personal or property right securing the principal obligation is an independent undertaking, and legal systems take different approaches in this case.

110. In some systems, these rights follow the payment obligation that they secure only if they are transferable and the transfer is made in a separate juridical act. This approach is based on the assumption that accessory rights are expected by parties to be transferred automatically with the obligations they secure but that the very fact of the independence of an independent undertaking means that parties would normally

have the contrary expectation. In other States, even independent security and other rights follow the obligation payment of which they secure automatically without a new act. This approach is based on the assumption that the secured creditor will normally request the grantor to transfer all rights securing the grantor's receivable and that simplifying the achievement of that result will save time and cost and thus have a beneficial impact on the availability and the cost of credit.

111. This second approach is also based on the assumption that rights of third-party obligors of independent rights (such as an independent undertaking) may be protected through separate rules. For example, in the case of a security right in the proceeds of a right to payment under an independent undertaking, third-party effectiveness automatically extends to the proceeds under the independent undertaking (i.e. the right to receive payment; see A/CN.9/631/Add.1, para. 19), but does not extend to the right to draw, which is an independent right (recommendation 26, subparagraph (b)). Because of this protection of the obligor under an independent undertaking, there is no reason not to automatically extend the third-party effectiveness of the secured creditor's rights to whatever rights it may claim in respect of the independent undertaking. This second approach is that adopted in this Guide (see A/CN.9/631, recommendation 49).

112. The case of an independent mortgage or hypothecation of an immovable raises other policy issues. In many States, a secured creditor that has made its security in a receivable effective against third parties will automatically be able to benefit from whatever normal mortgage or hypothecation on immovable property that secures the payment of the receivable. In some States, the law of immovable property requires that a notice of the security right be given to the grantor of the mortgage on the land. This Guide recommends automatic extension of the third-party effectiveness (see A/CN.9/631, recommendation 49), although it acknowledges that overriding policies in respect of land law may lead States to follow the second approach.

113. In some States, it is possible to transfer security rights in immovable property separately from the principal obligation that these rights secure. States that permit the creation of these types of independent mortgage do so primarily to facilitate the securitization and transfer of mortgages. Because the specialized financing practices associated with independent mortgages are typically carefully specified in the land law of a State, this Guide recommends that the automatic extension of third-party effectiveness to rights securing the payment of the receivable or negotiable instrument not apply where the right in question is an independent mortgage (see A/CN.9/631, recommendation 49).

2. Third-party effectiveness of a security right in a right to payment of funds credited to a bank account

114. Funds credited to a bank account are an increasingly important asset that grantors may offer as security for a loan or credit. The asset over which security is taken is not, in fact, the bank account itself, but rather the grantor's right to payment of funds credited to the bank account (for the definition of this term, see A/CN.9/631/Add.1, para. 19). States take different approaches to the requirements for third-party effectiveness of a security right in this type of asset. Among States that have not established a comprehensive security rights registry, most simply apply the general rules for achieving third-party effectiveness of security rights in receivables. This usually means registering a notice in a special registry devoted to

the assignment of or creation of a security right in receivables, although it may also sometimes involve the secured creditor giving written notice of the security right to the holder of the account. A similar approach, that is, considering the bank to be the debtor of a receivable, is also taken by many States that have established a comprehensive security rights registry. Because the funds in the bank account are not an identifiable species, the secured creditor can neither take possession itself, nor constitute the bank as its agent. Consequently, registration in the general security rights registry is the exclusive method for achieving third-party effectiveness.

115. Other States with general security rights registries have recently devised a specialized set of third-party effectiveness rules based on the assumption of “control” with respect to the account (for the definition of “control”, see A/CN.9/631/Add.1, para. 19). If the secured creditor is the depositary bank, control (and third-party effectiveness) is automatic. Other secured creditors can obtain control in either of two ways. One is for the secured creditor to replace the grantor as the bank’s customer on the account. While this creates the functional equivalent of the classic possessory pledge, it is impractical for the grantor’s checking and other current accounts to which it needs free access in the ordinary course of business. Consequently, the other variant, a “control agreement”, is the method mostly used in practice. Control is achieved through an agreement among the grantor, the secured creditor and the bank. As with automatic control by the depositary bank, a control agreement does not necessarily result in a blocking of the funds. Control (and therefore third-party effectiveness), is achieved even when the grantor remains free to draw on the account until notified otherwise.

116. Under both general approaches (e.g. treating the right to payment of the account as a receivable in respect of which third-party effectiveness of a security right can be achieved only through registration in the general security rights registry, or permitting third-party effectiveness to be achieved by means of a control agreement without the need for registration), a transferee of funds from a bank account under a transfer initiated by the grantor in the ordinary course of business takes free of the security right (see A/CN.9/631, recommendation 103). Otherwise, the two approaches have quite different priority consequences. Under the first approach, priority as a general rule turns on the order of registration of the security rights. The depositary bank does not enjoy any special priority status in its capacity as a secured creditor (although it typically has a right under other law to set off any claims it has against the grantor against a demand for payment by a prior ranking secured creditor and this normally means that it has a *de facto* priority). Under the second approach, a depositary bank with automatic control has priority over other secured creditors, except one that achieves control by replacing the grantor as the bank’s customer on the account (see A/CN.9/631, recommendation 101).

117. The first approach ensures transparency through public registration and permits the grantor to create a security right without the consent of the depositary bank. The second approach is more in line with banking practice. Automatic control in favour of the depositary bank is analogous to the law of set-off, which permits a depositary bank to apply funds credited to its customer’s account and therefore owing to the grantor against any amounts the customer owes the bank as a result of an extension of credit to the customer. However, the bank’s right of set-off for future loans is usually defeated once it receives notice of the creation of a security right

(or assignment) in favour of a third party. This may create difficulties for depositary banks and their commercial customers that often must be in position to act very quickly in bank account-related financing transactions. The need to ensure that no notice of a third-party assignment or security right has been received before acting on the customer's instructions may interfere with the efficiency of these transactions. Uncertainties about the precise timing of the receipt of notice and the bank's extension of credit may also invite litigation between a third-party secured creditor or assignee and the bank. The concept of automatic control, combined with the priority awarded to the depositary bank, eliminates this source of risk and uncertainty.

118. The approach that permits third-party effectiveness to be achieved through "control" with respect to the account does not have any adverse effects on the grantor. In the first place, the grantor must consent to the creation of a security right in favour of the depositary bank. Presumably the grantor will withhold this consent if the bank is not a source of financing. In addition, the priority rules associated with control can be altered by a subordination agreement in those situations where it would be more appropriate to ensure that first priority is given to another secured creditor. In a competitive banking environment, banks will not unreasonably withhold their consent to subordination (or to the conclusion of a control agreement), since the grantor is always free to change its account to another institution.

119. As for the lack of transparency inherent in the concept of control, it does not put third parties in a more disadvantageous position than they already occupy. As noted above, a depositary bank generally has the right under other law to set-off any obligations owing to it by the grantor in preference to rights of the grantor's creditors, both secured and unsecured. Since set-off is not a security right, it is not subject to any public registration requirement. Nor is the bank obligated to disclose its rights of set-off to third parties. Thus, creditors in States that adopt the first approach cannot rely on a clean search of the registry since the bank may always assert a preference under its private right of set-off. Nor are transferees of funds paid out of the account on the instructions of the grantor prejudiced since, as noted above, they generally take free of the security under both approaches.

120. States that have adopted the concept of "control" as a method for achieving third-party effectiveness do not make it an exclusive method. In other words, in these States third-party effectiveness may be achieved either by registration or by control. As noted, however, there are strong incentives for a secured creditor to achieve third-party effectiveness by control. A secured creditor with control has priority over any secured creditor that merely registers, regardless of the respective order of occurrence of control and registration (see A/CN.9/631, recommendation 101). Registration does, however, ensure that the security right will be effective against the grantor's judgement creditors and insolvency administrator since the priority given to the secured creditor with control may be claimed only against other secured creditors, and not as against all competing claimants (see A/CN.9/631, recommendation 101). Because the second approach is more in conformity with banking practices and the usual expectations of banks and their commercial customers, this Guide recommends that in addition to registration in the general security rights register, "control" be accepted as a privileged method for achieving

third-party effectiveness over the right to payment of funds credited to a bank account (see A/CN.9/631, recommendation 50).

3. Third-party effectiveness of a security right in proceeds under an independent undertaking

121.As explained in chapter IV (see A/CN.9/631/Add.1, paras. ...), in many States, a security right may be created in proceeds under an independent undertaking (for the definition of the term, see A/CN.9/631/Add.1, para. 19), but not in the right to draw under an independent undertaking (see A/CN.9/631, recommendation 28). On the other hand, some States do not permit a security right to be taken even in the proceeds of an independent undertaking. However, even among States that take the position recommended in this Guide, the particular character of the specific asset leads States to adopt different policies as to methods for achieving third-party effectiveness.

122.In some States, such a security right may be made effective against third parties in more than one way. For example, while it is impossible for the secured creditor to take possession since the asset (the proceeds under an independent undertaking) cannot exist in corporeal form unless and until paid, the secured creditor may register a notice in the general security rights registry. Alternatively, in States that recognize the idea of “control” (for the definition of “control” with respect to a security right in proceeds under an independent undertaking, see A/CN.9/631/Add.1, para. 19) the secured creditor may automatically have control or enter into a control agreement depending on the circumstances.

123.In other States, “control” is the exclusive method recognized for achieving third-party effectiveness of a security right in a right to proceeds under an independent undertaking. Control and, therefore third-party effectiveness, exists automatically if the secured creditor is the issuer or other nominated person (for the definitions of these terms, see A/CN.9/631/Add.1, para. 19). If the secured creditor is a third party, control requires the issuer or other nominated person to acknowledge the secured creditor’s entitlement to receive the proceeds upon a proper draw by the beneficiary. Under this approach a secured creditor can obtain control and, therefore, third-party effectiveness only if the issuer consents to pay any properly drawn proceeds to the secured creditor. The consent of the issuer is necessary because the issuer needs to be assured that the presentation has been duly made and that the beneficiary has agreed to the secured creditor’s right to receive the proceeds. Otherwise, it might find itself liable to the beneficiary for breaching the terms and conditions of the undertaking by paying the proceeds to a secured creditor that does not have the right to receive the payment.

124.As noted, the very nature the right to proceeds under an independent undertaking makes it impractical to achieve third-party effectiveness by taking possession of the proceeds. However, a secured creditor might take possession of the instrument itself. While possession of the independent undertaking does not achieve third-party effectiveness, possession would give a practical level of protection to a secured creditor when the terms of the independent undertaking require the physical presentation of the independent undertaking to the issuer in order to make a draw. As the beneficiary could not make an effective draw without the secured creditor’s cooperation, a secured creditor in possession could protect

itself by requiring the beneficiary to obtain an acknowledgement that would achieve control before surrendering possession of the instrument.

125. The particular practices of the letter of credit and independent guarantee industry have an important bearing on the manner in which a security right may be created in rights arising from an independent undertaking and the very rights upon which security might be taken (see A/CN.9/631, recommendation 28). These same particular practices require special attention to the methods by which third-party effectiveness, and especially effectiveness as against the issuer and nominated person, may be achieved. In order to protect the issuer against potential liability for payment to a secured creditor when presentation may not have been duly made, or when conditions in the security agreement may disentitle the secured creditor from claiming payment once a draw has been properly made, this Guide recommends that control be the exclusive method by which a secured creditor may achieve third-party effectiveness (see A/CN.9/631, recommendation 51).

4. Third-party effectiveness of a security right in a negotiable document or the goods covered by a negotiable document

126. The central characteristic of a negotiable document (e.g. a bill of lading) is that it represents the goods that are covered by it (for the definition of “negotiable document”, see A/CN.9/631/Add.1, para. 19). Because the document is negotiable it has the quality of tangibility that permits its holder to claim possession of the rights it represents. Delivery of a properly endorsed negotiable document is also generally treated as effective to transfer rights to the goods represented by the document. For this reason, in most States, a security right in a negotiable document will normally also extend to the goods covered by the negotiable document. If the security right in the negotiable document is effective, the security right in the goods covered by the document is also effective (see A/CN.9/631, recommendation 53).

127. The tangible character of the negotiable document means that, where States have a general security rights registry, a security right in the document may be made effective against third parties either (i) by registration in the general security rights registry or (ii) by transfer of possession of the document to the secured creditor as long as the goods are covered by the document (see A/CN.9/631, recommendation 52).

128. While registration and possession are alternative means of achieving third-party effectiveness, they do not produce identical consequences. In most States, a secured creditor that takes possession of the document during the period that the goods are covered by it has priority over competing claimants such as buyers or other transferees, and secured creditors, including secured creditors that may have achieved third-party effectiveness through an earlier in time registration in the general security rights registry. This approach reflects and supports the need to preserve the negotiable character of the document in commercial practice and for this reason it is the approach recommended in this Guide (see A/CN.9/631, recommendation 107).

129. In practice, a secured creditor may have to relinquish possession of the document to enable the grantor to deal with the goods in the course of its business. Normally, this would result in the lapse of third-party effectiveness, unless the secured creditor had also achieved third-party effectiveness through registration. In many States, however, the creditor that has not registered a notice of its security

right may nonetheless benefit from a temporary period of automatic third-party effectiveness (e.g. fifteen or twenty days) following relinquishment of possession of the document to enable the grantor to sell, exchange, load or unload or otherwise deal with the goods covered by the negotiable document. This automatic third-party effectiveness is not conditional on the secured creditor once again achieving third-party effectiveness before the expiry of the period. This means that the security right is effective against third-party rights that arise during the temporary period even if the security right is not otherwise made effective against third parties before the expiry of the short period. This approach reflects the typically short-term nature of financing transactions based on goods represented by a negotiable document which usually involve financing under an international sale of goods between a manufacturer or primary producer in one State and a wholesale buyer in another State. In the usual course of events, the secured creditor in this type of transaction will have been paid before the expiry of the period and will never retake possession of the negotiable document (see A/CN.9/631, recommendation 54).

130. It is, however, important to note that in order for this automatic third-party effectiveness to exist, the security agreement must have been concluded (that is, the security right must be effective as between the parties). Consider the case where a security right has been created by oral agreement and a transfer of possession to the secured creditor. The transfer of possession is not simply a method for achieving third-party effectiveness. It is an essential element for the creation of a security right by oral agreement. However, where a security right is not created by a transfer of possession writing is necessary. Hence, should the secured creditor later relinquish possession temporarily, automatic third-party effectiveness will not result unless there is a writing sufficient to ensure that the security right continue to exist as between the parties.

[Note to the Commission: The Commission may wish to consider revising recommendation 14 to clarify that, if the secured creditor relinquishes possession of an encumbered asset in which a security right was created by oral agreement and transfer of possession, a written agreement is necessary for the security right to continue to exist.]

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

(d) Prerequisites to registration	16-19
(e) Centralized and consolidated registry record	20-22
(f) Public access	23-24
(g) Prerequisites to searching	25-26
(h) Searching by reference to the grantor or to the secured creditor	27-29
(i) Grantor as compared to asset indexing	30-34
(j) Registration and searching fees	35
(k) Modes of access to the registry	36-38
(l) Service hours	39
(m) Optimal use of electronic technology	40
3. Security and integrity of the registry record	41-48
(a) State responsibility for the system	41-42
(b) Record of the identity of the registrant	43
(c) Grantor's entitlement to a copy of the registered notice	44-45
(d) Secured creditor's entitlement to a copy of changes to registration	46
(e) Prompt confirmation of registration	47
(f) Data integrity and preservation	48
4. Responsibility for loss or damage	49-55
5. Required content of the notice	56-58

6. Grantor's identifier	59-69
(a) Effect of error in the grantor's identifier on the effectiveness of registration	59-60
(b) Correct identifier for natural persons	61-64
(c) Correct identifier for legal persons	65
(d) Distinction between natural and legal persons	66
(e) Impact of a change of the grantor's identifier on the effectiveness of registration	67-68
(f) Impact of a transfer of an encumbered asset on the effectiveness of registration	69
7. Secured creditor's identifier	70
8. Description of assets covered by the notice	71-72
9. Advance registration and one registration for multiple security rights	73-75
10. Duration and extension of the registration of a notice	76-77
11. Time of effectiveness of registration of a notice or amendment	78-81
12. Authority for registration	82
13. Cancellation or amendment of a registered notice	83-92
(a) Compulsory cancellation or amendment	83-84
(b) Expunging and archiving of cancelled notices	85
(c) Amendments	86-92
B. Recommendations	

VI. The registry system

A. General remarks

1. Introduction

1. Certainty of rights in property is a central concern in most legal systems. Historically, actual possession was the basic way for establishing entitlements to movable or immovable property. Over time, as various subsidiary rights in land were developed, States developed other mechanisms for establishing and recording these rights. Some States relied on private record-keeping, for example, through the office of a notary, while other States developed public land-registry systems. These public registries typically recorded and indexed rights according to the geographic description of the immovable property in question.

2. The same concern preoccupied States when regulating rights in movable property. Again, physical possession of assets was deployed as an indicator of ownership, but, as the number of transactions involving a dissociation of ownership and possession of movable property increased (for example, leases, loans and sales with a reservation of title), States were obliged to develop other means for recording entitlement to movable property. Once again, some States relied on notaries to maintain such records. Other States developed public registry offices for rights in movable property.

3. The creation of security rights over movable property posed particular challenges. Because of the difficulty of recording and keeping track of these various security rights, given the mobility of movable property and its transformation over time, many States enacted prohibitions on the creation of non-possessory security rights. This meant that creditors that wished to acquire a security right in movable property belonging to a grantor were obliged to take physical possession of the property. In this way, possession could continue to play its traditional role. However, as the need for credit for businesses in particular expanded, and businesses came to generate and make use of intangible assets, States were obliged to develop other mechanisms for recording security rights. Many States ultimately came to rely on the concept of registration as the primary mechanism for recording security rights in movable property.

4. Hence the centrality of registry systems for modern regimes of secured transactions and the importance of their design for the function of an efficient system of security rights in movable property. Recognizing the importance of a registry system for ensuring predictability and transparency with respect to rights serving security purposes, this Guide offers several recommendations about the optimal design and operation of a registry system meant to achieve these goals. Indeed, the establishment and implementation of a general security rights registry is one of the key objectives of an effective and efficient secured transactions law (see A/CN.9/631, recommendation 1, subpara. (f)).

5. The design and operational features of a registry system will be largely driven by the purposes that States pursue in establishing the registry. Among States, there is no uniformity of purposes meant to be accomplished through a registry system. States may, for example, seek to record actual title to movable property; or they may use the registry to record and make public the details of all transactions relating to movable property. Some States establish registries of more limited scope and for more limited purposes.

6. The general security rights registry recommended in this Guide is a limited purpose registry that focuses on the recording of security rights in movable property. As such, the registration system has three main purposes. The first is to achieve third-party effectiveness of a security right. As noted in chapter V on the effectiveness of a security right against third parties (see A/CN.9/631/Add.2), registration of a notice in a general security rights registry is the most common method for achieving third-party effectiveness of a security right. Second, registration contributes to efficient and fair priority ordering by establishing an objectively verifiable temporal reference for applying priority rules based on the time of registration. Third, registration provides third parties with an objective source of information about whether assets in the grantor's possession or control may be subject to a security right.

7. Given the other purposes that are often pursued through registration systems, it is important to note two fundamental features of the type of general security rights registry recommended in this Guide. To begin with, registration does not by itself result in third-party effectiveness. Third-party effectiveness is acquired only when there is a coincidence of registration and satisfaction of the requirements for creation set out in chapter IV (see A/CN.9/631, recommendations 12-14). This is significant, since registration of a notice may take place before a security agreement is concluded or a security right comes into existence (see A/CN.9/631, recommendation 65). In addition, registration does not give constructive notice of the existence of a security right. The doctrine of constructive notice is relevant only in a priority regime that allows a third party that does not have notice of a security right to take free of that security right. However, under the Guide, knowledge on the part of a competing claimant is irrelevant for determining priority (see A/CN.9/631, recommendation 75). Priority is based simply on the act of registration (or other third-party effectiveness act) regardless of whether the competing claimant knows or should know that the registration (or another act) has occurred. Conversely, a security right that has not been registered (or otherwise made effective against third parties) is ineffective against competing claimants regardless of their actual or presumed knowledge of the creation of the security right.

8. There are, as noted, many different models for implementing a registry system. The specific features of these different models are reviewed in the various sections of this chapter. Accordingly, in section A.2, this chapter addresses a number of considerations about the structure and operation of a general security rights registry. In sections A.3 and A.4, issues relating to the security, integrity and reliability of records in the registry are reviewed. Sections A.5 through A.8 discuss the required content of notices that may be filed in the registry. A number of details touching on the duration, time of effectiveness, amendment and cancellation of registration are considered in sections A.9 through A.13. The question of where registration should be made in transactions having a cross-border element is dealt with in chapter XIII on private international law (see A/CN.9/631/Add.10). Section B of this chapter contains a series of specific recommendations about the design and operation of the registry system meant to ensure that registration and searching processes are simple, efficient and accessible.

2. Operational framework

(a) General

9. The establishment of a registry system for security rights in movable property such as the one recommended in this Guide may constitute a significant change for many legal systems. Some States do not now have registries for security rights in movable property. Some States have movable property registries that record title, such as ship, aircraft or motor vehicle registries. Other States have multiple movable property registries depending on the type of asset, the type of grantor or the type of creditor. Some States may have a single registry, but require that the specific documents creating the security right be registered. Hence the importance of reviewing the various operational issues that must be considered in establishing an efficient registry for security rights in movable property.

(b) Public education and training

10. The critical importance of implementing an efficient and effective registry system for security rights in movable property suggests an important preliminary consideration. States must take steps to ensure that the business and legal communities are educated about the existence and substantive role of registration well in advance of the entry into force of the law. It is equally essential to ensure that clear advice on the practical logistics of the registration and searching processes is provided to potential registry clients. Guidelines and practice tutorials should be prepared and widely disseminated (ideally, in both printed and electronic form) well in advance of the activation of the registry system and in-person information and training sessions should be conducted periodically. Although the relevant governmental authority will usually take the lead in ensuring that adequate public education and guidance takes place, the expertise of the legal and business communities can be enlisted in aid. These initiatives need not be overly burdensome in view of the availability of implementation models and published materials in States that already have enacted similar reforms.

(c) Types of registry system

11. Over the years, States have developed different types of registry system. One of the most common can be described as a title registration system. This type of registry system contemplates the registering of title, and encumbrances on title, to immovable property or to specific movable property, such as ships. A title registry functions as a source of positive information about the current state of title to specific assets. In order to protect the integrity of the title record, the registrant is generally required to register the actual title transfer or security documents or a certified summary of those documents after having tendered them for scrutiny by the registrar.

12. A number of States have established what may be called a document registration system that, while not recording title to movable property, serves to evidence the existence of particular security devices. Sometimes, States have multiple registries of this type, depending on the asset, the grantor, the creditor or the type of security device deployed. Sometimes, States have consolidated security rights registers. Whether the registries are multiple or single, in these systems as well, the actual security documentation is submitted to and checked by a registrar who then issues a registration certificate that constitutes at least presumptive (if not conclusive) evidence of the existence of the security right.

13. In contrast to these systems, some States have adopted the concept of notice registration. In a notice registration system, the registry is not a source of specific information about the security agreement between the parties. Rather, the registry serves as a basis for achieving third-party effectiveness and priority. For this reason, there is no requirement to register the underlying security documentation or even to tender it for scrutiny by the registrar (and thus registration of a notice is not a requirement for the creation of a security right; see A/CN.9/631/Add.1, paras. 144 and 145). Registration is simply effectuated by registering a notice that provides only the identities of the parties, a sufficient description of the encumbered assets and, depending on the policy of each State, the maximum sum for which the security is granted.

14. Such a notice registration system greatly simplifies the registration process and minimizes the administrative and archival burden on the registry system.

For example, because it is not necessary to register specific documents, it is much easier to establish an electronic registry system, which is more time- and cost-efficient than a paper system. In addition, for the same reason, a notice registration system enhances flexibility with respect to the scope of the assets that may be encumbered (including after-acquired assets) and the obligations that may be secured (including future and fluctuating obligations). Moreover, registration is not meant to provide positive assurances about the existence of security rights. The objective is to alert third parties about the possible existence of such rights and to provide them with the information necessary to determine whether, in fact, such security rights exist. So, for example, prospective buyers and secured creditors can protect themselves by refusing to go ahead with the transaction unless the registration is cancelled or unless the secured creditor identified in the registered notice undertakes to subordinate its right to that of the prospective buyer or secured creditor. From the grantor's perspective, protection from unauthorized registrations can be achieved by requiring the grantor to be informed of any registration and by establishing a summary administrative procedure to facilitate the removal of unauthorized registrations (see A/CN.9/631, recommendations 56, subpara. (c), and 70). In any case, the benefit of any safeguards should be weighed against their cost.

15. Registries based on a notice-registration concept exist in many jurisdictions. Such registries have also attracted considerable international support (see the European Bank for Reconstruction and Development Model Law on Secured Transactions, the Organization of American States Model Inter-American Law on Secured Transactions, the *Guide to Movable Registries* of the Asian Development Bank, the Convention on International Interests in Mobile Equipment and its related protocols and the annex to the United Nations Convention on the Assignment of Receivables in International Trade).¹ Given the efficiency, accessibility and transparency of notice registration systems and the relative low cost of their operation, this Guide recommends that States adopt this model of a general security rights registry (see A/CN.9/631, recommendation 55).

(d) Prerequisites to registration

16. The formalities for and the prerequisites to registration vary from State to State. Most often these requirements depend on the type of registry system that is in place. For example, in some States the registered notice provides conclusive or presumptive evidence of a security right. Where this is the case, the registrar or some other public official has to scrutinize the contents of the document creating the security right, compare it with the notice and confirm the accuracy and effect of the notice. This adds to the cost and the time required for an effective registration. In addition, it is likely to increase the risk of error and liability of the registry.

17. In other States, as registration does not provide conclusive or even presumptive evidence of a security right, there is no need for official verification or scrutiny of the content of the notice or of its conformity with the document creating the security right. Adding a requirement for official verification or scrutiny in such cases would be inimical to the kind of efficient, speedy and inexpensive registration process needed to encourage access to secured credit. The basic idea is to permit registration without further formalities (e.g. affidavits and notarization of documents) as long as the required registration fees are paid and the required

¹ United Nations publication, Sales No. E.04.V.14.

information fields are completed regardless of their content (see A/CN.9/631, recommendation 55, subpara. (c)).

18. In addition, in States that adopt a notice registration system, there are typically no restrictions on who is permitted to make a registration. As registration serves to protect certain rights of the secured creditor, the registrant will normally be the secured creditor (the registrar may require the identity of the registrant but may not require verification; see A/CN.9/631, recommendations 55, subpara. (d), and 56, subpara. (b)). By contrast with States that require documents or a verified summary of documents to be registered in notice registration systems, consent by the grantor need not be established at the time of registration or be part of the information registered, since registration by itself does not create a security right. In order for the registration to be effective, the grantor has to consent to it but, once again, in notice registration systems the mere existence of the security agreement constitutes sufficient evidence of the grantor's consent to immediate registration unless, for example, the agreement specifically requires that the grantor give its consent in a separate document or at a later time (see A/CN.9/631, recommendation 55, subpara. (d)).

19. Because the prerequisites to registration in these systems are minimal, there is a risk of registrations relating to a non-existing or no longer existing security right. Should this occur, a summary administrative procedure is typically made available to the grantor to compel cancellation of an unauthorized or expired registration. Some States are concerned by potential fraud and abuse in these types of notice registration systems where registrations may be made with a minimum of formalities. In order to palliate this concern, States impose administrative penalties for unauthorized registrations or cancellations. However, the introduction of any safeguards depends on the judgement States make, following a cost-benefit analysis, about the additional complexity and expense that proscriptions of this nature are likely to impose (see A/CN.9/631, recommendations 70-73).

(e) Centralized and consolidated registry record

20. In many States, registry systems are both decentralized and multiple. For example, it is often the case that land registry offices are organized on a region-by-region, department-by-department or county-by-county basis. Some motor vehicle licensing registries are also decentralized in this way. In addition, in many States, there are multiple registries for security rights in movable property, depending on the type of asset (e.g. equipment, receivables or inventory), the grantor (e.g. a natural person, a corporation or an unincorporated business) or the nature of the security right (e.g. a floating charge, an enterprise mortgage, a retention-of-title transaction or a non-possessory pledge of stock). These types of registry tended to develop where the basis of the registration was title, or where States developed on a piecemeal basis different particular types of security rights in movable property.

21. Where States have come to adopt a functional concept of a security right in movable property there is a strong incentive to both centralize and consolidate the registry system. That is, once the substantive rules governing security rights are brought together under a uniform regulatory regime, it is most efficient to consolidate all registrations in a single registry record, regardless of the type of the security device, the nature of the grantor as a legal or a natural person, or the nature of the encumbered assets. In addition, even among States that maintain a formal diversity of acquisition financing rights (what this Guide calls a non-unitary

approach to acquisition financing rights, see chapter XII; A/CN.9/631/Add.9) many require the registration of these multiple acquisition financing rights in the general security rights registry. The development of consolidated registries also facilitates the establishment of a single centralized registry covering the entire State. Ideally, the record should be maintained in electronic form in a single centralized database for each country. In States in which separate regional or district records are maintained, complex rules are needed to determine the appropriate registration venue and to deal with the consequences of a relocation of the assets or the grantor. While it is possible to imagine the integration of decentralized, plural registries, the goals of efficiency, accessibility and transparency in the registration system are more fully achieved through consolidation and centralization of an electronic-form registry of the type recommended in this Guide (see A/CN.9/631, recommendation 55, subpara. (e)).

22. In many existing registry systems, the recording of notices is undertaken manually and the registry is itself paper based. Hence, States may have a legitimate concern about equality of access for users in remote locations. However, modern communication technology supports the rapid onward transmission of notices submitted to a branch office to the central registry. That is, by establishing records in electronic form, it is possible to use local registry offices as points of access to a centrally maintained registry. This is why many States have adopted electronic registries. In addition, electronic registries make it possible to establish mechanisms for online access to the record. As long as appropriate protocols for registration and searching are in place, this means that access to the registry will be possible from any location where Internet connections are available. Finally, even if the registry is maintained in electronic form, it is still possible to permit registration in paper form. In such cases, it is only necessary that information submitted in a paper form be transcribed into a computerized record with a name-based index. This manual transcription of data though, may increase the risk of error and liability of the registry. To the extent feasible, therefore, the registry should be designed so that those that wish to register notices have the responsibility for directly entering them electronically following an approved registration template.

(f) Public access

23. One of the central objectives of any registry system is to enhance certainty about entitlements to property. Ultimately, this is the underlying rationale for a security rights registry. A well-functioning registry enables actual and potential competing claimants (for the definition of “competing claimant”, see A/CN.9/631, Introduction, sect. B, Terminology and rules of interpretation, para. 19) to find out whether a security right has been or may be created in the grantor’s assets. With this information, they can take steps to protect themselves against the priority risk this poses to their potential rights or the impact that any given security right may have on their existing rights.

24. In order to achieve this objective, a registry record must normally be accessible by the public. States take different views about the balance to be achieved between protecting the confidentiality of parties to a security agreement (both grantors and secured creditors) and providing information to third parties about rights and encumbrances that may be claimed in the grantor’s property. The policy choices relate to three issues: (a) who is entitled to search the registry; (b) what criteria may be used to search the registry; and (c) how the registry is organized. These issues are considered in turn below.

(g) Prerequisites to searching

25. The many approaches to deciding who is entitled to search the registry can be reduced to two main types. Some States explicitly regulate who is entitled to search the registry in order to preserve the confidentiality or privacy of the parties' financial affairs. Access to the registry record for searching is restricted to persons that can demonstrate a "legitimate" reason. What constitutes a legitimate reason varies widely from State to State and sometimes the criteria are so narrowly drawn that open competition for credit can be compromised. In addition, the imposition of criteria for access implies that some person has to exercise judgement as to the "legitimacy" of the search, a step that slows down and increases the administrative cost of conducting a search.

26. In other States, most often those that have adopted a notice-based registry system, a person seeking to search the registry need not demonstrate a legitimate interest or offer any reason for conducting the search. The overriding objective in these States is to ensure that actual and prospective competing claimants are able to access the relevant information easily and efficiently. In these States, there is no necessity to limit access to the registry in order to protect the confidentiality of the grantor's and secured creditor's relationship. Confidentiality is ensured by limiting the level of detail about their affairs that appears on the public record. That is, the notice typically indicates only the names of the parties and a description of the encumbered assets and does not identify either the terms of the security agreement or the amount of the credit that has been extended or is still owed. In order to avoid encumbering the registry system with unnecessary cost and delay where only minimal information is provided in the registry record, this Guide recommends that searchers should not be required to establish a "legitimate reason", or indeed any reason, for the use of the registry (see A/CN.9/631, recommendation 55, subpara. (g)).

(h) Searching by reference to the grantor or to the secured creditor

27. Concerns about confidentiality also raise the issue of whether the registry system should be organized to facilitate public searching against the name of the secured creditor as well as the grantor. In some States, searching in the registry record may be possible by the name of the secured creditor. In those States, it is considered that, while the function of the registry does not require the record to be organized to permit searching by the name of the secured creditor, such searching is not an illegitimate use of the record. It is also considered that, for internal administrative purposes, it is useful to build in this kind of technical search functionality as it facilitates the processing of volume amendments to registered notices in cases where the secured creditor changes its business name or merges with another financial institution.

28. In other States, searching by the name of the secured creditor is not possible. The concern is to avoid systematic searches to profile secured creditors and their business relationships. The quantity and content of notices filed by a particular financial institution or other creditor may have market value as a source of a competitor's customer lists or for companies seeking to market related financial or other products. The retrieval and sale of this kind of information is not relevant to the purpose of the registry, would violate reasonable commercial expectations and may even damage public trust in the system. For these reasons, the Guide recommends that notices be indexed and retrieved only by the name or other identifier of the grantor (see A/CN.9/631, recommendation 55, subpara. (h)).

29. In order to further address this concern, in some of those States, it is possible to mention in the registered notice the name of a trustee, agent or other representative of the secured creditor (as is commonly done in syndicated loan arrangements where only the lead bank or its nominee is identified as the secured creditor). This does not prejudice the rights of third parties so long as the person identified as the secured creditor on the notice is in fact authorized to act on behalf of the actual secured creditor in any communications or disputes connected to the security right to which the registration relates. This is the approach recommended in the Guide (see A/CN.9/631, recommendation 58, subpara. (a)).

(i) Grantor as compared to asset indexing

30. The primary interest of a competing claimant is to determine whether any particular asset of a grantor is encumbered. For this reason, modern registries are organized so that it is possible for searchers to access this information either by reference to the grantor, or to the asset itself. Historically, land registries were organized and indexed by reference to the asset, rather than by reference to the grantor. In some States, there are also specialized movable property registries organized on the basis of an asset-indexing system. Nonetheless, the majority of States that have created registries for security rights in movable property (whether these are multiple registries or consolidated registries, and even when they are document-filing registries) organize and index these registries by reference to the grantor of the security right.

31. In a notice-based regime, indexing is generally done by reference to the identity of the grantor. Grantor-based indexing greatly simplifies the registration process. Secured creditors can achieve third-party effectiveness of a security right even in all of a grantor's existing and future movable property through a single registration. They need not worry about updating the record every time the grantor acquires a new asset as long as the asset fits into the description in the notice. Given the recommendation in this Guide that States establish notice-based registries, it follows that the primary indexing mechanism for the general security rights registry should be tied to the identity of the grantor (see A/CN.9/631, recommendation 55, subpara. (h)).

32. Grantor-based indexing does, however, have one important drawback. If the encumbered assets become the object of unauthorized successive transfers, prospective secured creditors and buyers cannot protect themselves by conducting a search according to the name of the immediate apparent owner. Because the system is grantor-indexed, the search will not disclose a security right granted by any predecessor in title. For example, the grantor sells the encumbered assets to a third party that, in turn, proposes to sell or grant a security right in them to a fourth party. Assuming the fourth party is unaware that the third party acquired the asset from the original grantor, the fourth party will search the registry using only the third party's name. Because the search will not disclose the registered security right, in order to discover the full picture of security rights that may affect the grantor's assets, the secured creditor will have to determine the chain of title to these assets. In order to do so, it will be necessary for the secured creditor to undertake this inquiry without the aid of the registry, since in almost all cases, there will be neither a record of the chain of title nor an indexing system that permits searching by reference to the asset.

33. Many States do, however, also have specialized title registries for certain categories of movable property (e.g. ships, aircraft and motor vehicles) in addition

to general security rights registries. In some of these registries, it is possible to register security rights as well as title. Where such registries are in operation the problem of hidden security rights granted by a predecessor in title does not exist, since a specific description or even a serial number is registered in the appropriate field where possible.

34. Serial number identification is, nonetheless, not without its drawbacks, especially where serially numbered property is held as inventory. Where serially numbered property constitutes either capital equipment or consumer goods (for the definition of “consumer goods”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation, para. 19) in the hands of the grantor it is usually treated as discrete by both the grantor and the secured creditor. However, if the encumbered assets are instead held by the grantor as inventory intended for resale, requiring a serial number description would impose an unworkable registration burden on secured creditors, since they would have to register each time a new item is acquired by the grantor. In any event, serial number identification of inventory is normally unnecessary to protect buyers and lessees. Most often they will acquire the encumbered assets in the ordinary course of the grantor’s business, in which case they will take free of any security rights granted by the inventory seller (see A/CN.9/631, recommendations 86-88). In addition, requiring serial number registration for items held as inventory limits the ability of a secured creditor to achieve third-party effectiveness of a security right in after-acquired serially numbered property through a single registration. In such a case, because the registered notice would have to include the serial number, the secured creditor would be required to file an amendment to the notice adding the new serial number as the grantor acquires each additional item. For these reasons, States that either deploy a title registry as a mechanism for recording security rights in that type of property, or provide for a serial-number field in the record of a notice-filing system, should limit the mandatory requirement for serial number identification to cases where the serially numbered property is not held as inventory.

[Note to the Commission: The Commission may wish to reflect in a recommendation the rule reflected in the last sentence of paragraph 34.]

(j) Registration and searching fees

35. The fundamental logic of a general security rights registry system is to enhance transparency and certainty regarding security rights (“security right” is defined by reference to movable property; see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation, para. 19). For this reason, modern registry systems are designed so as to encourage parties to use the registry to record security rights and to search for any pre-existing security rights. It is critical to the success of the registry system in enhancing access to secured credit at a reasonable cost, for fees to be set at a level that facilitates access, while still enabling the system to recover its capital and operational costs within a reasonable time period. Excessive registration and searching fees, designed to raise revenue rather than support the cost of the system, are tantamount to a tax on borrowers that simply reduces the availability and increases the cost of credit. Consequently, this Guide recommends that fees for using the registry should be no greater than what is required for the registry to be self-financing (see A/CN.9/631, recommendation 55, subpara. (i)).

(k) Modes of access to the registry

36. Until the end of the twentieth century, registration records had to be kept in paper form. Increasingly, however, even in States that require transactional documents to be filed, these records are being archived in electronic form. Similarly, while some States with notice-based registries still permit or require registration requests to be made in paper form, most of them provide for archiving these records in electronic form. In other words, the advent of digital storage has facilitated conversion of the registry record to a computerized record, greatly reducing the administrative burden on the registry.

37. A computerized record has many advantages over a paper-based system. Archives take less space and are easier to search. Most modern systems authorize electronic submission of registrations and the electronic submission and retrieval of search requests and search results, thereby facilitating direct client access. In addition, most modern systems permit direct electronic access to amend or cancel a registration. This significantly reduces the costs of operation and maintenance of the system. It also enhances the efficiency of the registration process by putting direct control over the timing of registration into the hands of the secured creditor. In particular, direct electronic access eliminates any time lags between submission of a notice to the registrar and the actual entry of the information contained in the notice into the database.

38. In some States with notice-based registries, electronic access (either from a client's premises or from a branch office of the registry) is the only available mode of access for both registration and searching. Because the data to be registered are submitted in electronic form, no paper record is ever generated. A fully electronic system of this kind places the responsibility for accurate data entry directly on registrants. As a result, staffing and operational costs of the registry are minimized and the risk of registry personnel making an error in transcribing documents is eliminated. Other States with notice-based registries give clients the option of submitting a paper registration or search request in person or by fax or verbally by telephone. However, even in these States, electronic submission is by far the most prevalent mode of data submission, used in practice for more than 90 per cent of registrations. The Guide recommends that multiple modes of access be made available to registry clientele at least in the early stages of implementation to reassure users unfamiliar with the system (see A/CN.9/631, recommendation 55, subpara. (j)).

(l) Service hours

39. Recognizing the importance of public access, most States operate their registries according to a reliable and consistent schedule, coordinating opening hours with the needs of their clients. If the system supports direct electronic access, the days and hours of operation are not a practical concern. It can be accessible on a continuous basis. For this reason, this Guide recommends that the registry should be designed so as to be accessible continuously except for scheduled maintenance (see A/CN.9/631, recommendation 55, subpara. (k)).

(m) Optimal use of electronic technology

40. The benefits of a general security rights registry that supports a computerized registry record and direct electronic access have already been outlined. However, the extent of computerization that is possible may vary in different States depending

on the extent of start-up capital available, access to the right expertise, the level of computer literacy of potential users, the reliability of the local communications infrastructure and the probability that expected revenues will be sufficient to recover the capital costs of construction within a reasonable period. Perhaps not all States will be able to move immediately to a fully computerized registry. Nonetheless, even where States continue to use paper-based registries, the overall objective is the same: to make the registration and searching process as simple, transparent, efficient, inexpensive and accessible as possible. Accepting that the practical considerations just noted will affect how quickly States may proceed to implementation, this Guide recommends that, to the extent possible, a general security rights registry that is computerized and that permits direct electronic access should be preferred (see A/CN.9/631, recommendation 55, subpara. (l)).

3. Security and integrity of the registry record

(a) State responsibility for the system

41. Over the years, States have adopted different approaches to the management and operation of systems meant to provide information about entitlements to movable property. In some, the system is an entirely public system run either as a part of normal Government operations or as a publicly owned corporation. In other States, by contrast, a particular profession (e.g. notaries) is delegated responsibility for managing certain types of public record. With the sole exception of States where no public recording mechanism exists and informal, privately run record offices fill the gap, the pattern is to consider the registries as a public service.

42. This does not mean that the day-to-day operation of the registry will have to be provided by public officials. For example, in many States, these day-to-day operations may be delegated to a private entity. This normally ensures the efficient operation of the registry and avoids burdening the State with costs and liabilities. In order to give a public assurance of the reliability of the registry, a public authority retains the responsibility to ensure that the registry is operated in accordance with the appropriate legal framework (see A/CN.9/631, recommendation 56, subpara. (a)).

(b) Record of the identity of the registrant

43. In some States, the registry may require both the identity and verification of the identity of the registrant. The main reason for this approach is to ensure the legitimate use of the record. The disadvantage is that it is likely to increase the time and cost of registration, as well as the risk of error and liability. In other States, while the registry may require the registrant to state its identity, it may not require verification of the identity of the registrant for the purpose of registering a notice. This means that the registrant does not have to be the secured creditor. However, in order to deter unauthorized or malicious registrations, the registry will need to maintain an internal record of the identity of registrants and require adequate proof of identity for this purpose (as to the relevant rights of the grantor, see A/CN.9/631, recommendations 70-73). This need not pose an excessive administrative burden since the verification procedure can be built into the payment process. Moreover, since most registrants will be repeat users, a permanent secure access code can be assigned when the account with the registry is opened, eliminating the need to repeat the identification procedures for subsequent registrations. This is the

approach recommended in the Guide (see A/CN.9/631, recommendations 55, subpara. (d), and 56, subpara. (b)).

(c) Grantor's entitlement to a copy of the registered notice

44. Because a registration serves as a notice that the grantor may have created a security right in its assets in favour of a creditor, and therefore may affect the grantor's ability to receive further secured credit, most States provide that a grantor named in a registered notice is entitled to receive a copy of the registration, or of any amendments to the notice made by the secured creditor. This enables the grantor to verify the accuracy of the data on the notice and, in the case of inaccurate, unauthorized or malicious registrations, to exercise its rights to compel the amendment or cancellation of the registration (see A/CN.9/631, recommendations 70-73).

45. States differ as to who should bear the obligation to forward a copy of the registered notice to the grantor. In order to provide optimal protection against the risk of unauthorized registrations, some States place this burden on the registry system itself. In this way, when the registration is fraudulent the purported grantor will discover the fraud, a discovery unlikely to occur if the obligation to forward a copy of the notice were placed on the purported secured creditor. However, this advantage must be weighed against the additional costs and risks such a burden would impose on the registry system. In the absence of evidence that unauthorized registrations are posing a serious and substantial threat to the integrity of the system in a particular State, a cost-benefit analysis supports placing the obligation on the secured creditor. In cases where the registration is made in good faith and is accurate, requiring the secured creditor to forward a copy of the registered notice to the grantor need not be a condition of the effectiveness of the registration and could even complicate or delay such effectiveness. This is because such a failure in no way affects the rights of third parties that will consult the registry. For this reason, most States provide that the failure of the secured creditor to meet this obligation may result only in nominal administrative penalties and the award of damages for any harm to the grantor resulting from such failure. Given the general approach of this Guide to keep the administrative costs of the registry as low as possible, it recommends that responsibility for furnishing a copy of the notice to the grantor be placed upon the secured creditor (see A/CN.9/631, recommendation 56, subpara. (c)).

(d) Secured creditor's entitlement to a copy of changes to registration

46. In most States, a registered notice may be cancelled by the secured creditor or the grantor and amended by the secured creditor or sought to be amended by the grantor through summary judicial or administrative proceedings (see A/CN.9/631, recommendations 70 and 71). In order to enable the secured creditor to check the legitimacy of the cancellation or amendment, the registry is normally obligated promptly to forward a copy of any changes to a registered notice to the person identified as the secured creditor in the notice. This should not involve excessive cost or risk for the registry system, since an efficient mode of electronic communication (e.g. electronic mail) can be agreed to when the account of the registry with the secured creditor is initially opened. Moreover, if the system is electronic, it can be programmed to forward automatically a copy of any amendments to a specified electronic mail account without the need for any human intervention (see A/CN.9/631, recommendation 56, subpara. (d)).

(e) Prompt confirmation of registration

47. Before advancing funds under a security agreement, a secured creditor will typically expect to receive some assurance that its notice has been entered into the registry record and that the information has been accurately recorded. Modern electronic registries are designed to enable the registrant to obtain a printed or electronic record of the registration as soon as the data is entered. In a paper-based registry, there will inevitably be some time lag between the submission of the notice and confirmation that it has been entered into the record, but every effort should be made to reduce the delay to a minimum (see A/CN.9/631, recommendation 56, subpara. (e)).

(f) Data integrity and preservation

48. Any registry system, whether paper-based or electronic, is at risk of destruction through unforeseen events. Usually, it is very difficult to reconstruct a paper-based registry if the physical records are damaged or destroyed (e.g. by flood or fire). Not many States have the resources to be able to keep duplicate papers archived at a separate location. Moreover, because these copies must be filed and indexed manually, there is an ever-present risk of error. Where a paper registry is archived electronically, however, or where the entire registry is itself kept electronically, it is much easier to ensure the preservation of data in the registry. States with electronic registries typically maintain a backup copy of the records of the registry on a separate server in a different location. This backup copy is normally updated by a separate procedure on a nightly basis so that it can be reconstructed in the event of system malfunction or physical destruction. In order to ensure that the integrity of the registry can be preserved in a cost-effective manner, this Guide recommends that electronic registries be systematically backed up (see A/CN.9/631, recommendation 56, subpara. (f)).

4. Responsibility for loss or damage

49. As noted above, a general security rights registry system is publicly administered in the sense that, while the maintenance of the system may be contracted out to the private sector, the ultimate supervisory responsibility is vested in a publicly appointed registrar and public servants under the registrar's supervision. For this reason, most States have detailed rules setting out the conditions under which they assume legal responsibility for loss or damage caused by staff or system errors and the extent of responsibility they are prepared to assume. In theory, staff or system error could cause loss in three situations.

50. The first situation, which may arise in the context of all types of registry (e.g. document registries, title registries, notice registries, paper-based registries or electronic registries), is where an employee or representative of the registry is alleged to have given incorrect or misleading verbal advice or information. Some States exclude liability altogether in this situation. In States where recourse against the registry is permitted in such cases, strict qualifications and limitations often apply. For example, in some States, the alleged victim must establish bad faith. In other States, the employee's conduct has to satisfy the standard of liability imposed by the general law governing fault-based obligations.

51. The second potential area of liability is for loss caused by an error or omission in the information entered into the record of the registry. Here, a first distinction must be drawn between notice registries and document registries. In the former

case, any substantive errors will be the responsibility of the person submitting the document for registration. The only error that can occur on the part of the registrar is if the identifying data on the document is incorrectly transcribed into the index. A further distinction must be drawn between paper and electronic registrations. If the notice is submitted electronically, the registrant is responsible for entering the data on the notice directly into the registry database and thus bears the risk of any errors or omissions. Even if the problem could conceivably have been caused by a malfunction in the system, States typically exclude liability for the failure of the system to effect an electronic registration or failure to effect it correctly. The absence of a paper version of the registered notice makes an allegation of systemic malfunction impossible to prove.

52. If a paper notice is used, the registrant is likewise responsible for the correctness of the information entered on the notice. However, regimes usually give a remedy for loss or damage caused by a failure on the part of registry staff to enter the information contained on the paper notice into the registry database or by a failure to enter it accurately. The risk of human error in transposing and retrieving data can be significantly alleviated by establishing electronic editorial checks and ensuring the timely return to the client of a copy of the registered notice or search result.

53. If the error on the part of the registry staff consists in entering inaccurate information, the person normally entitled to compensation will be a third-party searcher that suffers loss as a result of reliance on the misleading information in the registered notice. The position is different if the error consists in the failure of the registry staff to enter the information on the paper notice into the system altogether. The Guide recommends that registration be treated as effective only upon entry of the registration data into the database so as to be searchable by third parties (see A/CN.9/631, recommendation 68). It follows that where a paper notice is never entered into the system, it never becomes legally effective and the person potentially suffering the loss will be the secured creditor whose security right was never legally made effective against third parties.

54. The third situation where loss might be caused is where the registry issues a search result that contains erroneous or incomplete information. In this situation, some States recognize liability for loss caused by an error or omission in a printed search result produced by the registry system. However, issues of proof preclude liability where the claimant alleges an error in a search result viewed electronically or printed at the client's own premises (see, for example, the Convention on International Interests in Mobile Equipment).

55. In the limited circumstances where liability is recognized, States typically also elaborate rules to govern the procedure for making and proving a claim, the prescription period for launching a claim, and whether the quantum of recovery is subject to an upper limit. In order to ensure that claims against the registry do not bankrupt the system, States usually also establish insurance regimes to cover any loss. Where insurance is privately provided, a small amount is added to the registration fee in order to cover the insurance premium. Where the registry is self-insured, this additional amount is paid into a separate fund meant to cover payment of any successful liability claims (see A/CN.9/631, recommendation 57).

5. Required content of the notice

56. As noted, there are two approaches to registration. In some States, parties are obliged to file a copy of the security agreement. The result is that any person authorized to search the registry may obtain detailed information about the business relationship between the grantor and secured creditor. In other States, the registry simply records a notice about the potential security agreement and contains no other information. In most modern, notice-based registration systems, only the following basic information is required to be set out in the registered notice: the name or other identifier of the grantor and the secured creditor and their addresses, a description of the encumbered assets, and a statement of the duration of the registration. Each of these items of information is discussed in greater detail in the following sections of this chapter.

57. One point on which the approach among even those States which adopt a notice-registry system diverges is the question as to whether the notice must disclose the maximum monetary amount for which the security right covered by the notice may be enforced. In some States, it is not considered desirable to require either the actual amount of the initial secured obligation or a sum representing the maximum amount for which the security right may be exercised against the encumbered assets be set out. The concern is that this approach would (a) limit the amount of credit available from the initial secured creditor; (b) result in secured creditors inflating the amount of the secured obligation to cover future credit, which would inadvertently limit the ability of grantors to obtain credit from other sources; and (c) generally interfere with the ability of parties to secure future or fluctuating obligations (as in the case of revolving credit facilities).

58. However, many States require that the registered notice include a statement of the maximum amount to be secured by the security right. This approach is intended to facilitate the grantor's access to secured financing from later creditors in situations where the value of the assets encumbered by the prior registered security right exceeds the maximum amount indicated in the notice. It is based on the assumption that the grantor may obtain credit from other sources, even though that credit will be secured with a security right with a lower priority status than the security right securing the initially provided credit. It is also based on the assumption that the grantor will have sufficient bargaining power to ensure that the first-registered secured creditor does not register an inflated maximum amount. In some of the States that follow this approach, the result is that the priority of the security right to which the notice relates over subsequent security rights is limited to the maximum amount set out in the notice. In other States, the maximum amount of the secured obligation has to be stated, since a security right cannot be created in future obligations. This Guide acknowledges that both approaches have merit and recommends that particular States adopt the approach that is most consistent with efficient practices then in use in the State in question (see A/CN.9/631, recommendation 58).

6. Grantor's identifier

(a) Effect of error in the grantor's identifier on the effectiveness of registration

59. As mentioned above, in a modern general security rights registry, notices are indexed and searched by reference to the grantor's identifier (see A/CN.9/631, recommendation 55, subpara. (h)). Consequently, a reference to the grantor's identifier in the notice is an essential component of a valid registration. The impact

of an error in the grantor's identifier on the legal effectiveness of a registered notice depends on the organizational logic of the particular registry system. Some electronic records are programmed to retrieve only exact matches between the identifier entered by the searcher and the identifiers in the database. In such systems, any error will render the notice irretrievable by searchers using the grantor's correct identifier. For this reason, the consequence of error is that the purported registration is null and produces no third-party effects.

60. However, in some States, a more sophisticated search algorithm is put in place. In these States, registry records are organized and indexed so as to enable a searcher that enters the correct identifier to retrieve notices in which the grantor's identifier is a close but not identical match to the correct identifier. Similarly, if the searcher were to enter an incorrect identifier, a correct identifier that is a close but not identical match would also be retrieved. Where States have adopted these more sophisticated search algorithms, the validity of many otherwise defective registrations would be preserved. The usual result is that the registration is deemed to be legally effective notwithstanding the error if a search using the correct identifier would still disclose the registered notice albeit as an inexact match (see A/CN.9/631, recommendation 59). This type of system works only if the search logic of the system is carefully designed to limit the number of "close matches" that the search turns up. If searchers entering the correct identifier are confronted with a search result that yields an excessive number of notices containing "close matches", the burden of the initial registrant's error would be unfairly shifted onto the searcher, who might then have to undertake a large number of additional inquiries to determine which if any of these "close matches" might refer to the grantor in question.

(b) Correct identifier for natural persons

61. As an error in the grantor's identifier may invalidate a registration, States usually take great care to establish clear legal rules on what constitutes a correct identifier. The grantor's name is the most common criterion. However, a State may not have a universal rule on what constitutes a natural person's correct legal name and the name used in everyday business or social life may differ from that which appears on the grantor's official documents. Moreover, name changes may have occurred since birth as a consequence of a change in marital status or other deliberate choice. Consequently, the regulations or administrative rules governing the operation of the registry usually need to provide explicit guidance on what official documentary sources of the grantor's name can be relied on by registrants and searchers.

62. What documents will be considered authoritative for this purpose depends on the availability and reliability of the official documents issued by each State. In order to accommodate grantors that do not possess the relevant first-order official document and grantors that are not residents or nationals of a particular State, it is necessary to provide a hierarchy of alternative references (see A/CN.9/631, recommendation 60). There is no universal formula for setting this hierarchy, since so much depends on the resources available in each State for providing reliable identifiers for natural persons. That said, the following paragraph illustrates how the approach recommended in this Guide might be implemented.

63. States would provide that the name of a grantor that is a natural person will be determined according to a hierarchy of references:

(a) If the grantor was born in the enacting State and the grantor's birth was registered with a Government agency, the name of the grantor is the name stated in the grantor's birth certificate;

(b) If the grantor was born in the enacting State but the grantor's birth was not registered, the name of the grantor is:

(i) The name stated in a passport issued to the grantor by the Government of the enacting State;

(ii) If the grantor does not have a passport, the name stated in a current social insurance or other national identity card issued to the grantor by the Government of the enacting State;

(iii) If the grantor does not have a current passport or national identity card, the name stated in a passport issued to the grantor by the Government of the State where the grantor habitually resides;

(c) If the grantor was not born in the enacting State but is a citizen of the enacting State, the name of the grantor is the name that appears in the grantor's certificate of citizenship;

(d) If the grantor was not born in the enacting State and is not a citizen, the name of the grantor is:

(i) The name stated in a current visa issued to the grantor by the Government of the enacting State;

(ii) If the grantor does not have a current visa, the name stated in a current passport issued to the grantor by the Government of the State where the grantor habitually resides;

(iii) If the grantor does not have a current visa or a current passport, the name stated in the birth certificate or equivalent document issued to the grantor by the Government agency responsible for the registration of births in the State where the grantor was born;

(e) In a case not falling within the preceding rules, the name of the grantor is the name stated in a current motor vehicle operator's licence or vehicle registration certificate or other official document issued to the grantor by the enacting State.

64. If a search reveals that more than one grantor shares the same name, the provision of the grantor's address will often resolve the identity issue for searchers. In States where many individuals share the same name, it may be useful to require supplementary information, such as the grantor's birth date. If a State has adopted a numerical identifier for its citizens, this can also be used, subject to the enacting State's privacy and security policies and subject to prescribing an alternative identifier for grantors that are non-nationals. However, if additional or supplementary identifiers are required, the law should explain the consequences to the validity of the registration of providing only one of them correctly.

(c) Correct identifier for legal persons

65. For corporate grantors and other legal persons, the grantor's identifier for the purposes of effective registration and searching is normally the name that appears in

the documents constituting the entity. This name can usually be verified by consulting the public record of corporate and commercial entities maintained by each State (see A/CN.9/631, recommendation 61). Problems with common identifiers are unlikely to occur, since business names generally have to be unique to be accepted by a company or commercial registry. If the information in this record and in the security rights registry is stored in electronic form, it may be possible to provide a common gateway to both databases to simplify the verification process. States with modern registries seek to facilitate speedy and efficient public access to these records by registrants and searchers.

(d) Distinction between natural and legal persons

66. A registrant will usually be required to indicate whether the grantor is an “individual” or a “natural person” on the one hand, or a “legal person” on the other hand. Although the terminology may vary, the basic dividing line is the same. Accurate designation is essential because the two categories of grantors are usually stored in separate searchable fields or books within the registry record. A search in the legal persons record will not disclose a security right registered against an individual grantor, and the converse is also true.

(e) Impact of a change of the grantor’s identifier on the effectiveness of registration

67. A subsequent change in the grantor’s name or other applicable identifier (for example, as a result of a merger, consolidation or other similar act in which the new company continues in business under a different name) raises problems for the discovery of previously registered notices. The grantor’s identifier is the principal search criterion and a search using the grantor’s new identifier will not disclose a security right registered against the old name.

68. In many legal systems, a secured creditor that fails to amend the registered notice to disclose the grantor’s new identifier before the expiry of a specified time period is subordinated to secured creditors and buyers that acquire rights in the encumbered assets before the amendment notice is registered. The secured creditor retains whatever priority it enjoyed against secured creditors and buyers whose rights arose prior to the change of name. This approach reflects the purpose of requiring disclosure: to protect third parties that might otherwise rely to their detriment on a “clean” search result made against the grantor’s new name. The secured creditor retains priority against secured creditors and buyers that acquire rights in the encumbered assets during the specified time period only if the registration is amended before the expiry of that period. In other words, the specified period gives only conditional protection against a loss of priority (see A/CN.9/631, recommendation 62).

(f) Impact of a transfer of an encumbered asset on the effectiveness of registration

69. As with a change in the original grantor’s identifier, after a transfer by the grantor of the encumbered assets, a search against the transferee’s name by third parties dealing with the encumbered assets in the hands of the transferee will not disclose a security right created by the transferor. Many States follow the approach taken to a change of name by the grantor. The secured creditor must register an amendment disclosing the transferee as a grantor within a specified time period after the transfer to preserve priority over secured creditors and buyers who acquire rights

in the encumbered assets after the transfer. If the amendment is not made within the specified time period, the secured creditor is subordinated to intervening secured creditors and buyers whose rights arise after the transfer and before the amendment is registered (see A/CN.9/631, recommendation 63).

7. Secured creditor's identifier

70. The name of the secured creditor is not an indexing criterion. Consequently, registration errors in relation to a secured creditor do not pose the same risk of misleading third-party searchers and would not lead to nullification of the notice. However, the notice typically includes the name and address of the secured creditor so that any third-party financier may contact a secured creditor on record and, with the grantor's consent, obtain information, for example, as to whether there is a security right in the grantor's assets, which assets are encumbered and any value left unencumbered. Reference to the name of the secured creditor in the notice also provides presumptive evidence that the secured creditor that later claims a priority based on the notice is in fact the person entitled to do so. In order to ensure confidentiality as to the identity of the grantor, many systems permit that the notice refer to a representative of the secured creditor (see A/CN.9/631, recommendation 58, subpara. (b)). The rules used for determining the correct name of a grantor can also be applied to secured creditors.

8. Description of assets covered by the notice

71. In theory, in a notice-registration system, there is no absolute necessity for the registration to identify the encumbered assets, as the mere notice indexed under the grantor's name is sufficient to warn third-party financiers about the possible existence of a security right. However, the absence of any description in the notice might limit the grantor's ability to sell or create a security right in assets that remain unencumbered. Prospective buyers and secured creditors would require some form of protection (for example, a release from the secured creditor) before entering into transactions involving any of the grantor's assets. The absence of a description would also diminish the information value of the registry for insolvency administrators and judgement creditors. For these reasons, the Guide recommends that a description of the encumbered assets be included in the registered notice (see A/CN.9/631, recommendation 58, subpara. (b)).

72. Although a description of the encumbered assets is required, there is no need for a specific item-by-item description. The information needs of searchers are sufficiently served by a generic description (e.g. all tangible assets or all receivables) or even an all encompassing description (e.g. all present and after-acquired movable property). Indeed, a generic description is necessary to ensure the efficient registration of a security right granted in after-acquired assets and in revolving categories of assets, such as inventory or receivables (see A/CN.9/631, recommendation 64).

9. Advance registration and one registration for multiple security rights

73. In a notice-registration system, the registered notice is independent from the security agreement. Notice registration thus removes any practical obstacle to advance registration and thus a notice of a security right may be made before or after the security agreement is made or the security right is created.

74. “Advance registration” serves several important purposes. As a security right is created in a particular asset only when the grantor owns or has rights in the asset, any other rule would require registration of a new notice each time the grantor acquired a new asset. Thus, this rule is necessary to facilitate financing involving after-acquired assets. Advance registration also enables a secured creditor to establish its priority ranking against other secured creditors under the general first-to-register priority rule. Furthermore, advance registration avoids the risk of nullification of the registration in cases where the underlying security agreement was technically deficient at the point of registration but is later rectified, or where there are factual uncertainties as to the precise time when the security agreement was concluded.

75. A notice-registration system also removes any practical necessity for a one-to-one relationship between the registration and the security agreement. Consequently, the registration of a single notice is normally sufficient to achieve the third-party effectiveness of security rights in the assets described in the notice whether created under a single agreement or multiple unrelated agreements between the same parties (even if concluded at different times).

10. Duration and extension of the registration of a notice

76. The duration of secured financing relationships can vary considerably. The necessary flexibility can usually be accommodated in one of two ways. The first is to allow registrants to self-select the desired term of the registration with the right to register further extensions as appropriate. The second is for the system to set a universal fixed term (for example five years), also accompanied by a right to register extensions that will then take effect automatically for additional equivalent terms. In either case, extension of the registration is effected through a notice of amendment submitted to the registry before expiry of the effectiveness of the notice (see A/CN.9/631, recommendation 67).

77. In medium- and long-term financing arrangements, the first approach lessens the risk for secured creditors of a loss of priority for an inadvertent failure to register an extension in time. In short-term financing arrangements, the second approach reduces the risk for grantors that secured creditors will register for an inflated term out of an excess of caution. In order to encourage timely cancellation in systems that adopt the second approach, a State may choose to not charge any fee for registration of a cancellation. Furthermore, in order to discourage the selection of excessive registration terms, fees can be based on an incremental tariff related to the length of the registration life selected.

11. Time of effectiveness of registration of a notice or amendment

78. As a general rule, priority between competing security rights that have been made effective against third parties only by registration depends on the order of registration (see A/CN.9/631, recommendation 78, subpara. (a)). It follows that the time at which a registration became legally effective is vital in determining priority among competing security rights. If the security right is already in existence, the time at which a registration takes legal effect may also be critical to the resolution of competing rights between a secured creditor and a buyer or lessee of the encumbered asset, or the grantor’s unsecured creditors and insolvency representative.

79. In a registry system that permits the submission of paper notices to the registry (as opposed to requiring direct electronic entry by registrants), there will inevitably be some delay between the time the notice is received in the office of the registry and the time the information on the notice is entered into the registry record by the registry staff so as to be searchable by third parties. This time lag raises the question of when registration should be considered legally effective: the time when the paper notice is received in the registry office or the time when the information on the notice becomes publicly searchable.

80. In resolving this issue, many legal systems place the priority risk created by a time lag on the secured creditor and not on third-party searchers. Consequently, the effective time of registration is concomitant with the ability of searchers to find the notice (see A/CN.9/631, recommendation 68). It would affect the reliability of the registry if searchers were to find themselves bound by a notice that was not publicly searchable. In any event, the secured creditor is in a better position to take steps to protect itself than third parties (for example, by withholding credit until the notice becomes searchable) and the design and operation of the registry should ensure speedy and efficient registration procedures that minimize delay.

81. In a fully electronic system that requires no intervention by registry staff, entry of the notice and its availability to searchers is virtually simultaneous and this problem is essentially eliminated.

12. Authority for registration

82. Normally, registration of a notice is not effective unless the grantor authorizes it in writing. However, in order to avoid delays, costs and errors, authorization is not required to be proven at the time of registration (see A/CN.9/631, recommendation 55, subpara. (d)). In any case, if there is no authorization, registration is not effective and the grantor may request its cancellation through summary judicial or administrative proceedings (while other law may provide for penalties for fraudulent registrations). Usually, authorization is given in the security agreement, expressly or implicitly (see A/CN.9/631, recommendation 69).

13. Cancellation or amendment of a registered notice

(a) Compulsory cancellation or amendment

83. For reasons of security, many legal systems provide that only the secured creditor has the authority to cancel or amend a registration. However, an unauthorized registration can have a prejudicial impact on the ability of the person named as grantor in the notice to sell or create a security right in the assets described in the notice. It is, therefore, essential to ensure that registered notices are cancelled or amended promptly if no security agreement exists or is contemplated, or if the security right has been extinguished by full and final satisfaction of the secured obligation or if a registered notice contains information not authorized by the grantor (for example, the asset description contained in the notice may be overly broad, including items or kinds of assets that are not intended to be the object of any actual or contemplated security agreement between the parties).

84. To address this need, many legal systems provide that the grantor has the right to send a written demand to the secured creditor to discharge or amend the registration to reflect the actual status of their relationship. The secured creditor is obliged to register a notice of cancellation or amendment, as the case may be, within

a specified time period (for example, 20 or 30 days) after receipt of the demand. If the secured creditor fails to comply, the grantor is then entitled to compel cancellation or amendment of the notice through a summary judicial or administrative procedure (see A/CN.9/631, recommendations 70 and 71). In some States, unless the secured creditor obtains a contrary court order, non-compliance entitles the grantor to require the registrar to register the discharge or amendment on proof to the registrar that the demand was made and not satisfied and after notice to the secured creditor.

(b) Expunging and archiving of cancelled notices

85. Once a registered notice has expired or been cancelled, it is normally promptly removed from the publicly searchable records of the registry (the secured creditor is obliged to take this action; see A/CN.9/631, recommendation 109, subpara. (b)). However, the information provided in the expired or cancelled notice and the fact of expiration or cancellation is archived so as to be capable of retrieval in the future if necessary (see A/CN.9/631, recommendation 72).

(c) Amendments

86. As mentioned above, an amendment to disclose a subsequent change in the identifier of the grantor (whether as a result of a change of name or a transfer of the encumbered assets) is necessary to preserve priority against subsequent secured creditors and buyers. In contrast, legal systems provide that a secured creditor is entitled, but not obliged, to amend a registered notice where the identity of the secured creditor changes as a result of an assignment of the secured obligation. Registration of an amendment notice is in this case optional, since a change in the identity of the secured creditor, unlike a change in the identity of the grantor, does not affect the ability of third-party searchers to retrieve the notice. Consequently, the registered notice retains its legal effectiveness whether or not the amendment is made.

87. Although it is optional, registration of a notice about an assignment is prudent. Failure to register leaves the assignor as the secured creditor of record, exposing the assignee to the risk that it will not receive notices sent by third parties and leaves the assignor with the legal power to alter the state of the record, for example by registering a notice of cancellation or other inappropriate amendment (see A/CN.9/631, recommendation 73).

88. The situation is different where the security right is not registered or otherwise made effective against third parties at the time of the assignment. Here, the assignee will need to register a notice in order to make the security right effective against third parties. There is no reason why the notice may not name the transferee as the secured creditor. There should be no need, in other words, to first register in the name of the original secured creditor.

89. If the grantor's financing needs change after the conclusion of the original security agreement, the grantor may agree to create a security right in additional assets. In the interest of flexibility, the registry system may allow the description in the registered notice to be amended to add the newly encumbered assets rather than requiring a new notice to be registered. However, the amendment is effective with respect to the newly encumbered assets only from the date it is registered, with the result that it cannot prejudice third-party rights acquired in the additional assets prior to registration of the amendment.

90. The situation is different when the amendment reflects new assets in the form of proceeds of the original encumbered assets. If the amendment is made before the expiry of the applicable period of temporary automatic third-party effectiveness, the security right in the proceeds takes effect against third parties as of the date of registration of the original notice.

91. If the description in the original registration covers after-acquired assets, there is normally no need to amend the registration. However, if the system adopts supplementary asset registration for after-acquired serially numbered goods, it will be necessary to amend the registration to include the new serial numbers in order for the security right to take effect against third parties.

92. Where a secured creditor agrees to subordinate or postpone a registered security right to the right of another creditor, registration of an amendment to disclose the subordination in principle should not be required or should be optional, since the subordination only affects the priority position of the relevant parties as against each other.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/631/Add.4 [Original: English]

**Note by the Secretariat on recommendations of the UNCITRAL
draft Legislative Guide on Secured Transactions, submitted to the
Working Group on Security Interests at its twelfth session**

3. Extent of priority	26-33
4. Irrelevance of knowledge of the existence of the security right	34
5. Subordination	35-37
6. Priority between security rights in the same encumbered assets	38-45
7. Priority of a security right in after-acquired property	46-47
8. Priority of a security right in proceeds	48-51
9. Continuity in priority	52-53
10. Priority of a security right registered in a specialized registry or noted on a title certificate.	54-55
11. Rights of buyers, lessees and licensees of encumbered assets	56-78
(a) General	56-57
(b) Rights of buyers	58-67
(c) Rights of lessees.	68-72
(d) Rights of licensees	73-77
(e) Rights of donees.	78
12. Priority of preferential claims	79-82
13. Priority of rights of judgement creditors	83-91

14. Priority of rights of persons providing services with respect to an encumbered asset	92-95
15. Priority of a supplier's reclamation right	96-97
16. Priority of a security right in an attachment	98-101
17. Priority of a security right in a mass or product	102-105
(a) Priority of security rights in the same items of tangible property that become part of a mass or product	103
(b) Priority of security rights in different items of tangible property that become part of a mass or product	104
(c) Priority of a security right originally taken in different items of tangible property as against a security right in the mass or product	105
B. Asset-specific remarks	106-120
1. Priority of a security right in a negotiable document	107-109
2. Priority of a security right in a right to payment of funds credited to a bank account	110-115
3. Priority of a security right in money	116
4. Priority of a security right in proceeds under an independent undertaking	117-118
5. Priority of a security right in a negotiable document or goods covered by a negotiable document	119-120
Recommendations	

VII. Priority of a security right as against the rights of competing claimants

A. General remarks

1. The concept of priority and its importance

1. In a secured transactions regime, the term “priority” refers to the extent to which a secured or other creditor may derive the economic benefit of its right in an encumbered asset in preference to a competing claimant (for the definitions of the terms “priority” and “competing claimant”, see Introduction, sect. B, Terminology and rules of interpretation, para. [...]). As discussed below, only one of the competing claimants must be a secured creditor of the grantor. Any other competing claimant may be another secured creditor of the grantor or the holder of another

type of proprietary right, such as the holder of a right created by statute (e.g. a preferential creditor) or by judgement (i.e. a judgement creditor), a buyer, lessee or licensee of the encumbered asset or the insolvency representative in the grantor's insolvency proceeding.

2. Issues of priority typically arise where the debtor defaults on a secured obligation and the value of the encumbered asset is not sufficient to satisfy that obligation as well as the obligations owed to other competing claimants asserting a right in the asset. In these situations, the secured transactions law must determine how the economic value of the asset is to be allocated among competing claimants. A typical example of such a case is where a grantor defaults on a loan obligation to a lender that is secured by an asset of the grantor, and the grantor has also created a security right in the same asset in favour of another lender to secure a different loan. Another example is a situation where a grantor defaults on a loan obligation to a lender that is secured by an asset of the grantor, and an unsecured creditor of the grantor has obtained a judgement against the grantor and has taken steps under applicable law to obtain a property right in the same asset by reason of the judgement.

3. In other cases, the application of priority rules will lead to a person taking the encumbered asset free of competing claims. A typical example of such a case is where a grantor creates a security right in an encumbered asset in favour of a lender and then sells the asset to a third party. In this situation, the secured transactions law must determine whether the buyer of the asset takes title to the asset free of the lender's security right. Another example is where a grantor creates a security right in an encumbered asset in favour of a lender and then leases or licenses the asset to a third party. Here, the secured transactions law must determine whether the lessee or licensee may each enjoy its proprietary rights under the lease or license unaffected by the lender's security right.

4. An essential element of an effective secured transactions regime is that security rights have priority over the rights of unsecured creditors. It is generally accepted that giving secured creditors priority over unsecured creditors is necessary to promote the availability of secured credit. Unsecured creditors can take other steps to protect their rights, such as monitoring the status of the credit, charging interest on amounts that are past due or obtaining a judgement with respect to their claims in the event of non-payment. In addition, secured credit can increase the working capital of the grantor, which in many instances benefits the unsecured creditors by increasing the likelihood that the unsecured debt will be repaid. In fact, advances made under a secured revolving working capital loan facility are often the source from which a company will pay its unsecured creditors in the ordinary course of its business (see chap. II, Scope of application and other general rules, sect. F, Examples of financing practices covered, paras. [...]).

5. However, in all the cases mentioned above, priority is an issue only if security rights are effective against third parties. Security rights that are not effective against third parties have the same ranking as against each other and as against the rights of competing claimants (including unsecured creditors). However, security rights that are not effective against third parties are nevertheless effective against the grantor (see A/CN.9/631, recommendation 31).

6. The concept of priority is at the core of every successful secured transactions regime and it is widely recognized that effective priority rules are necessary to

promote the availability of secured credit. There are two primary reasons for this. First (as discussed in para. 7 below), to the extent that priority rules are clear and lead to predictable outcomes, prospective secured creditors are able to determine, in an efficient manner and with a high degree of certainty prior to extending credit, the priority that their security rights will have relative to the rights of competing claimants in the event that a priority dispute arises in the future. Thus, priority rules function not only to resolve disputes, but also to encourage prospective creditors to extend credit by allowing them to predict how a potential priority dispute will be resolved. In this way, the existence of effective priority rules can have a positive impact on the availability and cost of secured credit. Second (as discussed in para. 8 below), where the secured transactions regime recognizes the ability of a grantor to create more than one security right in the same encumbered asset, effective priority rules encourage prospective creditors to extend credit secured by the excess value of an asset already subject to a security right in favour of other creditors, thereby making it possible for grantors to utilize the full value of their assets to obtain more credit, which is one of the key objectives of any effective and efficient secured transactions regime (see chap. I, Key objectives, sect. B).

7. With respect to the first reason mentioned above, the most critical issue for the secured creditor is what its priority will be in the event it seeks to enforce the security right either within or outside of the grantor's insolvency, especially where the encumbered asset is expected to be the creditor's primary or only source of repayment. To the extent that the creditor has uncertainty with respect to the priority of its prospective security right at the time it is evaluating whether to extend credit, the creditor will place less reliance on the encumbered asset. This uncertainty may cause the creditor to increase the cost or reduce the amount of the credit to reflect the diminished value of the encumbered asset to the creditor, and may even cause the creditor to refuse to extend credit altogether. To minimize this uncertainty, it is important that secured transactions laws include clear priority rules that lead to predictable outcomes and also that these outcomes are respected by insolvency law to the maximum extent possible (see chap. XI, Insolvency, paras. [...]).

8. With respect to the second reason mentioned above, it should be noted that priority rules have an additional positive impact on the availability of secured credit, since many banks and other financial institutions are willing to extend credit based upon security rights that do not have a first-priority ranking but are subordinate to one or more higher-priority ranking security rights, so long as they perceive that there is value in the grantor's assets to support their security rights and can clearly establish the lower-ranking priority of their security rights. For example, in jurisdictions that recognize an all-asset security (see chap. II, Scope of application and other general rules, sect. F, Examples of financing practices covered, paras. [...]), Lender B may be willing to extend credit to a grantor whose assets are already subject to an all-asset security in favour of Lender A, so long as Lender B believes that the value of the grantor's assets sufficiently exceeds the amount of the loan secured by the existing all-asset security to support the additional extension of credit by Lender B. This result is much more likely to occur in a jurisdiction that has clear priority rules that enable creditors to assess their priority with a high degree of certainty. By facilitating the granting of multiple security rights in the same assets, priority rules enable a grantor to maximize the extent to which it can use its assets to obtain credit.

9. Because of the importance of priority rules, a modern secured transactions regime typically incorporates a set of priority rules that are comprehensive in scope, covering a broad range of existing and future secured obligations and encumbered assets, and providing ways for resolving priority conflicts among a wide variety of competing claimants. Such rules also typically deal with the impact on priority of the method by which the security right is made effective against third parties (e.g. automatic third-party effectiveness, registration, possession or control). A secured transactions law that incorporates such precise and detailed priority rules, as opposed to a set of abstract principles that can require interpretation in particular cases, encourages prospective creditors to extend secured credit by giving them a high degree of assurance that they can predict how potential priority disputes will be resolved.

10. In view of the above, the Guide identifies a two-fold purpose of the priority provisions of a secured transactions law (see below, sect. C, Recommendations, Purpose).

11. It is important to note that no matter what priority rule is in effect in any jurisdiction, it will only have relevance to the extent that the applicable conflict-of-laws rules provide that such priority rule governs. This issue is discussed in chapter XIII, Conflict of laws (see paras. [...]).

2. Approaches to determining priority

12. There are various possible approaches to determining priority. More than one of these approaches may effectively coexist in the same legal system insofar as they may apply to different types of priority conflicts. This section describes these various approaches, indicating in each case their respective advantages and disadvantages in the context of a modern secured transactions regime.

(a) Priority rules where a registration system exists

13. As discussed above, in order to promote the availability of secured credit effectively, it is important to have priority rules that permit creditors to determine their priority with the highest degree of certainty at the time they extend credit and that enable grantors to use the full value of their assets to obtain credit. As discussed in chapter V, Effectiveness of a security right against third parties, (paras. [...]) and chap. VI, The registry system, (see paras. [...]), one of the most effective ways to provide for such certainty is to base priority on the use of a public registry.

14. In most jurisdictions in which there is a reliable system for registration of notices with respect to security rights, priority is determined by the order of registration of the notice, with priority being accorded to the right referred to in the earliest-registered notice (often referred to as the “first-to-register priority rule”). In some jurisdictions, this rule applies even if one or more of the requirements for the creation of a security right have not been satisfied at the time of the registration, which avoids the need for a creditor to search the registration system again after all remaining requirements for the creation of its security rights have been satisfied. This rule provides the creditor with certainty that, once it registers a notice of its security right, no other right with respect to which a notice is registered will have priority over its security right. Other existing or potential creditors are also

protected because the registered notice will warn them about potential security rights and they can then take steps to protect themselves (such as by requiring personal guarantees or security rights with lower-priority ranking in the same property or higher-priority-ranking security rights in other property).

15. Notwithstanding the foregoing, some States have recognized limited exceptions to the first-to-register priority rule. For example, a security right in consumer goods is deemed to be automatically effective against third parties upon its creation. Thus, the priority of such a security right is determined on the basis of the time of its creation.

16. In other States, as long as registration occurs within a specified period of time after the creation of a security right (often referred to as a “grace period”), priority will be determined according to the order of creation rather than registration of a notice with respect to the security right. Thus, a security right that is created first but registered second, may still have priority over a security right that is created second but registered first, as long as the notice is registered within the applicable grace period.

17. Under such an approach, because of the possibility that its registered security right will become subordinate to an earlier-created security right that is registered within the applicable grace period, a prospective secured creditor can protect itself only by delaying its extension of credit to the grantor until any applicable grace period relating to other potential claims has expired. Thus, until the grace period expires, the registration date is not a reliable measure of a creditor’s priority ranking and there is significant uncertainty that does not exist in legal systems in which no such grace periods exist.

18. In order to avoid undermining the certainty achieved by the first-to-register rule, some States restrict the use of grace periods to rare circumstances, such as: (a) acquisition security rights (unitary approach) or acquisition financing rights (non-unitary approach); (b) circumstances in which registration before, or concurrently with, creation is not logistically possible; or (c) circumstances in which the time difference between creation and registration cannot be minimized through the use of electronic registration or other registration techniques.

19. Many States have adopted an exception to the first-to-register priority rule for security rights in specific types of asset, such as cars and boats, which may also be registered in a specialized registry or noted on a title certificate. As a result, a security right registered in one of those systems is often given priority over a security right with respect to which a notice was previously registered in a general security rights registry. The reason for this approach is the need to ensure that purchasers of assets that are registered in a specialized registry or noted on a title certificate can have full confidence in the records of that system in assessing the quality of the title they are acquiring.

(b) Priority based on possession or control

20. As discussed in chapters IV, Creation of a security right (effectiveness as between the parties) (see paras. [...]) and V, Effectiveness of a security right against third parties (see paras. [...]), possessory security rights traditionally have been an important component of the secured transactions laws of most jurisdictions. In recognition of this fact, even in certain jurisdictions that have a first-to-register

priority rule, priority may also be established based on the date that the creditor obtained possession of the encumbered asset, without any requirement of a registration of a notice. In these jurisdictions, priority is often accorded to the creditor that first either registered a notice of its security right in the registration system or obtained a security right by possession.

21. Notwithstanding its importance, priority based on possession has significant disadvantages. First, it is usually commercially impractical in those situations where the grantor must maintain possession of the encumbered assets so as to use them in the operation of its business. Second, the requirement that the secured creditor maintain possession of the encumbered asset may impose undesirable administrative burdens on the creditor. Third, because possession often is not a public act, the holder of a security right made effective against third parties by possession will, under many legal regimes, have the burden of establishing precisely the time when it obtained possession.

22. Despite these disadvantages, priority based on possession is commercially useful in the case of certain types of encumbered asset, such as negotiable instruments (e.g. a cheque, bill of exchange or promissory note; see Introduction, sect. B, Terminology and rules of interpretation, para. [...]) or negotiable documents of title (e.g. a bill of lading or warehouse receipt; see Introduction, sect. B, Terminology and rules of interpretation, para. [...]), in which possession by the secured creditor can enable the creditor to prevent prohibited dispositions of the encumbered asset by the grantor. For these types of asset, the laws of many States provide that priority of a security right may be established either by possession or registration. In addition, a security right that becomes effective against third parties by possession is generally accorded priority over a security right made effective against third parties only by registration, even if the registration occurs first. This result is consistent with the expectations of the parties in the case of negotiable instruments and negotiable documents, because rights in such assets are traditionally transferred by possession.

23. In some States, the concept of possession has evolved into the more sophisticated concept of “control”, according to which a secured creditor may be deemed to have possession of an encumbered asset if it is able, by contract with the person holding actual possession of the asset, to control the disposition of the asset. In those States, control is recognized as a method of making a security right effective against third parties. In the case of certain types of asset, such as the proceeds under an independent undertaking, control may be the exclusive method for achieving effectiveness against third parties. In such a case, priority is accorded to a security right in such an asset only if the secured creditor is deemed to have control with respect to the asset. In the case of other types of asset, such as the right to the payment of funds credited to a bank account, third-party effectiveness may be based on either control or registration in the general security rights registry. Here, the priority system generally awards priority to a security right made effective by control over a security right made effective by an alternative method.

(c) Alternative priority rules

24. In jurisdictions in which there is no registration system for security rights, both effectiveness of a security right against third parties and priority are often based on the time when the security right is created. In those jurisdictions, although

non-possessory security rights may be permitted (often in the form of retention-of-title sales, transfers of title to tangible property or assignments of receivables for security purposes), creditors typically seek to ascertain the existence or non-existence of competing rights through representations by the grantor or information available in the market. In those jurisdictions, because there is no system to determine the priority of creditors with security rights in the same asset, it is difficult or impossible for a grantor to grant more than one security right in the same asset and thus to utilize fully the value of its assets to obtain secured credit. However, the secured obligation may be assigned (e.g. by the retention-of-title seller) together with the right securing it, but this approach often results in costs to the seller that are passed on to the end-buyer (in addition to the cost of the initial acquisition financing reflected in the price of the goods or the interest rate of the credit).

25. Some jurisdictions have adopted a special priority rule with respect to certain types of encumbered asset. For example, in some jurisdictions, effectiveness of a security right in a receivable against third parties and competing claims is based on the time that the debtor of the receivable is notified of the existence of the security right. However, this system is not conducive to the promotion of secured credit for a number of reasons. First, it does not permit the creditor to determine, with a sufficient degree of certainty at the time it extends credit, whether there are any competing security rights in the receivables. Second, the system does not provide an efficient way of obtaining security rights in future receivables because notification of the debtors of future receivables may not be possible at the time of the initial extension of credit and therefore debtors of the future receivables must be notified as the future receivables arise (except in the case of future receivables expected to arise under a long-term contract that exists at the time when credit is extended). Third, if there is a large number of debtors of receivables, notification may be costly. Fourth, many grantors may not wish to have their customers directly notified of the existence of a security right in their receivables.

3. Extent of priority

26. In order to encourage creditors to extend secured credit, it is essential that they be able to determine at the time they make a commitment to extend credit whether the priority of their security right will extend to the entire secured obligation owed to them or just to a portion of it. Specifically, they must be able to determine whether priority will extend only to the credit they extend contemporaneously with the conclusion of the security agreement or whether it will extend to: (a) obligations that arise thereafter pursuant to the terms of the security agreement (e.g. future advances under a revolving credit agreement); or (b) contingent obligations that become actual obligations thereafter upon the occurrence of the contingency (e.g. obligations that become payable under a guaranty).

27. In some jurisdictions, the same priority is accorded to the entire secured obligation, regardless of the time when the obligation arises. Under such an approach, a security right may extend to all secured monetary and non-monetary obligations owed to the secured creditor, including principal, costs, interest and fees. Priority is unaffected by the date on which an advance or other obligation secured by the security right is made or incurred. This means that a security right may secure

future advances under a credit facility with the same priority as advances made under the credit facility contemporaneously with the creation of the security right.

28. For example, in the case of a loan facility under which the lender has agreed on Day 1 to make advances to the grantor from time to time for the entire one-year term of the facility, secured by a security right in substantially all of the grantor's assets, the security right will have the same priority for all of the advances made, regardless of whether they are made on Days 1, 35, or 265.

29. In the case of credit extended for the delivery of goods or services in instalments matching deliveries of goods or services, this approach results in the entire claim being treated as coming into existence at the time when the contract is entered into and not at the time of each delivery of goods or services. The rationale for this approach is that it is the most cost-efficient approach (e.g. the secured creditor need not determine priority each time it extends credit) and minimizes the risk to the grantor that subsequent extensions of credit under the security agreement will be interrupted if the secured creditor determines that a future advance does not have priority.

30. In other jurisdictions, priority is limited in one of two ways. First, priority may be limited to the amount of debt existing at the time of the creation of a security right. The advantage of this approach is that it may (though not necessarily) match priority with the contemplation of the parties at the time of creation. The disadvantage of this approach is that it requires creditors to conduct additional due diligence (e.g. searches for new registrations) and to execute additional agreements and make additional registrations for amounts of credit extended subsequent to the time of the creation of a security right. This is particularly problematic in the case of revolving credit facilities, which represent one of the most effective means of providing secured credit, since this type of credit facility most efficiently matches the grantor's unique borrowing needs (see chap. II, Scope of application and other general rules, sect. F, Examples of financing practices covered, paras. [...]).

31. In yet other jurisdictions, priority is limited to the maximum amount specified in the notice registered in a public registry with respect to the security right. The rationale for this approach is that it encourages subordinate financing by encouraging prospective subordinate creditors to extend credit on the "equity" in encumbered assets (e.g. the value of the encumbered assets in excess of the maximum amount secured by the higher-ranking security right referred to in the registered notice). One argument against this approach is that it merely encourages secured creditors to inflate the amount mentioned in the registered notice to include an amount greater than that contemplated at the time of the security agreement to accommodate unanticipated future advances (see chap. VI, The registry system, paras. [...]).

32. In yet other jurisdictions, priority is accorded to all amounts of credit, even if extended after the creation of the security right, and for all contingent obligations that may arise after the creation of the security right, without the need to specify a maximum amount. In such systems, a security right may extend to all secured monetary and non-monetary obligations owed to the secured creditor and secured by the security right, including principal, costs, interest and fees, as well as performance obligations and other contingent obligations. Priority is unaffected by the date on which an advance or other obligation secured by the security right is

made or incurred. This means that a security right may secure future advances under a credit facility with the same priority as advances made under the credit facility contemporaneously with the creation of the security right (see A/CN.9/631, recommendations 74 and 76).

33. The Guide recommends that the priority of a security right should extend to all obligations secured under a security agreement. However, if a State determines that limiting the maximum amount of the secured obligation in the registered notice will encourage subordinate lending, priority may be limited to the maximum amount stated in the registered notice (see A/CN.9/631, recommendation 74; for the discussion of a possible limitation of priority in the case of a priority conflict with a judgement creditor, see paras. 90 and 91 below and recommendation 90).

4. Irrelevance of knowledge of the existence of the security right

34. In many legal systems, the ordering of priority according to the time of registration applies even if the creditor acquired its security right with knowledge of an existing unregistered security right. This rule is generally predicated on the premise that it is often difficult to prove that a person had knowledge of a particular fact at a particular time. This is particularly true in the case of a legal person. As a result, priority rules that are dependent on knowledge provide opportunities to subject registrations to challenge and complicate dispute resolution, thereby diminishing certainty as to the priority status of secured creditors and hence reducing the efficiency and effectiveness of the system.

5. Subordination

35. In most jurisdictions, a secured creditor may at any time subordinate, either unilaterally or by agreement, its security right to the right of an existing or future competing claimant. For example, Lender A, holding a security right in all existing and after-acquired assets of a grantor, may agree to permit the grantor to give a first-priority security right in a particular asset to Lender B so that the grantor could obtain additional financing from Lender B based on the value of that asset. The recognition of the validity of subordination of security rights reflects a well-established policy (see, for example, article 25 of the United Nations Assignment Convention).

36. However, subordination cannot affect the rights of a competing claimant without its consent. Thus, for example, a subordination agreement cannot adversely affect the priority of a secured creditor that is not a party to that agreement (see A/CN.9/631, recommendation 77). Under this approach, it is essential that the priority afforded by a subordination agreement continue to apply in an insolvency proceeding of the grantor. In fact, in some jurisdictions, such a provision in the insolvency laws may be necessary to empower the courts to enforce a subordination agreement and to empower insolvency representatives to deal with priority conflicts among parties to subordination agreements without risk of liability (see chap. XI, Insolvency, para. [...], and A/CN.9/631, recommendation 181).

37. Subordination of security rights and other proprietary rights in encumbered assets does not mean subordination of payments prior to default, which is a matter for contract law. Normally, prior to default and as long as the grantor services the loan or other credit received, the secured creditor is not entitled to enforce its

security right and priority is not an issue. Thus, in the absence of an agreement to the contrary, a grantor is not precluded from making payments on obligations secured by subordinate security rights (as to priority in a case where a subordinate claimant receives proceeds from the collection, sale or other disposition of an encumbered receivable, see chap. X, Post-default rights, paras. [...]).

6. Priority between security rights in the same encumbered assets

38. One of the cornerstones of an effective secured transactions regime is the manner in which it resolves priority disputes among competing security rights in the same encumbered assets. Such priority disputes may involve security rights that are made effective against third parties by registration, security rights that are made effective against third parties by another method, or a combination of security rights that are made effective against third parties by registration and security rights that are made effective against third parties by another method.

39. In many legal systems that have a general security rights registry, priority among security rights that were made effective against third parties by registration, subject to limited exceptions (see para. 45 below), is determined by the order in which registration occurs, regardless of the order of creation, even if one or more of the requirements for the creation of a security right were not satisfied at that time (see A/CN.9/631, recommendation 78, subpara. (a)).

40. This approach may be illustrated by the following example. A Grantor applies to Secured Creditor 1 for a loan, to be secured by a security right in all of the Grantor's existing and future equipment (a security right that may be made effective against third parties by registration of a notice in the general security rights registry). On Day 1, Secured Creditor 1 conducts a search of the registry, which confirms that no other notices have been filed with respect to security rights of other creditors in the Grantor's equipment. On Day 2, Secured Creditor 1 enters into a security agreement with the Grantor, in which Secured Creditor 1 commits to make the requested secured loan. On Day 3, Secured Creditor 1 registers a notice of the security right in the general security rights registry, but it does not make the loan to the Grantor until Day 5. Thus, the security right of Secured Creditor 1 was created and became effective against third parties on Day 5 (i.e. the first time when all of the requirements for creation and third-party effectiveness were satisfied). However, on Day 3, the Grantor enters into a security agreement with Secured Creditor 2, providing for a loan to be made by Secured Creditor 2 to the Grantor to be secured by a security right in the Grantor's existing and future equipment, and on the same day Secured Creditor 2 registers a notice of the security right in the general security rights registry and grants the loan to the grantor. As a result, the security right of Secured Creditor 2 was created and made effective against third parties on Day 3. Under the first-to-register approach described above, Secured Creditor 1's security right would have priority over Secured Creditor 2's, regardless of the fact that Secured Creditor 2's security right was created and made effective against third parties before Secured Creditor 1's security right.

41. The primary reasons for this approach are: (a) to encourage advance registration (which provides notice to third parties); and (b) to provide certainty to secured creditors by enabling them to determine the priority of their security rights before they extend credit. In the above example, if Secured Creditor 1 searches the registry on Day 2 after it registers its notice and determines that there are no other

notices in the registry that cover the relevant encumbered asset, Secured Creditor 1 can make its loan on Day 5 knowing with certainty that its security right will have priority over any other security right in the encumbered asset that may be created by the grantor in the future, because the priority of Secured Creditor 1's security right dates back to the time of its registration. By enabling Secured Creditor 1 to achieve this high level of certainty, the first-to-register approach can be a significant factor in promoting secured credit.

42. This certainty would not exist under an alternative approach, adopted in some jurisdictions, that accords priority to the first security right to become effective against third parties, since there would always be a risk that another security right could achieve third-party effectiveness, and thus priority, after Secured Creditor 1 conducts its search of the record but before it makes its loan. This risk would exist regardless of how short that time period might be.

43. In the case of a priority dispute among security rights made effective against third parties by methods other than registration, priority is normally accorded to the security right that is first made effective against third parties (see A/CN.9/631, recommendation 78, subpara. (b)). This rule would apply, for example, in a situation where one security right in a particular encumbered asset was made effective against third parties by possession and another security right in the same asset was made effective automatically upon its creation. In the case of security rights achieving third-party effectiveness by possession, there is no need for a "first-to-obtain-possession" rule analogous to the "first-to-register" rule, as typically a secured creditor would obtain possession of the encumbered asset at the same time it extends credit. In any case, such a "first-to-obtain-possession" rule would not be necessary for security rights in negotiable instruments or negotiable documents, if possession of them would give a superior right than is obtained by registration (see A/CN.9/631, recommendations 99 and 107).

44. In the case of priority disputes among security rights made effective against third parties by registration and security rights made effective against third parties by other methods, priority is accorded to the first security right to be registered or made effective against third parties, whichever occurs first (see A/CN.9/631, recommendation 78, subpara. (c)). This rule represents a logical extension of the first-to-register rule, using the registry as a basis for enabling secured creditors to achieve a high level of certainty with respect to the priority of their security rights. The rule also encourages the use of the registry for making security rights effective against third parties.

45. As noted above (see para. 39), the priority rules discussed herein are subject to limited exceptions. These exceptions reflect special priority rules relating to certain types of transaction or encumbered asset based on special policy or practical considerations relating to such transactions or assets. These types of transaction or asset are: (a) acquisition security rights (unitary approach) or acquisition financing rights (non-unitary approach) (see A/CN.9/631, recommendations 189-195, 198 and 199, in chap XII, Acquisition financing rights, sects. A and B, respectively); (b) cases in which third-party effectiveness is achieved by registration in a specialized registry (as is often the case for ships or aircraft) or notation on a title certificate (as is often the case for automobiles) (see A/CN.9/631, recommendations 83 and 84); (c) cases in which third-party effectiveness of security rights in rights to payment of funds credited to a bank account or proceeds under an independent

undertaking may be achieved by control (see A/CN.9/631, recommendations 101 and 105); (d) cases in which third-party effectiveness of security rights in negotiable instruments or negotiable documents may be achieved by possession (see A/CN.9/631, recommendations 99 and 107); (e) cases involving security rights in attachments (see A/CN.9/631, recommendations 93-95); and (f) situations involving security rights in masses of goods and products (see A/CN.9/631, recommendations 96-98).

7. Priority of a security right in after-acquired property

46. As discussed in greater detail in chapter IV, Creation of a security right (see paras. [...]), in some legal systems a security right may be created in property that the grantor may acquire in the future ("after-acquired property"). Such a security right is obtained automatically at the time the grantor acquires the property without any additional steps being required at that time. As a result, the costs incidental to the creation of the security right are minimized and the expectations of the parties are met. This is particularly important with respect to inventory that is continuously being acquired for resale, receivables that are continuously being collected and regenerated (see chap. II, Scope of application and other general rules, sect. F, Examples of financing practices covered, paras. [...]) and, to a lesser extent, equipment which is periodically being replaced in the normal course of the grantor's business.

47. The recognition of automatic creation of a security right in after-acquired property without additional steps being required at the time when the assets come into existence raises the question of whether the priority dates from the time when the security right is first registered or becomes effective against third parties, or from the time the grantor acquires the property. Different legal systems address this matter in different ways. The approach of some legal systems depends on the nature of the creditor competing for priority (with priority dating from the date of registration or third-party effectiveness vis-à-vis other consensual secured creditors, and from the date of acquisition by the grantor vis à vis all other creditors). It is generally accepted that dating priority from the time of registration or third-party effectiveness, rather than from the date the grantor acquires rights in the after-acquired assets, is the most efficient and effective approach in terms of promoting the availability of secured credit (see, for example, art. 8, para. 2, of the United Nations Assignment Convention). Thus, effective secured transactions regimes specify that a security right in after-acquired assets of the grantor has the same priority as a security right in assets of the grantor owned or existing at the time the security right is initially registered or made effective against third parties (see A/CN.9/631, recommendation 79).

8. Priority of a security right in proceeds

48. If a creditor has a security right in proceeds (for the definition of "proceeds", see Introduction, sect. B, Terminology and rules of interpretation, para. [...]), issues will arise as to the priority of that security right as against the rights of other competing claimants. Competing claimants with respect to proceeds may include, among others, another creditor of the grantor that has a security right in the proceeds and a creditor of the grantor that has obtained a right by judgement or execution against the proceeds.

49. Property that constitutes proceeds to one secured creditor may constitute original encumbered assets to another secured creditor. For example, Creditor A may have a security right in all of the grantor's receivables by virtue of its security right in all of the grantor's existing and future inventory and the proceeds arising upon the sale or other disposition thereof, and Creditor B may have a security right in all of the grantor's existing and future receivables as original collateral. If the grantor later sells on credit inventory that is subject to the security interest of Creditor A, both creditors have a security right in the receivables generated by the sale: Creditor A has a security right in the receivables as proceeds of the encumbered inventory, and Creditor B has a security right in the receivables as original encumbered assets.

50. The priority rules may differ depending on the nature of the competing claimant. When the competing claimant is another secured creditor, the priority rules for rights in proceeds of original encumbered assets may be derived from the priority rules applicable to rights in original encumbered assets. In a legal system in which the first right in particular property that is reflected in a registration has priority over the rights of a competing claimant, that same rule could be used to determine the priority when the original encumbered asset has been transferred and the secured creditor now claims a right in proceeds. If a registration was made with respect to the right in the original encumbered asset before the competing claimant made a registration with respect to the proceeds, the first security right could be given priority (see A/CN.9/631, recommendation 80).

51. In cases in which the order of priority of competing rights in the original encumbered asset is not determined by the order of registration (as is the case, for example, with acquisition financing rights that enjoy a super-priority), a separate determination will be necessary for the priority rule that would apply to proceeds (see chap. XII, Acquisition financing rights, paras. [...]).

9. Continuity in priority

52. In jurisdictions in which the third-party effectiveness of a security right may be established by more than one method (e.g. automatically, by registration, by possession or by control), a question arises as to whether a secured creditor that initially established the priority of its security right by one method should be permitted to change to another method without losing the original priority. In principle, there is no reason for a security right to lose its priority in this situation, provided there is no time during which the security right is not effective against third parties, so that the security right is subject to one method of third-party effectiveness or another at all times.

53. For example, if a security right in an asset first becomes effective by registration and the secured creditor subsequently obtains possession of the asset while the registration is still effective, the security right remains effective as against third parties and priority relates back to the time of registration. If, however, the secured creditor obtains possession of the asset after the registration has lapsed through the passage of time or otherwise, the priority of the security right dates from the time when the secured creditor obtained possession (see A/CN.9/631, recommendations 81 and 82; see also recommendations 47 and 48, which provide that third-party effectiveness is continuous and, if it lapses, it dates from the time it is re-established).

10. Priority of a security right registered in a specialized registry or noted on a title certificate

54. In many jurisdictions, a security or other right (such as the right of a buyer or lessee of an encumbered asset) may be registered in the general security rights registry or in a specialized registry, or it may be noted on a title certificate (see A/CN.9/631, recommendation 39). The question arises in this case as to which right has priority, as between the right registered in the general security rights registry and the right registered in the specialized registry or noted on a title certificate.

55. In many jurisdictions, a security right or other right registered in a specialized registry or noted on a title certificate has priority over a security right registered in a general registry (see A/CN.9/631, recommendation 83). The reason for this approach is to enable specialized registries to serve effectively their primary purpose of protecting buyers of the assets subjected to specialized registration. Under this approach, buyers of such assets can have full confidence in the completeness of the records in the system when assessing the quality of the title they are acquiring.

11. Rights of buyers, lessees and licensees of encumbered assets

(a) General

56. When a grantor sells assets that are subject to existing security rights, the buyer, lessee or licensee has an interest in receiving the assets free and clear of any security right, whereas the existing secured creditor has an interest in maintaining its security right in the assets sold (subject to certain exceptions; see para. 59 below). It is important that priority rules address both of these interests and that an appropriate balance be struck. If the rights of a secured creditor in particular assets are put at risk every time its grantor sells such assets, their value as security would be severely diminished and the availability of secured credit based on the value of such assets would be jeopardized.

57. The general principle is that a buyer or other transferee takes an encumbered asset subject to a security right and a lessee or licensee's rights are limited by a security right (*droit de suite*; see chap. V, Effectiveness of a security right against third parties, paras. [...]; see also A/CN.9/631, recommendations 32 and 85). In other words, the secured creditor may follow the asset in the hands of the buyer or other transferee, lessee or licensee. Exceptions to this general principle with respect to each of these three types of transaction are discussed below.

(b) Rights of buyers

58. As already mentioned (see chap. V, Effectiveness of a security right against third parties, paras. [...]; and chap. IV, Creation of a security right, paras. [...]), when an encumbered asset is sold, the secured creditor retains its security right in the original encumbered asset and also obtains a security right in the proceeds of the sale. In this situation, a question arises as to whether the security right in proceeds should replace the security right in the encumbered asset. It is sometimes argued that it should, on the premise that the secured creditor is not harmed by a sale of the assets free of its security right so long as it retains a security right in the proceeds of the sale. However, this would not necessarily protect the secured creditor, because proceeds are often not as valuable to the creditor as the original encumbered assets. In many instances, the proceeds may have little or no value to the creditor as

security (e.g. a receivable that cannot be collected). In other instances, it might be difficult for the creditor to identify the proceeds and its claim to the proceeds may, therefore, be illusory. In addition, there is a risk that the proceeds, even if they are of value to the secured creditor, may be dissipated by the seller that receives them, leaving the creditor with nothing. Jurisdictions have taken a number of different approaches to achieving this balance between the interests of secured creditors and persons buying encumbered assets from grantors in possession. The Guide takes the position that the secured creditor should retain its security right in the original encumbered asset and also a security right in the proceeds of its sale or other disposition (see A/CN.9/631, recommendations 18, 32, 40, 41 and 85). In any case, the secured creditor cannot receive more than it is owed.

59. However, most States recognize two exceptions to the general principle that a security right in an asset continues to encumber the asset after its transfer, and the Guide does also. The first exception relates to situations in which the secured creditor expressly authorizes the sale (see A/CN.9/631, recommendation 86). A secured creditor may authorize such a sale, for example, because the proceeds are sufficient to secure payment of the secured obligation or because the grantor gives other assets as security. The second exception refers to situations in which the authorization by the secured creditor is inferred, because the encumbered assets are of such a nature that the secured party expects them to be sold free of the security right, or where it is in the best interest of the secured creditor that they be sold free of the security right (see A/CN.9/631, recommendation 87). States have framed this second exception in a number of different ways, as described in the following paragraphs.

(i) *The ordinary-course-of-business approach*

60. One approach taken in many jurisdictions is to provide that sales of encumbered assets consisting of inventory made by the grantor in the ordinary course of its business will result in the automatic extinction of any security rights that the secured creditor has in the assets without any further action on the part of the buyer, seller or secured creditor. The corollary to this rule is that when a sale of inventory is outside the ordinary course of the grantor's business, or when the sale relates to an asset other than inventory, the exception will not apply; such a sale does not extinguish the security right and the secured creditor may, upon a default by the grantor, enforce its security right against the encumbered asset in the hands of the buyer (unless, of course, the secured creditor has consented to the sale). Where the security agreement so provides, the sale itself may constitute a default entitling the secured creditor to enforce its security rights; otherwise, the secured creditor cannot do so until default has occurred (see A/CN.9/631, recommendation 87, subpara. (a)).

61. Under this approach, two requirements must be satisfied for the encumbered asset to be sold free of the security right. The first requirement is that the seller of the encumbered assets must be in the business of selling assets of that kind. Thus, the encumbered asset cannot be something that the seller does not typically sell. In addition, the sale cannot be concluded in a manner different than the manner typically followed by the seller (e.g. a sale by the seller outside of its typical distribution channels, as would be the case if the seller normally sells only to retailers and the sale at issue is to a wholesaler). The second requirement is that the

buyer must not have knowledge that the sale violates the rights of a secured creditor under a security agreement (for a rule of interpretation with respect to “knowledge”, see Introduction, sect. B, Terminology and rules of interpretation, para. [...]). This would be the case, for example, if the buyer had knowledge that the sale was prohibited by the terms of the security agreement. On the other hand, mere knowledge on the part of the buyer of the fact that the asset was subject to a security right would be insufficient. This approach has the advantage that it is consistent with the commercial expectation that the grantor will sell its inventory of goods (and indeed must sell it to remain financially viable), and that buyers of the goods will take them free and clear of existing security rights. Without such an exception to the principle that the security right continues in the asset in the hands of a buyer, a grantor’s ability to sell goods in the ordinary course of its business would be greatly hampered, because buyers would have to investigate claims to the goods prior to purchasing them. This would result in significant transaction costs and would greatly impede ordinary-course transactions.

62. This approach provides a simple and transparent basis for determining whether goods are sold free and clear of security rights. For example, the sale of equipment by an equipment dealer to a manufacturer that will use the equipment in its factory is clearly a sale of inventory in the ordinary course of the dealer’s business, and the buyer should automatically take the equipment free and clear of any security rights in favour of the dealer’s creditors. This result is in line with the expectations of all parties, and the buyer is certainly entitled to presume that both the seller and any secured creditor of the seller expect the sale to take place in order to generate sales revenue for the seller. On the other hand, a sale by the dealer of a large number of machines in bulk to another dealer would presumably not be in the ordinary course of the dealer’s business.

63. With respect to sales that are outside the ordinary course of the grantor’s business, as long as the creditor’s security right is subject to registration in a general security rights registry, the buyer may protect itself by searching the registry to determine whether the asset it is purchasing is subject to a security right and, if so, seek a release of the security right from the secured creditor.

64. In some jurisdictions, buyers of encumbered assets are permitted to take the assets free of the security right, even where the transaction is outside the ordinary course of the seller’s business, if the assets are low-cost items, for the reason that, in those jurisdictions, the secured transactions law does not permit registration of a security right in a low-cost item, or because the cost of registrations is high in relation to the cost of the asset, and it would be unfair to impose that cost on a buyer of the item. On the other hand, it may be argued that, if an item is truly low-cost, a secured creditor is unlikely to enforce its security right against the asset in the hands of the buyer. In addition, determining which items are sufficiently low-cost to be so exempted would result in setting arbitrary limits, which would have to be continually revised to respond to cost fluctuations resulting from inflation and other factors.

65. In some jurisdictions that have a registration system that is searchable only by the grantor’s name, rather than by a description of the encumbered assets, a purchaser that purchases the assets from a seller that previously purchased the assets from the grantor (a “remote purchaser”) obtains the assets free of the security rights granted by such grantor. This approach is taken because it would be difficult for a

remote purchaser to detect the existence of a security right granted by a previous owner of the encumbered assets. In many instances, remote purchasers are not aware that the previous owner ever owned the asset and, accordingly, have no reason to conduct a search against the previous owner. The problem with this approach is that impairs the reliability of a security right given by a seller because of the possibility that the asset will be sold without the secured creditor's knowledge to a remote buyer, either innocently or with the specific intention of stripping away the security right. However, this cost is outweighed by the policy in favour of protecting buyers. For this reason, the Guide recommends that, where a buyer of tangible property takes free of a security right granted by its seller, a remote buyer will also take free of the security right (see A/CN.9/631, recommendation 88).

66. One disadvantage of the ordinary-course-of-business approach is that it might not always be clear to a buyer (particularly in international trade) what activities might be within the ordinary course of the seller's business. Another disadvantage might be that, if this rule were applied only to sales of inventory and not sales of other goods, there could be confusion on the part of the buyer as to whether the goods it is buying constitute inventory of the seller. On the other hand, it should be noted that, in a normal buyer-seller relationship, it is highly likely that buyers would know the type of business in which the seller is involved and in these situations the ordinary-course-of-business approach would be consistent with the expectations of the parties. Therefore, the number of cases in which such confusion exists are rare in practice. On balance, the benefits of the ordinary-course-of-business approach outweigh its disadvantages. This approach facilitates commerce and allows secured creditors and buyers to protect their respective interests in an efficient and cost-effective manner without undermining the promotion of secured credit (see A/CN.9/631, recommendation 87, subpara. (a)).

(ii) *Other approaches*

67. Many States have taken a different approach to determining whether a buyer of encumbered assets takes title to the assets free of a security right created by the seller. In those States, a buyer of goods takes free of any security rights in the goods if the buyer purchases the goods in good faith (i.e. with no actual or constructive knowledge of the existence of the security rights) and without regard to whether the sale was in the ordinary course of business of the seller. One argument in favour of this approach is that good faith is a notion known to all legal systems and there exists significant experience with its application both at the national and international levels. It has also been argued that a presumption should exist that a buyer is acting in good faith unless it is proven otherwise. However, the problem with such an approach is that it focuses on a subjective criterion relating to the disposition of the buyer (which also raises evidentiary issues), rather than on the commercial expectations of all parties involved.

(c) **Rights of lessees**

68. Priority disputes sometimes arise between the holder of a security right in an asset granted by the owner/lessor of the asset that is effective against third parties and a lessee of such asset. In this context, the issue is not whether the lessee actually takes the asset free of the security right in the sense that the security right is cut off. Rather, the issue is whether the lessee's right to use the leased asset on the terms and

conditions set forth in the lease agreement are unaffected by the security right. The principal issue in this situation is whether, if the holder of such a security right enforced it, the lessee could nevertheless continue using the asset so long as it continued to pay rent and otherwise abide by the terms of the lease. The general principle discussed above (see para. 58) applies here as well. The asset is, in principle, subject to the security right and thus the secured creditor may enforce its security right upon default of the grantor, even if it means interrupting the use of the asset by the lessee under the terms of the lease.

69. As in the case of buyers of tangible property subject to a pre-existing security right, many jurisdictions recognize two exceptions to this general principle. Under either exception, the security right does not cease to exist. However, for the duration of the lease, the right of the secured creditor is limited to the lessor's interest in the property and the lessee may continue to enjoy uninterrupted use of the asset in accordance with the terms of the lease.

70. The first exception is a situation in which the secured creditor has authorized the grantor to enter into the lease unaffected by the security right (see A/CN.9/631, recommendation 86, subpara. (b) (i)).

[Note to the Commission: The Commission may wish to note that commentary with respect to the issue addressed in recommendation 86, subparagraph (b) (ii), will be added if the Commission decides that this subparagraph should be retained (see A/CN.9/631, recommendation 86, subpara. (b) (ii), note).]

71. The second exception relates to situations in which the lessor of the tangible property is in the business of leasing tangible property of that type, the lease is entered into in the ordinary course of the lessor's business and the lessee had no actual knowledge that the lease violated the rights of the secured creditor under the security agreement (see A/CN.9/631, recommendation 87, subpara. (b)). Such knowledge would exist if, for example, the lessee knew that the security agreement creating such security right specifically prohibited the grantor from leasing the property. However, the mere knowledge of the existence of the security right, as evidenced by a notice registered in the security registration system, would not be sufficient to defeat the rights of the lessee. This exception is based on similar policy considerations to those relating to the analogous exception for sales of goods in the ordinary course of the seller's business (see para. 66 above).

72. An effective secured transactions regime must also address the issue of a sub-lease. In situations in which the rights of a lessee of tangible property are deemed to be unaffected by a security right in the property granted by the lessor, it is generally considered appropriate that the rights of a sub-lessee will also be unaffected (see A/CN.9/631, recommendation 88).

(d) Rights of licensees

73. The same issues discussed above also arise in the context of licensing of intangible property that is subject to a security right created by the licensor and the general principle applicable to sales and leases of tangible property also applies to licences of intangible property (see A/CN.9/631, recommendation 85). Thus, if a security right in intangible property is effective against third parties, it will continue in the property in the hands of the licensee unless one of the exceptions mentioned below applies (see A/CN.9/631, recommendations 86 and 87).

74. The first exception is where the secured creditor has authorized the licence (see A/CN.9/631, recommendation 86, subpara. (b) (i)). As in the case of sales and leases of tangible property, it is generally thought to be unfair to penalize a licensee if the secured creditor has consented to the licensing.

75. The second exception (also analogous to similar exceptions for sales and leases of tangible property) is a situation involving a non-exclusive licensing of intangible property, where the licensor is in the business of granting non-exclusive licences of such property, the lease is entered into in the ordinary course of the licensor's business, and the licensee had no knowledge that the licence violated the rights of the secured creditor under the security agreement (see A/CN.9/631, recommendation 87, subpara. (c)). As in the case of sales and leases of tangible property, it is generally recognized that such knowledge would exist if, for example, the licensee knew that the security agreement creating such security right specifically prohibited the grantor from licensing the property. However, the mere knowledge of the existence of the security right, as evidenced by a notice registered in the security registration system, would not be sufficient to defeat the rights of the licensee.

76. It is important to note that this second exception relates only to non-exclusive licences of intangible property and does not apply to exclusive licences. Where a grantor is engaged in the business of licensing intangible property, a secured creditor holding a security right in the property generally will normally expect its grantor to grant non-exclusive licences of the property in order to generate revenues. Moreover, it is not reasonable to expect the licensee under a non-exclusive licence to search the general security rights registry to ascertain the existence of security rights in the licensed property. On the other hand, an exclusive licence of intangible property, under which the licensee is granted the exclusive right to use the property throughout the world, or even in a specific territory, is generally a negotiated transaction that is out of the ordinary course of the licensor's business. In the case of an exclusive licence, it is reasonable to expect the licensee to search the general security rights registry to determine if the licensed property is subject to a security right created by the licensor and to obtain an appropriate waiver or subordination of priority.

77. Finally, as in the case of sales and leases of tangible property, a secured transactions regime must address the case of sub-licensees. And, as with sales and leases, a strong argument exists in favour of ensuring that sub-licensee is unaffected by a security right created by the original licensor in those situations where the law deems the licence itself to be unaffected by the security right (see A/CN.9/631, recommendation 88).

(e) Rights of donees

78. The position of a recipient of an encumbered asset as a gift (a "donee") is somewhat different from that of a buyer or other transferee for value. Because the donee has not parted with value, there is no objective evidence of detrimental reliance on the grantor's apparently unencumbered ownership. As a result, in a priority dispute between the donee of an asset and the holder of a security right in the asset granted by the donor, a strong argument exists in favour of awarding priority to the secured creditor, even in circumstances where the security right was not otherwise effective against third parties. Accordingly, the general rule is that a

security right follows the asset in the hands of a transferee (see A/CN.9/631, recommendation 85) and exceptions are made only for transferees for value, such as buyers, lessees or licensees (see A/CN.9/631, recommendations 86-88).

12. Priority of preferential claims

79. In many jurisdictions, as a means of achieving a general social goal (e.g. protection of tax revenue or employee wages), certain unsecured claims are given priority, within or even outside insolvency proceedings, over other unsecured claims and, in some cases, over secured claims (including secured claims previously registered). For example, to protect claims of employees and the State, claims for unpaid wages and unpaid taxes are in some jurisdictions given priority over previously existing security rights. Because social goals differ from jurisdiction to jurisdiction, the precise nature of these claims (e.g. whether they relate to taxes, employee-related claims or other types of claims) and the extent to which they are afforded priority, also differ.

80. The advantage of establishing these preferential claims is that a social goal may be furthered. The possible disadvantage is that these types of priorities can proliferate in a fashion that reduces certainty among existing and potential creditors, thereby impeding the availability of secured credit. In addition, even if the preferential claims can be ascertained with certainty by an existing or potential creditor, such claims (whether arising within or outside of insolvency proceedings) will adversely affect the availability and cost of secured credit. The reason is that, as such claims diminish the economic value of an asset to a secured creditor, creditors will often shift the economic burden of such claims to the grantor by increasing the interest rate or by withholding the estimated amount of such claims from the available credit.

81. To avoid discouraging secured credit, the availability of which is also a social goal, the various social goals should be carefully weighed in deciding whether to provide a preferential claim. The trend with respect to preferential claims in modern legislation is that they are limited and permitted only to the extent that there is no other effective means of satisfying the underlying social objective and when the jurisdiction has determined that the impact of such claims on the availability of secured credit is acceptable. For example, in some jurisdictions, tax revenue is protected through incentives on company directors to address financial problems quickly or face personal liability, while wage claims are protected through a public fund.

82. If preferential claims exist, the laws establishing them should be sufficiently clear and transparent so that a creditor is able to calculate the potential amount of the preferential claims in advance and to protect itself. Some jurisdictions have achieved such clarity and transparency by listing all preferential claims in one law or in an annex to the law. Other jurisdictions have achieved it by requiring that preferential claims be registered in a public registry and by according priority to such claims only over security rights registered thereafter. In those jurisdictions, priority is awarded to security rights that are registered before the preferential claims are registered to the extent they secure obligations in existence as of the date the preferential claim is registered or obligations arising within a specified period thereafter (such as 45 60 days after the preferential claims are registered), if the pre-existing security rights secure a commitment to provide future advances.

However, a problem with adopting a registration requirement with respect to some preferential claims that arise immediately prior to an insolvency proceeding is that it may be difficult to calculate their amount or to file in time. The Guide seeks to achieve a balance with respect to preferential claims by not recommending registration of such claims, but rather recommending that the law should limit such claims, both in number and amount, and that, to the extent preferential claims exist, they should be described in the law in a clear and specific way (see A/CN.9/631, recommendation 89). In this way, prospective secured creditors can evaluate the possibility of such claims in deciding whether to extend secured credit.

13. Priority of rights of judgement creditors

83. In some legal systems, a security right that is effective against third parties is accorded priority over the rights of an unsecured creditor, unless the unsecured creditor has obtained a judgement with respect to its claim and has taken the actions prescribed by law to enforce the judgement (such as seizing specific property or registering the judgement).

84. Judgement creditors are given this priority in recognition of the legal steps they have taken to enforce their claims on the grounds that this result is not unfair to other general unsecured creditors because they have the same rights to reduce their claims to judgement but have not taken the time and the expense to do so. However, to avoid giving judgement creditors excessive powers in legal systems where a single creditor may institute insolvency proceedings, insolvency laws often provide that security rights arising from judgements obtained within a specified period of time prior to the insolvency proceeding may be avoided by the insolvency representative. In various jurisdictions, the judgement creditor's property right is extinguished or not recognized in the judgement debtor's insolvency proceeding.

85. Effective secured transactions regimes typically address this type of priority dispute by balancing carefully the interests of the judgement creditor and the secured creditor. On the one hand, the judgement creditor has an interest in knowing at a certain point of time whether there is sufficient value left unencumbered in the grantor's assets for the enforcement of the judgement. On the other hand, a strong policy argument exists in favour of protecting the rights of the secured creditor, on the ground that the secured creditor expressly relied on its security right as a basis for extending credit.

86. Many legal systems seek to achieve this balance by giving priority to a security right over a property right of a judgement creditor, so long as the security right became effective against third parties before the judgement creditor's property right arises (see recommendation 90). There are one exception and two limitations to this rule.

87. The exception relates to acquisition financing rights in encumbered assets other than inventory or consumer goods. Priority is accorded to the acquisition financing right even if it is not effective at the time the judgement creditor obtains rights in the encumbered assets, so long as the security right is made effective against third parties within the applicable grace period provided for such security rights. A contrary rule would create an unacceptable risk for providers of acquisition financing that had already extended credit prior to the time when the judgement

creditor obtained its property right, and thus would discourage acquisition financing (see A/CN.9/631, recommendation 194).

88. The limitations to the rule mentioned above relate to limitations in the amount of credit given priority. The first limitation arises from the need to protect existing secured creditors from making additional advances based on the value of assets subject to judgement rights. There should be a mechanism to put creditors on notice of such judgement rights. In many jurisdictions in which there is a registration system, this notice is provided by subjecting judgement rights to the registration system. If there is no registration system or if judgement rights are not subject to the registration system, the judgement creditor might be required to notify the existing secured creditors of the existence of the judgement. In addition, the law may provide that the existing secured creditor's priority continues for a period of time (perhaps 45-60 days) after the judgement right is registered (or after the creditor receives notice), so that the creditor can take steps to protect its rights accordingly. The less time an existing secured creditor has to react to the existence of judgement rights and the less public such judgement rights are made, the more their potential existence will negatively affect the availability and cost of credit facilities that provide for future advances.

89. The Guide recommends the secured creditors on record should be notified and that the priority of any security right should extend to credit extended by the secured creditor a certain number of days (e.g. 30-60) after the secured creditor had been notified of the existence of the judgement creditor's right (see A/CN.9/631, recommendation 90, subpara. (a)). Although this limitation imposes an obligation on the judgement creditor to notify the secured creditor of its right, that is generally not overly burdensome for the judgement creditor and relieves the secured creditor of the obligation to search frequently for judgements against the grantor (which would be a far more burdensome and costly obligation). The existence of the grace period is justified on the ground that it prevents the secured creditor under a revolving loan facility or other credit facility providing for future extensions of credit from having to cut off loans or other credit immediately, a circumstance that could create difficulties for a grantor or even force a grantor into insolvency.

90. The second limitation relates to future advances. The priority of a security right may be extended to advances made even after the secured creditor is notified of the judgement creditor's rights, provided the advance was irrevocably committed, prior to that notice, in a fixed amount or an amount that may be determined pursuant to a specified formula (see A/CN.9/631, recommendation 90, subpara. (b)). A security right securing credit not committed but extended before the secured creditor is notified of the judgement creditor's rights does not have priority on the ground that the judgement creditor should be able to determine at some point in time whether any value would be left for the judgement creditor to enforce the judgement.

91. The rationale for this rule is that it would be unfair to deprive a secured creditor that has irrevocably committed to extend credit of the priority that it relied on when entering into the commitment. The contrary argument is that, under many credit facilities, the existence of a judgement would constitute an event of default, entitling the secured creditor to cease extending additional credit. However, that result would be unfair to the grantor, because the sudden loss of credit could well force the grantor into an insolvency proceeding. By recommending this rule, the

Guide resolves this priority dispute in favour of the continued extension of credit under an irrevocable credit facility, in the interest of allowing the grantor to remain in business (a circumstance that may result in the greatest chance for the grantor to pay all of its obligations).

14. Priority of rights of persons providing services with respect to an encumbered asset

92. In some legal systems, creditors that have provided services with respect to or have added value to tangible encumbered assets in some way, such as by storing, repairing or transporting them, are given a property right in the assets while the assets are in the possession of the service providers. This treatment of service providers has the advantage of inducing them to continue providing services and of facilitating the maintenance and preservation of encumbered assets.

93. In many jurisdictions, the property right given to service providers in assets in their possession ranks ahead of other security rights in those assets. The rationale underlying this priority rule is that service providers are not professional financiers and should be relieved of searching the registry to determine the existence of competing security rights before providing services. Moreover, the rule facilitates services such as repairs and other improvements that often benefit secured creditors.

94. A question arises as to whether the priority given to service providers should be limited in amount or recognized only in certain circumstances. One approach is to limit priority to an amount (such as one month's rent in the case of landlords) and to recognize their priority over pre-existing security rights only where value is added which directly benefits the holders of the pre-existing security rights. This approach would have the advantage that the rights of secured creditors would not be unduly limited. It would have the disadvantage though that service providers that did not add value would not be protected and, in any case, the amount of the value added by the service providers would need to be determined, a requirement that may add costs and create litigation.

95. Another approach is to limit the priority of service providers to the reasonable value of services provided. Such an approach would reflect a fair and efficient balance between the conflicting interests. It would ensure reasonable protection of service providers, while avoiding difficult questions of proof as to the relative value of the encumbered assets before and after the services are rendered (see A/CN.9/631, recommendation 91).

15. Priority of a supplier's reclamation right

96. In many legal systems, a supplier selling goods on unsecured credit may, upon default or financial insolvency of the buyer, be given by law a right to reclaim the goods from the buyer within a specified period of time (known as the "reclamation period"). If an insolvency proceeding has commenced with respect to the buyer, applicable insolvency law will determine the extent to which the reclamation claimants would be stayed or their rights would otherwise be affected (see recommendations 39-51 of the UNCITRAL Insolvency Guide).

97. An important question is whether a reclamation claim relating to specific tangible property should have priority over a pre-existing security right in the same property. In other words the question is whether, if the inventory of the buyer

(including the property sought to be reclaimed), is subject to effective security rights in favour of a secured creditor, the reclaimed property should be returned to the seller free of such security rights. In some jurisdictions, the reclamation has a retroactive effect, placing the seller in the same position it was prior to the sale (i.e. holding property that was not subject to any security rights in favour of the buyer's creditors). However, in other jurisdictions the property remains subject to the pre-existing security rights, provided that the security right had become effective against third parties before the supplier exercises its reclamation right, on the basis that any other result would be unfair to a pre-existing creditor of the buyer that had relied on the existence of such property in extending credit, and would also promote uncertainty and thereby discourage inventory financing (see A/CN.9/631, recommendation 92).

16. Priority of a security right in an attachment

98. To the extent that a secured transactions regime permits security rights to be created in attachments to immovable property (as recommended by this Guide; see A/CN.9/631, recommendation 22), it includes rules governing the relative priority of a holder of security rights in an attachment to immovable property vis-à-vis persons that hold rights with respect to the related immovable property. A paramount consideration of such priority rules is to avoid unnecessarily disturbing well-established principles of immovable property law.

99. Such priority rules address a number of different priority conflicts. The first is a priority conflict between a security right in an attachment (or any other right in an attachment such as the right of a buyer or a lessee), that is created and made effective against third parties under immovable property law, on the one hand, and a security right in the attachment that is made effective against third parties under the movable property secured transactions regime, on the other hand. In this situation, out of deference to immovable property law, priority is accorded to the right created under immovable property law (see A/CN.9/631, recommendation 93).

100. A second priority conflict may arise between: (a) a security right in an encumbered asset that is either an attachment to immovable property at the time the security right becomes effective against third parties or that becomes an attachment to immovable property subsequently; and (b) a security right in the attachment (or other right in the attachment such as the right of a buyer or lessor) in the related immovable property. In this case, priority is accorded to the right described under (a), on the ground that, as both competing security rights achieved third-party effectiveness in the immovable property registry, priority should be determined according to the order of registration in the immovable property registry in order to preserve the reliability of that registry (see A/CN.9/631, recommendation 94).

101. The general rules applicable to the priority of security rights in movable property apply to priority conflicts between security rights in attachments to movable property. A special rule may be required to address a priority conflict between: (a) a security right in an attachment (or any other right in an attachment such as the right of a buyer or lessee) that was made effective against third parties by registration in a specialized registry or notation on a title certificate; and (b) a security right or other right in the related movable property that is registered subsequently. Typically, priority is given to the right under (a) in deference to the

policy in favour of preserving the integrity of specialized registries and title-notation systems (see A/CN.9/631, recommendation 95).

17. Priority of a security right in a mass or product

102. There are three types of potential priority contests that require special rules. Using the example of the ingredients in a cake, these three types are: (a) contests between security rights taken in the same items of tangible property that ultimately become part of a mass or product (e.g. sugar and sugar); (b) contests involving security rights in different items of tangible property that ultimately become part of a mass or product (e.g. sugar and flour); and (c) contests involving a security right originally taken in separate tangible property and a security right in the mass or product (e.g. sugar and cake).

(a) Priority of security rights in the same items of tangible property that become part of a mass or product

103. Security rights in items of tangible property that become commingled normally have the same priority vis-à-vis each other as they had in the separate property. The rationale for this rule is that the incorporation of tangible property into a mass or product should have no bearing on the respective rights of creditors with competing security rights in the separate items of tangible property (see A/CN.9/631, recommendation 96). This rule is predicated on the assumption that a secured creditor may not receive an amount greater than the value of the tangible property immediately before it became part of the mass or product (see A/CN.9/631, recommendation 23).

(b) Priority of security rights in different items of tangible property that become part of a mass or product

104. If security rights in different items of tangible property that ultimately become part of a mass or product continue in the mass or product, the security rights have the same priority and the issue is to determine the relative value of the rights. Normally, the secured creditors are entitled to share in the aggregate maximum value of their security rights in the mass or product according to the ratio of the value of their security rights (see A/CN.9/631, recommendation 97). Using the example of the cake, if the value of the sugar is 2 and the flour 5, while the value of the cake is 6, the creditors will receive two sevenths and five sevenths of 6, but neither secured creditor will receive more than the amount of its secured obligation. In any case, if the value of the mass or product is less than the amount of the secured obligations, there will be no value left for unsecured creditors.

(c) Priority of a security right originally taken in different items of tangible property as against a security right in the mass or product

105. Security rights in items of tangible property have priority over all security rights in the mass or product that extend to future property only if the former are acquisition security rights (see A/CN.9/631, recommendation 98). Otherwise, the general priority rules apply. This rule is intended to promote the availability of credit for the acquisition of tangible property, without which no mass or product could be produced.

B. Asset-specific remarks

106. This section of the commentary discusses issues with respect to security rights in types of asset that require special priority rules. Security rights in types of asset to which the general rules apply (e.g. tangible property or receivables) are discussed in section A above.

1. Priority of a security right in a negotiable instrument

107. Many jurisdictions have adopted special priority rules for security rights in negotiable instruments, such as cheques, bills of exchange and promissory notes (for the definition of “negotiable instrument”, see Introduction, sect. B, Terminology and rules of interpretation, para. [...]). These rules are a reflection of the importance of the concept of negotiability in those jurisdictions.

108. As discussed (see chap. V, Effectiveness of a security right against third parties, paras. [...]), in many jurisdictions security rights in negotiable instruments may be made effective either by registration of the security right in the general security rights registry or by transfer of possession of the instrument (see A/CN.9/631, recommendation 38). In these jurisdictions, priority is often accorded to a security right made effective against third parties by transfer of possession of the instrument over a security right made effective against third parties by registration, regardless of when registration occurs (see A/CN.9/631, recommendation 99). The rationale for this priority rule is that it resolves the priority conflict in favour of preserving the unfettered negotiability of negotiable instruments.

109. For the same reason, in those jurisdictions, priority is often accorded to a buyer or other transferee (in a consensual transaction), if that person either qualifies as a protected holder of the instrument under the law governing negotiable instruments (for a rule of interpretation with respect to the expression “law governing negotiable instruments”, see Introduction, sect. B, Terminology and rules of interpretation, para. [...]) or takes possession of the instrument and gives value in good faith and without knowledge that the transfer is in violation of the secured creditor’s rights (see A/CN.9/631, recommendation 100). It should be noted in this regard that knowledge of the existence of a security right on the part of a transferee of an instrument or a document does not mean, by itself, that the transferee did not act in good faith.

2. Priority of a security right in a right to payment of funds credited to a bank account

110. A comprehensive priority regime typically addresses a number of different priority conflicts relating to security rights in rights to payment of funds credited to a bank account (for a definition of “bank account”, see Introduction, sect. B, Terminology and rules of interpretation, para. [...]). One type of priority conflict is between a security right made effective against third parties by control and a security right made effective against third parties by a method other than control. In this situation, many jurisdictions accord priority to the security right made effective against third parties by control, because that outcome facilitates financial transactions that rely on funds credited to a bank account, relieving secured

creditors from the necessity of searching the general security rights registry (see A/CN.9/631, recommendation 101, first sentence). In a sense, the existence of a control agreement in this situation functions like a specialized security rights registry.

111. Another type of priority conflict is a conflict between two security rights, each of which is made effective by control. Here, the logical outcome is to accord priority to the security right that was first made effective by control (see A/CN.9/631, recommendation 101, second sentence). This conflict will not arise often in practice, because it is unlikely that a depositary bank will knowingly enter into more than one control agreement with respect to the same bank account in the absence of an agreement between both secured creditors as to how priority will be determined.

112. Yet another type of priority conflict is where one of the secured creditors is the depositary bank itself. In this situation, a strong argument exists in favour of according priority to the depositary bank (see A/CN.9/631, recommendation 101, third sentence), because that depositary bank generally will win in such a situation in any event by reason of its right of set-off under non-secured transactions law and a priority rule that favours the bank in this circumstance allows the conflict to be resolved within the confines of the secured transactions regime without resorting to other law. If a different rule were adopted, depositary banks would be reluctant to enter into any control agreements and, in any case, a secured creditor could obtain a subordination agreement from the bank before deciding to extend credit.

113. Jurisdictions that adopt this priority rule often make an exception for the circumstance in which the priority conflict is between the depositary bank and a secured creditor that obtains control of the bank account by becoming the customer of the depositary bank, and adopt a rule that accords priority to the customer. The rationale for this approach is that, by accepting the competing secured creditor as its customer, the depositary bank effectively agrees to subordinate its claim. Also, the depositary bank would often lose its right of set-off in this situation because there would be no mutuality between the depositary bank and the grantor since the bank account is not in the grantor's name.

114. A fourth type of conflict is a conflict between a security right in a right to payment of funds credited to a bank account and any rights of set-off the depositary bank might have against the grantor-client. To avoid undermining the bank-client relationship, secured transactions laws give priority to the depositary bank's rights of set-off (see A/CN.9/631, recommendation 102).

115. A fifth type of priority conflict is a conflict between a security right in a right to payment of funds credited to a bank account and a transferee of funds from the bank account initiated by the grantor. In this situation, a strong policy argument in favour of the free negotiability of funds supports a rule that accords priority to the transferee, so long as the transferee did not act in collusion with the holder of the bank account to deprive the secured creditor of its security right. Thus if the transferee takes the funds with knowledge that the transfer violates the security right under the security agreement, it takes the funds subject to the security right. The term "transfer of funds" is intended to cover a variety of transfers, including by cheque and electronic means of communication. (see A/CN.9/631, recommendation 103).

3. Priority of a security right in money

116. In the interest of maximizing the negotiability of money, many secured transactions regimes permit a transferee of money to take the money free of the claims of other persons, including the holders of valid security rights in the money (for the definition of “money”, see Introduction, sect. B, Terminology and rules of interpretation, para. [...]). As in the case of transferees of funds from a bank account, the only exception to this priority rule is if the transferee has colluded with the holder of the bank account to deprive the secured creditor of its rights (e.g. if the transferee has knowledge that the transfer of the money is in violation of the security agreement between the account holder and the secured party. On the other hand, mere knowledge of the existence of the security right does not defeat the rights of the transferee under this rule (see A/CN.9/631, recommendation 104).

4. Priority of a security right in proceeds under an independent undertaking

117. As already mentioned (see chap. V, Effectiveness of a security right against third parties, see para. [...]), a security right in proceeds under an independent undertaking is made effective against third parties only by control. As the typical method of achieving control in this context is by obtaining an acknowledgment, in the case of several potential payors (e.g. the guarantor/issuer, confirmer and several nominated persons), control is achieved only vis-à-vis each particular guarantor/issuer, confirmer or nominated person that gave an acknowledgment. Thus, the priority rule normally focuses on the particular person that is the payor.

118. Normally, a security right in proceeds under an independent undertaking that has been made effective by control, has, with respect to a particular guarantor/issuer, confirmer or nominated person that has given value under the independent undertaking, priority over all other security rights that have, with respect to that person, been made effective by a method other than control. As in the case of bank accounts (see para. 110 above), this rule is based on the need to facilitate transactions involving independent undertakings by relieving parties of the necessity of searching the general security rights registry. However, as between two security rights made effective against third parties by acknowledgement, priority is accorded to the first security right to be acknowledged (see A/CN.9/631, recommendation 105).

5. Priority of a security right in a negotiable document or goods covered by a negotiable document

119. Effective secured transactions regimes typically have rules that address at least two priority conflicts involving negotiable documents, such as negotiable warehouse receipts and bills of lading (for the definition of “negotiable document”, see Introduction, sect. B, Terminology and rules of interpretation, para. [...]). The first is a conflict between the holder of a security right in a negotiable document or the goods covered thereby, on the one hand, and a person to whom the document has been duly negotiated, on the other. In the interest of preserving negotiability under non-secured transactions law, priority is generally accorded to the transferee of the document (see A/CN.9/631, recommendation 106).

120. The second conflict is between the holder of a security right in the goods covered by the negotiable document that is derived from a security right in the

negotiable document and the holder of a security right in the goods resulting from another method (e.g. the creation of a direct security right in the goods). This type of conflict can arise in two distinct situations. One situation is where the security right in the goods was created while the goods were subject to the negotiable document. Here, a strong argument exists in favour of awarding priority to the holder of the security right in the document (see A/CN.9/631, recommendation 107). The second situation is where the security right in the goods became effective before the goods were covered by the negotiable document. In this situation, it is fair to award priority to that security right.

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

VIII. Rights and obligations of the parties

A. General remarks

1. Introduction

1. A security agreement sets out the bargain between the grantor and the secured creditor. Its substantive content will vary according to the needs and wishes of the parties. Typically, clauses in security agreements address three main themes. First, some provisions are included because they form part of the mandatory requirements for creating a security right. Rules relating to the identification of the encumbered asset and the secured obligation are of this type (for the definitions of “encumbered asset” and “secured obligation”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). In chapter IV (Creation of a security right (effectiveness as between the parties)), this Guide recommends that the formal requirements for creating a security agreement that is effective as between the parties should be minimal and easy to satisfy (see A/CN.9/631, recommendations 12-14).

2. The typical security agreement will also contain several terms specifying the rights and obligations of the parties once the agreement has become effective between them. Many of these terms deal with the consequences of a default by the grantor or the breach of an obligation by the secured creditor. Often the events constituting a default by the grantor and the remedies available to the secured creditor to enforce the terms of the security agreement are enumerated in detail. The significant impact that enforcement may have on the rights of third parties usually has led States to specify in some detail a series of mandatory rules governing default and enforcement (see chapter X, Post-default rights). Nonetheless, unless the terms of the security agreement relating to a creditor’s contractual rights and remedies conflict with mandatory rules or are waived by the grantor after default (see A/CN.9/631, recommendation 130) or by the secured creditor at any time (see A/CN.9/631, recommendation 131) they will govern the relationship between the parties once a default occurs.

3. In addition, security agreements usually contain a series of other provisions meant to regulate the relationship between the parties after creation but prior to default. That is, efficiency and predictability in secured transactions often call for additional detailed clauses aimed at covering particular aspects of the ongoing transaction. Many States actively encourage the parties themselves to fashion the terms of the security agreement to meet their own requirements. Nonetheless, these same States are also anxious to frame certain mandatory rules to govern pre-default rights and obligations (especially when third-party rights may be in play). However, in order to enhance the flexibility offered to grantors and secured creditors to tailor-make their agreement, States usually keep these mandatory pre-default rules to a minimum.

4. While States are generally reluctant to specify a full menu of mandatory rules governing the pre-default relationship between the parties, this does not mean that they have no interest in providing guidance to grantors and secured creditors. Indeed, many States enact a greater or lesser number of other, non-mandatory (or suppletive) rules detailing the parties’ rights and obligations before default,

should they not specify these terms in the security agreement. This chapter does not address all the situations where States may wish to develop non-mandatory rules. Rather, it offers only an indicative and non-exhaustive list of those non-mandatory rules concerning pre-default rights and obligations which are commonly found in contemporary national legislation.

5. The discussion that follows focuses on three policy issues. The first, examined in section A.2, relates to the principle of party autonomy and the extent to which parties should be free to fashion the terms of their security agreement (assuming that the agreement satisfies the substantive and formal requirements for the creation of a security right). The second, explored in section A.3, relates to the mandatory rules that should govern pre-default rights and obligations of grantors and secured creditors. The third, which is the subject of sections A.4 and A.5, concerns the type and number of non-mandatory rules that could be included in modern secured transactions legislation, so as to encompass new and evolving forms of secured transactions.

6. Section B of this chapter considers the various mandatory and non-mandatory rules that might be contemplated to deal with pre-default rights and obligations in relation to particular types of asset and transaction. The chapter concludes, in section C, with a series of recommendations.

2. Party autonomy

7. In chapter II (Scope of application and other general rules), this Guide announces the principle of party autonomy as one of the foundations of its basic approach (see A/CN.9/631, recommendation 8). The central idea is that, unless a State provides otherwise, the secured creditor and the grantor should be free to craft their security agreement as they see fit. While party autonomy gives credit providers significant power in determining the content of the security agreement, the expectation is that permitting the secured creditor and the grantor to structure their transaction and allocate pre-default rights and obligations as best suited to their objectives will normally permit grantors to gain wider access to secured credit.

8. The party autonomy principle has two distinct dimensions when applied to pre-default rights and obligations. The first is aimed at States. While States should be free to enact mandatory rules to govern the ongoing relationship between parties, their number should be limited and their scope clearly stated. The second is directed to the grantor and the secured creditor. Any agreement that derogates from or modifies non-mandatory rules only binds the parties to that agreement and does not affect the rights of third parties.

9. Legislative limitations on party autonomy in the form of mandatory rules can be found both within a secured transactions law and in other laws. So, for example, many States extensively regulate consumer transactions, often strictly limiting the capacity of secured creditors and grantors to design their own regime of pre-default rights and obligations. An example would be a rule that prohibits secured creditors from limiting the right of consumer grantors to sell or dispose of the encumbered assets. Likewise, many States impose limitations where property described as “family property” or “community property” is at issue. An example would be a rule that prevents secured creditors from limiting the use to which grantors may put such “family property”.

10. In addition to these mandatory rules that govern particular grantors and particular property, it is common for States to impose various mandatory rules of a more general character. These are usually found within the legislation that creates the secured transactions regime and, as noted, they most often relate to default and enforcement. But some also concern pre-default rights and obligations. These latter types of mandatory rules are discussed in the next section of this chapter.

11. Because party autonomy is the basic principle, the secured creditor and the grantor will typically set out in detail a number of structural elements of their agreement. At least six pre-default dimensions of the agreement are typically specified by the grantor and the secured creditor:

(a) They will agree on the assets to be encumbered and the conditions under which assets not initially encumbered may later become encumbered;

(b) They will define the obligation to be secured as well as provide for any future obligations that may be secured under the agreement;

(c) They will attempt to specify what the grantor can and cannot do with the encumbered assets (including the right to use, transform, collect fruits from and dispose of the property);

(d) They will specify if, when and how the creditor may obtain possession of the encumbered assets prior to default, and the rights of the creditor with respect to those encumbered assets in its possession;

(e) They will specify a series of representations, warranties and obligations that the grantor undertakes; and

(f) They will define the events triggering default (primarily of the grantor, but also of the secured creditor) under the agreement.

12. It is against this background of party autonomy and its usual scope as set out in the security agreement that the various mandatory and non-mandatory rules should be read.

3. Mandatory pre-default rules

(a) General

13. Mandatory rules relating to pre-default rights and obligations of the parties may be found both in secured transactions law and in other laws. Generally these rules are of three broad types. Some rules, which States usually enact in consumer protection or family property legislation, have a very particular scope and application. This Guide recognizes the importance that States may attach to these matters (see chapter II, Scope of application and other general rules). In order to achieve the maximum economic benefit from a secured transactions regime however, States should clearly specify the scope of these limitations on the parties' freedom to tailor pre-default rights and obligations to their needs and wishes.

14. Other pre-default mandatory rules focus on the substantive content that parties may include in their agreement. Usually these rules are conceived as general limitations on the rights of secured creditors. They can vary widely from State to State. For example, some States attempt to prevent creditor overreaching and over-collateralization by enacting rules that require creditors to grant a release over property that is no longer necessary to secure the outstanding balance of the

obligation due. Similarly, some States do not permit creditors to restrict the right of a grantor to use or transform the encumbered assets as long as this use or transformation is consistent with the nature and purpose of those assets.

15. Because of the importance that this Guide attaches to the principle of party autonomy it takes the position that States generally ought not to enact pre-default mandatory rules that restrict the number or nature of the obligations that secured creditors and grantors may require of each other. Still, the above concerns are often real and depending on the particular character of their national economy States may feel the need to more closely regulate certain aspects of the pre-default relationship between secured parties and grantors. Should they do so, however, it follows from the principle of party autonomy that such mandatory rules should (a) be expressed in clear and limited language; and (b) like similar rules in the post-default context, be based on recognized grounds of public policy (*ordre public*) such as good faith, fair dealing and commercial reasonableness (see A/CN.9/631, recommendations 128 and 129).

16. A third type of mandatory rule aims at ensuring that the fundamental purposes of a secured transactions regime are not distorted. Typically, States deploy rules of this type to impose minimum duties upon the party that has possession or control of the encumbered assets. So, for example, as the point of security is to provide a creditor with a priority right to claim, upon default, payment through the value of the encumbered asset, it would be consistent with the logic of the institution that grantors assume an obligation not to waste or otherwise allow the encumbered assets to deteriorate beyond what would be expected from normal usage.

17. Rules requiring the grantor and, in the case where the secured creditor has possession, the secured creditor to take reasonable care of the encumbered assets, and more generally rules directed to preserving the value of the encumbered assets, are meant to encourage responsible behaviour by parties to a security agreement. These types of mandatory rules are not, however, identical in impact to consumer-protection rules or mandatory rules stipulating the substantive content of a security agreement. The latter types of mandatory rule are constitutive of the security right itself and cannot be waived either at the time the agreement is negotiated or afterwards.

18. Mandatory rules setting out pre-default rights and obligations (or any mandatory rules) may not be derogated from in the security agreement. For example, parties may not contract out of their duty to take reasonable care of the encumbered assets. However, this does not always disable parties from waiving a breach of the duty after the fact. Many States provide that the secured creditor may later release the grantor from its pre-default obligations or may waive any breaches by the grantor (even of obligations imposed by mandatory rules). By contrast, given the usual dynamic between secured creditor and grantor, many of these same States also provide that the grantor cannot release the secured creditor from any duties imposed by mandatory rules.

19. The mandatory pre-default rules recommended in this Guide aim at policy objectives consistent with what have been defined as the core principles of an effective and efficient regime of secured transactions. They set out pre-default rights and obligations that (a) encourage parties in possession to preserve the pre-default

value of the encumbered assets; and (b) ensure that once the obligation is paid, the grantor recovers the full use and enjoyment of the previously encumbered assets.

20. Chapter XII (Acquisition financing rights) of this Guide contemplates that some States might choose to preserve retention-of-title and financial lease transactions as independent forms of acquisition financing rights. In these situations, the seller's right is not a security right but rather constitutes ownership of the property sold until full payment of the purchase price (for the definitions of the terms "security right", "acquisition financing right", "retention of title" and "financial lease", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). For this reason, even though the fundamental economic objectives of the transaction are identical to those of an ordinary security right, the mandatory rules concerning pre-default rights and obligations of the parties (the seller that retains ownership and the buyer that has possession but only an expectancy of ownership) will have to be framed in slightly different language. These necessary adjustments are discussed in chapter XII, section A.8.

(b) Duty to preserve the encumbered assets

21. The encumbered asset is one of the creditor's principal assurances of repayment of the secured obligation. It is also an asset that the grantor normally expects and intends to continue using freely once the loan or credit has been repaid. For these reasons both secured creditors and grantors have an interest in maintaining the value of the encumbered asset.

22. Most often the person that has possession of an encumbered asset will be in the best position to ensure its preservation. This explains why States normally impose the duty to take reasonable care of the encumbered asset on that party. Only by exception, and almost invariably in relation to intangible property, might a person not in notional possession be optimally positioned to care for the encumbered asset. In view of the objective of ensuring a fair allocation of responsibility for caring for encumbered assets and encouraging parties to preserve their value, it matters little whether it is the grantor or the secured creditor that has possession. The mandatory duties imposed on the person in possession should be identical in both cases.

23. The specific content of the duty may vary considerably, depending on the nature of the encumbered asset. In the case of tangible property, the duty points first to the physical preservation of the asset (for the definitions of "tangible property" and "intangible property", see A/CN.9/631, Introduction, sect. B, Terminology and rules of interpretation). Where inanimate tangible property is concerned, this usually would include a duty to keep property in a good state of repair and not to use it for a purpose other than that which is normal in the circumstances. For example, if a piece of machinery is at issue, it must not be left out in the rain and the party that possesses and uses it must perform routine maintenance. If security is taken on a passenger automobile, the person in possession cannot use the vehicle as a light truck for commercial purposes.

24. In the case of living tangible property such as animals, the duty should be similar. It is not enough simply to keep the animal alive. The person in possession must ensure that the animal is properly fed and is maintained in good health (for example, receives adequate veterinary care). Where the animal requires special

services to maintain its value (for example, proper exercise for a race horse, regular milking for a cow), the duty of care extends to providing these services. Finally, as with equipment, the duty also means that the animal cannot be used for abnormal purposes. Thus, a prize bull the value of which lies in stud fees cannot be used as a beast of burden.

25. If the encumbered asset consists of tangible property, such as a right to payment of money embodied in a negotiable instrument, the duty will certainly include the physical preservation of the document. In such a case, however, the duty of care will include taking the necessary steps to maintain or preserve the grantor's rights against prior parties bound under the negotiable instrument (for example, the presentation of the instrument, protesting it if required by law, as well as providing notice of dishonour). It may also be incumbent upon the person in possession of a negotiable instrument to preserve its value by taking steps against persons secondarily liable under the instrument (e.g. guarantors). Where the tangible property is a negotiable document, here also the person in possession must physically preserve the document. Moreover, should the document be time limited, the person in possession of the document must present it prior to expiry to claim physical possession of the property covered by the document.

26. If the encumbered asset consists of intangible property, it is more difficult to fix the duty to take reasonable care by reference to the person in possession. Frequently, the intangible property is a simple contractual right to receive payment. The character of the duty of preservation in such cases is discussed below in section B. Where the encumbered asset is a right to payment of funds credited to a bank account, intellectual property or proceeds under an independent undertaking, States typically provide for the respective rights and obligations of parties to the transaction in special legislation regulating that particular form of property.

27. Consistent with the above considerations, this Guide recommends that States enact a general mandatory pre-default rule aimed at ensuring a fair allocation of responsibility for caring for encumbered assets and encouraging parties in possession to preserve the pre-default value of the encumbered assets (see A/CN.9/631, recommendation 109, subpara. (a)).

(c) Duty to return the encumbered asset and to terminate the notice

28. The central purpose of a security right is to enhance the likelihood that the grantor will repay any obligation owed to the secured creditor. A security right is not a means of expropriating surplus value from the grantor or a disguised transfer of that property to the creditor. For this reason, most States enact mandatory rules to regulate the duties of the secured creditor once the secured obligation has been repaid in full and all credit commitments have been terminated. These duties are of two types. Some duties relate to the return of the encumbered assets to the grantor, should the secured creditor be in possession of the assets during the duration of the agreement; other duties relate to ensuring that the grantor's rights to the encumbered assets are free from any residual encumbrance.

29. This Guide contemplates that secured creditors may make their rights effective against third parties by taking possession of the secured property (see A/CN.9/631, recommendation 35). In addition, even when creditor possession is not taken to achieve third-party effectiveness, given the principle of party autonomy, grantors

may agree to permit secured creditors to take possession of their assets at the time of creating the security right, or at some time thereafter, even if they are not in default. In either event, however, the secured creditor's possession is grounded in the agreement between the parties and relates to the specific objectives of that agreement. For this reason, most States enact mandatory rules governing the duties of a secured creditor that has possession or control of encumbered assets once the secured obligation has been repaid, or any commitments to extend further credit have been terminated.

30. Since the purpose of a security right is to ensure the performance of an obligation, once that performance has occurred, the grantor should be able to recover either possession of the encumbered assets or unimpeded access to them, or both. This explains the formal duty that many States impose on secured creditors to return the encumbered assets to the grantor upon full payment of the secured obligation (and termination of all credit commitments). The burden lies on the creditor to deliver the encumbered assets, and not on the grantor to reclaim them or to take them away. Likewise, where the secured creditor and a deposit-taking institution have entered into a control agreement, many States require the secured creditor specifically to inform the depositary that the control agreement is no longer in effect. Both of these requirements are intended to ensure that the grantor automatically acquires the free use of encumbered assets once the secured obligation has been paid in full and all credit commitments have been terminated.

31. Some States consider that the creditor must also take positive steps to ensure that the grantor is placed in the same position that it occupied prior to the creation of the security right. In the case of intangible property, this would require sending a notice to any third-party obligor (for example, the debtor of a receivable) indicating that the secured obligation has been paid in full and that the grantor is again entitled to receive payment of the receivable (for the definitions of "receivable" and "debtor of the receivable", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). More generally, some States oblige secured creditors to release the encumbered assets from the security right and to ensure that evidence of that security right be expunged from the record of the relevant registry. So, for example, where registrations are not automatically purged from a registry, after a relatively short period of time creditors are often required to request the registry to cancel the registration. Similarly, where the security right has been made the subject of a notice on a title certificate, some States require the secured creditor to ensure the deletion of the notice on the title certificate. The unifying theme of these requirements is that the secured creditor should take whatever steps are necessary to ensure that no third party might think that the grantor's assets are still potentially subject to its security right.

32. The mandatory rule recommended in this Guide to govern the relationship of the parties once the secured obligation has been paid broadly reflects these considerations. Its primary objective is to make certain that the grantor recovers the full use and enjoyment of the previously encumbered property and is able to deal effectively with it in transactions involving third parties (see A/CN.9/631, recommendation 109, subpara. (b)).

4. Non-mandatory pre-default rules

33. In addition to various mandatory rules governing pre-default rights and obligations of the parties, most States develop a longer or shorter list of non-mandatory rules addressing the same issues. The vocabulary used to identify rules “subject to contrary agreement between the parties” varies from State to State (e.g. *jus dispositivum*, *lois supplétives*, *normas supletorias*, non-mandatory rules, default rules). Their common feature, however, is this: they are meant to apply automatically, unless there is evidence that the parties intended to exclude or amend them.

34. Different policy rationales are offered to support the idea of non-mandatory rules. Some States use non-mandatory rules to protect weaker parties. Other States conceive them as rules simply mirroring the terms of an agreement that parties would have negotiated had they turned their attention to particular points. This Guide takes the position that the true justification for non-mandatory rules lies in the fact that they can be used to promote policy objectives consistent with the logic of a regime of secured transactions. Examples of non-mandatory rules grounded in this rationale are not hard to find. The law in many States provides that, unless the parties agree otherwise, the grantor will deposit any insurance proceeds obtained because of the loss of the encumbered asset in a deposit account controlled by the secured creditor; or again, the law in many States provides that, unless the parties agree otherwise, revenues deriving from the encumbered asset may be retained by the secured creditor during the life of the security agreement, so that in case of default those revenues may be applied to the payment of the secured obligation. In view of this general objective, there are at least four reasons why States might choose to develop a panoply of non-mandatory rules.

35. First, by allocating rights and obligations between a secured creditor and a grantor in the manner to which they themselves would most likely agree, given the basic purposes of a secured transactions regime, a set of non-mandatory rules helps to reduce transaction costs, eliminating the need for the parties to negotiate and draft new provisions already adequately covered by these rules. Here non-mandatory rules serve as implied or default (i.e. applicable in the absence of agreement to the contrary) terms that, unless a contrary intention is expressed in the security agreement, are deemed to form part of that agreement. An example of such an implied term would be a rule that permits a secured creditor in possession of the encumbered asset to retain any revenues produced by that asset and to apply them directly to the payment of the secured obligation.

36. Second, even the best-advised and most experienced parties do not possess infallible insight into the future. However carefully drawn the agreement, there will be unforeseen circumstances. To obviate the need for a judicial or arbitral decision to fill these gaps when they arise and to reduce the number of potential disputes, States usually provide for basic characterization rules. These non-mandatory rules direct parties to other, more general, legal principles that can be deployed to guide the resolution of unanticipated problems. An example of such a rule is that which provides that the grantor of a security right remains the holder of the substantive right (be it ownership, a lesser property right or a personal right) over which security has been taken. Thus, in working through any particular unforeseen event, the parties may begin with the principle that the exercise of any right not specifically allocated to the secured creditor remains vested in the grantor.

37. Third, a relatively comprehensive legislative elaboration of the rights and obligations of the parties before default increases efficiency and predictability by directing the attention of parties to issues that they should consider when negotiating their agreement. A series of default rules from which they may opt out can serve as a drafting aid, offering a checklist of points that might be addressed at the time the security agreement is finalized. Even when parties decide to modify the stated non-mandatory rules so as to better achieve their purposes, the exercise of having attended to them ensures that these matters are considered and not inadvertently left aside.

38. Finally, non-mandatory rules make it possible for the principle of party autonomy to operate most efficiently. This benefit is particularly evident in long-term transactions or other speculative transactions where the parties cannot anticipate every contingency. Such rules facilitate flexibility and reduce compliance costs. For example, treating the agreement as complete in itself and requiring the parties to formalize all subsequent modifications and amendments to that agreement simply imposes additional transaction costs on the grantor.

39. The advantages of permitting the parties to define their relationship with the assistance of a set of non-mandatory rules are widely recognized by many national legal systems (e.g. arts. 2736-2742 of the Civil Code of Québec, Canada, and arts. 9-207 to 9-210 of the Uniform Commercial Code in the United States), by organizations that promote regional model laws (e.g. art. 15 of the European Bank for Reconstruction and Development Model Law on Secured Transactions and art. 33 of the Organization of American States Model Inter-American Law on Secured Transactions), and by international conventions dealing with international sales (i.e. art. 6 of the United Nations Convention on Contracts for the International Sale of Goods)¹ or some aspect of secured transactions in movable assets (e.g. art. 11, para. 1, of the United Nations Convention on the Assignment of Receivables in International Trade² (hereinafter the “United Nations Assignment Convention”) and art. 15 of the International Institute for the Unification of Private Law (Unidroit) Convention on International Interests in Mobile Equipment).

5. Typical non-mandatory pre-default rules

(a) General

40. This chapter does not address all of the situations where States may wish to develop non-mandatory rules. For example, it does not deal with non-mandatory rules that may be developed in relation to the basic terms required for a security right to exist (e.g. the minimum contents of the security agreement). Non-mandatory rules in this context fulfil a different function and their desirability, scope and content would, therefore, be governed by different policy considerations. Moreover, and for the same reason, it does not consider non-mandatory rules that are meant to govern post-default rights and obligations of the parties. These non-mandatory rules are addressed in chapter X (Post-default rights).

41. The non-mandatory rules discussed in this section are those directed to pre-default rights and obligations of the parties. Yet, because non-mandatory rules

¹ United Nations publication, Sales No. E.95.V.12.

² Ibid., Sales No. E.04.V.14.

will usually reflect the needs, practices and policies of particular States their specific configuration varies enormously. Still, there is a core of non-mandatory rules that are commonly found in contemporary national legislation. They serve as a complement to mandatory rules dealing with the rights and duties of persons in possession of encumbered assets.

42. Like mandatory rules, these non-mandatory rules are meant to encourage responsible behaviour on the part of those having control and custody of encumbered assets. Hence, States organize them according to whether the secured creditor or the grantor has possession of the encumbered assets. Some non-mandatory rules, however, are intended to apply regardless of whether the security is possessory or non-possessory. These three situations are considered in turn.

(b) Creditor-in-possession security rights

43. As already noted, most States have mandatory rules that require secured creditors in possession to take reasonable care of, to preserve and to maintain the encumbered assets in their possession. Typically, the secured creditor is also bound to undertake all necessary repairs to keep the encumbered asset in good condition. The basic content of these mandatory rules has already been discussed. In addition, some States enact a series of non-mandatory rules that specify further obligations of creditors to care for encumbered assets in their possession, especially in cases where the encumbered asset generates civil and natural fruits, or is otherwise an income-producing asset. The following paragraphs address the more common non-mandatory rules of this type.

44. As for the basic obligation of care and preservation, many States specifically require, in the case of tangible property, that the secured creditor must keep the encumbered asset clearly identifiable. If it is fungible and commingled with other assets of the same nature, this duty is transformed into an obligation to keep assets of the same quantity, quality and value as that originally encumbered. In addition, where maintenance requires action beyond the creditor's capacity, States often require the creditor to notify the grantor and, if necessary, to permit the grantor temporarily to take possession to repair, care for or preserve the asset or its value.

45. Where the encumbered asset consists of an instrument embodying the grantor's right to the payment of money, the obligation of care on the part of the secured creditor is not limited to the physical preservation of that document. Many States require the secured creditor to take necessary steps to maintain or preserve the grantor's rights against prior parties bound under the negotiable instrument or secondarily liable, and also permit either the grantor or the secured creditor to sue for enforcement of the payment obligation.

46. Another non-mandatory rule (a corollary of the duty of the secured creditor in possession to take care of the encumbered asset) is that the secured creditor is entitled to obtain reimbursement for reasonable expenses required to preserve the asset and to have these expenses included within the secured obligation. In addition, many States permit the secured creditor to make reasonable use of or operate the encumbered asset (see A/CN.9/631, recommendation 108). As a concomitant of this right, the secured creditor must allow the grantor to inspect the encumbered asset at

all reasonable times and will be liable in damages for any deterioration of the asset beyond that associated with normal use.

47. Because the secured creditor is in possession, it will most often be in the best position to collect monetary proceeds (revenues or civil fruits) or non-monetary proceeds (natural fruits included in the definition of proceeds, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation) derived from the encumbered asset. For this reason, it is common for States to enact a non-mandatory rule that both monetary and non-monetary proceeds are to be collected by the secured creditor in possession. Normally, it is the grantor that will be able to get the best price for the natural fruits generated by secured property (for example, milk produced by a herd of cows, eggs produced by chickens, wool produced by sheep). Therefore, States usually also provide that the secured creditor should turn the fruits over to the grantor for disposition. Alternatively, where the fruits involve the natural increase of animals, for example, a common non-mandatory rule is that such offspring are automatically encumbered and held by the creditor under the same terms.

48. Where the proceeds are monetary it makes little sense to oblige the creditor, after collection, to turn these over to the grantor. The usual non-mandatory rule is that the secured creditor may either apply cash proceeds to repayment of the secured obligation, or hold them in a separate account as additional security. This principle operates whether the money received is interest, a blended payment of interest and capital, or a stock dividend. Some States even permit the creditor to sell additional stock received as a dividend or to hold it (in the manner of the offspring of animals) as additional encumbered assets.

49. As for the right of disposition, there is great diversity in the manner States enact non-mandatory rules. In any case, the creditor cannot waste the encumbered asset. However, some States provide that the secured creditor may assign the secured obligation and the security right. That is, the creditor may transfer possession of the encumbered asset to the person to whom it has assigned the secured obligation. Some States also provide that the secured creditor may create a security right in the encumbered asset as security for its own debt ("re-pledge the encumbered property") as long as the grantor's right to obtain the assets upon payment of the secured obligation is not impaired. Often these re-pledge agreements are limited to stocks, bonds and other instruments held in a securities account, but in some States creditors may re-pledge tangible property such as diamonds, precious metals and works of art. By contrast, many States prohibit the secured creditor in possession from re-pledging the encumbered assets, even if it can do so on terms that do not impair the grantor's right to recover its property upon performance of the secured obligation.

50. The risk of loss or deterioration of property normally follows ownership, not possession. Nonetheless, many States provide that where encumbered assets in the possession of the secured creditor are destroyed or suffer abnormal deterioration, the secured creditor is presumed to be at fault and must make good the loss. Typically, however, the same non-mandatory rule provides that the creditor is not liable for loss if it can show that the loss or deterioration occurred without its fault. Because it will always be in the secured creditor's interest to ensure that the value of the encumbered assets is maintained, many States provide that the creditor has an insurable interest. Should the secured creditor then insure against loss or damage,

however caused, it is entitled to add the cost of the insurance to the obligation secured.

51. This last rule is a particular example of a broader principle enacted as a non-mandatory rule in many States and recommended by this Guide. Reasonable expenses incurred by the secured creditor while discharging its custodial obligation to take reasonable care of the encumbered property are chargeable to the grantor and automatically added to the obligation secured (see A/CN.9/631, recommendation 108, subpara. (a)). Tax payments, repairer's bills and storage charges are examples of such reasonable expenses for which the grantor is ultimately liable.

(c) Grantor-in-possession security rights

52. A key policy objective of an effective secured transactions regime is to encourage responsible behaviour by the grantor that remains in possession of the encumbered assets. Maintaining the pre-default value of the encumbered assets is consistent with this objective. However, the policies underlying the non-mandatory rules for grantor-in-possession security are also aimed at maximizing the economic potential of the encumbered assets. In particular, encouraging the use and exploitation of encumbered assets is a way to facilitate revenue generation, and repayment of the secured obligation, by the grantor.

53. For this reason, most States provide that the grantor in possession does not surrender the general prerogatives of ownership simply because a security right has been created. Unless the parties otherwise agree, the grantor is entitled to use, mix, process and commingle the encumbered assets with other property in a manner that is reasonable and consistent with its nature and purpose and the purposes of the security agreement. In such a case, the secured creditor should have the right to monitor the conditions in which the encumbered asset is kept, used and processed by the grantor in possession and to inspect the asset at all reasonable times (see A/CN.9/631, recommendation 108, subpara. (b)). The duty to take care resting on the grantor in possession includes keeping the encumbered asset properly insured and ensuring that taxes are paid promptly. If the secured creditor incurs these expenses, even though the grantor remains in possession, the secured creditor has the right to reimbursement from the grantor and may add these expenses to the secured obligation.

54. If the encumbered assets consist of income-producing property in possession of the grantor, to the extent that the creditor's security right extends to the income or revenues generated by the asset, the grantor's duties may include maintaining adequate records and the reasonable rendering of accounts regarding the disposition and the handling of the proceeds derived from the encumbered assets. Specific obligations of the grantor in the case of intangible property (e.g. bank accounts, royalties from the use of patents, copyrights and trademarks), and particularly the grantor's right to payment in the form of receivables, are discussed in the next section.

55. Many States currently have a rule that protects fruits and revenues (as opposed to proceeds of disposition in the strict sense) from automatic re-encumbering under the security agreement. By contrast, this Guide provides that a security right extends to all proceeds generated by the encumbered asset. That is, unless otherwise agreed,

any increase in value or profit deriving from the encumbered assets in the grantor's possession is automatically subject to the security right, regardless of whether those additional assets are regarded as civil or natural fruits or as proceeds. To the extent that the fruits are in kind (e.g. increase in animals, stock dividends), the grantor may use and exploit them under the same terms and conditions as initially encumbered assets. Where they are agricultural products like milk, eggs and wool, most States provide that the grantor may sell them and that the secured creditor's rights may be claimed in the proceeds received. Where the civil fruits are revenues, the security right will extend to them as long as they remain identifiable. As a rule, however, the grantor will not only collect fruits and revenues, it will dispose of them in the ordinary course of business free of the security right.

56. The duty to preserve the encumbered asset normally means that the grantor in possession is responsible for loss or deterioration, whether caused by its fault or by fortuitous event. In principle, the grantor is not entitled to dispose of the encumbered assets without authorization of the secured creditor. If the grantor does so, the buyer will take the property subject to the security right. By way of exception, however, the grantor may dispose of the encumbered assets free of the security if they consist of inventory or consumer goods and they are sold in the seller's ordinary course of business (see A/CN.9/631, recommendation 87). Despite this limitation on disposition, because the grantor will normally retain the full use of the encumbered asset most States enact non-mandatory rules authorizing the grantor to create additional security rights charging already encumbered assets, the fruits and revenues they generate and the proceeds of their disposition.

(d) Possessory and non-possessory security rights

57. In addition to the rights specifically given to and obligations specifically imposed on secured creditors and grantors because of their possession of the encumbered assets, there are two common non-mandatory rules that speak to both secured creditor-in-possession (possessory) and grantor-in-possession (non-possessory) security. The first is a corollary of the idea that parties in possession should maintain the value of encumbered assets. If it should happen that the value of the encumbered assets were to decrease significantly for reasons that were unforeseeable at the time of the conclusion of the security agreement, and unrelated to any lack of attention by the party in possession, some States provide that the grantor will have to offer additional security to make up for the unexpected decrease in value. These States usually have other rules that restrict the capacity of secured creditors to over-collateralize (i.e. take a security right in assets of a significantly higher value than the value of the secured obligations). The assumption is that, in exchange for this limitation, the secured creditor should be able to require the grantor to offer further property in guarantee should the encumbered asset base fall precipitously. Moreover, this rule is often extended to normal deterioration of the value of the encumbered assets due to wear and tear or market conditions, whenever such deterioration reaches a significant percentage of the initial value of the encumbered assets.

58. A second common non-mandatory rule concerns the right of the secured creditor to assign both the obligation secured and the security right that attaches to it. Absent agreement to the contrary a secured creditor may freely assign the secured obligation and the accompanying security right (see, for example, art. 10 of the

United Nations Assignment Convention and A/CN.9/631, recommendation 26). Some States even provide that the secured creditor may do so even despite contractual limitations on assignment (see art. 9, para. 1, of the United Nations Assignment Convention and A/CN.9/631, recommendation 25). Where the secured creditor has possession, this implies that it may also transfer possession to the new secured creditor. In both cases, the assignee of the secured obligation cannot acquire greater rights as against the grantor or as against the encumbered asset than those that could be claimed by the assignor.

B. Asset-specific remarks

59. Most of the mandatory and non-mandatory rules pertaining to the pre-default rights and obligations of parties relate to the manner in which the prerogatives and responsibilities of ownership are allocated between the grantor and the secured creditor. These include, most importantly: (a) the obligation (invariably imposed upon the party in possession of the encumbered property to care for it, maintain it, and take steps necessary to preserve its value); (b) the right to use, transform, mix and manufacture encumbered property; (c) the right to collect fruits, revenues and proceeds generated by the property and to appropriate these to one's use; and (d) the right to pledge, re-pledge or dispose of encumbered assets, whether free of, or subject to, the security right.

60. These rules contemplate the cases where the encumbered asset is tangible property. Nonetheless, in chapter III (Basic approaches to security) this Guide notes the importance of intangible property and, in particular, rights to payment as property that a grantor might encumber. While certain categories of intangible property are excluded from this Guide (i.e. securities, see A/CN.9/631, recommendation 4), many other types of intangible property are included: notably, contractual and non-contractual receivables, rights to payment of funds credited to a bank account and proceeds under an independent undertaking (see A/CN.9/631, recommendation 2, subpara. (a)).

61. The creation of a security right in a right to payment necessarily involves parties other than the grantor and the secured creditor, most obviously the debtor of the receivable. For this reason States have developed detailed rules to regulate the rights and obligations of the parties and of third parties, whether the right arises under a tangible (e.g. a negotiable instrument or a negotiable document) or under an intangible (e.g. a receivable, rights to payment of funds credited to a bank account, proceeds under an independent undertaking). Most of the rules relating to the relationship between the grantor and the secured creditor on the one hand, and the debtor on the obligation (what this Guide calls third-party obligors) on the other, are mandatory but some are non-mandatory. The rights and obligations of third-party obligors are discussed in detail in chapter IX.

62. This chapter focuses on the pre-default rights and obligations as between the assignor and the assignee. Consistent with the principle of party autonomy, most States take the position that the parties themselves should determine their mutual pre-default rights and obligations. Hence, the majority of the rules relating to these rights and obligations are non-mandatory. Articles 11-14 of the United Nations

Assignment Convention do, however, provide for a number of mandatory rules in the case of international assignments.

63. The basic principle in this field can be stated succinctly and is typically found in the national law of most States. It provides that, because the security agreement may refer to an ongoing relationship between the parties, unless they otherwise decide, they should be bound by their own practices and usages. This Guide adopts the idea that the agreement between the parties is the primary source of their mutual rights and obligations and that absent a contrary agreement, their own established practices and usages will also be binding on them (see A/CN.9/631, recommendation 110).

64. Some of the most important parts of the agreement between the assignor and the assignee relate to the representations that the assignor makes to the assignee. In the normal case, it is presumed that (a) the assignor has the right to assign the receivable; (b) the receivable has not been previously assigned; and (c) the debtor of the receivable does not have any defences or rights of set-off that can be set up against the assignor. In other words, if the assignor has doubts about any of these matters, it must explicitly mention these in the agreement or must explicitly state that it makes no representations to this effect. In all events, in parallel with the grantor's pre-default obligations in respect of tangible property, the assignor must take all reasonable steps necessary to preserve the value of the receivable. This means that it must continue to ensure that it retains the legal right to collect on the receivable. On the other hand, unless the assignor specifically warrants otherwise, it is presumed that the assignor does not warrant the actual capacity of the debtor of the receivable to pay. These various obligations are presented in the form of non-mandatory rules in the national law of most States and are recommended as such in this Guide (see A/CN.9/631, recommendation 111).

65. As the value of the assigned receivable consists of payment made by the debtor of the obligation, and as the debtor of the receivable is only obliged to pay the assignee if it actually knows of the assignee's rights (see A/CN.9/631, recommendations 114 and 115), it is important to maximize the capacity of the assignee to make the debtor aware of the assignment. For this reason, many States provide that either the assignor or the assignee may notify the debtor and give instructions about how payment is to be made. Nonetheless, in order to prevent conflicting instructions from being given, it is normally the case that thereafter, only the assignee may direct the debtor as to the manner and place of payment.

66. There may, of course, be situations where both the assignor and the assignee (or just one of them) do not wish the debtor of the receivable to know of the assignment. This desire may relate to particular features of the business in question or to general economic conditions. For this reason, States usually provide that the assignor and assignee may agree to postpone notifying the debtor of the receivable that the assignment has occurred until some later time. Until such notice is given, the debtor of the receivable will continue to pay the assignor according to the agreement between them or any subsequent payment instructions. Where a party (usually the assignee) is in breach of an obligation not to notify this should not prejudice the debtor of the receivable. The debtor may pay according to the instructions given and receive a discharge for amounts so paid (see A/CN.9/631, recommendation 116). Nonetheless, many States also provide that, unless the assignor and assignee otherwise agree, such a breach may give rise to liability for

any resulting damages. This Guide recommends that these general principles govern notification of the assignment to the debtor of the receivable (see A/CN.9/631, recommendation 112).

67. Because the right to payment is the actual object of the security, it is important to specify the effect of any payment made by the debtor of the receivable (whether to the assignor or the assignee) on their respective rights. Many States have enacted non-mandatory rules to govern the outcome of payments made in good faith that may not actually be made according to the intention of the assignor or assignee. For example, even if no notification of the assignment is given to the debtor of the receivable, payment might actually be made to or received by the assignee. Given the purpose of the security right in the receivable, it is more efficient that the assignee be entitled to keep the payment, applying it to a reduction of the assignor's obligation. Similarly, if payment is made to the assignor after the assignment has been made, and again regardless of whether the debtor of the receivable has received notice, the assignor should be required to remit the payment received to the assignee. Likewise, once notice has been given, if part of the payment obligation is to return property to the assignor, States often provide that this property should be handed over to the assignee. In all these cases, however, the rules adopted by many States are non-mandatory and, as a result, the assignor and assignee might provide for a different outcome in their agreement.

68. In the case of multiple assignments of a receivable, the debtor of the receivable may receive multiple notifications and may be uncertain as to which assignee has the best right to payment. Sometimes, the payment is made in good faith to an assignee that has a lower priority. In such cases, States usually provide that the assignee with prior rank should not be deprived of its rights to obtain payment and where the payment obligation involves the return of property to the assignor, to receive this property as well. In all cases, however, the assignee may only retain payment to the extent of its rights in the receivable, so that if the payment made by the debtor of the receivable is greater than the outstanding indebtedness of the assignor, the assignee must remit the excess to the person who is entitled to it (the next lower-ranking assignee or the assignor as the case may be). Consistent with its general approach to allocating pre-default rights and obligations as between assignor and assignee, this Guide recommends that these general principles govern cases where payment has been made in good faith to a person not actually entitled to receive it (see A/CN.9/631, recommendation 113).

69. These non-mandatory rules relating to pre-default rights and obligations of assignors and assignees of intangible property help to structure the relationship between them. In many ways, they paradigmatically reflect what non-mandatory rules are meant to accomplish, which is why they are explicitly stated in the national law of many States. For this reason also, this Guide recommends that they be included in any law relating to secured transactions so as to facilitate the efficient assignment and collection of receivables, while nonetheless permitting assignors and assignees to structure their own transactions differently so as to meet their own needs and wishes.

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

IX. Rights and obligations of third-party obligors

A. General remarks

1. Introduction

1. When the encumbered asset in a secured transaction consists of a right against a third party, the secured transaction is necessarily more complicated than when the encumbered asset is a simple object such as an item of equipment. Such rights against third parties may include “receivables”, “negotiable instruments”, “negotiable documents”, “rights to proceeds under an independent undertaking” and “rights to payment of funds credited to a bank account” (for the definitions of these terms, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). While these rights against third parties differ from each other in important ways, they have a critical feature in common: the value of the encumbered asset is the right to receive performance from a third-party obligor.

2. Depending on the nature of the right against a third party that is an encumbered asset, this Guide uses varying terminology to describe the third-party obligor. When the right is a receivable, for example, the third-party obligor is referred to as the “debtor of the receivable” and when the obligation is the right to proceeds under an independent undertaking, the third-party obligor is referred to as the “guarantor/issuer, confirmer or other nominated person” (for the definitions of these terms, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

3. When the encumbered asset is a right against a third-party obligor, the secured transaction affects not only the grantor and the secured creditor but also the third-party obligor. Accordingly, laws typically provide appropriate protection against adverse effects on the third-party obligor, especially since that obligor is not a party to the secured transaction. On the other hand, those protections should not unduly burden the creation of security rights in rights against third-party obligors, since security rights facilitate the extension of credit by the secured creditor to the grantor, and thus by the grantor to the third-party obligor.

2. Effect of a security right on the obligations of a third-party obligor

(a) General

4. It is generally recognized that it would be inappropriate for a security right in a right to performance from a third-party obligor to change the nature or magnitude of the third-party obligor’s obligation. For example, article 15 of the United Nations Convention on the Assignment of Receivables in International Trade¹ (the “United Nations Assignment Convention”) permits no change in the obligation, other than the identity of the person to whom payment is owed (and, with some limitations, the address or account to which payment is to be made; see para. 8 below). This principle is equally applicable to third-party obligors in the case of rights other than receivables (such as the ones mentioned above).

5. When a negotiable instrument or negotiable document evidences the right against the third-party obligor, this principle is already reflected in law that is well developed in most States and that details the effect of an assignment on the

¹ United Nations publication, Sales No. E.04.V.14.

obligation of the obligor (“law governing a negotiable instrument” is broader than “negotiable instrument law”; see A/CN.9/631/Add.1, para. [...]). Thus, there is no need for secured transactions law to recreate those rules. Accordingly, this Guide generally defers to those bodies of law for effectuation of this principle. Similar protections exist under the law governing bank accounts and the law and practice governing independent undertakings, and this Guide defers to them as well.

(b) Effect of a security right on the obligations of the debtor of the receivable

6. While the effect of a security right on the obligor of a negotiable instrument or negotiable document is well developed in most States, this is not always the case with respect to a receivable that is the subject of a security right. Accordingly, this Guide addresses the effect of a security right on the obligation of the debtor of the receivable in some detail. For the most part, the Guide draws its policies from the analogous rules in the United Nations Assignment Convention.

7. In line with the approach of the United Nations Assignment Convention, the Guide covers not only security rights in receivables but also pure outright transfers and transfers by way of security (see A/CN.9/631, recommendation 3; for the definition of the terms “assignment”, “assignor” and “assignee” and related terms, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). Therefore, the discussion covers the debtor of the receivable in transactions in which the receivable has been transferred outright or utilized as an encumbered asset (in an outright assignment for security purposes or an assignment by way of security).

8. The United Nations Assignment Convention provides that, with few exceptions, the assignment of a receivable does not affect the rights and obligations of the debtor of the receivable without its consent. Permitted effects include only changes in the person, address or account to which the debtor of the receivable is to make payment. So as not to impose hardship on the debtor of the receivable that might result from the change in the person, address or account to which payment is to be made, though, the United Nations Assignment Convention prevents any instruction to the debtor of the receivable changing the person, address or account of payment, from changing the currency of payment or the State in which payment is to be made, unless the change is to the State in which the debtor of the receivable is located (see article 15 of the United Nations Assignment Convention and A/CN.9/631, recommendation 114).

9. When the assignment of a receivable is an outright transfer, the ownership of the right to receive performance from the debtor of the receivable has changed, but this does not necessarily mean that the party to whom payment is to be made will also change. This is because, in many cases, the assignee will enter into a servicing or similar arrangement with the assignor pursuant to which the latter obtains performance on behalf of the former.

10. Similarly, when the assignment of a receivable involves the creation of a security right, the assignment does not necessarily mean that the party to whom payment is to be made will change. In some cases, the arrangement between the assignor and the assignee will be that payments are to be made to the assignor (at least before any default by the assignor). In other cases, though, the arrangement will be that payments are to be made to the assignee.

11. In view of the fact that the obligation of the debtor of the receivable will be discharged only to the extent of payment to the right party (and may not be

discharged if payment is made to a different party), the debtor of the receivable has an obvious interest in knowing the identity of the party to whom payment is to be made. Thus, many legal systems protect the debtor of the receivable by providing that the debtor of the receivable is discharged by paying in accordance with the original contract until such time as it receives notification of the assignment and of any concomitant change in the person or address to which payment should be made. This principle provides important protection to the debtor of the receivable since it avoids the possibility that a payment will be found not to discharge the debtor of the receivable because the payment was made to a party that was no longer the creditor of the receivable, even though the debtor of the receivable was unaware of the change in the creditor of the receivable (see art. 17, para. 1, of the United Nations Assignment Convention and A/CN.9/631, recommendation 116, subpara. (a)).

12. Once the debtor of the receivable has been notified of the assignment and any new payment instructions, however, it is appropriate to require the debtor of the receivable to pay in accordance with the assignment and instructions (subject to the limitation described in para. 8 above, that the instructions may not change the currency of payment or the State in which payment is to be made unless the change is to the State in which the debtor of the receivable is located). This principle is critical to the economic viability of receivables financing. If the debtor of the receivable were to continue to be able to pay the assignor, this could deprive the assignee of the value of the assignment, especially when the assignor is in financial distress (see art. 17, para. 2, of the United Nations Assignment Convention and A/CN.9/631, recommendation 116, subpara. (b)).

13. As noted above, it would be inappropriate for an assignment of a receivable to change the nature or magnitude of the obligation of the debtor of the receivable. One implication of that principle is that the assignment should not, without the consent of the debtor of the receivable, deprive the debtor of the receivable of defences or rights of set-off that it could raise against the assignor in the absence of an assignment (see art. 18 of the United Nations Assignment Convention and A/CN.9/631, recommendation 117).

14. This principle should not, however, prevent the debtor of the receivable from agreeing that it may not raise against an assignee defences or rights of set-off that it could otherwise raise against the assignor. The effect of such an agreement is to confer on the receivable the same sort of “negotiability” that enables negotiable instruments to be enforced by “holders in due course” or “protected purchasers” without regard to defences or rights of set-off (for the meaning of the term “protected holder”, see, e.g., art. 29 of the United Nations Convention on International Bills of Exchange and International Promissory Notes² (the “UNCITRAL Bills and Notes Convention)). As the receivable could have been embodied in a promissory note or similar negotiable instrument with the agreement of the debtor of the receivable, there is no reason to prevent the debtor of the receivable from agreeing to the same result as would have been achieved by the use of a promissory note or similar negotiable instrument (see A/CN.9/631, recommendation 118, subpara. (a)). However, in most States, as in the UNCITRAL Bills and Notes Convention, there are certain defences, which can be raised even against a holder in due course or other protected purchaser (see, e.g., para. 1 of art. 30 of the UNCITRAL Bills and Notes Convention). The same result should follow in the context of agreeing not to raise defences against the assignee of a

² Ibid., Sales No. E.95.V.16.

receivable (see art. 19, para. 2, of the United Nations Assignment Convention and A/CN.9/631, recommendation 118, subpara. (b)).

15. When a receivable is created by contract, it is possible that the debtor of the receivable will agree with its creditor to modify the terms of the obligation. If such a receivable is the subject of an assignment, the effect of that modification on the rights of the assignee must be determined. If the modification occurs before the assignment, this means that the right assigned to the assignee is the original receivable as modified by the agreement of the debtor of the receivable and its creditor. If the modification occurs after the assignment, but before the debtor of the receivable has become aware that the creditor has assigned the receivable, it is understandable that the debtor of the receivable would believe that the agreement of modification was entered into with the creditor of the receivable and, thus, would be effective. Accordingly, legal systems generally provide that such a modification is effective as against the assignee (see, e.g., art. 20, para. 1, of the United Nations Assignment Convention and A/CN.9/631, recommendation 119, subpara. (a)).

16. If the agreement to modify the terms of the receivable is entered into between the debtor of the receivable and the assignor after the assignment has already occurred and after the debtor has been notified of it, such a modification is usually not effective unless the assignee consents to it. The reason is that, at this point, the assignee's right in the receivable has already been established and such a modification would change the assignee's rights without its consent. Some legal systems, however, provide limited exceptions to this rule of ineffectiveness. For example, if the right to be paid on the receivable has not yet been fully earned by performance and the original contract provides for the possibility of modification, the modification may be effective against the assignee. In some cases, such as when the original contract governs a long-term relationship between the debtor and the creditor of the receivable, and the relationship is of the sort that is frequently the subject of modification, the assignee might anticipate that reasonable modifications might be made in the ordinary course of business even after assignment. As a result, some legal systems provide that a modification to which a reasonable assignee would consent is effective against the assignee, even if made after the debtor of the receivable is aware of the assignment, so long as the receivable has not yet been fully earned by performance (see art. 20, para. 2, of the United Nations Assignment Convention and A/CN.9/631, recommendation 119, subpara. (b)).

(c) Effect of a security right on the obligations of the obligor on a negotiable instrument

17. In most States, the law governing negotiable instruments is well developed and contains clear rules as to the effect of a transfer of an instrument on the obligations of parties to the instrument. As a general matter, those rules continue to apply in the context of security rights in negotiable instruments (see A/CN.9/631, recommendation 121).

18. Thus, for example, the secured creditor is not able to collect on the negotiable instrument except in accordance with the terms of the negotiable instrument. Even if the grantor has defaulted on its obligation to the secured creditor, the secured creditor cannot enforce the negotiable instrument against an obligor under the negotiable instrument except when payment is due under the negotiable instrument. For example, if a negotiable instrument is payable only at maturity, a secured

creditor is not permitted to require payment on the negotiable instrument prior to its maturity, except as set forth in the terms of the negotiable instrument itself.

19. In addition, the secured creditor, unless otherwise agreed by the obligor, cannot collect on the negotiable instrument except in accordance with the law governing negotiable instruments. Typically, as a matter of the law governing negotiable instruments, for the secured creditor to collect on the negotiable instrument, the secured creditor must be a holder of the negotiable instrument by being in possession of it with any necessary endorsement. Otherwise, the obligor will not be assured of obtaining a discharge on the negotiable instrument by paying the secured creditor. Accordingly, the obligor is often permitted to insist, under the law governing negotiable instruments, on paying only the holder of the negotiable instrument. However, in some legal systems, a transferee of an instrument from a holder can enforce the instrument if the transferee has possession.

20. Under the law governing negotiable instruments, the secured creditor may or may not be subject to the claims and defences of an obligor on the instrument. If the secured creditor is a protected holder of the negotiable instrument, the secured creditor is entitled to enforce the negotiable instrument free of certain claims and defences of the obligor. These claims and defences are the so-called “personal” claims and defences, such as normal contract claims and defences, which the obligor could have asserted against the prior holder. However, the secured creditor, even as a protected purchaser, remains subject to so-called “real” defences of the obligor, such as lack of legal capacity, fraud in the inducement or discharge in insolvency proceedings.

21. If the secured creditor is a holder of the negotiable instrument but not a protected holder, the secured creditor, while entitled to collect on the negotiable instrument, is usually subject to the claims and defences that the obligor could have asserted against a prior holder of the negotiable instrument. These claims and defences include all “personal” claims and defences unless the party liable on the negotiable instrument has effectively waived its right to assert such claims and defences in the negotiable instrument itself or by separate agreement with the secured creditor.

(d) Effect of a security right on the obligations of the depositary bank

22. In legal systems in which a security right may be created in a right to payment of funds credited to a bank account only with the consent of the depositary bank, the bank has no duty to give its consent. In legal systems where the depositary bank’s consent to the creation of the security right is not required, the rights and obligations of the depositary bank may nonetheless not be affected without its consent (see A/CN.9/631, recommendation 122, subpara. (a)). In both cases, the reason lies in the critical role of banks in the payment system and the need to avoid interfering with banking law and practice.

23. The reason for not imposing duties on a depositary bank or changing the rights and duties of the depositary bank without its consent is that imposing such duties without the bank’s consent may subject the bank to undue risks that it is not in a position to manage without having appropriate safeguards in place. The depositary bank is subject to significant operational risks, with funds being debited or credited to bank accounts on a daily basis, often with credits being made on a provisional basis, and sometimes involving other transactions with its customers. These risks are compounded by the legal risk to the depositary bank of failing to comply with

laws dealing with negotiable instruments, credit transfers and other payment system rules in its day-to-day operations, as well as the risk of not complying with certain duties imposed on the depositary bank by other law, such as laws requiring it to maintain the confidentiality of its dealings with its customers. In addition, the depositary bank is typically subject to regulatory risk under laws and regulations of the State designed to ensure the safety and soundness of the depositary bank. Finally, the depositary bank is subject to reputational risk in choosing the customers with which it agrees to enter into transactions.

24. The experience in those States where the depositary bank's consent to new or changed duties is required suggests that the parties are often able to negotiate satisfactory arrangements so that the depositary bank is comfortable that it is managing the risks involved given the nature of the transaction and the bank's customer.

25. In particular to avoid any interference with the depositary bank's rights of set-off against the account holder, legal systems that permit the depositary bank to obtain a security right in the right to payment of funds credited to a bank account held with the bank, provide that the bank maintains any rights of set-off it might have under law other than the secured transactions law (see A/CN.9/631, recommendation 122, subpara. (b)).

26. The same principles apply with respect to the third-party effectiveness, priority and enforcement of a security right in a right to payment of funds credited to a bank account. For example, in legal systems that refer to the notion of "control" with respect to the third-party effectiveness of a security right in a right to payment of funds credited to a bank account, there are appropriate rules to safeguard the confidentiality of the relationship of a bank and its client (for the definition of "control", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). Such rules provide, for example, that the bank has no obligation to respond to requests for information about whether a control agreement exists or whether the account holder retains the right to dispose of funds credited to its bank account (see A/CN.9/631, recommendation 123, subpara. (b)).

27. In legal systems in which the security right in a bank account is made effective against third parties by registration of a notice in a public registry or by acknowledgment on the part of the depositary bank, the notice or acknowledgement may or may not impose duties on the depositary bank to follow instructions from the secured creditor as to the funds in the account. If such duties are not imposed on the depositary bank under the applicable laws of a particular State, the secured creditor's right to obtain the funds in the bank account upon enforcement of the security right would usually depend upon whether the customer-grantor has instructed the depositary bank to follow the secured creditor's instructions as to the funds or the depositary bank has agreed with the secured creditor to do so. In the absence of such instructions or agreement, the secured creditor may need to enforce the security right in the bank account by using judicial process to obtain a court order requiring the depositary bank to turn over the funds credited to the bank account to the secured creditor.

28. In legal systems in which the depositary bank may negotiate its favourable priority position with the bank account holder and its creditors, the bank has no duty to subordinate its rights to the security right of another creditor of the account holder. Even if, in order to facilitate the creation, effectiveness against third parties, priority and enforcement of a security right in a right to payment of funds credited

to a bank account, the secured creditor is willing to become the depositary bank's customer with respect to the bank account, the depositary bank has no duty to accept the secured creditor as the bank's customer.

(e) Effect of a security right on the obligations of the guarantor/issuer, confirmer or nominated person under an independent undertaking

29. The rights and duties of the guarantor/issuer, confirmer or nominated person with respect to an independent undertaking are quite well developed under the law and practice governing independent undertakings (for the definitions of these terms, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). This highly developed law and practice has facilitated the usefulness of independent undertakings, particularly in international trade. Accordingly, the development of secured transactions law with respect to independent undertakings should take great care to avoid interfering with these useful commercial mechanisms.

30. In order to avoid such interference, it is helpful to distinguish between the independent undertaking itself and the right of a beneficiary of such an undertaking to receive a payment (or another item of value) due from the guarantor/issuer or nominated person. While providing for a security right in the former without interference with the usefulness of the independent undertaking is a delicate task, a security right in the latter carries fewer risks because it relates only to the right of the beneficiary and would not have an effect on the guarantor/issuer, confirmer or a nominated person.

31. This Guide recommends rules facilitating the use of the right to proceeds under an independent undertaking as collateral, but with strict conditions designed to avoid negative effects on guarantors/issuers, confirmers or nominated persons (and, thus, on the usefulness of independent undertakings).

32. A cardinal principle is that a secured creditor's rights in proceeds under an independent undertaking should be subject to the rights, under the law and practice governing independent undertakings, of the guarantor/issuer, confirmer or nominated person. Similarly, to avoid undermining the independence of the undertaking, a transferee-beneficiary normally takes the undertaking without being affected by a security right in the proceeds under the independent undertaking of a transferor. For the same reason, if the guarantor/issuer, confirmer or nominated person has a security right in the proceeds under an independent undertaking, their independent rights are not adversely affected (see A/CN.9/631, recommendation 24).

33. Equally important is the principle that a guarantor/issuer, confirmer or nominated person should not be obligated to pay any person other than a confirmer, a nominated person, a named beneficiary, an acknowledged transferee of the independent undertaking or an acknowledged assignee of the proceeds under an independent undertaking (see A/CN.9/631, recommendation 125). If the guarantor/issuer, confirmer or nominated person acknowledges a secured creditor or transferee of the proceeds under an independent undertaking, the secured creditor or transferee may enforce its rights against the person that made the acknowledgement, since the independence of the undertaking is not compromised (see A/CN.9/631, recommendation 126).

(f) Effect of a security right on the obligations of the issuer or other obligor under a negotiable document

34. In most States, the law governing negotiable documents is well developed and contains clear rules as to the effect of a transfer of a document on the obligations of parties to the document. As a general matter, those rules continue to apply in the context of security rights in negotiable documents (see A/CN.9/631, recommendation 127).

35. This means, inter alia, that the right of a secured creditor to enforce a security right in a negotiable document and, thus, in the goods covered by it, is limited by the law governing negotiable documents. The limit is that the goods covered by the negotiable document are in the hands of the issuer or other obligor under that document, and the issuer's or other obligor's obligation to deliver the goods typically runs only to the consignee or to any subsequent holder. Thus, if the negotiable document was not transferred to the secured creditor in accordance with the law governing negotiable documents, the issuer or other obligor will have no obligation to deliver the goods to the secured creditor. In such a case, the secured creditor may need to have a court or other tribunal order the transfer of the document to the secured creditor (or to a person designated by the secured creditor), or otherwise order the issuer or other obligor to deliver the goods to the secured creditor or other person designated by the secured creditor.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/631/Add.7 [Original: English]**Note by the Secretariat on recommendations of the UNCITRAL draft Legislative Guide on Secured Transactions, submitted to the Working Group on Security Interests at its twelfth session****ADDENDUM****CONTENTS**

	<i>Paragraphs</i>
X. Post-default rights	1-99
A. General remarks	1-69
1. Introduction	1-9
2. General principles of enforcement	10-25
(a) General	10
(b) Requirement of a default prior to enforcement	11-13
(c) Judicial supervision of enforcement	14-16
(d) Good faith and commercial reasonableness	17
(e) Freedom of parties to agree to the enforcement procedure	18-19
(f) Judicial and extrajudicial enforcement	20-23
(g) Scope of secured creditor's enforceable rights	24-25
3. Procedural steps preceding enforcement and the rights of the grantor ..	26-40
(a) General	26
(b) Notice of intended extrajudicial enforcement	27-34
(c) Release of the encumbered assets and reinstatement of the secured obligation	35-39
(d) Authorized disposition by the grantor	40
4. Extrajudicial enforcement of the rights of the secured creditor	41-60
(a) General	41
(b) Removing the encumbered assets from the grantor's control	42-47
(c) Sale or other disposition of the encumbered assets	48-50
(d) Acceptance of the encumbered assets in satisfaction of the secured obligation	51-55
(e) Management and sale of a business	56-58
(f) Remedies cumulative	59-60

5. Effects of enforcement	61-69
(a) The grantor, the secured creditor and third parties	61-62
(b) Other parties	63-65
(c) Allocation of proceeds of disposition	66-68
(d) Finality	69
B. Asset-specific remarks	70-99
1. General	70-71
2. Enforcement of a security right in a receivable	72-76
3. Enforcement in the case of an outright transfer of a receivable	77-79
4. Enforcement of a security right in a negotiable instrument	80-82
5. Enforcement of a security right in a right to payment of funds credited to a bank account	83-86
6. Enforcement of a security right in proceeds under an independent undertaking	87-88
7. Enforcement of a security right in a negotiable document	89-90
8. Enforcement of a security right in proceeds	91-92
9. Enforcement of a security right in an attachment to movable property, a mass or a product	93-94
10. Intersection of movable and immovable property enforcement regimes	95-99
C. Recommendations	

X. Post-default rights

A. General remarks

1. Introduction

1. Parties to any agreement usually expect each other voluntarily to perform all their obligations, whether owed between themselves or to third parties, and whether these obligations arise by contract or by operation of law. Only where performance is not forthcoming do parties contemplate compulsory enforcement through a judicial procedure. Typically, States carefully develop enforcement regimes for ordinary civil actions that balance the rights of debtors, creditors and third parties. In most States these regimes require a creditor seeking to enforce performance to

bring a court action to have the claim recognized and then to have the debtor's property seized and sold under the supervision of a public official. From the amount generated by the sale, the judgement creditor will receive payment of its outstanding claim against the judgement debtor.

2. Parties to a security agreement have similar expectations of each other. A secured creditor usually presumes that a grantor will perform its obligations voluntarily. Likewise, a grantor will typically expect the secured creditor to fulfil the obligations it has undertaken. Both enter the transaction fully expecting and intending to meet their obligations to each other. Yet both also recognize that there will be times when they may not be able to do so. Sometimes the secured creditor will fail to make a promised payment, or to return property to a grantor when an agreed condition for doing so occurs. In such cases, depending on the nature of the agreement between them, the grantor will normally apply to the court for relief. Most often, however, it is the grantor that finds itself incapable of performing as promised (that is, will not repay the credit according to the terms of the agreement). The failure will sometimes flow from reasons beyond the grantor's control, such as an economic downturn in an industry or more general economic conditions. Sometimes it may result from defaults by the grantor's own debtors. Sometimes the grantor cannot perform owing to business misjudgements, or as a consequence of poor management.

3. Whatever the reason, even after one or more payments have been missed, it is in the interest of both parties to a security agreement, and to third parties generally, that the grantor attempt to make up these payments and continue voluntarily to perform the promised obligation. Compulsory enforcement proceedings are always less efficient than voluntary performance, since (a) they are costly; (b) they take time; (c) the outcome is not always certain; and (d) the longer-term consequences for grantors and third parties are often devastating. This is why many States actively encourage parties to a security agreement to take steps during its currency to avoid a failure of performance that would lead to compulsory enforcement. Moreover, this is why secured creditors often will closely monitor their grantors' business activities. For example, they will periodically review account books, inspect the encumbered assets and communicate with those grantors that show signs of financial difficulty. Grantors having trouble meeting their obligations generally will cooperate with their secured creditors to work out ways to forestall or to overcome their difficulties. In some cases, a grantor may request a secured creditor's assistance in developing a new business plan. In other cases, the grantor and an individual creditor, or the grantor and its whole group of creditors working together, may attempt to readjust aspects of their agreements.

4. There are many types of debt readjustment agreements. Sometimes the parties enter into a "composition" or "work-out" arrangement that extends the time for payment, otherwise modifies the grantor's obligation, or adds or reduces encumbered assets that secure these obligations. Negotiations to reach a composition agreement take place against a background of two main factors: (a) the secured creditor's right to enforce its security rights in the encumbered assets if the grantor defaults on its secured obligation; and (b) the possibility that insolvency proceedings will be initiated by or against the grantor.

5. Nevertheless, despite the best efforts of grantors and secured creditors to avoid compulsory enforcement proceedings, they will occasionally be unavoidable. One of

the key issues for States enacting secured transactions regimes is, consequently, to decide the contours of a creditor's post-default rights. More specifically, the question is what modifications, if any, States should make to the normal rules that apply to the enforcement of claims when developing rules to govern how security rights can be enforced when the grantor fails to perform the secured obligation.

6. At the heart of a secured transactions regime is the right of the secured creditor to look to the amount that can be realized upon the sale of the encumbered assets to satisfy the secured obligation. Enforcement mechanisms that allow creditors accurately to predict the time and cost involved in disposing of the encumbered assets and the likely proceeds received from the enforcement process will have a significant impact on the availability and the cost of credit. A secured transactions regime should, therefore, provide efficient, economical and predictable procedural and substantive rules for the enforcement of a security right after a grantor has defaulted. At the same time, because enforcement will directly affect the rights of third parties, the rules should provide reasonable safeguards for the rights of the grantor, other persons with a right in the encumbered assets and the grantor's other creditors.

7. All interested parties benefit from maximizing the amount achieved from the sale of the encumbered assets. The secured creditor benefits by the potential reduction of any deficiency that the grantor may owe as an unsecured obligation after application of the proceeds of enforcement to the outstanding secured obligation. At the same time, the grantor and the grantor's other creditors benefit from a smaller deficiency or a larger surplus.

8. This chapter examines the secured creditor's right to enforce its security right if the grantor fails to perform ("defaults on") the secured obligation prior to the institution of insolvency proceedings or, with the permission of the appropriate body, during insolvency (see chapter XI). In section A.2 of the chapter, the general principles guiding default and enforcement are discussed. Section A.3 reviews the procedural steps that a secured creditor may be required to follow prior to exercising its remedies and sets out the grantor's post-default rights. The different recourses typically available to secured creditors are examined in section A.4. In section A.5 the effects of enforcement on the grantor, the secured creditor and third parties are considered.

9. The enforcement of security rights in receivables, negotiable instruments, funds credited to a bank account and proceeds under an independent undertaking does not fit easily into the general procedures for enforcement against tangible property (for the definitions of those terms, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). As a result, many States have particular rules dealing with enforcement against intangible property, receivables and various other rights to payment. These special situations are discussed in sections B.1-B.5 of this chapter. In addition, because tangible property may sometimes be attached to other movable or immovable property, or may be commingled or manufactured, it is necessary to adjust the general regime to govern enforcement of attachments and masses or products. The types of adjustment that may be necessary for effective enforcement against attachments, masses or products are discussed in sections B.6-B.9. The chapter concludes, in section C, with a series of recommendations.

2. General principles of enforcement

(a) General

10. As noted in the preceding section, it is in everyone's interest that the grantor voluntarily performs its promised obligation. For this reason, when performance is not forthcoming, the secured creditor and the grantor normally will attempt to conclude an agreement that obviates the need to commence compulsory enforcement proceedings. Seldom will a grantor be unaware that it is not performing its obligations and even more rarely, if ever, will the grantor learn for the first time that it is in default by means of a formal indication to this effect from the secured creditor. Indeed, in the latter case, enforcement proceedings usually do not follow since the failure of performance will almost always have been due to inadvertence rather than an inability or unwillingness to pay. Still, compulsory enforcement will sometimes become necessary. When it does, a number of basic principles guide States in elaborating the post-default rights and obligations of secured creditors and grantors.

(b) Requirement of a default prior to enforcement

11. A security right secures the performance of a grantor's (or, in the case of a third-party grantor, the debtor's) obligation to the secured creditor. In the standard case, therefore, the security right becomes enforceable as soon as the grantor fails to pay the secured obligation. There are, however, a number of other "events of default" that are typically set out in the security agreement. Any one of these events, unless waived by the secured creditor, is sufficient to constitute a default, thereby permitting compulsory enforcement of the security right. In other words, the parties' agreement and the general law of obligations will determine whether the grantor is in default and when enforcement proceedings may be commenced. This general law of obligations usually will also determine whether a formal notice of default must be given to the debtor and, if so, what the content of that notice will be.

12. Occasionally, default occurs not because a payment has been missed, but because another creditor either seizes the encumbered assets under a judgement or seeks to enforce its own security right. Many States provide that, apart from any stipulation in the security agreement, the seizure of encumbered assets by any other creditor constitutes a default under all security agreements that encumber the seized property. The rationale is based on efficiency. Since the encumbered asset is the creditor's guarantee of payment, whenever that asset is subject to judicial process, the secured creditor should be enabled to intervene to protect its rights. In these cases, procedural law will often give these other creditors the right to force the disposition of encumbered assets. The secured creditor will look to this same procedural law for rules on intervening in these judicial actions and enforcement proceedings in order to protect its rights and its priority.

13. Typically, States provide that a secured creditor with priority will be able to substitute its own enforcement process for that of a subordinate secured creditor should it so choose. This rule follows because the two secured creditors will be enforcing similar rights under the same security regime and the enforcement rights of these creditors should, therefore, be determined by their respective priority. By contrast, in some States, once enforcement of a judgement claim has commenced, the secured creditor may not intervene to enforce its rights under the security

agreement. This approach is usually followed in States where a judicial sale purges all rights, including security rights, from the property sold. The assumption is that because the judicial sale enables the purchaser to acquire a clean title, it will produce the highest enforcement value (see paras. 20-23 below). In other States, however, where a secured creditor has rights in some or all of the property under seizure by a judgement creditor, the secured creditor is permitted to raise the seizure and enforce its security rights by any means available to it. This approach is usually found in States where a regular judicial sale in execution does not purge security rights. The assumption is that since security rights will not be purged, a higher price of disposition is more likely to be realized when the enforcement process leads to the purchaser obtaining the cleanest title (see paras. 61 and 62 below).

(c) Judicial supervision of enforcement

14. Generally speaking, when a grantor is in default and attempts to compose the obligations have failed, both parties are reconciled to the need for compulsory enforcement against the encumbered assets. In some cases, however, grantors will contest either the secured creditor's claim that they are in default, or the secured creditor's calculation of the amount owed as a result of the default. As a matter of public policy, States invariably provide that grantors are always entitled to request courts to confirm, reject, modify or otherwise control the exercise of a creditor's enforcement rights.

15. The point is not to burden secured creditors with unnecessary judicial procedures, but rather to enable grantors and other interested parties to ensure respect for mandatory post-default procedures (see A/CN.9/631, recommendation 141). Consequently, to ensure that grantor challenges to enforcement can be dealt with in a time- and cost-efficient manner, many States replace the normal rules of civil procedure with expedited judicial proceedings in these cases (see A/CN.9/631, recommendation 137). For example, grantors and other interested parties may be given only a limited time within which to make a claim or raise a defence. Other States permit grantors to challenge the secured creditor on these issues even after enforcement has commenced, or at the time proceeds of enforcement are distributed, or when the secured creditor seeks to collect any deficiency. Still other States permit grantors to obtain not only compensatory damages, but also punitive damages, should it be shown that the secured creditor either had no right to enforce, or enforced for an amount greater than that actually owed.

16. Furthermore, because all such challenges will delay enforcement and add to its cost, many States also build safeguards into the process to discourage grantors from making unfounded claims. These include procedural mechanisms, such as adding the costs of the proceedings to the secured obligation in the event that they are unsuccessful, or requiring affidavits from grantors and their counsel as a prerequisite to launching such proceedings. Some States also permit secured creditors to seek damages against grantors that bring frivolous proceedings, or fail to comply with their obligations, and to add these damages to the secured obligation. This Guide recommends that ordinary damages be available if the grantor fails to comply with any of its post-default obligations (see A/CN.9/631, recommendation 133; the same rule applies to the secured creditor).

(d) Good faith and commercial reasonableness

17. Enforcement of a security right has serious consequences for grantors, debtors and interested third parties. For this reason, many States impose, as a general and overriding obligation of secured creditors, a specific duty to act in good faith and follow commercially reasonable standards when enforcing their rights. Because of the importance of this obligation, these States also provide that at no time may the secured creditor and the grantor waive or vary it (see A/CN.9/631, recommendations 128 and 129). Moreover, as noted, a secured creditor that does not comply with enforcement obligations imposed on it will be liable for any damages caused to the persons injured by its failure. For example, if a secured creditor does not act in a commercially reasonable manner in disposing of the encumbered assets and that results in the secured creditor obtaining a smaller amount than a commercially reasonable disposition would have produced, the secured creditor will owe damages to any person harmed by that differential (see A/CN.9/631, recommendation 133).

(e) Freedom of parties to agree to the enforcement procedure

18. States generally impose very few pre-default obligations on parties to a security agreement (see chapter VIII, Rights and obligations of the parties). A key issue in the post-default enforcement context is, consequently, whether a similar policy should prevail. In other words, the issue is to what extent the secured creditor and the grantor should be permitted to modify either the statutory framework for enforcing security rights or their respective contractual rights as set out in the security agreement. Some States consider the enforcement procedure to be part of mandatory law that the parties cannot modify by agreement. In other States, the parties are allowed to modify the statutory framework for enforcement as long as public policy, priority, and third-party rights (in particular in the case of insolvency) are not affected. In yet other States, emphasis is placed on efficient enforcement mechanisms in which judicial enforcement is not the exclusive or the primary procedure. Hence, even if there are limits on the extent to which the secured creditor and the grantor may agree to modify the statutory framework in their security agreement (because the freedom to vary an enforcement obligation may be the subject of abuse at the time of conclusion of the security agreement), these States permit them to waive or modify their rights under the security agreement after a default occurs.

19. States that permit parties to waive their legal or contractual post-default rights by agreement nonetheless impose a number of restrictions on their capacity to do so. For example, they invariably do not permit waiver of the creditor's obligation to act in good faith and in a reasonably commercial manner (see A/CN.9/631, recommendation 129). As for other obligations, many States distinguish between the rights of the grantor and those of the secured creditor. In some States, the grantor may waive or agree to vary the secured creditor's post-default obligations only after a default has occurred. Allowing a waiver after default often enables the grantor and the secured creditor to "work out" in a non-adversarial way a disposition of the encumbered assets in a manner that maximizes the amount that can be realized for the benefit of the secured creditor, the grantor and the other creditors of the grantor (see A/CN.9/631, recommendation 130). These same States usually also permit a secured creditor to waive a grantor's obligations at any time (either prior to or after

default) on the assumption that there is little risk of abusive terms being imposed by the grantor at the time the credit is being extended (see A/CN.9/631, recommendation 131).

(f) Judicial and extrajudicial enforcement

20. As a general principle of debtor-creditor law, most States require claims to be enforced by judicial procedures. Creditors must sue their debtors, obtain judgement and then resort to other public officials or authorities (e.g. bailiffs, notaries or the police) to enforce the judgement. In order to protect the grantor and other parties with rights in the encumbered assets, some States impose a similar obligation on secured creditors, requiring them to resort exclusively to the courts or other governmental authorities to enforce their security rights. However, as court proceedings can be slow and costly, often they are less likely to produce the highest possible amount upon the disposition of the property being sold. In addition, because the expenses involved in enforcement will be factored into the cost of the financing transaction, inefficient processes will have a negative impact on the availability and the cost of credit.

21. To facilitate secured credit, some States require only a minimal prior intervention by officials such as courts, bailiffs or the police in the enforcement process. For example, the secured creditor may be required to apply to a court for an order of repossession, which the court will issue without a hearing. In other cases, once the secured creditor is in possession of the asset, it may sell it directly without court intervention as long as it hires a certified bailiff to manage the process according to prescribed procedures. The justification for a less formal approach lies in the fact that having the secured creditor or a trusted third party take control and dispose of the assets will often be more flexible, quicker and less costly than a State-controlled process. A properly designed system can provide protection to the grantor and other persons with an interest in maximizing the amount that will be achieved from the sale of the encumbered assets while at the same time providing an efficient system for realizing the encumbered assets. Moreover, the knowledge that judicial intervention is readily available is often sufficient to create incentives for cooperative and reasonable behaviour that obviates the need to actually resort to the courts.

22. In some States, the secured creditor is not required to use the courts or other governmental authorities for any enforcement purposes, but is entitled to make exclusive use of extrajudicial procedures. These States usually impose, in these cases, a number of mandatory rules relating to, for example, a notice of default or notice of intended disposition, the obligation to act in good faith and in a commercially reasonable manner, and the obligation to account to the grantor for the proceeds of disposition. In addition, they do not permit the secured creditor to take possession of the encumbered assets out of court if such enforcement would result in a disturbance of the public order. The purpose and effect of these requirements is to provide for flexibility in the methods used to dispose of the encumbered assets so as to achieve an economically efficient enforcement process, while at the same time protecting the grantor and other interested parties against actions taken by the secured creditor that, in the commercial context, are not reasonable. This Guide recommends that, in order to maximize flexibility in enforcement and thereby to obtain the highest possible price upon disposition, creditors should have the option

of proceeding either judicially or extra judicially when enforcing their security rights (see A/CN.9/631, recommendation 136). In any event, in States that permit extrajudicial enforcement, the courts are always available to ensure that legitimate claims and defences of the grantor and other parties with rights in the encumbered assets are recognized and protected (see A/CN.9/631, recommendation 141).

23. Even in States where a secured creditor is permitted to act without official intervention, it is normally also entitled to enforce its security right through the courts. Moreover, because a security right is granted in order to enhance the likelihood of a creditor receiving payment of the secured obligation, post-default enforcement of the security right should not preclude a secured creditor from attempting to enforce the secured obligation by ordinary judicial process (see A/CN.9/631, recommendation 139). There are a number of reasons why a secured creditor might choose either of these options over extrajudicial enforcement. The secured creditor may wish to avoid the risk of having its actions challenged after the fact, or it may conclude that it will have to apply for a judicial proceeding anyway in order to recover an anticipated deficiency. Many States actually encourage secured creditors to use the courts by providing for less costly and more expeditious enforcement proceedings. They may, for example, permit enforcement through a process involving only affidavit evidence. They may also provide that the hearing must be held, challenges disposed of, and a decision rendered within a very short time period (e.g. 72 hours). Some States go even further and permit a secured creditor that has obtained judgement to dispose of the encumbered assets without having to use the official seizure and sale process. Finally, most States provide that these recourses are cumulative. A secured creditor that elects to pursue a judicial remedy may change its mind and later pursue an extrajudicial remedy to enforce its security rights to the extent exercise of a right does not make the exercise of another right impossible (see A/CN.9/631, recommendation 138).

(g) Scope of a secured creditor's enforceable rights

24. A general creditor that obtains judgement may enforce the judgement against all the debtor's property that procedural law allows to be seized. This generally will include all the debtor's property rights of whatever kind. If the debtor has only a limited right in property, only that limited right (e.g. a usufruct) may be seized and sold. Similarly, if a debtor's rights in property are limited by a term or a condition, the enforcement against the property will be likewise limited. The purchaser at the judicial sale may only acquire the property subject to the same term or condition.

25. Unlike the case of ordinary enforcement of judgements, the enforcement of security rights is subjected to an important additional limitation. A secured creditor may only proceed against the assets actually encumbered by its security right and not as against the grantor's entire estate (the secured creditor may, of course, proceed as an unsecured creditor against the grantor for claims beyond the amount of the secured obligation). Within this additional constraint, principles similar to those governing enforcement in general apply to the enforcement of a security right. The secured creditor may only enforce the security right against the particular rights that the grantor actually has in the encumbered assets. So, for example, if a grantor's ability to sell or otherwise dispose of, lease or license an encumbered asset is limited, the secured creditor's enforcement may not override those restrictions. This means that, if a grantor holds assets subject to a trademark licence, the security right

would encompass only the grantor's right subject to enforceable terms in the trademark licence and would not give the secured creditor any general right to use or dispose of the trademark.

[Note to the Commission: The Commission may wish to consider whether the order of recommendations 128-141 might be modified so as to more closely track the explanation provided in these commentaries.]

3. Procedural steps preceding enforcement and the rights of the grantor

(a) General

26. States are required to develop procedural mechanisms to facilitate effective and efficient enforcement by the secured creditor and protection of the rights of the grantor and third parties with a right in the encumbered assets, regardless of whether the secured creditor (a) must obtain a judgement in the regular way, have a public official seize the encumbered assets and sell them at a public auction; or (b) has access to an expedited judicial remedy to have the debtor's default acknowledged, and is then able to proceed immediately to have a public official seize and sell the encumbered assets; or (c) is entitled to enforce its rights without judicial process. These procedural mechanisms are meant to ensure a balance between competing rights after default but prior to the effective exercise of the secured creditor's remedies. For this reason, States usually provide that these procedural mechanisms apply regardless of the particular remedy selected by the secured creditor. This means that they would apply whether the secured creditor (a) seizes and sells the encumbered assets privately, appropriating the proceeds of sale to the repayment of the outstanding obligation; (b) accepts the encumbered asset in payment of the secured obligation; or (c) takes possession of a business, operating it to pay the secured obligation.

(b) Notice of intended extrajudicial enforcement

27. Where a secured creditor elects to enforce the security agreement by bringing before the courts an ordinary action against the grantor with respect to the secured obligation, the normal rules of civil procedure (including those relating to notice of default and the opportunity for a hearing on the merits) will apply to both the judicial action itself and the post-judgement enforcement process. Usually, however, these rules only apply directly to the formal processes of courts. This is why States that permit extrajudicial enforcement typically enact separate rules governing extrajudicial enforcement. These rules are designed to ensure that the rights of affected parties are adequately protected while at the same time providing for a maximum of flexibility in the enforcement process. Invariably, States require that secured creditors give a notice of their intention to dispose of the encumbered assets to all persons that may be affected by the disposition (e.g. the debtor, a third-party grantor and any person with rights in the encumbered assets).

28. The acknowledged need for a notice of extrajudicial disposition confronts States with a fundamental policy choice. In some States, a secured creditor must give an advance notice of its intention to pursue extrajudicial enforcement even before seeking to obtain possession of the encumbered assets. That is, the creditor must provide the grantor (and usually also third parties with a right in the encumbered assets) a written notice specifying the default, the encumbered assets,

the creditor's intention to demand possession of the assets, the delay within which the grantor must either remedy the default or surrender the assets (typically 15-20 days) and, frequently, also the particular remedy that the creditor intends to follow in disposing of them. In other States, the timing of the notice is deferred and its substantive content is often less detailed. For example, in these States the secured creditor is not required to give prior notice of its intention to take possession, but is entitled to immediate possession of the encumbered assets at the same time that it gives formal notice of default to the grantor. Once in possession, however, the secured creditor usually may not dispose of the assets without giving the grantor and interested third parties an advance notice (typically 15-20 days) of the mode and manner of disposition that it proposes to follow if the grantor fails to remedy the default in the interim.

29. There are advantages and disadvantages to both of these approaches. The principal advantage of a regime that requires a prior notice of the secured creditor's intention to enforce and take possession of the encumbered assets is that it alerts the grantor and debtor to the need to protect their rights in the encumbered assets (invariably the debtor will be aware of its default but the third-party grantor may not be). This might involve, for example, challenging the enforcement, curing the debtor's default or seeking potential buyers for the encumbered assets. Notice to other interested parties allows them to monitor subsequent enforcement by the secured creditor, to contest the enforcement, or, if it is in their interest, to cure the default and, if they are secured creditors whose rights have priority (and the grantor is in default towards them as well), to participate in or take control of the enforcement process. The disadvantages of this type of notice include its cost, the fact that the secured creditor may have to elect a remedy before close inspection of the encumbered assets, the opportunity it provides an uncooperative grantor to remove the encumbered assets from the creditor's reach, and the possibility that other creditors will race to assert claims against the grantor's business and interfere with the disposition process. Moreover, unless formal and substantive requirements with respect to notices are clear and simple, there is a risk of "technical" non-compliance that will then generate litigation and its attendant cost and delay.

30. The advantage of a regime that requires only notice of extrajudicial disposition of the encumbered assets is that it secures the right of the secured creditor to take possession of the encumbered assets without undue delay, while protecting the interests of the grantor and third parties with rights in the encumbered assets at the time prior to disposition. The disadvantage is that the grantor is given notice of extrajudicial enforcement after the secured creditor takes possession of the encumbered assets (this approach creates the problems mentioned in the preceding paragraph).

31. Regardless of which approach is taken, States must also decide what other notices may be required when a secured creditor seeks to enforce its security right extra judicially. Many States that require a prior notice of intended disposition of the encumbered assets do not also require a separate notice of default or a subsequent notice of extrajudicial enforcement. The assumption is that a single notice will be sufficient for all purposes. Other States that permit the notice of the specific extrajudicial enforcement method being pursued to be given after the creditor obtains possession of the encumbered assets, nonetheless require a pre-possession formal notice of default. Because the objective and contents of the pre-possession

notice of intention to enforce and the post-possession notice of extrajudicial enforcement largely overlap, no States that opt for the former also require the latter. To balance the interests of all parties, this Guide recommends that the secured creditor may take possession of the encumbered assets without applying to a court, provided that the grantor has consented to extrajudicial enforcement in the security agreement, does not object when the secured creditor seeks to obtain possession, and has given the grantor notice of default and of its intention to seek to obtain possession out of court (see A/CN.9/631, recommendation 143).

32. As with other situations where notice may be required, States usually specify with considerable care the minimum contents of a notice, the manner in which it is to be given and the persons to whom it must be given, in addition to its timing. Many States distinguish between notice to the debtor, notice to the grantor when the grantor is not the debtor, notice to other creditors and notice to public authorities or the public in general. It is a matter of a cost-benefit analysis whether the secured creditor should be required to give prior written notice to others beyond the debtor and grantor and other secured creditors known to exist (i.e. other secured creditors that have registered a notice of their rights or that have otherwise notified the secured creditor that proposes to dispose of the encumbered assets). Some States provide that the notice need be given only to the grantor and other secured creditors that have registered their rights, but that it then be registered and that thereafter the registrar be required to forward the notice to all those who have registered rights against the encumbered assets.

33. States also take different approaches to the minimum content of the notice. As with the decision about the timing of the notice and its recipients, decisions about the information to be included require States to undertake a cost-benefit analysis. For example, they might require the inclusion of the secured creditor's calculation of the amount owed as a consequence of default. They might further require advice to the debtor or grantor regarding what steps to take to pay the secured obligation in full or, if such a right exists, to cure the default. Moreover, some States provide that the notice to other interested parties need not be as extensive or specific as notice to the debtor and grantor. Again, where the notice is to be given prior to taking possession, States often place a higher information burden on secured creditors. Where the notice is given after possession, by contrast, the secured creditor is often obliged simply to provide basic information about the date, time, location and type of disposition being proposed and the delay within which the grantor or other interested party may contest the proposal or remedy the default.

34. There are different approaches to achieving the right balance between the need to ensure that the notice conveys to interested parties sufficient information to enable them to make an informed judgement about how best to protect their rights, and the need to achieve expeditious and low-cost enforcement. Some States place a heavy burden on secured creditors, both as to the timing and the content of the notice. Others impose only minimal requirements. This Guide recommends that the notice normally should be given prior to the secured creditor commencing enforcement (see A/CN.9/631, recommendation 145) and that rules should provide for it to be given in a timely, efficient and reliable way (see A/CN.9/631, recommendation 146), but that States have the flexibility to determine the specific manner for giving the notice and its specific contents (see A/CN.9/631, recommendation 147).

(c) Release of the encumbered assets and reinstatement of the secured obligation

35. Once a default has been signalled, the debtor, third-party grantor and interested third parties will often attempt to refinance the secured obligation or otherwise remedy the alleged default. In such cases, States must decide what rights these different parties may exercise and within what time frame they may be exercised. Typically grantors and third parties are given two types of right: release of the encumbered assets; and reinstatement of the secured obligation.

36. Release brings the secured transaction to an end because the grantor's obligation has been fully repaid. Since the objective of enforcement proceedings is to enable creditors to obtain repayment of the obligation, States are usually quite flexible about the parties entitled to pay the secured obligation. For example, most States permit a defaulting grantor to seek to obtain a release of the encumbered assets before their final disposition by the secured creditor upon paying the outstanding amount of the secured obligation, including interest and the costs of enforcement incurred up to the time of repayment. States usually also permit any interested third party (e.g. a creditor with a lower priority ranking than that of the enforcing creditor or a purchaser that takes the assets subject to the security right) to exercise the right of repayment if the grantor does not.

37. In addition, States usually take a flexible position in relation to the time within which repayment may be made. The secured creditor's interest is in being paid. As long as this payment of principal, interest and costs of enforcement incurred occurs before any third-party rights are affected, there is no reason for insisting on disposition of the encumbered asset. That is, whoever exercises the right may do so up until the time of (a) disposition of the encumbered asset or the completion of collection by the secured creditor after disposition of the encumbered asset; (b) the secured creditor entering into a commitment to dispose of the encumbered asset; or (c) acceptance by the secured creditor of the encumbered asset in total or partial satisfaction of the secured obligation, whichever occurs first. Until one of these events occurs, the secured obligation may be repaid in full and the encumbered assets released. For the same reasons (recognizing that the creditor's primary interest is in receiving payment and the grantor's primary interest is in not losing its property), this Guide recommends that repayment leading to release of the encumbered assets be permitted right up until third-party rights are acquired or the secured creditor has accepted the encumbered asset in satisfaction of the secured obligation (see A/CN.9/631, recommendation 140).

38. Reinstatement of the secured obligation is quite different from release of the encumbered assets and is usually more narrowly circumscribed. Reinstating the secured obligation means curing the specific default (e.g. paying any missed instalments, accrued interest and costs of enforcement already incurred), but otherwise it has no effect either on the grantor's continuing duty to perform or on the security right. The reinstated obligation remains enforceable according to the terms agreed by the parties and remains secured by the encumbered assets.

39. States take quite different approaches to the reinstatement right. Some do not legislatively provide for a reinstatement right, but allow parties to provide for such a right in the security agreement. By contrast, many States provide for such a right but limit its exercise to the grantor. Finally, some States permit any interested party to cure a default and reinstate the secured obligation. Whenever reinstatement is

permitted, parties authorized to do so may exercise the right up to the same time that parties authorized to release the encumbered assets may exercise their right of release. Because reinstatement maintains rather than extinguishes the secured obligation, the grantor may later again fall into default. To prevent a series of strategic defaults and reinstatements, States often limit the number of times that a secured obligation may be reinstated after default.

[Note to the Commission: The Commission may wish to consider adding a recommendation on the grantor's right to cure the default and reinstate the secured obligation.]

(d) Authorized disposition by the grantor

40. Following default, the secured creditor will be interested in obtaining the highest price possible for the encumbered assets. Frequently, the grantor will be more knowledgeable about the market for the assets than the secured creditor. For this reason, secured creditors will often permit the grantor to dispose of the encumbered assets even after enforcement has commenced. In most such cases, the parties agree that any amount received from the disposition will be paid to the secured creditor in the same manner as if payment resulted from enforcement proceedings. These arrangements have consequences for third parties that may also have rights in the encumbered assets, or a right to proceeds of their disposition. For this reason, some States explicitly provide that when a secured creditor that has commenced enforcement gives the grantor a limited time following default to dispose of the encumbered assets, the proceeds of the sale will, for all purposes, be treated as if they had arisen as a consequence of an enforcement disposition. Some States go further, and even prohibit the secured creditor from attempting to arrange for the disposition of the encumbered assets during a short period of time following default. Other States seek to achieve the objective of maximizing the amount received upon disposition by providing incentives for the grantor to bring potential buyers to the attention of the secured creditor. In any event, the point is to structure the enforcement regime so as to give the grantor the incentive to cooperate with the secured creditor in disposing of encumbered assets for the highest possible price.

4. Extrajudicial enforcement of the rights of the secured creditor

(a) General

41. In cases where a secured creditor elects to enforce the security agreement judicially, after judgement has been obtained, the normal rules of civil procedure relating to the post-judgement enforcement process will apply. Typically, this means that public officials or authorities (e.g. bailiffs, sheriffs, notaries or the police) will take possession of the encumbered assets and bring them to sale. Slightly different processes are required where a secured creditor has taken the steps that are necessary to commence enforcement proceedings and elects to exercise its rights out of court. As no public official is involved, the secured creditor will normally wish to, and typically will have to, obtain possession or control of the encumbered asset itself in order to proceed with enforcement. States have taken different policy approaches both to the right of the secured creditor to obtain possession and control of assets (as opposed to consigning encumbered assets to a bailiff) and, if direct creditor possession is permitted, to the procedural mechanisms that must be followed for doing so.

(b) Removing the encumbered assets from the grantor's control

42. Prior to default, the grantor will usually be in possession of the encumbered assets. Sometimes, however, the grantor will have already placed the secured creditor in possession, either at the time of making the security right effective between them (see A/CN.9/631, recommendation 14) or thereafter either as a means of achieving third-party effectiveness (see A/CN.9/631, recommendation 38) or in response to a later pre-default creditor request to control the assets. On other occasions, the encumbered assets may be in the possession or the control of a third party that is acting for, or under the direction of, the secured creditor. In both these situations, many States do not require the secured creditor to take any further steps in order to commence enforcement. That is, the creditor need not formally give the grantor notice of default, but need only send a notice of intended disposition once it has determined the recourse it intends to pursue. By contrast, some States require the creditor in possession to inform the grantor of the default and of the fact that it is now holding the encumbered assets in preparation for enforcement. These States usually also consider that, upon default, any agreement under which the creditor in possession may use the encumbered assets comes to an end.

43. Where the creditor is not in possession, it must take active steps to recover the encumbered assets from the grantor or to inform a third party holding on behalf of the grantor that the security right has become enforceable. States that provide for extrajudicial enforcement generally provide that, once a grantor is in default, the secured creditor has an automatic right to possession of the encumbered asset. That is, they do not require that, pending extrajudicial enforcement, the assets be placed under the control of a public official. The assumption is that flexibility in enforcement and lower-cost preservation of the assets pending disposition will result if the secured creditor can make decisions about where post-default possession and control should lie. This rationale also underlies the recommendation in this Guide that the secured creditor has upon default an automatic right to possession (see A/CN.9/631, recommendation 142).

44. A concomitant of the secured creditor's right to possession is its right to decide exactly how that possession should be exercised. In some cases, secured creditors will actually take personal possession of the encumbered assets against which they are proceeding. However, in many cases, they will not take possession of the assets. Secured creditors may, for example, have the assets placed in the hands of a court, or a State- or court-appointed official. More commonly, they will have the assets entrusted to a third-party depositary that they appoint, or (particularly in the case where a manufacturing operation is involved) will appoint a manager to enter into the premises of the grantor in order to take control of the encumbered assets. Where assets are already in the hands of a third party that is not acting for them, but that has previously been made aware of the security agreement, secured creditors may simply give notice that the agreement has become enforceable and that the grantor no longer has rights to retain possession, to control or to dispose of the encumbered assets.

45. States usually consider the taking of possession to be a significant step in the enforcement process and impose specific procedural requirements on creditors claiming possession. That is, even though the secured creditor may have an automatic right to possession, the manner for doing so is regulated. In general, States take one of three approaches in developing the procedural mechanisms by

which secured creditors not in possession may remove encumbered assets from the grantor's control. In some States, the secured creditor may only obtain possession by a court order, whether following an *ex parte* procedure, or more frequently, after a hearing. In other States, no judicial order is required, but the grantor must have authorized the creditor to obtain possession extrajudicially in the security agreement and the creditor must give the grantor a prior notice (typically 10 or 20 days) of its intention to claim possession and to enforce. Finally, in some States, the creditor is entitled to demand and to take possession without any recourse to a court and without the need to give the grantor a prior notice of its intention to do so, provided that the grantor authorized it to do so in the security agreement. Even in these States however, the creditor does not have an absolute right to obtain possession extrajudicially. There is always potential for the creditor abusing its rights by threatening the grantor, intimidation, breaching the peace or claiming the encumbered assets under false pretences. Most of these States, therefore, condition any acts of the creditor to obtain possession on the creditor avoiding a disturbance of the public order. Should the grantor resist, a judicial order for possession would be required. States that permit extrajudicial creditor possession upon the giving of a 10 or 20 day prior notice typically also adopt this approach to possession and require a judicial order if a breach of the peace is threatened when the creditor seeks possession after the delay has expired.

46. In States that impose a notice requirement on secured creditors as a precondition to obtaining possession, there is always a risk that a grantor in default may then seek to hide or transfer the encumbered asset before the secured creditor can take control of it. It may also be that the assets may be misused, may dissipate if not looked after or, depending on market conditions, may rapidly decline in value. To forestall these possibilities, most States provide that secured creditors may obtain expedited relief from a court or other relevant authority. Furthermore, in the special case where the encumbered assets threaten to decline rapidly in value, and whether or not secured creditors are required to give a prior notice of their intention to enforce, many States permit the court to order the immediate sale of these perishable assets.

47. The decision as to the formalities required in order for a secured creditor to obtain possession depends on the balance States strike between the protection of the rights of grantors and efficient enforcement to reduce costs. It also depends on a judgement as to the likelihood in practice of abuse by secured creditors or improper behaviour by grantors in possession. In order to reduce the cost of enforcement and minimize the chances that assets will be misused or dissipate in value, this Guide recommends that the secured creditor be authorized to obtain possession extrajudicially, but only if the grantor has so authorized in the security agreement, a notice of intention to take possession has been given to the grantor, and the grantor does not object at the time possession is being sought (see A/CN.9/631, recommendation 143). In addition, to maximize enforcement value where assets are perishable or are likely to decline rapidly in value during the period between the giving of notice and the time when the creditor may actually obtain possession of the assets, this Guide recommends that, as long as the grantor has authorized extrajudicial possession in the security agreement and the grantor does not object when possession is actually being sought, notice of the creditor's intention to take possession and to dispose of the assets need not be given (see A/CN.9/631, recommendation 145).

(c) Sale or other disposition of the encumbered assets

48. Because a security right entitles the secured creditor to obtain the value from the sale of the encumbered assets and to apply it to the secured obligation, States usually regulate in some detail the procedures by which the secured creditor may seize and dispose of these assets. Requirements range from the less to the more formal. For example, even when extrajudicial enforcement is permitted, some States require disposition to be subject to the same public procedures used to enforce court judgements. Other States require secured creditors to obtain judicial approval of the proposed mode of disposition before proceeding. Still other States permit the secured creditor to control the disposition but prescribe uniform procedures for doing so (e.g. rules relating to public auctions or a call for tenders). On occasion, States actually oblige the secured creditor to obtain the consent of the grantor as to the mode of disposition. Finally, some States give the secured creditor a wide, unilateral discretion as to the mode of disposition, but subject this conduct to general standards of conduct (e.g. good faith and commercial reasonableness), the breach of which leads to the creditor's liability in damages.

49. Most commonly, the procedural safeguards by which States control the actions of secured creditors relate to the details of the notice that must be given to the grantor and third parties with a right in the encumbered assets. In principle, the types of detail required should be identical whether States opt for a pre-possession notice approach or a post-possession notice approach. So, for example, States often require creditors to indicate the method of advertising a proposed disposition, the date, time and location of the sale, whether the sale will be by public auction or by tender, whether the assets will be sold individually, by lot or as a whole, and whether the disposition includes leases, licences or associated permits where required. The objective should be to maximize the amount realized for the encumbered assets, while not jeopardizing the legitimate claims and defences of the grantor and other persons. This explains why even States that generally require detailed notices do not do so when the encumbered assets are to be sold on a recognized public market. In such cases, the market sets the value of the assets and there is no higher price to be obtained by adopting and giving notice of some other mode of sale (see A/CN.9/631, recommendation 145).

50. Because an extrajudicial disposition of encumbered assets has the same finality as a court-supervised sale, most States not only impose relatively detailed rules as to the contents of the notice and the time that must elapse before the sale can take place, but also permit interested parties to object to the timing and manner of the proposed disposition. Typically, special expedited procedures are available so that objections may be quickly heard and dealt with (see A/CN.9/631, recommendations 137 and 141). As a general rule, where the enforcing creditor has the greatest flexibility as to timing and method of disposition, the cost of enforcement is lowest, the enforcement is most expeditious and the proceeds received are highest. For these reasons, this Guide recommends flexibility for secured creditors and only the basic minimum of detail in the notice necessary to alert interested parties to the enforcement and the need to protect their interests should they wish (see A/CN.9/631, recommendations 146 and 147).

(d) Acceptance of the encumbered assets in satisfaction of the secured obligation

51. The underlying rationale for creating a security right is to enable the secured creditor to realize the value of the encumbered asset and to apply the money received to payment of the grantor's obligation. For this reason, in many States, a creditor's only recourse upon default is to seize the encumbered assets and sell them. In most States that so limit the secured creditor's extrajudicial recourses, the limitation applies even when the creditor is already in possession of the encumbered assets under a pledge agreement. That is, in these States it is not possible for the parties to agree in advance that, should the grantor default, the secured creditor may keep the encumbered assets in satisfaction of the secured obligation. Similarly, in many of these States, the secured creditor may not take the encumbered assets as a remedy after default has occurred. Moreover, even if, after default, the grantor and the secured creditor agree that the secured creditor may keep the encumbered assets, in these same States such arrangements are considered as a contractual payment and have no effect on the rights of any other party with a right in the encumbered assets.

52. By contrast, in many States, the secured creditor is entitled to propose to the grantor that it accept the encumbered assets in full or partial satisfaction of the secured obligation. Where such an enforcement remedy is made available to secured creditors, States usually provide that any agreement that automatically vests ownership of the encumbered assets in the secured creditor upon default is unenforceable if entered into prior to default. However, the agreement is enforceable if made after default and according to the specific enforcement procedures meant to prevent creditor abuse. These States usually also provide that any informal private agreements entered into by grantors and secured creditors after default are enforceable, but only as contractual payment remedies that have no effect on third parties with rights in the encumbered assets.

53. Where States expressly permit the creditor to take the encumbered assets in satisfaction of the secured obligation after default, provided that it has followed the required procedural steps, this does not mean that the grantor must accept the secured creditor's offer. The grantor may refuse to do so, with the consequence that the secured creditor will have to pursue one of its other remedies. The advantage of permitting these types of post-default agreement is that they can often lead to less expensive and more expeditious enforcement. The disadvantage is that there may be a risk of abuse by the secured creditor in cases where (a) the encumbered assets are more valuable than the secured obligation; (b) the secured creditor has, even in the post-default situation, unusual power over the grantor; or (c) the secured creditor and the grantor come to an arrangement that unreasonably prejudices the rights of third persons with a right in the encumbered assets.

54. To guard against the potential for abusive or collusive behaviour by the secured creditor and the grantor, some States require not only the consent of the grantor to the acceptance by the secured creditor, but also that notice be given to third parties with rights in the encumbered assets. These third parties then have a right to object to the proposed agreement and may require the secured creditor to enforce the security by means of a sale. In addition, some States require the consent of a court under certain circumstances, such as where the grantor has paid a substantial portion of the secured obligation and the value of the encumbered assets greatly exceeds the outstanding obligation. Finally, some States require that a secured creditor that proposes to accept encumbered assets in satisfaction of the

secured obligation be required to provide an official and independent appraisal of the value of the encumbered assets before proceeding.

55. Whether States should impose any or all of these requirements, and especially the requirement of prior judicial involvement, will depend on their assessment of the costs and benefits of each requirement. In line with the general objective of maximizing flexibility so as to obtain the highest possible value for encumbered assets at the point of enforcement, this Guide recommends that either the secured creditor or the grantor may propose to the other that the assets be taken in satisfaction of the secured obligation (see A/CN.9/631, recommendations 148 and 151). Likewise, to ensure that all parties understand the full implications of the proposal, this Guide recommends that adequate notice of the secured creditor's intention to accept the assets in payment is given to the grantor and third parties, and that the notice indicates not only the assets to be taken in satisfaction, but also the amount owed at the time the notice is sent, the amount of that obligation that is proposed to be satisfied by the acceptance, and a relatively short period of time at the expiration of which the proposal will be deemed to be accepted (see A/CN.9/631, recommendation 149). The assumption is that requiring the secured creditor to indicate its own valuation of the encumbered assets is a more efficient and less costly mechanism for providing relevant information to interested parties than providing for an independent appraisal. It is also assumed that, once informed of the secured creditor's proposal, the grantor or third parties will be in a position to assess its reasonableness. This is why this Guide further recommends that the grantor or third parties that object to the proposal have a right to require the secured creditor to abandon this recourse and proceed rather to a sale in disposition (see A/CN.9/631, recommendation 150).

(e) Management and sale of a business

56. In many circumstances a secured creditor has security not just on specific assets of a grantor, but on most or all of the assets of a business. In these situations, the highest enforcement value can often be obtained if the business is sold as a going concern. In order to be able to do so efficiently, secured creditors must usually be able to dispose of all these assets, including immovable property. Moreover, in such cases, States often prescribe special notice procedures for the sale and more strictly regulate the conditions under which the sale of a business as a going concern may take place.

57. Alternatively, in many cases where enforcement becomes necessary, it is not in the interest of the grantor or the secured creditor to immediately dispose of all the assets of a business, whether these are sold by category (e.g. inventory, equipment and licences) or whether the business is sold as a whole. For this reason, many States permit secured creditors to take possession of business operations and manage the business for a certain period of time after default. Frequently, these States require that the notice of enforcement specifically indicate that when the creditor takes possession of the encumbered assets it intends to gradually wind down the business. This is especially important for other creditors that otherwise may not know that liquidation is taking place. Some States also prescribe special procedures for naming a manager, for operating the business, for alerting suppliers of the secured creditor's rights and for informing customers that what looks like an ordinary-course-of-business sale is in fact part of an enforcement process.

58. When inventory has been effectively liquidated, the secured creditor will typically proceed to exercise another of its remedies. In such cases, most States require the secured creditor to give a further notice to the grantor and other parties with a right in the remaining assets (most often equipment, leases, licences and a remnant of inventory) that it proposes to exercise another of its remedies (e.g. accepting the assets in satisfaction, or more commonly, selling them). Once such a notice is given, then the regular enforcement procedures applicable to that recourse will apply.

[Note to the Commission: The Commission may wish to consider adding a recommendation on the secured creditor's right to take over the management of a business and to sell the assets as it winds down that business.]

(f) Remedies cumulative

59. It will sometimes happen that, in order to completely dispose of all the encumbered assets, a creditor will be obliged to exercise more than one remedy. As noted, this typically occurs when a secured creditor liquidates a business. However, it may occur because, for example, security in inventory may be most effectively enforced through a sale, or security in equipment may be most efficiently enforced through the acceptance of the assets by the secured creditor in satisfaction of the secured obligation. In addition, there will occasionally be situations where a secured creditor believes that one remedy will be optimal, only to discover that another will generate a higher value upon disposition. This is why most States provide that a secured creditor's remedies are cumulative. That is, the enforcing creditor may not only have the option of selecting which recourse to pursue, it may exercise different remedies either at the same time or one after the other. It may even concurrently pursue both judicial and extrajudicial remedies. Only where the exercise of one remedy (e.g. repossession and disposition of an encumbered asset) makes it impossible to exercise another remedy (e.g. acceptance of an encumbered asset in satisfaction of the secured obligation) will the creditor not be able to cumulate remedies. Here also, the Guide adopts the policy that maximizing flexibility in enforcement is likely to ensure that the highest value is received for the encumbered assets and recommends that secured creditors be permitted to cumulate their judicial and extrajudicial remedies (see A/CN.9/631, recommendation 138).

60. A security right is granted in order to enhance the likelihood of a creditor receiving payment of the secured obligation. The various post-default enforcement remedies, and especially extrajudicial remedies of the secured creditor, are meant to achieve this objective. Some States do not permit secured creditors to cumulate both their remedies with respect to the encumbered assets and their remedies with respect to the secured obligations. The assumption is that these extrajudicial remedies are a favour given to the secured creditor and that the creditor ought, therefore, to be required to opt either to enforce the security right or to bring a judicial action to enforce the secured obligation. Other States permit the secured creditor to cumulate both its extrajudicial remedies and its right to enforce the obligation as a matter of contract law. Moreover, they permit the two proceedings to be brought concurrently or serially in either order. To require a secured creditor to opt, at the outset of enforcement, for one or the other mode of proceeding will complicate and increase the cost of enforcement because it will require a creditor to determine if a deficiency is likely to result. If it comes to that conclusion it will be obliged to bring an action

to enforce the obligation and assert its priority only at the moment of a judicial sale in enforcement. This is a less expeditious process, is more costly, and will normally produce less value at the time of sale. To maximize enforcement value, this Guide recommends that secured creditors be permitted to cumulate proceedings to enforce the security extrajudicially and to enforce the secured obligation through a judicial process, subject always to the limitation that the secured creditor cannot claim more than it is owed (see A/CN.9/631, recommendation 139).

5. Effects of enforcement

(a) The grantor, the secured creditor and third parties

61. In order to make the enforcement regime as expeditious as possible, States typically enact detailed rules that determine the effect of enforcement on the relationship between the grantor and the secured creditor, the rights of parties that may purchase the encumbered assets at an enforcement sale, and the rights of other secured creditors to receive the proceeds generated by the sale of the encumbered assets. The primary object of an enforcement procedure is, of course, to generate value for the secured creditor that can be deployed to satisfy the unpaid secured obligation. In the most common situation, the secured creditor will acquire this value by selling the encumbered assets and appropriating the proceeds. Should there be a surplus, the secured creditor must return this to the grantor or to any other person entitled to it. Moreover, as just noted, should there be a deficiency, most States provide that the secured creditor retains an ordinary contractual right to sue the grantor for the deficiency as an unsecured creditor. The details of how proceeds of distribution are normally allocated in these cases are discussed below (paras. 67 and 68).

62. As noted, however, sometimes the secured creditor will take the encumbered asset in satisfaction of the secured obligation. Not all States adopt identical rules to govern the effects of this particular recourse. Usually, States provide that the creditor that takes the asset in satisfaction may keep it, even where the value of the asset exceeds the amount of the secured obligation still owed. That is, unlike the case of a sale, the secured creditor may keep a surplus. Concomitantly, many of these States provide that the secured creditor that accepts the asset in satisfaction of the obligation has no recourse for a deficiency against the grantor. The acceptance is deemed to be complete payment and therefore extinguishes the secured obligation. By contrast, however, other States permit creditors that have taken encumbered assets in satisfaction of the secured obligation to pursue their grantor for a deficiency. In these cases, of course, it becomes necessary to establish the value of the assets being taken in satisfaction so that the amount of the deficiency may be calculated. Some States require the secured creditor to provide an independent accounting of the value of these assets taken, while other States merely require the secured creditor to indicate the value that it ascribes to these assets. In either case, as noted, the grantor or other creditor may require the secured creditor to sell the asset instead. For reasons already given (see para. 55 above), this Guide recommends that secured creditors may take the asset in total or partial satisfaction of the secured obligation, provided that they indicate the value they ascribe to it in the notice sent to the grantor and third parties (see A/CN.9/631, recommendation 149).

(b) Other parties

63. When a secured creditor enforces its security right by means of a sale of the encumbered assets, there are different approaches to determining the effects of the sale on other parties. In some States, the sale (even when it is an extrajudicial sale) will purge all security rights in the encumbered assets. In such cases, even secured creditors with a priority ranking higher than that of the enforcing secured creditor will lose their security and will only have a claim in the proceeds with an equivalent priority ranking. Parties that purchase the assets will obtain a clear title and, it is presumed, will be willing to pay a premium to do so. In other States, the sale by a creditor (whether it is managed by a judicial officer or it is a private sale by the creditor) will only extinguish rights with a lower priority ranking than that of the enforcing secured creditor and the secured creditor with a higher priority ranking will retain its security right in the encumbered assets. Purchasers at the sale will not obtain a clear title and will, consequently, discount the amount they offer for the assets being sold. The assumption is that the highest ranking secured creditor normally will either take over the enforcement (so that all security rights will be extinguished) or that a lower ranking secured creditor will arrange to pay off the higher ranking creditor so as to produce a clear title. While either approach usually will produce a clear title, the second approach maximizes the flexibility of the enforcing creditor and the purchaser to reach an alternative arrangement in the event that the purchaser cannot finance the entire cost of the secured asset and is willing to purchase it for a discounted price because it is subject to a higher ranking security right. To maximize flexibility and efficiency in enforcement, this Guide recommends adoption of the second approach (see A/CN.9/631, recommendation 158).

64. When a secured creditor takes the encumbered assets in satisfaction of the secured obligation, States usually provide that the secured creditor takes the assets as if they were transferred through an enforcement sale. While it is possible that States could provide that an acceptance in satisfaction of the secured obligation operates a purge of all rights, this would invariably lead secured creditors with a higher priority ranking than that of the enforcing secured creditor to take over the enforcement process. Therefore, most States provide that the rights of other secured creditors are determined by their priority relative to the enforcing creditor. So, for example, where a State permits a secured creditor to take an encumbered asset in satisfaction of the secured obligation, that creditor will acquire the asset subject to the rights of secured creditors with a higher priority ranking. Conversely, if there are secured creditors with even lower priority, their rights will normally be extinguished upon acceptance of the encumbered assets by a secured creditor with higher priority. For the same reasons that apply to the remedy of extrajudicial sale, this Guide recommends that the secured creditor that accepts the asset in satisfaction takes it free of lower priority security rights, but subject to the rights of secured creditors with a higher priority (see A/CN.9/631, recommendation 158).

65. The secured creditor that has a higher priority will often wish to take over an enforcement process commenced by another creditor (whether this is under judgement enforcement proceedings or enforcement being pursued by another creditor exercising a security right). States usually provide for a takeover right from secured creditors enforcing under secured transactions law, but some do not permit secured creditors to pursue extrajudicial enforcement once a judgement creditor

(whether an unsecured judgement creditor, or a secured creditor that may have also taken judicial enforcement proceedings) has seized the encumbered assets. Where a takeover right is given to a secured creditor against enforcement by a judgement creditor, States often require the secured creditor to exercise the right in a timely manner (i.e. before the auction begins) and to reimburse the judgement creditor for enforcement expenses incurred up to that moment. In order to maximize the efficiency of the enforcement of security rights, this Guide recommends that a secured creditor with a priority ranking higher than that of the enforcing secured creditor is entitled to take control of enforcement both against other secured creditors pursuing extrajudicial enforcement and as against judgement creditors (see A/CN.9/631, recommendation 156).

(c) Allocation of proceeds of disposition

66. One of the important features of secured transactions law is that it disrupts the normal rules for distributing the proceeds of disposition that apply as between unsecured judgement creditors. After all, the object of the security is to obtain a priority in the distribution of these proceeds. Should the enforcement of the security right have taken place judicially or should the secured creditor not have taken over an enforcement process brought by a judgement creditor, the proceeds will be held by a public authority pending their distribution to parties entitled to them. When the regime provides for a purge of rights, the most common allocation is to pay reasonable enforcement costs first and then the secured obligations in the order of their priority. Many States also provide for the payment of certain statutory claims, after costs of enforcement but in priority to secured creditors. If the ordinary enforcement process does not provide for a purge of rights, secured creditors will not receive payment, but will be able to assert their security rights against the purchaser.

67. Where a secured creditor enforces through an extrajudicial sale, States typically provide in their secured transactions law a series of rules relating to the proceeds of the sale. Often there are special rules dealing with the manner by which proceeds are to be held by the secured creditor pending distribution. These rules usually also prescribe if and when a secured creditor is responsible for distributing proceeds to some or all other creditors (such as secured creditors with security rights in the encumbered assets with a lower priority ranking than that of the enforcing secured creditor or, if the enforcement regime provides for a purge of rights, to secured creditors with a higher priority ranking and statutory priority claimants). Often, the secured creditor need only take account of these other rights if they are registered or have otherwise been made effective against third parties, or if it has been expressly notified of them (e.g. the case of statutory priority claims that need not be registered). Invariably States also provide that any surplus proceeds after all creditors entitled to payment have been satisfied are to be remitted to the grantor (see A/CN.9/631, recommendation 152).

68. The secured obligation is discharged only to the extent of the proceeds received from the sale of the encumbered assets. Normally, the secured creditor is then entitled to recover the amount of the deficiency from the grantor. Unless the grantor has created a security right in other assets for the benefit of the creditor, the creditor's claim for the deficiency is an unsecured claim. Regardless of whether there is a deficiency or a surplus, some States provide that, when a secured creditor

purchases the encumbered assets at an enforcement sale and later sells them at a profit, the amount received for the sale that exceeds the amount paid by the creditor and the costs of the further sale, is deemed to be received in satisfaction of the secured obligation. Generally, however, unless the initial sale can be shown to have been commercially unreasonable, States consider the amount generated to be the final value received upon disposition of the encumbered assets.

(d) Finality

69. Secured transactions laws normally provide finality following enforcement. This means that, once the sale or acceptance in satisfaction has taken place according to the required enforcement procedures, it normally cannot be reopened. Unless fraud, bad faith or collusion between seller and buyer can be proved, the sale is final. Whether the secured creditor accepts the encumbered asset in satisfaction of the secured obligation or whether the assets are sold to a third party that acquires them at an enforcement sale, the effects of the enforcement on other parties are usually the same. The security right in the encumbered assets terminates, as do the grantor's rights and the rights of any secured creditor or other person with a lower priority ranking in the assets. In States where the sale produces a total purge of rights in the encumbered assets, the purchaser or the creditor that takes the encumbered assets in satisfaction of the secured obligation obtains a clear title. Most often, however, the law provides that the rights of certain other persons in the encumbered assets (most notably secured creditors with a higher priority ranking than that of the enforcing secured creditor) continue notwithstanding disposition of the assets in the enforcement procedure.

B. Asset-specific remarks

1. General

70. The basic principles governing enforcement of security rights just reviewed ought generally to apply whatever the type of encumbered asset. Nonetheless, they primarily envision certain types of tangible property, such as inventory, equipment and consumer goods. For this reason, these rules do not easily apply either to the enforcement of security rights in intangible property, such as receivables and various payment rights (such as rights to payment of funds credited to a bank account) and proceeds under an independent undertaking, or to payment rights arising from negotiable instruments and rights to possession arising from a negotiable document (for the definitions of these terms, see A/CN.9/631/Add.1, Introduction, sect. B. Terminology and rules of interpretation). Consequently, many States have enacted special rules governing enforcement against these types of encumbered asset and in particular in respect of payment rights. These include, among others, provisions giving the secured creditor the right to collect from the person obligated on the receivable or negotiable instrument and requiring that person to make payments directly to the secured creditor. Moreover, in many of these cases, secured transactions law must accommodate, and in part defer to, the specialized law and commercial practices governing bank accounts, negotiable instruments, negotiable documents and independent undertakings.

71. As previously mentioned, the basic principles in section A of this chapter generally envision encumbered assets as tangible property acquired, used and sold as separate objects. Yet tangible property is often attached to other movable or immovable property, or commingled in a mass, or manufactured into a product. These dealings require States to adjust the general regime to govern enforcement of competing security rights in attachments and manufactured products. This is most notably the case when tangible property is attached to, or detached from, immovable property. For example, there may be priority conflicts between creditors enforcing a mortgage on land and creditors with a security right in an attachment to that land. The most common of these different situations and the different approaches that States can take to ensure efficient enforcement of competing security rights are considered in turn.

2. Enforcement of a security right in a receivable

72. When a security right is taken in a receivable, the encumbered asset is the grantor's right to receive payment from the debtor of the receivable (for the definitions of the terms "receivable", "assignment", "assignor", "assignee" and "debtor of the receivable", see A/CN.9/631/Add.1, Introduction, sect. B. Terminology and rules of interpretation). While it would be theoretically possible to require the assignee to enforce the assignment by seizing the receivable and either selling it or keeping it in satisfaction of the secured obligation, this would be a cumbersome and inefficient way of realizing the economic value of the asset. This is the reason why most States that permit creditors to take security in receivables and other claims, enable the assignee to collect payment directly from the debtor of the receivable once the assignor is in default. The primary concerns are two: first, that the assignor knows that the assignee is enforcing (either after default, or with the agreement of the grantor before default); and second, that the debtor of the receivable knows that it must thereafter make payments to the assignee.

73. In chapter VIII, Rights and obligations of the parties, this Guide discusses the relationship between the assignor, the assignee and the debtor of the receivable. Issues discussed include, for example, the right of the assignee to inform the debtor of the receivable to make payments directly to the assignee following the assignor's default (see A/CN.9/631, recommendations 110-113). The Guide also provides, in chapter IX, Rights and obligations of third-party obligors, that the debtor of the receivable is protected against having to pay twice by the notification and payment instruction given by the assignee or the assignor (see A/CN.9/631, recommendations 114-120).

74. Many States take the position that the assignee's primary enforcement right is simply to collect the receivable. Assuming that it has followed the steps required to make its rights effective against the debtor of the receivable, the assignee will simply collect payment, applying the proceeds to reduction of the assignor's obligation. The rationale is that the rights of the assignor and third parties will be protected simply by the normal application of the money received to a reduction of the secured obligation. Consistent with the approach taken by these States, this Guide recommends that no further steps to achieve enforcement need be taken (see A/CN.9/631, recommendation 163).

75. Nonetheless, there may be cases where the assignee may wish to appropriate the entire present value of a receivable that may be spread out in instalments due

over several months. It may, therefore, after notifying the debtor of the receivable that it will be collecting the account, sell or transfer the receivable to a third person. To protect the assignor's rights in such cases, many States provide that the assignee may not keep any excess, a position this Guide adopts not only in relation to such dispositions of receivables, but also in relation to the ordinary collection of receivables (see A/CN.9/631, recommendation 113, subpara. (b)). Moreover, the assignee must act in a commercially reasonable manner in disposing of the receivable (see A/CN.9/631, recommendation 128).

76. In some cases, the receivable itself will be secured by some other personal or property right (e.g. a personal guarantee by a third party or a security right on movable property of the debtor of the receivable). Many States provide for an automatic right of the assignee to enforce these other rights should the debtor of the receivable be in default to pay the receivable as it falls due. This is a normal consequence of a security right (the accessory follows the principal) and this Guide adopts a like recommendation concerning guarantees of the third-party obligor's obligation to pay (see A/CN.9/631, recommendation 164). This rule applies to proceeds under an independent undertaking as well (see A/CN.9/631, recommendations 26, subpara. (b), 49, 105, 124 and 164).

3. Enforcement in the case of an outright transfer of a receivable

77. This Guide applies to outright transfers of receivables as well as security rights in receivables (see A/CN.9/631, recommendation 3). However, in an outright transfer, the assignor has generally transferred all of its rights in the receivable. Thus, the assignor has no continuing right in the receivable and no interest in the realization (usually collection) of the receivable. Accordingly, this chapter on enforcement applies to the outright transfer of a receivable only when the assignee has some recourse to the assignor for the non-collection of the receivables. That is, it is only where the assignor may ultimately be liable to the assignee that it has an interest in the method of the collection or other disposition of the receivables (see A/CN.9/631, recommendation 162).

78. Recourse to the assignor for the non-collection of receivables that have been the subject of an outright transfer usually arises when the assignor has guaranteed some or all of the payment of the receivables by the debtor of the receivables. Recourse may also arise from other functionally equivalent arrangements, such as when (a) the assignor agrees to repurchase a receivable sold to the assignee if the debtor on the receivable fails to pay; or (b) the assignor merely agrees to pay any deficiency between the purchase price for the bulk sale of receivables and the actual collections on those receivables.

79. Recourse to the assignor for non-collection as used here refers only to non-collection because of the failure of the debtor of the receivable to pay for credit reasons (e.g. its financial inability to pay). Consequently, the failure of the debtor of the receivable to pay for tangible property or services because of their poor quality or the failure of the assignor to comply with its specifications for the property or services would not be considered as non-collection. Where non-payment arises for credit reasons, however, the normal rules for collection of receivables and enforcement of the security would apply (see A/CN.9/631, recommendations 163 and 164).

4. Enforcement of a security right in a negotiable instrument

80. In many States, it is possible to acquire a security right in a negotiable instrument (for the definition of “negotiable instrument”, see A/CN.9/631/Add.1, Introduction, sect. B. Terminology and rules of interpretation), whether by taking possession or following other steps to achieve third-party effectiveness (see A/CN.9/631, recommendations 33 and 38). As a rule, even where there is a security right in the instrument, States defer to law governing negotiable instruments in determining the rights of persons obligated on the negotiable instrument and other persons claiming rights in the negotiable instrument (see A/CN.9/631, recommendation 121). These rights might include, for example, (a) the right of the person obligated on the negotiable instrument to refuse to pay anyone other than a holder or other person entitled to enforce the instrument under law governing negotiable instruments; and (b) the right of the person obligated on the instrument to raise certain defences to that obligation.

81. Where security is taken in a negotiable instrument, secured creditors will normally have possession or control of the instrument. Upon default of the grantor, many States permit the secured creditor to collect or otherwise enforce its security right in the instrument. This would include, for example, presenting it for payment, or, if default occurs before maturity, even selling it to a third party and using the proceeds to pay the grantor’s obligation. The rationale is that it would compromise the negotiability of the instrument if the secured creditor were obliged to go through the formalities required to exercise either the recourse of sale or taking the instrument in satisfaction of the secured obligation. Consistent with such practices, this Guide does not recommend that any further post-default formalities be imposed on enforcing secured creditors (see A/CN.9/631, recommendation 165).

82. As with receivables, it may be that the negotiable instrument is itself secured by some other personal or property right (e.g. a personal guarantee by a third party or a security right in movable property of the debtor of the receivable). Many States provide for an automatic right of the secured creditor to enforce these other rights should the person obligated under the negotiable instrument fail to pay upon presentment. This Guide recommends such an approach to enforcement of guarantees relating to the payment of a negotiable instrument (see A/CN.9/631, recommendation 166).

5. Enforcement of a security right in a right to payment of funds credited to a bank account

83. Many States envision the possibility of creating a security right in a right to payment of funds credited to a bank account (for the definition of this term and other relevant terms, see A/CN.9/631/Add.1, Introduction, sect. B. Terminology and rules of interpretation). In a bank account agreement, the bank is usually considered to be the debtor of the depositor and is obliged to pay the depositor a portion of or the whole amount on deposit when requested. Because banking law is closely tied to significant commercial practices within States, this Guide recommends deference to banking law and also provides additional safeguards for banks whose depositors may have granted security rights in their rights to payment of funds credited to a bank account (see A/CN.9/631, recommendations 33, 50, 101, 102, 122 and 123). For example, even if a depositor has concluded a security agreement with a creditor, the depositary bank has (a) the same rights and obligations in relation to its

depositor; (b) the same rights of set-off; (c) no obligation to pay any person other than the person that has control of the account; and (d) no obligation to respond to any requests for information (see A/CN.9/631, recommendations 122 and 123).

84. Many States provide that, if the encumbered asset is a right to payment of funds credited to a bank account, the secured creditor may collect or otherwise enforce its right to payment of the funds after default or even before default if so agreed with the grantor. Enforcement would normally occur by the secured creditor asking the bank to transfer the funds to its own account, or otherwise to collect the sums credited to the account. The rationale for this rule is that the encumbered asset is the right to receive payment of the funds credited to the account and that it would be inefficient if the secured creditor were required to enforce by taking possession and following the steps applicable to the sale of encumbered assets or by taking them in satisfaction of the secured obligation. Consistent with the objective of enhancing flexibility and efficiency in enforcement, this Guide recommends that creditors enforcing security in a right to payment of funds credited to a bank account may do so by collecting the money in the account (see A/CN.9/631, recommendation 167).

85. Sometimes, States require the secured creditor to obtain a court order prior to enforcement of a security right in a right to payment of funds credited to a bank account. Such a requirement is understandable in situations where the secured creditor may have obtained third-party effectiveness through registration in the general security rights registry. However, where the bank is aware of the security right because it has entered into a control agreement with the secured creditor, requiring a court order would be an unnecessary formality. For this reason, this Guide recommends that, where a control agreement has been entered into, it is not necessary to obtain a court order for the secured creditor to commence enforcement (see A/CN.9/631, recommendation 168). Conversely, where no such agreement has been entered into, this Guide recommends that a court order be required, unless the bank specifically consents to collection by the secured creditor (see A/CN.9/631, recommendation 169).

86. In many cases, the secured creditor will, in fact, be the depositary bank itself. Here, a formal enforcement process involving a specific act of collection and appropriation of the funds to repayment of the secured obligation would be superfluous. Upon default, a depositary bank acting as a secured creditor normally will deploy its right of set-off to apply the funds in the account directly to payment of the secured obligation in default. In keeping with this practice, this Guide recommends that enforcement of the depositary bank's rights of set-off not be affected by any security rights that the bank may have in the right to payment of funds in that account (see A/CN.9/631, recommendations 27 and 122, subpara. (b)).

6. Enforcement of a security right in proceeds under an independent undertaking

87. Today, some States permit persons that have the right to demand payment ("to draw") under an independent undertaking to grant security in the proceeds of that right (for the definition of this term and other relevant terms, see A/CN.9/631/Add.1, Introduction, sect. B. Terminology and rules of interpretation). This Guide recommends that security rights may be created in such proceeds, subject to a series of rules governing the obligations between the guarantor/issuer, confirmer or nominated person and the secured creditor (see A/CN.9/631,

recommendations 26, 28, 49 and 51). Because the law and commercial practices governing independent undertakings are quite specialized, this Guide recommends adoption of a number of rules meant to reflect existing law and practice (see A/CN.9/631, recommendations 124-126). So, for example, where the security right is automatically created, no separate act of transfer by the grantor should be necessary for the secured creditor to enforce a security right in a right to proceeds under an independent undertaking.

88. The general practice of States is to permit a secured creditor whose security right is in the proceeds under an independent undertaking to collect or otherwise enforce its right to payment of the proceeds after default or even before default if so agreed with the grantor. However, enforcement does not permit the secured creditor to demand payment from the guarantor/issuer, confirmer or nominated person (see A/CN.9/631, recommendation 28). Rather, enforcement would normally occur when the secured creditor indicates to the guarantor/issuer, confirmer or other nominated person that it is entitled to be paid whatever proceeds are otherwise due to the grantor. The rationale for this approach is that the guarantor/issuer, confirmer or other nominated person cannot be obliged towards anyone other than the beneficiary and only the beneficiary may request payment of the independent undertaking. This Guide follows the practice relating to independent undertakings and recommends that the enforcement of the security right be limited to collecting the proceeds once they have been paid (see A/CN.9/631, recommendation 170).

7. Enforcement of a security right in a negotiable document

89. Many States permit grantors to create security over a negotiable document (for the definition of this term and other relevant terms, see A/CN.9/631/Add.1, Introduction, sect. B. Terminology and rules of interpretation). This Guide recommends a similar practice (see A/CN.9/631, recommendations 2, subpara. (a), and 29). The negotiable document itself represents the tangible property that is described in it and permits the holder of the document to claim that property from the issuer of the document. Normally, secured creditors will enforce their security right by presenting the document to the issuer and claiming the property. Special rules may, however, apply to preserve the rights of certain persons under the law governing negotiable documents and this Guide defers to these special rules (see A/CN.9/631, recommendation 127).

90. Nonetheless, as between the grantor and the secured creditor, enforcement will occur when the secured creditor presents the document to the issuer. At this point, the secured creditor will be in possession of tangible property and enforcement of the security right will then be subject to the normal principles recommended for the enforcement of security rights in negotiable documents or goods covered by them (see A/CN.9/631, recommendation 171). Depending on the agreement between the parties, either upon default or prior to default with the grantor's permission, the secured creditor may dispose of the document. This must be done in a commercially reasonable manner and the price obtained for the sale of the document will be applied to satisfaction of the secured obligation.

8. Enforcement of a security right in proceeds

91. In the normal course of a business operation, tangible property like inventory is meant to be sold. In any case, if the grantor sells the encumbered assets

(in particular with the authorization of the secured creditor, in which case the security right does not continue in the encumbered assets; see A/CN.9/631, recommendation 86, subpara. (a)), the proceeds of the sale take the place of the encumbered assets (for the definition of “proceeds”, see A/CN.9/631/Add.1, Introduction, sect. B. Terminology and rules of interpretation). Hence, many States provide that a security right in tangible property will automatically pass into the proceeds of its disposition. Other States either do not so provide, or require that the security agreement expressly indicate which proceeds will be covered by the security. This Guide recommends that secured creditors have a right to claim their security in proceeds of encumbered assets and proceeds of proceeds (see A/CN.9/631, recommendations 40 and 41). Moreover, unlike many States that limit the concept of proceeds to replacement property, this Guide considers proceeds to include anything that is received on account of the encumbered asset, any fruits and revenues it generates and the natural increase of animals or plants.

92. Generally, States do not enact separate rules governing the enforcement of security rights in proceeds. That is, enforcement against proceeds will follow whatever type of process is required in order to enforce security against that type of asset (e.g. a tangible property, a receivable, a negotiable instrument, rights to payment of funds credited to a bank account, and so on). It would create considerable confusion if secured creditors were able to enforce security rights in proceeds according to the rules governing enforcement against the initially encumbered assets when other creditors seeking to enforce security rights against those proceeds as initially encumbered assets would have to follow rules specifically applicable to that type of asset. This Guide implicitly recommends that the general enforcement rules apply also to the enforcement of security rights in proceeds, except if the proceeds are receivables or other specific assets like those mentioned in the preceding paragraphs. In such a case, the asset-specific enforcement recommendations just described would apply.

[Note to the Commission: The Commission may wish to consider adding a recommendation that specifically addresses enforcement against proceeds and that explicitly notes that where proceeds are of a special category of assets (like receivables) enforcement should follow the rules applicable to that category of asset.]

9. Enforcement of a security right in an attachment to movable property, a mass or a product

93. Many types of tangible property in which a security right has been created are destined either to be attached to other tangible property, to be manufactured into a product or to be commingled with other tangible property. Many States deal with security rights in such cases by rules that determine whether ownership in the attachment, manufactured product or commingled property has passed to a third party. This Guide recommends that security rights that are effective against third parties generally should continue in property that has become attached to other property, into manufactured products and into commingled property (see A/CN.9/631, recommendations 35, subpara. (b), and 40-45). Where States permit continued third-party effectiveness of security rights in items of tangible property that are attachments, are manufactured products or commingled property, they normally also apply the general rules to enforcement against this type of

property (e.g. automobile engines, manufactured fibreglass products, commingled inventories of clothing, grain in a silo and oil in a tank). The assumption is that it would create unnecessary confusion if an enforcement regime other than that generally applicable were to be enacted. The Guide implicitly adopts a similar rule for enforcement against security rights in attachments that are effective as against third parties.

[Note to the Commission: The Commission may wish to consider adding a recommendation that specifically addresses enforcement of security rights in attachments.]

94. In cases of attachment, manufacture and commingling, it will normally be the case that more than one secured creditor will have rights in the property. If the encumbered asset can be easily separated, the secured creditor with an enforceable security right against only a part of the property should be able to separate the part in which it has a security right and dispose of that part only in a commercially reasonable manner. If the encumbered asset cannot be easily separated, the whole asset may have to be sold and the rights of competing secured creditors that may have rights in the property to which the attachment is attached will be determined by recommendations relating to priority (see A/CN.9/631, recommendation 95). Similarly, if a proportionate share of commingled assets cannot easily be isolated for separate sale, the whole mass or product may have to be sold and the rights of competing secured creditors that may have rights in other parts of the commingled property will be determined by recommendations relating to priority (see A/CN.9/631, recommendations 96-98).

[Note to the Commission: The Commission may wish to consider adding a recommendation that specifically addresses how enforcement of security rights in attachments and commingled property is to be effected depending on separability.]

10. Intersection of movable and immovable property enforcement regimes

95. Frequently, the characterization of tangible property as movable or immovable will change over time, as movable property becomes immovable property. For example, construction materials may become fully incorporated into a building, or shrubs and trees, manure and seeds may be planted or tilled into soil, thereby turning into immovable property. Sometimes, the movable property may be an attachment and not fully incorporated into immovable property (for example, an elevator, a furnace, or an attached counter or display case). In all of these cases, a security right in the movable property may have been made effective against third parties prior to attachment to or incorporation into the immovable property. The converse situation can also arise. A creditor may seek to take a security right in property that is currently immovable, but is destined to become movable (for example, crops, products of mines and quarries and hydrocarbons).

96. States have enacted many different rules to govern these various hypotheses. A primary concern is to establish the rights of creditors that seek to enforce security rights in movable property where immovable and movable property enforcement regimes may intersect. Most often, these enforcement regimes depend on the characterization given to the property. So, for example, many States permit the creation of a security right under secured transactions laws (applicable to movable property) in movable property that, while it is part of immovable property, is

destined to become movable, but postpone effectiveness until detachment. No enforcement of the security right can take place until the property becomes movable, and no enforcement of an encumbrance in immovable property may be taken against property that has become movable. While this Guide makes no specific recommendation on this question, because the enforcement regime presupposes the separate existence of tangible property as movable property such a result implicitly follows.

97. More difficult enforcement questions arise when tangible property is attached to or incorporated into immovable property. Many States distinguish between construction materials, other movable property that loses its identity when incorporated in immovable property (such as fertilizer), seeds, and attachments that retain their identity as movable property. Some States provide that security rights in movable property that loses its identity may only be preserved if they are made effective against third parties by registration in the immovable property registry, but that security rights in attachments made effective against third parties prior to the attachment retain their effectiveness without further registration. In these States, enforcement against the former kind of property would always be governed by the rules relating to enforcement against immovable property. Where the movable property becomes an attachment, these States usually enact special rules to govern not only the preservation of the secured creditor's rights, but also the preservation of the rights of creditors with rights in the immovable property.

98. The recommendations in this Guide follow the general pattern that many States have adopted for resolving conflicts between creditors with competing rights in attachments. Where tangible property loses its identity through incorporation into immovable property, any movable property security right is extinguished. Where, however, the movable property becomes an attachment, the security right continues, and its effectiveness against third parties is preserved automatically. The secured creditor may also ensure third-party effectiveness by registration of the security right in the immovable property registry (see A/CN.9/631, recommendations 35, 42 and 43). The enforcement rights of the secured creditor as against the attachment, and in relation to secured creditors that may have security rights in the immovable property, will then depend on the relative priority of the competing rights (see A/CN.9/631, recommendations 93 and 94). If the secured creditor with rights in the attachment has priority, it may detach the property and enforce its security right as a movable security right, subject to the right of the secured creditor or other interested party paying the value of the attachment. If, however, detachment of an attachment to immovable property (e.g. an elevator from a building) damages the building (not by diminishing its value), the secured enforcing creditor has to compensate persons with rights in the immovable property. If another creditor with a security right in the immovable property has priority, the secured creditor can enforce its rights only under the regime governing security rights in immovable property, provided that it has maintained effectiveness against third parties by registering in the immovable property registry (see A/CN.9/631, recommendations 161, subpara. (a), and 172).

99. The enforcement of security rights in attachments to immovable property is further complicated where the secured creditor has taken an encumbrance in the immovable property and a security right in the movable property that has become an attachment to the immovable property. Most States enable the creditor in such cases

to enforce the security in a variety of ways. The creditor may enforce the security right in the attachment and the encumbrance against the rest of the immovable property. Alternatively, the secured creditor may enforce the encumbrance against the entire immovable property, including the attachment. In the former case, the secured creditor would have to have priority over all rights in the immovable property (see A/CN.9/631, recommendation 172). In the latter case, the rights of the creditor would be determined by the priority regime governing immovable property (see A/CN.9/631, recommendation 161, subpara. (b)).

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/631/Add.8 [Original: English]

B. Recommendations	

XI. Insolvency

A. General remarks

1. Introduction

1. Secured transactions laws and insolvency laws have different concerns and objectives, some of which may overlap where the interests regulated by a secured transactions law are affected by the commencement of insolvency proceedings. A secured transactions law seeks to promote secured credit, i.e. credit at a lower cost, because security lowers the risk of non-payment to the secured creditor (“default”). It allows debtors to use the full value of their assets to obtain credit, develop their businesses and avoid default. In the case of default by a debtor, a secured transactions law seeks to ensure that the value of the encumbered assets protects the secured creditor. It focuses on effective enforcement of the rights of individual creditors to maximize the likelihood that, if the obligations owed are not performed, the economic value of the encumbered assets can be realized to satisfy the obligations. An insolvency law, on the other hand, is principally concerned with collective business and economic issues. It seeks to maximize the return to all creditors, firstly by preventing a race among creditors to enforce individually their rights against a common debtor, and secondly by facilitating the reorganization of viable business enterprises and the liquidation of businesses that are not viable. For these reasons, an insolvency law may affect the rights of a secured creditor. For example, a secured creditor’s rights to enforce its security may be postponed upon the commencement of insolvency proceedings.

2. Since reform of one law can impose unforeseen transaction and compliance costs on stakeholders under the other law and create tension between the two laws, legislators revising existing laws or introducing a new law in the field of either insolvency or secured transactions will need to ensure that that new or revised law properly takes account of an existing or proposed law in the other field. In some cases, review of the law in one field may point to the need to revise or develop a new law in the other field. In any event, to the extent that an insolvency law affects

the rights of secured creditors, those effects should be based on carefully articulated policies and stated clearly in the insolvency law.

3. The effects of the commencement of insolvency proceedings on security rights are discussed in detail, as a matter of insolvency law, in the *UNCITRAL Legislative Guide on Insolvency Law* (hereinafter the “*Insolvency Guide*”), adopted by UNCITRAL on 25 June 2004.¹ The purpose of this chapter is to highlight, in section A, some of the key points of intersection between an insolvency law and a secured transactions law. To that end, recommendations from the *Insolvency Guide* that relate particularly to security rights are repeated in this Guide. For a more complete discussion of the potential effect of the commencement of insolvency proceedings on security rights, however, this chapter should be read together with both the commentary and the recommendations of the *Insolvency Guide*. This chapter also includes discussion of several additional recommendations elaborating on issues discussed in the *Insolvency Guide*, but not the subject of recommendations in that Guide. All the recommendations are set out in section B.

2. Terminology

4. The *Insolvency Guide* and the present Guide use a number of defined terms (see *Insolvency Guide*, Introduction, Glossary, and this Guide, Introduction, sect. B, Terminology and rules of interpretation). Section B of this chapter, which includes recommendations, also includes certain definitions taken from the *Insolvency Guide* that are useful for understanding the recommendations of that Guide. For a better understanding of the recommendations of the *Insolvency Guide*, reference should be made to the other definitions in that Guide.

5. Certain terms that are defined in the *Insolvency Guide* are not redefined in this Guide and thus have the same meaning as in the *Insolvency Guide*. However, since, unlike the *Insolvency Guide*, the focus of this chapter is on issues relating to security rights, terms that are redefined in this Guide have the meaning given to them in this Guide (for an exception, see paras. [8] and [9] below).

6. The term “security right” is used in this chapter as defined in this Guide, since the definition of “security interest” in the *Insolvency Guide* is broader in that it refers generally to “a right in an asset to secure payment or other performance of one or more obligations” and accordingly potentially covers security rights in immovable property and non-consensual security rights that are not covered by the definition of “security right” in this Guide (see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

7. Similarly, the term “priority” is used in this chapter as defined in this Guide, since the definition of “priority” in the *Insolvency Guide* is narrower, referring only to the priority of claims in the context of insolvency (“the right of a claim to rank ahead of another claim where that right arises by operation of law”). This Guide defines “priority” as “the right of a person to derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant” (see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

¹ For the decision of the United Nations Commission on International Trade Law and the resolution of the General Assembly (resolution 59/40 of 2 December 2004), see the *UNCITRAL Legislative Guide on Insolvency Law* (United Nations publication, Sales No. E.05.V.10), annex II. The *Insolvency Guide*, which includes in its annex III the UNCITRAL Model Law on Cross-Border Insolvency and its Guide to Enactment, can be found at www.uncitral.org.

To refer to “priority” in insolvency proceedings, this chapter uses the term “ranking of claims” (see, for example, paras. [60]-[65] below).

8. The term “debtor” is defined in this Guide by reference to the person owing the secured obligation. As that definition would not work well in this chapter, “debtor” in this chapter has the meaning given to the term in the *Insolvency Guide*, that is, a person that meets the requirements for the commencement of insolvency proceedings (see *Insolvency Guide*, part two, chap. I, paras. 1-11, and recommendation 8).

9. In addition, as other chapters of this Guide focus on the term “grantor” (i.e. the person that creates a security right) rather than the term “debtor” (i.e. the person owing the secured obligation), references in this chapter to “debtor” should be understood as meaning “the grantor” in cases where the grantor is a person other than the person owing the secured obligation. This approach is necessary, since only in the third-party grantor’s insolvency does the secured creditor have a proprietary right in the encumbered assets. In the insolvency of a non-grantor debtor, the creditor is an unsecured creditor with an unsecured claim against the non-grantor debtor.

3. General principles concerning security rights in insolvency

10. Consistent with the *Insolvency Guide*, insolvency law should recognize in principle the creation, third-party effectiveness and priority of a security right and post-default rights of a secured creditor, as established under secured transactions law (see recommendations 179 and 180 of this Guide). However, to achieve the goals of insolvency proceedings, the rights that a secured creditor has outside of insolvency proceedings may need to be modified or affected once the insolvency proceedings commence. In such a case, it is desirable that an insolvency law also include appropriate protections for the secured creditor. What is important for the availability of secured credit is that insolvency law contains clear rules as to the effect of insolvency proceedings on the rights of a secured creditor, so as to enable secured creditors to quantify the risks associated with insolvency and incorporate those risks into their assessment of whether to extend credit and on what terms.

4. Applicable law in insolvency proceedings

11. The determination of the law applicable to the creation, third-party-effectiveness and priority of a security right and the post-default rights of a secured creditor may be a complex issue when insolvency proceedings are commenced in one State and some of the debtor’s assets or creditors are located in another State, or when insolvency proceedings are commenced in two different States owing to the multinational nature of the debtor’s business. In either instance, general private international law rules applying outside of insolvency proceedings would govern these matters. This result is made clear in recommendation 30 of the *Insolvency Guide*, which provides that the State in which insolvency proceedings are commenced (i.e. the forum State) should apply its private international law rules to determine which State’s secured transactions law governs such questions as the creation, third-party effectiveness and priority of a security right and post-default rights of a secured creditor outside of insolvency proceedings (see also recommendation 173 of this Guide).

(a) Insolvency effects: *lex fori concursus*

12. Once, under the non-insolvency law applicable outside of insolvency proceedings by virtue of the private international law rules of the forum State, the creation, third-party effectiveness and priority of a security right and post-default rights of a secured creditor are determined, a second issue arises concerning the effect of commencement of insolvency proceedings on security rights. For example, the question arises as to whether enforcement of a security right is stayed and whether the security right will be recognized in the insolvency proceedings and, if so, its relative position. The problem in this second phase lies in determining the law applicable to these insolvency effects. It is generally recognized that the insolvency law of the State in which the insolvency proceedings are commenced (*lex fori concursus*) governs the commencement, conduct, administration and conclusion of the proceedings (the “insolvency effects”). This result is reflected in recommendation 31 of the *Insolvency Guide*.

13. Problems may arise when the insolvency law governing the ranking of the security right changes the relative priority that a security right would have under secured transactions law. The categories of claims that, under insolvency law, would receive distributions ahead of a security right in insolvency proceedings are typically governed by the *lex fori concursus*. When establishing these categories of claims, the insolvency law of a State should look to secured transactions law with regard to the creation, third-party effectiveness, priority and enforcement of the security right before considering the extent, if any, to which the priority of the security right should be affected by the commencement and administration of insolvency proceedings.

(b) Exceptions to the *lex fori concursus*

14. While the insolvency effects of insolvency proceedings on security rights typically are governed by the *lex fori concursus*, some States have adopted exceptions. For example, a forum State may defer to the insolvency law of the State in which immovable property is located (*lex rei sitae*) for the insolvency effects on a security right in attachments to the immovable property. The *Insolvency Guide* addresses these exceptions in more detail (see part two, chap. I, paras. 85-90), but does not recommend the adoption of a *lex rei sitae* rule for insolvency effects as applied to attachments to immovable property or even to movable property in general. Instead, it generally recommends that any exceptions to the applicability of the *lex fori concursus* for insolvency effects should be limited in number and clearly set forth in the insolvency law (see *Insolvency Guide*, recommendation 34 and part two, chap. I, para. 88).

15. The question of the applicable insolvency law is further complicated if the debtor is subject to concurrent insolvency proceedings commenced in different States. In such a case, the court in which one proceeding is pending may defer to the insolvency law of the State in which another proceeding is pending for the insolvency effects on a security right in an encumbered asset located in the other State.

5. Treatment of encumbered assets

16. A security right may be affected following the commencement of insolvency proceedings by the provisions of insolvency law that define the scope of or otherwise address, for example, the assets of the debtor that are subject to the

insolvency proceedings, application of a stay or suspension of actions against the debtor, post-commencement finance, avoidance of transactions that took place before commencement of the proceedings, approval of a reorganization plan, and ranking of claims.

(a) Identification of assets subject to the proceedings

17. Identification of assets of the debtor that will be subject to insolvency proceedings is key to the successful conduct of the proceedings. Assets that are controlled by an insolvency representative and subject to the insolvency proceedings form the “estate” (see definition of the term “assets of the debtor” in sect. B below). So, the estate that is formed on commencement of the proceedings will typically include all property, rights and interests of the debtor, including rights and interests in property, whether tangible (movable or immovable) or intangible, wherever located (domestic or foreign), and whether or not in the possession of the debtor at the time of commencement. The debtor’s rights and interests in encumbered assets as well as assets acquired by the debtor or the insolvency representative after commencement of the proceedings and assets recovered through avoidance actions, would typically be included in the estate.

(i) Encumbered assets

18. The inclusion in the estate of the debtor’s rights and interests in encumbered assets may assist in ensuring not only the equal treatment of creditors similarly situated, but also the achievement of the goals of the insolvency proceedings where, for example, the asset in question is essential for the reorganization of the debtor or sale of the debtor’s business as a going concern. The *Insolvency Guide* discusses the assets of the debtor to be included in the estate (as well as those assets to be excluded) and the effect of commencement of insolvency proceedings on encumbered assets. It emphasizes, in particular, the importance to a successful reorganization of including in the insolvency estate the debtor’s interest in encumbered assets and third-party-owned assets (see *Insolvency Guide*, part two, chap. II, paras. 7-9) and of applying a stay on commencement to certain actions with respect to security rights (see *Insolvency Guide*, part two, chap. II, paras. 36-40, 56, 57 and 59-69, and recommendation 46, as well as paras. [25] and [26] below).

(ii) Assets acquired after commencement of insolvency proceedings

19. Consistent with the recommendations of the *Insolvency Guide* (see recommendation 35, subpara. (b)), an asset acquired by the debtor after the commencement of insolvency proceedings generally is part of the insolvency estate.

20. Accordingly, even though the secured creditor may have a security right in future assets of the debtor, the security right should not extend to an asset acquired by the debtor after the commencement of the insolvency proceedings (see also recommendation 176 of this Guide). If the security right did extend generally to an asset acquired by the debtor after the commencement of the insolvency proceedings, the secured creditor would unfairly benefit from the increase in the encumbered assets that could be available to satisfy the secured obligation resulting from the post-commencement acquisition of property by the debtor without the secured creditor providing any additional credit to the debtor. Likewise, other creditors of the insolvency estate would be unfairly prejudiced if unencumbered assets of the insolvency estate were used after the commencement of the insolvency proceedings

to acquire additional property and those assets were to become automatically subject to the secured creditor's security right and used to satisfy the secured obligation.

21. However, if the asset acquired by the debtor after the commencement of the insolvency proceedings consists of proceeds of an asset in which a secured creditor had a security right that was effective against third parties before the commencement of the insolvency proceedings (or was made effective against third parties after commencement but within a grace period), the security right should extend to the proceeds (see recommendation 177 of this Guide). If this were not the case, the secured creditor would not have the benefit of its security right in an encumbered asset that is disposed of or collected after the commencement of the insolvency proceedings and, because of that risk, would be less willing to extend credit at affordable rates to the debtor even where there is no likely prospect of the commencement of the debtor's insolvency proceedings.

22. An example may be helpful in illustrating these points. A secured creditor has an unavoidable security right in all of the debtor's existing and future inventory. After the commencement of insolvency proceedings, the debtor sells immovable property that is not subject to any security right and uses the cash received from the sale to buy inventory. The security right should not extend to this post-commencement inventory. The secured creditor advanced no credit in reliance upon a security right in the new inventory. Permitting the security right to extend to the new inventory would prejudice other creditors of the insolvency estate since the immovable property, an unencumbered asset that was otherwise available to satisfy claims of the other creditors, would have been used to increase the assets available to satisfy the secured obligation. The result would be that the value of the additional inventory would be less likely to be available to satisfy claims of the other creditors even though the value was derived from immovable property that was fully available to satisfy those claims.

23. However, if the additional inventory was acquired with cash received by the debtor from the sale of inventory existing on the commencement of the insolvency proceedings and in which the secured creditor had an unavoidable security right, the security right should extend to the inventory acquired after the commencement of the insolvency proceedings. Before the commencement of the insolvency proceedings the secured creditor had advanced credit to the debtor in reliance upon a security right in the inventory that the debtor sold after the commencement of the insolvency proceedings. The additional inventory is in effect a substitution for the sold inventory. The secured creditor does not benefit unfairly and other creditors are not unfairly prejudiced.

(b) Protection of the estate by application of a stay

24. Two essential objectives of an effective insolvency law are, first, ensuring that the value of the insolvency estate is not diminished by the actions of various parties and, second, facilitating administration of the estate in a fair and orderly manner. Many insolvency laws achieve these objectives by imposing a stay that prevents the commencement of individual or group actions by creditors to enforce their claims or pursue any remedies or proceedings against the debtor or property of the estate and suspends any such actions already under way. Where the stay applies from the commencement of the insolvency proceedings, it can be complemented by provisional measures of relief that can be ordered by the court to ensure protection of the assets of the debtor and the collective interest of creditors between the time when an application to commence insolvency proceedings has been filed and the

time it is acted on by the court. The *Insolvency Guide* discusses the scope of actions to which a mandatory or provisional stay applies (see *Insolvency Guide*, part two, chap. II, paras. 30-40); time and duration (including extension) of the stay (see part two, chap. II, paras. 41-53 and 58); and measures to protect the interests of secured creditors (part two, chap. II, paras. 59-69).

(i) *Scope of the stay*

25. A number of jurisdictions extend the stay to all actions against the debtor, whether judicial or not, including those by secured creditors and third-party owners. The stay usually extends to actions to enforce a security right by repossessing and selling, leasing or otherwise disposing of the encumbered assets (or exercising another enforcement remedy set out in chapter X, Post-default rights, of this Guide). It also extends to actions to create a security right or to make a security right effective against third parties. Some insolvency laws distinguish between liquidation and reorganization in terms of application and duration of the stay to actions by secured creditors or third-party owners. A growing number of insolvency laws recognize that, notwithstanding that limiting the enforcement of security rights may have an adverse impact on the cost and availability of credit, excluding actions by secured creditors from the stay could frustrate the basic objectives of the insolvency proceedings. This is true particularly in reorganization, since very often the debtor's continued use of encumbered assets is essential to the operation of the business and therefore to its reorganization. Any negative effects of the stay can be ameliorated by measures to ensure that the economic value of the encumbered assets is protected against diminution (see paras. [29]-[31] below).

26. Where a security right was effective against third parties at the time the insolvency proceedings commenced, it is necessary to exempt from the application of the stay any action that the secured creditor might need to take to ensure that effectiveness continues. For example, the secured transactions law may provide a grace period for registration of certain security rights, such as acquisition security rights, in the general security rights registry (see recommendation 189, subpara. (b), of this Guide); the stay generally should not interfere with registration within such a grace period (even if the grace period ends after the commencement of the insolvency proceedings).

(ii) *Duration of the stay*

27. In reorganization proceedings, subject to the safeguards discussed below it is desirable that the stay applies to secured creditors for a sufficient period of time to ensure orderly administration of the reorganization without encumbered assets being removed from the estate before it can be determined how those assets should be treated and an appropriate plan approved.

28. It is also desirable that the stay applies to secured creditors in liquidation proceedings, in particular to facilitate sale of the business as a going concern. The stay may apply for a short period of time (e.g. 30-60 days) that is clearly set forth in the insolvency law, with provision for an extension in certain circumstances. Alternatively, the stay may apply for the duration of the liquidation proceedings, subject to the court providing relief in certain circumstances (see *Insolvency Guide*, recommendation 49).

(iii) *Protection of secured creditors*

29. An insolvency law should include safeguards to protect secured creditors where the economic value of their security rights is adversely affected by the stay. One of those safeguards may take the form of relief from the stay or a release of the encumbered asset. Even absent a request for relief from the stay, it is desirable that an insolvency law provides that a secured creditor is entitled to protection against the diminution in value of the encumbered asset and that the court may grant appropriate measures to ensure that protection (see *Insolvency Guide*, recommendation 50).

30. Grounds for relief from the stay or release of the encumbered asset might include cases where, for example, the encumbered asset is not necessary to a prospective reorganization or sale of the debtor's business; the value of the encumbered asset is diminishing as a result of the commencement of the insolvency proceedings and the secured creditor is not protected against that diminution of value; and, in reorganization, a plan is not approved within any applicable time limit. Some insolvency laws also provide that, once relief is granted and the stay has been lifted with respect to particular encumbered assets, the assets may be released to the secured creditor. In such an event, the secured creditor would be free to enforce its security rights under applicable law other than insolvency law. Any surplus value remaining after payment of the secured obligation would be part of the estate.

31. Central to the notion of protecting the value of encumbered assets from diminution is the mechanism for determining both the value of those assets and the time at which valuation takes place, depending upon the purpose for which the determination is required. Assets may need to be valued at different times during the insolvency proceedings, such as at commencement with the value being reviewed during the proceedings, or during the course of the proceedings. The basis on which the valuation should be made is also an issue (e.g. going concern or liquidation value). The value of an encumbered asset may, at least in the first instance, be determined by pre-commencement agreement of the parties or may require determination by the court on the basis of evidence, including a consideration of markets, market conditions and expert testimony.

32. The *Insolvency Guide* discusses the timing of valuation and different valuation mechanisms (see *Insolvency Guide*, part two, chap. II, paras. 66-68).

(c) **Use and disposal of encumbered assets**

33. Secured creditors will have an interest in the manner in which encumbered assets are treated following commencement of insolvency proceedings and, in particular, the use and disposal of those assets.

34. Where the insolvency estate includes the debtor's rights in encumbered assets, treatment of those assets will depend on the provisions of the insolvency law with respect, for example, to application of the stay, further encumbrance of those assets, use of the assets during the course of the insolvency proceedings, sale or disposal of assets, relinquishment of assets and sale of encumbered assets free and clear of any security rights. Some insolvency laws, for example, provide that only the insolvency representative may dispose of encumbered assets in both liquidation and reorganization proceedings. Other laws provide that the insolvency representative's ability to dispose of encumbered assets in liquidation proceedings is time-limited

and, once the relevant time period expires, the secured creditor may exercise its rights.

35. The *Insolvency Guide* discusses the conditions under which encumbered assets may be sold free of security rights (for example, the condition that the security right in an asset extends to the proceeds of the sale of the asset) and the protections to be afforded to secured creditors whose encumbered assets are so sold, including the need to notify secured creditors about any proposed sale or other disposal of encumbered assets and to give them an opportunity to object (see *Insolvency Guide*, part two, chap. II, paras. 74-89).

6. Post-commencement finance

36. In both liquidation and reorganization proceedings, an insolvency representative may require access to funds to continue to operate the business. The estate may have insufficient liquid assets to fund anticipated expenses, in the form of cash or other assets that will be converted to cash (such as anticipated proceeds of receivables) and that are not subject to pre-existing security rights effective against third parties. Where there are insufficient unencumbered liquid assets or anticipated cash flow, the insolvency representative must seek financing from third parties. Often, these parties are the same lenders that extended credit to the debtor prior to the commencement of insolvency proceedings, and typically they will only be willing to extend the necessary credit if they receive appropriate assurance (either in the form of a priority claim on, or priority security rights in, the assets of the estate) that they will be repaid.

37. In any of these financing arrangements (referred to collectively as “post-commencement finance”), it is essential that the rights of pre-commencement secured creditors in the economic value of the encumbered assets be appropriately protected against diminution (provided that the security right was effective against third parties prior to commencement or after commencement but within a grace period). While some countries permit, in limited circumstances, the creation of a security right to secure post-commencement finance that ranks ahead of a pre-existing security right, the creation of such a security right (sometimes referred to as a “priming lien”) should be permitted only where certain conditions are met, including that the rights of pre-commencement secured creditors in the economic value of the encumbered assets are protected against diminution. Post-commencement finance is addressed in some detail in part two, chap. II, paras. 94-107 of the *Insolvency Guide*.

7. Treatment of contracts

(a) Automatic termination or acceleration clauses

38. Parties to security agreements have an interest in the treatment in insolvency of clauses that define events of default giving rise to automatic termination or acceleration of payments under the agreement. Although some insolvency laws permit those clauses to be overridden when insolvency proceedings commence, this approach has not yet become a general feature of insolvency laws. The inability to interfere with general principles of contract law in this way, however, may make reorganization impossible where the contract relates, for example, to an asset that is necessary for reorganization or the sale of a business as a going concern.

39. Any negative impact of a policy of overriding these types of clause can be balanced by providing compensation to creditors that can demonstrate they have suffered damage or loss as a result of a contract continuing to be performed after commencement of insolvency proceedings. In addition, an exception to a general override of such clauses for certain types of contract could be included. The insolvency law could provide, for example, that such a clause does not render unenforceable or invalidate a contract clause relieving a creditor from an obligation to make a loan or otherwise extend credit or other financial accommodations for the benefit of the debtor after the commencement of the insolvency proceedings.

40. However, if the contractual clause in question relates to an obligation of the party not subject to the insolvency proceedings to make additional loans or other financial accommodations to the debtor, the other party should be relieved of that obligation. It would not be equitable to require additional loans to an insolvent party where the prospect of repayment would be greatly diminished. Requiring the extension of credit after commencement of insolvency proceedings would be especially inequitable if, as described in paragraph [20], no additional encumbered assets are being provided after commencement to the secured creditor. The obligation to make additional loans differs from other contractual obligations where the other party can expect or make arrangements for return performance by the debtor or its insolvency representative (see recommendation 178 of this Guide).

(b) Continuation or rejection of contracts

41. Insolvency laws adopt different approaches to continued performance or rejection of contracts. The *Insolvency Guide* considers a number of the issues relating to the treatment of contracts once insolvency proceedings commence, including the procedures for determining whether contracts should continue to be performed or rejected, treatment of contracts where the debtor is in default on commencement of insolvency proceedings, effects of continuing performance or rejection, leases, assignment of contracts, types of contract for which exceptions might be required and post-commencement contracts (see *Insolvency Guide*, part two, chap. II, paras. 108-147). In any case, what is important for a secured creditor is that rejection of a security agreement does not terminate or otherwise impair the secured obligations already incurred or extinguish the security right and that financial contracts and loan commitments are frequently excepted from the scope of insolvency laws governing the treatment of contracts more generally (see *Insolvency Guide*, part two, chap. II, paras. 208-215).

8. Avoidance proceedings

42. As mentioned above, insolvency law recognizes in principle the effectiveness of a security right, which is a matter of secured transactions law. Nevertheless, the security right may be avoidable in insolvency proceedings on the same grounds that any other transaction may be avoided. For example, the transaction may be avoided as a preferential transaction, an undervalued transaction, or as a transaction intended to defeat, hinder or delay creditors from collecting their claims. Otherwise, the debtor could encumber its assets to prefer one creditor to another on the eve of the commencement of insolvency proceedings, or without obtaining corresponding value, to the detriment of other creditors. The *Insolvency Guide* discusses categories of transactions subject to avoidance, the suspect period, conduct of avoidance proceedings and liability of counterparties to avoided transactions (see part two, chap. II, paras. 148-203).

43. Examples of security rights that may be subject to avoidance include a security right created shortly before the commencement of insolvency proceedings to secure a pre-existing debt; a security right with respect to which one or more of the steps required to make it effective as against third parties have been taken after the creation of the security right, and after the expiry of any grace period for doing so (see recommendation 189, subpara. (b), of this Guide) but within the suspect period; and the acceptance of an encumbered asset in total or partial satisfaction of the secured obligations (see recommendation 148 of this Guide) at a price significantly lower than the asset's actual value.

9. Participation of secured creditors in insolvency proceedings

44. Where encumbered assets are part of the insolvency estate and the rights of secured creditors are affected by insolvency proceedings, secured creditors should have a right to participate in the insolvency proceedings. In some cases, the extent of a secured creditor's right to vote on certain issues may depend upon the amount by which the secured obligation exceeds the value of the encumbered assets. The extent of such participation may be prescribed by an insolvency law and may include voting on issues specified by the insolvency law, such as selection (and removal) of the insolvency representative; approval of a reorganization plan; and sale of assets outside the debtor's ordinary course of business.

45. The *Insolvency Guide* discusses issues of participation of creditors generally and mechanisms that may be used to facilitate that participation (see part two, chap. III, paras. 75-115).

10. Reorganization proceedings

(a) Approval of a reorganization plan

46. Whether or not a secured creditor is entitled to participate in the approval of a reorganization plan will depend upon the manner in which the insolvency law treats secured creditors and, in particular, the extent to which a reorganization plan can modify or impair their security rights. The value of the encumbered asset in relation to the claim will determine whether the creditor participates as a secured, and also as an unsecured, creditor.

47. Where a reorganization plan proposes to impair or modify the rights of secured creditors, they should have the opportunity to vote on approval of that plan. For that purpose, some insolvency laws classify creditors, including secured creditors, according to the nature of their rights and interests. Under some laws, secured creditors vote together as a class separate from unsecured creditors; under others, each secured creditor forms a class of its own. The *Insolvency Guide* discusses reorganization proceedings in some detail (see *Insolvency Guide*, part two, chap. IV, paras. 26-75), including voting by secured creditors (see *Insolvency Guide*, part two, chap. IV, paras. [38]-[44]).

48. Where secured creditors participate in the approval process, there is a question of whether they are bound by the plan even if they vote against it or abstain from voting. Where secured creditors vote in classes, some insolvency laws provide that, to the extent that the requisite majority of the class votes to approve the plan, dissenting members of the class are bound by the plan, subject to certain protections (e.g. they receive at least as much under the plan as they would have received in a liquidation or they are paid in full within a certain period of time with interest at a

market rate). Other insolvency laws provide that the court can order that secured creditors are bound by the plan, provided that it is satisfied as to certain conditions (e.g. security rights are adequately protected and the position of the secured creditor will not deteriorate further as a result of the plan). Yet other insolvency laws provide that the plan cannot be imposed on a secured creditor unless the secured creditor, or the relevant class of secured creditors, consents.

49. There are several examples of ways in which the economic value of security rights may be preserved in a reorganization plan even though the security rights are being impaired or modified by that plan. If a plan provides for a cash payment to a secured creditor in total or partial satisfaction of the secured obligation, the cash payment or, if cash payments are to be made in instalments, the present value of the cash payments should not be less than what the secured creditor would have received in liquidation. In determining such value, consideration should be given to the use of the assets and the purpose of the valuation. The basis of such a valuation may include not only the strict liquidation value, but also the value of the asset as part of the business as a going concern. For example, if the debtor is going to retain possession of and continue to use the asset under the reorganization plan in order to continue to operate the business as a going concern or if the debtor is going to sell the business as a going concern, this value should be determined by reference to the value of the asset as part of the going concern business rather than the value of the asset as a single item separate from the business.

50. If the plan provides for the secured creditor to release its security right in some encumbered assets, provision could also be made for substitute assets of at least equal value to become subject to the secured creditor's security right, unless disposal of the remaining encumbered assets would enable the secured creditor to be paid in full.

(b) Valuation of encumbered assets

51. Recommendations 49, subparagraph (c)(ii), 50, 51, subparagraph (b), 54, subparagraph (a), 58, subparagraph (d), 59, subparagraph (c), and 67, sub-paragraph (c), of the *Insolvency Guide* provide generally for the value of encumbered assets to be protected in insolvency proceedings. Recommendation 152, subparagraph (b), of the *Insolvency Guide* provides that, under a plan confirmed by a court, each creditor, including a secured creditor, should receive at least as much under the plan as the creditor would have received in liquidation. Issues to be considered in determining the value of encumbered assets are discussed in the *Insolvency Guide* (see *Insolvency Guide*, part two, chap. II, paras. 66-69, and para. 31 above).

52. In order to determine the liquidation value of encumbered assets in reorganization proceedings (for the purpose of applying recommendation 152, subpara. (b) of the *Insolvency Guide*), the use of the encumbered assets and the purpose of the valuation should be taken into account. The liquidation value of the assets may be based on their value as part of a going concern (see recommendation 183 of this Guide).

53. For example, if the debtor is going to retain or dispose of the encumbered assets as part of a going concern sale of the debtor's business, the going concern value of the encumbered assets in the hands of the debtor, if higher than the liquidation value of the encumbered assets separate from being used in the going

concern, may better represent a truer value of the encumbered assets given the purposes for which the encumbered assets are to be used.

54. The going concern value may also be the value on which the secured creditor relied in advancing credit to the debtor before the commencement of the insolvency proceedings. The secured creditor may have advanced credit based on the encumbered assets being used in the business as a going concern and generating the necessary profits to repay the secured creditor.

11. Expedited reorganization proceedings

55. In recent years, significant attention has been given to the development of expedited reorganization proceedings (i.e. proceedings commenced to give effect to a plan negotiated and agreed to by affected creditors in voluntary restructuring negotiations that took place prior to commencement of insolvency proceedings, where the insolvency law permits the court to expedite the conduct of those proceedings). Voluntary restructuring negotiations undertaken before the commencement of proceedings will generally involve those creditors, including secured creditors, whose participation is required to ensure an effective reorganization or whose rights are to be affected by the reorganization.

56. The substantive requirements for such expedited reorganization proceedings would include substantially the same safeguards and protections as provided in full, court-supervised reorganization proceedings. However, since the reorganization plan has already been negotiated and agreed to by the requisite majority of creditors at the time the expedited proceedings commence, a number of the procedural provisions of an insolvency law relating to full court-supervised proceedings may be modified or need not apply (see *Insolvency Guide*, part two, chap. IV, paras. 87-92).

12. Treatment of secured claims

57. The principal issue with regard to deciding which creditors will be required to submit claims in insolvency proceedings relates to the treatment of secured creditors. Under those insolvency laws which do not include encumbered assets in the insolvency estate and allow secured creditors to freely enforce their security rights against the encumbered assets, secured creditors may be excepted from the requirements to submit a claim, to the extent that their claim will be met from the value of the sale of the encumbered asset (see *Insolvency Guide*, part two, chap. V).

58. Another approach requires secured creditors to submit a claim for the total value of their security rights irrespective of whether any part of the claim is unsecured. That requirement is limited in some laws to the holders of certain types of security right, such as floating charges, bills of sale, or security over chattels. Some insolvency laws also permit secured creditors to surrender their security rights to the insolvency representative and submit a claim for the total value of the secured obligation. The rationale of requiring secured creditors to submit claims is to provide information to the insolvency representative as to the existence of all claims, the amount of the secured obligation and the description of the encumbered assets. Whichever approach is chosen, it is desirable that an insolvency law include clear rules on the treatment of secured creditors for the purposes of submission of claims.

59. Where the amount of the claim cannot be, or has not been, determined at the time when the claim is to be submitted, many insolvency laws allow a claim to be

admitted provisionally, subject to giving it a notional value. Determining a value for such claims raises a number of issues such as the time at which the value is to be determined and whether it must be liquidated (in which case it will need to be considered by a court) or estimated (which might be undertaken by the insolvency representative, the court or some other appointed person). Where a court is required to determine the issue, an associated question relates to the court that will be appropriate (i.e. the insolvency court or some other court) and how any delay in reaching a determination can be addressed in terms of its effect on the conduct of the insolvency proceedings. As to timing of the valuation, many insolvency laws require it to refer to the effective date of commencement of proceedings (see *Insolvency Guide*, part two, chap. V, para. 38).

13. Ranking of secured claims

60. A secured transactions law establishes the priority of security rights as against competing claimants (for the definition of the terms “competing claimant” and “priority”, see A/CN.9/631, Introduction, sect. B, Terminology and rules of interpretation), including the debtor’s other secured and unsecured creditors, judgement creditors with a right in encumbered assets and buyers of encumbered assets. Many insolvency laws recognize the pre-insolvency priority of security rights and rank secured claims ahead of administration expenses and other claims (e.g. for taxes or wages). However, where the insolvency representative has expended unencumbered resources of the estate in maintaining or preserving the value of the encumbered assets, those expenses may be given a higher ranking even over a secured claim and, accordingly, may have to be paid out of the proceeds from the sale of or other value attributable to the encumbered assets (see recommendation 182 of this Guide).

61. Other insolvency laws rank secured claims after administration costs and other specified (and generally unsecured) claims (e.g. for wages or taxes) or limit the amount with respect to which a secured claim will be given a higher ranking to a fixed percentage of the claim.

62. The provision of higher ranking for certain unsecured claims, which is often based on social policy considerations, has an impact upon the cost and availability of secured credit. The approach of restricting the amount recovered by a secured creditor from the value of the encumbered assets is sometimes taken with respect to a security right in the entirety of a debtor’s assets in order to provide some protection to unsecured creditors (often up to a limited amount).

63. A further approach may permit the ranking of post-commencement secured creditors ahead of the rights of secured creditors existing at the time of commencement (see paras. 36 and 37 above), provided the security rights of pre-existing creditors can be protected.

64. It is desirable that situations in which an insolvency law creates special privileges for certain types of claims ranking ahead of security rights (for example, a privilege for payment of tax or other unsecured claims), those privileges be kept to a minimum and clearly stated or referred to in the insolvency law (see recommendation 180 of this Guide). This approach will ensure that the insolvency regime is transparent and predictable as to its impact on creditors and will enable secured creditors to assess more accurately the risks associated with extending credit. These issues are discussed in more detail in the *Insolvency Guide*, part two, chapter V, paragraphs 51-79.

65. As already mentioned, insolvency law usually respects the pre-commencement priority of a security right (where the security right was made effective against third parties prior to commencement or after commencement but within a grace period), subject to any privileges for other claims that may be introduced by insolvency law. The same applies to priority of security rights established by subordination (i.e. a change of priority of a security right by agreement, by order of a court or even unilaterally; see recommendation 181 of this Guide). However, subordination should not result in a secured creditor being accorded a ranking higher than its ranking, whether as an individual creditor or as a member of a class of secured creditors, under applicable law. This means that, if secured creditors A, B and C rank in priority so that A is first, B is second and C is third, and A subordinates its secured claim to that of C, B does not obtain a ranking higher than A would have had with respect to the amount of A's claim. It also means that a secured creditor obtaining a subordination from a secured creditor within a class cannot obtain a ranking higher than the ranking of the class.

14. Acquisition financing transactions

66. The treatment in insolvency of security rights and other rights that function so as to secure the performance of an obligation is a key concern of a buyer's, lessee's or borrower's creditors. This treatment can sometimes vary considerably depending on how any particular right is characterized. Generally, but not universally, in legal systems that do not treat retention-of-title transactions and financial leases as security devices, a contract of sale with a retention-of-title clause or a financial lease contract is treated in the insolvency of the buyer or lessee under the rules relating to partly performed contracts (or, in other words, as title devices).

(a) Assets subject to an acquisition security right (unitary approach)

67. In States that integrate all forms of acquisition financing rights into their secured transactions law, retention-of-title transactions and financial leases are treated in the debtor's insolvency in the same way as a non-acquisition security right, with recognition given to any special priority status accorded to the acquisition security right under non-insolvency law (see recommendation 174, unitary approach, of this Guide). As a result, the provisions of the *Insolvency Guide* applicable to security rights would apply to acquisition security rights (for the definitions of the terms "security right", "acquisition financing right", "retention of title" and "financial lease" and other relevant terms, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

(b) Assets subject to an acquisition financing right (non-unitary approach)

68. The same consequence as noted in paragraph [67] is produced in some States that maintain separately denominated retention-of-title transactions and financial leases but subject them and similar arrangements to the same rules that apply to non-acquisition security rights, with recognition given to any special priority status accorded to the acquisition security right under non-insolvency law (recommendation 174 (alternative A), non-unitary approach, of this Guide).

69. Where an acquisition security right is treated in the same way as an ordinary (non-acquisition) security right, typically the insolvency representative can use, sell or lease the encumbered assets so long as it gives substitute assets to the secured creditor or the value of the secured creditor's right in the property is otherwise

protected against diminution. In such situations, any portion of the secured obligations in excess of the value of the secured creditor's right in the property is treated as a general unsecured claim, and in the grantor's reorganization the secured creditor's claim, up to the value of the security right, can be restructured (as is the case with other non-purchase acquisition security rights) with a different maturity, payment schedule, interest rate and the like.

70. Where retention-of-title transactions and financial leases are treated as partly performed contracts (or title devices), the insolvency representative has the right, within a prescribed time period and if willing and able to do so, to perform the contract by (a) paying the outstanding balance of the price and bringing the property into the estate; or (b) continuing to pay the lease payments as they come due. In some cases, the insolvency representative can assign the contract, together with the right to use the property (which in the case of a lease may require the consent of the lessor) to a third party. Alternatively, the insolvency representative can reject the contract, return the property and claim the return of the part of the purchase price paid by the buyer subject to a deduction for depreciation and use prior to the insolvency. In the case of a lease, the insolvency representative can repudiate the lease for the future and return the property to the lessor. However, if the property is critical to the success of the buyer's reorganization, only the first option (performance of the contract as agreed) would in practice be available to the insolvency representative. The need for the insolvency representative to perform the contract as agreed may, for example in cases where the current value of equipment is less than the balance of the purchase price, result in other assets of the insolvency estate being used to satisfy that performance rather than being used to fund other aspects of the reorganization of the grantor (see recommendation 174 (alternative B), non-unitary approach, of this Guide).

71. If retention-of-title and similar arrangements like financial leases are treated as partly performed contracts (or title devices), the retention-of-title seller and the financial lessor will have stronger rights at the expense of other creditors of the insolvency proceedings. The exercise of the stronger rights might result in some reorganizations not being successful, with possible loss of jobs and with other creditors of the insolvency estate not obtaining as much of a recovery on their claims. Thus, a State considering the treatment of retention-of-title, financial leases and the like in insolvency proceedings should consider whether the State's policy of encouraging the manufacture, supply and financing of equipment or inventory through the strengthening of the rights of retention-of-title sellers and financial lessors outweighs or is subordinate to the State's policy favouring reorganization proceedings.

72. In any case, regardless of whether an acquisition financing right is treated in the insolvency proceedings under the rules applicable to security rights or under the rules applicable to contracts and third-party-owned assets, all acquisition financing rights should be subject to the insolvency effects specified in the *Insolvency Guide*. With either type of non-unitary approach, it may be important to note that the *Insolvency Guide* often recommends the same treatment for the holders of security rights and third-party-owned assets, including those set forth in recommendation 88 of the *Insolvency Guide* (regarding the application of avoidance powers to, among other things, security rights and acquisition financing rights that are not effective against third parties, whether by the filing of a notice in the general security rights registry or otherwise); recommendation 35 (regarding the inclusion of the debtor's rights in encumbered assets and assets subject to acquisition financing rights within

assets constituting the insolvency estate); recommendations 39-51 (regarding the application of provisional measures and a stay to encumbered assets and assets subject to acquisition financing rights and relief from the stay); recommendation 52 (regarding use and disposal of assets of the estate, including encumbered assets and the debtor's rights and interests in assets subject to acquisition financing rights); recommendation 54 (regarding the use of third-party-owned assets); and recommendations 69-86 (regarding the treatment of contracts). Recommendation 35, footnote 6, of the *Insolvency Guide*, which was drafted before finalization of this Guide, is understood to apply to all acquisition financing rights determined by reference to relevant applicable law, whether based on ownership or otherwise.

15. Receivables subject to an outright transfer before commencement

73. An outright transfer of a receivable (i.e. a transfer of a receivable not for security) is within the scope of the present Guide (see recommendation 3 of this Guide); a "security right" is defined to include an outright transfer of a receivable (see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). In referring to an outright transfer, this Guide does not affect the application of any rule under law other than insolvency law by which a transaction may be re-characterized as a transfer for security even though the parties denominated the transaction as an outright transfer. In the event of such a re-characterization, the transfer would not qualify as an outright transfer for the purposes of this Guide.

74. If a security right in a receivable created by the debtor before the commencement of the debtor's insolvency proceedings is treated, under law other than insolvency law, as an outright transfer of the receivable, insolvency law should treat the outright transfer of the receivable as it would treat a pre-commencement transfer by the debtor of any other asset where the transfer qualifies as an outright transfer under law other than the insolvency law and exclude the asset transferred outright before the commencement of the insolvency proceedings from the insolvency estate of the debtor (see generally *Insolvency Guide*, recommendation 35, subpara. (a)).

75. However, as with the pre-commencement outright transfer by the debtor of any other asset and, indeed, as with any other pre-commencement transaction, the outright transfer of the receivable is nevertheless subject to the avoidance rules of the insolvency law (see *Insolvency Guide*, recommendation 88). For example, the transfer may be avoided, and the receivable may be brought into the insolvency estate, if (a) the transfer was not effective against third parties at the time of commencement of the insolvency proceedings; (b) the transfer could be avoided under the avoidance rules of the insolvency law relating to undervalued transactions; or (c) in the event that the transfer occurred on one date but was not made effective against third parties until a later date outside of any grace period and during the suspect transfer period, under the avoidance rules of the insolvency law relating to suspect transfers.

76. If the receivable is not in the insolvency estate and is not brought into the estate under the avoidance rules of the insolvency law, then, because the transferee is the owner of the receivable, any stay arising under the insolvency law should generally not apply to the collection of the receivable by the transferee and the insolvency law should generally not apply to the receivable or to the transferee's collection of the receivable. Nevertheless, if, pursuant to a contract in effect at the time of the commencement of the insolvency proceedings, the debtor has been

engaged by the transferee to collect the receivable for the benefit of the transferee, any stay under the insolvency law that is applicable with respect to contracts with the debtor generally (and thus applicable to that engagement contract) would, on that basis and notwithstanding the transferee's ownership of the receivable, prevent the transferee from collecting the receivable or otherwise interfering with the engagement contract until the termination of the stay as to the engagement contract or the rejection by the debtor of the engagement contract (see recommendation 175 of this Guide).

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/631/Add.9 [Original: English]**Note by the Secretariat on recommendations of the UNCITRAL draft Legislative Guide on Secured Transactions, submitted to the Working Group on Security Interests at its twelfth session****ADDENDUM****CONTENTS**

XII. Acquisition financing rights	1-172
A. General remarks	1-172
1. Introduction	1-10
(a) Meaning of acquisition financing transactions	1-4
(b) Diversity of acquisition financing transactions	5-9
(c) Outline of the chapter	10
2. Commercial background	11-34
(a) General	11-16
(b) Retention-of-title and similar transactions	17-23
(c) Financial leases and hire-purchase transactions	24-27
(d) Seller-secured transactions	28-30
(e) Lender acquisition financing	31-34
3. Approaches to financing the acquisition of tangible property	35-50
(a) General	35-37
(b) Approaches favouring seller-provided acquisition credit	38-42
(c) Approaches promoting both seller- and lender-provided acquisition credit	43-46
(d) Approaches based on the fully integrated “purchase-money” security right concept	47-50
4. Key policy choices	51-73
(a) General	51-55
(b) Functional equivalence: a generic concept of acquisition financing	56-63
(c) Unitary and non-unitary approaches to functional equivalence	64-73
5. Creation (effectiveness as between the parties)	74-83
6. Effectiveness against third parties	84-100
(a) General	84-91

(b)	Third-party effectiveness of acquisition financing transactions relating to equipment and inventory	92-94
(c)	Grace period for registration of certain acquisition financing transactions	95-96
(d)	Exceptions to registration for consumer transactions	97-100
7.	Priority as against the rights of competing claimants	101-152
(a)	General	101
(b)	Priority position of acquisition secured creditors and acquisition financiers	102-108
(c)	Priority of acquisition security rights and acquisition financing rights as against pre-existing security rights in tangible property other than inventory or consumer goods	109-113
(d)	Priority of acquisition security rights and acquisition financing rights as against pre-existing security rights in future inventory ..	114-118
(e)	Priority of acquisition security rights and acquisition financing rights as against pre-existing security rights in consumer goods ..	119-121
(f)	Priority of acquisition security rights and acquisition financing rights as against the rights of judgement creditors	122-123
(g)	Priority of acquisition security rights and acquisition financing rights in attachments and masses or products	124-128
(h)	Priority of acquisition security rights and acquisition financing rights in attachments to immovable property	129-131
(i)	Priority as between competing acquisition security rights and acquisition financing rights	132-138
(j)	Multiple acquisition financing transactions	139-142
(k)	Acquisition financing priority in proceeds of tangible property other than inventory or consumer goods	143-147
(l)	Acquisition financing priority in proceeds of inventory	148-152
8.	Pre-default rights and obligations of the parties	153-157
9.	Post-default rights of the parties	158-166
10.	Private international law	167-168
11.	Transition	169-172
B.	Recommendations	

XII. Acquisition financing rights

A. General remarks

1. Introduction

(a) Meaning of acquisition financing transactions

1. The purchase and sale of tangible property (for the definition of “tangible property”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation) is a central activity of many businesses. Sometimes, this involves the acquisition of raw materials and their subsequent manufacture and sale. Sometimes, it involves the purchase of inventory at wholesale for distribution to retailers or for resale at retail. In addition, for many businesses, the extraction and processing of raw materials or the display and distribution of inventory requires substantial investment in costly equipment. Most often these raw materials, inventory and equipment are purchased on credit.

2. Whenever a business acquires the ownership (or title) or the right to use, transform and dispose of raw materials, inventory or equipment on credit and offers rights in the property being acquired as security for the credit being extended, it is engaged in a particular form of secured transaction, which this Guide calls an acquisition financing transaction. The right that the seller or creditor retains or obtains in the property that is supplied to the buyer or grantor may be called, depending on their precise character, either “acquisition financing rights” or “acquisition security rights” (for the definitions of “grantor”, “acquisition financing right” and “acquisition security right”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

3. Acquisition financing transactions are among the most important sources of credit for many businesses. In many respects, they are identical to ordinary secured transactions as described in previous sections of this Guide. But in other respects, they have particular features that have led States to provide for special rules in several situations. This chapter considers the ways in which States may achieve an efficient and effective regime to govern all types of acquisition financing transaction.

4. Because of the number and diversity of acquisition financing transactions in use today it is important to state clearly how this Guide uses the term. An acquisition financing transaction exists wherever one person may claim a property right in tangible property to secure another person’s obligation to pay any unpaid portion of the purchase price (or its economic equivalent), whether that right exists in favour of a seller, a lessor or a lender. A transaction under which a seller retains property rights in the property sold for such a purpose is also an acquisition financing transaction. The key features of an acquisition financing transaction are two: (a) the credit is advanced for the specific purpose of enabling the buyer to acquire an item of tangible property; and (b) the acquisition financing rights retained or the acquisition security rights claimed relate directly to the property being acquired.

(b) Diversity of acquisition financing transactions

5. As noted in chapter III (Basic approaches to security) of this Guide, States have developed a wide variety of legal devices through which those that advance credit can ensure repayment of their debtor's obligation. While only some are classically known as security rights, all serve the economic function of securing the repayment obligation.

6. A similar, if not even greater, diversity of legal devices is typically available to those (often sellers) that finance a buyer's acquisition of tangible property. For example, a seller that retains title to the property being sold until the buyer has paid the purchase price in full (a retention-of-title seller), is extending credit terms to its buyer and is thereby financing the buyer's acquisition of that property. The retention-of-title right (for the definition of "retention-of-title right", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation) is just one of several devices available to sellers. A seller may also transfer title to a buyer with a proviso that the buyer's title will be retroactively extinguished if it fails to pay the agreed purchase price (the sale is under a "resolutive condition"); or, a seller may transfer title to a buyer, but take a security right in the property being sold.

7. Sellers comprise just one category of financiers that may offer credit to enable a person to acquire a tangible object. Lenders also may provide credit to a buyer for the specific purpose of enabling that buyer to purchase property from a seller. Because both sellers and lenders may advance credit to enable buyers to acquire tangible objects it is possible for more than one person to be claiming an acquisition financing right or an acquisition security right in the same property.

8. Still another form of acquisition financing transaction may not even involve a contract of sale at all. A lessor that leases property to a lessee on terms that are equivalent to those of a sale on credit is likewise providing financing that enables the lessee to use the tangible property in the same manner as if it owned that property, even if title never passes from the lessor to the lessee. As in the case of sellers, there are different ways in which lessors may structure the agreement so as to create a financial lease, that is, a lease that enables the lessee to acquire the economic equivalent of an ownership right in the leased property (for the definition of "financial lease", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

9. So also, a lender that provides credit to a lessee for the purpose of paying the rental payments as they come due under a lease may, depending on the terms of the credit, be an acquisition secured creditor with rights in the property being leased. If the credit being extended actually enables the lessee to conclude the financial lease agreement with the lessor, the lender is financing the lessee's use (and notional acquisition) of that property.

(c) Outline of the chapter

10. This chapter discusses, in section A.2, the commercial background of contemporary acquisition financing transactions, and in section A.3, the various approaches to acquisition finance that have heretofore been adopted in different legal systems. Section A.4 sets out the key policy choices that confront States enacting legislation to govern the various types of acquisition financing transaction.

The remainder of the chapter then reviews how the several components of a secured transactions regime discussed in other chapters of this Guide apply in the specific case of acquisition finance. It considers, in section A.5, the creation of such devices as between the parties, in section A.6, the effectiveness of such devices as against third parties, in section A.7, priority as against competing claimants, in section A.8, pre-default right and obligations of the parties, in section A.9, post-default rights of the parties, in section A.10, private international law, and in section A.11, transition issues. The chapter concludes, in section B, with a series of specific recommendations.

2. Commercial background

(a) General

11. The opening paragraphs of this chapter summarized a number of different ways for a buyer to finance the acquisition of tangible property, such as equipment and inventory. In this section, the commercial background of these various transactions and their actual operation are considered in greater detail.

12. An initial distinction to be drawn when considering the purchase and sale of tangible property in a commercial setting is that between cash sales and sales on credit. Sometimes buyers have sufficient liquidity that they may purchase both equipment and inventory on a cash basis. As a rule, however, commercial enterprises will acquire a substantial part of their raw materials, inventory and equipment on credit.

13. Acquisition credit will normally be of two types. First, a buyer might simply borrow the purchase price from a third party on an unsecured basis. For example, while the sale transaction is itself a cash transaction, it may be financed by a general line of credit from the primary lender of the business. This method is simple, but the buyer's credit rating or reputation might limit availability of such credit or make the cost of such third-party credit prohibitively high. Second, a buyer may agree with a seller to purchase the property on credit terms that allow the buyer to make payment (perhaps in instalments) after the completion of the sale. Here the seller transfers possession and ownership of the property to the buyer and is paid the purchase price in a lump sum at a later time, or through periodic instalment payments. This method, of course, is not really different to third-party finance except that the risk of non-payment is now on the seller rather than on a third-party financier. Many sellers are often unwilling to bear such an unsecured risk.

14. As a result, many buyers find that, as a practical matter, it is necessary to give some form of security in order to acquire tangible property on credit. The property subject to a security right could well be other property of the buyer. For example, a business would grant security over its factory or warehouse to secure repayment of a loan to be used to acquire inventory or raw materials. Typically, however, the most obvious asset on which security may be taken, and frequently the only such asset available to a buyer, is the property actually being acquired.

15. Property being acquired can be used as security for acquisition credit in several different ways. For example, in some legal systems, sellers have special rights that automatically enable them to cancel the sale and take back the property sold if the buyer does not pay the purchase price within a certain period after delivery. Similarly, other legal systems give sellers an automatic right to claim a

priority or preference in the distribution of proceeds of a sale of the property they have sold. Often, however, the security claimed by an acquisition financier does not arise by operation of law, but is the result of an agreement between the seller or lender and the buyer.

16. The creation by agreement of a security right in property being acquired by a buyer in order to ensure the payment of the purchase price can take many forms. For example, the buyer may formally grant a security right in the property to a third-party financier; or the buyer may formally grant such a security right to the seller; or the buyer and seller may agree to some other legal mechanism, which, although not in the form of a security right, is its economic equivalent. Two such mechanisms are (a) the use of ownership in the property to secure payment (typically, although not always, by a retention-of-title transaction); and (b) the use of a longer-term lease (typically through a financial lease transaction).

(b) Retention-of-title and similar transactions

17. A supplier of inventory or equipment may wish to meet its customer's need for credit by supplying the property to the customer under an agreement by which ownership of the property being sold does not pass to the buyer until the purchase price has been paid in full. In many cases the agreement is between the seller and the buyer without any intermediary. In some cases, however, the seller may sell the property for cash to a finance institution or other lender, which may then sell the property to the buyer under an agreement that enables it to retain ownership of the property until full payment of the purchase price.

18. There are many forms in which buyers and sellers may structure an agreement by which the seller reserves ownership of the property sold until full payment (retention-of-title agreements). The retention-of-title mechanism is very common. In this transaction a seller's right in tangible property is not transferred to the buyer until the condition that the unpaid portion of the purchase price of the property is paid in full has been satisfied. While the buyer usually obtains immediate possession of the property, ownership remains vested in the seller until the purchase price is paid.

19. Retention-of-title arrangements are sometimes called conditional sales. Generally, however, in transactions called "conditional sales" the sale itself is not conditional (that is, the actual sale agreement is not dependent on the occurrence of some event not related to the sale itself). Rather, under a "conditional sale", it is the transfer of ownership to the buyer that is conditional. The seller reserves ownership of the property sold until the purchase price has been paid in full or the buyer has complied with any other conditions prescribed in the sale agreement.

20. There are, of course, other types of transaction whereby a seller uses ownership of the property sold as security for the purchase price. For example, sometimes the reservation of a seller's ownership is structured as a sale with a term, and the transfer occurs only at the end of the stipulated term. Occasionally, a seller will actually transfer ownership to a buyer at the moment of sale, with a proviso that the buyer's title will be retroactively extinguished should it fail to pay the agreed purchase price according to stipulated terms.

21. In each of these cases, the key feature is that the agreement by the seller to postpone full payment is protected either by delaying the passing of title to the

property to the buyer or, less commonly, by transferring title to the buyer subject to the seller's right to regain title upon failure of the buyer to pay. The more common case (retention-of-title transactions) may, in some States, be varied through certain clauses that greatly expand its usefulness as an acquisition financing device. So, for example, the parties may be permitted to agree to an "all-monies" or "current-account" clause. Where such clauses are used, the seller retains ownership of the property sold until all debts owing from the buyer to the seller have been discharged (and not just those arising from the particular contract of sale in question).

22. In addition, in some States parties are permitted to add "products" clauses, in which the seller's ownership is extended to, or the seller is deemed to have a security right in, any products that are manufactured from the property in which the seller retained ownership. Similarly, some States allow for "proceeds" (for the definition of "proceeds", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation) clauses under which sellers may claim ownership or a security right in any proceeds generated by the sale of the property in which the seller retained ownership (for the treatment of proceeds in the case of ordinary security rights, see A/CN.9/631, recommendations 18-20).

23. Often, however, the applicable law strictly limits the scope of the seller's retained ownership. In many States the right may be claimed (a) only upon the property sold (i.e. neither on proceeds nor on replacement property); (b) only so long as the property remains in its original condition (i.e. unaltered by the manufacturing process); (c) only to secure the sale price of the property; or (d) only when all the three former conditions are met.

(c) Financial leases and hire-purchase transactions

24. A supplier may also use the concept of a lease to enable businesses to acquire the use of property without having to pay its purchase price in cash. For example, a supplier of equipment may lease a piece of equipment to a business that takes possession of the equipment and makes monthly rental payments. In these agreements the supplier necessarily retains ownership of the equipment (as lessor) and the lessee merely pays the rent as it falls due.

25. In some cases, the lease agreement is structured to achieve the functional equivalent of an instalment sale. For example, the term of the lease may be for the useful life of equipment being sold and, at the end of the lease, the lessee automatically acquires ownership; or the lease may be for the useful life of the equipment without the lessee having an obligation to purchase the equipment. Alternatively, the lease period could be for less than the useful life of the equipment but, at the end of the lease period, the lessee has the option to purchase the equipment at a nominal price. Given their economic purposes and effects, these various types of arrangements are often called financial leases (for the definition of "financial lease", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

26. Hire-purchase transactions are based on a similar principle. A typical transaction would commence with the lessee (hire-purchaser) selecting the equipment from the supplier (hire-seller) of the equipment. The lessee would then apply to a leasing company (usually a financial institution or an affiliate of one) to purchase the equipment from the supplier for cash and to lease it to the

lessee (hire-purchaser). As with an ordinary financial lease, very often the lease comprises the useful life of the equipment and, at the end of the lease period, the lessee automatically acquires ownership or has the option to purchase the equipment at the end of the lease period for a nominal sum.

27. Whether the financial lease agreement is a two-party arrangement between lessor and lessee or a three-party hire-purchase arrangement, the transaction takes the form of a lease. Nonetheless, the economic reality is that the lessee is paying the notional purchase price for the equipment in instalments, while the lessor remains the owner until full payment is made. Depending on the nature of the equipment at issue, lease periods may range from a few months to several years and items leased may range from high-value equipment, such as aircraft, to lower-value equipment, such as computers. Usually, the specific leasing arrangements are tailored to the lessee's unique cash-flow requirements, the tax regime in a State and other needs of the lessor and lessee.

(d) Seller-secured transactions

28. In many States today, a number of other legal devices are available to secure the performance of a buyer's payment obligations. As noted, some of these arise by operation of law. For example, in some States the seller of tangible property is given a high-ranking "privilege" or a "preferential claim" on the money generated by a sale in execution of the property it has sold. Whether the sale in execution is brought by the seller that has itself obtained a judgement against the buyer, by a judgement creditor of the buyer or by a secured creditor exercising a security right against the property, the seller may claim its statutory priority. What is more, this statutory preferential right is often given a rank that is superior even to that of consensual secured creditors.

29. In some States, a seller also has a right to refuse to deliver tangible property to a buyer that is not ready to pay the price at delivery. Occasionally, this right is projected forward as a reclamation right for a short period (e.g. 30 days) after delivery of the property. Neither of these rights is particularly effective as an acquisition financing right, however, since both typically presuppose that the sale is made for cash and not on credit.

30. More recently some States have also modified their law to permit a seller to take by agreement a non-possessory security right in the property sold. This type of seller's security right is usually available only in States that have also decided to permit lenders to take non-possessory security rights over tangible property. The seller's non-possessory security right is identical in form to the security right that an ordinary lender may take, but is given a special advantage. The seller that takes such a security is usually able to claim a preferred priority position that allows it to outrank any other secured creditor that is asserting rights granted by the buyer in that property.

(e) Lender acquisition financing

31. In many modern economies, lenders, rather than sellers and lessors, provide a substantial segment of the acquisition finance market. Historically, it was not possible for lenders directly to acquire any special priority rights in property for the acquisition of which they provided financing. Even where the money advanced to

the buyer was specifically intended to be used to purchase property and was in fact used for that purpose, the lender that took security in the property being acquired was considered to be a secured creditor subject to the priority rules governing security rights. That is, the lender that provided acquisition financing would rank lower than a pre-existing secured lender with a security right in a buyer's after-acquired property.

32. The only mechanism by which lenders could achieve the same preferred status as sellers and lessors was to acquire their rights. So, for example, where sellers retained ownership to secure the buyer's payment obligation, sometimes lenders would directly pay the purchase price to the seller and take an assignment of the seller's right to payment under the sale agreement, along with the seller's retention-of-title right. Similarly, in cases where the law enabled sellers to take by agreement a security right with a special priority status in the property being sold, the lender could purchase the seller's security right. Finally, in cases where the acquisition financing right arose by means of a financial lease, the lender would sometimes purchase the lease contract from the lessor. The particular form of transaction known as hire-purchase is a modern adaptation of this long-standing technique.

33. Today, however, many States permit lenders that advance credit to enable a debtor to purchase tangible property to acquire, in their own name, a preferential security right in those objects. In other words, in some States it is now possible for lenders to accede directly to a preferred status that was previously available to them only by purchasing the preferential right granted by a buyer to a seller. Nonetheless, in these States, not all lenders that provide money to a business that might ultimately be used to purchase tangible property will be able to claim an acquisition security right. The lender advancing the credit must do so to enable the purchaser to acquire the property, the credit must actually be used for that purpose and the right can only be claimed in the property thereby acquired.

34. Even though this special type of lender acquisition security right may be found in a number of States, the idea that a lender might be able directly to acquire a preferential security right in property the acquisition of which it specifically finances is not broadly accepted. Indeed, most States that permit sellers to secure the purchase price of the property they sell by means of a distinct reservation-of-title mechanism do not permit lenders to claim preferential acquisition security rights. Typically, only sellers themselves have the option of claiming such preferential acquisition security rights, which they may do as an alternative to retaining ownership.

3. Approaches to financing the acquisition of tangible property

(a) General

35. In the past, States have taken a wide variety of approaches to regulating acquisition financing transactions relating to tangible property. As noted, however, protecting the rights of sellers was typically conceived as the central objective. Moreover, until recently, in many States it was not possible to grant non-possessory security in tangible property, even to a seller. For these two reasons, the retention-of-title technique developed as an everyday practice in both civil-law and common-law systems. Sometimes States enacted legislation to acknowledge and regulate this acquisition financing technique. Most often, however, its development resulted from

changes in contractual practices relating to the sale of tangible property that were recognized and further elaborated by courts.

36. As an element of sales law that specifically touches the property aspects of the transaction, the conditions and effects of retention-of-title mechanisms vary widely from State to State. Many of these differences are products of history and the specific contractual practices that were adopted in response to the legal regime of individual States. The detailed configuration of many regimes, that is, does not result from a legislature comprehensively analysing the economic purposes served by secured transactions regimes generally or acquisition financing regimes in particular.

37. In some States, there is a real tension between the law of secured credit and existing business practices. Sometimes these business practices develop precisely to overcome existing legal rules. As such, often they are neither coherent with the legislative policy reflected by current law in a State, nor are they the kinds of practice that business would adopt if the legal regime were designed to promote efficient secured credit. Consequently, the law in this field of economic activity has frequently developed in a haphazard way. Novel contracts and additional terms to well-known types of agreement are invented in a piecemeal way as the need arises to serve as proxies for a fully developed regime to govern acquisition financing transactions.

(b) Approaches favouring seller-provided acquisition credit

38. In many States today, retention-of-title and economically equivalent devices available uniquely to sellers are the main or the only devices that provide acquisition-financing security while the buyer takes possession of the assets being purchased. Sometimes the regulation of sellers' rights is achieved by specifying a range of different legal devices within a civil or commercial code. Often, however, regulation results because particular sellers' rights are created in special statutes or by virtue of judge-made rules that deal with the various types of transactions that perform security functions whatever name they bear.

39. The approach that focuses on sellers as the principal source of acquisition finance is occasionally based on a policy decision to protect small- and medium-sized suppliers of tangible property on credit against large financing institutions. The approach acknowledges the importance of small- and medium-sized businesses (manufacturers and distributors) for the domestic economy and the dominant position of large financing institutions in credit markets. In these States, various assumptions are made to justify the policy affording special treatment for sellers that finance the acquisition of property by their buyers. One is that suppliers have an interest in providing credit at low rates to increase the volume of their sales. Another is that the cost of such credit is affordable because many suppliers do not charge interest prior to default. A third is that because there will usually be several suppliers seeking to sell property to the buyer, competitive prices will be offered to buyers.

40. A State considering secured transactions law reform needs to evaluate these assumptions carefully. While some assumptions may be justified, other assumptions may not be. For example, the fact that a supplier sells property to a buyer under a retention-of-title arrangement does not necessarily mean that the seller's credit

terms come at no cost to the buyer. The supplier itself has a cost of obtaining funds in order to extend these credit terms. In cases where interest is not charged till default, the supplier's cost of credit for itself will be embedded in the price of the property being sold.

41. Even if a State interested in promoting the manufacture and supply of tangible property wishes to encourage sellers to act as suppliers of credit, it need not do so to such an extent that other parties are excluded from offering competitive acquisition financing. In the same way that competition among sellers normally reduces prices for buyers, competition among suppliers of credit should reduce the cost of credit to borrowers. Fostering competition among all suppliers of credit will not only result in credit being available to the buyer at the most affordable rates, it is likely to open up other sources of credit enabling buyers to make payments to their sellers. In addition, making other sources of credit available to buyers will increase their capacity to purchase tangible property without the need for sellers themselves to provide financing to all their potential buyers.

42. Legal barriers that prevent financiers other than sellers and lessors from directly extending acquisition credit to buyers or that require these other financiers to extend credit only through the seller or lessor (by taking an assignment of the seller's retention-of-title claim or the lessor's lease agreement) are inefficient in other respects. Most importantly, treating acquisition financing simply as a matter of protecting the property rights of sellers and lessors can actually reduce the efficiency of the rights claimed by those sellers and lessors. Many modern secured transactions regimes offer secured creditors a number of rights that often have not, or not always, been available to sellers that deploy retention of title to secure their claims. These include, for example, automatic rights to claim security in any products that are manufactured from the property in which a security right is taken, or to claim a security right in any proceeds generated by the sale of the encumbered property, or to use the security right to secure all debts that may be owing from the buyer to the seller.

(c) Approaches promoting both seller- and lender-provided acquisition credit

43. In part to expand the range of those that may supply acquisition financing to a buyer, and in part to enable sellers to avail themselves of a full panoply of rights previously available to lenders that took regular security rights, many States today have redesigned their acquisition finance regime so as to promote both seller- and lender-based acquisition financing. Different approaches have been taken to achieve this law reform task.

44. In some States that maintain special acquisition rights for sellers based on a reservation of ownership, retention-of-title sellers are now able to expand their rights by contract through the insertion of, for example, proceeds clauses (often referred to as "extended retention-of-title" clauses) into the agreement of sale. Again, some States permit retention-of-title sellers to stipulate not only proceeds clauses, but also products clauses and all-sums clauses in order to enhance their rights. Finally, some legal systems recognize a buyer's expectancy right in property being acquired under a retention-of-title arrangement and permit the buyer to grant a lower-ranking security right in the property in favour of another creditor. Nonetheless, in most States that maintain special sellers' rights based on a reservation of ownership, only the simple retention-of-title is treated as a title

device, while these other more complex retention-of-title arrangements are either not recognized or are treated as giving rise to security rights.

45. Some States have reformed their secured transactions legislation to enable sellers to take preferential acquisition security rights, but still permit retention of title, financial leases and similar devices to co-exist as separate acquisition financing transactions. In these systems, the various devices by which ownership is deployed to secure a buyer's obligation are, however, typically regulated by substantially the same set of rules as those applicable to a seller's acquisition security rights. Still other States maintain traditional sellers' acquisition financing rights alongside sellers' acquisition security rights, but also allow lenders to claim security rights in the property being sold. To avoid the risk of imperfect coordination among various types of acquisition finance, these States often go further and integrate all acquisition financing transactions into the same framework of rules that governs security rights generally.

46. This last approach is based on a policy decision to treat, as far as possible, all transactions that are deployed to finance the acquisition of tangible objects equally. Creating equal opportunities for all credit providers, it is assumed, will enhance competition among them, thereby increasing the amount of credit available and reducing its cost. Nonetheless, States that continue to permit sellers to take security based on a reservation of ownership as well as acquisition security rights usually do not permit lenders that provide credit specifically to finance the acquisition of tangible property to accede to the preferred priority position of sellers and lessors. To do so, they must still purchase such preferred status from sellers or lessors. These types of modernized regime thus integrate sellers and lessors rights into the secured transactions regime and thereby facilitate financing on the security of the buyer's or lessor's expectancy, but do not permit these other financiers to compete directly for a first-ranking acquisition financing right in the property being purchased.

(d) Approaches based on the fully integrated “purchase-money” security right concept

47. Some States have taken a further step. Not only have they adopted an approach to acquisition financing that attempts to promote both seller and lender acquisition credit, but they have also enacted regimes that treat all providers of acquisition financing equally. In these regimes, lenders are enabled to take security in property being purchased, but also to acquire the same preferential status as sellers that take security rights in the property they sell. As a consequence, in these regimes acquisition security rights are made available equally to sellers, lessors, lenders and all other suppliers of acquisition financing. For regulatory purposes, the various acquisition financing rights of owners (retention of title, financial leases and similar devices) are (a) fully integrated into a single functional type of security right; and (b) treated identically to traditional acquisition security rights available to lenders. In many States that have adopted this approach, these various acquisition security rights are all characterized as “purchase-money” security rights.

48. Where the “purchase-money” security rights approach has been adopted two important principles govern its application. First is the idea that a purchase-money security right, which in this Guide is called an “acquisition security right”, is a generic concept. That is, it is applicable to any transaction by which a financier

provides credit to enable a buyer to purchase tangible property and takes a right in the property being purchased to secure repayment of that credit. Second is the idea that a purchase-money security right is a species of security right. That is, except where the particular circumstances of acquisition financing require a special rule applicable to such rights, all the rules applicable to security rights generally also apply to acquisition security rights.

49. The following are the key features of an “acquisition security right” (using the terminology of the Guide) in States that have adopted the fully integrated, “purchase-money” security right approach:

(a) The right is available not only to suppliers of goods, but also to other providers of credit, including lenders and lessors;

(b) The acquisition secured creditor is given, for secured transactions purposes, a security right, regardless of whether that creditor retains title to the property being acquired;

(c) The buyer may offer a lower-ranking security right in the same property to other creditors and is thus able to utilize the full value of its assets to obtain credit, thereby enhancing mobilization of capital within the economy;

(d) The acquisition secured creditor, like other secured creditors, normally has to register a notice of its security right in a general security rights registry to establish priority over competing claimants and to provide third parties with a way of being informed that another creditor claims a security right in the same property;

(e) Once a notice of the security right is registered in the general security rights registry the security right is effective against third parties;

(f) If the notice is registered within a short period of time after delivery of the property to the buyer, the acquisition security right has priority over a holder of a judgement right or an insolvency administrator of the buyer between the time of the delivery of the property to the buyer and the registration of the notice;

(g) If the property is equipment and notice is registered within a short period of time after delivery of the equipment to the buyer, the acquisition security right has priority over the security right of a pre-existing secured creditor with a security right in future equipment of the buyer;

(h) If the property is inventory and, before the inventory is delivered to the buyer, the acquisition secured creditor registers the notice in the general security rights registry and also notifies a pre-existing secured creditor with a security right in future inventory of the buyer, for which a notice has been registered in the general security rights registry, that the acquisition secured creditor is claiming a higher-ranking acquisition security right in the inventory, the acquisition security right has priority over the security right of the pre-existing secured creditor; and

(i) The acquisition secured creditor that is a seller or a lessor may enforce its rights, within or outside insolvency proceedings, in the same way as any other secured creditor and has no other title-based enforcement rights.

50. Over the past few decades, several States have adopted this fully integrated approach to acquisition security rights. This trend may also be seen at the international level. For example, the International Institute for the Unification of Private Law (Unidroit) Convention on International Interests in Mobile Equipment

governs the effectiveness against third parties of retention-of-title and financial leases with separate but substantively similar rules to those regulating security rights. Accordingly, it extends the international registry contemplated by the Convention beyond security rights to retention-of-title and to financial leasing arrangements. Moreover, under the United Nations Convention on the Assignment of Receivables in International Trade,¹ the same rules apply to (a) security assignments; (b) outright assignments for security purposes; and (c) even pure outright assignments (see art. 2, subpara. (a)), thus avoiding drawing a distinction between security rights and title devices. Indeed, article 22 of the Convention expressly covers various priority conflicts, including a conflict between an assignee of receivables and a creditor of the assignor whose retention-of-title rights in property extends to the receivables from the sale of that property (for the definition of “priority” and “competing claimant”, see art. 5, subparas. (g) and (m), of the Convention). The same approach to acquisition financing rights is followed in the European Bank for Reconstruction and Development Model Law on Secured Transactions, the Organization of American States Model Inter-American Law on Secured Transactions and the Asian Development Bank’s *Guide to Movable Registries*.

4. Key policy choices

(a) General

51. Chapter III of this Guide reviews the basic approaches to security that might be adopted by a State considering secured transactions law reform in general. A key question addressed in the chapter is how to treat transactions that fulfil the economic function of secured transactions but are effectuated by deploying title to property to secure the full payment of the financier’s claim. This question arises in both non-insolvency and insolvency contexts.

52. Many States today continue to maintain a formal diversity of financing devices in all situations. That is, they recognize both security devices and traditional devices such as mortgages and sales with a right of redemption where lenders deploy a transfer of ownership of a borrower’s property to secure performance of an obligation. Other States maintain this formal diversity in non-insolvency situations, but under their insolvency regime characterize transactions where title is deployed to secure payment of a creditor’s claim as security devices. In these States, all transactions that fulfil the economic role of security are treated as functionally equivalent for insolvency purposes.

53. Other States have adopted this “functional equivalence” approach and extended it to non-insolvency as well as insolvency contexts. The regimes in these States recognize the specificity of these various types of device and continue to permit sellers to engage in retention-of-title or resolutive sale transactions, and continue to permit lenders to engage in mortgage transactions or sale transactions with a right of redemption. However, to ensure a proper coordination among these various transactions and to ensure as far as possible their equal treatment, these States subject all these transactions, however denominated, to a framework of rules that produces functionally equivalent outcomes. Finally, some States carry this logic to its conclusion and adopt what might be called a “unitary” approach. Their secured

¹ United Nations publication, Sales No. E.04.V.14.

transactions regime characterizes as security the various transactions fulfilling the economic function of security, regardless of their form, and explicitly denominates them as “security rights” (for the definition of “security right”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

54. This Guide recommends that States adopt both a “functional equivalence” and a “unitary” approach to non-acquisition secured transactions generally. All transactions where rights in property, including ownership, are used to secure an ordinary repayment obligation by a borrower to a lender should be treated as security devices, and identified as such, in both insolvency and non-insolvency contexts (see A/CN.9/631, recommendation 11). The Guide calls this the “unitary and functional” approach. As explained in chapter III, the main advantages of the unitary and functional approach are two: (a) it more obviously promotes competition among credit providers based on price and thus is more likely to increase the availability of credit at lower cost; and (b) it better enables legislative policy decisions to be made on grounds of comparative efficiency.

55. This said, slightly different considerations arise when the obligation being secured is the payment of the purchase price of a tangible object (that is where an acquisition financing transaction is involved). The rationale for treating all lenders equally, regardless of the form of the credit transaction, does not automatically apply to situations of acquisition finance, since the parties involved are not just lenders. They are also sellers. In deciding whether to adopt the unitary and functional approach, therefore, States will have to determine (a) if the logic of secured transactions should override the logic of the law of sale and lease (or rather the logic of the law of ownership) when sellers and lessors use these transactions to secure the payment of the purchase price (or its economic equivalent) of tangible objects; or (b) if the logic of lease and sale should override the logic of secured transactions as the primary organizing principle in these cases.

(b) Functional equivalence: a generic concept of acquisition financing

56. In chapter III, this Guide notes that, while closely linked, the principles of “functional equivalence” and “unitary characterization” are independent. Equal opportunity to provide credit is the primary objective that States should seek to achieve when reforming their law of secured transactions both generally and in particular in relation to acquisition financing. The specific goals are two-fold: first, to ensure that, in so far as possible, all types of financiers are permitted to provide credit to enable business to acquire equipment and inventory; and second, to ensure that, in so far as possible, these various financiers will be subject to legal rules that treat them equally.

57. The idea of equal treatment of all financiers that provide acquisition credit is captured in the expression “functional equivalence”. There are reasons relating to both economic policy and the design of legal institutions why States might wish to adopt the functional equivalence principle. In market economies, creating equal opportunities for all credit providers will enhance competition among them, thereby increasing the amount of credit available and reducing its cost. There is no overriding reason of economic principle why the manufacturer or distributor of tangible objects should have a monopoly on providing credit to purchasers. Once it is accepted that financiers should be able to compete to offer buyers access to acquisition credit, the legal regime under which they do so should not create

incentives for one or another sub-group of financiers. The most efficient way to ensure that competition for the provision of credit is based solely on the terms and conditions offered by the financier is to establish legal rules that treat all of them in a functionally equivalent way.

58. In other words, buyers should be permitted to seek out the best deal possible to satisfy their acquisition credit needs. They should have equal opportunity to negotiate the term of the loan, the conditions of repayment, the interest charged, the events that would constitute a default and the scope of the security they provide with any potential financier. If the legal regime permits some financiers to obtain better security rights than others, this equality of opportunity to negotiate is compromised. In other words, from an economic perspective there is nothing unique about acquisition financing that would induce a State to take an approach to credit competition different from that it adopts in relation to ordinary non-acquisition financing.

59. There are also reasons relating to the design of legal institutions why a State might wish to adopt the functional equivalence principle. As noted, States have traditionally organized credit for buyers of tangible property by providing specific entitlements for sellers (the assumption being that sellers would provide most purchase-credit and most sales would be one-off transactions relating to individual items). Under such an assumption, the primary concern was simply to ensure that if the buyer did not pay the purchase price, the seller could recover the object sold quickly and efficiently and free of any third-party rights. That is, credit was simply an adjunct to the sale and the seller's primary interest was to receive value for the object provided to the buyer. Two developments required States to rethink this position.

60. First, as economies expanded, the need for acquisition credit grew and sellers found that they often could not meet all the credit needs of their buyers. Especially where manufacturers, wholesalers and retailers were purchasing large quantities of raw material and inventory, it became increasingly common for banks, finance companies and other lenders to extend credit to buyers for the express purpose of acquiring these raw materials and inventory. Second, the types of equipment needed for manufacturing and distribution became increasingly sophisticated and expensive. Moreover, often for tax reasons, buyers discovered that it was sometimes more economically advantageous to lease rather than purchase needed equipment. Frequently, these lease transactions were structured as the economic equivalent of a sale upon credit.

61. In both of these cases, a person other than the direct seller of the property provided acquisition credit to a buyer (or notional buyer). States were then confronted with having to decide whether continued reference to the seller's rights as the paradigmatic acquisition finance transaction was justifiable. The main reasons for concern lay in the fact that (a) sellers were traditionally able to get a top ranking secured right in the property sold based on their ownership, but other financiers such as lenders typically were not; and (b) when the transaction was structured as a lease rather than a sale in which the seller transferred title to the buyer against a right to have the sale set aside for non-payment of the purchase price, it was generally not possible for the lessee to deploy the leased asset as collateral to secure other credit. These concerns led States to consider whether a generic concept of an acquisition financing transaction in which the fact that credit was being offered to a

purchaser was the organizing principle might be a better way to organize this branch of secured transactions law.

62. Many States came to the conclusion that designing a legal regime in which all providers of acquisition credit would be able to exercise the same rights against a buyer-borrower in default would simplify this area of the law. That is, even when they decided that sellers should continue to be able to protect their rights by retaining ownership of the property sold until full payment by the purchaser, they concluded that the legal regime would be less uncertain and would generate less litigation if it did not draw purely formal distinctions between the rights available to different suppliers of acquisition credit. This led them to adopt the functional equivalence approach: all transactions being deployed to finance the acquisition of tangible property would be treated in essentially the same way regardless of their form and regardless of the legal status of the creditor (as seller, lessor or lender).

63. Consistent with the recommendation in chapter III (Basic approaches to security) of the Guide that States adopt the “functional equivalence” approach to non-acquisition secured transactions, in this chapter this Guide recommends that States adopt the principle of “functional equivalence” in respect of all acquisition financing transactions, however denominated (see A/CN.9/631, chapter XII, statements of purpose for unitary (sect. A) and non-unitary (sect. B) approaches; however under recommendation 174, alternative B for the non-unitary approach, there is no functional equivalence, and under recommendation 200 bis, subpara. (b), there is only qualified functional equivalence).

(c) Unitary and non-unitary approaches to functional equivalence

64. The second main policy choice that confronts States relates to the manner in which they design legislation to achieve functional equivalence. Once again, the main objective is to ensure that, in so far as possible, the legal regime that brings about this functional equivalence is crafted in a manner that facilitates the broadest extension of credit at the lowest price. This type of efficiency in a legal regime can be achieved in one of two ways. States may choose to collapse distinctions between various forms of acquisition financing transactions and adopt a single characterization of these devices. All acquisition financing transactions under the unitary approach will give rise to “acquisition security rights” and all financiers will be considered as “acquisition secured creditors” (for the definitions of “acquisition security right” and “acquisition financing right”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). This Guide refers to this method as the “unitary” approach.

65. Alternatively, States may choose to retain the form of existing transactions and the characterization given to their agreement by the parties (e.g. as sale, lease or loan) subject to the court declaring that characterization a sham. In doing so, however, they will nonetheless be required to adjust and streamline their technical rules for each transaction so as to promote functional equivalence and thereby to increase efficiency. This Guide calls this method for regulating acquisition credit the “non-unitary” approach. Acquisition financing transactions under the non-unitary approach will give rise either to “acquisition financing rights” in favour of an “acquisition financier” where a title device is deployed, or to “acquisition security rights” in favour of “acquisition secured creditors” if an ordinary security right is created, whether in favour of a lender or a seller that transfers title to a buyer.

The buyer or lessee of the property where a seller or lessor claims an acquisition financing right is described in this Guide as an “acquisition financing transferee” (for the definitions of the terms mentioned in this paragraph, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

66. The decision about which of these approaches to adopt is significant. It will affect the rights of third parties (both in and outside insolvency proceedings; however, the insolvency-related discussion is included in chapter XI) and, as a result, will have an impact on the availability and the cost of credit for buyers of tangible property. In addition, having decided to adopt one or the other of these approaches, States will also have to decide exactly how to design the particular rules by which all aspects of acquisition financing transactions will be governed.

67. When States adopt a unitary approach the consequences are two-fold. First, all acquisition financing devices, regardless of their form, will be considered as security devices generally subject to the same rules. This means that a creditor’s rights in property under a retention-of-title sale, sale under resolutive condition, hire-purchase agreement, financial lease, or similar transaction will be considered to be an acquisition security right and be regulated by the same rules that would govern an acquisition security right granted to a lender. Second, the buyer in such cases will be considered to have acquired ownership of the property regardless of whether the seller purports to retain title by contract.

68. States may take one of two paths to enacting the unitary approach in cases where sellers deploy a title-retention device. They may provide that the buyer becomes owner for all purposes, with the result that States would explicitly have to amend other legislation (such as taxation statutes) if they desired that sellers in such transactions would be taxed as owners. Alternatively, they might provide that buyers become owners only for the purposes of secured transactions law and its related fields (debtor-creditor law and insolvency law in particular).

69. Because this Guide adopts a unitary approach to non-acquisition financing, it contemplates the possibility of a non-unitary approach only in respect of acquisition financing transactions. Nonetheless, even when States adopt a non-unitary approach, they should design the regime to reflect the functional equivalence principle (see A/CN.9/631, recommendation 184, non-unitary approach). For example, the regime should treat, in a functionally equivalent manner, sellers that retain title, sellers that do not retain title but retain a right to cancel the sale, sellers that do not retain title but take a regular acquisition security right in the property sold, lessors that retain title, and lenders that take a regular acquisition security right in the asset sold or leased.

70. In principle, States adopting a non-unitary but functionally equivalent approach could achieve functional equivalence between the rights of sellers that retain title and financial lessors on the one hand, and the rights of acquisition secured creditors on the other, in one of two ways. They could either (a) model the rights accorded to retention-of-title and similar claimants on those given to acquisition secured creditors that are not sellers or lessors; or (b) they could model the rights of these other acquisition secured creditors on the rights already available to retention-of-title creditors. In the former case, all acquisition financiers would be treated the same (as acquisition secured creditors), but acquisition financiers that retain ownership would have slightly different rights from ordinary owners. In the

latter case, all acquisition financiers and acquisition secured creditors would be treated the same (as acquisition financiers) but acquisition secured creditors and non-acquisition secured creditors would be subject to slightly different rules. While formally these may appear to be equally viable options, in view of the overall objective to enable parties to obtain secured credit in a simple and efficient manner, there are several reasons why the former approach to achieving functional equivalence in a non-unitary regime should be preferred.

71. One may begin with the objective being sought. The question is what approach is the most likely to achieve the most transparent and lowest cost credit regardless of the source of the credit. First, it would be quite complicated to design a set of rules that would turn lenders into owners (especially since lenders normally would have no expertise in selling or maintaining the assets the acquisition of which they are financing). Second, it would be quite complicated to design a set of rules that distinguish between the rights afforded to two classes of lenders, namely ordinary secured lenders and acquisition secured lenders. Third, it is much simpler to model the rights and obligations of a seller that benefits from an acquisition financing right, i.e. an acquisition financier (for example, in relation to the creation, effectiveness against third parties, priority over competing claimants and enforcement) on those of a seller or lender that benefits from an acquisition security right (an acquisition secured creditor). The reason is that this approach would enhance the overall coherence of the secured transactions regime, while enabling States to make adjustments necessary to maintain the coherence of their regime of ownership as reflected in the law of sale and lease. It follows that States that choose to adopt a non-unitary approach to acquisition financing transactions should seek to achieve “functional equivalence” by modelling the rights of acquisition financiers on the rights of acquisition secured creditors rather than the reverse.

72. In chapter III (Basic approaches to security), this Guide recommends that States adopt the unitary approach to non-acquisition secured transactions. Given this general orientation, this Guide suggests that, to the extent that they have the opportunity to do so, States should also adopt the unitary approach to achieving functional equivalence among acquisition financing mechanisms. Notwithstanding this suggestion, however, the Guide acknowledges that some States may feel the need to retain the form of title devices in relation to sellers and other suppliers. For this reason, in each of the subsections of this chapter the relevant issues are examined as they arise in contemporary legal systems, whether they follow the non-unitary or the unitary approach. Each subsection concludes with a review of how the law of acquisition financing could be best reformed if one or the other of these approaches were adopted.

73. In section B, moreover, this chapter contains two sets of parallel recommendations. One presents recommendations about how States should design the detail of a unitary and functional approach to acquisition financing transactions (and approaches it implicitly for States that are enacting legislation to govern the full range of secured transactions for the first time). The other deals with how States that elect to retain a non-unitary approach should design rules governing acquisition financing through title devices and, in particular, “retention-of-title” and “financial-lease” transactions, as well as “acquisition security rights”, so that the economic advantages of a unitary approach may be equally achieved under a non-unitary

approach (for the definitions of these terms, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

5. Creation (effectiveness as between the parties)

74. Chapter IV (Creation of a security right (effectiveness as between the parties)) of this Guide discusses the requirements for making a security right effective as between the parties. That chapter also uses the expression “creation” to characterize the requirements necessary to achieve effectiveness as between the parties. As explained in chapter IV, the underlying policy is to make the requirements for achieving effectiveness between the parties as simple as possible (see A/CN.9/631/Add.2, paras. [...]). The precise manner in which these requirements may be transposed to regulating the effectiveness of the rights flowing from an acquisition financing transaction as between the parties will depend on whether a State adopts what has been called a “unitary” or a “non-unitary” approach.

75. Moreover, in States that continue to recognize retention-of-title transactions and financial leases as distinct transactions, it is not obvious that the word “creation” is the most appropriate one to describe the rights of the seller or the lessor. For example, the lessor’s ownership rights are not created separately from the contract of lease; they are a direct consequence of the lease itself: lessors are owners. Likewise, the seller that retains ownership is not creating a new right in its favour; it is merely continuing to assert the right of ownership it had prior to concluding the agreement with the purchaser. Nonetheless, for ease of expression the agreements under which a lessor and a seller may continue to assert their ownership against a lessee or purchaser to whom they have granted possession will sometimes be described as agreements “creating” the acquisition financing rights in question (it may be argued though that, in some States, in which the buyer acquires an expectancy of ownership, a new type of bifurcated ownership is created).

76. Legal systems in States that do not treat all acquisition financing transactions in the same way impose widely varying requirements for making acquisition rights effective as between the parties. To begin, the requirements imposed may vary within each State depending on the specific acquisition financing transaction (retention-of-title, financial lease, security right) in question. In addition, they can vary widely among States even in respect of the same type of acquisition financing transaction. That is, not all States conceive retention of title and financial leases identically and, therefore, not all impose the same requirement for creating or reserving such a right.

77. As an acquisition financing right, retention of title is usually seen as a property right that arises as an adjunct to a contract of sale. That is, in many systems, the formal requirements for the creation of a retention-of-title right (for the definition of this term, see A/CN.9/631, Introduction, sect. B, Terminology and rules of interpretation) are those applicable to contracts of sale generally, with no particular additional formalities required. Hence, if a State accepts that a contract for the sale of tangible property may be concluded orally, the clause of the agreement providing that the seller retains ownership until full payment of the purchase price might also be oral. In such cases, the seller’s retention of title may be agreed to orally or by reference to correspondence between the parties, a purchase order or an invoice with printed general terms and conditions. These documents may not even bear the

signature of the buyer, but the buyer may implicitly accept the terms and conditions they set out through the taking of delivery of the property and payment of part of the purchase price as indicated, for example, in the purchase order or invoice. In other States, even though a regular contract of sale may be concluded orally, a writing (even minimal), a date certain, notarization, or even registration may be required for a retention-of-title clause in a contract of sale to be effective even as between the parties.

78. In some States, only the actual seller may benefit from a retention-of-title right and be required to follow the formalities associated therewith. Of course, credit providers that deploy financial leases, hire-purchase agreements and related transactions also retain ownership because of the nature of those contracts. The effectiveness of, for example, the lessor's right as between the parties will be dependent upon the parties complying with the ordinary formalities for third-party effectiveness applicable to the particular financial lease or hire-purchase agreement in question. Other suppliers of acquisition credit, such as lenders, may not directly obtain either a retention-of-title right or the ownership right of a financial lessor. Rather, to do so, they must receive an assignment of the outstanding balance of the purchase price from the seller or an assignment of the contract of lease from the lessor. Thus, the formalities for effectiveness of the right are, first, those applicable to the initial transaction with the purchaser or lessee, and second, those applicable to the assignment of that type of contract.

79. The various States that do not treat retention of title and financial leases as security rights also take differing approaches to the extension of these rights into other property. In some, if property subject to retention of title is commingled with other property, the retention of title is extinguished. In a few others, by contrast, the retention of title continues to be effective as between the parties without the need for the seller to undertake any further formality to preserve its right of ownership as long as similar property is found in the hands of the buyer. Similarly, in some systems, the retention of title is automatically preserved even if the property is processed into a new product, while in others retention of title cannot be extended to new products. Some States also permit lessors to continue to claim ownership of leased property that has been slightly modified, or depending on the terms of the lease, in the proceeds of an authorized disposition. In these cases as well, no additional formality to preserve effectiveness as between the parties is required.

80. There is a greater similarity in the principles governing the requirements for effectiveness of acquisition security rights as between the parties among States that have adopted a unitary approach. Indeed, almost no differences in these requirements may be found. Moreover, within each system, the formal requirements for making an acquisition security right effective as between the parties are identical regardless of whether the financing is provided by a seller, a financial lessor, a lender, or any other person. In addition, because acquisition secured credit is treated simply as a special category of secured financing (that is, because an acquisition security right is simply a species of security right), these formal requirements will be the same relatively minimal formalities as those required for non-acquisition secured transactions (e.g. a written and signed agreement identifying the parties and reasonably describing the assets sold and their price; see A/CN.9/631, recommendations 12-14). Finally, because the acquisition security right is a security

right, it will be automatically preserved in manufactured property and in proceeds of disposition (see A/CN.9/631, recommendations 18-23).

81. The difference between the two approaches and among the specific legal systems described above rarely lies in a significant way in the written form requirement. That is, most of them would accept correspondence, an invoice, a purchase order or the like with general terms and conditions, whether they are in paper or electronic form. This is, moreover, the general position concerning a writing requirement that is suggested by this Guide (see A/CN.9/631, recommendations 9 and 10). The difference seems to lie more in the requirement of a signature, which may not be necessary as long as the retention-of-title seller, acquisition secured creditor or financial lessor is able to demonstrate by other evidence that the buyer or financial lessee has accepted the terms of the agreement. Such evidence could consist merely of the buyer's or financial lessee's acquisition and use of the property without protest after having received the writing. Thus, these minimal formal requirements are not burdensome. Also, because so many transactions for the purchase of tangible property are in fact well documented for other reasons, this issue rarely arises.

82. Under the unitary approach, the requirements for effectiveness as between the parties are the same as those applicable to non-acquisition security rights (see A/CN.9/631, recommendation 184, unitary approach), and are identical regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction (see A/CN.9/631, recommendation 185, unitary approach).

83. If a non-unitary approach were adopted, States seeking to achieve the benefits of a regime that created equal competition for credit would have to develop a regime that permits lenders to acquire the preferred status that is given to acquisition financiers. They would then also have to ensure that the rules governing effectiveness as between the parties bring about functionally equivalent results regardless of the form of the acquisition financing transaction (see A/CN.9/631, recommendation 184, non-unitary approach). In particular, the rules governing (a) the capacity of parties to the contract; (b) the specific character and modalities of the obligation secured; (c) the objects upon which the acquisition financing right might be taken; (d) evidentiary obligations such as a writing and signature; and (e) the time of effectiveness of the agreement between the parties; would have to be closely coordinated so as not to favour one type of acquisition financing transaction over another (see A/CN.9/631, recommendation 185, non-unitary approach).

6. Effectiveness against third parties

(a) General

84. Chapters IV (Creation of a security right (effectiveness as between the parties)) and V (Effectiveness of a security right against third parties) of this Guide draw a distinction between effectiveness of a security right as between the grantor and the secured creditor, and effectiveness of that right as against third parties. The point has a particular salience in relation to acquisition financing rights since, depending on whether a unitary or non-unitary approach is taken, the distinction between these types of effectiveness may not actually exist.

85. Most States that do not treat retention of title as a security right, with very few exceptions, do not require retention-of-title transactions to be registered. Neither do they require the seller to take any other formal step to ensure effectiveness as against third parties. To the contrary, upon the seller and buyer concluding the agreement of sale with a retention-of-title clause, the seller's ownership right in the tangible property that has been sold is effective as against all parties.

86. By contrast, in some States registration of retention of title is required (either generally or for particular types of tangible property). In these States, it is often the case that registration is required only to make the retention of title by the seller effective as against third parties. Sometimes, however, no distinction is drawn between effectiveness of the retention of title as between the parties and its effectiveness as against third parties. That is, in some States registration of retention of title is viewed as a requirement for effectiveness even as between the parties.

87. Under any of these retention-of-title regimes, the seller that retains title has full ownership rights. As a consequence, it will usually be the case that the buyer has no rights in the property being purchased until title passes. This means that, except in those legal systems in which the buyer has an "expectancy right" to encumber, no other creditor of the buyer can claim rights in the property being purchased. This would be the case even if another creditor provided credit to the buyer to purchase the asset and the value of the buyer's assets subject to retention of title was higher than the amount of its obligations still owed to the seller. In such cases, the only property upon which the other creditor could claim security rights would be the contract of sale between the seller and the buyer. A result identical to this would also follow in the case of a financial lease. The sole property of the lessee upon which the creditor could claim security rights would be the contract of lease (assuming it were assignable).

88. Legal systems that do not recognize the right of a buyer that acquires property under a retention-of-title transaction or lessee under a financial lease to grant security over its expectancy right either prevent or make it difficult for borrowers to use the full value of either the equity they may have acquired in their tangible property subject to retention-of-title rights or the value of the financial lease contract. That is, the conceptual logic of a retention-of-title or a lease agreement disables the buyer from granting a non-possessory security right in the same assets to several creditors under a system that ranks those creditors in terms of priority for payment. Interestingly, however, in some of these same States, such a regime permitting multiple mortgagees with priority based on time of registration exists with respect to immovable property sold under a retention-of-title transaction.

89. In States that follow a unitary approach, retention of title and its economic equivalents are subject to registration of a notice in the general security rights registry (or to some other formality for making the right effective against third parties) in the same way as any other secured transaction. Under this approach, moreover, the right of the seller that retains ownership by contract or the lessor that remains owner by virtue of the nature of the lease is transformed into the right of an acquisition secured creditor. As a result, the buyer or lessee is able to use the equity it has in the property being purchased or leased as security for further credit. That is, buyers and lessees may grant security rights to other creditors in the same manner as they could were the seller to have sold the tangible property outright and simply taken its own security right in the property.

90. Under the unitary approach the requirements for third-party effectiveness are the same as those applicable to non-acquisition security rights and are identical regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction (see A/CN.9/631, recommendation 186, unitary approach).

91. If a non-unitary approach were adopted, States would have to ensure that no substantial differences in requirements for third-party effectiveness exist between the different kinds of acquisition financing transactions (see A/CN.9/631, recommendation 186, non-unitary approach). A number of rules will have to be closely coordinated so as not to favour one form of transaction over another and, in particular, the rules governing (a) the modalities by which third-party effectiveness can be achieved; (b) the timing of third-party effectiveness when requirements are met; and (c) the consequences of third-party effectiveness on the right of the buyer or lessee to grant rights in the property. Specifically, in order to maximize the buyer's or lessee's capacity to benefit from the tangible property being acquired in the non-unitary approach, States would have to provide that, regardless of the acquisition financing transaction in question, the acquisition financing transferee (for the definition of this term, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation) has the power to grant a security right in the property subject to the acquisition financing right (see A/CN.9/631, recommendation 185 bis, non-unitary approach).

(b) Third-party effectiveness of acquisition financing transactions relating to equipment and inventory

92. As noted in chapter V (Effectiveness of a security right against third parties), the general mechanism by which ordinary security rights may be effective against third parties is through registration (see A/CN.9/631, recommendation 33). As with ordinary security rights, the registration of a notice of an acquisition financing right or an acquisition security right is meant to provide a notice to third parties that such a right might exist and to serve as a basis for establishing priority between competing claimants. Registration promotes credit market competition by providing information that enables financiers to better assess their risks.

93. For this reason, the Guide recommends that third-party effectiveness of all types of acquisition financing transaction (whether denominated as security rights, retention of title, financial leases or in some other manner) usually be dependant on the registration of a notice in the general security rights registry. Where this Guide also recommends other mechanisms to achieve third-party effectiveness for ordinary secured transactions (e.g. possession and registration in a specialized registry) these mechanisms should also be available to acquisition financiers and acquisition secured creditors as alternative means to achieve third-party effectiveness (see A.CN.9/631, recommendation 186, unitary and non-unitary approach).

94. Under the unitary approach, coordination of registration of acquisition and non-acquisition security rights in the general security rights registry will be necessary to promote certainty in the relative priority of competing claimants. Under the non-unitary approach, the rules governing the registration of a notice with respect to different title devices will also have to be coordinated with the general rules relating to the registration of a notice with respect to secured transactions. Doing so (either by adjusting the former to cohere with the latter or adjusting the

latter to cohere with the former, and by establishing a general security rights registry) will ensure certainty in the relative priority of competing claimants that hold different types of acquisition financing rights. The principles that should govern priority conflicts under both unitary and non-unitary approaches, including priority conflicts where different methods for achieving third-party effectiveness have been used (see A/CN.9/631, recommendation 193, unitary and non-unitary approach), are discussed below in the section on priority.

(c) Grace period for the registration of certain acquisition financing transactions

95. Many States seek to enhance the efficiency of the registration process by providing sellers and other financiers with a short “grace period” (e.g. 20 or 30 days) after delivery of the property sold or leased to register a notice relating to certain acquisition financing transactions. Such grace periods are found both in States that do not consider retention-of-title, financial leases and other acquisition financing rights to be security rights and in systems that consider all such rights to be acquisition security rights. The use of the grace period permits delivery of the property without waiting until registration takes place.

96. Under the unitary approach, if the notice is registered within the grace period, the acquisition secured creditor has the same priority in relation to other claimants that it would have been able to assert had it registered at or before the time of delivery. If a State were to adopt a non-unitary approach, the same rules relating to a grace period for registration and its effects should apply to all acquisition financing rights regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction. (see A/CN.9/631, recommendation 189, unitary and non-unitary approach).

(d) Exceptions to registration for consumer transactions

97. In some States where the registration of a notice relating to acquisition financing transactions would otherwise be required, an exception is made when those transactions relate to consumer goods (for the definition of this term, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). This means that the acquisition financing seller of tangible property bought for the buyer’s personal, household or family purposes is not burdened with a requirement to register. Such transactions become effective against third parties at the same time that they become effective as between the parties. The idea is that in such cases the need to warn potential third-party financiers is less acute (unless consumers resell those goods), especially where the consumer goods are of low value. In other legal systems that generally require registration, only relatively low-value consumer transactions are exempted from the requirement to register (e.g. consumer transactions up to a maximum of euros 3,000 or its equivalent, or transactions that are subject to the jurisdiction of small-claims courts).

98. In both types of system, the significant market involving automobile finance credit to consumers is usually served by a system requiring not registration in the secured transactions registry, but rather a notice on a title certificate. Moreover, it is important to note that in States that create an exemption from registration for consumer goods, the exception applies only to consumer transactions. In other words, the exception does not apply to a type of property, but rather only to a type of transaction relating to that property. It is still necessary to register a notice to

achieve third-party effectiveness in property normally sold to consumers if that property is being sold to a wholesaler or a retailer as inventory.

99. The exemption from registration does extend to equipment and inventory financing. Nonetheless, if a grace period were adopted for registering the notice of an acquisition financing transaction relating to equipment in the general security rights registry, that grace period may in itself serve as the equivalent of an exemption for short-term credit transactions fully paid within the grace period because, as a practical matter, the acquisition financier would not have to register before the expiry of that period. As for equipment-related acquisition financing transactions with longer repayment periods, and inventory-related transactions in general, an exemption may not be necessary if the acquisition financier could register a single notice in the secured transactions registry for a series of short-term transactions occurring over a longer period of time (e.g. five years) (see A/CN.9/631, recommendations 196 and 197, unitary and non-unitary approach).

100. Under the unitary approach, the exemption from registration for transactions relating to consumer goods would apply regardless of whether the acquisition secured creditor were a seller, lessor or lender since they would all be claiming identical rights. Were a non-unitary approach to be adopted, the rules relating to exemptions from registration for transactions relating to consumer goods should produce the same consequences regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the acquisition financing transaction (see A/CN.9/631, recommendation 187, unitary and non-unitary approach).

7. Priority as against the rights of competing claimants

(a) General

101. This Guide adopts the term priority to deal with competitions between all persons that may have rights in property subject to a security right (for the definition of the terms “priority” and “competing claimant”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). The concept of priority thus includes competitions both with (a) other creditors (secured creditors, other acquisition secured creditors, creditors that may avail themselves of a statutory preference and judgement creditors; and (b) other claimants (including prior owners, buyers and the insolvency administrator). Nevertheless, some States (and especially some States among those which do not consider retention-of-title and financial-lease rights to be acquisition security rights) adopt a more restrictive view of the notion of priority. Only competitions between creditors are considered to involve priority claims. This said, however the competition between various potential claimants is characterized, the relative rights of each must be carefully specified.

(b) Priority position of acquisition secured creditors and acquisition financiers

102. This Guide recommends in chapter IV (Creation of a security right (effectiveness between the parties)) that an ordinary security right may be taken in both present and after-acquired property (see A/CN.9/631, recommendation 12). It also recommends in chapter VII (Priority of a security right as against the rights of competing claimants) that priority generally be determined by the date of

registration of a security right, even in relation to after-acquired property (see A/CN.9/631, recommendations 78 and 79). As a result, in order to promote the provision of new credit for the acquisition of additional property, it is necessary to establish special priority rules applicable to competitions between acquisition financiers and acquisition secured creditors on the one hand, and pre-existing non-acquisition secured creditors holding rights in future assets of the grantor on the other.

103. In States that do not treat retention-of-title transactions and financial leases as security devices, the relative priority of claims is decided by reference to the seller or lessor's right of ownership. The retention-of-title seller or lessor effectively prevails with respect to the property sold over all other competing claimants (except certain bona fide buyers in an ordinary-course-of-business transaction). Moreover, in most such systems, until the buyer acquires title to the property, none of the buyer's other creditors may acquire any security rights in the property being purchased or subject to the lease. These other claimants whose rights in relation to the tangible property arise from a grant by the person acquiring it ("the acquisition financing transferee") generally cannot set up these rights against the retention-of-title seller or the financing lessor. While judgement creditors and the insolvency administrator may claim the buyer's contractual rights, unless the system permits the buyer to deal with its expectancy right, they cannot seize the property itself. For a similar reason, in cases of financial leases, neither could claim as against the actual property being leased. Finally, in most such States there can never be a competition between lenders claiming an acquisition financing right and a seller or lessor. First, it is rarely the case that the lender could acquire a right in the expectancy right of the buyer; and second, even if it could, the right would not normally be seen as an acquisition financing right. The only way in which a lender could acquire an acquisition financing right would be to purchase the rights of the seller or lessor.

104. In States that follow the unitary approach, the priority rights of a seller or a lessor that claims an acquisition financing right are equally protected. Provided that the retention-of-title seller, financial lessor or similar title claimant registers a notice in the general security rights registry within a short grace period and, in the case of inventory, takes certain other steps discussed below, they will have priority over all other claimants (except certain bona fide buyers in ordinary-course-of-business transactions). Moreover, under the unitary approach, a lender that provides financing to enable a buyer to purchase property will also be an acquisition secured creditor with priority over other claimants in the same manner as a seller or lessor. Finally, the retention-of-title seller, the financial lessor, or the seller that takes an ordinary acquisition security right, will have priority over any other acquisition financier in the same property, even if that other financier (e.g. a bank or other lender) had made its security effective against third parties before the seller did so. Thus, in States that follow the unitary approach the seller and lessor can achieve the same preferred priority position in relation to all other claimants as the retention-of-title seller or finance lessor in a non-unitary system.

105. While acquisition financing rights and acquisition security rights will normally be made effective against third parties by registration in the general security rights registry, in chapter V (Effectiveness of a security right against third parties) other methods for achieving third-party effectiveness are discussed. One of these,

possession by the secured creditor, will generally produce the same consequences as registration, and may be looked upon as an alternative to registration. As a result, should an acquisition financier or an acquisition secured creditor make its rights effective against third parties by possession within the stipulated grace period, the general priority principle would be applicable (see A/CN.9/631, recommendation 188, unitary and non-unitary approach).

106. Where the non-acquisition secured creditor makes its security right effective against third parties by registration in a specialized registry, chapter VII (Priority of a security right as against the rights of competing claimants) recommends that the registration in the specialized registry will give the registering creditor priority over even prior registrations in the general security rights registry or third-party effectiveness achieved by a prior possession (see A/CN.9/631, recommendation 83). In order to enhance the usefulness of the specialized registries, a similar rule should apply to acquisition financiers and acquisition secured creditors. They should not be able to obtain a preferred priority position simply by registration in the general security rights registry or possession within the grace period (see A/CN.9/631, recommendation 193, unitary and non-unitary approach). By implication, it would follow that, as a general principle, and subject to any superseding law, an acquisition financier or acquisition secured creditor that registered in the specialized registry would have priority over even a prior non-acquisition security right registered in that specialized registry.

107. Under the unitary approach, all acquisition secured creditors are subject to the same priority regime and must take identical steps in order to assure their priority position. The only difference between different categories of acquisition secured creditors is that in a competition between a seller or a lessor and another creditor all of whom are asserting an acquisition security right, the seller or lessor would always have priority, regardless of the respective dates of registration of their rights (see A/CN.9/631, recommendation 191, unitary approach).

108. If a non-unitary approach were adopted, to achieve functional equivalence States would likely have to make two changes to their existing regime. First, it would be necessary to permit financiers other than sellers or lessors that provide acquisition credit to acquire the preferred priority status of sellers and lessors by taking an acquisition security right. In such cases, it is important that equivalent rules relating to the priority of the seller's rights are established regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction (see A/CN.9/631, recommendation 188, non-unitary approach). Second, and concomitantly, in a competition between a retention-of-title seller, finance lessor or seller that takes an acquisition security right and an acquisition financier that is not a seller, it would be necessary to provide that priority goes to the seller or lessor, regardless of the date at which these various acquisition financing rights and acquisition security rights were registered (see A/CN.9/631, recommendation 191, non-unitary approach).

(c) Priority of acquisition security rights and acquisition financing rights as against pre-existing security rights in tangible property other than inventory or consumer goods

109. The general priority principles just noted establish a framework for organizing the rights of acquisition financiers and acquisition secured creditors, where more

than one of them may be in competition over the same tangible object. But not all tangible objects serve the same economic purpose and are subject to the same business dealings. For this reason, it is necessary to draw certain distinctions between types of such property (notably, between equipment, inventory and consumer goods). The case of equipment is especially important.

110. As noted, in most States that do not consider retention-of-title and financial leases to be security rights, the issue of competition between acquisition financiers does not arise when the acquisition financing right is a retention-of-title or a financial lease right. Pre-existing non-acquisition secured creditors are rarely permitted to acquire rights in property of which the grantor is not yet owner, and other lenders are generally not entitled to claim a special priority when they finance a buyer's acquisition of tangible objects. Moreover, even if it were possible to take a security right in the expectancy of ownership, that expectancy will only mature once the seller or lessor is fully paid. Where, however, the seller itself takes an acquisition security right rather than retaining title, and is in competition with a pre-existing non-acquisition security right, it is necessary to provide for the priority of the seller's acquisition security right.

111. In States that follow a unitary approach the protection of the acquisition secured creditor's rights will have a common basis. Upon registration, before or within a grace period after delivery of the tangible property to the grantor, the acquisition security right in the new equipment is given priority over pre-existing security rights in future equipment of the grantor. Because the acquisition security right overcomes the general rule that fixes priority based on the time of registration, this preferred position of an acquisition security right is often referred to as a "super-priority".

112. Under the unitary approach, all acquisition secured creditors of equipment are able to claim a super-priority over non-acquisition secured creditors for their acquisition security right, provided that they register a notice indicating that they are claiming such a right in the general secured rights registry within the stipulated grace period (see A/CN.9/631, recommendation 189, unitary approach).

113. States that adopt a non-unitary approach would have to provide equivalent rules relating to the priority of the seller's or lessor's rights over pre-existing rights in future equipment regardless of the legal form (e.g. denominated security right, retention of title, title reservation, financial lease) of the transaction. That is, even though the buyer is authorized to grant a security right in future equipment over which it will only have an expectancy right until the purchase price is fully paid or the financial lease concludes, and even if that security right over future equipment is made effective against third parties prior to the date of the sale, the retention-of-title seller (or similar acquisition financier) will have priority if it registers its rights within the same grace period given to any other acquisition financier (see A/CN.9/631, recommendation 189, non-unitary approach).

(d) Priority of acquisition security rights and acquisition financing rights as against pre-existing security rights in future inventory

114. Frequently, the competition between an acquisition financing right or an acquisition security right and a non-acquisition security right arises in relation to inventory. In such cases different policy considerations from those applicable to the

acquisition of equipment are at issue. The reason for this is the following. Inventory financiers typically extend credit in reliance upon a pool of existing or future inventory on a short periodic and perhaps even daily or weekly basis. The pool of inventory may be constantly changing as some inventory is sold and new inventory is manufactured or acquired. To obtain a new advance of inventory credit the grantor usually would present the lender with invoices or certifications indicating the actual status of the inventory serving as security for the new advance.

115. In States that do not treat retention-of-title transactions and financial leases as security devices, the relative priority of claims is decided by reference to the seller or lessor's right of ownership. For this reason the rights of the inventory financier are especially precarious and future advances will usually be made on the assumption that all new inventories are acquired under a retention-of-title transaction. It then becomes necessary for the creditor to determine what inventory has actually been fully paid. This has the effect of complicating a borrower's efforts to obtain future advances secured by the pool of inventory.
