116. In States that follow the unitary approach the rights of the general inventory financier are more secure. Where the additional property acquired by the grantor is inventory, the acquisition security right will have priority over a non-acquisition security right in future inventory only if the registration of a notice in the general security rights registry is made prior to the delivery of the additional inventory to the grantor. In addition, in some States that follow the unitary approach, pre-existing inventory financiers that have registered their rights must be directly notified that a higher-ranking acquisition security right is being claimed in the additional inventory. The reason for this rule is that it would not be efficient to require the non-acquisition inventory financier to search the general security rights registry each time before advancing credit in reliance upon a pool of ever-changing inventory. To avoid placing an undue burden on acquisition secured creditors, however, a single, general notification to pre-existing non-acquisition inventory financiers on record may be effective for all shipments to the same buyer occurring during a significant period of time (e.g. five years or the same period that registration lasts to make a security right effective against third parties). This would mean that, once notification had been given to these pre-existing non-acquisition inventory financiers, it would not be necessary to give a new notification within the given time period for each of the multiple inventory transactions between the acquisition secured creditor and the party acquiring the inventory.

117. Under the unitary approach, acquisition secured creditors of inventory are able to claim a super-priority over non-acquisition inventory financiers for their acquisition security right provided that they register a notice indicating that they are claiming an acquisition security right in the general security rights registry and give a notice in writing to earlier registered non-acquisition financiers prior to the delivery of the inventory to the grantor (see A/CN.9/631, recommendation 192, unitary approach).

118. If a State were to adopt a non-unitary approach, equivalent rules relating to the priority of the seller's rights over pre-existing rights in future inventory should be established regardless of the legal form (e.g. denominated security right, retention of title, title reservation, financial lease) of the transaction. That is, notwithstanding that the retention-of-title seller remains the owner of the property delivered, the rules governing the sale of inventory should be adjusted so that the seller's title will

have priority over pre-existing rights in future inventory only under the same conditions as its rights would have priority were they to arise under an acquisition security right taken by that seller (see A/CN.9/631, recommendation 192, non-unitary approach).

(e) Priority of acquisition security rights and acquisition financing rights as against pre-existing security rights in consumer goods

119. This Guide recommends, by exception to the general rule, that acquisition financing rights and acquisition security rights in consumer goods be effective as against third parties without registration in the general security rights registry or creditor possession (see A/CN.9/631, recommendation 187, unitary and non-unitary approach). In other words, in relation to consumer goods the priority of an acquisition financing right or an acquisition security right over a non-acquisition security right created by the acquisition financing transferee is acquired automatically from the moment the right becomes effective as between the parties.

120. Under the unitary approach, all acquisition financiers and acquisition secured creditors of consumer goods are able to claim a super-priority over non-acquisition secured creditors for their acquisition financing right or acquisition security right without the need to make the right effective against third parties by registration or possession (see A/CN.9/631, recommendation 190, unitary approach).

121. States that adopt a non-unitary approach would have to provide equivalent rules relating to the priority of the seller's or lessor's rights over pre-existing rights in consumer goods regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction. This priority could, of course, find its source either in the seller's or lessor's ownership, or in the case of a seller or lender that takes an acquisition security right, in the general principle that applies to acquisition security rights in consumer goods (see A/CN.9/631, recommendation 190, non-unitary approach).

(f) Priority of acquisition security rights and acquisition financing rights as against the rights of judgement creditors

122. In chapter VII (Priority of a security as against the rights of competing claimants), this Guide recommends that judgement creditors that obtain a judgement and take the steps necessary to acquire rights in a judgement debtor's assets will generally have priority over existing secured creditors for advances made after they are informed of the judgement creditor's rights (see A/CN.9/631, recommendation 90). When the competing right in question is an acquisition financing right or an acquisition security right, a slightly different set of considerations, depending on the kind of tangible property at issue, must be taken into account. For example, if the tangible property is in the form of consumer goods, the acquisition financier or acquisition secured creditor is not required to register or take possession in order to make its rights effective against third parties. Hence the acquisition financier automatically benefits from a preferred priority position as against judgement creditors. If the property is inventory, the acquisition financier or acquisition secured creditor must have possession of the property, or have registered its rights and given a notice of its rights to already registered third parties prior to delivery. Hence the judgement creditor will always be on notice of the acquisition financier's or acquisition secured creditor's potential rights. In one case, however, the

acquisition financier or acquisition secured creditor is given a grace period within which to register its rights. Nonetheless, it is rarely the case that a person claiming an acquisition financing right or an acquisition security right will be making future advances.

123. This said, when a judgement creditor seeks to enforce its judgement against its debtor's property, it should not generally be able to defeat the rights of an acquisition financier or acquisition secured creditor that adds new value to the judgement debtor's estate. For this reason, if the unitary approach is adopted it should be provided that, as long as an acquisition secured creditor makes its rights effective against third parties within the grace period, it will have priority even over judgement creditors that register their judgement during that grace period (see A/CN.9/631, recommendation 194, unitary approach). If the non-unitary approach is adopted, a similar protection should be afforded to retention-of-title sellers and financial lessors and for financiers that have taken an acquisition security right (see A/CN.9/631, recommendation 194, non-unitary approach).

(g) Priority of acquisition security rights and acquisition financing rights in attachments and masses or products

124. This Guide recommends in chapter VII (Priority of a security right as against the rights of competing claimants) that a security right in an attachment to movable property that is made effective against third parties by registration in a specialized registry or by a notation on a title certificate has priority against a security right in the related property that is registered subsequently in the general security rights registry (see A/CN.9/631, recommendation 95). This recommendation rests on the fact that security rights that are effective against third parties remain effective even after the property that they encumber has become attached to other property. In such cases, if two or more security rights encumber the property at the moment of attachment, they would maintain their relative priority following attachment. In respect of a mass or product (or, in other words, commingled property), the Guide recommends that the security rights continue into the mass or product and if there are two or more, they retain their relative priority in the mass or product (see A/CN.9/631, recommendation 96).

125. In both situations, however, it is also necessary to determine the relative priority of rights taken in the different tangible property that is united by attachment or commingled. The Guide provides that the regular priority rules apply so that the date of registration in the general security rights registry would determine priority, unless one of the security rights was an acquisition security right. An acquisition security right taken in a part of commingled property would have priority over an earlier registered non-acquisition security right (and presumably even an acquisition security right) granted by the same grantor in the whole mass or product (see A/CN.9/631, recommendation 98). This Guide does not, however, take a position on whether an acquisition security right in an attachment should have priority over an earlier registered non-acquisition (or even acquisition) security right granted by the same grantor in the tangible property to which the attachment is attached.

126. In States that do not consider retention of title and financial leases as security devices, the general priority rules set out in chapter VII would not directly apply to acquisition financing. Chapter VII deals with situations where all forms of secured

transaction are treated as security rights under the general unitary and functional approach. In the acquisition financing context, however, the relative rights of the parties depends on general rules governing attachments. Normally, if the attached property can be detached without damaging the property to which it is attached, the retention-of-title seller would retain its ownership in the attachment. If the attachment could not be so removed, it is necessary to determine whether the attachment or the property to which it is attached is the more valuable. If the tangible property in which a seller has retained ownership is more valuable, the retention-of-title seller acquires ownership of the whole, subject only to an obligation to pay the value of the other property. If the tangible property in which a seller has retained ownership is less valuable, the retention-of-title seller loses its ownership and merely has a claim against the new owner for the value of its former property.

127. Under the unitary approach, acquisition secured creditors with rights in attachments and property that is commingled are generally able to claim a super-priority over non-acquisition inventory financiers. They will have priority over other secured creditors claiming a right in the attachment or in the tangible property that is being commingled or processed. They will also have priority over non-acquisition secured creditors of the property to which the attachment is attached, at least in so far as the value of the attachment is concerned, and they will have priority over non-acquisition secured creditors with security over the entire mass or product (see A/CN.9/631, recommendations 96-98).

128. If a State were to adopt a non-unitary approach, equivalent rules relating to the priority of the seller's rights over other rights in the attachment or the tangible movable property to be commingled or processed should be established regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction. That is, notwithstanding that the retention-of-title seller of an attachment might lose its ownership upon attachment, the seller should be able to claim its priority either in the share of the mass or product that it sold, or upon the attachment that it sold. The exact mechanism by which the rules of attachments to movable property would have to be adjusted depends on the detail of the law in each particular State that chooses to adopt the non-unitary approach.

(h) Priority of acquisition security rights and acquisition financing rights in attachments to immovable property

129. In chapter VII (Priority of a security right as against the rights of competing claimants), this Guide recommends that, after attachment, a security right in attachments to immovable property that is made effective against third parties under immovable property law has priority over a security right in those attachments made effective against third parties under the law relating to secured transactions. Conversely, if the security right in tangible property is made effective against third parties before attachment and is registered in the immovable registry it will have priority over subsequently registered security rights in the immovable property (see A/CN.9/631, recommendations 93 and 94). The logic of these provisions should also apply to acquisition financing rights and acquisition security rights.

130. The rights of an acquisition financier or acquisition secured creditor in tangible property that will become an attachment should have priority over existing encumbrances on the immovable property provided that it is registered in the

immovable registry within a reasonable period after attachment. In this case, the person claiming an existing encumbrance on the immovable property made its advances on the basis of the value of the immovable property at the time of the advances and has no pre-existing expectation that the attachment would be available to satisfy its claim. Of course, in cases where the pre-existing encumbrance on the immovable property secures a loan that is intended to finance construction, this same assumption would not hold, and the rationale for preserving the acquisition financier's or acquisition secured creditor's preferred priority is less compelling.

131. Under the unitary approach, a single rule governing these cases is possible since the claim of the acquisition secured creditor will always be a security right (see A/CN.9/631, recommendation 195, unitary approach). Should a State adopt the non-unitary approach, however, it will be necessary to adjust the rules relating to attachments to achieve a result that is functionally equivalent regardless of the form of the transaction. That is, it would be necessary to specify that the retention-of-title seller and the financial lessee will lose their priority to a construction financier even when the title to the property being attached does not automatically pass to the owner of the immovable property (as would be the case for property sold under retention of title or leased under a financial lease that is fully incorporated into the immovable property) (see A/CN.9/631, recommendation 195, non-unitary approach).

(i) Priority as between competing acquisition security rights and acquisition financing rights

132. In the various priority conflicts already described in this section, the competing claimants are asserting different rights in tangible property. That is, the conflicts are between the rights of an acquisition financier or acquisition secured creditor and a non-acquisition secured creditor, a judgement creditor or a creditor with security in immovable property asserting rights in an attachment. It may be, however, that the competition is between two claimants, each of whom is asserting rights arising from an acquisition financing transaction. There are various situations in which this may occur and the policy considerations that should bear on the resolution of such conflicts are complex.

133. In States that do not treat retention-of-title transactions and financial leases as security devices, the relative priority of claims is decided by reference to the seller's or lessor's right of ownership. Unless that system permits other creditors to take a security right in the expectancy right of the buyer, a competition between owners and secured creditors would not arise. Further, even if it were possible for a creditor to take a security right in a buyer's or lessee's expectancy right, that expectancy right will only mature once the seller or lessor is fully paid. In other words, in most such systems, there can never be a competition between lenders claiming rights under an acquisition financing transaction and a seller or lessor. The only way that a lender could acquire an acquisition financing right would be to obtain an assignment of the secured obligation from the retention-of-title seller or the financial lessor.

134. Furthermore, in States that do not treat retention-of-title transactions and financial leases as security devices, it is often possible for a seller (although not a lessor) to transfer title of the property being sold to the buyer and to take back a security right. Sometimes these seller's rights arise by operation of law (e.g. the vendor's privilege) but sometimes they also arise as a result of a security agreement

between the seller and the buyer. In such cases, the buyer may well grant competing security rights in the property being acquired. These rights might be security rights granted and registered after the property has been purchased or beforehand, by virtue of a security right covering present and future property. Nonetheless, even when the lender advances credit to enable the buyer to acquire the property, the security it takes in the property being acquired is invariably considered to be an ordinary security right. That is, in most States that do not treat retention-of-title transactions or financial leases as security devices it is not possible for lenders to directly accede to the preferred priority position that is given to a seller that takes an acquisition security right. This would be the case even where the buyer would obtain ownership from the seller and would grant the seller an acquisition security right in the property being purchased. Once again, in most such States, the only way that a lender could acquire the preferred priority afforded to an acquisition security right would be to obtain an assignment of the secured obligation from the seller that has taken such a security right for itself.

135. In States that follow the unitary approach, the priority rights of a seller and a lessor are protected because the rights they would otherwise claim are characterized as acquisition security rights and are given the same preferred priority position through the concepts of the “purchase-money security interest” super-priority. Such a preferred priority position is also afforded to sellers that simply take a security right in the property being supplied. In addition, and by exception to the situation that prevails in non-unitary systems, it is possible for lenders that advance money to borrowers so as to enable them to purchase tangible property to take a security right in the property being acquired that will be characterized as an acquisition security right. In other words, under the unitary approach, it is possible to have a genuine conflict between more than one acquisition security right.

136. Under the unitary approach followed in many jurisdictions, the law explicitly provides that in any competition between a seller that is claiming an acquisition security right and a lender that is also claiming an acquisition security right, the seller’s acquisition security right will have priority regardless of the respective dates that these acquisition security rights were made effective against third parties. These unitary systems also provide that in a competition between two acquisition security rights taken by lenders, the date at which the right became effective against third parties will determine the relative priority of the two rights.

137. The policy decision that must be taken in States that choose to adopt a non-unitary approach is whether to permit financiers other than sellers or lessors to take security rights in property being acquired by their borrower that can achieve the preferred priority status of an acquisition security right. If not, there will never be a competition between two or more acquisition security rights or between an acquisition financing right and an acquisition security right. If so, States will also have to adopt a rule that provides for the priority of an acquisition financing right taken by a seller or a lessor or an acquisition security right taken by a seller over any other acquisition financing right or acquisition security right, whatever the respective date on which the seller’s or lessor’s rights became effective against third parties. Moreover, States will also be required to specify that, as between acquisition financing rights and acquisition security taken by financiers other than sellers or lessors, the priority of these rights will be determined by the date they

became effective against third parties, regardless of the form of the transaction (see A/CN.9/631, recommendation 191, unitary and non-unitary approach).

138. There are several reasons why States that select a non-unitary approach might wish to permit lenders to accede to the status of acquisition secured creditors directly (that is, without having to take an assignment of a seller's or lessor's ownership rights, or a seller's own acquisition security right). First, consistent with the overall objectives of this Guide, once it is accepted that a buyer may grant security in its expectancy right, there is no reason of principle to restrict this possibility to the grant of ordinary security. Second, and again consistent with the overall objectives of this Guide, permitting lender-provided acquisition financing credit will enhance competition for acquisition financing credit as between sellers and lessors and lenders (which should have a beneficial impact on the availability and the cost of credit). Third, without the possibility of lender-provided acquisition financing credit, lenders that wish to advance credit to their debtors-buyers against the expectancy right in property being acquired, will not have a preferred priority position as against other secured creditors on that expectancy right. They will simply rank according to the date their security became effective against third parties. That is, a later-in-time lender that wishes to advance credit specifically to enable a debtor to acquire tangible property will (in the absence of a subordination agreement) always rank after a general financier that has previously made its security effective against third parties.

(j) Multiple acquisition financing transactions

139. In many situations, a seller or other acquisition financier, or an acquisition secured creditor, will offer to provide financing to permit the acquisition of several assets. This could involve, for example, multiple sales with multiple deliveries of inventory, or multiple sales of several pieces of equipment. In these situations, it is necessary to decide, as a matter of policy, whether the acquisition financier or acquisition secured creditor benefits from its special priority rights over all equipment or inventory financed by it, without the need to identify the purchase price due under each particular sale. If so, the legal system in question is said to permit "cross-collateralization".

140. In States that do not treat retention-of-title transactions and financial leases as security devices, the issue of cross-collateralization usually does not arise. In the normal case of a retention-of-title or similar title transaction, the contract of sale or lease applies only to the specific assets sold or leased under that contract. Thus, while the same agreement may cover multiple deliveries, it would not cover multiple sales. The priority claim of the seller or lessee would relate to the specifics of each sale or lease. Some of these States do, however, permit the retention-of-title right to be extended by providing, for example, that the parties may agree to an "all monies" or "current account" clause where inventory is being sold. Where such clauses are used, the seller retains ownership of the property sold until all debts owing from the buyer to the seller have been discharged and not just those arising from the particular contract of sale in question (in some States though, retention-of-title sales with "all monies" or "current account" clauses are often characterized by courts as security devices).

141. In States that follow the unitary approach, the usual rule is that the super-priority of acquisition security rights, at least in inventory, is not impaired by cross-

collateralization. This means that the acquisition secured creditor may claim its preferred priority position in relation to inventory for the acquisition of which it has provided the financing without being obliged to specifically link any outstanding indebtedness to any particular sale or lease transaction. Of course, in such cases, the special priority right does not extend to other property, the acquisition of which was not financed by that acquisition secured creditor.

142. Under the unitary approach, the goal is to permit a maximum of flexibility to acquisition secured creditors that provide financing for the acquisition of inventory, and to minimize the transactional paperwork associated with multiple acquisition transactions involving the same acquisition secured creditor. The rule permitting cross-collateralization achieves this result (see A/CN.9/631, recommendations 196 and 197, unitary approach). Under a non-unitary approach, because a contract of sale or lease normally applies only to the specific assets sold, it would be necessary to modify the rules relating to retention-of-title sales and finance leases so as to permit cross-collateralization. Moreover, should a seller under the non-unitary approach or any acquisition secured creditor that is not a seller take an acquisition security right in the property sold, the seller or other financier should be enabled to exercise a right of cross-collateralization in the same manner as under the unitary regime (see A/CN.9/631, recommendations 196 and 197, non-unitary approach).

(k) Acquisition financing priority in proceeds of tangible property other than inventory or consumer goods

143. In many cases, the acquisition financier or acquisition secured creditor knows that the buyer will resell the property being acquired. This is obviously the case with inventory, but sometimes a manufacturer or other business enterprise will sell existing equipment in order to acquire upgraded equipment. As discussed in chapter IV (Creation of a security right (effectiveness as between the parties)), an ordinary security right in tangible property will normally extend into the proceeds of its disposition (see A/CN.9/631, recommendation 18). This extension of a security right into proceeds raises the policy question of whether the special acquisition finance priority should also extend to proceeds, and whether the rules for making such a claim should be the same regardless of whether equipment or inventory is being purchased.

144. In States that do not treat retention-of-title transactions and financial leases as security devices, the issue of a seller or lessor claiming special rights in proceeds generated by the sale of equipment often generally does not arise (see below for exceptions). This is because the law of sale or lease limits the seller's retained ownership right or the lessor's ownership only to the property sold or leased, and in the case of a sale only so long as this property remains in its original condition (i.e. unaltered by a manufacturing process or by customization). Of course, in cases of unauthorized disposition, the seller or lessor may be able to recover the property in kind from the person to whom it has been transferred. But sometimes the property cannot be found, although property or money received for its disposition can be identified. In addition, sometimes the seller or lessor permits the sale on condition that the seller's or lessor's title is extended to the proceeds and the products of the property in which the seller or lessor retained title. In these two situations, some States do permit the seller or lessor to claim ownership by real subrogation into the proceeds and products of the property sold under retention-of-title or leased. Where

the contract is a sale, it is common to speak of the seller's rights as an "extended retention of title".

145. In some States that follow the unitary approach, the super-priority of an acquisition security right extends only to the property the acquisition of which is financed, while in other States it may extend to its identifiable proceeds and products as well, at least in the case of transactions relating to equipment. Since the grantor does not usually acquire equipment with a view to immediate resale, there is little concern about prejudicing other secured creditors if the super-priority of an acquisition security right in equipment is extended to the proceeds of its disposition. If the equipment becomes obsolete or is no longer needed by the grantor, and is later sold or otherwise disposed of by the grantor, the secured creditor will often be approached by the grantor for a release of the security right to enable the grantor to dispose of the equipment free of the security right. Absent that release, the disposition would be subject to the security right and it would be unlikely that a buyer or other transferee would pay full value to acquire the equipment. In exchange for the release, the secured creditor will typically control the payment of the proceeds, for example by requiring that the proceeds of the disposition be paid directly to the secured creditor for application to the secured obligations. Under these circumstances, it is unlikely that another creditor would rely upon a security right taken directly in an asset of the grantor that is proceeds of the disposition of the equipment initially subject to an acquisition security right.

146. Under the unitary approach, the assumption is that the equipment is not normally subject to ongoing turnover. The acquisition secured creditor's control over the disposition of the asset supports the conclusion that the special priority afforded to acquisition secured creditors should be extended into proceeds of disposition and products of the property covered by the acquisition security right (see A/CN.9/631, recommendation 198, unitary approach).

147. If a State adopts a non-unitary approach, the rules relating to the maintenance of a special priority in proceeds of equipment should produce the same consequences as against other claimants regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the acquisition financing transaction. That is, the special priority of the retention-of-title seller or lessor of equipment should be claimable in the proceeds of disposition, either by continuing the seller's or lessor's title in the proceeds or by giving the seller or lessor the same priority claim as a seller that took an acquisition security right (see A/CN.9/631, recommendation 198, non-unitary approach).

(I) Acquisition financing priority in proceeds of inventory

148. The situation in relation to proceeds of inventory is different from that relating to proceeds of equipment for three reasons (each reason is equally applicable whether a non-unitary or unitary approach is adopted). First, inventory is expected to be sold in the ordinary course of business. Second, the proceeds of the sale of inventory will predominantly consist of receivables rather than some combination of a trade-in and receivables. That is, to take an example, it would not normally be the case that a seller of clothing or furniture would take back the purchaser's used clothing or furniture in partial payment of the purchase price. Third, it will often be the case that a pre-existing secured creditor, in extending working-capital credit to the grantor, will be advancing credit to the grantor on a periodic or even daily basis

in reliance upon its superior security right in an ever-changing pool of existing and future receivables as original encumbered assets. It may not be possible or practical for the grantor to segregate the receivables that are the proceeds of the inventory subject to an acquisition financing right or an acquisition security right from other receivables over which a pre-existing creditor has taken a security right. Even if it were possible or practical for the grantor to segregate the proceeds generated by the disposition of inventory over which an acquisition financing right or an acquisition security right had been granted, it would have to do so in a way that was transparent to both financiers and that minimized monitoring by both financiers.

149. Without such a prompt segregation that is transparent to both financiers and that minimizes monitoring, there is a significant risk that the pre-existing secured creditor extending credit against receivables would mistakenly assume that it had a higher-ranking security right in all of the grantor's receivables. There is likewise a risk of a dispute between the pre-existing secured creditor and the retention-of-title seller, purchase-money lender or financial lessor as to which financier has a priority right in which proceeds. All of those risks and any concomitant monitoring costs may result in the withholding of credit or charging for the credit at a higher cost. Of course, if the priority of the acquisition financing right or acquisition security right in the inventory does not extend to the receivables proceeds, the inventory acquisition financing creditor or acquisition secured creditor may itself withhold credit or offer credit only at a higher cost.

150. However, that risk may be ameliorated in a significant respect. For example, if the priority of the acquisition financing right or acquisition security right in the inventory does not extend to the receivables proceeds, a pre-existing secured creditor with a prior security right in future receivables of the grantor will be more likely to extend credit to the grantor in reliance upon its higher-ranking security right in the receivables to enable the grantor to pay for the inventory acquired by the grantor. The amount of the advance by the pre-existing secured creditor should be sufficient for the grantor to pay the purchase price to the seller of the inventory. This is because usually advance rates against receivables are much higher than those against inventory and because the amount of the receivables reflects a resale price for the purchase of the inventory well in excess of the cost of the inventory to the seller. Thus, there is a greater likelihood that the purchase price will be paid on a timely basis.

151. Under the unitary approach, the complexity of determining what receivables arise from the disposition of property over which an acquisition security right exists, and the widespread use of receivables as original property subject to a separate security right, are cogent reasons why the special priority afforded to acquisition security rights in inventory should be limited to proceeds of disposition other than receivables and other payment rights (see A/CN.9/631, recommendation 199, unitary approach).

152. Should a State adopt a non-unitary approach, the special priority given to acquisition financiers and acquisition secured creditors should not be extended to proceeds of disposition in the form of receivables and other payment rights regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the acquisition financing transaction. In particular, the special priority of the retention-of-title seller of inventory should be claimable by means of a real subrogation only into other tangible property, and not into proceeds

of disposition of that inventory that take the form of receivables and other payment rights (see A/CN.9/631, recommendation 199, non-unitary approach).

8. Pre-default rights and obligations of the parties

153. As noted in chapter VIII (Rights and obligations of the parties), in most States there are very few mandatory rules setting out pre-default rights and obligations of the parties. The vast majority of applicable rules and principles are suppletive (non-mandatory) and may be freely derogated from by the parties. In addition, for the most part the pre-default rights and obligations of the parties will depend on how any particular State conceives the legal nature of the transaction by which an acquisition financing right or acquisition security right arises. In particular, the way in which these rights and obligations are cast will largely depend on whether the State in question adopts a unitary or a non-unitary approach to acquisition financing transactions.

154. In States that do not treat retention-of-title transactions and financial leases as security devices, the regime governing pre-default rights and obligations applicable to non-acquisition security rights cannot be simply transposed to acquisition financing rights. Of course, the rules applicable to non-acquisition security rights (whether taken by a seller or by a lender) can mirror those applicable to acquisition security rights. But where a title device (retention of title, financial lease or similar transaction) is at issue, it will be necessary to adjust the manner by which these rules are expressed.

155. Because the objective is to achieve functional equivalence among all acquisition financing transactions, this will often require reversing the default presumptions about the prerogatives of ownership. That is, normally it is the owner (the retention-of-title seller or the financial lessor) that has the right to use, and collect, the civil and natural fruits produced by an object. Normally it is the owner that bears the risk of loss and, therefore, has the primary obligation to care for the property, maintain it, keep it good repair and insure it. And normally, it is the owner that has the right to further encumber the object and to dispose of it. To achieve the desired functionally equivalent results, therefore, States will have to provide a mix of mandatory and non-mandatory rules vesting each of these prerogatives and these obligations in the buyer and not in the seller or lessor.

156. States that adopt the unitary approach need not attend directly to this issue since an acquisition security right is simply a species of security right. As such, it would only be necessary to apply the regular rules about pre-default rights and obligations to all acquisition financing transactions, regardless of the form of the transaction in question. That is, there is no reason to assume that obligations relating to use, the obligation to protect the value of the secured property, the collection of civil and natural fruits, the right to encumber, or the right to dispose should be any different simply because the security right at issue is an acquisition security right. If acquisition secured creditors and grantors wish to provide for a different allocation of rights and obligations, they should be permitted to do so within exactly the same framework as applicable to non-acquisition secured rights (see A/CN.9/631, recommendations 108 and 109).

157. Should a State adopt the non-unitary approach, the specific pre-default rights and obligations of the parties will have to be spelled out in greater detail in order to

achieve functional equivalence. These rules will often have to be enacted as exceptions to the regular regime of property rights applicable to owners. Of course, as noted, most of the pre-default rules will not be mandatory. However, since the non-mandatory default regime should establish a set of terms about pre-default rights and obligations that the legislature believes the parties would choose to most efficiently achieve the purpose of a security device, States that do adopt the non-unitary approach should ensure the enactment of non-mandatory rules that mirror those it enacts to govern acquisition security rights taken by sellers or lenders. So doing would have the additional advantage of clearly specifying the right of the buyer to grant security over its expectancy right, and confirming the buyer's right to use, transform or process the property in a reasonable manner consistent with its nature and purpose (see A/CN.9/631, recommendations 108 and 109).

9. Post-default rights of the parties

158. The discussion in chapter X (Post-default rights) illustrates that in most legal systems the rules relating to enforcement of post-default rights flow directly from the manner in which that legal system characterizes the substantive right in question. For example, many systems consider certain rights to be "property rights" and provide for special remedies to ensure their effective enforcement. Other rights are characterized as "personal rights" and are usually enforced by bringing an ordinary legal action against a person. In such systems, both the right of ownership and security rights in tangible property are seen as a species of "property right" enforceable through an *in rem* action (an "action against the property"). Although the specifics of enforcement of property rights through property actions can vary greatly depending on the particular property right enforced and the specific configuration of a State's procedural laws, for the most part these rules governing enforcement of post-default rights are mandatory. As such, they cannot be derogated from the parties to an acquisition financing right or an acquisition security right.

159. In States that do not treat retention-of-title transactions and financial leases as security devices, the procedure for enforcement of the seller's or the lessor's rights will normally be that open to any person that claims ownership in tangible property. So, for example, upon default by the buyer, the retention-of-title seller may terminate the sale agreement and demand return of the property as an owner. In that event, and subject to any term of the agreement to the contrary, the seller is normally also required to refund at least a part of the price paid by the buyer. This amount of the payment due by the seller is often calculated by requiring disgorgement of all money received from the buyer, minus the rental value of the property while in the possession of the buyer and the amount by which the value of property has decreased as a result of its use by the buyer, or damages determined under a similar formula.

160. In these States, a seller that terminates the sale is usually not obliged to account to the buyer for any of the profits made on any subsequent resale of the property but, at the same time, unless otherwise provided by contract, the seller has no claim against the buyer for any deficiency beyond any damages resulting from the buyer's breach of the original sales contract. In some legal systems, courts have also ruled in certain instances that there is an implied term in retention-of-title arrangements that the seller cannot repossess more of the property sold than is necessary to repay the outstanding balance of the purchase price. Finally, in most of

these legal systems, neither the defaulting buyer nor any third party, such as a judgement creditor or a creditor that has taken security on the expectancy right of the buyer in the property being reclaimed by the seller, may require the seller to abandon its right to recover the property. Because the seller is the owner of the property being reclaimed, it cannot be compelled to sell that property as if it were simply an acquisition secured creditor enforcing an acquisition security right.

161. The position of a seller that reclaims ownership and possession of property under a proviso that, having transferred ownership to the buyer, it may retroactively set aside the sale should the buyer not pay the purchase price as agreed (a resolutive condition) is similar to that of the retention-of-title seller. Upon default, the sale is terminated and the seller reacquires ownership, and may reclaim possession of the property as the owner. That is, once the resolutive condition takes effect, the rights and obligations of the seller that regains ownership are identical to those of the retention-of-title seller.

162. The situation of the financial lessor is normally slightly different. Since the form of the lease is such as to be a contract of continuing performance (the lessee has continuing possession and use while the lessor has a right to payment), under most legal systems, the lease contract will be terminated for the future only. This result means that the lessee will lose the right to purchase the property at the end of the lease (or to automatically acquire ownership if the contract so provides), and that the lessor will keep the full rental payments received. Subject to any contrary provision in the lease agreement, however, the financial lessor will not be able to claim for the normal depreciation of the property. Damages will be claimable only for waste or extraordinary depreciation. Moreover, financial lessors will not usually be able to claim for the difference between the amount they receive as lease payments and the depreciation of the leased property.

163. Under the unitary approach, the acquisition secured creditor may repossess the property, as would any other secured creditor. Whether the acquisition secured creditor is a seller, lessor or lender, it will be able, as outlined in chapter X (Post-default rights), either to sell the property, or if the grantor or other secured creditor do not object, to take the property in satisfaction of the secured obligation. In the former case, the enforcing creditor will be able to sell under judicial process or privately. Having sold the property, the secured creditor then has to return to the grantor any surplus on the resale of the property, but concomitantly has an unsecured claim for any deficiency after the sale (see A/CN.9/631, recommendation 200, unitary approach).

164. If a State adopts the non-unitary approach, several adjustments to existing rules relating to the enforcement of the ownership right of a retention-of-title seller or a financial lessor would have to be made in order to achieve equality of treatment among all acquisition financiers and between these acquisition financiers and acquisition secured creditors. These adjustments would include, for example, giving the buyer or lessee and any secured creditor with a right in the buyer's or lessor's expectancy right, the right to compel a seller or lessor to sell the property in which ostensibly it has a right of ownership, rather than simply assert that ownership right to regain possession of and ultimately to dispose of the property. That is, an acquisition secured creditor may propose to take the property in satisfaction of the buyer's outstanding obligation, but the buyer or other interested party may compel the acquisition secured creditor to sell the property instead. Achieving functional

equivalence would mean that buyers and other interested parties would be enabled to compel the retention-of-title seller (an owner) to abandon the assertion of its right of ownership and to sell the property as if it were simply an acquisition secured creditor. It would also require adjusting the seller's or lessor's rights so that they would be required to account for a surplus upon any sale in disposition, while at the same time permitting them to recover as simple contractual claimants for a deficiency without having to bring a separate action in damages.

165. Of course, deficiencies are much more common than surpluses. Still, requiring an acquisition financier to account to the buyer and other creditors with security in the expectation right of the buyer for any surplus upon enforcement will encourage those other creditors to monitor the enforcement process closely and thereby enhance the chances that the highest possible value will be achieved. Likewise, providing the creditor with a deficiency claim allows the creditor to enforce its full claim, which enhances the likelihood of complete repayment. A rule that would deny, absent a contractual term for damages, a deficiency claim to an acquisition financier (whether by retention of title or financial lease), when such a deficiency claim would be enforceable by a seller or lender that exercised an acquisition security right, would be unfair and inefficient. The rights of a seller, especially, should not be significantly different (either to the seller's advantage or to its disadvantage), depending only on whether it chose to retain title or to take an acquisition security right.

166. Arguably, either remedial scheme might be appropriate for a State to consider so long as the enforcement regime applied equally to retention-of-title sellers, financial lessors and acquisition secured creditors. In other words, as a matter of strict legal logic, it is possible to achieve functionally equivalent enforcement results regardless of whether a unitary or a non-unitary approach is adopted. The need for these several adjustments to existing retention-of-title and financial-lease regimes in order to achieve the full benefit of treating all sources of acquisition financing equally, as recommended in this Guide (see A/CN.9/631, recommendation 184, non-unitary approach), suggests that it may be preferable for States that have not already achieved this coordinated result through legislative, judicial or contractual adjustments to their rules governing retention-of-title transactions and financial leases to do so by adopting the unitary approach. Nonetheless, the non-unitary approach will, if implemented as recommended in this Guide (see A/CN.9/631, recommendations 200-200 *très*, non-unitary approach), produce an efficient enforcement regime for acquisition financing transactions.²

10. Private international law

167. Many legal systems differentiate between rights of ownership and security rights in presenting rules relating to the applicable law. Under the unitary approach, whether an acquisition financing transaction involves a purported retention of title, a financial lease or an ordinary security right is immaterial. All will be considered as security rights and dealt with accordingly (see chapter XIII, Private international law).

² The discussion of the treatment of acquisition security rights and acquisition financing rights in the case of insolvency is included in chapter XI (Insolvency) of this Guide, so as to ensure that all insolvency-related issues are contained in the same chapter.

168. Should a State decide to retain a non-unitary approach, however, it will face the question of whether the private international law rules applicable to the creation, third-party effectiveness, priority and enforcement of retention-of-title, financial leases and similar arrangements should be the same as those that apply to acquisition security rights or, more generally, to ordinary security rights that are taken in the same type of assets. The goal of achieving functional equivalence is a strong argument that States should characterize the ownership rights of acquisition financiers as acquisition security rights for private international law purposes (see chapter XIII, Private international law).

11. Transition

169. The rules regarding the treatment of what were previously non-security devices represent a significant change for most legal systems. In particular, the characterization of retention-of-title and financial leases (including hire-purchase agreements) as acquisition security rights will bring about an important modification to the scope of secured transactions law in legal systems that have not already adopted the unitary and functional approach to secured transactions generally. Chapter XIV (Transition) of the Guide discusses principles that should govern the transition to a new regime. In principle, the same principles should govern the transition in relation to acquisition financing rights and acquisition security rights as apply to the transition in relation to non-acquisition security rights.

170. With respect to retention-of-title devices and financial leases, a smooth transition depends on attending to the detail of the previous regime. If it were already obligatory for retention-of-title creditors and financial lessors to register their rights, then it would only be necessary to provide for a certain delay within which the registration would have to be renewed in the new general security rights registry. Alternatively, the law could provide that the existing registration would remain effective for a sufficiently long time (e.g. three to five years) to cover the life span of most retention-of-title or financial lease arrangements (see A/CN.9/631, recommendation 226).

171. If no registration is currently necessary, a smooth transition could be achieved if, consistent with the transition rules applicable to non-acquisition financing transactions, the effectiveness of the rights of retention-of-title sellers and finance lessors against third parties and their priority position are preserved by registering an appropriate notice in the security rights registry. Alternatively, the law could provide that the registration requirement would take effect at a date sufficiently far in the future after the new law comes into force (e.g. three to five years) that it would cover the life span of most retention-of-title arrangements existing at the time of the enactment of the law (see A/CN.9/631, recommendation 226).

172. Even should a State decide to adopt a non-unitary approach to acquisition financing transactions and to maintain retention-of-title and financial lease regimes, in order to establish an efficient secured transactions law, it will be necessary to reorder a number of rules relating to these transactions. Since the Guide recommends that they be registered in the general security rights registry, the same transition rules for registration applicable to the unitary approach could be adapted for the non-unitary approach. As for the substance of the law, similar adjustments would be necessary in order to produce outcomes that are functionally equivalent to

those achieved under a unitary approach. In particular, it would be necessary to determine when the rules relating to the following issues will come into effect: (a) the priority of acquisition financing rights in proceeds; (b) the rights of third parties to acquire security rights in assets subject to a retention-of-title or financial lease; and (c) the procedures for enforcing these types of acquisition financing device. While the scale and scope of the needed transition under the non-unitary approach might not be as great, the issues that arise in practice will be identical to those arising under the unitary approach and the general principles governing adoption of a unitary regime should also apply to the transition to a reformed non-unitary regime.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

B. Recommendations.	

XIII. Private international law

A. General remarks

1. Introduction

(a) Purpose of private international law rules

1. This chapter discusses the rules for determining the law applicable to the creation, effectiveness against third parties (“third-party effectiveness”), priority as against the rights of competing claimants and enforcement of a security right (for the definitions of the terms “security right”, “priority” and “competing claimant”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). These rules are generally referred to as private international law rules (or conflict-of-laws rules) and also determine the territorial scope of the substantive rules envisaged in the Guide (i.e. if and when the substantive rules of the State enacting the regime envisaged in the Guide apply). For example, if a State has enacted the substantive law rules envisaged in the Guide relating to the priority of a security right, those rules will apply to a priority contest arising in the enacting State only to the extent that the private international law rule on priority issues points to the laws of that State. Should the private international law rule provide that the law governing priority is that of another State, then the relative priority of competing claimants will be determined in accordance with the law of that other State.

2. The private international law rules proposed in the Guide will apply only if the forum is in a State that has enacted the recommendations of the Guide. They cannot apply in another State if the latter is not an enacting State. This is so because a State cannot legislate on the private international law rules to be applied in another State. The courts of the other State apply their own private international law rules. In order to determine whether to apply its domestic law or the law of another State, the court needs to determine whether a case is a domestic or an international case. This in itself may be considered as an issue of private international law. Unlike the United Nations Convention on the Assignment of Receivables in International Trade¹ (hereinafter referred to as the “United Nations Assignment Convention”), which defines “internationality”, the Guide does not address the question, but rather leaves it to other law of the forum. In any case, for the law of a State to which private

¹ United Nations publication, Sales No. E.04.V.4.

international law rules point to apply, there has to be a connection with that State. The main connecting factors addressed in this chapter are the location of the assets and the location of the grantor of a security right.

3. After a security right has been created and has become effective against third parties, a change might occur in the connecting factor. For instance, if the third-party effectiveness of a security right in inventory located in State A is governed under the private international law rules of State A by the law of the location of the inventory, the question arises as to what happens if part of the inventory is subsequently moved to State B (whose private international law rules also provide that the law of the location of tangible property governs the third-party effectiveness of security rights in tangible property). One approach would be for the security to continue to be effective in State B without the need to take any further step in State B. Another approach would be for new security to be obtained under the laws of State B. Yet another approach would be for the secured creditor's pre-existing right to be preserved subject to the fulfilment in State B of certain formalities within a certain period of time (e.g. 30 days after the goods have been brought into State B). As this is a matter of substantive law rather than private international law, the Guide addresses it in chapter V (see A/CN.9/631, recommendation 46). This chapter deals only with the time that is relevant for the determination of the location of an asset or the grantor for the purpose of determining whether a security right has been created, made effective against third parties and obtained priority over another right (see A/CN.9/631, recommendation 216).

4. In an efficient secured transactions regime, private international law rules applicable to secured transactions normally reflect the objectives of the secured transactions regime. This means that the law applicable to the property aspects of a security right should be capable of easy determination. Certainty is a key objective in the development of rules affecting secured transactions both at the substantive and the private international law levels. Another objective is predictability. As illustrated by the example mentioned in the preceding paragraph, private international law rules should provide an answer to the question of whether a security right acquired under the law of State A remains subject to that law or becomes subject to the law of State B if a subsequent change in the connecting factor would point to the law of State B for a security right of the same type. A third key objective of an efficient private international law system is that the relevant rules reflect the reasonable expectations of interested parties (i.e. creditor, grantor, debtor and third parties). In order to achieve this result, it is arguable that the law applicable to a security right should have some connection to the factual situation that will be governed by such law.

5. Use of the Guide (including this chapter) in developing secured transactions laws will help to reduce the risks and costs resulting from divergences among current private international law regimes. In a secured transaction, the secured creditor normally wants to ensure that its rights will be recognized in all States where enforcement might take place (including in a jurisdiction administering an insolvency proceeding with respect to the grantor and its assets). If those States have different private international law rules in relation to the same type of encumbered asset, the creditor will need to comply with more than one regime in order to be fully protected. A benefit of different States having harmonized their

private international law rules is that a creditor can rely on the same private international law rule (leading to the same results) to determine the status of its security in all those States. This is one of the goals achieved in respect of receivables by the United Nations Assignment Convention and in respect of indirectly held securities by the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary, adopted by the Hague Conference on Private International Law in December 2002 (hereinafter the “Hague Securities Convention”).

6. Private international law rules would be necessary even if all States had harmonized their substantive secured transactions laws. There would remain instances where the parties would have to identify the State whose requirements will apply. For example, if the laws of all States provided that a non-possessory right is made effective against third parties by registration of a notice in a public registry, one would still need to know in which State’s registry the registration must be made.

(b) Scope of private international law rules

7. This chapter does not define the security rights to which the private international law rules will apply. Normally, the characterization of a right as a security right for private international law purposes will reflect the substantive secured transactions law in a jurisdiction. In principle, a court will use its own law whenever it is required to characterize an issue for the purpose of selecting the appropriate private international law rule. The question arises, however, as to whether the private international law rules of a State relating to security rights should also apply to other transactions that are functionally similar to security, even if they are not covered by the substantive secured transactions regime of that State (e.g. retention-of-title sales, financial leases and other similar transactions). The fact that the substantive secured transactions law of a State might not apply to those other transactions should not preclude the State from applying to those transactions the private international law rules applicable to secured transactions.

8. A similar issue arises in respect of certain transfers not made for security purposes, where it is desirable that the applicable law for creation, third-party effectiveness and priority of the transfer are the same as for a security right in the same type of property. An example is found in the United Nations Assignment Convention, which (including its private international law rules) applies to outright transfers of receivables as well as to security rights in receivables (see art. 2, subpara. (a) of the Convention). This policy choice is motivated, notably, by the necessity of referring to one single law to determine priority between competing claimants with a right in the same receivable. The Guide adopts the same policy. Otherwise, in the event of a priority dispute between a purchaser of a receivable and a creditor with a security right in the same receivable, it would be more difficult (and sometimes impossible) to determine who is entitled to priority if the priority of the purchaser were governed by the law of State A but the priority of the secured creditor were governed by the law of State B.

9. Whatever decision a jurisdiction makes on the range of transactions covered by the private international law rules, the scope of the rules on creation, third-party effectiveness and priority of a security right will be confined to the property aspects of the relevant transactions. Thus, a rule on the law applicable to the creation of a security right only determines what law governs the requirements to be met for a

property right to be created in the encumbered assets. The rule would not apply to the personal obligations of the parties under their contract. In most legal systems, purely contractual obligations are generally subject to the law chosen by the parties in their agreement or, in the absence of such a choice, by the law governing the security agreement (e.g. the Convention on the Law Applicable to Contractual Obligations,² concluded in Rome in 1980, hereinafter the “Rome Convention”). The Guide recommends the same approach for the determination of the mutual rights and obligations of the grantor and the secured creditor with respect to the security right.

10. A corollary to recognizing party autonomy with respect to the personal obligations of the parties is that the private international law rules applicable to the property aspects of secured transactions are matters that are outside the domain of freedom of contract. For instance, the grantor and the secured creditor are normally not permitted to select the law applicable to priority, since this could not only affect the rights of third parties, but could also result in a priority contest between two competing security rights being subject to two different laws leading to opposite results.

11. The private international law rules of many legal systems now provide that reference to the law of another State as the law governing an issue refers to the law applicable in that State other than its private international law rules (see, however, A/CN.9/631, recommendations 219, subpara. (b), and 220). The doctrine of renvoi is excluded, for the sake of predictability and also because renvoi may run contrary to the expectations of the parties. The Guide adopts the same approach (see A/CN.9/631, recommendation 217).

2. Private international law rules for the creation, third-party effectiveness and priority of a security right

12. The determination of the extent of the rights conferred by a security right generally requires a three-step analysis, as follows:

(a) The first issue is whether the security has been created (for matters covered by the notion of creation, see chapter IV of the Guide);

(b) The second issue is whether the security is effective against third parties (for matters covered by the notion of third-party effectiveness, see chapter V of the Guide); and

(c) The third issue is what is the priority ranking of the right of a secured creditor as against the right of a competing claimant, such as another creditor or an administrator in the insolvency of the grantor (for matters covered by the notion of priority, see chapter VII of the Guide).

13. Indeed, a security right is of little practical value if it cannot be efficiently enforced. This question does not, however, relate to the extent of the rights that the secured creditor has in the encumbered assets and the private international law rules on enforcement will be discussed in another section of this chapter.

14. Not all legal systems draw a distinction between effectiveness of a security right between the parties and effectiveness against third parties (and priority). In

² United Nations, *Treaty Series*, vol. 1605, No. 28023.

many legal systems, a validly created security right (or other property right) is by definition effective against all (*erga omnes*) without any further action. In those legal systems, the same private international law rule applies to the effectiveness of a security right against all (and priority may be analysed also as an issue of effectiveness). However, even legal systems that clearly distinguish among effectiveness as between the parties, effectiveness against third parties and priority do not always establish a separate private international law rule for each of those issues and thus the same private international law rule may apply to all the three issues leading to the application of the same substantive law rule.

15. Therefore, the key question is whether one single private international law rule should apply to all three issues. Policy considerations, such as simplicity and certainty, favour the application of one private international law rule. As noted above, the distinction among these issues is not always made or understood in the same manner in all legal systems, with the result that providing different private international law rules on these issues may complicate the analysis or give rise to uncertainty. There are, however, instances where selecting a different law for priority issues would better take into account the interests of third parties such as persons holding statutory security or similar rights (such as a judgement creditor or an insolvency administrator).

16. Another important question is whether on any given issue (i.e. creation, third-party effectiveness or priority) the relevant private international law rule should be the same for tangible and intangible property. A positive answer to that question would favour either a rule based on the law of the location of the grantor or a rule based on the law of the location of the encumbered assets (*lex situs* or *lex rei sitae*).

17. An approach based on the *lex situs* would be inconsistent in respect of receivables with the United Nations Assignment Convention (article 22 of which refers to the law of the State in which the assignor, i.e. the grantor, is located). Moreover, as intangible property is not capable of physical possession, adopting the *lex situs* as the applicable private international law rule would require the development of special rules and legal fictions for the determination of the actual situation of the various types of intangible property. For this reason, the Guide does not consider the location of the asset as being the appropriate connecting factor for intangible property and favours an approach generally based on the law of the location of the grantor (see A/CN.9/631, recommendation 204).

18. In addition, consistency with the United Nations Assignment Convention would dictate defining the location of the grantor in the same way as in the Convention. Under the Convention, the grantor's location is its place of business or, if the grantor has places of business in more than one State, the place where the central administration of the grantor is exercised. If the grantor has no place of business, reference is then made to the grantor's habitual residence (see art. 5, subpara. (h) of the Convention). This approach was followed in the Convention mainly because it results in the application of a single law that is easy to determine and is the law of the State in which the main insolvency proceeding with respect to the assignor will most likely be opened.

19. Simplicity and certainty considerations could even support the adoption of the same private international law rule (e.g. the law of the grantor's location) not only

for intangible property but also for tangible property, especially if the same law were to apply to the creation, third-party effectiveness and priority of a security right. Following this approach, one single enquiry would suffice to ascertain the extent of the security rights encumbering all assets of a grantor. There would also be no need for guidance in the event of a change in the location of encumbered assets or to distinguish between the law applicable to possessory and non-possessory rights (and to determine which prevails in a case where a possessory security right governed by the law of State A competes with a non-possessory security right in the same property governed by the law of State B).

20. Not all jurisdictions, however, regard the law of the location of the grantor as sufficiently connected to security rights in tangible property, at least for “non-mobile” goods (or even in certain types of intangible property, such as rights to payment of funds credited to bank accounts or intellectual property, a matter discussed below). Moreover, adoption of the grantor’s law would result in one law governing a secured transaction and another law governing a transfer of ownership in the same assets. To avoid this result, jurisdictions would need to adopt the grantor’s law for all transfers.

21. In addition, it is almost universally accepted that a possessory right should be governed by the law of the place where the property is held, so that adopting the law of the grantor for possessory rights would run against the reasonable expectations of non-sophisticated creditors. Accordingly, even if the law of the grantor’s location were to be the general rule, an exception would need to be made for possessory security rights.

22. For all these reasons, the Guide recommends two general private international law rules on the law applicable to the creation, third-party effectiveness and priority of a security right, as follows:

(a) With respect to tangible property, the applicable law should be the law of the location of the assets (see A/CN.9/631, recommendation 202);

(b) With respect to intangible property, the applicable law should be the law of the location of the grantor (see A/CN.9/631, recommendation 204).

23. As the private international law rules generally will be different depending on the tangible or intangible character of the assets, the question arises as to which private international law rule is appropriate if intangible property is capable of being the subject of a possessory security right. In this regard, most legal systems assimilate certain categories of intangible property embodied in a document (such as a negotiable instrument) to tangible property, thereby recognizing that a possessory security right may be created in such assets through the delivery of the document to the creditor. The Guide treats these types of intangible property as tangible property (for the definition of “tangible property”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation) and, accordingly, the private international law rule for tangible property generally applies to such intangible property. Accordingly, the law of the State where the instrument is held will govern the creation, third-party effectiveness and priority of a security right in a negotiable instrument (see A/CN.9/631, recommendation 202).

24. A related issue arises where goods are represented by a negotiable document of title (such as a bill of lading). It is generally accepted that a negotiable document

of title is also assimilated to tangible property and may be the subject of a possessory pledge. The law of the location of the document (and not of the goods covered thereby) would then govern the pledge. The question arises, however, as to what law would apply to resolve a priority contest between a pledgee of a document of title and another creditor to whom the debtor might have granted a non-possessory security right in the goods themselves, if the document and the goods are not held in the same State. In such a case, the private international law rules should accord precedence to the law governing the pledge, on the basis that this solution would better reflect the legitimate expectations of interested parties. This result would also be consistent with the substantive rule proposed by the Guide (see A/CN.9/631, recommendation 107).

3. Law applicable to the creation, third-party effectiveness and priority of a security right in tangible property

25. The policy considerations favouring the general private international law rules set out above (see para. 22) do not necessarily apply in all circumstances and other rules apply with respect to certain specified types of asset for which the location of the asset or of the grantor is not the most appropriate connecting factor. In addition, for efficiency purposes, alternative rules apply with respect to goods in transit and export goods. Such goods are not intended to remain in their initial location and may cross the borders of several States before reaching their ultimate destination. The following paragraphs explain the two general private international law rules outlined above and their exceptions.

(a) General rule: law of the location of the encumbered asset (*lex situs* or *lex rei sitae*)

26. As mentioned above, the creation, the effectiveness against third parties and the priority of a security right in tangible property are generally governed by the law of the State in which the encumbered asset is located (see A/CN.9/631, recommendation 202). A frequent example of the application of the rule relates to security rights in inventory. If a grantor owns inventory located in a State that has this rule (State A), the law of that State will govern those issues. The rule also means that, if the grantor also owns other inventory in another State (State B), the relevant requirements of State B will have to be fulfilled in order for the courts of State A to recognize that the inventory located in State B is subject to the secured creditor's rights.

27. The general private international law rule for tangible property does not make a distinction between possessory security rights and non-possessory security rights. Accordingly, the law of the location of the asset will generally apply, whether or not the secured creditor has possession of the asset. This is particularly relevant for intangible property assimilated to tangible property, such as negotiable instruments and negotiable documents. For instance, the law of the location of the instrument or document will govern priority matters even if the security right is made effective against third parties otherwise than by possession.

(b) Additional rule for the creation and third-party effectiveness of a security right in goods in transit and export goods

28. With respect to goods in transit or goods intended for export, application of the law of the location of the goods results in the application of the law of the State in which the goods are located at the time an issue arises. This means that secured creditors have to monitor the assets and follow the requirements of various States to ensure that they have at all times an effective security right. To avoid that result, one approach would be for the forum in the ultimate (or intermediate) destination to recognize as effective a security right created and made effective against third parties under the law of the initial location. Such an approach would reflect the expectations of parties in the initial location of the goods, but would be contrary to the expectations of parties that relied on the actual location of the assets and provided credit to the grantor following the requirements of the law of the ultimate destination of the goods.

29. Another approach would be for the forum in the ultimate destination to recognize as effective a security right created and made effective against third parties under the law of the initial location of the goods for a limited period of time. Parties in the initial destination could then have a period of time to follow the requirements of the law of the State of the ultimate destination to retain their security right as originally created and made effective against third parties. Such an approach would balance the interests of parties in the various jurisdictions (and is in fact recommended in the Guide in general for all tangible property; see A/CN.9/631, recommendations 46 and 216).

30. A further approach would be to offer to the secured creditor the option of creating and making its security right effective against third parties under the law of the State of the initial location of the goods or under the law of the State of the ultimate (or intermediate) location of the goods (see A/CN.9/631, recommendation 203). This approach would allow a secured creditor that is confident that the goods will reach the place of their intended destination to rely on the law of that place to create and make its security right effective against third parties. Otherwise, in the case of a security right created while the goods are at their initial location, for the security right to be continuously effective against third parties, the secured creditor would have to fulfil the creation and third-party effectiveness requirements of the place of the initial location, of each State where the goods could be in transit and of the place of ultimate destination. In any case, priority would always be subject to the law of the location of the goods at the time a priority dispute arises.

(c) Special rule for the creation, third-party effectiveness and priority of a security right in a negotiable instrument

31. As mentioned above, it is generally accepted that the law of the State in which the instrument is located (*lex situs*) should govern the creation, third-party effectiveness and priority of a security right in a negotiable instrument. However, in some legal systems, the third-party effectiveness of a security right in negotiable instruments may also be achieved by registration in the place in which the grantor is located. In such a case, it is logical to rely on the law of the State of the grantor's location to determine whether third-party effectiveness has been achieved by registration. In any case, this approach is confined to third-party effectiveness

achieved by registration. The law of the actual location of the instrument always governs the priority of a security right in the instrument (see A/CN.9/631, recommendation 207).

(d) Exceptions for certain types of asset

32. The general private international law rule for security rights in tangible property is normally subject to certain exceptions where the location of the property would not be an efficient connecting factor (e.g. goods ordinarily used in several States) or would not correspond to the reasonable expectations of the parties (e.g. goods the ownership of which must be recorded in special registries).

(i) Mobile goods

33. Mobile goods are goods that in the normal course of business cross the borders of States (e.g. aircraft, ships or, in some cases, motor vehicles). For example, a grantor operating a construction business in several States may have to create security rights in machinery periodically moved from one State to another for the purposes of that business; or a grantor operating a transportation business may need to create security rights in the vehicles used in the transportation business (although motor vehicles may not normally cross national borders in island States). The application of the general private international law rule for tangible property of that kind would require the secured creditor to ascertain the exact location of each piece of machinery or each vehicle at the time of the creation of the security. To ensure continued third-party effectiveness of its security, the secured creditor would also need to enquire as to all States in which each of these assets might be potentially located at any given time and meet the relevant requirements of all such States. Moreover, it would not be possible to identify the State in which the relevant asset would be located at the time of a priority contest occurring in the future and therefore to determine the priority regime to be applied to resolve the dispute. To avoid these problems and resulting costs and uncertainties, in many legal systems, the creation, third-party effectiveness and priority of a security right in tangible property of a type ordinarily used in more than one State are governed by the law of the State in which the grantor is located (except if ownership of property of that type is subject to registration in a special registry which also allows for the registration of security rights; see para. 34 below; see also A/CN.9/631, recommendation 202).

(ii) Tangible property subject to specialized registration

34. The ownership of certain categories of tangible property is sometimes recorded in specialized registries. This is generally the case for aircraft and ships and, in some States, for motor vehicles. To the extent that the relevant registry also permits the registration of security rights, reference can be made to the law of the State under the authority of which the relevant registry is maintained to determine the law governing the creation, third-party effectiveness and priority of a security right in an asset that is subject to registration in such a specialized registry. Thus, a search in the registry would disclose both ownership and security rights in respect of such assets. Such a rule may be based on national law (see A/CN.9/631, recommendation 202) or international conventions, which take precedence (e.g. the

International Institute for the Unification of Private Law (Unidroit) Convention on International Interests in Mobile Equipment and the relevant protocols thereto).

4. Law applicable to the creation, third-party effectiveness and priority of a security right in intangible property

(a) General rule: law of the location of the grantor

35. In some legal systems, the law of the State in which the grantor is located governs the creation, third-party effectiveness and priority of a security right in intangible property. For instance, if an exporter located in State A creates a security right in receivables owed by customers located in States B and C, the law of State A will govern the property right aspects of the security right. This rule is consistent with the approach followed in the United Nations Assignment Convention with respect to the law applicable to the assignment of receivables (see arts. 22 and 30).

36. In other legal systems, the law of the location of the asset still governs the creation, third-party effectiveness and priority of a security right in intangible assets. In those legal systems, it is necessary to establish the location of an intangible asset (e.g. for a receivable, the location of the debtor of the receivable). In those legal systems, the law of the location of the intangible asset (*lex situs*) governs all those matters.

37. The law of the grantor's location has several advantages over the *lex situs*. It is one law, as the assignor is always one and the same person even if the assignment relates to many receivables owed by different debtors (subsequent assignments, from A to B and from B to C, do not raise priority issues, as one assignor takes the place of another). In addition, the law of the grantor's location may be ascertained easily at the time the assignment is made, even if the assignment relates to future receivables or to receivables assigned in bulk. Moreover, the law of the grantor's location (place of central administration in the case of places of business in more than one State) is the law of the State in which the main insolvency proceeding with respect to the assignor is likely to be opened.

38. Moreover, while the law of the location of the encumbered asset (*lex situs*) works well in most instances for tangible property, great difficulties arise in applying the *lex situs* to intangible property, both at conceptual and practical levels. From a conceptual standpoint, there is no consensus and no clear answer as to the *situs* of a receivable. One view is that it is the place where payment must be made. Another view is that the *situs* of a receivable is the legal domicile or place of business or principal residence of the debtor of the receivable. A further view is that a receivable should be deemed to be located in the State whose law governs the contractual relationship between the original creditor (that is, the grantor) and the debtor. Any of the foregoing alternatives would impose upon a prospective assignee the burden of having to make a detailed factual and legal investigation. Moreover, in many instances, it might prove impossible for the assignee to determine with certainty the exact location of a receivable since the criteria for determining that location may depend on business practices or the will of the parties to the contract under which the receivable arises. Thus, using the *lex situs* as the law applicable to security rights involving receivables would not provide certainty and predictability, which are key objectives for a sound private international law regime in the area of secured transactions.

39. Furthermore, even if a legal system has detailed provisions allowing a prospective or existing secured creditor to ascertain easily and objectively the law of the location of a receivable, practical difficulties still ensue in many commercial transactions. This would be so because a security right may relate not only to an existing and specifically identified receivable, but also to many other receivables. Thus, a security right may cover a pool of present and future receivables. For instance, in such a case, selecting the *lex situs* as the law governing priority would not be an efficient policy decision, as different priority rules might apply with respect to the various assigned receivables. Moreover, where future receivables are subject to a security right, it would not be possible for the secured creditor to ascertain the extent of its priority rights at the time of the transaction, since the *situs* of those future receivables is unknown at that time.

40. In view of the above, the Guide recommends the law of the State in which the grantor is located (see A/CN.9/631, recommendation 204). The criteria defining the grantor's location are consistent with those found in the United Nations Assignment Convention (see A/CN.9/631, recommendation 215).

(b) Exceptions for certain types of asset

41. There are three categories of intangible property to which different considerations apply and the location of the grantor is not the most (or the only) appropriate connecting factor for the selection of the applicable law: rights to payment of funds credited to a bank account; proceeds under an independent undertaking; and receivables arising from a transaction relating to immovable property.

(i) Rights to payment of funds credited to a bank account

42. With respect to the creation, third-party effectiveness, priority and enforcement of a security right in rights to payment of funds credited to a bank account, as well as the rights and obligations of a depositary bank, different approaches are followed in various legal systems (for the definition of "bank account", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation). One approach is to refer those matters to the law of the State in which the branch maintaining the account is located. Under this approach, certainty and transparency with regard to the applicable law would be enhanced, as the location of the relevant branch could be easily determined in a bilateral bank-client relationship. In addition, such an approach would reflect the normal expectations of parties to current banking transactions. Moreover, this approach would result in the application of the same law to all issues (e.g. loans and tax or regulatory matters) relating to banking activities.

43. Another approach is to refer to the law specified in the account agreement as the law governing the account agreement or to any other law explicitly specified in the account agreement, provided that the depositary bank has a branch in that State. If the account agreement does not specify any law, the applicable law would be determined using the same default criteria as those found in article 5 of the Hague Securities Convention. Under this approach, the applicable law would meet the expectations of the parties to the account agreement. In addition, the need to identify the location of a bank account, which might not be easy to determine, would be avoided. Moreover, third parties would be able to ascertain the law

provided in the account agreement, as the grantor-account holder would normally supply information on the account agreement to obtain credit from a lender relying on the funds in the account.

44. As is the case with negotiable instruments, the law of the State of the grantor's location could apply to the third-party effectiveness of a security right in a right to payment of funds credited to a bank account where third-party effectiveness may be achieved by registration in the place where the grantor has its location (see para. 31 above).

(ii) *Proceeds under an independent undertaking*

45. In many legal systems, the third-party effectiveness, priority and enforcement of a security right in proceeds under an independent undertaking, as well as the rights and duties of a guarantor/issuer, confirmer or nominated person, are referred to the law specified in the independent undertaking (for the definition of "right in proceeds under an independent undertaking", see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation; for this approach, see A/CN.9/631, recommendation 208). If the governing law is not specified in the independent undertaking, those matters are referred to the law of the State of the location of the relevant office of the person that has provided (or has agreed to perform, as the case may be) the undertaking (see A/CN.9/631, recommendation 209). This approach provides certainty and predictability with respect to the law applicable to those matters. It is also consistent with the normal expectations of parties to such transactions. As to the creation of a security right in such an asset, reference is made to the law of the grantor's location, for the reasons discussed above with respect to security rights in receivables and in view of the fact that creation involves just the effectiveness of the security right as between the parties to the security agreement and does not affect the rights of third parties.

46. With the exception of creation, the matters mentioned in the preceding paragraph are governed by the law governing a receivable or negotiable instrument, if an independent undertaking is issued to ensure the performance of an obligation under the receivable or the negotiable instrument and, under the applicable law, the creditor with a right in the receivable, negotiable instrument or other intangible asset automatically has the benefit of the security right in the proceeds under the independent undertaking (see A/CN.9/631, recommendation 210). This approach is justified by the need to have, for consistency reasons, the same law apply to the security right in a receivable or negotiable instrument extending automatically to rights securing the performance of the receivable or negotiable instrument.

(iii) *Receivables related to immovable property*

47. Where a receivable arises from the sale or lease of immovable property or is secured by immovable property, as for any other receivable, the law of the State of the location of the grantor will normally govern the property aspects of a security right in the receivable. However, in the event of a priority contest where at least one of the competing claimants has registered its right in the immovable property registry of the State in which the property is located, the priority contest will be resolved in accordance with the law of that State (see A/CN.9/631, recommendation 205).

5. Law applicable to the creation, third-party effectiveness and priority of a security right in proceeds

48. There are generally two approaches to the law applicable to the creation, third-party effectiveness and priority of a security right in proceeds (for the definition of “proceeds”, see A/CN.9/631/Add.1, Introduction, sect. B, Terminology and rules of interpretation).

49. One approach is to refer for the law applicable to a security right in proceeds to the law applicable to the security right in the original encumbered assets. For example, if the original encumbered assets are in the form of inventory located in State A and the proceeds take the form of receivables and the grantor is located in State B, the law of State A would apply to the creation, third-party effectiveness and priority of a security right in receivables. In particular, a priority conflict between a security right in receivables as proceeds of inventory and a security right in receivables as original encumbered assets would be governed by the law of State A (the law of the location of the inventory). As a result, certainty as to the applicable law would be enhanced for the benefit of the inventory financiers relying on the receivables as proceeds. On the other hand, this approach would result in the application of a law other than the law receivables financiers would expect to apply to their rights in the receivables as original encumbered assets.

50. Another disadvantage of this approach is that the receivables financier would be unable to predict what the applicable law would be because the choice of the governing law would depend on whether the dispute arises with an inventory financier (in which case the law of the location of the inventory would govern) or with another competing claimant (in which case the law of the location of the grantor would govern). This approach also provides no solution in a tripartite dispute among the receivables financier, the inventory financier and another competing claimant. This approach would also undermine the choice of the law of the grantor’s location as the law applicable to a security right in receivables because receivables often result from the sale of tangible assets. The receivables financier in many instances then would be unable to rely on the law of grantor’s location.

51. Another approach is to refer to the law applicable to security rights in assets of the same type as the proceeds. In the example given above, the law of State B (the law of the grantor’s location) would apply to the creation, third-party effectiveness and priority of a security right in the receivables. Simplicity and certainty considerations would support such an approach. The benefit of this approach is that it would always be possible to determine the applicable law irrespective of the parties to the dispute.

52. Yet another approach is to combine the two approaches mentioned above and have the latter approach as the rule for third-party effectiveness and priority of a security right in proceeds, while the former approach would apply to the creation of that right. Under this approach, the question of whether a security right extends to proceeds would be governed by the law applicable to the creation of a right in the original encumbered assets from which the proceeds arose, while the third-party effectiveness and priority of an entitlement to proceeds would be subject to the law that would have been applicable to such issues if the proceeds had been original encumbered assets. This approach would meet the expectations of a creditor obtaining a security right in inventory under a domestic law providing that such

security right automatically extends to proceeds. It would also meet the expectations of receivables financiers as to the law that would apply to the creation, third-party effectiveness and priority of a security right in receivables as original encumbered assets. Finally, such an approach would ensure that the inventory financier could rely on the law governing its security right as to whether the right extends to proceeds and would allow all competing claimants to identify with certainty the law that will govern a potential priority contest (see A/CN.9/631, recommendation 211).

6. Law applicable to the rights and obligations of the parties to the security agreement

53. As mentioned above (see para. 9), the scope of the rules on the creation, third-party effectiveness and priority of a security right is confined to the property (*in rem*) aspects of the right. These rules do not apply to the mutual rights and obligations of the parties to the security agreement. Such rights and obligations are rather governed by the law chosen by them or, in the absence of a choice of law, by the law governing the agreement as determined by the private international law rules generally applicable to contractual obligations (see A/CN.9/631, recommendation 212). For example, in the absence of a choice of law by the parties, the mutual rights and obligations of the parties to the security agreement may be subject to the law most closely connected to the security agreement (see art. 4, para. 1, of the Rome Convention). A security agreement securing a loan may be presumed to be most closely connected with the State in which the party that performs the obligation that is characteristic of the security agreement has its central administration or habitual residence (see art. 4, para. 2, of the Rome Convention). In such a security agreement, this party may be the lender. In a retention-of-title sale, it may be the seller.

7. Law applicable to the rights and obligations of third-party obligors

54. Security rights in intangible property generally involve third parties such as, for example, the debtor of a receivable, the obligor under a negotiable instrument, the depositary bank, the guarantor/issuer, confirmer or nominated person in an independent undertaking or the issuer of a negotiable document. The private international law rules governing the property aspects or the enforcement of a security right are not necessarily appropriate for the determination of the law applicable to the obligations of third parties against whom the secured creditor may want to exercise the remedies arising from its security right. The main reason is to avoid frustrating the expectations of parties that have a payment obligation arising in connection with the encumbered asset but do not take part in the transaction to which the security agreement relates.

55. In particular, the fact that a receivable has been encumbered by a security right should not result in the obligations of the debtor of the receivable becoming subject to a law different from the law governing the receivable. Similar considerations apply to rights of the obligor under a negotiable instrument, the depositary bank, the guarantor/issuer, confirmer or nominated person in an independent undertaking or the issuer of a negotiable document where the encumbered asset is a negotiable instrument, right to payment of funds credited to bank accounts or proceeds under an independent undertaking, or a negotiable document (see A/CN.9/631, recommendations 206, 208 and 213).

8. Law applicable to the enforcement of a security right

56. In most legal systems, procedural matters are governed by the law of the State where the relevant procedural step is taken. However, enforcement may relate to substantive or procedural matters. Although a court would use its own law to determine what is substantive and what is procedural, the following are examples of issues generally considered to be substantive: the nature and extent of the remedies available to the creditor to realize the encumbered assets; whether such remedies (or some of them) may be exercised without judicial process; the conditions to be met for the secured creditor to be entitled to obtain possession and dispose of the assets (or to cause the assets to be judicially realized); the power of the secured creditor to collect receivables that are encumbered assets; and the obligations of the secured creditor to the other creditors of the grantor.

57. So, with respect to substantive enforcement matters, where a security right is created and made effective against third parties under the law of one State, but is sought to be enforced in another State, the question arises as to the law applicable and thus the remedies available to the secured creditor. This is of great practical importance where the substantive enforcement rules of the two States are significantly different. For example, the law governing the security right could allow enforcement by the secured creditor without prior recourse to the judicial system unless certain conditions for the protection of the grantor are met, while the law of the place of enforcement might require judicial intervention. Each of the possible solutions to this issue entails advantages and disadvantages.

58. One approach would be to refer enforcement remedies to the law of the place of enforcement, i.e. the law of the forum (*lex fori*). The place of enforcement of security rights in tangible property in most instances would be the place of the location of the asset, while enforcement of a security right in intangible property would often take place in the location of the grantor. The policy reasons in favour of this rule include that:

(a) The law of remedies would coincide with the law generally applicable to procedural issues;

(b) The law of remedies would, in many instances, coincide with the law of the State in which the property being the object of the enforcement is located (and could also coincide with the law governing priority if the private international law rules of the relevant State point to such location for priority issues);

(c) The requirements would be the same for all creditors intending to exercise rights against the assets of a grantor, irrespective of whether such rights are domestic or foreign in origin.

59. On the other hand, selecting the *lex fori* may result in uncertainty if the encumbered asset consists of intangible property. For example, it is not clear where enforcement is to take place if the encumbered assets are in the form of receivables. The answer to this question would be very problematic as it would require the criteria for determining the location of the receivables to be set out (see para. 38 above). In addition, the secured creditor might be located in a different State at the time the initial enforcement steps are taken. In the case of a bulk assignment involving receivables connected with several States, multiple laws may apply to enforcement. The result would be the same if one enforcement act would

have to be performed in one State (e.g. notification of the debtor of the receivable) and another act in another State (e.g. collection or sale of the receivable). If future receivables are involved, the secured creditor may not know at the time of the assignment which law would govern its enforcement remedies. All this uncertainty as to the applicable law is likely to have a negative impact on the availability and the cost of credit.

60. Another concern is that the *lex fori* might not give effect to the intention of the parties. The parties' expectations may be that their respective rights and obligations in an enforcement situation will be those provided by the law under which the priority of the security right will be determined. For example, if extrajudicial enforcement is permitted under the law governing the priority of the security right, this remedy should also be available to the secured creditor in the State where it has to enforce its security right, even if it is not generally allowed under the domestic law of that State.

61. So, another approach would be to refer substantive enforcement matters to the law governing the priority of the security right. The advantage of such an approach would be that such matters are closely connected with priority issues (e.g. the manner in which a secured creditor will enforce its security right may have an impact on the rights of competing claimants). Such an approach may have another benefit. As the law governing priority is often the same law as the law governing the creation and third-party effectiveness of the security right, the end result would be that creation, third-party effectiveness, priority and enforcement issues would often be governed by the same law.

62. A third possible approach would be to adopt a rule whereby the law governing the contractual relationship of the parties would also govern enforcement matters. This would often correspond to their expectations and, in many instances, would also coincide with the law applicable to the creation of the security right since that law is often selected as also being the law of their contractual obligations. However, under this approach, parties would then be free to select, for enforcement issues, a law other than the law of the forum or the law governing creation, third-party effectiveness and priority. This solution would be disadvantageous to third parties that might have no means to ascertain the nature of the remedies that could be exercised by a secured creditor against the property of their common debtor.

63. Therefore, referring enforcement issues to the law governing the contractual relationship of the parties would necessitate exceptions designed to take into account the interests of third parties, as well as the mandatory rules of the forum, or of the law governing creation, third-party effectiveness and priority.

64. Another approach would be to attempt to reconcile the benefits of the approaches based on the *lex fori* and the law governing priority. Under this approach, the enforcement of a security right in tangible property may be governed by the *lex fori*, while the enforcement of a security right in intangible property would be governed by the same law as the law that applies to priority (see A/CN.9/631, recommendation 214).

9. Rules and relevant time for the determination of location

65. As the general private international law rules for security rights in tangible and intangible property point to the location of the encumbered assets and the location

of the grantor, respectively, it is essential that the appropriate location be easily identified. Tangible property is commonly viewed as being located at the place where it is physically located and there is no need to provide a specific rule to that effect. There is such a need, however, for the determination of the location of the grantor. The legal domicile and the residence of a natural person might be in different States. Likewise, a legal person may have its statutory head office in a State other than the State in which its principal place of business or decision centre is located.

66. As mentioned above, the United Nations Assignment Convention defines the location of the grantor as follows: the grantor's location is its place of business or if the grantor has places of business in more than one State, the place where the central administration of the grantor is exercised. If the grantor has no place of business, reference is then made to the grantor's habitual residence (see art. 5, subpara. (h)). The Guide defines the location of the grantor in the same manner (see A/CN.9/631, recommendation 215).

67. Whatever connecting factor is retained for determining the most appropriate private international law rule for any given issue, there may be a change in the relevant factor after a security right has been created. For example, where the applicable law is that of the jurisdiction where the grantor has its head office, the grantor might later relocate its head office to another jurisdiction. Similarly, where the applicable law is the law of the jurisdiction where the encumbered assets are located, the assets may be moved to another jurisdiction. So, it is necessary to determine the time that is relevant for the determination of location.

68. If this issue is not dealt with specifically, the general private international law rules on creation, third-party effectiveness and priority might be construed to mean that, in the event of a change in the relevant connecting factor, the original governing law continues to apply to creation issues (because they arose before the change, while the subsequent governing law would apply to events occurring thereafter that raise third-party effectiveness or priority issues). For instance, in a situation where the law applicable to the third-party effectiveness of a security right is that of the grantor's location, the effectiveness of the right against the insolvency administrator of the grantor would be determined using the law of the State of the new location of the grantor at the time of commencement of the insolvency proceedings.

69. Silence of the law on these matters might, however, give rise to other interpretations. For example, one interpretation might be that the subsequent governing law also governs creation as between the parties in the event of a priority dispute occurring after the change (on the basis that third parties dealing with the grantor are entitled to determine the applicable law for all issues relying on the actual connecting factor, being the connecting factor in effect at the time of their dealings).

70. Therefore, providing guidance on these issues would appear to be necessary to avoid uncertainty, as a change in the connecting factor will result in the application of a law other than the law expected by the parties to apply if the law of the new location of the assets or the grantor has a different private international law rule. Normally, for the purpose of determining the law applicable to creation, the relevant location is the location of the encumbered asset or the grantor at the time of

creation. For the purpose of determining the law applicable to third-party effectiveness and priority, the relevant location is the location at the time the issue arises (see A/CN.9/631, recommendation 216).

10. Public policy and internationally mandatory rules

71. According to generally applicable private international law rules, the forum may refuse the application of the law applicable under its private international law rules only if the effect of its application would be manifestly contrary to the public policy of the forum State or in a situation where such effects are contrary to mandatory provisions of the law of the forum. This rule is intended to preserve fundamental principles of justice of the forum State. For example, if, under the law of the forum State, a security right cannot be created in retirement benefits and this is a matter of public policy or mandatory law in the forum State, the forum State may refuse to apply a provision of the applicable law that would recognize such a right. However, the forum may not apply instead its own law to third-party effectiveness or priority issues, unless the law of the forum is the applicable law (see A/CN.9/631, recommendation 218). This approach is justified by the need to avoid undermining certainty with respect to the law applicable to third-party effectiveness and priority. The same approach is followed in articles 23, paragraph 2, 30, paragraph 2, and 31 of the United Nations Assignment Convention. It is also followed in article 11, paragraph 3, of the Hague Securities Convention.

11. Special rules when the applicable law is the law of a multi-unit State

72. The term “State” in the Guide refers to a sovereign State or country. The question arises, however, as to what law applies if on a given issue the private international law rule refers to a State that comprises more than one territorial unit, with each unit having its own system of law in relation to the issue. This could be the case in federal States in which the secured transactions law generally falls under the legislative authority of their territorial units. For the private international law rules to work when the applicable law is the law of such a State (even if the forum is not a multi-unit State), it is necessary to determine the territorial unit whose law will apply.

73. Normally, references to the law of such a State are to the law in effect in the relevant territorial unit, as determined on the basis of the applicable connecting factor (such as the location of the asset or the location of the grantor). For instance, if the applicable law is the law of a multi-unit State with three territorial units (A, B and C), a reference to the law of the location of the grantor as the law applicable to a security right in receivables means a reference to the law of unit A if the place of central administration of the grantor is in unit A (see A/CN.9/631, recommendation 219, subpara. (a)).

74. To preserve the consistency of the internal private international law rules of a multi-unit State, it is generally provided that such rules continue to apply, but only internally (see A/CN.9/631, recommendations 219, subpara. (b), and 220). Using the example given in the preceding paragraph, if a grantor is located in unit A of a multi-unit State, application of the law of unit B would be permitted where the internal conflict rules of unit A would point to the law of unit B as the applicable law. This could be the case if the conflict rules of unit A contemplate (as in the Guide) that the law of the grantor’s location governs the third-party effectiveness

and priority of a security right in receivables but defines location differently. If the location of the grantor as defined in the Guide (that is, the place of central administration) is in unit A but the law of unit A defines the grantor's location as meaning the location of its statutory head office and the head office of the grantor is in unit B, then the third-party effectiveness and priority of the security right in the receivables will be governed by the law of unit B. This appears to be a deviation from the general rule on the exclusion of renvoi (see A/CN.9/631, recommendation 217). However, this "deviation" is limited to internal renvoi, which does not affect certainty as to the applicable law. In the above example, there would be no reference to a law other than that of unit A should the statutory head office of the grantor be located in a State other than the State of which unit A forms part.

75. These rules apply only to issues that, in the relevant multi-unit State, are governed by the laws of its territorial units. These rules would have no impact in a federal State whose constitution provides that secured transaction matters are governed by federal laws. These rules would not apply either if the applicable law is the law of a State with multiple units and multiple jurisdictions in which application of such a renvoi could inadvertently result in uncertainty as to the applicable law.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

(d) Effectiveness of pre-effective-date rights as against third parties	11-13
(e) Priority disputes	14-17
B. Recommendations	

XIV. Transition**A. General remarks****1. The need for transition provisions**

1. The rules embodied in new secured transactions legislation may be different from the rules in the law predating the legislation. Those differences will have an obvious impact on secured transactions that will be concluded after the new legislation is enacted. In light of the differences between the old and new legal regimes and the continued existence of transactions and security rights created under the old regime, it is important for the success of the new legislation that it contains fair and efficient rules governing the transition from the old rules to the new rules. A similar need for transition rules is present when, under the private

international law rules of the old regime, the law of a different State governed the creation, effectiveness against third parties or priority of a security right.

2. Two issues related to the transition from the old regime to the new law must be addressed. First, the new legislation should provide the date as of which it will have legal effect (the “effective date”; see A/CN.9/631, recommendation 223). Second, the new legislation should also set forth the extent, if any, to which, after the effective date, the new legislation applies to issues relating to transactions or security rights that existed before the effective date.

3. A number of factors require consideration in determining the effective date of the legislation. Prompt realization of the economic advantages of new legislation must be balanced against the need to avoid causing instability in, or disruption of, the markets that will be governed by new legislation and in allowing the market participants adequate time to prepare for conducting transactions under the new legislation, which may be significantly different from the prior law. Accordingly, a State may conclude that the effective date of new legislation should be some period of time after the enactment of the new legislation in order for these markets and their participants to adjust their transactions to the new rules. In determining the effective date, States might consider: the impact of the effective date on credit decisions; maximization of benefits to be derived from the new legislation; the necessary regulatory, institutional, educational and other arrangements or infrastructure improvements to be made by the State; the status of the pre-existing law and other infrastructure; the harmonization of the new secured transaction legislation with other legislation; constitutional limits to the retroactive effect of new legislation; and standard or convenient practice for the entry into force of legislation (e.g. on the first day of a month).

4. As debts that are secured by rights in the grantor’s property are often payable over a period of time, it is likely that there will be many rights created before the effective date that will continue to exist on and after the effective date, securing debts that are not yet paid. Therefore, as noted above, another important decision that must be made with respect to any new legislation is the extent, if any, to which the new legislation will govern issues relating to transactions entered into prior to the effective date.

5. One approach would be for the new legislation to apply prospectively only and, therefore, not to govern any transactions entered into prior to the effective date. While there might be some appeal in such a solution, especially with respect to issues that arise between the grantor and the secured creditor, such an approach would create significant problems, especially with respect to priority issues. Foremost among those problems would be the necessity of resolving priority disputes between a secured creditor that obtained its security right prior to the effective date and a competing secured creditor that obtained its security right in the same property after the effective date. Because priority is a comparative concept, and the same priority rule must govern the two rights that are being compared, it is not possible for the old rules to govern the priority of the right of the pre-effective-date creditor and the new rules to govern the priority of the right of the post-effective-date creditor. Of course, determining which priority rule to apply to such priority disputes is not without difficulty. Applying the old rules to such priority disputes would essentially delay the effectiveness of some of the most important aspects of the new legislation, with the result that significant economic benefits of the new legislation could be deferred for a substantial period. On the other hand, applying the new rules to such priority disputes might unfairly prejudice

parties that relied on the old law and might also provide an incentive for such parties to object to the new legislation or advocate an unduly delayed effective date.

6. Alternatively, greater certainty and earlier realization of the economic benefits of the new legislation could be promoted by applying the new legislation to all transactions as of the effective date, but with such “transition provisions” as are necessary to assure an effective transition to the new regime without loss of pre-effective-date priority status. Such an approach would avoid the problems identified above and would otherwise fairly and efficiently balance the interests of parties that complied with the old law with the interests of parties that comply with the new law.

2. Issues to be addressed by transition provisions

(a) Generally

7. Because many security rights created before the effective date will continue to exist after the effective date and may come into conflict with security rights created after the effective date, it is important for the new legislation to provide clear transition provisions to determine the extent to which the rules in the new legislation will apply to those pre-existing rights. These transition provisions should appropriately address both the settled expectations of parties and the need for certainty and predictability in future transactions. The transition provisions must address the extent to which the new rules will apply, after the effective date, as between the parties to a transaction creating a security right before the effective date. They must also address the extent to which the new rules will apply, after the effective date, to resolve priority disputes between a holder of a security right and a competing claimant, when either the security right or the right of the competing claimant was created before the effective date.

(b) Disputes before a court or arbitral tribunal

8. When a dispute is in litigation (or a comparable dispute resolution system, such as arbitration) at the effective date, the rights of the parties have sufficiently crystallized so that the effectiveness of a new legal regime should not change the outcome of that dispute. Therefore, such a dispute should not be resolved by application of the new legal regime (see A/CN.9/631, recommendation 224).

(c) Effectiveness of pre-effective-date rights as between the parties

9. When a security right has been created before the effective date of new legislation, two questions arise regarding the effectiveness of that right between the grantor and the creditor. The first question is whether a security right that was not effectively created under old law but fulfils all the requirements for creation of a security right under the new law should become effective on the effective date of the new law. The second question is whether a security right that was effectively created under the old law but does not fulfil the requirements for creation under the new law should become ineffective on the effective date of the new law.

10. With respect to the first question, consideration should be given to making the right effective as of the effective date of the new law, since the parties presumably favoured effectiveness. With respect to the second question, a transition period might be created during which the security right would remain effective between the parties, so that the creditor could take the necessary steps for creation under the new law during the transition period. At the expiration of the transition period, if such

steps had not been taken the right would become ineffective under the new law. On the other hand, a simpler approach would be to have all issues of the effectiveness between the parties of a security right created before the effective date governed by the rules in effect at that time (see A/CN.9/631, recommendation 225).

(d) Effectiveness of pre-effective-date rights as against third parties

11. Different issues arise as to the effectiveness against third parties of a right created before the effective date. As the new legislation will embody public policy regarding the proper steps necessary to make a right effective against third parties, it is preferable for the new rules to apply to the greatest extent possible. It may, however, be unreasonable to expect a creditor whose right was effective against third parties under the previous legal regime of the enacting State (or under the law of the State whose law applied to third-party effectiveness under the private international law rules of the old regime) to comply immediately with any additional requirements of the new law. The expectation would be especially onerous for institutional creditors, which would be required to comply with the additional requirements of the new law simultaneously for large numbers of pre-effective-date transactions.

12. A preferable approach would be for a security right that was effective against third parties under the previous legal regime but would not be effective under the new rules to remain effective for a reasonable period of time (as set forth in the new law) so as to give the creditor time to take the necessary steps under the new law. At the expiration of the transition period, the right would become ineffective against third parties unless it had become effective against third parties under the new law (see A/CN.9/631, recommendation 226).

13. If the right was not effective against third parties under the previous legal regime, but is nonetheless effective against them under the new rules, the right should be effective against third parties immediately upon the effective date of the new rules. Once again, the presumption is that the parties intended effectiveness as between them, and third parties are protected to the full extent of the new rules.

(e) Priority disputes

14. An entirely different set of questions arises in the case of priority disputes because such disputes necessarily involve applying one set of rules to two (or more) different rights created at different times. A legal system cannot simply provide that the priority rule in effect at the time when a security right was created governs priority with respect to that right because such a rule would not provide a coherent answer when one of the rights that is being compared was created under the former regime while the other was created under the new regime. Rather, there must be rules that address each of the following situations: (a) where both rights are created after the effective date of the new legislation; (b) where both rights are created before the effective date; and (c) where one right is created before the effective date and the other right is created after the effective date.

15. The easiest situation is a priority dispute between two rights that were created after the effective date of the new legislation. In that situation, it is obvious that the priority rules in the new legislation should be applied to resolve that dispute.

16. Conversely, if both of the competing rights were created before the effective date of the new legislation (and, accordingly, the relative priority of the two

competing rights in the encumbered assets was established before the effective date of the new rules) and, in addition, nothing (other than the effective date having occurred) has happened that would change that relative priority, stability of relationships suggests that the priority established before the effective date should not be changed. If, however, something occurs after the effective date that would have had an effect on priority even under the previous legal regime (such as a security right becoming effective against third parties or ceasing to be effective against third parties), there is less reason to continue to utilize old rules to govern a dispute that has been changed by an action that took place after the effective date. Therefore, there is a much stronger argument for applying the new rules to such a situation (see A/CN.9/631, recommendations 228-230).

17. The most difficult transition situation involves a priority dispute between one right that was established before the effective date and another right that was established after the effective date. In such a case, while it is preferable to have the new rules govern eventually, it is appropriate to provide a transition rule protecting the status of the creditor whose right was acquired under the old regime while that creditor takes whatever steps are necessary to maintain protection under the new regime. If those steps are taken within the requisite time, the new legislation should provide that creditor with priority to the same extent as would have been the case had the new rules been effective at the time of the original transaction and those steps had been taken at that time (see A/CN.9/631, recommendations 227 and 229).

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/631 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

Terminology

[Note to the Commission: The Commission may wish to note that the terminology will be placed in section B of the Introduction of the final text of the Guide, while recommendations will appear after the commentary in each chapter. The terminology is reproduced in this document with the recommendations for ease of reference. The Commission may wish to consider whether the terminology and recommendations should also be reproduced in a separate appendix to the Guide in its final version.]

1. The Guide adopts terminology to express the concepts that underlie an effective secured transactions regime. The terms used are not drawn from any particular legal system. Even when a term appears to be the same as that found in a particular national law (whether secured transactions or any other law), the Guide does not intend to adopt the meaning of the term in that national law. Rather, the Guide provides definitions giving a specific meaning to each key term in order to facilitate precise communication, independent of any particular national legal system, and to enable readers of the Guide to understand its recommendations in a uniform way, providing them with a common vocabulary and conceptual framework.

2. Some recommendations use terms that are defined in those recommendations, while the meaning of some terms defined below is further elaborated in recommendations that use those terms or specific chapters of the Guide. The scope and content of each recommendation depends on the meaning of its defined terms. Thus, legislators may consider using the definitions in order to avoid unintended substantive changes, maximize uniform interpretation of the new legislation and promote harmonization of secured transactions law.

3. The word “or” is not intended to be exclusive; use of the singular also includes the plural and vice versa; “include” and “including” are not intended to indicate an exhaustive list; “may” indicates permission and “should” indicates instruction; and “such as” and “for example” are to be interpreted in the same manner as “include” or “including”. “Creditors” should be interpreted as including both the creditors in the enacting State and foreign creditors, unless otherwise specified. References to “person” should be interpreted as including both natural and legal persons, unless otherwise specified.

4. Some States may choose to implement the recommendations of the Guide by enacting a single comprehensive statute (a method more likely to produce coherence and avoid errors of omission or misunderstanding), while other States may seek to modify their existing body of law by insertion of specific rules in various statutes. The Guide refers to the entire body of recommended rules, whichever method is chosen for implementation, as “the law” or “this law”.

5. The Guide also uses the term “law” in various other contexts. Except when otherwise expressly provided, throughout the Guide: (a) all references to law refer to both statutory and non-statutory law; (b) all references to law refer to domestic law, excluding conflict-of-laws rules (so as to avoid renvoi); (c) all references to “other law” refer to the entire body of a State’s law (whether substantive or procedural) other than that embodying the law governing secured transactions (whether pre-existing or newly enacted or modified pursuant to the recommendations of the Guide); (d) all references to “the law governing negotiable instruments” refer not only to a special statute or body of law denominated as “negotiable instruments law” but include also all contract and other general law that might be applicable to transactions or situations involving a negotiable instrument (the same rule applies to similar expressions); and (e) all references to “insolvency law” are similarly all-encompassing, but refer only to law that might be applicable after the commencement of insolvency proceedings.

6. The following subparagraphs identify the principal terms used and the core meaning given to them in the Guide. The meaning of these terms is further refined when they are used in subsequent chapters. Those chapters also define and use additional terms (as is the case, for example, with chapter XIV on the impact of insolvency on a security right). The definitions should be read together with the relevant recommendations. The principal terms are defined as follows:

(a) “Acknowledgement” with respect to a right to receive the proceeds under an independent undertaking means that the guarantor/issuer, confirmer or nominated person that will pay or otherwise give value upon a demand for payment (“draw”) under an independent undertaking has, unilaterally or by agreement:

(i) Acknowledged or consented to (however acknowledgement or consent is evidenced) the creation of a security right (whether denominated as an

assignment or otherwise) in favour of the secured creditor in the right to receive the proceeds under an independent undertaking; or

(ii) Has obligated itself to pay or give value to the secured creditor upon a draw under an independent undertaking;

(b) “Acquisition secured creditor” (a term used in the context of both the unitary and the non-unitary approaches to acquisition financing) means a secured creditor that has an acquisition security right. In the context of the unitary approach, the term includes a retention-of-title seller or financial lessor (terms used in the context of the non-unitary approach);

(c) “Acquisition security right” (a term used in the context of both the unitary and the non-unitary approaches to acquisition financing) means a security right in a tangible asset (other than a negotiable instrument or negotiable document) that secures the obligation to pay any unpaid portion of the purchase price of the asset or an obligation incurred or credit otherwise provided to enable the grantor to acquire the asset. An acquisition security right need not be denominated as such. Under the unitary approach, the term includes a right that is a retention-of-title right or a financial lease right (terms used in the context of the non-unitary approach);

(d) “Assignee” means the person to which an assignment of a receivable is made;¹

(e) “Assignment” means the creation of a security right in a receivable that secures the payment or other performance of an obligation. While an assignment that is an outright transfer does not secure the payment or other performance of an obligation, for convenience of reference, the term also includes an outright transfer of a receivable;²

(f) “Assignor” means the person that makes an assignment of a receivable;

(g) “Attachment to immovable property” means a tangible asset that is so physically attached to immovable property that, despite the fact that it has not lost its separate identity, is treated as immovable property under the law of the State where the immovable property is located;

(h) “Attachment to movable property” means a tangible asset that is physically attached to another tangible asset but has not lost its separate identity;

(i) “Bank account” means an account maintained by a bank to which funds may be credited. The term includes a checking or other current account, as well as a savings or time deposit account. The term does not include a right against the bank to payment evidenced by a negotiable instrument;

The term also includes a right to the payment of funds transferred to the bank by way of anticipatory reimbursement of a future payment obligation to which the bank has committed and a right to the payment of funds transferred to the bank by way of cash collateral securing an obligation owed to the bank to the extent that the transferor of those funds has a claim to them, if under national law the bank’s obligation is a bank account.

¹ For the definitions of the terms “assignee”, “assignor” and “assignment”, see article 2, subparagraph (a), of the United Nations Convention on the Assignment of Receivables in International Trade (United Nations publication, Sales No. E.04.V.14; hereinafter referred to as “the United Nations Assignment Convention”).

² See the definition of “security right”, as well as recommendation 3 and related commentary.

(j) “Competing claimant”³ means a creditor of a grantor competing with another creditor that has a security right in an encumbered asset of the grantor and includes:

- (i) Another secured creditor with a security right in the same encumbered asset (whether as an original encumbered asset or proceeds);
- (ii) In the context of the non-unitary approach to acquisition financing, the seller, financial lessor or other acquisition financier of the same encumbered asset that has retained title to it;
- (iii) Another creditor of the grantor that has a right in the same encumbered asset;
- (iv) The insolvency representative in the insolvency of the grantor;⁴ or
- (v) Any buyer or other transferee (including a lessee or licensee) of the encumbered asset;

(k) “Confirmer” means a bank or other person that adds its own independent undertaking to that of a guarantor/issuer;

In line with article 6, subparagraph (e), of the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit⁵ (hereinafter referred to as “the United Nations Guarantee and Stand-by Convention”), a confirmation provides the beneficiary with the option of demanding payment from the confirmer in conformity with the terms and conditions of the confirmed independent undertaking instead of from the guarantor/issuer;

(l) “Consumer goods” means goods that the grantor uses or intends to use for personal, family or household purposes;

(m) “Control” with respect to a right to receive the proceeds under an independent undertaking exists:

- (i) Automatically upon the creation of the security right if the guarantor/issuer, confirmer or nominated person is the secured creditor; or
- (ii) If the guarantor/issuer, confirmer or nominated person has made an acknowledgment in favour of the secured creditor;

(n) “Control” with respect to a right to payment of funds credited to a bank account exists:

- (i) Automatically upon the creation of a security right if the depositary bank is the secured creditor;
- (ii) If the depositary bank has concluded a control agreement with the grantor and the secured creditor evidenced by a signed writing⁶ according to

³ For the definition of the term “competing claimant”, see article 5, subparagraph (m), of the United Nations Assignment Convention.

⁴ In the chapter on insolvency, reference is made to “the insolvency of the debtor” for reasons of consistency with the terminology used in the UNCITRAL Legislative Guide on Insolvency Law (United Nations publication, Sales No. E.05.V.10; hereinafter referred to as “the UNCITRAL Insolvency Guide”).

⁵ United Nations publication, Sales No. E.97.V.12.

⁶ For the meaning of the term “signed writing” in the context of electronic communications, see recommendations 9 and 10.

which the depositary bank has agreed to follow instructions from the secured creditor with respect to the payment of funds credited to the bank account without further consent from the grantor; or

(iii) If the secured creditor is the account holder;

(o) “Debtor” means a person that owes performance of the secured obligation and includes a secondary obligor such as a guarantor of a secured obligation. The debtor may or may not be the person that creates the security right (see the definition of the term “grantor”);

(p) “Debtor of the receivable” means a person liable for payment of a receivable. “Debtor of the receivable” includes a guarantor or other person secondarily liable for payment of the receivable;⁷

A guarantor in an accessory guarantee is not only a debtor of the receivable of which it has guaranteed the payment, but also a debtor of the receivable constituted by the guarantee, as an accessory guarantee is itself a receivable (i.e. there are two receivables);

(q) “Encumbered asset” means a tangible or intangible asset that is subject to a security right. The term also includes a receivable that has been the subject of an outright transfer;⁸

(r) “Equipment” means a tangible asset used by a person in the operation of its business;

(s) “Financial contract” means any spot, forward, future, option or swap transaction involving interest rates, commodities, currencies, equities, bonds, indices or any other financial instrument, any repurchase or securities lending transaction, and any other transaction similar to any transaction referred to above entered into in financial markets and any combination of the transactions mentioned above;⁹

The reference in this definition to “any other transaction similar to any transaction referred to above entered into in financial markets” is intended to include the full range of transactions entered into in financial markets. The term is flexible. It includes any transaction entered into in financial markets under which payment rights are determined by reference to: (a) underlying asset classes; or (b) quantitative measures of economic or financial risk or value associated with an occurrence or contingency. Examples are transactions under which payment rights are determined by reference to weather statistics, freight rates, emissions allowances or economic statistics.

(t) “Financial lease right” (a term used only in the context of the non-unitary approach to acquisition financing) means a lessor’s right in a tangible asset (other than a negotiable instrument or negotiable document) that is the object of a lease agreement under which, at the end of the lease:

(i) The lessee automatically becomes the owner of the asset that is the object of the lease;

⁷ See article 2, subparagraph (a), of the United Nations Assignment Convention.

⁸ See the definition of “security right”, as well as recommendation 3 and related commentary.

⁹ See article 5, subparagraph (k), of the United Nations Assignment Convention; see also the relevant definition in the UNCITRAL Insolvency Guide.

(ii) The lessee may acquire ownership of the asset by paying no more than a nominal price; or

(iii) The asset has no more than a nominal residual value;

The term includes a hire-purchase agreement, even if not nominally referred to as a lease, provided that it meets the requirements of subparagraph (i), (ii) or (iii);

(u) “Grantor” means a person that creates a security right to secure either its own obligation or that of another person.¹⁰ Under the unitary approach to acquisition financing, the term “grantor” of an acquisition security right includes a retention-of-title buyer or financial lessee. While an assignor in an outright transfer of a receivable does not assign the receivable in order to secure the performance of an obligation, for convenience of reference, the term “grantor” also includes an assignor in an outright transfer of a receivable;¹¹

(v) “Guarantor/issuer” means a bank or other person that issues an independent undertaking;

(w) “Independent undertaking” means a letter of credit (commercial or standby), a confirmation of a letter of credit, an independent guarantee (including a demand- or first-demand-bank guarantee, or a counter-guarantee) or any other undertaking recognized as independent by law or practice rules such as the United Nations Guarantee and Stand-by Convention, the Uniform Customs and Practice for Documentary Credits, the Rules on International Standby Practices and the Uniform Rules for Demand Guarantees;

(x) “Insolvency court” means a judicial or other authority competent to control or supervise insolvency proceedings;

[Note to the Commission: As the term “insolvency court” is used only in the definition of “insolvency proceedings” and in the insolvency chapter, the Commission may wish to consider deleting the definition of “insolvency court” and including an explanation of its meaning in chapter XIV on the impact of insolvency on a security right.]

(y) “Insolvency estate” means the assets of the debtor subject to the insolvency proceedings;

(z) “Insolvency proceedings” means collective proceedings, subject to insolvency court supervision, either for reorganization or liquidation;

(aa) “Insolvency representative” means a person or body, including one appointed on an interim basis, authorized in insolvency proceedings to administer the reorganization or the liquidation of the insolvency estate;

(bb) “Intangible asset” means all forms of movable assets other than tangible assets and includes incorporeal rights, receivables and rights to the performance of obligations other than receivables;

(cc) “Intellectual property” means copyrights, trademarks, patents, service marks, trade secrets and designs and any other asset considered to be intellectual property under the domestic law of the enacting State or under an international agreement to which the enacting State is a party;

¹⁰ See the definition of the term “debtor”.

¹¹ See the definition of “security right”, as well as recommendation 3 and related commentary.

The definition of “intellectual property” is intended to ensure consistency of the Guide with intellectual property laws and treaties, while at the same time respecting the right of the legislator in a State enacting the recommendations of the Guide to align the definition with its own law and international obligations.

An enacting State may add to this list or subtract from it types of intellectual property to conform it to national law. The reference to international agreements is intended to refer to agreements, such as the Convention Establishing the World Intellectual Property Organization and the Agreement on Trade-Related Aspects of Intellectual Property Rights (“TRIPS”).

In order to clarify that these definitions and the recommendations referring to them apply only to tangible assets (and not to intangible assets such as intellectual property), reference is made in the definitions of the terms “acquisition security right”, “acquisition financing right”, “retention-of-title right” and “financial lease” to “tangible assets”.

In the definition of the term “receivable”, reference to “the performance of non-monetary obligations” has been deleted to clarify the understanding that the definition and the recommendations relating to receivables apply only to receivables and not, for example, to the rights of a licensee or the obligations of a licensor under a contractual license of intellectual property.

(dd) “Inventory” means tangible assets held for sale or lease in the ordinary course of the grantor’s business, as well as raw and semi-processed materials (work-in-process);

(ee) “Issuer” of a negotiable document means the person that is obligated to deliver the tangible assets covered by the document under the law governing negotiable documents, whether that person performs all obligations or not;

(ff) “Knowledge” means actual rather than constructive knowledge;

(gg) “Mass or product” means tangible assets other than money that are so physically associated or united with other tangible assets that they have lost their separate identity;

(hh) “Money” means currency currently authorized as legal tender by any State. It does not include funds credited to a bank account or negotiable instruments such as cheques;

(ii) “Negotiable document” means a document, such as a warehouse receipt or a bill of lading, that embodies a right to delivery of tangible assets and satisfies the requirements for negotiability under the law governing negotiable documents;

(jj) “Negotiable instrument” means an instrument, such as a cheque, bill of exchange or promissory note, that embodies a right to payment and satisfies the requirements for negotiability under the law governing negotiable instruments;

[Note to the Commission: The Commission may wish to consider that a note should be inserted after the definitions of “negotiable instrument” and “negotiable document” along the following lines:

“The Guide was prepared against the background of negotiable instruments and negotiable documents in paper form, in view of the particular difficulty of creating an electronic equivalent of paper-based negotiability. However, the Guide should not be interpreted as discouraging the use of

electronic equivalents of paper negotiable instruments or negotiable documents. Thus, an enacting State that wishes to address this matter will need to devise special rules (the United Nations Convention on the Use of Electronic Communications in International Contracts does not address the electronic equivalent of paper-based negotiability for the same reason)."^{12]}

(kk) "Netting agreement" means an agreement between two or more parties that provides for one or more of the following:

(i) The net settlement of payments due in the same currency on the same date whether by novation or otherwise;

(ii) Upon the insolvency or other default by a party, the termination of all outstanding transactions at their replacement or fair market values, conversion of such sums into a single currency and netting into a single payment by one party to the other; or

(iii) The set-off of amounts calculated as set forth in subparagraph (ii) of this definition under two or more netting agreements;¹³

(ll) "Nominated person" means a bank or other person that is identified in an independent undertaking by name or type (e.g. "any bank in country X") as being nominated to give value under an independent undertaking and that acts pursuant to that nomination and, in the case of a freely available independent undertaking, any bank or other person;

(mm) "Notice" means a communication in writing;¹⁴

[*Note to the Commission: The Commission may wish to consider adding to this definition wording along the following lines:*

"A person "notifies", "sends a notice" or "gives a notice" to another person by taking reasonable steps to inform the other person, whether or not the other person is actually so informed." The suggested text would explain the meaning of references in the Guide to "notifying", "sending" or "giving" "notices".]

(nn) "Notification of the assignment" means a communication in writing that reasonably identifies the assigned receivable and the assignee;¹⁵

(oo) "Original contract" means, in the context of a receivable created by contract, the contract between the assignor and the debtor of the receivable from which the receivable arises;

(pp) "Possession" (except as the term is used in recommendations 28 and 51-53 with respect to the issuer of a negotiable document) means the actual possession only of a tangible asset by a person or an agent or employee of that person, or by an independent person that acknowledges that it holds for that person. It does not include non-actual possession described by terms such as constructive, fictive, deemed or symbolic possession;

¹² See United Nations publication, Sales No. E.07.V.2, explanatory note, para. 7.

¹³ See article 5, subparagraph (l), of the United Nations Assignment Convention.

¹⁴ For the electronic equivalents of the terms "writing" and "signed writing", see recommendations 9 and 10.

¹⁵ As to when notification of the assignment is effective, see recommendation 115.

(qq) “Priority” means the right of a person to derive the economic benefit of its security right in preference to a competing claimant;

(rr) “Proceeds” means whatever is received in respect of encumbered assets, including what is received as a result of sale or other disposition or collection, lease or licence of an encumbered asset, proceeds of proceeds, civil and natural fruits, dividends, distributions, insurance proceeds and claims arising from defects in, damage to or loss of an encumbered asset;¹⁶

(ss) “Receivable” means a right to payment of a monetary obligation excluding a right to payment evidenced by a negotiable instrument, a right to receive the proceeds under an independent undertaking and a right to payment of funds credited to a bank account;¹⁷

(tt) “Retention-of-title right” (a term used only in the context of the non-unitary approach to acquisition financing) means a seller’s right in a tangible asset (other than a negotiable instrument or a negotiable document) pursuant to an arrangement with the buyer by which ownership of the asset is not transferred (or is not transferred irrevocably) from the seller to the buyer until the unpaid portion of the purchase price is paid;

(uu) “Right to receive the proceeds under an independent undertaking” means the right to receive a payment due, a draft accepted or deferred payment incurred or another item of value, in each case to be paid or delivered by the guarantor/issuer, confirmer or nominated person giving value for a draw under an independent undertaking. The term also includes the right to receive payment in connection with the purchase by a negotiating bank of a negotiable instrument or a document under a complying presentation. The term does not include:

- (i) The right to draw under an independent undertaking; and
- (ii) What is received upon honour of an independent undertaking;

A security right in the right to receive the proceeds under an independent undertaking (as an original encumbered asset) is different from a security right in “proceeds” (a key concept of the Guide) of assets covered in the Guide (see definition of the term “proceeds” and recommendation 19). Thus, what is received as a result of a complying presentation under an independent undertaking constitutes the “proceeds” of the right to receive the proceeds under an independent undertaking.

(vv) “Secured creditor” means a creditor that has a security right. While an outright transfer of a receivable does not secure the performance of an obligation, for convenience of reference, the term also includes the assignee in an outright transfer of a receivable;¹⁸

(ww) “Secured obligation” means an obligation secured by a security right;

(xx) “Secured transaction” means a transaction that creates a security right. While an outright transfer of a receivable does not secure the performance of an

¹⁶ See article 5, subparagraph (j), of the United Nations Assignment Convention.

¹⁷ For the definition of the term “receivable”, see article 2, subparagraph (a), of the United Nations Assignment Convention; for the exclusions of bank deposits, letters of credit and negotiable instruments, see article 4, subparagraphs 2 (f) and 2 (g), and paragraph 3, respectively, of the United Nations Assignment Convention.

¹⁸ See the definition of “security right”, as well as recommendation 3 and related commentary.

obligation, for convenience of reference, the term also includes an outright transfer of a receivable;¹⁹

(yy) “Security agreement” means an agreement, in whatever form or terminology, between a grantor and a creditor that creates a security right. While an outright transfer of a receivable does not secure the performance of an obligation, for convenience of reference, the term also includes an agreement for the outright transfer of a receivable;²⁰

(zz) “Security right” means a property right in a movable asset that is created by agreement and secures payment or other performance of an obligation, regardless of whether the parties have denominated it as a security right. In the context of the unitary approach to acquisition financing, the term includes both acquisition security rights and non-acquisition security rights. In the context of the non-unitary approach to acquisition financing, it does not include a retention-of-title or financial lease right. While an outright transfer of a receivable does not secure payment or other performance of an obligation, for convenience of reference, the term “security right” also includes the right of the assignee in an outright transfer of a receivable.²¹ The term does not include a personal right against a guarantor or other person liable for the payment of the secured obligation;

(aaa) “Subsequent assignment” means an assignment by the initial or any other assignee.²² In the case of a subsequent assignment, the person that makes that assignment is the assignor and the person to which that assignment is made is the assignee; and

(bbb) “Tangible asset” means every form of corporeal movable asset. Among the categories of tangible asset are inventory, equipment, consumer goods, attachments, negotiable instruments, negotiable documents and money.

I. Key objectives of an effective and efficient secured transactions law*

1. In order to provide a broad policy framework for an effective and efficient secured transactions law (the “secured transactions law” is hereinafter referred to as “the law” or “this law”), the law should be designed:

- (a) To promote secured credit;
- (b) To allow utilization of the full value inherent in a broad range of assets to support credit in the widest possible array of secured transactions;
- (c) To enable parties to obtain security rights in a simple and efficient manner;
- (d) To provide for equal treatment of diverse sources of credit and of diverse forms of secured transactions;

¹⁹ Ibid.

²⁰ Ibid.

²¹ Ibid.

²² See article 2, subparagraph (b), of the United Nations Assignment Convention.

* The key objectives could be included in a preamble or other statement accompanying the secured transactions law as a guide to the underlying legislative policies to be taken into account in the interpretation and application of the secured transactions law.

- (e) To validate security rights in assets that remain in the possession of the grantor;
- (f) To enhance predictability and transparency with respect to rights serving security purposes by providing for registration of a notice in a general security rights registry;
- (g) To establish clear and predictable priority rules;
- (h) To facilitate enforcement of creditor's rights in a predictable and efficient manner;
- (i) To balance the interests of affected persons;
- (j) To recognize party autonomy; and
- (k) To harmonize secured transactions laws, including conflict-of-laws rules.

II. Scope of application and other general rules

Purpose

The purpose of provisions on the scope of application of the law is to establish a single comprehensive regime for secured transactions. The provisions specify the security rights and other rights to which the law applies.

Scope of application

2. Subject to recommendations 3-7,²³ the law should apply to all rights in movable assets created by agreement that secure payment or other performance of an obligation, regardless of the form of the transaction, the type of the movable asset, the status of the grantor or secured creditor or the nature of the secured obligation. Thus, the law should apply to:

- (a) Security rights in all types of movable asset, tangible or intangible, present or future, including inventory, equipment and other tangible assets, contractual and non-contractual receivables, contractual non-monetary claims, negotiable instruments, negotiable documents, rights to payment of funds credited to a bank account, rights to receive the proceeds under an independent undertaking, and intellectual property;
- (b) Security rights created or acquired by all legal and natural persons, including consumers, without, however, affecting rights under consumer-protection legislation;
- (c) Security rights securing all types of obligation, present or future, determined or determinable, including fluctuating obligations and obligations described in a generic way; and
- (d) All property rights created contractually to secure the payment or other performance of an obligation, including transfers of title to tangible assets for

²³ Where reference is made in a recommendation to recommendations in another chapter, the number and subject of the chapter in which those recommendations are included, are also referred to. Where no such reference is made, the recommendations referred to are in the same chapter as the recommendation that contains the reference.

security purposes or assignments of receivables for security purposes, the various forms of retention-of-title sales and financial leases.

The law should also apply to security rights in proceeds of encumbered assets.

Outright transfers of receivables

3. The law should apply to outright transfers of receivables despite the fact that such transfers do not secure the payment or other performance of an obligation. This recommendation is subject to the exception provided in recommendation 164 (chapter X on the enforcement of a security right).

[Note to the Commission: The Commission may wish to note that, in line with the approach taken in the United Nations Assignment Convention, the Guide recommends that its recommendations (with the exception of certain recommendations on enforcement) apply to all assignments of receivables (including outright transfers of receivables). The commentary will explain the reasons for this approach and discuss in particular the practical need to have the recommendations on creation, third-party effectiveness and priority apply to all assignments of receivables.]

The commentary will also explain that, although the Guide applies to security rights in as well as to outright transfers of receivables in the same way that it applies to security rights and uses common terminology to describe both types of right, it does not transform outright transfers into security rights. Such a result (sometimes referred to as “re-characterization”) would be undesirable and indeed harmful for important practices such as securitization of receivables (which, even when it involves a true sale, is generally subject to the regime applicable to secured transactions).

As provided in the definitions, with respect to receivables only, and as a matter of expression and for convenience of drafting only, references in the law to security rights are also references to the rights of an outright transferee of receivables, references to a secured creditor are also references to an outright transferee, references to a grantor are also references to an outright transferor and references to an encumbered asset are also references to a receivable that has been transferred outright.

The commentary will also explain that the Guide’s coverage of outright transfers of receivables in addition to secured transactions, in no way obviates the distinction between an outright transfer of receivables and a transfer of a right in receivables as security for an obligation. By way of contrast, the Guide does make irrelevant any distinctions in form or terminology between transactions that secure payment or other performance of an obligation. Thus, for example, the creation of a right in a movable asset to secure payment or performance of an obligation is within the scope of the Guide whether the right is created by a transaction denominated as a transfer of the asset for security purposes (also sometimes known as a fiduciary transfer) or one that is denominated as a pledge.]

Limitations on scope

4. Notwithstanding recommendation 2, the law should not apply to:

(a) Aircraft, railway rolling stock, space objects, ships as well as other categories of mobile equipment, in so far as such asset is covered by a national law

or an international agreement to which the State enacting legislation based on these recommendations (herein referred to as “the State” or “this State”) is a party and the matters covered by this law are addressed in that national law or international agreement;

(b) Intellectual property in so far as the provisions of the law are inconsistent with national law or international agreements, to which the State is a party, relating to intellectual property;

(c) Securities;

(d) Payment rights arising under or from financial contracts governed by netting agreements, except a receivable owed on the termination of all outstanding transactions; and

(e) Payment rights arising under or from foreign exchange transactions.

5. The law should not apply to immovable property except as provided in recommendations 25 and 48 (chapter IV on the creation of a security right).

6. The law should provide that if, under other law, a security right in an excluded type of asset (e.g. immovable property) extends to a type of proceeds to which this law applies (e.g. receivables), this law applies to the security right in the proceeds except to the extent that that other law applies to that security right.

7. The law should not include any other limitations to its scope of application. To the extent any other limitations are introduced, they should be set out in the law in a clear and specific way.

[Note to the Commission: The Commission may wish to note that a previous version of this recommendation referred to employment benefits (see A/CN.9/WG.VI/WP.29). It was reformulated to avoid encouraging a State to further limit the scope of application of the law, and to ensure that any further limitation is set out in the law in a clear and transparent way. The Commission may wish to consider whether the policy in this recommendation is more appropriately reflected in the commentary.]

Party autonomy

8. The law should provide that, except as otherwise provided in recommendations 15 (chapter IV on the creation of a security right), 108-109 (chapter VIII on the rights and obligations of the parties), 129-133 (chapter X on the enforcement of a security right), 174-183 (chapter XI, unitary approach to acquisition financing), 184-199 (chapter XI, non-unitary approach to acquisition financing), 200-212 and 214-224 (chapter XII on conflict of laws) the secured creditor and the grantor or the debtor may derogate from or vary by agreement its provisions relating to their respective rights and obligations. Such an agreement does not affect the rights of any person that is not a party to the agreement.²⁴

Electronic communications

9. The law should provide that, where it requires that a communication or a contract should be in writing, or provides consequences for the absence of a writing,

²⁴ See article 6 of the United Nations Assignment Convention.

that requirement is met by an electronic communication if the information contained therein is accessible so as to be usable for subsequent reference.

10. The law should provide that, where the law requires that a communication or a contract should be signed by a person, or provides consequences for the absence of a signature, that requirement is met in relation to an electronic communication if:

(a) A method is used to identify the party and to indicate that person's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.²⁵

III. Basic approaches to security

Purpose

The purpose of provisions on basic approaches to security is to ensure that the law:

(a) Applies to all contractually created rights in movable assets that secure the payment or other performance of an obligation ("functional approach"); and

(b) Provides for the appropriate implementation of the functional approach so as to ensure that all providers of financing are treated according to rules that produce functionally equivalent outcomes.

Functional approach

11. The law should adopt a functional approach, under which it covers all rights in movable assets that are created by agreement and secure the payment or other performance of an obligation, regardless of the form of the transaction or the terminology used by the parties (including rights of transferees under a transfer of title to tangible assets for security purposes, rights of an assignee under an assignment of receivables for security purposes, as well as rights of sellers or financial lessors under various forms of retention-of-title and financial leases, respectively). Except with respect to acquisition financing, the functional approach should be implemented in a way that classifies all rights securing the performance of an obligation as security rights and subjects them to a common set of rules.

12. With respect to acquisition financing, the functional approach may be implemented either:

(a) In a way that classifies as acquisition security rights all rights in movable assets that secure the payment or other performance of an obligation, and that makes

²⁵ For recommendations 9 and 10, see article 9, paragraphs 2 and 3, of the United Nations Convention on the Use of Electronic Communications in International Contracts.

them subject to a common set of rules (“the unitary approach to acquisition financing” or “the unitary approach”); or

(b) In a way that classifies:

(i) As acquisition security rights all rights in movable assets that secure the payment or other performance of an obligation, other than the rights of a seller under a retention-of-title agreement and of a lessor under a financial lease;

(ii) As ownership rights the rights of a seller under a retention-of-title agreement and of a lessor under a financial lease, but makes those ownership rights subject to rules that produce outcomes that are the functional equivalent of the outcomes produced with respect to acquisition security rights, thereby ensuring that all providers of acquisition financing are treated equally (the approach in subparagraph (b) of this recommendation is referred to as “the non-unitary approach to acquisition financing” or “the non-unitary approach”).

[Note to the Commission: The Commission may wish to note that this recommendation has been redrafted to reflect the Commission’s understanding with respect to the functional approach and the way it is to be implemented with respect to acquisition security rights (in a unitary or a non-unitary way; see chapter XI on acquisition financing).]

IV. Creation of a security right (effectiveness as between the parties)

Purpose

The purpose of provisions on the creation of a security right is to specify the requirements that must be satisfied in order for a security right to be effective between the parties.

A. General recommendations*

Creation of a security right

13. The law should provide that a security right in an asset is created by an agreement concluded between the grantor and the secured creditor. In the case of an asset with respect to which the grantor has rights or the power to encumber at the time of the conclusion of the agreement, the security right in that asset is created at that time. In the case of an asset with respect to which the grantor acquires rights or the power to encumber thereafter, the security right in that asset is created when the grantor acquires rights in the asset or the power to encumber the asset.

* The general recommendations apply to security rights in all types of asset covered in the Guide, as modified by the asset-specific recommendations.

Minimum content of a security agreement

14. The law should provide that a security agreement must:

- (a) Reflect the intent of the parties to create a security right;
- (b) Identify the secured creditor and the grantor;
- (c) Describe the secured obligation; and
- (d) Describe the encumbered assets in a manner that reasonably allows their identification.

[Note to the Commission: The Commission may wish to note that the commentary will explain that the description need not be specific. A general description by category, type or class of asset is sufficient (e.g. “desk”, “furniture”, “office furniture” or “equipment”, “all present and future assets” or “all present and future inventory”).

The Commission may wish to note that recommendation 57, subparagraph (a), for confidentiality reasons, permits the secured creditor to avoid disclosing its name on the notice to be registered. The Commission may wish to consider whether, for the same or other reasons, it would be sufficient for the security agreement to identify a representative of the secured creditor rather than the secured creditor itself.]

Form of the security agreement

15. The law should provide that a security agreement may be oral if accompanied by the secured creditor’s possession of the encumbered asset. Otherwise, the agreement must be concluded in or evidenced by a writing that, in conjunction with the course of conduct between the parties, indicates the grantor’s intent to create a security right.

Obligations secured by a security right

16. The law should provide that a security right may secure any type of obligation, whether present or future, determined or determinable, conditional or unconditional, fixed or fluctuating.

Assets subject to a security right

17. The law should provide that a security right may encumber any type of asset, including parts of assets and undivided rights in assets. A security right may encumber assets that, at the time the security agreement is concluded, may not yet exist or that the grantor may not yet own or have the power to encumber. It may also encumber all assets of a grantor. Any exceptions to these rules should be limited and described in the law in a clear and specific way.

18. The law should provide that, except as provided in recommendations 23-25, it does not override provisions of any other law to the extent that they limit the creation or enforcement of a security right in, or the transferability of, specific types of asset.

Continuation of a security right in proceeds

19. The law should provide that, unless otherwise agreed by the parties to a security agreement, a security right in an encumbered asset extends to its identifiable proceeds (including proceeds of proceeds).

Commingled proceeds

20. The law should provide that, where proceeds in the form of money or funds credited to a bank account have been commingled with other assets of the same kind so that the proceeds are no longer identifiable, the amount of the proceeds immediately before they were commingled is to be treated as identifiable proceeds after commingling. However, if, at any time after commingling, the total amount of the asset is less than the amount of the proceeds, the total amount of the asset at the time that its amount is lowest plus the amount of any proceeds later commingled with the asset is to be treated as identifiable proceeds.

Creation and continuation of a security right in an attachment

21. The law should provide that a security right may be created in a tangible asset that is an attachment at the time of creation of the security right or continues in a tangible asset that becomes an attachment subsequently. A security right in an attachment to immovable property may be created under this law or under the law governing immovable property.

Continuation of a security right into a mass or product

22. The law should provide that a security right created in tangible assets before they are commingled in a mass or product continues in the mass or product. The security right that continues in the mass or product is limited to the value of the assets immediately before they became part of the mass or product.

B. Asset-specific recommendations**Effectiveness of a bulk assignment of receivables and an assignment of future, parts of and undivided interests in receivables**

23. The law should provide that:

(a) An assignment of contractual receivables that are not specifically identified, future receivables and parts of or undivided interests in receivables is effective as between the assignor and the assignee and as against the debtor of the receivable, as long as, at the time of the assignment or, in the case of future receivables, at the time they arise, they can be identified to the assignment to which they relate; and

(b) Unless otherwise agreed, an assignment of one or more future receivables is effective without a new act of transfer being required to assign each receivable.²⁶

²⁶ For recommendations 23-25, see articles 8-10 of the United Nations Assignment Convention.

Effectiveness of an assignment of receivables made despite an anti-assignment clause

24. The law should provide that:

(a) An assignment of a receivable is effective as between the assignor and the assignee and as against the debtor of the receivable notwithstanding an agreement between the initial or any subsequent assignor and the debtor of the receivable or any subsequent assignee limiting in any way the assignor's right to assign its receivables;

(b) Nothing in this recommendation affects any obligation or liability of the assignor for breach of the agreement mentioned in subparagraph (a) of this recommendation, but the other party to such an agreement may not avoid the original contract or the assignment contract on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement;

(c) This recommendation applies only to assignments of receivables:

(i) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;

(ii) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;

(iii) Representing the payment obligation for a credit card transaction; or

(iv) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.

Creation of a security right in a personal or property right securing a receivable, a negotiable instrument or any other intangible asset

25. The law should provide that:

(a) A secured creditor with a security right in a receivable, negotiable instrument or any other intangible asset covered by this law has the benefit of any personal or property right that secures payment or other performance of the receivable, negotiable instrument or intangible asset automatically, without further action by either the grantor or the secured creditor;

(b) If the personal or property right is an independent undertaking, the security right automatically extends to the right to receive the proceeds under the independent undertaking but does not extend to the right to draw under the independent undertaking;

(c) This recommendation does not affect a right in immovable property that under other law is transferable separately from a receivable, negotiable instrument or other intangible asset that it may secure;

(d) A secured creditor with a security right in a receivable, negotiable instrument or any other intangible asset covered by this law has the benefit of any personal or property right securing payment or other performance of the receivable, negotiable instrument or other intangible asset notwithstanding any agreement between the grantor and the debtor of the receivable or the obligor of the negotiable instrument or other intangible asset limiting in any way the grantor's right to create

a security right in the receivable, negotiable instrument or other intangible asset, or in any personal or property right securing payment or other performance of the receivable, negotiable instrument or other intangible asset;

(e) Nothing in this recommendation affects any obligation or liability of the grantor for breach of the agreement mentioned in subparagraph (d) of this recommendation, but the other party to such an agreement may not avoid the contract from which the receivable, negotiable instrument or other intangible asset arises, or the security agreement creating the personal or property security right on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement;

(f) Subparagraphs (d) and (e) of this recommendation apply only to security rights in receivables, negotiable instruments or other intangible assets:

(i) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;

(ii) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;

(iii) Representing the payment obligation for a credit card transaction; or

(iv) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties;

(g) Subparagraph (a) of this recommendation does not affect any duties of the grantor to the debtor of the receivable or to the obligor of the negotiable instrument or other intangible asset; and

(h) To the extent that the automatic effects under subparagraph (a) of this recommendation and recommendation 50 are not impaired, this recommendation does not affect any requirement under other law relating to the form or registration of the creation of a security right in any asset, securing payment or other performance of a receivable, negotiable instrument or other intangible asset that is not covered by this law.

Creation of a security right in a right to payment of funds credited to a bank account

26. The law should provide that a security right in a right to payment of funds credited to a bank account is effective notwithstanding an agreement between the grantor and the depositary bank limiting in any way the grantor's right to create such a security right. However, the depositary bank has no duty to recognize the secured creditor and no obligation is otherwise imposed on the depositary bank with respect to the security right without the depositary bank's consent (for the depositary bank's rights and obligations, see recommendations 122 and 123; chapter IX on the rights and obligations of third-party obligors).

Creation of a security right in a right to receive the proceeds under an independent undertaking

27. The law should provide that a beneficiary of an independent undertaking may create a security right in a right to receive the proceeds under an independent undertaking, even if the right to draw under the independent undertaking is itself not

transferable under the law and practice governing independent undertakings. The creation of a security right in a right to receive the proceeds under an independent undertaking is not a transfer of the right to draw under an independent undertaking.

Extension of a security right in a negotiable document to the tangible assets covered by the negotiable document

28. The law should provide that a security right in a negotiable document extends to the tangible assets covered by the document, provided that the issuer is in possession of the assets, directly or indirectly, at the time the security right in the document is created.

V. Effectiveness of a security right against third parties

Purpose

The purpose of provisions on the effectiveness of a security right against third parties is to create a foundation for the predictable, fair and efficient ordering of priority by:

(a) Requiring registration as a precondition for the effectiveness of a security right against third parties, except where exceptions and alternatives to registration are appropriate in light of countervailing commercial policy considerations; and

(b) Establishing a legal framework to create and support a simple, cost-efficient and effective public registry system for the registration of notices with respect to security rights.

A. General recommendations

Achieving third-party effectiveness

29. The law should provide that a security right is effective against third parties only if it is created and one of the methods for achieving third-party effectiveness referred to in recommendation 32, 34 or 35 has been followed.

Effectiveness against the grantor of a security right that is not effective against third parties

30. The law should provide that a security right that has been created is effective between the grantor and the secured creditor even if it is not effective against third parties.

Continued third-party effectiveness after a transfer of the encumbered asset

31. The law should provide that, after transfer of a right other than a security right in an encumbered asset, a security right in the encumbered asset that is effective against third parties at the time of the transfer continues to encumber the asset except as provided in recommendations 76-78 (chapter VII on the priority of a

security right), and remains effective against third parties except as provided in recommendation 62.

[Note to the Commission: The Commission may wish to note that recommendations 32-36 are not intended to state the relevant rules but rather to list, for the ease of the reader, the various methods for achieving third-party effectiveness and to refer to the following recommendations that state the relevant rules.]

General method for achieving third-party effectiveness: registration

32. The law should provide that a security right is effective against third parties if a notice with respect to the security right is registered in the general security rights registry referred to in recommendations 54-72 (chapter VI on the registry system).

33. The law should provide that registration of a notice does not create a security right and is not necessary for the creation of a security right.

Alternatives and exceptions to registration for achieving third-party effectiveness

34. The law should provide that:

(a) A security right may also be made effective against third parties by one of the following alternative methods:

(i) In tangible assets, by the secured creditor's possession, as provided in recommendation 37;

(ii) In tangible assets covered by a negotiable document, by the secured creditor's possession of the document, as provided in recommendations 51-53;

(iii) In movable assets subject to registration in a specialized registry or notation on a title certificate, by such registration or notation, as provided in recommendation 38;

(iv) In a right to payment of funds credited to a bank account, by control, as provided in recommendation 49; and

(v) In an attachment to immovable property, by registration in the immovable property registry, as provided in recommendation 43;

(b) A security right is effective against third parties automatically:

(i) In proceeds, if the security right in the original encumbered asset is effective against third parties, as provided in recommendations 39 and 40;

(ii) In an attachment to movable property, if the security right in the asset that becomes an attachment was effective against third parties before it became an attachment, as provided in recommendation 42;

(iii) In a mass or product, if the security right in processed or commingled assets was effective against third parties before they became part of the mass or product, as provided in recommendation 44; and

(iv) In movable assets, upon a change in the location of the asset or the grantor to this State, as provided in recommendation 45; and

(c) A security right in a personal or property right securing payment or other performance of a receivable, negotiable instrument or other intangible asset is effective against third parties, as provided in recommendation 48.

Method for achieving third-party effectiveness of a security right in a right to receive the proceeds under an independent undertaking

35. The law should provide that, except as provided in recommendation 48, a security right in a right to receive the proceeds under an independent undertaking may be made effective against third parties only by control, as provided in recommendation 50.

Different third-party effectiveness methods for different types of asset

36. The law should provide that different methods for achieving third-party effectiveness may be used for different types of encumbered asset, whether they are encumbered pursuant to the same security agreement or not.

Third-party effectiveness of a security right in tangible assets by possession

37. The law should provide that a security right in tangible assets may be made effective against third parties by registration as provided in recommendation 32 or by the secured creditor's possession.

Third-party effectiveness of a security right in movable assets subject to a specialized registration or a title certificate system

38. The law should provide that a security right in movable assets that is subject to registration in a specialized registry or notation on a title certificate under other law may be made effective against third parties by registration as provided in recommendation 32 or by:

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

Automatic third-party effectiveness of a security right in proceeds

39. The law should provide that, if a security right in an encumbered asset is effective against third parties, a security right in any proceeds of the encumbered asset (including any proceeds of proceeds) is effective against third parties when the proceeds arise, provided that the proceeds are described in a generic way in a registered notice or that the proceeds consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account.

40. If the proceeds are not described in the registered notice or do not consist of the types of asset referred to in recommendation 39, the security right in the proceeds is effective against third parties for [a short period of time to be specified] days after the proceeds arise and continuously thereafter, if it was made effective against third parties by one of the methods referred to in recommendation 32 or 34 before the expiry of that time period.

Automatic third-party effectiveness of a security right in an attachment

41. The law should provide that, if a security right in a tangible asset is effective against third parties at the time when the asset becomes an attachment, the security right remains effective against third parties thereafter.

Third-party effectiveness of a security right in an attachment subject to a specialized registration or a title certificate system

42. The law should provide that a security right in an attachment to movable property that is subject to registration in a specialized registry or notation on a title certificate under other law may be made effective against third parties automatically as provided in recommendation 41 or by:

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

43. The law should provide that a security right in an attachment to immovable property may be made effective against third parties automatically as provided in recommendation 41 or by registration in the immovable property registry.

Automatic third-party effectiveness of a security right in a mass or product

44. The law should provide that, if a security right in a tangible asset is effective against third parties when it becomes part of a mass or product, the security right that continues in the mass or product, as provided in recommendation 22 (chapter IV on the creation of a security right), is effective against third parties.

Continuity in third-party effectiveness upon change of location to this State

45. The law should provide that, if a security right in an encumbered asset is effective against third parties under the law of the State in which the encumbered asset or the grantor is located (whichever determines the applicable law under the conflict-of-laws provisions), and that location changes to this State, the security right continues to be effective against third parties under the law of this State for [a short period of time to be specified] days after the change. If the requirements of the law of this State to make the security right effective against third parties are satisfied prior to the end of that period, the security right continues to be effective against third parties thereafter under the law of this State. For the purposes of any rule of this State in which time of registration or other method of achieving third-party effectiveness is relevant for determining priority, that time is the time when registration or third-party effectiveness was achieved under the law of the State in which the encumbered assets or the grantor were located before their location changed to this State.

Continuity in third-party effectiveness of a security right upon change of method of third-party effectiveness

46. The law should provide that third-party effectiveness of a security right is continuous notwithstanding a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

Lapse in third-party effectiveness or advance registration

47. The law should provide that, if a security right has been made effective against third parties and subsequently there is a period during which the security right is not effective against third parties, third-party effectiveness may be re-established. In such a case, third-party effectiveness takes effect from the time it is re-established. Similarly, if registration made before creation of a security right as provided in recommendation 64 expires as provided in recommendation 66 (chapter VI on the registry system), it may be re-established. In such a case, registration takes effect from the time when the new notice with respect to the security right is registered.

B. Asset-specific recommendations**Third-party effectiveness of a security right in a personal or property right securing payment of a receivable, negotiable instrument or any other intangible asset**

48. The law should provide that, if a security right in a receivable, negotiable instrument or any other intangible asset covered by this law is effective against third parties, such third-party effectiveness extends to any personal or property right that secures payment or other performance of the receivable, negotiable instrument or other intangible asset, without further action by either the grantor or the secured creditor. If the personal or property right is an independent undertaking, its third-party effectiveness automatically extends to the right to receive the proceeds under the independent undertaking (but, as provided in recommendation 25, subparagraph (b), of chapter IV on the creation of a security right, the security right does not extend to the right to draw under the independent undertaking). This recommendation does not affect a right in immovable property that under other law is transferable separately from a receivable, negotiable instrument or other intangible asset that it may secure.

Third-party effectiveness of a security right in a right to payment of funds credited to a bank account

49. The law should provide that a security right in a right to payment of funds credited to a bank account may be made effective against third parties by registration as provided in recommendation 32 or by the secured creditor obtaining control with respect to the right to payment of funds credited to the bank account.

Third-party effectiveness of a security right in a right to receive the proceeds under an independent undertaking

50. The law should provide that, except as provided in recommendation 48, a security right in a right to receive the proceeds under an independent undertaking may be made effective against third parties only by the secured creditor obtaining control with respect to the right to receive the proceeds under the independent undertaking.

Third-party effectiveness of a security right in a negotiable document or assets covered by a negotiable document

51. The law should provide that a security right in a negotiable document may be made effective against third parties by registration as provided in recommendation 32 or by the secured creditor's possession of the document.

52. The law should provide that, if a security right in a negotiable document is effective against third parties, the corresponding security right in the assets covered by the document is also effective against third parties. During the period when a negotiable document covers assets, a security right in the assets may be made effective against third parties by the secured creditor's possession of the document.

53. The law should provide that a security right in a negotiable document that was made effective against third parties by the secured creditor's possession of the document remains effective against third parties for [a short period of time to be specified] days after the negotiable document has been relinquished to the grantor or other person for the purpose of ultimate sale or exchange, loading or unloading, or otherwise dealing with the assets covered by the negotiable document.

VI. The registry system**Purpose**

The purpose of provisions on the registry system is to establish a general security rights registry and to regulate its operation. The purpose of the registry system is to provide:

- (a) A method by which an existing or future security right in a grantor's existing or future assets may be made effective against third parties;
- (b) An efficient point of reference for priority rules based on the time of registration of a notice with respect to a security right; and
- (c) An objective source of information for third parties dealing with a grantor's assets (such as prospective secured creditors and buyers, judgement creditors and the grantor's insolvency representative) as to whether the assets may be encumbered by a security right.

To achieve this purpose, the registry system should be designed to ensure that the registration and searching processes are simple, time- and cost-efficient, user-friendly and publicly accessible.

Operational framework of the registration and searching processes

54. The law should ensure that:

- (a) Clear and concise guides to registration and searching procedures are widely available and information about the existence and role of the registry is widely disseminated;
- (b) Registration is effected by registering a notice that provides the information specified in recommendation 57, as opposed to requiring the submission of the original or a copy of the security agreement or other document;

(c) The registry accepts a notice presented by an authorized medium of communication (e.g. paper, electronic) except if:

- (i) It is not accompanied by the required fee;
- (ii) It fails to provide a grantor identifier sufficient to allow indexing; or
- (iii) It fails to provide some information with respect to any of the other items required under recommendation 57;

(d) The registrar does not require verification of the identity of the registrant or the existence of authorization for registration of the notice or conduct further scrutiny of the content of the notice;

(e) The record of the registry is centralized and contains all notices with respect to security rights registered under this law;

(f) The information provided on the record of the registry is available to the public;

(g) A search may be made without the need for the searcher to justify the reasons for the search;

(h) Notices are indexed and can be retrieved by searchers according to the name of the grantor or according to some other reliable identifier of the grantor;

(i) Fees for registration and for searching, if any, are set at a level no higher than necessary to permit cost recovery;

(j) If possible, the registration system is electronic. In particular:

- (i) Notices are stored in electronic form in a computer database;
- (ii) Registrants and searchers have immediate access to the registry record by electronic or similar means, including the Internet and electronic data interchange;
- (iii) The system is programmed to minimize the risk of entry of incomplete or irrelevant information; and
- (iv) The system is programmed to facilitate speedy and complete retrieval of information and to minimize the practical consequences of human error;

(k) Registrants may choose among multiple modes and points of access to the registry; and

(l) The registry, to the extent it is electronic, operates continuously except for scheduled maintenance, and, to the extent it is not electronic, operates during reliable and consistent service hours compatible with the needs of potential registry users.

Security and integrity of the registry

55. In order to ensure the security and integrity of the registry, the law should provide that the operational and legal framework of the registry should reflect the following characteristics:

(a) Although the day-to-day operation of the registry may be delegated to a private authority, the State retains the responsibility to ensure that it is operated in accordance with the governing legal framework;

- (b) The identity of a registrant is requested and maintained by the registry;²⁷
- (c) The registrant is obligated to forward a copy of a notice to the grantor named in the notice. Failure of the secured creditor to meet this obligation may result only in nominal penalties and any damages resulting from the failure that may be proven;
- (d) The registry is obligated to send promptly a copy of any changes to a registered notice to the person identified as the secured creditor in the notice;
- (e) A registrant can obtain a record of the registration as soon as the registration information is entered into the registry record; and
- (f) Multiple copies of all the information in the records of a registry are maintained and the entirety of the registry records can be reconstructed in the event of loss or damage.

Responsibility for loss or damage

56. The law should provide for the allocation of responsibility for loss or damage caused by an error in the administration or operation of the registration and searching system. If the system is designed to permit direct registration and searching by registry users without the intervention of registry personnel, the responsibility of the registry for loss or damage should be limited to system malfunction.

Required content of notice

57. The law should provide that the following information only is required to be provided in the notice:

- (a) The identifier of the grantor, satisfying the standard provided in recommendations 58-60, and the secured creditor or its representative and their addresses;
- (b) A description of the asset covered by the notice, satisfying the standard provided in recommendation 63;
- (c) The duration of the registration as provided in recommendation 66; and
- (d) If the State determines that the maximum monetary amount for which the security right may be enforced is helpful to facilitate subordinate lending, a statement of that maximum amount.

[Note to the Commission: The Commission may wish to consider three additional recommendations (entitled, for example, erroneous notices) along the following lines:

“X. The law should provide that an error in the identifier or address of the secured creditor or its representative does not render a registered notice ineffective as long as it has not seriously misled a reasonable searcher.

“Y. The law should provide that an error in the description of certain encumbered assets does not render a registered notice ineffective with respect to other assets sufficiently described.

²⁷ As to verification of the registrant's identity, see recommendation 54, subparagraph (d).

“Z. The law should provide that an error in the information provided in the notice with respect to the duration of registration and the maximum amount secured, if applicable, does not render a registered notice ineffective.”]

Sufficiency of grantor identifier

58. The law should provide that registration of a notice is effective only if it provides the grantor’s correct identifier or, in the case of an incorrect statement, if the notice would be retrieved by a search of the registry record under the correct identifier.

59. The law should provide that, where the grantor is a natural person, the identifier of the grantor for the purposes of effective registration is the grantor’s name, as it appears in a specified official document. Where necessary, additional information, such as the birth date or identity card number, should be required to uniquely identify the grantor.

60. The law should provide that, where the grantor is a legal person, the grantor’s identifier for the purposes of effective registration is the name that appears in the document constituting the legal person.

Impact of a change of the grantor’s identifier on the effectiveness of the registration

61. The law should provide that, if, after a notice is registered, the identifier of the grantor used in the notice changes and as a result the grantor’s identifier does not meet the standard provided in recommendations 58-60, the secured creditor may amend the registered notice to provide the new identifier in compliance with that standard. If the secured creditor does not register the amendment within [a short period of time to be specified] days after the change, the security right is ineffective against:

(a) A competing security right with respect to which a notice is registered or which is otherwise made effective against third parties before registration of the amendment; and

(b) A person that buys, leases or licenses the encumbered asset before registration of the amendment.

Impact of a transfer of an encumbered asset on the effectiveness of the registration

62. The law should provide that, if, after a notice is registered, the grantor transfers the encumbered asset, the secured creditor may amend the registered notice to provide the identifier of the transferee. If the secured creditor does not register the amendment within [a short period of time to be specified] days after the transfer, the security right is ineffective against:

(a) A competing security right with respect to which a notice is registered or which is otherwise made effective against third parties before registration of the amendment; and

(b) A person that buys, leases or licenses the encumbered asset before registration of the amendment.

Sufficiency of description of assets covered by a notice

63. The law should provide that a description of the encumbered assets in the notice that meets the requirements of recommendation 14, subparagraph (d) (chapter IV on the creation of a security right), is sufficient.

When notice may be registered

64. The law should provide that a notice with respect to a security right may be registered before or after creation of the security right, or conclusion of the security agreement.

One notice sufficient for multiple security rights arising from multiple agreements between the same parties

65. The law should provide that registration of a single notice is sufficient to achieve third-party effectiveness of one or more than one security right, whether they exist at the time of registration or are created thereafter, or whether they arise from one or more than one security agreement between the same parties.

Duration and extension of the registration of a notice

66. The law should either specify the duration of the effectiveness of the registration of a notice or permit the registrant to specify the duration in the notice at the time of registration and extend it at any time before its expiry. In either case, the secured creditor should be entitled to extend the period of effectiveness by submitting a notice of amendment to the registry at any time before the expiry of the effectiveness of the notice. If the law specifies the time of effectiveness of the registration, the extension period resulting from the registration of the notice of amendment should be an additional period equal to the initial period. If the law permits the registrant to specify the duration of the effectiveness of the registration, the extension period should be that specified in the notice of amendment.

Time of effectiveness of registration of a notice or amendment

67. The law should provide that registration of a notice or an amendment becomes effective when the information contained in the notice or the amendment is entered into the registry records so as to be available to searchers of the registry record.

Authority for registration

68. The law should provide that registration of a notice is ineffective unless authorized by the grantor in writing. The authorization may be given before or after registration. A written security agreement is sufficient to constitute authorization for the registration. The effectiveness of registration does not depend on the identity of the registrant.

Cancellation or amendment of notice

69. The law should provide that, if no security agreement has been concluded, the security right has been extinguished by full payment or otherwise, or a registered notice is not authorized by the grantor:

(a) The secured creditor is obliged to submit to the registry a notice of cancellation or amendment, to the extent appropriate, with respect to the relevant

registered notice not later than [a short period of time to be specified] days after the secured creditor's receipt of a written request of the grantor;

(b) The grantor is entitled to seek cancellation or appropriate amendment of the notice through a summary judicial or administrative procedure;

(c) The grantor is entitled to seek cancellation or appropriate amendment of the notice, as provided in subparagraph (b), even before the expiry of the period provided in subparagraph (a), provided that there are appropriate mechanisms to protect the secured creditor.

70. The law should provide that the secured creditor is entitled to submit to the registry a notice of cancellation or amendment, to the extent appropriate, with respect to the relevant registered notice at any time.

71. The law should provide that promptly after a registered notice has expired as provided in recommendation 66 or has been cancelled as provided in recommendation 69 or 70, the information contained in the notice should be removed from the records of the registry, which are accessible to the public. However, the information provided in the expired or cancelled or amended notice and the fact of expiration or cancellation or amendment should be archived so as to be capable of retrieval if necessary.

72. The law should provide that, in the case of an assignment of the secured obligation, the notice may be amended to indicate the name of the new secured creditor but the unamended notice remains effective.

VII. Priority of a security right

Purpose

The purpose of provisions on the priority of a security right is:

(a) To provide rules for determining the priority of a security right in an efficient and predictable way; and

(b) To facilitate transactions by which a grantor may create more than one security right in the same asset and thereby use the full value of its assets to obtain credit.

A. General recommendations

Priority between security rights in the same encumbered assets

73. The law should provide that priority between competing security rights in the same encumbered assets is determined as follows:

(a) As between security rights that were made effective against third parties by registration of a notice, priority is determined by the order of registration, regardless of the order of creation of the security rights;

(b) As between security rights that were made effective against third parties otherwise than by registration, priority is determined by the order of third-party effectiveness;

(c) As between a security right that was made effective against third parties by registration and a security right that was made effective against third parties otherwise than by registration, priority is determined (regardless of when creation occurs) by the order of registration or third-party effectiveness, whichever occurs first.

This recommendation is subject to the exceptions provided in recommendations 74, 75 and 84-106, as well as in recommendations 174-182 (chapter XI, unitary approach to acquisition financing).

Priority of a security or other right registered in a specialized registry or noted on a title certificate

74. The law should provide that a security right in an asset that is made effective against third parties by registration in a specialized registry or notation on a title certificate, as provided in recommendation 38 (chapter V on the third-party effectiveness of a security right), has priority as against:

(a) A security right in the same asset with respect to which a notice is registered in the general security rights registry or which is made effective against third parties by a method other than registration in a specialized registry or notation on a title certificate, regardless of the order; and

(b) A security right that is subsequently registered in the specialized registry or noted on a title certificate.

75. The law should provide that, if an encumbered asset is transferred, leased or licensed and, at the time of transfer, lease or licence, a security right in that asset is effective against third parties by registration in a specialized registry or notation on a title certificate, as provided in recommendation 38 (chapter V on the third-party effectiveness of a security right), the transferee, lessee or licensee takes its rights subject to the security right, except as provided in recommendations 76-78. However, if the security right has not been made effective against third parties by registration in a specialized registry or notation on a title certificate, a transferee, lessee or licensee takes its rights free of the security right.

Priority of rights of transferees, lessees and licensees of an encumbered asset

76. The law should provide that, if an encumbered asset is transferred, leased or licensed and a security right in that asset is effective against third parties at the time of the transfer, lease or licence, a transferee, lessee or licensee takes its rights subject to the security right except as provided in recommendations 75 and 77-79.

77. The law should provide that:

(a) A security right does not continue in an encumbered asset that the grantor sells or otherwise disposes of, if the secured creditor authorizes the sale or other disposition free of the security right; and

(b) The rights of a lessee or licensee of an encumbered asset are not affected by a security right if the secured creditor authorizes the grantor to lease or license the asset unaffected by the security right.

78. The law should provide that:

(a) A buyer of a tangible asset (other than a negotiable instrument or negotiable document) sold in the ordinary course of the seller's business takes free of a security right in the asset, provided that, at the time of the sale, the buyer does not have knowledge that the sale violates the rights of the secured creditor under the security agreement;

(b) The rights of a lessee of a tangible asset (other than a negotiable instrument or document) leased in the ordinary course of the lessor's business are not affected by a security right in the asset, provided that, at the time of the conclusion of the lease, the lessee does not have knowledge that the lease violates the rights of the secured creditor under the security agreement; and

(c) The rights of a non-exclusive licensee of an intangible asset licensed in the ordinary course of the licensor's business are not affected by a security right in the asset, provided that, at the time of the conclusion of the licence agreement, the licensee does not have knowledge that the licence violates the rights of the secured creditor under the security agreement.

79. The law should provide that, if a buyer acquires a right in an encumbered asset free of a security right, any person that subsequently acquires a right in the asset from the buyer also takes free of the security right. If the rights of a lessee or licensee are not affected by a security right, the rights of a sub-lessee or sub-licensee are also unaffected by the security right.

Priority of preferential claims

80. The law should limit, both in type and amount, preferential claims arising by operation of law that have priority as against security rights and, to the extent preferential claims exist, they should be described in the law in a clear and specific way.

Priority of rights of judgement creditors

81. The law should provide that, a security right has priority as against the rights of an unsecured creditor, unless the unsecured creditor, under other law, obtained a judgement or provisional court order against the grantor and took the steps necessary to acquire rights in assets of the grantor by reason of the judgement or provisional court order before the security right was made effective against third parties. The priority of the security right extends to credit extended by the secured creditor:

(a) Before the expiry of [a short period of time to be specified] days after the unsecured creditor notified the secured creditor that it had taken the steps necessary to acquire rights in the encumbered asset; or

(b) Pursuant to an irrevocable commitment (in a fixed amount or an amount to be fixed pursuant to a specified formula) of the secured creditor to extend credit, if the commitment was made before the unsecured creditor notified the secured creditor that it had taken the steps necessary to acquire rights in the encumbered asset.

This recommendation is subject to the exception in recommendation 179 (chapter XI, unitary approach to acquisition financing).

Priority of rights of persons providing services with respect to an encumbered asset

82. The law should provide that, if other law gives rights equivalent to security rights to a creditor that has provided services with respect to an encumbered asset (e.g. by repairing, storing or transporting it), such rights are limited to the asset in the possession of that creditor up to the reasonable value of the services rendered and have priority as against security rights in the asset that were made effective against third parties by one of the methods referred to in recommendation 32 or 34 (chapter V on the third-party effectiveness of a security right).

Priority of a supplier's reclamation right

83. The law should provide that, if other law provides that a supplier of tangible assets has the right to reclaim them, the right to reclaim is subordinate to a security right that was made effective against third parties before the supplier exercised its right.

Priority of a security right in an attachment to immovable property

84. The law should provide that a security right or any other right (such as the right of a buyer or lessee) in an attachment to immovable property that is created and made effective against third parties under immovable property law, as provided in recommendations 21 and 43 (chapter IV on the creation of a security right), has priority as against a security right in that attachment that is made effective against third parties by one of the methods referred to in recommendation 32 or 34 (chapter V on the third-party effectiveness of a security right).

85. The law should provide that a security right in a tangible asset that is an attachment to immovable property at the time the security right is made effective against third parties or that becomes an attachment to immovable property subsequently, which is made effective against third parties by registration in the immovable property registry as provided in recommendation 43 (chapter V on the third-party effectiveness of a security right), has priority as against a security right or any other right (such as the right of a buyer or lessor) in the related immovable property that is registered subsequently in the immovable property registry.

Priority of a security right in an attachment to movable assets

86. A security right or any other right (such as the right of a buyer or lessee) in an attachment to movable property that is made effective against third parties by registration in a specialized registry or by notation on a title certificate as provided in recommendation 42 (chapter V on the third-party effectiveness of a security right), has priority as against a security right or other right in the related movable property that is subsequently registered in the specialized registry or noted on the title certificate.

Priority of a security right in a mass or product

87. The law should provide that, if two or more security rights in the same tangible asset continue in a mass or product as provided in recommendation 22 (chapter IX on the creation of a security right), they retain the same priority as the

security rights in the asset had as against each other immediately before the asset became part of the mass or product.

88. The law should provide that, if security rights in separate tangible assets continue in the same mass or product and each security right is effective against third parties, the secured creditors are entitled to share in the aggregate maximum value of their security rights in the mass or product according to the ratio of the value of the respective security rights. For purposes of this formula, the maximum value of a security right is the lesser of the value determined pursuant to recommendation 22 (chapter IV on the creation of a security right) and the amount of the secured obligation.

89. The law should provide that an acquisition security right in a separate tangible asset that continues in a mass or product and is effective against third parties has priority as against a security right granted by the same grantor in the mass or product.

Irrelevance of knowledge of the existence of a security right

90. The law should provide that knowledge of the existence of a security right on the part of a competing claimant does not affect priority.²⁸

Subordination

91. The law should provide that a competing claimant entitled to priority may at any time subordinate its priority unilaterally or by agreement in favour of any other existing or future competing claimant.

Impact of continuity in third-party effectiveness on priority

92. The law should provide that, for the purpose of recommendation 73, the priority of a security right is not affected by a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

93. The law should provide that, if a security right is covered by a registered notice or made effective against third parties and subsequently there is a period during which the security right is neither covered by a registered notice nor effective against third parties, the priority of the security right dates from the earliest time thereafter when the security right is either covered by a registered notice or made effective against third parties.

Priority of security rights securing existing and future obligations

94. The law should provide that, subject to recommendation 81, the priority of a security right extends to all secured obligations, regardless of the time when they are incurred.

²⁸ As for the impact of knowledge that a transaction violates the rights of a secured creditor, see recommendations 78, 99, subparagraph (b), 102 and 103.

Extent of priority

95. The law should provide that, if a State implements recommendation 57, subparagraph (d) (chapter VI on the registry system), the priority of the security right is limited to the maximum amount set out in the registered notice.

Application of priority rules to a security right in after-acquired assets

96. The law should provide that, for purposes of recommendation 73, subparagraphs (a) and (c), the priority of a security right extends to all encumbered assets covered by the registered notice, irrespective of whether they are acquired by the grantor or come into existence before, at or after the time of registration.

Application of priority rules to a security right in proceeds

97. The law should provide that, for purposes of recommendation 73, the time of third-party effectiveness or the time of registration of a notice as to a security right in an encumbered asset is also the time of third-party effectiveness or registration as to a security right in its proceeds.

B. Asset-specific recommendations**Priority of a security right in a negotiable instrument**

98. The law should provide that a security right in a negotiable instrument that is made effective against third parties by possession of the instrument, as provided in recommendation 37 (chapter V on the third-party effectiveness of a security right), has priority as against a security right in a negotiable instrument that is made effective against third parties by any other method.

99. The law should provide that a security right in a negotiable instrument that is made effective against third parties by a method other than possession of the instrument is subordinate to the rights of a secured creditor, buyer or other transferee (by agreement) that:

(a) Qualifies as a protected holder under the law governing negotiable instruments; or

(b) Takes possession of the negotiable instrument and gives value in good faith and without knowledge that the transfer is in violation of the rights of the secured creditor under the security agreement.

Priority of a security right in a right to payment of funds credited to a bank account

100. The law should provide that a security right in a right to payment of funds credited to a bank account that is made effective against third parties by control, as provided in recommendation 49 (chapter V on the third-party effectiveness of a security right), has priority as against a competing security right that is made effective against third parties by any other method. If a depositary bank concludes control agreements with more than one secured creditor, priority among those secured creditors is determined according to the order in which the control agreements are concluded. If the depositary bank is the secured creditor, its security

right has priority as against any other security right (including a security right made effective against third parties by a control agreement with the depositary bank even if the depositary bank's security right is later in time) except a security right of a secured creditor that obtains control by becoming the account holder.

101. The law should provide that a right under other law of a depositary bank to set off obligations owed to the depositary bank by the grantor against the grantor's right to payment of funds credited to a bank account has priority as against a security right except a security right of a secured creditor that obtains control by becoming the account holder.

102. The law should provide that, in the case of a transfer of funds from a bank account initiated by the grantor, the transferee of the funds takes free of a security right in the right to payment of funds credited to the bank account, unless the transferee has knowledge that the transfer violates the rights of the secured creditor under the security agreement. This recommendation does not adversely affect the rights of transferees of funds from bank accounts under other law.

Priority of a security right in money

103. The law should provide that a person that obtains possession of money that is subject to a security right takes the money free of the security right, unless that person has knowledge that the transfer violates the rights of the secured creditor under the security agreement. This recommendation does not adversely affect the rights of holders of money under other law.

Priority of a security right in a right to receive the proceeds under an independent undertaking

104. The law should provide that a security right in a right to receive the proceeds under an independent undertaking that is made effective against third parties by control has priority as against a security right made effective against third parties pursuant to recommendation 48 (chapter V on the third-party effectiveness of a security right). If control has been achieved by acknowledgement and inconsistent acknowledgements have been given to more than one secured creditor by a person, priority among those security rights is determined according to the order in which the acknowledgements were given.

Priority of a security right in a negotiable document or tangible assets covered by a negotiable document

105. The law should provide that a security right in a negotiable document and the tangible assets covered thereby is subordinate to any superior rights acquired by a transferee of the document under the law governing negotiable documents.

106. The law should provide that a security right in a tangible asset made effective against third parties by possession of a negotiable document has priority as against a competing security right made effective against third parties by another method. This rule does not apply to a security right in an asset other than inventory if the security right of the secured creditor not in possession of the negotiable document was made effective against third parties before the earlier of:

- (a) The time that the asset became covered by the negotiable document; and

(b) The time when an agreement was made between the grantor and the secured creditor in possession of the negotiable document providing for the asset to be covered by a negotiable document so long as the asset became so covered within [a short period of time to be specified] days from the date of the agreement.

VIII. Rights and obligations of the parties to a security agreement

Purpose

The purpose of provisions on the rights and obligations of the parties is to enhance efficiency of secured transactions and reduce transaction costs and potential disputes by:

(a) Providing mandatory rules relating to the rights and obligations of the party in possession of the encumbered asset;

(b) Providing non-mandatory rules relating to the rights and obligations of the parties that apply in cases where the parties have not addressed these matters in their agreement; and

(c) Providing non-mandatory rules to serve as a drafting aid or checklist of issues the parties may wish to address in their agreement.

A. General recommendations

Rights and obligations of the parties to a security agreement²⁹

107. The law should provide that the mutual rights and obligations of the parties are determined by:

(a) The terms and conditions set forth in that agreement, including any rules or general conditions referred to therein;

(b) Any usage to which they have agreed; and

(c) Unless otherwise agreed, any practices they have established between themselves.

Mandatory rules

108. The law should provide that the party in possession of an encumbered asset must take reasonable steps to preserve the asset and its value.

109. The secured creditor must return an encumbered asset in its possession if the security right has been extinguished by full payment or otherwise.³⁰

²⁹ For recommendation 107, see article 11 of the United Nations Assignment Convention.

³⁰ For the secured creditor's duty to cancel a registered notice, see recommendation 69, chapter VI on the registry system.

Non-mandatory rules

110. The law should provide that, unless otherwise agreed, the secured creditor is entitled:

- (a) To be reimbursed for reasonable expenses incurred for the preservation of an encumbered asset in its possession;
- (b) To make reasonable use of an encumbered asset in its possession and to apply the revenues it generates to the payment of the secured obligation; and
- (c) To inspect an encumbered asset in the possession of the grantor.

B. Asset-specific recommendations**Representations of the assignor³¹**

111. With respect to an assignment of a contractual receivable, the law should provide that:

- (a) Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of conclusion of the contract of assignment that:
 - (i) The assignor has the right to assign the receivable;
 - (ii) The assignor has not previously assigned the receivable to another assignee; and
 - (iii) The debtor of the receivable does not and will not have any defences or rights of set-off;
- (b) Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor of the receivable has, or will have, the ability to pay.

Right to notify the debtor of the receivable

112. The law should provide that:

- (a) Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor of the receivable notification of the assignment and a payment instruction, but after notification has been sent only the assignee may send such an instruction; and
- (b) Notification of the assignment or a payment instruction sent in breach of any agreement referred to in subparagraph (a) of this recommendation is not ineffective for the purposes of recommendation 117 (chapter IX on the rights and obligations of third-party obligors) by reason of such breach. However, nothing in this recommendation affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

³¹ For recommendations 111-113, see articles 12-14 of the United Nations Assignment Convention.

Right to payment

113. The law should provide that:

(a) As between the assignor and the assignee, unless otherwise agreed and whether or not notification of the assignment has been sent:

(i) If payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and tangible assets returned in respect of the assigned receivable;

(ii) If payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and also to tangible assets returned to the assignor in respect of the assigned receivable; and

(iii) If payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and also to tangible assets returned to such person in respect of the assigned receivable;

(b) The assignee may not retain more than the value of its right in the receivable.

IX. Rights and obligations of third-party obligors**Purpose**

The purpose of provisions on the rights and obligations of third-party obligors is to enhance the efficiency of secured transactions where the encumbered asset is a payment obligation or other performance owed by a third party to the grantor by:

(a) Providing rules relating to rights and obligations of parties to the assignment of a receivable and the protection of the debtor of the receivable;

(b) Providing rules to ensure the coherence of secured transactions law with other law relating to the rights and obligations arising under negotiable instruments and negotiable documents; and

(c) Providing rules to ensure the coherence of the secured transactions regime with other law governing the rights and obligations of depositary banks, and of the guarantor/issuer, confirmer or nominated person under an independent undertaking.

A. Rights and obligations of the debtor of the receivable³²**Protection of the debtor of the receivable**

114. The law should provide that:

(a) Except as otherwise provided in this law, an assignment does not, without the consent of the debtor of the receivable, affect the rights and obligations of the debtor of the receivable, including the payment terms contained in the original contract; and

³² For recommendations 115-120, see articles 16-21 of the United Nations Assignment Convention.

(b) A payment instruction may change the person, address or account to which the debtor of the receivable is required to make payment, but may not change:

- (i) The currency of payment specified in the original contract; or
- (ii) The State specified in the original contract in which payment is to be made to a State other than that in which the debtor of the receivable is located.

Notification of the assignment

115. The law should provide that:

(a) Notification of the assignment or a payment instruction is effective when received by the debtor of the receivable if it is in a language that is reasonably expected to inform the debtor of the receivable about its contents. It is sufficient if notification of the assignment or a payment instruction is in the language of the original contract;

(b) Notification of the assignment or a payment instruction may relate to receivables arising after notification; and

(c) Notification of a subsequent assignment constitutes notification of all prior assignments.

Discharge of the debtor of the receivable by payment

116. The law should provide that:

(a) Until the debtor of the receivable receives notification of the assignment, it is entitled to be discharged by paying in accordance with the original contract;

(b) After the debtor of the receivable receives notification of the assignment, subject to subparagraphs (c)-(h) of this recommendation, it is discharged only by paying the assignee or, if otherwise instructed in the notification of the assignment or subsequently by the assignee in a writing received by the debtor of the receivable, in accordance with such payment instruction;

(c) If the debtor of the receivable receives more than one payment instruction relating to a single assignment of the same receivable by the same assignor, it is discharged by paying in accordance with the last payment instruction received from the assignee before payment;

(d) If the debtor of the receivable receives notification of more than one assignment of the same receivable made by the same assignor, it is discharged by paying in accordance with the first notification received;

(e) If the debtor of the receivable receives notification of one or more subsequent assignments, it is discharged by paying in accordance with the notification of the last of such subsequent assignments;

(f) If the debtor of the receivable receives notification of the assignment of a part of or an undivided interest in one or more receivables, it is discharged by paying in accordance with the notification or in accordance with this recommendation as if the debtor of the receivable had not received the notification. If the debtor of the receivable pays in accordance with the notification, it is discharged only to the extent of the part or undivided interest paid;

(g) If the debtor of the receivable receives notification of the assignment from the assignee, it is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment from the initial assignor to the initial assignee and any intermediate assignment have been made and, unless the assignee does so, the debtor of the receivable is discharged by paying in accordance with this recommendation as if the notification from the assignee had not been received. Adequate proof of an assignment includes but is not limited to any writing emanating from the assignor and indicating that the assignment has taken place; and

(h) This recommendation does not affect any other ground on which payment by the debtor of the receivable to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor of the receivable.

Defences and rights of set-off of the debtor of the receivable

117. The law should provide that:

(a) In a claim by the assignee against the debtor of the receivable for payment of the assigned receivable, the debtor of the receivable may raise against the assignee all defences and rights of set-off arising from the original contract, or any other contract that was part of the same transaction, of which the debtor of the receivable could avail itself as if the assignment had not been made and such claim were made by the assignor;

(b) The debtor of the receivable may raise against the assignee any other right of set-off, provided that it was available to the debtor of the receivable at the time notification of the assignment was received by the debtor of the receivable; and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, defences and rights of set-off that the debtor of the receivable may raise pursuant to recommendation 24, subparagraph (b), or recommendation 25, subparagraph (e) (chapter IV on the creation of a security right), against the assignor for breach of an agreement limiting in any way the assignor's right to make the assignment are not available to the debtor of the receivable against the assignee.

Agreement not to raise defences or rights of set-off

118. The law should provide that:

(a) The debtor of the receivable may agree with the assignor in a writing signed by the debtor of the receivable not to raise against the assignee the defences and rights of set-off that it could raise pursuant to recommendation 117. Such an agreement precludes the debtor of the receivable from raising against the assignee those defences and rights of set-off;

(b) The debtor of the receivable may not waive defences:

(i) Arising from fraudulent acts on the part of the assignee; or

(ii) Based on the incapacity of the debtor of the receivable; and

(c) Such an agreement may be modified only by an agreement in a writing signed by the debtor of the receivable. The effect of such a modification as against the assignee is determined by recommendation 119, subparagraph (b).

Modification of the original contract

119. The law should provide that:

(a) An agreement concluded before notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is effective as against the assignee, and the assignee acquires corresponding rights;

(b) An agreement concluded after notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is ineffective as against the assignee unless:

(i) The assignee consents to it; or

(ii) The receivable is not fully earned by performance and either the modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification; and

(c) Subparagraphs (a) and (b) of this recommendation do not affect any right of the assignor or the assignee arising from breach of an agreement between them.

Recovery of payments

120. The law should provide that failure of the assignor to perform the original contract does not entitle the debtor of the receivable to recover from the assignee a sum paid by the debtor of the receivable to the assignor or the assignee.

B. Rights and obligations of the obligor under a negotiable instrument

121. The law should provide that a secured creditor's rights in a negotiable instrument are, as against a person obligated on the negotiable instrument, subject to the law governing negotiable instruments.

C. Rights and obligations of the depositary bank

122. The law should provide that:

(a) The creation of a security right in a right to payment of funds credited to a bank account does not affect the rights and obligations of the depositary bank without its consent; and

(b) Any rights of set-off that the depositary bank may have under other law are not impaired by reason of any security right that the depositary bank may have in a right to payment of funds credited to a bank account.

123. The law should provide that it does not obligate a depositary bank:

(a) To pay any person other than a person that has control with respect to funds credited to a bank account;

(b) To respond to requests for information about whether a control agreement or a security right in its own favour exists and whether the grantor retains the right to dispose of the funds credited in the account; or

(c) To enter into a control agreement.

D. Rights and obligations of the guarantor/issuer, confirmer or nominated person of an independent undertaking

124. The law should provide that:

(a) A secured creditor's right in the right to receive the proceeds under an independent undertaking is subject to the rights, under the law and practice governing independent undertakings, of a guarantor/issuer, confirmer or nominated person and of any other beneficiary named in the undertaking or to whom a transfer of the right to draw has been effected;

(b) The rights of a transferee of an independent undertaking are not affected by a security right in the right to receive the proceeds under the independent undertaking acquired from the transferor or any prior transferor; and

(c) The independent rights of a guarantor/issuer, confirmer, nominated person or transferee of an independent undertaking are not adversely affected by reason of any security right it may have in the right to receive proceeds under the independent undertaking.

125. The law should provide that a guarantor/issuer, confirmer or nominated person is not obligated to pay any person other than a confirmer, a nominated person, a named beneficiary, an acknowledged transferee of the independent undertaking or an acknowledged assignee of the right to receive the proceeds under an independent undertaking.

126. The law should provide that, if a secured creditor obtains control by becoming an acknowledged assignee of the proceeds under an independent undertaking, the secured creditor has the right to enforce the acknowledgement against the guarantor/issuer, confirmer or nominated person that made the acknowledgement.

E. Rights and obligations of the issuer of a negotiable document

127. The law should provide that a secured creditor's rights in a negotiable document are, as against the issuer or any other person obligated on the negotiable document, subject to the law governing negotiable documents.

X. Enforcement of a security right

Purpose

The purpose of provisions on enforcement of security rights is to provide:

(a) Clear, simple and efficient methods for the enforcement of security rights after debtor default;

(b) Methods designed to maximize the net amount realized from the encumbered assets, for the benefit of the grantor, the debtor or any other person that owes payment of the secured obligation, the secured creditor and other creditors with a right in the encumbered assets; and

(c) Expeditious judicial and, subject to appropriate safeguards, non-judicial methods for the secured creditor to exercise its rights.

A. General recommendations

General standard of conduct in the context of enforcement

128. The law should provide that a person must enforce its rights and perform its obligations under the provisions on enforcement in good faith and in a commercially reasonable manner.

Limitations on party autonomy

129. The law should provide that the general standard of conduct provided in recommendation 128 cannot be waived unilaterally or varied by agreement at any time.

130. The law should provide that, subject to recommendation 129, the grantor and any other person that owes payment or other performance of the secured obligation may waive unilaterally or vary by agreement any of its rights under the provisions on enforcement, but only after default.

131. The law should provide that, subject to recommendation 129, the secured creditor may waive unilaterally or vary by agreement any of its rights under the provisions on enforcement.

132. The law should provide that a variation of rights by agreement may not adversely affect the rights of any person not a party to the agreement. A person challenging the effectiveness of the agreement on the ground that is inconsistent with recommendation 129, 130 or 131 has the burden of proof.

Liability

133. The law should provide that, if a person fails to comply with its obligations under the provisions on enforcement, it is liable for damages caused by such failure.

Judicial or other relief for non-compliance

134. The law should provide that the debtor, the grantor or any other interested person (e.g. a secured creditor with a lower priority ranking than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered assets) is entitled at any time to apply to a court or other authority for relief from the secured creditor's failure to comply with its obligations under the provisions on the enforcement of a security right.

Expeditious judicial proceedings

135. The law should provide for expeditious proceedings to accommodate situations where the secured creditor, the grantor or any other person that owes performance of the secured obligation, or claims to have a right in an encumbered asset, applies to a court or other authority with respect to the exercise of post-default rights.

Post-default rights of the grantor

136. The law should provide that, after default, the grantor is entitled to exercise one or more of the following rights:

(a) Pay in full the secured obligation and obtain a release from the security right of all encumbered assets, as provided in recommendation 137;

(b) Apply to a court or other authority for relief if the secured creditor is not complying with its obligations under the provisions of this law, as provided in recommendation 134;

(c) [Propose to the secured creditor, or] reject the proposal of the secured creditor[,] that the secured creditor acquire an encumbered asset in total or partial satisfaction of the secured obligation, as provided in recommendation 156; and

(d) Exercise any other right provided in the security agreement or any law.

Extinction of the security right after full satisfaction of the secured obligation

137. The law should provide that the debtor, the grantor or any other interested person (e.g. a secured creditor whose security right has lower priority than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered asset) is entitled to satisfy the secured obligation in full, including payment of the costs of enforcement up to the time of full satisfaction. This right may be exercised until the disposition, acceptance or collection of an encumbered asset by the secured creditor [or the conclusion of an agreement by the secured creditor to dispose of the encumbered asset]. If all commitments to extend credit have terminated, full satisfaction of the secured obligation extinguishes the security right in all encumbered assets, subject to any rights of subrogation in favour of the person satisfying the secured obligation.

[Note to the Commission: The Commission may wish to note that the bracketed text in this recommendation is intended to reflect the common practice of a secured creditor to enter into a contract to dispose of an encumbered asset before the actual disposition takes place.]

Post-default rights of the secured creditor

138. The law should provide that, after default, the secured creditor is entitled to exercise one or more of the following rights with respect to an encumbered asset:

(a) Obtain possession of a tangible encumbered asset, as provided in recommendations 143 and 144;

(b) Sell or otherwise dispose of, lease or license an encumbered asset, as provided in recommendations 145-146;

(c) Propose that the secured creditor acquire an encumbered asset in total or partial satisfaction of the secured obligation, as provided in recommendations 153-155;

(d) Enforce its security right in an attachment, as provided in recommendations 162 and 163;

(e) Collect on or otherwise enforce a security right in an encumbered asset that is a receivable, negotiable instrument, right to payment of funds credited to a bank account or right to receive the proceeds under an independent undertaking, as provided in recommendations 164-172;

(f) Enforce rights under a negotiable document, as provided in recommendation 173; and

(g) Exercise any other right provided in the security agreement (except to the extent inconsistent with the provisions of this law) or any law.

Judicial and extrajudicial methods of exercising post-default rights

139. The law should provide that, after default, the secured creditor may exercise its rights provided in recommendation 138 either by applying to a court or other authority, or without application to a court or other authority. Extrajudicial exercise of the secured creditor's rights is subject to the general standard of conduct provided in recommendation 128 and the requirements provided in recommendations 144-148 with respect to extrajudicial obtaining of possession and disposition of an encumbered asset.

Cumulative post-default rights

140. The law should provide that the exercise of one post-default right does not prevent the exercise of another right, except to the extent that the exercise of one right has made the exercise of another right impossible.

Post-default rights with respect to the secured obligation

141. The law should provide that the exercise of a post-default right with respect to an encumbered asset does not prevent the exercise of a post-default right with respect to the obligation secured by that asset, and vice versa.

Right of higher-ranking secured creditor to take over enforcement

142. The law should provide that, if a secured creditor has commenced enforcement by taking any of the actions described in the recommendations on enforcement or a judgement creditor has taken the steps referred to in recommendation 81 (chapter VII on the priority of a security right) a secured creditor whose security right has priority as against that of the enforcing secured creditor or the enforcing judgement creditor is entitled to take control of the enforcement process at any time before final disposition or acquisition [or collection] of an encumbered asset [or the conclusion of an agreement by the secured creditor to dispose of the encumbered asset]. The right to take control includes the right to enforce by any method available under the recommendations in this chapter.

[Note to the Commission: The Commission may wish to delete the first bracketed text if it decides to adopt the new recommendation set out in the note after recommendation 164. The second bracketed text is intended to conform this recommendation to the bracketed text in recommendation 137.]

Secured creditor's right to possession of an encumbered asset

143. The law should provide that after default the secured creditor is entitled to possession of a tangible encumbered asset.

Extrajudicial obtaining of possession of an encumbered asset

144. The law should provide that the secured creditor may elect to obtain possession of a tangible encumbered asset without applying to a court or other authority only if:

(a) The grantor has consented in the security agreement to the secured creditor obtaining possession without applying to a court or other authority;

(b) The secured creditor has given the grantor and any person in possession of the encumbered asset notice of default and of the secured creditor's intent to obtain possession without applying to a court or other authority; and

(c) At the time the secured creditor seeks to obtain possession of the encumbered asset the grantor does not object.

[Note to the Commission: The Commission may wish to consider whether subparagraph (c) should also refer to the person in possession of the encumbered asset, and not just to the grantor.]

The Commission may also wish to consider whether, if at the time the secured creditor seeks to obtain possession of the encumbered asset the grantor and any other person in possession affirmatively consents, the requirements of subparagraphs (a), (b) and (c) do not need to be met. This result could be implemented by the addition in a separate sentence of text along the following lines:

"The requirements of subparagraphs (a), (b) and (c) of this recommendation need not be met if, at the time the secured creditor seeks to obtain possession of the encumbered asset, the grantor and any other person in possession of the encumbered asset affirmatively consent".]

Extrajudicial disposition of an encumbered asset

145. The law should provide that, after default, a secured creditor is entitled, without applying to a court or other authority, to sell or otherwise dispose of, lease or license an encumbered asset to the extent of the grantor's rights in the encumbered asset. Subject to the standard of conduct provided in recommendation 128, a secured creditor that elects to exercise this right may select the method, manner, time, place and other aspects of the disposition, lease or licence.

Advance notice of extrajudicial disposition of an encumbered asset

146. The law should provide that, after default, the secured creditor must give notice of its intention to sell or otherwise dispose of, lease or licence an encumbered asset without applying to a court or other authority. The notice need not be given if the encumbered asset is perishable, may decline in value speedily or is of a kind sold on a recognized market.

147. The law should provide rules ensuring that the notice referred to in recommendation 146 can be given in an efficient, timely and reliable way so as to protect the grantor or other interested parties, while, at the same time, avoiding having a negative effect on the secured creditor's remedies and the potential net realization value of the encumbered assets.

148. With respect to the notice referred to in recommendation 146, the law should:

(a) Provide that the notice must be given to:

(i) The grantor, the debtor and any other person that owes performance of the secured obligation;

(ii) Any person with rights in the encumbered asset that, more than [to be specified] days before the sending of the notice by the secured creditor to the grantor, notifies in writing the secured creditor of those rights;

(iii) Any other secured creditor that, more than [to be specified] days before the notice is sent to the grantor, registered a notice with respect to a security right in the encumbered asset that is indexed under the identifier of the grantor; and

(iv) Any other secured creditor that was in possession of the encumbered asset at the time when the enforcing secured creditor took possession of the asset;

(b) State the manner in which the notice must be given, its timing and its minimum contents, including whether the notice must contain an accounting of the amount then owed and a reference to the right of the debtor or the grantor to obtain the release of the encumbered assets from the security right as provided in recommendation 137; and

(c) Provide that the notice must be in a language that is reasonably expected to inform its recipients about its contents.

[Note to the Commission: The Commission may wish to consider whether subparagraph (c) should include language along the following lines:

“It is sufficient if the notice is in the language of the security agreement being enforced”.

Addition of this text would conform subparagraph (c) to article 16, paragraph 1, of the United Nations Assignment Convention, on which subparagraph (c) is based. The result would be that, if the recipients of the notice are located in several countries, it would be enough if the notice is in the language of the relevant security agreement.]

Distribution of proceeds of disposition of an encumbered asset

149. The law should provide that, in the case of extrajudicial disposition of an encumbered asset [or collection of a receivable, negotiable instrument or other obligation], the enforcing secured creditor must apply the net proceeds of its enforcement (after deducting costs of enforcement) to the secured obligation. Except as provided in recommendation 150, the enforcing secured creditor must pay any surplus remaining to any subordinate competing claimant that, prior to any distribution of the surplus, notified the enforcing secured creditor of the subordinate competing claimant's claim, to the extent of the amount of that claim. The balance remaining, if any, must be remitted to the grantor.

[Note to the Commission: The Commission may wish to replace the bracketed text in this recommendation with a new recommendation set out in the note after recommendation 164.]

150. The law should also provide that, in the case of extrajudicial disposition of an encumbered asset, whether or not there is any dispute as to the entitlement of any competing claimant or as to the priority of payment, the enforcing secured creditor may, in accordance with generally applicable procedural rules, pay the surplus to a competent judicial or other authority or to a public deposit fund for distribution. The surplus should be distributed in accordance with the provisions of this law on priority.

151. The law should provide that distribution of the proceeds realized by a judicial disposition or other officially administered enforcement process is to be made

pursuant to the general rules of the State governing execution proceedings, but in accordance with the provisions of this law on priority.

152. The law should provide that [, unless otherwise agreed,] the debtor and any other person that owes payment of the secured obligation remain liable for any shortfall owing after application of the net proceeds of enforcement to the secured obligation. *[Note to the Commission: The Commission may wish to delete the bracketed text as recommendations 8 and 130 provide for party autonomy. If the bracketed text were retained, it might need to be added in all recommendations that are subject to party autonomy so as to avoid a negative implication as to the application of the principle of party autonomy.]*

Acquisition of encumbered assets in satisfaction of the secured obligation

153. The law should provide that, after default, the secured creditor may propose in writing to acquire one or more of the encumbered assets in total or partial satisfaction of the secured obligation.

154. With respect to the proposal referred to in recommendation 153, the law should:

(a) Provide that the proposal must be sent to:

(i) The grantor, the debtor and any other person that owes payment or other performance of the secured obligation (e.g. a guarantor);

(ii) Any person with rights in the encumbered asset that, more than [to be specified] days before the proposal is sent by the secured creditor to the grantor, has notified in writing the secured creditor of those rights;

(iii) Any other secured creditor that, more than [to be specified] days before the proposal is sent by the secured creditor to the grantor, registered a notice with respect to a security right in the encumbered asset indexed under the identifier of the grantor; and

(iv) Any other secured creditor that was in possession of the encumbered asset at the time the secured creditor took possession; and

(b) Provide that the proposal must specify the amount owed as of the date the proposal is sent and the amount of the obligation that is proposed to be satisfied by acquiring the encumbered asset.

155. The law should provide that the secured creditor may acquire the encumbered asset as provided in recommendation 153, unless the secured creditor receives an objection in writing from any person entitled to receive a proposal under recommendation 154 within [a short period of time to be specified] days, after the proposal is sent. In the case of a proposal for the acquisition of the encumbered asset in partial satisfaction, affirmative consent by each addressee of the proposal is necessary.

[Note to the Commission: The Commission may wish to note that this recommendation was aligned with the preceding recommendations by referring to the secured creditor “receiving” an objection in writing.]

156. The law should provide that the grantor may make a proposal such as that referred to in recommendation 153 and if the secured creditor accepts it, the secured creditor must proceed as provided in recommendations 154 and 155.

Rights acquired through judicial disposition

157. The law should provide that, if a secured creditor disposes of an encumbered asset through a judicial or other officially administered process, the rights acquired by the transferee are determined by the general rules of the State governing execution proceedings.

Rights acquired through extrajudicial disposition

158. The law should provide that, if a secured creditor sells or otherwise disposes of an encumbered asset without applying to a court or other authority, in accordance with this law, a person that acquires the grantor's right in the asset takes the asset subject to rights that have priority as against the security right of the enforcing secured creditor, but free of rights of the enforcing secured creditor and any competing claimant whose right has a lower priority than that of the enforcing secured creditor. The same rule applies to rights in an encumbered asset acquired by a secured creditor that has acquired the asset in total or partial satisfaction of the secured obligation.

159. The law should provide that, if a secured creditor leases or licenses an encumbered asset without applying to a court or other authority, in accordance with the law, a lessee or licensee is entitled to the benefit of the lease or licence during its term, except as against rights that have priority over the right of the enforcing secured creditor.

160. The law should provide that, if the secured creditor sells or otherwise disposes of, leases or licenses the encumbered asset not in accordance with the recommendations in this chapter, a good faith acquirer, lessee or licensee of the encumbered asset acquires the rights or benefits described in recommendations 158 and 159.

Intersection of movable and immovable property enforcement regimes

161. The law should provide that:

(a) The secured creditor may elect to enforce a security right in an attachment to immovable property in accordance with the recommendations in this chapter or the law governing enforcement of encumbrances in immovable property; and

(b) If an obligation is secured by both movable and immovable property of a grantor, the secured creditor may elect to enforce:

(i) The security right in the movable property under the provisions on enforcement of a security right in movable assets recommendations in this chapter and the encumbrance in the immovable property under the law governing enforcement of encumbrances in immovable property; or

(ii) Both rights under the law governing enforcement of encumbrances in immovable property.

Enforcement of a security right in attachments

162. The law should provide that a secured creditor with a security right in an attachment to immovable property is entitled to enforce its security right only if it has priority as against competing rights in the immovable property. A creditor with a competing right in immovable property that has lower priority is entitled to pay off the obligation secured by the security right of the enforcing secured creditor in the attachment. The enforcing secured creditor is liable for any damage to the immovable property caused by the act of removal other than any diminution in its value attributable solely to the absence of the attachment.

163. [The law should provide that a secured creditor with a security right in an attachment to a movable asset is entitled to enforce its security right in the attachment. A creditor with higher priority is entitled to take control of the enforcement process, as provided in recommendation 142. A creditor with lower priority may pay off the obligation secured by the security right of the enforcing secured creditor in the attachment. The enforcing secured creditor is liable for any damage to the movable asset caused by the act of removal other than any diminution in its value attributable solely to the absence of the attachment.]

[Note to the Commission: The Commission may wish to consider and approve this recommendation, which was added to address the issue of the enforcement of a security right in an attachment to movable property.]

B. Asset-specific recommendations

Application of the chapter on enforcement to outright transfers of receivables

164. The law should provide that the recommendations in this chapter do not apply to the collection or other enforcement of a receivable assigned by an outright transfer with the exception of:

- (a) Recommendation 128 in the case of an outright transfer with recourse; and
- (b) Recommendations 165 and 166.

[Note to the Commission: The Commission may wish to replace the bracketed text in recommendation 142 with text along the following lines:

“The law should provide that, in the case of collection or other enforcement of a receivable, negotiable instrument or enforcement of a claim, the enforcing secured creditor must apply the net proceeds of its enforcement (after deducting costs of enforcement) to the secured obligation. The enforcing secured creditor must pay any surplus remaining to the competing claimants that, prior to any distribution of the surplus, notified the enforcing secured creditor of the competing claimant’s claim, to the extent of that claim. The balance remaining, if any, must be remitted to the grantor.”

The second sentence of this text is intended to give some protection to a secured creditor with a higher priority status than that of the enforcing secured creditor (“senior secured creditor”). Collection of receivables by a junior secured creditor should be distinguished from disposition of encumbered assets by a junior

secured creditor. A senior secured creditor is protected because its security right in the asset disposed of continues (see recommendation 158).]

Enforcement of a security right in a receivable

165. The law should provide that, in the case of a receivable assigned by an outright transfer, subject to recommendations 114-120 (chapter IX on the rights and obligations of third-party obligors), the assignee has the right to collect or otherwise enforce the receivable. In the case of a receivable assigned by way of security, the assignee is entitled, subject to recommendations 114-120, to collect or otherwise enforce the receivable after default, or before default with the agreement of the assignor.

166. The law should provide that the assignee's right to collect or otherwise enforce a receivable includes the right to collect or otherwise enforce any personal or property right that secures payment of the receivable.

Enforcement of a security right in a negotiable instrument

167. The law should provide that, after default or before default with the agreement of the grantor, the secured creditor is entitled, subject to recommendation 121 (chapter IX on the rights and obligations of third-party obligors), to collect or otherwise enforce a negotiable instrument that is an encumbered asset against a person obligated on that instrument.

168. The law should provide that the secured creditor's right to collect or otherwise enforce a negotiable instrument includes the right to collect or otherwise enforce any personal or property right that secures payment of the negotiable instrument.

Enforcement of a security right in a right to payment of funds credited to a bank account

169. The law should provide that, after default or before default with the agreement of the grantor, a secured creditor with a security right in a right to payment of funds credited to a bank account is entitled, subject to recommendations 122 and 123 (chapter IX on the rights and obligations of third-party obligors), to collect or otherwise enforce its right to payment of the funds.

170. The law should provide that a secured creditor that has control is entitled, subject to recommendations 122 and 123 (chapter IX on the rights and obligations of third-party obligors), to enforce its security right without having to apply to a court or other authority.

171. The law should provide that a secured creditor that does not have control is entitled, subject to recommendations 122 and 123 (chapter IX on the rights and obligations of third-party obligors), to collect or otherwise enforce the security right in the right to payment of funds credited to a bank account against the depositary bank only pursuant to a court order, unless the depositary bank agrees otherwise.

Enforcement of a security right in a right to receive the proceeds under an independent undertaking

172. The law should provide that, after default or before default with the agreement of the grantor, a secured creditor with a security right in a right to receive

the proceeds under an independent undertaking is entitled, subject to recommendations 124-126 (chapter IX on the rights and obligations of third-party obligors), to collect or otherwise enforce its right in the right to receive the proceeds under the independent undertaking.

Enforcement of a security right in a negotiable document or tangible assets covered by a negotiable document

173. The law should provide that, after default or before default with the agreement of the grantor, the secured creditor is entitled, subject to recommendation 127 (chapter IX on the rights and obligations of third-party obligors), to enforce a security right in a negotiable document or the tangible assets covered by the document.

XI. Acquisition financing

Option A: Unitary approach to acquisition financing*

Purpose

The purpose of provisions on acquisition security rights is:

- (a) To recognize the importance and facilitate the use of acquisition financing as a source of affordable credit, especially for small- and medium-sized businesses;
- (b) To provide for equal treatment of all providers of acquisition financing; and
- (c) To facilitate secured transactions in general by creating transparency with respect to acquisition financing.

An acquisition security right as a security right

174. The law should provide that an acquisition security right is a security right. Thus, all the recommendations governing security rights, including those on creation, third-party effectiveness (except as provided in recommendation 175), registration, enforcement and the law applicable to a security right, apply to acquisition security rights. The recommendations on priority also apply (except as provided in recommendations 176-182).

Third-party effectiveness and priority of an acquisition security right in consumer goods

175. The law should provide that an acquisition security right in consumer goods is effective against third parties upon its creation and, except as provided in recommendation 177, has priority as against a competing non-acquisition security right created by the grantor.

* A State may adopt option A (unitary approach to acquisition financing), i.e. recommendations 174-183, or option B (non-unitary approach to acquisition financing), i.e. recommendations 184-199. The recommendations outside this chapter are generally applicable except to the extent modified by the recommendations in this chapter.

Priority of an acquisition security right in a tangible asset

176. The law should provide that, except as provided in recommendation 177:

Alternative A**

(a) An acquisition security right in a tangible asset other than inventory or consumer goods has priority as against a competing non-acquisition security right created by the grantor (even if a notice with respect to that security right was registered in the general security rights registry before registration of a notice with respect to the acquisition security right), provided that:

- (i) The acquisition secured creditor retains possession of the asset; or
- (ii) A notice with respect to the acquisition security right is registered in the general security rights registry not later than [specify a short time period, such as 20 or 30 days] after the grantor obtains possession of the asset;

(b) An acquisition security right in inventory has priority as against a competing non-acquisition security right created by the grantor (even if that security right became effective against third parties before the acquisition security right became effective against third parties), provided that:

- (i) The acquisition secured creditor retains possession of the inventory; or

- (ii) Before delivery of the inventory to the grantor:

a. A notice with respect to the acquisition security right is registered in the general security rights registry; and

b. A secured creditor with an earlier-registered non-acquisition security right created by the grantor in inventory of the same kind is notified by the acquisition secured creditor that it has or intends to acquire an acquisition security right. The notice must describe the inventory sufficiently to enable the non-acquisition secured creditor to identify the inventory that is the object of the acquisition security right;

(c) A notice, sent pursuant to subparagraph (b)(ii) b. of this recommendation, may cover acquisition security rights under multiple transactions between the same parties without the need to identify each transaction. The notice is sufficient only for security rights in tangible assets of which the grantor obtains possession within a period of [specify time, such as five years] after the notice is given.

Alternative B

an acquisition security right in a tangible assets other than consumer goods has priority as against a competing non-acquisition security right created by the grantor (even if a notice of that security right was registered in the general security rights registry before registration of a notice of the acquisition security right), provided that:

- (a) The acquisition secured creditor retains possession of the asset; or

** A State may adopt alternative A or alternative B of recommendation 176.

(b) A notice relating to the acquisition security right is registered in the general security rights registry not later than [a short time period, such as 20 or 30 days, to be specified] after the grantor obtains possession of the asset.

[Note to the Commission: The Commission may wish to note that alternative A draws a distinction between tangible assets other than inventory and inventory, while alternative B does not make such a distinction. Such alternatives are provided to implement the decision of the Commission to parallel the language included in recommendation 189 so as to ensure functional equivalence of the unitary and the non-unitary approaches (see A/62/17 (Part I), para. 63). In view of the fact that retention of title and financial lease rights are typically non-possessory rights (and in any case the general recommendations about third-party effectiveness obtained by possession remain applicable, the Commission may wish to consider whether subparagraphs (a)(i) and (b)(i) of alternative A and subparagraph (a) of alternative B are necessary. The same question arises with respect to recommendation 189 below.]

Priority of a security right registered in a specialized registry or noted on a title certificate

177. The law should provide that the priority of an acquisition security right under recommendation 176 does not override the priority of a security right or other right registered in a specialized registry or noted on a title certificate under recommendation 74 (chapter VII on the priority of a security right).

Priority between competing acquisition security rights

178. The law should provide that the priority between competing acquisition security rights is determined according to the general priority rules applicable to non-acquisition security rights, unless one of the acquisition security rights is an acquisition security right of a supplier that was made effective against third parties within the period specified in recommendation 176, in which case the supplier's acquisition security right has priority as against all competing acquisition security rights.

Priority of an acquisition security right as against the right of a judgement creditor

179. The law should provide that an acquisition security right that is made effective against third parties within the period specified in recommendation 176 has priority as against the rights of an unsecured creditor that would otherwise have priority under recommendation 81 (chapter VII on the priority of a security right).

Priority of an acquisition security right in an attachment to immovable property as against an earlier registered encumbrance in the immovable property

180. The law should provide that an acquisition security right in a tangible asset that becomes an attachment to immovable property has priority as against third parties with existing rights in the immovable property (other than an encumbrance securing a loan financing the construction of the immovable property), provided that notice of the acquisition security right is registered in the immovable property

registry not later than [a short time period, such as 20-30 days, to be specified] days after the asset becomes an attachment.

Priority of an acquisition security right in proceeds of tangible assets other than inventory or consumer goods

181. The law should provide that an acquisition security right in proceeds of tangible assets other than inventory or consumer goods has the same priority as the acquisition security right in those assets.

Priority of a security right in proceeds of inventory

182. The law should provide that a security right in proceeds of inventory has the same priority as the acquisition security right in that inventory, except where the proceeds take the form of receivables, negotiable instruments, rights to payment of funds credited to a bank account or rights to receive the proceeds under an independent undertaking. However, this priority is conditional on the acquisition secured creditor notifying secured creditors that, before the proceeds arise, registered a notice with respect to a security right in assets of the same kind as the proceeds.

[Note to the Commission: The Commission may wish to note that, to parallel the recommendation suggested in the note to recommendation 196, which does not draw a distinction between inventory and tangible assets other than inventory, an alternative to this recommendation could be added here (entitled “Priority of an acquisition security right in proceeds of a tangible asset”) along the following lines:

“The law should provide that, if an acquisition security right in tangible assets is effective against third parties, the security right in proceeds has the priority of a non-acquisition security right.”]

Acquisition security right as a security right in insolvency proceedings

183. The law should provide that, in the case of insolvency proceedings with respect to the debtor, the provisions that apply to security rights apply also to acquisition security rights.

[Note to the Commission: The Commission may wish to note that this recommendation was moved from chapter XIV on the impact of insolvency on a security right to avoid the implication that the characterization of acquisition security rights as security rights is a matter of insolvency law (an implication that would be inconsistent with the UNCITRAL Insolvency Guide; see, for example, footnote 6 to recommendation 35 of the UNCITRAL Insolvency Guide). The Commission may wish to consider deleting this recommendation and adding to recommendation 174 on the equivalence of an acquisition security right to a security right the word “insolvency”. As a result, the recommendations on security rights would apply to acquisition security rights within or outside insolvency (only the priority recommendations would be modified for acquisition security rights).]

Option B: Non-unitary approach to acquisition financing*

Purpose (non-unitary approach)

The purpose of provisions on acquisition financing, including acquisition security rights, retention-of-title rights and financial lease rights, is:

- (a) To recognize the importance and facilitate the use of acquisition financing as a source of affordable credit especially for small- and medium-sized businesses;
- (b) To provide for equal treatment of all providers of acquisition financing; and
- (c) To facilitate secured transactions in general by creating transparency with respect to acquisition financing.

Methods of acquisition financing

184. The law should provide that:

- (a) The regime of acquisition security rights in the context of the non-unitary approach is identical to that adopted in the context of the unitary approach;
- (b) All creditors, both suppliers and lenders, may acquire an acquisition security right in conformity with the regime governing acquisition security rights;
- (c) Acquisition financing based on retention-of-title rights and financial lease rights may be provided in accordance with recommendation 185; and
- (d) A lender may acquire the benefit of a retention-of-title right and a financial lease right through an assignment or subrogation.

Equivalence of a retention-of-title right and a financial lease right to an acquisition security right

185. The law should provide that the rules governing acquisition financing produce functionally equivalent economic results regardless of whether the creditor's right is a retention-of-title right, a financial lease right or an acquisition security right.

Effectiveness of a retention-of-title right and a financial lease right

186. The law should provide that a retention-of-title right or a financial lease right in a tangible asset is not effective unless the sale or lease agreement is concluded in or evidenced by a writing that in conjunction with the course of conduct between the parties indicates the seller's or the lessor's intent to retain ownership. The writing must exist not later than the time when the buyer or lessee obtains possession of the asset.

* A State may adopt option A (unitary approach to acquisition financing), i.e. recommendations 174-183, or option B (non-unitary approach to acquisition financing), i.e. recommendations 184-199.

Right of buyer or lessee to create a security right

187. The law should provide that a buyer or lessee may create a security right in a tangible asset that is the object of a retention-of-title right or a financial lease right. The security right encumbers the asset only to the extent of the asset's value in excess of the amount owing to the seller or financial lessor.

Third-party effectiveness of a retention-of-title or financial lease right in consumer goods

188. The law should provide that a retention-of-title or a financial lease right in consumer goods is effective against third parties upon conclusion of the sale or lease provided that the right is evidenced in accordance with recommendation 186.

Third-party effectiveness of a retention-of-title right in a tangible asset

189. The law should provide that:

Alternative A*

(a) A retention-of-title right or a financial lease right in tangible asset other than inventory or consumer goods is effective against third parties only if:

- (i) The seller or lessor retains possession of the asset; or
- (ii) A notice relating to the right is registered in the general security rights registry not later than [a short time period, such as 20 or 30 days, to be specified] days after the buyer or lessee obtains possession of the asset;

(b) A retention-of-title right or a financial lease right in inventory is effective against third parties only if:

- (i) The seller or lessor retains possession of the inventory; or
- (ii) Before delivery of the inventory to the buyer or lessee:
 - a. A notice relating to the right is registered in the general security rights registry; and
 - b. A secured creditor with an earlier registered non-acquisition security right created by the buyer or lessee in inventory of the same kind is notified by the seller or lessor of its intention to claim a retention-of-title right or a financial lease right. The notice should describe the inventory sufficiently to enable the secured creditor to identify the inventory that is the object of the retention-of-title right or the financial lease right;

(c) A notice sent pursuant to subparagraph (b)(ii) b. of this recommendation may cover retention-of-title rights and financial lease rights under multiple transactions between the same parties without the need to identify each transaction. The notice is effective only for rights in tangible assets of which the buyer or lessee obtains possession within a period of

* A State may adopt alternative A or alternative B of recommendation 189.

[a period of time, such as five years, to be specified] years after the notice is given.

Alternative B

a retention-of-title right or financial lease right in a tangible asset other than consumer goods is effective against third parties only if:

- (a) The seller or lessor retains possession of the asset; or
- (b) A notice relating to the right is registered in the general security rights registry not later than [a short time period, such as 20 or 30 days, to be specified] days after the buyer or lessee obtains possession of the asset.

The rule in this recommendation applies also to an acquisition security right in a tangible asset other than consumer goods.

[Note to the Commission: The Commission may wish to note that alternative A of this recommendation draws a distinction between inventory and tangible assets other than inventory, while alternative B does not draw such a distinction.]

One registration sufficient

190. The law should provide that registration of a single notice in the general security rights registry is sufficient to achieve third-party effectiveness of a retention-of-title right or a financial lease right under multiple transactions between the same parties, whether concluded before or after the registration, which involve tangible assets that fall within the description contained in the notice. The provisions on the registry system apply, with appropriate modifications as to terminology, to the registration of a retention-of-title right and a financial lease right.

Effect of failure to achieve third-party effectiveness of a retention-of-title right or a financial lease right

191. The law should provide that, if a retention-of-title right or a financial lease right is not effective against third parties, ownership of the asset as against third parties passes to the buyer or lessee, and the seller or lessor has a security right in the asset subject to the recommendations applicable to security rights.

Third-party effectiveness of a retention-of-title or financial lease right in an attachment to immovable property

192. The law should provide that a retention-of-title right or a financial lease right in a tangible asset that becomes an attachment to immovable property is effective against third parties with rights in the immovable property that are registered in the immovable property registry only if it is registered in the immovable property registry not later than [a short time period, such as 20-30 days, to be specified] days after the asset becomes an attachment.

Existence of a security right in proceeds of a tangible asset subject to a retention-of-title right or financial lease right

193. The law should provide that a seller or lessor with a retention-of-title right or financial lease right in a tangible asset has a security right in proceeds of the asset.

Third-party effectiveness of a security right in proceeds of a tangible asset subject to a retention-of-title right or financial lease right

194. The law should provide that:

(a) A security right in proceeds referred to in recommendation 193 is effective against third parties only if the proceeds are described in a generic way in the registered notice by which the retention-of-title right or financial lease right was made effective against third parties or the proceeds consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account;

(b) If the proceeds are not described in a generic way in the registered notice or do not consist of the types of asset referred to in subparagraph (a) of this recommendation, the security right in the proceeds is effective against third parties for [a short period of time to be specified] days after the proceeds arise and continuously thereafter, if it was made effective against third parties by one of the methods referred to in recommendation 32 or 34 (chapter V on the third-party effectiveness of a security right) before the expiry of that time period.

Priority of a security right in proceeds of a tangible asset other than inventory or consumer goods

195. The law should provide that, if a retention-of-title right or financial lease right is effective against third parties, the security right in proceeds referred to in recommendation 193 has priority as against another security right in the same assets.

Priority of a security right in proceeds of inventory

196. The law should provide that, if a retention-of-title right or financial lease right is effective against third parties, the security right in proceeds of inventory referred to in recommendation 193 has the same priority as a retention-of-title or financial lease right in that inventory, except where the proceeds take the form of receivables, negotiable instruments, rights to payment of funds credited to a bank account and rights to receive the proceeds under an independent undertaking. However, this priority is conditional on the seller or lessor notifying secured creditors that have registered a notice with respect to a security right in assets of the same kind as the proceeds before the proceeds arise.

[Note to the Commission: The Commission may wish to recall that, at its fortieth session (first part), it decided that a second alternative should be prepared with respect to the third-party effectiveness of a retention-of-title right and a financial lease right that would not make a distinction between inventory and assets other than inventory as to the original encumbered assets (see A/62/17 (Part I), paras. 63 and 89-90). These alternatives are reflected in recommendation 189.]

The Commission may wish to consider whether, to parallel the alternatives in recommendation 189, an alternative to recommendations 195 and 196 should be made available (entitled “Priority of a security right in proceeds of a tangible asset”) along the following lines:

“The law should provide that, if a retention-of-title right or financial lease right in tangible assets is effective against third parties, the security right in proceeds referred to in recommendation 193 has the priority of a

non-acquisition security right if the security right in the proceeds is effective against third parties under recommendation 194.

“The law should provide that the rule in the preceding recommendation applies also to the proceeds of a tangible asset subject to an acquisition security right.”

The Commission may wish to note that these recommendations provide that the security right in the proceeds of an asset that was subject to a retention-of-title or financial lease right has the priority of a non-acquisition security right (i.e. not a super-priority). This approach, which is in line with recommendation 196, is intended to avoid a negative impact on receivables financing and inventory financing, and is consistent with the approach taken in most jurisdictions in which retention of title is used.]

Enforcement of a retention-of-title right or a financial lease right

197. The law should provide that:

(a) Rules for the post-default enforcement of a retention-of-title right or a financial lease right in a tangible asset should deal with:

- (i) The manner in which the seller or lessor may obtain possession of the asset;
- (ii) Whether the seller or lessor is required to dispose of the asset and, if so, how;
- (iii) Whether the seller or lessor may retain any surplus; and
- (iv) Whether the seller or lessor has a claim for any deficiency against the buyer or lessee;

(b) The regime that applies to the post-default enforcement of a security right applies to the post-default enforcement of a retention-of-title right or a financial lease right except to the extent necessary to preserve the coherence of the regime applicable to sale and lease.

Retention-of-title or financial lease right in insolvency proceedings

198. The law should provide that, in the case of insolvency proceedings with respect to the debtor,

Alternative A*

the provisions that apply to security rights apply also to retention-of-title rights and financial lease rights.

Alternative B

the provisions of the law of the enacting State that apply to ownership rights of third parties apply also to retention-of-title rights and financial lease rights.

[Note to the Commission: The Commission may wish to note that this recommendation was moved from chapter XIV on the impact of insolvency on a

* A State may adopt alternative A or alternative B of recommendation 198.

security right to avoid the implication that the characterization of acquisition security rights as security rights or as ownership rights is a matter of insolvency law (an implication that would be inconsistent with the UNCITRAL Insolvency Guide; see, for example, footnote 6 to recommendation 35 of the UNCITRAL Insolvency Guide).

The Commission may also wish to note that the commentary will explain that such characterization is a matter of secured transactions law or general property law. The commentary will also explain that insolvency law defers to secured transactions law on these matters. The commentary will also explain that an acquisition security right is to be treated as a security right in the context of both the unitary and the non-unitary approach.

The commentary of chapter XIV on the impact of insolvency on a security right will explain that, under the UNCITRAL Insolvency Guide, if a retention-of-title right or financial lease right is, under law other than insolvency law, a security right, the recommendations of the UNCITRAL Insolvency Guide dealing with security rights apply. If a retention-of-title right or financial lease right is, under law other than insolvency law, an ownership right, the recommendations of the UNCITRAL Insolvency Guide dealing with third-party-owned assets apply.]

Law applicable to a retention-of-title right or a financial lease right

199. The law should provide that the conflict-of-laws provisions that apply to security rights apply also to retention-of-title rights and financial lease rights.

XII. Conflict of laws*

Purpose

The purpose of conflict-of-laws provisions is to determine the law applicable to: the creation, third-party effectiveness and priority of a security right; and the pre- and post-default rights and obligations of the grantor, secured creditor and third parties.³³

A. General recommendations

Law applicable to a security right in tangible assets

200. The law³⁴ should provide that, except as provided in recommendations 201-204 and 208, the law applicable to the creation, third-party effectiveness and priority of a security right in a tangible asset is the law of the State in which the asset is located.

201. The law should provide that the law applicable to the issues mentioned in recommendation 198 with respect to a security right in a tangible asset of a type

* The recommendations on the conflict of laws were prepared in close cooperation with the Permanent Bureau of the Hague Conference on Private International Law.

³³ Conflict-of-laws issues relating to acquisition financing and insolvency are addressed in chapters XI and XIV respectively.

³⁴ "Law" in this chapter means the secured transactions law or other law in which a State may include conflict-of-laws provisions.

ordinarily used in more than one State is the law of the State in which the grantor is located.

202. The law should provide that, if a tangible asset is subject to registration in a specialized registry or notation on a title certificate providing for registration or notation of a security right, the law applicable to issues mentioned in recommendation 200 is the law of the State under whose authority the registry is maintained or the title certificate is issued.

203. The law should provide that the law applicable to the priority of a security right in a tangible asset made effective against third parties by possession of a negotiable document as against a competing security right made effective against third parties by another method is the law of the State in which the document is located.

Law applicable to a security right in tangible assets in transit or to be exported

204. The law should provide that a security right in a tangible asset (other than a negotiable instrument or a negotiable document) in transit or to be exported from the State in which it is located at the time of the creation of the security right may be created and made effective against third parties under the law of the State of the initial location of the asset as provided in recommendation 200 or under the law of the State of its ultimate destination, provided that the asset reaches that State within [a short period of time to be specified] days after the time of creation of the security right.

Law applicable to a security right in intangible assets

205. The law should provide that the law applicable to the creation, effectiveness against third parties and priority of a security right in an intangible asset is the law of the State in which the grantor is located.

Law applicable to receivables arising from a sale, lease or security agreement relating to immovable property

206. The law should provide that the law applicable to the creation, third-party effectiveness and priority of a security right in a receivable arising from a sale, lease or security agreement relating to immovable property is the law of the State in which the assignor is located. However, the law applicable to a priority conflict involving the right of a competing claimant that is registered in an immovable property registry is the law of the State under whose authority the registry is maintained. The rule in the preceding sentence applies only if registration is relevant under that law to the priority of a security right in the receivable.

Law applicable to a security right in a right to payment of funds credited to a bank account

207. The law should provide that the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in a right to payment of funds credited to a bank account, as well as rights and duties of the depositary bank with respect to the security right, is

Alternative A*

the law of the State in which the bank that maintains the bank account has its place of business. If the bank has places of business in more than one State, reference should be made to the place where the branch maintaining the account is located.

Alternative B

the law of the State expressly stated in the account agreement as the State whose law governs the account agreement or, if the account agreement expressly provides that another law is applicable to all such issues, that other law. However, the law of the State determined pursuant to the preceding sentence applies only if the depositary bank has, at the time of the conclusion of the account agreement, an office in that State that is engaged in the regular activity of maintaining bank accounts. If the applicable law is not determined pursuant to the preceding two sentences, the applicable law is to be determined pursuant to default rules based on article 5 of the Hague Convention on the Law Applicable to Certain Rights in Respect of Securities Held with an Intermediary.³⁵

This recommendation is subject to the exception provided in recommendation 208.

Law applicable to the third-party effectiveness of a security right in specified types of asset by registration

208. The law should provide that, if the State in which the grantor is located recognizes registration as a method of achieving effectiveness against third parties of a security right in a negotiable instrument or a right to payment of funds credited to a bank account, the law of the State in which the grantor is located is the law applicable to the issue whether third-party effectiveness has been achieved by registration under the laws of that State.

Law applicable to a security right in the right to receive the proceeds under an independent undertaking

209. The law should provide that the law of the State specified in an independent undertaking of a guarantor/issuer, confirmer or nominated person is the law applicable to:

- (a) The rights and duties of the guarantor/issuer, confirmer or nominated person that has received a request for an acknowledgement or that has or may pay or otherwise give value under an independent undertaking;
- (b) The right to enforce a security right in the right to receive the proceeds under the independent undertaking against the guarantor/issuer, confirmer or nominated person; and
- (c) Except as provided in recommendation 209, the third-party effectiveness and priority of a security right in the right to receive the proceeds under the independent undertaking.

* A State may adopt alternative A or alternative B of recommendation 207.

³⁵ A State that adopts alternative B has to also adopt recommendations 223 and 224.

210. If the applicable law is not specified in the independent undertaking of the guarantor/issuer or confirmer, the law applicable to the issues referred to in recommendation 209 is the law of the State of the location of the branch or office of the guarantor/issuer or confirmer indicated in the independent undertaking. However, in the case of a nominated person, the applicable law is the law of the State of the location of the nominated person's branch or office that has or may pay or otherwise give value under the independent undertaking.

211. The law should provide that the law applicable to the creation and third-party effectiveness of a security right in a receivable, negotiable instrument or other claim, the payment or other performance of which is secured by an independent undertaking, is also the law applicable to the issue whether a security right in the right to receive the proceeds under the independent undertaking is created and made effective against third parties automatically as contemplated in recommendations 25 and 48 (chapter IV on the creation of a security right).

Law applicable to a security right in proceeds

212. The law should provide that:

(a) The law applicable to the creation of a security right in proceeds is the law applicable to the creation of the security right in the original encumbered asset from which the proceeds arose; and

(b) The law applicable to the third-party effectiveness and priority of a security right in proceeds is the law applicable to the third-party effectiveness and priority of a security right in an asset of the same kind as the proceeds.

Law applicable to the rights and obligations of the grantor and the secured creditor

213. The law should provide that the law applicable to the mutual rights and obligations of the grantor and the secured creditor arising from their security agreement is the law chosen by them and, in the absence of a choice of law, by the law governing the security agreement.

Law applicable to the rights and obligations of third-party obligors and secured creditors

214. The law should provide that the law applicable to a receivable, negotiable instrument or negotiable document also is the law applicable to:

(a) The relationship between the debtor of the receivable and the assignee of the receivable, between an obligor under a negotiable instrument and the holder of a security right in the instrument or between the issuer of a negotiable document and the holder of a security right in the document;

[Note to the Commission: The Commission may wish to delete the reference to the law applicable to the relationship between the issuer of a negotiable document and the holder of a security right in the document. For the secured transactions law to provide that this relationship is subject to the law of the State governing the negotiable document may result in an inconsistency with the approaches currently taken in the transport laws of different States. The matter may be better left to other law.]

(b) The conditions under which an assignment of the receivable, a security right in the negotiable instrument or a security right in the negotiable document may be invoked against the debtor of the receivable, the obligor on the negotiable instrument or the issuer of the negotiable document (including whether an anti-assignment agreement may be asserted by the debtor of the receivable, the obligor or the issuer); and

(c) Whether the obligations of the debtor of the receivable, the obligor on the negotiable instrument or the issuer of the negotiable document have been discharged.

Law applicable to enforcement of a security right

215. The law should provide that, subject to recommendation 220, the law applicable to issues relating to the enforcement of a security right:

(a) In a tangible asset is the law of the State where enforcement takes place; and

(b) In an intangible asset is the law applicable to the priority of the security right.

Meaning of “location” of the grantor

216. The law should provide that, for the purposes of the conflict-of-laws provisions, the grantor is located in the State in which it has its place of business. If the grantor has a place of business in more than one State, the grantor’s place of business is that place where the central administration of the grantor is exercised. If the grantor does not have a place of business, reference is to be made to the habitual residence of the grantor.

Relevant time for determining location

217. The law should provide that:

(a) Except as provided in subparagraph (b) of this recommendation, references to the location of the assets or of the grantor in the conflict-of-laws provisions refer, for creation issues, to the location at the time of the putative creation of the security right and, for third-party effectiveness and priority issues, to the location at the time the issue arises;

(b) If the rights of all competing claimants in an encumbered asset were created and made effective against third parties before a change in location of the asset or the grantor, references in the conflict-of-laws provisions to the location of the asset or of the grantor refer, with respect to third-party effectiveness and priority issues, to the location prior to the change in location.

Exclusion of renvoi

218. The law should provide that a reference in the conflict-of-laws provisions to “the law” of another State as the law applicable to an issue refers to the law in force in that State other than its conflict-of-laws provisions.

Public policy and internationally mandatory rules

219. The law should provide that:

(a) The application of the law determined under the conflict-of-laws provisions may be refused only if the effects of its application would be manifestly contrary to the public policy of the forum;

(b) The conflict-of-laws provisions do not prevent the application of those provisions of the law of the forum which, irrespective of conflict-of-laws provisions, must be applied even to international situations; and

(c) Subparagraphs (a) and (b) of this recommendation do not permit the application of the provisions of the law of the forum to the third-party effectiveness and priority of a security right.

Impact of commencement of insolvency proceedings on the law applicable to security rights

220. The law should provide that the commencement of insolvency proceedings does not displace the conflict-of-laws provisions that determine the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right (and, in the context of the non-unitary approach, a retention-of-title right and financial lease right). However, this provision should be subject to the effects on such issues of the application of the insolvency law of the State in which insolvency proceedings are commenced (*lex fori concursus*) to issues such as avoidance, treatment of secured creditors, ranking of claims or distribution of proceeds.³⁶

[Note to the Commission: The Commission may wish to note that this recommendation was moved from chapter XIV on the impact of insolvency on a security right and revised in order to avoid inconsistencies with the UNCITRAL Insolvency Guide, which deals with the law applicable to the validity and effectiveness of rights and claims, but not with the law applicable to the general priority or the enforcement of a security right. The commentary will explain that the first sentence of this recommendation introduces a generally acceptable conflict-of-laws rule, which is in line with the UNCITRAL Insolvency Guide as the second sentence preserves the application of the lex fori concursus.³⁷ In this context, the commentary will refer to the commentary of chapter XIV on the impact of insolvency on a security right explaining the conflict-of-laws recommendations of the UNCITRAL Insolvency Guide.]

B. Special recommendations when the applicable law is the law of a multi-unit State

221. The law should provide that in situations in which the law applicable to an issue is the law of a multi-unit State subject to recommendation 222, references to the law of a multi-unit State are to the law of the relevant territorial unit (as determined on the basis of the location of the grantor or of an encumbered asset

³⁶ See recommendation 31 of the UNCITRAL Insolvency Guide.

³⁷ See UNCITRAL Insolvency Guide, part two, para. 88, and recommendation 34, which provides that additional exceptions could be made to that principle as long as they are clearly set forth or noted in the insolvency law.

or otherwise under the conflict-of-laws provisions) and, to the extent applicable in that unit, to the law of the multi-unit State itself.

222. The law should provide that if, under its conflict-of laws provisions, the applicable law is that of a multi-unit State or one of its territorial units, the internal conflict-of laws provisions in force in the multi-unit State or territorial unit determine whether the substantive provisions of law of the multi-unit State or of a particular territorial unit of the multi-unit State apply.

223. The law should provide that, if the account holder and the depositary bank have chosen the law of a specified territorial unit of a multi-unit State as the law applicable to the account agreement:

(a) The references to “State” in the first sentence of recommendation 207 (alternative B) are to the territorial unit;

(b) The references to “that State” in the second sentence of recommendation 207 (alternative B) are to the multi-unit State itself.

224. The law should provide that the law of a territorial unit is the applicable law if:

(a) Under recommendations 207 (alternative B) and 223, the designated law is that of a territorial unit of a multi-unit State;

(b) Under the law of that State, the law of a territorial unit is the law applicable only if the depositary bank has an office within that territorial unit which satisfies the condition specified in the second sentence of recommendation 207 (alternative B); and

(c) The provision described in subparagraph (b) of this recommendation is in force at the time the security right in the bank account is created.³⁸

XIII. Transition

Purpose

The purpose of provisions on transition is to provide a fair and efficient transition to the law from the regime in force before the effective date of the law.

Effective date

225. The law should specify either a date subsequent to its enactment on which it comes into force (the “effective date”) or a mechanism by which the effective date may be determined. From its effective date, the law applies to all transactions within its scope, whether entered into before or after that date, except as provided below.

Inapplicability of the law to actions commenced before the effective date

226. The law should provide that it does not apply to a matter that is the subject of litigation or alternative binding dispute resolution proceedings that were commenced before the effective date. If enforcement of a security right has

³⁸ Only a State that adopts recommendation 207 (alternative B) needs to adopt recommendations 223 and 224.

commenced before the effective date, the enforcement may continue under the law in force before the effective date (“prior law”).

[Note to the Commission: The Commission may wish to consider whether initiation of a post-default remedy before the effective date of the new law should result in the application of the entire prior law to enforcement. If so, use of the word “must” rather than “may” is more appropriate.]

Creation of a security right

227. The law should provide that prior law determines whether a security right was created before the effective date.

Third-party effectiveness of a security right

228. The law should provide that a security right that is effective against third parties under prior law remains effective against third parties until the earlier of:

(a) The time it would cease to be effective against third parties under prior law; and

(b) The expiration of a period of [time period to be specified] months after the effective date (“the transition period”).

If the requirements for third-party effectiveness under this law are satisfied before third-party effectiveness would have ceased under the preceding sentence, third-party effectiveness is continuous.

Priority of a security right

229. Subject to recommendations 230 and 231, the law should provide that it governs the priority of a security right. The time when a security right referred to in recommendation 228 was made effective against third parties or became the subject of a registered notice under prior law is the time to be used in determining the priority of that right.

230. The law should provide that the priority of a security right is determined by prior law if:

(a) The security right and the rights of all competing claimants arose before the effective date; and

(b) The priority status of none of these rights has changed since the effective date.

231. The law should provide that the status of a security right has changed if:

(a) It was effective against third parties on the effective date in accordance with recommendation 228 and later ceased to be effective against third parties; or

(b) It was not effective against third parties on the effective date and later became effective against third parties.

[Note to the Commission: The Commission may wish to consider whether this recommendation should be deleted because it might not sufficiently explain the meaning of the word “status” and might even be misleading. The insertion of the word “priority” before the word “status” in this recommendation might be sufficient to address this matter, and the commentary could elaborate further.]

XIV. The impact of insolvency on a security right

A. *UNCITRAL Legislative Guide on Insolvency Law*:³⁹ definitions and recommendations

Definitions

12. (b) “Assets of the debtor”: property, rights and interests of the debtor, including rights and interests in property, whether or not in the possession of the debtor, tangible or intangible, movable or immovable, including the debtor’s interests in encumbered assets or in third-party-owned assets;

12. (r) “Financial contract”: any spot, forward, future, option or swap transaction involving interest rates, commodities, currencies, equities, bonds, indices or any other financial instrument, any repurchase or securities lending transaction, and any other transaction similar to any transaction referred to above entered into in financial markets and any combination of the transactions mentioned above;

[Note to the Commission: The Commission may wish to consider whether the definitions of the terms “financial contract” and “netting agreement” (drawn from United Nations Assignment Convention, article 5, subparagraphs (k) and (l) and reproduced in the Secured Transactions Guide) should also be reproduced here.]

12. (x) “*Lex fori concursus*”: the law of the State in which the insolvency proceedings are commenced;

12. (y) “*Lex rei sitae*”: the law of the State in which the asset is situated;

12. (z) “Netting”: the setting-off of monetary or non-monetary obligations under financial contracts;

12. (aa) “Netting agreement”: a form of financial contract between two or more parties that provides for one or more of the following:

(i) The net settlement of payments due in the same currency on the same date whether by novation or otherwise;

(ii) Upon the insolvency or other default by a party, the termination of all outstanding transactions at their replacement or fair market values, conversion of such sums into a single currency and netting into a single payment by one party to the other; or

(iii) The set-off of amounts calculated as set forth in subparagraph (ii) of this definition under two or more netting agreements.⁴⁰

12. (dd) “Party in interest”: any party whose rights, obligations or interests are affected by insolvency proceedings or particular matters in the insolvency proceedings, including the debtor, the insolvency representative, a creditor, an equity holder, a creditor committee, a government authority or any other person so affected. It is not intended that persons with remote or diffuse interests affected by the insolvency proceedings would be considered to be a party in interest;

³⁹ United Nations publication, E.05.V.10.

⁴⁰ United Nations Convention on the Assignment of Receivables in International Trade (United Nations publication, Sales No. E.04.V.14), article 5, subparagraph (1).

- 12. (ff) “Preference”: a transaction which results in a creditor obtaining an advantage or irregular payment;
- 12. (gg) “Priority”: the right of a claim to rank ahead of another claim where that right arises by operation of law;
- 12. (hh) “Priority claim”: a claim that will be paid before payment of general unsecured creditors;
- 12. (ii) “Protection of value”: measures directed at maintaining the economic value of encumbered assets and third-party-owned assets during the insolvency proceedings (in some jurisdictions referred to as “adequate protection”). Protection may be provided by way of cash payments, provision of security interests over alternative or additional assets or by other means as determined by a court to provide the necessary protection;
- 12. (pp) “Security interest”: a right in an asset to secure payment or other performance of one or more obligations.

Recommendations

[Note to the Commission: The Commission may wish to note that, in order to ensure that all relevant recommendations of the UNCITRAL Insolvency Guide are reproduced in this chapter, recommendations (34), (40-45), (63), (73), (79), (81)-(85), (87), (92), (146)-(149) and (178) of the UNCITRAL Insolvency Guide have been included below.]

Key objectives of an efficient and effective insolvency law

- (1) In order to establish and develop an effective insolvency law, the following key objectives should be considered:
 - (a) Provide certainty in the market to promote economic stability and growth;
 - (b) Maximize value of assets;
 - (c) Strike a balance between liquidation and reorganization;
 - (d) Ensure equitable treatment of similarly situated creditors;
 - (e) Provide for timely, efficient and impartial resolution of insolvency;
 - (f) Preserve the insolvency estate to allow equitable distribution to creditors;
 - (g) Ensure a transparent and predictable insolvency law that contains incentives for gathering and dispensing information; and
 - (h) Recognize existing creditors’ rights and establish clear rules for ranking of priority claims.
- (4) The insolvency law should specify that where a security interest is effective and enforceable under law other than the insolvency law, it will be recognized in insolvency proceedings as effective and enforceable.
- (7) In order to design an effective and efficient insolvency law, the following common features should be considered:
 - (a)-(d) ...

(e) Protection of the insolvency estate against the actions of creditors, the debtor itself and the insolvency representative, and where the protective measures apply to secured creditors, the manner in which the economic value of the security interest will be protected during the insolvency proceedings;

(f)-(r) ...

Law applicable to validity and effectiveness of rights and claims

(30) The law applicable to the validity and effectiveness of rights and claims existing at the time of the commencement of insolvency proceedings should be determined by the private international law rules of the State in which insolvency proceedings are commenced.

Law applicable in insolvency proceedings: *lex fori concursus*

(31) The insolvency law of the State in which insolvency proceedings are commenced (*lex fori concursus*) should apply to all aspects of the commencement, conduct, administration and conclusion of those insolvency proceedings and their effects. These may include, for example:

(a)-(i) ...

(j) Treatment of secured creditors;

(k)-(n) ...

(o) Ranking of claims;

(p)-(s) ...

Exceptions to the application of the law of the insolvency proceedings

...

(34) Any exceptions additional to recommendations 32 and 33 should be limited in number and be clearly set forth or noted in the insolvency law.

Assets constituting the insolvency estate

(35) The insolvency law should specify that the estate should include:

(a) Assets of the debtor,⁴¹ including the debtor's interest in encumbered assets and in third-party-owned assets;

(b) Assets acquired after commencement of the insolvency proceedings; and

(c) ...

Provisional measures⁴²

(39) The insolvency law should specify that the court may grant relief of a provisional nature, at the request of the debtor, creditors or third parties, where

⁴¹ Ownership of assets would be determined by reference to the relevant applicable law, where the term "assets" is defined broadly to include property, rights and interest of the debtor, including the debtor's rights and interests in third-party-owned assets.

⁴² These articles follow the corresponding articles of the UNCITRAL Model Law on Cross-Border Insolvency, see article 19 (see annex III of the *UNCITRAL Insolvency Guide*).

relief is needed to protect and preserve the value of the assets of the debtor⁴³ or the interests of creditors, between the time an application to commence insolvency proceedings is made and commencement of the proceedings,⁴⁴ including:

(a) Staying execution against the assets of the debtor, including actions to make security interests effective against third parties and enforcement of security interests;

(b)-(d) ...

Indemnification in connection with provisional measures

(40) The insolvency law may provide the court with the power to:

(a) Require the applicant for provisional measures to provide indemnification and, where appropriate, to pay costs or fees; or

(b) Impose sanctions in connection with an application for provisional measures.

Balance of rights between the debtor and insolvency representative

(41) The insolvency law should clearly specify the balance of the rights and obligations between the debtor and any insolvency representative appointed as a provisional measure. Between the time an application for commencement of insolvency proceedings is made and commencement of those proceedings, the debtor is entitled to continue to operate its business and to use and dispose of assets in the ordinary course of business, except to the extent restricted by the court.

Notice

(42) The insolvency law should specify that, unless the court limits or dispenses with the need to provide notice, appropriate notice is to be given to those parties in interest affected by:

(a) An application or court order for provisional measures (including an application for review and modification or termination); and

(b) A court order for additional measures applicable on commencement, unless the court limits or dispenses with the need to provide notice.

Ex parte provisional measures

(43) The insolvency law should specify that, where the debtor or other party in interest affected by a provisional measure is not given notice of the application for that provisional measure, the debtor or other party in interest affected by the provisional measures has the right, upon urgent application, to be heard promptly⁴⁵ on whether the relief should be continued.

⁴³ The reference to assets in paragraphs (a)-(c) is intended to be limited to assets that would be part of the insolvency estate once proceedings commence.

⁴⁴ The insolvency law should indicate the time of effect of an order for provisional measures, for example, at the time of the making of the order, retrospectively from the commencement of the day on which the order is made or some other specified time (see para. 44 of the *UNCITRAL Insolvency Guide*).

⁴⁵ Any time limit included in the insolvency law should be short in order to prevent the loss of value of the debtor's business.

Modification or termination of provisional measures

(44) The insolvency law should specify that the court, at its own motion or at the request of the insolvency representative, the debtor, a creditor or any other person affected by the provisional measures, may review and modify or terminate those measures.

Termination of provisional measures

(45) The insolvency law should specify that provisional measures terminate when:

- (a) An application for commencement is denied;
- (b) An order for provisional measures is successfully challenged under recommendation 43; and
- (c) The measures applicable on commencement take effect, unless the court continues the effect of the provisional measures.

Measures applicable on commencement

(46) The insolvency law should specify that, on commencement of insolvency proceedings:⁴⁶

- (a) Commencement or continuation of individual actions or proceedings⁴⁷ concerning the assets of the debtor, and the rights, obligations or liabilities of the debtor are stayed;
- (b) Actions to make security interests effective against third parties and to enforce security interests are stayed;⁴⁸
- (c) Execution or other enforcement against the assets of the estate is stayed;
- (d) The right of a counterparty to terminate any contract with the debtor is suspended;⁴⁹ and
- (e) The right to transfer, encumber or otherwise dispose of any assets of the estate is suspended.⁵⁰

⁴⁶ These measures would generally be effective as at the time of the making of the order for commencement.

⁴⁷ See UNCITRAL Model Law on Cross-Border Insolvency, article 20 (see annex III of the *UNCITRAL Insolvency Guide*). It is intended that the individual actions referred to in subparagraph (a) of recommendation 46 would also cover actions before an arbitral tribunal. It may not always be possible, however, to implement the automatic stay of arbitral proceedings, such as where the arbitration does not take place in the State but in a foreign location.

⁴⁸ If law other than the insolvency law permits those security interests to be made effective within certain specified time periods, it is desirable that the insolvency law recognize those periods and permit the interest to be made effective where the commencement of insolvency proceedings occurs before expiry of the specified time period. Where law other than the insolvency law does not include such time periods, the stay applicable on commencement would operate to prevent the security interest being made effective. (For further discussion see para. 32 of the *UNCITRAL Insolvency Guide*, and the UNCITRAL Legislative Guide on Secured Transactions.)

⁴⁹ See *UNCITRAL Insolvency Guide*, paragraphs 114-119. This recommendation is not intended to preclude the termination of a contract if the contract provides for a termination date that happens to fall after the commencement of insolvency proceedings.

⁵⁰ The limitation on the right to transfer, encumber or otherwise dispose of assets of the estate may be subject to an exception in those cases where the continued operation of the business by the

Duration of measures automatically applicable on commencement

(49) The insolvency law should specify that the measures applicable on commencement of insolvency proceedings remain effective throughout those proceedings until:

- (a) The court grants relief from the measures;⁵¹
- (b) In reorganization proceedings, a reorganization plan becomes effective;⁵²
or
- (c) In the case of secured creditors in liquidation proceedings, a fixed time period specified in the law expires,⁵³ unless it is extended by the court for a further period on a showing that:
 - (i) An extension is necessary to maximize the value of assets for the benefit of creditors; and
 - (ii) The secured creditor will be protected against diminution of the value of the encumbered asset in which it has a security interest.

Protection from diminution of the value of encumbered assets

(50) The insolvency law should specify that, upon application to the court, a secured creditor should be entitled to protection of the value of the asset in which it has a security interest. The court may grant appropriate measures of protection that may include:

- (a) Cash payments by the estate;
- (b) Provision of additional security interests; or
- (c) Such other means as the court determines.

Relief from measures applicable on commencement

(51) The insolvency law should specify that a secured creditor may request the court to grant relief from the measures applicable on commencement of insolvency proceedings on grounds that may include that:

- (a) The encumbered asset is not necessary to a prospective reorganization or sale of the debtor's business;
- (b) The value of the encumbered asset is diminishing as a result of the commencement of insolvency proceedings and the secured creditor is not protected against that diminution of value; and

debtor is authorized and the debtor can transfer, encumber or otherwise dispose of assets in the ordinary course of business.

⁵¹ Relief should be granted on the grounds included in recommendation 51 of the *UNCITRAL Insolvency Guide*.

⁵² A plan may become effective upon approval by creditors or following confirmation by the court, depending upon the requirements of the insolvency law (see *UNCITRAL Insolvency Guide*, chap. IV, paras. 54 and following).

⁵³ It is intended that the stay should apply to secured creditors only for a short period of time, such as between 30 and 60 days, and that the insolvency law should clearly state the period of application.

(c) In reorganization, a plan is not approved within any applicable time limits.

Power to use and dispose of assets of the estate

(52) The insolvency law should permit:

(a) The use and disposal of assets of the estate (including encumbered assets) in the ordinary course of business, except cash proceeds; and

(b) The use and disposal of assets of the estate (including encumbered assets) outside the ordinary course of business, subject to the requirements of recommendations 55 and 58.

Further encumbrance of encumbered assets

(53) The insolvency law should specify that encumbered assets may be further encumbered, subject to the requirements of recommendations 65-67.

Use of third-party-owned assets

(54) The insolvency law should specify that the insolvency representative may use an asset owned by a third party and in the possession of the debtor provided specified conditions are satisfied, including:

(a) The interests of the third party will be protected against diminution in the value of the asset; and

(b) The costs under the contract of continued performance of the contract and use of the asset will be paid as an administrative expense.

Ability to sell assets of the estate free and clear of encumbrances and other interests

(58) The insolvency law should permit the insolvency representative to sell assets that are encumbered or subject to other interest free and clear of that encumbrance and other interest, outside the ordinary course of business, provided that:

(a) The insolvency representative gives notice of the proposed sale to the holders of encumbrances or other interests;

(b) The holder is given the opportunity to be heard by the court where they object to the proposed sale;

(c) Relief from the stay has not been granted; and

(d) The priority of interests in the proceeds of sale of the asset is preserved.

Use of cash proceeds

(59) The insolvency law should permit the insolvency representative to use and dispose of cash proceeds if:

(a) The secured creditor with a security interest in those cash proceeds consents to such use or disposal; or

(b) The secured creditor was given notice of the proposed use or disposal and an opportunity to be heard by the court; and

(c) The interests of the secured creditor will be protected against diminution in the value of the cash proceeds.

Burdensome assets

(62) The insolvency law should permit the insolvency representative to determine the treatment of any asset that is burdensome to the estate. In particular, the insolvency law may permit the insolvency representative to relinquish a burdensome asset following the provision of notice to creditors and the opportunity for creditors to object to the proposed action, except that where a secured claim exceeds the value of the encumbered asset, and the asset is not required for a reorganization or sale of the business as a going concern, the insolvency law may permit the insolvency representative to relinquish the asset to the secured creditor without notice to other creditors.

Attracting and authorizing post-commencement finance

(63) The insolvency law should facilitate and provide incentives for post-commencement finance to be obtained by the insolvency representative where the insolvency representative determines it to be necessary for the continued operation or survival of the business of the debtor or the preservation or enhancement of the value of the estate. The insolvency law may require the court to authorize or creditors to consent to the provision of post-commencement finance.

Security for post-commencement finance

(65) The insolvency law should enable a security interest to be granted for repayment of post-commencement finance, including a security interest on an unencumbered asset, including an after-acquired asset, or a junior or lower priority security interest on an already encumbered asset of the estate.

(66) The law⁵⁴ should specify that a security interest over the assets of the estate to secure post-commencement finance does not have priority ahead of any existing security interest over the same assets unless the insolvency representative obtains the agreement of the existing secured creditor(s) or follows the procedure in recommendation 67.

(67) The insolvency law should specify that, where the existing secured creditor does not agree, the court may authorize the creation of a security interest having priority over pre-existing security interests provided specified conditions are satisfied, including:

- (a) The existing secured creditor was given the opportunity to be heard by the court;
- (b) The debtor can prove that it cannot obtain the finance in any other way; and
- (c) The interests of the existing secured creditor will be protected.⁵⁵

⁵⁴ This rule may be in a law other than the insolvency law, in which case the insolvency law should note the existence of the provision.

⁵⁵ See *UNCITRAL Insolvency Guide*, paragraphs 63-69.

Effect of conversion on post-commencement finance

(68) The insolvency law should specify that where reorganization proceedings are converted to liquidation, any priority accorded to post-commencement finance in the reorganization should continue to be recognized in the liquidation.⁵⁶

Automatic termination and acceleration clauses

(70) The insolvency law should specify that any contract clause that automatically terminates or accelerates a contract upon the occurrence of any of the following events is unenforceable as against the insolvency representative and the debtor:

(a) An application for commencement, or commencement, of insolvency proceedings;

(b) The appointment of an insolvency representative.⁵⁷

(71) The insolvency law should specify the contracts that are exempt from the operation of recommendation 70, such as financial contracts, or subject to special rules, such as labour contracts.

Continuation or rejection

(72) The insolvency law should specify that the insolvency representative may decide to continue the performance of a contract of which it is aware where continuation would be beneficial to the insolvency estate.⁵⁸ The insolvency law should specify that:

(a) The right to continue applies to the contract as a whole; and

(b) The effect of continuation is that all terms of the contract are enforceable.

(73) The insolvency law may permit the insolvency representative to decide to reject a contract.⁵⁹ The insolvency law should specify that the right to reject applies to the contract as a whole.

⁵⁶ The same order of priority may not necessarily be recognized. For example, post-commencement finance may rank in priority after administrative claims relating to the costs of the liquidation.

⁵⁷ This recommendation would apply only to those contracts where such clauses could be overridden (see commentary of the *UNCITRAL Insolvency Guide*, paras. 143-145, on exceptions) and is not intended to be exclusive, but to establish a minimum: the court should be able to examine other contractual clauses that would have the effect of terminating a contract on the occurrence of similar events.

⁵⁸ Provided the automatic stay on commencement of proceedings applies to prevent termination (pursuant to an automatic termination clause) of contracts with the debtor, all contracts should remain in place to enable the insolvency representative to consider the possibility of continuation, unless the contract has a termination date that happens to fall after the commencement of insolvency proceedings.

⁵⁹ An alternative to providing a power to reject contracts is the approach of those jurisdictions which provide that performance of a contract simply ceases unless the insolvency representative decides to continue its performance.

Continuation of contracts where the debtor is in breach

(79) The insolvency law should specify that where the debtor is in breach of a contract the insolvency representative can continue the performance of that contract, provided the breach is cured, the non-breaching counterparty is substantially returned to the economic position it was in before the breach and the estate is able to perform under the continued contract.

Performance prior to continuation or rejection

(80) The insolvency law should specify that the insolvency representative may accept or require performance from the counterparty to a contract prior to continuation or rejection of the contract. Claims of the counterparty arising from performance accepted or required by the insolvency representative prior to continuation or rejection of the contract should be payable as an administrative expense:

(a) If the counterparty has performed the contract the amount of the administrative expense should be the contractual price of the performance; or

(b) If the insolvency representative uses assets owned by a third party that are in the possession of the debtor subject to contract, that party should be protected against diminution of the value of those assets and have an administrative claim in accordance with subparagraph (a).

Damages for subsequent breach of a continued contract

(81) The insolvency law should specify that where a decision is made to continue performance of a contract, damages for the subsequent breach of that contract should be payable as an administrative expense.

Damages arising from rejection

(82) The insolvency law should specify that any damages arising from the rejection of a pre-commencement contract would be determined in accordance with applicable law and should be treated as an ordinary unsecured claim. The insolvency law may limit claims relating to the rejection of a long-term contract.

Assignment of contracts

(83) The insolvency law may specify that the insolvency representative can decide to assign a contract, notwithstanding restrictions in the contract, provided the assignment would be beneficial to the estate.

(84) Where the counterparty objects to assignment of a contract, the insolvency law may permit the court to nonetheless approve the assignment provided:

(a) The insolvency representative continues the contract;

(b) The assignee can perform the assigned contractual obligations;

(c) The counterparty is not substantially disadvantaged by the assignment;
and

(d) The debtor's breach under the contract is cured before assignment.

(85) The insolvency law may specify that, where the contract is assigned, the assignee will be substituted for the debtor as the contracting party with effect from

the date of the assignment and the estate will have no further liability under the contract.

Avoidable transactions⁶⁰

(87) The insolvency law should include provisions that apply retroactively and are designed to overturn transactions, involving the debtor or assets of the estate, and that have the effect of either reducing the value of the estate or upsetting the principle of equitable treatment of creditors. The insolvency law should specify the following types of transaction as avoidable:

(a) Transactions intended to defeat, delay or hinder the ability of creditors to collect claims where the effect of the transaction was to put assets beyond the reach of creditors or potential creditors or to otherwise prejudice the interests of creditors;

(b) Transactions where a transfer of an interest in property or the undertaking of an obligation by the debtor was a gift or was made in exchange for a nominal or less than equivalent value or for inadequate value that occurred at a time when the debtor was insolvent or as a result of which the debtor became insolvent (undervalued transactions); and

(c) Transactions involving creditors where a creditor obtained, or received the benefit of, more than its pro rata share of the debtor's assets that occurred at a time when the debtor was insolvent (preferential transactions).

Avoidance of security interests

(88) The insolvency law should specify that notwithstanding that a security interest is effective and enforceable under law other than the insolvency law, it may be subject to the avoidance provisions of insolvency law on the same grounds as other transactions.

Transactions exempt from avoidance actions

(92) The insolvency law should specify the transactions that are exempt from avoidance, including financial contracts.

Financial contracts

(103) Once the financial contracts of the debtor have been terminated, the insolvency law should permit counterparties to enforce and apply their security interest to obligations arising out of financial contracts. Financial contracts should be exempt from any stay under the insolvency law that applies to the enforcement of a security interest.

⁶⁰ The use of the word "transaction" in this section is intended to refer generally to the wide range of legal acts by which assets may be disposed of or obligations incurred including by way of a transfer, a payment, granting of a security interest, a guarantee, a loan or a release or an action to make a security interest effective against third parties and may include a composite series of transactions.

Participation by creditors

(126) The insolvency law should specify that creditors, both secured and unsecured, are entitled to participate in insolvency proceedings and identify what that participation may involve in terms of the functions that may be performed.

Right to be heard and to request review

(137) The insolvency law should specify that a party in interest has a right to be heard on any issue in the insolvency proceedings that affects its rights, obligations or interests. For example, a party in interest should be entitled:

- (a) To object to any act that requires court approval;
- (b) To request review by the court of any act for which court approval was not required or not requested; and
- (c) To request any relief available to it in insolvency proceedings.

Right of appeal⁶¹

(138) The insolvency law should specify that a party in interest may appeal from any order of the court in the insolvency proceedings that affects its rights, obligations or interests.

Voting mechanisms

(145) The insolvency law should establish a mechanism for voting on approval of the plan. The mechanism should address the creditors and equity holders who are entitled to vote on the plan; the manner in which the vote will be conducted, either at a meeting convened for that purpose or by mail or other means, including electronic means and the use of proxies; and whether or not creditors and equity holders should vote in classes according to their respective rights.

(146) The insolvency law should specify that a creditor or equity holder whose rights are modified or affected by the plan should not be bound to the terms of the plan unless that creditor or equity holder has been given the opportunity to vote on approval of the plan.

(147) The insolvency law should specify that where the plan provides that the rights of a creditor or equity holder or class of creditors or equity holders are not modified or affected by a plan, that creditor or equity holder or class of creditors or equity holders is not entitled to vote on approval of the plan.

(148) The insolvency law should specify that creditors entitled to vote on approval of the plan should be separately classified according to their respective rights and that each class should vote separately.

(149) The insolvency law should specify that all creditors and equity holders in a class should be offered the same treatment.

⁶¹ In accordance with the key objectives, the insolvency law should provide that appeals in insolvency proceedings should not have suspensive effect unless otherwise determined by the court, in order to ensure that insolvency can be addressed and resolved in an orderly, quick and efficient manner without undue disruption. Time limits for appeal should be in accordance with generally applicable law, but in insolvency need to be shorter than otherwise to avoid interrupting insolvency proceedings.

Reorganization plan**Approval by classes**

(150) Where voting on approval of the plan is conducted by reference to classes, the insolvency law should specify how the vote achieved in each class would be treated for the purposes of approval of the plan. Different approaches may be taken, including requiring approval by all classes or approval by a specified majority of the classes, but at least one class of creditors whose rights are modified or affected by the plan must approve the plan.

(151) Where the insolvency law does not require a plan to be approved by all classes, the insolvency law should address the treatment of those classes which do not vote to approve a plan that is otherwise approved by the requisite classes. That treatment should be consistent with the grounds set forth in recommendation 152.

Confirmation of an approved plan

(152) Where the insolvency law requires court confirmation of an approved plan, the insolvency law should require the court to confirm the plan if the following conditions are satisfied:

- (a) The requisite approvals have been obtained and the approval process was properly conducted;
- (b) Creditors will receive at least as much under the plan as they would have received in liquidation, unless they have specifically agreed to receive lesser treatment;
- (c) The plan does not contain provisions contrary to law;
- (d) Administrative claims and expenses will be paid in full, except to the extent that the holder of the claim or expense agrees to different treatment; and
- (e) Except to the extent that affected classes of creditors have agreed otherwise, if a class of creditors has voted against the plan, that class shall receive under the plan full recognition of its ranking under the insolvency law and the distribution to that class under the plan should conform to that ranking.

Challenges to approval (where there is no requirement for confirmation)

(153) Where a plan becomes binding on approval by creditors, without requiring confirmation by the court, the insolvency law should permit parties in interest, including the debtor, to challenge the approval of the plan. The insolvency law should specify criteria against which a challenge can be assessed, which should include:

- (a) Whether the grounds set forth in recommendation 152 are satisfied; and
- (b) Fraud, in which case the requirements of recommendation 154 should apply.

Secured claims

(172) The insolvency law should specify whether secured creditors are required to submit claims.

Unliquidated claims

(178) The insolvency law should permit unliquidated claims to be admitted provisionally, pending determination of the amount of the claim by the insolvency representative.

Valuation of secured claims

(180) The insolvency law should provide that the insolvency representative may determine the portion of a secured creditor's claim that is secured and the portion that is unsecured by valuing the encumbered asset.

Secured claims

(188) The insolvency law should specify that secured claims should be satisfied from the encumbered asset in liquidation or pursuant to a reorganization plan, subject to claims that are superior in priority to the secured claim, if any. Claims superior in priority to secured claims should be minimized and clearly set forth in the insolvency law. To the extent that the value of the encumbered asset is insufficient to satisfy the secured creditor's claim, the secured creditor may participate as an ordinary unsecured creditor.

B. Additional insolvency recommendations**Assets acquired after commencement of insolvency proceedings**

232. Except as provided in recommendation 233, the insolvency law should provide that an asset of the estate acquired after the commencement of insolvency proceedings is not subject to a security right created by the debtor before the commencement of the insolvency proceedings.

233. The insolvency law should provide that an asset of the estate acquired after the commencement of insolvency proceedings with respect to the debtor is subject to a security right created by the debtor before the commencement of the insolvency proceedings to the extent the asset is proceeds (whether cash or non-cash) of an encumbered asset that was an asset of the debtor before commencement.

Automatic termination clauses in insolvency proceedings

234. If the insolvency law provides that a contract clause that, upon the commencement of insolvency proceedings or the occurrence of another insolvency-related event, automatically terminates any obligation under a contract or accelerates the maturity of any obligation under a contract, is unenforceable as against the insolvency representative or the debtor, the insolvency law should also provide that such provision does not render unenforceable or invalidate a contract clause relieving a creditor from an obligation to make a loan or otherwise extend credit or other financial accommodations to the benefit of the debtor.

Third-party effectiveness of a security right in insolvency proceedings

235. The insolvency law should provide that, if a security right is effective against third parties at the time of the commencement of insolvency proceedings, action may be taken after the commencement of the insolvency proceedings to continue,

preserve or maintain the effectiveness against third parties of the security right to the extent and in the manner permitted under the secured transactions law.

Priority of a security right in insolvency proceedings

236. The insolvency law should provide that, if a security right is entitled to priority under law other than insolvency law, the priority continues unimpaired in insolvency proceedings except if, pursuant to insolvency law, another claim is given priority. Such exceptions should be minimal and clearly set forth in the insolvency law. This recommendation is subject to recommendation 188 of the *UNCITRAL Insolvency Guide*.

Effect of a subordination agreement in insolvency proceedings

237. The insolvency law should provide that, if a holder of a security right in an asset of the insolvency estate subordinates its priority unilaterally or by agreement in favour of any existing or future competing claimant, such subordination is binding in insolvency proceedings with respect to the debtor to the same extent that such subordination is effective under non-insolvency law.

Costs and expenses of maintaining value of the encumbered asset in insolvency proceedings

238. The insolvency law should provide that the insolvency representative is entitled to recover on a first priority basis from the value of an encumbered asset reasonable costs and expenses incurred by the insolvency representative in maintaining, preserving or increasing the value of the encumbered asset for the benefit of the secured creditor.

Valuation of encumbered assets in reorganization proceedings

239. The insolvency law should provide that, in determining the liquidation value of encumbered assets in reorganization proceedings, consideration should be given to the use of those assets and the purpose of the valuation. The liquidation value of those assets may be based on their value as part of a going concern.

C.	Recommendations.	

VII. Priority of a security right

A. General remarks

1. Introduction

(a) The concept of priority

1. The concept of priority is at the core of every successful secured transactions regime. It is the primary means by which States resolve conflicts among competing claimants to a debtor's property (for the definitions of the terms "priority" and "competing claimant", see Introduction, section B, Terminology). In a secured

transactions regime relating to movable assets, the concept is reflected in the set of principles and rules governing the extent to which a secured creditor may derive the economic benefit of its right in an encumbered asset in preference to any other competing claimant.

2. The logic and limits of the concept of priority are best understood against the backdrop of a State's general law of debtor-creditor relations. In some States, debtor-creditor law does not directly concern itself with the relationship among a debtor's various creditors; it only deals with the relationship between the creditor and its debtor. Upon default, a creditor can obtain a judgement against its debtor and then simply seize and sell its debtor's assets to pay the amount owed based on the judgement. In these States, the concept of priority (that is, where it is necessary to determine which of two or more claimants has the best right in an asset) arises only when a competing claimant contests a creditor's right to realize upon one or more of its debtor's assets. This might occur, for example, where a creditor seizes property found on its debtor's premises that may in fact belong to a third party.

3. In most States, however, debtor-creditor law is more broadly cast. It is also more explicit about how relationships among all of a debtor's creditors are to be regulated. Two general principles usually govern these relationships. First, the law typically provides that the assets of a debtor are the "common pledge" (sometimes known as the "sizeable estate") of its creditors: all a debtor's assets may be seized and sold to satisfy an obligation confirmed by a judgement in favour of any one creditor; however, if other creditors have also obtained a judgement and join the seizure, the proceeds of sale are used to satisfy the claims of all creditors. Second, in the event that there is not enough money generated by the sale of assets to pay all creditors in full, their claims are discounted proportionally and they are paid *pro rata* (i.e. creditors share equally in the proceeds of sale in proportion to the respective amounts of their claims).

4. Although both of the principles mentioned in the preceding paragraph are part of the law of most States, the debtor-creditor law in these States has evolved well beyond these principles so as to permit particular creditors to obtain a preference over other creditors. In other words, in most States, these two principles govern all debtor-creditor relationships only where one or more creditors have not contracted with their debtor for a preference. For example, in many States, creditors use devices such as retention-of-title or a sale with a right of redemption either to prevent certain assets from becoming part of, or to withdraw certain of a debtor's assets from, the common pledge otherwise available to all creditors. Having done so, these creditors can enhance the likelihood of receiving full payment of any obligations owed to them since they no longer have to share the economic value of those assets with competing claimants. In addition, in most States, certain creditors are authorized to obtain a preferential right in the distribution of the proceeds of a sale in realization of their claims. This preference can arise either by virtue of a legislatively determined preference (such as that often awarded to repairers of assets, unpaid sellers of assets and taxing authorities) or by entering into a contract to obtain a security right in specific assets of the debtor. In these cases, the right of certain creditors to be paid in preference to other creditors directly enhances the likelihood that the former creditors will receive full payment of their claims, since competing claimants will be paid only after the claims of preferred creditors have been fully satisfied. Sorting through the consequences of these techniques to obtain

a preference over competing claimants is one of the key purposes of rules governing priority.

5. States take different general approaches to creating a set of priority rules. In some States, the concept is given a rather narrow meaning. It is used only in reference to competitions between claimants that have obtained a preference through a disruption of the principle of creditor equality. In these States, competitions involving claimants whose claims are limited to one or more assets of the debtor (notably sellers that have retained title and subsequent acquirers of a debtor's assets) are not normally characterized as priority conflicts. They are resolved, first and foremost, by determining whether the claimant or the debtor has title to the asset in question. Moreover, in these States, questions of priority usually arise only when a creditor seeks to enforce its claim by realizing upon its debtor's assets; the concept of priority has no material relevance prior to that time.

6. In other States, the term priority has a broader scope. It is used in reference to any competition between claimants that have proprietary rights in the assets (or ostensible assets) of their debtor (even assets that the debtor may not actually yet own). For example, the conflict between a seller that has retained title to an asset, a third party to whom the debtor has purportedly sold the asset and a judgement creditor of the purchaser with a right in the asset is characterized as a priority conflict. Furthermore, in these States, the concept of priority governs the relationship between competing claimants even before a debtor is in default. A competition between the transferee of a claim and a creditor that is collecting the claim is viewed as a priority competition, even though the debtor may not yet be in default towards the collecting creditor.

7. The Guide recommends that States adopt a fully integrated (or unitary) approach to security rights as a general organizing framework. Except in connection with the non-unitary approach to acquisition financing (see chapter XI on acquisition financing), whether a creditor seeks to obtain a preference by means of either the principle of the common pledge or the principle of creditor equality, the particular means by which it does so will be a matter for secured transactions law (see chapter III, Basic approaches to security, recommendation 11). For this reason, in the present chapter the term priority is used in the broader sense just outlined. All competitions between a secured creditor and any other claimants that seek to enforce rights in an encumbered asset are treated as priority conflicts.

(b) The domain of priority: types of priority competition

8. Before examining why the concept of priority is so important (see paras. 12-16 below), the various situations in which questions of priority arise are discussed so as to explain the relevant context. Issues of priority typically arise in two main contexts, both of which presume that at least one of the competing claimants is a secured creditor.

9. Most commonly, priority issues become relevant at the point of enforcement of security rights, such as where the grantor of a security right in an encumbered asset defaults on its secured obligation, and where the value of the encumbered asset is not sufficient to satisfy the obligations owed to the enforcing creditor and all other competing claimants asserting a right in the asset. In this situation, the secured transactions law must determine how the economic value of the asset is to be

allocated among them. Often, the competing claimant will be another secured creditor of the grantor. A typical example is where a grantor has granted security rights in the same asset to two different lenders. However, in many cases, the competing claimant will be the holder of another type of proprietary right, such as a right created by statute (e.g. a preferential creditor). Still another example is where a grantor is in default to a secured creditor and an unsecured creditor of the grantor has obtained a judgement against the grantor and has taken steps to enforce the judgement against assets encumbered by the security right.

10. Priority issues also arise where a third party asserts a claim to an encumbered asset that will, if successful, enable the third party to obtain a clear title to the asset (that is, free of all security rights in the asset and other competing claims to the asset). A typical example is where a grantor creates a security right in favour of a lender retaining possession of the asset and then sells the encumbered asset to a third party. In this situation, the secured transactions law must determine whether the buyer of the asset acquires title to the asset free of the lender's security right. Another example is where a grantor creates a security right in an asset in favour of a lender and then leases or licenses the asset to a third party. Here, the secured transactions law must determine whether the lessee or licensee may each enjoy its property rights under the lease or license unaffected by the lender's security right. Yet another example arises where the insolvency representative in the grantor's insolvency proceedings claims the assets encumbered by a creditor's security right for the benefit of the insolvency estate.

11. In all of the cases just mentioned, priority is an issue only if security rights are effective against third parties (as to the distinction between effectiveness between the parties and effectiveness as against third parties, see chapter IV on the creation of a security right). While some States attach priority consequences to certain rights that may not be "fully" effective against third parties, other States draw a sharp distinction between rights that are effective against third parties and those that are not. In these States, security rights that are not effective against third parties have the same ranking, both as against each other and as against the rights of ordinary unsecured claimants. Moreover, competing claimants that benefit from a preferred status under other law (for example, providers of services such as repairers and those that are given a legislative preference) or that acquire assets from the grantor will always have priority over a security right that has not been made effective against third parties. It should be noted, however, that even if security rights are not effective against third parties and produce no priority consequences, they are, nevertheless, effective and enforceable against the grantor (see recommendation 30 and chapter VIII, Rights and obligations of the parties to a security agreement).

(c) The importance of priority rules

12. For a number of reasons, it is widely recognized that effective priority rules are fundamental to promoting the availability of secured credit.

13. To begin, the most critical issue for a secured creditor is what the priority of its security right will be in the event it seeks to enforce the security right either within or outside of the grantor's insolvency. More specifically, the question is how much might the secured creditor reasonably expect to derive from the sale of encumbered assets. This question is especially important where the encumbered assets are expected to be the creditor's primary or only source of repayment. To the

extent that the creditor is uncertain about the priority of its prospective security right at the time it is evaluating whether to extend credit, it will place less reliance on these encumbered assets as a guarantee of repayment. This uncertainty about how much can be realized upon the sale of the assets may induce the creditor to increase the cost of the credit (for example, by charging a higher interest rate) or to reduce the amount of the credit (by advancing a smaller percentage of the value of the encumbered assets). In some cases, it may even cause the creditor to refuse to extend credit altogether.

14. To minimize this uncertainty (and thereby to promote secured credit), it is important that secured transactions laws include clear priority rules that lead to predictable outcomes in any competition between claimants to the encumbered assets. In addition, because security rights have no value to secured creditors unless they are enforceable in the grantor's insolvency proceedings, it is important that these outcomes are respected by the insolvency law of a State to the maximum extent possible (see chapter XIV on the impact of insolvency on a security right, paras. 13 and 59-63). This is especially true because, in many cases, a default towards a secured creditor may be concurrent with defaults towards other creditors, triggering insolvency. Clear priority rules function not only to resolve disputes, but also to avoid disputes by enabling competing claimants to predict how a potential priority dispute will be resolved. In this way, the existence of effective priority rules can have a positive impact on the availability and cost of secured credit, by allowing prospective creditors to feel more confident that they will be able to look to the encumbered assets in the event of their grantor's default (even if the grantor becomes subject to insolvency proceedings) and to calculate accurately the risks associated with the extension of credit to a given borrower.

15. Well-conceived priority rules can also have another positive impact on the overall availability of secured credit. Many banks and other financial institutions are willing to extend credit based upon security rights that are subordinate to one or more other higher-ranking security rights held by other secured creditors, so long as they perceive that there is residual value in the grantor's assets (over and above the other secured obligations) to support their security rights and can clearly confirm the precise priority of their security rights. This presupposes that the prospective creditor is able to determine the maximum amount secured by the higher-ranking security rights, either by communicating with the holders of the other security rights or, in States that require a statement of the maximum amount for which a security right encumbers an asset, by consulting the registered notice in the general security rights registry (see para. 141 below and recommendation 57, subparagraph (d)). Alternatively, in situations where the prospective secured creditor is unable to satisfy itself that sufficient residual value exists to support the proposed new grant of credit, that secured creditor may be able to create sufficient value by negotiating a subordination agreement with one or more higher-ranking secured creditors, by which the higher-ranking creditors would subordinate their security rights in particular assets to the proposed new security right (see paras. 130-133 below and recommendation 75). The higher-ranking secured creditors may be willing to subordinate their security rights because they believe that the proposed new extension of credit will help the grantor's business, thereby enhancing the likelihood that their higher-ranking claims will be paid.

16. In both of these situations, the likelihood that another creditor will extend credit to a grantor is significantly increased in a State where there are clear priority rules that enable creditors to assess their priority with a high degree of certainty. In addition, clear and well-conceived priority rules facilitate the granting of multiple security rights in the same assets. In so doing, they enable a grantor to maximize the value of its assets that can be used to obtain credit.

(d) Outline of the chapter

17. This chapter discusses, in section A.2, general approaches to drafting priority rules, and in section A.3, the various means by which priority may be determined. The chapter then turns to a review of the key priority rules that should be part of a modern secured transactions regime. Section A.4 considers the relationship among the various competing claimants. Section A.5 addresses the scope and interpretation of priority rules. Section B reviews special priority rules that apply only to certain specific categories of assets. The chapter concludes, in section C, with a series of recommendations.

2. Approaches to drafting priority rules

18. States face a number of key policy choices when drafting priority rules. Initially, they must determine the scope of the priority regime. The first question is whether it should cover only competitions between various creditors of personal obligations or embrace competitions between all persons that claim rights in or in relation to a debtor's assets or ostensible assets. For reasons given above (see paras. 1-7), the Guide adopts the position that the priority regime should encompass priority competitions among all potential competing claimants.

19. States must then decide how these priority rules should be organized and drafted. Several approaches are possible, although they broadly reflect alternative tendencies in legislative drafting.

20. One approach is to develop priority rules as a set of general principles for courts to interpret and apply in resolving particular conflicts. When States adopt such an approach, especially in conjunction with the enactment of a new secured transactions regime of the fully integrated type that is recommended in the Guide, a tremendous burden is placed upon courts to flesh out the detailed application of these general principles. Not only must judges quickly master the underlying logic of the new regime, they must also ascertain and internalize market practices so as to develop specific rules that are predictable and efficient. Moreover, there may be a considerable period of time before a sufficient number of judicial decisions on a sufficient range of issues have been rendered so as to provide real certainty as to the operation of the priority principles in practice.

21. Another approach is to develop a large number of detailed priority rules meant to govern all the possible situations involving competing claimants that can be imagined. Where this approach is taken, especially in States that have previously developed priority regimes through broad principles derived from first determining ownership of assets subject to competing claims, a comprehensive system of specific rules can look extremely complex and difficult for lawyers and judges to use.

22. Yet another approach is to develop and organize priority rules in a coherent whole as a series of more general principles followed by specific applications of these principles to commonly occurring situations. Such an approach can provide both clarity and a high degree of certainty about any particular priority conflict. This is the approach recommended by the Guide.

23. In selecting one or the other approach, a State must consider the overall objectives it is seeking to achieve. To recall, the Guide aims to present a regime of secured transactions that envisions non-possessory security rights over a range of tangible and intangible assets that in many States have not previously been capable of being encumbered or have not been capable of being encumbered by more than one security right at a time (see recommendation 2 (a)). Moreover, the Guide takes a fully integrated approach to transactions that, regardless of their name, are intended to secure the performance of an obligation (see recommendation 11). Finally, the Guide recognizes a variety of methods by which security rights may be made effective against third parties (see recommendations 32 and 34-36). For all these reasons, the Guide recommends that States adopt the third approach to drafting their priority rules.

24. Following this logic, a modern secured transactions regime should incorporate a set of detailed and precise priority rules that: (a) are comprehensive in scope; (b) cover a broad range of existing and future secured obligations; (c) apply to all types of encumbered asset, including after-acquired assets and proceeds; and (d) provide ways for resolving priority conflicts among a wide variety of competing claimants (for example, secured creditors, transferees, service providers and judgement creditors). Such an approach to priority rules encourages prospective creditors to extend secured credit by giving them a high degree of assurance that they can predict how potential priority disputes will be resolved. The remaining sections of this chapter specify what issues these detailed rules should address and how they should be formulated.

3. Different bases upon which priority may be determined

25. In a modern secured transactions regime, because priority rules are meant to govern the rights of the holder of a security right as against the rights of one or more third parties, they are closely correlated with the different methods through which third-party effectiveness of the security right may be achieved. In view of the significant importance the Guide places on achieving third-party effectiveness, it takes the general approach that no secured creditor may assert priority over a competing claimant unless the security right has been made effective against third parties. Only in such cases can a question of priority arise.

26. This section briefly restates the various methods for achieving third-party effectiveness that have been adopted in various States, indicating in each case what basic priority principles will apply when third-party effectiveness has been achieved using that method. It reviews, in turn, third-party effectiveness deriving from: (a) registration of a notice in a general security rights registry; (b) possession of the encumbered asset by the secured creditor; (c) a control agreement; (d) registration in a specialized registry or notation on a title certificate; (e) the creation of the security right; and (f) notification to a third-party obligor.

(a) Priority where third-party effectiveness is based on registration

27. As discussed above (see chapter V on the effectiveness of a security right against third parties, paras. [...], and chapter VI on the registry system, paras. [...]), one of the most effective ways to provide creditors with the means to determine their priority with a high degree of certainty at the time they extend credit is to base priority on the use of a public registry.

28. In most States in which there is a reliable system for registration of notices with respect to security rights, the general principle is that priority is accorded to the right referred to in the earliest-registered notice (often referred to as the “first-to-register priority rule”).

(i) Registration of a notice prior to the creation of a security right

29. In many States, registration traditionally has been seen as a step to achieve third-party effectiveness that is taken once a security right has been made effective between the parties. This means that the registration publicizes and confirms a right that already exists or arises concurrently with the registration (see the discussion in chapter V on the effectiveness of a security right against third parties, paras. [...]). An example is a legal system in which a security right becomes effective against third parties when the entire security agreement is registered. In some States, however, the approach is not to register a right that already exists, but rather to register a notice relating to a right that may or may not yet exist. The registration does not confirm that the right has actually been created, but rather that it either has been created or may be created. As a result, in these States, the first-to-register priority rule can apply even if one or more of the requirements for the creation of a security right have not been satisfied at the time of registration.

30. Such an approach avoids the need for a creditor that has already registered a notice to search the registration system again after all remaining requirements for the creation of its security rights have been satisfied. It provides the creditor with certainty that, once it registers a notice of its security right, other rights with respect to which a notice is registered later in time will not have priority over its security right. For example, Creditor A can register its notice, conduct a search of the registry to determine that no notice of security right has been registered, and then extend credit with the assurance that its security right will have a first-ranking priority, even if Creditor B registers a notice of a competing security right during the period between Creditor A’s registration and Creditor A’s extension of credit. Moreover, other existing or potential creditors are also protected under this rule because the registered notice will warn them about potential security rights and they can then take steps to protect themselves (such as by requiring personal guarantees or security rights with lower-priority ranking in the same assets or higher-priority ranking security rights in other assets). This is the approach taken by the Guide (see recommendation 73 (a)).

(ii) Attenuations with respect to the first-to-register rule

31. In many States where priority is based on the first-to-register rule, that rule is attenuated in the case of what have been called “grace periods” for registration. Grace periods permit retroactivity in the third-party effectiveness of a security right if registration of a notice takes place within a short period of time following the

creation of a security right. In these cases, priority will be determined according to the date of creation rather than the date of registration of the notice. As a result, a security right that is created first but registered second may nevertheless have priority over a security right that is created second but registered first, as long as the notice with respect to the later-created security right is registered within the applicable grace period. In these cases, until the grace period expires, the registration date is not a reliable measure of a creditor's priority ranking (see generally chapter XII on acquisition financing, paras. [...]).

32. Creditors seek to protect themselves against this risk in a number of different ways. They may delay extending credit to the grantor until the applicable grace period has expired. However, this solution has the drawback that it also delays the extension of credit to the grantor. Alternatively, creditors may rely on a representation of the grantor that it has not granted any competing security rights in the same encumbered assets. This solution is also not ideal, because it provides the creditor with only a claim for damages in the event the representation is untrue. In order to avoid undermining the certainty achieved by the first-to-register rule, States generally restrict the use of grace periods to rare circumstances, such as: (a) acquisition financing; or (b) circumstances in which registration before or concurrently with creation is not logistically possible.

(iii) *Exceptions to the first-to-register rule*

33. The first-to-register rule cannot be absolute. In modern secured transactions regimes, there are two main types of exception. Sometimes States provide that a security right may be automatically effective against third parties upon its creation without the need to register a notice. This exception is most often found in respect of security rights in consumer goods (for the definition of the term "consumer goods", see Introduction, section B, Terminology). In these cases, the priority of the security right is determined by reference to the time of its creation (see paras. 45 and 46 below).

34. In addition, many States have adopted an exception to the first-to-register priority rule for security rights that have been made effective against third parties by a method other than registration of a notice in the general security rights registry. So, for example, where a notice of the security right happens to be registered second in the general registry, but has also been registered first in a specialized title registry or noted on a title certificate, States typically award priority to the order of registration in the specialized registry or to the notation on the title certificate (see paras. 41-44 below). Likewise, where a security right is registered second in the general registry, but the encumbered asset is a negotiable instrument in the possession of a creditor (see paras. 35-38 and 155-157 below), a negotiable document in possession of a creditor (see paras. 168-170 below), or a right to payment of funds credited to a bank account that has been made subject to a control agreement (see paras. 158-164 below), priority is usually given to the possessor of the negotiable instrument or negotiable document, or the beneficiary of the control agreement.

(b) **Priority where third-party effectiveness is based on possession**

35. As already discussed (see chapter IV on the creation of a security right, paras. [...], and chapter V on the effectiveness of a security right against

third parties, paras. [...]), possessory security rights traditionally have been an important component of the secured transactions laws of most States. In recognition of this fact, even in States that have established a general security rights registry, security rights in tangible assets may also be made effective against third parties through possession by the creditor.

36. In these States, notwithstanding the general principle that priority goes to the first creditor to register a notice in the general security rights registry, priority may also be established based on the date that the creditor obtained possession of the encumbered asset, without any requirement of registering a notice. Moreover, in many of these States, a third party may have actual possession of the assets, and multiple secured creditors may agree among themselves that the third party holds for all of them, with priority determined by the respective dates on which possession on behalf of each creditor is established. In such cases, possession for each of the creditors may begin on a different date, and therefore the priority among the creditors will be fixed according to the date on which possession on their account commenced. However, whenever the priority dispute is among security rights that have achieved third-party effectiveness by possession (regardless of whether possession is held by the secured creditor or by an agent on behalf of one or more secured creditors), priority generally is determined by the order in which third-party effectiveness was achieved (see recommendation 73, subparagraph (b)).

37. As a result of the use of the date of possession to establish priority, it is necessary for States to provide a rule to govern priority as among creditors that have registered a notice in the general security rights register and creditors that have obtained possession. The usual rule is that priority is determined by the order in which: (a) the notice was registered in the general security rights register; and (b) possession of the encumbered asset was obtained (see recommendation 73, subparagraph (c)). For example, if Creditor A registered a notice on Day 1, Creditor B took possession on Day 2, Creditor C arranged for Creditor B to also hold on its behalf on Day 3, and Creditor D registered a notice on Day 4, the priority ranking of the creditors would be A, B, C and D.

38. Notwithstanding its importance, priority based on possession has the disadvantage that, because possession is often not a public act, the holder of a security right that relies on possession to establish priority will have the burden of establishing precisely the time at which it obtained possession. Despite this disadvantage, however, priority based on possession is commercially useful in the case of certain assets such as negotiable instruments (e.g. a cheque, bill of exchange or promissory note) or negotiable documents of title (e.g. a bill of lading or warehouse receipt). In these cases, possession by the secured creditor can prevent prohibited dispositions of the encumbered asset by the grantor. In addition, as noted, many States also provide that a security right in these types of asset that becomes effective against third parties by possession is generally accorded priority over a security right made effective against third parties by registration of a notice, even if the registration occurs first (see recommendations 98, 105 and 106; see also paras. 155-157 and 168-170 below).

(c) Priority where third-party effectiveness is based on control

39. In some States, third-party effectiveness of a security right in certain types of intangible asset may be achieved by means of “control” (see Introduction, section B,

Terminology). In most cases where States permit third-party effectiveness to be established by control, priority is typically accorded to a secured creditor that obtains control with respect to the encumbered asset, regardless of whether that occurs before or after the rights of competing claimants in the asset arise. For example, where the asset is the right to the payment of funds credited to a bank account, the priority system generally awards priority to a security right made effective against third parties by control over a security right made effective against third parties by a different method (see recommendation 100; see also paras. 158-164 below).

40. In the case of certain types of intangible asset, such as the right to receive the proceeds under an independent undertaking, some States provide that control may be the exclusive method for achieving third-party effectiveness. Where this is the case, there is no need to provide for priority rules to govern conflicts between third-party effectiveness based on control and third-party effectiveness achieved by any other means (see recommendation 104; see also paras. 166 and 167 below).

(d) Priority where third-party effectiveness is based on registration in a specialized registry or notation on a title certificate

41. In many States, a security or other right (such as the right of a buyer or lessee of an encumbered asset) may be registered in a specialized registry, or may be noted on a title certificate. Originally, the function of some specialized registries or title notation systems was only to protect buyers of assets subject to the registry or system by confirming that the seller actually had title to the asset being sold. However, some specialized registries, such as ship and aircraft registries, traditionally have also served the broader purpose of protecting all types of transferee of rights in the designated assets, including holders of security rights. More recently, there has been a trend for specialized registries and title notation systems to cover this broader purpose (see recommendation 38).

42. When an asset is subject to a specialized registry or title notation system, the question arises as to which right of the several rights mentioned in the registry or notation system has priority. In most cases, States that have adopted such registries or systems provide that rights rank in the order in which they are registered. Such a security right has priority over a security right that is subsequently registered in the specialized registry or noted on a title certificate.

43. When a specialized registry exists, it is also necessary to determine the priority as between the right registered in the specialized registry or noted on a title certificate, on the one hand, and a right registered in the general security rights registry or a right that has been made effective against third parties by possession or some other means, on the other hand. In most such States, a right registered in a specialized registry or noted on a title certificate has priority over any security rights not so registered or noted on a title certificate. A similar rule is usually also adopted by these States in respect of transferees, lessees and licensees of rights in assets subject to a specialized registry or title notation system. With only minor exceptions, the rights of a transferee, lessee or licensee in such assets will be subordinate to any rights registered in the specialized registry or noted on the title certificate (see paras. 70-94 below and recommendation 75).

44. The reason for the approach just described is to enable transferees of such assets to enhance efficiency by permitting a person to search in only one place (i.e. the specialized registry or the title certificate). It is important to note, however, that the priority rules discussed above apply only to the extent that the specialized registration or notation regime does not itself provide for different priority rules.

(e) Priority where third-party effectiveness is based on creation of the security right

45. In States in which there is no registration system for security rights, third-party effectiveness often is automatic and is achieved upon creation of the security right. Even in States that have adopted registration systems, third-party effectiveness of rights in certain types of asset, such as consumer goods, is sometimes automatic. In these States, the priority of a security right is usually determined by comparing the time when the security right is created with the time a notice with respect to the competing security right is registered in the general security rights registry or the competing security right has been made effective against third parties by some other method (see paras. 59-61 below).

46. The advantage of and rationale for automatic third-party effectiveness is to relieve certain claimants of the need to take further steps to ensure the priority of their rights. In the case of consumer goods and assets of small value, the idea of linking priority to creation can, consequently, lead to efficient outcomes. However, there are situations where automatic third-party effectiveness can lead to inefficiencies in the priority system. For example, where States permit automatic third-party effectiveness in relation to common transactions such as retention-of-title sales and assignments of receivables for security purposes, other claimants are required to undertake costly and time-consuming inquiries (typically relying on less objective evidence such as representations of the grantor or information generally available in the market) to determine the existence and priority of non-possessory security rights.

(f) Priority where third-party effectiveness is based on notification to a third-party obligor

47. Most of the bases for determining priority noted above contemplate situations involving tangible assets such as equipment and inventory. Where security rights are created in receivables or other rights to payment, States typically provide that priority will be determined according to the date on which a notice is registered in the general security rights registry or, if some other method for achieving third-party effectiveness is at issue, the date on which third-party effectiveness is achieved. In other States, however, third-party effectiveness of a security right in a receivable and priority among competing claimants is based on the time that the debtor of the receivable is notified of the existence of the security right (for the definition of “debtor of the receivable”, see Introduction, section B, Terminology).

48. The advantage of determining priority on this basis is that it simplifies the task of the debtor of the receivable in determining to whom payment should be made. One disadvantage is that it can foster uncertainty for prospective secured creditors because they cannot know if, and when, a competing secured creditor has given notice of its security right to the debtor of the receivable. A second disadvantage is that this lack of certainty may lead claimants to immediately enforce their rights.

This result deprives the grantor of a source of income with which to operate its business.

(g) Priority legislatively determined according to the nature of the creditor's claim

49. In many States, certain claims are given a priority solely on the basis of the nature of the claim, regardless of the date on which the claim arose or was made effective against third parties. In these cases, States enact a ranking of priorities that is applicable to all competitions between claimants. For example, tax claims, claims for contributions to social welfare programmes and employee wages are sometimes given a first-ranking priority, even over security rights that have previously been made effective against third parties. Moreover, in these States, there is typically a sub-ranking under which, for example, legal costs may outrank tax claims, which may outrank claims for social welfare programmes, which in turn may outrank employee's claims for wages. Sometimes these rights require registration, and sometimes they do not. But in both cases, priority is determined according to a legislatively established ranking and not according to any scheme based on the time the security right may have been created or made effective against third parties (see paras. 95-98 below).

50. The advantage of these legislatively determined priorities is that they provide some measure of protection for claimants that might not otherwise have the negotiating power to obtain a security right by agreement. The disadvantage is that, even when they must be registered to be effective against third parties, they usually trump pre-existing security rights. In consequence, secured creditors cannot, at the time they take a security right, precisely determine the ranking or amount of the legislatively determined priorities. This uncertainty inevitably is likely to drive up the cost and reduce the availability of secured credit. In recognition of this fact, States usually limit the nature and amount of such claims (e.g. to "wages in an amount not to exceed a certain amount per employee" or "up to a certain number of months of unpaid wages").

4. Rules for determining priority as among competing claimants

51. The general principles reviewed to this point form the basic structure of a priority regime in relation to: (a) the different means by which a priority system can be organized; and (b) the scope of the priority of the security right, particularly as this relates to future obligations, after-acquired assets and proceeds. The discussion that follows focuses on the specific priority rules to govern the rights of competing claimants.

(a) Priority as among secured and unsecured creditors

52. Generally, States provide that all security rights that have been made effective against third parties have priority over the rights of unsecured creditors. It is generally accepted that giving secured creditors this priority is necessary to promote the availability of secured credit. Unsecured creditors can take other steps to protect their rights, such as charging a premium to account for their increased risk, monitoring the status of the credit, or requiring the debtor to pay interest on amounts that are past due. In addition, secured credit can increase the working capital of the grantor. Typically, advances made under a secured revolving working capital loan facility are the principal source from which a company will pay its

unsecured creditors in the ordinary course of its business (see chapter II on the scope of application and other general rules, section F, Examples of financing practices covered). The principle that secured creditors have priority over unsecured creditors is central to the approach taken by the Guide, and underlies many of its recommendations (see, for example, recommendation 81).

53. In many States, the priority afforded to secured creditors over unsecured creditors is absolute. In some States, however, it is subject to an exception in favour of judgement creditors. The holder of an unsecured claim may obtain a right in the assets of a debtor by obtaining a judgement or provisional court order against the debtor. By registering the judgement in the general security rights registry, the judgement creditor is able to convert an unsecured claim into a secured claim that ranks according to the ordinary priority rules. Other States go further and provide that where an unsecured creditor has taken the steps required under applicable law to obtain a judgement or provisional court order, the proprietary rights it asserts may actually have priority over certain claims of a pre-existing secured creditor (see recommendation 81 and paras. 99-107 below).

(b) Priority as among competing security rights in the same encumbered assets

54. One of the key features of a modern secured transactions regime is the efficiency with which it resolves priority disputes among competing security rights in the same encumbered assets. Such priority disputes may involve security rights that are all made effective against third parties by registration of a notice in the general security rights registry, security rights that are all made effective against third parties by another method, or a combination of security rights that are made effective against third parties by registration and security rights that are made effective against third parties by another method. With very few exceptions, States provide, for all the various situations about to be reviewed, that priority will be determined on a temporal basis: first in time, first in right. The following paragraphs elaborate in detail how this central principle is usually applied to particular situations.

(i) Priority as among security rights made effective by registration of a notice in the general security rights registry

55. In most States that have a general security rights registry, priority among security rights that were all made effective against third parties by registration of a notice is determined by the order in which registration occurs, regardless of the order of third-party effectiveness and even if one or more of the requirements for third-party effectiveness were not satisfied at that time. Only very limited exceptions to this principle are recognized (see paras. 63-67 below).

56. This approach may be illustrated by the following example. A Grantor applies to Bank A for a loan, to be secured by a security right in all of the Grantor's existing and future equipment (a security right that may be made effective against third parties by registration of a notice in the general security rights registry). On Day 1, Bank A conducts a search of the registry, which confirms that no other notices have been filed with respect to security rights of other creditors in the Grantor's equipment. On Day 2, Bank A enters into a security agreement with the Grantor, in which Bank A commits to make the requested secured loan. Also on Day 2, Bank A registers a notice of the security right in the general security rights registry, but it

does not make the loan to the Grantor until Day 5. Thus, the security right of Bank A was created and became effective against third parties on Day 5 (i.e. the first time when all of the requirements for creation and third-party effectiveness were satisfied). However, on Day 3, the Grantor enters into a security agreement with Bank B, providing for a loan to be made by Bank B to the Grantor to be secured by a security right in the Grantor's existing and future equipment. On the same day (Day 3) Bank B registers a notice of the security right in the general security rights registry and grants the loan to the grantor. As a result, the security right of Bank B was created and made effective against third parties on Day 3. Under the first-to-register approach described above, Bank A's security right would have priority over Bank B's security right, regardless of the fact that Bank B's security right was created and made effective against third parties before Bank A's security right.

57. The primary reasons for this approach are: (a) to encourage registration of the notice as early as possible (which puts other potential creditors on notice of the security right); and (b) to provide certainty to secured creditors by enabling them to determine, before they extend credit, the priority of their security rights as against the rights of other secured creditors. In the above example, if Bank A searches the registry on Day 2 after it registers its notice and determines that there are no other notices in the registry that cover the relevant encumbered asset, Bank A can make its loan on Day 5 knowing with certainty that its security right will have priority over any other security right in the encumbered asset that may be made effective against third parties in the future, because the priority of Bank A's security right dates back to the time of its registration. By enabling Bank A to achieve this high level of certainty, the first-to-register approach can be a significant factor in promoting secured credit. Likewise, when Bank B searches the registry it will immediately know that it will have a subordinate position should Bank A extend credit and it will consequently be able to adjust the terms and conditions of the credit it extends accordingly.

58. This certainty would not exist under an alternative approach, adopted in some States, which accords priority to the first security right to become effective against third parties (third-party effectiveness requires both creation and registration or another method). There would always be a risk that another security right could achieve third-party effectiveness, and thus priority, after Bank A or B conducts its search of the record but before it makes its loan. This risk would exist regardless of how short that time period might be. For this reason, the Guide takes the position that the priority of competing claimants in such cases should be determined by the date of registration of the notice, and not the date that the security right was either created or actually became effective as against third parties (see recommendation 73, subparagraph (a)).

(ii) *Priority as among security rights made effective against third parties by means other than registration of a notice in the general security rights registry*

59. In the case of a priority dispute among security rights made effective against third parties by means other than registration of a notice in the general security rights registry, States normally accord priority to the security right that is first made effective against third parties. This rule would apply, for example, in a situation where one security right in a particular encumbered asset was made effective against

third parties by possession and another security right in the same asset was made effective automatically upon its creation.

60. In the case of security rights achieving third-party effectiveness by possession, there is normally no need for a “first-to-obtain-possession” rule analogous to the “first-to-register” rule noted above, as typically a secured creditor would obtain possession of the encumbered asset at the same time it extends credit and not before. In some States, however, it is possible for a creditor to exercise its possession through a third party. Where this is the case, more than one secured creditor may exercise possession in such a manner, and their relative priority is determined by the order in which they establish their possession through that third party. A similar result would be reached in the unlikely case that a bank or other financial institution entered into more than one control agreement. Priority would depend on the relative dates of the agreements.

61. In each of the examples given, consistent with the principle applicable to security rights made effective against third parties by registration of a notice in the general security rights registry, the Guide takes the position that the priority of competing claimants in such cases should be determined by the date that the security right became effective as against third parties (see recommendation 73, subparagraph (b)).

(iii) *Priority as among security rights made effective against third parties by registration of a notice in the general security rights registry and security rights made effective against third parties by other means*

62. In the case of priority disputes among security rights made effective against third parties by registration of a notice in the general security rights registry and security rights made effective against third parties by other means, States normally accord priority to the first security right to be registered or made effective against third parties. This rule represents a logical extension of the first-to-register rule, using the registry as a basis for enabling secured creditors to achieve a high level of certainty with respect to the priority of their security right. As the notice may be registered before the security right is created (an outcome not possible in respect of third-party effectiveness by possession or automatic third-party effectiveness upon creation), this rule also encourages the use of the registry for making security rights effective against third parties. The Guide adopts this principle as leading to the most efficient outcomes when third-party effectiveness is achieved by different means (see recommendation 73, subparagraph (c)).

(iv) *Exceptions to the first-in-time principle for establishing priority as among competing secured creditors*

63. The above-mentioned examples of how the first-in-time principle applies to the different situations where security rights are made effective against third parties by different means are nonetheless subject to limited exceptions. These exceptions reflect special priority rules relating to certain means for achieving third-party effectiveness, or certain types of transaction or encumbered asset, and are based on policy or practical considerations relating to such transactions or assets. Of the various means for achieving third-party effectiveness already mentioned, two in particular (i.e. registration in a specialized registry and control) often lead to special priority rules.

a. Registration in a specialized registry or notation on a title certificate

64. In many States, a security or other right (such as the right of a buyer or lessee of an encumbered asset) may be registered in a specialized registry, or it may be noted on a title certificate. Most of these States provide that rights rank in the order in which they are registered or noted (e.g. that such a security right has priority over a security right that is subsequently registered in the specialized registry or noted on a title certificate). In order to protect the integrity of such registers or notation systems, the Guide adopts a similar position (see recommendation 74, subparagraph (b)).

65. When a specialized registry exists, it is also necessary to determine the priority as between the right registered in the specialized registry or noted on a title certificate, on the one hand, and a right registered in the general security rights registry or a right that has been made effective against third parties by possession or some other means, on the other hand. In most such States, a security right or other right registered in a specialized registry or noted on a title certificate is accorded priority over a security right registered in a general registry or that achieves third-party effectiveness by a method other than registration in a specialized registry or notation on a title certificate, regardless of which occurred first. Once again, in order to protect the integrity of such registries and notation systems, the Guide adopts a similar position (see recommendation 74, subparagraph (a)).

b. Control agreements

66. A second exception is usually found in States that permit third-party effectiveness of security rights in certain types of intangible asset to be achieved by control. These States provide that, where a creditor obtains third-party effectiveness of a security right by control, priority is given to that security right, regardless of whether other creditors may have achieved effectiveness against third parties of their security rights by any other means (see paras. 158-164 and 166-167 below). In view of the special nature of security rights in rights to payment, the Guide adopts a similar position (see recommendations 100 and 104).

c. Other exceptions to the first-in-time rule

67. In addition to these situations, where third-party effectiveness is achieved by special means, exceptions to the first-in-time rule also arise in respect of certain types of transaction or certain types of encumbered asset. These types of transaction or asset are: (a) acquisition security rights under both the unitary and non-unitary approach, and retention-of-title or financial lease rights under the non-unitary approach (see chapter XI on acquisition financing and recommendations 173-182 and 188-196); (b) cases in which third-party effectiveness of security rights in negotiable instruments, negotiable documents or money may be achieved by possession (see paras. 155-157, 165 and 168-170 below and recommendations 98, 99, 103, 105 and 106); (c) cases involving security rights in attachments (see paras. 115-120 below and recommendations 84-86); and (d) situations involving security rights in masses or products (see paras. 121-126 below and recommendations 87-89).

(c) Priority of rights of transferees, lessees and licensees of encumbered assets

(i) General

68. When a grantor transfers, leases or licenses tangible assets (other than negotiable instruments or negotiable documents) that are subject to existing security rights, the transferee, lessee or licensee has an interest in receiving the assets free and clear of any security right, whereas the existing secured creditor has an interest in maintaining its security right in the assets sold (subject to certain exceptions; see paras. 73-84 below). It is important that priority rules address both of these interests and that an appropriate balance be struck. If the rights of a secured creditor in particular assets are put at risk every time its grantor transfers, leases or licences them, their value as security would be severely diminished and the availability of secured credit based on their value would be jeopardized.

69. In most States, the starting point is the general principle that a transferee (including a buyer, exchanger, donee, legatee and other similar transferees), lessee or licensee of an encumbered asset takes its rights in the asset subject to an existing security right (the security right is said to encompass a “right to follow” or a *droit de suite*; see chapter V on the effectiveness of a security right against third parties; see also recommendations 31 and 76). In other words, the secured creditor may follow the asset in the hands of the buyer or other transferee, lessee or licensee. Exceptions to this general principle with respect to each of these types of transaction are discussed below.

(ii) Rights of buyers

70. As already mentioned (see chapter V on the effectiveness of a security right against third parties and chapter IV on the creation of a security right), when an encumbered asset is sold, the secured creditor retains its security right in the original encumbered asset and also obtains a security right in the proceeds of the sale (which may include cash, receivables, or even other assets in the case of transactions between barterers and exchangers (for the definition of “proceeds”, see Introduction, section B, Terminology). In this situation, a question arises as to whether the security right in proceeds should replace the security right in the encumbered asset, so that the buyer takes its rights free of the security right.

71. It is sometimes argued that the security right should be extinguished upon a sale, on the premise that the secured creditor is not harmed by a sale of the assets free of its security right so long as it retains a security right in the proceeds of the sale. However, this result would not necessarily protect the secured creditor, because proceeds are often not as valuable to the creditor as the original encumbered assets. In many instances, the proceeds may have little or no value to the creditor as security (e.g. a receivable that cannot be collected because the debtor of the receivable is not financially sound). In other instances, it might be difficult for the creditor to identify the proceeds and its claim to the proceeds may, therefore, be illusory. In addition, there is a risk that the proceeds, even if they are of value to the secured creditor, may be dissipated by the seller that receives them, leaving the creditor with nothing. Finally, it may be that another creditor may have taken a security right in the proceeds as original encumbered assets, and may have priority. This possibility is especially real in the case of receivables.

72. While States have adopted different approaches to achieving a balance between the interests of secured creditors and persons buying encumbered assets from grantors in possession, most provide that the security right should survive the transfer even when the secured creditor is also able to claim a right in proceeds. This does not mean that the secured creditor will be paid twice. As a security right secures an obligation, the secured creditor that asserts rights in the assets and in the proceeds cannot claim or receive more than it is owed. The Guide takes the position that, as a general principle, the secured creditor should retain its security right in the original encumbered asset and also a security right in the proceeds of its sale or other transfer (see recommendations 19, 31, 39, 40 and 76).

73. This said, most States recognize two exceptions to the general principle that a security right in an asset continues to encumber the asset after its sale, and the Guide does also. The first exception relates to situations in which the secured creditor expressly authorizes the sale free of the security right (see recommendation 77, subparagraph (a)). A secured creditor may authorize such a sale, for example, because it believes that the proceeds are sufficient to secure payment of the secured obligation or because the grantor gives the secured creditor other assets as security to make up for the loss of the sold asset. It should be noted, however, that this exception does not apply to situations in which the secured creditor authorizes the sale, but does not authorize the grantor to sell free of the security right. In these situations, the buyer generally takes title to the asset subject to the security right.

74. The second exception refers to situations in which the authorization by the secured creditor to sell the assets free of the security right is inferred, because the encumbered assets are of such a nature that the secured party expects them to be sold free of the security right, or where it is in the best interest of all concerned parties that they be sold free of the security right. States have framed this second exception in a number of different ways, as described in the following paragraphs.

a. The ordinary-course-of-business approach

75. A common approach, taken in many States, is to provide that sales of encumbered assets consisting of inventory made by the grantor in the ordinary course of its business will result in the automatic extinguishment of any security rights that the secured creditor has in the assets without any further action on the part of the buyer, seller or secured creditor. The corollary to this rule is that when a sale of inventory is outside the ordinary course of the grantor's business, or when the sale relates to an asset other than inventory, the exception will not apply; such a sale does not extinguish the security right and the secured creditor may, upon a default by the grantor, enforce its security right against the encumbered asset in the hands of the buyer (unless the secured creditor has authorized the sale free of the security right). Where the security agreement so provides, the sale itself may constitute a default entitling the secured creditor to enforce its security rights; otherwise, the secured creditor cannot do so until default has occurred.

76. Under this approach, two requirements must be satisfied for the encumbered asset to be sold free of the security right. The first requirement is that the seller of the asset must be in the business of selling assets of that kind; the encumbered asset cannot be something that the seller does not typically sell. In addition, the sale cannot be concluded in a manner different than the manner typically followed by the

seller, such as a sale by the seller outside of its typical distribution channel (e.g. if the seller normally sells only to retailers and the sale at issue is to a wholesaler). The second requirement is that the buyer must not have knowledge that the sale violates the rights of a secured creditor under a security agreement (for a rule of interpretation with respect to “knowledge”, see Introduction, section B, Terminology). This would be the case, for example, if a buyer had knowledge that the sale to it was prohibited by the terms of the security agreement. On the other hand, mere knowledge on the part of the buyer of the fact that the asset was subject to a security right would be insufficient.

77. The “ordinary-course-of-business” approach has the advantage that it is consistent with the commercial expectation that the grantor will sell its inventory of tangible assets (and indeed must do so to remain financially viable), and that buyers of the tangible assets will take them free and clear of existing security rights. Without such an exception to the principle that the security right continues in the asset in the hands of a buyer, a grantor’s ability to sell tangible assets in the ordinary course of its business would be greatly hampered, because buyers would have to investigate claims to the tangible assets prior to purchasing them. This situation would result in significant transaction costs and would greatly impede ordinary-course transactions.

78. The ordinary-course-of-business approach also provides a simple and transparent basis for determining whether tangible assets are sold free and clear of security rights. For example, the sale of equipment by an equipment dealer to a manufacturer that will use the equipment in its factory is clearly a sale of inventory in the ordinary course of the dealer’s business, and the buyer should automatically take the equipment free and clear of any security rights in favour of the dealer’s creditors. This result is in line with the expectations of all parties, and the buyer is certainly entitled to presume that both the seller and any secured creditor of the seller expect the sale to take place in order to generate sales revenue for the seller. Conversely, a sale by the dealer of a large number of machines in bulk to another dealer would presumably not be in the ordinary course of the dealer’s business. Similarly, a sale by a printer of old printing presses would also not be in the ordinary course of the printer’s business. In most cases, it will be obvious to the buyer, or easy for the buyer to ascertain, that the sale is in the seller’s ordinary course of business. For these reasons, the ordinary-course-of-business approach is the approach adopted by the Guide (see recommendation 78, subparagraph (a)).

79. With respect to sales that are obviously outside the ordinary course of the grantor’s business, or where there is at least a question in the mind of the buyer, as long as creditors’ security rights are subject to registration in a general security rights registry, the buyer may protect itself by searching the registry to determine whether the asset it is purchasing is subject to a security right and, if so, seek a release of the security right from the secured creditor.

80. In some jurisdictions, buyers of encumbered assets are permitted to take the assets free of the security right, even where the transaction is outside the ordinary course of the seller’s business, if the assets are low-cost items. The reason given for this approach is that, in those jurisdictions, the secured transactions law either does not permit registration of a security right in a low-cost item, or the cost of registration is high in relation to the cost of the asset and it would be unfair to impose that cost on a buyer of the item. By contrast, it may be argued that, if an

item is truly low-cost, a secured creditor is unlikely to enforce its security right against the asset in the hands of the buyer. In addition, determining which items are sufficiently low-cost to be so exempted would result in setting arbitrary limits, which would have to be continually revised to respond to cost fluctuations resulting from inflation and other factors. For these reasons, the Guide does not adopt an additional exception for low-cost items.

81. More difficult policy choices arise in the relatively uncommon situation where assets are sold several times and no sales are undertaken in the ordinary course of business of the seller. In some States, a purchaser that purchases the assets from a seller that previously purchased the assets from the grantor (a “remote purchaser”) obtains the assets free of security rights. This approach is taken because it would be difficult for a remote purchaser to detect the existence of a security right granted by a previous owner of the encumbered assets. In many instances, remote purchasers are not aware that the previous owner ever owned the asset and, accordingly, have no reason to conduct a search against the previous owner. The problem with this approach is that impairs the reliability of a security right given by a seller because of the possibility that the asset will be sold without the secured creditor’s knowledge to a remote purchaser, either innocently or with the specific intention of stripping away the security right. For this reason, other States provide that, where a buyer of tangible assets takes free of a security right granted by its seller, a remote purchaser will also take free of the security right. In these States, if the remote purchaser buys from a seller that purchased the asset subject to the security right, the remote purchaser will acquire the property subject to the security right, unless the remote sale is itself in the ordinary course of the seller’s business. To maintain consistency of approach in relation to ordinary-course-of-business sales, the Guide recommends that, where a buyer of tangible assets takes free of a security right granted by its seller, a remote purchaser will also take free of the security right (see recommendation 79). If the seller takes subject to the security right, the remote purchaser will also normally take subject to that right.

82. One potential disadvantage of the ordinary-course-of-business approach, particularly in international trade, arises in those limited situations where it is not clear to a buyer what activities fall within the ordinary course of the seller’s business. This said, in a normal buyer-seller relationship, it is highly likely that buyers would know the type of business in which the seller is involved and in these situations the ordinary-course-of-business approach would be consistent with the expectations of the parties. Therefore, the number of cases in which such confusion exists is limited in practice. On balance, the benefits of the ordinary-course-of-business approach outweigh its disadvantages. This approach facilitates commerce and allows secured creditors and buyers to protect their respective interests in an efficient and cost-effective manner without undermining the promotion of secured credit.

b. The good-faith approach

83. Many States have taken a different approach to determining whether a buyer of encumbered assets takes title to the assets free of a security right created by the seller. In these States, a buyer of tangible assets takes free of any security rights in the tangible assets if the buyer purchases the tangible assets in good faith (without regard to whether the sale was in the ordinary course of business of the seller).

States have adopted various formulations of the definition of “good faith” for the purposes of this test. For example, in some States the buyer is under a duty to investigate whether the assets are subject to a security right, while in other States the buyer is not under such a duty.

84. One argument in favour of this approach is that good faith is a notion known to all legal systems and there exists significant experience with its application at both the national and international levels. Another argument is that a presumption should exist that a buyer is acting in good faith unless it is proven otherwise. Yet another argument in favour of this approach is that it relieves the buyer of the cost and time involved in conducting a search of the registry. However, the problem with such an approach is that it focuses on a subjective criterion relating to the knowledge and intentions of the buyer (which also raise difficult evidentiary issues), rather than on the commercial expectations of all parties involved in the transaction.

(iii) *Rights of lessees*

85. Priority disputes sometimes arise between the holder of a security right in a tangible asset granted by the owner or lessor of the asset and a lessee of such asset. In this context, the issue is not whether the lessee actually takes the asset free of the security right in the sense that the security right is cut off. Rather, the issue is whether the lessee’s right to use the leased asset on the terms and conditions set forth in the lease agreement are unaffected by the security right. The key point is whether, once the holder of a security right commences enforcement, the lessee can nevertheless continue using the asset so long as it continues to pay rent and otherwise abides by the terms of the lease. The general principle discussed in relation to buyers applies here as well (see paras. 70-72 above). The asset is, in principle, subject to the security right and thus the secured creditor may enforce its security right upon default of the grantor, even if this means interrupting the use of the asset by the lessee pursuant to the lease.

86. As in the case of buyers of tangible assets subject to a pre-existing security right, many States recognize two exceptions to this general principle. Under either exception, the security right does not cease to exist. However, for the duration of the lease, the right of the secured creditor is limited to the lessor-grantor’s own rights in the assets and the lessee may continue to enjoy uninterrupted use of the asset in accordance with the terms of the lease.

87. The first exception is where the secured creditor has authorized the grantor to enter into the lease unaffected by the security right. As in the case of sales of tangible assets, when a secured creditor has authorized the lease, the lessee’s knowledge of the security right is irrelevant. The Guide adopts this exception (see recommendation 77, subparagraph (b)). The second exception relates to situations in which the lessor of the tangible asset is in the business of leasing tangible assets of that type, the lease is entered into in the ordinary course of the lessor’s business and the lessee has no actual knowledge that the lease violates the rights of the secured creditor under the security agreement. Such knowledge would exist if, for example, the lessee knew that the security agreement creating such security right specifically prohibited the grantor from leasing the assets. However, the mere knowledge of the existence of the security right, whether arising because the lessee saw a notice registered in the security registration system or in another way, would not be sufficient to defeat the rights of the lessee. This exception is

based on similar policy considerations to those relating to the analogous exception for sales of tangible assets in the ordinary course of the seller's business and is the approach adopted in the Guide (see recommendation 78, subparagraph (b), and para. 73 above).

88. An effective secured transactions regime must also address the issue of a sub-lease. In situations in which the rights of a lessee of a tangible asset are deemed to be unaffected by a security right in the assets granted by the lessor, it is generally considered appropriate that the rights of a sub-lessee will also be unaffected. To maintain consistency of approach in relation to ordinary-course-of-business transactions, the Guide recommends that such a rule also apply to sub-leases (see recommendation 79).

(iv) *Rights of licensees*

89. The same issues discussed above also arise in the context of licensing of intangible assets that are subject to a security right created by the licensor and the general principle applicable to sales and leases of tangible assets also applies to licences of intangible assets (see recommendation 76). Thus, if a security right in an intangible asset is effective against third parties, it will continue in the assets in the hands of the licensee unless one of the exceptions mentioned below applies (see recommendations 77 and 78).

90. The first exception recognized by most States has two branches that track the rule in relation to sales and leases of tangible assets. Analogous to leases, where the secured creditor has authorized the licence, the licensee takes free of the security right and it is irrelevant whether the licensee knew of the security right. The Guide adopts this exception (see recommendation 77, subparagraph (b)).

91. The second exception (also analogous to similar exceptions for sales and leases of tangible assets) is a situation involving a non-exclusive licensing of intangible assets, where the licensor is in the business of granting non-exclusive licences of such assets, the licence is entered into in the ordinary course of the licensor's business, and the licensee had no knowledge that the licence violated the rights of the secured creditor under the security agreement (see recommendation 78, subparagraph (c)). As in the case of sales and leases of tangible assets, it is generally recognized that such knowledge would exist if, for example, the licensee knew that the security agreement creating such security right specifically prohibited the grantor from licensing the assets. However, the mere knowledge of the existence of the security right, as evidenced by a notice registered in the security registration system, would not be sufficient to defeat the rights of the licensee.

92. It is important to note that this second exception relates only to non-exclusive licences of intangible assets (e.g. licences under which the licensee is not the sole and exclusive licensee of the intellectual property covered by the licence, as is the case with mass-distributed software programs) and does not apply to exclusive licences. Where a grantor is engaged in the business of licensing intangible assets, a secured creditor holding a security right in the assets normally will expect its grantor to grant non-exclusive licences of the assets in order to generate revenues. Moreover, it is not reasonable to expect the licensee under a non-exclusive licence to search the general security rights registry to ascertain the existence of security rights in the licensed assets. On the other hand, an exclusive licence of intangible

assets, under which the licensee is granted the exclusive right to use the assets throughout the world or even in a specific territory, is generally a negotiated transaction. Such a transaction is often out of the ordinary course of the licensor's business (although it also may be in the ordinary course of the licensor's business if the licensor is in the business of negotiating exclusive licences as is often the case, for example, in the motion picture industry). In the case of an exclusive licence, it is reasonable to expect the licensee to search the general security rights registry to determine if the licensed assets are subject to a security right created by the licensor, and to obtain an appropriate waiver or subordination of priority.

93. Finally, as in the case of sales and leases of tangible assets, a secured transactions regime must address the case of sub-licensees. And, as with sales and leases, a strong argument exists in favour of ensuring that a sub-licensee is unaffected by a security right created by the original licensor in those situations where the law deems the licence itself to be unaffected by the security right (see recommendation 79).

(v) *Rights of donees and other gratuitous transferees*

94. The position of a recipient of an encumbered asset as a gift (i.e. without value; typically a "donee" but also a "legatee") is somewhat different from that of a buyer or other transferee for value. As the gratuitous transferee has not parted with value, there is no objective evidence of detrimental reliance on the grantor's apparently unencumbered ownership. As a result, in a priority dispute between the donee of an asset and the holder of a security right in the asset granted by the transferor, a strong argument exists in favour of awarding priority to the secured creditor, even in circumstances where the security right was not otherwise effective against third parties. A second argument in favour of this approach is that, where an encumbered asset is the subject of a gift, there are no "proceeds" to which the secured creditor may look as substitute encumbered assets. While some States take this approach, most States follow the general rule that only security rights that have been made effective against third parties will have priority over other claimants. This means that a security right that is effective against third parties follows the asset in the hands of a transferee (see recommendation 76) and exceptions are made only for transferees for value, such as buyers, lessees or licensees (see recommendations 77-79). Applying this rule, a donee could never be a transferee in the ordinary course of business and would take free of a security right only if that security right were not effective against third parties.

(d) **Priority of preferential claims**

95. In many States, as a means of achieving general social goals, certain unsecured claims are re-characterized as preferential claims and given priority, within or even outside insolvency proceedings, over other unsecured claims. In some cases, the priority also extends to secured claims, including secured claims previously registered. For example, in some States the claims of employees for unpaid wages and of the State for unpaid taxes are given priority over previously existing security rights. As social goals differ from jurisdiction to jurisdiction, the precise nature of these claims and the extent to which they are afforded priority are quite variable. Moreover, in many States, at least some of these claims must be registered in order

to be effective against third parties, while other States do not require registration for third-party effectiveness.

96. The advantage of establishing these preferential claims is that a social goal may be furthered. The possible disadvantage depends, in large part, on whether the claims are required to be registered. The disadvantage of unregistered preferential claims is that it will typically be difficult or impossible for prospective creditors to know whether such claims exist, a circumstance that increases uncertainty and thereby discourages secured credit. This particular disadvantage does not affect claims that have to be registered. Nonetheless, even registered preferential claims can adversely affect the availability and cost of secured credit. The reason is that, as such claims diminish the economic value of an asset to a secured creditor, creditors will often shift the economic burden of such claims to the grantor by increasing the interest rate or by withholding the estimated amount of such claims from the available credit.

97. To avoid discouraging secured credit, many States have recently cut back on the number of preferential claims that are given priority over existing security rights. The trend in modern legislation is to establish such claims only when there is no other effective means of satisfying the underlying social objective. For example, in some jurisdictions, tax revenue is protected through incentives for company directors to address financial problems quickly or face personal liability, while wage claims are protected through a public fund. In addition, many States have also sought to limit the impact of preferential claims on the availability of secured credit by imposing a cap either on the amount that may be paid to the preferred claimant or on the percentage of the amount realized upon enforcement that may be used to pay them.

98. If preferential claims are permitted to exist, the laws establishing them should be sufficiently clear and transparent so that a creditor is able to calculate the potential amount of the preferential claims in advance and to protect itself. Some States have achieved such clarity and transparency by listing all preferential claims in one law or in an annex to the law. Other States have achieved this result by requiring that preferential claims be registered in a public registry and by according priority to such claims only over security rights registered thereafter. When States adopt this second approach, however, much of the rationale for preferential claims disappears. This is because a number of these claims arise immediately prior to insolvency proceedings and therefore there is unlikely to be any secured credit arising after they are registered. The Guide seeks to achieve a balance with respect to preferential claims, not by recommending their registration, but rather by recommending that the law should limit such claims, both in type and amount, and that, to the extent preferential claims exist, they should be described in the law in a manner that is sufficiently clear and specific, to enable prospective secured creditors to evaluate whether or not to extend credit to a grantor (see recommendation 80).

(e) Priority of rights of judgement creditors

99. In contemporary secured transactions regimes, the general rule is that a security right that is effective against third parties is accorded priority over the rights of an unsecured creditor. However, as discussed in paragraph [...] above, in some States the holder of an unsecured claim may obtain a right in the assets of a debtor by obtaining a judgement or provisional court order against the debtor and

registering the judgement or provisional court order in the general security rights registry, thereby converting an unsecured claim into a secured claim that ranks according to the ordinary priority rules. Some of these States go further and provide that, where an unsecured creditor has taken the steps required under applicable law to obtain a judgement or provisional court order, the proprietary rights it asserts may actually have priority over certain claims of a pre-existing secured creditor. The law distinguishes these creditors from other unsecured creditors because of their diligence in doing whatever they could do, often at significant cost, to pursue their claim against their obligor. For ease of reference, the term “judgement” is used below to refer to both a judgement and a provisional court order, and the term “judgement creditor” is used to refer to a creditor that has obtained either a judgement or a provisional court order against a debtor.

100. This result is not unfair to other general unsecured creditors because they have the same rights to reduce their claims to judgement but have not taken the time or incurred the expense to do so. However, to avoid giving judgement creditors excessive powers in legal systems where a single creditor may even institute insolvency proceedings, insolvency laws often provide that security rights arising from judgements obtained within a specified period of time prior to the insolvency proceeding may be avoided by the insolvency representative. In various jurisdictions, the judgement creditor’s property right is extinguished or not recognized in the debtor’s insolvency proceedings.

101. Modern secured transactions regimes typically address this type of priority dispute by balancing the interests of the judgement creditor and the secured creditor. On the one hand, the judgement creditor has an interest in knowing at a given point of time whether there is sufficient value left unencumbered in the grantor’s assets for the enforcement of the judgement. On the other hand, a strong policy argument exists in favour of protecting the rights of the secured creditor, on the ground that the secured creditor expressly relied on its security right as a basis for extending credit.

102. Many States seek to achieve this balance by generally giving priority to a security right over a property right of a judgement creditor in encumbered assets, so long as the security right became effective against third parties before the judgement creditor’s property right arises. This is the general principle adopted by the Guide (see recommendation 81).

103. In States that seek to protect the rights of judgement creditors, there is typically one exception and two limitations to the general rule. Commonly, an exception to the rights of judgement creditors is created in the case of acquisition security rights in encumbered assets other than inventory or consumer goods. Priority is accorded to the acquisition security right even if it is not effective at the time the judgement creditor obtains rights in the encumbered assets, so long as the security right is made effective against third parties within the applicable grace period provided for such security rights. A contrary rule would create an unacceptable risk for providers of acquisition financing that had already extended credit prior to the time when the judgement creditor obtained its property right, and thus would discourage acquisition financing (see recommendation 179).

104. The limitations to the rule mentioned above relate to restrictions on the amount of credit given priority. The first limitation arises from the need to protect

existing secured creditors from making additional advances based on the value of assets subject to judgement rights. There should be a mechanism to put creditors on notice of the judgement rights. In many jurisdictions in which there is a registration system, this notice is provided by subjecting judgement rights to the registration system. If there is no registration system, or if judgement rights are not subject to the registration system, the judgement creditor might be required to notify the existing secured creditors of the existence of the judgement. In addition, the law may provide that the existing secured creditor's priority continues for a period of time (perhaps 45-60 days) after the judgement right is registered (or after the creditor receives notice of the judgement creditor's right in the encumbered assets), so that the creditor can take steps to protect its rights accordingly. The less time an existing secured creditor has to react to the existence of judgement rights and the less public such judgement rights are made, the more their potential existence will negatively affect the availability and cost of credit in the context of credit transactions that provide for extension of credit at various times after the conclusion of the credit agreement ("future advances").

105. The Guide recommends that secured creditors on record should be notified and that the priority of any security right is limited to credit extended by the secured creditor a certain number of days (e.g. 30-60) after the secured creditor had been notified of the existence of the judgement creditor's right (see recommendation 81, subparagraph (a)). Although this limitation imposes an obligation on the judgement creditor to notify the secured creditor, that obligation is generally not overly burdensome for the judgement creditor and relieves the secured creditor of the obligation to search frequently for judgements against the grantor (which would be a far more burdensome and costly obligation, the cost of which is almost always passed on to the grantor). The existence of the grace period is justified on the ground that it prevents the secured creditor under a revolving loan facility or other credit facility providing for future extensions of credit from having to cut off loans or other credit immediately, a circumstance that could create difficulties for a grantor or even force the grantor into insolvency.

106. The second limitation relates to future advances. The priority of a security right may be extended to advances made even after the secured creditor is notified of the judgement creditor's rights, provided the advance was irrevocably committed, prior to that notice, in a fixed amount or an amount that may be determined pursuant to a specified formula.

107. The rationale for this rule is that it would be unfair to deprive a secured creditor that has irrevocably committed to extend credit of the priority that it relied on when entering into the commitment. The contrary argument is that, under many credit facilities, the existence of a judgement would constitute an event of default, entitling the secured creditor to cease extending additional credit. However, ceasing to extend credit may not be a sufficient protection for the secured creditor and may be harmful to other parties as well. For example, the sudden loss of credit precipitated by the judgement could well force the grantor into insolvency proceedings, resulting not only in loss to the secured creditor and other creditors but also the possible destruction of the grantor's business. The Guide resolves this priority dispute in favour of the continued extension of credit under an irrevocable credit facility, in the interest of allowing the grantor to remain in business

(a circumstance that may result in the greatest chance for the grantor to pay all of its obligations) (see recommendation 81, subparagraph (b)).

(f) Priority of rights of persons providing services with respect to an encumbered asset

108. In many States, creditors that have provided services with respect to, or have added value to, tangible encumbered assets in some way, such as by storing, repairing or transporting them, are given a property right in the assets. In some States, this right can ripen into a fully formed security right that permits the service provider to enforce its claim as if it were a security right. In other States, this right is simply a right to refuse to hand over the assets to anyone seeking their delivery. Regardless of the nature of the service provider's right, in these States it may only be claimed while the assets are still in the possession of the service provider.

109. This treatment of service providers has the advantage of inducing them to continue providing services and of facilitating the maintenance and preservation of encumbered assets. In most States the right given to service providers has priority over all other rights that may be claimed in assets in their possession. In particular, this right ranks ahead of any other security right in those assets, regardless of the respective dates on which the two rights became effective against third parties. The rationale underlying this priority rule is that service providers are not professional financiers and should be relieved of searching the registry to determine the existence of competing security rights before providing services. Moreover, the rule facilitates services such as storage and repairs and other improvements that typically benefit secured creditors as well as grantors.

110. A question arises as to whether the priority given to service providers should be limited in amount or recognized only in certain circumstances. One approach is to limit priority to an amount (such as one month's rent in the case of landlords) and to recognize their priority over pre-existing security rights only where value is added which directly benefits the holders of the pre-existing security rights. This approach would have the advantage that the rights of secured creditors would not be unduly limited. It would have the disadvantage, though, that service providers that did not add value would not be protected. In addition, the amount of the value added by the service providers would need to be determined, a requirement that may add costs and create litigation.

111. Another approach is to limit the priority of service providers to the reasonable value of services provided. Such an approach would reflect a fair and efficient balance between the conflicting interests. It would ensure reasonable protection of service providers, while avoiding difficult questions of proof as to the relative value of the encumbered assets before and after the services are rendered. As the reasonable value of services is based on a calculation that can be verified comparatively and publicly, this approach also minimizes the costs associated with claiming the right. For this reason, it is the approach recommended in the Guide (see recommendation 82).

(g) Priority of a supplier's reclamation right

112. In some States, a supplier selling tangible assets on unsecured credit may, upon default or financial insolvency of the buyer (which may or may not be

accompanied by the grantor's insolvency proceedings), be given by law a right to reclaim the tangible assets from the buyer within a specified period of time, which is known as the "reclamation period". If insolvency proceedings have commenced with respect to the buyer, applicable insolvency law will determine the extent to which the rights of reclamation claimants would be stayed or otherwise affected (see recommendations 39-51 of the *UNCITRAL Insolvency Guide*).

113. An important question is whether a reclamation claim relating to specific tangible assets should have priority over a pre-existing security right in the same assets, either outside or inside the insolvency context. In other words the question is whether, if the assets of the buyer (including the assets sought to be reclaimed) are subject to a security right, the reclaimed assets should be returned to the seller free of such security right. In some States, the reclamation has a retroactive effect, placing the seller in the same position as it was prior to the sale (i.e. holding assets that were not subject to any security rights in favour of the buyer's creditors). However, in other States, the assets remain subject to the pre-existing security rights, provided that the security right has become effective against third parties before the supplier exercises its reclamation right. The rationale for this approach is that the holders of such security rights would likely have relied on the existence of the assets being reclaimed when extending credit. Also, if the reclamation rights were given priority in this situation, the response of inventory acquisition financiers often will be to reduce the amount of credit extended to the grantor by "reserving" for potential reclamation claims.

114. Where States have enacted a modern secured transaction regime of the type envisioned in the Guide, the seller is able to protect itself by obtaining an acquisition security right in the assets, and therefore the policy sought to be promoted by providing for reclamation rights can usually be achieved by other means. The Guide, consequently, recommends that reclamation rights do not have priority unless they are exercised before a competing security right has become effective against third parties (see recommendation 83).

(h) Priority of a security right in an attachment

115. Tangible assets may often become attachments to other tangible assets (whether movable, as in the case of tyres attached to road vehicles, or immovable, as in the case of ornamental fireplaces or chandeliers or furnaces attached to buildings). In these cases, there can often be conflicts between security rights created in the attachment and security rights created in the object to which the attachment is affixed. Different policy considerations come into play when determining how to determine the relative priority of these rights as between attachments to immovable property and attachments to movable assets.

(i) Priority of a security right in an attachment to immovable property

116. To the extent that a secured transactions regime permits security rights to be created in attachments to immovable property (as recommended by the Guide; see recommendation 21), it must also include rules governing the relative priority of a holder of security rights in an attachment to immovable property vis-à-vis persons that hold rights with respect to the related immovable property. A paramount consideration of such priority rules is to avoid unnecessarily disturbing well-established principles of immovable property law.

117. Such priority rules will have to address a number of different priority conflicts. The first is a conflict between a security right in an attachment (or any other right in an attachment, such as the right of a buyer or a lessee), that is created and made effective against third parties under immovable property law and a security right in the attachment that is made effective against third parties under the secured transactions regime governing movable assets. In this situation, out of deference to immovable property law, most States give priority to the right created and made effective against third parties under immovable property law. With a view to preserving the reliability of the immovable property registry, this is also the position taken in the Guide (see recommendation 84).

118. A second type of priority conflict may arise between a security right in an encumbered asset that is either an attachment to immovable property at the time the security right becomes effective against third parties or that becomes an attachment to immovable property subsequently, where the security right has been made effective against third parties by registration in the immovable property registry, and a security right (or other right, such as the right of a buyer or lessor) in the related immovable property. In these cases, priority will be determined according to the order of registration in the immovable property registry. Once again, the rationale is to preserve the reliability of the immovable property registry, a rationale that also underlies the position taken in the Guide (see recommendation 85).

119. A third type of priority conflict may arise between an acquisition security right in an encumbered asset that becomes an attachment to immovable property and an encumbrance in the immovable property. In order to promote the financing of the acquisition of attachments, the Guide recommends that priority be given to the acquisition security right in the encumbered asset that becomes an attachment (see recommendation 180; under recommendation 192, the same principle will also apply in cases where the acquisition financier in the non-unitary regime has a retention-of-title right or a financial lease right).

(ii) *Priority of a security right in an attachment to a movable asset*

120. Several types of priority conflict may arise with respect to security rights in assets that later became attachments to movable assets. One such type may arise between two security rights in assets that later became attachments to one or more movable asset. Another priority conflict may arise between a security right in an asset that later became an attachment to a movable asset and a security right in the relevant movable asset to which the attachment was attached where both have been registered in the general security rights registry. In these cases, priority may be determined in accordance with the order of registration or third-party effectiveness (see recommendation 173). A third type of priority conflict may arise between a security right in an asset that later became an attachment where that security right was made effective against third parties by registration in a specialized registry or notation on a title certificate and a security right in the related movable asset that was registered in the general security rights registry. In this case, priority is given to the former right in deference to the policy in favour of preserving the integrity of specialized registries and title-notation systems (see recommendation 74, subparagraph (a)). A fourth type of priority conflict may arise between two security rights in assets that later became attachments to one or more movable assets where both rights have been made effective against third parties by registration in a

specialized registry or notation on a title certificate. A fifth priority conflict may arise between a security right in an asset that later became an attachment and a security right in the relevant movable asset to which the attachment was attached where both rights have been made effective against third parties by registration in a specialized registry or notation on a title certificate. In these cases, priority is determined according to the time of such registration or notation (see recommendations 74, subparagraph (b), and 86).

(i) Priority of a security right in a mass or product derived from a security right in processed or commingled assets

121. Many types of tangible asset are destined to be manufactured, transformed or commingled with other tangible assets of the same kind. This circumstance gives rise to three types of potential priority contest that require special rules. These three types are: (a) contests between security rights taken in the same items of tangible assets that ultimately become commingled in a mass or product (e.g. sugar and sugar; oil and oil; grain and grain); (b) contests involving security rights in different tangible assets that ultimately become part of a mass or product (e.g. sugar and flour, fibreglass and polyester resin, cloth and dye in fabrics); and (c) contests involving a security right originally taken in separate tangible assets and a security right in the mass or product (e.g. sugar and cake, fibreglass and furniture, cloth and trousers). Each of these potential contests is discussed below.

(i) Priority of security rights in the same tangible assets that are commingled in a mass or product

122. States typically provide that non-possessory security rights in the same tangible assets that become commingled continue into the mass or product and have the same priority as against each other as they had prior to the commingling. The rationale for this rule is that the commingling of tangible assets into a mass or product should have no bearing on the respective rights of creditors with competing security rights in the separate tangible assets. As between each other, they should be in an identical position. Of course, in these cases the total amount available to satisfy the claims of these secured creditors cannot exceed the value of the tangible assets encumbered by these competing security rights immediately before they became commingled in the mass or product (see recommendation 22). The Guide recommends this principle as well (see recommendation 87).

(ii) Priority of security rights in tangible assets that become part of a mass or product

123. If security rights in different tangible assets that ultimately become part of a mass or product continue in the mass or product, the issue is how to determine the relative value of the rights that may be claimed by each creditor. States have taken many approaches to deciding this question, depending on how they decide the extent of the secured creditor's rights in the mass or product. The Guide recommends that secured creditors should be entitled to share in the aggregate maximum value of their security rights in the mass or product according to the ratio of the value of the assets encumbered by their respective security rights immediately prior to manufacture or incorporation to the value of all the components at that time (see recommendation 22). Using the example of the cake, if the value of the sugar is 2 and the flour 5, while the value of the cake when baked is 8, the creditors will

receive 2 and 5, respectively, but neither secured creditor will receive more than the amount of its secured obligation. Conversely, if the value of the sugar is 2 and the flour 5, while the value of the cake when baked is 6, the creditors will receive two-sevenths and five-sevenths of 6, respectively. Each creditor in this situation will suffer a proportional decrease.

124. It follows that in these types of case, each creditor is entitled to claim its pre-manufacture priority in the share of the final product that represents the value of the component part over which it had taken security. This means that, if the secured claim of one secured creditor is less than the value of its component part and the secured claim of another secured creditor is greater than the value of its component, the second secured creditor cannot claim a priority right in the excess value attributable to the share of the first secured creditor. To avoid these limitations, many secured creditors draft security agreements that describe the encumbered assets as including not only the component parts, but also any mass or product that is manufactured from these component parts. However, States typically follow the relative valuation formula described above for determining rights of secured creditors with security rights in different components of a mass or product, and this is also the approach recommended in the Guide (see recommendation 88).

(iii) *Priority of a security right originally taken in tangible assets as against a security right in the mass or product*

125. The third type of competition that States must resolve is that between security rights in tangible assets that become part of a mass or product and security rights taken in the mass or product itself. Generally, States take the position that the regular priority rules apply to govern these conflicts. For example, if Secured Creditor A has a security right in sugar that is the subject of a notice registered on 1 January, and Secured Creditor B has a security right in present and future cakes that is the subject of a notice registered on 1 February, Secured Creditor A will have priority, subject to the limitation, set out in recommendation 22, that its security right is limited to the value of the assets immediately before they became part of the mass or product. Conversely, if Secured Creditor A has a security right in sugar that is the subject of a notice registered on 1 February, and Secured Creditor B has a security right in present and future cakes that is the subject of a notice registered on 1 January, Secured Creditor B will have priority.

126. There is, however, one exception to this principle, which arises where the secured creditor that takes security in a component part is an acquisition financier (see chapter XI on acquisition financing). In these cases, and in keeping with the general treatment of acquisition financiers, States usually give the acquisition security right priority over all security rights in the mass or product that extend to future assets. To maintain a consistent regime promoting the availability of credit for the acquisition of tangible assets, the Guide also recommends adoption of this principle (see recommendation 89).

5. Scope and interpretation of priority rules

(a) Irrelevance of knowledge of the existence of the security right

127. One of the key features of a modern secured transactions regime is that, regardless of the basis adopted for determining priority, it will be fixed by reference

to objective facts (e.g. registration of a notice, possession, a control agreement, or a notation on a title certificate). For such a priority system to provide certainty, these objective facts must be the exclusive means for determining priority. This is why in most States that have modernized their regime of security rights the ordering of priority as established by, for example, the date of registration of a notice or creditor possession applies even if a subsequent creditor or other competing claimant acquired its rights with knowledge of an existing security right that was not then registered or otherwise effective against third parties.

128. The rationale for this rule is based on the premise that it is often difficult to prove that a person had knowledge of a particular fact at a particular time. This is especially true in the case of a corporation or other legal entity with numerous employees. Priority rules that are dependent on subjective knowledge provide opportunities to complicate dispute resolution, thereby diminishing certainty as to the priority status of secured creditors and reducing the efficiency and effectiveness of the system. While it might seem odd to give priority to a creditor that knows of a security right already created by a grantor, basing priority on the order of a publicly verifiable event through which a creditor makes its rights effective against third parties ensures certainty in the relationships between potentially competing claimants. This consideration supports the recommendation in the Guide that mere knowledge of a security right is irrelevant to the determination of priority (see recommendation 90).

129. This said, it is important to distinguish knowledge merely of the existence of a security right from knowledge that a particular transaction violates the rights of a secured creditor. For example, knowledge by a buyer of an unregistered security right will not disrupt the priority regime established for registered rights. By contrast, should the buyer know as well that the asset it acquires is being sold in contravention of the specific terms of a security agreement (e.g. a prohibition on the grantor's right to sell encumbered assets) significant legal ramifications may well follow (e.g. acquiring title to the asset subject to existing security rights; see paras. 70-72 above; see also recommendations 78, 98, subparagraph (b), 102 and 103).

(b) Freedom of contract with respect to priority: subordination

130. The priority regime in most States establishes rules that apply unless they are specifically modified by affected parties. In other words, most States provide that a secured creditor may at any time, whether unilaterally or by agreement, subordinate its security right to the right of an existing or future competing claimant. For example, Lender A, holding a first-priority security right in all existing and after-acquired assets of a grantor, may agree to permit the grantor to give a first-priority security right in a particular asset (e.g. a piece of equipment) to Lender B so that the grantor could obtain additional financing from Lender B based on the value of that asset. The recognition of the validity of subordination of security rights reflects a well-established policy (see, for example, article 25 of the United Nations Assignment Convention). Consistent with the widespread recognition of the utility of subordination agreements, the Guide recommends that they be permitted (see recommendation 91).

131. However, subordination cannot affect the rights of a competing claimant without its consent. Thus, a subordination agreement cannot adversely affect the priority of a secured creditor that is not a party to that agreement. This means that,

in those States which require creditors to indicate in the registered notice the maximum amount for which a security right is granted (see recommendation 57, subparagraph (d)), the subordination will be limited to the indicated value of the higher ranking right. So, for example, if Lender A has limited its security right to 100,000 and Lender B has security for 50,000, a subordination agreement between Lender A and Lender C that has security for 200,000 cannot operate so as to permit Lender C to claim more than 100,000 by priority over Lender B.

132. The purpose of a subordination agreement is to permit secured creditors to agree among themselves as to the most efficient allocation of priority of their rights in encumbered assets. To obtain the full benefit of these consensual allocations, it is essential that the priority afforded by a subordination agreement continue to apply in insolvency proceedings of the grantor. In some jurisdictions, such a provision already exists in the insolvency regime. In others it may be necessary to amend insolvency laws so as to empower the courts to enforce a subordination agreement and to enable insolvency representatives to deal with priority conflicts among parties to subordination agreements without risk of liability (see chapter XVI on the impact of insolvency on a security right, para. 63, and recommendation 237).

133. Subordination of security rights and other proprietary rights in encumbered assets does not mean subordination of payments prior to default. This is a matter for the general law of obligations. Normally, prior to default, and as long as the grantor continues to repay the loan or other credit received, the secured creditor is not entitled to enforce its security right and priority is not an issue. That is, as long as no fraud is being committed and in the absence of an agreement to the contrary between a grantor and a secured creditor, a grantor is not precluded from making payments on obligations secured by subordinate security rights.

(c) Impact of continuity of third-party effectiveness on priority

134. Where the third-party effectiveness of a security right may be achieved by more than one method (e.g. automatically, by registration, by possession, by control or by notation on a title certificate), a question arises as to whether a secured creditor that initially established the priority of its security right by reference to one such method should be permitted to change to another method without losing its original priority. Some States do not permit creditors to change the means by which they have achieved third-party effectiveness. As a result, in these States, it is not possible for a creditor's priority to be maintained following such a change. For example, if a creditor registers a notice in the general security rights register on Day 1, on Day 10 obtains possession of the encumbered asset and on Day 20 cancels the registration, from that time onwards the relevant time for establishing priority in these States would be Day 10, and not Day 1. If the initial method of establishing priority no longer exists, priority can only date from the time when a still-existing method for establishing priority was achieved.

135. In other States, it is possible to maintain priority even after a change in the method by which third-party effectiveness is achieved. Whether priority is maintained depends on the manner in which the different methods for achieving third-party effectiveness are integrated. In these States, the principle is that a security right will not lose its priority as long as there is no time during which the security right is not effective against third parties. For example, if a security right in an asset first becomes effective by possession and the secured creditor subsequently

registers a notice of the security right in the general security rights registry and returns possession to the grantor, the security right remains effective as against third parties and priority relates back to the time that possession was initially obtained as long as the registration precedes the creditor's surrender of possession. If, however, the secured creditor registers the notice after it surrenders possession of the asset, the priority of the security right dates only from the time that the secured creditor registers the notice. Rules providing for continuity in priority are especially important in cases where effectiveness against third parties was first established through possession and the duration of the credit extends past the point where the grantor requires the use of the encumbered asset. Consistent with its recommendations relating to continuity of third-party effectiveness (see recommendations 46 and 47), the Guide takes the position that, for the purpose of applying the temporal priority rules recommended in the Guide, priority should be maintained notwithstanding a change in the method by which it is determined (see recommendations 92 and 93).

136. It should be noted that the above-mentioned rule applies only where the temporal priority rules are applied to determine priority, and does not apply where the non-temporal rules are applied. In the latter case, a change in the mode of third-party effectiveness will affect the priority of a security right, even if third-party effectiveness is continuous. For example, if the holder of a negotiable instrument registers a notice of a security right in the instrument prior to surrendering possession, the special priority attaching to possession of the instrument will not be maintained simply through the registration. Should a second secured creditor have registered a notice before the secured creditor surrendering possession registered its notice, the second secured creditor will take priority based on its prior registration (see paras. 155-157 below; see also recommendation 98). Similarly, if a secured creditor with control with respect to a right to payment of funds credited to a bank account registers a notice of its security right and then surrenders control, the special priority attaching to control is lost. Should another secured creditor have registered a notice in the general security rights registry before the initial taking of control, once control is surrendered, that secured creditor would have priority based on its prior registration (see paras. 158-164 below; see also recommendation 100).

(d) Extent of priority: future advances, and future and contingent obligations

137. Previous chapters have addressed the fact that, in modern secured transactions regimes, a security right can secure not only obligations existing at the time the security right is created, but also future and contingent obligations as well (see chapter IV on the creation of a security right, paras. [...]; see also recommendation 16). Most States provide that the initial security right covers principal and interest as stipulated in the agreement as well as any fees and costs associated with recovery of payment.

138. As for future advances under existing credit arrangements and contingent obligations, States take different positions. Some give the same priority to future advances as to the original extension of credit, but in order for the initial priority to extend to future and contingent obligations, these States require such obligations to be determinable both as to type and amount (e.g. the agreement specifies that only future advances under a line of credit up to a maximum exposure of 100,000 be

secured). In other States, a security right may extend to all monetary and non-monetary obligations owed to the secured creditor of whatever type and in whatever amount, as long as the agreement so specifies. In these States, future and contingent obligations under the security agreement will have the same priority as the initial extension of credit.

139. The practical consequence is that a secured creditor is assured, at the time it makes a commitment to extend credit, that the priority of its security right will extend, not only to the credit it extends contemporaneously with the conclusion of the security agreement, but also to: (a) obligations that arise thereafter pursuant to the terms of the security agreement (such as future advances under a revolving credit agreement); and (b) contingent obligations that become actual obligations upon the occurrence of the contingency (such as obligations that become payable to the secured party under a guarantee). For example, in the case of a revolving credit facility under which the lender has agreed on Day 1 to make advances to the grantor from time to time for the entire one-year term of the facility secured by a security right in the grantor's assets, the security right will have the same priority for all of the advances made, regardless of whether they are made on Day 1, 35 or 265.

140. In the case of credit extended to enable a grantor to purchase tangible assets or services in instalments over time, this approach results in the entire claim being treated as coming into existence at the time when the contract for the purchase of the tangible assets or services is concluded, and not at the time of each delivery of tangible assets or rendering of services. One rationale for this approach is that it is the most cost-efficient approach, because it relieves the secured creditor of the need to determine priority each time it extends credit, a determination that typically involves additional searches for new registrations by other creditors, the execution of additional agreements and additional registrations for amounts of credit extended subsequent to the time the security right was created. Because the costs associated with these additional steps invariably are passed on to the grantor directly or reflected in an increase in the interest rate, eliminating them can reduce the cost of credit for the grantor. Another rationale for this approach is that it minimizes the risk to the grantor that subsequent extensions of credit under the security agreement will be interrupted if the secured creditor determines that a future advance does not have the same priority as the initial advances. For these reasons the Guide recommends adoption of priority rules that extend priority to future obligations (see recommendation 94).

141. The foregoing priority rules are, nonetheless, subject to two possible limitations. First, as noted, in some States where the priority of a security right extends to future extensions of credit, priority is limited to the maximum amount specified in the notice registered in a public registry with respect to the security right. The rationale for this approach is that it may encourage subordinate financing by encouraging prospective subordinate creditors to extend credit on the residual value of the encumbered assets (e.g. the value of the encumbered assets in excess of the maximum amount secured by the higher-ranking security right referred to in the registered notice) to the extent the prospective creditor is able to satisfy itself that a sufficient residual value exists (see recommendation 95). Other States do not take this approach on the basis that it might encourage secured creditors to inflate the amount mentioned in the registered notice to include an amount greater than that contemplated at the time of the security agreement to accommodate possible

unanticipated future advances (see chapter VI on the registry system, paras. [...]; see also recommendation 57, subparagraph (d)).

142. Second, the Guide recognizes that, in some circumstances, a secured creditor should not be able to assert its priority with respect to future advances against a creditor that obtains a judgement or provisional court order against the grantor and takes steps to enforce the judgement against the encumbered assets (see paras. 99-107 above; see also recommendations 81 and 94).

(e) Application of priority rules to a security right in after-acquired assets

143. As discussed in greater detail in chapter IV on the creation of a security right, in some States a security right may be created in assets that the grantor may acquire in the future (“after-acquired assets”). In these States, assuming that the description of the after-acquired assets is sufficient to identify them, a security right in these assets is obtained automatically at the time the grantor acquires them, without any additional steps being required at the time of acquisition. As a result, the costs incidental to the creation of the security right are minimized and the expectations of the parties are met. This is particularly important with respect to inventory that is continuously being acquired for resale, receivables that are continuously being collected and regenerated (see chapter II on the scope of application and other general rules, section F, Examples of financing practices covered, paras. [...]) and equipment that is periodically being replaced in the normal operation of the grantor’s business.

144. The recognition of the automatic creation of a security right in after-acquired assets raises the question as to whether priority should date from the time when the security right is first registered or becomes effective against third parties, or from the time the grantor acquires the assets. Different States address this matter in different ways. Some States adopt an approach that differentiates according to the nature of the creditor competing for priority. In these States, priority dates, as against other consensual secured creditors, from the date of registration or third-party effectiveness and, as against all other competing claimants, from the date the asset is acquired by the grantor. In other States, priority for all after-acquired assets, and as against all competing claimants, is determined by reference to the date priority was initially established.

145. It is generally accepted that the second of these approaches is more efficient and effective in promoting the availability of secured credit. Thus, modern secured transactions regimes typically specify that, in such cases, the priority of a security right extends to all encumbered assets covered by the registered notice, regardless of whether they come into existence before, at or after the time of registration. This is the approach taken by the Guide (see recommendation 96).

(f) Application of priority rules to a security right in proceeds

146. If a creditor has a security right in proceeds (for the definition of “proceeds”, see Introduction, section B, Terminology), issues will arise as to the priority of that security right as against the rights of competing claimants. Competing claimants with respect to proceeds may include, among others, another creditor of the grantor that has a security right in the proceeds and a creditor of the grantor that has obtained a right by judgement against the proceeds.

147. Assets that constitute proceeds to one secured creditor may constitute original encumbered assets to another secured creditor. For example, Creditor A may have a security right in all of the grantor's receivables by virtue of its security right in all of the grantor's existing and future inventory and the proceeds arising upon the sale or other disposition thereof; Creditor B may have a security right in all of the grantor's existing and future receivables as original encumbered assets. If the grantor later sells on credit inventory that is subject to the security right of Creditor A, both creditors have a security right in the receivables generated by the sale: Creditor A has a security right in the receivables as proceeds of the encumbered inventory, and Creditor B has a security right in the receivables as original encumbered assets.

148. The approach to priority taken in States that recognize a security right in proceeds will often differ depending on the nature of the competing claimants and the type of asset that gives rise to the proceeds. In priority disputes between holders of competing security rights, the priority rules for rights in proceeds of original encumbered assets may be derived from the priority rules applicable to rights in the original encumbered assets. Thus, the time of third-party effectiveness or the time of registration of a notice in the general security rights registry of a security right in an encumbered asset would also be the time of third-party effectiveness or registration, respectively, of a security right in the proceeds of such encumbered asset.

149. In the case of competitions between secured creditors with security rights in assets as proceeds and secured creditors with rights in these assets as original encumbered assets, some States distinguish between proceeds in the form of receivables and proceeds in the form of tangible assets (for example, tangible assets obtained in exchange). These States also typically distinguish between proceeds arising from the sale of inventory and proceeds arising from the sale of equipment. The general rule is that a secured creditor that takes security in receivables generated by the sale of inventory as original encumbered assets will have priority over a creditor claiming such receivables as proceeds, regardless of the respective dates on which their rights became effective as against third parties.

150. In other States, no distinctions as to the form of proceeds or the nature of the assets are made. The rule is that the first right in particular assets that is reflected in a registration has priority over the rights of a competing claimant. For example, if the registration of the security right in assets, the sale of which generates the proceeds, predates the registration of the security right in the proceeds as original encumbered assets, the security right in the assets giving rise to the proceeds has priority. Conversely, if a notice was registered with respect to the right in the proceeds as original encumbered assets before the competing claimant made a registration with respect to the assets giving rise to the proceeds, the security right of the creditor in the proceeds as original encumbered assets would have priority. This is the approach recommended in the Guide (see recommendation 97).

151. In cases in which the order of priority of competing rights in the originally encumbered asset is not determined by the order of registration in the general security rights registry (as is the case, for example, with acquisition financing rights that enjoy a special priority position), a separate determination will be necessary for the priority rule that would apply to proceeds (see chapter XI on acquisition financing, paras. [...]; see also recommendations 181 and 182 (unitary approach) and 194-196 (non-unitary approach)).

B. Asset-specific remarks

152. The particular priority conflicts that generally recur in connection with tangible assets have been reviewed above. The “first-in-time” principle is an efficient starting point for establishing priorities.

153. As noted, however, the principle requires adjustment in certain cases. Some adjustments involve other secured creditors (e.g. security rights in attachments or security rights in masses or products). Other adjustments involve competing claimants that are not secured creditors (e.g. transferees, lessees and licenses or insolvency representatives).

154. In addition to these adjustments resulting from the diversity of obligations being secured and the diversity of competing claimants, modern secured transactions regimes also contain a number of special priority rules that apply to particular types of asset and flow from the particular means for achieving third-party effectiveness applicable to these types of asset. This section deals with priority issues relating to such types of asset.

1. Priority of a security right in a negotiable instrument

155. Many States have adopted special priority rules for security rights in negotiable instruments, such as cheques, bills of exchange and promissory notes. These rules are a reflection of the importance of the concept of negotiability in those States.

156. As discussed (see chapter V on the effectiveness of a security right against third parties), in many States, security rights in negotiable instruments may be made effective either by registration of the security right in the general security rights registry or by transfer of possession of the instrument (see recommendation 37). In these States, priority is often accorded to a security right made effective against third parties by transfer of possession of the instrument over a security right made effective against third parties by registration, regardless of when registration occurs. The rationale for this rule is that it resolves the priority conflict in favour of preserving the unfettered negotiability of negotiable instruments. To preserve the coherence of existing law governing negotiable instruments (for a rule of interpretation with respect to the expression “law governing negotiable instruments”, see Introduction, section B, Terminology), the Guide recommends adopting this priority principle (see recommendation 98).

157. For the same reason, in these States, priority is often accorded to a buyer or other transferee (in a consensual transaction), if that person qualifies as a protected holder of the instrument under the law governing negotiable instruments. A like priority is also given if the buyer or other transferee takes possession of the instrument and gives value in good faith and without knowledge that the transfer is in violation of the secured creditor’s rights. It should be noted in this regard that knowledge of the existence of a security right on the part of a transferee of an instrument or a document does not mean, by itself, that the transferee did not act in good faith. The buyer must know that the transfer free of the security right is prohibited under the security agreement. Here also, the Guide adopts a priority rule that follows the above principles of negotiable instruments law (see recommendation 99).

2. Priority of a security right in a right to payment of funds credited to a bank account

158. A comprehensive priority regime typically addresses a number of different priority conflicts relating to security rights in rights to payment of funds credited to a bank account (for a definition of “bank account”, see Introduction, section B, Terminology). Some States consider the right to payment of funds credited to a bank account simply to be a receivable. In these States, no special rules govern the creation or the third-party effectiveness of security rights in the right to payment. In other States, third-party effectiveness may also be achieved by control. In these cases, States must also determine the priority consequences of achieving third-party effectiveness by such a method (see paras. 39 and 40 above). Several different priority conflicts are possible.

159. One type of priority conflict is between a security right made effective against third parties by control and a security right made effective against third parties by a method other than control. In this situation, States that have adopted the concept of control accord priority to the security right made effective against third parties by control. The reason is that that outcome facilitates financial transactions that rely on rights to payment of funds credited to a bank account, relieving secured creditors from the necessity of searching the general security rights registry. This is also the position taken in the Guide (see recommendation 100, first sentence).

160. A second type of priority conflict is that between two security rights, each of which is made effective by control. Here, the logical outcome, usually adopted in States that recognize control agreements, is to accord priority to the security right that was first made effective by control (i.e. in the order in which the respective control agreements were concluded). This conflict will not arise often in practice, because it is unlikely that a depositary bank will knowingly enter into more than one control agreement with respect to the same bank account in the absence of an agreement between both secured creditors as to how priority will be determined. Nonetheless, the conflict is theoretically possible, and the Guide therefore takes the position that the normal “first-in-time” priority principle should apply in these cases (see recommendation 100, second sentence).

161. Yet another type of priority conflict is where one of the secured creditors is the depositary bank itself. In this situation, a strong argument exists in favour of according priority to the depositary bank. As the depositary bank generally will win in such a situation by reason of the right of set-off that it generally enjoys under non-secured transactions law (unless it has expressly waived its right), a priority rule that favours the bank in this circumstance allows the conflict to be resolved within the confines of the priority regime without resorting to other law. Adoption of such a principle is recommended in the Guide (see recommendation 100, third sentence).

162. States that adopt the special priority rule just noted often make an exception for the circumstance in which the priority conflict is between the depositary bank and a secured creditor that obtains control of the bank account by becoming the customer of the depositary bank. In such cases, they generally take the position that priority should be given to the customer. The rationale for this approach is that, by accepting the competing secured creditor as its customer, the depositary bank generally releases its claim in the deposit agreement that it enters into with its

customer. Also, the depository bank would often lose its right of set-off in this situation; since the bank account is not in the grantor's name, there would be no mutuality between the depository bank and the grantor and hence, no right of set-off (see recommendation 100, third sentence).

163. A fourth type of conflict is one between a security right in a right to payment of funds credited to a bank account and any rights of set-off the depository bank might have against the grantor-client. To avoid undermining the bank-client relationship, the law of set-off generally gives priority to the depository bank's rights of set-off. In some States, this concept of priority has been explicitly incorporated into the secured transactions law. This is also the position that is recommended in the Guide (see recommendation 101).

164. A fifth type of priority conflict can arise between a security right in a right to payment of funds credited to a bank account and the rights of a transferee of funds from that bank account, where the transfer is initiated by the grantor. The term "transfer of funds" is intended to cover a variety of transfers, including by cheque and electronic means. In these situations, a strong policy argument in favour of the free negotiability of funds supports a rule that accords priority to the transferee, so long as the transferee was not aware that the transfer of funds to it was in violation of the rights of a secured creditor under its security agreement. If, on the other hand, the transferee knew that the transfer violated the security agreement, it would take the funds subject to the security right. This is the recommendation adopted in the Guide, subject to the caveat that the recommendation is not intended adversely to affect the rights of transferees of funds from bank accounts under law other than the secured transactions law (see recommendation 102).

3. Priority of a security right in money

165. In the interest of maximizing the negotiability of money, many States permit a transferee of money to take the money free of the claims of other persons, including the holders of security rights in the money (for the definition of "money", see Introduction, section B, Terminology). As in the case of transferees of funds from a bank account, the only exception to this priority rule is if the transferee has knowledge that the transfer of the money is in violation of the security agreement between the account holder and the secured party (e.g. if the transferee has colluded with the holder of the bank account to deprive the secured creditor of its rights). As in similar situations involving the transfer of funds from bank accounts, mere knowledge of the existence of the security right would not defeat the rights of the transferee. Here also, in keeping with generally accepted practice governing money, the Guide recommends adoption of this priority principle (see recommendation 103).

4. Priority of a security right in a right to receive the proceeds under an independent undertaking

166. The law governing independent undertakings has developed largely through practices in the letter-of-credit and bank-guarantee industry. As already mentioned (see chapter V on the effectiveness of a security right against third parties), a security right in a right to receive the proceeds under an independent undertaking is made effective against third parties only by control. As the typical method of achieving control in this context is by obtaining an acknowledgment, in the case of

several potential payers (e.g. the guarantor/issuer, confirmer and several nominated persons), control may be achieved only as against each particular guarantor/issuer, confirmer or nominated person that gave an acknowledgment. Thus, the priority rule normally focuses on the particular person that is the payer.

167. Normally, in the rare case of a priority contest between the holder of a security right in a right to receive the proceeds under an independent undertaking that has been made effective by control and a security right made effective against third parties by reason of the fact that it secures payment of a receivable, negotiable instrument or other intangible asset, the former will prevail (see recommendations 48 and 104). As in the case of bank accounts, this rule is based on the need to facilitate transactions involving independent undertakings by relieving parties of the necessity of searching the general security rights registry to determine whether the receivable supported by the independent undertaking is also subject to a security right, thereby encouraging reliance on independent undertakings. As a practical matter, this particular type of priority conflict is quite rare, because in most cases the beneficiary of the receivable will also be the beneficiary of the independent undertaking. In any case, consistent with the general “first-in-time” principle, as between two security rights made effective against third parties by control through acknowledgement, priority is accorded to the first security right to be acknowledged by the payer. The rationale for this result is largely practice-based, in that it is a special rule required in order to keep low the cost of independent undertakings. As independent undertakings constitute a highly specialized branch of commercial law that has been largely developed by practice, the Guide recommends that relevant priority rules be consistent with these principles (see recommendation 104).

5. Priority of a security right in a negotiable document or tangible assets covered by a negotiable document

168. Modern secured transactions regimes typically have rules that address at least two priority conflicts involving negotiable documents, such as negotiable warehouse receipts and bills of lading. The first is a conflict between the holder of a security right in a negotiable document or the tangible assets covered thereby, on the one hand, and a person to whom the document has been duly negotiated, on the other. In the interest of preserving negotiability under non-secured transactions law, most States provide that the security right in the negotiable document and the tangible assets covered thereby will be subordinate to any superior rights acquired by the transferee of the document under the law governing negotiable documents. For the same reason, this is the position recommended in the Guide (see recommendation 105).

169. The second type of conflict is between the holder of a security right in the tangible assets covered by the negotiable document that is derived from a security right in the negotiable document and the holder of a security right in the tangible assets resulting from some other transaction (e.g. the creation of a direct security right in the tangible assets). This type of conflict can arise either where the direct security right in the tangible assets became effective against third parties while the tangible assets were subject to the negotiable document or where the direct security right in the tangible assets became effective against third parties before the tangible assets became subject to the negotiable document. In either situation, priority is usually given to the security right in the negotiable document. Such a priority rule

encourages reliance on negotiable documents as a medium of commerce, especially in connection with bills of lading issued in connection with international sales. It is, therefore, the position taken in the Guide (see recommendation 106).

170. However, an exception to this rule is warranted in the particular situation where the tangible asset subject to the negotiable document is an asset other than inventory. Creditors normally expect that inventory will be shipped and a bill of lading or warehouse receipt issued, and therefore can anticipate a short period where assets that their security right directly encumbers will be covered by a bill or receipt. This is not usually the case with, for example, equipment. Hence, the rule giving absolute priority to security over negotiable documents has less significance, and an exception may be justified. Thus, the rule is inapplicable where the tangible assets are assets other than inventory and the direct security right (that is, the security right of the secured creditor not in possession of the negotiable document) was made effective against third parties before the earlier of: (a) the time the asset became covered by the negotiable document; and (b) the time when an agreement was made between the grantor of the security right and the secured creditor in possession of the negotiable document providing for the asset to be covered by the negotiable document, so long as the asset became so covered with a specified short period of time (such as 30 days) from the date of the agreement. In this particular case, the normal “first-in-time” priority rule would apply, and the first creditor to make its security in the tangible assets (whether directly or through taking security in a negotiable document representing those assets) effective against third parties will have priority. This exception provides a level of protection for holders of security rights in tangible assets other than inventory against situations in which the grantor, without notifying such holders and without their authorization, causes the assets to be covered by a negotiable document. For these reasons, the Guide also recommends that such an exception be adopted (see recommendation 106, second sentence).

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

VIII. Rights and obligations of the parties

A. General remarks

1. Introduction

1. As is the case with respect to any other agreement, issues such as the formation, interpretation, effects, breach and avoidance of a security agreement are subject to general contract law. In addition, as it sets out the bargain between the grantor and the secured creditor, a security agreement is normally subject to special rules regulating security agreements. This usually means, in particular, that a security agreement will be effective between the parties even if it is not effective against third parties.

2. The substantive content of a security agreement will vary according to the needs and wishes of the parties. Typically, clauses in security agreements address three main themes. First, some provisions are included in the agreement because they form part of the mandatory requirements for creating a security right. For example, rules relating to the identification of the encumbered assets and the secured obligation might fall into this category (for the definitions of “encumbered asset” and “secured obligation”, see Introduction, section B, Terminology). In chapter IV (Creation of a security right (effectiveness as between the parties)), the Guide recommends that the formal requirements for creating a security agreement that is effective between the parties should be minimal and easy to satisfy (see recommendations 12-14).

3. Second, the typical security agreement will also contain several terms specifying the rights and obligations of the parties once the agreement has become effective between them. Many of these terms deal with the consequences of a default by the grantor or the breach of an obligation by the secured creditor. Often the events constituting a default by the grantor and the remedies available to the secured creditor to enforce the terms of the security agreement are enumerated at length. The significant impact that enforcement may have on the rights of third parties usually has led States to specify in some detail a series of mandatory rules governing default and enforcement (see chapter X, Enforcement). These mandatory rules usually are meant to protect the rights of grantors and third parties. As mandatory rules, they will necessarily override any terms of the security agreement that specify conflicting creditor rights and remedies, unless they are waived by the grantor after default (see recommendation 129) or by the secured creditor at any time (see recommendation 130). Where there is no conflict, however, the terms set out in the security agreement will govern the post-default relationship between the parties.

4. Third, security agreements usually contain a series of provisions meant to regulate aspects of the relationship between the parties after creation but prior to default. Efficiency and predictability in secured transactions often call for additional detailed clauses to govern ongoing aspects of the transaction. Many States actively encourage the parties to fashion the terms of the security agreement to meet their own requirements. Nonetheless, as in the case of post-default rights and obligations, these same States also frame various mandatory rules relating to pre-default rights and obligations (especially when third-party rights may be affected). This said, in

order to offer grantors and secured creditors maximum flexibility to tailor-make their agreement, States usually keep these mandatory pre-default rules to a minimum.

5. While States are generally reluctant to impose a full menu of mandatory rules governing the pre-default rights and obligations, they do have an interest in providing guidance to grantors and secured creditors. Indeed, many States enact a greater or lesser number of non-mandatory (or suppletive) rules that are applicable if the parties do not specify otherwise in their security agreement. This chapter does not address all the situations where States may wish to elaborate such non-mandatory rules. Rather, it offers only an indicative and non-exhaustive list of those suppletive pre-default rules that are commonly found in contemporary national legislation.

6. The discussion that follows focuses on three policy issues. The first, examined in section A.2, relates to the principle of party autonomy and the extent to which parties should be free to fashion the terms of their security agreement (assuming that the agreement satisfies the substantive and formal requirements for the creation of a security right). The second, explored in section A.3, relates to the mandatory rules that should govern pre-default rights and obligations of grantors and secured creditors. The third, which is the subject of sections A.4 and A.5, concerns the type of non-mandatory rules that could be included in modern secured transactions legislation.

7. Section B of this chapter considers various mandatory and non-mandatory rules to deal with pre-default rights and obligations in relation to particular types of asset and transaction. The chapter concludes, in section C, with a series of recommendations.

2. Party autonomy

(a) General

8. In chapter II (Scope of application and other general rules), the Guide announces the principle of party autonomy as one of the foundations of its basic approach (see recommendation 8). In most States, this principle forms part of the general law of contracts and it is applicable to secured transactions law simply because a security agreement is a contract. The central idea is that, unless a State provides otherwise, the secured creditor and the grantor should be free to craft their security agreement as they see fit. While party autonomy gives credit providers significant power in determining the content of the security agreement, the expectation is that permitting the secured creditor and the grantor to structure their transaction and allocate pre-default rights and obligations as best suited to their objectives will normally permit grantors to gain wider access to secured credit.

9. The party autonomy principle has two distinct dimensions when applied to pre-default rights and obligations. The first is aimed at States. While States should be free to enact mandatory rules to govern key features of the ongoing relationship between parties, their number should be limited and their scope clearly stated. The second is directed to the effects that the grantor and the secured creditor seek to achieve through their agreement. Any terms that derogate from or modify non-mandatory rules or that speak to issues not addressed by a State's suppletive

rules, only bind the parties themselves and, except to the extent provided by general principles of contract law, do not affect the rights of third parties.

10. Legislative limitations on party autonomy in the form of mandatory rules can be found both within a secured transactions law and in other laws. So, for example, many States extensively regulate consumer transactions, often strictly constraining the capacity of secured creditors and grantors to design their own regime of pre-default rights and obligations. An example would be a rule that prohibits secured creditors from limiting the right of consumer grantors to sell or dispose of the encumbered assets. Likewise, many States restrict party autonomy where “family property” or “community property” is at issue. An example would be a rule that prevents secured creditors from limiting the use to which grantors may put such “family property” (see recommendation 2, subparagraph (b)).

11. In addition to these mandatory rules that govern particular grantors and particular assets, it is common for States to impose various mandatory rules of a more general character. These are usually found within the legislation that creates the secured transactions regime. As noted, they most often relate to default and enforcement (for example, the standard of conduct in the case of enforcement cannot be waived unilaterally or by agreement; see recommendation 128). But some also concern pre-default rights and obligations (for example, the party in possession has to take reasonable care of the encumbered assets, as well as to return them and terminate any registered notice upon full payment of the secured obligation; see recommendation 107). These latter types of mandatory rules are discussed in the next section of this chapter.

12. Because party autonomy is the basic principle, the secured creditor and the grantor will typically set out in detail in the security agreement a number of structural elements of their agreement. At least six pre-default dimensions of the agreement are frequently specified by the grantor and the secured creditor:

(a) The assets to be encumbered and the conditions under which assets not initially encumbered may later become encumbered;

(b) The obligation to be secured under the agreement (including future obligations);

(c) What the grantor can and cannot do with the encumbered assets (including the right to use, transform, collect fruits and revenues from, and dispose of, the assets);

(d) When and how the creditor may obtain possession of the encumbered assets prior to default, and the rights and duties of the creditor with respect to those encumbered assets in its possession;

(e) A series of representations and warranties made, and obligations undertaken, by the grantor; and

(f) The events triggering default (primarily of the grantor, but also of the secured creditor) under the agreement.

13. It is against this background of party autonomy and its usual scope as set out in the security agreement that the various mandatory and non-mandatory rules outlined below should be read.

(b) Source of rights and obligations of the parties

14. As already noted, most of the mandatory and non-mandatory rules pertaining to the pre-default rights and obligations of parties relate to the manner in which the prerogatives and responsibilities of ownership are allocated between the grantor and the secured creditor. Consistent with the principle of party autonomy and subject to any appropriate limitations (see paras. 9-11 above), most States take the position that the parties themselves should determine their mutual pre-default rights and obligations. Hence, it is important to determine the source of these rights and obligations.

15. In principle, these rights and obligations are determined by the specific terms and conditions that the parties have included in their agreement. This would also include any general conditions that the parties incorporate into their agreement by reference. In addition, the national law of most States provides that, because the security agreement may refer to an ongoing relationship between the parties that is common in a particular industry or field, they should be bound by any usages to which they have agreed. Finally, unless the parties agree otherwise, in performing their agreement, they should be bound by any practices they have established between themselves. The Guide adopts the idea that the agreement between the parties is the primary source of their mutual rights and obligations, along with any usages to which they have agreed and, absent a contrary agreement, their own established practices (see recommendation 106).

3. Mandatory pre-default rules

(a) General

16. Mandatory rules relating to pre-default rights and obligations of the parties may be found both in secured transactions law and in other laws. Generally these rules are of three broad types. One type, which States usually enact in consumer protection or family property legislation, have a very particular scope and application. The Guide recognizes the importance that States may attach to these matters (see recommendation 2, subparagraph (b)). In order to achieve the maximum economic benefit from a secured transactions regime however, States should clearly specify the scope of these limitations on the parties' freedom to tailor pre-default rights and obligations to their needs and wishes.

17. Other pre-default mandatory rules focus on the substantive content that parties may include in their agreement. Usually these rules are conceived as general limitations on the rights of secured creditors and are applicable whether the grantor is a consumer or an enterprise. They can vary widely from State to State. For example, some States have a carve-out for unsecured creditors in the insolvency context, which tends to be quite restricted. Some States do not permit creditors to restrict the right of a grantor to use or transform the encumbered assets as long as the use or transformation being undertaken is consistent with the nature and purpose of those assets. Some States do not permit a secured creditor either to use or to apply against the secured obligation the fruits and revenues generated by encumbered assets in its possession.

18. Because of the importance that the Guide attaches to the principle of party autonomy, it takes the position that States generally ought not to enact pre-default mandatory rules that restrict the number or nature of the obligations that secured

creditors and grantors may require of each other. Still, the above concerns are often real and, depending on the particular character of their national economy or the commercial enterprise granting the security right, States may feel the need to more closely regulate the pre-default relationship between secured creditors and grantors. Should they do so, however, such mandatory rules should: (a) be expressed in clear language; (b) be drafted in precise and limitative, rather than open-ended, terms; and (c) like similar rules in the post-default context, be based on recognized grounds of public policy (*ordre public*) such as good faith, fair dealing and commercial reasonableness (see recommendations 127 and 128).

19. A third type of pre-default mandatory rule aims at ensuring that the fundamental purposes of a secured transactions regime are not distorted. Typically, States deploy mandatory rules of this type to impose minimum duties upon the party that has possession or control of the encumbered assets. So, for example, since the purpose of security is to provide a creditor with a priority right, upon default, to payment of money generated by the sale of encumbered assets, it would be consistent with this purpose that grantors be obligated not to waste or otherwise allow the encumbered assets to deteriorate beyond what would be expected from normal usage, thereby preserving the economic value of the assets for the benefit of the secured creditors.

20. Rules requiring the grantor and, in the case where the secured creditor has possession, the secured creditor to take reasonable care of the encumbered assets, and more generally rules directed to preserving the encumbered assets, are meant to encourage responsible behaviour by parties to a security agreement. These types of mandatory rules are not, however, identical in impact to consumer-protection rules or mandatory rules stipulating the substantive content of a security agreement. The latter types of mandatory rule are constitutive of the security right itself and cannot be waived either at the time the agreement is negotiated or afterwards.

21. Similarly, parties may not, by agreement, derogate from mandatory rules setting out their general pre-default rights and obligations. For example, States typically do not permit parties to contract out of their duty to take reasonable care of the encumbered assets. However, this does not always disable parties from waiving a breach of the duty after the fact. Many States provide that the secured creditor may later release the grantor from its pre-default obligations (including obligations imposed by mandatory rules) or may waive any breaches by the grantor. By contrast, given the usual dynamic between secured creditor and grantor, many of these same States take the position that the grantor should not be allowed to release the secured creditor, prior to default, from any duties imposed on it by mandatory rules.

22. The mandatory pre-default rules recommended in the Guide aim at policy objectives consistent with what have been defined as the core principles of an effective and efficient regime of secured transactions (see recommendation 1). They set out pre-default rights and obligations that (a) encourage parties in possession to preserve the encumbered assets; and (b) ensure that once the obligation is paid, the grantor recovers the full use and enjoyment of the previously encumbered assets.

23. Chapter XI (Acquisition financing) of the Guide contemplates that some States might choose to preserve retention-of-title and financial lease transactions as independent techniques of acquisition financing. In these situations, the seller's or

lessor's right is not a security right but rather comprises the seller's right to assert its ownership of the assets — in the case of a sale until full payment of the purchase price, and in the case of a financial lease for the duration of the transaction (for the definitions of the terms “security right”, “acquisition security right”, “retention of title right” and “financial lease right”, see Introduction, section B, Terminology). For this reason, even though the fundamental economic objectives of these transactions are identical to those of an ordinary acquisition security right, the mandatory rules concerning pre-default rights and obligations of the parties (the seller that retains ownership and the buyer that has possession but only an expectancy of ownership; the lessor that is owner and the lessee that merely has a right of possession and use) will have to be framed in slightly different language. These necessary adjustments are discussed in chapter XI, section A.8.

(b) Duty to preserve the encumbered assets

24. The encumbered asset is one of the creditor's principal assurances of repayment of the secured obligation. It is also an asset that the grantor normally expects and intends to continue using freely once the loan or credit has been repaid. For these reasons both secured creditors and grantors have an interest in preserving the encumbered asset.

25. Most often the person that has possession of an encumbered asset will be in the best position to ensure its preservation. This explains why States normally impose the duty to take reasonable care of the encumbered asset on that party. Only by exception, and almost invariably in relation to intangible assets, might a person not in notional possession be optimally positioned to care for the encumbered asset. In view of the objective of ensuring a fair allocation of responsibility for caring for encumbered assets and encouraging parties to preserve them it matters little whether it is the grantor or the secured creditor that has possession. The mandatory duties imposed on the person in possession to preserve the encumbered asset should be identical in both cases.

26. The specific content of the duty may vary considerably, depending on the nature of the encumbered asset. In the case of tangible assets, the duty points first to the physical preservation of the asset (for the definitions of the terms “tangible asset” and “intangible asset”, see Introduction, section B, Terminology). Where inanimate tangible assets are concerned, this usually would include a duty to keep these assets in a good state of repair and not to use them for a purpose other than that which is normal in the circumstances. For example, if the encumbered asset is a piece of machinery, it must not be left out in the rain. Moreover, the party that possesses and uses it must perform routine maintenance. Still again, if security is taken, for example, on a passenger automobile, the person in possession, who is authorized to use it, cannot then use the vehicle as a light truck for commercial purposes.

27. Where the encumbered assets are inventory the duty of preservation may require other, more onerous, actions on the part of the person in possession. Unlike equipment, inventory is often on display and is easier to steal. Hence the grantor (who is the party most likely to be in possession) must provide adequate security to forestall “shrinkage”, must properly display the inventory to avoid breakage, or store it so as to prevent deterioration. For example, if the inventory consists of expensive electronic equipment, or particularly fragile glassware, it may be

necessary to keep it in locked cases; if it consists of perishable foodstuffs, the person in possession would have to store the encumbered assets in refrigerated units.

28. In the case of living tangible assets such as animals, the duty should be similar. It is not enough simply to keep the animal alive. The person in possession must ensure that the animal is properly fed and is maintained in good health (for example, receives adequate veterinary care). Where the animal requires special services to preserve it in good condition (for example, proper exercise for a race horse, regular milking for a cow), the duty of care extends to providing these services. Finally, as with equipment, the duty also means that the animal cannot be used for abnormal purposes. Thus, a prize bull the value of which lies in stud fees cannot be used as a beast of burden.

29. If the encumbered asset consists of a right to payment of money embodied in a negotiable instrument, the duty will certainly include the physical preservation of the document. In such a case, however, the duty of care will include taking the necessary steps to maintain or preserve the grantor's rights against prior parties bound under the negotiable instrument (such as presenting the instrument, protesting it if required by law, and providing notice of dishonour). It may also be incumbent upon the person in possession of a negotiable instrument to avoid loss of rights on the instrument itself against prior parties by taking steps against persons secondarily liable under the instrument (e.g. guarantors). Where the tangible asset is a negotiable document, here also the person in possession must physically preserve the document. Moreover, should the document be time-limited, the person in possession of the document must present it prior to expiry to claim physical possession of the assets covered by the document.

30. Where the encumbered asset is intangible, it is more difficult to fix the duty to take reasonable care by reference to the person in possession. Frequently, the intangible asset is a simple contractual right to receive payment. The character of the duty of preservation in such cases is discussed below in section B. Where the encumbered asset is a right to payment of funds credited to a bank account, intellectual property or a right to receive the proceeds under an independent undertaking, States typically provide for the respective rights and obligations of parties to the transaction in special legislation regulating that particular form of asset.

31. In determining the extent of the obligation of the person in possession to preserve encumbered assets, States are making a cost-benefit judgement as to how best to ensure a fair allocation of responsibility for their preservation. The main policy issue is to avoid placing an undue burden on the person in possession, especially when the person in possession is the secured creditor and not the grantor. In line with the above considerations, the Guide recommends that States enact a general mandatory pre-default rule imposing a duty on parties in possession to take reasonable care to preserve encumbered assets (see recommendation 107).

(c) Duty to preserve the value of the encumbered assets

32. In many cases, the physical preservation of the encumbered asset will also ensure the maintenance of its value. Sometimes, however, additional steps will be necessary. The special case of intangible assets is discussed below in section A.5.

As for tangible assets, States typically distinguish between the obligations of grantors and the obligations of secured creditors. Since the encumbered asset is the secured creditor's guarantee of payment, grantors are occasionally required to take positive action to maintain the value of encumbered assets over and above the obligation to preserve it physically. For example, grantors may be required to install computer upgrades or return equipment to a dealer for service under a recall order. Once again, in determining the extent of this obligation on grantors, States must weigh the benefits against the burdens they impose.

33. Only rarely do States impose any obligation related to preservation of the value of encumbered assets on secured creditors. The rationale is that if the imposition of an obligation requires secured creditors to assume a burdensome responsibility for closely monitoring encumbered assets, the asset will simply cease to have value as security, to the detriment of the grantor. For example, secured creditors should not be required to take any steps to maintain the market value of a trademark, or to engage in investment analysis to maintain the value of a stock portfolio. In any event, it is always in the grantor's interest that the encumbered asset maintains its value so that parties will normally provide that grantors may indicate to secured creditors in possession the steps to be taken to preserve value in such cases. Any money expended to do so will typically either be paid in advance by the grantor or added to the secured obligation.

34. Because the parties will normally provide for additional duties that aim at the preservation of the value of the encumbered assets in their security agreement, States typically do not enact a mandatory rule that directly imposes such a duty either on grantors or on secured creditors. In line with this general tendency, the Guide does not recommend that States enact a mandatory pre-default rule requiring parties in possession to preserve the pre-default value of encumbered assets.

(d) Duty to return the encumbered assets and to terminate a registered notice

35. The central purpose of a security right is to enhance the likelihood that the secured obligation will be satisfied, either by inducing the grantor to repay the secured obligation or by the application of the value of the encumbered asset to the secured obligation. A security right is not a means of expropriating surplus value from the grantor or a disguised transfer of the encumbered assets to the creditor. Upon satisfaction of the secured obligation, as a matter of law, the security right terminates and the grantor is entitled to possession and full enjoyment of unencumbered ownership of the previously encumbered assets. To implement the grantor's rights, most States enact mandatory rules to regulate the duties of the secured creditor once the secured obligation has been repaid in full and all credit commitments have been terminated. These duties are of two types. Some duties relate to the return of the encumbered assets to the grantor in situations where the secured creditor is in possession of the assets at the time of the satisfaction of the secured obligation; other duties relate to taking steps to enable the grantor to enjoy its rights to the encumbered assets free from any disability arising from the prior existence of the encumbrance.

36. The Guide contemplates that secured creditors may, in most cases, make their rights effective against third parties by taking possession of the encumbered assets (see recommendation 36). In addition, even when creditors achieve third-party effectiveness by registering a notice rather than by taking possession, given the

principle of party autonomy, grantors may nonetheless permit secured creditors to take possession of the encumbered assets. This permission may be given either at the time of creating the security right or at some time thereafter. In the latter case, the grantor need not even be in default under the security agreement. Regardless of how it arises, the secured creditor's possession is grounded in the agreement between the parties and relates to the objectives of that agreement.

37. Since a security right is aimed at ensuring the performance of an obligation, once that performance has occurred, the grantor should be able to recover either possession of the encumbered assets or unimpeded access to them, or both. This explains the formal duty that many States impose on secured creditors to return the encumbered assets to the grantor upon full payment of the secured obligation and termination of all credit commitments. In these States, the burden lies on the creditor to deliver the encumbered assets, and not on the grantor to reclaim them or to take them away. In other States, the secured creditor has no obligation to deliver, but need only permit the grantor to reclaim previously encumbered assets. Where tangible assets are in the hands of a third party that was initially in possession for the account of the grantor, but that upon the creation of the security right was holding on behalf of the secured creditor, many States require the secured creditor to indicate to the person in possession that the secured obligation has been paid and that the possessor is once again holding exclusively for the account of the grantor. A similar duty arises in many States where the secured creditor and a deposit-taking institution have entered into a control agreement (for the definition of the term "control", see Introduction, section B, Terminology). In these States, the secured creditor is usually obliged to specifically inform the depositary that the control agreement is no longer in effect. These various requirements are all intended to implement the grantor's right to enjoy the free use of encumbered assets once the secured obligation has been paid in full and all credit commitments have been terminated.

38. Some States consider that the creditor must also take positive steps to ensure that the grantor is placed in the same position that it occupied prior to the creation of the security right. In the case of intangible assets, this would require sending a notice to any third-party obligor (for example, the debtor of a receivable) indicating that the secured obligation has been paid in full and that the grantor is again entitled to receive payment of the obligation. More generally, some States oblige secured creditors to release the encumbered assets from the security right and, in cases where third-party effectiveness has been achieved by registration, to take steps to cancel the effectiveness of the notice relating to that security right on the record of the relevant registry. So, for example, where registrations are not automatically purged from a registry after a relatively short period of time, many States impose upon creditors a duty to request cancellation of the registration. Similarly, where the security right has been made the subject of a notice on a title certificate, some States oblige the secured creditor to take steps to ensure that the notice is deleted from the title certificate. The unifying theme of these requirements is that the secured creditor should take steps to remove any formal evidence of its previous right that might lead third parties to think that the grantor's assets are still potentially subject to its security right.

39. The mandatory rule recommended in the Guide to govern the relationship of the parties once the secured obligation has been paid broadly reflects the above

considerations. Its primary objective is to make certain that the grantor recovers the full use and enjoyment of the previously encumbered assets and is able to deal effectively with them in transactions involving third parties, free of any disability arising from the no longer extant security right (see recommendations 68 and 108).

4. Non-mandatory pre-default rules

40. In addition to various mandatory rules governing pre-default rights and obligations of the parties, most States have developed a longer or shorter list of non-mandatory rules addressing other pre-default issues. The vocabulary used to identify these non-mandatory rules that are “subject to contrary agreement between the parties” varies from State to State (e.g. *jus dispositivum*, *lois supplétives*, *normas supletorias*, suppletive rules, default rules). Their common feature, however, is this: they are meant to apply automatically as additional terms to the security agreement unless there is evidence that the parties intended to exclude or modify them.

41. Different policy rationales are offered to support the idea of non-mandatory rules. Some States use non-mandatory rules to protect weaker parties on the theory that they provide a baseline against which the stronger party may attempt to negotiate an alternative contractual provision. Other States conceive them as rules simply mirroring the terms of an agreement that parties would have negotiated had they turned their attention to particular points. The Guide takes the position that the true justification for non-mandatory rules lies in the fact that they can be used to promote policy objectives consistent with the logic of a regime of secured transactions. Examples of non-mandatory rules grounded in this rationale are not hard to find. The law in many States provides that, unless the parties agree otherwise, the grantor will deposit any insurance proceeds arising from the loss of or damage to the encumbered asset in a deposit account controlled by the secured creditor. Also, the law in many States provides that, unless the parties agree otherwise, revenues deriving from the encumbered asset may be retained by the secured creditor during the life of the security agreement as additional encumbered assets, so that in case of default those revenues may be applied to the payment of the secured obligation. In view of this general objective, there are at least four reasons why States might choose to develop a panoply of non-mandatory rules.

42. First, by allocating rights and obligations between a secured creditor and a grantor in the manner to which they themselves would likely agree, given the basic purposes of a secured transactions regime, a set of non-mandatory rules helps to reduce transaction costs, eliminating the need for the parties to negotiate and draft new provisions already adequately covered by these rules. Here non-mandatory rules serve as implied or default terms (i.e. terms applicable in the absence of agreement to the contrary) that, unless a contrary intention is expressed in the security agreement, are deemed to form part of that agreement. An example of such an implied term would be a rule that permits a secured creditor in possession of the encumbered asset to obtain any revenues produced by that asset and to apply them directly to the payment of the secured obligation.

43. Second, even the best-advised and most experienced parties do not possess infallible insight into the future. However carefully drawn an agreement, there will be unforeseen circumstances. To obviate the need for a judicial or arbitral decision to fill these gaps in the agreement when they arise and to reduce the number of

potential disputes, States usually provide for basic characterization rules. These non-mandatory rules direct parties to other, more general, legal principles that can be deployed to guide the resolution of unanticipated problems. An example of such a rule is that which provides that the grantor of a security right remains the holder of the substantive right (be it ownership, a lesser property right or a personal right) over which security has been taken. Thus, in working through any particular unforeseen event, the parties may begin with the principle that the exercise of any right not specifically allocated to the secured creditor remains vested in the grantor.

44. Third, a relatively comprehensive legislative elaboration of the rights and obligations of the parties before default increases efficiency and predictability by directing the attention of parties to issues that they should consider when negotiating their agreement. A series of default rules from which they may opt out can serve as a drafting aid, offering a checklist of points that might be addressed at the time the security agreement is finalized. Even when parties decide to modify the stated non-mandatory rules so as to better achieve their purposes, the exercise of having attended to them ensures that these matters are considered and not inadvertently left aside.

45. Finally, non-mandatory rules make it possible for the principle of party autonomy to operate most efficiently. This benefit is particularly evident in long-term transactions where the parties cannot anticipate every contingency. Such rules facilitate flexibility and reduce compliance costs. For example, treating the agreement as complete in itself and requiring the parties to formalize all subsequent modifications and amendments to that agreement simply imposes additional transaction costs on the grantor. As these are non-mandatory rules, parties can always exclude their application by a specific contractual provision, such as a clause that provides that a written document contains the entire agreement of the parties and that no oral modifications are permitted.

46. The advantages of permitting the parties to define their relationship with the assistance of a set of non-mandatory rules are widely recognized by many national legal systems (e.g. articles 2736-2742 of the Civil Code of Québec, Canada, and articles 9-207 to 9-210 of the Uniform Commercial Code in the United States), by organizations that promote regional model laws (e.g. article 15 of the European Bank for Reconstruction and Development Model Law on Secured Transactions and article 33 of the Organization of American States Model Inter-American Law on Secured Transactions), and by international conventions dealing with international sales (e.g. United Nations Sales Convention, article 6)¹ or some aspect of secured transactions in movable property (e.g. United Nations Assignment Convention, article 11, paragraph 1, and article 15 of the International Institute for the Unification of Private Law (Unidroit) Convention on International Interests in Mobile Equipment).

5. Typical non-mandatory pre-default rules

(a) General

47. This chapter does not address all of the situations where States may wish to develop non-mandatory rules. For example, it does not deal with any non-mandatory

¹ United Nations publication, Sales No. E.95.V.12.

rules that may be developed in relation to additional terms that complete those required for a security right to exist (e.g. the possible contents of the security agreement above the minimum necessary for creation). Non-mandatory rules in this context fulfil a different function and their desirability, scope and content would, therefore, be governed by different policy considerations. Moreover, and for the same reason, it does not consider non-mandatory rules that are meant to govern post-default rights and obligations of the parties. These non-mandatory rules are addressed in chapter X (Enforcement).

48. The non-mandatory rules discussed in this section are those directed to pre-default rights and obligations of the parties. Because non-mandatory rules will usually reflect the needs, practices and policies of particular States, their specific configuration varies enormously. Still, there is a core of non-mandatory rules that are commonly found in contemporary national legislation. These are typically of two broad types: rules that serve as a complement to mandatory rules dealing with the rights and duties of secured creditors in possession of encumbered assets, and rules that elaborate the rights retained by the grantor regardless of where possession lies.

49. Like mandatory rules, these non-mandatory rules are meant to encourage responsible behaviour on the part of those having control and custody of encumbered assets. Hence, States most often organize them according to whether the secured creditor or the grantor has possession of the encumbered assets. Some non-mandatory pre-default rules, however, are intended to apply regardless of whether the secured creditor or the grantor is in possession. These three situations are considered in turn.

(b) Non-mandatory rules where the secured creditor is in possession

50. As already noted, most States have mandatory rules that require secured creditors in possession to take reasonable care of, to preserve and to maintain the encumbered assets in their possession. Typically, where the secured creditor has a right to use encumbered assets, it is also bound to undertake all necessary repairs to keep them in good working condition. The basic content of these mandatory rules has already been discussed. In addition, some States enact a series of non-mandatory rules that specify further obligations of creditors to care for encumbered assets in their possession, especially in cases where the encumbered asset generates civil and natural fruits, or is otherwise an income-producing asset. The following paragraphs address the more common non-mandatory rules of this type.

51. As for the basic obligation of care and preservation, many States specifically require that the secured creditor keep the encumbered tangible assets clearly identifiable. If these assets are fungible and commingled with other assets of the same nature, this duty is transformed into an obligation to keep a sufficient quantity of assets of the same quality as those originally encumbered. In addition, where maintenance requires action beyond the creditor's personal capacity, States often require the creditor to notify the grantor and, if necessary, permit the grantor temporarily to take possession to repair, care for or preserve the asset or its value.

52. Where the encumbered asset consists of an instrument embodying the grantor's right to the payment of money, the obligation of care on the part of the secured creditor may not be limited to the physical preservation of that document.

Many States oblige the secured creditor in possession of a negotiable instrument to avoid loss of rights on the instrument itself against prior parties by taking steps against persons secondarily liable under the instrument (e.g. guarantors). In these States, it is also common to provide that either the grantor or the secured creditor may sue to enforce the payment obligation.

53. A non-mandatory corollary to the secured creditor's obligation to take care of the encumbered asset is its entitlement to be reimbursed for reasonable costs expended to preserve the asset, and to have these costs added to the secured obligation. In addition, many States permit the secured creditor to make reasonable use of or operate the encumbered asset (see recommendation 109, subparagraph (b)). As concomitants of this right, the secured creditor must allow the grantor to inspect the encumbered asset at all reasonable times and will be liable in damages for any deterioration of the asset beyond that associated with normal use (recommendation 109, subparagraph (c)).

54. Because the secured creditor is in possession, it will most often be in the best position to collect monetary proceeds (revenues or civil fruits) or non-monetary proceeds (natural fruits are also included in the definition of the term "proceeds", see Introduction, section B, Terminology) derived from the encumbered asset. For this reason, it is common for States to enact a non-mandatory rule that both monetary and non-monetary proceeds are to be collected by the secured creditor in possession. Normally, it is the grantor that will be able to get the best price for the natural fruits generated by encumbered assets (for example, milk produced by a herd of cows, eggs produced by chickens, wool produced by sheep). Therefore, States usually also provide that, in the rare case where the secured creditor takes possession of livestock, it should turn the fruits over to the grantor for disposition. Where the fruits involve the natural increase of animals, a common non-mandatory rule is that such offspring are automatically encumbered by the security and held by the creditor under the same terms as the parent.

55. Where the proceeds are monetary, it often makes little sense to oblige the creditor, after collection, to turn these over to the grantor. The usual non-mandatory rule is that the secured creditor may either apply cash proceeds to repayment of the secured obligation, or hold them in a separate account as additional security. This principle operates whether the money received is interest, a blended payment of interest and capital, or a stock dividend. Some States even give the creditor the choice of selling additional stock received as a dividend (accounting for the proceeds of sale as if they were cash dividends), or to hold this stock (in the manner of the offspring of animals) as additional encumbered assets. However, it is also common for the secured creditor and the grantor to agree in the security agreement that, so long as the grantor is not in default under the security agreement, dividends (whether in the form of cash or stock) may be retained by the grantor.

56. There is great diversity in the non-mandatory rules governing the secured creditor's right to dispose of encumbered assets in its possession. Some States provide that the secured creditor may assign the secured obligation and the security right. That is, the creditor may actually transfer possession of the encumbered asset to a person to whom it has assigned the secured obligation. Some States also provide that the secured creditor may create a security right in the encumbered asset as security for its own debt ("re-pledge the encumbered assets") as long as the grantor's right to obtain the assets upon payment of the secured obligation is not

impaired. Often these re-pledge agreements are limited to stocks, bonds and other instruments held in a securities account, but in some States creditors may re-pledge tangible assets such as diamonds, precious metals and works of art. By contrast, many States prohibit the secured creditor in possession from re-pledging the encumbered assets, even if it can do so on terms that do not impair the grantor's right to recover its assets upon performance of the secured obligation.

57. The risk of loss or deterioration of assets normally follows ownership, not possession. Nonetheless, many States provide that, where encumbered assets in the possession of the secured creditor are destroyed or suffer abnormal deterioration, the secured creditor is presumed to be at fault and must make good the loss. Typically, however, the same non-mandatory rule provides that the creditor is not liable if it can show that the loss or deterioration occurred without its fault. Because it will always be in the secured creditor's interest to ensure that the value of the encumbered assets is maintained, many States provide that the creditor has an insurable interest. Should the secured creditor then insure against loss or damage, however caused, it is entitled to add the cost of the insurance to the obligation secured.

58. This last rule is a particular example of a broader principle enacted as a non-mandatory rule in many States and recommended by the Guide. Reasonable expenses incurred by the secured creditor while discharging its custodial obligation to take reasonable care of the encumbered assets are chargeable to the grantor and automatically added to the obligation secured (see recommendation 109, subparagraph (a)). Tax payments, repairer's bills, storage charges and insurance premiums are examples of such reasonable expenses for which the grantor is ultimately liable.

(c) Non-mandatory rules where the grantor is in possession

59. A key policy objective of an efficient and effective secured transactions regime is to encourage responsible behaviour by a grantor that remains in possession of the encumbered assets. Avoiding actions that decrease the value of the encumbered assets beyond depreciation by normal usage is consistent with this objective. Hence, most States impose on the grantor in possession the same obligation of care and preservation as that resting upon secured creditors in possession. The grantor's duty to take care includes keeping the encumbered assets properly insured and paying taxes promptly. If the secured creditor incurs these expenses, even though the grantor remains in possession, the secured creditor has the right to reimbursement from the grantor and may add these expenses to the secured obligation.

60. In addition to these mandatory rules, however, many States enact non-mandatory rules for grantor-in-possession security aimed at maximizing the economic potential of the encumbered assets. In particular, encouraging the grantor's use and exploitation of encumbered assets is seen as a way to facilitate revenue generation and repayment of the secured obligation. For this reason, States often provide that, unless otherwise agreed, the grantor in possession does not surrender the general prerogatives of ownership (the right to use and enjoy, the right to appropriate fruits, and the right to dispose) simply because a security right has been created. This means that, in the normal situation, the grantor is entitled to use, lease, process and commingle the encumbered assets with other assets in a manner

that is reasonable and consistent with its nature and purpose and the parties' objectives as set out in the security agreement. In such cases, the secured creditor should have the right to monitor the conditions in which the encumbered asset is kept, used and processed by the grantor in possession and to inspect the asset at all reasonable times (see recommendation 108, subparagraph (c)).

61. If the encumbered assets consist of income-producing assets in possession of the grantor, to the extent that the creditor's security right extends to the income or revenues generated by the asset, the grantor's duties may include maintaining adequate records and the reasonable rendering of accounts regarding the disposition and the handling of the proceeds derived from the encumbered assets. Specific obligations of the grantor in the case of intangible assets (e.g. rights to payment of funds credited to a bank account, royalties from the licensing of patents, copyrights and trademarks), and particularly the grantor's right to payment in the form of receivables, are discussed in the next section.

62. Many States currently have a non-mandatory rule that protects fruits and revenues (as opposed to proceeds of disposition in the strict sense) from automatic re-encumbering under the security agreement. The policy objective is to provide the grantor with the chance to gain additional financing by isolating these new assets from the existing security. Other States set the default rule so as to automatically encumber fruits and revenues under the initial security right. The policy objective here is that the parties would normally expect and intend fruits and revenues to be encumbered, and that the non-mandatory rule should reflect these normal expectations. In any event, because this is invariably enacted as a suppletive rule, should the parties wish to exclude fruits and revenues, either at the time of negotiating the security or at any time thereafter, they may freely do so.

63. The Guide provides in chapter IV on creation (see recommendation 18) that a security right extends to all proceeds generated by the encumbered asset. That is, unless otherwise agreed, any assets derived from the encumbered assets in the grantor's possession is automatically subject to the security right, regardless of whether those additional assets are regarded as civil or natural fruits or as proceeds (in the strict sense). To the extent that the fruits are in kind (e.g. increase in animals, stock dividends), the grantor may use and exploit them under the same terms and conditions as initially encumbered assets. Where they are agricultural products like milk, eggs and wool, most States provide that the grantor may sell them and that the secured creditor's rights extend to the proceeds received upon their disposition. Where the civil fruits are revenues (e.g. rentals received from the lease of property, interest received upon the loan of money), the security right will extend to them as long as they remain identifiable. As a rule, however, the grantor in possession will not only collect fruits and revenues, it will also dispose of the fruits in the ordinary course of business free of the security right (presumably generating proceeds that will become encumbered assets).

64. The duty to preserve the encumbered asset normally means that the grantor in possession is liable for loss or deterioration, whether caused by its fault or by fortuitous event. This means that, by contrast with a secured creditor in possession, who is not liable to the grantor for loss or deterioration caused by a fortuitous event, the grantor is liable however the loss arises, and would be, consequently, in default under the agreement.

65. In principle, the grantor is not entitled to dispose of the encumbered assets without authorization of the secured creditor. If the grantor does so, the buyer will take the assets subject to the security right (see recommendation 75). By way of exception, however, the grantor may dispose of the encumbered assets free of the security right if they consist of inventory or consumer goods and they are sold in the seller's ordinary course of business (see recommendation 77). Despite this limitation on disposition, because the grantor will normally retain the full use of the encumbered asset, most States enact non-mandatory rules authorizing the grantor to create additional security rights charging already encumbered assets, the fruits and revenues they generate and the proceeds of their disposition. The Guide's recommendations are consistent with this approach. Moreover, the grantor's lack of authority to grant additional security rights does not prevent their successful creation, even though doing so may constitute a default under the security agreement.

(d) Non-mandatory rules regardless of who is in possession

66. In addition to the rights specifically given to, and obligations specifically imposed on, secured creditors and grantors because of their possession of the encumbered assets, many States also enact non-mandatory rules that speak to both secured creditor-in-possession (possessory) and grantor-in-possession (non-possessory) situations. Two such rules, one focusing on the grantor's obligations and the other on the secured creditor's rights, are common.

67. The first rule is a corollary to the idea that a grantor in possession should maintain the value of encumbered assets. If it should happen that the value of the encumbered assets were to decrease significantly, even for reasons unrelated to any lack of attention by the party in possession, some States provide that the grantor will have to offer additional security (or additional assets) to make up for unforeseeable decreases in value. Moreover, this rule is often extended to normal deterioration of the value of the encumbered assets due to wear and tear or market conditions, whenever such deterioration reaches a significant percentage of the initial value of the encumbered assets. Typically, however, parties will provide for top-up provisions in their agreement, and specify in detail the conditions under which the grantor will be required to offer further assets should the value of the encumbered assets fall precipitously.

68. A second common non-mandatory rule concerns the right of the secured creditor to assign both the obligation secured and the security right that relates to it. Absent agreement to the contrary, a secured creditor may freely assign the secured obligation and the accompanying security right (see, for example, United Nations Assignment Convention, article 10, and recommendation 24). Some States even provide that the secured creditor may do so even despite contractual limitations on assignment (see United Nations Assignment Convention, article 9, paragraph 1, and recommendation 23). Where the secured creditor has possession of the encumbered asset, this implies that it may also transfer possession to the new secured creditor. In both cases, however, absent a specific agreement to the contrary between the grantor and the original secured creditor (the assignor) authorizing such an arrangement, the assignee of the secured obligation cannot acquire greater rights as against the grantor, or assert greater prerogatives in relation to the encumbered asset, than those that could be claimed by the assignor.

B. Asset-specific remarks

69. The mandatory and non-mandatory rules pertaining to the pre-default rights and obligations of parties relate to the manner in which the prerogatives and responsibilities of ownership are allocated between the grantor and the secured creditor. These include, most importantly: (a) the obligation (invariably imposed upon the party in possession of the encumbered assets) to care for, maintain and preserve it; (b) the right to use, transform, mix and manufacture encumbered assets; (c) the right to collect fruits, revenues and proceeds generated by the assets and to appropriate these to one's use; and, in some States, (d) whether the secured creditor has the right to pledge, re-pledge or dispose of encumbered assets, whether free of, or subject to, the security right.

70. These rules generally contemplate situations involving tangible assets. Nonetheless, in chapter III (Basic approaches to security) the Guide notes the importance of intangible assets and, in particular, rights to payment as assets that a grantor might encumber. While certain categories of intangible asset are excluded from the Guide (e.g. securities and payment rights under financing contracts; see recommendation 4, subparagraphs (c) and (d)), many other types of intangible asset are included: notably, contractual and non-contractual receivables, rights to payment of funds credited to a bank account and rights to receive the proceeds under an independent undertaking (see recommendation 2, subparagraph (a)).

71. The creation of a security right in a right to payment necessarily involves parties other than the grantor and the secured creditor, most obviously the debtor of the receivable. Because the encumbered asset is the obligation owed to the grantor by a third person, States have been required to develop detailed rules to regulate the triangular relationship among the parties and also between them and third parties. These rules address the rights and obligations of the parties and of third parties, whether the right to payment arises under a tangible asset (e.g. a negotiable instrument or a negotiable document) or under an intangible asset (e.g. a receivable, rights to payment of funds credited to a bank account, proceeds under an independent undertaking). Most of the rules relating to the relationship between the grantor and the secured creditor on the one hand, and the debtor on the obligation (what the Guide calls third-party obligors) on the other, are mandatory but some are non-mandatory. The rights and obligations of third-party obligors are discussed in detail in chapter IX.

72. This section focuses on the pre-default rights and obligations as between the assignor (the grantor) and the assignee (the secured creditor) (for the definition of the terms "assignor" and "assignee", see Introduction, section B, Terminology). As in the case of tangible assets, most States take the position that the parties themselves should determine their mutual pre-default rights and obligations (see recommendation 106). Hence, the majority of the rules relating to these rights and obligations are non-mandatory. Nonetheless, because of the impact these rules may have on third parties, States often adopt a mixture of mandatory and non-mandatory rules. Articles 11-14 of the United Nations Assignment Convention provide a good example of this practice in the case of international assignments of receivables.

73. Some of the most important parts of the agreement between the assignor and the assignee relate to the representations that the assignor makes to the assignee. In the normal case, it is presumed that (a) the assignor has the right to assign the receivable; (b) the receivable has not been previously assigned; and (c) the debtor of the receivable does not have any defences or rights of set-off that can be set up against the assignor. In other words, if the assignor has doubts about any of these matters, it must explicitly mention them in the agreement or must explicitly state that it makes no representations to the secured creditor about them. In all events, in parallel with the grantor's pre-default obligations in respect of tangible assets, the assignor must take all reasonable steps necessary to preserve its legal right to collect on the receivable. On the other hand, unless the assignor specifically warrants otherwise, it is presumed that the assignor does not warrant the actual capacity of the debtor of the receivable to pay. These various obligations are presented in the form of non-mandatory rules in the national law of most States and are recommended as such in the Guide (see recommendation 110).

74. As the value of the assigned receivable consists of payment made by the debtor of the receivable, and as that debtor is only obliged to pay the assignee if it actually knows of the assignee's rights (see recommendations 114 and 115), it is important to maximize the capacity of the assignee to make the debtor aware of the assignment. For this reason, most States provide that either the assignor or the assignee may notify the debtor and give instructions about how payment is to be made. Nonetheless, in order to prevent conflicting instructions from being given, these States normally also provide that, once notice of the assignment has been given, only the assignee may direct the debtor as to the manner and place of payment. The Guide also adopts this well-established framework for notifying the debtor of the receivable (see recommendation 111).

75. There may, of course, be situations where both the assignor and the assignee (or just one of them) do not wish the debtor of the receivable to know of the assignment. This desire may relate to particular features of the grantor's business or to general economic conditions. For this reason, States usually provide that the assignor and assignee may agree to postpone notifying the debtor of the receivable that the assignment has occurred until some later time. Until such notice is given, the debtor of the receivable will continue to pay the assignor according to the original agreement between them or any subsequent payment instructions. Where a party (usually the assignee) is in breach of an obligation not to notify, this should not prejudice the debtor of the receivable. The debtor will thereafter be required to pay according to the instructions given and is entitled to receive a discharge for amounts so paid (see recommendation 115). Nonetheless, many States also provide that, unless the assignor and assignee otherwise agree, such a breach of the obligation not to give notice may give rise to liability for any resulting damages. The Guide recommends that these general principles govern notification of the assignment to the debtor of the receivable (see recommendation 111).

76. Because the right to payment is the actual object of the security, it is important to specify the effect of any payment made by the debtor of the receivable (whether to the assignor or the assignee) on the respective rights of assignor and assignee. Many States have enacted non-mandatory rules to govern payments made in good faith that may not actually be made according to the intention of the assignor or assignee. This can sometimes occur because the debtor of the receivable has

received conflicting payment instructions, or learns of the assignment without actually having received formal notice of it.

77. There are two standard situations that these rules typically address. First, even if no notification of the assignment is given to the debtor of the receivable, payment might actually be made to, or received by, the assignee. Given the purpose of the security right in the receivable, it is more efficient that the assignee be entitled to keep the payment, applying it to a reduction of the assignor's obligation. Similarly, if payment is made to the assignor after the assignment has been made, and again regardless of whether the debtor of the receivable has received notice, the assignor should be required to remit the payment received to the assignee. Likewise, once notice has been given, if part of the payment obligation is to return certain tangible assets to the assignor, States often provide that these assets should be handed over to the assignee. For example, if part of the payment obligation of the debtor of the receivable is meant to transfer a negotiable instrument to the assignor, once notice is received that negotiable instrument should be transferred to the assignee. Adoption of this set of practices to govern misdirected payments is recommended in the Guide (see recommendation 112, subparagraph (a)). In all these cases, of course, the rules adopted by many States are non-mandatory and, as a result, the assignor and assignee might provide for a different outcome in their agreement.

78. In the case of multiple assignments of a receivable, the debtor of the receivable may receive multiple notifications and may be uncertain as to which assignee has the best right to payment. Sometimes, the payment is made in good faith to an assignee that has a lower priority. In such cases, States usually provide that the assignee with prior rank should not be deprived of its rights to obtain payment, and where the payment obligation involves the return of assets to the assignor, its right to receive these assets as well. The assignee with lower priority must remit the payment of the assets to the assignee with higher priority. Consistent with its general approach to allocating pre-default rights and obligations as between assignor and assignee, the Guide recommends that these general principles govern cases where payment has been made in good faith to a person not actually entitled to receive it (see recommendation 112, subparagraph (a)).

79. Whatever the circumstances under which the assignee obtains payment, States invariably provide, by means of a mandatory rule, that the assignee may only retain the payment to the extent of its rights in the receivable. In other words, unlike the case of ordinary post-default enforcement (see chapter X, Enforcement), if the payment made by the debtor of the receivable is greater than the outstanding indebtedness of the assignor, the assignee may not keep the surplus (see recommendation 151). The assignee must remit the excess to the person who is entitled to it (the next lower-ranking assignee or the assignor, as the case may be). In the same manner that a secured creditor that has been fully satisfied must either remit tangible assets to the grantor or ensure that notice of its rights is expunged from the general security rights register, States usually also require an assignee that has been fully satisfied to notify the debtor of the receivable of that fact, and that it should no longer receive payment. This is the position recommended in the Guide (see recommendation 112, subparagraph (b)).

80. These mandatory and non-mandatory rules relating to pre-default rights and obligations of assignors and assignees of intangible assets help to structure the relationship between them. In many ways, the non-mandatory rules reflect what

suppletive rules are meant to accomplish, which is why they are explicitly stated in the national law of many States. For this reason also, the Guide recommends that they be included in any law relating to secured transactions so as to facilitate the efficient assignment and collection of receivables, while nonetheless permitting assignors and assignees to structure their own transactions differently so as to meet their own needs and wishes.

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/637/Add.3 [Original: English]**Note by the Secretariat on terminology recommendations of the UNCITRAL draft
Legislative Guide on Secured Transactions, submitted to the Working Group on
Security Interests at its twelfth session****ADDENDUM****CONTENTS**

	<i>Paragraphs</i>
IX. Rights and obligations of third-party obligors	1-38
A. General remarks	1-38
1. Introduction	1-5
2. Effect of a security right on the obligations of a third-party obligor . . .	6-38
(a) General	6-7
(b) Effect of a security right on the obligations of the debtor of a receivable	8-21

(d) Effect of a security right on the obligations of the depositary bank . . .	27-32
(e) Effect of a security right on the obligations of the guarantor/issuer, confirmer or nominated person under an independent undertaking . . .	33-36
(f) Effect of a security right on the obligations of the issuer or other obligor under a negotiable document	37-38
B. Recommendations	

IX. Rights and obligations of third-party obligors**A. General remarks****1. Introduction**

1. The standard example of a secured transaction is where a grantor encumbers a tangible asset, such as equipment or inventory, in favour of a secured creditor. In chapter III, however, the Guide also notes the importance of intangible assets in

modern secured transactions. While certain categories of intangible assets may be excluded from the Guide, many other types of intangible asset and, in particular, rights to payment are included (see recommendation 2, subparagraph (a)).

2. When the encumbered asset in a secured transaction consists of a right against a third party, the secured transaction is necessarily more complicated than when the encumbered asset is a simple object such as equipment. Such rights against third parties may include “receivables”, “negotiable instruments”, “negotiable documents”, “rights to receive the proceeds under an independent undertaking” and “rights to payment of funds credited to a bank account” (for the definitions of these terms, see Introduction, section B, Terminology). While these rights against third parties differ from each other in important ways, they have a critical feature in common: the value of the encumbered asset is the right to receive performance from a third-party obligor (that is, a third party who owes an obligation to the grantor). There could be rights against third parties that do not fall into one of these five categories for which the Guide does not provide specific recommendations. The Guide covers these rights as well when they serve as encumbered assets, and the same principles discussed in this chapter for the five specified categories apply to these other rights, except to the extent that their nature requires a different rule that might be found in another body of law that specifically addresses such rights. The remainder of this chapter will focus on the five categories of rights referred to above.

3. Depending on the nature of the right against a third party that is an encumbered asset, the Guide uses varying terminology to describe the third-party obligor. When the right is a receivable, for example, the third-party obligor is referred to as the “debtor of the receivable”, and when the obligation is the right to proceeds under an independent undertaking, the third-party obligor is referred to as the “guarantor/issuer, confirmer or other nominated person” (for the definitions of these terms, see Introduction, section B, Terminology).

4. When the encumbered asset is a right against a third-party obligor, the secured transaction affects not only the grantor and the secured creditor but may also affect the third-party obligor. Accordingly, States typically provide appropriate protection against adverse effects on the third-party obligor, especially since that obligor is not a party to the secured transaction. On the other hand, those protections should not unduly burden the creation of security rights in rights against third-party obligors, since security rights facilitate the extension of credit by the secured creditor to the grantor, which may also redound to the benefit of the third-party obligor.

5. The detailed rules governing the mutual rights and obligations of grantors and secured parties where the encumbered asset is a right to payment have been discussed in chapter VIII. This chapter first reviews, in section A.2 (a), a number of general issues. It then addresses, in sections A.2(b)-A.2(f), the rights and obligations of third-party obligors in the different contexts where they most frequently arise. The chapter concludes, in section B, with a series of recommendations.

2. Effect of a security right on the obligations of a third-party obligor

(a) General

6. It is generally recognized by States that it would be inappropriate for a security right in a right to performance from a third-party obligor to change the nature or magnitude of the third-party obligor’s obligation towards its creditor. This basic principle is also present in international instruments. For example, article 15 of the United Nations Assignment Convention permits no change in the obligation,

other than the identity of the person to whom payment is owed (and, with some limitations, the address or account to which payment is to be made; see para. 11 below). The principle is general, and equally applies to third-party obligors regardless of how the obligation arises or the manner in which it is expressed (e.g. whether the obligation is a right to payment under a negotiable instrument, a right to payment of funds credited to a bank account, a right to receive the proceeds under an independent undertaking, or a right under a negotiable document).

7. When a negotiable instrument or negotiable document evidences the right against the third-party obligor, this principle is already reflected in law that is well developed in most States and that details the effect of an assignment on the obligation of the obligor. This body of law is generally referred to in the Guide as negotiable instruments law. There is no need for secured transactions law to recreate those rules. Accordingly, the Guide generally defers to those bodies of law for effectuation of this principle. Similar protections exist under the law governing bank accounts and the law and practice governing independent undertakings, and the Guide defers to them as well.

(b) Effect of a security right on the obligations of the debtor of a receivable

8. While the effect of a security right on the obligor of a negotiable instrument or negotiable document is well developed in most States, this is not always the case with respect to a receivable that is the subject of a security right. Accordingly, the Guide addresses in some detail the effect of a security right on the obligation of the debtor of the receivable. For the most part, the Guide draws its policies and recommendations (often verbatim) from the analogous rules in the United Nations Assignment Convention.

9. In many States today, it is not possible to grant a security right in a receivable. The only mechanism by which the debtor of a receivable may use the claim as an asset to secure a loan is to transfer (or assign) the claim to a creditor. Moreover, in some States, it is not possible to assign a claim by way of security (that is, to make the assignee's right to collect the receivable contingent upon the assignor itself continuing to owe an obligation to the assignee). In these States, only outright (or pure) transfers of receivables are possible. Regardless of the type of the transaction (i.e. whether it is an outright assignment, a security arrangement denominated as a security right or a transfer by way of security), the legal mechanisms by which the mutual rights and obligations of the parties, and their rights as against third-party obligors are created are similar. For this reason, and because it is sometimes difficult to determine exactly the nature of the underlying transaction between the assignor and the assignee, many States treat all forms of transfer of receivables broadly in the same manner.

10. This is also the approach taken by the United Nations Assignment Convention, and consistent with that approach, the Guide covers not only security rights in receivables but also outright transfers and transfers by way of security (see recommendation 3; for the definition of the terms "assignment", "assignor" and "assignee" and related terms, see Introduction, section B, Terminology). Therefore, the discussion below covers the debtor of the receivable in transactions in which the receivable has been transferred outright or utilized as an encumbered asset (whether in an outright assignment for security purposes or an assignment by way of security), and the term "assignment" is used in this chapter to refer to all three types of transaction, except where otherwise indicated. However, this does not result in

converting an outright transfer of a receivable to a secured transaction (see recommendation 3).

11. The United Nations Assignment Convention provides that, with few exceptions, the assignment of a receivable does not affect the rights and obligations of the debtor of the receivable without its consent. A like principle is found in the national law of many States. The only effect that the assignment may have on the debtor of the receivable is to change the person, address or deposit account to which the debtor of the receivable is to make payment. However, so as not to impose hardship on the debtor of the receivable, the United Nations Assignment Convention provides that such changes of the person, address or account of payment may not result in changing the currency of payment or the State in which payment is to be made, unless the change is to the currency of the State in which the debtor of the receivable is located (see United Nations Assignment Convention, article 15, and recommendation 114).

12. When the assignment of a receivable is an outright transfer, the ownership of the right to receive performance from the debtor of the receivable also changes. While some States characterize this type of transaction as involving a change of ownership, others simply provide that the claim reflected by the receivable has been transferred to the patrimony of the assignee. However the transaction is characterized, it does not necessarily mean that the party to whom payment is to be made will also change. This is because, in many cases, the assignee will enter into a servicing or similar arrangement with the assignor pursuant to which the latter continues to collect the receivable on behalf of the assignee.

13. Even when the assignment of a receivable is by way of security, the transaction is sometimes structured as an immediate transfer to the assignee. In these cases, the assignor normally also collects the receivable on behalf of the assignee but, until default, need not remit more than is necessary under the agreement between them. Sometimes, by contrast, the assignment is conditional, and the assignee acquires no rights in the receivable until the occurrence of a default by the assignor. Until this moment, the third-party obligor will continue to pay the assignor under the terms of the original obligation contracted between them.

14. There is typically a like result when the assignment of a receivable involves the creation of a security right. The assignment does not necessarily mean that the party to whom payment is to be made will change. In many cases, the arrangement between the assignor and the assignee will be that payments are to be made to the assignor (at least before any default by the assignor). Only upon default will the assignee generally seek to receive payment directly from the debtor of the receivable. In other cases, the parties will agree that payments are to be made to the assignee. Under these types of arrangement, the assignee normally holds the money received in a separate account and withdraws from that account only an amount necessary to fulfil the assignor's payment obligation. The balance is held for the assignor, and remitted once the credit has been fully paid.

15. In view of the fact that the obligation of the debtor of the receivable normally will be discharged only to the extent of payment to the party entitled to payment under the law (and may not be discharged if mistakenly made to a different party), it has an obvious interest in knowing the identity of the party to which payment is to be made (which is not necessarily the "owner" of the receivable). Thus, many States protect the debtor of the receivable by providing that the debtor of the receivable is discharged by paying in accordance with the original contract until such time as it

receives notification of the assignment and of any change in the person or address to which payment should be made. This principle provides important protection to the debtor of the receivable since it avoids the possibility that a payment will be found not to discharge the debtor of the receivable because the payment was made to a party that was no longer the creditor of the receivable, even though the debtor of the receivable was unaware of the change in the creditor of the receivable (see United Nations Assignment Convention, article 17, paragraph 1, and recommendation 115, subparagraph (a)).

16. Once the debtor of the receivable has been notified of the assignment and any new payment instructions, however, it is appropriate to require it to pay in accordance with the assignment and instructions (subject to the limitation described in para. 10 above that the instructions may not change the currency of payment or the State in which payment is to be made unless the change is to the State in which the debtor of the receivable is located). This principle is critical to the economic viability of secured transactions where the encumbered asset being relied upon by the secured creditor is a receivable. If the debtor of the receivable were to continue to be able to pay the assignor, this would deprive the assignee of the value of the assignment. The value of the receivable is reduced because every payment made by the debtor of the receivable reduces the outstanding balance of the receivable. Being able to obtain payment directly from the debtor of the receivable once instructions have been given is especially important when the assignor is in financial distress (see United Nations Assignment Convention, article 17, paragraph 2, and recommendation 115, subparagraph (b)).

17. As noted above, it would be inappropriate for an assignment of a receivable to change the nature or magnitude of the obligation of the debtor of the receivable. One implication of that principle is that the assignment should not, without the consent of the debtor of the receivable, deprive it of defences arising out of the original contract or rights of set-off arising prior to the receipt of notification of an assignment (see United Nations Assignment Convention, article 18, and recommendation 116).

18. This principle should not, however, prevent the debtor of the receivable from agreeing that it may not raise against an assignee defences or rights of set-off that it could otherwise raise against the assignor. The effect of such an agreement is to confer on the receivable the same sort of “negotiability” that enables negotiable instruments to be enforced by “holders in due course” or “protected purchasers” without regard to defences or rights of set-off (for the meaning of the term “protected holder”, see, for example, article 29 of the United Nations Convention on International Bills of Exchange and International Promissory Notes¹ (the “United Nations Bills and Notes Convention”). As the receivable could have been embodied in a negotiable promissory note or similar negotiable instrument with the agreement of the debtor of the receivable, there is no reason to prevent the debtor of the receivable from agreeing to the same result as would have been achieved by the use of a negotiable promissory note or similar negotiable instrument (see recommendation 117, subparagraph (a)). However, in most States, as in the United Nations Bills and Notes Convention, there are certain defences that can be raised even against a holder in due course or other protected purchaser (see, for example, paragraph 1 of article 30 of the United Nations Bills and Notes Convention). In principle, the same result should follow when the debtor of a receivable agrees not

¹ Ibid., Sales No. E.95.V.16.

to raise defences against the assignee of a receivable (see United Nations Assignment Convention, article 19, paragraph 2, and recommendation 117, subparagraph (b)).

19. When a receivable is created by contract, it is always possible that the debtor of the receivable and its original creditor might modify the terms of the obligation at a later time. If such a receivable is assigned, the effect of that modification on the rights of the assignee must be determined. If the modification occurs before the assignment, the right actually assigned to the assignee is the original receivable as so modified. Most States also take the position that a debtor of the receivable is not affected by an assignment of which it has no knowledge. So, for example, if the modification occurs after the assignment, but before the debtor of the receivable has become aware that the creditor has assigned the receivable, it is understandable that the debtor of the receivable would believe that the agreement of modification was entered into with the creditor of the receivable and, thus, would be effective. Accordingly, States generally provide that such a modification is effective as against the assignee (see, e.g., United Nations Assignment Convention, article 20, paragraph 1, and recommendation 118, subparagraph (a)).

20. If the agreement to modify the terms of the receivable is entered into after the assignment has already occurred and after the debtor has been notified of it, such a modification is usually not effective unless the assignee consents to it. The reason is that, at this point, the assignee's right in the receivable has already been established and such a modification would change the assignee's rights without its consent. Some States, however, provide limited exceptions to this rule. For example, if the right to be paid on the receivable has not yet been fully earned by performance by the original creditor of the receivable (the assignor), and the original contract provides for the possibility of its modification, the modification may be effective against the assignee. In certain cases, the original contract need not even expressly provide for modification. The usual example would be where the original contract governs a long-term relationship between the debtor and the creditor of the receivable, and the relationship is of the sort that is frequently the subject of modification. In this situation, the assignee might anticipate that reasonable modifications might be made in the ordinary course of business even after the assignment. As a result, some States provide that a modification to which a reasonable assignee would consent is effective against the assignee, even if made after the debtor of the receivable is aware of the assignment, so long as the receivable has not yet been fully earned by performance (see United Nations Assignment Convention, article 20, paragraph 2, and recommendation 118, subparagraph (b)).

21. As a general rule, the assignor's right to receive payment from the debtor of the receivable arises because the assignor has performed the obligation for which payment is to be made (e.g. the sale of a vehicle, the performance of a service). Sometimes the debtor of the receivable may make a down-payment, or may pay part of the price in advance of the asset being delivered or the service being rendered. This payment may well end up in the hands of the assignee (either because the assignor has remitted it to the assignee or because the assignee has given notice to the debtor of the receivable and has obtained payment directly). Normally, contract law provides that, if one party does not perform, the other party may have the contract annulled or seek damages for the breach. However, once the payment has passed into the hands of the assignee, many States provide that the only recourse of the debtor of the receivable is against the assignor, and sums received by the

assignee cannot be recovered. The policy behind this rule flows from the general law of obligations. Absent fraud, creditors of a party in default under a contract are not permitted to reclaim money that may have been paid in good faith to other creditors. Hence, if payment is made to the assignor, which then transfers the payment to the assignee, or if payment is made directly to the assignee, the assignee stands in the same position as any other creditor that has been paid by the assignor, and should not be required to disgorge the payment received to the debtor of the receivable simply because the assignor has not performed its correlative obligation. In essence, this means that the debtor of the receivable bears the insolvency risk of its contractual partner. The Guide recommends adoption of a rule reflecting this general principle (see recommendation 119).

(c) Effect of a security right on the obligations of the obligor on a negotiable instrument

22. In most States, the law governing negotiable instruments (for the meaning of this expression, see Introduction, section B, Terminology, para. 6) is well developed and contains clear rules as to the effect of a transfer of an instrument on the obligations of parties to the instrument. In principle, those rules continue to apply in the context of security rights in negotiable instruments (see recommendation 120).

23. Thus, for example, a secured creditor with a security right in a negotiable instrument is not able to collect on the instrument except in accordance with its terms. Even if the grantor has defaulted on its obligation under the security agreement, the secured creditor cannot enforce the negotiable instrument against an obligor except when payment is due under that instrument. For example, if a negotiable instrument is payable only at maturity, a secured creditor is not permitted to require payment prior to its maturity (even if the grantor of the security right, as opposed to the obligor on the instrument, is in default), except in accordance with the terms of the negotiable instrument itself.

24. In addition, unless otherwise agreed by the obligor, the secured creditor cannot collect on the negotiable instrument except in accordance with the law governing negotiable instruments. Typically, as a matter of the law governing negotiable instruments, the secured creditor may only collect on the negotiable instrument if it is a holder (that is, is in possession of the instrument and has obtained any necessary endorsement) or has acquired the rights of a holder. Accordingly, in order to be assured of obtaining a discharge, the obligor is often permitted to insist, under the law governing negotiable instruments, on paying only the holder of the instrument. However, in some States, a transferee of an instrument from a holder can enforce the instrument if the transferee has possession of the instrument.

25. Under the law governing negotiable instruments, the secured creditor may or may not be subject to the claims and defences of an obligor on the instrument. If the secured creditor is a “protected” holder of the negotiable instrument, the secured creditor is entitled to enforce the negotiable instrument free of certain claims and defences of the obligor. These claims and defences are the so-called “personal” claims and defences, such as normal contract claims and defences, which the obligor could have asserted against the prior holder. However, the secured creditor, even as a protected purchaser, remains subject to so-called “real” defences of the obligor, such as lack of legal capacity, fraud in the inducement or discharge in insolvency proceedings.

26. If the secured creditor is a holder of the negotiable instrument but not a “protected” holder, it is nonetheless entitled to collect on the negotiable instrument, but will usually be subject to the claims and defences that the obligor could have asserted against a prior holder of the negotiable instrument. These claims and defences include all “personal” claims and defences unless the party liable on the negotiable instrument has effectively waived its right to assert such claims and defences in the negotiable instrument itself or by separate agreement.

(d) Effect of a security right on the obligations of the depositary bank

27. In States in which a security right in a right to payment of funds credited to a bank account may be created only with the consent of the depositary bank, the bank has no duty to give its consent. In these States, the result is that, even as between the secured creditor and the grantor, a security right may not be created in a right to payment of funds credited to the bank account without the agreement of the bank. By contrast, other States do not require the consent of the depositary bank for the creation of the security right. Nonetheless, even in these States the rights and obligations of the depositary bank itself may not be affected without its consent (see recommendation 121, subparagraph (a)). In both cases, the main reason lies in the critical role of banks in the payment system and the need to avoid interfering with banking law and practice (see also para. 28).

28. The reason for not imposing duties on a depositary bank or changing the rights and duties of the depositary bank without its consent is that this may subject the bank to undue risks that it is not in a position to manage without having appropriate safeguards in place. The depositary bank is subject to significant operational risks, with funds being debited or credited to bank accounts on a daily basis, often with credits being made on a provisional basis, and sometimes involving other transactions with its customers. These risks are compounded by the legal risk to the depositary bank of failing to comply with laws dealing with negotiable instruments, credit transfers and other payment system rules in its day-to-day operations. The bank is also exposed to the further risk of not complying with certain duties imposed on the depositary bank by other law, such as laws requiring it to maintain the confidentiality of its dealings with its customers. In addition, the depositary bank is typically subject to regulatory risk under laws and regulations of the State designed to ensure the safety and soundness of the depositary bank. Finally, the depositary bank is subject to reputational risk in choosing the customers with which it agrees to enter into transactions.

29. The experience in those States where the depositary bank’s consent to new or changed duties is required suggests that the parties are often able to negotiate satisfactory arrangements so that the depositary bank is comfortable that it is managing the risks involved, given the nature of the transaction and the bank’s customer. In particular, to avoid any interference with the depositary bank’s rights of set-off against the account holder, legal systems that permit the depositary bank to obtain a security right in the right to payment of funds credited to a bank account held with the bank, provide that the bank retains any rights of set-off it might have under law other than the secured transactions law (see recommendation 121, subparagraph (b)).

30. The same principles apply with respect to the third-party effectiveness, priority and enforcement of a security right in a right to payment of funds credited to a bank account. For example, in States that prescribe “control” as the method for achieving third-party effectiveness of a security right in a right to payment of funds credited to

a bank account, there are appropriate rules to safeguard the confidentiality of the relationship of a bank and its client (for the definition of “control”, see Introduction, section B, Terminology). Such rules provide, for example, that the bank has no obligation to respond to requests for information about whether a control agreement exists or whether the account holder retains the right to dispose of funds credited to its bank account (see recommendation 122, subparagraph (b)).

31. In States in which the security right in a right to payment of funds credited to a bank account is made effective against third parties by registration of a notice in a public registry or by acknowledgment on the part of the depositary bank, the notice or acknowledgement may or may not impose duties on the depositary bank to follow instructions from the secured creditor as to the funds in the account. If such duties are not imposed on the depositary bank under the laws of a particular State, the secured creditor’s right to obtain the funds in the bank account upon enforcement of the security right would usually depend upon whether the customer-grantor has instructed the depositary bank to follow the secured creditor’s instructions as to the funds or the depositary bank has agreed with the secured creditor to do so. In the absence of such instructions or agreement, the secured creditor may need to enforce the security right in the bank account by using judicial process to obtain a court order requiring the depositary bank to turn over the funds credited to the bank account to the secured creditor.

32. In States in which the depositary bank is permitted to subordinate its priority position, the bank has no duty to subordinate its rights to a security right being asserted by another creditor of the account holder. Even if, in order to facilitate the creation, effectiveness against third parties, priority and enforcement of a security right in a right to payment of funds credited to a bank account, the secured creditor is willing to become the depositary bank’s customer with respect to the bank account, the depositary bank has no duty to accept the secured creditor as the bank’s customer. This result is consistent with the general position taken in the Guide that any mechanisms by which secured transactions law aims to facilitate the grant of security over funds credited to a bank account should not impair national regulatory laws or other laws designed to assure the safety and soundness of the banking system.

(e) Effect of a security right on the obligations of the guarantor/issuer, confirmer or nominated person under an independent undertaking

33. The rights and duties of the guarantor/issuer, confirmer or nominated person with respect to an independent undertaking are quite well developed under the law and practice governing independent undertakings (for the definitions of these terms, see Introduction, section B, Terminology). This highly specialized law and practice has facilitated the usefulness of independent undertakings, particularly in international trade. Accordingly, when developing a secured transactions law with respect to independent undertakings, great care should be taken to avoid interfering with these useful commercial mechanisms.

34. In order to avoid such interference, it is helpful to distinguish between the independent undertaking itself and the right to draw, on the one hand, and the right of a beneficiary of such an undertaking to receive a payment (or another item of value) due from the guarantor/issuer or nominated person, on the other hand. While providing for a security right in the former without interference with the usefulness of the independent undertaking is a delicate task (usually done by an agreed-upon transfer of the undertaking itself), a security right in the latter carries fewer risks

because it relates only to the right of the beneficiary to receive whatever may become due and would not have an effect on the guarantor/issuer, confirmer or a nominated person. For this reason, the Guide recommends rules facilitating the use as security of the right to receive the proceeds under an independent undertaking (a carefully defined term that refers to the right to receive the proceeds as contrasted with the cash and other assets that actually constitute the proceeds of the independent undertaking, as that term is commonly used in independent undertaking practice), but with strict conditions designed to avoid compromising the usefulness of independent undertakings. The basic rules that should govern the interaction of the law relating to independent undertakings and secured transactions law are described below.

35. A cardinal principle is that a secured creditor's rights in the right to receive the proceeds under an independent undertaking should be subject to the rights, under the law and practice governing independent undertakings, of the guarantor/issuer, confirmer or nominated person. Thus, a secured creditor may not assert a right to payment of the proceeds otherwise not payable to the secured creditor's grantor. For the same reason, a transferee-beneficiary normally takes the undertaking (including both the right to draw and the right to receive payment of the proceeds) without being affected by a security right in the proceeds of the independent undertaking granted by the transferor (see recommendation 123, subparagraphs (a) and (b)). For the same reason, if the guarantor/issuer, confirmer or nominated person has a security right in the proceeds under an independent undertaking, their independent rights are not adversely affected (see recommendation 123, subparagraph (c)).

36. Equally important is the principle that a guarantor/issuer, confirmer or nominated person should not be obligated to pay any person other than a confirmer, a nominated person, a named beneficiary, an acknowledged transferee of the independent undertaking or an acknowledged assignee of the proceeds under an independent undertaking (see recommendation 124). The reason for this rule is that the usefulness of independent undertakings as a low-cost and efficient method for facilitating the flow of commerce would be compromised if the guarantor/issuer, confirmer or nominated person had to verify the background transaction by which the right was purportedly transferred and to which it had not consented. If, however, the guarantor/issuer, confirmer or nominated person acknowledges a secured creditor or transferee of the proceeds under an independent undertaking, the secured creditor or transferee may enforce its rights against the person that made the acknowledgement (see recommendation 125).

(f) Effect of a security right on the obligations of the issuer or other obligor under a negotiable document

37. In most States, the law governing negotiable documents is well developed and contains clear rules as to the effect of a transfer of a document on the obligations of parties to the document. In principle, those rules continue to apply in the context of security rights in negotiable documents (see recommendation 126).

38. This means, among other things, that the right of a secured creditor to enforce a security right in a negotiable document and, thus, in the tangible assets covered by it, is limited by the law governing negotiable documents. The limit is that the assets covered by the negotiable document are in the hands of the issuer or other obligor under that document, and the issuer's or other obligor's obligation to deliver the assets typically runs only to the consignee or to any subsequent holder. Thus, if the negotiable document was not transferred to the secured creditor in accordance with

the law governing negotiable documents, the issuer or other obligor will have no obligation to deliver the assets to the secured creditor. For example, if under negotiable documents law, the document must bear an endorsement at the time it is transferred in order for the transferee to be entitled to receive the assets covered by the document, and the transferee holds a document without such an endorsement, the obligor need not deliver the assets covered by the document. In such a case, the secured creditor may need to obtain an order from a court or other tribunal in order to obtain possession. The court order would either require transfer of the document (or its transfer and endorsement) to the secured creditor or to a person designated by the secured creditor, or require the issuer or other obligor to deliver the assets to the secured creditor or other person designated by the secured creditor.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

C. Recommendations	

X. Enforcement of a security right

A. General remarks

1. Introduction

1. Parties to any agreement usually expect each other voluntarily to perform all their obligations, whether owed between themselves or to third parties and whether these obligations arise by contract or by operation of law. Only where performance is not forthcoming do parties contemplate compulsory enforcement through a judicial procedure. Typically, States carefully develop enforcement regimes for

ordinary civil actions that balance the rights of debtors, creditors and third parties. In most States, these regimes require a creditor seeking to enforce performance to bring a court action to have the claim recognized and then to have the debtor's assets seized and sold under the supervision of a public official. From the amount generated by the sale, the judgement creditor will receive payment of its outstanding claim against the judgement debtor.

2. Parties to a security agreement have similar expectations of each other. A secured creditor usually presumes that a grantor will perform its obligations voluntarily. Likewise, a grantor will typically expect the secured creditor to fulfil the obligations it has undertaken. Both enter the transaction fully expecting and intending to meet their obligations to each other. Yet both also recognize that there will be times when they may not be able to do so. Sometimes the secured creditor will fail to make a promised payment, or to return assets to a grantor when an agreed condition for doing so occurs. In such cases, depending on the nature of the agreement between them, the grantor will normally apply to the court for relief. Most often, however, it is the grantor that finds itself incapable of performing as promised (that is, will not repay the credit according to the terms of the agreement). The failure will sometimes flow from reasons beyond the grantor's control, such as an economic downturn in an industry or more general economic conditions. Sometimes it may result from defaults by the grantor's own debtors. Sometimes the grantor cannot perform owing to business misjudgements, or as a consequence of poor management.

3. Whatever the reason, even after one or more payments have been missed, it is in the interest of both parties to a security agreement, and of third parties generally, that the grantor attempt to make up these payments and continue voluntarily to perform the promised obligation. Compulsory enforcement proceedings are always less efficient than voluntary performance, since: (a) they are costly; (b) they take time; (c) the outcome is not always certain; (d) they usually lead to a complete breakdown in the relationship between the parties; and (e) the longer-term consequences for grantors and third parties are often devastating. This is why many States actively encourage parties to a security agreement to take steps to avoid a failure of performance that would lead to compulsory enforcement. Moreover, this is why secured creditors often will closely monitor their grantors' business activities. For example, they will periodically review account books, inspect the encumbered assets and communicate with those grantors that show signs of financial difficulty. Grantors having trouble meeting their obligations generally will cooperate with their secured creditors to work out ways to forestall or to overcome their difficulties. In some cases, a grantor may request a secured creditor's assistance in developing a new business plan. In other cases, the grantor and an individual creditor, or the grantor and its whole group of creditors working together, may attempt informally to readjust aspects of their agreements.

4. There are many types of debt-readjustment agreements. Sometimes the parties enter into a "composition" or "work-out" arrangement that extends the time for payment, otherwise modifies the grantor's obligation, or adds or reduces encumbered assets that secure these obligations. Negotiations to reach a composition agreement take place against a background of two main factors: (a) the secured creditor's right to enforce its security rights in the encumbered assets if the grantor defaults on its secured obligation; and (b) the possibility that insolvency proceedings will be initiated by or against the grantor.

5. Nevertheless, despite the best efforts of grantors and secured creditors to avoid compulsory enforcement proceedings, they will occasionally be unavoidable. One of the key issues for States enacting secured transactions regimes is, consequently, to decide the scope of a creditor's post-default rights. More specifically, the question is what modifications, if any, States should make to the normal rules that apply to the enforcement of claims when developing rules to govern how security rights can be enforced when the grantor fails to perform the secured obligation.

6. At the heart of a secured transactions regime is the right of the secured creditor to look to the amount that can be realized upon the sale of the encumbered assets to satisfy the secured obligation. Enforcement mechanisms that allow creditors accurately to predict the time and cost involved in disposing of the encumbered assets and the likely proceeds received from the enforcement process will have a significant impact on the availability and the cost of credit. A secured transactions regime should, therefore, provide efficient, economical and predictable procedural and substantive rules for the enforcement of a security right after a grantor has defaulted. At the same time, because enforcement will directly affect the rights of the grantor, other persons with a right in the encumbered assets and the grantor's other creditors, a secured transactions regime should provide reasonable safeguards to protect their rights.

7. All interested parties benefit from maximizing the amount achieved from the sale of the encumbered assets. The secured creditor benefits by the potential reduction of any amount that the grantor may owe as an unsecured obligation after application of the proceeds of enforcement to the outstanding secured obligation ("deficiency"). At the same time, the grantor and the grantor's other creditors benefit from a smaller deficiency or a larger amount remaining after satisfaction of the secured obligation ("surplus").

8. This chapter examines the secured creditor's right to enforce its security right if the grantor fails to perform ("defaults on") the secured obligation. If the grantor is insolvent, insolvency law may limit the exercise of these rights (see chapter XIV, on the impact of insolvency on a security right). In section A.2 of the present chapter, the general principles guiding default and enforcement are discussed. Section A.3 reviews the procedural steps that a secured creditor may be required to follow prior to exercising its remedies and sets out the grantor's post-default rights. The different remedies typically available to secured creditors are examined in section A.4. In section A.5, the effects of enforcement on the grantor, the secured creditor and third parties are considered. The enforcement of a security right in proceeds is discussed in section A.6. The intersection of the enforcement regimes relating to movable assets and immovable property is discussed in section A.7. Finally, the types of adjustment that may be necessary for effective enforcement against attachments to movable assets, masses and products are discussed in section A.8.

9. The enforcement of security rights in receivables, negotiable instruments, rights to payment of funds credited to a bank account, rights to receive the proceeds under an independent undertaking and negotiable documents does not fit easily into the general procedures for enforcement against tangible assets (for the definitions of those terms, see Introduction, section B, Terminology). As a result, many States have particular rules dealing with enforcement against intangible assets, receivables and various other rights to payment. These special situations are discussed in sections B.1-B.7 of this chapter. The chapter concludes, in section C, with a series of recommendations.

2. General principles of enforcement

(a) General

10. As noted in the preceding section, it is in everyone's interest that the grantor voluntarily performs its promised obligation. For this reason, when performance is not forthcoming, the secured creditor and the grantor normally will attempt to conclude an agreement that obviates the need to commence compulsory enforcement proceedings. Seldom will a grantor be unaware that it is not performing its obligations and even more rarely, if ever, will the grantor learn for the first time that it is in default by means of a formal indication to this effect from the secured creditor. Indeed, in the latter case, enforcement proceedings usually do not follow since the failure of performance will almost always have been due to inadvertence rather than an inability or unwillingness to pay. Still, compulsory enforcement will sometimes become necessary. When it does, a number of basic principles guide States in elaborating the post-default rights and obligations of secured creditors and grantors.

(b) Requirement of a default prior to enforcement

11. A security right secures the performance of a grantor's (or, in the case of a third-party grantor, the debtor's) obligation to the secured creditor. In the standard case, therefore, the security right becomes enforceable as soon as the grantor fails to pay the secured obligation. There are, however, a number of other "events of default" that are typically set out in the security agreement. Any one of these events, unless waived by the secured creditor, is sufficient to constitute a default, thereby permitting compulsory enforcement of the security right. In other words, the parties' agreement and the general law of obligations will determine whether the grantor is in default and when enforcement proceedings may be commenced. This general law of obligations usually will also determine whether a formal notice of default must be given to the debtor and, if so, what the content of that notice will be.

12. Occasionally, default occurs not because a payment has been missed, but because another creditor either seizes the encumbered assets under a judgement or seeks to enforce its own security right. Some States provide that, apart from any stipulation in the security agreement, the seizure of encumbered assets by any other creditor constitutes a default under all security agreements that encumber the seized assets. The rationale is based on efficiency. As the encumbered asset is the creditor's guarantee of payment, whenever that asset is subject to judicial process, the secured creditor should be able to intervene to protect its rights. In these cases, procedural law will often give these other creditors the right to force the disposition of encumbered assets. The secured creditor will look to this same procedural law for rules on intervening in these judicial actions and enforcement proceedings in order to protect its rights and its priority.

13. Typically, States provide that a secured creditor with priority will be able to take over the enforcement process from a subordinate secured creditor should it so choose. This rule follows because the two secured creditors will be enforcing similar rights under the same security regime and the enforcement rights of these creditors should, therefore, be determined by their respective priority. Other States protect the rights of creditors with a higher priority ranking ("senior creditors") by providing that any realization sale by a creditor with a lower priority ranking (a "junior creditor") cannot affect the rights of a senior creditor.

14. In some States, once enforcement of a judgement claim has commenced, the secured creditor may not intervene to enforce its rights under the security agreement. This approach is usually followed in States where a judicial sale extinguishes all rights, including security rights, from the assets sold. The assumption is that because the judicial sale enables the purchaser to acquire a clean title, it will produce the highest enforcement value. In other States, however, where a secured creditor has rights in some or all of the assets under seizure by a judgement creditor, the secured creditor is permitted to counter the seizure and enforce its security rights by any means available to it. This approach is usually found in States where a regular judicial sale in execution does not extinguish security rights. The assumption is that since security rights will not be extinguished, a higher price of disposition is more likely to be realized when the enforcement process leads to the purchaser obtaining the cleanest title (see paras. 70 and 72 below).

(c) Good faith and commercial reasonableness

15. Enforcement of a security right has serious consequences for grantors, debtors and interested third parties (e.g. a junior secured creditor, a guarantor or a co-owner of the encumbered assets). For this reason, some States impose, as a general and overriding obligation of secured creditors, a specific duty to act in good faith and follow commercially reasonable standards when enforcing their rights. Because of the importance of this obligation, these States also provide that at no time may the secured creditor and the grantor waive or vary it (see recommendations 128 and 129). Moreover, as noted, a secured creditor that does not comply with enforcement obligations imposed on it will be liable for any damages caused to the persons injured by its failure (see recommendation 133). For example, if a secured creditor does not act in a commercially reasonable manner in disposing of the encumbered assets and that results in the secured creditor obtaining a smaller amount than a commercially reasonable disposition would have produced, the secured creditor will owe damages to any person harmed by that differential.

(d) Freedom of parties to agree to the enforcement procedure

16. States generally impose very few pre-default obligations on parties to a security agreement (see chapter VIII, Rights and obligations of the parties to a security agreement). A key issue in the post-default enforcement context is, consequently, whether a similar policy should prevail. In other words, the issue is to what extent the secured creditor and the grantor should be permitted to modify either the statutory framework for enforcing security rights or their respective contractual rights as set out in the security agreement. Some States consider the enforcement procedure to be part of mandatory law that the parties cannot modify by agreement. In other States, the parties are allowed to modify the statutory framework for enforcement as long as public policy, priority, and third-party rights (in particular in the case of insolvency) are not affected. In yet other States, emphasis is placed on efficient enforcement mechanisms in which judicial enforcement is not the exclusive or the primary procedure. Hence, even if there are limits on the extent to which the secured creditor and the grantor may agree to modify the statutory framework in their security agreement (because the freedom to vary an enforcement obligation may be the subject of abuse at the time of conclusion of the security agreement), these States permit them to waive or modify their rights under the security agreement after a default occurs.

17. States that permit parties to waive their legal or contractual post-default rights by agreement nonetheless impose a number of restrictions on their capacity to do so. For example, they generally do not permit waiver of the creditor's obligation to act in good faith and in a reasonably commercial manner (see recommendation 129). As for other obligations, many States distinguish between the rights of the grantor and those of the secured creditor. In some States, the grantor may waive or agree to vary the secured creditor's post-default obligations only after a default has occurred. Allowing a waiver after default often enables the grantor and the secured creditor to "work out" in a non-adversarial way a disposition of the encumbered assets in a manner that maximizes the amount that can be realized for the benefit of the secured creditor, the grantor and the other creditors of the grantor (see recommendation 130). These same States usually also permit a secured creditor to waive its rights against the grantor at any time (either prior to or after default) on the assumption that there is little risk that abusive terms would be imposed by the grantor at the time the credit is being extended (see recommendation 131). In any case, a variation of rights by the parties to a security agreement does not affect the rights of third parties and any person challenging the agreement has the burden of proof (see recommendation 132).

(e) Judicial supervision of enforcement

18. Generally speaking, when a grantor is in default and attempts to work out the obligations have failed, compulsory enforcement against the encumbered assets is likely to ensue. In some cases, however, grantors will contest either the secured creditor's claim that they are in default, or the secured creditor's calculation of the amount owed as a result of the default. As a matter of public policy, States generally provide that grantors are always entitled to request courts to confirm, reject, modify or otherwise control the exercise of a creditor's enforcement rights.

19. The point is not to burden secured creditors with unnecessary judicial procedures, but rather to enable grantors and other interested parties to ensure respect for mandatory post-default procedures (see recommendation 134). Consequently, to ensure that grantor challenges to enforcement can be dealt with in a time- and cost-efficient manner, many States replace the normal rules of civil procedure with expedited judicial proceedings in these cases (see recommendation 135). For example, grantors and other interested parties may be given only a limited time within which to make a claim or raise a defence. Other States permit grantors to challenge the secured creditor on these issues even after enforcement has commenced, or at the time proceeds of enforcement are distributed, or when the secured creditor seeks to collect any deficiency. Still other States permit grantors to obtain not only compensatory damages, but also punitive damages, should it be shown that the secured creditor either had no right to enforce, or enforced for an amount greater than that actually owed.

20. Furthermore, because all such challenges will delay enforcement and add to its cost, many States also build safeguards into the process to discourage grantors from making unfounded claims. These include procedural mechanisms, such as adding the costs of the proceedings to the secured obligation in the event that they are unsuccessful, or requiring affidavits from grantors as a prerequisite to launching such proceedings. Some States also permit secured creditors to seek damages against grantors that bring frivolous proceedings, or fail to comply with their obligations, and to add these damages to the secured obligation. The Guide recommends that compensatory damages be available if the grantor fails to comply

with any of its post-default obligations (see recommendation 133; the same rule applies to the secured creditor).

(f) Scope of post-default rights of the grantor

(i) General

21. As mentioned above, the grantor may seek court relief if the secured creditor fails to exercise its post-default rights in accordance with the security agreement and the law (see paras. 18-20). The grantor may also pay the secured obligation in full and obtain a release of the encumbered assets (see paras. 22-26 below). In addition, the grantor may propose to the secured creditor to take the encumbered assets in total or partial satisfaction of the secured obligation (or object to such a proposal of the secured creditor; see paras. 60-64), as well as exercise any other remedy provided for in the security agreement or the law (see recommendation 136). The grantor may also object to the extrajudicial taking of possession by the secured creditor or to the extrajudicial disposition of the encumbered assets (see recommendations 139, 144 and 145; see also paras. 29-32 and 48-56 below).

(ii) Extinction of the security right after full payment of the secured obligation

22. Once a default has been signalled, the debtor, third-party grantor and interested third parties will often attempt to refinance the secured obligation or otherwise remedy the alleged default. In such cases, States must decide what rights these different parties may exercise and within what time frame they may be exercised. Typically grantors and third parties are given the right to obtain a release of the encumbered assets from the security right upon full repayment of the secured obligation.

23. Full payment of the secured obligation (and termination of any credit commitment) extinguishes the security right and brings the secured transaction to an end. As the objective of enforcement proceedings is to enable creditors to obtain repayment of the obligation, States are usually quite flexible about which parties are entitled to pay the secured obligation. For example, most States permit a defaulting grantor to seek to obtain a release of the encumbered assets before their final disposition by the secured creditor upon paying the outstanding amount of the secured obligation, including interest and the costs of enforcement incurred up to the time of repayment. States usually also permit any interested third party (e.g. a creditor with a lower priority ranking than that of the enforcing creditor or a purchaser that takes the assets subject to the security right) to exercise the right of repayment if the grantor does not.

24. In addition, States usually take a flexible position in relation to the time within which repayment may be made. The secured creditor's interest is in being paid. As long as this payment of principal, interest and costs incurred for enforcement occurs before any third-party rights are affected, there is no reason for insisting on disposition of the encumbered asset. This means that, whoever exercises the right may do so up until the time of: (a) disposition of the encumbered asset or the completion of collection by the secured creditor after disposition of the encumbered asset; (b) the secured creditor entering into a commitment to dispose of the encumbered asset; or (c) acquisition by the secured creditor of the encumbered asset in total or partial satisfaction of the secured obligation, whichever occurs first. Until one of these events occurs, the secured obligation may be repaid in full and the

encumbered assets released. For the same reasons (recognizing that the creditor's primary interest is in receiving payment and the grantor's primary interest is in not losing its assets), the Guide recommends that repayment leading to release of the encumbered assets be permitted right up until third-party rights are acquired, an agreement for the disposition of the assets has been concluded or the secured creditor has acquired the encumbered asset in satisfaction of the secured obligation (see recommendation 137).

25. Another post-default right given to grantors in some States is the reinstatement of the secured obligation upon payment of any arrears. Reinstatement of the secured obligation is quite different from the extinction of the security right and is usually more narrowly circumscribed. Reinstating the secured obligation means curing the specific default (e.g. paying any missed instalments, accrued interest and costs of enforcement already incurred), but otherwise it has no effect either on the grantor's continuing duty to perform or on the security right. The reinstated obligation remains enforceable according to the terms agreed by the parties and remains secured by the encumbered assets.

26. States take quite different approaches to the reinstatement right. Some do not legislatively provide for a reinstatement right, but allow parties to provide for such a right in the security agreement. By contrast, some States provide that reinstatement is a right that may not be waived and may only be exercised by the grantor. Finally, some States permit any interested party to cure a default and reinstate the secured obligation. Whenever reinstatement is permitted, parties authorized to do so may exercise the right up to the same time that parties authorized to release the encumbered assets may exercise their right of release. As reinstatement maintains rather than extinguishes the secured obligation, the grantor may later again fall into default. To prevent a series of strategic defaults and reinstatements, States that permit reinstatement usually limit the number of times that a secured obligation may be reinstated after default. The Guide does not contain a specific recommendation concerning reinstatement. The main reason for this approach is that the decision whether or not to permit acceleration clauses in security agreements (which would make the reinstatement right moot) is considered to be more properly a matter to be addressed by a State's general law of obligations.

(g) Scope of post-default rights of the secured creditor

27. A general creditor that obtains a judgement may enforce the judgement against all the debtor's assets that procedural law allows to be seized. This generally will include all the debtor's assets of whatever kind. If the debtor has only a limited right in assets, only that limited right (e.g. a usufruct) may be seized and sold. Similarly, if a debtor's rights in assets are limited by a term or a condition, the enforcement against the asset will be likewise limited. The purchaser at the judicial sale may only acquire the asset subject to the same term or condition.

28. Unlike the case of ordinary enforcement of judgements, the enforcement of security rights is subjected to an important additional limitation. A secured creditor may only proceed against the assets actually encumbered by its security right and not as against the grantor's entire estate (the secured creditor may exercise any remedies available to an unsecured creditor to claim a deficiency against the grantor). Within this additional constraint, principles similar to those governing enforcement in general apply to the enforcement of a security right. The secured creditor may only enforce the security right against the particular proprietary rights that the grantor actually has in the encumbered assets. So, for example, if a

grantor's ability to sell or otherwise dispose of, lease or license an encumbered asset is limited, the secured creditor's enforcement may not override those restrictions. This means that, for example, if a grantor holds assets as a licensee of a trademark licence, the security right would encompass only the grantor's right as a licensee subject to enforceable terms in the trademark licence and would not give the secured creditor any general right to use or dispose of the trademark.

(h) Judicial and extrajudicial enforcement

29. As a general principle of debtor-creditor law, most States require claims to be enforced by judicial procedures. Creditors must sue their debtors, obtain judgement and then resort to other public officials or authorities (e.g. bailiffs, notaries or the police) to enforce the judgement. In order to protect the grantor and other parties with rights in the encumbered assets, some States impose a similar obligation on secured creditors, requiring them to resort exclusively to the courts or other governmental authorities to enforce their security rights. However, as court proceedings can be slow and costly, often they are less likely to produce the highest possible amount upon the disposition of the assets being sold. In addition, because the expenses involved in enforcement will be factored into the cost of the financing transaction, inefficient processes will have a negative impact on the availability and the cost of credit.

30. To facilitate secured transactions, some States require only a minimal prior intervention by public officials or authorities in the enforcement process. For example, the secured creditor may be required to apply to a court for an order of repossession, which the court will issue without a hearing. In other cases, once the secured creditor is in possession of the asset, it may sell it directly without court intervention as long as it hires a certified bailiff to manage the process according to prescribed procedures. The justification for a less formal approach lies in the fact that having the secured creditor or a trusted third party take control and dispose of the assets will often be more flexible, quicker and less costly than a State-controlled process. A properly designed system can provide protection to the grantor and other persons with an interest in maximizing the amount that will be achieved from the sale of the encumbered assets while at the same time providing an efficient system for realizing on the encumbered assets. Moreover, the knowledge that judicial intervention is readily available is often sufficient to create incentives for cooperative and reasonable behaviour that obviates the need to actually resort to the courts. Finally, unlike the typical judgement creditor, most secured creditors are in the business of providing credit. Hence, reputation concerns will normally impose constraints on their enforcement behaviour.

31. In some States, the secured creditor is not required to use the courts or other governmental authorities for any enforcement purposes, but is entitled to make exclusive use of extrajudicial procedures. These States usually impose, in these cases, a number of mandatory rules relating to, for example, the obligation to send a notice of default or notice of intended disposition, the obligation to act in good faith and in a commercially reasonable manner, and the obligation to account to the grantor for the proceeds of disposition. In addition, they do not permit the secured creditor to take possession of the encumbered assets extrajudicially if such enforcement would result in a disturbance of the public order. The purpose and effect of these requirements is to provide for flexibility in the methods used to dispose of the encumbered assets so as to achieve an economically efficient enforcement process, while at the same time protecting the grantor and other

interested parties against actions taken by the secured creditor that, in the commercial context, are not reasonable. This Guide recommends that, in order to maximize flexibility in enforcement and thereby to obtain the highest possible price upon disposition, creditors should have the option of proceeding either judicially or extrajudicially when enforcing their security rights (see recommendation 139). In any event, in States that permit extrajudicial enforcement, the courts are always available to ensure that legitimate claims and defences of the grantor and other parties with rights in the encumbered assets are recognized and protected (see recommendation 134).

32. Even in States where a secured creditor is permitted to act without official intervention, it is normally also entitled to enforce its security right through the courts. Moreover, because a security right is granted in order to enhance the likelihood of a creditor receiving payment of the secured obligation, post-default enforcement of the security right should not preclude a secured creditor from attempting to enforce the secured obligation by ordinary judicial process (see recommendation 141). There are a number of reasons why a secured creditor might choose either of these options over extrajudicial enforcement. The secured creditor may wish to avoid the risk of having its actions challenged after the fact, or it may conclude that it will have to apply for a judicial proceeding anyway in order to recover an anticipated deficiency, or it may fear a breach of the public order at the time of enforcement. Many States actually encourage secured creditors to use the courts by providing for less costly and more expeditious enforcement proceedings. They may, for example, permit enforcement through a process involving only affidavit evidence. They may also provide for rules ensuring that the hearing must be held, challenges disposed of within a very short time period (e.g. 72 hours) and a decision rendered as expeditiously as possible. Some States even permit a secured creditor that has obtained judgement in the ordinary way to seize and dispose of the encumbered assets without having to use the official seizure and sale process. Finally, most States provide that these recourses are cumulative. A secured creditor that elects to pursue a particular extrajudicial remedy may change its mind and later pursue another extrajudicial remedy to enforce its security rights to the extent that the exercise of a right does not make the exercise of another right impossible (see recommendation 140 and paragraphs 33 and 34 below).

(i) Post-default rights cumulative

33. It will sometimes happen that, in order to dispose completely of all the encumbered assets, a creditor will be obliged to exercise more than one remedy. As noted, this typically occurs when a secured creditor liquidates a business. However, it may occur because, for example, security in inventory may be most effectively enforced through a sale, or security in equipment may be most efficiently enforced through the acquisition of the assets by the secured creditor in satisfaction of the secured obligation. In addition, there will occasionally be situations where a secured creditor believes that one remedy will be optimal, only to discover that another will generate a higher value upon disposition. This is why most States provide that a secured creditor's remedies are cumulative. This means that the enforcing creditor may not only have the option of selecting which remedy to pursue, it may exercise different remedies either at the same time or one after the other. It may even concurrently pursue both judicial and extrajudicial remedies. Only where the exercise of one remedy (e.g. repossession and disposition of an encumbered asset) makes it impossible to exercise another remedy (e.g. acquisition of an encumbered asset in satisfaction of the secured obligation) will the creditor not be able to

cumulate remedies. Here also, the Guide adopts the policy that maximizing flexibility in enforcement is likely to ensure that the highest value is received for the encumbered assets and recommends that secured creditors be permitted to cumulate their judicial and extrajudicial remedies (see recommendation 140).

34. A security right is granted in order to enhance the likelihood of a creditor receiving payment of the secured obligation. The various post-default enforcement remedies, and especially extrajudicial remedies of the secured creditor, are meant to achieve this objective. Some States do not permit secured creditors to cumulate both their (judicial or extrajudicial) remedies with respect to the encumbered assets and their remedies with respect to the secured obligations. The assumption is that the extrajudicial remedies are a favour given to the secured creditor and that the creditor ought, therefore, to be required to opt either to enforce the security right extrajudicially or bring a judicial action to enforce the secured obligation. Other States permit the secured creditor to cumulate both its extrajudicial remedies and its right to enforce the obligation as a matter of contract law. Moreover, they permit the two proceedings to be brought concurrently or serially in either order. To require a secured creditor to opt, at the outset of enforcement, for one or the other mode of proceeding will complicate and increase the cost of enforcement because it will require a creditor to determine if a deficiency is likely to result. If the secured creditor comes to that conclusion, it will be obliged to bring an action to enforce the obligation and assert its priority only at the moment of a judicial sale in enforcement. This process is less expeditious, more costly and will normally produce less value at the time of sale. To maximize enforcement value, the Guide recommends that secured creditors be permitted to cumulate proceedings to enforce the security extrajudicially and to enforce the secured obligation through a judicial process, subject always to the limitation that the secured creditor cannot claim more than it is owed (see recommendation 141).

(j) Right of the secured creditor with priority to take over enforcement

35. The secured creditor that has a higher priority will often wish to take over an enforcement process commenced by another creditor (whether this is under judgement enforcement proceedings or enforcement being pursued by another creditor exercising a security right). States usually provide for a takeover right from secured creditors enforcing under secured transactions law, but some do not permit secured creditors to pursue extrajudicial enforcement once a judgement creditor (whether an unsecured judgement creditor, or a secured creditor that may have also taken judicial enforcement proceedings) has seized the encumbered assets. Where a takeover right is given to a secured creditor against enforcement by a judgement creditor, States often require the secured creditor to exercise the right in a timely manner (i.e. before the auction begins) and to reimburse the judgement creditor for enforcement expenses incurred up to that moment. In order to maximize the efficiency of the enforcement of security rights, the Guide recommends that a secured creditor with a priority ranking higher than that of the enforcing secured creditor is entitled to take control of enforcement both against other secured creditors pursuing extrajudicial enforcement and as against judgement creditors (see recommendation 142).

3. Procedural steps preceding enforcement and the rights of the grantor

(a) General

36. States have developed procedural mechanisms to facilitate effective and efficient enforcement by the secured creditor and protection of the rights of the grantor and third parties with a right in the encumbered assets. Generally, a secured creditor may: (a) obtain a judgement in the regular way, have a public official seize the encumbered assets and sell them at a public auction; (b) exercise an expedited judicial remedy to have the debtor's default acknowledged and proceed immediately to have a public official seize and sell the encumbered assets; or (c) enforce its rights without judicial process. These procedural mechanisms are meant to ensure a balance between competing rights after default but prior to the effective exercise of the secured creditor's remedies. For this reason, States usually provide that these procedural mechanisms apply regardless of the particular remedy selected by the secured creditor. This means that they would apply whether the secured creditor: (a) seizes and sells the encumbered assets privately, appropriating the proceeds of sale to the repayment of the outstanding obligation; (b) acquires the encumbered asset in payment of the secured obligation; or (c) takes over the debtor's business and operates it to pay the secured obligation.

(b) Notice of intended extrajudicial enforcement

37. Where a secured creditor elects to enforce the security agreement by bringing before the courts an ordinary action against the grantor with respect to the secured obligation, the normal rules of civil procedure (including those relating to notice of default and the opportunity for a hearing on the merits) will apply to both the judicial action itself and the post-judgement enforcement process. Usually, however, these rules only apply directly to the formal processes of courts. This is why States that permit extrajudicial enforcement typically enact separate rules governing extrajudicial enforcement. These rules are designed to ensure that the rights of affected parties are adequately protected while at the same time providing for a maximum of flexibility in the enforcement process.

38. The acknowledged need for a notice of extrajudicial enforcement confronts States with a fundamental policy choice. In some States, a secured creditor must give an advance notice of its intention to pursue extrajudicial enforcement even before seeking to obtain possession of the encumbered assets. This means that the creditor must provide the grantor (and usually also third parties with a right in the encumbered assets) a written notice specifying the default, the encumbered assets, the creditor's intention to demand possession of the assets, the time period within which the grantor must either remedy the default or surrender the assets (typically 15-20 days) and, frequently, also the particular remedy that the creditor intends to follow in disposing of them. In other States, the timing of the notice is deferred and its substantive content is often less detailed. For example, in these States the secured creditor is not required to give prior notice of its intention to take possession, but is entitled to immediate possession of the encumbered assets at the same time that it gives formal notice of default to the grantor. Once in possession, however, the secured creditor usually may not dispose of the assets without giving the grantor and interested third parties an advance notice (typically 15-20 days) of the mode and manner of disposition that it proposes to follow if the grantor fails to remedy the default in the interim.

39. There are advantages and disadvantages to both of these approaches. The principal advantage of a regime that requires a prior notice of the secured creditor's intention to enforce and take possession of the encumbered assets is that it alerts the grantor and debtor to the need to protect their rights in the encumbered assets (invariably the debtor will be aware of its default but the third-party grantor may not be). This might involve, for example, challenging the enforcement, curing the debtor's default or seeking potential buyers for the encumbered assets. Notice to other interested parties allows them to monitor subsequent enforcement by the secured creditor, to contest the enforcement, or, if it is in their interest, to cure the default and, if they are secured creditors whose rights have priority (and the grantor is in default towards them as well), to participate in or take control of the enforcement process. The disadvantages of this type of notice include its cost, the fact that the secured creditor may have to elect a remedy before close inspection of the encumbered assets, the opportunity it provides an uncooperative grantor to remove the encumbered assets from the creditor's reach, and the possibility that other creditors will race to assert claims against the grantor's business and interfere with the disposition process. Moreover, unless formal and substantive requirements with respect to notices are clear and simple, there is a risk of "technical" non-compliance that will then generate litigation and its attendant cost and delay.

40. The advantage of a regime that requires only notice of extrajudicial disposition of the encumbered assets is that it secures the right of the secured creditor to take possession of the encumbered assets without undue delay, while protecting the interests of the grantor and third parties with rights in the encumbered assets at the time prior to disposition. The disadvantage is that the grantor is given notice of extrajudicial enforcement after the secured creditor takes possession of the encumbered assets (this approach creates the problems mentioned in the preceding paragraph).

41. Regardless of which approach is taken, States must also decide what other notices may be required when a secured creditor seeks to enforce its security right extrajudicially. Many States that require a prior notice of intended disposition of the encumbered assets do not also require a separate notice of default or a subsequent notice of extrajudicial enforcement. The assumption is that a single notice will be sufficient for all purposes. Other States that permit the notice of the specific extrajudicial enforcement method being pursued to be given after the creditor obtains possession of the encumbered assets, nonetheless require a pre-possession formal notice of default. Because the objective and contents of the pre-possession notice of intention to enforce and the post-possession notice of extrajudicial enforcement largely overlap, no States that opt for the former also require the latter. To balance the interests of all parties, the Guide recommends that the secured creditor may take possession of the encumbered assets without applying to a court, provided that the grantor has consented to extrajudicial enforcement in the security agreement, does not object when the secured creditor seeks to obtain possession, and the secured creditor has given the grantor notice of default and of its intention to seek to obtain possession out of court (see recommendation 144).

(c) Form and content of the notice

42. As with other situations where notice may be required, States usually specify with considerable care the manner in which the notice is to be given, the persons to whom it must be given, the timing of the notice and its minimum contents. Many States distinguish between notice to the debtor, notice to the grantor when the

grantor is not the debtor, notice to other creditors and notice to public authorities or the public in general. It is a matter of a cost-benefit analysis whether the secured creditor should be required to give prior written notice to others beyond the debtor and grantor and other secured creditors known to exist (i.e. other secured creditors that have registered a notice of their rights or that have otherwise notified the secured creditor that proposes to dispose of the encumbered assets). Some States provide that the notice need be given only to the grantor and other secured creditors that have registered their rights, but that it then be registered and that thereafter the registrar be required to forward the notice to all third parties other than secured creditors that have registered rights against the encumbered assets. Other States only require the secured creditor to give notice to the grantor and to register the notice. These States impose on the registrar the duty to send the notice to other parties.

43. States also take different approaches to the minimum content of the notice. As with the decision about the timing of the notice and its recipients, decisions about the information to be included require States to undertake a cost-benefit analysis. For example, they usually require the inclusion of the secured creditor's calculation of the amount owed as a consequence of default. They might further require advice to the debtor or grantor regarding what steps to take to pay the secured obligation in full or, if such a right exists, to cure the default. Moreover, some States provide that the notice to other interested parties need not be as extensive or specific as notice to the debtor and grantor. Again, where the notice is to be given prior to taking possession, States sometimes place a higher information burden on secured creditors. Where the notice is given after possession, by contrast, the secured creditor is often obliged simply to provide basic information about the date, time, location and type of disposition being proposed and the time period within which the grantor or other interested party may contest the proposal or remedy the default.

44. There are different approaches to achieving the right balance between the need to ensure that the notice conveys to interested parties sufficient information to enable them to make an informed judgement about how best to protect their rights, and the need to achieve expeditious and low-cost enforcement. Some States place a heavy burden on secured creditors, both as to the timing and the content of the notice. Others impose only minimal requirements. The Guide recommends that this notice must be given prior to obtaining possession (see recommendation 144). If the secured creditor is already in possession, this notice need not be given. Nonetheless, in either case the creditor must inform the grantor of the intended manner of realizing upon the encumbered assets. If the proposed remedy is extrajudicial sale, the notice will be given, except in cases of urgency prior to disposition of the encumbered assets (see recommendation 146). While the secured transactions law should provide for the notice to be given in a timely, efficient and reliable way (see recommendation 147), the Guide recommends that States have the flexibility to determine the specific manner for giving the notice and its specific contents (see recommendation 147). In a like manner, the Guide recommends that, if the secured creditor exercises the remedy to acquire the encumbered asset in full or partial satisfaction of the debt (see recommendation 153), the notice must permit the grantor sufficient time to object to the proposal (see recommendation 154).

(d) Authorized disposition by the grantor

45. Following default, the secured creditor will be interested in obtaining the highest price possible for the encumbered assets. Frequently, the grantor will be more knowledgeable about the market for the assets than the secured creditor.

For this reason, secured creditors will often permit the grantor to dispose of the encumbered assets even after enforcement has commenced. In most such cases, the parties agree that any amount received from the disposition will be paid to the secured creditor in the same manner as if payment resulted from enforcement proceedings. These arrangements have consequences for third parties that may also have rights in the encumbered assets, or a right to proceeds of their disposition. For this reason, some States explicitly provide that when a secured creditor that has commenced enforcement gives the grantor a limited time following default to dispose of the encumbered assets, the proceeds of the sale will, for all purposes, be treated as if they had arisen as a consequence of an enforcement disposition. Some States go further, and even prohibit the secured creditor from attempting to arrange for the disposition of the encumbered assets during a short period of time following default. Other States seek to achieve the objective of maximizing the amount received upon disposition by providing incentives for the grantor to bring potential buyers to the attention of the secured creditor. In any event, the point is: (a) to structure the enforcement regime so as to give the grantor the incentive to cooperate with the secured creditor in disposing of encumbered assets for the highest possible price; and (b) to give the secured creditor the incentive to seek the highest possible price even when this exceeds the amount still owing on the obligation secured by the encumbered asset.

4. Extrajudicial enforcement of the rights of the secured creditor

(a) General

46. In cases where a secured creditor elects to enforce the security agreement judicially, after judgement has been obtained, it will be necessary for the secured creditor to seize and sell the encumbered assets. In some States, the normal rules of civil procedure relating to the post-judgement enforcement process will apply. Typically, this means that public officials or authorities (e.g. bailiffs, sheriffs, notaries or the police) will take possession of the encumbered assets and sell them in a public auction. In other States, even after a secured creditor has obtained judgement, it may exercise its extrajudicial right to take possession of the encumbered assets and proceed to dispose of these assets extrajudicially. In still other States, once judgement has been obtained, the secured creditor must follow a judicial process, but a streamlined procedure for enforcing the judgement is provided.

47. Slightly different processes are required where a secured creditor has taken the steps that are necessary to commence enforcement proceedings and elects to proceed with extrajudicial enforcement. As no public official is involved, the secured creditor will normally wish to, and typically will have to, obtain possession or control of the encumbered asset itself in order to proceed with enforcement. States have taken different policy approaches both to the right of the secured creditor to obtain possession and control of assets (as opposed to consigning encumbered assets to a bailiff) and, if direct creditor possession is permitted, to the procedural mechanisms that must be followed for doing so.

(b) Removing the encumbered assets from the grantor's possession

48. Prior to default, the grantor will usually be in possession of the encumbered assets. Sometimes, however, the grantor will have already placed the secured creditor in possession, either at the time of making the security right effective

between them (see recommendation 15) or thereafter either as a means of achieving third-party effectiveness (see recommendation 37) or in response to a later pre-default creditor request to take possession of the assets. On other occasions, the encumbered assets may be in the possession of a third party that is acting for, or under the direction of, the secured creditor. In both these situations, many States do not require the secured creditor to take any further steps in order to commence enforcement. That is, the creditor need not formally give the grantor notice of default, but need only send a notice of intended disposition once it has determined the recourse it intends to pursue. By contrast, some States require the creditor in possession to inform the grantor of the default and of the fact that it is now holding the encumbered assets in preparation for enforcement. These States usually also consider that, upon default, any agreement under which the creditor in possession may use the encumbered assets comes to an end.

49. Where the creditor is not in possession, it must take active steps to recover the encumbered assets from the grantor or to inform a third party holding on behalf of the grantor that the security right has become enforceable. States that provide for extrajudicial enforcement generally provide that, once a grantor is in default, the secured creditor has an automatic right to possession of the encumbered asset. This means that they do not require that, pending extrajudicial enforcement, the assets be placed under the control of a public official. The assumption is that flexibility in enforcement and preservation of the assets at a lower cost pending disposition will result if the secured creditor can make decisions about where post-default possession should lie. This rationale also underlies the recommendation in the Guide that the secured creditor has upon default an automatic right to possession (see recommendation 143).

50. A concomitant of the secured creditor's right to possession is its right to decide exactly how the rights flowing from that possession should be exercised. In some cases, secured creditors will themselves take physical possession of the encumbered assets against which they are proceeding. However, in many cases, they will not take possession of the assets. Secured creditors may, for example, have the assets placed in the hands of a court, or a State- or court-appointed official. More commonly, they will have the assets entrusted to a third-party depositary that they appoint, or (particularly in the case where a manufacturing operation is involved) will appoint a manager to enter into the premises of the grantor in order to take possession of the encumbered assets. Where assets are already in the hands of a third party that is not acting for them, but that has previously been made aware of the security agreement, secured creditors may simply give notice that the agreement has become enforceable and that the grantor no longer has rights to retain possession, to control or to dispose of the encumbered assets.

51. States usually consider the taking of possession of encumbered assets by secured creditors to be a significant step in the enforcement process and impose specific procedural requirements on creditors claiming possession. This means that, even though the secured creditor may have an automatic right to possession, the manner for doing so is regulated. In general, States take one of three approaches in developing the procedural mechanisms by which secured creditors not in possession may take possession of encumbered assets. In some States, the secured creditor may only obtain possession by a court order, whether following an *ex parte* procedure, or more frequently, after a hearing. In other States, no judicial order is required, but the grantor must have authorized the creditor to obtain possession extrajudicially in the security agreement and the creditor must give the grantor a prior notice

(typically 10 or 20 days) of its intention to claim possession and to enforce. Finally, in some States, the creditor is entitled to demand and to take possession without any recourse to a court and without the need to give the grantor a prior notice of its intention to do so, provided that the grantor authorized it to do so in the security agreement (see para. 38 above). Even in these States however, the creditor does not have an absolute right to obtain possession extrajudicially. There is always potential for the creditor abusing its rights by threatening the grantor, intimidation, breaching the peace or claiming the encumbered assets under false pretences. Most of these States, therefore, condition any acts of the creditor to obtain possession on the creditor avoiding a disturbance of the public order. Should the grantor resist, a judicial order for possession would be required. States that permit extrajudicial creditor possession upon the giving of a 10- or 20-day prior notice typically also adopt this approach to possession and require a judicial order if a breach of the peace is threatened when the creditor seeks possession after the delay has expired.

52. As mentioned above (see paras. 39-41), in States that impose a notice requirement on secured creditors as a precondition to obtaining possession, there is always a risk that a grantor in default may then seek to hide or transfer the encumbered asset before the secured creditor can take control of it. It may also be that the assets may be misused, may dissipate if not looked after or, depending on market conditions, may rapidly decline in value. To forestall these possibilities, most States provide that secured creditors may obtain expedited relief from a court or other relevant authority. Furthermore, in the special case where the encumbered assets threaten to decline rapidly in value, and whether or not secured creditors are required to give a prior notice of their intention to enforce, many States permit the court to order the immediate sale of these perishable assets.

53. The decision as to the formalities required in order for a secured creditor to obtain possession depends on the balance States strike between the protection of the rights of grantors and efficient enforcement to reduce costs. It also depends on a judgement as to the likelihood in practice of abuse by secured creditors or improper behaviour by grantors in possession. In order to reduce the cost of enforcement and minimize the chances that assets will be misused or dissipate in value, the Guide recommends that the secured creditor be authorized to obtain possession extrajudicially, but only if the grantor has so consented in the security agreement, a notice of intention to take possession has been given to the grantor, and the grantor does not object at the time possession is being sought (see recommendation 144). In addition, the Guide recommends that notice of the creditor's intention to take possession and to dispose of the assets need not be given where assets are perishable or are likely to decline rapidly in value during the period between the giving of notice and the time when the creditor may actually obtain possession of the assets (see recommendation 146). However, for the secured creditor to have this remedy, the grantor must have authorized extrajudicial possession in the security agreement and have no objection when possession is actually being sought (see recommendation 144).

(c) Sale or other disposition of the encumbered assets

54. As a security right entitles the secured creditor to obtain the value from the sale of the encumbered assets and to apply it to the secured obligation, States usually regulate in some detail the procedures by which the secured creditor may seize and dispose of these assets. Requirements range from the less to the more formal. For example, even when extrajudicial enforcement is permitted, some States

require disposition to be subject to the same public procedures used to enforce court judgements. Other States require secured creditors to obtain judicial approval of the proposed mode of disposition before proceeding. Still other States permit the secured creditor to control the disposition but prescribe uniform procedures for doing so (e.g. rules relating to public auctions or a call for tenders). On occasion, States actually oblige the secured creditor to obtain the consent of the grantor as to the mode of disposition. Finally, some States give the secured creditor a wide, unilateral discretion as to the mode of disposition, but subject this conduct to general standards of conduct (e.g. good faith and commercial reasonableness), the breach of which leads to the creditor's liability in compensatory damages.

55. Most commonly, the procedural safeguards by which States control the actions of secured creditors relate to the details of the notice that must be given to the grantor and third parties with a right in the encumbered assets. In principle, the types of detail required should be identical whether States opt for a pre-possession notice approach or a post-possession notice approach. So, for example, States often require creditors to indicate the method of advertising a proposed disposition, the date, time and location of the sale, whether the sale will be by public auction or by tender, whether the assets will be sold individually, by lot or as a whole, and whether the disposition includes leases, licences or associated permits where required. The objective should be to maximize the amount realized for the encumbered assets, while not jeopardizing the legitimate claims and defences of the grantor and other persons. This explains why even States that generally require detailed notices do not do so when the encumbered assets are to be sold on a recognized public market. In such cases, the market sets the value of the assets and there is no higher price to be obtained by adopting and giving notice of some other mode of sale (see recommendation 146).

56. As an extrajudicial disposition of encumbered assets has the same finality as a court-supervised sale, most States not only impose relatively detailed rules as to the contents of the notice and the time that must elapse before the sale can take place, but also permit interested parties to object to the timing and manner of the proposed disposition. Typically, special expedited procedures are available so that objections may be quickly heard and dealt with (see recommendations 134 and 135). As a general rule, where the enforcing creditor has the greatest flexibility as to timing and method of disposition, the cost of enforcement is lowest, the enforcement is most expeditious and the proceeds received are highest. For these reasons, the Guide recommends flexibility for secured creditors and only the basic minimum of detail in the notice necessary to alert interested parties to the enforcement and the need to protect their interests should they wish (see recommendations 147 and 148).

(d) Allocation of proceeds of disposition

57. One of the important features of secured transactions law is that it disrupts the normal rules for distributing the proceeds of disposition that apply as between unsecured judgement creditors. After all, the object of the security is to obtain a priority in the distribution of these proceeds. Should the enforcement of the security right have taken place judicially or should the secured creditor not have taken over an enforcement process brought by a judgement creditor, the proceeds will be held by a public authority pending their distribution to parties entitled to them. When the regime provides for a purge of rights, the most common allocation is to pay reasonable enforcement costs first and then the secured obligations in the order of their priority. Many States also provide for the payment of certain statutory claims,

after costs of enforcement but in priority to secured creditors. If the ordinary enforcement process does not provide for a purge of rights, secured creditors will not receive payment, but will be able to assert their security rights against the purchaser.

58. Where a secured creditor enforces through an extrajudicial sale, States typically provide in their secured transactions law a series of rules relating to the proceeds of the sale. Often there are special rules dealing with the manner by which proceeds are to be held by the secured creditor pending distribution. These rules usually also prescribe if and when a secured creditor is responsible for distributing proceeds to some or all other creditors (such as secured creditors with security rights in the encumbered assets with a lower priority ranking than that of the enforcing secured creditor or, if the enforcement regime provides for a purge of rights, to secured creditors with a higher priority ranking and statutory priority claimants). Often, the secured creditor need only take account of these other rights if they are registered or have otherwise been made effective against third parties, or if it has been expressly notified of them (e.g. the case of statutory priority claims that need not be registered). Invariably States also provide that any surplus proceeds after all creditors entitled to payment have been satisfied are to be remitted to the grantor (see recommendation 149).

59. The secured obligation is discharged only to the extent of the proceeds received from the sale of the encumbered assets. Normally, the secured creditor is then entitled to recover the amount of the deficiency from the grantor. Unless the grantor has created a security right in other assets for the benefit of the creditor, the creditor's claim for the deficiency is an unsecured claim. Regardless of whether there is a deficiency or a surplus, some States provide that, when a secured creditor purchases the encumbered assets at an enforcement sale and later sells them at a profit, the amount received for the sale that exceeds the amount paid by the creditor and the costs of the further sale, is deemed to be received in satisfaction of the secured obligation. Generally, however, unless the initial sale can be shown to have been commercially unreasonable, States consider the amount generated to be the final value received upon disposition of the encumbered assets.

(e) Acquisition of the encumbered assets in satisfaction of the secured obligation

60. The underlying rationale for creating a security right is to enable the secured creditor to realize the value of the encumbered asset and to apply the money received to payment of the grantor's obligation. For this reason, in many States, a creditor's only recourse upon default is to seize the encumbered assets and sell them. In most States that so limit the secured creditor's extrajudicial remedies, the limitation applies even when the creditor is already in possession of the encumbered assets under a security agreement. That is, in these States it is not possible for the parties to agree in advance that, should the grantor default, the secured creditor may keep the encumbered assets in satisfaction of the secured obligation. Similarly, in many of these States, the secured creditor may not take the encumbered assets as a remedy after default has occurred. Moreover, even if, after default, the grantor and the secured creditor agree that the secured creditor may keep the encumbered assets, in these same States such arrangements are considered as a contractual payment and have no effect on the rights of any other party with a right in the encumbered assets.

61. By contrast, in many States, the secured creditor is entitled to propose to the grantor that it acquire the encumbered assets in full or partial satisfaction of the secured obligation. Where such an enforcement remedy is made available to secured

creditors, States usually provide that any agreement that automatically vests ownership of the encumbered assets in the secured creditor upon default is unenforceable if entered into prior to default. However, the agreement is enforceable if made after default and according to the specific enforcement procedures meant to prevent creditor abuse. These States usually also provide that any informal private agreements entered into by grantors and secured creditors after default are enforceable, but only as contractual payment remedies that have no effect on third parties with rights in the encumbered assets.

62. Where States expressly permit the creditor to take the encumbered assets in satisfaction of the secured obligation after default, provided that it has followed the required procedural steps, this does not mean that the grantor must accept the secured creditor's offer. The grantor may refuse to do so, with the consequence that the secured creditor will have to pursue one of its other remedies. The advantage of permitting these types of post-default agreement is that they can often lead to less expensive and more expeditious enforcement. The disadvantage is that there may be a risk of abuse by the secured creditor in cases where: (a) the encumbered assets are more valuable than the secured obligation; (b) the secured creditor has, even in the post-default situation, unusual power over the grantor; or (c) the secured creditor and the grantor come to an arrangement that unreasonably prejudices the rights of third persons with a right in the encumbered assets.

63. To guard against the potential for abusive or collusive behaviour by the secured creditor and the grantor, some States require not only the consent of the grantor to the acquisition by the secured creditor, but also that notice be given to third parties with rights in the encumbered assets. These third parties then have a right to object to the proposed agreement and may require the secured creditor to enforce the security by means of a sale. In addition, some States require the consent of a court under certain circumstances, such as where the grantor has paid a substantial portion of the secured obligation and the value of the encumbered assets greatly exceeds the outstanding obligation. Finally, some States require that a secured creditor that proposes to acquire encumbered assets in satisfaction of the secured obligation be required to provide an official and independent appraisal of the value of the encumbered assets before proceeding.

64. Whether States should impose any or all of these requirements, and especially the requirement of prior judicial involvement, will depend on their assessment of the costs and benefits of each requirement. In line with the general objective of maximizing flexibility so as to obtain the highest possible value for encumbered assets at the point of enforcement, the Guide recommends that either the secured creditor or the grantor may propose to the other that the assets be taken in satisfaction of the secured obligation (see recommendations 153 and 156). Likewise, to ensure that all parties understand the full implications of the proposal, the Guide recommends that adequate notice of the secured creditor's intention to acquire the assets in payment is given to the grantor and third parties, and that the notice indicates not only the assets to be taken in satisfaction, but also the amount owed at the time the notice is sent, the amount of that obligation that is proposed to be satisfied by the acquisition, and a relatively short period of time at the expiration of which the proposal will be deemed to be accepted by the grantor and third parties (see recommendation 154). The assumption is that requiring the secured creditor to indicate its own valuation of the encumbered assets is a more efficient and less costly mechanism for providing relevant information to interested parties than providing for an independent appraisal. It is also assumed that, once informed of the

secured creditor's proposal, the grantor or third parties will be in a position to assess its reasonableness. This is the reason why the Guide further recommends that the grantor or third parties be given a right to object to the secured creditor's acquisition of the encumbered assets. The consequence of a timely objection is that the secured creditor must abandon this remedy and exercise another of its remedies, i.e. typically an extrajudicial sale or other disposition (see recommendation 155).

(f) Management and sale of a business

65. In many circumstances, a secured creditor has security not just on specific assets of a grantor, but on most or all of the assets of a business. In these situations, the highest enforcement value can often be obtained if the business is sold as a going concern. In order to be able to do so efficiently, secured creditors must usually be able to dispose of all these assets, including immovable property. Moreover, in such cases, States often prescribe special notice procedures for the sale and more strictly regulate the conditions under which the sale of a business as a going concern may take place.

66. Alternatively, in many cases where enforcement becomes necessary, it is not in the interest of the grantor or the secured creditor to immediately dispose of all the assets of a business, whether these are sold by category (e.g. inventory, equipment and licences) or whether the business is sold as a whole. For this reason, many States permit secured creditors to take possession of business operations and manage the business for a certain period of time after default. Frequently, these States require that the notice of enforcement specifically indicate that when the creditor takes possession of the encumbered assets it intends to gradually wind down the business. This is especially important for other creditors that otherwise may not know that liquidation is taking place. Some States also prescribe special procedures for naming a manager, for operating the business, for alerting suppliers of the secured creditor's rights and for informing customers that what looks like an ordinary-course-of-business sale is in fact part of an enforcement process.

67. When inventory has been effectively liquidated, the secured creditor will typically proceed to exercise another of its remedies. In such cases, most States require the secured creditor to give a further notice to the grantor and other parties with a right in the remaining assets (most often equipment, leases, licences and a remnant of inventory) that it proposes to exercise another of its remedies (e.g. acquiring the assets in satisfaction, or more commonly, selling them). Once such a notice is given, then the regular enforcement procedures applicable to that recourse will apply. Although many States now permit creditors to take over the management of a business for the purposes of gradually liquidating its inventory and equipment, the Guide does not make a formal recommendation on this point. States interested in this remedy may have to weigh the benefits against the responsibilities associated with management of a business by a secured creditor, as well as the impact of such a remedy on the rights of other creditors, secured or unsecured.

5. Effects of enforcement

(a) The grantor, the secured creditor and third parties

68. In order to make the enforcement regime as expeditious as possible, States typically enact detailed rules that determine the effect of enforcement on the relationship between the grantor and the secured creditor, the rights of parties that

may purchase the encumbered assets at an enforcement sale, and the rights of other secured creditors to receive the proceeds generated by the sale of the encumbered assets. The primary object of an enforcement procedure is to generate value for the secured creditor that can be deployed to satisfy the unpaid secured obligation. In the most common situation, the secured creditor will acquire this value by selling the encumbered assets and appropriating the proceeds. Should there be a surplus, the secured creditor must return it to the grantor or to any other person entitled to it. Moreover, as just noted, should there be a deficiency, most States provide that the secured creditor retains an ordinary contractual right to sue the grantor for the deficiency as an unsecured creditor. The details of how proceeds of disposition are normally allocated in these cases have already been discussed (see paras. 57-59 above).

69. As noted, however, sometimes the secured creditor will acquire the encumbered asset in satisfaction of the secured obligation. Not all States adopt identical rules to govern the effects of this particular remedy. Usually, States provide that the creditor that acquires the asset in satisfaction may keep it, even where the value of the asset exceeds the amount of the secured obligation still owed. This means that, unlike the case of a sale, the secured creditor may keep a surplus. Concomitantly, many of these States provide that the secured creditor that acquires the asset in satisfaction of the obligation has no recourse for a deficiency against the grantor. The acquisition is deemed to be complete payment and therefore extinguishes the secured obligation. By contrast, however, other States permit creditors that have taken encumbered assets in satisfaction of the secured obligation to pursue their grantor for a deficiency. In these cases, it becomes necessary to establish the value of the assets being taken in satisfaction so that the amount of the deficiency may be calculated. Some States require the secured creditor to provide an independent accounting of the value of these assets taken, while other States merely require the secured creditor to indicate the value that it ascribes to these assets. In either case, as noted, the grantor or other creditor may require the secured creditor to sell the asset instead. For reasons already given (see para. 64 above), the Guide recommends that secured creditors may take the asset in total or partial satisfaction of the secured obligation, provided that they indicate the value they ascribe to it in the notice sent to the grantor and third parties (see recommendation 154).

(b) Other parties

70. When a secured creditor enforces its security right by means of a sale of the encumbered assets, there are different approaches to determining the effects of the sale on other parties. In some States, the sale (even when it is an extrajudicial sale) will extinguish all security rights in the encumbered assets. In such cases, even secured creditors with a priority ranking higher than that of the enforcing secured creditor will lose their security rights and will only have a claim in the proceeds with an equivalent priority ranking. Parties that purchase the assets will obtain a clear title and, it is presumed, will be willing to pay a premium to do so. In other States, the sale by a creditor (whether it is managed by a judicial officer or it is a private sale by the creditor) will only extinguish rights with a lower priority ranking than that of the enforcing secured creditor and the secured creditor with a higher priority ranking will retain its security right in the encumbered assets. Purchasers at the sale will not obtain a clear title and will, consequently, discount the amount they offer for the assets being sold. The assumption is that the highest ranking secured creditor normally will either take over the enforcement (so that all security rights will be extinguished) or that a lower ranking secured creditor will arrange to pay off

the higher ranking creditor so as to produce a clear title. While either approach usually will produce a clear title, the second approach maximizes the flexibility of the enforcing creditor and the purchaser to reach an alternative arrangement in the event that the purchaser cannot finance the entire cost of the secured asset and is willing to purchase it for a discounted price because it is subject to a higher ranking security right. To maximize flexibility and efficiency in enforcement, the Guide recommends adoption of the second approach with respect to extrajudicial dispositions (see recommendations 158-160). As to judicial dispositions, to avoid interference with general rules of civil procedure governing execution proceedings, the Guide leaves the matters to other law (see recommendation 157).

71. When a secured creditor acquires the encumbered assets in satisfaction of the secured obligation, States usually provide that the secured creditor acquires the assets as if they were transferred through an enforcement sale. While it is possible that States could provide that an acquisition in satisfaction of the secured obligation operates a purge of all rights, this would invariably lead secured creditors with a higher priority ranking than that of the enforcing secured creditor to take over the enforcement process. Therefore, most States provide that the rights of other secured creditors are determined by their priority relative to the enforcing creditor. So, for example, where a State permits a secured creditor to take an encumbered asset in satisfaction of the secured obligation, that creditor will acquire the asset subject to the rights of secured creditors with a higher priority ranking. Conversely, if there are secured creditors with even lower priority, their rights will normally be extinguished upon acquisition of the encumbered assets by a secured creditor with higher priority. For the same reasons that apply to the remedy of extrajudicial sale, the Guide recommends that the secured creditor that acquires the asset in satisfaction takes it free of lower priority security rights, but subject to the rights of secured creditors with a higher priority (see recommendation 158).

(c) Finality

72. Secured transactions laws normally provide finality following enforcement. This means that, once the sale or acceptance in satisfaction has taken place according to the required enforcement procedures, it normally cannot be reopened. Unless fraud, bad faith or collusion between seller and buyer can be proved, the sale is final. Whether the secured creditor accepts the encumbered asset in satisfaction of the secured obligation or whether the assets are sold to a third party that acquires them at an enforcement sale, the effects of the enforcement on other parties are usually the same. The security right of the enforcing secured creditor terminates, as do the grantor's rights and the rights of any secured creditor or other person with a lower priority ranking in the assets. In States where the sale produces a total purge of rights in the encumbered assets, the purchaser or the creditor that takes the encumbered assets in satisfaction of the secured obligation obtains a clear title. Most often, however, the law provides that the rights of certain other persons in the encumbered assets (most notably secured creditors with a higher priority ranking than that of the enforcing secured creditor) continue notwithstanding disposition of the assets in the enforcement procedure.

6. Enforcement of a security right in proceeds

73. If the grantor sells the encumbered assets (in particular with the authorization of the secured creditor, in which case the security right does not continue in the encumbered assets; see recommendation 77, subparagraph (a)), the proceeds of the

sale take the place of the encumbered assets (for the definition of “proceeds”, see Introduction, section B. Terminology). Hence, many States provide that a security right in tangible assets will automatically pass into the proceeds of its disposition. Other States either do not so provide, or require that the security agreement expressly indicate which proceeds will be covered by the security. The Guide recommends that secured creditors have a right to claim their security in proceeds of encumbered assets and proceeds of proceeds (see recommendations 39 and 40). Moreover, unlike many States that limit the concept of proceeds to replacement assets, the Guide considers proceeds to include anything that is received on account of the encumbered asset, any fruits and revenues it generates and the natural increase of animals or plants.

74. Generally, States do not enact separate rules governing the enforcement of security rights in proceeds. This means that enforcement against proceeds will follow whatever type of process is required in order to enforce security against that type of asset (e.g. a tangible asset, a receivable, a negotiable instrument, rights to payment of funds credited to a bank account, and so on). It would create considerable confusion if secured creditors were able to enforce security rights in proceeds according to the rules governing enforcement against the initially encumbered assets when other creditors seeking to enforce security rights against those proceeds as initially encumbered assets would have to follow rules specifically applicable to that type of asset. By not recommending special enforcement rules applicable to proceeds, the Guide implicitly recommends that the general enforcement rules apply also to the enforcement of security rights in proceeds, except if the proceeds are receivables or other specific assets like those mentioned in section B of this chapter. In such cases, the asset-specific enforcement recommendations described therein would apply.

7. Intersection of movable and immovable property enforcement regimes

75. Frequently, the characterization of tangible assets as movable or immovable will change over time, as movable assets become immovable property. For example, construction materials may become fully incorporated into a building, or shrubs and trees, manure and seeds may be planted or tilled into soil, thereby turning into immovable property. Sometimes, the movable asset may be an attachment and not fully incorporated into immovable property (for example, an elevator, a furnace, or an attached counter or display case). In all of these cases, a security right in the movable assets may have been made effective against third parties prior to attachment to or incorporation into the immovable property. The converse situation can also arise. A creditor may seek to take a security right in an asset that is currently immovable property, but is destined to become movable (for example, crops, products of mines and quarries and hydrocarbons).

76. States have enacted many different rules to govern these various situations. A primary concern is to establish the rights of creditors that seek to enforce security rights in movable assets where movable and immovable property enforcement regimes may intersect. Most often, these enforcement regimes depend on the characterization given to the assets. So, for example, many States permit the creation of a security right under secured transactions laws (applicable to movable assets) in movable assets that, while they are part of immovable property, are destined to become movable, but postpone effectiveness until detachment. No enforcement of the security right can take place until the asset becomes movable, and no enforcement of an encumbrance in immovable property may be

taken against assets that have become movable. While the Guide makes no specific recommendation on this question, because the enforcement regime presupposes the separate existence of tangible assets as movable assets such a result implicitly follows.

77. More difficult enforcement questions arise when tangible assets are attached to or incorporated into immovable property. Many States distinguish between construction materials, other movable assets that lose their identity when incorporated into immovable property (such as fertilizer), seeds, and attachments that retain their identity as movable assets. Some States provide that security rights in movable assets that lose their identity may only be preserved if they are made effective against third parties by registration in the immovable property registry, but that security rights in attachments made effective against third parties prior to the attachment retain their effectiveness without further registration. In these States, enforcement against the former kind of assets would always be governed by the rules relating to enforcement against immovable property. Where the movable assets become an attachment, these States usually enact special rules to govern not only the preservation of the secured creditor's rights, but also the preservation of the rights of creditors with rights in the immovable property.

78. The Guide follows the general pattern that many States have adopted for resolving conflicts between creditors with competing rights in attachments. Where tangible assets lose their identity through incorporation into immovable assets, any security right in the movable assets is extinguished. Where, however, the movable assets become an attachment, the security right continues, and its effectiveness against third parties is preserved automatically. The secured creditor may also ensure third-party effectiveness by registration of the security right in the immovable property registry (see recommendations 38 and 42). The enforcement rights of the secured creditor as against the attachment, and in relation to secured creditors that may have security rights in the immovable property, will then depend on the relative priority of the competing rights (see recommendations 84 and 85). If the secured creditor with rights in the attachment has priority, it may detach the assets and enforce its security right as a security right in the movable assets, subject to the right of the secured creditor or other interested party paying the value of the attachment. If, however, detachment of an attachment to immovable property (e.g. an elevator from a building) damages the immovable property (not by diminishing its value), the enforcing secured creditor has to compensate persons with rights in the immovable property. If another creditor with a security right in the immovable property has priority, the secured creditor can enforce its rights only under the regime governing security rights in immovable property, provided that it has maintained effectiveness against third parties by registering in the immovable property registry (see recommendations 161, subparagraph (a), and 162).

79. The enforcement of security rights in attachments to immovable property is further complicated where the secured creditor has taken an encumbrance in the immovable property and a security right in the movable asset that has become an attachment to the immovable property. Most States enable the creditor in such cases to enforce the security in a variety of ways. The creditor may enforce the security right in the attachment and the encumbrance against the rest of the immovable property. Alternatively, the secured creditor may enforce the encumbrance against the entire immovable property, including the attachment. In the former case, the secured creditor would have to have priority over all rights in the immovable property (see recommendation 162). In the latter case, the rights of the creditor

would be determined by the priority regime governing immovable property (see recommendation 161, subparagraph (b)).

8. Enforcement of a security right in an attachment to movable assets, a mass or a product

80. Many types of tangible asset in which a security right has been created are destined either to be attached to other tangible assets, to be manufactured into a product or to be commingled with other tangible assets into a mass. Many States deal with security rights in such cases by rules that determine whether ownership in the attachment, manufactured product or mass has passed to a third party. The Guide recommends that security rights that are effective against third parties generally should continue in assets that have become attached to other assets, in assets that are manufactured or processed into products and in assets that are commingled with other assets into a mass (see recommendations 41-44). Where States permit continued third-party effectiveness of security rights in tangible assets that are attachments, manufactured products or commingled assets, they normally also apply the general rules to enforcement against this type of asset (e.g. automobile engines, manufactured fibreglass products, commingled inventories of clothing, grain in a silo and oil in a tank). The assumption is that it would create unnecessary confusion if an enforcement regime other than that generally applicable were to be enacted.

81. With respect to the enforcement of a security right in an attachment to a movable asset, similar rules apply as in the case of security rights in attachments to immovable property. A secured creditor with a lower priority ranking than that of the enforcing secured creditor may pay off the claim of the enforcing secured creditor; a secured creditor with a higher priority ranking may take over the enforcement process; and the enforcing secured creditor is liable for any damage caused by the act of removal of the attachment. However, the difference with the treatment of a security right in an attachment to immovable property is that a secured creditor does not need to have priority as against competing rights in the movable asset to enforce its security right in the attachment (see recommendations 162 and 163).

82. In cases of products or masses, more than one secured creditor may have rights in the end product and the component assets. If the encumbered assets can be separated (as is the case with masses), the secured creditor with an enforceable security right against only a part of the assets should be able to separate the part in which it has a security right and dispose of that part following the general rules. If the encumbered assets cannot be separated (as is the case with products), the whole product may have to be sold and the rights of competing secured creditors that may have rights in other parts of the commingled assets will be determined by recommendations relating to priority (see recommendations 87-89).

B. Asset-specific remarks

1. General

83. The basic principles governing enforcement of security rights just reviewed ought generally to apply whatever the type of encumbered asset. Nonetheless, they primarily envision certain types of tangible assets, such as inventory, equipment and consumer goods. For this reason, these rules do not easily apply either to the enforcement of security rights in intangible assets, such as receivables and various

payment rights (such as rights to payment of funds credited to a bank account, rights to receive the proceeds under an independent undertaking or payment rights arising from negotiable instruments) and rights to possession arising from a negotiable document (for the definitions of these terms, see Introduction, section B. Terminology). Consequently, many States have enacted special rules governing enforcement against these types of encumbered asset. These rules include, *inter alia*, provisions giving the secured creditor the right to collect from the person obligated on the receivable or negotiable instrument and requiring that person to make payments directly to the secured creditor. Moreover, in many of these cases, secured transactions law accommodates, and in part defers to, the specialized law and commercial practices governing bank accounts, negotiable instruments, negotiable documents and independent undertakings.

2. Enforcement of a security right in a receivable

84. When a security right is taken in a receivable, the encumbered asset is the grantor's right to receive payment from the debtor of the receivable (for the definitions of the terms "receivable", "assignment", "assignor", "assignee" and "debtor of the receivable", see Introduction, section B, Terminology). While it would be theoretically possible to require the assignee to enforce the assignment by seizing the receivable and either selling it or keeping it in satisfaction of the secured obligation, this would be a cumbersome and inefficient way of realizing the economic value of the asset. This is the reason why most States that permit creditors to take security in receivables and other claims, enable the assignee to collect payment directly from the debtor of the receivable once the assignor is in default. The primary concerns are two: first, that the assignor knows that the assignee is enforcing (either after default, or with the agreement of the grantor before default); and second, that the debtor of the receivable knows that it must thereafter make payments to the assignee.

85. In chapter VIII, Rights and obligations of the parties to a security agreement, the Guide discusses the relationship between the assignor, the assignee and the debtor of the receivable. Issues discussed include, for example, the right of the assignee to inform the debtor of the receivable to make payments directly to the assignee following the assignor's default (see recommendations 111-113). The Guide also provides, in chapter IX, Rights and obligations of third-party obligors, *inter alia*, that the debtor of the receivable is protected against having to pay twice by the notification and payment instruction given by the assignee or the assignor (see recommendations 114-120).

86. Many States take the position that the assignee's primary enforcement right is simply to collect the receivable. Assuming that it has followed the steps required to make its rights effective against the debtor of the receivable, the assignee will simply collect payment, applying the proceeds to reduction of the assignor's obligation. The rationale is that the rights of the assignor and third parties will be protected simply by the normal application of the money received to a reduction of the secured obligation. Consistent with the approach taken by these States, the Guide recommends that no further steps to achieve enforcement need be taken (see recommendation 165).

87. Nonetheless, there may be cases where the assignee may wish to appropriate the entire present value of a receivable that may be spread out in instalments due over several months. It may, therefore, after notifying the debtor of the receivable that it will be collecting the account, sell or transfer the receivable to a third person.

To protect the assignor's rights in such cases, many States provide that the assignee may not keep any excess, a position the Guide adopts not only in relation to such dispositions of receivables, but also in relation to the ordinary collection of receivables (see recommendation 113, subparagraph (b)). Moreover, the assignee must act in a commercially reasonable manner in disposing of the receivable (see recommendation 128).

88. In some cases, the receivable itself will be secured by some other personal or property right (e.g. a personal guarantee by a third party or a security right in movable assets of the debtor of the receivable). Many States provide for an automatic right of the assignee to enforce these other rights should the debtor of the receivable be in default to pay the receivable as it falls due. This is a normal consequence of a security right (the accessory follows the principal) and the Guide adopts a like recommendation concerning guarantees of the third-party obligor's obligation to pay (see recommendation 166). This rule applies to the right to receive the proceeds under an independent undertaking as well (see recommendations 25, subparagraph (b), 48, 104, 124 and 166).

3. Enforcement in the case of an outright transfer of a receivable

89. The Guide applies to outright transfers of receivables as well as security rights in receivables (see recommendation 3). However, in an outright transfer, the assignor has generally transferred all of its rights in the receivable. Thus, the assignor has no continuing right in the receivable and no interest in the realization (usually collection) of the receivable. Accordingly, the present chapter on enforcement applies to the outright transfer of a receivable only when the assignee has some recourse to the assignor for the non-collection of the receivables. That is, it is only where the assignor may ultimately be liable to the assignee that it has an interest in the method of the collection or other disposition of the receivables (see recommendation 164).

90. Recourse to the assignor for the non-collection of receivables that have been the subject of an outright transfer usually arises when the assignor has guaranteed some or all of the payment of the receivables by the debtor of the receivables. Recourse may also arise from other functionally equivalent arrangements, such as when: (a) the assignor agrees to repurchase a receivable sold to the assignee if the debtor of the receivable fails to pay; or (b) the assignor merely agrees to pay any deficiency between the purchase price for the bulk sale of receivables and the actual collections of those receivables.

91. Recourse to the assignor for non-collection as used here refers only to non-collection because of the failure of the debtor of the receivable to pay for credit reasons (e.g. its financial inability to pay). Consequently, the failure of the debtor of the receivable to pay for tangible assets or services because of their poor quality or the failure of the assignor to comply with its specifications for the assets or services would not be considered as non-collection. Where non-payment arises for credit reasons, however, the normal rules for collection of receivables and enforcement of the security would apply (see recommendations 165 and 166).

4. Enforcement of a security right in a negotiable instrument

92. In many States, it is possible to acquire a security right in a negotiable instrument (for the definition of "negotiable instrument", see Introduction, section B, Terminology), whether by taking possession or following other steps to

achieve third-party effectiveness (see recommendations 32 and 37). As a general rule, even where there is a security right in the instrument, States defer to law governing negotiable instruments in determining the rights of persons obligated on the negotiable instrument and other persons claiming rights in the negotiable instrument (see recommendation 121). These rights might include, for example: (a) the right of the person obligated on the negotiable instrument to refuse to pay anyone other than a holder or other person entitled to enforce the instrument under law governing negotiable instruments; and (b) the right of the person obligated on the instrument to raise certain defences to that obligation.

93. Where security is taken in a negotiable instrument, secured creditors will normally have possession of the instrument. Upon default of the grantor, many States permit the secured creditor to collect or otherwise enforce its security right in the instrument. This would include, for example, presenting it for payment, or, if default occurs before maturity, even selling it to a third party and using the proceeds to pay the grantor's obligation. The rationale is that it would compromise the negotiability of the instrument if the secured creditor were obliged to go through the formalities required to exercise either the recourse of sale or taking the instrument in satisfaction of the secured obligation. Consistent with such practices, the Guide does not recommend that any further post-default formalities be imposed on enforcing secured creditors (see recommendation 167).

94. As with receivables, it may be that the negotiable instrument is itself secured by some other personal or property right (e.g. a personal guarantee by a third party or a security right in movable assets of the debtor of the receivable). Many States provide for an automatic right of the secured creditor to enforce these other rights should the person obligated under the negotiable instrument fail to pay upon presentment. The Guide recommends such an approach to enforcement of guarantees relating to the payment of a negotiable instrument (see recommendation 168).

5. Enforcement of a security right in a right to payment of funds credited to a bank account

95. Many States envision the possibility of creating a security right in a right to payment of funds credited to a bank account (for the definition of this term and other relevant terms, see Introduction, section B, Terminology). In a bank account agreement, the bank is usually considered to be the debtor of the depositor and is obliged to pay the depositor a portion of or the whole amount on deposit when requested. As banking law is closely tied to significant commercial practices, the Guide recommends deference to banking law and also provides additional safeguards for banks whose depositors may have granted security rights in their rights to payment of funds credited to a bank account (see recommendations 32, 49, 100, 101, 122 and 123). For example, even if a depositor has concluded a security agreement with a creditor, the depositary bank has: (a) the same rights and obligations in relation to its depositor; (b) the same rights of set-off; (c) no obligation to pay any person other than the person that has control of the account; and (d) no obligation to respond to any requests for information (see recommendations 122 and 123).

96. Many States provide that, if the encumbered asset is a right to payment of funds credited to a bank account, the secured creditor may collect or otherwise enforce its right to payment of the funds after default or even before default if so agreed with the grantor. Enforcement would normally occur by the secured creditor

asking the bank to transfer the funds to its own account, or otherwise to collect the sums credited to the account. The rationale for this rule is that the encumbered asset is the right to receive payment of the funds credited to the account and that it would be inefficient if the secured creditor were required to enforce by taking possession and following the steps applicable to the sale of encumbered assets or by taking them in satisfaction of the secured obligation. Consistent with the objective of enhancing flexibility and efficiency in enforcement, the Guide recommends that creditors enforcing security in a right to payment of funds credited to a bank account may do so by collecting the money in the account (see recommendation 169).

97. Sometimes, States require the secured creditor to obtain a court order prior to enforcement of a security right in a right to payment of funds credited to a bank account. Such a requirement is understandable in situations where the secured creditor may have obtained third-party effectiveness through registration in the general security rights registry. However, where the bank is aware of the security right because it has entered into a control agreement with the secured creditor, requiring a court order would be an unnecessary formality. For this reason, the Guide recommends that, where a control agreement has been entered into, it is not necessary to obtain a court order for the secured creditor to commence enforcement (see recommendation 170). Conversely, where no such agreement has been entered into, the Guide recommends that a court order be required, unless the bank specifically consents to collection by the secured creditor (see recommendation 171).

98. In many cases, the secured creditor will, in fact, be the depositary bank itself. Here, a formal enforcement process involving a specific act of collection and appropriation of the funds to repayment of the secured obligation would be superfluous. Upon default, a depositary bank acting as a secured creditor normally will deploy its right of set-off to apply the funds in the account directly to payment of the secured obligation in default. In keeping with this practice, the Guide recommends that enforcement of the depositary bank's rights of set-off not be affected by any security rights that the bank may have in the right to payment of funds in that account (see recommendations 26 and 122, subparagraph (b)).

6. Enforcement of a security right in a right to receive the proceeds under an independent undertaking

99. Some States permit persons that have the right to demand payment ("to draw") under an independent undertaking to grant security in the right to receive the proceeds of that right (for the definition of this term and other relevant terms, see Introduction, section B, Terminology). The Guide recommends that security rights may be created in the right to receive such proceeds, subject to a series of rules governing the obligations between the guarantor/issuer, confirmer or nominated person and the secured creditor (see recommendations, 27, 48 and 50). As the law and commercial practices governing independent undertakings are quite specialized, the Guide recommends adoption of a number of rules meant to reflect existing law and practice (see recommendations 124-126). So, for example, where the security right is automatically created, no separate act of transfer by the grantor should be necessary for the secured creditor to enforce a security right in a right to proceeds under an independent undertaking.

100. The general practice of States is to permit a secured creditor whose security right is in the right to receive the proceeds under an independent undertaking to

collect or otherwise enforce its right to payment of the proceeds after default or even before default if so agreed with the grantor. However, enforcement does not permit the secured creditor to demand payment from the guarantor/issuer, confirmer or nominated person (see recommendation 27). Rather, enforcement would normally occur when the secured creditor indicates to the guarantor/issuer, confirmer or other nominated person that it is entitled to be paid whatever proceeds are otherwise due to the grantor. The rationale for this approach is that the guarantor/issuer, confirmer or other nominated person cannot be obliged towards anyone other than the beneficiary and only the beneficiary may request payment of the independent undertaking. The Guide follows the practice relating to independent undertakings and recommends that the enforcement of the security right be limited to collecting the proceeds once they have been paid (see recommendation 172).

7. Enforcement of a security right in a negotiable document

101. Many States permit grantors to create a security right in a negotiable document (for the definition of this term and other relevant terms, see Introduction, section B, Terminology). The Guide recommends a similar practice (see recommendations 2, subparagraph (a), and 28). The negotiable document itself represents the tangible assets that are described in it and permits the holder of the document to claim those assets from the issuer of the document. Normally, secured creditors will enforce their security right by presenting the document to the issuer and claiming the assets. Special rules may, however, apply to preserve the rights of certain persons under the law governing negotiable documents and the Guide defers to that law (see recommendation 127).

102. Nonetheless, as between the grantor and the secured creditor, enforcement will occur when the secured creditor presents the document to the issuer. At this point, the secured creditor will be in possession of tangible assets and enforcement of the security right will then be subject to the normal principles recommended for the enforcement of security rights in negotiable documents or tangible assets covered by them (see recommendation 173). Depending on the agreement between the parties, either upon default or prior to default with the grantor's permission, the secured creditor may dispose of the document. This must be done in a commercially reasonable manner and the price obtained for the sale of the document will be applied to satisfaction of the secured obligation.

C. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/637/Add.5 [Original: English]

**Note by the Secretariat on terminology recommendations of the UNCITRAL draft
Legislative Guide on Secured Transactions, submitted to the Working Group on
Security Interests at its twelfth session**

ADDENDUM

CONTENTS

	<i>Paragraphs</i>
XII. Acquisition financing	1-213
A. General remarks	1-213
1. Introduction	1-12
(a) The nature of acquisition financing	1-6
(b) Diversity of forms of acquisition financing	7-11
(c) Outline of the chapter	12
2. Commercial background	13-43
(a) General	13
(b) Unsecured and secured acquisition credit	14-19
(c) Retention-of-title and similar transactions	20-29
(d) Leases, hire-purchase transactions and financial leases	30-35
(e) Security rights of sellers	36-39
(f) Lender acquisition financing	40-43
3. Approaches to financing the acquisition of tangible assets	44-59
(a) General	44-45
(b) Approaches favouring seller-based acquisition financing	46-51
(c) Approaches promoting both seller- and lender-based acquisition financing	52-55
(d) Approaches based on the fully integrated “purchase-money” security right concept	56-59
4. Key policy choices	60-84

B.	Recommendations	

XI. Acquisition financing

A. General remarks

1. Introduction

(a) The nature of acquisition financing

1. The purchase and sale of tangible assets (for the definition of “tangible assets” see Introduction, section B, Terminology) is a central activity in a modern commercial economy. Almost every business buys or sells this type of asset at some time or another. For some businesses, such transactions (e.g. the acquisition of raw materials and their subsequent manufacture and sale or the purchase of inventory at wholesale for distribution to retailers or for resale at retail) are a central activity. For other businesses, the purchase and sale of tangible assets is not the central activity, but it is nonetheless important to the extent that a business requires an investment in equipment and this equipment may need to be augmented, upgraded or replaced from time to time.

2. However, the acquisition of tangible assets is not just an activity of businesses. Consumers are constantly purchasing tangible assets. These assets range from low-price consumer goods, through mid-range durable assets such as furniture, electronic devices and kitchen equipment, to high-value assets such as automobiles and recreational vehicles.

3. In many cases, the acquisition of tangible assets by businesses or consumers is on a cash basis. In many other cases, however, needed assets are acquired on credit. Whenever a business or consumer acquires tangible assets on credit, and rights in the assets being acquired serve as security for the credit being extended, the credit transaction is a form of secured transaction, which the Guide calls an “acquisition financing transaction”. The right that the seller or creditor retains or obtains in the assets that are supplied to the buyer or grantor may be called, depending on the precise character of the right, either an acquisition security right, or a retention-of-title right, or a financial lease right (for the definitions of “grantor”, “acquisition security right”, “retention-of-title right” and “financial lease right” see Introduction, section B, Terminology).

4. Acquisition financing transactions are among the most important sources of credit for many buyers of tangible assets. In addition, acquisition financing transactions are critical to many sellers, even when their buyers do not otherwise regularly purchase assets on credit. For example, in many States, the sale of automobiles normally involves an acquisition financing transaction. While buyers may seldom engage in such transactions for other purchases, their availability is critical to the business of automobile sellers. In many respects, acquisition financing transactions are identical to ordinary secured transactions as described in previous sections of the Guide. However, in other respects, they have particular features that have led States to provide for special rules in several situations. This chapter considers the ways in which States may achieve an efficient and effective regime to govern all types of acquisition financing transaction.

5. Because of the number and diversity of acquisition financing transactions today, for the purposes of this chapter it is important to state clearly how the Guide

uses this term, as well as various other terms. In several cases these other terms coincide with terms now in use in many States. The Guide makes a conscious choice in this chapter not to generate new, unfamiliar terms. However, the terms used here are meant to have the meanings provided in the definitions, which may well differ from the meanings in any particular State today.

6. The only new term is the generic concept “acquisition financing transaction”. An acquisition financing transaction exists whenever one person may claim a property right in tangible assets to secure another person’s obligation to pay any unpaid portion of the purchase price (or its economic equivalent), whether that property right exists in favour of a seller, a lessor or a lender. A transaction under which a seller retains title (ownership) of the assets sold for such a purpose is also an acquisition financing transaction. Thus, the key features of an acquisition financing transaction are two: (a) the credit is used for the specific purpose of enabling the buyer to acquire a tangible asset; and (b) the rights being claimed or retained relate directly to the asset being acquired.

(b) Diversity of forms of acquisition financing

7. As noted in section B of chapter I (Basic approaches to regulating secured transactions) of the Guide, States have developed a wide variety of legal devices through which providers of credit can ensure repayment of their debtor’s obligation. While only some are classically known as security rights, all serve the economic function of securing the repayment obligation.

8. A similar, if not even greater, diversity of legal devices is typically available to those (often sellers) that finance a buyer’s acquisition of tangible assets. For example, a seller that retains title to the asset being sold until the buyer has paid the purchase price in full (a retention-of-title seller), is extending credit terms to its buyer and is thereby financing the buyer’s acquisition of that asset. The retention-of-title right is just one of several devices available to sellers. A seller may also transfer title to a buyer with a proviso that the buyer’s title will be retroactively extinguished if it fails to pay the agreed purchase price (the sale is under a “resolutive condition”); or, a seller may transfer title to a buyer, but take a security right in the asset being sold.

9. Sellers comprise just one category of financiers that may provide credit to enable a person to acquire a tangible asset. Lenders, too, may provide credit to a buyer for the specific purpose of enabling that buyer to purchase assets from a seller. Because both sellers and lenders may provide credit to enable buyers to acquire tangible assets it is possible for more than one person to be claiming a right in a particular asset under acquisition financing transactions involving that asset.

10. Still another form of acquisition financing transaction may not even involve a contract of sale at all. A lessor that leases an asset to a lessee on terms that are economically equivalent to those of a sale on credit is likewise providing financing that enables the lessee to acquire use and enjoyment of the tangible asset as if it owned that asset, even if title never passes from the lessor to the lessee. As in the case of sellers, there are different ways in which lessors may structure the agreement so as to enable the lessee to acquire the economic equivalent of an ownership right in the leased asset. The Guide calls the right of the lessor in such cases a financial lease right.

11. Finally, a lender that provides credit to a lessee for the purpose of paying all payments as they come due under a lease may, depending on the terms of the credit, be an acquisition secured creditor entitled to claim an acquisition security right in the asset being leased. If the credit being extended actually enables the lessee to conclude the financial lease agreement with the lessor, the lender is financing the lessee's use (and notional acquisition) of that asset.

(c) Outline of the chapter

12. This chapter discusses, in section A.2, the commercial background of contemporary acquisition financing transactions, and in section A.3, the various approaches to acquisition finance that have heretofore been adopted in different legal systems. Section A.4 sets out the key policy choices that confront States enacting legislation to govern the various types of acquisition financing transaction. The remainder of the chapter then reviews how the several components of a secured transactions regime discussed in other chapters of the Guide apply in the specific case of acquisition finance. It considers, in section A.5, the creation of such devices (their effectiveness as between the parties), in section A.6, the effectiveness of such devices as against third parties, in section A.7, priority of rights as against the rights of competing claimants, in section A.8, pre-default rights and obligations of the parties, in section A.9, enforcement, in section A.10, conflicts of laws, in section A.11, transition issues, and in section A.12, issues relating to the treatment of acquisition financing transactions in insolvency. The chapter concludes, in section B, with a series of specific recommendations.

2. Commercial background

(a) General

13. The opening paragraphs of this chapter summarized a number of different ways for a buyer to finance its acquisition of tangible assets, such as raw materials, inventory and equipment. In this section, the commercial background of these various transactions and their actual operation in different States today are considered in greater detail. This discussion is meant to illustrate the broad range of transactions, involving a broad range of credit suppliers, which are being deployed to finance the acquisition of tangible assets, and to show the manner in which many transactions serve that purpose even though they are not denominated as such. The discussion is also meant to reveal that among the several States that use these different transactions there is a great diversity both in their scope and their effect. Finally, by briefly considering the advantages and the drawbacks of each of these traditional transactions as mechanisms, the discussion aims to provide a context for the particular approach to acquisition financing recommended in the Guide.

(b) Unsecured and secured acquisition credit

14. An initial distinction to be drawn when considering the purchase and sale of tangible assets in a commercial setting is the distinction between cash sales and sales on credit. Sometimes buyers have sufficient liquidity that they may purchase equipment, raw materials and inventory on a cash basis. As a rule, however, commercial enterprises will acquire a substantial part of their raw materials, inventory and equipment on credit.

15. When tangible assets are purchased on credit, the buyer often obtains the credit on an unsecured basis. This normally occurs in one of the following two ways. First, a buyer might simply borrow an amount equal to the purchase price from a third party on an unsecured basis. For example, while the sale transaction is itself a cash transaction, it may effectively be financed by a general line of credit from the primary lender of the business. This method is simple, but the buyer's credit rating or reputation might limit availability of such credit or make the cost of such third-party credit prohibitively high.

16. Second, a buyer may agree with a seller to purchase the asset on credit terms that allow the buyer to make payment (perhaps in instalments) after the completion of the sale. Here the seller transfers possession and ownership of the asset to the buyer but is paid the purchase price at a later time, whether in a lump sum or through periodic instalment payments. This method is not really different from third-party finance except that the risk of non-payment is now on the seller rather than on a third-party financier. Many sellers are, however, unwilling to bear such an unsecured risk.

17. As a result, buyers often find that, as a practical matter, it is necessary to provide some form of security in order to acquire tangible assets on credit. The assets subject to the security right could well be other existing assets of the buyer. For example, a business could grant security over its factory or warehouse to secure repayment of a loan to be used to acquire equipment, inventory or raw materials. Typically, however, the most obvious asset in which security may be taken, and frequently the only such asset available to a buyer, is the asset actually being acquired.

18. Security for acquisition credit in the assets being acquired can arise in several different ways. For example, in some States, sellers have special rights arising by operation of law that enable them to cancel the sale and take back the asset sold if the buyer does not pay the purchase price within a certain period after delivery. Similarly, other States give sellers an automatic (non-consensual) right to claim a priority or preference in the distribution of proceeds of a sale (in execution) of the asset they have supplied. Often, however, the security claimed by an acquisition financier does not arise by operation of law, but is the result of an agreement between the seller or lender and the buyer.

19. As a matter of commercial practice, most acquisition credit results from an agreement between the buyer and the credit provider. As noted, these consensual acquisition financing transactions can take many forms and involve many different providers of credit. For example, the buyer may formally grant a security right in the asset to a third-party financier; or the buyer may formally grant such a security right to the seller; or the buyer and seller may agree to some other legal mechanism, which, although not in the form of a security right, is its economic equivalent. Historically, two such other mechanisms, both using ownership of the asset to secure payment, have played a central role in acquisition financing. These mechanisms are: (a) the seller's retention of title to the asset until the purchase price is paid; and (b) the use of a transaction documented as a lease. They are considered in turn, prior to a review of modern acquisition financing mechanisms available to both sellers and lenders.

(c) Retention-of-title and similar transactions

20. A supplier of raw materials, inventory or equipment may wish to meet its customer's need for credit by supplying the asset to the customer under an agreement by which ownership does not pass to the buyer until the purchase price has been paid in full. In many cases the agreement is between the seller and the buyer without any intermediary. In some cases, however, the seller may sell the asset for cash to a finance institution or other lender, which may then sell the asset to the buyer under an agreement that provides for retention (or reservation) of ownership (or title) until full payment of the purchase price.

21. There are many types of agreement through which sellers may reserve ownership of the assets sold until full payment of the purchase price. The retention-of-title mechanism is very common. In this transaction the buyer's right to obtain title is conditional upon it paying the purchase price; until then, the seller is not required to transfer ownership to the buyer. While the buyer usually obtains immediate possession of the asset being purchased, ownership remains vested in the seller.

22. Retention-of-title arrangements are sometimes called "conditional sales". Generally, however, in transactions called conditional sales the sale itself is not conditional (that is, the actual sale agreement is not dependent on the occurrence of some future and uncertain event not related to the sale itself). Rather, under a conditional sale, it is the transfer of ownership to the buyer that is conditional. The seller reserves ownership of the asset sold until the purchase price has been paid in full or the buyer has complied with any other conditions prescribed in the sale agreement.

23. In addition to retention-of-title arrangements, there are a wide variety of other transactions in which a seller uses ownership to secure the unpaid purchase price of an asset it sells. For example, sometimes the reservation of a seller's ownership is structured as a sale with a term, and the transfer occurs only at the end of the stipulated term. In other transactions, possession of the asset is delivered to the purchaser under a "promise of sale" or an "option to purchase". Some States attempt to regulate these latter transactions by providing that a promise of sale accompanied by delivery is equivalent to a sale. Occasionally, a seller will actually transfer ownership to a buyer at the moment of sale, with a proviso that the buyer's title will be retroactively extinguished should it fail to pay the agreed purchase price according to stipulated terms.

24. In each of these cases, the key feature is that the agreement by the seller to postpone full payment (that is, to offer credit) is protected either by delaying the passing of title to the asset to the buyer or, less commonly, by transferring title to the buyer subject to the seller's right to regain title upon failure of the buyer to pay. As a general principle, the idea is that the buyer does not irrevocably acquire ownership of the asset being sold until the purchase price is fully paid.

25. Another form of transaction that has been used to serve the same economic function is a "consignment". The typical consignment structure is as follows. The consignor (the notional seller) retains ownership of tangible assets (typically inventory held for resale), but transfers possession to the consignee that is authorized to sell these assets to a third party. Upon such a sale the consignee is obliged to remit to the consignor an agreed amount. In the case of a true

consignment, the consignee has no absolute obligation to pay the agreed price; its obligation is either to pay the agreed price or to return the assets to the consignor (a right that a true buyer does not have). Thus, it is critical to examine the nature of the consignee's obligation: if it is to pay the price, but with payment deferred until the assets have been sold by the consignee, and the ownership of the assets is retained by the consignor to function as security (like a title-retention transaction), then it fits into the category of an acquisition financing transaction discussed in this chapter. Moreover, this will be the case even if ownership of the consigned assets never formally passes to the consignee because they are deemed to have been transferred directly from the consignor to the third party that bought from the consignee.

26. The most common of the above arrangements is the retention-of-title transaction. In some States, the basic transaction may be varied through various clauses that greatly expand its usefulness as an acquisition financing device. So, for example, the parties may be permitted to agree to an "all-monies" or "current-account" clause. Where such clauses are used, the seller retains ownership of the asset sold until all debts owing from the buyer to the seller have been discharged (and not just those arising from the particular contract of sale in question). This means, for example, that the seller will be able to assert its retained ownership rights in the asset sold against all other potential claimants until the unpaid purchase price for all other assets sold by the seller to that buyer has been paid in full.

27. In addition, in some States parties are permitted to add "products" clauses, in which the seller's ownership is extended to, or the seller is deemed to have a security right in, any products that are manufactured from the asset in which the seller retained ownership. Similarly, some States allow for "proceeds" (for the definition of "proceeds", see Introduction, section B, Terminology) clauses under which sellers may claim ownership or a security right in any proceeds generated by the sale of the assets in which they have retained ownership (for the treatment of proceeds in the case of ordinary security rights, see recommendations 19 and 20), although this is quite rare. In most of these States, however, the seller's transformed security right in the proceeds does not benefit from any special priority.

28. While there are great divergences in the extent to which States permit modification of the basic retention-of-title transaction, many adopt a traditional posture. In these States, the applicable law strictly limits the scope of the seller's retained ownership. The right may be claimed: (a) only upon the tangible asset sold (i.e. neither on proceeds of disposition, nor on replacement assets); (b) only so long as the asset remains in its original condition (i.e. unaltered by the manufacturing process); (c) only to secure the sale price of the particular asset; or (d) only when some combination of these three conditions is met.

29. Given the continued centrality of retention-of-title in many States today, for the purposes of this chapter, the expression "retention-of-title right" will be used generically to refer to the right of a supplier under all types of sales transaction where a buyer does not irrevocably acquire ownership of the asset being sold until the purchase price is fully paid (for the definition of "retention-of-title right", see Introduction, section B, Terminology).

(d) Leases, hire-purchase transactions and financial leases

30. A supplier may also use the concept of a lease to enable its customers to acquire the use of an asset without having immediately to pay its purchase price. There is a wide variety of lease transactions that can be used as acquisition financing mechanisms. For example, a supplier of equipment may simply lease a piece of equipment to a business that takes possession of the equipment and makes monthly rental payments. In this agreement, the supplier necessarily retains ownership of the equipment (as lessor) and the lessee merely pays the rent as it falls due. While it is conceivable that such a lease arrangement could involve raw materials or inventory, parties will typically deploy these types of transaction to enable businesses to acquire the use of equipment (e.g. machinery, vehicles, computers, photocopiers, display racks, office furniture and hardware).

31. In many cases, the lease agreement is structured to achieve the functional equivalent of a title-retention sale. For example, the term of the lease may be for the useful life of equipment being sold so that at the end of the lease the lessee has enjoyed the equivalent benefit to having owned the equipment (whether or not ownership ever passes to the lessee and whether or not the lessee has an obligation to purchase the equipment at the end of the lease). Alternatively, the lease period could be for less than the useful life of the equipment but, at the end of the lease period, the lessee has the option to purchase the equipment at a nominal price or to extend the term for the balance of the useful life. In some States, this type of lease arrangement can only exist if the lessee is not obliged or even entitled to acquire the leased asset. In these States, it is the fact that ownership is never transferred that distinguishes a lease from a title-retention sale, but this transfer is not relevant to whether the transaction should be characterized as an acquisition financing transaction. Whenever the transaction is denominated as a lease, what really matters is whether the lessee is acquiring the use of the asset for at least most of its useful life in exchange for notional rental payments that represent the economic equivalent of its price under an instalment sale.

32. In a number of States, a similar result to a retention-of-title sale is achieved through devices called “hire-purchase transactions”. However, not all States use the expression to identify the same arrangement. For example, in some States, the hire-purchase arrangement commences with the lessee (hire-purchaser) selecting the equipment from the supplier (hire-seller) of the equipment. The lessee would then apply to a leasing company (usually a financial institution or an affiliate of one) to purchase the equipment from the supplier for cash and to lease it to the lessee (hire-purchaser). As with an ordinary financial lease, very often the lease comprises the useful life of the equipment and, at the end of the lease period, the lessee automatically acquires ownership or has the option to purchase the equipment at the end of the lease period for a nominal sum. In other States, the expression is used to cover transactions where a business leases the asset directly from the manufacturer and either automatically acquires ownership or has the option to purchase the equipment at the end of the lease period. For the purposes of this Guide, the expression is meant to cover any transaction that starts out as a lease arrangement, but contemplates that the lessee will acquire ownership of the asset at the end of the lease period.

33. Yet another acquisition financing transaction that takes the form of a lease is what many States label a “financial lease” or a “finance lease”. In these States,

financial leases are granted special tax advantages that have the economic effect of reducing the cost to the lessee. Whether the financial lease agreement is a two-party arrangement between lessor and lessee or a three-party arrangement, the transaction takes the form of a lease. Nonetheless, in each case, the economic reality is that the lessee is paying the notional purchase price for the equipment in instalments, while the lessor remains the owner until full payment is made. It is important to note, however, that the economic effects of such a transaction as an acquisition financing mechanism are not necessarily related to how a financial lease may be characterized for tax purposes. Consequently, a transaction may be a financing lease for secured transactions purposes although not one for tax purposes, or vice versa.

34. States that make general use of transactions in the form of leases as acquisition financing devices not only use different terms to describe these transactions, they also attach different consequences to their deployment. For example, in some States, the lessee is able to sell the leased asset and a good faith purchaser will be able to assert its rights against the lessor. In a few of these States, however, the lessor may be able to claim a right in the proceeds of the sale. In other States, the lessor may always be able to claim its right against an ostensible purchaser. Again, in some States, a lessor is able to reclaim the asset without the need for a judicial order if the lessee is in default. In other States, the lessor must first seek formal termination of the contract, and reclaim possession judicially. Finally, in some States, these transactions are strictly regulated by mandatory rules, while in others the specific leasing arrangements are tailored to the lessee's unique cash-flow requirements, the tax regime in a State and other needs of the lessor and lessee.

35. The above discussion suggests a great diversity in these lease transactions. Depending on the nature of the equipment at issue, lease periods may range from a few months to several years and items leased may range from high-value equipment, such as aircraft, to lower-value equipment, such as computers. In all cases, however, and whatever may be the definition given to a financial lease for tax or accounting purposes in any State, for the purposes of this chapter the expression "financial lease right" will be used generically to refer to all transactions that take the form of a lease but where the functional equivalent of ownership will be enjoyed by the lessee, regardless of whether formal title to the asset is ever transferred to the lessee (for the definition of "financial lease right", see Introduction, section B, Terminology).

(e) Security rights of sellers

36. In many States today, several other legal devices are available to secure the performance of a buyer's payment obligations. As noted, in some cases, rights arise by operation of law. These non-consensual rights of sellers typically presuppose that ownership of the asset being sold has passed to the buyer. For example, in some States the seller of tangible assets is given a high-ranking "privilege" or a "preferential claim" on the money generated by a sale in execution of these assets. Whether the sale in execution is brought by the seller that has itself obtained a judgement against the buyer, by another judgement creditor of the buyer or by a secured creditor exercising a security right against the assets, the seller may claim its statutory priority. What is more, when it exists, this statutory preferential right (often called a vendor's privilege) is usually given a priority that is superior even to that of consensual secured creditors.

37. In some States, a seller also has a right to refuse to deliver tangible assets to a buyer that is not ready to pay the price at delivery. This right to refuse delivery usually also includes a right to interrupt the transport of assets by a carrier (the right of stoppage in transit). Occasionally, this right is projected forward as a reclamation right for a short period (e.g. 30 days) after delivery of the assets. None of these rights is particularly effective as a means for financing the acquisition of assets, however, since they invariably presuppose that the sale is made for cash and not on credit.

38. In addition to these rights attached to the contract of sale, traditionally sellers were also entitled to take a regular security right in the assets they sold. In many States, however, this was not an effective mechanism given the absence of a non-possessory security device. For example, a seller that transferred ownership of an asset title to a buyer would then have to keep or retake possession of that asset as a pledge. By contrast, other States have long permitted sellers to take non-possessory security, often in the form of a so called “chattel mortgage”. More recently a number of States that previously did not allow the “hypothecation of movable assets” have also modified their law to permit a seller to contract for a non-possessory security right in the assets it sells. This type of seller’s security right is usually available only in States that have also decided to permit lenders to take non-possessory security rights over tangible assets.

39. The development of non-possessory security rights in favour of a seller has usually been accompanied by another development. Sellers that take security are able, if they follow the appropriate procedure, to assert a priority over all other security rights in the asset being sold that are granted by the purchaser. In some States this special seller’s security right is called a “vendor’s hypothec”; in others it is called a “supplier’s lien” or “supplier’s charge”; in others it is called a “purchase-money security interest”. The name is of little consequence. What matters is that: (a) the seller’s non-possessory security right is identical in form to the non-possessory security right that may be taken by an ordinary lender; and (b) it is vested with certain special advantages. The seller that takes such a security right is usually able to claim a preferred priority position that allows it to outrank any other secured creditor that is asserting rights in the asset granted by the buyer.

(f) Lender acquisition financing

40. In most modern economies, lenders provide a substantial segment of the acquisition finance market. Nonetheless, many States historically placed significant limitations on a lender’s capacity to provide acquisition financing. For example, it was often not possible for buyers to grant non-possessory security over assets they were in course of acquiring. Today, several States that permit lenders to take non-possessory security still do not also permit them to obtain a special priority when they provide acquisition credit. That is, even where the money advanced to the buyer was specifically intended to be used to purchase assets and was in fact used for that purpose, the lender that took security in those assets was considered to be an ordinary secured creditor subject to the ordinary priority rules governing security rights. As a result, in these States, a lender that provides acquisition financing for a particular asset will rank lower than a pre-existing secured lender with a security right in a buyer’s after-acquired assets of the type being purchased.

41. The only mechanism by which lenders could achieve the same preferred status as sellers and lessors was to acquire their rights. So, for example, where sellers retained ownership to secure the buyer's payment obligation, sometimes lenders would directly pay the purchase price to the seller and take an assignment of the seller's right to payment under the sale agreement, along with the seller's retention-of-title right. Similarly, in cases where the law enabled sellers to take a consensual security right with a special priority status in the asset being sold, the lender could purchase the seller's security right. Finally, in cases involving financial leases, the lender would sometimes purchase the lease contract (embracing the financial lease right) from the lessor. The particular form of transaction known in some countries as hire-purchase is a modern adaptation of this long-standing technique. While these lender's rights derived from sellers permit lenders to enter the acquisition finance market, they do not promote open competition among credit suppliers since: (a) either the consent of the seller will be required (often at a cost to the lender), or the lender will have to engage in multiple transactions (involving, for example, the purchase of and subrogation into the seller's rights) to achieve the desired outcome; and (b) the lender will be required to become the owner of the asset being acquired (a status it may not wish to assume).

42. Today, in order to promote competition for acquisition credit, some States permit lenders that provide acquisition financing to buyers of tangible assets to obtain, in their own name, a preferential security right in those assets. In other words, in these States it is now possible for lenders to accede directly to a priority status that was previously available to them only by purchasing the preferential right granted by a buyer to a seller. Not all lenders that provide money to a business that might ultimately be used to purchase tangible assets will be able to claim an acquisition security right. To be able to do so, the lender: (a) must advance the credit to enable the purchaser to acquire the assets; (b) the credit must actually be used for that purpose; and (c) the right can only be claimed in the assets thereby acquired.

43. Even though this special type of lender acquisition security right may be found in a number of States, the idea that a lender might be able directly to claim a preferential acquisition security right is not broadly accepted. Indeed, most States that permit sellers to secure the purchase price of the assets being sold through a distinct retention-of-title right do not permit lenders to claim preferential acquisition security rights. In these States, lenders as well as sellers may take non-possessory security, but typically, only sellers are permitted to claim a preferential acquisition security right, which they may do as an alternative to retaining ownership.

3. Approaches to financing the acquisition of tangible assets

(a) General

44. In the past, States have taken a wide variety of approaches to regulating acquisition financing transactions. As noted, however, protecting the rights of sellers was typically conceived as the central objective. Moreover, until recently, in many States it was not possible for a buyer to grant a non-possessory security right in tangible assets, even to a seller. For these two reasons, the retention-of-title technique developed as an everyday practice in civil law, common law and other systems. Sometimes States enacted legislation to acknowledge and regulate this acquisition financing technique. Most often, however, they failed to do so, with the

result that the contemporary law of acquisition finance in these States emerged from contractual practices that were later explicitly recognized and further elaborated by courts.

45. In order to appreciate the policy choices relating to acquisition financing now open to States, it is helpful to briefly consider three of the common approaches that have been taken to acquisition financing: (a) approaches that favour seller-based acquisition credit; (b) approaches that promote both seller- and lender-based acquisition credit as complementary but distinct mechanisms; and (c) approaches based on a fully integrated approach to acquisition finance that does not conceptually distinguish between sellers and lenders.

(b) Approaches favouring seller-based acquisition financing

46. The development of the law of acquisition finance in many States focused on the protection of sellers. In no State did the legislature and courts set out to prevent financial institutions from providing acquisition financing. However, because this field was conceived as an adjunct to the law of sale, in these States retention-of-title and economically equivalent devices available uniquely to sellers, as opposed to financial institutions, were the main, if not exclusive, acquisition-financing devices that enabled buyers to obtain possession of the assets being purchased.

47. As an element of sales law that specifically touches the property aspects of the transaction, the character and effects of retention-of-title mechanisms vary widely from State to State. Many of these differences are products of history and the specific contractual practices that were adopted in response to (and frequently to overcome limitations imposed by) the legal rules in place in individual States. Thus, the law in this field has tended to develop in a haphazard way with novel contracts and additional terms to well-known types of agreement being invented piecemeal, as the need arose, to serve as proxies for a fully developed regime to govern acquisition financing transactions. As a result, the everyday contractual practices sometimes are not coherent with the legislative policy reflected by the current law in a State, and do not reflect the kinds of practices that business would adopt if the legal regime were designed to promote efficient secured credit.

48. The approach that focuses on sellers as the principal source of acquisition finance is occasionally based on a policy decision to protect small- and medium-sized suppliers of tangible assets against large financial institutions. The approach acknowledges the importance of these manufacturers and distributors for the domestic economy and the dominant position of large institutions in credit markets. The policy decision to afford special treatment for sellers is often argued to rest on a number of assumptions. One is that suppliers have an interest in providing credit at low rates to increase the volume of their sales. Another is that the cost of such credit is affordable because many suppliers do not charge interest prior to default. A third is that, because there will usually be several suppliers seeking to sell tangible assets to any given buyer, competitive prices will be offered to buyers.

49. A State considering secured transactions law reform needs to evaluate these assumptions carefully. While some may be justified, others may not. For example, the fact that a supplier sells assets to a buyer under a retention-of-title arrangement does not necessarily mean that the seller's credit terms come at no cost to the buyer. The supplier itself has a cost of obtaining funds in order to extend these credit

terms. In cases where interest is not charged to the buyer until it fails to pay the purchase price for the goods in a timely manner, presumably the seller's cost of funds will be embedded in the price of the assets being sold and passed on to the buyer.

50. Even if a State interested in promoting the manufacture and supply of tangible assets wishes to encourage sellers to act as suppliers of credit, it need not, and should not, do so to such an extent that other parties are excluded from offering competitive acquisition financing. In the same way that competition among sellers normally reduces prices for buyers, competition among suppliers of credit normally reduces the cost of credit to borrowers and increases its availability. Fostering competition among all suppliers of credit will not only result in credit being available to the buyer at the most affordable rates, but is also likely to open up new sources of credit for buyers. This, in turn, will increase their capacity to purchase tangible assets without the need for sellers themselves to provide financing to all their potential buyers.

51. Legal barriers that prevent financiers other than sellers and lessors from directly extending acquisition credit to buyers, or that require these other financiers to extend credit only through the seller or lessor (by taking an assignment of the seller's retention-of-title right or the lessor's financial lease right), can be inefficient in other respects as well. Most importantly, treating acquisition financing simply as a matter of protecting the property rights of sellers and lessors can actually reduce the scope of the rights otherwise claimable by those sellers and lessors. Many modern secured transactions regimes offer secured creditors a number of rights that often have not, or not always, been available to sellers that use retention of title to secure their claims. These include, for example, an automatic right to claim a security right: (a) in any products that are manufactured from the assets in which a security right is granted; (b) in any proceeds generated by the sale of the encumbered assets; or (c) to use the security right to secure all debts that may be owing from the buyer to the seller.

(c) Approaches promoting both seller- and lender-based acquisition financing

52. In part to expand the range of potential providers of acquisition financing to buyers, and in part to enable sellers to avail themselves of a full panoply of rights previously available to lenders that took security rights, many States today have redesigned their acquisition finance regime so as to promote both seller- and lender-based acquisition financing. Different approaches have been taken to achieve this outcome.

53. In some States that recognize special acquisition rights for sellers based on a reservation of ownership, retention-of-title sellers are now able to expand their rights by contract through the insertion of additional clauses into the agreement of sale. For example, some States permit retention-of-title sellers to insert a clause in the sale contract extending the seller's right into assets manufactured from the asset initially sold, or a clause (often referred to as an "all sums clause") allowing the retention of title to specific goods to stand as security for all obligations owed to the seller by the buyer. In rare cases, a State will also permit a retention-of-title seller to insert a clause in the sale contract extending the seller's right to receivables or other proceeds arising from the sale of the goods. Nonetheless, in most States that maintain special sellers' rights based on a reservation of ownership, only the simple

retention-of-title is treated as a title device, while these other, more complex retention-of-title arrangements are either not recognized or are treated as giving rise to security rights or fiduciary or other rights. It also bears notice that some States have also enhanced the rights of buyers under a retention-of-title arrangement, by recognizing a buyer's expectancy right in assets being acquired under a retention-of-title arrangement and permitting the buyer to grant a lower-ranking security right in the assets (or, in the case of goods to be acquired in the future, the expectancy of receiving such goods) in favour of another creditor.

54. A few States have reformed their secured transactions legislation to enable sellers to take preferential acquisition security rights, but still permit retention of title, financial leases and similar devices to co-exist as separate acquisition financing transactions. In these States, the various devices by which ownership is used to secure a buyer's obligation are, however, usually regulated by substantially the same set of rules as those applicable to a seller's acquisition security rights. Still other States maintain traditional sellers' acquisition financing rights alongside sellers' acquisition security rights, but also allow lenders to claim security rights in the assets being sold. To avoid the risk of imperfect coordination among various types of acquisition finance, these States often go further and require sellers to register a notice of a retention-of-title right in the security rights registry, and to follow the same procedures for enforcement that would apply to enforcement of a security right.

55. This last approach is based on a policy decision to provide, as far as possible, for the equal treatment of all transactions that are deployed to finance the acquisition of tangible assets. Attempting to create more or less equal opportunities for all credit providers, it is assumed, will enhance competition among them, thereby increasing the amount of credit available and reducing its cost to the benefit of both sellers and buyers. These types of modernized regime thus integrate sellers' and lessors' rights into the secured transactions regime, thereby facilitating financing on the security of the buyer's or lessee's expectancy, but at the same time, prevent other financiers to compete directly for a first-ranking acquisition financing right in the assets being purchased. In other words, while these States have adopted regimes that go a long way to achieving equal opportunities for the provision of acquisition credit, there is still a preferred priority status that is afforded to sellers over lenders that provide acquisition finance.

(d) Approaches based on the fully integrated "purchase-money" security right concept

56. Some States have taken an additional step. Not only have they adopted an approach that permits and promotes both seller and lender acquisition credit, but they have also enacted regimes that treat all providers of acquisition financing equally. In these States, lenders can acquire the same preferential priority as sellers that take security rights in the assets they sell. For regulatory purposes, the various acquisition financing rights of owners (retention-of-title, financial leases and similar devices) are: (a) fully integrated into a single, functional security right; and (b) treated identically to the standard acquisition security rights available to sellers and lenders. In many States that have adopted this approach, these various acquisition security rights are all characterized as "purchase-money" security rights

(for the definitions of “security right” and “acquisition security right”, see Introduction, section B, Terminology).

57. Where the “purchase-money” security rights approach has been adopted, two important principles govern its application. The first is that a purchase-money security right, which in the Guide is referred to as an “acquisition security right”, is a generic concept. That is, it is applicable to any transaction by which a financier provides credit to enable a buyer to purchase tangible assets and holds a right in the assets being purchased to secure repayment of that credit. The second is that a purchase-money security right is a species of security right. That is, except where the particular circumstances of acquisition financing require a special rule applicable only to such rights, all the rules applicable to security rights generally also apply to acquisition security rights.

58. The following are the main features of the acquisition security rights regime (using the terminology of the Guide) in States that have adopted the fully integrated, purchase-money security right approach:

(a) The right is available not only to suppliers of tangible assets, but also to other providers of acquisition financing, including lenders and financial lessors;

(b) The acquisition secured creditor is given, for secured transactions purposes, a security right, regardless of whether the creditor retains title to the assets being acquired;

(c) The buyer may offer a lower-ranking security right in the same assets to other creditors (and is thus able to utilize the full value of its rights in assets being acquired to obtain additional credit);

(d) Whether the agreement creating the acquisition security right is denominated as a security right, or is a retention-of-title right or a financial lease right, the acquisition secured creditor, like other secured creditors, normally has to register a notice of its security right in the general security rights registry;

(e) Once a notice of the security right is registered in the general security rights registry, the security right is effective against third parties;

(f) If the notice is registered within a short period of time after delivery of the assets to the buyer, the acquisition security right will normally have priority over competing claimants, including a creditor with a pre-existing security right in future (or after-acquired) assets of the buyer; and

(g) The acquisition secured creditor that is a seller or a financial lessor may enforce its rights, within or outside insolvency proceedings, in the same way as any other secured creditor and does not have, in addition, any title-based enforcement rights.

59. Over the past few decades, an increasing number of States have adopted this fully integrated approach to acquisition financing. This trend may also be seen at the international level. For example, the International Institute for the Unification of Private Law (Unidroit) Convention on International Interests in Mobile Equipment governs the effectiveness against third parties of retention-of-title and financial leases with separate but substantively similar rules to those regulating security rights. Accordingly, it extends the international registry contemplated by the Convention beyond security rights to retention-of-title and to financial leasing

arrangements. Moreover, under the United Nations Assignment Convention¹ the same rules apply to (a) security assignments; (b) assignments for security purposes; and (c) outright assignments (see article 2, subparagraph (a)), thus avoiding drawing a distinction between security rights and title-based devices. Indeed, article 22 of the Convention, which expressly covers various priority conflicts, includes a conflict between an assignee of receivables and a creditor of the assignor whose retention-of-title rights in tangible assets extend to the receivables from the sale of those assets. Finally, the same approach to acquisition financing is followed in the European Bank for Reconstruction and Development Model Law on Secured Transactions, the Organization of American States Model Inter-American Law on Secured Transactions and the Asian Development Bank's Guide to Movable Registries.

4. Key policy choices

(a) General

60. The Guide (see chapter I, section B, Basic approaches to regulating secured transactions) reviews the basic approaches to security that might be adopted by a State seeking to reform its secured transactions law. A key question addressed in that chapter is how to treat transactions that fulfil the economic function of a security device but are effectuated by utilizing title to an asset to secure the full payment of the financier's claim. This question arises in both non-insolvency and insolvency contexts.

61. Many States today continue to maintain a formal diversity of financing devices in all situations. That is, they recognize both security devices and devices such as fiduciary transfers of title and mortgages and sales with a right of redemption where a transfer of ownership of a borrower's assets is made to secure performance of an obligation. Other States maintain this formal diversity in non-insolvency situations, but under their insolvency regime characterize as security devices transactions where the right of ownership (or title) is used to secure payment of a creditor's claim. In these latter States, all transactions that fulfil the economic role of security are treated as functionally equivalent for insolvency purposes.

62. Other States have extended this "functional equivalence" approach to non-insolvency as well as insolvency contexts. The regimes in these States recognize the distinctive character of these various transactions involving title: sellers are still permitted to engage in retention-of-title or resolutive sale transactions, and lenders are still permitted to engage in secured transactions or sale transactions with a right of redemption. However, to ensure a proper coordination among these various transactions, and also to ensure, as far as possible, their equal treatment, these States subject all these transactions, however denominated, to a framework of rules that produces functionally equivalent outcomes.

63. Finally, some States carry this functional logic to its conclusion and adopt what might be called an "integrated" (or "unitary") approach. Their secured transactions regime characterizes as security all the various transactions fulfilling the economic function of security, regardless of their form, and explicitly denominates them as "security rights" (for the definition of "security right",

¹ United Nations publication, Sales No. E.04.V.14.

see Introduction, section B, Terminology). That is, in these States, the regime does not simply maintain a diversity of mechanisms that are treated as “functionally equivalent”. The regime recharacterizes all these mechanisms as security rights as long as they perform the economic function of a security right.

64. The Guide recommends that States adopt this last approach with respect to non-acquisition secured transactions. All transactions where rights in the grantor’s assets, including ownership, are used to secure an ordinary repayment obligation by a borrower to a supplier of credit should be treated as security devices, and identified as such, in both insolvency and non-insolvency contexts (see recommendations 11 and 12). The Guide calls this the “integrated and functional” approach. As explained earlier (see paras. [...] above), there are three main advantages of such an approach: (a) it more obviously promotes competition among credit providers based on price and thus is more likely to increase the availability of credit at lower cost; (b) it better enables legislative policy decisions to be made on grounds of comparative efficiency; and (c) because all transactions creating security rights are treated the same, the regime is easier to enact and apply.

65. When the obligation being secured is the payment of the purchase price of a tangible asset (that is, where an acquisition financing transaction is involved), a conceptually more complex issue is presented, since the parties involved are not all lenders. They are also sellers. In deciding whether to adopt the “integrated and functional” approach, therefore, States will have to determine whether: (a) the logic of secured transactions should override the logic of the law of sale and lease (or more particularly the logic of the law of ownership) when sellers and lessors use these transactions to secure the payment of the purchase price (or its economic equivalent) of tangible assets; or (b) the logic of sale and lease should override the logic of secured transactions as the primary organizing principle in these cases. In order to decide these issues, States must, first of all, consider whether the approach of providing functionally equivalent outcomes should be adopted as the most efficient way to reach the goal of substantial equality among acquisition financiers; and secondly, if so, States must consider whether the integrated approach should be adopted as the most efficient way to produce a framework of rules that achieves functional equivalence of outcomes.

(b) Functional equivalence: a generic concept of acquisition financing

66. As noted above (see paras. [...]), while closely linked, the principles of functionality and integration are independent. That discussion also notes that equal opportunity to provide credit is one of the primary objectives that States should seek to achieve when reforming their law of secured transactions generally.

67. There are good reasons of economic policy why States might wish to adopt the functionality principle in relation to acquisition financing. In market economies, creating equal opportunities for all credit providers will enhance competition among them, thereby increasing the amount of credit available and reducing its cost. There is no overriding reason of economic principle why the manufacturer or distributor of tangible assets should have a monopoly on providing credit to purchasers. Once it is accepted that financiers should be able to compete to offer buyers access to acquisition credit, the legal regime under which they do so should not create incentives for one or another sub-group of financiers. The most efficient way to ensure that competition for the provision of credit is based solely on the terms and

conditions offered by the financier is to establish legal rules that treat all of them in a way that produces functionally equivalent outcomes.

68. It follows that buyers should be permitted to seek out the best deal possible to satisfy their acquisition credit needs. They should have equal opportunity to negotiate, with any potential financier, the terms of the loan, the conditions of repayment, the interest to be charged, the events that would constitute a default and the scope of the security they provide. If the legal regime permits some financiers to obtain better security rights than others, this equality of opportunity to negotiate is compromised. In other words, from an economic perspective, there is nothing unique about acquisition financing that would induce a State to take an approach to credit competition different from that it adopts in relation to ordinary non-acquisition financing.

69. There are also reasons relating to the design of legal institutions why a State might wish to adopt the approach that aims at producing functionally equivalent outcomes. As noted above (see paras. 36-39), States have traditionally organized credit for buyers of tangible assets by providing specific entitlements for sellers (possibly on the assumption that sellers would provide most purchase-credit and most sales would be one-off transactions relating to individual items). Under such an assumption, the primary concern was simply to ensure that, if the buyer did not pay the purchase price, the seller could recover the sold asset quickly, efficiently and free of any third-party rights. That is, credit was simply an adjunct to the sale, and the seller's primary interest was to receive value for the asset provided to the buyer. Two developments over the past several decades have required States to rethink this position.

70. First, as economies expanded, the need for acquisition credit grew and sellers found that they often could not meet all the credit needs of their buyers. Especially where manufacturers, wholesalers and retailers were purchasing large quantities of raw material and inventory, it became increasingly common for banks, finance companies and other lenders to extend credit to buyers for the express purpose of enabling them to acquire these raw materials and inventory. Second, the types of equipment needed for manufacturing and distribution became increasingly sophisticated and expensive. Suppliers were frequently unable to provide the necessary financing to their prospective buyers. Moreover, often for tax reasons, buyers discovered that it was sometimes more economically advantageous to acquire needed equipment by a transaction documented as a lease rather than a purchase. Frequently, these lease transactions were structured as the economic equivalent of a sale upon credit.

71. In both of these cases, acquisition financing was being provided to a buyer (or notional buyer) by a person other than the direct seller of the assets. States were then confronted with having to decide whether continued reference to the seller's rights as the paradigmatic acquisition finance transaction was justifiable. The main reasons for concern lay in the fact that: (a) sellers were traditionally able to get a top-ranking secured right in the assets based on their ownership, but other acquisition financiers such as lenders typically were not; and (b) when the transaction was structured as a lease rather than a sale in which the seller transferred title to the buyer against a right to have the sale set aside for non-payment of the purchase price, it was generally not possible for the lessee to deploy the leased asset as collateral to secure other credit. These concerns led States to consider whether a

generic concept of an acquisition financing transaction might be a better way to organize this branch of secured transactions law.

72. Many States concluded that, even when they decided that sellers should continue to be able to protect their rights by retaining ownership of the assets sold until full payment by the buyer, the legal regime would be less uncertain and would generate less litigation if it did not draw purely formal distinctions between the rights available to different suppliers of acquisition credit. This led these States to simplify the design of the regime by adopting the approach that produces functionally equivalent outcomes: all transactions being deployed to finance the acquisition of tangible assets would be treated in essentially the same way regardless of their form and regardless of the legal status of the creditor (as seller, lessor or lender).

73. Consistent with the recommendation that States adopt the functionally-equivalent-outcome approach to non-acquisition secured transactions, in this chapter the Guide recommends that States adopt the functionally-equivalent-outcome approach in respect of all acquisition financing transactions, however denominated (see the statements of purpose in chapter XI, options A and B). That is, the Guide recommends that States enact regimes that achieve functionally equivalent outcomes, regardless of whether they also decide to adopt the fully integrated approach (see recommendation 174 for the unitary approach and recommendation 185 for the non-unitary approach).

(c) Unitary and non-unitary approaches to functional equivalence

74. The second main policy choice that confronts States concerns the manner in which they design legislation to achieve functionally equivalent outcomes. Once again, the main objective is to ensure that, in so far as possible, the legal regime that brings about this functional equivalence is crafted in a manner that facilitates the broadest extension of credit at the lowest price. This type of efficiency in a legal regime can be achieved in one of two ways.

75. First, States may choose to collapse distinctions between various forms of acquisition financing transactions and adopt a single characterization of these devices. This is the policy that the Guide recommends for security rights generally. The method for achieving functionally equivalent outcomes is referred to as the “integrated” approach. Given the alternatives outlined in this chapter, the integrated approach will be characterized as the unitary approach to acquisition financing. All acquisition financing transactions under the unitary approach will give rise to “acquisition security rights” and all financiers will be considered as “acquisition secured creditors” (for the definitions of “acquisition security right” and “acquisition secured creditors”, see Introduction, section B, Terminology).

76. Alternatively, States may choose to retain the form of existing acquisition financing transactions and the characterization that parties give to their agreement (e.g. as sale, lease or loan), subject to the court declaring that characterization to be a sham. In doing so, however, States will nonetheless be required to adjust and streamline their technical rules for each transaction so as to achieve functional equivalence across the whole regime. The Guide refers to this method for regulating acquisition credit as the “non-unitary” approach. Acquisition financing transactions under the non-unitary approach will give rise either to “retention-of-title rights” and

“financial lease rights” where a title device is deployed, or to “acquisition security rights” in favour of acquisition secured creditors where a security right (whether in favour of a lender or a seller that transfers title to a buyer) is created (for the definitions of the terms mentioned in this paragraph, see Introduction, section B, Terminology).

77. Depending on law other than secured transactions law, the decision about which of these approaches to adopt could have significant consequences. For example, it might affect the rights of third parties both in and outside insolvency proceedings (the issues relating to insolvency are discussed in section A.12 below and in chapter XIV (The impact of insolvency on a security right)). In addition, having decided to adopt one or the other of these approaches, States will also have to decide exactly how to design the particular rules by which all aspects of acquisition financing transactions will be governed, and integrate them into the general law of sale and lease.

78. Three main consequences flow from a States’ decision to adopt the unitary approach. First, all acquisition financing devices, regardless of their form, will be considered as security devices and subjected to the same rules that govern non-acquisition security rights. Second, a creditor’s right in tangible assets under a retention-of-title sale, sale under resolutive condition, hire-purchase agreement, financial lease or similar transaction will be considered to be an acquisition security right and be regulated by the same rules that would govern an acquisition security right granted to a lender. Third, the buyer in such cases will be considered to have acquired ownership of the asset, regardless of whether the seller or lessor purports to retain title by contract.

79. States may take one of two paths to enacting the unitary approach in cases where sellers use retention of title or a financial lease. They may provide that the buyer becomes the owner for all purposes, with the result that States would explicitly have to amend other legislation (such as taxation statutes) if they desired that sellers in such transactions would be taxed as owners. Alternatively, they might provide that buyers become owners only for the purposes of secured transactions law and its related fields (debtor-creditor law and insolvency law in particular). It is important to note, however, that coherence of the regime requires States to take the same path in relation to acquisition financing transactions that they take in relation to non-acquisition financing transactions.

80. As the Guide adopts a unitary approach to non-acquisition financing, traditional lender transactions such as sales with a right of redemption, sales with a leaseback and fiduciary transfers of title are all considered to be ordinary security rights. Only in relation to seller transactions (and “seller-like” transactions such as financial leases) does the Guide contemplate the possibility of a non-unitary approach. That said, even when States adopt a non-unitary approach to acquisition financing transactions, they should design the regime to reflect the functional equivalence principle (see recommendation 185). For example, the regime should treat all the following suppliers of acquisition credit in a functionally equivalent manner: sellers that retain title; sellers that do not retain title but retain a right to cancel the sale; sellers that do not retain title but take a regular acquisition security right in the assets sold; lessors that retain title; and lenders that take a regular acquisition security right in the asset sold or leased.

81. In principle, States that adopt the non-unitary approach could achieve functional equivalence between the rights of sellers that retain title and financial lessor, on the one hand, and the rights of acquisition secured creditors, on the other, in one of two ways. They could: (a) model the rights accorded to retention-of-title and similar claimants on those given to acquisition secured creditors that are not sellers or lessors; or (b) they could model the rights of these other acquisition secured creditors on the rights already available to retention-of-title creditors. In the former case, all acquisition financiers would be treated the same (i.e. as acquisition secured creditors), but acquisition financiers that retain ownership would have slightly different rights from ordinary owners. In the latter case, all acquisition financiers and acquisition secured creditors would be treated the same (i.e. as owners) but acquisition secured creditors and non-acquisition secured creditors would be subject to slightly different rules. While formally these may appear to be equally viable options, in view of the overall objective to enable parties to obtain secured credit in a simple and efficient manner, there are several reasons why the former approach to achieving functional equivalence in a non-unitary regime should be preferred.

82. One may begin with the objective being sought. The question is what approach is the most likely to achieve the most transparent and lowest cost credit, regardless of the source of the credit. First, it would be quite complicated to design a set of rules that would treat lenders as owners (especially since lenders normally would have no expertise in selling or maintaining the assets they are financing). Second, even though these lenders would be characterized as owners, their ownership would not be identical to ordinary ownership since their enforcement rights would be adjusted to protect the rights of certain third parties that may have taken security in the buyer's expectancy right. Third, it would be quite complicated to design a set of rules that distinguish between the accessory rights afforded to two classes of lenders, namely ordinary secured lenders and acquisition secured lenders. Fourth, it is much simpler to model the rights and obligations of a seller that benefits from an acquisition financing right (for example, in relation to the creation, effectiveness against third parties, priority over competing claimants and enforcement) on those of a seller or lender that benefits from an acquisition security right (an acquisition secured creditor). The reason is that this approach would enhance the overall coherence of the secured transactions regime, while enabling States to make adjustments necessary to maintain the coherence of their regime of ownership as reflected in the law of sale and lease. For these reasons, the Guide recommends that States choosing to adopt a non-unitary approach to acquisition financing transactions should seek to achieve functional equivalence by modelling retention-of-title rights and financial lease rights on acquisition security rights, rather than the reverse (see recommendation 185).

83. The Guide recommends that States adopt the unitary approach to achieving functional equivalence of acquisition finance to non-acquisition secured transactions. Given this general orientation, the Guide suggests that, to the extent that they have the opportunity to do so, States should also adopt the unitary approach to achieving functional equivalence among all acquisition financing mechanisms. Notwithstanding this suggestion, however, the Guide acknowledges that some States may feel the need to retain the form of title devices to govern the rights of sellers, financial lessors and other suppliers. For this reason, in each of the following subsections of this chapter (A.5-A.11), the relevant issues are examined

as they arise in contemporary legal systems. Each subsection concludes with a review of how the law of acquisition financing could be best reformed, if one or the other of these approaches (unitary or non-unitary) to achieving functional equivalence were adopted.

84. In section B, moreover, this chapter contains parallel recommendations presented as option A and option B. Option A presents recommendations about how States should design the detail of a unitary and functional approach to acquisition financing transactions. The Guide implicitly recommends this approach for States that are enacting legislation to govern the full range of secured transactions for the first time, although States with a comprehensive secured transactions regime can certainly benefit from this approach as well. Option B deals with how States that elect to retain a non-unitary approach should design rules governing acquisition financing through title devices and, in particular, retention-of-title and financial-lease transactions, as well as acquisition security rights, so that the economic advantages of functional equivalence may be equally achieved under a non-unitary approach.

5. Creation (effectiveness as between the parties)

85. The Guide discusses in the chapter on the creation of a security right (effectiveness as between the parties) the requirements for making a security right effective as between the parties (e.g. the grantor and the secured creditor). That chapter also uses the expression “creation” to characterize the requirements necessary to achieve effectiveness as between the parties. As explained in that chapter, the underlying policy is to make the requirements for achieving effectiveness between the parties as simple as possible (see paras. [...]). The precise manner in which these requirements may be transposed to regulating the effectiveness of the rights flowing from an acquisition financing transaction as between the parties will depend on whether a State adopts the unitary or non-unitary approach.

86. In States that continue to recognize retention-of-title transactions and financial leases as distinct security devices, it is, moreover, not obvious that the word “creation” is the most appropriate one to describe how the seller under a retention-of-title transaction or the lessor under a financial lease “acquire” their rights. For example, the lessor’s ownership rights are not created by the contract of lease; the lessor is already the owner at the time it concludes the lease with the lessee. Likewise, the seller that retains ownership is not creating a new right in its favour; it is merely continuing to assert the right of ownership that it had prior to concluding the agreement with the buyer. Nonetheless, for ease of expression, the agreements under which a lessor and a seller may continue to assert their ownership against a lessee or buyer to whom they have granted possession of a tangible asset will sometimes be described as agreements “creating” the acquisition financing rights in question. It may be argued however that, in those States where the buyer under a retention-of-title agreement acquires an expectancy of ownership, a new type of bifurcated ownership is created, and that, consequently, it is appropriate to speak of the “creation” of a retention-of-title right that is not exactly traditional ownership.

87. States that do not treat all acquisition financing transactions in the same way impose widely varying requirements for making acquisition rights effective as between the parties. To begin, the requirements imposed may vary within each State

depending on the specific acquisition financing transaction (retention-of-title, financial lease, security right) in question. In addition, they can vary widely among different States even in respect of the same type of acquisition financing transaction. That is, not all States conceive retention-of-title rights and financial lease rights identically and, therefore, not all impose the same requirement for creating or reserving such a right.

88. As an acquisition financing right, retention of title is usually seen as a property right that arises as part of a contract of sale (such as a clause in one of the documents evidencing the sale). It follows that, in many States, the formal requirements for the creation of a retention-of-title right are those applicable to contracts of sale generally, with no particular additional formalities required. Hence, if a State accepts that a contract for the sale of tangible assets may be concluded orally, the clause of the agreement providing that the seller retains ownership until full payment of the purchase price might also be oral. In such cases, the seller's retention-of-title may be agreed to orally, or by reference to correspondence between the parties, a purchase order or an invoice with printed general terms and conditions. These documents may not even bear the signature of the buyer, but the buyer may implicitly accept the terms and conditions they set out through the taking of delivery of the assets and payment of part of the purchase price as indicated, for example, in the purchase order or invoice. In other States, even though a regular contract of sale may be concluded orally, a writing (even if minimal), a date certain, notarization, or even registration may be required for a retention-of-title clause in a contract of sale to be effective even as between the parties.

89. Credit providers that deploy financial leases, hire-purchase agreements and related transactions also retain ownership because of the nature of those contracts. The effectiveness of, for example, the lessor's right as between the parties will be dependent upon the parties complying with the ordinary formalities for third-party effectiveness applicable to the particular financial lease or hire-purchase agreement in question.

90. In most States, only the actual seller or financial lessor may benefit from a retention-of-title right or a financial lease right (as the case may be) and be required to follow the formalities associated therewith. Other suppliers of acquisition credit, such as lenders, may not directly obtain either a retention-of-title right or a financial lease right. Rather, to do so, they must receive an assignment of the contract of sale from the seller or an assignment of the contract of lease from the lessor. Thus, the formalities for effectiveness of the right claimed by a lender are, first, those applicable to the initial transaction with the buyer or lessee, and second, those applicable to an assignment of that type of contract. In many of these States, it is also possible for a lender that supplies acquisition credit to take a security right. Nonetheless, these States typically do not permit such lenders to acquire the preferred rights of a seller that retains title, or even (in States that permit sellers to take a non-possessory security right), the preferred position that is afforded to sellers that take a security right.

91. There are, however, several reasons why States might wish to permit lenders to accede to the status of acquisition secured creditors directly (that is, without having to take an assignment of a retention-of-title right or a financial lease right, or a seller's own acquisition security right). First, once it is accepted that a buyer may grant security in its expectancy right, there is no reason in principle to restrict

lenders to non-acquisition security transactions. Second, permitting lenders to provide acquisition financing will enhance competition for credit as among sellers, lessors and lenders (which should have a beneficial impact on the availability and the cost of credit). Third, without the possibility of direct, lender-provided acquisition financing, lenders that wish to advance credit to their debtors-buyers against the expectancy right in assets being acquired, will not have a preferred priority position as against other secured creditors on that expectancy right. They will simply rank according to the date their security became effective against third parties. That is, a later-in-time lender that wishes to advance credit specifically to enable a debtor to acquire tangible assets will (in the absence of a subordination agreement) always rank after a general financier that has previously made its security effective against third parties.

92. The various States that do not treat sales with a retention-of-title clause or financial leases as security rights also take differing approaches to the extension of these rights into other assets. In some States, if assets subject to retention of title are commingled with other assets, the retention-of-title right is extinguished (in a few States, by contrast, the retention-of-title continues to be effective as between the parties; in these States, by exception to general principles of property law, as long as similar assets are found in the hands of the buyer, the seller need not undertake any further formality to preserve its right of ownership). Similarly, in most States, the retention-of-title right cannot be extended to assets that are processed or manufactured into new products, while in a small number of other States, the retention-of-title is automatically preserved when the assets are manufactured into a new product. In some States that take the latter approach, the seller is entitled automatically to claim a security right in the new product, while in other States the seller simply becomes an ordinary secured creditor. Some States also permit lessors to continue to claim ownership of leased assets that have been slightly modified or, depending on the terms of the lease, in the proceeds of an authorized disposition. In these cases as well, no additional steps are typically required in order to preserve effectiveness of the security right as between the parties in the modified assets or the proceeds.

93. There is a greater similarity in the principles governing the requirements for effectiveness of acquisition security rights as between the parties among various States that have adopted a fully integrated approach. Indeed, almost no differences in these requirements may be found. Moreover, within each State, the formal requirements for making an acquisition security right effective as between the parties are identical, regardless of whether the financing is provided by a seller, a financial lessor, a lender, or any other person. In addition, because acquisition secured credit is treated simply as a special category of secured financing (that is, because an acquisition security right is a species of security right), these formal requirements will be the same relatively minimal formalities as those required for non-acquisition secured transactions (e.g. a written and signed agreement identifying the parties and reasonably describing the assets sold and their price; see recommendations 13-15). Finally, because the acquisition security right is a security right, it will be automatically preserved in manufactured assets and in proceeds of disposition (see recommendations 19-22).

94. The difference between the two approaches and among the specific legal systems described above rarely lies in a significant way in the writing requirement.

That is, most of them would accept correspondence, an invoice, a purchase order or the like with general terms and conditions, whether they are in paper or electronic form. This is, moreover, the general position concerning a writing requirement that is recommended by the Guide (see recommendations 9 and 10). The difference seems to lie more in the requirement of a signature, which is often required for effectiveness as between the parties. Nonetheless, in some States the buyer's signature is not necessary as long as the retention-of-title seller, acquisition secured creditor or financial lessor is able to demonstrate by other evidence that the buyer or financial lessee has accepted the terms of the agreement. Such evidence could consist merely of the buyer's or financial lessee's acquisition and use of the assets without protest after having received the writing. Also, because so many transactions for the purchase of tangible assets are in fact well documented for other reasons, this issue rarely arises.

95. Under the unitary approach, the requirements for effectiveness as between the parties are the same as those applicable to non-acquisition security rights, and are identical regardless of the legal form (e.g. denominated security right, retention-of-title right, title resolution right, financial lease right) of the transaction (see recommendation 174).

96. If a non-unitary approach were adopted, States seeking to achieve the benefits of a regime that created equal competition for credit would have to develop a regime for creation of an acquisition security right that permits lenders to acquire the same preferred status that is given to retention-of-title sellers and financial lessors. To achieve this result, they would have to ensure that the rules governing effectiveness as between the parties would be functionally equivalent, regardless of the form of the acquisition financing transaction (see recommendation 185). In particular, the rules governing: (a) the capacity of parties to the contract; (b) the specific character and modalities of the obligation secured; (c) the objects upon which the acquisition financing right might be taken; (d) evidentiary obligations such as a writing and signature; and (e) the time of effectiveness of the agreement between the parties would have to be closely coordinated so as not to favour one type of acquisition financing transaction over another (see recommendation 185).

6. Effectiveness against third parties

(a) General

97. The Guide draws a distinction between effectiveness of a security right as between the grantor and the secured creditor and effectiveness of that right as against third parties (see the chapter on creation of a security right, paras. [...], and the chapter on third-party effectiveness of a security right, paras. [...]). The point has a particular importance in relation to acquisition financing rights since, depending on whether a unitary or non-unitary approach is followed, the distinction between these types of effectiveness may not actually exist.

98. Many States that do not treat retention-of-title rights and financial lease rights as security rights do not require these transactions to be registered. Nor do they require the seller or the lessor to take any other formal step beyond what is necessary to make the right effective between the parties in order to ensure its effectiveness as against third parties. To the contrary, in these States, upon the seller and buyer concluding the agreement of sale with a retention-of-title clause, the

seller's ownership right in the tangible assets that has been sold is effective as against all parties.

99. In some States, by contrast, registration of a retention-of-title right and a financial lease right is required (either generally or for particular types of tangible asset). In these States, it is often the case that registration is required only to make the seller's retention-of-title right effective as against third parties. Sometimes, however, no distinction is drawn between effectiveness of the retention-of-title right as between the parties and its effectiveness as against third parties. That is, in some States registration of retention-of-title right is viewed as a requirement for effectiveness even as between the parties. Not surprisingly, a similar diversity of approaches may also be found in relation to the formalities necessary to make a financial lease right effective against third parties.

100. Under all of these retention-of-title regimes, the seller that retains title retains ownership of the assets sold and delivered to the buyer. As a consequence, it will usually be the case that the buyer has no property rights in the assets being purchased until title passes, usually when the purchase price is paid in full. This means that, except in those legal systems in which the buyer has an ownership expectancy right to encumber, no other creditor of the buyer is able to claim rights in the tangible assets being purchased as long as the seller retains ownership. This would be the case even if another creditor provided credit to the buyer to purchase the asset and the value of the buyer's asset subject to the retention-of-title right was higher than the amount of the purchase price still owed to the seller. In such cases, the only asset of the buyer upon which another creditor could claim a security right would be an intangible asset (the right of the buyer to the value of the purchase price paid). An identical outcome would also result in the case of a financial lease. Unless the lease provides for a right of the lessee to buy the leased asset at the end of the lease and thus gives the lessee an ownership expectancy right that the lessee may encumber, the sole asset of the lessee upon which the lessee's creditors could claim security rights would be an intangible asset (the right of the lessee to the value of the rents paid).

101. States that do not recognize the right of a buyer that acquires assets under a retention-of-title transaction or a lessee under a financial lease to grant a security right in the assets purchased or leased either prevent or make it difficult for borrowers to use the full value of either the equity they may have acquired in their tangible assets subject to retention-of-title rights or financial lease rights. That is, the conceptual logic of a retention-of-title or a financial lease agreement disables the buyer from granting a non-possessory security right in the assets being acquired or leased. Interestingly, however, several of these same States permit a purchaser to grant multiple mortgages or hypothecs on immovable assets, with priority based on time of registration, even when the immovable assets have been sold under a retention-of-title transaction and the purchase price has not yet been paid in full.

102. In States that now follow a fully integrated approach, retention of title and its economic equivalents are subject to registration of a notice in the general security rights registry (or to some other formality for making the right effective against third parties) in the same way as any other secured transactions. Under this approach, moreover, the right of the seller that retains ownership by contract, or of the lessor that remains owner by virtue of the nature of the lease, is transformed into the right of an acquisition secured creditor. As a result, the buyer or lessee is able to

use the equity it has in the assets being purchased or leased as security for further credit. That is, the right of the retention-of-title seller or financial lessor that is made effective against third parties is not a right of ownership. It is, rather a security right with the same third-party effectiveness as arises in the case of a seller that sells the tangible assets outright and takes its own security right in the assets sold.

103. Under the unitary approach, the requirements for third-party effectiveness (except in respect of the acquisition of consumer goods; see recommendation 175 and paras. 114-117 below) are the same as those applicable to non-acquisition security rights and are identical regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction (see recommendation 174).

104. If a non-unitary approach were adopted, States would have to ensure that no substantial differences in requirements for third-party effectiveness exist between the different kinds of acquisition financing transactions (see recommendations 185 and 189). A number of rules will have to be closely coordinated so as not to favour one form of transaction over another and, in particular, the rules governing: (a) the modalities by which third-party effectiveness can be achieved; (b) the timing of third-party effectiveness when requirements are met; and (c) the consequences of third-party effectiveness on the right of the buyer or lessee to grant rights in the assets. Specifically, in order to maximize the buyer's or lessee's capacity to benefit from the tangible assets being acquired in the non-unitary approach, States would have to provide that they have the power to grant a security right in the assets subject to the retention-of-title or financial lease right (see recommendation 187).

(b) Third-party effectiveness of acquisition financing transactions generally

105. As noted in the chapter on the effectiveness of a security right against third parties, the general mechanism by which ordinary security rights may be effective against third parties is registration (see recommendation 32). As with ordinary security rights, registration is meant to provide a notice to third parties that such a right might exist and to serve as a basis for establishing priority between competing claimants. Generally, registration promotes credit market competition by providing information that enables financiers to better assess their risks.

106. For this reason, the Guide recommends that third-party effectiveness of all types of acquisition financing transaction (whether denominated as security rights, retention of title, financial leases or in some other manner) should usually be dependant on the registration of a notice in the general security rights registry. This notice would explicitly make mention of the fact that an acquisition security right is being claimed. Where the Guide also recommends other mechanisms to achieve third-party effectiveness for ordinary security rights (e.g. possession, registration in a specialized registry, notation on a title certificate), these mechanisms should also be available as alternative means to achieve third-party effectiveness of acquisition security rights (see recommendations 174 and 185).

107. Under the unitary approach, coordination of the registration of notices relating to acquisition and non-acquisition security rights in the general security rights registry will be necessary to promote certainty in the relative priority of competing claimants. In particular, it will be necessary for creditors to indicate in their notices that they are claiming an acquisition security right.

108. Under the non-unitary approach, the rules governing the registration of a notice with respect to retention-of-title rights and financial lease rights will also have to be coordinated with the general rules relating to the registration of a notice with respect to security rights. Doing so requires either adjusting the former to cohere with the latter or, less plausibly, adjusting the latter to cohere with the former, and establishing a general security rights registry in which notices relating to all such rights can be registered. Together, these steps will ensure certainty in the relative priority of competing claimants that hold different types of acquisition financing rights (for further discussion of the mechanics of registration, see chapter VI, The registry system).

109. The principles that should govern what are called priority conflicts under the unitary approach, including priority conflicts where different methods for achieving third-party effectiveness have been used (see recommendations 176-182), and what are often questions of third-party effectiveness under the non-unitary approach (see recommendations 188-190, 192 and 194) are discussed below in section A.7.

(c) Grace period for the registration of certain acquisition financing transactions

110. Many States historically did not require sellers to take further steps to make their rights effective as against third parties. Similarly, where a seller retained title, it was often not necessary to register the retention-of-title right (with very few exceptions). By contrast, and in keeping with the approach adopted by most States that have recently modernized their secured transactions law, the Guide recommends that registration (or some other step) be taken by sellers, financial lessors or lenders providing acquisition credit in order to achieve third-party effectiveness (see recommendations 174 and 189).

111. Where States require registration in the acquisition financing context, most seek to enhance the efficiency of the registration process by providing sellers and other suppliers of acquisition credit with a short “grace period” (e.g. 20 or 30 days) after delivery of the assets sold or leased to register a notice relating to the acquisition financing transaction in question. Such grace periods are found both in States that do not consider retention-of-title rights and financial lease rights to be security rights and in systems that consider all such rights to be acquisition security rights. Among other advantages, the use of the grace period permits sellers to deliver assets to the buyer without having to wait until they or any other supplier of acquisition credit registers a notice.

112. Under the unitary approach, if the notice is registered within the grace period, the right of an acquisition secured creditor in assets other than inventory has the same priority in relation to other claimants that it would have been able to assert had it registered at or before the time of delivery. This rule may be limited to assets other than inventory, as in the case of inventory, registration and notification of inventory financiers on record has to take place before delivery of the goods (see recommendation 176, alternatives A and B).

113. If a State were to adopt the non-unitary approach, the same rules relating to a grace period for registration and its effects should apply to all acquisition financing transactions, regardless of the legal form of the transaction (e.g. denominated security rights, retention-of-title rights, title resolution rights, financial lease rights) (see recommendation 189, alternatives A and B).

(d) Exceptions to registration for consumer transactions

114. In some States where the registration of a notice relating to acquisition financing transactions would otherwise be required, an exception is made when those transactions relate to consumer goods (for the definition of this term, see Introduction, section B, Terminology). This means that the seller or other supplier of acquisition credit relating to tangible assets bought for the buyer's personal, household or family purposes is not burdened with a requirement to register; nor, as a rule, is the seller or credit supplier in these cases required to follow any of the other steps by which third-party effectiveness is normally achieved. Such transactions become effective against third parties at the same time that they become effective as between the parties. The idea is that in such cases the need to warn potential third-party financiers is less acute (unless consumers quickly resell the goods), especially where the consumer goods are of low value. In other legal systems that generally require registration, only relatively low-value consumer transactions are exempted from the requirement to register (e.g. consumer transactions up to a maximum of Euros 3,000 or its equivalent, or transactions that are subject to the jurisdiction of small-claims courts).

115. In both types of system, the significant market involving automobile finance credit to consumers is usually served by a system that requires registration not in the general security rights registry, but rather in a specialized registry, or that requires the notation of a notice on a title certificate. Moreover, it is important to note that, in States that create an exemption from registration for consumer goods, the exception applies only to consumer transactions. In other words, the exception does not apply to a particular type of asset as such (i.e. consumer goods), but rather only to a type of transaction relating to those assets. It is still necessary to register a notice to achieve third-party effectiveness in assets normally sold to consumers if those assets are being sold to a wholesaler or a retailer as inventory.

116. The exemption from registration does extend to equipment and inventory bought on credit for the buyer's personal, family or household purposes. Nonetheless, if a grace period were adopted for registering the notice of an acquisition financing transaction relating to equipment in the general security rights registry, that grace period may, in itself, serve as the equivalent of an exemption for short-term credit transactions fully paid within the grace period because, as a practical matter, the acquisition financier would not have to register before the expiry of that period. As for equipment-related acquisition financing transactions with longer repayment periods, and inventory-related transactions in general, an exemption may not be necessary if the acquisition financier could register a single notice in the secured transactions registry for a series of short-term transactions occurring over a longer period of time (e.g. five years) (see recommendations 182 and 196). These issues are fully discussed below in section A.7.

117. Under the unitary approach, the exemption from registration (or other method for achieving third-party effectiveness) for consumer transactions would apply regardless of whether the acquisition secured creditor were a seller, lessor or lender since they would all be claiming identical rights. Were a non-unitary approach to be adopted, the rules relating to the exemption from registration (or other method for achieving third-party effectiveness) for transactions relating to consumer goods should produce the same consequences regardless of the legal form

(e.g. denominated security right, retention-of-title right or financial lease right) of the transaction (see recommendations 175 and 188).

7. Priority

(a) General

118. The Guide adopts the term priority to deal with competitions between all persons that may have rights in assets subject to a security right (for the definition of the terms “priority” and “competing claimant”, see Introduction, section B, Terminology). The concept of priority thus includes competitions both with other creditors (secured creditors, other acquisition secured creditors, creditors that may avail themselves of a statutory preference and judgement creditors) and other claimants (including prior owners, buyers, lessees, licensees and the insolvency representative). Nevertheless, some States (and especially some States among those which do not consider retention-of-title rights and financial-lease rights to be acquisition security rights) adopt a more restrictive view of the notion of priority. Only competitions between creditors are considered to involve priority claims. Other potential conflicts (notably between prior owners and subsequent purchasers) are resolved by reference to the right of ownership. This said, however the competition between various potential claimants is characterized, the relative rights of each must be carefully specified.

(b) Priority position of providers of acquisition financing

119. The Guide recommends in the chapter on the creation of a security right (effectiveness as between the parties) that an ordinary security right may be taken in both present and future (or after-acquired) assets (see recommendation 13). It also recommends in the chapter on the priority of a security right that priority generally be determined by the date of registration of a notice with respect to a security right, even in relation to after-acquired assets (see recommendations 73 and 96). In order to promote the provision of new credit for the acquisition of additional assets, it is necessary to establish special rules applicable to competitions between retention-of-title sellers, financial lessors and acquisition secured creditors on the one hand, and pre-existing non-acquisition secured creditors holding rights in future assets of the grantor on the other.

120. In States that do not treat retention-of-title rights and financial lease rights as security rights, the relative priority of rights is decided by reference to the seller's or lessor's right of ownership. The retention-of-title seller or financial lessor effectively prevails with respect to the assets sold over all other competing claimants whose rights derive from the buyer or lessee (except certain bona fide buyers). Moreover, in most such systems, until the buyer or lessee acquires title to the assets (by fully paying the purchase price or, in certain cases, by making the last lease payment), none of the buyer's or lessee's other creditors (including secured creditors claiming a security right in after-acquired assets or creditors attempting to claim an acquisition security right in the assets) are able to claim rights in the assets being purchased or subject to the lease. At best, these secured creditors can claim a right in the value paid by the buyer or lessee, provided they have included that type of intangible asset in the description of the assets covered by their security right. Similarly, judgement creditors and the insolvency administrator may claim the buyer's or lessee's rights, but unless the legal system permits the buyer or financial

lessee to deal with its expectancy right, neither they nor secured creditors can seize the asset itself.

121. Finally, in most such States, there can never be a competition between lenders claiming as providers of acquisition credit and a retention-of-title seller or financial lessor. First, for reasons given, the buyer or lessee has no assets upon which the lender could actually claim an acquisition security right. Second, it is rarely the case that the lender could acquire the expectancy right of the buyer or lessee (for example, by taking a conditional assignment of the right subject to an obligation to retransfer it to the buyer or lessee when the loan is paid); and even if it could take such a right, the right would normally be seen as a type of pledge, or sale with a right of redemption, and not as a right arising in an acquisition financing transaction. Were a legal system to permit such transactions, the lender that acquired the ownership expectancy right would have a right that could be set up as against any other claimants asserting rights derived from the buyer or lessee (including buyers, secured creditors, judgement creditors and the insolvency representative), although not as against the retention-of-title seller or financial lessor. In other words, in these legal systems, the primary (if not the only) way in which a lender could acquire a preferred status as against other creditors and claimants would be to purchase the seller's or lessor's retention-of-title or financial lease right.

122. In States that follow the fully integrated approach, the priority rights of a seller or a lessor that provides acquisition financing are equally protected. Provided that the retention-of-title seller, financial lessor or similar title claimant registers a notice in the general security rights registry within a short grace period and, in the case of inventory, takes certain other steps discussed below, they will have priority over all other claimants (except certain bona fide buyers). Moreover, in these States, a lender that provides financing to enable a buyer to purchase assets will also be an acquisition secured creditor with priority over other claimants in the same manner as a seller or lessor. This means that, unlike the situation in States that do not follow the fully integrated approach, there can be more than one creditor claiming an acquisition security right. As a consequence, under the fully integrated approach, a further priority rule is necessary to deal with these cases. Invariably, these States provide that the seller that purports to retain title, the financial lessor, and the seller that transfers title but takes an ordinary acquisition security right will have priority over any other supplier of acquisition financing, even if that other financier (e.g. a bank or other lender) had made its acquisition security right effective against third parties before the seller or lessor did so. Thus, in States that follow the fully integrated approach, the seller and lessor are able to achieve the same preferred priority position in relation to all other claimants as the retention-of-title seller or finance lessor in a non-unitary system.

123. While rights under acquisition financing transactions will normally be made effective against third parties by registration in the general security rights registry, many States also contemplate other methods for achieving third-party effectiveness. In these States, one such method (i.e. possession by the secured creditor) will generally produce the same consequences as registration, and may be looked upon as an alternative to registration. As a result, should a supplier of acquisition financing such as a retention-of-title seller, a financial lessor or a seller that takes an acquisition security right make its rights effective against third parties by possession within the stipulated grace period (given the purposes of acquisition financing, a

highly implausible but theoretically possible situation), the general priority principle would be applicable. Where States also permit lenders to obtain acquisition security rights, an identical outcome would result (see recommendations 174 and 185).

124. Where the non-acquisition secured creditor makes its security right effective against third parties by registration in a specialized registry, the Guide recommends that the registration in the specialized registry will give the registering creditor priority over even prior registrations in the general security rights registry or third-party effectiveness achieved by a prior possession (see recommendation 74). In order to enhance the usefulness of the specialized registries, a similar rule should apply to suppliers of acquisition financing. They should not be able to obtain a preferred priority position simply by registration in the general security rights registry or possession within the grace period (see recommendation 177). By implication, it would follow that, as a general principle, and subject to any superseding law, an acquisition security right that is registered in the specialized registry would have priority over even a prior non-acquisition security right registered in that specialized registry. Nonetheless, in States that do not treat retention-of-title and financial lease rights as security rights, a certain nuance is necessary. In these States, the retention-of-title seller or financial lessor will be the party that is registered as owner in the specialized registry. No other creditor of the buyer or lessor can register a security right in that register, so the seller or lessor will achieve priority simply by virtue of its registered ownership right. Only in cases where the seller transfers title to the buyer and takes an acquisition security right would the principle relating to the priority of registration in specialized registries be applicable.

125. Under the unitary approach, all acquisition secured creditors are subject to the same priority regime and must take identical steps in order to assure their priority position. Having done so, they are entitled to claim priority over even pre-existing creditors that have non-acquisition security rights in the grantor's after-acquired (or future) assets. Because the acquisition security right overcomes the general rule that fixes priority based on the time of registration, this preferred position of an acquisition security right is often referred to as a "super-priority". In a competition between acquisition secured creditors that have all taken the necessary steps to make their rights effective against third parties, the time of registration will generally determine their relative priority under the same principles as apply to non-acquisition security rights (see recommendations 174 and 176). The only difference between different categories of acquisition secured creditors is that in a competition between a seller or a lessor and another creditor, all of whom are asserting an acquisition security right, the seller or lessor would always have priority, regardless of the respective dates of registration of their rights (see recommendation 178).

126. If the non-unitary approach were adopted to achieve functional equivalence, States would likely have to make slight adjustments to their existing regime. First, it would be necessary to permit providers of acquisition financing, other than retention-of-title sellers and financial lessors, to acquire the preferred priority status of sellers and lessors by taking an acquisition security right. In such cases, it is important that equivalent rules relating to the priority of the seller's or lessor's rights are established regardless of the legal form (e.g. denominated security right, retention of title, title resolution, financial lease) of the transaction

(see recommendations 184 and 185). Second, and concomitantly, in a competition between a retention-of-title seller, finance lessor or seller that takes an acquisition security right and a supplier of acquisition financing that is not a seller or lessor, it would be necessary to ensure that priority goes to the seller or lessor, regardless of the time at which these various acquisition financing rights and acquisition security rights were registered (see recommendation 195). This will follow as a matter of course in cases involving a seller that retains title or a financial lessor, but where the seller transfers title and takes an acquisition security right, it would be necessary to specify that the seller's acquisition security right will always have priority over any other acquisition security right.

(c) Priority of acquisition financing rights in consumer goods

127. The general priority principles just noted establish a framework for organizing the rights of providers of acquisition financing where more than one of them may be in competition over the same tangible asset. However, not all tangible assets serve the same economic purpose and are subject to the same business dealings. Consequently, many States have drawn distinctions between types of such assets (notably, between equipment and inventory, but often between commercial assets and consumer goods as well) in the non-acquisition financing context. For example, in some States, different denominated security devices are available depending on the type of asset (an agricultural or commercial pledge for equipment, a transfer-of-property-in-stock and a floating charge for inventory). In States with fully integrated systems involving a generic concept of a security right, these different types of security device have disappeared. However, even in such States, the distinctions between different types of asset remain where acquisition security rights are an issue. Thus, it is instructive to examine how States have addressed acquisition financing in relation to different categories of asset.

128. The Guide recommends, by exception to the general rule, that the rights of providers of acquisition financing for consumer goods be effective as against third parties without registration in the general security rights registry or creditor possession (see recommendation 175 and 188). In other words, the relevant time for fixing effectiveness against third parties is the time when the agreement was effective between the seller, lessor or lender and the buyer, lessee or borrower, as the case may be. Consequently, the priority of a retention-of-title right or financial lease right over any non-acquisition security right created by the buyer, lessee or borrower is acquired automatically from the moment the right becomes effective as between the parties.

129. Under the unitary approach, providers of acquisition financing for consumer goods are able to claim a super-priority over non-acquisition secured creditors without the need to make the right effective against third parties by registration or possession (see recommendation 175).

130. States that adopt a non-unitary approach would have to provide equivalent rules giving priority to the seller's or lessor's rights over pre-existing rights in consumer goods regardless of the legal form (e.g. denominated security right, retention-of-title right or financial lease right) of the transaction. This priority could find its source either in the seller's or lessor's ownership, or in the case of a seller or lender that takes an acquisition security right, in the general principle that applies to acquisition security rights in consumer goods (see recommendation 188).

(d) Priority of acquisition financing rights in tangible assets other than inventory or consumer goods

131. As noted, in most States that do not consider retention-of-title and financial lease rights to be security rights, the issue of competition between providers of acquisition financing and between acquisition and non-acquisition financiers does not normally arise. Pre-existing non-acquisition secured creditors are rarely permitted to acquire rights in assets of which the grantor is not yet owner, and other lenders are generally not entitled to claim a special priority when they finance a buyer's acquisition of tangible assets. Moreover, even where it is possible to take a security right in the expectancy of ownership, that expectancy will only mature once the seller or lessor is fully paid. Only at this point can there be a real competition between claimants that derive their rights from the buyer or lessee (e.g. secured creditors, judgement creditors, the insolvency representative, buyers and lessees). Where, however, the seller itself takes an acquisition security right rather than retaining title and is in competition with a pre-existing non-acquisition security right, it is necessary to provide rules to determine when the seller's acquisition security right will have priority. Where equipment is involved, there is typically a single asset (or at most a relatively small number of individually identifiable assets) being sold or leased, and these assets are normally not meant to be resold in the short term. For this reason most States do not require retention-of-title sellers or financial lessors of equipment to take any further steps beyond those necessary to achieve third-party effectiveness as a condition of asserting their ownership.

132. In States that follow a fully integrated approach, the protection of the acquisition secured creditor's rights will have a common basis. Upon registration, before or within a grace period after delivery of the tangible assets to the grantor, the acquisition security right in the new equipment is given priority over pre-existing security rights in future equipment of the grantor. Moreover, in these States as well, because equipment financing usually involves either a single asset (or at most a relatively small number of individually identifiable assets) not normally meant to be resold in the short term, acquisition secured creditors are typically not required to take any further steps beyond those necessary to achieve third-party effectiveness as a condition of asserting their acquisition security right.

133. Under the unitary approach, all acquisition secured creditors of equipment are able to claim a super-priority over non-acquisition secured creditors for their acquisition security right, provided that they register a notice indicating that they are claiming such a right in the general secured rights registry within the stipulated grace period (see recommendation 176).

134. States that adopt the non-unitary approach would have to provide equivalent rules relating to the priority (or, in the terminology of the non-unitary approach, the third-party effectiveness) of the seller's or lessor's rights over pre-existing rights in future equipment regardless of the legal form (e.g. denominated security right, retention-of-title right or financial lease right) of the transaction. That is, even though the buyer or lessee is authorized to grant a security right in equipment over which it will only have an expectancy right until the purchase price is fully paid or the financial lease concludes, and even if that security right covers future or after-acquired equipment and is made effective against third parties prior to the date of the sale, the retention-of-title seller (or similar acquisition financier) will have priority if it registers a notice of its rights within the same grace period given to an

acquisition financier. Similarly, under this approach, a seller that transfers title but retains an acquisition security right, or a lender that supplies acquisition financing and takes an acquisition security right, will also have priority if it registers a notice within the indicated grace period (see recommendation 189).

(e) Priority of acquisition financing rights in inventory

135. Frequently, the competition between a supplier of acquisition financing and a non-acquisition security right arises in relation to inventory. In such cases, different policy considerations from those applicable to the acquisition of equipment are at issue. Unlike equipment financiers, inventory financiers typically extend credit in reliance upon a pool of existing or future inventory on a short-term basis and perhaps even on a daily basis. The pool of inventory may be constantly changing as some inventory is sold and new inventory is manufactured or acquired. In order to obtain a new inventory credit, the grantor usually would present the lender with invoices or certifications indicating the actual status of the inventory serving as security for the new credit.

136. In States that do not treat retention-of-title and financial lease rights as security rights, the relative priority (or third-party effectiveness) of rights is decided by reference to the seller's or lessor's right of ownership. It is implausible that inventory would be acquired under a financial lease, since the principal characteristic of inventory is that it will be sold. In cases involving retention-of-title rights, the position of a lender that finances the acquisition of inventory is especially precarious. Future advances will usually be made on the assumption that all new inventories are acquired under a retention-of-title transaction. It then becomes necessary for the creditor to determine what inventory has actually been fully paid. This has the effect of complicating a borrower's efforts to obtain future advances secured by the pool of inventory. Nonetheless, the seller will have priority based on its ownership for inventory not yet paid for; only once the inventory is paid for by the buyer may other creditors assert security rights in that inventory.

137. In States that follow the fully integrated approach, the rights of the general inventory financier are more secure. Where the additional assets acquired by the grantor are inventory, the acquisition security right will have priority over a non-acquisition security right in future inventory if the registration of a notice in the general security rights registry is made prior to the delivery of the inventory to the grantor. In addition, in some States that follow the fully integrated approach, pre-existing inventory financiers that have registered their rights must be directly notified that a higher-ranking acquisition security right is being claimed in the new inventory being supplied. The reason for this rule is that it would not be efficient to require the non-acquisition inventory financier to search the general security rights registry every time it advanced credit in reliance upon a pool of ever-changing inventory. In order to avoid placing an undue burden on acquisition secured creditors, however, a single, general notification to pre-existing non-acquisition inventory financiers on record may be effective for all shipments to the same buyer occurring during a significant period of time (e.g. five years or the same period that registration lasts to make a security right effective against third parties). This would mean that, once notification had been given to these pre-existing non-acquisition inventory financiers, it would not be necessary to give a new notification within the

given time period for each of the multiple inventory transactions between the acquisition secured creditor and the party acquiring the inventory.

138. Under the unitary approach, the additional requirements usually found in States that now follow the fully integrated approach are adopted for acquisition security rights in inventory. That is, acquisition secured creditors are able to claim a super-priority over non-acquisition inventory financiers for their acquisition security right only if, prior to the delivery of the inventory to the grantor, they register a notice in the general security rights registry indicating that they are claiming an acquisition security right and they also notify in writing earlier registered non-acquisition financiers (see recommendation 176, alternative A). Under this approach, acquisition secured creditors do not have a grace period after the buyer obtains possession of the assets within which they may register a notice that they are claiming an acquisition security right.

139. While all States that have to date adopted the fully integrated approach take the above view, it is possible to imagine that no distinction should be drawn between inventory and assets other than inventory and consumer goods. If such were the case, the principles governing assets other than inventory would also apply to acquisition security rights in inventory. In order to maintain parallelism between the unitary and non-unitary approaches, the Guide presents these options in recommendations 176 and 189 as alternative A and alternative B.

140. If a State were to adopt a non-unitary approach, it would face a similar choice. Under alternative A in recommendation 189 of the non-unitary approach, equivalent rules relating to the priority of the seller's rights over pre-existing rights in future inventory should be established regardless of the legal form (e.g. denominated security right, retention-of-title right or financial lease right) of the transaction. That is, notwithstanding that the retention-of-title seller remains the owner of the assets delivered, the rules governing the sale of inventory should be adjusted so that the seller's title will have priority over pre-existing rights in future inventory only under the same conditions as its rights would have priority were they to arise under an acquisition security right taken by that seller (see recommendation 189). In other words, under alternative A, the retention-of-title seller or the seller or lender claiming an acquisition security right would be required, prior to delivery of the inventory to the buyer, to register a notice indicating that it is claiming an acquisition security right in the general security rights registry and also notify in writing earlier registered non-acquisition financiers.

141. Under alternative B in recommendation 189 of the non-unitary approach as recommended in the Guide, no distinction would be drawn between equipment and inventory. A retention-of-title seller, or a seller or lender claiming an acquisition security right in inventory, would only be required to register a notice indicating that it is claiming an acquisition security right in the general security rights registry either before, or within the indicated grace period after, the buyer obtains possession of the assets.

(f) Multiple acquisition financing transactions

142. In many situations, a seller or other supplier of acquisition financing will provide financing to permit the acquisition of several assets. This could involve, for example, multiple sales with multiple deliveries of inventory or multiple sales of

several pieces of equipment. In these situations, it is necessary to decide, as a matter of policy, whether the supplier of acquisition financing should benefit from its special priority rights over all equipment or inventory financed by it, without the need to identify the purchase price due under each particular sale. If so, the legal system in question is said to permit “cross-collateralization”.

143. In most States that do not treat retention-of-title transactions and financial leases as security devices, the issue of cross-collateralization usually does not arise. In the normal case of a retention-of-title sale or similar title transaction, the contract of sale or lease applies only to the specific assets sold or leased under that contract. Thus, while the same agreement may cover multiple deliveries, it would not cover multiple sales. The priority claim of the seller or lessor as owner would relate to the specifics of each sale or lease. Some of these States do, however, permit the retention-of-title right to be enlarged by providing, for example, that the parties may agree to an “all monies” or “current account” clause where inventory is being sold. When such clauses are used, the seller retains ownership of the assets sold until all debts owing from the buyer to the seller have been discharged and not just those arising from the particular contract of sale in question. In some States, however, retention-of-title sales with “all monies” or “current account” clauses are often characterized by courts as security devices.

144. In States that follow the fully integrated approach, the usual rule is that the super-priority of acquisition security rights, at least in inventory, is not impaired by cross-collateralization. This means that the acquisition secured creditor may claim its preferred priority position in relation to the financed inventory without being obliged to specifically link any outstanding indebtedness to any particular sale or lease transaction. In such cases, the special priority right does not extend to other inventory or assets, the acquisition of which was not financed by that acquisition secured creditor.

145. Under the unitary approach, the goal is to permit a maximum of flexibility to acquisition secured creditors that provide financing for the acquisition of inventory, and to minimize the transactional paperwork associated with multiple acquisition transactions involving the same acquisition secured creditor. For this reason a single registration will be sufficient to cover multiple transactions and a single notice sent to creditors with security rights in after-acquired inventory of the type being supplied may cover acquisition security rights under multiple transactions between the same parties without the need to identify each transaction (see recommendations 65, 175 and 176, alternative A, subparagraph (c), and alternative B, subparagraph (b)).

146. Under the non-unitary approach, because a contract of sale or lease normally applies only to the specific assets sold, it would be necessary to modify the rules relating to retention-of-title rights and financial lease rights so as to permit cross-collateralization. Moreover, under alternative A of recommendation 189 in relation to inventory, should a seller or any acquisition secured creditor that is not a seller take an acquisition security right in the assets, the seller or other financier should be enabled to exercise a right of cross-collateralization in the same manner as under the unitary regime (see recommendation 190). Should alternative B of recommendation 189 be adopted, no notification of the retention-of-title, financial lease or acquisition security right would have to be sent in order for the supplier of acquisition finance to claim the preferred priority position.

(g) Priority of rights of acquisition financing providers as against the rights of judgement creditors

147. In the chapter on the priority of a security right, the Guide recommends that the rights of creditors that obtain a judgement and take the steps necessary to acquire rights in a judgement debtor's assets will generally have priority over existing security rights for advances made after the existing secured creditors are informed of the judgement creditor's rights (see recommendation 81). When the competing right in question is a retention-of-title right, a financial lease right or an acquisition security right, a slightly different set of considerations, depending on the kind of tangible assets at issue, must be taken into account. For example, if the tangible assets are consumer goods, the provider of acquisition financing is not required to register or take possession of the assets in order to make its rights effective against third parties. Hence the retention-of-title seller or financial lessor as an owner upon conclusion of the transaction will not be in a priority competition with a judgement creditor since the judgement creditor cannot seize the assets of a person other than its debtor. Similarly, in the case of consumer goods, conflicts between an acquisition secured creditor and a judgement creditor will be rare since the consumer transaction will rarely involve future advances.

148. If the assets are inventory, the provider of acquisition financing must have possession of the assets or have registered its rights and notified already registered third parties of its rights prior to the buyer obtaining possession of the inventory. Hence the judgement creditor will always be on notice of the acquisition financier's or acquisition secured creditor's potential rights. However, in one case (that involving equipment), the provider of acquisition financing is given a grace period within which to register its rights. Nonetheless, as in the case of consumer goods, it is seldom the case that a provider of acquisition financing for equipment will be making future advances. This said, when a judgement creditor seeks to enforce its judgement against its debtor's assets, it should not generally be able to defeat the rights of a provider of acquisition financing that adds new value to the judgement debtor's estate.

149. If the unitary approach is adopted, it should be provided that, as long as an acquisition secured creditor makes its rights effective against third parties within the grace period, it will have priority even over judgement creditors that register their judgement during that grace period (see recommendation 179).

150. If the non-unitary approach is adopted, a similar protection should be afforded to retention-of-title sellers, financial lessors and acquisition secured creditors that register a notice of their acquisition security right within the indicated grace period (see recommendation 189). If alternative A were adopted, this principle would apply only in the case where the acquisition of equipment is being financed. By contrast, if alternative B were adopted, the grace period would also apply to inventory, and the recommendation would apply to cases where the acquisition of either equipment or inventory is being financed.

(h) Priority of rights of acquisition financing providers in attachments to movable property and masses or products

151. The Guide recommends in the chapter on the priority of a security right that a security right in an attachment to movable assets that is made effective against

third parties by registration in a specialized registry or by a notation on a title certificate has priority against a security right in the related assets that is registered subsequently in the general security rights registry (see recommendation 86). This recommendation rests on the fact that security rights that are effective against third parties remain effective even after the assets that they encumber have become attached to other assets. In such cases, if two or more security rights encumber the assets at the time of attachment, they would maintain their relative priority following attachment. In respect of a mass or product (or, in other words, commingled assets), the Guide recommends that the security rights continue into the mass or product, and if there are two or more, they retain their relative priority in the mass or product (see recommendation 87).

152. In both situations, however, it is also necessary to determine the relative priority of rights taken in the different tangible assets that are united by attachment or commingled. The Guide provides that the regular priority rules apply so that the time of registration in the general security rights registry would determine priority, unless one of the security rights was an acquisition security right. An acquisition security right taken in a part of commingled assets would have priority over an earlier registered non-acquisition security right (and presumably even an acquisition security right) granted by the same grantor in the whole mass or product (see recommendation 89). The Guide does not, however, take a position on whether an acquisition security right in an attachment should have priority over an earlier-registered non-acquisition (or even acquisition) security right granted by the same grantor in the tangible assets to which the attachment is attached.

153. In States that do not consider retention-of-title rights and financial lease rights as security rights, the general priority rules set out in the chapter on priority of a security right would not directly apply to acquisition financing. That chapter deals with situations where all forms of secured transaction are treated as security rights under the general unitary and functional approach. In the acquisition financing context, however, the relative rights of the parties depends on general rules of property law governing attachments. Normally, if the attached asset can be detached without damaging the assets to which it is attached, the retention-of-title seller would retain its ownership in the attachment. If the attachment could not be so removed, it is necessary to determine whether the attachment or the asset to which it is attached is the more valuable. If the tangible asset in which a seller has retained ownership is more valuable, the retention-of-title seller acquires ownership of the whole, subject only to an obligation to pay the value of the other asset. Conversely, if the tangible asset in which a seller has retained ownership is less valuable, the retention-of-title seller loses its ownership and merely has a claim against the new owner for the value of its former asset.

154. Under the unitary approach, acquisition secured creditors with rights in attachments or in assets that are commingled are generally able to claim a super-priority over non-acquisition secured creditors. That is, they will have priority over other secured creditors claiming a right in the attachment or in the tangible assets that are being commingled or processed. They will also have priority over non-acquisition secured creditors of the assets to which the attachment is attached, at least in so far as the value of the attachment is concerned, and they will have priority over non-acquisition secured creditors with security over the entire mass or product (see recommendations 87-89).

155. If a State were to adopt the non-unitary approach, equivalent rules relating to the priority of the seller's rights over other rights in the attachment or the tangible assets to be commingled or processed should be established regardless of the legal form (e.g. denominated security right, retention-of-title right or financial lease right) of the transaction. In other words, notwithstanding that the retention-of-title seller of an attachment might lose its ownership upon attachment, the seller should be able to claim its priority either in the share of the mass or product that it sold, or upon the attachment that it sold. The exact mechanism by which the rules of attachments to movable assets would have to be adjusted depends on the detail of the law in each particular State that chooses to adopt the non-unitary approach.

(i) Priority of rights of acquisition financing providers in attachments to immovable property

156. In the chapter on the priority of a security right, the Guide recommends that, after attachment, a security right in attachments to immovable property that is made effective against third parties under immovable property law has priority over a security right in those attachments made effective against third parties under the law relating to secured transactions. Conversely, if the security right in tangible assets is made effective against third parties before attachment and is registered in the immovable registry, it will have priority over subsequently registered security rights in the immovable property (see recommendations 84 and 85). The logic of these provisions should also apply to retention-of-title rights, financial lease rights and acquisition security rights.

157. The rights of a provider of acquisition financing in a tangible asset that will become an attachment should have priority over existing encumbrances on the immovable property provided that a notice of the right of the acquisition financing provider is registered in the immovable registry within a reasonable period after attachment. In this case, the person claiming an existing encumbrance on the immovable property made its advances on the basis of the value of the immovable property at the time of the advances and has no pre-existing expectation that the attachment would be available to satisfy its claim. In cases where the pre-existing encumbrance on the immovable property secures a loan that is intended to finance construction, this same assumption would not hold, and the rationale for preserving the preferred priority of the supplier of acquisition financing is less compelling.

158. Under the unitary approach, a single rule governing these cases is possible since the claim of the acquisition secured creditor will always be a security right (see recommendation 180). The acquisition secured creditor that takes the steps necessary to make its right effective against third parties will have priority, except as against a construction loan that is secured by the immovable property.

159. Should a State adopt the non-unitary approach, however, it will be necessary to adjust the rules relating to attachments to achieve a result that is functionally equivalent regardless of the form of the transaction. That is, it would be necessary to specify that the retention-of-title right and a financial lease right will normally continue to be effective against third parties with existing rights in the immovable property, provided they register their rights in the immovable property registry within a short time after the asset becomes an attachment to the immovable property. By contrast, the retention-of-title seller and financial lessor would lose their priority to a construction financier even when the title to the assets being

attached does not automatically pass to the owner of the immovable property (as would be the case for assets sold under retention of title or leased under a financial lease that is fully incorporated into the immovable property) (see recommendation 192). Likewise, a seller or lender with an acquisition security right will have priority should it re-register its rights in the immovable property registry within the same short period.

(j) Acquisition financing priority in proceeds generally

160. In many cases, the supplier of acquisition financing knows that the buyer will resell the assets being acquired. This is obviously the case with inventory, but sometimes a manufacturer or other business enterprise will sell existing equipment in order to acquire upgraded equipment. As discussed in the chapter on the creation of a security right, an ordinary security right in tangible assets will normally extend into the proceeds of its disposition (see recommendation 19). In the case of acquisition financing, this extension of a security right into proceeds raises three distinct policy questions. The first relates to whether a similar extension into proceeds should be possible where the acquisition financing is by way of retention-of-title right or financial lease right. The second policy question is whether the special acquisition financing priority should also extend to proceeds. The third policy question is whether the rules for making such a claim should be the same regardless of whether equipment or inventory is being purchased.

161. While it is extremely rare, some States that do not treat retention-of-title rights and financial lease rights as security rights permit the seller or lessor to extend its ownership claim into proceeds generated by the sale of the assets when these proceeds are tangible assets of the same type as sold, for example, a vehicle received by the seller as a trade-in upon the purchase of a new vehicle. When the proceeds of disposition are in the form of receivables, the ownership right is invariably extinguished. Nonetheless, in some States, the retention-of-title right and financial lease right in intangible proceeds are converted into a security right, although, once again this is not the common practice.

162. The Guide takes the position that a retention-of-title right or a financial lease right should permit the seller or lessor to claim a right in proceeds and that, consistent with the position found in almost all of those few States which already extend the retention-of-title right into proceeds, this right should always be a security right and not a continuation of the ownership right (see recommendation 193). The second and third policy questions relating to proceeds of assets sold under retention-of-title or subject to a financial lease are discussed in the next two subsections.

(k) Acquisition financing priority in proceeds of tangible assets other than inventory or consumer goods

163. In States that do not treat retention-of-title rights and financial lease rights as security rights, the issue of a seller or lessor claiming special rights in proceeds generated by the sale of equipment, while theoretically possible, usually does not arise. This is because the law of sale or lease usually limits the seller's retained ownership right or the lessor's ownership only to the assets sold or leased. In cases of unauthorized disposition, the seller or lessor may be able to recover the asset in kind from the person to which it has been transferred. However, sometimes the

assets cannot be found, even though assets or money received for their disposition can be identified. In addition, sometimes the seller or lessor permits the sale on condition that the seller's or lessor's title is extended to the proceeds of the assets in which the seller or lessor retained title. As noted, in these two situations, very few States permit the seller or lessor to claim ownership by real subrogation into the proceeds of the assets sold under a retention-of-title or financial lease transaction that are tangible assets of the same type. Where the contract is a sale, it is common to speak of the seller's rights as an "extended retention of title". In the majority of cases where such an extension is possible, however, the retention-of-title right or financial lease right is converted into a security right in the proceeds.

164. In some States that follow the fully integrated approach, the special priority of an acquisition security right extends only to the assets the acquisition of which is financed, while in other States the special priority may extend to its identifiable proceeds as well, at least in the case of transactions relating to equipment. Since the grantor does not usually acquire equipment with a view to immediate resale, there is little concern about prejudicing other secured creditors if the special priority of an acquisition security right in equipment is extended to the proceeds of its disposition. If the equipment becomes obsolete or is no longer needed by the grantor, and is later sold or otherwise disposed of by the grantor, the secured creditor will often be approached by the grantor for a release of the security right to enable the grantor to dispose of the equipment free of the security right. Absent that release, the disposition would be subject to the security right and it would be unlikely that a buyer or other transferee would pay full value to acquire the equipment. In exchange for the release, the secured creditor will typically control the payment of the proceeds, for example by requiring that the proceeds of the disposition be paid directly to the secured creditor for application to the secured obligations. Under these circumstances, it is unlikely that another creditor would rely upon a security right taken directly in an asset of the grantor that represents proceeds of the disposition of the equipment initially subject to an acquisition security right.

165. Under the unitary approach, the assumption is that equipment is not normally subject to ongoing turnover. The acquisition secured creditor's control over the disposition of the asset supports the conclusion that the special priority afforded to acquisition secured creditors should be extended into proceeds of disposition and products of the assets covered by the acquisition security right (see recommendation 181).

166. If a State adopts the non-unitary approach, the rules relating to the maintenance of a special priority in proceeds of equipment should produce the same consequences as against other claimants regardless of the legal form (e.g. denominated security right, retention-of-title right or financial lease right) of the acquisition financing transaction. That is, the special priority of the retention-of-title seller or lessor of equipment should be claimable in the proceeds of disposition, either by continuing the seller's or lessor's title in the proceeds or by giving the seller or lessor a replacement security right with the same priority claim as a seller or lender that took an acquisition security right. It would also be necessary to provide for the third-party effectiveness of this replacement right in proceeds through rules relating to a registration of a notice or another method for achieving third-party effectiveness, as well as to provide that, in such cases, this right has the

same priority against other claimants as if it were an acquisition security right taken by a seller or a lender (see recommendation 195).

(I) Acquisition financing priority in proceeds of inventory

167. The situation in relation to proceeds of inventory is different from that relating to proceeds of equipment for three reasons. First, inventory is expected to be sold in the ordinary course of business. Second, the proceeds of the sale of inventory will predominantly consist of receivables rather than some combination of a trade-in and receivables. That is, to take an example, it would not normally be the case that a seller of clothing or furniture would take back the purchaser's used clothing or furniture in partial payment of the purchase price. Third, it will often be the case that a pre-existing secured creditor, in extending working-capital credit to the grantor, will be advancing credit to the grantor on a periodic or even daily basis in reliance upon its superior security right in an ever-changing pool of existing and future receivables as original encumbered assets. It may not be possible or practical for the grantor to segregate the receivables that are the proceeds of the inventory subject to an acquisition financing right or an acquisition security right from other receivables over which a pre-existing creditor has taken a security right. Even if it were possible or practical for the grantor to segregate the proceeds generated by the disposition of inventory over which an acquisition financing right or an acquisition security right had been granted, it would have to do so in a way that was transparent to both financiers and that minimized monitoring by both financiers.

168. Without such a prompt segregation that is transparent to both financiers and that minimizes monitoring, there is a significant risk that the pre-existing secured creditor extending credit against receivables would mistakenly assume that it had a higher-ranking security right in all of the grantor's receivables. There is likewise a risk of a dispute between the pre-existing secured creditor and the retention-of-title seller, financial lessor or acquisition secured creditor as to which financier has priority in which proceeds. All of those risks and any concomitant monitoring costs may result in the withholding of credit or charging for the credit at a higher cost. If the priority of the provider of acquisition financing in the inventory does not extend to the proceeds, that provider of acquisition financing may itself withhold credit or offer credit only at a higher cost.

169. However, that risk may be ameliorated in a significant respect. For example, if the priority of the acquisition financing right or acquisition security right in the inventory does not extend to the receivables proceeds, a pre-existing secured creditor with a prior security right in future receivables of the grantor will be more likely to extend credit to the grantor in reliance upon its higher-ranking security right in the receivables to enable the grantor to pay for the inventory acquired by the grantor. The amount of the advance by the pre-existing secured creditor should be sufficient for the grantor to pay the purchase price to the seller of the inventory. This is because usually advance rates against receivables generally are much higher than those against inventory and because the amount of the receivables reflects a resale price for the purchase of the inventory well in excess of the cost of the inventory to the seller. Thus, there is a greater likelihood that the purchase price will be paid on a timely basis.

170. Under the unitary approach, the complexity of determining what receivables arise from the disposition of assets in which an acquisition security right exists, and

the widespread use of receivables as assets subject to a separate security right, are cogent reasons why the special priority afforded to acquisition security rights in inventory should be limited to proceeds of disposition other than receivables and other payment rights (e.g. negotiable instruments, rights to payment of funds credited to a bank account, and rights to receive the proceeds under an independent undertaking; see recommendation 182).

171. While all States that have to date adopted the fully integrated approach take the above-mentioned view, it is possible to imagine that no distinction should be drawn between proceeds of inventory and proceeds of assets other than inventory and consumer goods. If such were the case, the principles governing assets other than inventory would also apply to acquisition security rights in inventory. However, because the right in proceeds would also extend to receivables and other payment rights, the security right in proceeds would not have the special priority of an acquisition security right but would only have priority according to the general rules applicable to ordinary security rights. In order to maintain parallelism between the unitary and non-unitary approaches, the Guide presents these options in recommendations 182 and 196 as alternative A and alternative B.

172. Should a State adopt the non-unitary approach as recommended in the Guide, it would face the same choice. Under alternative A, the special priority given to acquisition financiers and acquisition secured creditors should not be extended to proceeds of disposition in the form of receivables and other payment rights regardless of the legal form of the acquisition financing transaction (e.g. denominated security right, retention-of-title right or financial lease right). In particular, the special priority of the retention-of-title seller of inventory should be claimable only in other tangible assets, and not in proceeds of disposition of that inventory that take the form of receivables and other payment rights (see recommendation 196, alternative A). By contrast, under alternative B, the retention-of-title seller, financial lessor or acquisition secured creditor would be able to claim a security right in the proceeds of disposition of that inventory, including proceeds that take the form of receivables and other payment rights, but it would only have priority according to the general rules.

[Note to the Commission: The Commission may wish to note that the alternatives in recommendations 182 and 196 are presented in a note as the matter has not yet been considered by the Commission. Paragraphs 167-172 may need to be revised to reflect the final decision of the Commission on this matter.]

(m) Priority as between rights of competing providers of acquisition financing

173. In the various priority conflicts already described in this section, the competing claimants are asserting different rights in tangible assets. That is, the conflicts are between the rights of a retention-of-title seller, financial lessor or an acquisition secured creditor and mainly a non-acquisition secured creditor. In a few cases, however, the competition could be between two claimants, each of whom is asserting rights arising from an acquisition financing transaction. The main circumstance in which, depending on the applicable law of a given State, this may occur is when a lender provides credit to a buyer in order to make a down payment, and the seller also offers credit terms to the purchaser for the remainder of the purchase price.

174. In States that do not treat retention-of-title rights and financial lease rights as security rights, the relative priority of claims is decided by reference to the seller's or lessor's right of ownership. Unless that system permits other creditors to take a security right in the expectancy right of the buyer, a competition between owners and secured creditors would not arise. Further, even if it were possible for a creditor to take a security right in a buyer's or lessee's expectancy right, that expectancy right will only mature once the seller or lessor is fully paid. In other words, in most States with such systems, there can never be a direct competition between a lender claiming rights under an acquisition financing transaction and a seller or lessor. The only way that a lender could acquire an acquisition financing right would be to obtain an assignment of the secured obligation from the retention-of-title seller or the financial lessor.

175. Furthermore, in States that do not treat retention-of-title rights and financial lease rights as security rights, it is often possible for a seller (although not a lessor) to transfer title to the asset being sold to the buyer and take back a security right. Sometimes these seller's rights arise by operation of law (e.g. the vendor's privilege), but sometimes they arise from an agreement between the seller and the buyer. In such cases, the buyer may well grant competing security rights in the asset being acquired. These rights will usually be security rights granted after the asset has been purchased. Less commonly, in most of these States, they might also arise beforehand, by virtue of a security right covering present and future assets. Nonetheless, even when the lender advances credit to enable a buyer to acquire the assets, the security it takes in those assets is invariably considered to be an ordinary security right. That is, in most States that do not treat retention-of-title rights or financial lease rights as security rights, it is not possible for lenders to directly accede to the preferred priority position that is given to a seller that transfers ownership to a buyer and takes back an acquisition security right. Once again, in most such States, the only way that a lender could acquire the preferred priority afforded to an acquisition security right would be to obtain an assignment of the secured obligation from the seller that has taken such a security right for itself.

176. In States that follow the fully integrated approach, the priority rights of a seller and a lessor are protected because the rights they would otherwise claim as owners are characterized as acquisition security rights and are given the same preferred priority position through the concept of the "purchase-money security interest" special priority. Such a preferred priority position is also afforded to sellers that simply take a security right in the assets being supplied and to lenders that advance money to borrowers so as to enable them to purchase tangible assets. In other words, under the fully integrated approach, it is possible to have a genuine conflict between more than one acquisition security right. The normal priority rule in such States is that, as between competing security rights of the same type, the first to register, or if another method for achieving third-party effectiveness is used the first to achieve third-party effectiveness, would prevail. Thus, for example, as between two lenders that may both claim an acquisition security right, the first to register will have priority. It may be, however, that a seller that claims an acquisition security right registers its notice after a lender that has also provided acquisition financing. In this one case, these systems override the usual priority rule so as to protect the prior owner of the asset being sold. The seller that makes its acquisition security right effective against third parties will have priority even over lenders with pre-existing acquisition security rights.

177. Under the unitary approach, in any competition between a seller that is claiming an acquisition security right and a lender that is also claiming an acquisition security right, the seller's acquisition security right will have priority regardless of the respective dates that these acquisition security rights were made effective against third parties (see recommendation 178). In addition, in a competition between two acquisition security rights taken by lenders, the normal priority rules apply. That is, the time at which the right became effective against third parties will determine the relative priority of the two rights.

178. In States that choose to adopt the non-unitary approach, an initial policy decision is whether to permit financiers other than sellers or lessors to take security rights in assets being acquired by their borrower that can achieve the preferred priority status of an acquisition security right. If not, there will never be a competition between two or more acquisition financiers. The Guide recommends that, even when assets are sold under a retention-of-title arrangement or are subject to a financial lease, the buyer may grant security over the asset being sold or leased (see recommendation 187). Moreover, it also recommends that lenders that provide acquisition financing to buyers be permitted to claim an acquisition security right (see recommendations 184 and 185). As a result, States that adopt the non-unitary approach will also face a possible competition between providers of acquisition financing. Should the competition be between a retention-of-title seller or a financial lessor and a lender, the seller or lessor will always have priority as a consequence of its right of ownership. Should the competition be between a seller that claims an acquisition security right and a lender claiming such a right, States will have to adopt a rule that provides for the priority of the seller's or lessor's acquisition security right, whatever their respective dates of effectiveness against third parties. Moreover, States will also be required to specify that, as between acquisition security taken by financiers other than sellers or lessors, the priority of these rights will be determined by the time they became effective against third parties, regardless of the form of the transaction.

[Note to the Commission: The Commission may wish to consider whether a recommendation along the lines of recommendation 178 (unitary approach) should be included also in the non-unitary approach section of chapter XI.]

(n) Effect of the failure of a provider of acquisition financing to make its acquisition rights effective against third parties

179. Normally, a retention-of-title seller, a financial lessor or a seller or lender that takes a security right in assets being acquired by a buyer will ensure that it has taken all the steps necessary to make its rights effective as against third parties. In the case of a retention-of-title right or a financial lease right this means following one of the methods for achieving third-party effectiveness, and in the case where this is accomplished through registration in the general security rights register, doing so within the indicated time (see recommendation 189). In the case of an acquisition security right, whether under the unitary or non-unitary approach, the secured creditor must take the steps necessary to achieve third-party effectiveness, and if that step is registration in the general security rights registry, doing so within the indicated time (see recommendations 176 and 189).

180. A failure to achieve third-party effectiveness within the applicable time period has significant consequences for all providers of acquisition financing. Should an

acquisition secured creditor fail to register in a timely fashion (see para. 122 above), this does not mean that it loses its security right. Provided that it has taken the steps necessary to achieve third-party effectiveness after the expiry of the grace period, the secured creditor claiming an acquisition security right will not be able to assert the special priority associated with that right. At this point, it will simply be an ordinary secured creditor subject to the general priority rules applicable to security rights.

181. The situation is slightly different where a retention-of-title seller or a financial lessor fails to make its rights effective against third parties in a timely way. In these cases, the seller or lessor loses the benefit of its ownership, and in so far as the rights of third parties are concerned, title to the asset being sold or leased is transferred to the buyer or lessee. The complete loss of rights is a severe consequence to attach to a failure to take the steps necessary to achieve third-party effectiveness. In order to palliate these consequences and to parallel the result reached in respect of acquisition security rights, it is necessary to convert the seller's or lessor's right into an ordinary security right, subject to the general priority rules applicable to security rights (see recommendation 193).

182. A similar conclusion should be reached in other cases where a retention-of-title seller or a financial lessor is deprived of its rights of ownership. For example, where the seller of an asset that becomes an attachment to immovable property is not made effective against third parties after the attachment in a timely way, the seller or lessor loses its ownership right. Once third-party effectiveness is achieved, however, the seller or lessor may claim an ordinary security right.

[Note to the Commission: The Commission may wish to consider whether a recommendation along the lines of recommendation 193 should be added to address the point made in paragraph 182.]

8. Pre-default rights and obligations of the parties

183. As noted in the chapter on the rights and obligations of the parties, in most States there are very few mandatory rules setting out pre-default rights and obligations of the parties. The vast majority of applicable rules and principles are suppletive (non-mandatory) and may be freely derogated from by the parties. In addition, for the most part the pre-default rights and obligations of the parties will depend on how any particular State conceives the legal nature of the transaction by which acquisition financing is provided.

184. In States that do not treat retention-of-title rights and financial lease rights as security rights, the regime governing pre-default rights and obligations applicable to non-acquisition security rights cannot be simply transposed to acquisition financing rights. The rules applicable to acquisition security rights (whether taken by a seller or by a lender) will mirror those applicable to non-acquisition security rights. However, where a title device (retention-of-title, financial lease or similar transaction) is at issue, it will be necessary to adjust the manner by which these rules are expressed.

185. As the objective is to achieve functional equivalence among all acquisition financing transactions, this will often require reversing the default presumptions about the prerogatives of ownership. That is, normally it is the owner (the retention-of-title seller or the financial lessor) that has the right to use an asset and to collect

the civil and natural fruits it produces. Normally it is the owner that bears the risk of loss and, therefore, has the primary obligation to care for the asset, maintain it, keep it in good repair and insure it; and normally, it is the owner that has the right to further encumber the asset and to dispose of it. In order to achieve the desired functionally equivalent results, therefore, these States will have to provide a mix of mandatory and non-mandatory rules vesting each of these prerogatives and these obligations in the buyer and not in the seller or lessor.

186. States that adopt the unitary approach need not attend directly to this issue, since an acquisition security right is simply a species of security right. As such, it would only be necessary to apply the regular rules about pre-default rights and obligations to all acquisition financing transactions, regardless of the form of the transaction in question. That is, there is no reason to assume that obligations relating to use, the obligation to protect the value of the secured assets, the collection of civil and natural fruits, the right to encumber, or the right to dispose should be any different simply because the security right at issue is an acquisition security right. If acquisition secured creditors and grantors wish to provide for a different allocation of rights and obligations, they should be permitted to do so within exactly the same framework as applicable to non-acquisition secured rights (see recommendations 107-110).

187. Should a State adopt the non-unitary approach, however, the specific pre-default rights and obligations of the parties will have to be spelled out in greater detail in order to achieve functional equivalence. In relation to retention-of-title sellers and financial lessors, these rules will often have to be enacted as exceptions to the regular regime of ownership rights. As noted in the chapter on the rights and obligations of the parties, most of the pre-default rules will not be mandatory. However, as the non-mandatory default regime should establish a set of terms about pre-default rights and obligations that the legislature believes the parties would choose to most efficiently achieve the purpose of a security device, States that do adopt the non-unitary approach should ensure the enactment of non-mandatory rules that mirror those it enacts to govern acquisition security rights taken by sellers or lenders. So doing would have the additional advantage of clearly specifying the right of the buyer to grant security over its expectancy right, and confirming the buyer's right to use, transform or process the assets in a reasonable manner consistent with its nature and purpose (see recommendations 107-110).

9. Enforcement

188. The discussion in the chapter on the enforcement of a security right illustrates that in most legal systems the rules relating to enforcement of post-default rights flow directly from the manner in which that legal system characterizes the substantive right in question. For example, many systems consider certain rights to be "property rights" and provide for special remedies to ensure their effective enforcement. Other rights are characterized as "personal rights" and are usually enforced by bringing an ordinary legal action against a person. In such systems, both the right of ownership and security rights in tangible assets are seen as a species of "property right" enforceable through an *in rem* action (an "action against the asset"). Although the specifics of enforcement of property rights through *in rem* actions can vary greatly depending on the particular property right enforced and the specific configuration of a State's procedural laws, for the most part these rules

governing enforcement of post-default rights are mandatory. As such, they cannot be derogated from by the parties to an acquisition financing transaction.

189. In States that do not treat retention-of-title rights and financial lease rights as security rights, the procedure for enforcement of the seller's or the lessor's rights will normally be that open to any person that claims ownership in tangible assets. So, for example, upon default by the buyer, the retention-of-title seller may terminate the sale agreement and demand return of the assets as an owner. In that event and subject to any term of the agreement to the contrary, the seller is normally also required to refund at least a part of the price paid by the buyer. The amount of the payment due by the seller is often calculated by requiring disgorgement of all money received from the buyer, minus the rental value of the asset while in the possession of the buyer and the amount by which the value of the asset has decreased as a result of its use by the buyer (or damages for depreciation determined under a similar formula).

190. In these States, a seller that terminates the sale is usually not obliged to account to the buyer for any of the profits made on any subsequent resale of the asset but, at the same time, unless otherwise provided by contract, the seller has no claim against the buyer for any deficiency beyond any direct damages resulting from the buyer's breach of the original sales contract. In some legal systems, courts have also ruled in certain instances that there is an implied term in retention-of-title arrangements that the seller cannot repossess more of the assets sold than is necessary to repay the outstanding balance of the purchase price. Finally, in most of these States, neither the defaulting buyer nor any third party, such as a judgement creditor or a creditor that has taken security on the expectancy right of the buyer in the asset being reclaimed by the seller, may require the seller to abandon its right to recover the assets. As the seller is and always has been the owner of the assets being reclaimed, it cannot be compelled to sell those assets as if it were simply an acquisition secured creditor enforcing an acquisition security right. The only recourses of judgement creditors, secured creditors and other acquisition secured creditors are: (a) if the seller or lessor agrees, to purchase the rights of the seller or lessor (becoming subrogated into the seller's or lessor's rights); or (b) to pay whatever is outstanding under the contract and then exercise their rights on the assets that, as a result, are thereafter owned by the buyer or lessee.

191. The position of a seller that reclaims ownership and possession of assets under a proviso that, having transferred ownership to the buyer, it may retroactively set aside the sale should the buyer not pay the purchase price as agreed (a resolutive condition) is similar to that of the retention-of-title seller. Upon default, the sale is terminated, and the seller reacquires ownership. It may then reclaim possession of the assets as the owner subject to disgorging to the buyer whatever has been paid (discounted in the manner already indicated). In other words, once the resolutive condition takes effect, the rights and obligations of the seller that regains ownership are identical to those of the retention-of-title seller.

192. The situation of the financial lessor is normally slightly different. Since a lease is a contract of continuing performance (the lessee has continuing possession and use while the lessor has a continuing right to payment of the rent), under most legal systems, the lease contract will be terminated for the future only. This result means that the lessee will lose the right to purchase the assets at the end of the lease (or to automatically acquire ownership if the contract so provides), that the lessor will

keep the full rental payments received and that the lessee will be obliged to return the assets to the lessor. Subject to any contrary provision in the lease agreement, however, the financial lessor will not be able to claim damages for the normal depreciation of the assets. Damages will be claimable only for waste or extraordinary depreciation. Moreover, unless the lease agreement provides otherwise, financial lessors will not usually be able to claim any shortfall between the amount they receive as rent and the depreciation of the leased assets.

193. Under the unitary approach, the acquisition secured creditor may repossess the assets, as would any other secured creditor. Whether the acquisition secured creditor is a seller, lessor or lender, it will be able, as outlined in the chapter on the enforcement of a security right, either to sell the assets, or if the grantor or other secured creditor do not object, to take the assets in satisfaction of the secured obligation. In the former case, the enforcing creditor will be able to sell under judicial process or privately. Having sold the assets, the secured creditor then has to return to the grantor any surplus on the resale of the assets, but concomitantly has an unsecured claim for any deficiency after the sale (see recommendation 174).

194. If a State adopts the non-unitary approach, several adjustments to existing rules relating to the enforcement of the ownership right of a retention-of-title seller or a financial lessor would have to be made in order to achieve equality of treatment among all providers of acquisition financing. These adjustments could include, for example, giving the buyer or lessee and any secured creditor with a right in the buyer's or lessor's expectancy right, the right to compel a seller or lessor to sell the assets in which ostensibly it has a right of ownership, rather than simply assert that ownership right to regain possession of and ultimately to dispose of the assets. Sellers and lenders with acquisition security rights may propose to take the assets in satisfaction of the buyer's outstanding obligation, but the buyer or other interested party may compel the acquisition secured creditor to sell the assets instead. Achieving full functional equivalence would mean that buyers and other interested parties would be enabled to compel the retention-of-title seller (an owner) to abandon the assertion of its right of ownership and to sell the assets as if it were simply an acquisition secured creditor. It would also require adjusting the seller's or lessor's rights so that they would be required to account for a surplus upon any sale in disposition, while at the same time permitting them to recover as simple contractual claimants for a deficiency without having to bring a separate action in damages.

195. Deficiencies are much more common than surpluses. Still, requiring all providers of acquisition financing (including retention-of-title sellers and financial lessors) to account to the buyer and other creditors with security rights in the expectation right of the buyer for any surplus upon enforcement will encourage those other creditors to monitor the enforcement process closely and thereby enhance the chances that the highest possible value will be achieved. Likewise, providing the provider of acquisition financing with a deficiency claim allows the creditor to enforce its full claim, which enhances the likelihood of complete repayment. A rule that would deny, absent a contractual term for damages, a deficiency claim to certain providers of acquisition financing (notably retention-of-title sellers or financial lessors), when such a deficiency claim would be enforceable by a seller or lender that exercised an acquisition security right, would be unfair and inefficient. The rights of a seller, especially, should not be significantly different

(either to the seller's advantage or to its disadvantage), depending only on whether it chose to retain title or to take an acquisition security right.

196. As a matter of strict legal logic, it is possible to achieve functionally equivalent enforcement results regardless of whether a unitary or a non-unitary approach is adopted. The need for these several adjustments to existing retention-of-title and financial-lease regimes in order to achieve the full benefit of treating all sources of acquisition financing equally, as recommended in the Guide (see recommendation 197), suggests that it may be preferable for States that have not already achieved this coordinated result through legislative, judicial or contractual adjustments to their rules governing retention-of-title rights and financial lease rights to do so by adopting the unitary approach. Nonetheless, the non-unitary approach will, if implemented as recommended in the Guide (see recommendation 197), produce an efficient enforcement regime for acquisition financing transactions.

10. Conflict of laws

197. Many legal systems differentiate between rights of ownership arising under a contract of sale or lease and security rights in presenting rules relating to the applicable law. That is, conflict-of-laws rules relating to obligations (for example, not only sales and leases, but also licences and receivables) may differ from those applicable to agreements creating a security right in tangible assets. The treatment of conflicts of laws in relation to security rights in general, and accompanying recommendations, are included in the chapter on conflict of laws. The present discussion only addresses whether retention-of-title rights, financial lease rights and acquisition security rights should be the subject of different recommendations.

198. Notwithstanding the conceptual differences between rights that flow from ownership and security rights, when a retention-of-title right is being used to secure the performance of a payment obligation and possession has been delivered to the buyer, the appearance of the transaction is no different from that where a non-possessory security right is created. Moreover, the asset in question is equally mobile, and is consequently equally likely to cross international borders. As the Guide recommends that lenders may acquire not only security rights, but also acquisition security rights in the expectancy of a buyer, it is possible that once an asset crosses a border and unless the same conflict-of-laws rules are applicable to all such rights, different laws will govern the retention-of-title right and the acquisition security right. Efficiency and transparency of transactions would suggest that this type of conflict should be avoided if at all possible, and that the same conflict-of-laws rules should govern both types of transaction.

199. Under the unitary approach, whether an acquisition financing transaction involves a retention-of-title right, a financial lease right or an acquisition security right is immaterial for conflict-of-laws purposes. All will be considered as security rights and dealt with accordingly (see recommendation 174).

200. Should a State decide to retain the non-unitary approach, however, it will face the question of whether the conflict-of-laws rules applicable to the creation, third-party effectiveness, priority and enforcement of retention-of-title rights, financial lease rights and similar arrangements should be the same as those that apply to acquisition security rights or, more generally, to ordinary security rights

that are taken in the same type of asset. The goal of achieving functionally equivalent outcomes is a powerful argument that States should characterize the ownership rights of retention-of-title sellers and financial lessors as equivalent to acquisition security rights for conflict of laws purposes (see recommendation 199).

11. Transition

201. The rules recommended in the Guide relating to the treatment of transactions that in many States were not considered to be security devices represent a significant change for most legal systems. In particular, the characterization of retention-of-title rights and financial lease rights (including rights under hire-purchase agreements) as acquisition security rights will bring about an important modification to the scope of secured transactions law in legal systems that have not already adopted the unitary and functional approach to secured transactions generally. The chapter on transition discusses principles that should govern the transition to the new regime for ordinary security rights as recommended in the Guide. These same principles should regulate the transition in relation to acquisition financing transactions.

202. If a State were to adopt the unitary approach, a smooth transition will depend on attending to the detail of the previous regime governing retention-of-title rights and financial lease rights. For example, if it were already obligatory for retention-of-title sellers and financial lessors to register their rights, then it would only be necessary to provide for a certain delay within which the registration would have to be renewed in the new general security rights registry. Alternatively, the law could provide that the existing registration would remain effective for a sufficiently long time period (e.g. three to five years) to cover the life span of most retention-of-title or financial lease arrangements (see recommendation 228).

203. If no registration of these rights were currently necessary, a smooth transition could be achieved if, consistent with the transition rules applicable to non-acquisition financing transactions, the effectiveness of the rights of retention-of-title sellers and finance lessors against third parties and their priority position were capable of being preserved by registering an appropriate notice in the general security rights registry. Alternatively, the law could provide that the registration requirement would take effect at a date sufficiently far in the future after the new law comes into force (e.g. three to five years) so that it would cover the life span of most retention-of-title and financial lease arrangements existing at the time the new law came into force (see recommendation 228). In order to ensure coherence of the transition, and consistent with the approach taken in the chapter on transition, whatever the length of the transition period that is adopted, it should be the same for rights that had to be registered under prior law, for rights that were exempt from registration under prior law and for non-acquisition security rights.

204. Even if a State decides to adopt the non-unitary approach, in order to establish an efficient secured transactions law, it will be necessary to reorder a number of rules relating to retention-of-title rights and financial lease rights. As the Guide recommends that a notice be registered in the general security rights registry, the same transition rules for registration applicable to the unitary approach could be adapted for the non-unitary approach. As for existing acquisition security rights, the transition should be governed by the same principles as apply to the transition under the unitary approach.

205. In order to put these principles into operation in a manner that produces outcomes that are functionally equivalent to those achieved under the unitary approach, however, various adjustments to the substance of the law relating to retention-of-title rights and financial lease rights would be required. In particular, it would be necessary to determine when the rules relating to the following issues will come into effect: (a) the priority of acquisition financing rights in proceeds; (b) the rights of third parties to acquire security rights in assets subject to a retention-of-title right or a financial lease right; and (c) the procedures for enforcing these types of acquisition financing device including the rights of third parties. While the scale and scope of the needed transition under the non-unitary approach initially might not appear to be as great, the issues that arise in practice will be identical to those arising under the unitary approach and the general principles governing adoption of a unitary regime should also apply to the transition to a reformed non-unitary regime.

12. Insolvency

206. One of the central themes of the Guide is that a security right has little or no value to a secured creditor unless it is given appropriate recognition in insolvency proceedings of the grantor. Thus, an effective secured transactions regime must go hand-in-hand with an effective insolvency law. Both are essential to promoting secured credit. For this reason, this Guide goes hand-in-hand with its companion guide, the *UNCITRAL Legislative Guide on Insolvency Law* (“the *UNCITRAL Insolvency Guide*”).

207. The general interaction of insolvency law and secured transactions law is addressed in the chapter on the impact of insolvency on a security right. The Guide’s recommendations on this topic are in two parts: part A, which reproduces those recommendations of the *UNCITRAL Insolvency Guide* that have a direct bearing on secured transactions, and part B, which is comprised of additional recommendations that are intended to supplement those of the *UNCITRAL Insolvency Guide*. The *UNCITRAL Insolvency Guide* generally defers to non-insolvency law (e.g. a State’s secured transactions law) with respect to how a particular acquisition financing transaction is characterized and the legal implications of that characterization.

208. The principle that insolvency law generally defers to non-insolvency law on matters of characterization means that, in States that integrate all forms of acquisition financing rights into their secured transactions law, retention-of-title transactions and financial leases will be treated in the grantor’s insolvency in the same way as a non-acquisition security right, with recognition given to any special priority status accorded to the acquisition security right under non-insolvency law. Accordingly, the provisions of the *UNCITRAL Insolvency Guide* applicable to security rights would apply to acquisition security rights. Thus, if a State were to adopt the unitary approach, this means that the insolvency law should treat assets subject to an acquisition security right in the same way as assets subject to security rights generally (recommendation 183).

209. A slightly more complicated analysis is required in States that do not treat retention-of-title transactions and financial leases as security devices. Some of these States maintain separately denominated retention-of-title transactions and financial leases but subject them and similar arrangements to the same rules that apply to

non-acquisition security rights, with recognition given to any special priority status accorded to the acquisition security right under non-insolvency law. That is, in these States the ownership of retention-of-title sellers and financial lessors is converted by secured transactions law into a security right when the grantor becomes insolvent. Consequently, the same outcome in insolvency is reached as is achieved in States with fully integrated regimes. Accordingly, the provisions of the *UNCITRAL Insolvency Guide* applicable to security rights will then apply to these transactions, even though under non-insolvency law, they would not be characterized as security rights (recommendation 198, alternative A).

210. Other States that maintain separately denominated retention-of-title transactions and financial leases nonetheless provide for a rough functional equivalence between these rights and acquisition security rights. In these States, retention-of-title transactions and financial leases are treated as assets owned by the seller or lessor. Accordingly, the provisions of the *UNCITRAL Insolvency Guide* relating to third-party-owned assets would then apply to these transactions (see recommendation 198, alternative B).

211. These alternatives can have very different results in insolvency proceedings, especially where reorganization is a possibility. In States that integrate all forms of acquisition financing rights into their secured transactions law, retention-of-title transactions and financial leases are treated in the grantor's insolvency in the same way as a non-acquisition security right, with recognition given to any special priority status accorded to the acquisition security right under non-insolvency law. In these States, typically the insolvency representative can use, sell or lease the encumbered assets so long as it gives substitute assets to the secured creditor or the value of the secured creditor's right in the property is otherwise protected against diminution. In such situations, any portion of the secured obligations in excess of the value of the secured creditor's right in the property is treated as a general unsecured claim, and in the grantor's reorganization the secured creditor's claim, up to the value of the security right, can be restructured (as is the case with other non-acquisition security rights) with a different maturity, payment schedule, interest rate and the like (see chapter on the impact of insolvency on a security right, paras. [...]).

212. The above-mentioned discussion illustrates that in States where retention-of-title transactions and financial leases are not treated as security rights, the insolvency representative often has the right, within a prescribed time period and if willing and able to do so, to perform the contract by: (a) paying the outstanding balance of the price and bringing the property into the estate; or (b) continuing to pay the lease payments as they come due. In some cases, the insolvency representative can assign the contract, together with the right to use the property (which in the case of a lease may require the consent of the lessor) to a third party. Alternatively, the insolvency representative may be able to reject the contract, return the property and claim the return of the part of the purchase price paid by the buyer subject to a deduction for depreciation and use prior to the insolvency. In the case of a lease, the insolvency representative can repudiate the lease for the future and return the property to the lessor. However, if the property is critical to the success of the buyer's reorganization, only the first option (performance of the contract as agreed) would in practice be available to the insolvency representative. The need for the insolvency representative to perform the contract as agreed may, for example in

cases where the current value of equipment is less than the balance of the purchase price, result in other assets of the insolvency estate being used to satisfy that performance rather than being used to fund other aspects of the reorganization of the grantor.

213. In States where assets subject to retention-of-title rights and financial lease rights are treated as third-party-owned assets, the retention-of-title seller and the financial lessor will have stronger rights at the expense of other creditors of the insolvency proceedings. This inevitably will have an impact on the capacity of the insolvency representative to pursue reorganization. As a consequence, States that adopt the non-unitary approach to acquisition financing in non-insolvency situations must also consider whether this characterization of retention-of-title rights, financial lease rights and similar rights should be maintained in insolvency proceedings. The legislative choice is whether encouraging the supply and financing of equipment or inventory by providing special rights for retention-of-title sellers and financial lessors should outweigh insolvency policies that seek to promote reorganization.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/637/Add.6 [Original: English]

**Note by the Secretariat on terminology recommendations of the UNCITRAL draft
Legislative Guide on Secured Transactions, submitted to the Working Group on
Security Interests at its twelfth session**

ADDENDUM

CONTENTS

	<i>Paragraphs</i>
XII. Conflict of laws	1-83
A. General remarks	1-83
1. Introduction	1-14
(a) Purpose of conflict-of-laws rules	1-8
(b) Scope of conflict-of-laws rules	9-13
(c) Outline of this chapter	14
2. Conflict-of-laws rules for the creation, third-party effectiveness and priority of a security right	15-27
3. Law applicable to the creation, third-party effectiveness and priority of a security right in tangible assets	28-37
(a) General rule: law of the location of the encumbered asset (<i>lex situs</i> or <i>lex rei sitae</i>)	29-30
(b) Additional rule for the creation and third-party effectiveness of a security right in goods in transit and export goods	31-33
(c) Special rule for the creation, third-party effectiveness and priority of a security right in a negotiable instrument	34
(d) Exceptions for certain types of asset	35-37
4. Law applicable to the creation, third-party effectiveness and priority of a security right in intangible assets	38-50
(a) General rule: law of the location of the grantor	38-43
(b) Exceptions for certain types of asset	44-50
5. Law applicable to the creation, third-party effectiveness and priority of a security right in proceeds	51-56

B. Recommendations.	

XII. Conflict of laws

A. General remarks

1. Introduction

(a) Purpose of conflict-of-laws rules

1. The central purpose of the Guide is to assist States in the development of modern secured transactions laws with a view to promoting the availability of secured credit, thus promoting the growth of domestic businesses and generally increasing trade (see para. [...]). In order to achieve this purpose, a secured transactions law has to facilitate credit both from domestic and foreign lenders and from other credit providers, promoting the growth of domestic businesses and generally increasing trade. Much of secured transactions law is meant to deal with grantors, secured creditors, third-party obligors and third-party creditors that are all located in the same State. It is also directed to security agreements covering encumbered assets also located in this same State, both at the time the security right is created and at all times thereafter. However, a significant part of modern commercial activity is not of this type. Increasingly, secured transactions law involves agreements between or affecting parties located in more than one State, or relating to assets that are meant for export or import, or are located in more than one State, or that are normally used in more than one State. Necessarily, therefore, to achieve comprehensiveness the Guide must address a broad range of issues that arise from various types of cross-border transaction.

2. This chapter discusses the rules for determining the law applicable to the creation, effectiveness against third parties (“third-party effectiveness”), priority as against the rights of competing claimants and enforcement of a security right (for the definitions of the terms “security right”, “priority” and “competing claimant”, see Introduction, section B, Terminology). These rules, generally referred to as conflict-of-laws rules, also determine the territorial scope of the substantive rules envisaged in the Guide (i.e. if and when the substantive rules of the State enacting the regime envisaged in the Guide apply). For example, if a State has enacted the substantive law rules envisaged in the Guide relating to the priority of a

security right, those rules will apply to a priority contest arising in the enacting State only to the extent that the forum¹ State's conflict-of-laws rule on priority issues points to the laws of that State. Should the forum State's conflict-of-laws rule provide that the law governing priority is that of another State, then the relative priority of competing claimants will be determined in accordance with the law of that other State.

3. The conflict-of-laws rules proposed in the Guide will apply only if the forum State is a State that has enacted the rules recommended by the Guide. They cannot apply in a State that has not enacted those rules. This is so because a State cannot legislate on the conflict-of-laws rules to be applied in another State. The courts of the other State apply their own conflict-of-laws rules in order to determine whether to apply their domestic substantive law or the substantive law of another State.

4. The conflict-of-laws rules indicate the State whose substantive law will apply to a situation by identifying the factors that connect the situation to that State. The main connecting factors recommended by the Guide are the location of the encumbered assets and the location of the grantor of the security right. Thus, in a situation where the connecting factor is the location of the assets, the law applicable will be that of the State of the location of the assets.

5. After a security right has been created and has become effective against third parties, a change might occur in one or more connecting factors. For example, if the third-party effectiveness of a security right in inventory located in State A is governed under the conflict-of-laws rules of State A by the law of the location of the inventory, the question arises as to what happens if part of the inventory is subsequently moved to State B (whose conflict-of-laws rules also provide that the law of the location of tangible assets governs the third-party effectiveness of security rights in tangible assets). One approach would be for the security right to continue to be effective in State B without the need to take any further step in State B. Another approach would be to require that a new security right be obtained under the laws of State B. Yet another approach would be for the secured creditor's pre-existing right to be preserved subject to the fulfilment in State B of certain formalities within a certain period of time (e.g. 30 days after the goods have been brought into State B). As this is a matter of substantive law rather than conflict of laws, the Guide addresses it in chapter V dealing with third-party effectiveness (see paras. [...] and recommendation 45). This chapter deals only with the time that is relevant for the determination of whether a security right has been created, made effective against third parties and obtained priority over another right.

6. In an efficient secured transactions regime, conflict-of-laws rules applicable to secured transactions normally reflect the objectives of the secured transactions regime. This means that the law applicable to the property aspects of a security right should be easy to determine. Certainty is a key objective in the development of rules affecting secured transactions both at the substantive and the conflict-of-laws levels. Another objective is predictability. As illustrated by the example mentioned in the preceding paragraph, conflict-of-laws rules should provide an answer to the

¹ The term "forum State" refers to the State in respect of which one has to ascertain the substantive law to apply in that State. Ascertaining the applicable law is necessary not only in a litigation context but also in every instance where there is a need to know if a transaction will provide its intended legal effects.

question of whether a security right acquired under the law of State A remains subject to that law or becomes subject to the law of State B if a subsequent change in the connecting factor were to point to the law of State B for a security right of the same type. A third key objective of an efficient conflict-of-laws system is that the relevant rules should reflect the reasonable expectations of interested parties (i.e. creditor, grantor, debtor and third parties). In order to achieve this result, the connecting factor that indicates the law applicable to a security right must have some real relation to the factual situation that will be governed by such law.

7. Use of the Guide (including this chapter) in developing secured transactions laws will help to reduce the risks and costs resulting from divergences among current conflict-of-laws regimes. In a secured transaction, the secured creditor normally wants to ensure that its rights will be recognized in all States where enforcement might take place (including in a jurisdiction administering insolvency proceedings with respect to the grantor and its assets). If those States have different conflict-of-laws rules for the same type of encumbered asset, the creditor will need to comply with more than one regime in order to be fully protected (a result that is likely to affect the availability and the cost of credit). A benefit of different States having harmonized their conflict-of-laws rules is that a creditor can rely on the same conflict-of-laws rule (leading to the same results) to determine the status of its security in all those States. This is one of the goals achieved in respect of receivables by the United Nations Assignment Convention and in respect of indirectly held securities by the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary, adopted by the Hague Conference on Private International Law in December 2002 (hereinafter referred to as “the Hague Securities Convention”).

8. Conflict-of-laws rules would be necessary even if all States had harmonized their substantive secured transactions laws. There would remain instances where the parties would have to identify the State whose requirements will apply. For example, if the laws of all States provided that a non-possessory security right is made effective against third parties by registration of a notice in a public registry, one would still need to know in which State’s registry the registration must be made.

(b) Scope of conflict-of-laws rules

9. This chapter does not define the security rights to which the conflict-of-laws rules will apply. Normally, the characterization of a right as a security right for conflict-of-laws purposes will reflect the substantive secured transactions law in a State. In principle, a court will use its own law whenever it is required to characterize an issue for the purpose of selecting the appropriate conflict-of-laws rule. The question arises, however, as to whether the conflict-of-laws rules of a State relating to security rights should also apply to other transactions that are functionally similar to security rights, even if they are not covered by the substantive secured transactions regime of that State (e.g. retention-of-title sales, financial leases and other similar transactions). The fact that the substantive secured transactions law of a State might not apply to those other transactions should not preclude the State from applying to those transactions the conflict-of-laws rules applicable to security rights. The Guide recommends this approach to a State that would adopt the non-unitary approach to acquisition financing (see recommendation 199).

10. A similar issue arises in respect of certain transfers not made for security purposes, where it is desirable that the applicable law for creation, third-party effectiveness and priority of the transfer be the same as for a security right in the same type of asset. An example is found in the United Nations Assignment Convention, which (including its conflict-of-laws rules) applies to outright transfers of receivables as well as to security rights in receivables (see article 2, subparagraph (a) of the Convention). This policy choice is motivated, notably, by the necessity of referring to one single law to determine priority between competing claimants with a right in the same receivable. The Guide adopts the same policy (see recommendation 205). Otherwise, in the event of a priority dispute between a purchaser of a receivable and a creditor with a security right in the same receivable, it would be more difficult (and sometimes impossible) to determine who is entitled to priority if the priority of the purchaser were governed by the law of State A but the priority of the secured creditor were governed by the law of State B.

11. Whatever decision a State makes with respect to the range of transactions covered by the conflict-of-laws rules, the scope of those rules on creation, third-party effectiveness and priority of a security right will be confined to the property aspects of the relevant transactions. Thus, a rule on the law applicable to the creation of a security right only determines what law governs the requirements to be met for a property right to be created in the encumbered assets. The rule would not apply to the personal obligations of the parties under their contract. In most States, purely contractual obligations arising from a commercial transaction are generally subject to the law chosen by the parties in their security agreement or, in the absence of such a choice, by the law governing the security agreement as determined by the conflict-of-laws rules of the relevant State (e.g. the Convention on the Law Applicable to Contractual Obligations,² concluded in Rome in 1980, hereinafter the “Rome Convention”). The Guide recommends the same approach for the determination of the mutual rights and obligations of the grantor and the secured creditor with respect to the security right (see recommendation 213).

12. A corollary to recognizing party autonomy with respect to the personal obligations of the parties is that the conflict-of-laws rules applicable to the property aspects of secured transactions are matters that are outside the domain of freedom of contract. For example, the grantor and the secured creditor are normally not permitted to select the law applicable to priority, since this could not only affect the rights of third parties, but could also result in a priority contest between two competing security rights being subject to two different laws leading to opposite results.

13. The conflict-of-laws rules of many States now provide that reference to the law of another State as the law governing an issue refers to the law applicable in that State other than its conflict rules. The doctrine of *renvoi* is excluded, for the sake of predictability and also because *renvoi* may lead to results that run contrary to the expectations of the parties. The Guide adopts the same approach (see recommendation 218).

² United Nations, *Treaty Series*, vol. 1605, No. 28023.

(c) Outline of this chapter

14. This chapter discusses, in section A.2, the conflict-of-laws rules for the creation, third-party effectiveness and priority of a security right in general. Section A.3 reviews the law applicable to the creation, third-party effectiveness and priority of a security right in tangible assets, while section A.4 elaborates the law applicable to the creation, third-party effectiveness and priority of a security right in intangible assets and section A.5 discusses the law applicable to the creation, third-party effectiveness and priority of a security right in proceeds. The chapter then considers, in section A.6, the law applicable to the rights and obligations of the parties to the security agreement, and in section A.7, the law applicable to the rights and obligations of third-party obligors. The law applicable to the enforcement of a security right is commented on in section A.8. The last three sections of the chapter deal with the rules and relevant time for the determination of location (section A.9), public policy and internally mandatory rules (section A.10) and special rules when the applicable law is the law of a multi-unit State (section A.11). The chapter concludes, in section B, with a series of recommendations.

2. Conflict-of-laws rules for the creation, third-party effectiveness and priority of a security right

15. The determination of the extent of the rights conferred by a security right generally requires a three-step analysis, as follows:

(a) The first issue is whether the security has been created (for matters covered by the notion of creation, see chapter IV of the Guide);

(b) The second issue is whether the security is effective against third parties (for matters covered by the notion of third-party effectiveness, see chapter V of the Guide); and

(c) The third issue is what is the priority ranking of the right of a secured creditor as against the right of a competing claimant, such as another creditor or an administrator in the insolvency of the grantor (for matters covered by the notion of priority, see chapter VII of the Guide).

16. Indeed, a security right is of little practical value if it cannot be efficiently enforced. This question does not, however, relate to the extent of the rights that the secured creditor has in the encumbered assets, and the conflict-of-laws rules on enforcement will be discussed in another section of this chapter.

17. Not all States draw a distinction between the three issues mentioned in paragraph 15. In many States, a security right (or other property right) once created is by definition effective against all (*erga omnes*) without any further action. In those States, the same conflict rule applies to the creation of a security right and its effectiveness against third parties (and priority may be analysed also as an issue of effectiveness). However, even States that clearly distinguish among effectiveness as between the parties (creation), effectiveness against third parties and priority do not always establish a separate conflict-of-laws rule for each of those issues; thus the same conflict-of-laws rule may apply to each of the three issues resulting in the substantive law of the same State being applicable to all such issues.

18. Therefore, the key question is whether one single conflict-of-laws rule should apply to all three issues. Policy considerations, such as simplicity and certainty,

favour the application of only one rule. As noted above, the distinction among these issues is not always made or understood in the same manner in all States, with the result that providing different conflict-of-laws rules on these issues may complicate the analysis or give rise to uncertainty. There are, however, instances where selecting a different law for priority issues would better take into account the interests of third parties such as persons holding statutory security or a judgement creditor or an insolvency administrator.

19. Another important question is whether, on any given issue (i.e. creation, third-party effectiveness or priority), the relevant conflict-of-laws rule should be the same for tangible and intangible assets. A positive answer to that question would favour either a rule based on the law of the location of the grantor or a rule based on the law of the location of the encumbered assets (*lex situs* or *lex rei sitae*).

20. In the case of receivables, an approach based on the *lex situs* would be inconsistent with the United Nations Assignment Convention (article 22 of which refers to the law of the State in which the assignor, i.e. the grantor, is located). Moreover, as intangible assets are not capable of physical possession, adopting the *lex situs* as the applicable conflict-of-laws rule would require the development of special rules and legal fictions for the determination of the actual location of various types of intangible asset. For this reason, the Guide does not consider the location of the asset as being the appropriate connecting factor for intangible assets and favours an approach generally based on the law of the location of the grantor (see recommendation 205).

21. In addition, consistency with the United Nations Assignment Convention would dictate defining the location of the grantor in the same way as in the Convention (see recommendation 216). Under the Convention, the grantor's location is its place of business or, if the grantor has places of business in more than one State, the place where the central administration of the grantor is exercised. If the grantor has no place of business, reference is then made to the grantor's habitual residence (see article 5, subparagraph (h), of the Convention). This definition was adopted by the Convention mainly because that location was considered as being the real location of the grantor and also leads to the law of the State in which the main insolvency proceedings with respect to the grantor will most likely be opened.

22. Simplicity and certainty considerations could even support the adoption of the same conflict-of-laws rule (e.g. the law of the grantor's location) not only for intangible assets but also for tangible assets, especially if the same law were to apply to the creation, third-party effectiveness and priority of a security right. Following this approach, one single enquiry would suffice to ascertain the extent of the security rights encumbering all assets of a grantor. There would also be no need for guidance in the event of a change in the location of encumbered assets or to distinguish between the law applicable to possessory and non-possessory rights (and to determine which prevails in a case where a possessory security right governed by the law of State A competes with a non-possessory security right in the same assets governed by the law of State B).

23. Not all States, however, regard the law of the location of the grantor as sufficiently connected to security rights in tangible assets, at least for "non-mobile" assets (or even in certain types of intangible asset, such as rights to payment of funds credited to a bank account or intellectual property). Moreover, in many cases,

adoption of the grantor's location law would result in one law governing a secured transaction and another law governing a transfer of ownership in the same assets. To avoid this result, States would need to adopt the grantor's location law for all transfers of ownership.

24. In addition, it is almost universally accepted that a possessory security right should be governed by the law of the place where the assets are held, so that adopting the law of the grantor for possessory rights would run against the reasonable expectations of non-sophisticated creditors. Accordingly, even if the law of the grantor's location were to be the general rule, an exception would need to be made for possessory security rights.

25. For all these reasons, the Guide recommends two general conflict-of-laws rules on the law applicable to the creation, third-party effectiveness and priority of a security right, as follows:

(a) With respect to tangible assets, the applicable law should be the law of the location of the assets (see recommendation 200);

(b) With respect to intangible assets, the applicable law should be the law of the location of the grantor (see recommendation 205).

26. As the conflict-of-laws rules generally will be different depending on the tangible or intangible character of the assets, the question arises as to which conflict rule is appropriate where intangible assets are capable of being the subject of a possessory security right. In this regard, most States assimilate certain categories of rights embodied in a document (such as a negotiable instrument) to tangible assets, thereby recognizing that a possessory security right may be created in such assets through the delivery of the document to the creditor. The Guide treats these types of intangible assets as tangible assets (for the definition of "tangible assets", see Introduction, section B, Terminology) and, accordingly, the conflict-of-laws rule for tangible assets generally applies to such intangible assets. Accordingly, the law of the State where the instrument is held will govern the creation, third-party effectiveness and priority of a security right in a negotiable instrument (see recommendation 200).

27. A related issue arises where tangible assets are represented by a negotiable document of title (such as a bill of lading). It is generally accepted that a negotiable document of title is also assimilated to a tangible asset and may be the subject of a possessory security right. The law of the location of the document (and not of the actual tangible assets covered thereby) would then govern the security right. The question arises, however, as to what law would apply to resolve a priority contest between a creditor with a security right in a document of title and another creditor to whom the debtor might have granted a non-possessory security right in the tangible assets themselves, if the document and the tangible assets are not held in the same State. In such a case, the conflict-of-laws rules should accord precedence to the law governing the security right in the document, on the basis that this solution would better reflect the legitimate expectations of interested parties (see recommendation 203). This result would also be consistent with the substantive law rules proposed by the Guide on creation, third-party effectiveness and priority (see recommendations 28, 52 and 105).

3. Law applicable to the creation, third-party effectiveness and priority of a security right in tangible assets

28. The policy considerations favouring the general conflict-of-laws rules set out above do not necessarily apply in all circumstances and other rules apply with respect to certain specified types of asset for which the location of the asset or of the grantor is not the most appropriate connecting factor. In addition, for efficiency purposes, alternative rules apply with respect to assets in transit and assets intended for export. Such assets are not intended to remain in their initial location and may cross the borders of several States before reaching their ultimate destination. The following paragraphs explain the two general conflict-of-laws rules outlined above and their exceptions.

(a) General rule: law of the location of the encumbered asset (*lex situs* or *lex rei sitae*)

29. As mentioned above, the creation, the effectiveness against third parties and the priority of a security right in tangible assets are generally governed by the law of the State in which the encumbered asset is located (see recommendation 200). A frequent example of the application of this rule relates to security rights in inventory. If a grantor owns inventory located in a State that has this rule (State A), the law of that State will govern those issues. The rule also means that, if the grantor also owns other inventory in another State (State B), the relevant requirements of State B will have to be fulfilled in order for the courts of State A to recognize that the inventory located in State B is subject to the secured creditor's rights.

30. The general conflict-of-laws rule for tangible assets does not distinguish between possessory security rights and non-possessory security rights. Accordingly, the law of the location of the asset will generally apply, whether or not the secured creditor has possession of the asset. This is particularly relevant for intangible assets assimilated to tangible assets, such as negotiable instruments and negotiable documents. For example, the law of the location of the instrument or document will govern priority matters even if the security right is made effective against third parties otherwise than by possession.

(b) Additional rule for the creation and third-party effectiveness of a security right in goods in transit and export goods

31. With respect to assets in transit or assets intended for export, application of the law of the location of the goods results in the application of the law of the State in which the assets are located at the time an issue arises. A consequence of the rule is that secured creditors need to monitor the assets and follow the requirements of various States to ensure that they have at all times an effective security right. To avoid that burden, one approach would be for the State of the ultimate (or intermediate) destination to recognize as effective a security right created and made effective against third parties under the law of the initial location. Such an approach would reflect the expectations of parties in the initial location of the assets, but would be contrary to the expectations of parties that provided credit to the grantor following the requirements of the law of the ultimate destination of the assets.

32. Another approach would be for the State of the ultimate destination to recognize for a limited period of time a security right created and made effective against third parties under the law of the initial location of the assets. Parties in the initial location could then have a period of time to follow the third-party effectiveness requirements of the law of the State of the ultimate destination to preserve the effectiveness originally acquired in the initial location. Such an approach would balance the interests of parties in the various jurisdictions (and is in fact supported by the Guide for most types of tangible asset; see recommendations 45 and 200).

33. A further approach would be to offer to the secured creditor the option of creating and making its security right effective against third parties under the law of the State of the initial location of the assets or under the law of the State of the ultimate location of the assets provided in the latter case that the assets reach such location within a specified period of time (see recommendation 204). This approach would allow a secured creditor that is confident that the assets will reach the place of their intended destination to rely on the law of that place to create and make its security right effective against third parties. A rule providing for that option is particularly useful when the assets are likely to quickly transit through other States and arrive at their final destination within a short period of time after shipment. Otherwise, in the case of a security right created while the assets are at their initial location, for the security right to be continuously effective against third parties, the secured creditor would have to fulfil the third-party effectiveness requirements of the place of the initial location, of each State where the assets could be in transit and of the place of ultimate destination. In any case, priority would always be subject to the law of the location of the assets at the time a priority dispute arises.

(c) Special rule for the creation, third-party effectiveness and priority of a security right in a negotiable instrument

34. As mentioned above, it is generally accepted that the law of the State in which a negotiable instrument is located (*lex situs*) should govern the creation, third-party effectiveness and priority of a security right in the instrument (see recommendation 200). However, in some States, the third-party effectiveness of a security right in negotiable instruments may also be achieved by registration in the place in which the grantor is located. In such a case, it is logical to rely on the law of the State of the grantor's location to determine whether third-party effectiveness has been achieved by registration (see recommendation 208). It is worth noting that this option is confined to third-party effectiveness. The law of the actual location of the instrument will always govern the priority of a security right in the instrument.

(d) Exceptions for certain types of asset

35. The general conflict-of-laws rule for security rights in tangible assets is normally subject to certain exceptions where the location of the assets would not be an efficient connecting factor (e.g. assets ordinarily used in several States) or would not correspond to the reasonable expectations of the parties (e.g. assets the ownership of which must be recorded in special registries).

(i) Mobile assets

36. Mobile assets are assets that in the normal course of business cross the borders of States (e.g. aircraft, ships or, in some cases, machinery or motor vehicles). For example, a grantor operating a construction business in several States may have to create security rights in machinery periodically moved from one State to another for the purposes of that business; or a grantor operating a transportation business may need to create security rights in the vehicles used in the transportation business (although motor vehicles may not normally cross national borders in island States). The application to mobile assets of the general conflict-of-laws rule for tangible assets would require the secured creditor to ascertain the exact location of each piece of machinery or each vehicle at the time of the creation of the security right. To ensure continued third-party effectiveness of its security right, the secured creditor would also need to enquire as to all States in which each of these assets might be potentially located at any given time and meet the relevant requirements of all such States. Moreover, it would not be possible to identify the State in which the relevant asset would be located at the time of a priority contest occurring in the future and therefore to determine the priority regime to be applied to resolve the dispute. To avoid these problems and resulting costs and uncertainties, in some States, the creation, third-party effectiveness and priority of a security right in tangible assets of a type ordinarily used in more than one State may be governed by the law of the State in which the grantor is located (except if ownership of assets of that type is subject to registration in a special registry which also allows for the registration of security rights; see para. 37 below). The Guide follows this approach (see recommendation 201).

(ii) Tangible assets subject to specialized registration or notation on a title certificate

37. The ownership of certain categories of tangible assets is sometimes recorded in specialized registries or evidenced by a title certificate. This is generally the case for aircraft and ships and, in some States, for motor vehicles. To the extent that the relevant registry or notation system also permits the registration or notation of security rights, reference can be made to the law of the State under the authority of which the relevant registry is maintained, or the title certificate is issued, to determine the law governing the creation, third-party effectiveness and priority of a security right in an asset that is subject to registration in such a specialized registry or notation on a title certificate. Thus, a search in the registry, or an examination of the title certificate, would disclose both ownership and security rights in respect of such assets. Such a rule may be based on national law (see recommendation 202) or international conventions, which take precedence (e.g. the Convention on International Interests in Mobile Equipment and the relevant protocols thereto).

4. Law applicable to the creation, third-party effectiveness and priority of a security right in intangible assets

(a) General rule: law of the location of the grantor

38. In some States, the creation, third-party effectiveness and priority of a security right in intangible assets is governed by the law of the States in which the grantor is located. For example, if an exporter located in State A creates a security right in receivables owed by customers located in States B and C, the law of State A will govern the property right aspects of the security right. This rule is consistent with

the approach followed in the United Nations Assignment Convention with respect to the law applicable to the assignment of receivables (see articles 22 and 30).

39. In other States, the law of the location of the asset (*lex situs*) still governs the creation, third-party effectiveness and priority of a security right in intangible assets. In those States, it is necessary to establish the location of an intangible asset (e.g. for a receivable, the location of the debtor of the receivable).

40. The law of the grantor's location has several advantages over the *lex situs*, especially where the encumbered intangible assets consist of receivables. One single law applies even if the assignment relates to many receivables owed by different debtors. In addition, the law of the grantor's location may be ascertained easily at the time the assignment is made, even if the assignment relates to future receivables or to receivables assigned in bulk. Moreover, the law of the grantor's location (place of central administration in the case of a grantor having places of business in more than one State) is the law of the State in which the main insolvency proceedings with respect to the grantor are likely to be administered.

41. It is also the case that, while the law of the location of the encumbered asset (*lex situs*) works well in most instances for tangible assets, great difficulties arise in applying the *lex situs* to intangible assets, both at conceptual and practical levels. From a conceptual standpoint, there is no consensus and no clear answer as to the *situs* of a receivable. One view is that it is the place where payment must be made. Another view is that the *situs* of a receivable is the legal domicile or place of business or principal residence of the debtor of the receivable. A further view is that a receivable should be deemed to be located in the State whose law governs the contractual relationship between the original creditor (that is, the grantor) and the debtor of the receivable. Any of the foregoing alternatives would impose upon a prospective assignee the burden of having to make a detailed factual and legal investigation. Moreover, in many instances, it might prove impossible for the assignee to determine with certainty the exact location of a receivable since the criteria for determining that location may depend on business practices or the will of the parties to the contract under which the receivable arises. Thus, using the *lex situs* as the law applicable to security rights involving receivables would not provide certainty and predictability, which are key objectives for a sound conflict-of-laws regime in the area of secured transactions.

42. Furthermore, even if a State had detailed provisions allowing a prospective or existing secured creditor to ascertain easily and objectively the law of the location of a receivable, practical difficulties would still ensue in many commercial transactions. This would be so because a security right may relate not only to an existing and specifically identified receivable, but also to many other receivables. Thus, a security right may cover a pool of present and future receivables. In such a case, selecting the *lex situs* as the law governing priority would not be an efficient policy decision, as different priority rules might apply with respect to the various assigned receivables. Moreover, where future receivables are subject to a security right, it would not be possible for the secured creditor to ascertain the extent of its priority rights at the time of the transaction, since the *situs* of those future receivables is unknown at that time.

43. In view of the above, the Guide recommends that the creation, third-party effectiveness and priority of a security right in an intangible asset be governed

in general by the law of the State in which the grantor is located (see recommendation 205). The criteria defining the grantor's location are consistent with those found in the United Nations Assignment Convention (see paragraphs 21 and 70; see also recommendation 216).

(b) Exceptions for certain types of asset

44. There are three categories of intangible asset in respect of which different considerations apply and the location of the grantor is not the most (or the only) appropriate connecting factor for the selection of the applicable law: rights to payment of funds credited to a bank account; rights to receive the proceeds under an independent undertaking; and receivables arising from a transaction relating to immovable property.

(i) Rights to payment of funds credited to a bank account

45. With respect to the creation, third-party effectiveness, priority and enforcement of a security right in rights to payment of funds credited to a bank account, different approaches are followed in various States (for the definition of "bank account", see Introduction, section B, Terminology). For sake of simplicity and because a bank deposit is a receivable, some States consider that the governing law for receivables in general should also apply to a bank account. A different approach is to refer to the law of the State in which the branch maintaining the account is located (see recommendation 207, alternative A). Under this approach, certainty and transparency with regard to the applicable law would be enhanced, as the location of the relevant branch could be easily determined in a bilateral bank-client relationship. In addition, such an approach would reflect the normal expectations of parties to current banking transactions. Moreover, this approach would result in the law governing a security right in a right to payment of funds credited to a bank account being the same as that applicable to regulatory matters. The location of the branch is often viewed as the *situs* of a bank account for regulatory or other matters in respect of which the *situs* of the account must be ascertained.

46. Another approach is to refer to the law specified in the account agreement as the law governing the account agreement, or to any other law explicitly specified in the account agreement, provided that the depositary bank has a branch in the State whose law is so specified. If the account agreement does not specify any law, the applicable law could be determined using the same default criteria as those found in article 5 of the Hague Securities Convention (see recommendation 207, alternative B). Under this approach, the applicable law would meet the expectations of the parties to the account agreement. Third parties would be able to ascertain the law provided in the account agreement, as the grantor-account holder would normally supply information on the account agreement to obtain credit from a lender relying on the funds credited to the account.

47. As is the case with negotiable instruments and for the same reasons, the law of the State of the grantor's location could apply to the third-party effectiveness of a security right in a right to payment of funds credited to a bank account where third-party effectiveness may be achieved by registration in the place where the grantor has its location (see para. 34 above and recommendation 208).

(ii) *Rights to receive the proceeds under an independent undertaking*

48. In many States, the third-party effectiveness and priority of a security right in the right to receive the proceeds under an independent undertaking are referred to the law specified in the independent undertaking (for the definition of “right to receive the proceeds under an independent undertaking”, see Introduction, section B, Terminology; for this approach, see recommendation 209). If the governing law is not specified in the independent undertaking, those matters are referred to the law of the State of the location of the relevant office of the person that has provided (or has agreed to perform, as the case may be) the undertaking (see recommendation 210). This approach is viewed as being the most closely connected to the undertaking with respect to the law applicable to those matters. It is also consistent with the normal expectations of parties to such transactions. As to the creation of a security right in such an asset, the general conflict-of-laws rule for intangible assets continues to apply in view of the fact that creation only involves the effectiveness of the security right as between the parties to the security agreement and does not affect the rights of other parties.

49. However, if an independent undertaking is issued to ensure the performance of an obligation under a receivable or negotiable instrument, the law governing the creation and third-party effectiveness of a security right in the receivable or negotiable instrument will determine whether the security right extends automatically to the independent undertaking (see recommendation 211). This approach is justified by the need to apply, for consistency reasons, the same law to the creation and third-party effectiveness of the security right in the receivable or negotiable instrument and in the right to receive the proceeds under a related independent undertaking.

(iii) *Receivables related to immovable property*

50. Where a receivable arises from the sale or lease of immovable property or is secured by immovable property, as for any other receivable, the law of the State of the location of the grantor should normally govern the property aspects of a security right in the receivable. However, in the event of a priority contest where at least one of the competing claimants has registered its right in the immovable property registry of the State in which the immovable property is located, the Guide recommends that the priority contest be resolved in accordance with the law the State under whose authority the registry is maintained (see recommendation 206). The purpose of the latter rule is to ensure that the law of the State maintaining the registry actually applies to parties that are entitled by that law to rely on the registry. For the same reason, this rule is confined to a situation where, under the law of the State of the registry, registration in the registry is relevant for priority issues.

5. Law applicable to the creation, third-party effectiveness and priority of a security right in proceeds

51. There are generally three approaches to the law applicable to the creation, third-party effectiveness and priority of a security right in proceeds (for the definition of “proceeds”, see Introduction, section B, Terminology).

52. One approach is to refer, for the law applicable to a security right in proceeds, to the law applicable to the security right in the original encumbered assets.

For example, if the original encumbered assets are in the form of inventory located in State A and the proceeds take the form of receivables and the grantor is located in State B, the law of State A would apply to the creation, third-party effectiveness and priority of a security right in the receivables. Hence, a priority conflict between a security right in receivables as proceeds of inventory and a security right in receivables as original encumbered assets would be governed by the law of State A (the law of the location of the inventory). As a result, certainty as to the applicable law would be enhanced for the benefit of the inventory financiers relying on the receivables as proceeds.

53. However, this approach has significant disadvantages for the receivables financier. For example, it would result in the application of a law other than the law receivables financiers would expect to apply to their rights in the receivables as original encumbered assets. Another disadvantage is that the receivables financier would be unable to predict what the applicable law would be because the governing law would depend on whether the dispute arises with an inventory financier (in which case the law of the location of the inventory would govern) or with another competing claimant (in which case the law of the location of the grantor would govern). This approach also provides no solution in a tripartite dispute among the receivables financier, the inventory financier and another competing claimant. This approach would also undermine the choice of the law of the grantor's location as the law applicable to a security right in receivables because receivables often result from the sale of tangible assets. The receivables financier in many instances then would be unable to rely on the law of grantor's location.

54. A second approach is to refer to the law applicable to security rights in assets of the same type as the proceeds. In the example given above, the law of State B (the law of the grantor's location) would apply to the creation, third-party effectiveness and priority of a security right in the receivables. Simplicity and certainty considerations would support such an approach: it would always be possible to determine the applicable law irrespective of the parties to the dispute.

55. Yet a third approach is to combine the two approaches mentioned above and retain the second approach as the rule for third-party effectiveness and priority of a security right in proceeds, while the first approach would apply to the creation of that right. Under this third approach, the question of whether a security right extends to proceeds would be governed by the law applicable to the creation of a right in the original encumbered assets from which the proceeds arose, while the third-party effectiveness and priority of a security right to proceeds would be subject to the law that would have been applicable to such issues if the proceeds had been original encumbered assets.

56. This approach would meet the expectations of a creditor obtaining a security right in inventory under a domestic law providing that such security right automatically extends to proceeds. It would also meet the expectations of receivables financiers as to the law that would apply to the creation, third-party effectiveness and priority of a security right in receivables as original encumbered assets. Finally, such an approach would ensure that the inventory financier could rely on the law governing its security right as to whether the right extends to proceeds and would allow all competing claimants to identify with certainty the law that will govern a potential priority contest. For all these reasons, this is the approach recommended in the Guide (see recommendation 212).

6. Law applicable to the rights and obligations of the parties to the security agreement

57. As mentioned above (see para. 11), the scope of the rules on the creation, third-party effectiveness and priority of a security right is confined to the property (in rem) aspects of the right. These rules do not apply to the mutual rights and obligations of the parties to the security agreement. Such rights and obligations are rather governed by the law chosen by them or, in the absence of a choice of law, by the law governing the agreement as determined by the conflict-of-laws rules generally applicable to contractual obligations (see recommendation 213). For example, in a State in which the Rome Convention is in effect, in the absence of a choice of law by the parties, the mutual rights and obligations of the parties to the security agreement will be subject to the law most closely connected to the security agreement (see article 4, paragraph 1, of the Rome Convention). A loan agreement whereby a security right is also granted may be presumed to be most closely connected with the State in which the party that performs the obligation that is characteristic of the agreement has its central administration or habitual residence (see article 4, paragraph 2, of the Rome Convention). In such a loan agreement, this party may be the lender. In a retention-of-title sale, it may be the seller.

7. Law applicable to the rights and obligations of third-party obligors

58. Security rights in intangible assets generally involve third parties such as, for example, the debtor of a receivable, an obligor under a negotiable instrument, the depositary bank, the guarantor/issuer, confirmer or nominated person in an independent undertaking or the issuer of a negotiable document. The conflict-of-laws rules governing the property aspects or the enforcement of a security right are not necessarily appropriate for the determination of the law applicable to the obligations of third parties against whom the secured creditor may want to exercise the recourses arising from its security right. Applying these rules would frustrate the expectations of parties that have payment or other obligations arising in connection with the encumbered asset but do not take part in the transaction to which the security agreement relates.

59. In particular, the fact that a receivable has been encumbered by a security right should not result in the obligations of the debtor of the receivable becoming subject to a law different from the law governing the receivable. Similar considerations apply to the obligations of the obligor under a negotiable instrument, the depositary bank, the guarantor/issuer, confirmer or nominated person in an independent undertaking or the issuer of a negotiable document where a security right has been granted in a negotiable instrument, right to payment of funds credited to bank accounts or proceeds under an independent undertaking, or a negotiable document. It is generally accepted that the existence of the security right should not displace the law applicable to the relationship of all such parties with the grantor and that such law should also govern their relationship with the secured creditor. The conflict-of-laws rules proposed by the Guide follow this approach (see recommendation 214).

8. Law applicable to the enforcement of a security right

60. In most States, procedural matters are governed by the law of the State where the relevant procedural step is taken. However, enforcement may relate to

substantive or procedural matters. Although the forum State will use its own law to determine what is substantive and what is procedural, the following are examples of issues generally considered to be substantive: the nature and extent of the remedies available to the creditor to realize the encumbered assets; whether such remedies (or some of them) may be exercised without judicial process; the conditions to be met for the secured creditor to be entitled to obtain possession and dispose of the assets (or to cause the assets to be judicially realized); the power of the secured creditor to collect receivables that are encumbered assets; and the obligations of the secured creditor to the other creditors of the grantor.

61. With respect to substantive enforcement matters, where a security right is created and made effective against third parties under the law of one State, but is sought to be enforced in another State, the question arises as to the law applicable and thus the remedies available to the secured creditor. This is of great practical importance where the substantive enforcement rules of the two States are significantly different. For example, the law governing the security right could allow enforcement by the secured creditor without prior recourse to the judicial system, while the law of the place of enforcement might require advance judicial intervention. Each of the possible solutions to this issue entails advantages and disadvantages.

62. One approach would be to refer enforcement remedies to the law of the place of enforcement, i.e. the law of the forum State (*lex fori*). The place of enforcement of security rights in tangible assets in most instances would be the place of the location of the asset, while enforcement of a security right in intangible assets such as a receivable might take place in the location of the debtor of the receivable. The policy reasons in favour of this approach are, among others, that:

(a) The law of remedies would coincide with the law generally applicable to procedural issues;

(b) The law of remedies would, in many instances, coincide with the law of the State in which the assets being the object of the enforcement are located (and could also coincide with the law governing priority if the conflict-of-laws rules of the relevant State point to such location for priority issues);

(c) The requirements would be the same for all creditors intending to exercise rights in the place of enforcement against the assets of a grantor, irrespective of whether such rights are domestic or foreign in origin.

63. On the other hand, selecting the *lex fori* may result in uncertainty if the encumbered asset is an intangible asset. For example, it is not clear where enforcement is to take place if the encumbered assets are in the form of receivables. The answer to this question could be very problematic as it would require the criteria for determining the location of the receivables to be set out (see para. 41 above). In addition, the secured creditor might be located in a different State at the time the initial enforcement steps are taken. In the case of a bulk assignment involving receivables owing by debtors located in several States, multiple laws may apply to enforcement. The difficulty would be the same if one enforcement act would have to be performed in one State (e.g. notification of the debtor of the receivable) and another act in another State (e.g. collection or sale of the receivable). If future receivables are involved, the secured creditor may not know at the time of the assignment which law would govern its enforcement remedies.

All this uncertainty as to the applicable law may have a negative impact on the availability and the cost of credit.

64. Another concern is that the *lex fori* might not give effect to the intention of the parties. The parties' expectations may be that their respective rights and obligations in an enforcement situation will be those provided by the law under which the priority of the security right will be determined. For example, if extrajudicial enforcement is permitted under the law governing the priority of the security right, this remedy should also be available to the secured creditor in the State where it has to enforce its security right, even if it is not generally allowed under the domestic law of that State.

65. So, another approach would be to refer substantive enforcement matters to the law governing the priority of a security right. The advantage of this approach would be that enforcement matters are closely connected with priority issues (e.g. the manner in which a secured creditor will enforce its security right may have an impact on the rights of competing claimants). Such an approach may have another benefit. As the law governing priority is often the same law as the law governing the creation and third-party effectiveness of the security right, the final result would be that creation, third-party effectiveness, priority and enforcement issues would often be governed by the same law.

66. A third possible approach would be a rule whereby the law governing the contractual relationship of the parties would also govern enforcement matters. This approach would result in an applicable law that would often correspond to the parties' expectations. In addition, in many instances, under such an approach, the applicable law would coincide with the law applicable to the creation of the security right, since that law is frequently selected as also being the law of their contractual obligations. However, under this approach, parties would then be free to select, for enforcement issues, a law other than the law of the forum State or the law governing priority. This solution would be disadvantageous to third parties that might have no means to ascertain the nature of the remedies that could be exercised by a secured creditor against the assets of their common debtor. Therefore, referring enforcement issues to the law governing the contractual relationship of the parties would necessitate exceptions designed to take into account the interests of third parties, as well as the mandatory rules of the forum State, or of the law governing creation, third-party effectiveness and priority.

67. A fourth approach would be to attempt to reconcile the benefits of the approaches based on the law of the place of enforcement (*lex fori*) and the law governing priority. Under this approach, the enforcement of a security right in tangible assets may be governed by the *lex fori*, while the enforcement of a security right in intangible assets would be governed by the same law as the law that applies to priority. The Guide recommends this solution as it preserves the benefits of using the *lex fori* for tangible assets, while avoiding the difficulties that would arise if such law were to apply to intangible assets (see recommendation 215).

68. It must be noted that the above conflict-of-laws rules on enforcement do not govern the relationship between a secured creditor and third-party obligors. As mentioned above (see paragraph 59), the obligations of such persons to the secured creditor are generally governed by the same law that was applicable to their relationship to the grantor.

9. Rules and relevant time for the determination of location

69. As the general conflict-of-laws rules for security rights in tangible and intangible assets point to the location of the encumbered assets and the location of the grantor, respectively, it is essential that the appropriate location be easily identified. Tangible assets are commonly viewed as being located at the place where they are physically located and there is no need to provide a specific rule to that effect. There is such a need, however, for the determination of the location of the grantor. The legal domicile and the residence of a natural person might be in different States. Likewise, a legal person may have its statutory head office in a State other than the State in which its principal place of business or decision centre is located.

70. As mentioned above, the United Nations Assignment Convention defines the location of the grantor as follows: the grantor's location is its place of business or if the grantor has places of business in more than one State, the place where the central administration of the grantor is exercised. If the grantor has no place of business, reference is then made to the grantor's habitual residence (see article 5, subparagraph (h)). The Guide defines the location of the grantor in the same manner (see recommendation 216).

71. Whatever connecting factor is retained for determining the most appropriate conflict-of-laws rule for any given issue, there may be a change in the relevant factor after a security right has been created. For example, where the applicable law is that of the State where the grantor has its head office, the grantor might later relocate its head office to another State. Similarly, where the applicable law is the law of the State where the encumbered assets are located, the assets may be moved to another State. So, it is also necessary to determine the time that is relevant for the determination of location.

72. If this issue is not dealt with specifically, the general conflict-of-laws rules on creation, third-party effectiveness and priority of a security right might be construed to mean that, in the event of a change in the relevant connecting factor, the original governing law continues to apply to creation issues (because they arose before the change, while the subsequent governing law would apply to events occurring thereafter that raise third-party effectiveness or priority issues). For example, in a situation where the law applicable to the third-party effectiveness of a security right is that of the grantor's location, the effectiveness of the right against the insolvency administrator of the grantor would be determined using the law of the State of the new location of the grantor at the time of commencement of the insolvency proceedings.

73. Silence of the law on these matters might, however, give rise to other interpretations. For example, one interpretation might be that the subsequent governing law also governs creation as between the parties in the event of a priority dispute occurring after the change (on the basis that third parties dealing with the grantor are entitled to determine the applicable law for all issues relying on the actual connecting factor being the connecting factor in effect at the time of their dealings).

74. Thus, providing guidance on these issues is necessary to allow interested parties to determine with certainty whether a change in the connecting factor would result in the application of a law other than the law initially expected by the parties

to apply if the State of the new location of the assets or the grantor has a different conflict-of-laws rule. Therefore, the Guide proposes to make explicit the interpretation referred to in paragraph 73: for the purpose of determining the law applicable to creation, the relevant location should normally be the location of the encumbered asset or the grantor at the time of putative (purported or asserted) creation; for the purpose of determining the law applicable to third-party effectiveness and priority, the relevant location should be the location at the time the issue arises. However, in a dispute involving only competing claimants whose rights became effective against third parties before a change in location of the asset or the grantor, third-party effectiveness and priority issues should be governed by the law of the initial location (see recommendation 217).

10. Public policy and internationally mandatory rules

75. According to the conflict-of-laws rules of many States, the forum State may refuse the application of the law determined under its conflict-of-laws rules only if the effect of its application would be manifestly contrary to the public policy of the forum State or to provisions of the law of the forum State that are mandatory even in international situations. This rule is intended to preserve fundamental principles of justice of the forum State. For example, if, under the law of the forum State, a security right cannot be created in retirement benefits and this is a matter of public policy in the forum State, the forum State may refuse to apply a provision of the applicable law that would recognize the creation of such a right. However, these principles should not permit the forum State to apply its own third-party effectiveness and priority rules in the place of those of the applicable law (see recommendation 219). The forum State has to apply other provisions of the applicable law to determine third-party effectiveness and priority. This approach is justified by the need to achieve certainty with respect to the law applicable to third-party effectiveness and priority. The same approach is followed in articles 23, paragraph 2, 30, paragraph 2, and 31 of the United Nations Assignment Convention. It is also followed in article 11, paragraph 3, of the Hague Securities Convention.

11. Impact of commencement of insolvency proceedings on the law applicable to security rights

76. Determining the law applicable to the creation, third-party effectiveness and priority of a security right and the post-default rights of a secured creditor may raise additional issues when insolvency proceedings are commenced in one State and some of the debtor's assets or creditors are located in another State, or when insolvency proceedings are commenced in two different States owing to the multinational nature of the debtor's business. In either instance, however, most States provide that general conflict-of-laws rules applying outside of insolvency proceedings would govern these matters, subject to the limitations discussed below. This result is consistent with recommendation 30 of the *UNCITRAL Insolvency Guide*, which provides that the State in which insolvency proceedings are commenced (i.e. the forum State) should apply its conflict-of-laws rules to determine which State's law governs such questions as the validity and effectiveness of rights and claims (including security rights) existing at the time of the commencement of insolvency proceedings (see also recommendation 220 of this Guide).

77. Once, under the non-insolvency law applicable outside of insolvency proceedings by virtue of the conflict-of-laws rules of the forum State, the validity and effectiveness of a security right are determined, a second issue arises concerning the effect of commencement of insolvency proceedings on the priority of security rights. It is generally recognized that the insolvency law of the State in which the insolvency proceedings are commenced (*lex fori concursus*) governs the commencement, conduct, including the ranking of claims, administration and conclusion of the proceedings (the “insolvency effects”) (see recommendation 31 of the *UNCITRAL Insolvency Guide*). This may have the effect of changing the relative priority that a security right would have under secured transactions law, and establish categories of claims that would receive distributions ahead of a security right in insolvency proceedings. In addition, irrespective of priority issues a security right might be subject to the avoidance provisions of the insolvency law (see recommendation 88 of the *UNCITRAL Insolvency Guide*).

78. While the insolvency effects of insolvency proceedings on security rights typically are governed by the *lex fori concursus*, some States have adopted exceptions. For example, a forum State may defer to the insolvency law of the State in which immovable property is located (*lex rei sitae*) for the insolvency effects on a security right in attachments to the immovable property. The *UNCITRAL Insolvency Guide* addresses these exceptions in more detail (see part two, chapter I, paras. 85-91), but does not recommend the adoption of a *lex rei sitae* rule for insolvency effects as applied to attachments to immovable property or even to movable property in general. Instead, it generally recommends that any exceptions to the applicability of the *lex fori concursus* for insolvency effects should be limited in number and clearly set forth in the insolvency law (see *UNCITRAL Insolvency Guide*, recommendation 34 and part two, chapter I, para. 88).

12. Special recommendations when the applicable law is the law of a multi-unit State

79. The term “State” in the Guide refers to a sovereign State or country. The question arises, however, as to what law applies if, on a given issue, the conflict-of-laws rule refers to a State that comprises more than one territorial unit, with each unit having its own system of law in relation to the issue. This could be the case in federal States in which the secured transactions law generally falls under the legislative authority of their territorial units. For the conflict-of-laws rules to work where the applicable law is the law of such a State (even if the forum State is not a multi-unit State), it is necessary to determine the territorial unit whose law will apply.

80. Normally, references to the law of such a State are to the law in effect in the relevant territorial unit, as determined on the basis of the applicable connecting factor (such as the location of the asset or the location of the grantor). For instance, if the applicable law is the law of a multi-unit State with three territorial units (A, B and C), a reference to the law of the location of the grantor as the law applicable to a security right in receivables means a reference to the law of unit A if the place of central administration of the grantor is in unit A (see recommendation 221).

81. To preserve the consistency of the internal conflict-of-laws rules of a multi-unit State, the Guide adopts an approach followed by many international conventions and recommends that such rules continue to apply, but only internally

(see recommendation 222). Using the example given in the preceding paragraph, if a grantor is located in unit A of a multi-unit State, the law of unit B would apply where the internal conflict rules of unit A would point to the law of unit B as the applicable law. This could be the case if the conflict rules of unit A contemplate (as in the Guide) that the law of the grantor's location governs the third-party effectiveness and priority of a security right in receivables but defines location differently. If the location of the grantor as defined in the Guide (that is, the place of central administration) is in unit A but the law of unit A defines the grantor's location as meaning the location of its statutory head office and such office of the grantor is in unit B, then the third-party effectiveness and priority of the security right in the receivables will be governed by the law of unit B. This appears to be a deviation from the general rule on the exclusion of renvoi (see recommendation 218). However, this "deviation" is limited to internal renvoi, which does not affect certainty as to the applicable law. In the above example, there would be no reference to a law other than that of unit A should the statutory head office of the grantor be located in a State other than the State of which unit A forms part.

82. These rules on multi-unit States are relevant only to issues that, in such a State, are governed by the laws of its territorial units. So, for example, these rules would have no impact in a federal State whose constitution provides that secured transaction matters are governed by federal laws.

83. Recommendations 223 and 224 apply only if a State adopts alternative B of recommendation 207.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

A/CN.9/637/Add.7 [Original: English]

(f) Enforcement	24-30
B. Recommendations	

XIII. Transition

A. General remarks

1. The need for transition provisions

1. The previous chapter addressed “conflict of laws”, that is, the set of rules to determine, in cases where two or more legal systems have substantive rules that might apply to a particular transaction, which substantive rules will in fact apply. Often these conflict-of-laws rules are described as rules governing conflict of laws “in space”, in order to distinguish them from a different type of conflict-of-laws

rules (i.e. those governing conflict of laws “in time”). All legislative action raises issues relating to the conflict of laws in time. Hence, most States have well-developed principles to determine, when a new law comes into force, its impact on inconsistent prior law and the extent of its application to existing legal relationships. Where, however, a major reform to existing law is contemplated, States usually incorporate into the reform statute specific rules governing conflict of laws in time as they arise in connection with the coming into force of the new law. These rules are typically known as “transition provisions”. In view of the scope of preceding chapters, the Guide recommends that States adopt a series of transition provisions tailored specifically to the new law they may enact.

2. The rules embodied in new secured transactions legislation reflecting the recommendations of the Guide are likely to depart in significant ways from the rules in the secured transactions law predating the legislation. Those differences will have an obvious impact on any agreements that grantors and secured creditors conclude after the new legislation is enacted. However, many transactions concluded under the prior law will be ongoing when the new law comes into force. In light of the differences between the old and new legal regimes and the continued existence of transactions and security rights created under the old regime, it is important for the success of the new legislation that it contain fair and efficient rules governing the transition from the old law to the new law. A similar need for transition rules is present when, under the conflict-of-laws rules of the old regime, the law of a different State (i.e. different from the State whose law governs that issue under the conflict-of-laws rules of the new regime) governed the creation, effectiveness against third parties or priority of a security right.

3. Two issues related to the transition from the old regime to the new law must be addressed. First, as discussed in section A.2, the new legislation should provide the date as of which it (or dates as of which its various parts) will come into force (the “effective date”; see recommendation 223). Second, as discussed in section A.3, the new legislation should also set forth the extent to which, after the effective date, the new legislation applies to transactions or security rights that existed before the effective date.

2. Effective date of new legislation

4. A number of factors require consideration in determining the effective date of the legislation. Prompt realization of the economic advantages of new legislation is a reason for States to bring the new law into force as soon as possible after enactment. These advantages must be balanced, however, against the need to avoid causing instability in, or disruption of, the markets that will be governed by the new legislation, and to allow market participants adequate time to prepare for conducting transactions under the new legislation, which may be significantly different from transactions under the prior law. Accordingly, and depending on the extent to which the new legislation had been the subject of public discussion (including substantial educational programmes for judges, lawyers and market participants), a State may conclude that the effective date of the new legislation should be some period of time after the enactment of the new legislation, in order for these markets and their participants to adjust their conduct in preparation for the new rules.

5. In determining the effective date, States might consider various factors including the following: the impact of the effective date on credit decisions;

maximization of benefits to be derived from the new legislation; the necessary regulatory, institutional, educational and other arrangements or infrastructure improvements to be made by the State; the status of the pre-existing law and other infrastructure; the harmonization of the new secured transaction legislation with other legislation; constitutional limits, if any, to the retroactive effect of new legislation; and standard or convenient practice for the entry into force of legislation (e.g. on the first day of a month).

6. States generally adopt one of three methods for bringing legislation into force at a date subsequent to enactment. First, it is provided that a law comes into force on a future date fixed by a “decree” or a “proclamation”. In other cases, the law itself will specify that future date. For example, if a law were enacted on 17 January of a given year, that law might simply provide that it comes into force on 1 September of the same year. In still other cases, the legislation will contain a specific formula for determining its effective date. For example, the law might provide that the effective date will be the first day of the calendar month following the expiration of six months after the date of enactment. A second formula might refer to the first day of January or July, whichever occurs first, following the expiration of six months after the date of enactment. Under a third formula, it is necessary to delay the effective date in order to allow time to build a technical infrastructure (such as a computerized registry). In these cases, States often use a “decree” to the effect that, for example, the date the registry becomes operational will be the starting point for the six-month or longer delay. The Guide recommends that States either specify the effective date, or set out a formula for determining the effective date in the law itself (recommendation 223).

7. As debts that are secured by rights in the grantor’s assets are often payable over a period of time, it is likely that there will be many rights created before the effective date that will continue to exist on and after the effective date, securing debts that are not yet paid. Therefore, States also must consider whether the new legislation should apply to issues that arise after the effective date when these issues relate to transactions entered into prior to the effective date.

8. One approach would be for the new legislation to apply prospectively only and, therefore, not to govern any aspects of any transactions entered into prior to the effective date. While there might be some appeal in such a solution, especially with respect to issues that arise between the grantor and the secured creditor, such an approach would create significant problems, especially with respect to priority issues. Foremost among those problems would be the necessity of resolving priority disputes between a secured creditor that obtained its security right prior to the effective date and a competing secured creditor that obtained its security right in the same encumbered assets after the effective date. Because priority is a comparative concept, and the same priority rule must govern the two security rights that are being compared, it is not practicable for the old rules to govern the priority of the security right of the pre-effective-date creditor and the new rules to govern the priority of the security right of the post-effective-date creditor. Determining which priority rule to apply to such priority disputes is not without difficulty. Applying the old rules to such priority disputes would essentially delay the effectiveness of some of the most important aspects of the new legislation, with the result that significant economic benefits of the new legislation could be deferred for a substantial period. The delay would affect all new transactions even though it would be needed for only

some of the old transactions. Moreover, the delay would prevent parties with security agreements that cover future assets from taking advantage of the new law for assets acquired after its effective date. On the other hand, applying the new rules to such priority disputes might unfairly prejudice parties that relied on the old law (especially those parties that relied on the old law without notice that the law might be changed) and might also provide an incentive for such parties to object to the new legislation or advocate an unduly delayed effective date.

9. Alternatively, greater certainty and earlier realization of the benefits of the new legislation could be promoted by applying the new legislation to all transactions as of the effective date, but with such transition provisions as are necessary to assure an effective transition to the new regime without loss of pre-effective-date priority status. Such an approach would avoid the problems identified above and would otherwise fairly and efficiently balance the interests of parties that complied with the old law with the interests of parties that comply with the new law.

10. Taking into account these considerations, the Guide recommends the second of these two general approaches: (a) immediate application of the new law to all transactions arising after its effective date; (b) no general retroactive application of the new law to transactions entered into prior to its effective date; (c) application of the new law to issues and procedures (for example, priority disputes and enforcement mechanisms) arising after its effective date; and (d) adoption of transition provisions to protect the rights that parties acquired under transactions concluded prior to the effective date (recommendation 223, second sentence).

3. Issues to be addressed by transition provisions

(a) General

11. Many security rights created before the effective date of the new law will continue to exist after the effective date and may come into conflict with security rights created under the new law. Clear transition provisions are thus needed to determine the extent to which the rules in the new legislation will apply to those pre-existing security rights. These transition provisions should appropriately address both the settled expectations of parties and the need for certainty and predictability in future transactions. The transition provisions must address the extent to which the new rules will apply, after the effective date, as between the parties to a transaction that created a security right before the effective date. They must also address the extent to which the new rules will apply, after the effective date, to resolve priority disputes between a holder of a security right and a competing claimant, when either the security right or the right of the competing claimant was created before the effective date.

12. No single rule or formula to govern all cases is possible because, even if all States were to implement the Guide in identical fashion, each State would be transitioning from a different pre-existing regime. Further, the particularities of the pre-existing regime will have an effect on the decisions made with respect to transition, such as how easy it will be to determine that assets were subject to a security right under the old regime, or how long transactions could go on “untouched” (e.g. whether, under the old regime, there would not be a need for renewal or other action to maintain third-party effectiveness). The discussion that

follows reviews the principal issues that States must address in elaborating a series of transition provisions.

(b) Disputes before a court or arbitral tribunal

13. When a dispute is in litigation at the effective date, the rights of the parties have sufficiently crystallized so that the coming into force of a new legal regime should not change the outcome of that dispute. The same principle should apply when the dispute is taken before a comparable dispute resolution system, such as arbitration, although it should not apply when a system such as conciliation is being used by the parties (as the non-binding character of the result of the proceedings indicates that the rights of the parties have not sufficiently crystallized). It follows, therefore, that such a dispute should not be resolved by application of the new legal regime (see recommendation 224). Moreover, within the context of ongoing enforcement proceedings, parties to the dispute should generally not be able to avail themselves of mechanisms or rights provided in the new law. Litigation may involve matters other than enforcement. In these cases, ongoing litigation on one aspect of a secured transaction should not preclude the application of the new law to aspects of the transaction that are not the subject of litigation. Nor should it prevent parties from commencing litigation on any such matters under the new law.

(c) Effectiveness of pre-effective-date rights as between the parties

14. When a security right has been created before the effective date of new legislation, two questions arise regarding the effectiveness of that right between the grantor and the creditor. The first question is whether a security right that was effectively created under the old law but does not fulfil the requirements for creation under the new law will become ineffective on the effective date of the new law. The second question is whether a security right that was not effectively created under old law but fulfils all the requirements for creation of a security right under the new law will become effective on the effective date of the new law.

15. With respect to the first question, different approaches are also possible. For example, a transition period might be created during which the security right would remain effective between the parties, so that the creditor could take the necessary steps for creation under the new law during the transition period. At the expiration of the transition period, if such steps had not been taken the right would become ineffective under the new law. On the other hand, a simpler approach (and the approach adopted by the Guide) is to provide that, if a security right is created (that is, is effective between the parties) before the effective date of the new law, it remains effective between them after the new law comes into force (see recommendation 225).

16. With respect to the second question, consideration should be given to making the right effective as of the effective date of the new law, since the parties presumably intended the right to be effective as between them when they entered into their agreement. Nonetheless, some States address this issue by requiring a confirmation by the grantor that it intends the previously ineffective right to be effective under the new law. Such a requirement is difficult to put into practice, however, since it presumes, implausibly, that at least one of the parties knew of the defect, failed to do anything to correct it under the old law, but now wishes the security right to be effective. The more likely case involves the discovery of the

defect after the new law came in force, in which case a rule providing for automatic effectiveness upon the coming into force of the new law is justified. This is the position implicitly recommended in the Guide (recommendation 223, second sentence).

(d) Effectiveness of pre-effective-date rights as against third parties

17. Different issues arise as to the effectiveness against third parties of a right created before the effective date of the new law. As the new legislation will embody public policy regarding the proper steps necessary to make a right effective against third parties, it is preferable for the new rules to apply to the greatest extent possible. It may, however, be unreasonable to expect a creditor whose right was effective against third parties under the previous legal regime of the enacting State (or under the law of the State whose law applied to third-party effectiveness under the conflict-of-laws rules of the old regime) to comply immediately with any additional requirements of the new law. The expectation would be especially onerous for institutional creditors, which would be required to comply with the additional requirements of the new law simultaneously for large numbers of pre-effective-date transactions.

18. A preferable approach would be for a security right that was effective against third parties under the previous legal regime but would not be effective under the new rules to remain effective for a reasonable period of time (as specified in the transition provisions in the new law) so as to give the creditor time to satisfy the requirements of the new law. At the expiration of the transition period, the right would become ineffective against third parties unless it had become effective against third parties under the new law (see recommendation 226). In determining the length of time within which creditors are permitted to make their existing rights effective against third parties, States should consider a number of practical questions. For example, where a registry system for security rights already exists, a longer period might be contemplated since third parties would continue to have a means to determine if a security right encumbered particular assets. By contrast, where no registry system for security rights is in place, a shorter period might be considered (at least for rights for which a notice was not required to be registered under the old law), since third parties would not have an easy means to determine whether a security right encumbered a potential grantor's assets.

19. If the right was not effective against third parties under the previous legal regime, but is nonetheless effective against them under the new rules, the right should be effective against third parties immediately upon the effective date of the new rules. Once again, the presumption is that the parties intended effectiveness as between them, and third parties are protected to the full extent provided for in the new rules. This is the position implicitly recommended in the Guide (recommendation 223, second sentence).

(e) Priority disputes

20. An entirely different set of questions arises in the case of priority disputes because such disputes necessarily involve applying one set of rules to two (or more) different rights created at different times. A legal system cannot simply provide that the priority rule in effect at the time when a security right was created governs priority with respect to that right because such a rule would not provide a coherent

answer when one of the rights that is being compared was created under the former regime while the other was created under the new regime. Rather, there must be rules that address each of the following situations: (a) where both rights are created after the effective date of the new legislation; (b) where both rights are created before the effective date; and (c) where one right is created before the effective date and the other right is created after the effective date.

21. The easiest situation is a priority dispute between competing claimants whose rights were created after the effective date of the new legislation. In that situation, it is obvious that the priority rules in the new legislation should be applied to resolve that dispute.

22. Conversely, if both of the competing rights were created before the effective date of the new legislation and the relative priority of the two competing rights in the encumbered assets was established before the effective date of the new rules and, in addition, nothing (other than the effective date having occurred) has happened that would change that relative priority, stability of relationships suggests that the priority established before the effective date should not be changed merely because the new law came into force. If, however, something occurs after the effective date that would have had an effect on priority under the previous legal regime (such as a security right becoming effective against third parties or ceasing to be effective against third parties), there is less reason to continue to utilize the former law to govern a dispute that has been changed by an action or event that took place after the effective date. There is a much stronger argument for applying the new law to such a situation. In other words, the existing rights of parties as they stood when the new law came into force are protected, but parties should not be relieved of the obligation to make certain that they avoid acting (or failing to act) in such a way that their existing rights are no longer preserved under the new law (see recommendations 227-229).

23. The most difficult transition situation involves a priority dispute between one right that was created before the effective date and another right that was created after the effective date. In such a case, while it is preferable to have the new rules govern eventually (indeed, sooner rather than later), it is appropriate to provide a transition rule protecting the status of the creditor whose right was acquired under the old regime, provided that creditor takes whatever steps are necessary to maintain protection under the new regime. If those steps are taken within the time prescribed in the transition rule, the new legislation should provide that creditor with the same priority it would have enjoyed had the new rules been effective at the time of the original transaction and those steps had been taken in a timely fashion under the old law (see recommendation 227).

(f) Enforcement

24. Disputes may be in litigation (or an alternative dispute resolution system, such as arbitration) at the date when the new law comes into force. As noted, in these cases, the rights of the parties have sufficiently crystallized so that the effectiveness of a new legal regime should not change the outcome of that dispute (see recommendation 224). Parties to the dispute should generally not be able to avail themselves of mechanisms or rights provided in the new law. For example, if non-judicial enforcement is prohibited under prior law, but authorized under the new law, enforcing parties should not be able to convert the judicial enforcement

process into a non-judicial enforcement process. Likewise, within the context of ongoing enforcement proceedings, parties should not normally be permitted to invoke defences or other rights contained only in the new law. The scope of the principle is, however, open to interpretation. In one view, once a creditor has commenced enforcement under prior law, it should be deemed to have opted for enforcement under that law, and cannot thereafter attempt to avail itself of recourses available under the new law. In another view, the principle means only that the creditor cannot be forced to convert proceedings commenced under prior law into proceedings under the new law. It may continue to proceed with enforcement as if the new law had not yet come into force. If, however, the enforcing creditor were to abandon ongoing judicial or arbitral enforcement proceedings, in this view, nothing would prevent that creditor from commencing other enforcement proceedings (including non-judicial enforcement proceedings) under the new law. The Guide does not make a recommendation on which of these two approaches States should adopt in respect of ongoing enforcement proceedings.

25. Nonetheless, the vast bulk of disputes that involve transactions entered into before the coming into force of the new law will arise after the new law becomes effective. Two different situations can arise. On the one hand, it may be that secured creditors are entitled to exercise certain recourses and grantors are permitted to plead certain defences that are no longer permitted under the new law. On the other hand, it may be that the new law permits creditors to avail themselves of new remedies and permits debtors to plead new defences not previously permitted.

26. Where the new law abolishes certain remedies, or makes them subject to a new and more onerous procedure, there is an argument that creditors should not be prejudiced by the new law. For example, in some States, creditors in possession may, upon default, simply take the asset given in pledge without having to give notice to the grantor or third parties. The Guide, by contrast, contemplates that a creditor would have to give notice of its intention to accept the assets in satisfaction of the secured obligation (see recommendations 141-145).

27. A similar rationale applies to cases where grantors are deprived of defences or procedural rights that could be exercised under prior law. For example, in some States, grantors in default may suspend enforcement proceedings by remedying the particular omission that led to the default, thereby reinstating the secured obligation and stopping enforcement. The Guide, by contrast, contemplates that grantors have a right to redeem the security by paying the outstanding obligation, but have no right to cure the default and reinstate the obligation (see recommendation 139).

28. In both these cases, there is an argument that the prejudice potentially suffered by a secured creditor or a grantor with the coming into force of the new law is sufficient to justify not abolishing any rights arising under prior law, even in respect of enforcement that commences after the new law comes into force. Both should be able to enforce the original agreement according to the law in force when it was concluded. By contrast, there is an equally strong argument that because the new enforcement regime results from a State carefully considering how best to balance the rights of all parties, it should apply to all post-effective-date enforcement remedies. This argument is particularly persuasive when the enforcement will affect the rights of third parties that have taken security rights in the assets after the new regime comes into force. Moreover, because the relative balance to be struck depends on the particular configuration of secured creditors' enforcement rights and

grantors' rights in individual States under prior law, the Guide adopts the general principle of immediate application (see recommendation 223).

29. This said, other law in a State (for example, the general law of obligations or constitutional principles relating to retroactive interference with property rights) may affect the precise extent to which enforcement proceedings commenced after the new law comes into force are affected by the principle of immediate application.

30. As for the case where the new law provides creditors with new remedies, and grantors with new procedural rights, the argument for applying the new law to transactions existing prior to its coming into force is compelling. A secured creditor under prior law that has taken the steps necessary to ensure third-party effectiveness under the new law should be in no different a position than a creditor that initially takes security under the new law. Similarly, any new defences or procedural rights given to grantors and third parties under the new law should be available in connection with enforcement proceedings undertaken by all secured creditors, including those creditors enforcing rights arising under transactions that existed before the new law came into force. That is, the new enforcement regime reflects a State's best judgement as to a fair and efficient regime for enforcing security rights. If it is appropriate for security rights that have been created after the new law came into force, it should also apply to the post-effective-date enforcement of security rights created before the new law came into force.

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

B. Recommendations	

XIV. Insolvency

A. General remarks

1. Introduction

1. The preceding chapters of the Guide provide commentary and recommendations aimed at assisting States in the development of effective and efficient secured transactions laws. The goal has been to set out a framework for regulating the rights of grantors, secured creditors and third parties whenever grantors seek to encumber assets with a security right. The Guide generally does not address issues related to the basic law of obligations and property, nor does it directly address matters of civil procedure and the regime governing the enforcement of judgements. The Guide leaves these matters to other law. However, there is one field of law, i.e. insolvency law, where as a practical matter the regime of secured transactions deeply interacts with other law and thus needs to be directly addressed in this Guide.

2. Secured transactions laws and insolvency laws have different concerns and objectives, some of which may overlap where the rights regulated by a secured transactions law are affected by the commencement of insolvency proceedings. A secured transactions law seeks to promote secured credit, i.e. credit at a lower cost, because security lowers the risk of non-payment to the secured creditor (“default”). It allows debtors to use the full value of their assets to obtain credit, develop their business and avoid default. In the case of default by a debtor, a secured transactions law seeks to ensure that the value of the encumbered assets protects the secured creditor. It focuses on effective enforcement of the rights of individual creditors to maximize the likelihood that, if the secured obligations owed are not performed, the economic value of the encumbered assets can be realized to satisfy the secured obligations.

3. An insolvency law, on the other hand, is principally concerned with collective business and economic issues. It seeks, among other objectives, to preserve and maximize the value of the debtor’s assets for the collective benefit of creditors and to facilitate equitable distribution to creditors. The achievement of these objectives will be assisted by preventing a race among creditors to enforce individually their rights against a common debtor, and facilitating the reorganization of viable business enterprises and the liquidation of businesses that are not viable. For these reasons, an insolvency law may affect the rights of a secured creditor in different ways once insolvency proceedings commence.

4. Since reform of one law can impose unforeseen transaction and compliance costs on parties under the other law and create tension between the two laws, legislators revising existing laws or introducing a new law in the field of either insolvency or secured transactions will need to ensure that any new or revised law properly takes account of an existing or proposed law in the other field. In some cases, review of the law in one field may point to the need to revise or develop a new law in the other field. In any event, to the extent that an insolvency law affects the rights of secured creditors, those effects should be based on carefully articulated policies and stated clearly in the insolvency law, as recommended throughout the *UNCITRAL Legislative Guide on Insolvency Law* (hereinafter referred to as “the *UNCITRAL Insolvency Guide*”), adopted by UNCITRAL on 25 June 2004.¹

5. The effects of insolvency proceedings on security rights are discussed in detail, as a matter of insolvency law, in the *UNCITRAL Insolvency Guide*. The purpose of the present chapter is to highlight some of the key points of intersection between an insolvency law and a secured transactions law. The chapter discusses, in section A.3, the general principles concerning security rights in insolvency. Section A.4 reviews the law applicable in insolvency, while section A.5 elaborates upon the treatment of encumbered assets. Section A.6 considers post-commencement finance, section A.7, the treatment of contracts, and section A.8, avoidance proceedings. The next three sections deal with the participation of secured creditors in insolvency proceedings (section A.9), reorganization proceedings (section A.10) and expedited reorganization proceedings (section A.11). The last four sections address the treatment of secured claims (section A.12), the ranking of secured claims (section A.13), acquisition finance (section A.14) and receivables subject to an outright transfer before commencement (section A.15).

6. To provide a sufficient discussion of the effects of insolvency proceedings on security rights in this Guide, core recommendations from the *UNCITRAL Insolvency Guide* that relate particularly to security rights are included in this chapter. For a more complete discussion, however, this chapter should be read together with both the commentary and the recommendations of the *UNCITRAL Insolvency Guide*. This chapter also includes discussion of some additional recommendations elaborating on issues discussed in the *UNCITRAL Insolvency Guide*, but not the subject of recommendations in that Guide. The recommendations from the *UNCITRAL Insolvency Guide* are set out in section B.1 of the present chapter, and the additional recommendations are set out in section B.2.

2. Terminology

7. The *UNCITRAL Insolvency Guide* and the present Guide use a number of defined terms (see *UNCITRAL Insolvency Guide*, Introduction, section B, Glossary, and this Guide, Introduction, section B, Terminology). In addition to the recommendations referred to above, section B.1 of this chapter also includes certain

¹ For the decision of the United Nations Commission on International Trade Law and the resolution of the General Assembly (resolution 59/40 of 2 December 2004), see the *UNCITRAL Legislative Guide on Insolvency Law* (United Nations publication, Sales No. E.05.V.10), annex II. The *UNCITRAL Insolvency Guide*, which includes in its annex III the UNCITRAL Model Law on Cross-Border Insolvency and its Guide to Enactment, can be found at www.uncitral.org/uncitral/en/uncitral_texts/insolvency/2004Guide.html.

definitions from the *UNCITRAL Insolvency Guide* that facilitate understanding of the recommendations of that Guide.

8. Certain terms that are defined in the *UNCITRAL Insolvency Guide* are not redefined in this Guide and thus have the same meaning as in the *UNCITRAL Insolvency Guide*. Other terms, however, have been either slightly reworded or redefined in this Guide and therefore have a different meaning in this chapter, as indicated below.

9. The term “security right” is defined in this Guide. As used in this chapter it is not a synonym for “security interest” as defined in the *UNCITRAL Insolvency Guide*. The term “security interest” is broader in that it refers generally to “a right in an asset to secure payment or other performance of one or more obligations” and accordingly potentially covers security rights in immovable property (which are outside the scope of this Guide; see recommendation 5) and non-consensual security rights (which are not covered by the definition of “security right” in this Guide; see Introduction, section B, Terminology).

10. Similarly, the term “priority” is used in this chapter as defined in this Guide and not as defined in the *UNCITRAL Insolvency Guide*. The definition of “priority” in the *UNCITRAL Insolvency Guide* is narrower, referring only to the priority of claims in the context of insolvency (“the right of a claim to rank ahead of another claim where that right arises by operation of law”; see section B.1 below). This Guide defines “priority” as “the right of a person to derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant” (see Introduction, section B, Terminology). To refer to “priority” in insolvency proceedings, this chapter uses the term “ranking of claims” (see, for example, paras. 59-63 below).

11. The term “debtor” is defined in this Guide by reference to the person owing the secured obligation. As that definition would not work well in the present chapter, “debtor” in this chapter has the meaning given to the term in the *UNCITRAL Insolvency Guide*, that is, a person that meets the requirements for the commencement of insolvency proceedings (see *UNCITRAL Insolvency Guide*, part two, chapter I, paras. 1-11 and recommendation 8).

12. In addition, as other chapters of this Guide focus on the term “grantor” (i.e. the person that creates a security right) rather than the term “debtor” (i.e. the person owing the secured obligation), references in this chapter to “debtor” should be understood as referring to situations where the grantor is the debtor in the insolvency proceedings.

3. General principles concerning security rights in insolvency

13. The *UNCITRAL Insolvency Guide* recognizes in principle the creation, third-party effectiveness, enforceability (see recommendation 4 of the *UNCITRAL Insolvency Guide*) and priority (see recommendation 1 of the *UNCITRAL Insolvency Guide*) of a security right as established under law other than the insolvency law (see recommendations 235 and 236 of this Guide). However, to achieve the goals of insolvency proceedings, the rights that a secured creditor has outside of insolvency proceedings may need to be modified or affected once the insolvency proceedings commence. In such a case, it is desirable that an insolvency law also include appropriate protections for the secured creditor. As noted throughout the *UNCITRAL*

Insolvency Guide, what is important for the availability of secured credit is that insolvency law contains clear rules as to the effect of insolvency proceedings on the rights of a secured creditor, so as to enable secured creditors to quantify the risks associated with insolvency and incorporate those risks into their assessment of whether to extend credit and on what terms.

4. Applicable law in insolvency proceedings

14. The determination of the law applicable to the creation, third-party effectiveness and priority of a security right and the post-default rights of a secured creditor may be a complex issue when insolvency proceedings are commenced in one State and some of the debtor's assets or creditors are located in another State, or when insolvency proceedings are commenced in two different States owing to the multinational nature of the debtor's business. In either instance, general conflict-of-laws rules applying outside of insolvency proceedings would govern these matters, subject to the limitations discussed in sections (a) and (b) below and the application of avoidance provisions of the insolvency law (see recommendation 220 of this Guide). This result is made clear in recommendation 30 of the *UNCITRAL Insolvency Guide*, which provides that the State in which insolvency proceedings are commenced (i.e. the forum State) should apply its conflict-of-laws rules to determine which State's law governs such questions as the creation and third-party effectiveness of a security right existing at the time of the commencement of insolvency proceedings.

(a) Insolvency effects: *lex fori concursus*

15. Once, under the non-insolvency law applicable outside of insolvency proceedings by virtue of the conflict-of-laws rules of the forum State, the creation and third-party effectiveness of a security right are determined, a second issue arises concerning the effect of commencement of insolvency proceedings on security rights. Points that need to be addressed are, for example, whether enforcement of a security right is stayed and whether the security right will be recognized in the insolvency proceedings and, if so, its relative position. It is generally recognized that the insolvency law of the State in which the insolvency proceedings are commenced (*lex fori concursus*) governs the commencement, conduct, including the ranking of claims, administration and conclusion of the proceedings (the "insolvency effects"; see recommendation 31 of the *UNCITRAL Insolvency Guide*).

16. The insolvency law governing the ranking of the security right may change the relative priority that a security right would have under secured transactions law, and establish categories of claims that would receive distributions ahead of a security right in insolvency proceedings. When establishing these categories of claims, reference should be made to secured transactions law with regard to the creation, third-party effectiveness, priority and enforcement of the security right before considering the extent, if any, to which the priority of the security right should be affected by the commencement and administration of insolvency proceedings. Irrespective of issues of ranking of rights, a security right might nevertheless be subject to the avoidance provisions of the insolvency law (see recommendation 88 of the *UNCITRAL Insolvency Guide*).

(b) Exceptions to the *lex fori concursus*

17. While the insolvency effects of insolvency proceedings on security rights typically are governed by the *lex fori concursus*, some States have adopted exceptions. For example, a forum State may defer to the insolvency law of the State in which immovable property is located (*lex situs* or *lex rei sitae*) for the insolvency effects on a security right in attachments to the immovable property. The *UNCITRAL Insolvency Guide* addresses these exceptions in more detail (see part two, chapter I, paras. 85-90 of that Guide), but does not recommend the adoption of a *lex rei sitae* rule for insolvency effects as applied to attachments to immovable property or even to movable property in general. Instead, it generally recommends that any exceptions to the applicability of the *lex fori concursus* for insolvency effects should be limited in number and clearly set forth in the insolvency law (see *UNCITRAL Insolvency Guide*, recommendation 34 and part two, chapter I, para. 88).

5. Treatment of encumbered assets

18. A security right may be affected following the commencement of insolvency proceedings by the provisions of insolvency law that define the scope of or otherwise address several matters. Such matters include, for example: the assets of the debtor that are subject to the insolvency proceedings; application of a stay or suspension of actions against the debtor; post-commencement finance; avoidance of transactions that took place before commencement of the proceedings; approval of a reorganization plan; and ranking of claims.

(a) Identification of assets subject to the proceedings

19. Identification of assets of the debtor that will be subject to insolvency proceedings is key to the successful conduct of the proceedings. Assets that are controlled by an insolvency representative and subject to the insolvency proceedings form the “estate” (see definition of the term “assets of the debtor” in section B.1 below). So, the *UNCITRAL Insolvency Guide* recommends that the estate formed on commencement of the proceedings will typically include all property, rights and interests of the debtor, including rights and interests in property, whether tangible (movable or immovable) or intangible, wherever located (domestic or foreign), and whether or not in the possession of the debtor at the time of commencement. The debtor’s rights and interests in encumbered assets and in third-party-owned assets, as well as assets acquired by the debtor or the insolvency representative after commencement of the proceedings and assets recovered through avoidance actions, should also be included in the estate (see *UNCITRAL Insolvency Guide*, recommendation 35).

(i) Encumbered assets

20. The inclusion in the estate of the debtor’s rights and interests in encumbered assets may assist in ensuring not only the equal treatment of creditors similarly situated, but also the achievement of the goals of the insolvency proceedings where, for example, the asset in question is essential for the reorganization of the debtor or sale of the debtor’s business as a going concern in liquidation. The *UNCITRAL Insolvency Guide* discusses the assets of the debtor to be included in the estate (as well as those assets to be excluded) and the effect of commencement of

insolvency proceedings on encumbered assets. It emphasizes, in particular, the importance to a successful reorganization of including in the insolvency estate the debtor's interest in encumbered assets and third-party-owned assets (for the definition of the term "assets of the debtor", see section B.1 below; for a discussion of the estate, see *UNCITRAL Insolvency Guide*, part two, chapter II, paras. 7-9) and of applying a stay on commencement to certain actions with respect to security rights (see *UNCITRAL Insolvency Guide*, part two, chapter II, paras. 36-40, 56, 57 and 59-69 and recommendation 46, as well as paras. 26 and 27 below).

(ii) *Assets acquired after commencement of insolvency proceedings*

21. The *UNCITRAL Insolvency Guide* (see recommendation 35, subparagraph (b)), provides that an asset acquired by the debtor after the commencement of insolvency proceedings generally is part of the insolvency estate.

22. Accordingly, even though the secured creditor may have a security right in future assets of the debtor, the security right should not extend to assets acquired by the debtor after the commencement of the insolvency proceedings (see also recommendation 232 of this Guide), unless the secured creditor is providing additional funding. If the security right did extend generally to assets acquired by the debtor after the commencement of the insolvency proceedings, the secured creditor would unfairly benefit from the increase in the encumbered assets that could be available to satisfy the secured obligation resulting from the post-commencement acquisition of assets by the debtor without the secured creditor providing any additional credit to the debtor. Likewise, other creditors of the insolvency estate would be unfairly prejudiced if unencumbered assets of the insolvency estate were used after the commencement of the insolvency proceedings to acquire additional assets and those assets were to become automatically subject to the secured creditor's security right and used to satisfy the secured obligation.

23. However, if the assets acquired by the debtor after the commencement of the insolvency proceedings consist of proceeds of assets in which a secured creditor had a security right that was effective against third parties before the commencement of the insolvency proceedings (or was made effective against third parties after commencement but within any applicable grace period), the security right should extend to the proceeds (see recommendation 233 of this Guide). If this were not the case, the secured creditor would not have the benefit of its security right in an encumbered asset that is disposed of or collected after the commencement of the insolvency proceedings and, because of that risk, would be less willing to extend credit to the debtor even where there is no prospect of the commencement of the debtor's insolvency proceedings.

24. An example may be helpful in illustrating these points. A secured creditor has an unavoidable security right in the debtor's entire existing and future inventory. After the commencement of insolvency proceedings, the debtor sells immovable property that is not subject to any security right and uses the cash received from the sale to buy inventory. The security right should not extend to this post-commencement inventory. The secured creditor advanced no credit in reliance upon a security right in the new inventory. Permitting the security right to extend to the new inventory would prejudice other creditors of the insolvency estate since the immovable property, an unencumbered asset that was otherwise available to satisfy

claims of the other creditors, would have been used to increase the assets available to satisfy the secured obligation.

25. By contrast, if the additional inventory was acquired with cash received by the debtor from the sale of inventory existing on the commencement of the insolvency proceedings and in which the secured creditor had an unavoidable security right, the security right should extend to the inventory acquired after the commencement of the insolvency proceedings. The additional inventory is in effect a substitution for the sold inventory. The secured creditor does not benefit unfairly and other creditors are not unfairly prejudiced.

(b) Protection of the estate by application of a stay

26. Two essential objectives of an effective insolvency law are, first, ensuring that the value of the insolvency estate is not diminished by the actions of various parties and, second, facilitating administration of the estate in a fair and orderly manner (see *UNCITRAL Insolvency Guide*, recommendation 1). Many insolvency laws achieve these objectives by imposing a stay that prevents the commencement of individual or group actions by creditors to enforce their claims or pursue any remedies or proceedings against the debtor or property of the estate and suspends any such actions already under way. Where the stay applies from the commencement of the insolvency proceedings (see *UNCITRAL Insolvency Guide*, recommendation 46), it can be complemented by provisional measures of relief that can be ordered by the court to ensure protection of the assets of the debtor and the collective interest of creditors between the time when an application to commence insolvency proceedings has been filed and the time it is acted on by the court (see *UNCITRAL Insolvency Guide*, recommendations 39-45). The *UNCITRAL Insolvency Guide* discusses the scope of actions to which a mandatory or provisional stay applies (see *UNCITRAL Insolvency Guide*, part two, chapter II, paras. 30-40); time and duration (including extension) of the stay (see part two, chapter II, paras. 41-53 and 58); and measures to protect the interests of secured creditors (part two, chapter II, paras. 59-69; see also *UNCITRAL Insolvency Guide*, recommendations 39-51).

(i) Scope of the stay

27. A number of States extend the stay to all actions against the debtor, whether judicial or not, including those by secured creditors and third-party owners. The stay usually extends to actions to enforce a security right by repossessing and selling, leasing or otherwise disposing of the encumbered assets (or exercising another enforcement remedy set out in chapter X, Enforcement of a security right, of this Guide). It also extends to actions to create a security right or to make a security right effective against third parties (see *UNCITRAL Insolvency Guide*, recommendation 46). Some insolvency laws distinguish between liquidation and reorganization in terms of application and duration of the stay to actions by secured creditors or third-party owners. A growing number of insolvency laws recognize that, notwithstanding that limiting the enforcement of security rights may have an adverse impact on the cost and availability of credit, excluding actions by secured creditors from the stay could frustrate the basic objectives of the insolvency proceedings. This is true particularly in reorganization, since very often the debtor's continued use of encumbered assets is essential to the operation of the business and

therefore to its reorganization. Any negative effects of the stay can be ameliorated by measures to ensure that the economic value of the encumbered assets is protected against diminution (see paras. 31-34 below).

28. Where a security right was effective against third parties at the time the insolvency proceedings commenced, it is necessary to exempt from the application of the stay any action that the secured creditor might need to take to ensure that effectiveness continues. For example, the secured transactions law may provide a grace period for registration of certain security rights, such as acquisition security rights, in the general security rights registry (see recommendations 176 and 189 of this Guide); the stay generally should not interfere with registration within such a grace period (even if the grace period ends after the commencement of the insolvency proceedings).

(ii) *Duration of the stay*

29. In reorganization proceedings, subject to the safeguards discussed below, it is desirable that the stay apply to security rights for a sufficient period of time to ensure orderly administration of the reorganization without encumbered assets being removed from the estate before it can be determined how those assets should be treated and an appropriate plan approved.

30. It is also desirable that the stay apply to security rights in liquidation proceedings, in particular to facilitate sale of the business as a going concern. The *UNCITRAL Insolvency Guide* recommends that the stay should apply for a short period of time (e.g. 30-60 days) that is clearly set forth in the insolvency law, with provision for the court to provide an extension in certain limited circumstances (see *UNCITRAL Insolvency Guide*, recommendation 49).

(iii) *Protection of secured creditors*

31. An insolvency law should include safeguards to protect secured creditors where the economic value of their security rights is adversely affected by the stay (see *UNCITRAL Insolvency Guide*, recommendation 50). One of those safeguards may take the form of relief from the stay or a release of the encumbered asset. Even absent a request for relief from the stay, it is desirable that an insolvency law provide that a secured creditor is entitled to protection against the diminution in value of the encumbered asset and that the court may grant appropriate measures to ensure that protection.

32. The *UNCITRAL Insolvency Guide* recommends that grounds for relief from the stay or release of the encumbered asset might include cases where, for example, the encumbered asset is not necessary to a prospective reorganization or sale of the debtor's business; the value of the encumbered asset is diminishing as a result of the commencement of the insolvency proceedings and the secured creditor is not protected against that diminution of value; and, in reorganization, a plan is not approved within any applicable time limit (see *UNCITRAL Insolvency Guide*, recommendation 51). Some insolvency laws also provide that, once relief has been granted and the stay has been lifted with respect to a particular encumbered asset, the asset may be released to the secured creditor. In such an event, the secured creditor would be free to enforce its security right against such asset under

applicable law. Any surplus value remaining after payment of the secured obligation would be part of the estate.

33. Central to the notion of protecting the value of encumbered assets from diminution is the mechanism for determining both the value of those assets and the time at which valuation takes place, depending upon the purpose for which the determination is required. Assets may need to be valued at different times during the insolvency proceedings, such as at commencement with the value being reviewed during the proceedings, or during the course of the proceedings. The basis on which the valuation should be made is also an issue (e.g. going concern or liquidation value). The value of an encumbered asset may, at least in the first instance, be determined by pre-commencement agreement of the parties or may require determination by the court on the basis of evidence, including a consideration of markets, market conditions and expert testimony.

34. The *UNCITRAL Insolvency Guide* discusses the timing of valuation and different valuation mechanisms (see *UNCITRAL Insolvency Guide*, part two, chapter II, paras. 66-68).

(c) Use and disposal of encumbered assets

35. Secured creditors will have an ongoing concern with the manner in which encumbered assets are treated following commencement of insolvency proceedings. Treatment of these assets will depend on the provisions of the insolvency law with respect, for example, to application of the stay, further encumbrance of those assets, use of the assets during the course of the insolvency proceedings, sale or disposal of assets, relinquishment of assets and sale of encumbered assets free and clear of any security rights.

36. The *UNCITRAL Insolvency Guide* recommends that the insolvency law should permit encumbered assets to be used and disposed of or further encumbered in the insolvency proceedings. It sets out recommendations about the conditions under which encumbered assets may be sold free of security rights (for example, the condition that the security right in an asset extends to the proceeds of the sale of the asset) and the protections to be afforded to secured creditors whose encumbered assets are so sold, including the need to notify secured creditors about any proposed sale or other disposal of encumbered assets and to give them an opportunity to object (see *UNCITRAL Insolvency Guide*, part two, chapter II, paras. 74-89 and recommendations 52-59).

6. Post-commencement finance

37. In both liquidation and reorganization proceedings, an insolvency representative may require access to funds to continue to operate the business. The estate may have insufficient liquid assets to fund anticipated expenses, in the form of cash or other assets that will be converted to cash (such as anticipated proceeds of receivables) and that are not subject to pre-existing security rights effective against third parties. Where there are insufficient unencumbered liquid assets or anticipated cash flow, the insolvency representative must seek financing from third parties. Often, these parties are the same lenders that extended credit to the debtor prior to the commencement of insolvency proceedings, and typically they will only be willing to extend the necessary credit if they receive appropriate

assurance (either in the form of a priority claim on, or priority security rights in, the assets of the estate) that they will be repaid.

38. In any of these financing arrangements (referred to collectively as “post-commencement finance”), it is essential that the rights of pre-commencement secured creditors in the economic value of the encumbered assets be appropriately protected against diminution. While some States permit, in limited circumstances, the creation of a security right to secure post-commencement finance that ranks ahead of a pre-existing security right, the *UNCITRAL Insolvency Guide* recommends that the creation of such a security right (sometimes referred to as a “priming lien”) should be permitted only where certain conditions are met, including that the rights of pre-commencement secured creditors in the economic value of the encumbered assets are protected against diminution. Post-commencement finance is addressed in some detail in part two, chapter II, paras. 94-107 and recommendations 63-68, of the *UNCITRAL Insolvency Guide*.

7. Treatment of contracts

(a) Automatic termination or acceleration clauses

39. Parties to security agreements have an interest in the treatment in insolvency of clauses that define events of default giving rise to automatic termination or acceleration of payments under the agreement. Although some insolvency laws permit those clauses to be overridden when insolvency proceedings commence, this approach has not yet become a general feature of insolvency laws. The inability to interfere with general principles of contract law in this way, however, may make reorganization impossible where the contract relates, for example, to an asset that is necessary for reorganization or the sale of a business as a going concern. The *UNCITRAL Insolvency Guide* recommends that such clauses should be unenforceable as against the insolvency representative and the debtor (see *UNCITRAL Insolvency Guide*, recommendation 70).

40. Any negative impact of a policy of overriding these types of clause can be balanced by providing compensation to creditors that can demonstrate that they have suffered damage or loss as a result of a contract continuing to be performed after commencement of insolvency proceedings or providing an exception to a general override of such clauses for certain types of contract. The *UNCITRAL Insolvency Guide* recommends that the contracts excepted from a general override might include financial contracts and that special rules might be required in the case of labour contracts (see *UNCITRAL Insolvency Guide*, recommendations 70 and 71).

41. The insolvency law could also provide, for example, that such a clause does not render unenforceable or invalidate a contract clause relieving a creditor from an obligation to make a loan or otherwise extend credit or other financial accommodations for the benefit of the debtor after the commencement of the insolvency proceedings. It would not be equitable to require a lender to make loans or other extensions of credit to an insolvent party where the prospect of repayment would be greatly diminished. Requiring the extension of credit after commencement of insolvency proceedings would be especially inequitable if, as described in paragraph 22 above, no additional encumbered assets are being provided after commencement to the secured creditor (see recommendation 234 of this Guide).

(b) Continuation or rejection of contracts

42. Insolvency laws adopt different approaches to continued performance or rejection of contracts. The *UNCITRAL Insolvency Guide* makes a number of recommendations relating to the handling of contracts once insolvency proceedings commence. These include recommendations about the procedures for determining whether contracts should continue to be performed or rejected, the treatment of contracts where the debtor is in default on commencement of insolvency proceedings, effects of continuing performance or rejection, leases, assignment of contracts, types of contract for which exceptions might be required and post-commencement contracts (see *UNCITRAL Insolvency Guide*, part two, chapter II, paras. 108-147 and recommendations 69-86). In any case, what is important for a secured creditor is that rejection of a security agreement does not terminate or otherwise impair the secured obligations already incurred or extinguish the security right and that financial contracts and loan commitments are frequently excepted from the scope of insolvency laws governing the treatment of contracts more generally (see *UNCITRAL Insolvency Guide*, part two, chapter II, paras. 208-215 and recommendation 101).

8. Avoidance proceedings

43. As mentioned above, insolvency law should recognize in principle the effectiveness of a security right that is effective as a matter of secured transactions law. Nevertheless, the security right may be avoidable in insolvency proceedings on the same grounds as any other transaction. For example, the transaction may be avoided as a preferential transaction, an undervalued transaction, or as a transaction intended to defeat, hinder or delay creditors from collecting their claims (see *UNCITRAL Insolvency Guide*, recommendation 87). Thus, were the debtor to encumber its assets to prefer one creditor to another on the eve of the commencement of insolvency proceedings, or without obtaining corresponding value, to the detriment of other creditors, the transaction may be avoided as a preferential or undervalued transaction. The *UNCITRAL Insolvency Guide* discusses categories of transactions subject to avoidance, the suspect period, conduct of avoidance proceedings and liability of counterparties to avoided transactions (see part two, chapter II, paras. 148-203 and recommendations 87-99 of that Guide).

44. Examples of security rights that may be subject to avoidance include a security right created shortly before the commencement of insolvency proceedings to secure a pre-existing debt; a security right with respect to which one or more of the steps required to make it effective as against third parties have been taken after the creation of the security right, and after the expiry of any grace period for doing so (see recommendations 176 and 189 of this Guide) but within the suspect period; and the acquisition of an encumbered asset by the secured creditor in total or partial satisfaction of the secured obligation (see recommendations 153-156 of this Guide) at a price significantly lower than the asset's actual value.

9. Participation of secured creditors in insolvency proceedings

45. Where encumbered assets are part of the insolvency estate and the rights of secured creditors are affected by insolvency proceedings, secured creditors should be entitled to participate in the insolvency proceedings (see *UNCITRAL Insolvency Guide*, recommendation 126). That participation may take different forms.

Under some laws it includes the right to be heard and to appear in the proceedings, while under other laws, it includes the right to vote on certain specified matters, such as selection (and removal) of the insolvency representative and approval of a reorganization plan, to provide advice to the insolvency representative as requested or on matters specified in the insolvency law, and other functions and duties as determined by the insolvency law, the courts or the insolvency representative. In some cases, the extent of a secured creditor's right to vote on certain issues may depend upon whether the secured obligation exceeds the value of the encumbered assets; if the secured creditor is under-secured, it might participate as an unsecured creditor to the extent that its obligation is not satisfied from the encumbered asset.

46. The *UNCITRAL Insolvency Guide* discusses issues of participation of creditors generally and mechanisms that may be used to facilitate that participation (see part two, chapter III, paras. 75-115 and recommendations 126-137).

10. Reorganization proceedings

(a) Approval of a reorganization plan

47. Whether or not a secured creditor is entitled to participate in the approval of a reorganization plan will depend upon the manner in which the insolvency law treats secured creditors and, in particular, the extent to which a reorganization plan can modify or impair their security rights and the extent to which the value of the encumbered asset will satisfy the secured creditor's claim. Where the value of the encumbered asset is not sufficient to satisfy the secured creditor's claim, the creditor may participate both as a secured and an unsecured creditor.

48. Where a reorganization plan proposes to impair or modify the rights of secured creditors, they should have the opportunity to vote on approval of that plan (see *UNCITRAL Insolvency Guide*, recommendation 146). For that purpose, some insolvency laws classify creditors, including secured creditors, according to the nature of their rights and interests. Under some laws, secured creditors vote together as a class separate from unsecured creditors. Under other laws, each secured creditor forms a class of its own.

49. Where secured creditors participate in the approval process, there is a question of whether they are bound by the plan even if they vote against it or abstain from voting. Where secured creditors vote in classes, some insolvency laws provide that, to the extent that the requisite majority of the class votes to approve the plan, dissenting members of the class are bound by the plan, subject to certain protections (e.g. they receive at least as much under the plan as they would have received in a liquidation or they are paid in full within a certain period of time with interest at a market rate). The *UNCITRAL Insolvency Guide* discusses reorganization proceedings in some detail (see *UNCITRAL Insolvency Guide*, part two, chapter IV, paras. 26-75 and recommendations 139-159), including voting by secured creditors (see *UNCITRAL Insolvency Guide*, part two, chapter IV, paras. 34-39 and recommendations 146, 150 and 151).

50. There are several examples of ways in which the economic value of security rights may be preserved in a reorganization plan even though the security rights are being impaired or modified by that plan. If a plan provides for a cash payment to a secured creditor in total or partial satisfaction of the secured obligation, the cash payment or, if cash payments are to be made in instalments, the present value of the

cash payments, should not be less than what the secured creditor would have received in liquidation. In determining such value, consideration should be given to the use of the assets and the purpose of the valuation. The basis of such a valuation may include not only the strict liquidation value, but also the value of the asset as part of the business as a going concern. For example, if the debtor is going to retain possession of and continue to use the asset under the reorganization plan in order to continue to operate the business as a going concern or if the debtor is going to sell the business as a going concern, this value should be determined by reference to the value of the asset as part of the going concern business rather than the value of the asset as a single item separate from the business.

51. If the plan provides for the secured creditor to release its security right in some encumbered assets, provision could also be made for substitute assets of at least equal value to become subject to the secured creditor's security right, unless disposal of the remaining encumbered assets would enable the secured creditor to be paid in full.

(b) Valuation of encumbered assets

52. Recommendations 49, subparagraph (c) (ii), 50, 51, subparagraph (b), 54, subparagraph (a), 58, subparagraph (d), 59, subparagraph (c), and 67, subparagraph (c), of the *UNCITRAL Insolvency Guide* provide generally for the value of encumbered assets to be protected in insolvency proceedings. Recommendation 152, subparagraph (b), of the *UNCITRAL Insolvency Guide* provides that, under a plan confirmed by a court, all creditors, including secured creditors, should receive at least as much under the plan as they would have received in liquidation. Issues to be considered in determining the value of encumbered assets are discussed in the *UNCITRAL Insolvency Guide* (see part two, chapter II, paras. 66-69, of that Guide and para. 33 above).

53. In order to determine the liquidation value of encumbered assets in reorganization proceedings (for the purpose of applying recommendation 152, subparagraph (b), of the *UNCITRAL Insolvency Guide*), the use of the encumbered assets, the purpose of the valuation and other relevant considerations should be taken into account. The liquidation value of the assets, for example, may be based on their value as part of a going concern (see recommendation 239 of this Guide), which may better represent a more accurate value of the encumbered assets given the purposes for which they are to be used.

11. Expedited reorganization proceedings

54. In recent years, significant attention has been given to the development of expedited reorganization proceedings (i.e. proceedings commenced to give effect to a plan negotiated and agreed to by affected creditors in voluntary restructuring negotiations that took place prior to commencement of insolvency proceedings, where the insolvency law permits the court to expedite the conduct of those proceedings). Voluntary restructuring negotiations undertaken before the commencement of proceedings will generally involve those creditors, including secured creditors, whose participation is required to ensure an effective reorganization or whose rights are to be affected by the reorganization.

55. The substantive requirements for such expedited reorganization proceedings would include substantially the same safeguards and protections as provided in full, court-supervised reorganization proceedings. However, since the reorganization plan has already been negotiated and agreed to by the requisite majority of creditors at the time the expedited proceedings commence, a number of the procedural provisions of an insolvency law relating to full court-supervised proceedings may be modified or need not apply (see *UNCITRAL Insolvency Guide*, part two, chapter IV, paras. 87-92 and recommendations 160-168).

12. Treatment of secured claims

56. An important issue for secured creditors is whether they will be required to submit their claims in the insolvency proceedings. Under those insolvency laws that do not include encumbered assets in the insolvency estate and allow secured creditors freely to enforce their security rights against the encumbered assets, secured creditors may be excepted from the requirement to submit a claim. In such cases, they need to file a claim only to the extent that their claim has not been fully met from the value of the sale of the encumbered asset (see *UNCITRAL Insolvency Guide*, part two, chapter V, paras. 1-50 and recommendations 169-184).

57. Another approach requires secured creditors to submit a claim for the total value of their security rights irrespective of whether any part of the claim is unsecured. That requirement is limited in some laws to the holders of certain types of security right, such as floating charges, bills of sale, or security over chattels. Some insolvency laws also permit secured creditors to surrender their security rights to the insolvency representative and submit a claim for the total value of the secured obligation. The rationale of requiring secured creditors to submit claims is to provide information to the insolvency representative as to the existence of all claims, the amount of the secured obligation and the description of the encumbered assets. Whichever approach is chosen, it is desirable that an insolvency law include clear rules on the treatment of secured creditors for the purposes of submission of claims.

58. Where the amount of the claim cannot be, or has not been, determined at the time when the claim is to be submitted, many insolvency laws allow a claim to be admitted provisionally, subject to giving it a notional value (see *UNCITRAL Insolvency Guide*, recommendation 178). Determining a value for such claims raises a number of issues such as the time at which the value is to be determined and whether it must be liquidated (in which case it will need to be considered by a court) or estimated (which might be undertaken by the insolvency representative, the court or some other appointed person) (see *UNCITRAL Insolvency Guide*, recommendation 179). Where a court is required to determine the issue, an associated question relates to the court that will be appropriate (i.e. the insolvency court or some other court) and how any delay in reaching a determination can be addressed in terms of its effect on the conduct of the insolvency proceedings. As to timing, many insolvency laws require the valuation to refer to the effective date of commencement of proceedings (see *UNCITRAL Insolvency Guide*, part two, chapter V, para. 38 and recommendation 179).

13. Ranking of secured claims

59. A secured transactions law establishes the priority of security rights as against competing claimants (for the definition of the terms “competing claimant” and “priority”, see Introduction, section B, Terminology, of this Guide), including other secured and unsecured creditors of a debtor, judgement creditors with a right in encumbered assets and buyers of encumbered assets. Many insolvency laws recognize the pre-insolvency priority of security rights and rank those rights ahead of other claims, such as administration expenses and other claims (e.g. for taxes or wages). Such laws provide that secured claims should be satisfied from the proceeds of sale of the specific encumbered assets or from general funds, depending upon the manner in which the encumbered assets are treated in the insolvency (see *UNCITRAL Insolvency Guide*, recommendation 188). However, where the insolvency representative has expended unencumbered resources of the estate in maintaining or preserving the value of the encumbered assets, those expenses may be given a higher ranking even over a secured claim. Accordingly, they may have to be paid out of the proceeds from the sale of or other value attributable to the encumbered assets (see recommendation 238 of this Guide).

60. Other insolvency laws rank secured claims after administration costs and other specified (and generally unsecured) claims (e.g. for wages or taxes) or limit the amount with respect to which a secured claim will be given a higher ranking to a fixed percentage of the claim. The higher ranking given to certain unsecured claims, which is often based on social policy considerations, has an impact upon the cost and availability of secured credit. The approach of restricting the amount recovered by a secured creditor from the value of the encumbered assets is sometimes taken with respect to a security right in the entirety of a debtor’s assets in order to provide some protection to unsecured creditors (often up to a limited amount).

61. A further approach may permit the ranking of post-commencement secured creditors ahead of the rights of secured creditors existing at the time of commencement (see paras. 37 and 38 above), provided the security rights of pre-existing creditors can be protected (see *UNCITRAL Insolvency Guide*, recommendations 66 and 67).

62. It is desirable that situations in which an insolvency law creates special privileges for certain types of claim ranking ahead of security rights (for example, a privilege for payment of tax or other unsecured claims), those privileges be kept to a minimum and clearly stated or referred to in the insolvency law (see recommendation 80 of this Guide). This approach will ensure that the insolvency regime is transparent and predictable as to its impact on creditors and will enable secured creditors to assess more accurately the risks associated with extending credit. These issues are discussed in more detail in the *UNCITRAL Insolvency Guide*, part two, chapter V, paragraphs 51-79 and recommendations 185-193.

63. As already mentioned, insolvency law usually respects the pre-commencement priority of a security right (where the security right was made effective against third parties prior to commencement or after commencement but within a grace period), subject to any privileges for other claims that may be introduced by insolvency law. The same applies to priority of security rights established by subordination (i.e. a change of priority of a security right by agreement, by order of a court or even

unilaterally; see recommendation 237 of this Guide). However, subordination should not result in a secured creditor being accorded a ranking higher than its ranking, whether as an individual creditor or as a member of a class of secured creditors, under applicable law. This means that, if secured creditors A, B and C rank in priority so that A is first, B is second and C is third, and A subordinates its secured claim to that of C, B does not obtain a ranking higher than A would have had with respect to the amount of A's claim. It also means that a secured creditor obtaining a subordination from a secured creditor within a class cannot obtain a ranking higher than the ranking of the class.

14. Acquisition financing transactions

64. The treatment in insolvency of security rights and other rights that function so as to secure the performance of an obligation is a key concern of a buyer's, lessee's or borrower's creditors. This treatment can sometimes vary according to how any particular right is characterized in a secured transactions law; the way in which they are treated in the secured transactions law will generally determine how they are treated in insolvency. Accordingly, the *UNCITRAL Insolvency Guide* does not address the issue of how these rights are characterized in secured transactions law and addresses only the treatment of such rights in insolvency, given their characterization by secured transactions law.

65. In States that integrate all forms of acquisition financing rights into their secured transactions law, retention-of-title transactions and financial leases are treated in the debtor's insolvency in the same way as a non-acquisition security right, with recognition given to any special priority status accorded to the acquisition security right under non-insolvency law (see recommendation 183, chapter XI, unitary approach to acquisition financing, of this Guide). The same result would occur whenever secured transactions law characterizes a transaction as giving rise to a security right (see recommendation 198, alternative A, chapter XI, non-unitary approach to acquisition financing, of this Guide). Accordingly, the provisions of the *UNCITRAL Insolvency Guide* applicable to security rights would apply to these various acquisition security rights. Where States maintain separately denominated retention-of-title and financial lease transactions, assets subject to these transactions are often not treated by secured transactions law as assets subject to a security right, but rather as assets owned by the seller or the lessor. Accordingly, the provisions of the *UNCITRAL Insolvency Guide* relating to third-party-owned assets would apply to these transactions (see recommendation 198, alternative B, chapter XI, non-unitary approach to acquisition financing, of this Guide).

66. In any case, regardless of whether an acquisition financing right is treated in the insolvency proceedings under the rules applicable to security rights or under the rules applicable to contracts and third-party-owned assets, all acquisition financing rights should be subject to the insolvency effects specified in the *UNCITRAL Insolvency Guide*. With either alternative of the non-unitary approach (see alternatives A and B of recommendation 198 of this Guide), it may be important to note that the *UNCITRAL Insolvency Guide* often recommends the same treatment for the holders of security rights and third-party-owned assets. This is the case, for example, with respect to recommendation 88 of the *UNCITRAL Insolvency Guide* (regarding the application of avoidance powers to, among other things,

security rights); recommendation 35 (regarding the inclusion of the debtor's rights in encumbered assets of the insolvency estate); recommendations 39-51 (regarding the application of provisional measures and a stay to encumbered assets and relief from the stay); recommendation 52 (regarding use and disposal of assets of the estate, including encumbered assets); recommendation 54 (regarding the use of third-party-owned assets); and recommendations 69-86 (regarding the treatment of contracts).

15. Receivables subject to an outright transfer before commencement

67. An outright transfer of a receivable is within the scope of the present Guide although such a transfer is not made for the purpose of securing the performance of an obligation (see recommendations 3 and 164 of this Guide). In any case, irrespective of how it is treated by non-insolvency law, insolvency law treats an outright transfer of a receivable as any other pre-commencement transfer of an asset by the debtor (see generally *UNCITRAL Insolvency Guide*, recommendation 35, subparagraph (a)).

B. Recommendations

[Note to the Commission: The Commission may wish to note that, as document A/CN.9/637 includes a consolidated set of the recommendations of the draft legislative guide on secured transactions, the recommendations are not reproduced here. Once the recommendations are finalized, they will be reproduced at the end of each chapter.]

II. PROCUREMENT

A. Report of the Working Group on Procurement on the work of its tenth session (Vienna, 25-29 September 2006)

(A/CN.9/615) [Original: English]

CONTENTS

	<i>Paragraphs</i>
I. Introduction	1-3
II. Organization of the session	4-9
III. Deliberations and decisions	10-11
IV. Consideration of proposals for the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services	12-81

2. Revisions to the Guide to Enactment	14
B. The use of electronic communications in procurement (A/CN.9/WG.I/X/CRP.2 and A/CN.9/WG.I/WP.47)	15-36
1. Communications in procurement: new articles 5 bis and 9/5 ter	15-26
2. Electronic submission of tenders: revision to article 30 (5)	27-30
3. Electronic opening of tenders: revisions to new article 33 (4) (A/CN.9/WG.I/WP.47, paragraph 29)	31-32
4. Electronic publication of procurement-related information (A/CN.9/WG.I/WP.47, paragraphs 30-37)	33-36
C. Draft provisions to enable the use of electronic reverse auctions in the Model Law (A/CN.9/WG.I/WP.48, A/CN.9/WG.I/WP.43, paragraphs 54-66, A/CN.9/WG.I/WP.43/Add.1, paragraphs 1-6, and A/CN.9/WG.I/WP.40, paragraph 27)	37-71
1. Location of the provisions on ERAs	37-39
2. Conditions for the use of electronic reverse auctions: new article [36 bis] (A/CN.9/WG.I/WP.48, paragraphs 3-17)	40-47
3. Procedures in the pre-auction phase: new article [47 bis] (A/CN.9/WG.I/WP.48, paragraphs 18-27)	48-56

4.	Procedures in the auction phase: new article [47 ter] (A/CN.9/WG.I/WP.40, paragraph 27, and A/CN.9/WG.I/WP.43, paragraphs 54-58)	57-63
5.	Other revisions to the text of the Model Law and the Guide to Enactment to enable the use of electronic reverse auctions (A/CN.9/WG.I/WP.43, paragraphs 59-66, and A/CN.9/WG.I/WP.43/Add.1, paragraphs 1-6)	64-71
D.	Abnormally low tenders (A/CN.9/WG.I/WP.43/Add.1, paragraphs 7 to 13) .	72-78
1.	Proposed additions to article 34 of the Model Law	72-75
2.	Proposed additions to the Guide to Enactment text addressing article 34	76-78
E.	Framework agreements (A/CN.9/WG.I/WP.44 and Add.1)	79-81
V.	Other Business	82-86

I. Introduction

1. At its thirty-seventh session, in 2004, the United Nations Commission on International Trade Law (the “Commission”) entrusted the drafting of proposals for the revision of the 1994 UNCITRAL Model Law on Procurement of Goods, Construction and Services (the “Model Law”, A/49/17 and Corr.1, annex I) to its Working Group I (Procurement). The Working Group was given a flexible mandate to identify the issues to be addressed in its considerations, including providing for new practices in public procurement, in particular those that resulted from the use of electronic communications (A/59/17, para. 82). The Working Group began its work on the elaboration of proposals for the revision of the Model Law at its sixth session (Vienna, 30 August-3 September 2004) (A/CN.9/568). At that session, it decided to proceed at its future sessions with the in-depth consideration of topics in documents A/CN.9/WG.I/WP.31 and 32 in sequence (A/CN.9/568, para. 10).

2. At its seventh to ninth sessions (New York, 4-8 April 2005, Vienna, 7-11 November 2005, and New York, 24-28 April 2006, respectively) (A/CN.9/575, A/CN.9/590 and A/CN.9/595), the Working Group considered the topics related to: (a) the use of electronic means of communication in the procurement process, including exchange of communications by electronic means, the electronic submission of tenders, opening of tenders, holding meetings and storing information, as well as controls over their use; (b) aspects of the publication of procurement-related information, including possibly expanding the current scope of article 5 of the Model Law and referring to the publication of forthcoming procurement opportunities; and (c) electronic reverse auctions, including whether they should be treated as an optional phase in other procurement methods or a stand-alone method, criteria for their use, types of procurement to be covered, and their procedural aspects. At its seventh and eighth sessions, the Working Group in

addition considered the issues of abnormally low tenders, including their early identification in the procurement process and the prevention of negative consequences of such tenders. At its ninth session, the Working Group came to preliminary agreement on the draft revisions to the Model Law and the Guide that would be necessary to accommodate the use of electronic communications and technologies (including electronic reverse auctions) in the Model Law. It decided that at its tenth session it would proceed with further consideration of those draft revisions as well as with the in-depth consideration of the proposed revisions to the Model Law and the Guide addressing the remaining aspects of electronic reverse auctions and the investigation of abnormally low tenders, and, time permitting, would take up the topics of framework agreements and suppliers' lists (A/CN.9/595, para. 9).

3. At its thirty-eighth and thirty-ninth sessions, in 2005 and 2006, respectively, the Commission commended the Working Group for the progress made in its work and reaffirmed its support for the review being undertaken and for the inclusion of novel procurement practices in the Model Law (A/60/17, para. 172, and A/61/17, para. 191). At its thirty-ninth session, the Commission also recommended that the Working Group, in updating the Model Law and the Guide, should take into account issues of conflicts of interest and should consider whether any specific provisions addressing those issues would be warranted in the Model Law (A/61/17, para. 192).

II. Organization of the session

4. The Working Group, which was composed of all States members of the Commission, held its tenth session in Vienna from 25 to 29 September 2006. The session was attended by representatives of the following States members of the Working Group: Algeria, Argentina, Austria, Belarus, Brazil, Cameroon, Canada, Chile, China, Croatia, Czech Republic, France, Germany, Iran (Islamic Republic of), Italy, Kenya, Lithuania, Mexico, Nigeria, Pakistan, Republic of Korea, Russian Federation, Singapore, Spain, Sweden, Thailand, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

5. The session was attended by observers from the following States: Bulgaria, Democratic Republic of the Congo, Dominican Republic, Finland, Indonesia, Ireland, Latvia, Malaysia, Philippines, Romania, Slovakia and Timor-Leste.

6. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: United Nations Office of Legal Affairs and the World Bank.

(b) *Intergovernmental organizations*: Asian Clearing Union (ACU), European Commission, European Space Agency (ESA), Inter-American Development Bank (IADB), and Organization for Economic Cooperation and Development (OECD).

(c) *International non-governmental organizations invited by the Working Group*: Centre for International Legal Studies (CILS), European Law Students Association (ELSA), International Bar Association (IBA), and International Chamber of Commerce (ICC).

7. The Working Group elected the following officers:
Chairman: Mr. Stephen R. KARANGIZI (Uganda)
Rapporteur: Sra. Ligia GONZÁLEZ LOZANO (Mexico)
8. The Working Group had before it the following documents:
 - (a) Annotated provisional agenda (A/CN.9/WG.I/WP.46 and Corr.1);
 - (b) A note concerning electronic reverse auctions and abnormally low tenders (A/CN.9/WG.I/WP.43 and Add.1);
 - (c) A comparative study of framework agreements (A/CN.9/WG.I/WP.44 and Add.1);
 - (d) A note concerning suppliers' lists (A/CN.9/WG.I/WP.45 and Add.1);
 - (e) A note concerning the use of electronic communications in the procurement process and the electronic publication of procurement-related information, including drafting materials (A/CN.9/WG.I/WP.47);
 - (f) A further note concerning electronic reverse auctions, including drafting materials (A/CN.9/WG.I/WP.48); and
 - (g) A note on legislative work of international organizations relating to public procurement (A/CN.9/598/Add.1).
9. The Working Group adopted the following agenda:
 1. Opening of the session.
 2. Election of officers.
 3. Adoption of the agenda.
 4. Consideration of proposals for the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services.
 5. Other business.
 6. Adoption of the report of the Working Group.

III. Deliberations and decisions

10. At its tenth session, the Working Group continued its work on the elaboration of proposals for the revision of the Model Law. The Working Group used the notes by the Secretariat referred to in paragraph 8 above (WP.43 and 44 and their addenda, 47 and 48, and document A/CN.9/598/Add.1) as a basis for its deliberations. The Working Group agreed to defer the consideration of document A/CN.9/WG.I/WP.45 and Add.1 to a future session.
11. The Working Group requested the Secretariat to revise the drafting materials reflecting the deliberations at the tenth session, for its consideration at its next session. It also requested the Secretariat to prepare drafting materials for the Model Law and the Guide on the use of framework agreements. The Working Group agreed to add the issue of conflicts of interest to the list of topics to be considered in the revision of the Model Law and the Guide.

IV. Consideration of proposals for the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services

A. General comments

1. Project timetable

12. The Working Group recalled the list of topics for its consideration in revising the Model Law, as follows: (a) electronic publication of procurement-related information; (b) the use of electronic communications in the procurement process; (c) controls over the use of electronic communications in the procurement process; (d) electronic reverse auctions (ERAs) and abnormally low tenders (ALTs); (e) the use of suppliers' lists; (f) framework agreements; (g) procurement of services; (h) evaluation and comparison of tenders, and the use of procurement to promote industrial, social and environmental policies; (i) remedies and enforcement; (j) alternative methods of procurement; (k) community participation in procurement; (l) simplification and standardization of the Model Law; (m) legalization of documents; and (n) conflicts of interest in the procurement process, a topic that the Commission referred to the Working Group to ensure that the Model Law complied with the requirements of the United Nations Convention against Corruption¹ in this regard (see para. 3 above and para. 85 below).

13. The Working Group expressed its desire to complete its work on those topics in 2008. In seeking to achieve that target, the Working Group noted that its first priority would be the preparation of the revised text of the Model Law itself.

2. Revisions to the Guide to Enactment

14. The Working Group noted that the Guide to Enactment could be addressed not just to legislators, but also to regulators and perhaps operators (procurement officials such as contracting officers and those in charge of designing electronic systems for use in procurement). Therefore, its guidance could contain provisions addressed to each group of users, including guiding principles for legislators, regulatory guidance and practical guidance. However, noting the target date for completion of its work (see para. 13 above), the Working Group noted that it might not be possible to complete all aspects of the guidance by 2008. The Working Group therefore requested the Secretariat to undertake consultations with experts and to draft the Guide to Enactment in the following order of priority: first, following completion of the relevant sections of the Model Law text, guidance for legislators in enacting its text; secondly, guidance for regulators, and, thirdly, perhaps, guidance for other users. At its final session before the revised Model Law text was presented to the Commission, the Working Group would consider the Model Law text and the guidance to legislators and regulators completed to date. The Secretariat would subsequently be entrusted with drafting any remaining aspects of the Guide for consideration by the Working Group.

¹ General Assembly resolution 58/4, annex.

B. The use of electronic communications in procurement (A/CN.9/WG.I/X/CRP.2 and A/CN.9/WG.I/WP.47)

1. Communications in procurement: new articles 5 bis and 9/5 ter

15. The Working Group considered the wording of the draft articles 5 bis and 9/5 ter as contained in document A/CN.9/WG.I/X/CRP.2, presented to the Working Group for its consideration in addition to the wording of the draft articles proposed in paragraph 3 of A/CN.9/WG.I/WP.47.

16. The general view was that the wording of draft article 5 bis in document A/CN.9/WG.I/X/CRP.2 was an improvement on the previous formulation, as it dealt with the issue of the use of communications in the procurement process in a way that was technologically neutral and addressed functional equivalence among various means of communications. It was suggested that some refinement to make the provisions as precise as possible could be considered, so as to avoid the risk that they could be interpreted differently in different jurisdictions. Furthermore, insufficient precision could inadvertently give rise to the risk of review actions. It was also suggested that the provisions should be drafted in such a way so as to ensure that they addressed all aspects of procurement under the Model Law, and not only communications generated during a particular procurement. An example of an aspect of procurement that could otherwise be excluded in some jurisdictions would be review procedures.

17. The Working Group considered whether the provisions in draft articles 5 bis and 9/5 ter should be consolidated in one article. The prevailing view was that they should be so consolidated because they both addressed the topic of communications in the procurement process.

18. The consideration of draft articles 5 bis and 9/5 ter then proceeded on the basis of a consolidated article, as follows:

“Article 5 bis. Communications during the procurement process

(1) Subject to the requirements set out in article [cross reference], the procuring entity shall select:

(a) The means by which documents, notifications, decisions and other information in the procurement proceedings are to be communicated by or to the procuring entity or any administrative authority involved in the procurement, or a supplier or contractor or to the public; and

(b) The means by which any requirement under this Law for information to be in writing or for a signature is to be satisfied.

(2) The means of communication of information selected, and of any requirements for writing and signatures being satisfied, must be readily capable of being used with those in common use among suppliers or contractors of the goods, services or construction being the subject matter of the procurement. Such means are to be specified by the procuring entity when first soliciting the participation of suppliers or contractors in the procurement proceedings.

(3) The provisions of paragraph 1 of this article shall apply equally to the creation of the record of the procurement proceedings, and holding meetings of suppliers or contractors.

(4) The procurement regulations shall establish measures to ensure the authenticity, integrity and confidentiality of documents, notifications, decisions and other communications or information.

(5) Subject to other provisions of this Law, documents, notifications, decisions and other information to be communicated by or to the procuring entity or any administrative authority involved in the procurement or a supplier or contractor shall be in a form that provides a record of information contained therein and shall be accessible so as to be usable for subsequent reference.

(6) Communication of information between suppliers or contractors and the procuring entity referred to in articles [7 (4) and (6), 12 (3), 31 (2)(a), 32 (1)(d), 34 (1), 36 (1), 37 (3), 44 (b) to (f) and 47 (1), to update for revisions to Model Law] may be made by means that do not provide a record of the information contained therein provided that, immediately thereafter, confirmation of the communication is given to the recipient of the communication in a form that provides a record of the information contained therein and is accessible so as to be usable for subsequent reference.”

19. The following drafting suggestions were made with respect to draft article 5 bis (1): (i) to use the word “specify” instead of “select” in the opening sentence and in subparagraph (2); (ii) to update the cross-references between means and form of communications following the consolidation of the draft article; (iii) as any requirement for information to be in writing or for a signature could be found in other laws, the procuring entity itself might not be in a position to stipulate how the requirements would be satisfied. Accordingly, the text could state either that the procuring entity should set out the requirements in the solicitation documents, referring where necessary to existing laws that governed the questions, or the words “unless regulated by other law” could be inserted in the beginning of subparagraph (b).

20. Regarding draft article 5 bis (2), it was suggested that the word “potential” be added to qualify “suppliers or contractors”, so as to make it clear that the provisions addressed suppliers at large. However, it was also recalled that article 2 of the Model Law defined “supplier or contractor” as including potential suppliers and contractors, according to the circumstances. The Working Group requested the Secretariat to consider whether the suggested addition would be necessary in this context, and also to consider whether the drafting of the proviso could be improved.

21. Regarding draft article 5 bis (3), it was agreed that the items referred to should be expanded to include other aspects of the procurement process that would be subject to the same requirements.

22. The Working Group considered the interrelationship between the provisions facilitating the use of electronic commerce already adopted (provisions that may be similar to the UNCITRAL Model Law on Electronic Commerce,² for example) and

² For the text of the Model Law, see *Official Records of the General Assembly, Fifty-first Session, Supplement No. 17 (A/51/17)*, annex I (also published in the *UNCITRAL Yearbook*, vol. XXVII:1996 (United Nations publication, Sales No. E.98.V.7), part three, annex I). The Model Law and its accompanying Guide to Enactment have been published as United Nations publication, Sales No. E.99.V.4, and are available in electronic form at the UNCITRAL website (www.uncitral.org/english/texts/electcom/ml-ecomm.htm).

the provisions adopted for the purposes of public procurement. It was noted that other branches of law, such as contract law and the law of electronic commerce, might regulate these issues in some jurisdictions, but that other issues arising in the procurement context might not be covered elsewhere. It was suggested that the paragraph be redrafted in the passive, providing that appropriate measures of authenticity, integrity and confidentiality should be provided for, but should be flexible so that to respect the particular circumstances in each enacting State. The Working Group's attention was drawn to the fact that this paragraph would provide for requirements applicable both to electronic and paper communications, introducing explicit requirements for the former.

23. The point was made that in drafting article 5 bis and any provisions for the Guide to Enactment on confidentiality, trade or other information that should be kept confidential (as required in article 45 of the Model Law, for example) should be distinguished from information that should be made public.

24. It was recalled that the reference to "accessibility" had been deleted from draft article 5 bis (4), as the focus of the paragraph should be on measures needed to ensure security of communication and information in procurement. Accessibility, it was said, aimed at another objective, namely non-discrimination, and should be dealt with elsewhere, or as a separate element of draft article 5 bis (4).

25. The question arose as to whether the Model Law would contain sufficient safeguards against discrimination in communication if article 9 (3) of the Model Law were replaced by the proposed article 5 bis (2). The positive phraseology of draft article 5 bis (2), it was said, was aimed at ensuring competition, rather than non-discrimination. However, the Working Group noted that the provisions of article 9 (3) could be inconsistent with giving the procuring entity the right to specify the means of communication in the procurement process. The Working Group recalled its consideration of this subject at its ninth session (A/CN.9/595, paras. 23-38), and in particular the reference to the preamble of the Model Law, which provided for the fair and equitable treatment of all suppliers and contractors. Recalling its wish for the Guide to Enactment to elaborate on the notion of non-discrimination, the Working Group decided to continue the approach of addressing the question in the Guide rather than reinserting article 9 (3).

26. It was also agreed that the title of the consolidated draft article, which would address both the means and form of communications in procurement, should be changed to "Communications in procurement" so as to convey the general scope of the article.

2. Electronic submission of tenders: revision to article 30 (5)

27. The Working Group considered the alternative proposals for article 30 (5) contained in paragraph 2 of document A/CN.9/WG.I/X/CRP.2, and in paragraph 21 of document A/CN.9/WG.I/WP.47. The Working Group was of the view that consideration of the revisions to article 30 (5) should proceed on the basis of the text in document A/CN.9/WG.I/X/CRP.2.

28. The following drafting suggestions were made to the proposed text of article 30 (5), which were accepted by the Working Group: (i) to merge the opening sentence in paragraph (a) with subparagraph (i); (ii) to split subparagraph (ii) into two parts, one dealing with submission of tenders in paper and the other with submission of tenders in any other form; (iii) to replace the word "protection" in subparagraph (ii) with the words "integrity and confidentiality", so as to ensure

consistency between articles 5 bis (4) and 30 (5)(d); (iv) to delete the word “security” in paragraph (d); and (v) to replace the words “the time of its submission” with either “the time of its receipt”, or with “the time as determined by the procuring entity but in no case later than the time of its receipt”. The latter formulation was preferred, such that the entire provision would read: “(d) the procuring entity shall preserve the integrity and confidentiality of a tender from the time as determined by the procuring entity, but in no case later than the time of its receipt, and shall ensure that the content of the tender is examined only after its opening in accordance with this Law”. The formulation was considered to provide sufficient flexibility in cases where responsibility for protection of tenders was assumed by the procuring entity earlier than the moment of receipt of tenders, so as to allow (for example) for the encryption and decryption of electronic tenders by a procuring entity rather than suppliers.

29. Doubts were expressed as regards the desirability of removing the concept of “security” from the proposed article 30 (5)(d). It was noted that the concept of “security” was different from (though related to) the concepts of integrity and confidentiality. The importance of preserving security in both the paper-based and electronic environments was stressed. The Working Group’s understanding was that sufficient safeguards were already provided in draft articles 30 (5) and 5 bis, as amended, to ensure adequate security in the procurement process as a whole and in the submission of tenders in particular.

30. The point was made that the Guide should provide assistance to enacting States as regards these issues. It was noted that separate treatment of submission and receipt of tenders in the paper and electronic environments might be justifiable, so as to avoid imposing more stringent requirements appropriate in the electronic environment on the paper-based environment, where they might not be necessary. It was also noted that imposing excessive requirements might discourage the use of electronic submission of tenders.

3. Electronic opening of tenders: revisions to new article 33 (4) (A/CN.9/WG.I/WP.47, paragraph 29)

31. The Working Group agreed to make the proposed text of new article 33 (4) technologically neutral by deleting references to “electronic”, “electronically”, and “optical” means of procurement and communication. It was also agreed that the words “capable of following [the opening of the tenders]” would be replaced with the words “fully apprised of” to convey the meaning that suppliers or contractors should be allowed not only to observe the opening process but also make comments instantaneously.

32. The Working Group decided that proposed paragraph 4 as amended would be merged with paragraph 2 of article 33, so that the latter would read as follows:

“(2) All suppliers or contractors that have submitted tenders, or their representatives, shall be permitted by the procuring entity to be present at the opening of tenders. Suppliers or contractors shall be deemed to have been permitted to be present at the opening of the tenders if they are fully apprised of the opening of the tenders contemporaneously through the means of communication used by the procuring entity.”

**4. Electronic publication of procurement-related information
(A/CN.9/WG.I/WP.47, paragraphs 30-37)**

Article 5

33. The Working Group agreed that article 5 would be split into two paragraphs as suggested in paragraph 31 of document A/CN.9/WG.I/WP.47. Significant important judicial decisions and administrative rulings would be required to be published, but with a requirement “to update [the information] on a regular basis if need be”, but there would be no requirement to “systematically maintain” that information.

Publication of information on forthcoming procurement opportunities

34. The Working Group noted developments at international and regional levels towards encouraging the publication of information on forthcoming procurement opportunities through regulation, in particular by providing incentives for such publication, such as allowing a shorter time period in the procurement process. Strong support was expressed for the inclusion of provisions on the publication of information on forthcoming procurement opportunities in the Model Law as, it was said, that practice encouraged procurement planning, led to better discipline in procurement (for example, reducing instances of splitting procurements to avoid the application of more stringent rules) and benefited suppliers and contractors (by allowing them to identify needs, plan the allocation of necessary resources and take other preparatory actions for the participation in forthcoming procurements).

35. Caution was expressed, however, as the benefits of such publication were not clearly established, and as the information could change (suppliers or contractors thereby incurring unnecessary costs having relied on it). The Model Law, it was said, should encourage best practice and should recognize that making available abundant irrelevant or misleading information (as opposed to useful and relevant information) might compromise the objectives of the Model Law, including transparency. On the other hand, it was noted that, in some jurisdictions, the publication of such information might already be required or necessary as part of the planning process.

36. The Working Group agreed that enabling provisions on publication of information on forthcoming procurement opportunities should be included in the Model Law, based on the wording in paragraph 33 of document A/CN.9/WG.I/WP.47. The text would be permissive, using the words “procuring entities may publish”. The Working Group considered that the word “may” required support to make the provision effective. In this regard, it was agreed that the Guide should refer to incentives that enacting States might provide for procuring entities to publish that type of information, and to any existing regulations and practices. The Working Group noted that the Guide should stress that suppliers or contractors would not be entitled to any remedy if the procurement were cancelled following its pre-advertisement. At the same time, the Guide should draw appropriate balance between the benefits and concerns that publication of that information might raise.

C. Draft provisions to enable the use of electronic reverse auctions in the Model Law (A/CN.9/WG.I/WP.48, A/CN.9/WG.I/WP.43, paragraphs 54-66, A/CN.9/WG.I/WP.43/Add.1, paragraphs 1-6, and A/CN.9/WG.I/WP.40, paragraph 27)

1. Location of the provisions on ERAs

37. The Working Group considered the structure of the Model Law as a whole, noting that the conditions for use and procedures to be applied in particular procurement methods appeared in different chapters of the Model Law. Noting that it might wish to consider altering that structure at a future time, the Working Group agreed on a preliminary basis to include provisions stipulating the conditions for the use of ERAs to chapter II of the Model Law (which listed methods of procurement and their conditions for use). Provisions on procedural matters of ERAs, it was agreed, would be included elsewhere, such as in chapter V of the Model Law (which described procedures for alternative methods of procurement). This location, it was observed, would also allow the use of ERAs in various procurement methods, such as tendering or request for quotations, or as a stand-alone method.

38. However, the Working Group noted that a final decision on the structure of the Model Law would be taken after new procurement techniques, such as ERAs and framework agreements, had been considered. It was also recognized that the current preference for tendering contained in article 18 of the Model Law might be revisited, so as to take account of evolving procurement techniques and tools.

39. The view was expressed that in any event the Model Law would have to impose requirements according to which a procuring entity would choose the procurement method most appropriate for given circumstances. It was also pointed out that the conditions for use of each procurement method would have to become more precise, especially in the light of the preliminary agreement in the Working Group that the selection of the method of procurement would no longer be exempted from the review under article 52 of the Model Law (A/CN.9/568, para. 112).

2. Conditions for the use of electronic reverse auctions: new article [36 bis] (A/CN.9/WG.I/WP.48, paragraphs 3-17)

Article [36 bis]

40. The Working Group considered the text of draft article 36 bis contained in paragraph 3 of document A/CN.9/WG.I/WP.48. It recalled that all provisions in article 36 bis had to be taken as a package in order to preserve safeguards against improper use of ERAs (A/CN.9/595, para. 96).

41. The following drafting suggestions were made, which were accepted by the Working Group: (i) to put references and provisions related to construction or services in square brackets throughout the text as an indication to enacting States that these types of procurement could be excluded from the scope of the article; and (ii) to delete the reference to “commonly used goods, construction or services” throughout the text and instead use consistently the reference to goods, construction or services that were generally available on the market.

42. The need for subparagraph (a) was questioned in the light of subparagraph (c) since the compliance with the conditions of the latter, it was said, led to the compliance with the requirements of subparagraph (a).

43. As regards subparagraph (d), views varied as to whether both options in the text should be retained, or whether only one should appear in the Model Law (with the Guide to Enactment referring to the other as a possible alternative). It was commented that neither approach would be desirable, if it resulted in conflicting provisions appearing in the Model Law and the Guide.

44. It was noted that the question raised which award criteria should be permitted in procurements through ERAs — price only, or price and other criteria. The view was expressed that to ensure the acceptability of the revised Model Law, its provisions should be drafted in a sufficiently flexible way allowing both price and non-price criteria in determining the successful bid. However, recalling that the primary understanding that ERAs were most suitable for procurements where the price was the only award criterion, it was also commented that the more permissive language of the second option might allow the introduction of non-price criteria in inappropriate circumstances.

45. After discussion, it was decided to retain both options in the Model Law, with the procurement regulations governing which option would be appropriate in the circumstances in any enacting State (to be reflected in the introduction to subparagraph (d)). The second option would be amended to read as follows: “Where the successful tender is to be determined on the basis of the price and other criteria that can be transformed into monetary units and can be evaluated automatically.”

46. It was the Working Group’s understanding that the Guide would explain in detail the options for enacting States as regards both alternatives under the prevailing circumstances on the ground, including the level of experience with ERAs in any given jurisdiction, whether any services or construction procurement could be handled through ERAs, and taking into account the sectors of the economy. In addition, the Guide should alert enacting States that ERAs might be prone to elevated risks of corrupt practices through outsourcing decision-making beyond government, such as to third-party software and service providers. The Working Group also noted that provision should be made to ensure that any criteria to be used in determining the successful bid and the evaluation process would be disclosed to suppliers and contractors in the solicitation documents. Further, it was stressed that care would be required to ensure that subjectivity in ERAs was not introduced (such as through a points system), and that simplicity and transparency in the process should be preserved.

Guide to Enactment text

47. The suggestion was made that, in addition to the points listed in paragraph 11 of document A/CN.9/WG.I/WP.48 as requiring a detailed commentary in the Guide, the Guide should stress that procuring entities should be aware of the opportunity costs arising from the use of ERAs (costs such as those flowing should vendors abandon the government market if required to bid through ERAs).

3. Procedures in the pre-auction phase: new article [47 bis] (A/CN.9/WG.I/WP.48, paragraphs 18-27)

48. The Working Group had before it the text of draft article 47 bis, contained in paragraph 18 of document A/CN.9/WG.I/WP.48. The Working Group proceeded with the consideration of the article on the understanding that it would subsequently be merged with article 47 ter (see paras. 57-63 below).

49. The understanding of the Working Group was that provisions on pre-auction procedures had to be revised to ensure consistency with article 36 bis. Some delegates in particular preferred that two different versions of an article dealing with pre-auction procedures be prepared as per the two alternative versions of paragraph (d) of article 36 bis previously agreed (see paras. 40-46 above).

50. The Working Group also agreed that the Model Law should not prevent appropriate use of ERAs as a procurement tool in procurement methods other than tendering, such as request for quotations, as well as in any other procurement techniques that may be envisaged by the revised Model Law, such as framework agreements and dynamic purchasing systems.

51. Independently of the issue of the assessment of the qualification of the suppliers and responsiveness of tenders, the Working Group noted that two types of ERAs should be envisaged: first, a simpler version with price or other modifiable elements that can be transformed to monetary units as the only award criteria; and, secondly, a more complex version, in which non-modifiable elements of the tender would be subject to a prior evaluation. The variable elements that could be expressed as monetary units would subsequently be submitted to the auction.

52. The following drafting suggestions were made, which were referred to the Secretariat for consideration in the preparation of a revised article: (i) with reference to paragraph (1), to set out, for those procurement methods that could appropriately include ERAs, which of the normal requirements for each such procurement method would apply to the ERAs to be conducted (for example, it was noted that article 34 (4)(c), setting out procedures for the evaluation and comparison of tenders, was not applicable to ERAs); (ii) to permit both the simpler and more complex ERAs set out above; (iii) to redraft the article in a way that would make it clear which pre-auction procedures were involved in the simpler and more complex ERAs; (iv) to reflect that the rules of the conduct of ERAs, the criteria for evaluation of tenders and any formula or other mechanism for automatic re-evaluation of tenders should be disclosed to suppliers or contractors in the beginning of the procurement process; (v) in paragraph (3), to replace the reference to article 34 (3) with a reference to article 34 (2) that dealt with the determination of tenders' responsiveness if references to tendering proceedings were to be retained; (vi) in the context of more complex ERAs, to state that invitations to participate in the auction (following pre-auction assessment(s)) were to be issued to the "bidders that had met mandatory criteria" or to the "bidders that had been chosen" rather than to all those whose tenders had been rejected as a result of those assessments; (vii) to reorder the sequence of the paragraphs to set out procedures common to both ERAs first; and (viii) to make the withdrawal of ERAs mandatory if in the opinion of the procuring entity the number of suppliers or contractors was insufficient to ensure effective competition at any time before the opening (rather than closure) of the auction (although it was noted that that approach was too prescriptive compared with a more flexible approach taken in some jurisdictions).

53. The Working Group considered proposed alternative wording of article 47 bis, which read as follows:

"Article [47 bis]. Conduct of electronic reverse auctions in the pre-auction period

(1) [The provisions of chapter III of this Law shall apply to procurement by means of electronic reverse auctions except to the extent that those provisions are derogated from in this article.]

- (2) The procuring entity may require either prequalification or, in addition, submission and assessment of initial tenders.
- (3) If the prequalification is required, the procuring entity shall prequalify suppliers or contractors in accordance with article 7 (5) and (6).
- (4) If the submission of initial tenders is required, the procuring entity shall carry out an initial assessment of the tenders to determine their responsiveness in accordance with article 34 (2).
- (5) The procuring entity shall send an invitation to participate in the auction to all suppliers or contractors except for those who have not been prequalified, or whose tenders have been rejected in accordance with article 34 (3).
- (6) The invitation to participate in the auction shall set out the manner and deadline by which suppliers and contractors shall register to participate in the auction. Unless already provided to suppliers or contractors, the invitation to participate in the auction shall include all information necessary to enable the supplier or contractor to participate in the auction.
- (7) The procuring entity shall ensure that the number of suppliers or contractors invited to participate in the auction is sufficient to secure effective competition. If the number of suppliers or contractors at any time before the opening of the auction, is in the opinion of the procuring entity insufficient to ensure effective competition, the procuring entity shall withdraw the electronic reverse auction.
- (8) If the successful tender shall be determined on the basis of not only price but price and criteria transformed into monetary units in accordance with article 36 bis [second (d)] [(e)], the procuring entity shall assess those elements of tenders that are not to be presented in the auction in accordance with such criteria and in accordance with the formula specified in the solicitation documents for the transformation of such elements into monetary units.”

54. In introducing the draft article, the point was made that the article applied only for the pre-auction phase; in the auction phase, elements other than price and the elements referred to in paragraph (8) of the draft article, if applicable, could be factored in to determine the winning tender. With reference to paragraph (8) of the draft article, it was also pointed out, that its scope had been narrowed in accordance with draft article 36 bis (d), second alternative.

55. The view was expressed that the drafting should allow for the inevitable evolution of ERAs so as to avoid the provisions becoming obsolete. Thus any ERA should be permitted, subject to a number of safeguards, including: (i) transparency through inter alia disclosure early in the procurement process, either in specifications or invitations to pre-qualify or invitation to participate in the auction, all information to suppliers that would allow them to determine how tenders would be evaluated and their ranking in the evaluation process vis-à-vis other participants; and (ii) objectivity through inter alia requiring the finality of the auction stage in determining the successful tender so as to prevent any post-auction evaluation.

56. The Secretariat was requested carefully to consider which of the items listed in paragraph 60 of document A/CN.9/WG.I/WP.43 might need to be retained in the revised provisions. The point was also made that in drafting the provisions either for the Model Law or the Guide no impression should be given that ERAs, even if all

criteria for their use under article 36 bis had been met, were necessarily the only or a desirable tool to be used. The Secretariat was requested to consult with experts having practical experience with the ERAs to ascertain that whatever was drafted for the Model Law and the Guide concerning ERAs was workable in practice. Certain parts of the Guide that might require specific review by experts, such as those on ERAs, could be presented separately.

4. Procedures in the auction phase: new article [47 ter] (A/CN.9/WG.I/WP.40, paragraph 27, and A/CN.9/WG.I/WP.43, paragraphs 54-58)

57. The Working Group had before it the text of draft article 47 ter, contained in paragraph 27 of document A/CN.9/WG.I/WP.40 as amended by the text in paragraph 55 of document A/CN.9/WG.I/WP.43. The Working Group proceeded with the consideration of the draft article recalling that it would subsequently be merged with article 47 bis (see para. 48 above).

58. It was noted that the article had been drafted to address ERAs in which the successful supplier would be chosen on the basis of price criteria alone. In the light of its decisions regarding article 36 bis (see paras. 40-46 above), the Working Group considered that the text should be expanded to address both the simple and more complex ERAs, and that other parameters decided during the Working Group's consideration of articles 36 bis and 47 bis (such as those designed to ensure objectivity and transparency in the use of ERAs) would apply equally, *mutatis mutandis*, to article 47 ter.

59. It was noted that, further to the Working Group's understanding that ERAs could be used as a procurement tool in different procurement methods and techniques, the provisions in the draft that referred only to procedures conducted in accordance with the provisions of chapter III (tendering proceedings) in paragraphs (3), (6) and (7) would be revised.

60. The question of the anonymity of the bidders during the ERA itself was discussed. The Working Group agreed that the preservation of this anonymity during the auction phase was critical. Views differed, however, as to whether that anonymity should be preserved after closure of the auction. The predominant view was that the identity of the successful supplier and the winning price should be disclosed, as they would be in any other procurement under the Model Law, *inter alia* so as to permit a review of the procurement if necessary, but that the Working Group would consider at a future session whether to include provisions regarding anonymity after closure of the auction.

61. The following comments were made on the text of the draft article: (i) in paragraph 1 (b), the words "lowest price submitted" should be replaced with the words "result of the auction according to the pre-disclosed formula"; (ii) in paragraph (2), the phrase "dates and times" should be replaced with "date and time"; (iii) in paragraph 3, the phrase "[may also at any time announce the number of participants in the auction but]" and the words "[during the auction]" should be deleted, and the Working Group would revisit at a future session the issue as to whether the references to articles 33 (2) and (3) should be replaced with the language that would reflect more clearly the use of ERAs; (iv) paragraph (3) bis should be placed in square brackets, pending the determination of the Working Group as to whether to retain the provision and, if so, what its contents should be so as to capture only those events that would justify the suspension or termination of an ERA; (v) in paragraph (5), the words "or ranked first according to the

pre-disclosed formula” should be inserted after the words “lowest price”; and (vi) in paragraph (6), the provision be revised to provide that if the successful supplier did not enter into a procurement contract, the procuring entity would not be in a position to select another bid and instead might hold another ERA or adopt another procurement method.

62. The Working Group decided to base its future deliberations on the following text:

“Article 47 ter. Conduct of electronic reverse auctions during the auction itself

(1) During an electronic reverse auction:

(a) There shall be automatic evaluation of all bids;

(b) Procuring entities must instantaneously communicate [the result] of the auction according to the pre-disclosed formula to all bidders on a continuous basis during the auction;

(c) All participating suppliers and contractors shall have an equal and continuous opportunity to revise their tenders in respect of those features presented through the auction process.

(2) The auction shall be closed in accordance with the precise method, date and time specified in the solicitation documents or in the invitation to participate in the auction.

(3) The procuring entity shall not disclose the identity of any bidder [until the auction has closed]. [Articles 33 (2) and (3) shall not apply to a procedure involving an electronic reverse auction].

[(3) bis The procuring entity may suspend or terminate the electronic reverse auction in the case of system or communications failures.]

(4) There shall be no communication between the procuring entity and suppliers or contractors during the electronic reverse auction other than as provided for in paragraphs 1 (b) and (c) above.

(5) The successful bid shall be the bid with the lowest price or ranked first according to the pre-disclosed formula at the time the auction closes.

(6) If the supplier or contractor submitting the successful bid in a procedure involving an electronic reverse auction is requested to demonstrate again its qualifications in accordance with [article 34 (6)] but fails to do so, if the supplier or contractor fails to sign a written procurement contract when required to do so, and/or fails to provide any required security for the performance of the contract, the procuring entity may not select another bid but may conduct another electronic reverse auction, which shall then be conducted in accordance with the provisions of this article, or adopt another method of procurement.

(7) Where appropriate, [any reference to a tender in the Model Law] the reference to a tender in articles [list relevant articles] shall be read to include a reference to an initial tender submitted in a procedure involving an electronic reverse auction.”

63. In the light of the different conditions for use and procedures that could arise in the use of the simpler and more complex ERAs, and the use of price and non-price criteria, the Working Group requested the Secretariat to consider the preparation of one composite draft for articles 47 bis and ter, to address all ERAs, or to separate the text into two alternatives, to reflect simpler and more complex ERAs. It was noted that if the Secretariat included the text in paragraph 57 of A/CN.9/WG.I/WP.43 addressing non-price criteria in the revisions to be considered at the next session, the word “current” should be deleted, and that the Working Group would consider at its next session whether the reference to “the result” of the ERA in paragraph (1) (b) of the draft article above should be to “the ranking” of the suppliers.

5. Other revisions to the text of the Model Law and the Guide to Enactment to enable the use of electronic reverse auctions (A/CN.9/WG.I/WP.43, paragraphs 59-66, and A/CN.9/WG.I/WP.43/Add.1, paragraphs 1-6)

General comment

64. It was the Working Group’s understanding that ERAs could be used in other procurement methods as well as tendering proceedings.

Record of procurement proceedings (article 11) (A/CN.9/WG.I/WP.43, paragraph 59) and modification and withdrawal of tenders (article 31) (A/CN.9/WG.I/WP.43, paragraphs 65-66)

65. The Working Group agreed to revisit the question of how to refer to the use of ERAs in the record, and how and when offers in the context of ERAs could be modified and withdrawn, at a future session.

Contents of solicitation documents (article 27) (A/CN.9/WG.I/WP.43, paragraphs 60-64)

66. The Working Group considered the provisions in paragraph 60 of document A/CN.9/WG.I/WP.43.

67. The following drafting suggestions were made: (i) to start the introduction to paragraph (n) bis with the phrase “in addition to the provisions in article 27”; (ii) in paragraph (n) bis (ii), to replace the reference to the “website address” with “address” or “website or other electronic address”; (iii) to replace the current (n) bis (iii) with “the rules for the conduct of the electronic reverse auction”; (iv) to expand paragraph (n) bis (iv) by referring in addition to the formula that would be used in the evaluation of criteria during the auction (noting that the suggested wording in paragraph 64 of document A/CN.9/WG.I/WP.43 would be amended to comply with articles 36 bis and 47 bis and ter and merged with paragraph (n) bis (iv)); (v) to reinstate, with the opening phrase stating “unless set out in the rules for the conduct of the electronic reverse auction”, the provisions of paragraph (n) bis (v), those provisions of paragraph (n) bis (vi) that referred to stages in ERAs and those provisions of paragraph (n) bis (vii) that referred to conditions under which bidders would bid (in particular the reference to increments); and (vi) to amend paragraph (n) bis (ix) to read as follows “all other information concerning the electronic reverse auction necessary to enable the supplier or contractor to participate in the auction”. The Working Group confirmed its understanding that the remaining issues of paragraph (n) bis would be addressed in the Guide.

68. The Working Group's understanding was that the Model Law should list only those requirements for the content of the solicitation documents in procurements conducted by way of ERAs that were crucial for the proper handling of ERAs and for the fair and equitable treatment of all suppliers and contractors. The rules of ERAs, which would be included in the solicitation documents, would list any additional requirements, including any technical requirements for a particular ERA. (Recommendations and guidance on those requirements should be discussed in the Guide).

Tender securities (article 32) (A/CN.9/WG.I/WP.43/Add.1, paragraphs 1 to 4)

69. The Working Group noted that tender securities were not often used in ERAs. Views differed as to whether the Guide should discourage requiring tender securities in the context of ERAs, or whether a more flexible approach would be desirable (in that requiring a tender security could serve as a disincentive to withdraw the bid before the opening of the auction).

*Examination, evaluation and comparison of tenders (article 34)
(A/CN.9/WG.I/WP.43/Add.1, paragraphs 5 to 6)*

70. The Working Group considered the provisions in paragraph 5 of document A/CN.9/WG.I/WP.43/Add.1.

71. The Working Group agreed that the following wording would be considered at a future session: "No change in a matter of substance in the initial tender, including changes in price, shall be sought, offered or permitted, except during the auction itself". That wording would make it sure, it was said, that changes to tenders in ERAs were permitted only during the auction phase itself, and would avoid giving the impression that during the auction phase changes could be made to make unresponsive tenders responsive.

D. Abnormally low tenders (A/CN.9/WG.I/WP.43/Add.1, paragraphs 7 to 13)

1. Proposed additions to article 34 of the Model Law

72. The Working Group considered the provisions in paragraph 8 of document A/CN.9/WG.I/WP.43/Add.1.

73. The following drafting suggestions were made: (i) to refer to "concerns as to the capacity of the tenderer(s) to perform the contract" throughout the text; and (ii) to amend paragraph 4 (a) bis (ii) to read as follows: "[t]he procuring entity has taken account of the information supplied, if any, but continues, on a reasonable basis, to hold those concerns".

74. The Working Group's understanding was that the supplier's refusal to provide information requested by the procuring entity should not give an automatic right to the procuring entity to reject the tender on the basis that it was abnormally low. The Working Group deferred its decision on whether any decision regarding abnormally low tenders by the procuring entity should be open to review. The Working Group noted that domestic regulation of that issue might vary significantly. It was suggested that the Working Group might revert to that point when it considered review provisions.

75. The Secretariat was requested to propose the appropriate location for the provisions, taking into account that the issue should not be limited to tendering proceedings, and that risks of ALTs should be examined and addressed by the procuring entity at any stage of the procurement, including through qualification of suppliers.

2. Proposed additions to the Guide to Enactment text addressing article 34

76. It was agreed that the Guide should discuss the issues raised in paragraph 8 of document A/CN.9/WG.I/WP.43/Add.1, other issues considered by the Working Group at its eighth session (A/CN.9/590, paras. 107-109) as well as issues discussed in a note by the Secretariat A/CN.9/WG.I/WP.36 (in particular danger of rejecting tenders applying “arithmetical methods”, and the cost-effectiveness and cost implications for SMEs of performance bonds and independent guarantees). The Working Group agreed that the Guide should highlight the importance of adequate examination of tenders for their responsiveness and supplier for their solvency, of precise and detailed specifications and of objective criteria, for identifying and rejecting ALTs.

77. As regards the text for the Guide in paragraph 13 of document A/CN.9/WG.I/WP.43/Add.1, the Secretariat was requested to: (i) consider the order in which the elements of guidance should be presented; (ii) reconsider the reference to “a normal level of profit” in paragraph (1) bis as that criterion might be subjective and possibly irrelevant in defining ALTs; and (iii) provide examples of ALTs rather than defining the concept.

78. With reference to paragraph (1) quater contained in paragraph 13 of document A/CN.9/WG.I/WP.43/Add.1, views varied on whether the Guide should contain more flexible wording regarding information that may be requested by procuring entities about the cost structure of tenders. The prevailing view was that procuring entities should be alerted that it might be inappropriate to request that type of information from suppliers, but that there would be no prohibition on doing so. The Secretariat was requested, in redrafting the provisions for the Guide, to take into account differences in regulation of the subject in various jurisdictions (for example, in some instances, contracting officials were barred from demanding information relating to cost structure, because of risks that such information could be misused).

E. Framework agreements (A/CN.9/WG.I/WP.44 and Add.1)

79. Some delegates and observers updated information in documents A/CN.9/WG.I/WP.44 and Add.1 in the light of the most recent developments in the use and regulation of framework agreement in their respective jurisdictions.

80. The Working Group noted that two major issues would primarily affect the preparation of any drafting materials on the subject: first, whether specifications could be altered within the operation of the framework agreements, and second, whether suppliers not parties to the original framework agreement could join it after the conclusion of the master contract. The view was expressed that the response to these questions would depend on the complexity and subject-matter of framework arrangements. It was suggested that the Model Law provisions should be drafted sufficiently broadly to accommodate any type of framework agreements.

81. The Working Group, recognizing the wide-spread use of framework agreements and noting positive experience with their use in some jurisdictions (and trends towards their express regulation), entrusted the Secretariat with the preparation of drafting materials for the Model Law and the Guide that would set out conditions for the use of framework agreements and provide necessary safeguards against commonly encountered problems in their use, such as risks of collusion among suppliers, corruption and anti-competitiveness.

V. Other business

82. The Working Group had before it a note by the Secretariat on legislative work of international organizations relating to public procurement (A/CN.9/598/Add.1) (see paras. 8 and 10 above). The Working Group took note of the recommendation by the Commission that the Working Group, in updating the Model Law and the Guide, should take into account the issue of conflicts of interest and should consider whether any specific provisions addressing that issue would be warranted in the Model Law (see para. 3 above).

83. In that context, the Working Group noted the provisions on conflicts of interest contained in the e-tendering and electronic reverse auctions requirements and guidelines of the multilateral development banks (the “MDBs”) for MDB financed procurement (A/CN.9/598/Add.1, paras. 15 and 17),³ and in article 9 of the United Nations Convention against Corruption (A/CN.9/598/Add.1, paras. 43-45). As regards the latter, the Working Group noted that article 9 (1)(e) of the Convention required taking, where appropriate, measures to regulate matters regarding personnel responsible for procurement, such as declaration of interest in particular public procurements, screening procedures and training requirements, which had no equivalent in the Model Law.

84. The Working Group also heard a report from the Secretariat on its participation at the coordination meeting of the MDBs (Rome, 19-20 September 2006) that discussed, inter alia a study being undertaken by the MDBs on the issues of corruption and technology in public procurement, in which conflicts of interest in the context of electronic procurement would be specifically addressed.

85. The Working Group agreed to add the issue of conflicts of interest to the list of topics to be considered in the revision of the Model Law and the Guide.

86. The Working Group also heard reports on current legislative and other related activities in the procurement field, from regional and international organizations and authorities and confirmed that its work in revising the Model Law should be undertaken in close cooperation with those organizations and authorities.

³ Section 12 of the E-Tendering Requirements and section 11 of the E-reverse Auction Guidelines, both available at www.mdb-egp.org.

I. Introduction

1. The background to the current work of Working Group I (Procurement) on the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services (the “Model Law”) (A/49/17 and Corr.1, annex I) is set out in paragraphs 5 to 53 of document A/CN.9/WG.I/WP.46, which is before the Working Group at its tenth session. The main task of the Working Group is to update and revise the Model Law, so as to take account of recent developments, including the use of electronic communications and technologies, in public procurement.

2. Such use, including the electronic submission and opening of tenders, and holding meetings, storing information and the publication of procurement-related information electronically, was included in the topics before the Working Group at its sixth to ninth sessions.¹ At its ninth session, the Working Group requested the Secretariat to revise the relevant drafting materials that it had considered at the session.² This note has been prepared pursuant to that request, and sets out the drafting materials revised to take account of the Working Group’s deliberations at its ninth session.

II. Drafting materials addressing the use of electronic communications in public procurement

A. Means and form of communications

1. Proposed draft text for the revised Model Law

3. The Working Group has decided to continue its deliberations on the basis of the following two draft articles for the Model Law, drawing on the drafts before it at its ninth session³ and the provisions of article 9 of the current (1994) text of the Model Law:⁴

“Article 5 bis. Means of communication

(1) Any provision of this Law related to communicating [, to writing, to publication of information, to the submission of tenders in a sealed envelope, to the opening of tenders, to a record or to a meeting,] shall be interpreted to include electronic, optical or comparable means [by which such activities take place/of communication], provided that the means chosen are readily capable of being used with those in general [or common] use among suppliers or contractors.

(2) Documents, notifications, decisions and other communications between suppliers or contractors and the procuring entity shall be provided, submitted or effected by the means of communication specified by the procuring entity when first soliciting the participation of suppliers or contractors in the procurement proceedings, provided that the means specified are capable of being used as set out in the preceding paragraph.

¹ As regards electronic reverse auctions, see A/CN.9/WG.I/WP.48.

² A/CN.9/595, paras. 10-79.

³ A/CN.9/WG.I/WP.42, paras. 7, 17 and 20.

⁴ A/CN.9/595, paras. 40 and 44.

(3) The [procurement regulations or the procuring entity] [shall or may] establish measures to ensure the authenticity, integrity, accessibility and confidentiality of communications.

[(4) The provisions of paragraph 1 of this article shall apply equally to any provision of this Law related to writing, to publication of information, to the submission of tenders in a sealed envelope, to the opening of tenders, to a record or to a meeting.]”

“Article 9 [5 ter.] Form of communications

(1) Subject to other provisions of this Law, documents, notifications, decisions and other communications to be submitted by the procuring entity or administrative authority to a supplier or contractor or by a supplier or contractor to the procuring entity shall be in a form that provides a record of the content of the communication and is accessible so as to be usable for subsequent reference.

(2) Communications between suppliers or contractors and the procuring entity referred to in articles [7 (4) and (6), 12 (3), 31 (2)(a), 32 (1)(d), 34 (1), 36 (1), 37 (3), 44 (b) to (f) and 47 (1), to update for revisions to Model Law] may be made by a means of communication that does not provide a record of the content of the communication provided that, immediately thereafter, confirmation of the communication is given to the recipient of the communication in a form that provides a record of the content of the communication and is accessible so as to be usable for subsequent reference.”

Commentary — derivation, location and title

4. Proposed article 5 bis and the revised article 9 reflect the deliberations of the Working Group at its ninth session regarding the means and form of communications.⁵ Proposed article 5 bis contains text that does not appear in the current Model Law, and the revised article 9 draws on the provisions of the current article 9.

5. The Working Group at its ninth session noted that provisions in article 5 bis set out a fundamental principle relating to the use of communications in the procurement process (referring to the term “communications” in its broadest sense), and therefore should be placed early in the Model Law, before any identification of suppliers or contractors. Accordingly, it was agreed on a preliminary basis that they might follow the current article 5.⁶

6. The Working Group deferred its consideration of the title of proposed article 5 bis at its ninth session.⁷ The Working Group may consider that this article addresses the means of communication (whether paper-based or electronic), while the revised article 9 addresses the form of communications (in writing rather than oral and the content to be recorded). Accordingly, the Working Group may wish to reflect this difference in the titles of the articles.

⁵ A/CN.9/595, paras. 11 to 46.

⁶ A/CN.9/595, para. 37.

⁷ A/CN.9/595, para. 37.

7. The Working Group has not finally decided whether the above provisions should be contained in one or two articles, and whether they may usefully be located together (as articles 5 bis and 5 ter, for example). In this regard, the Working Group may wish to consider whether the differences between the “means” and “form” of communications are sufficiently clear and whether seeking to distinguish them may be helpful to the user of the Model Law. Alternatively, the Working Group may wish to provide for the “means” and “form” of communication in one composite article, which could be entitled “Communications” (see further para. 12 below).

Commentary — the text

8. The Working Group may wish to consider whether the reference to “means” (of communication) in the first paragraph of draft article 5 bis is sufficiently clear, or whether the word “means” should be qualified so as to make it clear that the reference is to “means of communication”. The Working Group may wish to consider the inclusion of a descriptive phrase such as the alternatives in square brackets: “by which such activities take place”, or “means of communication” to provide that reference, though noting that the second alternative would be intended to be interpreted broadly (explanation to such effect would be required in the Guide to Enactment).

9. Furthermore, the Working Group may wish to consider whether the first paragraph of article 5 bis fulfils the Working Group’s expressed wish to present the revised Model Law in a technologically neutral manner.⁸ The above draft refers only to “electronic, optical or comparable means” of communication, but not to paper-based means. An alternative formulation, expressed in technologically neutral manner, could read, for example, that:

“[a]ny provision of this Law related to communicating [...] shall be interpreted to include all means [by which such activities take place/of communication], including paper-based, electronic, optical or comparable means”.

10. The Working Group may wish to consider whether article 5 bis provides the functional equivalence desired, because there is no standard or requirement for communications generally, and the functional equivalent approach operates by providing that any requirements for paper can be satisfied by electronic communications.⁹ An alternative formulation might be for the provision to refer to such a requirement, which will be satisfied by paper-based or electronic means of communication. The Working Group may also wish to consider the addition of a statement that any communication issued in a procurement governed by the Model

⁸ While discussing a related issue, the Working Group noted “an inconsistency between the principle of “technological neutrality” in [this text] where a reference was made to a specific technology, which would have to be reconsidered in due course” (A/CN.9/595, para. 15). The Working Group’s attention is also drawn to the discussion at its ninth session regarding the submission of tenders, in which it was noted that a significant proportion of tenders are submitted in traditional format (A/CN.9/595, para. 55).

⁹ The Guide to Enactment accompanying the Model Law on Electronic Commerce notes in paragraph 16 that the “functional equivalent approach” “[...] is based on an analysis of the purposes and functions of the traditional *paper-based requirement* with a view to determining how those purposes or functions could be fulfilled through electronic-commerce techniques”. [emphasis added].

Law can be issued using any means of communication, be it paper-based, electronic, optical or comparable.¹⁰

11. The Working Group has noted that the first paragraph of draft article 5 bis also addresses not only communications, but also writing, publication of information, submission of tenders in a sealed envelope, opening of tenders, records and meetings. However, the second and third paragraphs address communications alone. The Working Group agreed at its ninth session to consider at a subsequent session whether these other references should be included in the first paragraph, alternatively in a separate fourth paragraph in the draft article, or elsewhere in the text. The bracketed text in paragraphs 1 and 4 of draft article 5 bis reflect that outstanding issue.¹¹

12. The Working Group may wish to consider that the first paragraph of article 5 bis should be a separate article, placed as article 2 bis and entitled “Interpretation”, as it deals with interpretation of subsequent provisions of the Model Law, including those related to publication of procurement-related information, the first of which appear already in article 5, i.e., before the proposed article 5 bis. The Working Group may also wish to consider that, if that approach is followed, paragraphs 2 and 3 of the proposed article 5 bis should be consolidated with the revised article 9 under the title “Communications”, or immediately following article 5 as article 5 bis.

13. The Working Group at its ninth session requested that the term “common” should be added to the term “general” as a qualifier to the means of communication in use among suppliers or contractors, so as to ensure that the means of communication should be sufficiently available.¹²

14. As regards the third paragraph of proposed article 5 bis, the Working Group has agreed to consider whether the procuring entity, rather than the enacting State by means of regulations, should address the issues of authenticity, integrity, accessibility and confidentiality of communications set out in that paragraph, and whether either the procuring entity or the enacting State should be given the option or should be required to do so. The bracketed text in the proposed text reflects that outstanding issue.¹³

15. As regards the revised article 9, the Working Group may recall that the text follows paragraphs 1 and 2 of the current text of article 9, with the addition of the phrase “and is accessible so as to be usable for subsequent reference” at the end of each paragraph. That phrase is included so as the requirement that communications should contain a record of their content endures over time, and so as to conform to articles 6 and 10 of the UNCITRAL Model Law on Electronic Commerce, which

¹⁰ The Working Group may also consider that a formulation of this type would enable the introduction of a functional equivalence provision governing electronic signatures in article 5 bis. See, further, paragraph 26 of this note.

¹¹ A/CN.9/595, para. 41.

¹² See draft text following paragraph 40 of A/CN.9/595. In this regard, the Working Group recalled that the term “generally” involves the notion of universality, and that the term “commonly” means that the technology is widely available, but perhaps not to all or nearly all users, as set out in A/CN.9/WG.I/WP.42, paragraph 18 (a).

¹³ A/CN.9/595, para. 43.

address the notion of “writing” and the retention of electronic communications, respectively.¹⁴

16. The Working Group has deferred its final consideration as to whether the current text of article 9 (3)¹⁵ should be retained in some form, so as to establish a general principle of non-discrimination in the use of communications, or whether the proposed article 5 bis, paragraph 1, provides sufficient safeguards. In this regard, the Working Group has observed that the notion of non-discrimination exists in addition to the current article 9 (3), in some other provisions of the current text of the Model Law, such as in positive terms of fair and equitable treatment of suppliers and contractors in the preamble paragraph (d). The Working Group has expressed the view that the current article 9 (3) could be superfluous in the light of the proposed new provisions of article 5 bis and the revised article 9 for communications generally, but that in the context of the possible mandatory submission of tenders electronically, a non-discrimination provision may still be required. The Working Group has also deferred its consideration of where in the text any general non-discrimination provision should be located.¹⁶

17. The Working Group at its ninth session confirmed that the selection of means and form of communications, be it paper-based or electronic means, or both, were decisions for the procuring entity. It was decided that the text of the Model Law should expressly allow more than one means or form of communications to be selected by the procuring entity.¹⁷ The text of draft article 5 bis and the revised article 9 above allow for more than one means to be selected.

¹⁴ For the text of the Model Law on Electronic Commerce, see *Official Records of the General Assembly, Fifty-first session, Supplement No. 17 (A/51/17)*, annex I (also published in the UNCITRAL Yearbook, vol. XXVII:1996 (United Nations publication, Sales No. E.98.V.7), part three, annex I). The Model Law and its accompanying Guide to Enactment have been published as United Nations publication, Sales No. E.99.V.4, and are available in electronic form at the UNCITRAL website: www.uncitral.org/uncitral/en/uncitral_texts/electronic_commerce/1996Model.html. The explanatory note to article 6 (see para. 50 of the Guide to Enactment of the UNCITRAL Model Law on Electronic Commerce) provides that “article 6 focuses upon the basic notion of the information being reproduced and read. That notion is expressed in article 6 in terms that were found to provide an objective criterion, namely that the information in a data message must be accessible so as to be usable for subsequent reference. The use of the word “accessible” is meant to imply that information in the form of computer data should be readable and interpretable, and that the software that might be necessary to render such information readable should be retained. The word “usable” is not intended to cover only human use but also computer processing. As to the notion of “subsequent reference”, it was preferred to such notions as “durability” or “non-alterability”, which would have established too harsh standards, and to such notions as “readability” or “intelligibility”, which might constitute too subjective criteria.”

¹⁵ The current text reads: “The procuring entity shall not discriminate against or among suppliers or contractors on the basis of the form in which they transmit or receive documents, notifications, decisions or other communications.” The Guide to Enactment text addressing this provision states that: “In view in particular of the as yet uneven availability and use of non-traditional means of communication such as EDI, paragraph (3) has been included as a safeguard against discrimination against or among suppliers and contractors on the basis of the form of communication that they use.”

¹⁶ A/CN.9/595, paras. 26 to 36 and 60.

¹⁷ A/CN.9/595, paras. 59 and 60.

2. Guide to Enactment text

18. The Working Group has requested that the Guide to Enactment text addressing the above provisions should:

(a) Contain an updated illustrative list of examples of “electronic, optical or comparable means” of communication;

(b) Explain that the provisions in draft article 5 bis (1), although deviating from the similar provisions in other UNCITRAL texts, are to the same effect as other UNCITRAL texts, including the United Nations Convention on Electronic Contracting;¹⁸

(c) State that the provisions of the proposed article 5 bis (1) are intended to be interpreted broadly so as to encompass any provisions in the Model Law implying physical presence or a paper-based environment;

(d) Contain some discussions on the role and place of electronic procurement in the context of electronic government;

(e) Set out situations in which the use of electronic means under the Model Law would be required and provide more guidance on the impact of varying levels of use of electronic commerce in enacting States;

(f) Expand on the notion of general availability of means of communication (from the perspective that procuring entities should take account of the level of penetration of electronic communications and technologies in the relevant market when making their selection of the means of communication for the procurement concerned as well as costs of such means);

(g) Highlight that recourse to which means of communication was objectively justifiable would vary from jurisdiction to jurisdiction and from procurement to procurement;

(h) Address technical issues such as interoperability and compatibility;

(i) Advise that stricter requirements might apply in certain circumstances (for example, under international treaties or imposed by multilateral development banks);

(j) Should stress that the use of mixed systems would be most appropriate during the transitional period after the introduction of electronic means of communications in procurement, and that the use of only electronic means would be promoted where appropriate in the longer term;

(k) Address the notion of discrimination and explain with examples how it might arise in practice;

(l) Clarify that the means of communication chosen should not pose an obstacle to the procurement process, as otherwise they will jeopardize the promotion of the Model Law’s objectives of maximizing economy and efficiency in procurement, as stated in its preamble paragraph (a); and

(m) Discuss in detail the issues raised by the authenticity, integrity, accessibility and confidentiality of communications.¹⁹

¹⁸ General Assembly resolution 60/21.

¹⁹ A/CN.9/595, paras. 11, 12, 14, 18 to 22, 30, 34, 38, 43 and 61.

19. The Working Group will be provided with draft Guide to Enactment text to reflect these points and its decisions on the issues set out in paragraphs 6 to 14 and 16 above for consideration at a future session.

B. Provisions related to legal value of procurement contracts concluded electronically and requirement to maintain a record of the procurement proceedings

20. The Working Group may recall that its drafting suggestions to the Guide to Enactment provisions before it (made at the ninth session)²⁰ related to legal value of procurement contracts concluded electronically and requirement to maintain a record of the procurement proceedings. The Working Group will be provided with draft Guide text to reflect those suggestions for consideration at a future session.

C. Drafting materials addressing the electronic submission of tenders, proposals and quotations

1. Proposed draft text for the revised Model Law

21. The Working Group decided to continue its deliberations regarding the electronic submission of tenders based on the following draft text for article 30 (5)(a):

“A tender shall be submitted [by the means specified in the solicitation documents, and shall be submitted] in writing, signed and in a sealed envelope”.²¹

Commentary

22. The Working Group noted at its ninth session that the proposed text addressed both the “means” and “form” of submission of tenders. Although the “means” of submission are in fact addressed in proposed article 5 bis (because tenders are “communications” within the ambit of that proposed article), the Working Group expressed the view that an express reference in article 30 (5)(a) to those means may be helpful, so as to make it clear that the words “in writing, signed and in a sealed envelope” address the “form” of tenders and not the “means” by which they are to be submitted.²²

23. As regards the “form” in which the tenders are to be submitted, the Working Group has noted that the form requirements that tenders should be submitted “in writing, signed and in a sealed envelope” are critical safeguards for the submission of tenders. Consequently, and despite the context of a paper-based environment that such a phrase implies, the Working Group decided that technologically neutral equivalents should not replace the terms “in writing, signed and in a sealed envelope”.²³

²⁰ A/CN.9/595, paras. 47-51.

²¹ A/CN.9/595, para. 63.

²² A/CN.9/595, para. 62.

²³ A/CN.9/595, para. 54.

24. In this regard, the Working Group also decided to remove an option contained in the current article 30 (5)(b) for the procuring entity to relax the form requirements. Article 30 (5)(b) in material part, which the Working Group has decided to delete, stated that tenders could be submitted “in any other form specified in the solicitation documents that provides a record of the content of the tender and at least a similar degree of authenticity, security and confidentiality”. (The reference to “other form” in this paragraph is to any form other than “in writing, signed and in a sealed envelope”.)

25. Although proposed article 5 bis makes it clear that the terms “in writing” and “in a sealed envelope” are intended to address both traditional, paper-based notions and their electronic counterparts, it does not address any requirements for signatures. Article 7 of the UNCITRAL Model Law on Electronic Commerce provides that requirements for signatures are satisfied by a reliable “method used to identify” a person and “to indicate that person’s approval” of the information contained in the electronic communication. Issues arising in the use of electronic and digital signatures are discussed in detail in the UNCITRAL Model Law on Electronic Signatures, whose text is derived directly from the UNCITRAL Model Law on Electronic Commerce.²⁴

26. The Working Group may recall that the use of electronic signatures varies widely from jurisdiction to jurisdiction, and in some cases electronic signatures are independently certified (in which case they are known as “digital signatures”).²⁵ However, commentators have noted that requiring the use of electronic and digital signatures may involve unnecessary technical burdens and operate as a disincentive to the take-up of electronic procurement. As the Working Group noted at its ninth session, some jurisdictions have sought to avoid the technical consequences of requiring an electronic document to be signed by referring to such documents simply as being capable of authentication.²⁶ The Working Group may wish to consider whether the Model Law should provide expressly for the functional equivalence of traditional signatures and their electronic counterparts, and if so the location of such a provision. The Working Group may recall that there is a signature requirement in the Model Law only as regards tenders and procurement contracts, and therefore a provision addressing signature could be located either in proposed article 5 bis, or in the articles governing the submission of tenders, and procurement contracts. Alternatively, the Working Group may consider that the functional equivalence of traditional and electronic signatures could be addressed in the Guide to Enactment.

²⁴ For the text of the Model Law on Electronic Signatures, see *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17 (A/56/17)*, annex II. The Model Law and its accompanying Guide to Enactment have been published as United Nations publication, Sales No. E.02.V.8, and are available in electronic form at the UNCITRAL website (www.uncitral.org/uncitral/en/uncitral_texts/electronic_commerce/2001Model_signatures.html).

²⁵ Digital signatures involve encryption, sometimes using public key infrastructure, and require significant investment to set up. The private sector operates electronic commerce without digital signatures. For further detail, see the Final Report of the Conference on Electronic Government Procurement (E-GP) held by the multilateral development banks, Manila, 26-28 October 2004, available at www.mdb-egp.org/data/international.htm.

²⁶ A/CN.9/595, para. 56.

2. Guide to Enactment text

27. The Working Group has noted that the Guide to Enactment text should address the following issues regarding the electronic submission of tenders: (i) that the reference to “means” of submission of tenders implies the use of a purely electronic, purely paper-based or mixed system (in which suppliers may submit tenders in paper-based format or electronically, or in which suppliers may submit some parts of their tenders, such as samples, technical drawings or legal certificates, in paper-based format); (ii) the desirability of promoting electronic submission in the longer term, and the use of mixed systems as an interim measure; (iii) the equivalent safeguards to “in writing, signature and a sealed envelope”; (iv) the use of technologies such as virus-scanning software to mitigate the risk of tenders being deleted as a result of virus (so as to enhance confidence and transparency in the electronic environment); and (v) whether procuring entities should allow duplicate tenders in a different format as a safeguard against system failure and the safeguards that should also be applied to guard against abuse.²⁷

28. The Working Group will be provided with draft Guide to Enactment text to reflect these points and its decisions on the issue set out in paragraph 26 above, for consideration at a future session.

D. Electronic opening of tenders

29. The Working Group preliminarily agreed on the wording of the proposed text for article 33 (4) of the Model Law, which reads:

“Article 33. Opening of tenders

(4) Where the procurement proceedings were conducted electronically in accordance with [insert provisions dealing with electronic communications, reverse auctions and other fully automated procedures], suppliers or contractors shall be deemed to have been permitted to be present at the opening of the tenders in accordance with the requirements of article 33 (2) if they are capable of following the opening of the tenders contemporaneously through the electronic, optical or comparable means of communication used by the procuring entity.”²⁸

E. Electronic publication of procurement-related information

1. Proposed draft text for the revised Model Law

30. At its ninth session, the Working Group preliminarily agreed to retain the current text of article 5 of the Model Law without change and reflect the proposed additional points²⁹ in the Guide.³⁰

31. The Working Group is to decide at its tenth session whether the Secretariat, in preparing the revised article 5, should split the article into two paragraphs as was suggested at the Working Group’s ninth session: the first paragraph dealing with

²⁷ A/CN.9/595, paras. 57-59.

²⁸ A/CN.9/595, paras. 64 and 65, and A/CN.9/WG.I/WP.42, paras. 35-37.

²⁹ A/CN.9/WG.I/WP.42, para. 38.

³⁰ A/CN.9/595, paras. 66-74.

legal texts that had to be published (law, procurement regulations and directives of general application), with respect to which the requirements to “systematically maintain” would remain; and the second paragraph dealing with significant important judicial decisions and administrative rulings, with respect to which the requirement to “systematically maintain” would be replaced with the requirement “to update on a regular basis if need be”. That suggestion was met with some support in the Working Group; however, no definitive decision was taken.³¹

32. The Working Group is expected to continue considering at its tenth session desirability of including in the Model Law provisions on the publication of information on forthcoming procurement opportunities, either as a part of article 5 or a separate article, in the light of deliberations at its ninth session.³² The suggestion was made at that session that in the consideration of this issue, the Working Group should assess whether the practice of publication of this type of information would be consistent with objectives of the Model Law, and if so whether there would be the need for a specific enabling provision in the Model Law to promote the practice.³³

33. Also at that session, some changes were suggested to the proposed wording on the publication of information on forthcoming procurement opportunities, and the text as amended in the light of those changes reads as follows:

“As promptly as possible after beginning of a fiscal year procuring entities [shall/may] publish information of the expected procurement opportunities for the following [the enacting State specifies the period], and this information shall not constitute the solicitation documents or parts thereof.”³⁴

34. The Working Group is to consider whether the text, if it is included in the Model Law, should be enabling or prescriptive (“shall publish” or “may publish”).³⁵ The Working Group may wish to consider whether an alternative formulation, such as noting that the procurement regulations may address the publication of additional procurement-related information, with the Guide to Enactment providing appropriate guidance as to the extent of publication to be required, might provide additional flexibility in the matter.

2. Guide to Enactment text

35. The Working Group has requested that the Guide to Enactment should address desirability of making available to public and of updating as need be the following information:

(a) Judicial decisions with precedent value and of general application on the application of procurement law;³⁶

(b) Additional information regarding internal controls, guidance or other information;

³¹ A/CN.9/595, para. 71.

³² A/CN.9/595, paras. 75-78.

³³ A/CN.9/595, para. 78.

³⁴ A/CN.9/595, para. 76.

³⁵ A/CN.9/595, paras. 76 and 77.

³⁶ A/CN.9/595, paras. 68 and 74.

(c) All other documents and information that the Model Law requires to be published with specific references thereto;³⁷ and

(d) Information on forthcoming procurement opportunities.³⁸

36. The Guide will also address practical difficulties of making legal texts available and accessible, media and manner of publication, and the notion of “systematic maintenance” referred to in the current article 5.³⁹

37. The Working Group has also requested making minor amendments to the proposed text for the Guide to Enactment before it at its ninth session.⁴⁰ The Working Group will be provided with the revised draft Guide to Enactment text, reflecting those suggestions and suggestions in paragraphs 35 and 36 above as well as the Working Group’s decisions on the outstanding issues set out in paragraphs 31, 32 and 34 above, for consideration at a future session.

³⁷ A/CN.9/595, para. 74.

³⁸ A/CN.9/595, paras. 76-78.

³⁹ A/CN.9/595, paras. 69, 70 and 72.

⁴⁰ A/CN.9/595, para. 79.

**C. Note by the Secretariat on possible revisions to the UNCITRAL Model Law
on Procurement of Goods, Construction and Services — drafting materials
addressing the use of electronic reverse auctions in public procurement,
submitted to the Working Group on Procurement at its tenth session
(A/CN.9/WG.I/WP.48) [Original: English]**

C. Procedures in the auction phase, and further revisions to the text of the Model Law and Guide to Enactment required to enable the conduct of electronic reverse auctions	28

I. Introduction

1. The background to the current work of Working Group I (Procurement) on the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services (the “Model Law”) (A/49/17 and Corr.1, annex I) is set out in paragraphs 5 to 53 of document A/CN.9/WG.I/WP.46, which is before the Working Group at its tenth session. The main task of the Working Group is to update and revise the Model Law, so as to take account of recent developments, including the use of electronic communications and technologies, in public procurement.

2. Such use, including the use of electronic reverse auctions (ERAs), was included in the topics before the Working Group at its sixth to ninth sessions.¹ At its ninth session, the Working Group requested the Secretariat to revise the

¹ See A/CN.9/WG.I/WP.35, A/CN.9/WG.I/WP.40, A/CN.9/WG.I/WP.43 and their addenda. For other related topics, see A/CN.9/WG.I/WP.47.

drafting materials that it had considered at the session on this topic.² This note has been prepared pursuant to that request, and sets out the drafting materials revised to take account of the Working Group's deliberations at its ninth session.

II. Drafting materials addressing the use of electronic reverse auctions in public procurement

A. Conditions for use of electronic reverse auctions

1. Proposed draft text for the revised Model Law

3. The Working Group has decided to continue its deliberations on the basis of the following draft article for the Model Law:³

“Article [36 bis]. Conditions for use of electronic reverse auctions

“A procuring entity may engage in procurement by means of an electronic reverse auction in accordance with article[s ...] in the following circumstances:

(a) Where it is feasible to formulate detailed and precise specifications for the goods, construction or services;

(b) Where there is a competitive market of suppliers or contractors that are anticipated to be qualified to participate in the electronic reverse auction such that effective competition is ensured;

(c) Where the procurement concerns:

(i) Commonly used goods[, which are generally available on the market]; or

(ii) Commonly used construction or services, [which are generally available on the market and] provided that the construction or services are of a simple nature; and

[(d) Where the price is the only criterion to be used in determining the successful tender;

or

(d) Where the price and [only/any] other criteria that can be expressed in figures or transformed into monetary units and can be [evaluated automatically/evaluated in automatic processes] are to be used in determining the successful tender.]”

Commentary — aims and location of the provisions

4. The aim of the above provisions is to establish the essential legal framework for operation of ERAs, to reflect both general procurement principles and those specific to the operation of such auctions. However, the Working Group has also noted that the relative novelty of ERAs requires that the text be as broad as possible

² A/CN.9/595, paras. 87-111.

³ A/CN.9/595, para. 95. Minor changes have also been made to the draft before the Working Group at its ninth session so as to conform the text with the Model Law's style.

to allow for evolution of the practice.⁴ There was agreement in the Working Group that all provisions in the proposed article 36 bis should be taken as a package, so as to preserve the effect of all safeguards contained therein.⁵

5. As regards location, the Working Group has provisionally decided to include the article as a new section IV entitled “Electronic reverse auctions” within chapter III of the Model Law (Tendering proceedings), while not excluding the possibility of using ERAs as a stand-alone procurement method or as a phase in multi-stage framework agreements.⁶ As chapter III addresses the procedures to be followed in tendering proceedings, but not the conditions for use of particular types of tendering (such as two-stage tendering), the Working Group may wish to consider whether an alternative location for provisions regulating ERAs would be more consistent with the structure of the current Model Law. In the case of two-stage tendering, for example, the conditions for use are set out in article 19 of the Model Law (which falls within chapter II), and the procedures to be followed in article 46 (which falls within chapter V). The Working Group may also wish to recall that the first paragraph of article 46 states that “[t]he provisions of chapter III of this Law shall apply to two-stage tendering proceedings except to the extent those provisions are derogated from in this article.” If this formulation were followed for ERAs, the above article would be included within chapter II, and the procedural provisions discussed in sections II.C and II.D of A/CN.9/WG.I/WP.43 within chapter V.

6. The Working Group may also wish to consider that this approach could ease the use of ERA procedures for a stand-alone procurement method (akin to the request for quotations procedure, with which it could also be combined in circumstances where a fully open procedure is not required) or for a phase in multi-stage framework agreements.

7. On the other hand, and in the light of the striving for consistency in the Model Law, the Working Group may alternatively decide to incorporate those parts of chapters II and V that address forms of tendering proceedings within chapter III, including ERAs.

Commentary — the text

8. As regards paragraph (a) of the proposed text, the Working Group has noted that its provisions may be redundant in the light of article 27 (d) of the Model Law,⁷ and has agreed further to consider whether the paragraph should be included. In this regard, the Working Group may consider that the requirement for “detailed and precise specifications” is one of the overriding criteria that determine whether an ERA is a suitable method of procurement in any given case, and therefore the paragraph should be included in this article even if not strictly necessary.

⁴ A/CN.9/595, para. 89.

⁵ A/CN.9/595, para. 96.

⁶ A/CN.9/595, paras. 95 and 103.

⁷ See, further, A/CN.9/595, para. 99. Article 27(d) requires the solicitation documents to contain at least the following information regarding specifications: “The nature and required technical and quality characteristics, in conformity with article 16, of the goods, construction or services to be procured, including, but not limited to, technical specifications, plans, drawings and designs as appropriate; the quantity of the goods; any incidental services to be performed; the location where the construction is to be effected or the services are to be provided; and the desired or required time, if any, when the goods are to be delivered, the construction is to be effected or the services are to be provided.”

9. As regards the second option for paragraph (d), the Working Group has agreed to reconsider whether the auction of non-price criteria should be recognized in the text of the Model Law, or whether reference to non-price criteria should be made in the Guide to Enactment alone.⁸ In this regard, the Working Group may wish to consider whether the Guide can introduce variations to the text of the Model Law, rather than provide detailed guidance as to the application of the Model Law's provisions.

10. The precise drafting of the following items in the text remains outstanding:⁹

(a) In paragraph (c), whether to retain the reference to "generally available on the market";

(b) In the second option for paragraph (d), whether to insert the word "only" or "any" before the phrase "other criteria"; and

(c) Also in the second option for paragraph (d), whether to amend the phrase "evaluated automatically", such as by replacing it with the phrase "evaluated in automatic processes".

2. Guide to Enactment text

11. The Working Group has noted that the following criteria are critical for the successful use of ERAs, and should receive detailed commentary in the Guide to Enactment text:

(a) That clear specifications must be established and made known to suppliers at the outset of procurement;¹⁰

(b) That ERAs are suitable for commonly used goods and services;¹¹

(c) The importance of a sufficient number of participating suppliers to ensure competition;¹²

(d) Preservation of the anonymity of bidders (also in the broader context of competition and fair dealing);¹³

(e) That consolidated purchases are to be encouraged to amortize costs;¹⁴

(f) The critical need to allow price and, if at all, only limited non-price criteria that fulfil the conditions of the second option for paragraph (d) of the proposed article 36 bis (such as delivery times and technical considerations) to be auctioned, so as to avoid the introduction of subjective elements when quantifying such criteria, and to guard against the possibility of abuse;¹⁵

(g) That ERAs are to be a single and final round before a winner is selected, also so as to guard against abuse;¹⁶

⁸ A/CN.9/595, para. 99.

⁹ A/CN.9/595, para. 98.

¹⁰ A/CN.9/595, para. 89.

¹¹ A/CN.9/595, paras. 102 and 103.

¹² A/CN.9/595, para. 101.

¹³ A/CN.9/595, paras. 89 and 101.

¹⁴ A/CN.9/595, para. 90.

¹⁵ A/CN.9/595, para. 101.

¹⁶ A/CN.9/595, para. 101.

(h) That the winning price is to figure in the contract, including in the case of framework agreements;¹⁷ and

(i) That the timing of the opening and criteria governing the closing of ERAs are to be clearly specified in advance.¹⁸

12. In addition, the Working Group has expressed the view that the Guide should explain that construction or services would not normally fulfil the conditions for use of ERAs, unless they were of a highly simple nature.¹⁹ It was also understood in the Working Group that paragraph 35 of A/CN.9/WG.I/WP.43, in particular its provisions on commodities (fuel, standard information technology equipment, office supplies and primary building products), and items with no or limited impact from post-acquisition costs and without services or added benefits after the initial contract is completed, should remain as the text for the Guide accompanying the proposed article 36 bis.

13. Although the proposed article envisages criteria other than price to be subject to the auction in the second option for paragraph (d), the understanding in the Working Group was that the Guide should alert to potential dangers of using such other criteria.²⁰ In this regard, the Working Group may consider that the Guide should encourage enacting States that have not yet used the technique to introduce ERAs in a staged fashion: that is, to allow price only to be auctioned initially, and subsequently to allow non-price criteria to be introduced as experience in the technique is gained and practices evolve.

14. The Guide will also clarify that the term “qualified” used in subparagraph (b) does not mean that pre-qualification will necessarily be a feature of ERAs.²¹

15. In addition, the Working Group has suggested that the Guide should note that the use of a common procurement vocabulary to identify goods, construction or services by codes or by reference to general market-defined standards would be of assistance. Developing lists with goods, construction or services that were not suitable for ERAs or a list that would describe characteristics of goods, construction or services, which if present would make such goods, construction or services suitable for ERAs could also be discussed in the Guide (as opposed to developing a positive list that would be difficult to update).²²

16. The Working Group has also noted that establishing the lowest price below which bids would not be accepted could be an important safeguard for proper management of ERAs and to guard against abnormally low tenders.²³

17. The Working Group will be provided with draft Guide text to reflect these points and the decisions on outstanding issues for its consideration at a future session.

¹⁷ A/CN.9/595, para. 101.

¹⁸ A/CN.9/595, para. 101.

¹⁹ A/CN.9/595, para. 100.

²⁰ A/CN.9/595, para. 100.

²¹ A/CN.9/595, para. 100.

²² A/CN.9/595, para. 102.

²³ A/CN.9/595, para. 91.

B. Procedures in the pre-auction period

18. The Working Group has requested the Secretariat to redraft proposed article 47 bis²⁴ to confer sufficient flexibility as regards distinct types of ERAs and the withdrawal of suppliers from the ERA before its closure, provided that sufficient safeguards were in place against fraud and abuse.²⁵ The revised draft for the consideration by the Working Group follows:

“Article [47 bis]. Conduct of electronic reverse auctions in the pre-auction period

(1) [The provisions of chapter III of this Law shall apply to procurement by means of electronic reverse auctions except to the extent that those provisions are derogated from in this article.]

(2) The invitation to tender shall set out whether suppliers or contractors are required to submit initial tenders that are complete in all respects prior to the auction.

(3) If the submission of initial tenders is required, the procuring entity shall carry out an initial examination of the tenders to determine their responsiveness in accordance with article 34 (3), [the qualification of suppliers or contractors,] [and to assess all elements of tenders that are not to be presented in the auction in accordance with the award criteria set].

(4) The procuring entity shall send an invitation to participate in the auction to all suppliers or contractors except for those whose tenders have been rejected under paragraph (3).

(5) The invitation to participate in the auction shall set out the manner and deadline by which suppliers and contractors shall register to participate in the auction.

(6) The procuring entity shall ensure that the number of suppliers or contractors invited to participate in the auction is sufficient to secure effective competition. If the number of suppliers or contractors at any time before the closure of the auction, is in the opinion of the procuring entity insufficient to ensure effective competition, the procuring entity [may/shall] withdraw the electronic reverse auction.

(7) Unless already provided to suppliers or contractors, the invitation to participate in the auction shall include all information necessary to enable the supplier or contractor to participate in the auction.”

Commentary

19. The Working Group has noted that there are two ways in which provision may be made for ERAs — in the first, an ordinary tendering proceeding would be conducted, including an assessment of the responsiveness of the initial tender and the qualifications of the suppliers, with all the safeguards of the sealed envelope system. Thereafter, all qualified suppliers who submitted responsive tenders would be invited to participate in the ERA that would determine the winner. In the second,

²⁴ See A/CN.9/WG.I/WP.43, text following para. 39.

²⁵ A/CN.9/595, para. 108.

there would be no initial assessment, and no control of the responsiveness of the tender or qualifications of the supplier until after the auction had closed.²⁶

20. The Working Group has requested that the text be drafted in a manner that is sufficiently wide for either type of ERAs to be conducted provided that sufficient safeguards are in place to protect against fraud and abuse.²⁷ The above draft follows that request. The paragraphs of the draft text have been renumbered to allow for one procedure for either system, with an additional step in new paragraph 3 if initial tenders are required.

21. Paragraph 1 of the draft text will not be required if the text is located together with draft article 36 bis above within chapter III of the Model Law, as was suggested at the Working Group's ninth session.²⁸

22. Paragraph 2 of the draft text makes it clear that either of the systems for conducting ERAs can be used, with the safeguard that the system is specified at the outset. The provisions of article 27 (a) of the current text of the Model Law, which require the solicitation documents to provide instructions for preparing tenders, will then require the procuring entity to set out appropriate detail to reflect the relevant circumstances. Appropriate guidance on this aspect would be set out in the Guide to Enactment text.

23. The words "the qualification of suppliers or contractors" can be included in paragraph 3 of the draft text if the Working Group considers that attention should be drawn to the fact that the qualifications of suppliers should be examined before the invitations to participate are issued if the second system is used, so as to ensure sufficient number of qualified participants.

24. In the light of the proposed article 36 bis (d) that does not envisage ERAs where not all elements of tenders are presented to and assessed in the auction, the Working Group may wish to consider whether the wording "[and may assess all elements of tenders that are not to be presented in the auction in accordance with the award criteria set]" should be retained so as to allow the ranking of tenders in more complex electronic reverse auctions using non-price criteria. Alternatively, any appropriate guidance in the Guide to Enactment on why this type of ERAs should not be envisaged may be formulated.

25. The Working Group has expressed concerns that allowing suppliers to withdraw from the ERA may endanger the effectiveness of the auction (and also may mean that the use of the technique ceases to be cost-effective). The withdrawal of suppliers may jeopardize effective competition, and the revisions to former paragraph 3 (d) of the proposed article 47 bis (now paragraph 6 above) reflect the Working Group's reflections at its ninth session on the question. The Working Group has deferred to a future session its consideration of whether a procuring entity should be obliged or enabled to withdraw the auction if competition is insufficient, and as to when and how suppliers might withdraw from the auction process before its closure, guidance on which point will be provided in the text of the Guide to Enactment.²⁹

²⁶ A/CN.9/595, paras. 106 and 107.

²⁷ A/CN.9/595, para. 108.

²⁸ A/CN.9/595, para. 95.

²⁹ A/CN.9/595, para. 111.

26. Paragraph 7 of the text would be supplemented by commentary in the Guide as to the information required (such as that described in subparagraphs 4 (e)(ii)-(v) and (vii)-(xii) following paragraph 20 of A/CN.9/WG.I/WP.40).

27. The Working Group has also requested that the Guide should explain that the provisions in the Model Law were intended to confer sufficient flexibility to allow ERAs to be conducted in either of the ways described above, depending on the circumstances prevailing in the country concerned, and should address the safeguards that should be in place to allow either systems to operate consistently with the objectives and main procedures of the Model Law, including any differences between procedures at ERAs and those main procedures.³⁰ The Working Group will be provided with draft text to reflect these points and the decisions on outstanding issues for its consideration at a future session.

C. Procedures in the auction phase, and further revisions to the text of the Model Law and Guide to Enactment required to enable the conduct of electronic reverse auctions

28. The Working Group has deferred to a future session its consideration of the matters discussed in sections II.D-G of A/CN.9/WG.I/WP.43 and in A/CN.9/WG.I/WP.43/Add.1.

³⁰ A/CN.9/595, para. 109.

General comments	101
E. Simplification and standardization of the Model Law	102

I. Introduction

1. At its thirty-seventh session, in 2004, the United Nations Commission on International Trade Law (the “Commission”) entrusted the drafting of proposals for the revision of the 1994 UNCITRAL Model Law on Procurement of Goods, Construction and Services (the “Model Law”, A/49/17 and Corr.1, annex I) to its Working Group I (Procurement). The Working Group was given a flexible mandate to identify the issues to be addressed in its considerations, including providing for new practices in public procurement, in particular those that resulted from the use of electronic communications (A/59/17, para. 82). The Working Group began its work on the elaboration of proposals for the revision of the Model Law at its sixth session (Vienna, 30 August-3 September 2004) (A/CN.9/568). At that session, it decided to proceed at its future sessions with the in-depth consideration of topics in documents A/CN.9/WG.I/WP.31 and 32 in sequence (A/CN.9/568, para. 10).

2. At its seventh to tenth sessions (New York, 4-8 April 2005, Vienna, 7-11 November 2005, New York, 24-28 April 2006, and Vienna, 25-29 September 2006, respectively) (A/CN.9/575, A/CN.9/590, A/CN.9/595 and A/CN.9/615), the Working Group considered the topics related to the use of electronic communications and technologies in the procurement process: (a) the use of electronic means of communication in the procurement process, including exchange of communications by electronic means, the electronic submission of tenders, opening of tenders, holding meetings and storing information, as well as controls over their use; (b) aspects of the publication of procurement-related information, including possibly expanding the current scope of article 5 and referring to the publication of forthcoming procurement opportunities; and (c) electronic reverse auctions (ERAs), including whether they should be treated as an optional phase in other procurement methods or a stand-alone method, criteria for their use, types of procurement to be covered, and their procedural aspects. At its tenth session, the Working Group came to preliminary agreement on the draft revisions to the Model Law and the Guide to Enactment to the Model Law (the “Guide”) that would be necessary to accommodate the use of electronic communications and technologies (including ERAs) in the Model Law. At that session, the Working Group decided that at its eleventh session it would proceed with further consideration of those draft revisions (A/CN.9/615, para. 11).

3. At its seventh, eighth and tenth sessions, the Working Group in addition considered the issues of abnormally low tenders (ALTs), including their early identification in the procurement process and the prevention of negative consequences of such tenders. At its tenth session, the Working Group requested the Secretariat to propose the appropriate location for the provisions on ALTs, taking into account that the issue should not be limited to tendering proceedings, and that risks of ALTs should be examined and addressed by the procuring entity at any stage of the procurement, including through qualification of suppliers (A/CN.9/615, para. 75).

4. At its tenth session, the Working Group also took up the topic of framework agreements and requested the Secretariat to prepare drafting materials for the Model Law on the use of framework agreements (A/CN.9/615, para. 11). At the same session, the Working Group considered the recommendation by the Commission at its thirty-ninth session that the Working Group, in updating the Model Law and the Guide, should take into account issues of conflict of interest and should consider whether any specific provisions addressing those issues would be warranted in the

Model Law (A/61/17, para. 192). The Working Group agreed to add the issue of conflicts of interest to the list of topics to be considered in the revision of the Model Law and the Guide (A/CN.9/615, para. 11).

5. At its thirty-eighth and thirty-ninth sessions, in 2005 and 2006, respectively, the Commission commended the Working Group for the progress made in its work and reaffirmed its support for the review being undertaken and for the inclusion of novel procurement practices in the Model Law (A/60/17, para. 172, and A/61/17, para. 191).

II. Organization of the session

6. The Working Group, which was composed of all States members of the Commission, held its eleventh session in New York, from 21 to 25 May 2007. The session was attended by representatives of the following States members of the Working Group: Canada, Chile, China, Colombia, Czech Republic, France, Germany, Guatemala, Iran (Islamic Republic of), Kenya, Lithuania, Mexico, Nigeria, Pakistan, Poland, Republic of Korea, Russian Federation, Singapore, Spain, Sweden, Thailand, Turkey, United States of America, Venezuela (Bolivarian Republic of) and Zimbabwe.

7. The session was attended by observers from the following States: the Democratic Republic of the Congo, Holy See, Honduras, Indonesia and Lao People's Democratic Republic.

8. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: United Nations Office of Legal Affairs and the World Bank;

(b) *Intergovernmental organizations*: Asian-African Legal Consultative Organization (AALCO), European Commission, European Space Agency (ESA), International Development Law Organization (IDLO) and the World Trade Organization (WTO);

(c) *International non-governmental organizations invited by the Working Group*: International Bar Association (IBA), International Law Institute (ILI) and the European Law Students' Association (ELSA).

9. The Working Group elected the following officers:

Chairman: Mr. Tore WIWEN-NILSSON (Sweden)

Rapporteur: Sra. Ligia GONZÁLEZ LOZANO (Mexico)

10. The Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.I/WP.49);

(b) Drafting materials addressing the use of electronic communications in public procurement, publication of procurement-related information, and abnormally low tenders: note by the Secretariat (A/CN.9/WG.I/WP.50);

(c) Drafting materials for the use of electronic reverse auctions in public procurement: note by the Secretariat (A/CN.9/WG.I/WP.51);

(d) Drafting materials for the use of framework agreements and dynamic purchasing systems in public procurement: note by the Secretariat (A/CN.9/WG.I/WP.52 and Add.1); and

(e) Issues arising from the use of suppliers' lists, including drafting materials: note by the Secretariat (A/CN.9/WG.I/WP.45 and Add.1) (the consideration of the note was deferred to a future session at the previous two sessions of the Working Group (see A/CN.9/595, para. 9, and A/CN.9/615, para. 10)).

11. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Consideration of proposals for the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services.
5. Other business.
6. Adoption of the report of the Working Group.

III. Deliberations and decisions

12. At its eleventh session, the Working Group continued its work on the elaboration of proposals for the revision of the Model Law. The Working Group used the notes by the Secretariat referred to in paragraph 10 above (WP.50 and 51) as a basis for its deliberations. The Working Group held a preliminary exchange of views on document A/CN.9/WG.I/WP.52 and decided to consider the document in depth at its next session. It also deferred consideration of documents A/CN.9/WG.I/WP.45 and Add.1 and WP.52/Add.1 to a future session.

13. The Working Group requested the Secretariat to revise drafting materials contained in documents A/CN.9/WG.I/WP.50 and 51, reflecting the deliberations at its eleventh session, for its consideration at the next session. The Working Group noted that any time frame to be agreed for the completion of the project should take into account the time necessary to consider and address issues of conflicts of interest in revisions to the Model Law and the Guide. It was mentioned that the issue of conflicts of interest was an important issue in public procurement and it was recalled that at its tenth session the Working Group agreed to consider this issue as part of its current review of the Model Law and the Guide (A/CN.9/615, paras.11 and 82-85).

IV. Consideration of proposals for the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services

A. Draft provisions addressing the use of electronic communications in public procurement (A/CN.9/WG.I/WP.50, paras. 4-42)

1. Communications in procurement: article [5 bis] (A/CN.9/WG.I/WP.50, paras. 4-21)

14. The Working Group confirmed its understanding that revisions to the Model Law and the Guide should be drafted in technologically neutral terms and that they should not, for example, specify or encourage any particular method of authentication. They should also impose essentially equal requirements on both the paper-based and the electronic procurement environment. Reference in this context was made to some provisions of the Guide, such as paragraph 3 of the commentary to article 30 (regarding the submission of tenders), which specified that, in the use of alternatives to traditional means and forms of submission, at least a similar degree of authenticity, security and confidentiality should be provided.

15. As regards paragraph (1) of the draft article, the Working Group decided to replace the words “described in” with the words “required by”, so as to limit the breadth of the provision. It was also agreed to retain the general reference in the paragraph to chapter VI of the Model Law (addressing Review), but with an explanation in the Guide that the article was intended to cover only information generated and communicated in the course of procurement. This provision would therefore exclude communications generated in court proceedings and in those administrative proceedings that may fall outside the scope of the Model Law.

16. As regards paragraph (2), it was agreed that the reference in the paragraph to article 12 (3) should be deleted, so that notice of the rejection of all tenders, proposals, offers or quotations would have to be communicated to all suppliers or contractors concerned in a form specified in paragraph (1). Noting the interdependence of paragraphs (1) and (2), it was also suggested that paragraph (2) should be expanded to cover any communication of information in a procurement that was generated other than pursuant to a requirement of the Model Law. It was also observed that all language versions of the text should refer to the obligation of a procuring entity to specify the means by which any requirements for writing, or for signature, or for both should be satisfied.

17. As regards paragraph (3), the Working Group agreed to add the words “for the purpose of procurement covered by this Law” after the word “shall”, to avoid the inadvertent application of the article to contract administration. The view was expressed, however, that such an addition might be superfluous in the light of clearly defined scope of the Model Law, which excluded the contract performance phase of procurement. In this regard, it was observed that the text would be reviewed in due course to ensure that there was no ambiguity in the reference to “procurement”.

18. As regards paragraph (4), it was agreed to replace the word “among” with the word “by”.

19. As regards paragraph (5), while agreeing to retain the wording proposed, the Working Group requested the Secretariat, in preparing an accompanying text for the

Guide, to make it clear that the requirement to secure the confidentiality of information would not apply to information that was intended to be made public under the Model Law.

20. With reference to paragraph 17 of the working paper, it was mentioned that the suggestion to use a definition instead of enumerating the list was a good idea. However, it was considered premature to make changes given that the text was not set.

2. Electronic submission of tenders: article 30 (5) (A/CN.9/WG.I/WP.50, paras. 22-29)

21. As regards subparagraph (a)(ii), it was agreed that the requirements should address “authenticity” and “security” in addition to “integrity” and “confidentiality” in the text, with explanation in the Guide of the meaning of each term in the context of that subparagraph.

22. As regards subparagraph (b), in response to the suggestion that the words “on request” should be deleted, concern was raised that the procuring entity might not be in a position in all cases to provide to a supplier or contractor a receipt showing the date and time when the tender was received (for example, when suppliers put tenders in a designated tender box without the procuring entity being aware of the submission). The view prevailed that since the policy objective in revisions of the Model Law and the Guide was to promote best practice, procuring entities should be required to provide to suppliers or contractors a receipt showing the date and time when the tender was received, in particular in the light of the importance of this information in review proceedings. The Working Group agreed therefore to delete the words “on request”.

23. As regards subparagraph (c), it was agreed that the text should include a requirement to preserve “security” in addition to “integrity” and “confidentiality”, with explanation in the Guide of the meaning of each term in the context of that subparagraph. Recognizing that the procuring entity could not generally preserve security, integrity or confidentiality before the receipt of tenders, it was also agreed that the phrase “from the time as determined by the procuring entity, but in no case later than the time of its receipt” should be deleted. Concern was raised that the reference to “authenticity” appeared in subparagraph (a)(ii) but not in subparagraph (c). It was argued that “authenticity” could only be ensured by the supplier and therefore the reference to “authenticity” should only appear in subparagraph (a)(ii).

24. The Working Group was informed that, in practice, in some cases, the precise time of receipt of paper-based tenders was not recorded, and recalling that more onerous requirements should not be placed on electronic submission, the Working Group considered how the time of receipt should be established and recorded. The Working Group noted that UNCITRAL Working Group IV (Electronic Commerce), when it worked on a draft convention on the use of electronic communications in international contracts, had encountered difficulties in defining the time of receipt of electronic communications. Recognizing that the characteristics of the electronic environment made it difficult to establish the time of receipt with precision, the solution adopted in the United Nations Convention on the subject¹ was that the time

¹ “United Nations Convention on the Use of Electronic Communications in International Contracts.” General Assembly resolution 60/21, annex.

of receipt of an electronic communication would be the time when an electronic communication became capable of being retrieved, presumed to be when it reached the addressee's electronic address.² It was agreed, therefore, that an element of discretion could be given to the procuring entity to establish the degree of precision to which the time of receipt of tenders submitted electronically would be recorded, and that the Guide should elaborate on that point.

3. Presence at the opening of tenders: article 33 (2) (A/CN.9/WG.I/WP.50, paras. 30-32)

25. The Working Group agreed with the proposed provisions in paragraph 30 of the working paper. It was also suggested that the Guide should note, as an example of the efforts to harmonize procurement texts, that the proposed text was consistent with similar provisions in other international instruments (such as World Bank procurement guideline 2.45³).

4. Publication of procurement-related information: article 5 and the publication of information on forthcoming procurement opportunities (A/CN.9/WG.I/WP.50, paras. 33-42)

Article 5

26. As regards paragraph (1), the Working Group agreed to replace the word "directives" with the words "other legal texts".

27. As regards paragraph (2), the Working Group agreed to open the paragraph with the phrase "notwithstanding the provisions of paragraph (1) of this article", to clarify that no category of text was intended to be included in both paragraphs, and to replace the proposed wording with the text reading "judicial decisions and administrative rulings with precedent value in connection with procurement covered by this Law shall be made available to the public and updated if need be."

28. The Working Group noted that all language versions of the proposed provisions should be aligned so that to draw a clear distinction between notions of making information accessible to the public (paragraph (1)) and making it available to the public (paragraph (2)).

29. It was agreed that the Guide should explain that, depending on legal traditions of enacting States, interpretative texts of importance to suppliers or contractors might be covered by either paragraph 1 or paragraph 2 of article 5, and the Secretariat was requested to address in this regard whether the phrase "judicial decisions and administrative rulings" would be sufficiently broad to cover all intended decisions and rulings.

Publication of information on forthcoming procurement opportunities

30. As regards proposed provisions on the publication of information on forthcoming procurement opportunities, contained in paragraph 37 of the working paper, the Working Group agreed: (i) to keep the word "promptly" without square brackets; and (ii) to split the provisions in two sentences. The understanding was

² Ibid., article 10 (2).

³ See in the "Guidelines Procurement under IBRD Loans and IDA credits", May 2004, revised 1 October 2006, available as of the date of this report at <http://siteresources.worldbank.org/INTPROCUREMENT/Resources/ProcGuid-10-06-ev1.doc>.

that the Secretariat should propose wording for the second sentence that would provide that publication of information on forthcoming procurement opportunities did not oblige the procuring entity to solicit tenders, proposals, offers, quotations or bids in relation to the publicised procurement opportunities.

31. As regards the location of the provisions, it was suggested that provisions should be placed in the beginning of the Model Law, as paragraph (3) of article 5, and the Secretariat would change the title of article 5 to reflect the addition of a new paragraph.

32. It was agreed that the Guide should note that publication of information on forthcoming procurement opportunities was optional, and in that context enacting States might wish to provide for publication of such information for procurements above a certain value.

B. Draft provisions addressing abnormally low tenders (A/CN.9/WG.I/WP.50, paras. 43-49)

Article 12 bis

33. The suggestion was made that the last sentence in the proposed paragraph 13 of the accompanying Guide text (A/CN.9/WG.I/WP.50, para. 49) should be removed from the Guide text and its substance should be reflected in draft article 12 bis. One proposal was that an amended extract from that sentence reading “the solicitation documents or other documents for solicitation of proposals, offers, quotations or bids shall include an explicit statement that a procuring entity may carry out analyses of potential performance risks and prices submitted” should be placed as a new paragraph (1) (a) of draft article 12 bis. Another proposal was that, in order to align draft article 12 bis (1) with provisions of article 12 (1) of the Model Law, paragraph (1) should be supplemented with a new subparagraph (a) reading: “[provided that] the procuring entity has specified the right to do so in the solicitation documents or in any other documents for the solicitation of proposals, offers or quotations.”

34. It was explained that the proposals were not intended to affect the right of the procuring entity to reject a tender under other articles of the Model Law or disqualify a supplier or contractor under articles 6 and 7 of the Model Law. The intention of the proposal was to require the express reservation of the right to reject an ALT under article 12 bis in the solicitation or equivalent documents.

35. Concerns were expressed about this proposal, in that in many jurisdictions and as a matter of general contract law, the procuring entity’s right to reject a tender or offer, whether on the ground that the price suggested was abnormally low or any other ground, was unconditional and remained so up to the time when the tender or offer was accepted by, and therefore became binding on, the procuring entity.

36. It was also suggested that article 12 (1) of the Model Law, in which the same precondition was imposed regarding the rejection of all tenders, should be reconsidered. For example, the article could provide that, while no obligation should be imposed on the procuring entity to reserve the right to reject all tenders in the solicitation or equivalent documents, the procuring entity should be required to justify its grounds for rejection of all tenders if it did not do so. Objections were raised to the suggestion that the Working Group should consider such revisions to

article 12 of the Model Law, as its approach represented a previously-negotiated and delicate balance between main legal systems, and should not be disturbed.

37. The Working Group decided to defer consideration of article 12 (1) to a later stage and to focus on the provisions of draft article 12 bis.

38. The first suggestion referred to in paragraph 33 above was subsequently amended by replacing the word “shall” with “may” or “should”, so that there was no requirement to reserve the right to reject ALTs in the solicitation documents. It was also proposed to locate the amended wording as a new paragraph (2) of draft article 12 bis. The desirability of including such a permissive provision in the Model Law was however questioned.

39. The Working Group decided to consider both suggestions, the first as amended (see the immediately preceding paragraph) and the second as originally proposed (see paragraph 33 above), at its next session.

40. Another suggestion for the draft article was to add as an opening phrase to paragraph (1) the words similar to the ones found in article 12 (1) “(Subject to approval by ... (the enacting State designates an organ to issue that approval))”. The view prevailed however that no such wording should be included, in particular in the light of the Working Group’s previous decision on that issue at its eighth session and of the reasons for that decision (A/CN.9/590, para. 109 (iii)).

41. The Working Group agreed that subparagraph (a) should be amended to make it clear that requests under that subparagraph were addressed to the supplier or contractor concerned.

Guide to Enactment

42. The Working Group agreed to make the following amendments to the draft text for the Guide that appeared following paragraph 49 of A/CN.9/WG.I/WP.50:

(a) To add the words “and it must substantiate its decision if it decides to reject a tender” at the end of the second sentence in paragraph (4), so as to ensure that the procuring entity’s concerns and reasons for those concerns would be recorded in writing;

(b) That the text in paragraph (8) in square brackets, qualifying the term “realistic”, should be deleted, because the qualification as drafted did not reflect the meaning of the term (whether or not there was a material performance risk). However, the Working Group agreed that some explanation of the term “realistic”, by reference to the constituent elements of the tender that would be evaluated as described in paragraph (7), should be included;

(c) That the last sentence of paragraph (9) should be deleted.

43. Also, as regards paragraph (9), it was noted that, should a supplier or contractor fail to provide the clarifications requested, the concerns of the procuring entity regarding potential performance risk would inevitably persist, giving a reason to the procuring entity to reject an ALT under subparagraph (b). It was noted however that the procuring entity would be obliged in any case to look at other, perhaps circumstantial information. The Working Group did not consider that further additions to the text would be necessary to reflect this point.

44. As regards paragraph (11), it was observed that the draft text at the end of the paragraph envisaged guidance on the operation of review proceedings in the context

of a rejection of an abnormally low tender, but no text was currently included pending a decision of the Working Group as to whether a decision to reject an abnormally low tender would be subject to review.

45. The Working Group therefore considered whether such a decision should indeed be subject to review. It recalled that, at its sixth session, the Working Group had decided on a preliminary basis that the list of exclusions from review contained in article 52 of the current Model Law text should be deleted (one effect being that a decision to reject all tenders under article 12 would then be subject to review). The importance of a consistent approach as regards the decisions within procurement that should be subject to review was also stressed, and thus it was observed that there should be a presumption that all stages of the procurement, including a decision to reject an ALT, should be subject to review.

46. The Working Group heard that many jurisdictions currently subjected any decision to reject an ALT to review, and that in some systems, a request for review could lead to the suspension of the procurement pending the outcome of the review. Noting that, by contrast with a rejection of all tenders under article 12, the rejection of an ALT would not of itself interrupt the procurement, some concern was expressed that suspension in the case of an ALT could unnecessarily interfere in the procurement. Further, it was noted that care should be taken to avoid any review taking the form of a *de novo* consideration as to whether or not the tender was abnormally low.

47. Observing that these issues would arise when considering article 52 and the review process as a whole, the Working Group decided to continue its deliberations in the context of its review of article 52 in due course. Those deliberations would proceed on the basis that there was wide support for the principle that a decision to reject an ALT should be subject to review.

48. As regards paragraph (12), the Working Group noted the educational purpose of the provisions contained therein. The Secretariat was requested to reconsider the paragraph in the light of the distinct issues it addressed, such as assessment of qualifications of suppliers or contractors and evaluation of tenders. It was suggested that appropriate cross-references to the relevant provisions of the Model Law and sections of the Guide might be included.

49. As regards paragraph (13), it was agreed that the last sentence of the paragraph should be removed in the light of the relevant amendments proposed to draft article 12 bis (see paragraphs 33 to 39 above).

C. Draft provisions to enable the use of electronic reverse auctions in public procurement under the Model Law (A/CN.9/WG.I/WP.51)

1. General comments

50. The importance of the Working Group's work on ERAs was highlighted. It was mentioned that in the absence of detailed regulation of the subject at national, regional or international level, UNCITRAL should set the standard in the use of that procurement technique, which could then be used internationally. It was noted that detailed regulation of the subject at an international level would benefit both jurisdictions that were experienced in the use of that procurement technique as well as those jurisdictions that were considering introducing it.

51. The Working Group noted general provisions on the subject included in the revised (December 2006 version) Agreement on Government Procurement of the World Trade Organization.⁴ The point was made that since those provisions were formulated as general principles, they would benefit from the detailed guidance that UNCITRAL could provide.

2. Conditions for the use of electronic reverse auctions: draft article 22 bis (A/CN.9/WG.I/WP.51, paras. 6-13)

52. The view was shared, in the light of the novelty of ERAs and regulation in the field, that an article on conditions for the use of ERAs should establish the essential minimum conditions. So doing would allow both jurisdictions not familiar with the procurement technique properly to introduce and to use it, and would not prevent those jurisdictions that were already using the technique to continue with and refine its use.

53. The Working Group agreed: (i) to replace in the chapeau of the draft article the word “circumstances” with the word “conditions”; (ii) to keep subparagraphs (a) and (b) in the text of the Model Law but to remove subparagraph (c) to the Guide, with an explanation of the meaning of “construction and services of a simple nature”; (iii) to highlight in the Guide (with a possible cross-reference to article 16 (2)) the need for the procuring entity, in formulating detailed and precise specifications for the goods[, construction or services], to use the relevant objective technical and quality characteristics of the goods[, construction and services] procured; and (iv) amend subparagraph (d) to read as follows “Where the price is the only criterion to be used in determining the successful bid. The procurement regulations may establish conditions for the use of electronic reverse auctions in procurement where other criteria that can be expressed in monetary terms may be used in determining the successful bid.” (For further drafting suggestions made to draft article 22 bis, see paragraphs 62 (b) and 69 to 72 below).

54. The understanding in the Working Group was that subparagraph (d) as amended was intended to provide for two versions of ERAs: those in which price was the only criterion to be used by the procuring entity in determining the successful bid (referred to as alternative A in paragraph 18 of the working paper) and those in which non-price criteria were evaluated at a pre-auction stage (referred to as alternative C in the same paragraph). The Working Group’s attention was drawn to an example of regulation in one state that followed this formulation. No consensus was reached on whether the Model Law or the Guide should provide for alternative B as it stood. Concerns were expressed that alternative B contained inherently non-transparent mechanisms for the expression of non-price criteria in monetary terms (for their subsequent automatic evaluation through the auction). However, some delegates shared the view that, in order to preserve flexibility and given the different procedural consequences of the two alternatives, elements of alternative B should be retained in alternative C. (For further discussion of the relevant provisions, see paragraphs 63 to 72 below).

55. Doubts were expressed as to desirability of retaining references to construction and services in the text of the draft article. The view prevailed however that, as was

⁴ See articles I (e) and XIV of the revised text. The revised text has been circulated among all WTO members as document GPA/W/297, available as of the date of this report at www.wto.org/english/tratop_e/gproc_e/gp_gpa_e.htm.

agreed at the previous session (A/CN.9/615, para. 41), such references should be maintained in the text in square brackets, and the Guide would elaborate on the advantages and concerns that might arise in the use of ERAs for construction and services procurement.

56. The point was also made that referring to a requirement to ensure effective competition only in the context of ERAs (subparagraph (b)) might imply that similar considerations were not valid in the context of other procurement methods or techniques. The Working Group agreed to revisit the issue at a future time.

3. Procedures in the pre-auction and auction stages: draft articles 51 bis to septies (A/CN.9/WG.I/WP.51, paras. 14-59)

Draft article 51 bis. General provisions (A/CN.9/WG.I/WP.51, paras. 14-18)

57. The view was expressed that the draft article should be amended so as to provide for the use of ERAs only as a stand-alone procurement method, with explanation in the Guide that ERAs could be used in conjunction with some procurement methods. It was pointed out that the use of ERAs in some procurement methods referred to in the draft article as well as in tendering proceedings would be inappropriate due to the particular characteristics of those procurement methods (such as prohibition in tendering proceedings of substantive modification of tenders after their submission). It was also stated that the lack of practical experience with regulation and use of ERAs as a phase in procurement methods made regulating such use difficult, and the Guide should alert enacting States accordingly. It was noted that ERAs could more appropriately be envisaged in framework agreements.

58. Concerns that ERAs could be used in all procurement methods referred to in the draft article were shared. It was, however, pointed out that the agreement reached at the previous session (A/CN.9/615, para. 50) was that ERAs could be used not only as a stand-alone procurement method but also in conjunction with existing procurement methods, as and when appropriate. The importance of preserving flexibility in that regard was stressed. In response to concerns about the lack of practical experience with regulation and use of ERAs as a phase in procurement methods, it was stated that UNCITRAL, as part of its mandate to harmonize and modernize the law of international trade, should not only codify existing practices but should also contribute to their development.

59. Some support was expressed for the suggestion to delete the draft article as it did not add anything to the provisions in immediately following articles 51 ter and quater. Another suggestion was that, instead of specifying in which procurement methods ERAs might be used, the draft article should provide for their possible use in other procurement methods set out in the Model Law, as might be appropriate in the light of the conditions for use of those procurement methods and ERAs. Alternatively, the provisions could cross-refer to the articles that would define such methods.

60. The Working Group noted the experience of some jurisdictions in regulating ERAs and their practical use in various ways, including as a phase in procurement methods. Particular reference in this regard was made to the note by the Secretariat containing a study on the topic (A/CN.9/WG.I/WP.35 and Add.1).

61. The Working Group decided to defer its consideration of the draft article to a later stage. (For further discussion, see paragraph 77 below).

Draft article 51 ter. Pre-auction procedures in stand-alone electronic reverse auctions (A/CN.9/WG.I/WP.51, paras. 19-34)

62. The following drafting suggestions were made:

(a) In paragraph (1), to cross-refer to article 24 of the Model Law;

(b) In subparagraph (b) of paragraph (2), to retain only those elements of information regarding the evaluation process that were essential to ensure transparency and predictability in the process. It was agreed that the subparagraph would provide that the notice of an ERA should include a statement of the criteria to be used by the procuring entity in determining the successful bid, such as whether price and other criteria would be so used, or price alone, and the relative weight assigned to the criteria. The notice would also state explicitly which, if any, of the non-price criteria would be evaluated prior to the auction and would not subsequently be varied during the auction itself, and the mathematical formula that would be used in the evaluation procedure. It was also agreed that non-essential elements should be reflected elsewhere, such as in draft article 22 bis to supplement subparagraph (d) (see further paragraphs 69 to 72 below);

(c) To delete subparagraph (c) in paragraph (2). In this regard, a reference was made to subparagraph (j) that referred to rules for the conduct of the ERA (which should contain the information referred to in subparagraph (c)). The view prevailed that subparagraph (c) should remain since the rules for the conduct of the ERA might not necessarily contain such information, which was considered important for ensuring adequate competition and transparency in the process;

(d) In subparagraph (f) of paragraph (2), to replace the phrase the “[website or other electronic] address” with the word “location” and to refer to the website or other electronic address as examples of the location at which the ERA may be held in the Guide. Various alternatives were suggested for the opening phrase of that subparagraph, including “electronic site” and “where the electronic reverse auction will be held”. The view prevailed that the beginning of paragraph 2 (f) should read “how the electronic reverse auction can be accessed”;

(e) To replace the word “known” in subparagraphs (g), (h) and (i) of paragraph (2) with the word “determined”. This suggestion was accepted. However, the point was made that some information referred to in these subparagraphs should be determined and made known to suppliers or contractors by the procuring entity at the beginning of the procurement proceedings (i.e., in the notice of the ERA) and therefore the use of the phrase “if already determined” with reference to this kind of information might not be appropriate. The Secretariat was requested to reformulate the paragraphs, so that information that should be determined at the beginning of the procurement proceedings be expressly included without qualification;

(f) To merge subparagraphs (j), (k) and (l) of paragraph (2) to read as follows: “The rules for the conduct of the electronic reverse auction, including the information that will be made available to the bidders in the course of the auction and the conditions under which the bidders will be able to bid.” The proposal was accepted; and

(g) To delete paragraph (9). The view however prevailed that the paragraph should remain as an important element in ensuring predictability, objectivity and transparency in the process, and as a safeguard for suppliers or contractors against possible improprieties by procuring entities (such as manipulating the date and time of the auction opening to favour some suppliers).

63. In the context of consideration of paragraph 2 (b), various proposals were heard, including that provision should be made for price-based ERAs only in the Model Law (discussing the potential use of more complex ERAs only in the Guide) (alternative A); for price and non-price based criteria that would be evaluated only during the auction (alternative B); and making provision for price and non-price based ERAs, but the non-price based criteria could be evaluated either before or during the auction (alternative C). The Working Group was informed that there were no known examples of alternative B in systems that had been reviewed to date.

64. The Working Group recalled that one aim of the draft provisions contained in the working paper was to enable enacting States to select one of the three alternatives. The potential benefits and disadvantages of each alternative were discussed, with emphasis on the need to ensure adequate competition and transparency in the operation of ERAs, to avoid potential abuse, and to reflect and provide for best practice in the light of limited experience.

65. Concerns were reiterated as regards allowing non-price criteria to be used in ERAs. The Working Group noted the cautious approach taken by the World Bank towards ERAs, especially towards allowing the use of any non-price criteria in ERAs and using that tool for types of procurement beyond procurement of simple standardized goods. The point was made that in a Guide text accompanying provisions of the Model Law on ERAs, these concerns and grounds for them should be stressed.

66. The prevailing view was that both price and non-price criteria could be used in ERAs under the Model Law, in such a manner that enacting States could select any or both alternatives. (It was noted that the Guide would present the advantages and disadvantages of each option or recommend the use of ERAs where price was the only award criterion, or both. No consensus on this point being reached at this session, the Working Group agreed to reconsider the question at its next session.) It was also observed that it would not be necessary to separate the alternatives, and to provide for conditions for the use of price only and price and non-price based ERAs in one place would be a better approach.

67. It was emphasized that the Guide would need to provide detailed and practice-based guidance on the selection of appropriate alternatives for any enacting State. The Guide should explain what each variant of ERA entailed (advantages, disadvantages, challenges and the required level of expertise and experience, for example properly to factor any non-price criteria in a mathematical formula) and the risks of introducing subjectivity into the process. It was pointed out that more complex ERAs would require the higher level of expertise and experience in dealing with them in an enacting State and its procuring entities. Even those procuring entities that were supervising activities of third party service providers handling ERAs on behalf of procuring entities would require such expertise and experience.

68. As regards the use of ERAs involving non-price criteria, it was agreed that it was critical to ensure in the Model Law's provisions that the criteria should be transparent and objective, and transparently and objectively applied, and thus that they should be quantifiable and expressed in monetary terms. In addition, it was stressed that the provisions for ERAs should note that in the ERAs involving non-price criteria, price would always remain one of the determining criteria, so that ERAs could never be based on other criteria alone and the price would always be subject to the auction. The view was expressed that definition of an ERA (for example drawing on that in the GPA) might be included to reflect this point.

Recalling the consensus in the Working Group reached at the previous session that no such definition should be included in the Model Law, the Working Group decided to consider at a later stage whether an express reference in the provisions governing the conduct of the auction itself (draft article 51 *sexies*) would be sufficient.

69. Accordingly, it was agreed that the conditions in draft article 22 bis (d) for use of ERAs should be revised, to provide that ERAs could involve either the price as the only evaluation criterion or price and other criteria. It was noted that it would have to be determined in advance (and fully reflected in the notice of the ERA to be published) whether the ERA would be price-based or price and other criteria-based, and whether all, some or none of those non-price criteria would subsequently be evaluated in the auction itself. The determination would also include the identification of all other non-price criteria concerned, and the relative weight of all such criteria (including the criteria used to determine the weighting, to be expressed in an objective manner and in monetary terms).

70. It was queried whether the conditions for use should require the submission of initial bids for all ERAs in which both price and non-price criteria would determine the successful bid. This question was subject to lengthy discussion, focusing on the two ways in which the non-price criteria could form part of the determination of the successful bid: that is, as criteria that could be evaluated during the auction or as criteria that were evaluated prior to the auction. It was agreed that initial bids would naturally be required in the latter case, and that the evaluation prior to the auction might lead to a ranking of the bids.

71. Views, however, differed as to whether there was a real benefit to a pre-auction evaluation if all criteria would subsequently be evaluated during the auction. On the one hand, it was said that such an evaluation would be an important step in ensuring the transparency of the application of the criteria and weightings, as it would be followed by a notice to each bidder of the results of that evaluation (the results including whether the bidder was qualified for the ERA, whether the initial bid was responsive, and, if relevant, any ranking or scoring of the bid). This procedure would enable a challenge or review of the criteria or their application before the auction took place. On the other hand, certain delegations expressed the view that there was little real benefit if suppliers could change all elements of their bids during the auction.

72. Noting also that the 2004 European Union procurement directives required the submission of initial bids, their evaluation and the subsequent advising of bidders of the outcome of that evaluation,⁵ the prevailing view was that the use of any ERA involving both price and non-price criteria should be subject to the condition that initial bids should be submitted and evaluated, and the results should be communicated to each supplier or contractor concerned. The Working Group therefore decided that conditions in draft article 22 bis (d) should also contain this requirement. It was also recalled that a critical anti-abuse feature of ERAs was that

⁵ See article 56 of Directive 2004/17/EC of the European Parliament and of the Council of 31 March 2004 coordinating the procurement procedures of entities operating in the water, energy, transport and postal services sectors, and article 54 of Directive 2004/18/EC of the European Parliament and of the Council of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts, both available as of the date of this report at http://ec.europa.eu/internal_market/publicprocurement/legislation_en.htm.

the anonymity of bidders should be preserved throughout the process, and therefore the results of the evaluation of each bid would be communicated only to the bidder concerned.

73. The Working Group agreed to delete the words “or partial” before the word “evaluation” in paragraphs (2) (e)(ii), and 6 (c). It also agreed to replace the reference to two working days in paragraph (9) with a reference to “adequate time, which is sufficiently long to allow suppliers or contractors to prepare for the auction,” as suggested in the end of paragraph 34 of the working paper.

Draft article 51 quater. Pre-auction procedures in procurement by means of restricted tendering, competitive negotiation or request for quotations (A/CN.9/WG.I/WP.51, paras. 35-37)

74. The view was generally shared that the draft article should not refer to any specific procurement method set out in the Model Law in which ERAs might be used as the manner of determining the successful bid. It was preferred that the article should state generally that, as long as the objectives of the Model Law were preserved, and conditions and procedural requirements both for the use of ERAs and for the use of procurement methods set out in the Model Law were compatible, ERAs might be used in those procurement methods.

75. The view was reiterated that, in the absence of sufficient experience in regulating ERAs and their use as a phase in procurement methods, a flexible approach, and regulation at the general level, would be appropriate. Otherwise, it was stated, regulations formulated in unnecessarily prescriptive terms or in too much detail might turn out to be unworkable in practice. The point was also made that any explicit exclusion of the use of ERAs in a specific procurement method, or any omission of a reference to any procurement method in which ERAs might be used, might result in incompatibility of the provisions of the revised Model Law and the Guide with other regional or international instruments that envisaged the use of ERAs in those procurement methods (for example, the 2004 European Union procurement directives that allowed the use of ERAs in open, restricted and negotiated procedures⁶).

76. The Working Group agreed to proceed on this basis. It was also agreed that, in revising the draft article, the Secretariat should retain the requirement that the procuring entity should disclose, at the solicitation stage, the fact that ERAs would be used to determine the successful bid in the procurement proceedings. Recognizing difficulties with introducing ERAs as a phase in some procurement methods, the Guide accompanying the relevant provisions would explain how ERAs might be incorporated in various procurement methods, and which modifications of traditional characteristics of those procurement methods would be needed (an example would be that the current Model Law did not envisage repetitive submission of tenders, offers or quotations, which would have to be adjusted to accommodate the use of ERAs).

77. The Working Group agreed to delete draft article 51 bis as a result of these amendments to draft article 51 quater.

⁶ Ibid.

*Draft article 51 quinquies. Requirement of effective competition
(A/CN.9/WG.I/WP.51, paras. 38-41)*

78. Observing that the draft article dealt only with some means that aimed at ensuring effective competition in ERA, the Working Group agreed that the title of the draft article should be changed to read “Requirement of sufficient number of bidders to ensure effective competition.”

79. The need for the draft article was questioned since the requirement of effective competition was already included in paragraph (b) of proposed article 22 bis. In response, it was noted that the conditions for use of ERAs contained in draft article 22 bis (b) required the existence of a competitive market as a precondition for the use of the ERA, but did not address how to ensure effective competition during the conduct of the procurement involving the ERA itself. The prevailing view was that the draft article was important and should remain.

80. In response to concerns that the requirement in paragraph (1) was onerous since the procuring entity would not have means to ensure effective competition at all stages of the ERA, it was observed that the paragraph addressed the stage of the procurement at which the procuring entity issued invitations to potential bidders, and therefore it would be within the control of the procuring entity to ensure that the number of suppliers or contractors invited to participate in the auction was sufficient to secure effective competition.

81. It was decided that paragraph (1) should be retained with some amendments to reflect the revisions that would be made to article 51 quater (see paragraphs 74 to 76 above).

82. As regards paragraph (2), it was agreed to replace the term “withdraw” with the term “cancel” since the former was used in the Model Law in a different context (that is, in the context of withdrawal of tenders under article 31). It was also agreed that the word “shall” in square brackets should be replaced by “may”, to provide flexibility to the procuring entity in dealing with situations where the number of suppliers or contractors registered to participate in the auction was insufficient to ensure effective competition (for example, the procuring entity in such a situation might consider extending a deadline for registration to participate in the auction).

83. Concerns were expressed that the draft article did not address how a procuring entity should proceed if the ERA was cancelled as a result of insufficient number of registered bidders to ensure effective competition. It was suggested that options could be provided in the Model Law, for example that the procuring entity could proceed to negotiate with potential suppliers. Observing that the 2004 European Union procurement directives⁷ also did not provide a solution to this issue, and noting that the question involved practical considerations, it was commented that the procuring entity should be afforded some flexibility in this regard and should not be obliged to continue with the procurement in these circumstances. It was stated that the procuring entity might be able to proceed in various ways, all of which could not be envisaged and regulated in the Model Law, and therefore the Guide could illustrate some options and mention that solicitation or equivalent documents might set out any steps that the procuring entity intended to take should the situation arise.

⁷ Ibid.

Draft article 51 sexies. Requirements during the auction (A/CN.9/WG.I/WP.51, paras. 42-49)

84. As regards paragraph 1 (c), the Working Group agreed to omit the reference to ranking of the bidders and to refer only to successive results of the auction, which would be the price in ERAs where price was the only evaluation criterion, or otherwise the outcome, expressed in a figure, of the application of the pre-disclosed evaluation criteria (including the mathematical formula). It was agreed to replace the phrase “[according to the pre-disclosed formula]” with the phrase “according to pre-disclosed evaluation criteria”.

85. As regards paragraph (2), the Working Group agreed to delete the sentence in the square brackets that referred to articles 33 (2) and (3) of the Model Law, which referred to tendering proceedings and would no longer be relevant. As regards the issue in the same paragraph on whether the anonymity of bidders should be preserved after the auction, the view prevailed that the paragraph should be redrafted to reflect the following understanding of the Working Group: (i) the anonymity of bidders had to be preserved during the auction, and in the case of suspension or termination of the auction; and (ii) where the auction was successful and the winner known, the name of the winner and its address as well as information about the winning price would have to be communicated to other bidders, as envisaged in paragraph (3) of draft article 51 septies.

86. Views varied as to the practical value of the disclosure of the names of other bidders after the closure of the auction. Reference in this regard was made to articles 11 (1) and (2) of the Model Law, in which it was provided that this type of information was to be reflected in the records of procurement proceedings and to be made available to any person on request. The value of disclosing such information was emphasized as a general matter of transparency in the procurement process, and in particular as a means to verify that the procuring entity had complied with the requirement to ensure effective competition, as envisaged in draft articles 22 bis and 51 quinquies.

87. The view prevailed that the names of all bidders could be disclosed only if such disclosure would not result in the disclosure of price-sensitive commercial information regarding any particular bidder. That latter requirement was considered to be especially important for preventing collusion, protecting legitimate commercial interests of the bidders and thus maintaining competitiveness in the market and ensuring the success of future auctions. It was also noted that the introduction of ERAs as a new procurement tool would be successful only to the extent that potential bidders had sufficient confidence in the process, in particular that price-sensitive information about their business would be kept confidential through ERAs; otherwise, it was said, they would be reluctant to take part in procurement proceedings that involved ERAs. These considerations, it was pointed out, should prevail over transparency considerations.

88. It was suggested that the Guide should provide guidance to the enacting State and its procuring entities as regards situations and grounds that would justify keeping information relating to bids confidential. Reference in this regard was made to the provisions of article 11 (3) of the Model Law, which gave exceptions to disclosure of portions of the records of the procurement proceedings relating to detailed information on the examination, evaluation and comparison of submissions, as well as disclosure of records if such disclosure would inter alia inhibit fair competition or would prejudice legitimate commercial interests. It was noted that

risks of anti-competitive effect of such disclosure was particularly high when a small number of bidders took part in the ERA.

89. As regards paragraph (4), the Working Group considered whether the provisions should provide for possibility to suspend or terminate the ERA in cases other than system or communications failures. The views were expressed that, in the light of practical experience, suspension might be desirable in the case of suspected abnormally low bids. In such case, it was said, there should be the means available to the procuring entity instantaneously to intervene to the process to prevent any disruptive effect that the abnormally low bid might have on the auction (such a bid might have the effect of preventing other bidders from continuing to participate). The Working Group also took note, with reference to paragraph 49 of the working paper, that complaints from bidders about irregularities in the process might be made, which might also justify suspension of the auction. The Secretariat was requested to redraft the paragraph taking into account these considerations. The view was shared that provisions should be redrafted also to make it clear that the procuring entity was not responsible for failures in the bidders' communication systems, and such failures would not justify the suspension of the ERA.

Draft article 51 septies. Award of the procurement contract on the basis of the results of the electronic reverse auction (A/CN.9/WG.I/WP.51, paras. 50-57)

90. It was noted that the draft article had been prepared on the basis of provisions previously presented to the Working Group, and were intended to be equivalent to those governing the award of the procurement contract, and relevant exceptions, in tendering proceedings.

91. In this regard, it was queried whether the full text of paragraph (1) of the draft article was necessary, or whether, more simply and concisely, references to article 36 and to other relevant articles could be used. In response, it was observed that article 36 applied only to tendering proceedings, and that a separate article on award of contracts in the specific context of ERAs was necessary. It was decided that paragraph (1) should be retained but simplified and shortened to the extent possible, for example by the greater use of cross references rather than a restatement of text that appeared elsewhere in the Model Law.

92. It was observed that the following changes should be made to the text: (i) in the chapeau of paragraph (1), the phrase "ranked first" should be replaced with the phrase "the lowest evaluated bid", to reflect changes proposed to draft article 51 sexies (1) (c) (see paragraph 84 above); and (ii) in paragraph (1) (b), the square brackets around "article 12 bis" should be removed.

93. It was noted that paragraph (2) addressed the options available to the procuring entity should the successful bidder not enter into a procurement contract by reason of the circumstances set out in paragraph (1), and presented a more flexible approach than that previously considered by the Working Group. The Working Group agreed with the flexible approach, noting, however, that the words "second lowest price" and "ranked second" in paragraph (2) (c) should be replaced with the words "next lowest price" and "next lowest evaluated bid", respectively.

94. It was agreed that the practical implications of each option would require elaboration in the Guide. The Working Group considered that the Guide, prior to addressing the options available, should emphasize the need for prompt action where there was any post-auction qualification of the successful bidder or a review

of a possible abnormally low bid, so as to ensure that the final position should be determined as soon as reasonably practical.

95. As regards paragraph (3), it was agreed that square brackets therein should be removed and the reference to “accepted bid” should be replaced by the phrase “the bid that the procuring entity is prepared to accept”.

96. The Working Group agreed to finalize the wording of the draft article after it had considered revisions to article 36 of the current Model Law in due course.

**4. Consequential changes to other provisions of the Model Law
(A/CN.9/WG.I/WP.51, paras. 60-69)**

97. In the course of discussion of paragraphs 60 to 67 of the working paper, the Working Group agreed that issues related to the content of solicitation documents, period of effectiveness, modification and withdrawal of tenders, bid securities, and examination, evaluation and comparison of tenders, should be addressed in the context of provisions on ERAs as and where appropriate through cross-references to the relevant articles of the Model Law.

98. As regards the specific issue of withdrawal of bidders from the ERA before its closure, the Working Group noted that there might not be readily available solutions to that problem. Blacklisting of suppliers who withdrew was not considered to be a viable option, since it was often not possible to determine the reasons for an early withdrawal and the reasons for such a withdrawal might be justifiable. Recognizing that withdrawal of bidders might have a negative impact on effective competition, the Working Group considered whether the procuring entity should have the right to suspend or terminate the auction when an insufficient number of bidders participated in the auction. Reference in this regard was made to paragraph (4) of draft article 51 *sexies*, which could be expanded so as to refer to other justifiable reasons as grounds beyond system or communication failures for the suspension or termination of an ERA. Noting that suspension or termination of an ERA for reasons other than system or communication failure might lead to challenges by affected bidders, and might be counterproductive in preventing last-minute competition (a common feature of ERAs), the view prevailed that draft articles 51 *quinquies* and *septies* were sufficient to deal with the issue.

99. As regards the specific issue of bid securities, noting that some jurisdictions required bid securities in the context of ERAs, in particular to alleviate risks of fraudulent bids, and also noting various circumstances that might justify a request for bid security, the Working Group agreed that the Guide should not discourage recourse to bid securities.

100. As regards paragraph 68 of the working paper, the Working Group agreed that the proposed text for the Model Law should be expanded to refer to all information that would have to be included in the record of procurement proceedings in the context of an ERA, which was not expressly mentioned in article 11 (1) of the Model Law. It was suggested in particular that records should contain information about the grounds and circumstances on which the procuring entity relied to justify recourse to the ERA, and the date and time of the ERA. It was also considered justifiable to provide exceptions to disclosure of some type of information under article 11 in the light of specific characteristics of the ERA.

D. Draft provisions to enable the use of framework agreements in public procurement under the Model Law (A/CN.9/WG.I/WP.52)

General comments

101. The Working Group considered the draft provisions to enable the use of framework agreements in public procurement under the Model Law presented in document A/CN.9/WG.I/WP.52, noting in particular the scope of the draft provisions and the approach to drafting contained in that document. It was agreed that the Working Group's deliberations on the topic would be continued at its next session, including on the following issues highlighted as of importance to the debate:

(a) How to provide for appropriate nomenclature for this procurement technique, especially given the different terms used in various jurisdictions and systems;

(b) Whether a framework agreement and/or a purchase order under a framework agreement should constitute the procurement contract under the Model Law. In this regard, it was observed that whether framework agreements themselves would constitute binding contracts would be a question of local law in any particular state, that it would be vital to ensure a common understanding on the optimal solution, and that the terms and conditions of a framework agreement should in any event be clear and transparent. It was also noted that the Guide should discuss the issue in detail;

(c) The related question of whether or not a procuring entity should be able to procure outside the framework agreement, which was noted to be a multi-faceted one, and the different experiences in various jurisdictions would need to be considered;

(d) Whether a multi-supplier framework agreement should take the form of one contract for all suppliers that were parties to the framework agreement, or whether each party should have a separate contract with the procuring entity;

(e) Whether the framework agreement should be open to additional suppliers or contractors during its term; and

(f) Whether provision should be made for a Model 2 framework⁸ (normally envisaged to be a multi-supplier agreement) to be concluded with a single supplier, for example in the case of urgent procurement or a catastrophic event.

E. Simplification and standardization of the Model Law

102. The Working Group also considered the question of standardization and simplification of the Model Law by reference to the example of article 36 of the Model Law (noting that article 36 addressed the entry into force of procurement contracts in tendering proceedings). It was noted that the provisions governing the acceptance of successful submissions and the entry into force of the procurement contract (as set out in article 13 of the Model Law) were slightly different under different procurement methods. The need for consistency in these matters was accepted, in particular in the context of introducing ERAs as a possible technique in

⁸ See description of the models of framework agreements in paragraph 6 of A/CN.9/WG.I/WP.52.

a variety of procurement methods, and as a method itself. It was also stated that these matters, and perhaps other steps described in the tendering process under the Model Law, might be considered to be issues that should be addressed from the perspective of general rules applicable to all procurement methods. Accordingly, the Working Group agreed that it would consider the steps in the tendering process, including article 36, from this perspective at a future time.

E. Note by the Secretariat on revisions to the UNCITRAL Model Law on Procurement of Goods, Construction and Services — drafting materials addressing the use of electronic communications in public procurement, publication of procurement-related information, and abnormally low tenders, submitted to the Working Group on Procurement at its eleventh session

I. Introduction

1. The background to the current work of Working Group I (Procurement) on the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services (the “Model Law”) (A/49/17 and Corr.1, annex I) is set out in paragraphs 5 to 65 of document A/CN.9/WG.I/WP.49, which is before the Working Group at its eleventh session. The main task of the Working Group is to update and revise the Model Law, so as to take account of recent developments, including the use of electronic communications and technologies, in public procurement.

2. The regulation of such use, including in the context of the submission and opening of tenders, holding meetings, storing information and publicising procurement-related information, was included in the topics before the Working Group at its sixth to tenth sessions. At its tenth session, the Working Group requested the Secretariat to revise the draft provisions on the use of electronic communications in public procurement that it had considered at the session.¹ This note has been prepared pursuant to that request, and sets out the relevant draft provisions that reflect the Working Group’s deliberations at its tenth session (see paragraphs 4-42 below).

3. This note also contains draft provisions for the Model Law and the Guide addressing abnormally low tenders (“ALTs”), revised pursuant to the Working Group’s request at its tenth session (see paragraphs 43-49 below).

II. Draft provisions addressing the use of electronic communications in public procurement

A. Communications in procurement

1. Proposed draft text for the revised Model Law

4. The following draft article draws on a consolidated text of draft article 5 bis that was before the Working Group at its tenth session² and reflects the suggestions made to that text at that session.³

“Article [5 bis]. Communications in procurement

(1) Any document, notification, decision and other information generated in the course of a procurement and communicated as described in this Law, including in connection with review proceedings under [chapter VI] [article 53] or in the course of a meeting, or forming part of the record of procurement proceedings under article [11], shall be in a form that provides a record of the content of the information and that is accessible so as to be usable for subsequent reference.

(2) Communication of information between suppliers or contractors and the procuring entity referred to in articles [7 (4) and (6), 12 (3), 31 (2)(a), 32 (1)(d), 34 (1), 36 (1), 37 (3), 44 (b) to (f) and 47 (1), to update for revisions

¹ A/CN.9/615, para. 11.

² Ibid., para. 18.

³ Ibid., paras. 19-26.

to *Model Law*] may be made by means that do not provide a record of the content of the information on the condition that, immediately thereafter, confirmation of the communication is given to the recipient of the communication in a form that provides a record of the content of the information and that is accessible so as to be usable for subsequent reference.

(3) The procuring entity, when first soliciting the participation of suppliers or contractors in the procurement proceedings, shall specify:

(a) Any requirement of form in compliance with paragraph (1) of this article;

(b) The means to be used to communicate information by or on behalf of the procuring entity to a supplier or contractor or to the public or by a supplier or contractor to the procuring entity or other entity acting on its behalf;

(c) The means to be used to satisfy all requirements under this Law for information to be in writing or for a signature; and

(d) The means to be used to hold any meeting of suppliers or contractors.

(4) The means referred to in the preceding paragraph shall be readily capable of being utilized with those in common use among suppliers or contractors in the relevant context. The means to be used to hold any meeting of suppliers or contractors shall in addition ensure that suppliers or contractors can fully and contemporaneously participate in the meeting.

(5) Appropriate measures shall be put in place to secure the authenticity, integrity and confidentiality of information concerned.”

Commentary

Paragraph (1)

5. Paragraph (1) sets out the substantive requirements of form of communications in procurement. They may be derogated from only in accordance with paragraph (2) of the draft article.

6. The procuring entity must set out any specific form requirement when it first solicits the participation of suppliers or contractors in the procurement proceedings, in accordance with paragraph 3 (a) of the draft article. Such specific requirements have to comply with general requirements in paragraph (1) of the draft article.

7. The references in paragraph (1) to [chapter VI] [article 53] are put in square brackets to indicate that it may be inappropriate in the context of the article to refer to the entire chapter VI on review, which includes provisions on administrative and judicial reviews. Administrative review and court proceedings are likely to have their own rules for communications. The paragraph may therefore more appropriately refer only to article 53 that addresses review by a procuring entity.

Paragraph (2)

8. Paragraph (2) sets exceptions to the rule contained in paragraph (1) that the form of information has to provide a record of the content of the information.

The list of the articles referred to in that paragraph is taken from the current paragraph (2) of article 9 of the Model Law.

9. The Working Group may wish to consider whether it would be appropriate to retain references to all the listed articles. For the ease of reference, the text of those articles is reproduced in the table below:

<i>Article</i>	<i>Content</i>
7 (Prequalification proceedings)	<p>(4) The procuring entity shall respond to any request by a supplier or contractor for clarification of the prequalification documents that is received by the procuring entity within a reasonable time prior to the deadline for the submission of applications to prequalify. The response by the procuring entity shall be given within a reasonable time so as to enable the supplier or contractor to make a timely submission of its application to prequalify. The response to any request that might reasonably be expected to be of interest to other suppliers or contractors shall, without identifying the source of the request, be communicated to all suppliers or contractors to which the procuring entity provided the prequalification documents.</p> <p>(6) The procuring entity shall promptly notify each supplier or contractor submitting an application to prequalify whether or not it has been prequalified and shall make available to any member of the general public, upon request, the names of all suppliers or contractors that have been prequalified. Only suppliers or contractors that have been prequalified are entitled to participate further in the procurement proceedings.</p>
12 (3) (Rejection of all tenders, proposals, offers or quotations)	<p>Notice of the rejection of all tenders, proposals, offers or quotations shall be given promptly to all suppliers or contractors that submitted tenders, proposals, offers or quotations.</p>
31 (2)(a) (Period of effectiveness of tenders; modification and withdrawal of tenders)	<p>Prior to the expiry of the period of effectiveness of tenders, the procuring entity may request suppliers or contractors to extend the period for an additional specified period of time. A supplier or contractor may refuse the request without forfeiting its tender security, and the effectiveness of its tender will terminate upon the expiry of the unextended period of effectiveness;</p>
32 (1)(d) (Tender securities)	<p>When the procuring entity requires suppliers or contractors submitting tenders to provide a tender security:</p> <p>(d) Prior to submitting a tender, a supplier or contractor may request the procuring entity to confirm the acceptability of a proposed issuer of a tender security, or of a proposed confirmer, if required; the procuring entity shall respond promptly to such a request;</p>
34 (1) (Examination, evaluation and comparison of tenders)	<p>(a) The procuring entity may ask suppliers or contractors for clarifications of their tenders in order to assist in the examination, evaluation and comparison of tenders. No change in a matter of substance in the tender, including changes in price and changes aimed at making an unresponsive tender responsive, shall be sought, offered or permitted;</p>

<i>Article</i>	<i>Content</i>
	(b) Notwithstanding subparagraph (a) of this paragraph, the procuring entity shall correct purely arithmetical errors that are discovered during the examination of tenders. The procuring entity shall give prompt notice of any such correction to the supplier or contractor that submitted the tender.
36 (1) (Acceptance of tender and entry into force of procurement contract)	Subject to articles 12 and 34 (7), the tender that has been ascertained to be the successful tender pursuant to article 34 (4)(b) shall be accepted. Notice of acceptance of the tender shall be given promptly to the supplier or contractor submitting the tender.
37 (3) (CHAPTER IV. PRINCIPAL METHOD FOR PROCUREMENT OF SERVICES, Notice of solicitation of proposals)	<p>(Subject to approval by ... (the enacting State designates an organ to issue the approval),) where direct solicitation is necessary for reasons of economy and efficiency, the procuring entity need not apply the provisions of paragraphs (1) and (2) of this article in a case where:</p> <p>(a) The services to be procured are available only from a limited number of suppliers or contractors, provided that it solicits proposals from all those suppliers or contractors; or</p> <p>(b) The time and cost required to examine and evaluate a large number of proposals would be disproportionate to the value of the services to be procured, provided that it solicits proposals from a sufficient number of suppliers or contractors to ensure effective competition; or</p> <p>(c) Direct solicitation is the only means of ensuring confidentiality or is required by reason of the national interest, provided that it solicits proposals from a sufficient number of suppliers or contractors to ensure effective competition.</p>
44 (b) to (f) (Selection procedure with consecutive negotiations)	<p>Where the procuring entity, in accordance with article 41 (1), uses the procedure provided for in this article, it shall engage in negotiations with suppliers and contractors in accordance with the following procedure:</p> <p>(b) Invite for negotiations on the price of its proposal the supplier or contractor that has attained the best rating in accordance with article 42 (1);</p> <p>(c) Inform the suppliers or contractors that attained ratings above the threshold that they may be considered for negotiation if the negotiations with the suppliers or contractors with better ratings do not result in a procurement contract;</p> <p>(d) Inform the other suppliers or contractors that they did not attain the required threshold;</p> <p>(e) If it becomes apparent to the procuring entity that the negotiations with the supplier or contractor invited pursuant to subparagraph (b) of this article will not result in a procurement contract, inform that supplier or contractor that it is terminating the negotiations;</p> <p>(f) The procuring entity shall then invite for negotiations the supplier or contractor that attained the second best rating; if the negotiations with that supplier or contractor do not result in a procurement contract, the procuring entity shall invite the other suppliers or contractors for negotiations on the</p>

<i>Article</i>	<i>Content</i>
47 (1) (Restricted tendering)	<p>basis of their ranking until it arrives at a procurement contract or rejects all remaining proposals.</p> <p>(a) When the procuring entity engages in restricted tendering on the grounds referred to in article 20 (a), it shall solicit tenders from all suppliers and contractors from whom the goods, construction or services to be procured are available;</p> <p>(b) When the procuring entity engages in restricted tendering on the grounds referred to in article 20 (b), it shall select suppliers or contractors from whom to solicit tenders in a non-discriminatory manner and it shall select a sufficient number of suppliers or contractors to ensure effective competition.</p>

10. As may be seen from the table above, most exceptions refer to situations when communications are made by a procuring entity to any single supplier or contractor participating in the procurement proceedings. Some exceptions, however, refer to more general communications addressed to all suppliers or contractors involved in the procurement proceedings.

11. In the exclusively paper-based environment, these exceptions allow faster communication of information between a procuring entity and suppliers or contractors concerned. In the electronic environment, there are means to achieve the same goal by more efficient and transparent means, such as e-mails.

12. At least with respect to information to be communicated to all suppliers or contractors participating in a particular procurement, it may be more appropriate for the Model Law to encourage the use of electronic means, rather than telephones, in-person meetings or other means of communication that do not provide a record of the content of the information communicated using such means. Although the Model Law requires that when such latter means are used, confirmation of the communication must immediately be given to the recipient in a form that provides a record of the content of the communicated information, practical difficulties may exist with verification of compliance with that requirement and its enforceability. Thus the exceptions may create conditions for abuse, including corruption and favouritism, and the Working Group may consider that they should be limited to accommodate only those situations that are strictly necessary.

13. In line with its intention to encourage where appropriate the use of electronic means of communication and to ensure more transparency in public procurement, the Working Group may wish to consider which exceptions are justifiable to retain in paragraph (2) and which could be dispensed with in the light of the widespread use of e-mails and other modern means of communication.

Paragraph (3)

14. The paragraph lists information about communications in procurement, which the procuring entity has to specify in the beginning of the procurement proceedings.

Paragraph (4)

15. The paragraph sets out standards for the means by which information is communicated, requirements for “writing” and “signature” are met and meetings are

held. Additional standards apply to the means by which meetings are held. They are based on the wording of the revisions to article 33 (2) agreed upon at the Working Group's tenth session (see paragraph 30 below).

Paragraph (5)

16. Paragraph (5) is expressed in the passive, as was suggested at the Working Group's tenth session, to cover situations when other branches of law may or should regulate the issues of authenticity, integrity and confidentiality of information communicated *inter alia* in the context of public procurement.⁴

Use of terms

17. The proposed text refers to "document, notification, decision and other information" in paragraph (1) while in subsequent paragraphs it refers to "information" alone. The Working Group may wish to consider using the full list consistently throughout the text or retaining the reference only to "information" for the sake of conciseness after the guidance as to what the article is aimed at is provided in paragraph (1). The Guide may give examples of types of information other than documents, notifications and decisions referred to in the article.

Location of the provisions

18. The Working Group may wish to defer its decision on the final location of the provisions until a later date.

2. Guide to Enactment text

19. The draft texts for the Guide that would accompany provisions of the Model Law on (i) the use of electronic means of communication in general, (ii) functional equivalence, (iii) choice of means of communication and (iv) requirement as regards form of communication were presented to the Working Group at its eighth and ninth sessions (documents A/CN.9/WG.I/WP.38 (the text following paragraphs 23), 38/Add.1 (the text following paragraph 4), 42 (the text following paragraphs 13, 19 and 26) and 42/Add.1 (the text following paragraphs 2 and 5)).

20. Following the consolidation of all the relevant provisions in one article dealing with communications in procurement, a new consolidated text for the Guide is being prepared and will be presented to the Working Group for consideration at a future session. The revised text for the Guide will incorporate relevant suggestions made at the Working Group's sessions.

21. Furthermore, also at the Working Group's eighth and ninth sessions, the Secretariat proposed the additions to the Guide text that accompany some of the existing provisions of the Model Law, such as article 36 on acceptance of tender and entry into force of procurement contract (documents A/CN.9/WG.I/WP.42 (the text following paragraph 29), and 42/Add.1 (the text following paragraph 6), revising the text in document A/CN.9/WG.I/WP.38/Add.1 following paragraph 14). They will also be amended to reflect the relevant deliberations at the Working Group's subsequent sessions.

⁴ Ibid., para. 22.

B. Electronic submission of tenders

1. Proposed draft text for the revised Model Law

22. The following draft text for article 30 (5) incorporates drafting suggestions made at the Working Group's tenth session:⁵

“Article 30. Submission of tenders

- (5) (a) A tender shall be submitted in writing, and signed, and:
 - (i) if in paper form, in a sealed envelope; or
 - (ii) if in any other form, according to requirements specified by the procuring entity, which ensure at least a similar degree of [authenticity,] [security,] integrity and confidentiality;
- (b) The procuring entity shall, on request, provide to the supplier or contractor receipt showing the date and time when its tender was received;
- (c) The procuring entity shall preserve the integrity and confidentiality of a tender from the time as determined by the procuring entity, but in no case later than the time of its receipt, and shall ensure that the content of the tender is examined only after its opening in accordance with this Law.”

Commentary

Paragraph 5 (a)(ii)

23. The Working Group may wish to consider whether references to “authenticity” and “security” of tenders should be inserted in paragraph 5 (a)(ii). In current article 30 (5)(b) of the Model Law, in the same context, the reference is made in addition to the requirement of confidentiality to the requirements of authenticity and security of tenders.

24. At the tenth session, the issue of security was discussed only in the context of paragraph 5 (c) above: it was suggested that in that context the security requirement should not appear since the requirements of integrity and confidentiality were sufficient (although some doubts were expressed about that suggestion).⁶ The Working Group may wish to consider whether the same is true in the context of paragraph 5 (a)(ii).⁷

25. As regards the issue of authenticity, the Working Group may wish to consider whether the requirement of signature in the opening phrase of paragraph 5 (a) will always ensure authenticity of tenders (for example, in situations where a supplier sends several signed tenders from different addresses, which would raise the issue of authenticity in determining which tender is final and binding on the supplier).

⁵ Ibid., paras. 27-28.

⁶ Ibid., para. 29.

⁷ At the tenth session, in the context of paragraph 5 (a) (ii), it was suggested to replace the word “protection” with “integrity and confidentiality”. No issues of security and authenticity of tenders were raised. A/CN.9/615, para. 28 (iii).

Paragraph 5 (b)

26. The paragraph reproduces provisions of article 30 (5)(c) of the Model Law without change.

Paragraph 5 (c)

27. The paragraph is new and based on the draft provisions agreed upon at the Working Group's tenth session.⁸

2. Guide to Enactment text

28. At the Working Group's tenth session, the point was made that the Guide should provide guidance to enacting States as regards separate treatment of submission and receipt of tenders in the paper and electronic environments to avoid overly stringent requirements in traditional tendering, and the need to avoid imposing excessive requirements on the electronic submission of tenders (which might otherwise discourage such submissions).⁹

29. The draft text for the Guide that would accompany a revised article 30 (5) was presented to the Working Group, at its eighth session, in document A/CN.9/WG.I/WP.38/Add.1, the text following paragraph 26. Since then, a number of suggestions have been made to the text. The revised text for the Guide that will replace in entirety the previously proposed text is being prepared and will be presented to the Working Group for consideration at a future session.

C. Presence at the opening of tenders

30. At its tenth session, the Working Group decided to base its future consideration of provisions for revised article 33 (2) on the following text:¹⁰

“Article 33. Opening of tenders

(2) All suppliers or contractors that have submitted tenders, or their representatives, shall be permitted by the procuring entity to be present at the opening of tenders. Suppliers or contractors shall be deemed to have been permitted to be present at the opening of the tenders if they are fully apprised of the opening of the tenders contemporaneously through the means of communication used by the procuring entity.”

31. A revised text of draft article 5 bis above incorporates the requirement for holding meetings, which will also apply to opening of tenders (see article 5 bis (4) in paragraph 4 above). For avoidance of a repetition, the Working Group may wish to shorten the second sentence of the text in the preceding paragraph to read:

“Suppliers or contractors shall be deemed to have been permitted to be present at the opening of the tenders if conditions of article [5 bis (3)(d) and (4)] are met.”

32. The draft text for the Guide that would accompany a revised article 33 (2) will be prepared and presented to the Working Group for consideration at a future

⁸ A/CN.9/615, para. 28.

⁹ Ibid., para. 30.

¹⁰ Ibid., para. 32.

session, reflecting suggestions made at the Working Group's session for reflection in such a text.

D. Publication of procurement-related information

1. Proposed revisions to article 5

33. At its tenth session, the Working Group agreed to split the current text of article 5 of the Model Law into two paragraphs: the first paragraph dealing with legal texts (law, procurement regulations and directives of general application) that had to be made accessible to the public, with respect to which the requirements to "systematically maintain" would remain; and the second paragraph dealing with judicial decisions and administrative rulings of precedent value and general application, with respect to which the requirement to "systematically maintain" would be replaced with the requirement "to update on a regular basis if need be".¹¹ The Working Group may therefore wish to consider the following text:

"Article 5. Publicity of legal texts

(1) The text of this Law, procurement regulations and all directives of general application in connection with procurement covered by this Law, and all amendments thereto, shall be promptly made accessible to the public and systematically maintained.

(2) Judicial decisions and administrative rulings with precedent value and of general application in connection with procurement covered by this Law, and all amendments thereto, shall be made available to the public and updated on a regular basis if need be."

Commentary

34. The amendments to the article reflect the deliberations on article 5 at the Working Group's ninth and tenth sessions, such as concerns that the requirements found in the current article 5 of the Model Law as regards the public accessibility of legal texts and their systematic maintenance appeared to be too onerous with respect to some types of legal texts. The suggestions were made to reconsider the application of these requirements to such legal texts as judicial decisions and administrative rulings.¹²

35. In the light of the changes made to the article (in particular paragraph (2) that refers to public availability, not public accessibility, of the texts referred therein), it is suggested that the title of the article should be changed from "Public accessibility of legal texts" to "Publicity of legal texts".

36. The draft text for the Guide that would accompany a revised article 5 was submitted to the Working Group for consideration at its ninth session in document A/CN.9/WG.I/WP.42, the text following paragraph 45 (a). This text will be revised to reflect the Working Group's discussion of the relevant issues.

¹¹ Ibid., para. 33. See also A/CN.9/WG.I/WP.47, para. 31.

¹² A/CN.9/595, paras. 68-72, and A/CN.9/615, para. 33.

2. Proposed draft text for the revised Model Law addressing the publication of information on forthcoming procurement opportunities

37. At its tenth session, the Working Group agreed that enabling provisions on publication of information on forthcoming procurement opportunities should be included in the Model Law, based on the wording of the text contained in paragraph 33 of document A/CN.9/WG.I/WP.47.¹³ The Working Group may therefore wish to consider the following text:

“As [promptly] as possible after beginning of a fiscal year procuring entities may publish information of the expected procurement opportunities for the following [the enacting State specifies the period], and this information shall not constitute the solicitation of the participation of suppliers or contractors in the procurement proceedings.”

Commentary

38. The Working Group may wish to consider that the wording “as promptly as possible” in the text above should be changed to a less prescriptive wording, such as “as early as possible”, in the light of the permissive nature of the provisions.

39. The ending of the provisions that reads “the solicitation of the participation of suppliers or contractors in the procurement proceedings” has replaced the previous reference to “the solicitation documents or parts thereof”. The suggested new wording is broader and covers all procurement methods under the Model Law (the reference to solicitation documents in the Model Law is relevant only in the context of tendering proceedings). This broader reference is used for example in articles 8 (3) and 9 (1) of the Model Law as well as in the revised article 5 bis (3) above.

40. The Working Group is still to decide about the location of these provisions in the Model Law. At a Working Group’s previous session, the suggestion was made to include provisions on publication of information on forthcoming procurement opportunities in article 5.¹⁴ However, taking into account that the current article 5 deals with publication of regulatory legal texts, the appearance of the provisions on publication of information on forthcoming procurement opportunities in that article may give the wrong impression about the intended nature of that information (informative as opposed to regulatory and binding). It may be more appropriate to include provisions on publication of information on forthcoming procurement opportunities in a separate article.

41. The Working Group may wish to defer its decision on the location of the provisions to a later date, in the light of its decisions on the location of other articles, such as article 5 bis that would set rules for communications in procurement, which may also apply to the publication of information on forthcoming procurement opportunities.

42. The draft text for the Guide that would accompany provisions on publication of information on forthcoming procurement opportunities was submitted to the Working Group for consideration at its ninth session in document A/CN.9/WG.I/WP.42, the text following paragraph 45 (b). This text will be revised to reflect the Working Group’s discussion of the relevant issues.

¹³ A/CN.9/615, para. 36.

¹⁴ A/CN.9/595, para. 76.

III. Draft provisions addressing abnormally low tenders

1. Proposed draft text for the revised Model Law

43. At its tenth session, the Working Group requested the Secretariat to propose the appropriate location for the provisions on ALTs, taking into account that risks of ALTs should be addressed by the procuring entity not only in the context of examination, evaluation and comparison of tenders in the tendering proceedings, as was originally implied by placing provisions in article 34 of the Model Law, but in addition at any other stage of the procurement, including during qualification of suppliers, and in procurement proceedings by means other than tendering.¹⁵

44. At the same session, the drafting suggestions were made to the text of the provisions on ALTs that were before the Working Group in document A/CN.9/WG.I/WP.43/Add.1 (the text following paragraph 8).¹⁶

45. The text below incorporates those suggestions and is presented as a new article 12 bis. In the process of revising the structure of the Model Law, the Working Group may wish to consider putting all articles addressing rejection of tenders, such as articles 12, 15 and the proposed article 12 bis, in one cluster, one after another.

“Article [12 bis]. Rejection of abnormally low tenders, proposals, offers, quotations or bids

(1) The procuring entity may reject a tender, proposal, offer, quotation or bid if a price submitted therein is abnormally low in relation to the goods, construction or services to be procured, provided that:

(a) The procuring entity has requested in writing details of constituent elements of a tender, proposal, offer, quotation or bid that give rise to concerns as to the ability of the supplier or contractor that submitted such a tender, proposal, offer, quotation or bid to perform the procurement contract;

(b) The procuring entity has taken account of the information supplied, if any, but continues, on a reasonable basis, to hold those concerns; and

(c) The procuring entity has recorded those concerns and its reasons for holding them, and all communications with the supplier or contractor under this article, in the record of the procurement proceedings.

(2) The decision of the procuring entity to reject a tender, proposal, offer, quotation or bid in accordance with this article and grounds for the decision shall be recorded in the record of the procurement proceedings and promptly communicated to the supplier or contractor concerned.”

Commentary

46. The provisions contain a reference to “bid” along references to “tenders, proposals, offers and quotations”. This is in the light of the draft provisions on electronic reverse auctions submitted to the Working Group for consideration at its eleventh session in document A/CN.9/WG.I/WP.51. Additional references may be

¹⁵ A/CN.9/615, para. 75.

¹⁶ Ibid., para. 73.

needed in the light of the provisions on framework agreements (see document A/CN.9/WG.I/WP.52).

47. The Working Group deferred its decision on whether any action regarding ALTs by the procuring entity should be open to review. The Working Group noted that domestic regulation of that issue might vary significantly. It was suggested that the Working Group might revert to that point when it considered review provisions.¹⁷

2. Proposed draft text for the revised Guide

48. At its tenth session, the Working Group considered the text of the Guide that would accompany provisions of the Model Law on ALTs. A number of drafting suggestions were made to that text.¹⁸

49. The revised text below reflects those suggestions. It replaces in entirety the previously proposed texts in documents A/CN.9/WG.I/WP.43/Add.1 (the text following paragraphs 13) and 40/Add.1 (the texts following paragraphs 27 and 28).

“Article [12 bis]. Rejection of abnormally low tenders, proposals, offers, quotations or bids

(1) The purpose of the article is to enable, but not to require, the procuring entity to reject abnormally low tenders, proposals, offers, quotations or bids (henceforth referred to as “abnormally low tenders”) that give rise to procuring entity’s concerns as to the ability of the supplier or contractor that submitted such an abnormally low tender to perform the procurement contract.

(2) The article does not require any approval of a higher administrative authority for the procuring entity to take measures referred to in the article. The article applies to any procurement proceedings under the Model Law, including one involving an electronic reverse auction, where risks of abnormally low tenders may be especially high.

(3) The article provides necessary safeguards that aim to protect legitimate interests of both sides: procuring entities and suppliers and contractors. On the one hand, it enables the procuring entity to address possible abnormally low tenders before a procurement contract has been concluded. From the perspective of the procuring entity, an abnormally low tender involves a risk that the contract cannot be performed, or performed at the price tendered, and additional costs and delays to the project may ensue leading to higher prices and disruption to the procurement concerned. The procuring entity should therefore take steps to avoid running such a performance risk.

(4) On the other hand, the article protects suppliers and contractors against the possibility of arbitrary decisions and abusive practices by procuring entities. The procuring entity cannot automatically reject a tender simply on the basis that the tender price appears to be abnormally low. Conferring such a right on procuring entities would introduce the possibility of abuse as tenders could be rejected for being abnormally low without justification, or on the basis of a purely subjective criterion. Such a risk is especially acute in international procurement, where an abnormally low price in one country

¹⁷ Ibid., para. 74.

¹⁸ Ibid., paras. 76-78.

might be perfectly normal in another. In addition, some prices may seem to be abnormally low if they are below cost; however, selling old stock below cost, or engaging in below cost pricing to keep a workforce occupied, subject to applicable competition regulations, might be legitimate.

(5) For these reasons, the Model Law allows the rejection of an abnormally low tender only when the procuring entity has concerns as to the ability of the supplier or contractor to perform the procurement contract. This, however, is without prejudice to any other applicable law that may require the procuring entity to reject the abnormally low tender, for example, if criminal acts (such as money-laundering) or illegal practices (such as non-compliance with minimum wage or social security obligations) are involved. In any case, proper procedures should be in place to ensure due process and prevent arbitrary decisions and abusive practices.

(6) Subparagraphs 1 (a) to (c) of the article specify the steps that the procuring entity has to take before the abnormally low tender may be rejected, to ensure due process is followed and the rights of the supplier or contractor concerned are preserved.

(7) First, a written request for clarification must be made to the supplier or contractor concerned about details of constituent elements of the submitted tender, which the procuring entity considers relevant for justification of the price submitted. Those details may include: the methods and economics of the manufacturing process for the goods or of the construction methods or of the services provided; the technical solutions chosen and/or any exceptionally favourable conditions available to the supplier or contractor for the execution of the construction or for the supply of the goods or services; or the originality of the construction, supplies or services proposed by the supplier or contractor.

(8) The enacting State may choose to regulate which type of information the procuring entity may request to submit for price justification. It should be noted in this context that the assessment is whether the price is “realistic” (that is, the price reflects market conditions and not a loss-leading or other pricing strategy with steep discounts to gain a competitive advantage), using such factors as pre-tender estimates, market prices or prices of previous contracts, where available. It might not be appropriate to request information about the underlying costs that will have been used by suppliers and contractors to determine the price itself. Since cost assessment can be cumbersome and complicated, and is also not possible in all cases, the ability of the procuring entities to assess prices on the basis of cost may be limited. In some jurisdictions, procuring entities may be barred by law from demanding information relating to cost structure, because of risks that such information could be misused.

(9) The procuring entity should take account of the response supplied by the supplier or contractor in the price assessment. The supplier’s refusal to provide information requested by the procuring entity should not give an automatic right to the procuring entity to reject the abnormally low tender. The price assessment must be carried out in any case and on a purely objective basis. It may turn out during such assessment that the abnormally low tender was submitted due to a misunderstanding or other error.

(10) If after price justification the procuring entity continues to hold concerns about the ability of the supplier or contractor to perform the procurement

contract, it must record those concerns and its reasons for holding them in the record of procurement proceedings pursuant to subparagraph (1) (c) of the article. This provision is included to ensure that before a decision to reject the abnormally low tender is made, all information relevant to that decision is properly recorded for the sake of accountability, transparency and objectivity in the process.

(11) Only after the steps outlined in subparagraphs 1 (a) to (c) have been fulfilled, may the procuring entity reject the abnormally low tender. The decision on the rejection of the abnormally low tender must be included in the record of the procurement proceedings and promptly communicated to the supplier or contractor concerned, under paragraph (2) of the article. [If the Working Group decides that an appeal against the rejection should be allowed, reference and comment would appear here]

(12) Enacting States should be aware that, apart from the measures envisaged in this article, other measures can effectively prevent the performance risks resulting from abnormally low tenders. Thoroughly evaluating suppliers' qualifications, tenders, proposals, offers, quotations or bids can play an especially important role in this context, which in turn depends on the proper formulation of qualification requirements and the precise drafting of specifications. Procuring entities should be appropriately instructed to that end, and should be aware of the needs to compile accurate and comprehensive information about the qualifications of suppliers or contractors, including information about their past performance, and to pay due attention in evaluation to all aspects of submitted tenders, proposals, offers, quotations or bids, not only to price (such as to maintenance and replacement costs where appropriate).

(13) Additional measures may include: (i) promotion of awareness of the adverse effects of abnormally low tenders; (ii) provision of training, adequate resources and information to procurement officers, including reference or market prices; and (iii) allowing for sufficient time for each stage of the procurement process. The solicitation documents or other documents for solicitation of proposals, offers, quotations or bids may include an explicit statement to the effect that the procuring entity is not obligated to accept any tender, and that a procuring entity may carry out analyses of potential performance risk and prices submitted."

I. Introduction

1. The background to the current work of Working Group I (Procurement) on the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services (the “Model Law”) (A/49/17 and Corr.1, annex I) is set out in paragraphs 5 to 65 of document A/CN.9/WG.I/WP.49, which is before the Working Group at its eleventh session. The main task of the Working Group is to update and revise the Model Law, so as to take account of recent developments, including the use of electronic reverse auctions (“ERAs”), in public procurement.

2. Such use was included in the topics before the Working Group at its sixth to tenth sessions. At its tenth session, the Working Group requested the Secretariat to revise the relevant drafting materials that it had considered at the session.¹ This note has been prepared pursuant to that request, and sets out the drafting materials on ERAs, revised to take account of the Working Group’s deliberations at its tenth session.²

II. Draft provisions to enable the use of electronic reverse auctions in public procurement under the Model Law

A. Location of draft provisions

3. At its tenth session, the Working Group agreed on a preliminary basis to include provisions stipulating the conditions for the use of ERAs in chapter II of the Model Law (which listed methods of procurement and their conditions for use). Provisions on procedural matters of ERAs, it was agreed, would be included elsewhere, such as in chapter V of the Model Law (which described procedures for alternative methods of procurement). This location, it was observed, would permit ERAs to be employed not only on a stand-alone basis, but also in conjunction with various procurement methods, such as tendering or request for quotations, and procurement techniques that may be envisaged by the revised Model Law, such as framework agreements.³

4. If the Working Group decides to keep the provisions relating to ERAs in the locations agreed to on a preliminary basis at the tenth session, the Working Group may wish to consider splitting each of the two relevant chapters into sections: the first section would deal with procurement methods while the other would deal with procurement mechanisms, such as ERAs. Consequentially, the titles of the amended chapters should include not only a reference to procurement methods but also to procurement mechanisms (the Working Group may wish to consider in due course which generic term it should apply to procurement mechanisms, such as ERAs, framework agreements, suppliers’ lists and dynamic purchasing systems, which are not procurement methods).

5. Following this approach, draft provisions on conditions for the use of ERAs are presented in article 22 bis, proposed to be included in section II of an expanded chapter II. Draft provisions on procedural aspects of ERAs are presented in draft

¹ A/CN.9/615, para. 11.

² Ibid., paras. 37 to 71.

³ Ibid., paras. 37-38, 50, 59 and 64.

articles 51 bis to 51 septies,⁴ proposed to be included in a section of an expanded chapter V.

B. Conditions for the use of electronic reverse auctions: draft article 22 bis

1. Proposed draft text for the revised Model Law

6. The draft article 22 bis below draws on the text of a draft article on conditions for the use of electronic reverse auctions that was before the Working Group at its tenth session, and reflects amendments suggested to be made thereto:⁵

“Article 22 bis. Conditions for use of electronic reverse auctions

“A procuring entity may engage in procurement by means of an electronic reverse auction in accordance with articles [51 bis to 51 septies] in the following circumstances:

[(a) Where it is feasible for the procuring entity to formulate detailed and precise specifications for the goods [or construction or, in the case of services, to identify their detailed and precise characteristics]];

(b) Where there is a competitive market of suppliers or contractors anticipated to be qualified to participate in the electronic reverse auction such that effective competition is ensured;

(c) Where the procurement concerns goods[, construction or services] that are generally available on the market[, provided that the construction or services are of a simple nature]; and

(d) Where the price is the only criterion to be used in determining the successful bid. [The procurement regulations may establish conditions for the use of electronic reverse auctions in procurement where other criteria [that can be expressed in monetary terms and can be evaluated automatically through the auction] may be used in determining the successful bid.]”

Commentary

7. Subparagraph (a) is placed in square brackets, to reflect (as noted at the Working Group’s tenth session) that text may be superfluous in the light of subparagraph (c) (compliance with the conditions of the latter, it was said, necessarily involved compliance with the requirements of subparagraph (a)).⁶ Other changes have been made to that paragraph to align it with the wording of similar provisions of the Model Law.⁷

⁴ Although the Working Group, at its tenth session, anticipated that the provisions relating to procedural aspects of ERAs, which were presented at that session in two articles (47 bis and 47 ter), would be merged in one composite article, it was not feasible to comply with that request due to the length of the provisions and distinct matters and stages of ERA that they address. *Ibid.*, paras. 48, 57 and 63.

⁵ *Ibid.*, paras. 41, 45, 51 and 52.

⁶ *Ibid.*, para. 42.

⁷ See, for example, articles 19 (1)(a) and 38 (g) of the Model Law, where the reference is made to characteristics rather than specifications, of services.

8. The references to “construction or services” throughout the text above, and the provision in subparagraph (c) linked to it, were put in square brackets as was agreed at the Working Group’s tenth session.⁸ The understanding is that the square brackets will remain in the final text and the Guide will explain that an enacting State may decide to delete the words contained in the square brackets and thus restrict the use of ERAs to procurement of goods alone.

9. With reference to the square brackets in subparagraph (d), the Working Group’s attention is drawn to the lack of common understanding in the Working Group at its tenth session as regards whether ERAs are to be used in procurement where all criteria for determining a successful bid can be expressed in monetary terms and automatically evaluated through the auction,⁹ or also in a more complex procurement, where not all award criteria are evaluated automatically through the auction. The Working Group considered allowing any type of ERAs in the long term, so long as transparency and objectivity in the process are preserved.¹⁰

10. Subparagraph (d), as drafted above, allows an enacting State: (i) to restrict the use of ERAs to procurement where price is the only award criterion; or (ii) to allow the use of ERAs in procurement where other award criteria may be used, provided that all award criteria can be quantified and automatically evaluated through the auction; or (iii) to allow ERAs in procurement where pre-auction evaluation of non-quantifiable criteria may take place. In the latter case, the results of such an evaluation are to be factored in the auction through a mathematical formula that allows automatic re-ranking of bidders on the basis of the results of the pre-auction evaluation and values presented through the auction.

11. All these options would be available to an enacting State if both pairs of square brackets remain in the final text. The Guide would provide guidance to the enacting State on each option, in particular pointing out: (i) that under the provisions ERAs are mainly intended for the use procurement where price is the only award criterion; (ii) benefits and risks arising from each option; and (iii) that the choice will depend on the experience with ERAs in any particular jurisdiction. Alternatively, particularly considering the longer-term view, some options could be excluded from the Model Law text at this stage, but discussed in the Guide as possible future additions where appropriate in the light of experience gained in the operation of ERAs.

12. Other provisions on ERAs in this note were drafted with a view of accommodating the use of ERAs in all three situations described in paragraph 10 above.

2. Proposed draft text for the revised Guide

13. At its tenth session, the Working Group made a number of suggestions for revision of the Guide text that would accompany the Model Law provisions on the conditions for the use of ERAs.¹¹ The revised text for the Guide that will reflect those suggestions as well as the suggestions made at the Working Group’s eighth and ninth sessions¹² will be prepared and presented to the Working Group at a

⁸ A/CN.9/615, para. 41 (i).

⁹ Ibid., paras. 44, 45, 51 and 55.

¹⁰ Ibid., para. 55.

¹¹ Ibid., paras. 46 and 47.

¹² For ease of reference, most of them have been listed in paragraphs 11 to 16 of document A/CN.9/WG.I/WP.48 that was before the Working Group at its tenth session.

future session, taking account of discussions of the draft article above. The new text intends to replace in entirety the texts in documents A/CN.9/WG.I/WP.40 (the text following paragraph 17) and 43 (the text following paragraph 35) that were before the Working Group at its eighth and ninth sessions, respectively.

C. Procedures in the pre-auction and auction stages: draft articles 51 bis to septies

1. Proposed draft texts for the revised Model Law

14. The following draft articles 51 bis to septies reflect, with some exceptions identified below, amendments suggested to be made to draft provisions on procedural aspects of ERAs at the Working Group's tenth session.¹³

“Article 51 bis. General provisions

An electronic reverse auction may be used as a stand-alone electronic reverse auction or in procurement by means of restricted tendering, competitive negotiation and request for quotations proceedings [or on reopening competition under a framework agreement and dynamic purchasing systems], when the procuring entity decides that the award of the procurement contract shall be preceded by an electronic reverse auction, provided that the conditions for the use of an electronic reverse auction stipulated in article 22 bis are met.”

Commentary to draft article 51 bis above

15. In the draft article, references are made to procurement methods where it may be appropriate, in the light of the conditions for the use of ERAs set out in draft article 22 bis above, and of the existing provisions of the Model Law, to use ERAs as an optional phase preceding the award of the procurement contract.

16. For instance, the requirements in draft article 22 bis (a) and (c) prevent the use of ERAs in two-stage tendering, request for proposals and the principal method for procurement of services. According to the Model Law provisions on conditions for use of those procurement methods and on their procedures, each of these procurement methods is mainly intended for use in procurement of complex goods, construction or services.¹⁴ Single-source procurement is naturally excluded from the scope of draft article 51 bis.

17. In other procurement methods, such as restricted tendering, competitive negotiation and request for quotations, the use of ERAs may be envisaged, provided that the conditions for their use set out in draft article 22 bis are met. In addition, the use of ERAs may be appropriate in framework agreements and dynamic purchasing systems upon (re)opening competition, as for example envisaged in European Union Directive 2004/18/EC, article 54 (2). Inclusion of references to these procurement mechanisms in draft article 51 bis above is indicative and without prejudice to the Working Group's deliberations on these procurement mechanisms (see A/CN.9/WG.I/WP.52 and Add.1).

¹³ A/CN.9/615, paras. 48-63 and 67.

¹⁴ See article 18 (3) and chapter IV of the Model Law as relevant to the principal method for procurement of services; and articles 19 (1), 46 and 48 of the Model Law as relevant to two-stage tendering and request for proposals.

18. No reference in draft article above is made to chapter III (Tendering proceedings). This is because one of the variations of stand-alone ERAs under draft article 51 ter below would constitute the use of ERAs in chapter III tendering proceedings.

“Article 51 ter. Pre-auction procedures in stand-alone electronic reverse auctions

(1) The procuring entity shall cause a notice of the electronic reverse auction to be published in ... (each enacting State specifies the official gazette or other official publication in which the notice is to be published).

(2) The notice shall include, at a minimum, the following:

(a) Information referred to in article 25 (1)(a), (d) and (e), and article 27 (d), (f), (h) to (j) and (t) to (y);

(b)

Alternative A

[The statement that price is the only criterion to be used by the procuring entity in determining the successful bid;]

Alternative B

[The criteria to be used by the procuring entity in determining the successful bid, provided that such criteria can be expressed in monetary terms and can be evaluated automatically through the electronic reverse auction, and, where applicable, any mathematical formula to be used in the auction that will automatically rank and re-rank suppliers or contractors participating in the auction (the “bidders”) on the basis of the values submitted through the auction;]

Alternative C

[The criteria to be used by the procuring entity in determining the successful bid and, where applicable, any mathematical formula to be used in the auction that will automatically rank and re-rank suppliers or contractors participating in the auction (the “bidders”) on the basis of the results of the pre-auction evaluation, if any, and values submitted through the auction. If not all award criteria are subject of automatic evaluation through the electronic reverse auction, in addition information about:

(i) Features, the values for which are subject of evaluation through the electronic reverse auction, provided that such features can be expressed in monetary terms and can be evaluated automatically through the auction; and

(ii) Features, the values for which are subject of evaluation before the auction and the relative weight assigned to such features in the evaluation procedure;]

(c) Whether any limitation on the number of suppliers or contractors to be invited to the auction is imposed, and if so, such number and the criteria and procedure that will be followed in selecting that number of suppliers or contractors;

- (d) Whether prequalification is required and, if so, information referred to in article 25 (2)(a) to (e);
 - (e) Whether submission of initial bids is required and, if so:
 - (i) information referred to in articles 25 (f) to (j);
 - (ii) whether initial bids are to be submitted for assessment of their responsiveness to the requirements specified in the notice of the auction or in addition for their full or partial evaluation; and
 - (iii) if evaluation is involved, procedures and criteria to be used in such evaluation;
 - (f) The [website or other electronic] address at which the electronic reverse auction will be held, and information about the electronic equipment being used and technical specifications for connection;
 - (g) The manner and, if already known, deadline by which the suppliers and contractors shall register to participate in the auction;
 - (h) If already known, the date and time of the opening and criteria governing the closing of the auction;
 - (i) If already known, whether there will be only a single stage of the auction, or multiple stages (in which case, the number of stages and the duration of each stage);
 - (j) The rules for the conduct of the electronic reverse auction;
 - (k) Unless set out in the rules for the conduct of the electronic reverse auction, the information that will be made available to the bidders in the course of the auction and, where appropriate, how and when it will be made available; and
 - (l) Unless set out in the rules for the conduct of the electronic reverse auction, the conditions under which the bidders will be able to bid and, in particular, any minimum differences in price or other features that must be improved in any new submission during the auction.
- (3) Except as provided for in paragraphs (4) to (6) of this article, the notice of the electronic reverse auction shall serve as an invitation to participate in the auction and shall be complete in all respects, including as regards information specified in paragraph (7) of this article.
- (4) Where a limitation on the number of suppliers or contractors to be invited to the auction is imposed, the procuring entity shall:
- (a) Select suppliers or contractors corresponding to the number and in accordance with the criteria and procedure specified in the notice of the electronic reverse auction; and
 - (b) Send an invitation to prequalify or to submit initial bids or to participate in the auction, as the case may be, individually and simultaneously to each selected supplier or contractor.
- (5) Where prequalification is required, the procuring entity shall:
- (a) Prequalify suppliers or contractors in accordance with article 7; and

(b) Send an invitation to submit initial bids or to participate in the auction, as the case may be, individually and simultaneously to each prequalified supplier or contractor.

(6) Where submission of the initial bids is required, the procuring entity shall:

(a) Include in the solicitation documents information referred to in article 27 (a), (k) to (s) and (z) of this Law;

(b) Solicit and examine initial bids in accordance with articles 26, 28 to 32, 33 (1) and 34 (1) of this Law;

(c) As specified in the notice of the electronic reverse auction, assess responsiveness of initial bids to all requirements set out in the notice of the electronic reverse auction in accordance with article 34 (2) or in addition carry out full or partial evaluation of initial bids in accordance with the procedures and criteria set out in the notice of the electronic reverse auction; and

(d) Send an invitation to participate in the auction individually and simultaneously to each supplier or contractor except for those whose bid has been rejected in accordance with article 34 (3). Where evaluation of initial bids took place, the invitation shall be accompanied by the information on the outcome of such evaluation, including any ranking assigned to each supplier or contractor concerned.

(7) Unless already provided in the notice of the electronic reverse auction, the invitation to participate in the auction shall set out:

(a) The manner and deadline by which the invited suppliers and contractors shall register to participate in the auction;

(b) The date and time of the opening and criteria governing the closing of the auction;

(c) The requirements for registration and identification of bidders at the opening of the auction;

(d) Information concerning individual connection to the electronic equipment being used; and

(e) All other information concerning the electronic reverse auction necessary to enable the supplier or contractor to participate in the auction.

(8) The fact of the registration to participate in the auction shall be promptly confirmed individually to each registered supplier or contractor.

(9) The auction shall not take place before expiry of [two] working days after the notice of the electronic reverse auction has been issued or, where invitations to participate in the auction are sent, from the date of sending the invitations to all suppliers or contractors concerned.”

Commentary to draft article 51 ter above*General comments*

19. The text above has been drafted to allow the use of stand-alone ERAs in different situations envisaged in draft article 22 bis (d) above.

20. Some provisions are tailored for simple ERAs, where only price or in addition other quantifiable features are used as award criteria to be evaluated automatically through the auction. Other provisions are tailored for more complex ERAs where some award criteria are to be evaluated before the auction.

21. The draft article envisages that the procuring entity may request the submission of initial bids. In simple ERAs, this may be necessary to assess responsiveness of bids to the requirements set out in the notice of the ERA. In more complex ERAs, this will be necessary for pre-auction evaluation, full or partial, during which initial bids are not only checked against the requirements set out in the notice of ERA but they are also compared with each other.

22. In both simple and complex ERAs, pre-selection and/or prequalification may be involved. When no pre-selection is involved, the procuring entity invites all suppliers or contractors who expressed interest to participate in the auction directly to the ERA or to prequalify or to submit initial bids, as the case may be.

23. When a large number of suppliers or contractors is anticipated to express interest to participate in the ERA, the procuring entity may for justified reasons, such as limited system capacity, restrict the number of suppliers or contractors who will be invited to proceed to the next stage of the ERA. The draft article requires that the procuring entity should specify in the notice any restrictions on the number, the number of suppliers or contractors to be pre-selected and any pre-selection criteria and procedure (such as first fifty who expressed interest).

24. The draft article allows but does not require prequalification. As is the practice in some jurisdictions, the procuring entity may choose to hold post-auction evaluation of qualifications of only the supplier or contractor who submits the successful bid.

Paragraph (1)

25. The Working Group may wish to decide whether the suggested wording should be replaced by the wording of, or a cross-reference to, article 24, which requires wider publicity of a solicitation notice.

Paragraph (2)

26. The cross-references in subparagraph 2 (a) are to those provisions of articles 25 and 27 that refer to information that will have to be included in the notice on the ERA regardless of whether pre-selection, prequalification or submission of initial bids is required. Specific information to be included in the notice on the ERA where pre-selection, prequalification or the submission of initial bids is required is set out in subparagraphs (c) to (e) above, respectively.

27. The alternatives in subparagraph (b) reflect changes made to the conditions for the use of ERAs in draft article 22 bis, subparagraph (d), above. Alternative A covers situations where the successful bid is determined exclusively on the basis of the price. Alternative B covers situations where price and other criteria that can be expressed in monetary terms and automatically evaluated through the auction, such

as delivery time, can be used in determining the successful bid. Alternative C covers the broadest situations where any criteria can be used in determining the successful bid.

28. The Working Group may wish to consider defining in subparagraph (b) suppliers or contractors participating in the auction as “bidders”, and use this term consistently in subsequent provisions according to the context, as was done above.

29. Subparagraphs (f) to (l) are based on the relevant provisions that were before the Working Group at its tenth session and reflect drafting suggestions proposed to those provisions at that session.¹⁵ The Working Group deferred its decision on whether in subparagraph (f) the reference should be to the address or to the website or other electronic address.¹⁶

30. Subparagraphs (g) to (i) include the qualifier phrase “if already known”. These words were included to indicate that some type of information may not be known at the time of a notice of the ERA, especially if prequalification or assessment or evaluation of initial bids is involved.

Paragraph (3)

31. The paragraph is new. It intends to cover situations where no pre-selection, prequalification or pre-auction assessment or evaluation of initial bids is involved. In such case, a notice of the ERA has to serve as an invitation to participate in the auction and therefore has to be complete in all relevant respects to enable suppliers or contractors to participate in the auction.

Paragraph (4)

Paragraph (4) is also new and was included to address pre-selection procedures. It supplements paragraph 2 (c).

Paragraphs (5), (6) and (7)

32. The paragraphs are based on the relevant provisions that were before the Working Group at its tenth session.¹⁷

Paragraphs (8) and (9)

33. The paragraphs are new. Paragraph (8) provides suppliers or contractors with the means to learn that they would indeed be considered as registered and therefore have access right to the system at the time the auction opens.

34. Paragraph (9) intends to ensure that: (i) when invitations to participate in the auction are sent, interested suppliers will have sufficient time to receive such invitation, subsequently properly to connect themselves to the system, to comply with other technical requirements to participate in the auction and to report any problems to the procuring entity; and (ii) when the notice of the ERA serves as invitation to participate in the ERA, interested suppliers will have sufficient time not only to comply with connection and other technical requirements to participate in the auction but also to prepare and submit responsive bids during the auction. The two-day requirement is taken from the European Union Directive 2004/18/EC,

¹⁵ A/CN.9/615, para. 67 under (ii), (iii) and (v).

¹⁶ Ibid., para. 67 (ii).

¹⁷ Ibid., the text of article 47 bis following para. 53, paras. 3 to 6.

article 54 (4), second paragraph. The Working Group may wish to decide that instead of fixing any time frame in numbers, the provision should contain the requirement of “[adequate/reasonable] time which is sufficiently long to allow suppliers or contractors to prepare for the auction.” This would be consistent with the approach taken, for example, in article 30 of the Model Law where the reference is made to “reasonable time”, and would be sufficiently flexible to accommodate different situations in practice.

“Article 51 quater. Pre-auction procedures in procurement by means of restricted tendering, competitive negotiation or request for quotations

(1) When the procuring entity decides that the award of the procurement contract in procurement by means of restricted tendering, competitive negotiation or request for quotations shall be preceded by an electronic reverse auction, the procuring entity when first soliciting the participation of suppliers or contractors in the procurement proceedings shall state that fact and provide information referred to in article 51 ter (2)(b) and (f) to (l).

(2) The provisions of this Law applicable to the relevant procurement proceedings shall regulate procedures preceding the electronic reverse auction in the procurement proceedings concerned.

(3) The procuring entity shall send an invitation to participate in the auction individually and simultaneously to each supplier or contractor admitted to participate in the auction.

(4) Unless already provided when first soliciting the participation of suppliers or contractors in the procurement proceedings, the invitation to participate in the auction shall set out all information referred to in article 51 ter (7).

(5) The fact of the registration to participate in the auction shall be promptly confirmed individually to each registered supplier or contractor.

(6) The auction shall not take place before expiry of [two] working days after invitations to participate in the auction have been sent to all suppliers or contractors admitted to participate in the auction.”

Commentary to article 51 quater above

35. Since ERA under draft article 51 quater is an optional phase in the referred procurement methods, all stages up to the auction itself, including solicitation mechanisms, submission of tenders, offers or quotations, their evaluation, if any, and admission of suppliers or contractors to the auction, will be regulated by the applicable provisions of the Model Law. Paragraph (2) contains cross-references to those provisions of the Model Law.

36. Provisions in paragraphs (1) and (3) to (6) intend to accommodate the use of ERAs in those procurement proceedings. Paragraph (1) requires disclosing at the beginning of the procurement proceedings the fact that ERA will be held and other information relevant to ERA, which is the same as listed in article 51 ter (2)(b) and (f) to (l). To avoid repetitive listing, an appropriate cross-reference to draft article 51 ter has been inserted. Provisions of paragraphs (4) to (6) above correspond in the relevant parts to the provisions of paragraphs (7) to (9) of draft article 51 ter.

37. No provisions have been drafted on the use of ERAs in framework agreements or other procurement mechanisms, pending the Working Group's consideration of the relevant topics.

“Article 51 quinquies. Requirement of effective competition

(1) The procuring entity shall ensure that the number of suppliers or contractors invited to participate in the auction in accordance with articles 51 ter (4) to (6) and article 51 quater (3) is sufficient to secure effective competition.

(2) If the number of suppliers or contractors registered to participate in the auction is in the opinion of the procuring entity insufficient to ensure effective competition, the procuring entity [shall] withdraw the electronic reverse auction.”

Commentary to article 51 quinquies above

38. The draft article is based on the provisions that were before the Working Group at its previous sessions as amended at the tenth session.¹⁸ In paragraph (2), the words “the number of suppliers or contractors registered to participate in the auction” replaced the previous wording “the number of suppliers or contractors at any time before the opening of the auction”, which was very broad.

39. The purpose of the draft article as revised is to ensure that the procuring entity keeps in mind the requirement of effective competition (see draft article 22 bis (b) above) at the stage of issuing invitations to participate in the auction, where applicable, and after a deadline for the registration to participate in the auction has expired, when it has a number of suppliers or contractors registered to participate in the auction.

40. In accordance with paragraph (2) of the draft article, the procuring entity's decision to withdraw the auction for the reasons that no effective competition can be ensured has to be based not on the number of invited suppliers or contractors but on the number of suppliers or contractors registered to participate in the auction. This requirement is especially relevant where suppliers or contractors are invited to participate in the auction through the notice of the electronic reverse auction in accordance with draft article 51 ter (3): paragraph (1) of draft article 51 quinquies in such case is not applicable because no separate invitations to participate in the auction are issued.

41. In paragraph (2), the word “shall” is in square brackets, for further consideration by the Working Group. At the tenth session of the Working Group, it was noted that an approach of requiring withdrawal of the auction was too prescriptive compared with a more flexible approach taken in some jurisdictions.¹⁹

“Article 51 sexies. Requirements during the auction

(1) During an electronic reverse auction:

(a) All bidders shall have an equal and continuous opportunity to submit their bids;

(b) There shall be automatic evaluation of all bids;

¹⁸ Ibid., para. 52, under (viii), and para. 53, article 47 bis (7).

¹⁹ Ibid., para. 52, under (viii).

(c) The [results of the auction/ranking of the bidders] [according to the pre-disclosed formula] must instantaneously be communicated on a continuous basis to all bidders;

(d) There shall be no communication between the procuring entity and the bidders, other than as provided for in paragraphs 1 (a) and (c) above.

(2) The procuring entity shall not disclose the identity of any bidder [until the auction has closed]. [Articles 33 (2) and (3) shall not apply to a procedure involving an electronic reverse auction].

(3) The auction shall be closed in accordance with the criteria specified in the notice of the electronic reverse auction or in the invitation to participate in the auction, as the case may be.

(4) [The procuring entity may suspend or terminate the electronic reverse auction in the case of system or communications failures.]”

Commentary to article 51 *sexies* above

42. The draft article is based on the provisions that were before the Working Group at its previous sessions as amended at the tenth session.²⁰

Paragraph (1)

43. In paragraph 1 (a), the words “submit their bids” replaced the words “revise their tenders in respect of those features presented through the auction process”. It is suggested as being broader and more accurate to cover various situations, including where no revision of bids through ERA takes place as no initial bids are submitted.

44. Subparagraph (c) has been put in the passive to reflect situations when third parties on behalf of the procuring entity manage ERAs.²¹ As regards the wording in the first pair of square brackets in that subparagraph, the Working Group decided to consider at its next session whether the reference should be to “the results” of the ERA or to “the ranking” of the bidders.²² The latter seems to be more accurate as the reference to the results is more appropriate in the context of final results at the closing of the auction.

45. The second pair of the square brackets in subparagraph (c) has been inserted by the Secretariat to indicate that the reference to a formula will not be appropriate in all cases. In a simple ERA, where the price is the only award criterion, no formula exists. The Working Group may consider deleting these words as being superfluous in the light of the provisions of article 51 *ter* (2)(b) and through a cross-reference in article 51 *quater* (1).

46. The Working Group may wish to consider replacing subparagraph (c) with the following wording that draws on the provisions of the European Union Directive 2004/18/EC, article 54, paragraph 6: “Sufficient information to enable the bidders to ascertain their relative ranking at any moment must instantaneously be communicated on a continuous basis to all bidders.”

²⁰ Ibid., paras. 57-63.

²¹ The previous wording was “Procuring entities must instantaneously communicate [the result] of the auction according to the pre-disclosed formula to all bidders on a continuous basis during the auction”. See *ibid.*, para. 62, article 47 *ter* (1)(b).

²² Ibid., para. 63.

Paragraph (2)

47. As regards the wording in the first square brackets in paragraph (2), the Working Group, at its tenth session, decided to consider at a future session whether to require that the anonymity of the bidders should be preserved after the closure of the auction.²³

48. As regards the wording in the second pair of square brackets in that paragraph, the Working Group decided at its tenth session that it would revisit at a future session the issue of whether the references to articles 33 (2) and (3)²⁴ should appear in that paragraph, or be replaced with language that would reflect more clearly the use of ERAs.²⁵ The Working Group may wish to consider that, in the absence of a cross-reference to article 33 (2) and (3) in draft articles above, provisions of article 33 (2) and (3) will not apply to ERAs in any case and therefore these words may be superfluous and should be deleted.

Paragraph (4)

49. The entire paragraph (4) was put in the square brackets pending the determination by the Working Group of whether to retain the provision and, if so, what its contents should be, so as to capture only those events that would justify the suspension or termination of an ERA.²⁶ In this connection, the Working Group may wish to note that suspension of ERAs may be needed in the case of the price justification if an abnormally low bid is submitted (see A/CN.9/WG.I/WP.50, paragraphs 43-49). In addition, article 56 of the Model Law provides for seven-day suspension of procurement proceedings in the case of the submission of complaints. This duration may be excessive and require reconsideration in the context of ERAs.

“Article 51 septies. Award of the procurement contract on the basis of the results of the electronic reverse auction

(1) The procurement contract shall be awarded to the bidder that, at the closure of the auction, submitted the bid with the lowest price or is ranked first, as applicable, except:

- (a) When such bidder fails to:
 - (i) Demonstrate its qualifications in accordance with article 6 when required to do so; or
 - (ii) Sign a written procurement contract if required to do so; or
 - (iii) Provide any required security for the performance of the procurement contract; and
- (b) In the circumstances referred to in articles 12, [12 bis] and 15.

(2) In the circumstances referred to in paragraph 1 (a) and (b) of this article, and subject to the right of the procuring entity, in accordance with

²³ Ibid., para. 60.

²⁴ The provisions of paragraph (2) of the article refer to the presence of suppliers or contractors that have submitted tenders, or their representatives, at the opening of tenders. They are being revised in the light of electronic means of communication (see A/CN.9/WG.I/WP.50, paras. 30 and 31). The provisions of paragraph (3) refer inter alia to the public announcement of the name and address of each supplier or contractor whose tender is opened and the tender price.

²⁵ A/CN.9/615, para. 61 (iii), the second part.

²⁶ Ibid., para. 61, under (iv).

article 12 (1) of this Law, to reject all remaining bids, the procuring entity may:

- (a) Hold another auction under the same procurement proceedings; or
 - (b) Announce new procurement proceedings; or
 - (c) Award the procurement contract to the bidder that, at the closure of the auction, submitted the bid with the second lowest price or is ranked second, as applicable.
- (3) Notice of acceptance of the bid shall be given promptly to the bidder that submitted the accepted bid [as well as to other bidders specifying the name and address of the bidder whose bid has been accepted and the bid price].”

Commentary to article 51 septies above

50. The draft article is based on the provisions that were before the Working Group at its previous sessions as amended at the tenth session (see, however, paragraphs 55-56 below).²⁷ The revisions have been made to streamline the text and align some of its provisions with similar provisions of the Model Law, such as those found in articles 34 (7) and 36 (5).

Paragraph (1)

51. Paragraph (1) of the draft text above intends to indicate that the auction must be the final stage in the procurement proceedings under the Model Law, after which no evaluation of bids can take place.²⁸ Therefore, as a general rule, the results of the auction must be final and binding upon the procuring entity and the lowest price obtained through the auction must figure in the procurement contract.

52. Exceptions to this rule are provided in subparagraphs (a) and (b). They were drafted on the basis of articles 34 (3)(a) and (d), 34 (7) and 36 (1) and (5) of the Model Law.

53. The reference in subparagraph (b) to article 12 bis is to draft provisions on abnormally low tenders, proposals, offers, quotations or bids, which are proposed to the Working Group at its eleventh session as draft article 12 bis (see document A/CN.9/WG.I/WP.50, the text following paragraph 45. The provisions of draft article 12 bis there enable the procuring entity to reject an abnormally low bid under some conditions).

54. The reference in the same subparagraph to article 15 is to the provisions of the Model Law that allow the procuring entity to reject the tender on the basis of inducements from suppliers or contractors. It corresponds to the reference found in article 34 (3)(d). In the light of the Working Group’s decision to strengthen anti-corruption provisions and regulate conflict of interests in the Model Law, provisions of article 15 may be expanded.

Paragraph (2)

55. At the Working Group’s tenth session, it was suggested that the procuring entity might not award a procurement contract to another bidder of the same auction if it decides that conditions prevent it from awarding the contract to the successful

²⁷ Ibid., para. 62, article 47 ter (5) and (6).

²⁸ Ibid., para. 55 (ii).

bidder. It was suggested that in such case, the procuring entity must cancel the results of the auction and may hold a new auction under the same procurement proceedings or announce new procurement proceedings.²⁹

56. Such prescriptive provisions may have disruptive and costly effects on the procurement proceedings. Paragraph (2) above was drafted in a more flexible manner to allow various options at the discretion of the procuring entity. Risks of each option may be explained in the Guide.

Paragraph (3)

57. Paragraph (3) is new and draws on article 36 (1) and (6) of the Model Law. The provisions in square brackets depend on the Working Group's decision on whether anonymity of bidders must be preserved after the auction (see draft article 51 *sexies* (2) and paragraph 47 above).

2. Proposed draft text for the revised Guide

58. The draft text for the Guide to accompany provisions of the Model Law on the procedural aspects of ERAs was presented by the Secretariat to the Working Group at its eighth session in document A/CN.9/WG.I/WP.40 (the text following paragraphs 25 and 35). At that and subsequent sessions, the Working Group did not consider the suggested text in the light of the revisions made to the draft articles on ERAs, which necessitated consequential changes to that text.

59. The new text for the Guide, which will replace in entirety the previously proposed text, will be prepared and presented to the Working Group at a future session, taking account of the Working Group consideration of the draft articles above.

D. Consequential changes to other provisions of the Model Law

1. Previously suggested changes to provisions of chapter III "Tendering proceedings" (articles 27, 31, 32 and 34)

60. In compliance with the Working Group's understanding at its tenth session that ERAs could be used not only in tendering but also in other procurement methods and as a stand-alone ERA,³⁰ this note does not suggest making changes to articles 27, 31, 32 and 34 of the Model Law applicable to tendering proceedings, and to the accompanying provisions of the Guide. Instead, the issues considered in conjunction with those articles have been addressed in articles 51 *bis* to *septies* above as follows:

Contents of solicitation documents (article 27)

61. The suggested changes to article 27 have been incorporated in draft article 51 *ter* above and by cross-reference in draft article 51 *quater*.

²⁹ Ibid., paras. 61 under (vi) and 62 article 47 *ter* (6).

³⁰ Ibid., paras. 37, 50, 59 and 64.

Period of effectiveness of tenders; modification and withdrawal of tenders (article 31)

62. At its tenth session, the Working Group decided to look at a future session into the question of how and when bids in the context of ERAs could be modified or withdrawn.³¹ Currently, the Model Law regulates the subject explicitly only in the context of tendering proceedings (article 31).

63. Draft article 51 ter (6), which deals with situations where ERA is preceded by assessment or evaluation of initial bids, incorporates provisions of article 31 by cross-reference. The Working Group may wish to consider whether the provisions of article 31 should be extended to offers in competitive negotiations and to quotations in request of quotations proceedings when ERAs are used under article 51 quater. Currently, the Model Law does not regulate the subject in the context of those procurement proceedings (see articles 49 and 50).

Tender securities (article 32 of the Model Law)

64. At its tenth session, the Working Group noted that tender securities were not often used in the specific context of ERAs. Views differed as to whether the Guide should discourage requiring tender securities in the context of ERAs, or whether a more flexible approach would be desirable (in that requiring a tender security could serve as a disincentive to withdraw the bid before the opening of the auction).³² At the eighth session, it was suggested that the Guide should note that practices might continue to evolve, as more relevant experience was accumulated.³³

65. Currently, the Model Law regulates the subject explicitly only in the context of tendering proceedings (article 32). Draft article 51 ter (6) above, which, as already noted, deals with situations where ERA is preceded by assessment or evaluation of initial bids, incorporates provisions of article 32 by cross-reference. If the Working Group decides to envisage explicitly that tender securities could be required in other cases, a cross-reference to article 27 (1) should be added to draft article 51 ter (2)(a) above.

Examination, evaluation and comparison of tenders (article 34)

66. At its tenth session, the Working Group agreed that the following wording would be considered at a future session as a change to the current article 34 (1)(a): “No change in a matter of substance in the initial tender, including changes in price, shall be sought, offered or permitted, except during the auction itself”. That wording would ensure, it was said at that session, that changes to tenders in ERAs would be permitted only during the auction phase itself, and would avoid giving the impression that changes could be made during the auction phase to make unresponsive tenders responsive.³⁴

67. Since article 34 is applicable to tendering proceedings alone, the Working Group may wish to reconsider amending this article because such amendment would be necessitated solely by the distinct features of ERAs. The Working Group may consider that a cross-reference to article 34 (1) in the context of assessment or

³¹ Ibid., para. 65.

³² Ibid., para. 69.

³³ A/CN.9/590, para. 100.

³⁴ A/CN.9/615, para. 71.

evaluation of initial bids in draft article 51 ter (6) above, and possibly additional explanation in the Guide, would sufficiently cover the point.

2. Record of procurement proceedings (article 11 of the Model Law)

68. At its tenth session, the Working Group decided to revisit the question of what information should be reflected in the record of procurement in conjunction with the use of ERAs.³⁵ The following proposed addition to article 11 of the Model Law was before the Working Group at its previous sessions:³⁶

“Article 11. Record of procurement proceedings

(1) The procuring entity shall maintain a record of the procurement proceedings containing, at a minimum, the following information:

...

[new paragraph] “In procurement proceedings involving the use of electronic reverse auctions pursuant to [article 22 bis], a statement to that effect.”

69. The location of the provisions on ERAs in article 11 is to be considered in conjunction with the Working Group decision on what information should be reflected in the record of procurement proceedings in the context of ERAs, and in the light of the Working Group’s decision at the tenth session that ERAs can be used not only in tendering proceedings.

³⁵ Ibid., para. 65.

³⁶ A/CN.9/WG.I/WP.43, para. 59, and A/CN.9/WG.I/WP.40/Add.1, para. 3.

I. Introduction

1. The background to the current work of Working Group I (Procurement) on the revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services (the “Model Law”) (A/49/17 and Corr.1, annex I) is set out in paragraphs 5 to 65 of document A/CN.9/WG.I/WP.49, which is before the Working Group at its eleventh session. The main task of the Working Group is to update and revise the Model Law, so as to take account of recent developments, including the use of framework agreements, in public procurement.

2. Such use was included in the topics before the Working Group at its sixth to tenth sessions. At its tenth session, the Working Group requested the Secretariat to prepare drafting materials for consideration at the eleventh session, in the form of

broad enabling provisions that would accommodate any type of framework agreements. This note has been prepared pursuant to that request.¹

3. This note and addendum thereto draw on the consideration of framework agreements and dynamic purchasing systems set out in A/CN.9/WG.I/WP.44 and Add.1, and should be read together with those documents. Section II of this note sets out draft provisions for the use of framework agreements. Section III sets out draft provisions for the use of dynamic purchasing systems. Section IV sets out some considerations for consequential changes to the existing provisions of the Model Law to accommodate the use of framework agreements and dynamic purchasing systems. For sections III and IV, see the addendum A/CN.9/WG.I/WP.52/Add.1.

4. It is recalled that a framework agreement is a transaction to secure the supply of a product or service over a period of time. Further details are set out in paragraphs 3-6 of A/CN.9/WG.I/WP.44. It is also recalled that a dynamic purchasing system, as referred to in the European Union procurement directives,² is a totally electronic process permitted for making commonly used purchases. Further details are set out in paragraph 35 of A/CN.9/WG.I/WP.44/Add.1.

II. Draft provisions to enable the use of framework agreements in public procurement under the Model Law

A. Terminology

5. Questions of terminology and interpretation of terms are addressed in paragraphs 7-9 of A/CN.9/WG.I/WP.44. The Working Group is requested to consider the name that the Model Law should use to refer to “framework agreements” (that is the term used in the English language version of the European Union Procurement Directives,³ and in some domestic systems). Alternatives considered in the paragraphs referred to above include terms that are not closely identified with any particular system such as “periodic purchase arrangement”, “recurrent purchase arrangement”, “periodic requirements arrangement” or “periodic supply vehicle”. Pending a decision on this question, and consistent with previous notes on the topic, this note will refer to “framework agreements”.

¹ A/CN.9/615, paras. 11 and 79 to 81. The Working Group noted in addition that the main issues of substance to be considered include whether specifications can be altered within the operation of the framework agreements, and whether suppliers not parties to the original framework agreement could join it after the conclusion of the master contract.

² Directive 2004/17/EC of the European Parliament and of the Council of 31 March 2004 coordinating the procurement procedures of entities operating in the water, energy, transport and postal services sectors, and Directive 2004/18/EC of the European Parliament and of the Council of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts, both available as of the date of this note at http://ec.europa.eu/internal_market/publicprocurement/legislation_en.htm.

³ Ibid.

B. Scope of the draft provisions and approach to drafting

6. This section addresses two models of framework agreements:

(a) “Model 1” framework agreements, which are very similar to traditional procurement contracts. They can be concluded with one or more suppliers or contractors, and establish the specification for the procurement and all the terms and conditions of the procurement. Purchase orders are placed under them on the basis of those specifications and fixed terms and conditions of the procurement without any further evaluation or competition. Thus the only difference of this type of framework agreements as compared with traditional procurement contracts is that the items are procured in batches, under purchase orders, over a period of time; and

(b) “Model 2” framework agreements are agreements concluded with more than one supplier or contractor (the first stage of the procurement), which set out the specification for the procurement, and the main terms of the procurement. They may leave some terms of the procurement undecided or subject them to further evaluation (these terms could include price, and normally include quantities and delivery times). A further evaluation or competition among the suppliers or contractors that are parties to the framework agreement is required to select the suppliers or contractors to fulfil each purchase order placed under the framework agreement (the second stage of the procurement). Although in theory framework agreements of this type could also be concluded with one supplier that would be invited to improve its offer for a particular purchase order, commentators have indicated that the risk of abuse is significant and therefore single-supplier framework agreements of this type have not been provided for in this note.

7. In the draft provisions contained in this section, it is the purchase orders issued under both Models of framework agreements, and not the framework agreements themselves, that constitute procurement contracts.^{4, 5} This approach allows the regulation of both Models in a single set of provisions (see subsection D below) and thus achieves:

(a) Consistency in regulation and avoidance of repetitive listing of some considerations that are applicable to both Models; and

⁴ The requirements for the formation of a binding contract are outside the scope of the Model Law. Nevertheless, article 2 (g) of the Model Law provides the following definition of the procurement contract: “‘Procurement contract’ means a contract between the procuring entity and a supplier or contractor resulting from procurement proceedings.” Other provisions of the Model Law (see in particular articles 34 and 36) indicate that only when all terms and conditions are set and the suppliers are selected can a procurement contract come into force. Therefore, Model 1 framework agreements could (and perhaps should) be construed as procurement contracts as defined in article 2 (g) of the Model Law and within the terms of current article 36 (1) and (4). As regards Model 2 framework agreements, although it is not precluded in some jurisdictions that an agreement without all terms fixed could be construed as a contract, under the Model Law, Model 2 framework agreements, which subject some or all terms and conditions to further evaluation, are not procurement contracts *strictu sensu*.

⁵ If framework agreements are treated as procurement contracts, the issue of purchase orders would fall under the contract administration stage and thus outside the scope of the Model Law. The Working Group, at its previous sessions, considered whether the scope of the Model Law should be expanded to cover also contract administration stage. No consensus has been reached on that issue; however, the prevailing view has been so far that such an expansion would be undesirable. See A/CN.9/590, para. 13, and A/CN.9/595, paras. 80-86.

(b) The continuing application of the Model Law's transparency and objectivity provisions, and of other safeguards, until the placement of the purchase orders, i.e., for all phases up to the award of procurement contracts based on the framework agreement.

8. This approach also alleviates the need to amend a number of provisions throughout the Model Law so as to accommodate framework agreements within existing procurement methods. The relevant provisions of the existing Model Law are made applicable to framework agreements through cross-references. Where necessary, derogations from those provisions are provided for. For an alternative approach to drafting, see subsection E below.

C. Location of the draft provisions

9. Pending the Working Group's consideration of the structure of the revised Model Law, and as to whether framework agreements could result from procurement proceedings by means of any procurement method envisaged under the Model Law, the provisions for framework agreements are presented in this note as three draft articles to be included in a composite draft section on framework agreements, located in Chapter V (following the procedures for the conduct of electronic reverse auctions).⁶ The draft articles will be finally numbered once the structure of Chapter V is finalized.

D. Proposed draft text for the revised Model Law — Models 1 and 2 framework agreements

10. The Working Group may wish to recall its request to the Secretariat that the provisions be drafted so as to provide appropriate safeguards including as against collusion and anti-competitiveness.⁷ The Working Group may also wish to consider the observations of commentators that true competition when issuing purchase orders under a Model 2 framework agreement may be difficult to achieve.⁸ Therefore, the draft provisions below draw on systems for Model 2 framework agreements that envisage the competition at both stages of the procurement proceedings, i.e. for the conclusion of the framework agreement and for the award of procurement contracts under the framework agreement,⁹ rather than on systems that envisage the main competition at the second stage, without any meaningful competition at the first stage (i.e. for conclusion of a framework agreement itself). Also recalling that there may be risks to competition in operating a framework agreement for an extended period of time, the provisions draw on systems that limit their duration.¹⁰ The main sources are therefore the European Union public

⁶ The Working Group may consider that framework agreements are techniques that can be applied in various procurement methods, rather than a procurement method per se. This consideration applies also to electronic reverse auctions (see A/CN.9/WG.I/WP.51, paras. 3-5).

⁷ A/CN.9/615, para. 81.

⁸ See, further, A/CN.9/WG.I/WP.44/Add.1, paras. 41 and 42.

⁹ In Model 1 framework agreements, there is no further competition after the first stage between the suppliers or contractors, but the procuring entity is obliged to select the tender or other submission that is the lowest price or lowest evaluated tender or equivalent at the second stage.

¹⁰ See, further, A/CN.9/WG.I/WP.44, paras. 16 and 17.

procurement directive 2004/18/EC (articles 1 (5) and 32) (hereinafter “the EU Procurement Directive”), and the applicable provisions of the current Model Law:

“Section [...]. Framework agreements

Article [51 octies]. General provisions

(1) A procuring entity may enter into a framework agreement with one or more suppliers or contractors [, the aggregate value of which is anticipated to exceed [*the enacting State includes a minimum amount*] [but not to exceed [*the enacting State includes a maximum amount*] [the amount set out in the procurement regulations]].

(2) A framework agreement shall set out the terms and conditions upon which suppliers or contractors are to supply the goods, construction and services, and the procedures for the award of procurement contracts under the framework agreement. A framework agreement is not a procurement contract within the meaning of article 2 (g) of this Law.

(3) If the terms and conditions of the framework agreement provide for a competitive procedure for the award of procurement contracts under the framework agreement, the procuring entity shall ensure that the number of suppliers or contractors that are parties to the framework agreement is sufficient to secure effective competition when procurement contracts under the framework agreement are awarded.

(4) A framework agreement shall be concluded for a given duration, which is not to exceed [...] years [, save in exceptional cases, by reference to the goods, services or construction procured under the framework agreement, for no longer than [...] years. The procuring entity shall include in the record required under article 11 of this Law a statement of the grounds and circumstances on which it relied to justify [the extension of the duration of the framework agreement] [the longer duration of the framework agreement.]]

Commentary and issues for discussion in the Guide to Enactment

Paragraph (1)

Joint purchasing

11. To enable a procuring entity to group its procurement requirements to take advantage of bulk purchasing discounts, either by procuring together with other procuring entities or through a central purchasing entity,¹¹ the definition of a procuring entity in article 2 (b) of the Model Law needs to be amended. The amended wording is suggested below:

¹¹ This would also allow for the entity concluding a framework agreement not to be the procuring entity awarding the procurement contracts based on that framework agreement (for example, in the case of the purchase of school books from publishers selected by an education ministry, followed by purchases made by the schools districts or schools themselves, or a similar structure for pharmaceutical products for hospitals).

“‘Procuring entity’ means:

Option I

Any governmental department, agency, organ or other unit, or any subdivision thereof, in this State that engages in procurement, either alone, together with other procuring entities [or through [an enacting State may insert a reference here to a central purchasing entity]], except ...;

(and)

Option II

Any department, agency, organ or other unit, or any subdivision thereof, of the (“Government” or other term used to refer to the national Government of the enacting State) that engages in procurement, either alone, together with other procuring entities [or through [an enacting State may insert a reference here to a centralized purchasing entity]], except ...;

Conditions for the use of framework agreements

12. Paragraph (1) includes optional text for the enacting State to specify the minimum and maximum anticipated size of procurement for which framework agreements may be suitable, either in the Model Law text or in regulations. Alternatively, the issue could be addressed in the Guide to Enactment. The Working Group may wish to consider whether such a provision is desirable (to promote cost-effectiveness and avoid over- or inappropriate use of the procedure) together with the question of which procurement methods should be permitted to lead to a framework agreement, as discussed in paragraphs 18 and 19 below.¹²

13. The Working Group may also wish to consider that the Guide should elaborate on the effective and appropriate use of framework agreements, perhaps including a list of generic procurement that would be suitable for procurement in this fashion and some case studies. Framework agreements may be less suitable for large investment or capital contracts, for very technical or complex items, and more complex services procurement, topics that could also be discussed in the Guide.

Paragraph (2)

14. The wording complies with the approach to drafting explained in paragraph 7 above.¹³ The provisions in this and subsequent articles according to the context refer to the award of procurement contracts under both Model 1 and Model 2 framework agreements.

Paragraph (3)

15. The text reflects the practice that framework agreements are commonly concluded with more than one supplier. To ensure effective competition, the Working Group may consider that a Model 2 framework agreement should be awarded to a minimum number of suppliers. The EU Procurement Directive requires the equivalent minimum number to be three. Alternatively, and considering that the

¹² If the Working Group considers that a minimum and maximum estimated amount for purchases for the use of a framework agreement should be included, the question of price inflation could also be addressed, through the provision of an index or similar calculation mechanism.

¹³ See also footnote 4, *supra*.

risk of collusion among low numbers of suppliers may exist, the Working Group may wish to consider a more general requirement set out in the draft article above to ensure effective competition, consistent with the approach taken in drafting similar provisions related to electronic reverse auctions.¹⁴

Paragraph (4)

16. Framework agreements are closed systems, meaning that no supplier or contractor may be awarded a procurement contract under the framework agreement without being party to the framework agreement. They are closed to other suppliers for the period of their duration. Paragraph (4) seeks to address the concerns that have been voiced about this potentially anti-competitive feature of framework agreements by limiting their duration (see, further, paragraphs 16-18 of A/CN.9/WG.I/WP.44 for a discussion of those concerns). The Working Group's attention is drawn to provisions of the EU Procurement Directive that limit the duration of frameworks to four years in normal circumstances (exceptions are permitted with appropriate justification). The Working Group may wish to consider inserting the maximum length of framework agreements in the text of the Model Law, rather than leaving the matter to procurement regulations or other rules. The Working Group may also wish to consider whether an explicit reference to an extension in the text may be seen as inviting exceptions by legislation.

17. The issue of the duration of framework agreements is closely linked to the issue of the procuring entity's ability to purchase outside the framework agreement, discussed in paragraphs 24-26 below in conjunction with draft article 56 decies (1). The Working Group may therefore wish to consider both issues together.

Article [51 novies]. Conclusion of framework agreements

(1) Where a procuring entity intends to enter into a framework agreement, it shall follow the procedures of this Law applicable to the procurement method chosen for solicitation of tenders, proposals, offers or quotations (collectively referred to as "submissions" in this section), so as to select the supplier(s) or contractor(s) with which it will conclude the framework agreement.

(2) When first soliciting the participation of suppliers or contractors in the procurement proceedings, the procuring entity shall specify all information required for the chosen procurement method under this Law, except to the extent that those provisions are derogated from in this article, together with the following information:

(a) A statement that the procurement will involve a framework agreement;

(b) The nature, estimated quantity and desired place and time of delivery, of the purchases envisaged under the framework agreement;

(c) The number or the minimum and maximum number of supplier(s) or contractor(s) to be parties to the framework agreement;

(d) The criteria to be used by the procuring entity in the selection of the supplier(s) or contractor(s) with which it will enter a framework agreement,

¹⁴ See in document A/CN.9/WG.I/WP.51, articles 22 bis and 51 quinquies and commentaries thereto.

including their relative weight and the manner in which they will be applied in the selection, and whether the selection will be based on lowest price or lowest evaluated submission;

(e) If the procuring entity intends to enter into a framework agreement with more than one supplier or contractor, that the supplier(s) or contractor(s) selected for the framework agreement will be ranked according to the selection criteria specified;

(f) The terms and conditions of the framework agreement upon which supplier(s) or contractor(s) are to supply the goods, construction and services, including the duration of the framework agreement and:

(i) The procedure for the award of procurement contracts on the basis of the framework agreement, in particular whether a further competition will be held;

(ii) If further competition for the award of procurement contracts is to be held among suppliers or contractors parties to the framework agreement, the criteria for evaluating the submissions during that competition, their relative weight, the manner in which they will be applied in the evaluation of the submissions, and whether the award of procurement contracts will be based on lowest price or lowest evaluated submission; and

(iii) If an electronic reverse auction will take place, in addition information referred to in article [cross-reference to the relevant provisions on electronic reverse auctions];

(g) Whether a written framework agreement will be required and the manner of entry into force of the framework agreement.

(3) Unless the procuring entity rejects some or all submissions under articles [12, 12 bis, other cross-references] of this Law, the procuring entity shall select the supplier(s) or contractor(s) with whom to enter into the framework agreement on the basis of the selection criteria to be specified under paragraph (2) (d) above, and shall promptly notify the selected supplier(s) or contractor(s) of their selection and, where relevant, their ranking.

(4) The framework agreement, on the terms and conditions of the selected submission(s) comes into force as specified in accordance with the requirements of paragraph (2) (g) above.

(5) The procuring entity shall promptly publish notice of the award of the framework agreement, in any manner that has been specified for the publication of contract awards under article 14 of this Law.

Commentary and issues for discussion in the Guide to Enactment

Paragraph (1)

18. Paragraph (1) permits framework agreements to be concluded with one or more suppliers or contractors following the procurement methods specified in the Model Law. Since one concern that arises in framework agreements is the possible restriction of competition during their operation, the Working Group may consider that a framework should normally be concluded only after fully open procurement

proceedings, so as to ensure rigorous competition at that first stage of the procurement proceedings. On the other hand, oft-cited beneficial use of framework agreements include the ability to protect sources of supply in limited markets, and the swift and cost-effective procurement of low-cost, repeated and urgent items, such as maintenance or cleaning services, for which open tendering procurements may not be cost-effective.¹⁵

19. If the Working Group considers that framework agreements may result from procurement proceedings by means of any procurement methods specified in the Model Law (including the principal method for procurement of services, two-stage tendering, restricted tendering, request for proposals, competitive negotiation, and request for quotations, though perhaps excluding single-source procurement), the Working Group may wish to provide guidance in the Guide regarding the types of procurement that are suitable for each procurement method, and that the Guide should stress the need for the most competitive process in the circumstances. The Working Group may also wish to consider whether two-stage tendering, which is normally used for very complex or large capital procurement, would be suitable.

Paragraph (2)

Transparency provisions

20. The paragraph intends to achieve the following objectives: first, to apply the main transparency requirements for the procurement method chosen to select the suppliers or contractors for the framework agreement (such as those set out in articles 25, 27, 37 and in various articles in Chapter V, and the provisions of proposed article on communications in procurement proceedings being considered by the Working Group);¹⁶ secondly, to set out deviations from those requirements in the light of the specific requirements of the framework agreements (see, for example, draft article 51 novies 2 (b) that refers to estimated quantities as compared to article 27 (d), and draft article 51 novies 2 (d), (f) and (g) that supersede articles 27 (e), (f) and (y)); and thirdly, to add other transparency-related requirements specific to framework agreements. The Working Group may consider this a more efficient method of drafting rather than amending other provisions of the Model Law that may be applicable (see also the drafting approach in this note explained in paragraph 8 above).

Selection criteria

21. Subparagraphs (d) and (f)(ii) draw on article 27 (e) of the Model Law that requires the solicitation documents for tendering proceedings to specify: “The criteria to be used by the procuring entity in determining the successful tender, including any margin of preference and any criteria other than price to be used pursuant to article 34 (4)(b), (c) or (d) and the relative weight of such criteria”. Equivalents to this requirement are found for other procurement methods. Requirements for selection criteria in tendering proceedings are found in article 34 (4)(b), which inter alia states that the “criteria shall, to the extent practicable, be objective and quantifiable, and shall be given a relative weight in the evaluation procedure or be expressed in monetary terms wherever practicable”. There is no equivalent to these requirements for other procurement methods. The

¹⁵ Other examples include purchase of coal, crude oil, drugs and textbooks, in each case with appropriate safeguards (including quality and competition requirements).

¹⁶ See A/CN.9/WG.I/WP.50, draft article 5 bis, following para. 4.

Working Group may wish to consider whether (to enhance objectivity and transparency) some or all of the objectivity requirements contained in article 34 (4)(b) should be set out in subparagraphs (d) and (f)(ii) for framework agreements above, by adding the following or similar text: “the criteria, which, to the extent practicable, shall be objective and quantifiable, and shall be given a relative weight or be expressed in monetary terms wherever practicable”. Alternatively, or additionally, the Working Group may consider that there should be transparency and objectivity requirements in the Model Law regarding selection criteria for all procurement methods (including framework agreements), in addition to the requirements for the solicitation documents or their equivalent as regards selection criteria. Finally, the Working Group may wish to consider whether the use of a margin of preference for framework purchasing would be suitable.

Paragraph (3)

22. The paragraph draws on articles 34 (4)(b) and 36 (1) of the Model Law. The cross-references currently in square brackets will be to provisions of the Model Law that allow procuring entity to reject tenders, proposals, offers, quotations or bids (see, for example, articles 12 and 15). The reference to article 12 bis is a reference to the draft article on rejection of tenders, proposals, offers, quotations or bids on the basis that they are abnormally low, proposed for consideration by the Working Group at its eleventh session.¹⁷

Paragraph (4)

23. Paragraph (4) should be read together with paragraph (2) (g) of the draft article above. The paragraph draws on the approach taken in article 13 (2) of the Model Law as regards the manner of entry into force of procurement contracts in procurement methods other than tendering proceedings. While in tendering proceedings the matter is regulated in article 36 (which also requires the prior “acceptance” of the successful tender), in other procurement methods, under article 13, the manner of entry into force of procurement contracts must be notified to the suppliers or contractors in the beginning of the procurement proceedings. The Working Group may wish to consider at a later date whether the provisions regarding acceptance of the successful tender or other submission and the entry into force of the procurement contract should be conformed.

Article [51 decies]. Award of procurement contracts under the framework agreement

- (1) The procuring entity may award one or more procurement contracts under the framework agreement in accordance with the terms and conditions of the framework agreement, subject to the provisions of this article.
- (2) No procurement contract under the framework agreement may be awarded to suppliers or contractors that were not originally party to the framework agreement.
- (3) In the process of awarding procurement contracts under the framework agreement, the parties to the framework agreement may not materially amend or vary any term or condition of the framework agreement.

¹⁷ Ibid., paras. 43-49.

(4) If the framework agreement is entered into with one supplier or contractor, the procuring entity may award a procurement contract on the basis of the terms and conditions of the framework agreement to the supplier or contractor party to that agreement by the issue of a purchase order [in writing] to that supplier or contractor. The procurement contract, on the terms and conditions of the framework agreement, comes into force when this purchase order is dispatched.

(5) If the framework agreement entered into with more than one supplier or contractor establishes all the terms and conditions necessary for the procurement to be effected [, and does not provide for a competitive procedure for the award of procurement contracts under it], the procuring entity may award a procurement contract by the issue of a purchase order [in writing] to the highest-ranked supplier(s) or contractor(s) capable of fulfilling the contract. The procurement contract, on the terms and conditions of the framework agreement, comes into force when this purchase order is dispatched. The procuring entity shall notify [in writing] all other suppliers and contractors that are parties to the framework agreement of the name and address of the supplier(s) or contractor(s) to whom the purchase order has been dispatched.

(6) If the framework agreement entered into with more than one supplier or contractor [does not establish all the terms and conditions necessary for the procurement to be effected] [provides for a competitive procedure for the award of procurement contracts under the framework agreement], the procuring entity may award a procurement contract under the framework agreement in accordance with the following procedures:

(a) The procuring entity shall invite [in writing] all suppliers or contractors that are parties to the framework agreement to present their submissions for the supply of the items to be procured;

(b) The invitation shall restate the terms and conditions of the framework agreement, and shall set out the terms and conditions of the procurement contract that were not specified in the terms and conditions of the framework agreement, and shall set out instructions for preparing submissions;

(c) The procuring entity shall fix the place for, and a specific date and time as the deadline for presenting the submissions. The deadline shall afford suppliers or contractors sufficient time to prepare and present their submissions;

(d) The successful submission shall be determined in accordance with the criteria set out in the framework agreement;

(e) Where an electronic reverse auction is held, the procuring entity shall comply with requirements during auction in article [cross-references to the relevant provisions];

(f) Without prejudice to the provisions of article [proper cross-reference to the provisions on award of contracts through electronic reverse auction] and subject to articles [12, 12 bis and other appropriate references] of this Law, the procuring entity shall accept the successful submission(s), and shall promptly notify [in writing] the successful supplier(s) or contractor(s) that it has accepted their submission(s). The procuring entity shall also notify [in writing] all other suppliers and contractors that are parties to the

framework agreement of the name and address of the supplier(s) or contractor(s) whose submission(s) was or were accepted and the contract price;

(g) The procurement contract(s), on the terms and conditions of the successful submission(s), comes into force when the notice of acceptance to the successful supplier(s) or contractor(s) is dispatched.

(7) Where the price payable pursuant to a procurement contract concluded under the provisions of this section exceeds [*the enacting State includes a minimum amount* [or] the amount set out in the procurement regulations], the procuring entity shall promptly publish notice of the award of the procurement contract(s) in any manner that has been specified for the publication of contract awards under article 14 of this Law. The procuring entity shall also publish, in the same manner, [quarterly] notices of all procurement contracts issued under a framework agreement.

Commentary and issues for discussion in the Guide to Enactment

Paragraph (1)

24. The Working Group may wish to consider whether the procuring entity must effect all purchases of the items concerned under the framework agreement through that framework agreement. In practice, it is common that no such obligation is imposed on the procuring entity, even under a Model 1 framework agreement, to enable the procuring entity to obtain the best value for money if, for example, market circumstances change and better offers exist outside the framework agreement.¹⁸ Paragraph (1) as drafted provides such flexibility to the procuring entity.

25. On the other hand, whether suppliers will discount their prices to give the maximum commercial benefit to procuring entities may in many cases depend on whether suppliers are confident that they will receive sufficient orders under the framework agreement, at least within the estimated quantities (minima and maxima) indicated in the agreement, to justify such discounts.¹⁹ If procuring entities are freely able to and regularly do procure the items concerned outside the framework agreement, suppliers' confidence may be eroded.

26. Accordingly, there may be actual and potential costs and benefits incurred in permitting or not permitting procuring entities to purchase outside the framework agreement. The Working Group may wish to formulate its position on the matter taking into account possible costs and benefits and the type of procurement at issue.

Paragraph (3)

27. This paragraph and those following have been drafted on the understanding that no material change to the terms and conditions of the framework agreement as set out in the beginning of the procurement proceedings is allowed at the subsequent

¹⁸ Another way is to allow technology-refreshing provisions, but such provisions may not be compatible with the requirement of fixed specifications under traditional framework agreements. Where generic specifications are used, for example, in certain types of standing qualification lists, such provisions may be considered.

¹⁹ See A/CN.9/WG.I/WP.44, paras. 11-15, for a discussion of the potential benefits of framework agreements, including efficiency and security of supply.

stage. This restrictive approach reflects a closed framework agreement system. Allowing changes in evaluation criteria or specifications at the stage of the award of procurement contracts under a framework agreement may lead to abuse, such as favouritism through procuring entity adapting criteria to the needs of any particular party to the framework agreement, and further exacerbates any anti-competitive effect of a framework agreement.²⁰

Paragraphs (4), (5) and (6)

[in writing]

28. The Working Group may wish to consider whether the provisions should require that the procuring entity must perform the referred actions, such as issue of purchase orders or invitation of, or notification to, suppliers of contractors, in writing (that is, on paper or electronically) as opposed by phone or otherwise verbally. Such an explicit requirement appears for example in the EU Procurement Directive. The issue may be considered in conjunction with article 5 bis on communications in procurement, set out in document A/CN.9/WG.I/WP.50 (the text following paragraph 4) (also before the Working Group at its eleventh session).

Acceptance of successful submission and entry into force of the procurement contract

29. The Working Group may note that the provisions mirror the equivalent provisions for tendering proceedings, rather than the more flexible approach for other procurement methods envisaged under article 13. Paragraph (6) (g) tracks the wording of article 36 (4), which refers to the procurement contract coming into force in accordance with the terms and conditions of the accepted tender. Whether this may be an accurate statement about the source of the terms and conditions of the procurement contract may be a further issue for the Working Group to consider when reviewing article 36 and the equivalent provisions for other procurement methods at a later date. (See also paragraph 23 above about possible need to conform the provisions regarding acceptance of the successful tender or other submission and the entry into force of the procurement contract throughout the Model Law).

Paragraphs (5) and (6)

Requirement for decision at the outset as to whether the multi-supplier framework agreement will be a Model 1 or Model 2 framework agreement

30. The paragraphs are drafted in such a way that the procuring entity cannot invite further competition at the second stage of the procurement proceedings unless the terms and conditions of the framework agreement disclosed in a solicitation notice in accordance with draft article 51 novies (2)(f) above advised that this would be the award procedure, and, conversely, that the procuring entity cannot award a procurement contract without competition if the terms and conditions of the framework agreement provided for second-stage competition. An alternative formulation would be to allow the procuring entity to decide subsequently after the

²⁰ These risks may be considered to be considerably higher in closed framework agreements than in open dynamic purchasing systems, where an unlimited number of potential suppliers are allowed to compete for the award of any particular procurement contract. See A/CN.9/WG.I/WP.52/Add.1.

first stage whether or not to hold a second-stage competition (provided that such a possibility has been reserved at the outset of the procurement proceedings in the terms and conditions of the framework agreement as disclosed in a solicitation notice). The Working Group may wish to consider whether the advantages of additional flexibility would be outweighed by a possible risk of abuse.

Possibility of competition on the same terms

31. The Working Group may wish to consider (i) whether the opening phrase in paragraph (5) of the draft article should contain the text in square brackets and (ii) which of the square bracketed texts or both (with the appropriate connector) should remain in the chapeau of paragraph (6). The decision would depend on the Working Group's position as regards possibility of holding second-stage competition even if all terms and conditions have been set out in the multi-supplier framework agreement, provided that such a possibility has been reserved at the outset of the procurement proceedings (see paragraph 30 above). In this regard, the attention of the Working Group is drawn to the provisions of the EU Procurement Directive that provide for such a possibility (see article 32 (4), the second indent).

Paragraph (6)

32. Paragraph (6) sets out procedures that will have to be followed at the second stage of competition. This latter procedure resembles tendering proceedings with the exception that no open solicitation is held; only suppliers that are parties to the framework agreement are notified about forthcoming awards. If an electronic reverse auction is held, additional provisions on electronic reverse auctions will be applicable and cross-references to those provisions have therefore been inserted.

33. The approach taken in drafting the provisions, which does not allow at the subsequent stage to change substantially the terms and conditions of the framework agreement as set out in the beginning of the procurement proceedings (see paragraph 27 above), would prevent the procuring entity from holding procedures at the second stage of competition that resemble two-stage tendering (article 46 (4)) or competitive negotiations proceedings (article 49), both of which permit material variations in specifications and evaluation criteria.

34. It is implicit under provisions of paragraph (6), which require inviting all suppliers or contractors that are parties to the framework agreement to present submissions at the second stage, that all suppliers admitted to the framework should be capable of carrying out the entire procurement concerned, so that the framework is effectively restricted in scope to a type or group of item(s) that all suppliers or contractors parties to the framework agreement are able to provide. In some jurisdictions, framework agreements broader in scope are concluded, so that the framework agreement may provide for a list of items that not all suppliers or contractors would be able to provide, or it may be evident that no one supplier could meet all the procuring entity's requirements. The procuring entity may therefore benefit from the flexibility to select the item(s) required and to invite only those suppliers to compete who can supply the items or combination. The Working Group may wish to consider whether the Model Law should provide for framework agreements of broad or narrow scope, bearing in mind the need to ensure effective competition and that one of the main goals and benefits of the framework agreements is to secure supplies. If the Working Group considers that only narrow-scope framework agreements should be permitted, it may wish to consider whether article 27 (h) (which envisages partial tendering) should be excluded in the

case of frameworks agreements, and whether tender securities may be required. If it wishes to provide for broader-scope agreements, the Working Group may wish to consider how the procuring entity could limit the numbers of suppliers or contractors invited to compete at the second stage.

Paragraph (7)

35. The Working Group may wish to consider in which cases the publication of notice of procurement contract awards under the framework agreement should be required, by reference in particular to the amount payable under the procurement contract in question.

36. The Working Group may also wish to consider whether requiring in addition the publication of advance public notices of intended procurement contracts may enhance proper oversight and review, and lead to better value for money procurement contracts (for example, by enabling procuring entities to be advised of better opportunities, and purchase, outside the framework agreement. See, however, paragraphs 24-26 above for issues regarding purchases outside the framework agreement).

E. Alternative approach to drafting

37. The Working Group may wish to consider an alternative approach to drafting, for example by regulating Model 1 framework contracts separately from Model 2 framework agreements, so as to reflect the more straightforward nature of the former. While Model 1 single-supplier framework contracts are sufficiently covered by the existing provisions of the Model Law, regulating Model 1 multi-supplier framework agreements separately would require amendments to a number of the Model Law provisions.

38. First, amendments would have to be made to article 2 (g) of the Model Law, which defines a procurement contract, to provide for a possibility of concluding procurement contracts with more than one suppliers or contractors. The provisions may read:

“*Procurement contract*” means a contract between one or more procuring entities and one or more suppliers or contractors resulting from procurement proceedings”.²¹

39. In addition and as linked thereto, to enable procuring entities to accept more than one tender or its equivalent, references throughout the Model Law to successful or accepted tender or proposal, best and final offer and lowest-priced quotation or to the supplier or contractor submitting them would have to be put in plural in a number of articles, such as in articles 11, 27 (e), 34 (4)(b), 36, 38-44 and 46-50, according to the context.

²¹ This amended definition would enable a procurement contract to be concluded with more than one supplier not only in the case of framework contracts. If the Working Group considers that procuring entities should not have the flexibility to accept more than one tender and conclude multiple party procurement contracts as a general proposition other than in the context of framework agreements, the words “in the case of framework agreements” can be inserted in the definition where appropriate.

40. Second, revisions throughout the current text of the Model Law would have to be made to provide for appropriate transparency, oversight and review procedures. Appropriate safeguards would need to be built in the Model Law to ensure: first, that procedures for allocation of purchase orders under the multi-supplier framework contracts are disclosed to suppliers in the beginning of the procurement proceedings; and second, that the suppliers parties to the framework agreement will have means to verify that such procedures were indeed followed (by requiring, for example, that, once purchase orders are allocated, the suppliers parties to the framework agreement must be notified of allocated purchase orders and to whom they were allocated). While there would be no difficulty in incorporating in the Model Law the requirement to disclose in the beginning of the procurement proceedings the procedures on allocation of purchase orders under the framework contract (through additions to article 27 and equivalent articles regulating other procurement methods), there may be greater difficulty in providing for effective oversight and review, as such provisions would then be applied to the contract administration stage.²² Furthermore, the question would be raised as to why other long-term or large-scale procurement would also not be subject to similar provisions at the contract administration phase. The Working Group has not yet decided whether the Model Law should regulate this phase of procurement.²³

²² See footnote 5, *supra*.

²³ *Ibid*.

C. Proposed draft text for the revised Model Law	6-19
Commentary	
IV. Consequential changes to provisions of the Model Law	20-23

III. Draft provisions to enable the use of dynamic purchasing systems in public procurement under the Model Law

A. Scope and terminology

1. This section deals with an electronic purchasing arrangement with the main characteristics of Model 2 framework agreements described in document A/CN.9/WG.I/WP.52, but new suppliers or contractors can be admitted to the system at any time, and all suppliers or contractors admitted to the system may revise their tenders at any time (without a new tender phase). This type of arrangement is substantively different from Models 1 and 2 framework agreements because of these features, and the Working Group may wish therefore to regulate them, if at all, separately.

2. Variations of such systems can be encountered in practice, which differ from each other mainly by the extent to which changes to the specifications of the system are allowed (at the most extreme, only generic specifications may be provided,

which are refined or further defined when a procuring entity wishes to make a purchase). Some are paper-based, but most operate electronically as electronic catalogues, or electronic purchasing systems. Although called framework agreements in some jurisdictions, such arrangements may be more appropriately described as standing qualification lists, especially where only generic specifications may be provided.¹ For controls commonly imposed on such lists, see notes by the Secretariat on suppliers' lists (A/CN.9/WG.I/WP.45 and Add.1).

3. The Working Group may wish to base any provisions for regulating such systems in the Model Law on provisions for the "dynamic purchasing system" in the European Union public procurement directive 2004/18/EC (articles 1 (6) and 33) (hereinafter "the EU Procurement Directive"),² which is not based on a generic specification and so is not in essence a suppliers' list.

4. As regards the terminology for the system, pending the Working Group's decision on this question, and consistent with previous notes on the topic, this note will refer to "dynamic purchasing systems" (that is the term used in the English language version of the EU Procurement Directive).

B. Location of draft provisions

5. Pending the Working Group's consideration of the structure of the revised Model Law, the provisions for dynamic purchasing systems are presented in this note as three draft articles to be included in a composite draft section on dynamic purchasing systems, located in Chapter V (following the provisions on framework agreements).³ The draft articles will be finally numbered once the structure of Chapter V is finalized.

C. Proposed draft text for the revised Model Law

6. Suggested provisions, which draw on the EU Procurement Directive but are drafted to be consistent with those proposed for framework agreements in document A/CN.9/WG.I/WP.52 and the provisions of the current Model Law, are set out below:

"Section [...]. Dynamic purchasing systems

Article [51 undecies]. General provisions

(1) A procuring entity may set up an [electronic] dynamic purchasing system [which shall operate electronically] [for commonly used purchases that are generally available on the market] that shall provide for the procedures, terms and conditions upon which procurement contracts for the supply of goods,

¹ See further A/CN.9/WG.I/WP.44/Add.1, paras. 31-35.

² Directive 2004/18/EC of the European Parliament and of the Council of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts, available as of the date of this note at http://ec.europa.eu/internal_market/publicprocurement/legislation_en.htm.

³ The Working Group may consider that dynamic purchasing systems are techniques that can be applied in tendering proceedings, rather than a procurement method per se. This consideration applies also to electronic reverse auctions and framework agreements (see A/CN.9/WG.I/WP.51, paras. 3-5, and A/CN.9/WG.I/WP.52, para. 9 and endnote 6).

construction or services may be awarded under the system during a given period.

(2) A dynamic purchasing system shall be set up for a given duration, which is not to exceed [...] years. The duration of the system operation may be extended for no longer than [...] years under exceptional circumstances, upon publication of a notice of the extension of the system in [...] (each enacting State specifies the official gazette or other official publication in which the notice is to be published). The procuring entity shall include in the record required under article 11 of this Law a statement of the grounds and circumstances on which it relied to justify the extension of the duration of the system.

Commentary and issues for discussion in the Guide to Enactment

Paragraph (1)

7. The Working Group may wish to consider elements that may be included in the definition of the dynamic purchasing system in paragraph (1), such as that it is a completely electronic process and suitable for particular types of procurement (the optional text in square brackets would so provide). In this regard, the attention of the Working Group is drawn to the definition of the dynamic purchasing systems provided in the EU Procurement Directive:

“A ‘dynamic purchasing system’ is a completely electronic process for making commonly used purchases, the characteristics of which, as generally available on the market, meet the requirements of the contracting authority, which is limited in duration and open throughout its validity to any economic operator which satisfies the selection criteria and has submitted an indicative tender that complies with the specifications.”

8. The Working Group may also wish to consider the issues raised in paragraph 11 of document A/CN.9/WG.I/WP.52 regarding a possible amendment of the definition of the “procuring entity” in article 2 of the Model Law. In the context of draft article 51 undecies (1) above, that amendment would allow several procuring entities to set up a dynamic purchasing system or use the one set up by a central purchasing entity.

Paragraph (2)

9. The EU Procurement Directive limits the duration of dynamic purchasing systems to four years in normal circumstances (exceptions are permitted with appropriate justification). The Working Group may wish to consider inserting a maximum duration in the text of the Model Law, rather than allowing the procurement regulations or other rules to determine the maximum length. The text also provides that the duration could be extended if it would be desirable to extend the system, rather than setting it up de novo.

10. Unlike the case of extensions of framework agreements (see article 51 octies (4) in document A/CN.9/WG.I/WP.52, the text following paragraph 10), which are closed systems, the notice of an extension of the dynamic purchasing system must be made public (so as to reflect the fact that the system is open to all interested suppliers at any time). Additionally, the procuring entity must justify the extension in the record of the procurement proceedings, and the Guide to Enactment could note that the justification should normally relate to an ongoing need for the

subject-matter of the dynamic purchasing system and lack of significant market changes in the interim.

Article [51 duodecies]. Setting up the dynamic purchasing systems

(1) Where a procuring entity seeks to set up a dynamic purchasing system, the procuring entity shall first publish an invitation to submit indicative tenders in [...] (each enacting State specifies the official gazette or other official publication in which the notice is to be published).

(2) The invitation to submit indicative tenders shall specify, in addition to the information referred to in article 25 (1)(a) and (e) to (i) and article 27 (a) to (c), (i) to (k), (t), (u) and (w) of this Law:

(a) That the procuring entity will set up a dynamic purchasing system;

(b) The nature, estimated quantity and desired place and time of delivery of the purchases envisaged under the dynamic purchasing system;

(c) The terms and conditions of the dynamic purchasing system, including the duration of the dynamic purchasing system, any minimum or maximum number of suppliers or contractors to be admitted to the dynamic purchasing system, the selection criteria and procedure for admittance to the system;

(d) Other necessary information concerning the dynamic purchasing system, the electronic equipment used and the technical connection arrangements;

(e) The [website or other electronic] address at which the specifications, the terms and conditions of the dynamic purchasing system, and other necessary information relevant to the operation of the system may be accessed;

(f) That suppliers or contractors may submit indicative tenders at any time during the period of operation of the dynamic purchasing system, subject to the maximum number of suppliers or contractors to be admitted to the dynamic purchasing system, if any;

(g) Procedures for the award of procurement contracts under the system, including:

(i) Whether an electronic reverse auction will be held and, if so, information required under article [...] of this Law; and

(ii) The criteria to be used by the procuring entity for the evaluation of tenders, including their relative weight and the manner in which they will be applied to that evaluation, and whether the award of a procurement contract will be based on lowest price or lowest evaluated tender.

(3) The procuring entity shall, on publication of the invitation to submit indicative tenders and during the entire period of the operation of the system, ensure unrestricted, direct and full access to the specifications and terms and conditions of the dynamic purchasing system and to any other necessary information relevant to the operation of the system.

(4) The procuring entity shall evaluate all indicative tenders received during the period of operation of the dynamic purchasing system [within a maximum

of [...] days] in accordance with the selection criteria set out in the invitation to submit indicative tenders.

(5) Subject to a maximum number of suppliers or contractors to be admitted to the system and the criteria and procedure for the selection of that number specified in the invitation to submit indicative tenders, the procuring entity shall admit to the system all suppliers or contractors satisfying the selection criteria and having submitted indicative tenders that comply with the specifications and any other additional requirements set out in the invitation to submit indicative tenders.

(6) The procuring entity shall promptly notify the suppliers or contractors of their admittance to the system or of the rejection of their indicative tenders.

(7) Suppliers or contractors that are admitted to the dynamic purchasing system may improve indicative tenders at any time during the period of operation of the dynamic purchasing system, provided that they continue to comply with the specifications set out in the invitation to submit indicative tenders.

(8) The procuring entity shall promptly publish a notice that it has set up a dynamic purchasing system, in any manner that has been specified for the publication of contract awards under article 14 of this Law. The notice shall identify the suppliers or contractors admitted to the system.

Commentary

Paragraph (1)

11. The open nature of the systems requires open solicitation of indicative tenders. Paragraph (1) draws on provisions of article 24 (1).

Paragraph (2)

12. The content of the invitation to submit indicative tenders should include the information referred to in articles 25 (1) and 27. To avoid repetition, appropriate cross-references to the relevant provisions of these articles have been inserted in the paragraph. In addition, the paragraph lists information specific to the systems that have to be made public in the beginning of the procurement proceedings.

13. The wording in the square brackets in subparagraph (e) will be aligned with the similar provisions on electronic reverse auctions (see A/CN.9/WG.I/WP.51, paragraph 29).

14. As in the case of framework agreements, the Working Group may wish to state the transparency and objectivity requirements of evaluation criteria explicitly in this article such as by adding in the appropriate subparagraphs (such as subparagraphs (c) and (g)(ii) the following or similar wording: “the criteria, which, to the extent practicable, shall be objective and quantifiable, and shall be given a relative weight or be expressed in monetary terms wherever practicable” (see, further, A/CN.9/WG.I/WP.52, paragraph 21).

Paragraph (4)

15. The Working Group may wish to consider the timeframe during which indicative tenders should be evaluated and decision on their admittance to the

system or rejection be taken. The equivalent provisions found in the EU Procurement Directive require that evaluation should be completed within a maximum of fifteen days from the date of submission of the indicative tender. However, under that system, the procuring entity may extend the evaluation period provided that no invitation to tender is issued in the meantime.

Article [51 ter decies]. Award of procurement contracts under the dynamic purchasing systems

(1) The procuring entity may subsequently award one or more procurement contracts under the dynamic purchasing system in accordance with the procedures set out in the invitation to submit indicative tenders, subject to the provisions below.

(2) Each specific procurement contract shall be the subject to an invitation to tender.

(3) The procuring entity shall invite all suppliers or contractors admitted to the system to submit tenders for the supply of the items to be procured for each procurement contract it proposes to award. The invitation shall:

(a) Restate, or formulate where necessary more precisely, information referred to in article [51 duodecies (2)(g)] of this Law;

(b) Set out the terms and conditions of the procurement contract, to the extent that are already known to the procuring entity; and

(c) Include instructions for preparing tenders.

(4) The procuring entity shall fix a specific date and time as the deadline for submitting tenders. The deadline shall afford suppliers or contractors sufficient time to prepare and submit their tenders.

(5) The procuring entity shall evaluate all tenders received and determine the successful tender in accordance with the evaluation criteria set out in the invitation to submit tenders under paragraph (3)(a) of this article.

(6) Subject to articles [12, 12 bis and other appropriate references] of this Law, the procuring entity shall accept the successful tender(s), and shall promptly notify the successful supplier(s) or contractor(s) that it has accepted their tender(s). The procuring entity shall also notify all other suppliers and contractors that submitted tenders of the name and address of the supplier(s) or contractor(s) whose tender(s) was or were accepted and the contract price.

(7) The procurement contract, on the terms and conditions of the successful tender(s), comes into force when the notification to the successful supplier or contractor(s) is dispatched.

(8) Where the price payable pursuant to a procurement contract concluded under the provisions of this article exceeds [the enacting State includes a minimum amount [or] the amount set out in the procurement regulations]], the procuring entity shall promptly publish notice of the award of the procurement contract in any manner that has been specified for the publication of contract awards under article 14 of this Law. The procuring entity shall also publish, in the same manner, [quarterly] notices of all procurement contracts issued under the dynamic purchasing system.

Commentary

16. The drafting follows the equivalent provisions for framework agreements, and the Working Group may therefore wish to consider the issues raised in paragraphs 29 and 35 of document A/CN.9/WG.I/WP.52.

Issue of a notice before invitation to tender

17. Under the EU Procurement Directive, when wishing to award procurement contracts under the system, a procuring entity must first publish a simplified contract notice inviting all interested suppliers to submit an indicative tender. The procuring entity may not invite all tenderers admitted to the system to submit a tender until it has completed evaluation of all the indicative tenders received within a fixed time limit after the simplified contract notice was published. Commentators have observed that the transparency advantages of these requirements of the award process may operate as a significant disincentive to their use.⁴

18. If the Working Group considers that provision for a simplified contract notice would be desirable, it could include a paragraph before paragraph (3) in the above text, to provide for example:

“(3) Before inviting suppliers or contractors admitted to the system to submit their tenders, the procuring entity shall:

(a) Publish a simplified notice on the existence of the dynamic purchasing system and inviting all interested suppliers or contractors to consider joining the system by submitting indicative tenders. Article 51 [duodecies (1) and (2)] shall apply to publication of such a simplified notice;

(b) Complete evaluation of all indicative tenders submitted within the timeframe to be fixed in the simplified notice, which may not be less than [...] days from the date of the publication of the simplified notice. Article [51 duodecies (4) to (6)] shall apply to the evaluation of indicative tenders and admittance to the system.”

19. The Working Group may also then wish to consider the timeframe after the publication of the simplified notice within which the procuring entity must allow all interested suppliers or contractors to submit their indicative tenders. This timeframe should be sufficiently long to allow new suppliers to prepare their indicative tenders. The respective provisions of the EU Procurement Directive required that the timeframe should be not less than fifteen days after the simplified notice has been published. This timeframe does not include the additional time that procuring entity may need to complete evaluation of all indicative tenders received by the established deadline (see draft article 51 duodecies (4)).

IV. Consequential changes to provisions of the Model Law

20. Some consequential changes to the existing provisions of the Model Law will be required in the light of the provisions on framework agreements and dynamic purchasing systems. In particular, article 11 on record of procurement proceedings will have to be amended.

⁴ See A/CN.9/WG.I/WP.44/Add.1, para. 35.

21. The Working Group may wish to consider inserting references to framework agreements, where appropriate, in article 11, such as in paragraph (1)(b), (d) and (g) and in paragraph (2). In addition, a new subparagraph (n) may be added in paragraph (1) reading “any other information required to be included in the record of procurement proceedings under provisions of this Law”, which would ensure that such provisions as in articles 51 octies (4) (see A/CN.9/WG.I/WP.52, the text following paragraph 10) and 51 undecies (2) above are covered.

22. This wording would also cover information required to be included in the records of procurement proceedings under other new provisions of the Model Law, such as on electronic reverse auctions. It is to be recalled that, at its tenth session, the Working Group decided to defer its consideration of revisions to article 11 necessitated by the use of electronic reverse auctions.⁵

23. Furthermore, when considering review provisions under Chapter VI of the Model Law, the Working Group may wish to consider whether the use of framework agreements and dynamic purchasing systems as well as their operation should be subject to review.

⁵ A/CN.9/615, para. 65.

III. INTERNATIONAL COMMERCIAL ARBITRATION AND CONCILIATION

A. Report of the Working Group on Arbitration on the work of its forty-fifth session (Vienna, 11-15 September 2006)

(A/CN.9/614) [Original: English]

Section IV. The award	108-135
Additional provision	136

I. Introduction

1. At its thirty-first session (New York, 1-12 June 1998), the Commission, with reference to discussions at the special commemorative New York Convention Day held in June 1998 to celebrate the fortieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (“the New York Convention”), considered that it would be useful to engage in a discussion of possible future work in the area of arbitration. It requested the Secretariat to prepare a note that would serve as a basis for the consideration of the Commission at its next session.¹

2. At its thirty-second session (Vienna, 17 May-4 June 1999), the Commission had before it a note entitled “Possible future work in the area of international

¹ *Official Records of the General Assembly, Fifty-third Session, Supplement No. 17 (A/53/17)*, para. 235.

commercial arbitration” (A/CN.9/460). Welcoming the opportunity to discuss the desirability and feasibility of further development of the law of international commercial arbitration, the Commission generally considered that the time had come to assess the extensive and favourable experience with national enactments of the UNCITRAL Model Law on International Commercial Arbitration (“the Model Law”), as well as the use of the UNCITRAL Arbitration Rules (“the UNCITRAL Arbitration Rules” or “the Rules”) and the UNCITRAL Conciliation Rules, and to evaluate, in the universal forum of the Commission, the acceptability of ideas and proposals for improvement of arbitration laws, rules and practices.² When the Commission discussed that topic, it left open the question of what form its future work might take. It was agreed that decisions on the matter should be taken later as the substance of proposed solutions became clearer. Uniform provisions might, for example, take the form of a legislative text (such as model legislative provisions or a treaty) or a non-legislative text (such as a model contractual rule or a practice guide).³

3. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that the topic of revising the UNCITRAL Arbitration Rules should be given priority. The Commission noted that, as one of the early instruments elaborated by UNCITRAL in the field of arbitration, the UNCITRAL Arbitration Rules were recognized as a very successful text, adopted by many arbitration centres and used in many different instances, such as, for example, in investor-State disputes. In recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of the UNCITRAL Arbitration Rules should not alter the structure of the text, its spirit, its drafting style, and should respect the flexibility of the text rather than make it more complex. It was suggested that the Working Group should undertake to carefully define the list of topics which might need to be addressed in a revised version of the UNCITRAL Arbitration Rules.⁴

4. The topic of arbitrability was said to be an important question, which should also be given priority. It was said that it would be for the Working Group to consider whether arbitrable matters could be defined in a generic manner, possibly with an illustrative list of such matters, or whether the legislative provision to be prepared in respect of arbitrability should identify the topics that were not arbitrable. It was suggested that studying the question of arbitrability in the context of immovable property, unfair competition and insolvency could provide useful guidance for States. It was cautioned however that the topic of arbitrability was a matter raising questions of public policy, which was notoriously difficult to define in a uniform manner, and that providing a pre-defined list of arbitrable matters could unnecessarily restrict a State’s ability to meet certain public policy concerns that were likely to evolve over time.⁵

5. Other topics mentioned for possible inclusion in the future work of the Working Group included issues raised by online dispute resolution. It was suggested that the UNCITRAL Arbitration Rules, when read in conjunction with other instruments, such as the UNCITRAL Model Law on Electronic Commerce and the United Nations Convention on the Use of Electronic Communications in

² Ibid., *Fifty-fourth Session, Supplement No. 17* (A/54/17), para. 337.

³ Ibid., para. 338.

⁴ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), paragraph 184.

⁵ Ibid., para. 185.

International Contracts, already accommodated a number of issues arising in the online context. Another topic was the issue of arbitration in the field of insolvency. Yet another suggestion was made to address the impact of anti-suit injunctions on international arbitration. A further suggestion was made to consider clarifying the notions used in article I, paragraph (1), of the New York Convention of “arbitral awards made in the territory of a State other than the State where the recognition and enforcement of such awards are sought” or “arbitral awards not considered as domestic awards in the State where their recognition and enforcement are sought”, which were said to have raised uncertainty in some State courts. The Commission also heard with interest a statement made on behalf of the International Cotton Advisory Committee suggesting that work could be undertaken by the Commission to promote contract discipline, effectiveness of arbitration agreements and enforcement of awards in that industry.⁶

6. After discussion, the Commission was generally of the view that several matters could be dealt with by the Working Group in parallel. The Commission agreed that the Working Group should resume its work on the question of a revision of the UNCITRAL Arbitration Rules. It was also agreed that the issue of arbitrability was a topic which the Working Group should also consider. As to the issue of online dispute resolution, it was agreed that the Working Group should place the topic on its agenda but at least in an initial phase, should consider the implications of electronic communications in the context of the revision of the UNCITRAL Arbitration Rules.⁷

II. Organization of the session

7. The Working Group, which was composed of all States members of the Commission, held its forty-fifth session in Vienna, from 11 to 15 September 2006. The session was attended by the following States members of the Working Group: Algeria, Argentina, Australia, Austria, Belarus, Brazil, Cameroon, Canada, China, Croatia, Czech Republic, France, Germany, Guatemala, India, Iran (Islamic Republic of), Italy, Japan, Jordan, Kenya, Mexico, Nigeria, Poland, Republic of Korea, Russian Federation, Singapore, Spain, Sweden, Switzerland, Thailand, Tunisia, Turkey, United Kingdom of Great Britain and Northern Ireland, United States of America, and Venezuela (Bolivarian Republic of).

8. The session was attended by observers from the following States: Bahrain, Bulgaria, Democratic Republic of the Congo, Dominican Republic, Finland, Indonesia, Ireland, Kuwait, Latvia, Mauritius, Netherlands, Peru, Philippines, Romania, Slovakia and Ukraine.

9. The session was also attended by observers from the following international intergovernmental organization: Permanent Court of Arbitration.

10. The session was also attended by observers from the following international non-governmental organizations invited by the Working Group: Arab Union for International Arbitration (AUIA), Asia Pacific Regional Arbitration Group (APRAG), *Association Suisse de l'Arbitrage* (ASA), Cairo Regional Centre for International Commercial Arbitration (CRCICA), the Chartered Institute of Arbitrators, the European Law Students Association (ELSA), Forum for

⁶ Ibid., para. 186.

⁷ Ibid., para. 187.

International Commercial Arbitration (FICA), International Arbitration Institute (IAI), International Chamber of Commerce (ICC), International Council for Commercial Arbitration (ICCA), Kuala Lumpur Regional Centre for Arbitration (KLRCA), the London Court of International Arbitration (LCIA), Milan Club of Arbitrators, NAFTA Article 2022 Advisory Committee, School of International Arbitration of the Queen Mary University of London, the Singapore International Arbitration Centre-Construction Industry Arbitration Association (SIAC-CIAA Forum), *Union Internationale des Avocats* (UIA) and the Vienna International Arbitral Centre (VIAC).

11. The Working Group elected the following officers:

Chairman: Mr. Michael Schneider (Switzerland);

Rapporteur: Mr. Triumph Jalichandra (Thailand).

12. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.142); (b) a note by the Secretariat on a revision of the UNCITRAL Arbitration Rules pursuant to the decision made by the Commission at its thirty-ninth session (A/CN.9/WG.II/WP.143 and A/CN.9/WG.II/WP.143/Add.1).

13. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Revision of the UNCITRAL Arbitration Rules and organization of future work.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

14. The Working Group commenced its deliberations on agenda item 4 on the basis of the notes prepared by the Secretariat (A/CN.9/WG.II/WP.143 and A/CN.9/WG.II/WP.143/Add.1). The deliberations of the Working Group with respect to this item are reflected in chapter IV. The Secretariat was requested to prepare a first draft of revised UNCITRAL Arbitration Rules, based on the deliberations of the Working Group.

IV. Revision of the UNCITRAL Arbitration Rules

General principles

15. The Working Group recalled the mandate given by the Commission at its thirty-ninth session (New York, 19 June-7 July 2006) and set out above (see above, paras. 3-6) which provided, *inter alia*, that any revision of the UNCITRAL Arbitration Rules should not alter the structure of the text, its spirit and drafting

style and that it should respect the flexibility of the text rather than make it more complex.⁸

16. The Working Group agreed that the UNCITRAL Arbitration Rules had been one of the most successful instruments of UNCITRAL and therefore cautioned against any unnecessary amendments or statements being included in the *travaux préparatoires* that would call into question the legitimacy of prior applications of the Rules in specific cases. It was considered that the focus of the revision should be on updating the Rules to meet changes that had taken place over the last thirty years in arbitral practice.

17. It was pointed out that the UNCITRAL Arbitration Rules were originally intended to be used in a broad range of circumstances and therefore a generic approach was taken in drafting the Rules. The Working Group recalled that, for that reason, the reference to the word “ad hoc” in the title of the UNCITRAL Arbitration Rules had been deleted at the time the Rules were drafted. It was noted that, in practice, there were at least four types of arbitration where the UNCITRAL Arbitration Rules were used, namely; disputes between private commercial parties where no arbitral institution was involved (a type sometimes referred to as “ad hoc” arbitration), investor-State disputes, State-to-State disputes and commercial disputes administered by arbitral institutions. The question was raised whether in revising the UNCITRAL Arbitration Rules, the Working Group should maintain that generic approach or should include provisions, possibly contained in parallel versions or annexes to the UNCITRAL Arbitration Rules, dealing specifically with the different types of arbitration or disputes to which the Rules applied. It was suggested that inclusion of annexes could provide useful guidance for users, such as States and arbitral institutions when adopting the UNCITRAL Arbitration Rules. In that context, the attention of the Working Group was drawn to the Recommendations adopted by UNCITRAL in 1982 to assist arbitral institutions and other interested bodies with regard to arbitrations under the UNCITRAL Arbitration Rules. The Recommendations are designed to provide information and assistance to arbitral institutions and other relevant bodies, such as chambers of commerce, in using the Rules. This may include cases where the Rules are being used as the basis for preparing or revising institutional rules, where arbitral institutions or other bodies are acting as an appointing authority as envisaged under the Rules, or in the provision of administrative services of a secretarial or technical nature for an arbitration conducted pursuant to the Rules.

18. Broad support was expressed for a generic approach that sought to identify common denominators that applied to all types of arbitration irrespective of the subject matter of the dispute, in preference to dealing with specific situations. The Working Group took note that the Rules had been easily adapted to be used in a wide variety of circumstances covering a broad range of disputes and that this quality should be retained. The Working Group further noted that the Rules could apply in the future to other situations or types of disputes that had not yet been identified. The view was expressed that, since practice in various areas, including in investor-State dispute settlement, was still developing, it would be undesirable to seek to design specific provisions at this stage. It was also stated that inclusion of specific provisions could undermine the existing flexibility and simplicity of the Rules and therefore make them less attractive. Others were of the view that, either it

⁸ Ibid., para. 184.

would be desirable to identify provisions which might need a different set of rules for specific purposes or that, at a minimum, that option should not be disregarded.

19. After discussion, the Working Group agreed that the structure and spirit of the UNCITRAL Arbitration Rules should be maintained. Given that some of the discussion would potentially develop useful conclusions relating to specific situations, such as investor-State disputes or institutional arbitration, it was agreed that any such conclusions should be reflected in the *travaux préparatoires* whether or not those conclusions were ultimately reflected in the Rules or in any material that might accompany the Rules.

20. With respect to the working method to be followed at the current session, it was suggested that the Working Group should identify areas where a revision of the UNCITRAL Arbitration Rules might be useful, possibly giving indications as to the substance or principles to be adopted in relation to the proposed revisions, in order to allow the Secretariat to prepare for subsequent sessions the first tentative draft of the revised UNCITRAL Arbitration Rules. The Working Group agreed, on the basis of documents A/CN.9/WG.II/WP.143 and Add.1, to define the list of topics that might need to be addressed in a revised version of the UNCITRAL Arbitration Rules and to hear suggestions to the Secretariat for drafting such revisions but not to reach any conclusion at the current session.

Harmonization of the drafting of the UNCITRAL Arbitration Rules with the Model Law

21. The Working Group agreed that harmonizing the provisions of the UNCITRAL Arbitration Rules with the corresponding provisions of the Model Law should not be automatic but rather considered only where appropriate.

Section I. Introductory rules

Scope of application — Article 1

Applicable version of the UNCITRAL Arbitration Rules

22. It was noted that article 1 dealt with the scope of application of the UNCITRAL Arbitration Rules, without determining which version of the Rules would apply in case of revision. In that respect, it was further noted that the model arbitration clause appended to article 1, paragraph (1) referred to the Rules “as at present in force”.

23. It was observed that a practice in some arbitral institutions was to include an express interpretative provision to the effect that the rules in force on the date of the commencement of the arbitration proceedings (as opposed to the Rules in force on the date of the contract) should apply unless the parties had agreed to the contrary. It was observed that, in practice, some parties had a preference to apply the most up-to-date rules to their dispute whereas others preferred the certainty of agreeing on rules in existence at the time the arbitration agreement was made. It was also said that, inclusion of a provision on the applicable rules would have the benefit of avoiding uncertainty as to the applicable version of the Rules in case of future revisions. That proposal received some support.

24. The Working Group further noted that many investment treaties included a provision on settlement of disputes that referred to the “arbitration rules of the

United Nations Commission on International Trade Law”, without determining which version of those Rules would apply in case of revision.⁹ Some treaties expressly stipulated that, in the event of a revision of the UNCITRAL Arbitration Rules, the applicable version would be the one in force at the time that the arbitration commenced.

25. It was observed that given the contractual nature of the Rules, their binding nature was derived from the will of the parties. No version of the Rules could be considered to be “in force” in and of itself outside the context of an agreement between the parties to the dispute (except possibly where a treaty or other instrument mandated dispute resolution by reference to the Rules). It was cautioned that any provision designating a default version of the Rules should be consistent with the principle of party autonomy. If the parties had agreed to apply the former version of the Rules, any transitional provision should not have any retroactive implications for that agreement.

26. The Working Group agreed to revisit the question of the applicable version of the Rules once it had completed its review of the current text of the UNCITRAL Arbitration Rules. It was pointed out that the decision whether or not to include a default provision on the applicable version might depend upon the overall scale of the modifications.

Paragraph (1)

The writing requirement for the agreement to arbitrate and for modification of the Rules

27. It was questioned whether to retain the requirements in article 1, paragraph (1) that both the agreement of the parties to refer disputes to arbitration under the UNCITRAL Arbitration Rules and any modification thereto should be in writing. Diverging views were expressed on that question.

28. It was noted that the purpose of the requirement that the arbitration agreement be in writing was to set out the scope of application of the UNCITRAL Arbitration Rules and, unlike the function of the form requirement under the Model Law, might be separate from the question of the validity of the arbitration agreement (which was left to the applicable law) or from the question of enforcement under the New York Convention.

29. In support of deletion of the writing requirement, it was said that the question of form was a matter that should be left to the applicable law. It was observed that a number of arbitration rules did not require, as a condition for their applicability, an agreement in writing. It was said that the UNCITRAL Arbitration Rules should, in the interests of harmonization of international arbitration, take a consistent approach with the work of the Working Group in respect of the Model Law, which had reflected a broad and liberal understanding of the form requirement. In addition, it was said that, if such a requirement were to be maintained, it should be defined and that including such a definition would go beyond the usual scope of arbitration rules.

⁹ NAFTA Rules, article 1120 (1)(c); and article 10 (3)(b) of the Greek Model BIT (2001), reprinted in UNCTAD, *International Investment Instruments: A Compendium* vol. VIII (2003) 273; United States of America-Uruguay BIT (2004); article 1(k) of the United States of America Model BIT (1994) reprinted in UNCTAD, *International Investment Instruments: A Compendium* vol. III (1996) 195.

30. However, it was said that preserving a reference to the writing requirement was necessary particularly in light of the fact that there was no uniform approach to that question, some jurisdictions having omitted this requirement and others still requiring writing. In addition, it was noted that the writing requirement could have two functions. First to remind the parties that depending on the applicable law, the agreement to arbitrate might only be valid if made in writing and second, from the point of view of convenience, to provide a basis upon which an appointing authority could appoint arbitrators.

31. The Working Group agreed that that question on whether or not to retain the writing requirement in respect of the arbitration agreement and the modification of the Rules should be further considered.

“disputes in relation to that contract”

32. The Working Group noted that article 1, paragraph (1) referred to disputes “in relation to that contract”. The Working Group considered whether those words should be omitted so as not to suggest any limitation with respect to the types of disputes that parties could submit to arbitration. The Working Group considered whether article 1, paragraph (1) should be widened to include words consistent with article 7 of the Model Law, which permitted arbitration of disputes “in respect of a defined legal relationship, whether contractual or not” or should contain no restriction at all.

33. Some support was expressed for inclusion of the words “in respect of a defined legal relationship, whether contractual or not” for the reason that it encompassed a broad range of disputes, including those arising in investment treaties that did not relate to a contract at all or that related to a contract involving a person that was not a party to the arbitration. It was also said that inclusion of these words would promote consistency between the Rules and the Model Law, which had been adopted widely. However, it was said that these words simply replaced one restriction with another, which unnecessarily limited the scope of the Rules and could raise interpretative questions that would undermine the certainty of the text. It was stated that a preferable approach would be to include no limitation at all.

34. It was noted that, if the words “in relation to that contract” were deleted then, as a matter of consistency, the words “to a contract” appearing after the words “the parties” should also be deleted. It was noted that such deletion could, in the context of disputes arising under investment treaties, create uncertainty given that the parties to the arbitration agreement might be different to the parties to the dispute. In response, it was said that addressing that specific issue in the UNCITRAL Arbitration Rules would add unnecessary complexity. To avoid this complication, a proposal was made to delete any reference to parties in the opening words of article 1, paragraph (1). That suggestion received some support. As a matter of drafting, it was suggested that wordings along the lines of “Where an agreement to arbitrate refers to the UNCITRAL Arbitration Rules (...)” or “Where it has been agreed that a dispute shall be settled by arbitration under the UNCITRAL Arbitration Rules (...)” might require further consideration. The Working Group agreed to revisit that question at a future session.

*Paragraph (2)**International law*

35. The Working Group was generally of the view that it was not necessary to include a reference in article 1, paragraph (2) to “international law” to address cases where a State or an international organization was involved as an arbitrating party. It was said that cases where a source of arbitration law was contained in a treaty or other mandatory international instrument were sufficiently covered by the reference to “the law applicable to the arbitration from which the parties cannot derogate”.

Model arbitration clause

36. A question was raised whether the words “arising out of or relating to this contract” should be deleted from the Model Arbitration Clause. It was recalled that the Working Group had envisaged under article 1, paragraph (1) to delete any reference to a contract (see above, paras. 32-34). In response, broad support was expressed for the retention of the reference to the contract in the Model Arbitration Clause, the purpose of which was precisely to provide a recommendation for the parties wishing to include a clause in their contract. In addition, it was said that the deletion of the words “, or the breach, termination or invalidity thereof”, which would ensue if the words “arising out of or relating to this contract” were deleted, might lead to unintended or negative consequences, depending upon the extent to which the law governing the arbitration agreement recognized the separability of the arbitration agreement.

37. With respect to the contents of the Model Arbitration Clause, several proposals were made to complement the options offered for consideration by the parties in the note placed at the end of the Model Arbitration Clause. One proposal was to add a paragraph along the following lines “(e) the law governing this arbitration agreement shall be (...)”. That concept received broad support, subject to drafting. Another proposal was to add a paragraph referring to the designation of the law governing the contract. That proposal was objected to on the ground that it went beyond the scope of the Arbitration Rules. A further proposal was to amend paragraph (c) to refer to the “[juridical] seat of arbitration” instead of the “place of arbitration” to emphasize that the legal place of the arbitration might differ from the actual place where arbitrators met. Doubts were expressed about that proposal given that it differed from the language used in the Model Law. The Working Group agreed to revisit that proposal in the context of article 16, which dealt with the place of arbitration.

38. A proposal was made to consider whether the arbitration clause should be moved elsewhere given the modifications to article 1, paragraph (1), which no longer contained a reference to a contract. The Working Group agreed to consider that proposal at a future session.

Notice, calculation of periods of time — Article 2*Paragraph (1)**Delivery of the notice*

39. The Working Group noted that article 2, paragraph (1) was based on the 1974 UNCITRAL Convention on the Limitation Period in the International Sale of Goods and set forth default provisions, which the parties could vary. It regulated

in useful detail when a notice, including a notification, communication or proposal could be deemed to have been received. It was noted that a number of existing arbitration rules referred to delivery by electronic means and it was suggested that article 2 should be amended to reflect contemporary practice. It was noted that such amendments would merely constitute a clarification for the avoidance of doubt, and should not be taken to mean that the current version of article 2, paragraph (1) excluded electronic means of communication.

40. It was also noted that article 2, paragraph (1) referred to a “physical delivery” of notices, thus relying on a concept of effective delivery that did not envisage the possibility of deemed delivery. Some considered that the inclusion of a provision on deemed delivery would be helpful, particularly to deal with the situation where delivery was not possible either because a party had absconded or systematically blocked delivery of notices. The Working Group was referred to article 3.3 of the International Chamber of Commerce Arbitration Rules 1998 (“the ICC Rules”) which provided that “A notification or communication shall be deemed to have been made on the day it was received by the party itself or by its representative, or would have been received if made in accordance with the preceding paragraph”, as an example of such a provision.

Paragraph (2)

Modification of periods of time

41. The Working Group proceeded to consider whether article 2, paragraph (2) should be amended to provide that the arbitral tribunal might have an express power to extend or shorten the time periods stipulated under the UNCITRAL Arbitration Rules, as necessary for a fair and efficient process of resolving the parties’ dispute.

42. It was observed that article 2, paragraph (2), which dealt with the method of calculation of time limits, might not be the appropriate place to deal with that more general issue. It was suggested that the power of the arbitral tribunal to modify time limits should be considered under article 15, which provided that the arbitral tribunal could conduct the arbitration in such manner as it considered appropriate. It was suggested that language along the following lines could be included: “In discharge of its duties under article 15, paragraph (1), the arbitral tribunal may at any time extend or abridge any period of time prescribed under or pursuant to the Rules”.

43. Reservations were expressed as to the need for inclusion of an express provision on the power of the arbitral tribunal to extend or abridge stipulated time limits. The view was expressed that that power could be understood as an inherent power of the arbitral tribunal, particularly in light of article 15.

44. A contrary view was expressed that, given that the power in article 15 was stated to be expressly subject to the UNCITRAL Arbitration Rules and that various time periods were stipulated under different articles of the Rules, the Rules could be interpreted as restricting the power of the arbitrator to amend these time periods.

45. It was suggested that the issue could be assessed once the Working Group had examined all provisions that stipulated a time period, and had determined whether expressly establishing the power of the arbitral tribunal to extend or abridge stipulated time periods was appropriate in each context. That proposal received support.

46. It was noted as well that the granting of such power to the arbitral tribunal would be of practical value when the parties failed to agree on applicable time limits. A question was raised whether the arbitrators should nevertheless be granted the power to modify time limits even where the parties had agreed on these matters. A suggestion was made that time limits agreed upon between the parties before the appointment of the arbitral tribunal might be considered as binding on it whereas any such limitation agreed upon by the parties after the arbitral tribunal had been appointed required the approval of the arbitral tribunal. The Working Group agreed to further consider the issue at a future session.

47. A question was raised whether the UNCITRAL Arbitration Rules should include a time limitation for the rendering of the award. The Working Group agreed that that matter should be considered when reviewing article 32 of the Rules (see below, paras. 118-119).

Notice of arbitration — Article 3

Separation of notice of arbitration from statement of claim

48. The Working Group considered whether the notice of arbitration should be separated from the statement of claim. It was stated that the UNCITRAL Arbitration Rules were carefully drafted so as to constitute a compromise between those who wished the statement of claim to be delivered at the outset and those who preferred a two-tiered approach where the notice of arbitration was followed by the statement of claim.

49. The Working Group agreed that the notice of arbitration and the statement of claim should remain separate documents, which might be submitted at different times, for various reasons. First, it was said that it might be impractical for a party to file a statement of claim together with the notice of arbitration in cases where, for example, there was an urgent need to start the arbitral proceedings either due to a limitation period, to the need to seek interim relief, or to precipitate negotiation of a settlement. Second, it was said that permitting the filing of a statement of claim either together or after the notice of arbitration as set out in the current provisions of the UNCITRAL Arbitration Rules provided for the right level of procedural flexibility.

Contents of notice of arbitration

50. A suggestion was made that article 3, paragraphs (3) and (4), which dealt with the contents of the notice of arbitration should be amended to include more detailed or additional information in the interests of improving efficiency of the arbitral procedure.

51. In relation to disputes that did not arise out of or in relation to a contract, a proposal was made to consider whether the notice of arbitration should require an indication of the documents or facts out of or in relation to which the dispute arose. It was said that that approach was too broad and there were other methods to address this issue such as, for example, by including language in subparagraph (d), along the following lines: “A reference to the contract, if any, out of or in relation to which the dispute arises” or “A reference to the contract or other legal instrument out of or in relation to which the dispute arises”.

52. A proposal was made to require for disputes arising out of a contract that the notice of arbitration should include a copy of that contract (rather than merely a

reference to it). It was generally felt that such a requirement would be unnecessarily burdensome and that the existing wording in article 3, paragraph (3)(d) adequately covered all situations, including disputes arising out of a bilateral investment treaty or involving an arrangement, involving some oral part.

53. Another proposal was made to amend article 3, paragraph (3)(e) by replacing the words “general nature” with the words “brief description”. Yet, another proposal was made to add under article 3, paragraph (3) the provisions currently contained in paragraph (4) subparagraphs (a) and (b). A proposal was made to include in the notice of arbitration, in addition to those items already listed in paragraph (3), the following elements: proposals by the claimant with respect to the number of arbitrators, the language and the place of the arbitration, if those matters had not already been agreed upon.

54. It was cautioned that imposing the obligation to include too much information in the notice of arbitration might give rise to the question of how to deal with an incomplete notice of arbitration. The Working Group discussed whether that issue should be addressed in the revised Rules or left to the discretion of the arbitral tribunal. To avoid overloading the notice of arbitration, a suggestion was made to determine whether some of the items proposed for inclusion under paragraph (3) should be included as optional items under paragraph (4). Support was expressed for allowing the arbitral tribunal to determine the consequences of an incomplete notice of arbitration. The Working Group agreed to further consider that issue at a future session.

55. It was observed that the notice of arbitration as currently conceived under the UNCITRAL Arbitration Rules constituted a well-recognized feature of the Rules, allowing the parties to start arbitration proceedings in a timely and efficient manner, and it was said that it would be important not to depart from that feature.

Response to the notice of arbitration

56. The Working Group noted that, since the statement of claim was only an optional element in the notice of arbitration, the arbitral tribunal might be constituted without the respondent having an opportunity (or being required) to state its position with respect to matters such as the jurisdiction, the claim, or any counterclaim.

57. The Working Group considered whether the respondent should be given an opportunity to state its position before the constitution of the arbitral tribunal, by responding to the notice of arbitration, and before the submission by the claimant of its statement of claim. It was suggested that providing such an opportunity or, as proposed by some delegations, a procedural obligation, would have the added advantage of clarifying at an early stage of the procedure the main issues raised by the dispute. It was said that inclusion of a right for the respondent to reply to the notice of arbitration would provide an appropriate balance between the applicant and the respondent. Support was expressed for that proposal. The Working Group agreed to discuss at a future session the possible contents of the response to the notice of arbitration.

Commencement date of arbitral proceedings

58. A question was raised whether the date for commencement of the arbitral proceedings should be the date on which the notice of arbitration had been received by the respondent as provided for under article 3, paragraph (2) or whether

commencement should be delayed until the date on which response to the notice of arbitration had been received. That matter was considered an important question, particularly in States where the arbitration law defined a time limit for the rendering of an award. The view was expressed that the commencement date of the arbitration should be distinguished from the date as of which the time for rendering the award was counted. The Working Group agreed to further consider that issue.

Section II. Composition of the arbitral tribunal

Number of arbitrators — Article 5

59. The Working Group proceeded to consider whether the default rule on the number of arbitrators of three members should be modified. In support of retaining the default composition for arbitral tribunal of three members, it was said that the default rule of three arbitrators was a well-established feature of the UNCITRAL Arbitration Rules, reproduced in the Model Law, ensured a certain level of security by not relying on a single arbitrator, and should in the interests of familiarity be retained.

60. In favour of inclusion of a default rule of a sole arbitrator, it was said that such a rule would render arbitration less costly and thus make it more accessible, particularly to poorer parties and in less complex cases. However, it was questioned whether such parties might prefer the less costly option of a sole arbitrator and it was suggested that arbitral practice indicated that such parties preferred a three member panel which allowed them to choose at least one arbitrator. The Working Group observed that it was normal practice to have one arbitrator as the default rule in arbitrations administered by some institutions with a discretion to appoint three arbitrators, subject to contrary agreement by the parties. It was noted that in arbitrations conducted outside the framework of an arbitral institution, discretionary selection of three arbitrators by the institution would not be available. It was suggested that discretion to intervene could be granted to the appointing authority in non-institutional arbitrations to appoint three arbitrators in more complex arbitrations. However, concern was expressed that such discretion fell outside the traditional role for appointing authorities and could introduce a further level of delay in the arbitral proceedings. As well, at the time of appointment of arbitrators, there might not be an appointing authority. It was said that leaving the question of the number of arbitrators to the appointing authority based on the subjective question of whether or not a case was complex introduced a level of uncertainty.

61. A proposal was made that a better way to address the question of accessibility of arbitration and reduction of cost would be to issue guiding recommendations on how to use the UNCITRAL Arbitration Rules in situations involving small claims.

Appointment of arbitrators — Articles 6 to 8

Multiparty arbitration

62. The Working Group took note that articles 6 to 8, which dealt with the appointment of arbitrators, did not include provisions dealing with appointment of arbitrators in multiparty cases. Support was expressed for inclusion of a two-step procedure for the appointment of arbitrators in a multiparty arbitration such that where there were multiple parties, whether as claimant or as respondent, and where the dispute was to be referred to three arbitrators, the multiple claimants, jointly,

and the multiple respondents, jointly, should nominate an arbitrator. In the absence of such a joint nomination and where all parties were unable to agree on a method for the constitution of the arbitral tribunal, the appointing authority might appoint each member of the arbitral tribunal and designate one of them to act as the presiding arbitrator. Support was expressed for the general principles expressed in that approach.

63. There was general support for the proposal to include a rule which deprived all parties of their right to appoint an arbitrator if the parties on either side were unable to make such an appointment. For example, where the number of either applicants or respondents was very large and did not form a single group with common rights and obligations, involving, for example, a large number of shareholders, the appointing authority should be given authority to make the appointment on their behalf. In the context of that discussion, it was pointed out that the appointing authority should have the discretion to appoint an arbitrator already appointed by a party that was subsequently deprived of its right to appoint. It was suggested that rules relating to multiparty arbitrations should extend beyond appointment of arbitrators and should also deal with the conduct of arbitrations and the method of appointment especially its transparency, where there were multiple parties on both or either side. The Working Group agreed to reconsider these issues at a future session.

Challenge of arbitrators — Articles 9 to 12

Article 9

Ongoing nature of duty to disclose

64. The Working Group proceeded to consider whether article 9, which dealt with the duty of disclosure by an arbitrator, should make it clear that the obligation to disclose matters giving rise to justifiable doubts as to an arbitrator's impartiality and independence was a continuing one, as was provided under article 12, paragraph (1) of the Model Law. It was noted that whilst the Model Law imposed an ongoing obligation by the words "from the time of his appointment and throughout the arbitral proceedings", the Rules merely referred to the duty "once [the arbitrator was] appointed or chosen". The Working Group agreed that the obligation to disclose under the Rules had in practice been interpreted as an ongoing obligation. Nevertheless, it was agreed that, in order to put that matter beyond doubt and in the interests of achieving consistency with the Model Law, the ongoing nature of the duty to disclose be clarified by using similar language to that used in article 12, paragraph (1) of the Model Law.

65. The Working Group did not support a proposal that disclosure should be in the form of a written declaration.

Article 12

Time limits for challenge

66. The Working Group agreed to consider revising article 12 so as to introduce time limits by which the party making a challenge should seek a decision by the appointing authority. The Working Group agreed that other matters, such as whether or not the arbitral proceedings could continue while a challenge was ongoing, should not be addressed, as such matters were dealt with in applicable laws or left to the arbitral tribunal.

Replacement of an arbitrator — Article 13

Resignation of arbitrators

67. The Working Group considered whether the revised version of the UNCITRAL Arbitration Rules should specify conditions for the resignation of arbitrators in order to avoid spurious resignations, or at least minimize their impact on the overall arbitral process. Article 13 did not contain any provision on that question, and it was noted that, in practice, arbitral proceedings had been adversely affected by *mala fide* or tactical resignations of arbitrators.

68. Various options to define conditions under which the resignation of an arbitrator could be permitted were considered by the Working Group. It was noted that in multi-member arbitral tribunals, a resignation could be approved by the other arbitrators. This would require an arbitrator to provide reasons for resigning and to submit to the other arbitrators' scrutiny and judgement, and could act as an effective deterrent against ill-considered or plainly tactical resignations. This practice would be consistent with the general rule that the arbitral tribunal was responsible for the conduct of the proceedings. Another option was to require the appointing authority to approve the resignation of an arbitrator. However, it was said that the other arbitrators would be in a better position to approve or refuse such resignation as they would be aware of the circumstances and facts of the arbitral proceedings.

69. It was questioned whether the Rules should contain criteria for assessing whether the resignation of an arbitrator was made in good faith or not. In that respect, it was noted that arbitral institutions rarely refused the resignation of arbitrators for the practical reason that obliging participation by a reluctant arbitrator would be detrimental to the arbitral process. It was felt as well that setting criteria for the acceptance or refusal of a resignation by an arbitrator might be too rigid, and a preferable approach was to permit either the remaining members of the arbitral tribunal or the appointing authority to determine, by reference to the relevant facts and circumstances whether the resignation was acceptable or not. It was said that that approach had the advantage of respecting the contractual foundation of arbitration.

Consequences of a bad faith resignation

70. It was said that there might be two different ways of dealing with an unapproved resignation of an arbitrator. First, the party having initially appointed the arbitrator might be deprived of the right to appoint a replacement arbitrator, which would be vested instead with the appointing authority. The second was to design a provision on truncated tribunal, which would preserve the existence of a three-person arbitral tribunal and thus satisfy the provision found in some national laws that prohibited even-numbered arbitral tribunals (see below, paras. 73-74).

71. The Working Group considered whether the loss of the right to appoint a substitute arbitrator should be automatic or subject to conditions. It was said that the loss of that right should not be connected with the need to prove collusion with the resigning arbitrator. It was also said that the loss of that right was a serious act, which could only be based on the faulty behaviour of a party to the arbitration. It was said that the loss of that right should be based on a fact-specific inquiry, and should not be subject to defined criteria. Rather, the arbitral tribunal or the appointing authority should determine, in its discretion, whether the party had the right to appoint another arbitrator.

72. It was said that the arbitrator who resigned in bad faith might be held liable for such behaviour under the general rules governing the relationship between the parties and the arbitrator.

Truncated tribunals

73. The Working Group proceeded to consider whether the language used in article 13 precluded the possibility of a “truncated tribunal” whereby, after the resignation of an arbitrator, the remaining arbitrators could continue with the proceedings and possibly issue an award, without a substitute arbitrator being appointed. It was observed that some arbitral tribunals had found that the power to act as a truncated tribunal existed under the present Rules without modification. It was pointed out, however, that there was a risk that an award made by a truncated tribunal might not be recognized under some national laws. The view was also expressed that the inclusion of a provision on truncated tribunals was unnecessary in view of the fact that courts could rule on that point either under article 34 of the Model Law or under article V of the New York Convention. However, it was said that relying on differing court interpretations would create a level of uncertainty in respect of truncated tribunals and that it was desirable to provide a solution during the proceedings rather than leave the issue to be dealt with at the enforcement stage. It was suggested that a provision on replacement of an arbitrator should not be limited to resignation by the arbitrator but could extend to other circumstances such as incapacity or death of the arbitrator.

74. It was stated that including a provision on truncated tribunal would be particularly important if it addressed the circumstances in which the truncated tribunal mechanism would apply. It was agreed that the provision should indicate what kind of conduct would trigger the mechanism, who should be able to decide when the mechanism ought to apply (for example, the appointing authority or the remaining arbitrators), and at what point the mechanism could begin to operate (i.e., only after the conclusion of the hearings or possibly earlier). It was suggested that the mechanism should apply within strict time limits, for example, only once the hearings were closed and should not be available in the case of bona fide resignation but only where there was a *mala fide* resignation or other obstructionist behaviour by an arbitrator.

Repetition of hearings in the event of the replacement of an arbitrator — Article 14

75. The Working Group considered whether article 14 should be revised. Suggestions were made that article 14 be revised to include a provision granting the arbitral tribunal the power to decide whether or not to repeat a hearing when the sole or presiding arbitrator was replaced. Another suggestion was made to revise article 14 along the lines of article 14 of the Swiss Rules of International Arbitration, which provided that, in case of replacement of an arbitrator, the proceedings should resume at the stage where the arbitrator who was replaced had ceased his or her functions, unless the arbitral tribunal decided otherwise. The Working Group requested the Secretariat to provide a revised version of article 14, taking account of the suggested amendments.

Section III. Arbitral proceedings

General provisions — Article 15

76. The Working Group proceeded to consider whether article 15, paragraph (1) should expressly provide that arbitral proceedings should be dealt with by the arbitral tribunal without unnecessary delay. It was said that inclusion of such a principle was otiose but that it might nevertheless be useful to provide leverage for arbitral tribunals to take certain steps both vis-à-vis the other arbitrators and the parties. It was cautioned that inclusion of such a principle could expose the arbitral tribunal to attack for not fulfilling the duty.

77. It was suggested that article 15 of the Rules should not include the words that each party should be given a full opportunity of presenting its case “at any stage of proceedings”, which phrase had been omitted from article 18 of the Model Law. It was suggested that, to avoid a situation where a party would insist on submission at an inappropriate stage of the arbitration, the words “at any stage of proceedings” could be replaced by words such as “at the appropriate stage”. It was also suggested that the reference to the phrase “a full opportunity” could be contentious and that it might be more appropriate to simply refer to “an opportunity”. Caution was expressed as to whether this amendment was really necessary given that the Working Group had no information that the current text had led to problems or created undesirable results.

Preparatory hearings

78. The Working Group agreed that it might not be necessary to include an express provision conferring on the arbitral tribunal the power to hold preliminary consultations or meetings either at the request of the parties or at its own initiative.

Consolidation of cases before arbitral tribunals

79. The Working Group was informed that, in some cases, under the Rules, consolidation of cases was only possible where the parties specifically so agreed and proceeded to consider whether additional provisions on that matter should be added to the Rules. Some support was expressed for inclusion of such provisions based, for example, on the approach taken in article 4 (6) of the ICC Rules, which allowed consolidation when all proceedings related to the same “legal relationship” and subject to the consent of the parties to submit to rules that permitted such consolidation.

80. However, doubts were expressed as to the workability of such a provision given that the Rules often applied in non-administered cases. It was suggested that a number of issues raised by consolidation might be dealt with by other procedures such as set-off or joinder. In that respect, reference was made to article 22.1(h) of the LCIA Arbitration Rules.

Third party intervention in arbitral proceedings

81. The Working Group considered whether an express provision on third party intervention should be included in any revised version of the UNCITRAL Arbitration Rules. It was said that two different situations might be distinguished. One was the situation where a person wished to be heard in the arbitral proceeding,

for example, in the form of *amicus curiae* briefs. The second situation was where a party sought to be joined to the proceedings.

82. It was felt that article 15, paragraph (1), of the UNCITRAL Arbitration Rules, which provided that “the arbitral tribunal may conduct the arbitration in such manner as it considers appropriate”, could be interpreted as including a power of the arbitral tribunal to accept interventions by third parties. It was observed that practice showed that third parties were able to join arbitral proceedings under the UNCITRAL Arbitration Rules and the Working Group agreed that there might not be a need to include an express provision on that matter in a revised version of the UNCITRAL Arbitration Rules.

83. The Working Group agreed that third party intervention in arbitral proceedings was a matter closely connected to the confidentiality of proceedings.

Confidentiality of proceedings

84. The Working Group considered whether an express provision on confidentiality should be included in a revised version of the UNCITRAL Arbitration Rules. It was observed that articles 25, paragraph (4), and 32, paragraph (5), of the UNCITRAL Arbitration Rules dealt with the confidentiality of hearings and awards respectively, but did not contain rules regarding the confidentiality of the proceedings as such, or of the materials (including pleadings) before the arbitral tribunal.

85. The Working Group noted that that matter was quite complex, that there were diverse views expressed on the importance of confidentiality, and that the practice and the law were still evolving. It was said that regulating that issue in too much detail would constitute a major departure from the UNCITRAL Arbitration Rules. It was observed that the scope of confidentiality needed could depend on the subject matter of the dispute and the applicable regulatory regimes.

86. The opinion that a general confidentiality provision should not be included was expressed by many delegations. It was also suggested that the matter should be left to be addressed on a case-by-case basis by the arbitrators and the parties. The Working Group agreed to further discuss whether article 32, paragraph (5) would need to be revised.

Place of arbitration — Article 16

87. The Working Group proceeded to consider whether or not to clarify the term “place of arbitration” in article 16. It was observed that the term “place” was used in article 16 under paragraphs (1) and (4) to refer to the seat of arbitration, which determined the law applicable to the arbitral procedure and court jurisdiction, whereas paragraphs (2) and (3) referred to the physical location where meetings might be held. It was suggested that a review be undertaken of the Rules to distinguish provisions where the reference to the term “place” referred to physical locations from those provisions where it referred to the seat of arbitration.

88. A proposal was made to replace the words “place of arbitration” in article 16, paragraphs (1) and (4) with words such as “the seat of arbitration” or “the juridical seat of arbitration”. Reservations were expressed as to whether the proposed words would in fact improve the understanding of the provision. It was observed that users were often unaware of the legal consequences attached to the term “place of arbitration”. It was suggested that a reference to the “seat of arbitration” could

signal the legal implications of that notion and could differ from the physical place where certain elements of the arbitral procedure were carried out or where an arbitrator might sign the award.

89. The Working Group considered but did not reach a conclusion as to whether the Rules should remain consistent with the Model Law (which currently used the expression “place of arbitration”) or whether a differentiated terminology should be used.

90. A proposal was made to amend paragraph (4), consistent with article 31, paragraph (3) of the Model Law to provide that an award should be deemed to have been made at the place of arbitration to avoid the risk that an award be declared invalid if it was signed in a place other than the seat of arbitration

Language — Article 17

91. The Working Group heard suggestions that it was unnecessary to revise article 17, paragraph (1) so as to expressly require consultation of the arbitral tribunal with the parties to determine the language or languages to be used in the proceedings. Even though it was noted that as drafted, the requirement that the arbitral tribunal “promptly after its appointment, determine the language or languages” could be interpreted as not requiring consultation, the Working Group considered that the Rules did not affect the advisability of consulting the parties before the arbitral tribunal took such or any other procedural decision.

Statement of claim — Article 18

92. The Working Group agreed that it was not necessary to include complementary provisions to article 18 on documentary evidence to be provided by the claimant with its statement of claim. It was agreed that that issue could be left to the discretion of the arbitral tribunal or to the parties in organizing the procedure.

Statement of defence — Article 19

Raising claims for the purpose of set-off

93. Article 19, paragraph (3), of the UNCITRAL Arbitration Rules provided that the respondent might make a counter-claim or rely on a claim for the purpose of a set-off if the claim arose “out of the same contract”. The Working Group considered whether a revised version of the UNCITRAL Arbitration Rules should contain provisions allowing counter-claims or set-off in a wider range of situations.

94. Views were expressed that the arbitral tribunal’s competence to consider counter-claims or set-off should, under certain conditions, extend beyond the contract from which the principal claim arose. To achieve that extension, it was proposed to replace the words “arising out of the same contract” with the words “arising out of the same defined legal relationship”. Another proposal was that the restriction be removed altogether although it was noted that such an approach might render the provision unclear as to the legal basis on which the counter-claim or the set-off would be acceptable.

95. A suggestion was made to provide expressly that an arbitral tribunal could only proceed to deal with a counter-claim or a set-off if it had jurisdiction over those matters. It was recognized that determining that issue raised complex questions of consistency of the Rules with laws governing the issues of jurisdiction,

counter-claim and set-off. The view was expressed that it was preferable not to include in the Rules a specific provision on jurisdictional issues in the context of counter-claims and set-off and that those issues should be left for the arbitral tribunal to decide. Others expressed the view that some provision should clarify the jurisdictional basis for any counter-claim. The Working Group observed that the function of set-off, which could be understood as a form of payment, differed from that of a counter-claim and different legal principles applied to it.

96. As to the range of situations where issues of counter-claim or set-off could be addressed by the arbitral tribunal, the view was expressed that permitting the arbitral tribunal to deal with any such issue arising out of a legal relationship between the parties might raise important issues, especially in the context of investment disputes, where it might be necessary to adopt a particularly broad understanding of the range of counter-claims and set-off that could be dealt with in the same proceedings.

Pleas as to the jurisdiction of the arbitral tribunal — Article 21

Paragraph (1)

97. The Working Group was generally of the view that article 21, paragraph (1) should be redrafted along the lines of article 16, paragraph (1), of the Arbitration Model Law in order to make it clear that the arbitral tribunal had the power to raise and decide upon issues regarding the existence and scope of its own jurisdiction. It was noted that, in cases where both parties participated in the arbitral process, it would be unusual for the arbitral tribunal to raise such issues in the absence of any objections by the parties. However, it was noted that in some cases, for example, where one party did not participate in the proceedings or where complex issues of arbitrability were at stake such as those relating to competition issues, the parties were not necessarily aware of the arbitrability of the subject-matter of the dispute. The arbitral tribunal should therefore be permitted to decide on its own jurisdiction regardless of the position of the parties.

98. The Working Group was also of the view that article 21 of the Rules should contain an equivalent provision to article 16, paragraph (2), of the Arbitration Model Law, which provided that a party was not precluded from raising a plea as to jurisdiction by the fact that it had appointed, or participated in the appointment of, an arbitrator, and that the arbitral tribunal might, in either case, admit a later plea if it considered the delay justified.

Paragraph (4)

99. The Working Group considered whether article 21 should make it clear that recourse to domestic courts should only be made after the arbitral tribunal had pronounced itself on its own jurisdiction, and that such recourse should not delay the arbitral proceedings or prevent the arbitral tribunal from making a further award, in accordance with article 16, paragraph (3), of the Arbitration Model Law.

100. It was observed that such provision might raise legal and practical difficulties. It was noted that a number of national laws provided parties with an irrevocable right to seek recourse from the courts. Constitutional provisions, article 6 of the Convention for the Protection of Human Rights and Fundamental Freedoms adopted by the Council of Europe, and other examples of mandatory legislation were quoted as particularly authoritative sources of law that would take precedence over arbitration rules. In response, it was said that inclusion of a provision limiting

recourse to courts would, pursuant to article 1, paragraph (2) of the Rules, always be subject to mandatory applicable law.

101. It was stated that any proposed provision on recourse should be carefully drafted to take account of the fact that a party should not be prevented from exercising recourse to the courts, particularly before the arbitral tribunal had been constituted and even thereafter if the arbitral tribunal was not functioning properly. For example, where a party sought an application for a stay in a court, that court might need to enquire into the question of jurisdiction.

102. The Working Group agreed to further consider that matter at a future session.

Evidence and hearings — Articles 24 and 25

Article 24

103. The Working Group considered whether a revised version of article 24, paragraph (1) should provide that the power to require a party to produce evidence might be exercised either on the arbitral tribunal's own motion or on the application of any party. The Working Group agreed that that provision did not require modification.

Interim measures of protection — Article 26

104. The Working Group considered whether, and if so, to what extent, article 26 of the UNCITRAL Arbitration Rules should be revised in light of the new Chapter IV A of the Model Law adopted by the Commission at its thirty-ninth session.

105. The Working Group was generally of the view that article 26 should be revised to take account of that new chapter. For instance, the words “in respect of the subject-matter of the dispute”, which were deleted from the equivalent provisions in Chapter IV A, could also be deleted from article 26 for being overly restrictive. A suggestion was made that the revised provisions on interim measures might clarify the circumstances, conditions and procedure for the granting of interim measures, consistent with Chapter IV A, or be drafted in such a way that they would give effect to the party autonomy provided by Chapter IV A. However, the Working Group agreed that, given the nature of the Rules, a number of provisions contained in Chapter IV A should not be replicated, such as provisions on the enforcement of interim measures. The view was expressed that the provisions of Chapter IV A that were of a contentious nature and had previously given rise to diverging views in the Working Group should not be included in the UNCITRAL Arbitration Rules, in order not to endanger their wide acceptability.

Experts — Article 27

106. The Working Group considered whether a revised version of the UNCITRAL Arbitration Rules should refer to consultation with the parties before appointing any expert. While the view was expressed that such an obligation was implied, the contrary view was also held that the Rules created no obligation for the arbitral tribunal to consult with the parties in that case. In addition, it was said that the inclusion of such an express statement might lead to unintended results in that it could be misinterpreted as excluding the possibility that the parties be consulted on other matters such as, for example, the content of the report produced by the expert.

107. The Working Group considered whether article 27 should provide that an arbitral tribunal be given the power to direct any expert presented by the parties to meet with the expert appointed by the arbitral tribunal in order to attempt to reach an agreement on contentious issues or, at least, to narrow them down. That proposal was not supported. After discussion, the Working Group was generally of the view that article 27 should remain unaltered.

Section IV. The award

Decisions — Article 31

Paragraph (1)

108. It was noted that article 31, paragraph (1) required that an award be made by a majority of arbitrators in cases where there was a three-member arbitral tribunal. It was proposed to revise that paragraph in order to avoid a deadlock situation where no majority decision could be made. It was said that one solution could be to revise paragraph (1) so as to provide that if an arbitral tribunal composed of three arbitrators could not reach a majority, then the award would be decided by the presiding arbitrator as if he or she were a sole arbitrator.

109. It was said that in the absence of such a provision, the presiding arbitrator could be forced to compromise his or her views to join with the least unreasonable of the co-arbitrators in order to form a majority. However, fears were expressed that such a provision would give too much power to presiding arbitrators. In addition, it was noted that, in cases administered under rules that conferred upon presiding arbitrators the right to make a casting vote, practice had shown that presiding arbitrators rarely exercised that right, as they preferred to seek a unanimous award for the reason that it was felt to have greater persuasion. In response, it was stated that if that right rarely had to be used, it was because it created conditions under which members of arbitral tribunals sought to find common grounds with presiding arbitrators.

110. If such a rule was considered appropriate, it was suggested that consequential amendments relating to the signing of the award and truncated tribunals might also need to be considered.

111. Reservations were expressed as to the need for the proposed rule. It was suggested that the requirement for a majority decision was a well-known feature not only of the UNCITRAL Arbitration Rules but also of other successful sets of rules, such as the arbitration rules of the American Arbitration Association.

112. Given the differing views expressed, the Working Group requested the Secretariat to prepare various options for consideration by the Working Group at a future session, based on information regarding the existing practice of arbitration institutions on that issue.

Form and effect of the award — Article 32

Paragraph (1)

113. It was suggested that the word “partial”, which was not used in the Model Law, should be deleted given that a partial award could be considered a final award in respect of the issues on which it ruled.

Paragraph (2)

114. It was proposed that the revised Rules should include a provision inspired from article 28, paragraph (6), of the ICC Rules and article 26.9 of the LCIA Rules, whereby the award should be subject to no appeal or other recourse before any court or other authority. The effect of the new provision would be to make it impossible for parties to use those types of recourse that could be freely waived by the parties (for example, in some jurisdictions, an appeal on a point of law), but not to exclude challenges to the award (for example, on matters such as lack of jurisdiction, violation of due process or any other ground for setting aside the award as set out under article 34 of the Model Law), inasmuch as the parties could not exclude them by contract.

Paragraph (5)

115. A suggestion was made that the rule contained in paragraph (5) could be reversed requiring an award to be published unless parties agreed otherwise. It was further proposed that any revision of paragraph (5) take account of cases where a party was under a legal duty to disclose an award or its tenor.

116. A question was raised whether paragraph (5) should also encompass draft awards. It was noted that inclusion of draft awards could have implications on confidentiality of deliberations, which the Working Group agreed was a separate issue, yet unsettled in practice, which needed to be further considered.

Paragraph (7)

117. A suggestion was made to revise paragraph (7) so as to avoid an onerous burden being placed on an arbitral tribunal in countries where registration requirements were ambiguous. It was suggested that a revised draft be prepared providing that compliance of the arbitral tribunal with registration requirements be made subject to a timely request of any party. However, reservations were expressed that such a revision might not relieve arbitrators of a registration duty under applicable law and the Secretariat was requested to examine the nature of such duty.

Time limit for rendering the award

118. The Working Group considered whether a time limit should be imposed for rendering of an award. It was noted that the existence of time limits was well known in institutional rules and that, in practice, extensions of such time limits were systematically given. Some support was expressed for inclusion of a time limit with the arbitral tribunal having a one-time option to extend that period.

119. Reservations were expressed on that proposal given that, in non-administered arbitrations, there would be no institution to deal with possible extensions of the time limit. As well, it was indicated that in States having time limits in their arbitration laws, practical problems also existed and therefore strong opposition was expressed to a time limit. It was suggested that rather than imposing an arbitrary time period, flexibility should be retained by inclusion of a general principle that there not be undue delay in rendering an award.

Possible new paragraph (8)

120. The Working Group considered whether a provision imposing a duty on arbitrators and parties to act in the spirit of the UNCITRAL Arbitration Rules, even

in circumstances where no specific provision covered the situation in question, should be added. In that respect, it was said that inclusion of principles contained in articles 15 and 35 of the ICC Rules or in article 32 of the LCIA Rules should be considered. The attention of the Working Group was brought to the need of formulating the new rule in such a way that it would avoid vagueness. After discussion, a provision of the kind suggested was broadly supported, to the extent it would clarify that the Rules constituted a self-contained system of contractual norms and that any lacuna therein was to be filled by interpreting the Rules themselves, without reference to any non-mandatory provision of applicable procedural law.

121. It was also proposed to include a provision on the interpretation of the Rules in accordance with their international origin in line with the new article 2 A of the Model Law.

Applicable law, amiable compositeur — Article 33

Paragraph (1)

Law applicable to the substance of the dispute

122. The Working Group considered whether the words “rules of law” currently used in article 28 of the Model Law should also be used in a revised version of article 33 of the UNCITRAL Arbitration Rules to replace the term “law”. Diverging views were expressed on that point and the Secretariat was requested to prepare alternative drafts for consideration by the Working Group at a future session.

123. Another proposal was made to replace the default provision that reference be made to conflict of laws rules failing designation by the parties with a reference to a direct choice of the rules of law most closely connected to the dispute.

Paragraph (2)

Ex aequo et bono — Amiable compositeur

124. The Working Group considered whether article 33, paragraph (2) should be modified to delete the requirement that the law applicable to the arbitral procedure permit an arbitration to be decided *ex aequo et bono*. No support was expressed for that modification.

Interpretation of the award — Article 35

125. A proposal was made that the request to the arbitral tribunal to give an interpretation of the award should be made by both parties. That proposal did not receive support.

126. The Working Group considered whether article 35 should only apply where there was a need to interpret what the award ordered the parties to do. That proposal did not receive support.

Correction of the award — Article 36

127. The Working Group considered whether the scope of article 36 should be broadened to include correction of the award in situations such as arbitrator having omitted to sign the award or to state the date or place of the award. Diverging views were expressed. It was said that the text, which allowed correction in the award of

“any errors in computation, any clerical or typographical errors, or any errors of similar nature” was sufficiently broad to encompass such matters. To clarify that omissions were included, a proposal was made to add the words “or omission”.

Additional award — Article 37

128. The Working Group considered whether the words “without any further hearings or evidence” should be deleted on the basis that arbitrators should be free to convene hearings or request further evidence or pleadings. Support was expressed for that proposal as it allowed the arbitral tribunal to complete the award in respect of claims that were presented during the arbitral proceedings but had been overlooked in the award. It was suggested that, if further hearings or evidence were necessary, the sixty-day period contained in paragraph (2) might not apply. Reservations were expressed with respect to recognizing the possibility for the arbitral tribunal to hold hearings or receive further evidence, which could be used by the parties as a dilatory tactic to reopen arbitral proceedings.

129. Diverging interpretations were expressed as to whether paragraph (2) could be understood as already allowing the arbitral tribunal to make an additional award after holding further hearings and taking further evidence.

Costs — Articles 38 to 40

Article 38

130. The Working Group considered whether the list of elements included in article 38 was exhaustive. It was stated that the word “only” used in the chapeau resulted in the list being exhaustive.

131. No support was expressed in favour of a proposal to add a reference to the fees and expense of a secretary in paragraph (c). It was said that such fees and expenses were already covered in paragraph (c) through use of the words “other assistance required by the arbitral tribunal”.

132. The view was expressed that paragraphs (b)-(d) should be qualified by the word “reasonable”.

Article 39

133. The Working Group considered whether it was necessary to provide more guidance on the question of the fees of the arbitrators in any revision of the UNCITRAL Arbitration Rules. It was noted that the absence of any provision on fees could create reluctance to choose the UNCITRAL Arbitration Rules.

134. It was suggested that consideration be given to granting a role to the appointing authority in respect of fees. Some reservations were expressed to granting such a role to appointing authorities for the reason that it might extend beyond their experience. However, it was noted that a number of appointing authorities had experience regarding the functioning of arbitration, including the setting of costs. Another option proposed was to provide a more transparent procedure for agreeing on the method of calculating the arbitral tribunal’s fees from the outset.

Article 40

135. A view was expressed that the costs of legal representation and assistance referred to under article 40, paragraph (2) might be already included in the costs of arbitration referred to under article 40, paragraph (1), and that therefore either the two paragraphs should be merged or the distinction between the two categories of costs should be clarified in any proposed revision of that article.

Additional provision**Liability of arbitrators**

136. The Working Group noted that the question of liability had given rise to case law and that a provision on that matter, whether limiting or excluding liability of arbitrators, should be considered for inclusion in the UNCITRAL Arbitration Rules. It was suggested that any provision on liability could require accompanying provisions setting out a code of ethics for arbitrators.

**B. Note by the Secretariat on settlement of commercial disputes:
Revision of the UNCITRAL Arbitration Rules, submitted to the
Working Group on Arbitration at its forty-fifth session
(A/CN.9/WG.II/WP.143 and Add.1) [Original: English]**

Section III. Arbitral Proceedings	62-76

Introduction

1. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that, in respect of future work of the Working Group, priority be given to a revision of the UNCITRAL Arbitration Rules (1976) ("the UNCITRAL Rules").¹ The Commission previously discussed that matter at its thirty-sixth (Vienna, 30 June-11 July 2003), thirty-seventh (New York, 14-25 June 2004) and thirty-eighth sessions (Vienna, 4-15 July 2005).²

2. At the forty-fourth session of the Working Group (New York, 23-27 January 2006), in order to facilitate a review of the UNCITRAL Rules, it was proposed to undertake preliminary consultations with practitioners to develop a list of potential topics on which updating or revision might be necessary.³ A conference was held in Vienna on 6 and 7 April 2006 in cooperation with the International Arbitral Centre of the Austrian Federal Economic Chamber. Suggestions were made to amend a number of articles of the UNCITRAL Rules in order to better align the Rules with

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 182-187.

² *Ibid.*, *Fifty-eighth Session, Supplement No. 17 (A/58/17)*, para. 204; *ibid.*, *Fifty-ninth Session, Supplement No. 17 (A/59/17)*, para. 60; *ibid.*, *Sixtieth Session, Supplement No. 17 (A/60/17)*, para. 178.

³ A/CN.9/592, paras. 90 and 93.

current international arbitration practice and the relevant provisions of the UNCITRAL Model Law on International Commercial Arbitration (“the Arbitration Model Law”).

3. To facilitate discussions of the Working Group on that topic, the Secretariat has prepared an annotated list of possible areas of revision of the UNCITRAL Rules, as suggested by arbitration experts during that conference, and as detailed in writings of such experts.⁴ This note covers articles 1 to 16 of the UNCITRAL Rules. Articles 17 to 41 are dealt with under A/CN.9/WG.II/WP.143/Add.1. This note and the addendum identifies areas of consensus as well as possible trends in modern arbitration and how those trends are reflected in arbitration rules with a view to extracting therefrom possible areas for revision of the UNCITRAL Rules. The annotated list is not intended to be exhaustive, and the Working Group might wish to raise additional issues.

4. It is suggested that the forty-fifth session of the Working Group be devoted to identifying areas where revisions of the UNCITRAL Rules might be useful, possibly giving indications as to the substance or principles to be adopted in relation to the proposed revisions, in order to allow the Secretariat to prepare for subsequent sessions the first tentative draft of revised UNCITRAL Rules.

Notes on a revision of the UNCITRAL Arbitration Rules

1. General remarks

Principles to be applied in revising the UNCITRAL Rules

5. At the thirty-ninth session of the Commission (New York, 19 June-7 July 2006), in recognition of the success and status of the UNCITRAL Rules, the Commission was generally of the view that any revision of the UNCITRAL Rules should not alter the structure of the text, its spirit, its drafting style, and should respect the flexibility of the text rather than make it more complex. It was suggested that the Working Group should undertake to carefully consider the list of topics which might need to be addressed in a revised version of the UNCITRAL Rules.

Harmonization of the drafting of the UNCITRAL Rules with the Arbitration Model Law

6. The Working Group might wish to consider harmonizing the provisions of the UNCITRAL Rules with the corresponding provisions of the Arbitration Model Law, where appropriate.⁵

⁴ *The work of UNCITRAL on Arbitration and Conciliation*, by Prof. Pieter Sanders, Second and Expanded Edition, Kluwer Law International; *Has the moment come to revise the Arbitration Rules of UNCITRAL?* by Prof. Pieter Sanders, *Arbitration International*, Vol. 20, No. 3, 2004. Unpublished and informal report: *Revision of the UNCITRAL Arbitration Rules*, by Jan Paulsson and Georgios Petrochilos, prepared for the UNCITRAL Secretariat.

⁵ For instance, the following articles of the UNCITRAL Rules might be aligned, to the extent relevant, with corresponding provisions of the Arbitration Model Law: article 2, paragraph (1), of the UNCITRAL Rules with article 3, paragraph (1), of the Arbitration Model Law; article 9 of the UNCITRAL Rules with article 12 of the Arbitration Model Law; article 13 of the UNCITRAL Rules with article 14 of the Arbitration Model Law; article 15 of the UNCITRAL Rules with article 24 of the Arbitration Model Law; article 16 of the UNCITRAL Rules with article 20 of the Arbitration Model Law; article 21 of the Arbitration Rules with article 16 of the

2. Notes on the provisions of the UNCITRAL Rules

7. Only articles on which substantive revisions are discussed are referred to below. The text of articles quoted in this note in *italic* is the original text of the UNCITRAL Rules.

Section I. Introductory rules

Scope of application — Article 1

“1. Where the parties to a contract have agreed in writing that disputes in relation to that contract shall be referred to arbitration under the UNCITRAL Arbitration Rules, then such disputes shall be settled in accordance with these Rules subject to such modification as the parties may agree in writing.*

“2. These Rules shall govern the arbitration except that where any of these Rules is in conflict with a provision of the law applicable to the arbitration from which the parties cannot derogate, that provision shall prevail.”

**Model Arbitration Clause*

Any dispute, controversy or claim arising out of or relating to this contract, or the breach, termination or invalidity thereof, shall be settled by arbitration in accordance with the UNCITRAL Arbitration Rules as at present in force.

Note — Parties may wish to consider adding:

(a) The appointing authority shall be ... (name of institution or person); (b) The number of arbitrators shall be ... (one or three); (c) The place of arbitration shall be ... (town or country); (d) The language(s) to be used in the arbitral proceedings shall be ...

Applicable version of the UNCITRAL Rules

8. Article 1 deals with the scope of application of the UNCITRAL Rules, without determining which version of the Rules would apply in case of revision. In that respect, it might be noted that the model arbitration clause appended to article 1, paragraph (1) refers to the Rules “as at present in force”.

9. The Working Group might wish to note that many investment treaties include a provision on settlement of disputes which refers to the “arbitration rules of the United Nations Commission on International Trade Law”, without determining which version of those Rules would apply in case of revision.⁶ Some treaties expressly stipulate that, in the event of a revision of the UNCITRAL Rules, the

Arbitration Model Law; article 28 of the UNCITRAL Rules with article 25 of the Arbitration Model Law; article 31 of the UNCITRAL Rules with article 29 of the Arbitration Model Law; article 33 of the UNCITRAL Rules with article 28 of the Arbitration Model Law; article 34 of the UNCITRAL Rules with article 32 of the Arbitration Model Law; article 37 of the UNCITRAL Rules with article 33 of the Arbitration Model Law.

⁶ NAFTA Rules, article 1120 (1) (c); and article 10 (3) (b) of the Greek Model BIT (2001), reprinted in UNCTAD, *International Investment Instruments: A Compendium* vol. VIII (2003) 273; United States of America-Uruguay BIT (2004); article 1 (k) of the United States of America Model BIT (1994) reprinted in UNCTAD, *International Investment Instruments: A Compendium* vol. III (1996) 195.

applicable version will be the one in force at the time that the arbitration is commenced.⁷

10. The rules of several arbitration centres contain a clarification on the applicable version of the rules in case of revision. For instance, the International Chamber of Commerce Arbitration Rules (“ICC Rules”) contain an express interpretative provision to the effect that the parties “shall be deemed to have submitted ipso facto to the Rules in effect on the date of the commencement of the arbitration proceedings, unless they have agreed to submit to the Rules in effect on the date of their arbitration agreement” (article 6, paragraph (1)). The Arbitration Rules of the London Court of International Arbitration (“the LCIA Rules”) contain in their preamble a statement clarifying that the applicable Rules are the current version of the Rules (“the following Rules”) or, in case of a revision, “such amended rules as the LCIA may have adopted hereafter to take effect before the commencement of the arbitration”.

11. The Working Group might wish to consider whether to revise article 1, by providing as a default rule that the most recent version of the UNCITRAL Rules apply, subject to contrary agreement of the parties.

Paragraph (1)

The writing requirement for the agreement to arbitrate

12. Article 1, paragraph (1) requires that the agreement of the parties to refer disputes to arbitration under the UNCITRAL Rules be in writing.

13. The *travaux préparatoires* indicate that the purpose of the requirement that the arbitration agreement be in writing was to avoid uncertainty as to whether the UNCITRAL Rules have been made applicable. That requirement was also intended to ensure conformity with article II, paragraph (2), of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (“the New York Convention”).⁸

14. It might be noted that there has been constant development of international arbitral practice on this question.

15. The Working Group might wish to note that the revised version of article 7 of the Arbitration Model Law on the definition and form of the arbitration agreement, as adopted by the Commission at its thirty-ninth session (New York, 19 June–7 July 2006), contains two options, the first one including a liberalized definition of the writing requirement, and the second deleting altogether that requirement. At that session, the Commission adopted a Recommendation on the interpretation of article II, paragraph (2), of the New York Convention, recommending “that

⁷ Hong Kong SAR-Italy BIT (1995); United Kingdom of Great Britain and Northern Ireland-Bosnia and Herzegovina BIT (2002); article 8 (2) (c) of the United Kingdom Model BIT (1991) reprinted in UNCTAD, *International Investment Instruments: A Compendium* vol. III (1996) 185.

⁸ Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section I, Commentary on article 1, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

article II, paragraph (2) be applied recognizing that the circumstances described therein are not exhaustive”.⁹

16. The arbitration rules of several institutions do not require, as a condition for their applicability, an agreement in writing. For instance, the ICC Rules only require that the parties have agreed to submit to arbitration under the ICC Rules. The Swiss Rules of International Arbitration (“the Swiss Rules”), which are based on the UNCITRAL Rules, provides that “these Rules shall govern international arbitrations, where an agreement to arbitrate refers to these Rules (...)” (article 1, paragraph (1)). As well, the rules of the Arbitration Institute of the Stockholm Chamber of Commerce (“SCC Rules”) do not require any written arbitration agreement.

17. Other institutions, which still maintain the writing requirement, seek to adopt a flexible definition of that requirement. For instance, the preamble of the LCIA Rules states that: “where an agreement (...) provides in writing and in whatsoever manner for arbitration under the Rules of the LCIA (...), the parties shall be taken to have agreed in writing that the arbitration shall be conducted in accordance with the following rules (...)”.

18. The Working Group might wish to consider whether the writing requirement should be retained.

The writing requirement for modification of the Rules

19. Article 1, paragraph (1) requires that the parties set out any modification they wish to make to the UNCITRAL Rules in writing.

20. According to the *travaux préparatoires*, the requirement that modification to the UNCITRAL Rules be in writing was intended to create certainty as to the ambit of such a modification.¹⁰

21. It might be noted that certain arbitration rules provide for a similar obligation. For instance, the preamble of the Arbitration Rules of the Singapore International Arbitration Centre (“the SIAC Rules”) states that “where any agreement, submission or reference provides for arbitration under the (...) Rules, the parties thereto shall be taken to have agreed that the arbitration shall be conducted in accordance with the following Rules (...), subject to such modifications as the parties may agree in writing”.

22. For instance, the Swiss Rules, the LCIA Rules, or the SCC Rules do not contain an obligation that modification by the parties to the Rules be in writing.

23. The Working Group might wish to consider whether the writing requirement should apply in respect of modifications.

⁹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, Annex II.

¹⁰ Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section I, Commentary on article 2, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

“disputes in relation to that contract”

24. Article 1, paragraph (1) refers to disputes in relation to a contract. The Working Group might wish to consider whether the ambit of the UNCITRAL Rules should include such a limitation, or be widened and include words consistent with article 7 of the Arbitration Model Law, which permits arbitration of disputes “in respect of a defined legal relationship, whether contractual or not”.¹¹

25. It might be noted that other sets of arbitration rules (such as the ICC Rules and the LCIA Rules) do not contain such limitation.

Paragraph (2)

International law

26. The Working Group might wish to consider whether article 1, paragraph (2) should include an explicit reference to “international law” to better deal with cases where a State or an international organization is involved as an arbitrating party.

Notice, calculation of periods of time — Article 2

“1. For the purposes of these Rules, any notice, including a notification, communication or proposal, is deemed to have been received if it is physically delivered to the addressee or if it is delivered at his habitual residence, place of business or mailing address, or, if none of these can be found after making reasonable inquiry, then at the addressee’s last-known residence or place of business. Notice shall be deemed to have been received on the day it is so delivered.

“2. For the purposes of calculating a period of time under these Rules, such period shall begin to run on the day following the day when a notice, notification, communication or proposal is received. If the last day of such period is an official holiday or a non-business day at the residence or place of business of the addressee, the period is extended until the first business day which follows. Official holidays or non-business days occurring during the running of the period of time are included in calculating the period.”

Paragraph (1)

27. Article 2, paragraph (1) is based on the 1974 UNCITRAL Convention on the Limitation Period in the International Sale of Goods and set forth default provisions, which the parties may vary. It regulates in useful detail when a notice, including a notification, communication or proposal is deemed to have been received. It includes a reference to a physical delivery of notices, which represents the “concept of effective delivery” as strongly supported in the *travaux préparatoires*.¹²

¹¹ Options 1 and 2 of article 7 of the Arbitration Model Law, as adopted by the Commission at its thirty-ninth session: *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, Annex I; the same phrase was contained in the 1985 version of article 7 of the Arbitration Model Law.

¹² Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section I, Commentary on article 3, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

28. It might be noted that the Arbitration Rules of the American Arbitration Association (“AAA Rules”) provide that “(...) all notices, statements and written communications may be served on a party by air mail, air courier, facsimile, transmission, telex, telegram or other written form of electronic communication addressed to the party or its representative at its last known address or by personal service” (article 18, paragraph (1)). The ICC Rules provide that all notifications or communications shall be made “by delivery against receipt, registered post, courier, facsimile transmission, telex, telegram or any other means of telecommunication that provides a record of the sending thereof” (article 3, paragraph (2)). The LCIA Rules contain a similar provision (article 4.1).

29. The Working Group might wish to consider whether that provision, which might be read as excluding electronic communications, should be amended to reflect contemporary practice.

Paragraph (2)

30. The Working Group might wish to consider whether paragraph (2) should provide that the arbitral tribunal might have an express power to extend or shorten the time-periods stipulated under the UNCITRAL Rules, as necessary for a fair and efficient process of resolving the parties’ dispute. The granting of such power to the arbitral tribunal would be of practical value when the parties fail to agree on these matters.

31. Example of such provisions might be found in the LCIA Rules, which provide that “The arbitral tribunal may at any time extend (even where the period of time has expired) or abridge any period of time prescribed under these Rules or under the Arbitration Agreement for the conduct of the arbitration, including any notice or communication to be served by one party on any other party” (article 4.7). The Rules of Arbitration of the World Intellectual Property Organization (“the WIPO Rules”) provide that “The tribunal shall ensure that the arbitral procedure takes place with due expedition. It may, at the request of a party or on its own motion, extend in exceptional cases a period of time fixed by these Rules, by itself or agreed to by the parties. In urgent cases, such an extension may be granted by the presiding arbitrator alone” (article 38 (c)).

Notice of arbitration — Article 3

“1. The party initiating recourse to arbitration (hereinafter called the “claimant”) shall give to the other party (hereinafter called the “respondent”) a notice of arbitration.

“2. Arbitral proceedings shall be deemed to commence on the date on which the notice of arbitration is received by the respondent.

“3. The notice of arbitration shall include the following:

“(a) A demand that the dispute be referred to arbitration;

“(b) The names and addresses of the parties;

“(c) A reference to the arbitration clause or the separate arbitration agreement that is invoked;

“(d) A reference to the contract out of or in relation to which the dispute arises;

“(e) The general nature of the claim and an indication of the amount involved, if any;

“(f) The relief or remedy sought;

“(g) A proposal as to the number of arbitrators (i.e. one or three), if the parties have not previously agreed thereon.

“4. The notice of arbitration may also include:

“(a) The proposals for the appointments of a sole arbitrator and an appointing authority referred to in article 6, paragraph 1;

“(b) The notification of the appointment of an arbitrator referred to in article 7;

“(c) The statement of claim referred to in article 18.”

32. During the discussions on the preparation of the UNCITRAL Rules, the *travaux préparatoires* indicate that the Commission heard the views that article 3 constitutes a “bridge between the civil and common law systems” and a “reasonable compromise” between those who wished the statement of claim to be delivered at the outset and those who preferred a two-tier approach where the notice of arbitration is followed by the statement of claim.¹³

Notice of arbitration separated from statement of claim

33. Paragraph (3) requires the claimant’s notice of arbitration to indicate the “general nature” of its claim (paragraph (3) (e)) as well as the “remedy or relief sought” (paragraph (3) (f)). As the statement of claim is only an optional element in the notice of arbitration, the arbitral tribunal might be constituted without the respondent having an opportunity (or being required) to state its position with respect to (i) jurisdiction, (ii) the claim, or (iii) any counterclaim. Article 18 of the UNCITRAL Rules sets out the requirements for a statement of claim if it was not included in the notice of arbitration.

34. In that respect, the Working Group may wish to note that the Swiss Rules include the statement of claim as an optional element of the notice of arbitration (article 3, paragraph (4)). By contrast, the AAA Rules require that the notice of arbitration “shall contain a statement of claim” (article 2, paragraph (3)). The ICC Rules provide that the request for arbitration contain, inter alia, “a description of the nature and circumstances of the dispute giving rise to the claim(s);” (...) “a statement of relief sought, including, to the extent possible, any indication of the amount(s) claimed” (article 4, paragraph (3)). The LCIA Rules provide that the claimant’s written request for arbitration should be accompanied by “a description of the nature and circumstances of the dispute and the specification of the claim” (article 1.1 (c)) as well as “a statement of any matters (...) on which the parties have already agreed in writing for the arbitration or in respect of which the claimant wishes to make a proposal” (article 1.1 (d)). The SCC Rules require that the request for arbitration include “a summary of the dispute” (article 5 (ii)) and “a preliminary statement of the relief sought by the Claimant” (article 5 (iii)). The Arbitration rules of the German Institution of Arbitration (“the DIS Rules”) provide that arbitration is initiated by filing a statement of claim with the DIS Secretariat and the statement of

¹³ UNCITRAL, Ninth Session, Committee of the Whole II, Summary Records of the Second Meeting, A/CN.9/9/C.2/SR.2 (1976), paras. 35-36.

claim must include, inter alia, the facts and circumstances, which give rise to the claim(s)” (Sec. 6.1). The Rules of Arbitration of the China International Economic and Trade Arbitration Commission (“the CIETAC Rules) provide that the request for arbitration shall include the claim of the claimant (article 10, paragraph 1 (a)).

35. The Working Group might wish to consider whether the notice of arbitration should be separated from the statement of claim.

Content of the notice of arbitration

36. The Working Group might wish to consider whether the content of the notice of arbitration should include all the elements necessary to permit the respondent to take a position on (a) the claimant’s claim, (b) the validity and scope of the arbitration agreement invoked, (c) counterclaims, and (d) the constitution of the tribunal. Such a provision might be added to article 3, paragraph (3).

37. Consistent with the proposal to extend article 1, paragraph (1) to cover disputes that do not arise out of or in relation to a contract, the Working Group might wish to consider whether the notice of arbitration should require an indication of the document(s) or fact(s) out of or in relation to which the dispute arose.

38. As well, for disputes that arise out of a contract, the Working Group might wish to consider whether the notice of arbitration should require that a copy of that contract (rather than merely a reference to it) should be provided.

39. The Working Group might wish to note that, under the LCIA Rules (article 1.1 d)) and the ICC Rules (article 4, paragraph (3) (f)), the claimant is required to make proposals on the place (i.e., the legal seat) and language of the arbitration, if these matters have not already been agreed upon.

Response to the notice of arbitration

40. The Working Group might wish to consider whether the respondent should be given an opportunity to state its position before the constitution of the arbitral tribunal, by responding to the notice of arbitration, and before the submission by the claimant of its statement of claim. This would, in turn, permit the claimant to articulate in its statement of claim both its positive case (on its claim) and its defensive case (on the respondent’s claim). For instance, such opportunity is provided for in the SCC Rules (article 10), the ICC Rules (article 5), and the LCIA Rules (article 3).

41. Allowing the respondent to state its positions in a reply to the notice of arbitration might have the advantage of clarifying at an early stage of the procedure the main issues raised by the dispute. It might be noted however that the UNCITRAL Rules are meant to deal also with ad hoc arbitration cases. Therefore, it might be advisable that revised provisions of the UNCITRAL Rules on the notice of arbitration and its response by the respondent include a level of flexibility on the extent of information to be exchanged between the parties before the constitution of the arbitral tribunal.

Section II. Composition of the arbitral tribunal

Number of Arbitrators — Article 5

“If the parties have not previously agreed on the number of arbitrators (i.e. one or three), and if within fifteen days after the receipt by the respondent of the notice of arbitration the parties have not agreed that there shall be only one arbitrator, three arbitrators shall be appointed.”

42. The *travaux préparatoires* recalled that it was normal practice to have three arbitrators in the arbitration of disputes arising out of international trade transactions. The *travaux préparatoires* also indicate that the question had been examined whether this article should contain a provision stating that, even where the parties fail to reach an agreement on the number of arbitrators, the parties have the right to agree subsequently that there shall be a single arbitrator. It was considered, however, that no express provision to this effect was needed, since the desired result may be obtained by the parties agreeing in writing to modify this article in accordance with article 1.¹⁴

43. The Working Group might wish to note that, according to the LCIA Rules (article 5.4) and AAA Rules (article 5), when the parties have not agreed on the number of arbitrators, preference is given to the appointment of a sole arbitrator, unless the appointing authority determines otherwise in its discretion considering the circumstances of the case. The ICC Rules provide that, where the parties have not agreed upon the number of arbitrators, the court will appoint a sole arbitrator, except “where it appears to the ICC court that the dispute is such as to warrant the appointment of three arbitrators” (article 8, paragraph (2)). The Rules of Arbitration and Conciliation of the International Arbitral Centre of the Austrian Federal Economic Chamber, Vienna (“Vienna Rules”) state no preference but allow discretion on the part of the appointing authority in deciding whether to appoint one or three arbitrators (article 14 (2)).

44. The Working Group might wish to decide whether the default composition for arbitral tribunals of three members should be kept or modified.

Appointment of arbitrators — Articles 6-8

Multiparty arbitration

45. Articles 6 to 8 deal with the appointment of arbitrators, but they do not include provisions dealing with appointment of arbitrators in multi-party cases. When a single arbitration involves more than two parties (multi-party arbitration), proceedings can be more complicated to manage.

46. Rules of various arbitration institutions have been amended so as to accommodate multi-party arbitration (article 10 of the ICC Rules, article 8.1 of the LCIA Rules, rule 9 of the SIAC Rules, article 18 of the WIPO Rules) and deal with that situation in the following manner: where there are multiple parties, whether as claimant or as respondent, and where the dispute is to be referred to three arbitrators, the multiple claimants, jointly, and the multiple respondents, jointly,

¹⁴ Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section I, Commentary on article 6, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

shall nominate an arbitrator; in the absence of such a joint nomination and where all parties are unable to agree on a method for the constitution of the arbitral tribunal, the appointing authority may appoint each member of the arbitral tribunal and designate one of them to act as chairperson.

47. The Working Group might wish to decide whether a revised version of the UNCITRAL Rules should include provisions on multi-party arbitration.

Challenge of Arbitrators — Articles 9-12

Article 9

“A prospective arbitrator shall disclose to those who approach him in connexion with his possible appointment any circumstances likely to give rise to justifiable doubts as to his impartiality or independence. An arbitrator, once appointed or chosen, shall disclose such circumstances to the parties unless they have already been informed by him of these circumstances.”

Disclosure

48. Article 9 sets forth a two-step disclosure process. The Working Group might wish to consider whether article 9 should make it explicit that the duty of impartiality and independence is a continuing one, as provided for under article 12, paragraph (1), of the Arbitration Model Law and under most of the provisions on disclosure of the rules of arbitration centres (article 7 (3) of the ICC Rules, articles 5.2, 5.3 of the LCIA Rules, article 7 (5) of the Vienna Rules). The Working Group might also wish to consider whether article 9 should contain a clarification that disclosure should be in the form of a written declaration.

Article 12

“1. If the other party does not agree to the challenge and the challenged arbitrator does not withdraw, the decision on the challenge will be made:

“(a) When the initial appointment was made by an appointing authority, by that authority;

“(b) When the initial appointment was not made by an appointing authority, but an appointing authority has been previously designated, by that authority;

“(c) In all other cases, by the appointing authority to be designated in accordance with the procedure for designating an appointing authority as provided for in article 6.

“2. If the appointing authority sustains the challenge, a substitute arbitrator shall be appointed or chosen pursuant to the procedure applicable to the appointment or choice of an arbitrator as provided in articles 6 to 9 except that, when this procedure would call for the designation of an appointing authority, the appointment of the arbitrator shall be made by the appointing authority which decided on the challenge.”

49. Practitioners have noted that this provision, which does not contain time-limits by which the party making the challenge must seek a decision by the appointing authority (and, if necessary, seek the designation of an appointing authority) had on occasion led to delay and uncertainty on the part of the arbitral tribunal on whether the proceedings should be continued.

50. The Working Group might wish to decide whether time limits should be included in any revised version of that provision.

Replacement of an arbitrator — Article 13

“1. In the event of the death or resignation of an arbitrator during the course of the arbitral proceedings, a substitute arbitrator shall be appointed or chosen pursuant to the procedure provided for in articles 6 to 9 that was applicable to the appointment or choice of the arbitrator being replaced.

“2. In the event that an arbitrator fails to act or in the event of the de jure or de facto impossibility of his performing his functions, the procedure in respect of the challenge and replacement of an arbitrator as provided in the preceding articles shall apply.”

Resignation of arbitrators

51. One of the questions raised by article 13 is whether the conditions for resignation of an arbitrator should be defined, in order to dissuade spurious resignations, or at least minimize their impact on the overall process.

52. During the discussions on the preparation of the UNCITRAL Rules, the *travaux préparatoires* show that the Commission heard the views that, although it was recognized that an arbitrator should resign only for exceptional “good reasons”,¹⁵ it was felt that such an obligation could not be effectively enforced.¹⁶

53. The Working Group might wish to consider the following proposals to address that question:

- In multi-member arbitral tribunals, a resignation could be approved by the other arbitrators. This would require an arbitrator to provide reasons for resigning and to submit to the other arbitrators’ scrutiny and judgment, and might be an effective deterrent against ill-considered or plainly tactical resignations. This practice would be consistent with the general rule that the arbitral tribunal is responsible for the conduct of the proceedings.
- A resignation would take effect on a date decided upon by the arbitral tribunal: this rule would permit arbitral tribunals to continue with the proceedings in an orderly way.¹⁷

Nominating process in case of replacement of an arbitrator

54. Concerning the nominating process in case of replacement of an arbitrator, the Working Group might wish to note that rules of several arbitration centres provide for discretion to decide whether or not to follow the original nominating process (for example, article 11.1 of the LCIA Rules). The purpose of that provision is to deprive the party which has appointed an arbitrator whose resignation is not approved of the right to name his or her replacement. Article 13 of the Swiss Rules

¹⁵ UNCITRAL, Ninth Session, Committee of the Whole II, Summary Records of the Fifth Meeting, A/CN.9/9/C.2/SR.5 (1976) 5, para 31.

¹⁶ UNCITRAL, Ninth Session, Committee of the Whole II, Summary Records of the Fifth Meeting, A/CN.9/9/C.2/SR.5 (1976) 5, para 32.

¹⁷ Article 13(5) of the Iran-US CTR Rules (the “Mosk Rule”), which requires an arbitrator who has resigned to “continue to serve ... with respect to all cases in which he had participated in a hearing on the merits”.

provides that the party having nominated the arbitrator concerned shall designate a replacement arbitrator within a prescribed time limit, failing which the Chambers shall appoint a replacement arbitrator. Such mechanism might however not easily fit in the context of ad hoc arbitration.

Truncated tribunals

55. An important question raised by article 13 is whether the language of article 13 (“shall be appointed”, “the procedure in respect of the challenge and replacement (...) shall apply”) precludes the remaining arbitrators from continuing with the proceedings and possibly issuing an award, without a replacement arbitrator being nominated.

56. A revised version of article 13 might include provisions to address the situation where the arbitral tribunal decides to proceed with the arbitration notwithstanding the absence of one of its members, for instance where the arbitral tribunal considers that one of its members is obstructing the progress of the case, including the arbitral tribunal’s deliberations. The Working Group might wish to discuss the potential detrimental consequences of bad-faith withdrawals of arbitrators from arbitral proceedings on the practice of international commercial arbitration and, in that context, consider the extent to which the parties should be able, by agreement, to put beyond doubt the validity of an award issued by a tribunal composed of the remaining arbitrators constituting the majority of the members of the arbitral tribunal (a “truncated” arbitral tribunal).¹⁸ In that respect, the Working Group might bear in mind the provisions of article 32, paragraph (4), which requires that the award state the reason for the absence of one arbitrator’s signature from an award.

57. Article 10 of the AAA Rules provides, inter alia, that the administrator shall determine whether there are sufficient reasons to accept the resignation of an arbitrator. Article 11 then provides that in case “an arbitrator on a three-person tribunal fails to participate in the arbitration for reasons other than those identified in article 10, the two other arbitrators shall have the power in their sole discretion to continue the arbitration and to make any decision, ruling or award, notwithstanding the failure of the third arbitrator to participate”. The ICC Rules provide that the ICC court has discretion, when an arbitrator is replaced, to decide whether or not to follow the original nominating process (article 12, paragraph (4)), and may decide, subsequent to the closing of the proceedings, when it considers appropriate, that the remaining arbitrators shall continue the arbitration (article 12, paragraph (5)).

Repetition of hearings in the event of the replacement of an arbitrator — Article 14

“If under articles 11 to 13 the sole or presiding arbitrator is replaced, any hearings held previously shall be repeated; if any other arbitrator is replaced, such prior hearings may be repeated at the discretion of the arbitral tribunal.”

58. Article 14 defines the procedure for repetition of hearings in the event of replacement of an arbitrator, and specifies that when the sole or presiding arbitrator is replaced, any hearings held previously shall be repeated.

59. The travaux préparatoires indicate that, in recognition of the special role that is played in arbitral proceedings by the sole or presiding arbitrator, this paragraph

¹⁸ A/CN.9/460, paras. 80-91.

provides that when such an arbitrator is replaced, all hearings that were held previously must be repeated.¹⁹

60. It might be noted that article 14 of the Rules of Procedure of the Iran-US Claims Tribunal and article 12, paragraph (4), of the ICC Rules leave this decision entirely to the arbitral tribunal without providing for any compulsory rules. As well, article 14 of the Swiss Rules provides that in case of replacement of an arbitrator, the proceedings shall resume at the stage where the arbitrator who was replaced ceased his or her functions, unless the arbitral tribunal decides otherwise.

61. The Working Group might wish to consider whether the UNCITRAL Rules should be revised so as to leave the decision on whether or not to repeat a hearing when the sole or presiding arbitrator is replaced to the arbitral tribunal.

Section III. Arbitral Proceedings

General Provisions — Article 15

“1. Subject to these Rules, the arbitral tribunal may conduct the arbitration in such manner as it considers appropriate, provided that the parties are treated with equality and that at any stage of the proceedings each party is given a full opportunity of presenting his case.

“2. If either party so requests at any stage of the proceedings, the arbitral tribunal shall hold hearings for the presentation of evidence by witnesses, including expert witnesses, or for oral argument. In the absence of such a request, the arbitral tribunal shall decide whether to hold such hearings or whether the proceedings shall be conducted on the basis of documents and other materials.

“3. All documents or information supplied to the arbitral tribunal by one party shall at the same time be communicated by that party to the other party.”

Paragraph (1)

62. The Working Group might wish to decide whether paragraph (1) should spell out the general principle that arbitral proceedings should be dealt with by the arbitral tribunal without unnecessary delay. Such a rule has been included in arbitration rules of many arbitration institutions. For instance, article 14.1 (ii) of the LCIA Rules imposes the general duty on tribunals at all times “to adopt procedures suitable to the circumstances of the arbitration, avoiding unnecessary delay or expense, so as to provide a fair and efficient means for the final resolution of the parties’ dispute”. Article 15, paragraph (3) of the Swiss Rules provides that “at an early stage of the arbitral proceedings and in consultation with the parties, the arbitral tribunal shall prepare a provisional time-table for the arbitral proceedings, which shall be provided to the parties and, for information to the Chambers”. Article 16, paragraph (2) of the AAA Rules provides that “the tribunal, in exercising its discretion, shall conduct the proceedings with a view to expediting the resolution

¹⁹ Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section I, Commentary on article 12, para. 5, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

of the dispute”. Article 20, paragraph (3) of the SCC Rules and article 38 (c) of WIPO Rules contain provisions to the same effect.

Preparatory consultations or meetings

63. Preparatory consultations or meetings are increasingly viewed as serving a useful purpose, particularly in more complex international arbitration proceedings. The UNCITRAL Notes on Organizing Arbitral Proceedings provide guidance to both the arbitral tribunal and the parties on matters to be discussed in that context.²⁰

64. Preparatory meetings are expressly provided for under the Iran-US Claims Tribunal Notes to article 15. The Iran-US Claims Tribunal adopted article 15 of the UNCITRAL Rules but provided in Note 4 to the article that “[t]he arbitral tribunal may make an order directing the arbitrating parties to appear for a pre-hearing conference. The pre-hearing conference will normally be held only after the Statement of Defence in the case had been received. The order will state the matters to be considered at the pre-hearing conference”. Article 16, paragraph (2) of the AAA Rules provides that the arbitral tribunal “may conduct a preparatory conference with the parties for the purpose of organizing, scheduling and agreeing to procedures to expedite the subsequent proceedings”. Under article 18 the ICC Rules, the arbitral tribunal must in all cases draw the terms of reference and a timetable for the proceedings.

65. While the general rule contained in current article 15, paragraph (1) does not preclude tribunals from holding preparatory consultations or meetings, the Working Group might wish to consider whether a provision should be included in the UNCITRAL Rules expressly conferring the power on the arbitral tribunal to hold such consultations or meetings “at an appropriate stage of the proceedings”, whether following a request by the parties or at its own initiative.

Consolidation of cases before arbitral tribunals

66. In situations where several distinct disputes arise between the same parties under separate contracts (e.g., related contracts or a chain of contracts) containing separate arbitration clauses, one of the parties might object to all the disputes being resolved in the same proceedings. A party might also initiate a separate arbitration in respect of a distinct claim under the same contract in order to gain a tactical advantage. Consolidation in such situations might provide a more efficient resolution of the disputes between the parties consistently with the general principle

²⁰ These are, in particular, defining the points at issue, the order in which issues are to be decided and defining any relief or remedy sought; possible settlement negotiations and their effect on scheduling proceedings; the language to be used in the proceedings; the place of arbitration and the possibility of meeting outside that place; administrative services that may be needed for the arbitral tribunal to carry out its functions (e.g. hearing arrangements or secretarial assistance); deposits in respect of costs; confidentiality of information relating to the arbitration; arrangements for the exchange of written submissions; other practical details concerning written submissions and evidence (e.g. copies, numbering, references); issues relating to documentary evidence, including time-limits for their submission; disclosure; joint submission of a single set of documentary evidence and the possibility of submitting summaries of voluminous documentary evidence; physical evidence other than documents; issue regarding witnesses (e.g. the manner of taking oral evidence, the order in which the witnesses will be called); experts and expert witnesses; matters relating to the holding of hearings; and possible requirements concerning the filing or delivery of the award.

in article 15, paragraph (1), and also reduce the possibility of inconsistent awards in parallel arbitrations.

67. The Working Group might wish to note that consolidation is permitted under the ICC Rules when all proceedings relate to the same “legal relationship”, on the premise that the parties have consented to consolidate claims by choosing to arbitrate in accordance with the ICC Rules. Article 4, paragraph (6), of the ICC Rules provides: “When a party submits a Request in connection with a legal relationship in respect of which arbitration proceedings between the same parties are already pending under these Rules, the Court may, at the request of a party, decide to include the claims contained in the Request in the pending proceedings provided that the Terms of Reference have not been signed or approved by the Court. Once the Terms of Reference have been signed or approved by the Court, claims may only be included in the pending proceedings subject to the provisions of article 19”.

68. Under the UNCITRAL Rules, consolidation is possible only where the parties specifically so agree.²¹ The Working Group might wish to consider whether, bearing in mind the fact that the UNCITRAL Rules often apply in non-administered cases, additional provisions on that matter should be inserted in a revised version of the UNCITRAL Rules.

Third party intervention in arbitral proceedings

69. Third parties, for example non-governmental organizations, may request for an opportunity to explain their positions, particularly in investment treaty arbitrations. Article 15, paragraph (1), of the UNCITRAL Rules, which provides that “the arbitral tribunal may conduct the arbitration in such manner as it considers appropriate”, could be interpreted as encompassing power of the arbitral tribunal to accept such interventions, for example in the form of *amicus curiae* briefs.

70. The Swiss Rules, for instance, expressly provide, under article 4, paragraph (2), that: “Where a third party requests to participate in arbitral proceedings already pending under these Rules or where a party to arbitral proceedings under these Rules intends to cause a third party to participate in the arbitration, the arbitral tribunal shall decide on such request, after consulting with all parties, taking into account all circumstances it deems relevant and applicable”.

71. The Working Group might wish to consider whether an express provision on third party intervention should be included in any revised version of the UNCITRAL Rules.

Confidentiality of proceedings

72. Articles 25, paragraph (4), and 32, paragraph (5), of the UNCITRAL Rules deal with the confidentiality of hearings and awards respectively, but do not contain rules regarding the confidentiality of the proceedings as such, or of the materials (including pleadings) before the arbitral tribunal.

73. The Working Group might wish to note that following substantial controversy on whether arbitral proceedings should be confidential, the ICC considered including an express provision on confidentiality in its Rules when it most recently revised them in 1998. After extensive consideration, it was decided that a general

²¹ Article 19(3) of the UNCITRAL Rules states that the respondent can bring a counterclaim arising out of the same contract.

confidentiality provision should not be included, and that the matter should be left to be addressed on a case-by-case basis by the arbitrators and the parties (for example, in the Tribunal's Terms of Reference).

74. The Working Group might wish to consider whether an express provision to that effect should be included in a revised version of the UNCITRAL Rules, and, if so, how to define the scope of application of the confidentiality obligation, the persons concerned, and the exceptions to that obligation.

Place of arbitration — Article 16

“1. Unless the parties have agreed upon the place where the arbitration is to be held, such place shall be determined by the arbitral tribunal, having regard to the circumstances of the arbitration.

“2. The arbitral tribunal may determine the locale of the arbitration within the country agreed upon by the parties. It may hear witnesses and hold meetings for consultation among its members at any place it deems appropriate, having regard to the circumstances of the arbitration.

“3. The arbitral tribunal may meet at any place it deems appropriate for the inspection of goods, other property or documents. The parties shall be given sufficient notice to enable them to be present at such inspection.

“4. The award shall be made at the place of arbitration.”

Legal nature of the place of arbitration

75. The Working Group might wish to note that arbitration rules of certain arbitration centres clarify the legal nature of the place of arbitration by referring to it as:

- The seat of the arbitration (article 16, paragraph (1) of the Swiss Rules), as opposed to the places where the arbitral tribunal may meet (article 16, paragraph (3) of the Swiss Rules);
- The seat, defined as the legal place of arbitration (article 16.1 of the LCIA Rules), as opposed to the convenient geographical place for holding hearings, meetings and deliberations (article 16.2 of the LCIA Rules).

76. This terminology clarifies that the choice of the place of arbitration imports the application of the national law governing the arbitral proceedings, including the jurisdiction of the State courts of that place to intervene in the arbitral process (see, for example, article 5 of the Arbitration Model Law). The Working Group might wish to consider whether the UNCITRAL Rules should clarify, by appropriate wording, the legal nature of the place of arbitration.

Note by the Secretariat on settlement of commercial disputes: Revision of the UNCITRAL Arbitration Rules, submitted to the Working Group on Arbitration at its forty-fifth session

ADDENDUM

CONTENTS

	<i>Paragraphs</i>
Introduction	1-2
Notes on a revision of the UNCITRAL Arbitration Rules	3-40
Section III. Arbitral Proceedings (<i>continued</i>).	3-20
Section IV. The award	21-38
Miscellaneous provision	39-40

Introduction

1. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that, in respect of future work of the Working Group, priority be given to a revision of the UNCITRAL Arbitration Rules (1976) (“the UNCITRAL Rules”).¹

2. To facilitate discussions of the Working Group on that topic, this note continues from article 17 of the UNCITRAL Rules with an annotated list of possible areas of revision of the UNCITRAL Rules. The list of possible areas of revision in relation to articles 1 to 16 is contained in A/CN.9/WG.II/WP.143.

Notes on a revision of the UNCITRAL Arbitration Rules

Section III. Arbitral Proceedings (*continued*)

Language — Article 17

“1. Subject to an agreement by the parties, the arbitral tribunal shall, promptly after its appointment, determine the language or languages to be used in the proceedings. This determination shall apply to the statement of

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17), paras. 182-187.*

claim, the statement of defence, and any further written statements and, if oral hearings take place, to the language or languages to be used in such hearings.

“2. The arbitral tribunal may order that any documents annexed to the statement of claim or statement of defence, and any supplementary documents or exhibits submitted in the course of the proceedings, delivered in their original language, shall be accompanied by a translation into the language or languages agreed upon by the parties or determined by the arbitral tribunal.”

3. The Working Group might wish to decide whether a revised version of article 17, paragraph (1) should expressly require consultation of the arbitrator(s) with the parties to determine the language or languages to be used in the proceedings. Article 14 of the AAA Rules, article 17.3 of the LCIA Rules and article 40 of the WIPO Rules all require the arbitral tribunal to have regard to the parties' view on that question.

Statement of claim — Article 18

“1. Unless the statement of claim was contained in the notice of arbitration, within a period of time to be determined by the arbitral tribunal, the claimant shall communicate his statement of claim in writing to the respondent and to each of the arbitrators. A copy of the contract, and of the arbitration agreement if not contained in the contract, shall be annexed thereto.

“2. The statement of claim shall include the following particulars:

“(a) The names and addresses of the parties;

“(b) A statement of the facts supporting the claim;

“(c) The points at issue;

“(d) The relief or remedy sought.

“The claimant may annex to his statement of claim all documents he deems relevant or may add a reference to the documents or other evidence he will submit.”

4. Article 18 describes the information that must be contained in the statement of claim.

5. The *travaux préparatoires* recall that, although in its statement of claim the claimant is obliged to include “a statement of the facts supporting the claim”, it is not required to annex the documents, which it deems relevant and on which it intends to rely. However, if it wishes to do so, a claimant may still annex the relevant documents. The *travaux préparatoires* indicate that it is believed that, since claimants are generally interested in the resolution of the dispute submitted to arbitration as quickly as possible, they will in a large number of cases annex to their statements of claim the documents or copies of the documents on which they intend to rely. In cases where the claimant does annex a list of such documents or copies of the documents themselves, it is not precluded from submitting additional or substitute documents at a later stage in the arbitral proceedings, in the light of the position taken by the respondent in its statement of defence.²

² Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section 1,

6. The Working Group might wish to note that article 41 (c) of the WIPO Rules and article 15.6 of the LCIA Rules require that the statement of claim be accompanied by documentary evidence and all essential documents on which the parties rely.

7. The Working Group might wish to decide whether a revised version of article 18 should be complemented by provisions on documentary evidence to be provided by the claimant with its statement of claim.

Statement of defence — Article 19

“1. Within a period of time to be determined by the arbitral tribunal, the respondent shall communicate his statement of defence in writing to the claimant and to each of the arbitrators.

“2. The statement of defence shall reply to the particulars (b), (c) and (d) of the statement of claim (article 18, para. 2). The respondent may annex to his statement the documents on which he relies for his defence or may add a reference to the documents or other evidence he will submit.

“3. In his statement of defence, or at a later stage in the arbitral proceedings if the arbitral tribunal decides that the delay was justified under the circumstances, the respondent may make a counter claim arising out of the same contract or rely on a claim arising out of the same contract for the purpose of a set-off.

“4. The provisions of article 18, paragraph 2, shall apply to a counter-claim and a claim relied on for the purpose of a set-off.”

Raising claims for the purpose of set-off

8. Article 19, paragraph (3), of the UNCITRAL Rules provides that the respondent may rely on a claim for the purpose of a set-off if the claim arises out of the same contract. Views have been expressed that the arbitral tribunal's competence to consider claims by way of a set-off should, under certain conditions, extend beyond the contract from which the principal claim arises. The reasons cited are procedural efficiency and the desirability of eliminating disputes between the parties.³

9. The Working Group might wish to note that the Swiss Rules provide, under article 21, paragraph (5) that “the arbitral tribunal shall have jurisdiction to hear a set-off defence even when the relationship out of which the defence is said to arise is not within the scope of the arbitration clause or is the object of another arbitration agreement or forum-selection clause”.

10. The Working Group might wish to consider whether a revised version of the UNCITRAL Rules should contain provisions allowing set-off of claims in a wider range of situations.

Commentary on article 17, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

³ A/CN.9/460, paras. 72-79.

Pleas as to the jurisdiction of the arbitral tribunal — Article 21

“1. The arbitral tribunal shall have the power to rule on objections that it has no jurisdiction, including any objections with respect to the existence or validity of the arbitration clause or of the separate arbitration agreement.

“2. The arbitral tribunal shall have the power to determine the existence or the validity of the contract of which an arbitration clause forms a part. For the purposes of article 21, an arbitration clause which forms part of a contract and which provides for arbitration under these Rules shall be treated as an agreement independent of the other terms of the contract. A decision by the arbitral tribunal that the contract is null and void shall not entail ipso jure the invalidity of the arbitration clause.

“3. A plea that the arbitral tribunal does not have jurisdiction shall be raised not later than in the statement of defence or, with respect to a counter-claim, in the reply to the counter-claim.

“4. In general, the arbitral tribunal should rule on a plea concerning its jurisdiction as a preliminary question. However, the arbitral tribunal may proceed with the arbitration and rule on such a plea in their final award.”

Paragraph (1)

11. The Working Group might wish to consider whether paragraph (1) should be redrafted along the lines of article 16, paragraph (1), of the Arbitration Model Law, in order to make it clear that the arbitral tribunal has the power on its own motion to raise and decide the existence and scope of its own jurisdiction.

12. Pursuant to article 16, paragraph (2), of the Arbitration Model Law, a party is not precluded from raising a plea that the arbitral tribunal does not have jurisdiction for the reason that it has appointed, or participated in the appointment of, an arbitrator. Article 21 of the UNCITRAL Rules does not contain such a provision.

Paragraph (4)

13. While article 21, paragraph (4) requires that, in general, the arbitral tribunal rule on pleas concerning its jurisdiction as a preliminary question, it permits the arbitral tribunal to rule on such pleas in the final award. This solution is in conformity with the discretion granted to the arbitral tribunal by article 15, paragraph 1, of the UNCITRAL Rules to conduct the arbitral proceedings “in such manner as they consider appropriate” and with paragraph 2 of article 41 of the 1965 Washington Convention on the Settlement of Investment Disputes.⁴

14. The Working Group might wish to consider whether article 21 should make it clear that recourse to domestic courts should only be made after the arbitral tribunal has pronounced itself on its own jurisdiction, and that such recourse should not delay the arbitral proceedings or prevent the arbitral tribunal from making a further award, in accordance with article 16, paragraph (3), of the Arbitration Model Law.

⁴ Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section I, Commentary on article 19, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

Evidence and hearings — Articles 24 and 25**Article 24**

“1. Each party shall have the burden of proving the facts relied on to support his claim or defence.

“2. The arbitral tribunal may, if it considers it appropriate, require a party to deliver to the tribunal and to the other party, within such a period of time as the arbitral tribunal shall decide, a summary of the documents and other evidence which that party intends to present in support of the facts in issue set out in his statement of claim or statement of defence.

“3. At any time during the arbitral proceedings the arbitral tribunal may require the parties to produce documents, exhibits or other evidence within such a period of time as the tribunal shall determine.”

Paragraph 1

15. The Working Group might wish to consider whether a revised version of article 24 should provide that the power to require a party to produce evidence might be exercised either on the arbitral tribunal's own motion or also on the application of any party. It might be noted that article 22 of the LCIA Rules (article 22), rule 25 of the SIAC Rules, and article 48 (b) of the WIPO Rules contain such a provision.

Interim measures of protection — Article 26

“1. At the request of either party, the arbitral tribunal may take any interim measures it deems necessary in respect of the subject matter of the dispute, including measures for the conservation of the goods forming the subject matter in dispute, such as ordering their deposit with a third person or the sale of perishable goods.

“2. Such interim measures may be established in the form of an interim award. The arbitral tribunal shall be entitled to require security for the costs of such measures.

“3. A request for interim measures addressed by any party to a judicial authority shall not be deemed incompatible with the agreement to arbitrate, or as a waiver of that agreement.”

16. Article 26 of the UNCITRAL Rules deals with interim measures in lesser detail than the new provisions dealing with interim measures set out in a new Chapter IV A of the Arbitration Model Law, adopted by the Commission at its thirty-ninth session.⁵ The Working Group might wish to consider whether, and if so, to what extent, article 26 of the UNCITRAL Rules should be revised in light of the new Chapter IV A.

Experts — Article 27

“1. The arbitral tribunal may appoint one or more experts to report to it, in writing, on specific issues to be determined by the tribunal. A copy of the

⁵ A/CN.9/592, annex I.

expert's terms of reference, established by the arbitral tribunal, shall be communicated to the parties.

"2. The parties shall give the expert any relevant information or produce for his inspection any relevant documents or goods that he may require of them. Any dispute between a party and such expert as to the relevance of the required information or production shall be referred to the arbitral tribunal for decision.

"3. Upon receipt of the experts report, the arbitral tribunal shall communicate a copy of the report to the parties who shall be given the opportunity to express, in writing, their opinion on the report. A party shall be entitled to examine any document on which the expert has relied in his report.

"4. At the request of either party the expert, after delivery of the report, may be heard at a hearing where the parties shall have the opportunity to be present and to interrogate the expert. At this hearing either party may present expert witnesses in order to testify on the points at issue. The provisions of article 25 shall be applicable to such proceedings."

17. The article emphasizes the role of a tribunal-appointed expert and only expressly deals with expert witnesses presented by parties after the report of the tribunal-appointed expert has been delivered.

18. The Working Group might wish to note that article 20, paragraph (4), of the ICC Rules, article 55 (a) of the WIPO Rules and article 27, paragraph (1), of the Swiss Rules provide that the arbitral tribunal may appoint experts "after having consulted the parties".

19. The Working Group might wish to consider whether a revised version of the UNCITRAL Rules should provide that an arbitral tribunal should consult the parties before appointing any expert to report to it.

20. As well, the Working Group might wish to consider whether article 27 should provide that an arbitral tribunal be given the power to direct any experts presented by the parties to meet with the tribunal-appointed expert in order to attempt to reach an agreement on contentious issues or, at least, to narrow them down.

Section IV. The award

Decisions — Article 31

"1. When there are three arbitrators, any award or other decision of the arbitral tribunal shall be made by a majority of the arbitrators.

"2. In the case of questions of procedure, when there is no majority or when the arbitral tribunal so authorizes, the presiding arbitrator may decide on his own, subject to revision, if any, by the arbitral tribunal."

Paragraph (1)

21. Paragraph (1) requires that an award be made by a majority of the arbitrators in cases where there is a three-member arbitral tribunal.

22. The *travaux préparatoires* emphasize that, at least two of the three arbitrators must concur in the award; however, it is not required that the presiding arbitrator be

one of the two arbitrators who agree on the award. Moreover, the *travaux préparatoires* indicate that if a majority of arbitrators fail to agree on an award, the arbitral tribunal must resolve the deadlock in accordance with the relevant law and practice at the place of the arbitration, which is the place where (according to article 16, paragraph 4 of these Rules) the award must be made. The law and practice in many jurisdictions require arbitrators to continue their deliberations until they arrive at a majority decision.⁶

23. The Working Group might wish to note that article 25, paragraph (1) of the ICC Rules addresses the case where no majority exists and provides that: “When the Arbitral Tribunal is composed of more than one arbitrator, an award is given by a majority decision. If there be no majority, the award shall be made by the chairman of the Arbitral Tribunal alone”. Similar provisions are included in article 26.3 of the LCIA Rules, article 61 of the WIPO Rules, article 26, paragraph (2) of the Vienna Rules and article 31 of the Swiss Rules.

24. The Working Group might wish to consider whether article 31, paragraph (1) should include a rule to address the case where no majority exists, as provided in many arbitration rules.

Form and effect of the award — Article 32

“1. In addition to making a final award, the arbitral tribunal shall be entitled to make interim, interlocutory, or partial awards.

“2. The award shall be made in writing and shall be final and binding on the parties. The parties undertake to carry out the award without delay.

“3. The arbitral tribunal shall state the reasons upon which the award is based, unless the parties have agreed that no reasons are to be given.

“4. An award shall be signed by the arbitrators and it shall contain the date on which and the place where the award was made. Where there are three arbitrators and one of them fails to sign, the award shall state the reason for the absence of the signature.

“5. The award may be made public only with the consent of both parties.

“6. Copies of the award signed by the arbitrators shall be communicated to the parties by the arbitral tribunal.

“7. If the arbitration law of the country where the award is made requires that the award be filed or registered by the arbitral tribunal, the tribunal shall comply with this requirement within the period of time required by law.”

Paragraph (2)

25. The Working Group might wish to consider including a new provision modelled on article 28, paragraph (6), of the ICC Rules, and article 26.9 of the LCIA Rules, according to which the award shall be subject to no appeal or other recourse before any court or other authority so as to exclude, for example, an appeal on a point of law, but not to exclude challenges to the award (for example, on

⁶ Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules A/CN.9/112/Add.1, Section 1, Commentary on article 27, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

matters such as lack of jurisdiction or violation of due process). Article 28, paragraph (6) of the ICC Rules provides that: “(...) the parties undertake to carry out any Award without delay and shall be deemed to have waived their right to any form of recourse insofar as such waiver can validly be made”. Article 26.9 of the LCIA Rules provides that: “(...) the parties also waive irrevocably their right to any form of appeal, review or recourse to any State court or other judicial authority, insofar as such waiver may be validly made”.

Paragraph (5)

26. Paragraph 5 requires the consent of the parties for the award to be made public. The Working Group might wish to consider whether the UNCITRAL Rules should address the situation where a party is under a legal duty to disclose an award or its tenor.

Paragraph (7)

27. The Working Group might wish to consider an amendment to paragraph (7) so as to avoid an onerous burden being placed on the arbitral tribunal in countries where registration requirements are ambiguous. For this purpose, the compliance of the tribunal with the said requirements could be made subject to the timely request of any party.

Time-limit for rendering the award

28. The Working Group might wish to consider whether a time-limit should be provided for the rendering of the award. An example of such time-limit is contained in article 24, paragraph (1) of the ICC Rules, which provides that an award should be rendered within six months, starting from the date of the last signature by the arbitral tribunal or the parties of the terms of reference. Similarly, article 42, paragraph (1) of the CIETAC Rules provides that the award shall be rendered within six months from the date on which the arbitral tribunal is formed. If such a rule is to be provided in the UNCITRAL Rules, a method of extending such time-limit may be useful.

Possible new paragraph (8)

29. The Working Group might wish to consider whether a principle for interpreting the UNCITRAL Rules, in addition to the general principle contained in article 15, should be added. To that end, the Working Group might wish to consider including a new rule providing that it is the essential duty of arbitrators and parties to act in the spirit of the UNCITRAL Rules, even in circumstances where no specific provision covers the situation in question. The Working Group might wish to consider whether it would be appropriate to link this general duty to the enforceability of the award, providing that the arbitral tribunal and the parties shall make every effort to ensure that the award would be legally enforceable.

Applicable law — Amiable compositeur — Article 33

“1. The arbitral tribunal shall apply the law designated by the parties as applicable to the substance of the dispute. Failing such designation by the parties, the arbitral tribunal shall apply the law determined by the conflict of laws rules which it considers applicable.

“2. The arbitral tribunal shall decide as *amiable compositeur* or *ex aequo et bono* only if the parties have expressly authorized the arbitral tribunal to do so and if the law applicable to the arbitral procedure permits such arbitration.

“3. In all cases, the arbitral tribunal shall decide in accordance with the terms of the contract and shall take into account the usages of the trade applicable to the transaction.”

Paragraph (1)

Law applicable to the substance of the dispute

30. The Working Group might wish to note that article 28 of the Arbitration Model Law provides that the parties might designate the “rules of law” applicable to the substance of the dispute, whereas paragraph (1) refers to the “applicable law”. The term “rules of law”, until its inclusion in the Arbitration Model Law, had only been used in the 1965 Washington Convention on the Settlement of Investment Disputes (article 42), and the arbitration laws of France and Djibouti.⁷ The term “rules of law” is understood to be wider than the term “law”, allowing the parties “to designate as applicable to their case rules of more than one legal system, including rules of law which have been elaborated on the international level”.⁸ The Working Group might wish to consider adopting that term in a revised version of article 33 of the UNCITRAL Rules.

Paragraph (2)

Ex aequo et bono — Amiable compositeur

31. The Working Group might wish to note that rules of certain arbitration centres (article 17.3 of the ICC Rules, article 22.4 of the LCIA Rules and article 28.3 of the AAA Rules) require authorization by the parties for the arbitral tribunal to decide as *amiable compositeur* or *ex aequo et bono* and do not include a requirement that the law applicable to the arbitral procedure permit an arbitration to be decided *ex aequo et bono*. The Working Group might wish to consider whether such an amendment would be appropriate in the context of the UNCITRAL Rules.

Interpretation of the award — Article 35

“1. Within 30 days after the receipt of the award, either party, with notice to the other party, may request that the arbitral tribunal give an interpretation of the award.

“2. The interpretation shall be given in writing within 45 days after the receipt of the request. The interpretation shall form part of the award and the provisions of article 32, paragraphs 2 to 7, shall apply.”

32. The Working Group might wish to consider whether this article should only apply where there is a need to interpret what the award orders the parties to do.

Correction of the award — Article 36

“1. Within 30 days after the receipt of the award, either party, with notice to the other party, may request the arbitral tribunal to correct in the award any errors in

⁷ A/CN.9/264, para. 4.

⁸ Ibid.

computation, any clerical or typographical errors, or any errors of similar nature. The arbitral tribunal may within 30 days after the communication of the award make such corrections on its own initiative.

“2. Such corrections shall be in writing, and the provisions of article 32, paragraphs 2 to 7, shall apply.”

33. The Working Group might wish to consider whether the scope of article 36 should be broadened to allow correction of the award if an arbitrator omits to sign the award or omits to state the date or place of the award.

Additional award — Article 37

“1. Within thirty days after the receipt of the award, either party, with notice to the other party, may request the arbitral tribunal to make an additional award as to claims presented in the arbitral proceedings but omitted from the award.

“2. If the arbitral tribunal considers the request for an additional award to be justified and considers that the omission can be rectified without any further hearings or evidence, it shall complete its award within sixty days after the receipt of the request.

“3. When an additional award is made, the provisions of article 32, paragraphs 2 to 7, shall apply.”

34. The Working Group might wish to consider whether the requirement that “the omission can be rectified without any further hearings or evidence” should be retained on the basis that arbitrators should be free to convene hearings or request further evidence or pleadings.

Costs — Articles 38-40

Article 38

“The arbitral tribunal shall fix the costs of arbitration in its award. The term “costs” includes only:

“(a) The fees of the arbitral tribunal to be stated separately as to each arbitrator and to be fixed by the tribunal itself in accordance with article 39;

“(b) The travel and other expenses incurred by the arbitrators;

“(c) The costs of expert advice and of other assistance required by the arbitral tribunal;

“(d) The travel and other expenses of witnesses to the extent such expenses are approved by the arbitral tribunal;

“(e) The costs for legal representation and assistance of the successful party if such costs were claimed during the arbitral proceedings, and only to the extent that the arbitral tribunal determines that the amount of such costs is reasonable;

“(f) Any fees and expenses of the appointing authority as well as the expenses of the Secretary General of the Permanent Court of Arbitration at The Hague.”

35. The Working Group might wish to consider whether the list of elements included in article 38 is exhaustive.
36. As well, the following questions might be raised in relation to that article:
- Whether subparagraphs (b)-(d) should be qualified by the word “reasonable” as is the case with paragraph (e) (which refers to legal costs). This word might be considered as constituting a useful reminder to arbitrators that they must act efficiently in all respects in the conduct of the arbitration (as provided in article 15, paragraph (1) of the UNCITRAL Rules);
 - Whether fees and expenses of a secretary appointed by the arbitral tribunal should be expressly included in element (c).

Article 39

“1. The fees of the arbitral tribunal shall be reasonable in amount, taking into account the amount in dispute, the complexity of the subject matter, the time spent by the arbitrators and any other relevant circumstances of the case.

“2. If an appointing authority has been agreed upon by the parties or designated by the Secretary General of the Permanent Court of Arbitration at The Hague, and if that authority has issued a schedule of fees for arbitrators in international cases which it administers, the arbitral tribunal in fixing its fees shall take that schedule of fees into account to the extent that it considers appropriate in the circumstances of the case.

“3. If such appointing authority has not issued a schedule of fees for arbitrators in international cases, any party may at any time request the appointing authority to furnish a statement setting forth the basis for establishing fees which is customarily followed in international cases in which the authority appoints arbitrators. If the appointing authority consents to provide such a statement, the arbitral tribunal in fixing its fees shall take such information into account to the extent that it considers appropriate in the circumstances of the case.

“4. In cases referred to in paragraphs 2 and 3, when a party so requests and the appointing authority consents to perform the function, the arbitral tribunal shall fix its fees only after consultation with the appointing authority which may make any comment it deems appropriate to the arbitral tribunal concerning the fees.”

37. The Working Group might wish to consider whether it is necessary to provide more guidance on the question of the fees of the arbitrators in any revision of the UNCITRAL Rules. Various solutions might be envisaged to address that matter:
- The arbitral tribunal and the parties would be explicitly encouraged to agree on the method of calculating the arbitral tribunal’s fees from the outset, at a consultation or preparatory meeting. Such a provision might be included in a revised version of article 15;
 - The appointing authority, or if none has been agreed upon or designated, the authority appointed or designated by the Secretary-General of the Permanent Court of Arbitration, would have the power to resolve any objection by a party to an arbitral tribunal’s decision on its fees pursuant to articles 38 and 39, paragraph (1).

Article 40

“1. Except as provided in paragraph 2, the costs of arbitration shall in principle be borne by the unsuccessful party. However, the arbitral tribunal may apportion each of such costs between the parties if it determines that apportionment is reasonable, taking into account the circumstances of the case.

“2. With respect to the costs of legal representation and assistance referred to in article 38, paragraph (e), the arbitral tribunal, taking into account the circumstances of the case, shall be free to determine which party shall bear such costs or may apportion such costs between the parties if it determines that apportionment is reasonable.

“3. When the arbitral tribunal issues an order for the termination of the arbitral proceedings or makes an award on agreed terms, it shall fix the costs of arbitration referred to in article 38 and article 39, paragraph 1, in the text of that order or award.

“4. No additional fees may be charged by an arbitral tribunal for interpretation or correction or completion of its award under articles 35 to 37.”

38. The Working Group might wish to decide whether to retain article 40, paragraph (4), as this provision is not found in revised versions of arbitration rules of most arbitration institutions.

Miscellaneous provision**Liability of arbitrators**

39. The Working Group might wish to consider whether the question of liability of arbitrators needs to be further examined in the context of the UNCITRAL Rules. At present, neither the UNCITRAL Rules nor the Arbitration Model Law address that question. Consideration may also be given to extending the scope of any provision on liability to persons or institutions performing the function of an appointing authority under the UNCITRAL Rules.

40. Existing arbitration rules offer two possible approaches. The first, adopted in the ICC Rules (article 34), is an unqualified exclusion of liability: neither the arbitrators, nor the Court and its members, nor the ICC and its employees, nor the ICC National Committees shall be liable to any person for any act of omission in connection with the arbitration. A similar approach has been adopted in the Vienna Rules. The second, and more common approach is reflected in the Introductory Note of the IBA Rules of Ethics for International Arbitrators (1987), which provides that “international arbitrators should in principle be granted immunity from suit under national laws, except in extreme case of wilful or reckless disregard of their legal obligations”. The LCIA Rules (article 31.1) and the AAA Rules (article 35) similarly refer to “conscious and deliberate wrongdoing”.

**C. Report of the Working Group on Arbitration on the work of its
forty-sixth session (New York, 5-9 February 2007)**

(A/CN.9/619) [Original: English]

Section III. Arbitral proceedings	114-164

I. Introduction

1. At its thirty-first session (New York, 1-12 June 1998), the Commission, with reference to discussions at the special commemorative New York Convention Day held in June 1998 to celebrate the fortieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (“the New York Convention”), considered that it would be useful to engage in a discussion of possible future work in the area of arbitration. It requested the Secretariat to prepare a note that would serve as a basis for the consideration of the Commission at its next session.¹

2. At its thirty-second session (Vienna, 17 May-4 June 1999), the Commission had before it a note entitled “Possible future work in the area of international commercial arbitration” (A/CN.9/460). Welcoming the opportunity to discuss the desirability and feasibility of further development of the law of international commercial arbitration, the Commission generally considered that the time had come to assess the extensive and favourable experience with national enactments of the UNCITRAL Model Law on International Commercial Arbitration (1985) (“the UNCITRAL Arbitration Model Law”), as well as the use of the UNCITRAL Arbitration Rules (“the UNCITRAL Arbitration Rules” or “the Rules”) and the UNCITRAL Conciliation Rules, and to evaluate, in the universal forum of the

¹ *Official Records of the General Assembly, Fifty-third Session, Supplement No. 17 (A/53/17)*, para. 235.

Commission, the acceptability of ideas and proposals for improvement of arbitration laws, rules and practices.² When the Commission discussed that topic, it left open the question of what form its future work might take. It was agreed that decisions on the matter should be taken later as the substance of proposed solutions became clearer. Uniform provisions might, for example, take the form of a legislative text (such as model legislative provisions or a treaty) or a non-legislative text (such as a model contractual rule or a practice guide).³

3. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that the topic of revising the UNCITRAL Arbitration Rules should be given priority. The Commission noted that, as one of the early instruments elaborated by UNCITRAL in the field of arbitration, the UNCITRAL Arbitration Rules were recognized as a very successful text, adopted by many arbitration centres and used in many different instances, such as, for example, in investor-State disputes. In recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of the UNCITRAL Arbitration Rules should not alter the structure of the text, its spirit, its drafting style, and should respect the flexibility of the text rather than make it more complex. It was suggested that the Working Group should undertake to carefully define the list of topics which might need to be addressed in a revised version of the UNCITRAL Arbitration Rules.⁴

4. The topic of arbitrability was said to be an important question, which should also be given priority. It was said that it would be for the Working Group to define whether arbitrable matters could be defined in a generic manner, possibly with an illustrative list of such matters, or whether the legislative provision to be prepared in respect of arbitrability should identify the topics that were not arbitrable. It was suggested that studying the question of arbitrability in the context of immovable property, unfair competition and insolvency could provide useful guidance for States. It was cautioned however that the topic of arbitrability was a matter raising questions of public policy, which was notoriously difficult to define in a uniform manner, and that providing a pre-defined list of arbitrable matters could unnecessarily restrict a State's ability to meet certain public policy concerns that were likely to evolve over time.⁵

5. Other topics mentioned for possible inclusion in the future work of the Working Group included issues raised by online dispute resolution. It was suggested that the UNCITRAL Arbitration Rules, when read in conjunction with other instruments, such as the UNCITRAL Model Law on Electronic Commerce and the United Nations Convention on the Use of Electronic Communications in International Contracts, already accommodated a number of issues arising in the online context. Another topic was the issue of arbitration in the field of insolvency. Yet another suggestion was made to address the impact of anti-suit injunctions on international arbitration. A further suggestion was made to consider clarifying the notions used in article I, paragraph (1), of the New York Convention of "arbitral awards made in the territory of a State other than the State where the recognition and enforcement of such awards are sought" or "arbitral awards not considered as domestic awards in the State where their recognition and enforcement are sought",

⁵ Ibid., para. 185.

which were said to have raised uncertainty in some State courts. The Commission also heard with interest a statement made on behalf of the International Cotton Advisory Committee suggesting that work could be undertaken by the Commission to promote contract discipline, effectiveness of arbitration agreements and enforcement of awards in that industry.⁶

6. After discussion, the Commission was generally of the view that several matters could be dealt with by the Working Group in parallel. The Commission agreed that the Working Group should resume its work on the question of a revision of the UNCITRAL Arbitration Rules. It was also agreed that the issue of arbitrability was a topic which the Working Group should also consider. As to the issue of online dispute resolution, it was agreed that the Working Group should place the topic on its agenda but, at least in an initial phase, deal with the implications of electronic communications in the context of the revision of the UNCITRAL Arbitration Rules.⁷

II. Organization of the session

7. The Working Group, which was composed of all States members of the Commission, held its forty-sixth session in New York, from 5 to 9 February 2007. The session was attended by the following States members of the Working Group: Argentina, Australia, Austria, Belarus, Benin, Cameroon, Canada, Chile, China, Colombia, Croatia, Czech Republic, Fiji, France, Germany, Guatemala, India, Iran (Islamic Republic of), Italy, Japan, Kenya, Madagascar, Mexico, Nigeria, Poland, Republic of Korea, Russian Federation, Rwanda, Singapore, South Africa, Spain, Sweden, Switzerland, Thailand, Turkey, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

8. The session was attended by observers from the following States: Albania, Bahrain, Bulgaria, Cuba, Egypt, El Salvador, Finland, Greece, Haiti, Honduras, Ireland, Jamaica, Kuwait, Liberia, Malaysia, Mauritius, Nepal, Netherlands, Romania and Trinidad and Tobago.

9. The session was also attended by observers from the following international intergovernmental organizations invited by the Commission: Asian African Legal Consultative Organization, European Community and Permanent Court of Arbitration.

10. The session was also attended by observers from the following international non-governmental organizations invited by the Commission: American Arbitration Association (AAA), American Bar Association (ABA), Arab Union for International Arbitration (AUIA), Asia Pacific Regional Arbitration Group (APRAG), Association of the Bar of the City of New York (ABCNY), Cairo Regional Centre for International Commercial Arbitration (CRCICA), Center for International Environmental Law (CIEL), Chartered Institute of Arbitrators, Forum for International Commercial Arbitration (FICA), International Arbitration Institute (IAI), International Chamber of Commerce (ICC), International Cotton Advisory Committee (ICAC), International Institute for Sustainable Development (IISD), Kuala Lumpur Regional Centre for Arbitration (KLRCA), the London Court of International Arbitration (LCIA), Milan Club of Arbitrators, Moot Alumni

Association, NAFTA Article 2022 Advisory Committee, School of International Arbitration of the Queen Mary University of London, Swiss Arbitration Association (ASA), the European Law Students' Association and *Union Internationale des Avocats* (UIA).

11. The Working Group elected the following officers:

Chairman: Mr. Michael Schneider (Switzerland);

Rapporteur: Mr. Andrés Jana (Chile).

12. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.144); (b) a note by the Secretariat on a revision of the UNCITRAL Arbitration Rules pursuant to the deliberations of the Working Group at its forty-fifth session (A/CN.9/WG.II/WP.145 and A/CN.9/WG.II/WP.145/Add.1).

13. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Revision of the UNCITRAL Arbitration Rules and organization of future work.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

14. The Working Group resumed its work on agenda item 4 on the basis of the notes prepared by the Secretariat (A/CN.9/WG.II/WP.145 and A/CN.9/WG.II/WP.145/Add.1). The deliberations and conclusions of the Working Group with respect to this item are reflected in chapter IV. The Secretariat was requested to prepare a draft of revised UNCITRAL Arbitration Rules, based on the deliberations and conclusions of the Working Group.

IV. Revision of the UNCITRAL Arbitration Rules

15. The Working Group recalled the mandate given by the Commission at its thirty-ninth session (New York, 19 June-7 July 2006) and set out above (see above paragraph 3). The Working Group recalled as well its decision that harmonizing the provisions of the UNCITRAL Arbitration Rules with the corresponding provisions of the UNCITRAL Arbitration Model Law should not be automatic but rather considered only where appropriate (A/CN.9/614, para. 21).

16. The Working Group agreed to resume discussions on the revision of the Rules on the basis of documents A/CN.9/WG.II/WP.145 and A/CN.9/WG.II/WP.145/Add.1 and the proposed revisions contained therein.

General remarks on the reference to “parties” in the Rules

17. The Working Group agreed on the principle to replace words such as “both parties”, “either party”, “one of the parties” with the more generic formulation of “parties” in the text of the Rules, where appropriate, so as to encompass multi-party arbitration.

Section I. Introductory rules**Scope of application****Article 1***Title*

18. The Working Group considered whether the title of article 1 should read “Applicability” instead of “Scope of application”, given that article 1 contained provisions on the principles of application of the UNCITRAL Arbitration Rules and was not limited to matters relating to the scope of application. After discussion, it was agreed to retain the existing title without change, following the generally agreed principle that the Working Group should avoid making unnecessary changes to the Rules.

*Paragraph (1)**“parties to a contract”*

19. The Working Group proceeded to consider two options in respect of the question whether paragraph (1) should contain a reference to the “parties”. It was noted that option 1 most closely corresponded to the existing version of the Rules, by including a reference to “parties”, whereas option 2 implemented a suggestion made in the Working Group at its forty-fifth session to delete any reference to “parties” in the opening words of paragraph (1) (A/CN.9/614, para. 34).

20. Some support was also expressed for option 2 for the reason that it provided flexibility and that it would more appropriately cover arbitrations involving situations such as disputes in the context of bilateral investment treaties, where the parties to an investment arbitration treaty containing an arbitration clause differed from the parties to the arbitration. However, preference was expressed for option 1 as it had the advantage of clarifying that disputes of a non-contractual nature would also be covered by the Rules (see below, paragraphs 21-24).

“disputes in relation to that contract”

21. The Working Group considered whether the words “in relation to that contract”, contained in paragraph (1) should be omitted so as not to suggest any limitation with respect to the types of disputes that parties could submit to arbitration. The Working Group agreed that paragraph (1) should be widened to avoid ambiguity on the scope of application of the Rules and ensure that it not be limited to disputes of a contractual nature only. The Working Group agreed that the words “to a contract” and “in relation to that contract” should be deleted.

“in respect of a defined legal relationship, whether contractual or not,”

22. The Working Group considered whether the words “in respect of a defined legal relationship, whether contractual or not,” should be added to paragraph (1). It was suggested that these words should not be added as they might unnecessarily limit the scope of the Rules and could raise difficult interpretative questions. It was also said that the reference to a “defined legal relationship” might not easily be accommodated in certain legal systems.

23. In response, it was said that the words “in respect of a defined legal relationship, whether contractual or not” were well recognized given that they were derived from the New York Convention, and were also included in article 7, paragraph (1) of the UNCITRAL Arbitration Model Law. In favour of their retention, it was said that these words put beyond doubt that a broad range of disputes, whether or not arising out of a contract, could be submitted to arbitration under the Rules and that their deletion could give rise to ambiguity. It was also suggested that these words would have educational impact on the future developments in the field of international arbitration.

24. Subject to possible review at a future session, the Working Group expressed strong support for the retention of option 1, with the addition of the words “in respect of a defined legal relationship, whether contractual or not”.

The writing requirement for the agreement to arbitrate under the Rules and for modification of the Rules

25. The Working Group considered whether to retain the requirements in paragraph (1) that both the agreement of the parties to refer disputes to arbitration under the UNCITRAL Arbitration Rules, and any modification thereto, should be in writing.

26. It was recalled that the purpose of the requirement that the arbitration agreement be in writing was to set out the scope of application of the UNCITRAL Arbitration Rules and, unlike the function of the form requirement under the UNCITRAL Arbitration Model Law, was separate from the question of the validity of the arbitration agreement (which was governed by the applicable law) or from the question of enforcement under the New York Convention.

27. It was recalled that the *travaux préparatoires* of the UNCITRAL Arbitration Rules indicated that the purpose of the requirement that an arbitration agreement be in writing was to avoid uncertainty as to whether the UNCITRAL Arbitration Rules had been made applicable.⁸ Diverging views were expressed on whether the increased use of the Rules had reduced the risk of such uncertainty.

28. In support of deleting the writing requirement, it was said that the form of arbitration agreement was a matter that should be left to the applicable law. It was said that the UNCITRAL Arbitration Rules should, in the interests of harmonization of international arbitration, take a consistent approach with the work of the Working Group in respect of the UNCITRAL Arbitration Model Law, which had reflected a broad and liberal understanding of the form requirement. It was suggested that

⁸ Report of the Secretary-General: revised draft set of arbitration rules for optional use in ad hoc arbitration relating to international trade (UNCITRAL Arbitration Rules) (addendum): commentary on the draft UNCITRAL Arbitration Rules (A/CN.9/112/Add.1), Section I, Commentary on article 1, UNCITRAL Yearbook, Volume VII: 1976, Part Two, III, 2.

retention of the writing requirement in the Rules could create difficulties in those States that had deleted any such requirement in their legislation. It was said that, if such a requirement were to be maintained, it should be defined and that including such a definition would go beyond the usual scope of arbitration rules. Also, it was said that article 19, paragraph (1), of the UNCITRAL Arbitration Model Law, which provided that “Subject to the provisions of this Law, the parties are free to agree on the procedure to be followed by the arbitral tribunal in conducting the proceedings”, did not require any written agreement of the parties on the proceedings, and therefore, as a matter of consistency, the Rules should not go beyond the requirements of the UNCITRAL Arbitration Model Law.

29. It was also noted that issues such as whether the writing requirement had been met and how it could be met had given rise to a substantial amount of litigation. As well, it was pointed out that there was uncertainty as to whether the writing requirement applied to the agreement to arbitrate or to the parties’ agreement on the application of the UNCITRAL Arbitration Rules, and that, for that reason, that requirement should be removed.

30. In support of preserving a reference to the writing requirement, it was said that there was no uniform approach to that question, some jurisdictions having omitted that requirement while others maintained it. In addition, it was noted that the writing requirement could have two functions. First, to remind the parties that, depending on the applicable law, the agreement to arbitrate might only be valid if made in writing and second, from the point of view of convenience, to provide a basis upon which an appointing authority could appoint arbitrators. It was stated that a requirement that the parties define their arbitration agreement in writing would promote good practices and would provide an opportunity for parties to clarify which version of the Rules would apply.

31. Subject to possible review at a future session, the Working Group expressed strong support for deletion of the writing requirement from article 1.

Applicable version of the UNCITRAL Arbitration Rules

32. It was noted that article 1 dealt with the scope of application of the UNCITRAL Arbitration Rules, without determining which version of the Rules would apply in case of revision. The Working Group considered variants 1, 2 and 3 as proposed in document A/CN.9/WG.II/WP.145.

33. Variant 1, which corresponded to the current wording of the UNCITRAL Arbitration Rules and did not include any indication as to the applicable version of the Rules in case of revision, did not receive support.

34. Support was expressed for variant 2, which provided that the applicable version of the Rules be the one “as in effect on the date of commencement of the arbitration, subject to such modification as the parties may agree”. It was noted that that variant corresponded with the approach taken by a number of arbitration institutions when revising their rules.

35. Variant 3 received considerable support as providing a precise and simple rule, which put the parties on notice that, if they did not express their agreement to apply the Rules as in effect on the date of their agreement, then the Rules as in effect on the date of the commencement of the arbitration should be presumed to apply. In that respect, it was observed that variant 3 more comprehensively set out the options

of parties to apply either the most recent version of the Rules to their dispute or the Rules in existence at the time the arbitration agreement was made.

36. However concern was expressed that variant 3 could lead to a situation where a default rule would apply retroactively to agreements made before the adoption of the revised Rules without sufficient regard for the principle of party autonomy. To avoid that situation, a proposal was made to reverse the presumption under variant 3 along the following lines: “Unless the parties have agreed to apply the Rules in effect on the date of commencement of the arbitration, the parties shall be deemed to have submitted to the Rules as in effect on the date of their agreement”. Another proposal was made that: “Unless the parties have otherwise agreed, the parties shall be deemed to have submitted to the Rules in effect at the date of the arbitration agreement”. Yet another proposal was made to retain variant 3 with a clarification that the revised Rules did not apply to agreements concluded before the revision of the Rules was adopted.

37. Some support was expressed for those proposals. However, it was recalled that the proposals might run contrary to the expectation that the most recent version of the Rules would apply, as illustrated by the practice of some arbitral institutions suggesting that parties often preferred using the updated rules. The view was expressed that the preference for the most recent rules could also result from a parallel to be drawn between a revision of the rules and the adoption of new legislation on matters of procedure. In response, it was stated that the difference in nature between model contractual rules and a piece of legislation made it unadvisable to pursue such comparison. It was widely felt that, in case of disagreement or doubt regarding the chosen version of the Rules, it would be for the arbitral tribunal to interpret the will of the parties. In the view of some delegations, the provision on the applicable version of the Rules should apply only to future changes to the Rules.

38. After discussion, preference was expressed for variant 3. The Working Group agreed to revisit the question of the applicable version of the Rules once it had completed its review of the current text of the UNCITRAL Arbitration Rules and noted that the question of whether the provision on the applicable version of the Rules should apply to agreements concluded before the adoption of the revised Rules was a matter to be further considered.

Model arbitration clause

“as at present in force”

39. The Working Group agreed that the words “as at present in force” should be considered for deletion if a provision referring to the applicable version of the Rules was adopted in article 1, paragraph (1) (see above, paragraphs 32-38).

Note to the model arbitration clause

Subparagraph (a)

40. A proposal was made to delete the reference in brackets to “person” for the reason that it was preferable to name institutions as appointing authorities, instead of individuals. While that proposal received some support, it was noted that removal of the possibility to appoint a person would run contrary to existing practice, including that of the Secretary-General of the Permanent Court of Arbitration who, in appropriate cases, appointed individuals as the appointing authority.

Subparagraph (c)

41. The Working Group noted that the question whether that subparagraph should refer to the term “seat” instead of “place” should be considered in the context of article 16 on the place of arbitration (see below, paragraphs 137-144). A proposal was made to delete the words “town or country” appearing in brackets since they did not express all factual possibilities and were not sufficiently flexible. In addition, naming a country alone as a place of arbitration left unclear the determination of the place of arbitration and, in cases where a country had more than one legal systems governing the arbitral procedure, the formulation did not take appropriate account of the fact that the designation of the location of the arbitration within that country could have significant legal consequences. However, it was pointed out that parties might need guidance on the meaning of the determination of the place of arbitration, and a proposal was made to retain those words, and replace “or” with “and”. The Working Group took note of those proposals.

Subparagraph (e)

42. The Working Group considered the proposal made at its forty-fifth session to add to the note to the model arbitration clause a reference to the law governing the arbitration agreement (A/CN.9/614, para. 37). Although that addition would have the benefit of raising awareness of the importance of defining the law applicable to the arbitration agreement, the widely shared view was that it would be misleading to retain it as it addressed only one aspect of the laws applicable in the context of arbitration. The Working Group considered whether the model arbitration clause should include a provision on the law applicable to the substance of the dispute, and whether the impact of the place of arbitration on the law applicable to the arbitral proceedings should also be clarified. The Working Group agreed that subparagraph (e) should not be retained and that the model arbitration clause should not contain any provision on applicable law.

Conciliation

43. The Working Group agreed that a reference to conciliation should not be added, in order to avoid unnecessarily complicating that model arbitration clause.

Notice, calculation of periods of time**Article 2***Paragraph (1)*

44. The Working Group proceeded to consider paragraph (1), which regulated when a notice, including a notification, communication or proposal could be deemed to have been received.

Deemed delivery of notice

45. The view was expressed that paragraph (1) should not be modified, for the reason that it had not created any difficulties in practice. It was also pointed out that article 2, paragraph (1) of the Rules was based on the 1974 UNCITRAL Convention on the Limitation Period in the International Sale of Goods and that a similar provision was contained in article 24 of the United Nations Convention on the Contracts for the International Sale of Goods (Vienna, 1980). It was said that

adoption of the proposed amendments could create unnecessary discrepancies among existing texts.

46. A suggestion was made to modify paragraph (1) to include a provision along the lines contained in article 3, paragraph 3 of the International Chamber of Commerce Arbitration Rules 1998 (“the ICC Rules”) which provided that: “A notification or communication shall be deemed to have been made on the day it was received by the party itself or by its representative, or would have been received if made in accordance with the preceding paragraph”. It was said that that modification would encompass situations where physical delivery of notices was not possible, for instance where an address provided was no longer in existence. The view was expressed that it was uncertain whether such situations would already be covered by the concept of “deemed receipt” of the notice by the defendant, as already contained in article 2, paragraph (1) of the Rules. However, it was indicated that, in the rules of other arbitration institutions, there were different provisions and that, in any case, delivery to the last known place of business or residence under article 2, paragraph (1), provided an adequate solution for such situations.

“Mailing address”

47. The Working Group considered whether the terms “mailing address” contained in article 2, paragraph (1), could be understood as including new means of communication, such as delivery of notices by e-mail. Broad support was expressed in the Working Group for deletion of the term “mailing”, so that the word “address” might be understood in a wider manner, as encompassing either a postal or electronic address.

Notice of arbitration

48. A question was raised whether the deemed delivery of notices should include delivery of the notice of arbitration. It was said that such a provision might deprive the defendant of a right to be properly notified of the commencement of the arbitration. To address that concern, a proposal was made to replace the notion of deemed receipt of notices, by the notion of proper service of notices. That proposal did not receive support.

49. After discussions, the Working Group agreed that paragraph (1) should not be amended as was proposed in document A/CN.9/WG.II/WP.145, but that any accompanying material should include clarification to deal with the situation where delivery was not possible.

Electronic communication — paragraph (1 bis)

50. The Working Group considered proposed new paragraph (1 bis) on delivery of notices by electronic means, as contained in document A/CN.9/WG.II/WP.145. Support was expressed for the view that the proposed new paragraph should include a reference to traditional ways of delivering notices, keeping in mind the importance of effectiveness of delivery, the necessity to keep a record of the issuance and receipt of notices, and the consent of the parties to the means of communication used. A proposal was made to add a provision along the following lines: “delivery pursuant to paragraph 1 may be made by facsimile, telex, e-mail or any other means of communication that provides a durable record of dispatch and receipt”. That proposal received some support. The Working Group agreed that the new provision on that question should contain the words “electronic communication” as these

words were used in the United Nations Convention on the Use of Electronic Communications in International Contracts (2005). The Working Group further agreed that these terms did not need to be defined, as definitions were already contained in the relevant UNCITRAL instruments. Caution was urged on the use of terms such as “durable records” which were not used in UNCITRAL instruments, and preference was expressed for the revised draft to be prepared being consistent with terminology used in the existing instruments. The Secretariat was requested to draft language for a paragraph (1 bis) that would authorize both electronic communication and traditional forms of communication.

Notice of arbitration and response to the notice of arbitration

Article 3

Paragraph (1)

Party [or parties]

51. The Working Group agreed that inclusion of the words “or parties” were useful to encompass multi-party arbitration and therefore should be retained.

Paragraph (3)

Subparagraph (b)

52. In order to take account of a suggestion that subparagraph (b), which required that the notice of arbitration contain the name and addresses of the parties, might also include additional contact details, the Working Group agreed to modify that subparagraph as follows: “(b) The names and contact details of the parties;”. For the sake of consistency, article 3, subparagraph (5)(b) should be modified so as to read: “the full name and contact details of any respondent” (see also below, paragraph 148).

Subparagraph (c)

53. It was said that subparagraph (c), which required identification of the arbitration agreement being invoked, might not provide sufficient information, particularly if the Rules were extended to apply to multi-party arbitration, and therefore it was suggested that subparagraph (c) be modified to provide that the notice of arbitration set out the actual wording of the arbitration agreement. No support was expressed for the suggestion.

Subparagraph (d)

54. It was suggested that the reference in subparagraph (d) to “any contract, or other legal instrument” ought to be made consistent with the earlier decision by the Working Group that disputes of a non-contractual nature would also be covered by the Rules (see above, paras. 21-24). For that reason, it was proposed to seek a broader formulation to encompass non-contractual disputes. That proposal received some support.

Mandatory items to be included in the notice of arbitration

55. The Working Group recalled its discussions at its forty-fifth session where it was cautioned that imposing an obligation to include too much information in the notice of arbitration might give rise to the question of how to deal with an

incomplete notice of arbitration, particularly in non-administered arbitration where no institution would oversee that issue (A/CN.9/614, para. 54). The Working Group agreed that it might be useful to address that issue in the revised Rules.

56. In that respect, a proposal was made to expressly provide that an incomplete notice of arbitration should not prevent the constitution of an arbitral tribunal and that the consequences of failing to include mandatory items in the notice of arbitration should be a matter to be determined by the arbitral tribunal. A proposal was made to add a provision along the following lines: “any controversy with respect to the sufficiency of the notice of arbitration shall be finally resolved by the arbitral tribunal, the constitution of which should not be impeded by such a controversy”. It was suggested that article 5.4 of the Arbitration Rules of the London Court of International Arbitration (LCIA) might provide a useful example on the question of the impact of an incomplete notice of arbitration, although the wording would need to be adapted for non-administered arbitration. It was also suggested that, in drafting a new provision, the Secretariat should consider whether the arbitral tribunal should be given express power to request rectification of a notice of arbitration so that, if the notice was rectified accordingly, the proceedings might, for the purposes of the relevant limitation period, be deemed to commence from the date that the notice was initially communicated. It was noted that rule 4.5 of the Australian Centre for International Commercial Arbitration Rules as well as the ICC Rules might provide useful models. The Working Group agreed to further consider that issue at a future session.

Paragraph (4)

Subparagraph (c)

57. The Working Group agreed that the option for the claimant to communicate its statement of claim should be retained. The Working Group agreed to further discuss at a future session whether the decision by the claimant that its notice of arbitration would constitute its statement of claim should be postponed until the stage of proceedings reflected in article 18.

Paragraph (5)

Mandatory or optional provision

58. The Working Group agreed that the provisions referred to in document A/CN.9/WG.II/WP.145, para. 39 on the response to the notice of arbitration should be maintained. Questions were raised whether the response to the notice of arbitration should be made optional. A suggestion was made to replace the words “which shall include” in the chapeau of paragraph (5) with the words “which may include”. The Working Group noted that paragraph (7) already contained provisions on the consequences of failure to communicate a response to the notice of arbitration. The Working Group agreed to further consider the wording of paragraphs (5) to (7) at a future session.

Time periods

59. It was observed that the thirty days time period for the communication of the response to the notice of arbitration might be too short in certain cases and did not appear to be synchronized with other time periods such as the fifteen day period for challenging an arbitrator as contained in article 11 of the Rules. The Working Group

agreed that there might be a need to revisit the various time periods provided in the Rules so as to ensure consistency.

Subparagraph (a)

60. A suggestion was made that the words “any comment” might not be appropriate if understood to preclude subsequent comment and that more precise language be used. The Working Group agreed to consider the drafting of paragraphs (5), (6) and (7) on the response to the notice of arbitration, at a later stage.

Investor-State arbitration

61. A view was expressed that specific provisions might need to be included to ensure transparency of the procedure for arbitration involving a State. Under that view, specific provisions should be included to deal with investor-State arbitration as follows: in article 3, a paragraph should be inserted to the effect that the notice of arbitration and the composition of the arbitral tribunal should be published on the UNCITRAL website; article 15, paragraph (3), should provide that all documents received or issued by the arbitral tribunal should be published by similar means; article 15, paragraph (4), should establish the discretion of the arbitral tribunal to allow persons or entities other than the parties to submit *amicus curiae* briefs; article 25, paragraph (4), should provide that hearings should be open to the public; and article 32, paragraph (5), should provide for the systematic publication of awards.

62. The Working Group recalled that, at its forty-fifth session, broad support had been expressed for a generic approach that sought to identify common denominators that applied to all types of arbitration irrespective of the subject matter of the dispute, in preference to dealing with specific situations (A/CN.9/614, paras. 18-19). The Working Group reiterated its support for that approach. It was recalled that, since practice in various areas, including in investor-State dispute settlement, was still developing, it would be undesirable to seek to design specific provisions at the current stage when the Working Group was still finalizing the common denominators that should be applied to all arbitrations. The Working Group agreed to revisit the issue after it had completed its first review of the revised provisions.

Representation and assistance

Article 4

“persons of their choice”

63. A proposal was made to replace the words “persons of their choice” appearing in the first sentence of article 4 with “persons chosen by them” in order to avoid the implication that the party had an unrestricted discretion, at any time during the proceedings, to impose the presence of any counsel (for example, a busy practitioner that would be unable to meet reasonable time schedules set by the arbitral tribunal). That proposal was broadly supported.

Existence/Scope of authority

64. The Working Group considered whether it would be useful to add language to article 4 to ensure that, when a person was empowered to represent a party,

disclosure should be made to any party or the arbitral tribunal of the content of its representative's powers. A question was raised whether such disclosure should be limited to the existence of the representative's powers or should also extend to the scope of the representative's authority.

65. It was said that requiring disclosure of the scope of authority might prove difficult in certain circumstances, as it could have the consequence of forcing disclosure of certain communications between the party and its representative that should be kept confidential, such as for example, a power to settle a claim at a certain amount.

66. It was suggested that the provision should be drafted in a flexible manner, allowing the arbitral tribunal to determine on its own motion the extent to which it needed to be provided with information on the scope of authority. In that respect, a proposal was made to add at the end of article 4, language along the following lines: "At any time, the arbitral tribunal may require from any party proof of authority granted to its representative in such a form as the arbitral tribunal may determine." It was said that the intention of that provision was not to deprive a party of its right to choose a representative but rather to confirm to the other party that a person was actually the representative of a party to the arbitration.

67. It was pointed out that, while the arbitral tribunal had the right to request a party to provide information on that question, it might be more useful to empower a party to request from the other communication of such information. Support was expressed for providing that such information should be communicated at the request of the arbitral tribunal, including at the instance of a party. As well, it was clarified that communication on proof of authority did not exclude communication on the scope of the representative's power.

"In writing"

68. The Working Group agreed to delete the words "in writing" in article 4, as the manner in which communication should be exchanged among the parties and the arbitral tribunal was already dealt with under article 2.

Designating and appointing authorities

Article 4 bis

69. The Working Group considered the provision referred to in document A/CN.9/WG.II/WP.145, paras. 41 and 42, and tentatively numbered article 4 bis, which was intended to deal with designating and appointing authorities. That provision contained the principle that the appointing authority could be appointed by the parties at any time during the arbitration proceedings, and not only in circumstances currently provided for in the Rules. It also sought to clarify for the users of the Rules the importance of the role of the appointing authority, particularly in the context of non-administered arbitration. The Working Group agreed on the principle of including in the Rules a provision addressing the respective roles of the designating and appointing authorities. Taking account of the simplification that resulted from the adoption of article 4 bis, the Secretariat was requested to review the Rules, assessing further possible simplification that could be made elsewhere in the Rules.

70. As a matter of drafting, it was proposed that, after insertion of a proper definition, the words "Secretary-General of the PCA" be used instead of the full title

“Secretary-General of the Permanent Court of Arbitration at The Hague”. Support was expressed for that proposal.

Paragraph (1)

71. The Working Group noted that the draft revision of paragraph (1) clarified that the Secretary-General of the PCA was expressly entitled to act as appointing authority under the Rules. A proposal was made to modify the draft text to provide that, where the parties were unable to agree on an appointing authority, the Secretary-General of the PCA should act directly as the appointing authority, instead of designating an appointing authority. It was said that such a provision would preserve the freedom of the parties to select any other appointing authority but provide more predictability in the event they did not agree.

72. Concerns were expressed that that proposal would not sufficiently take account of the multi-regional applicability of the UNCITRAL Arbitration Rules, and would have the consequence of centralizing all cases where the parties had not designated an appointing authority in the hands of one organization. While the view was expressed that such a provision might be appropriate for investor-State disputes, a widely held opinion was that it would not be as appropriate in other instances. Reference was made to regional and domestic arbitration. It was said that the mechanism provided in the original version of the Rules was functioning well, and did not need to be modified. With a view to accommodating these concerns, the proposal was amended to provide that the parties should retain the right to request the Secretary-General of the PCA to appoint another appointing authority, and that the Secretary-General of the PCA itself should be empowered to designate another appointing authority, if it considered it appropriate.

73. In support of that proposal, it was recalled that the PCA was a unique intergovernmental organization with broad membership. It was said that the proposal would preserve the right of the parties to designate an appointing authority. It was also stated that, in expressing a default rule, the proposal provided the parties with a simple, streamlined and efficient procedure. In the context of that discussion, the Working Group recognized the expertise and the accountability of the PCA, as well as the quality of the services it rendered under the UNCITRAL Arbitration Rules.

74. The prevailing view, however, was the proposal constituted a major and unnecessary departure from the existing UNCITRAL Arbitration Rules. After discussion, it was decided that, with the amendments to article 4 bis as proposed in document A/CN.9/WG.II/WP.145, the existing mechanism on the designating and appointing authority should be preserved. The Working Group noted that the representative of the Permanent Court of Arbitration confirmed the agreement of its Secretary-General to perform the functions provided for in the draft revised Rules.

Paragraph (2)

75. In order to clarify the principle that the designation of the appointing authority could be sought by the parties at any time during the arbitration proceedings, the Working Group agreed to add the words “with the Notice of Arbitration or any time thereafter” after “any party” so that that part of the sentence read: “any party, with the Notice of Arbitration or any time thereafter, may request the Secretary-General of the Permanent Court of Arbitration at The Hague to designate an appointing authority.” That proposal was adopted.

Paragraph (3)

76. The Working Group agreed that paragraph (3) should include a general principle that the parties should be given an opportunity to be heard by the appointing authority.

Paragraph (5)

77. The Working Group agreed that the words “the name of one or more” appearing in the last sentence of paragraph (5) should be deleted.

78. The Working Group agreed that paragraph (5) should clarify that it was for the proposed arbitrators (rather than the appointing authority) to provide information regarding their qualifications to the parties.

Section II. Composition of the arbitral tribunal

Number of arbitrators — Article 5

Paragraph (1)

79. The Working Group recalled that, at its forty-fifth session, diverging views were expressed on whether the default rule on the number of arbitrators should be modified (A/CN.9/614, paras. 59-60). It proceeded to consider the various options referred to in document A/CN.9/WG.II/WP.145, paras. 43 and 44 on that question.

Option 1, variant 1 and option 2

80. Preference was expressed for option 1, variant 1, which provided that if the parties were unable to agree on the appointment of one arbitrator, three arbitrators should be appointed. It was said that that option most closely reflected the current default rule set out in article 5. Option 2 provided that, if the parties were unable to agree on the number of arbitrators, that matter should be determined by the appointing authority. That option received limited support for the reason that involving an appointing authority at such an early stage of the arbitral proceeding could create unnecessary delays.

Alternative proposal

81. An alternative proposal was made to include text along the following lines: “If the parties have not previously agreed on the number of arbitrators, one arbitrator shall be appointed, unless either the claimant in its notice of arbitration or the respondent, by the time for filing the response to the notice of arbitration, requests that there be three, in which case there shall be three arbitrators.” It was suggested that that approach avoided imposing a three-person tribunal in arbitration involving small claims. The substance of that proposal received support as it included an additional level of flexibility. However, it was suggested that the drafting should be revised. It was also suggested that the fifteen day period granted to the respondent to request the appointment of three arbitrators might be too short, particularly in arbitrations involving State parties. In that respect, it was suggested to replace “within fifteen days” either by “within thirty days”, as provided for in respect of the response to the notice of arbitration or “within the time period for responding to the notice of arbitration”.

82. The Working Group agreed to further consider the matter and requested the Secretariat to provide revised drafts reflecting the alternative proposal.

Paragraph (2)

83. The Working Group expressed support for draft paragraph (2), as contained in document A/CN.9/WG.II/WP.145. That paragraph clarified that the Rules provided for methods to form either a one or a three-member arbitral tribunal and if the parties wished to opt for another number (e.g., to have a two-member arbitral tribunal, which was allowed by the UNCITRAL Arbitration Model Law and was customary in some trades), the parties should define their own method for the constitution of the arbitral tribunal. It was noted that paragraph (2) did not contain a fallback rule and a suggestion was made that, in such situations, the appointing authority might need to be involved.

Appointment of arbitrators (articles 6 to 8)

Article 6

84. The Working Group adopted article 6 in substance, as contained in A/CN.9/WG.II/WP.145.

Article 7

85. The Working Group adopted article 7 in substance, as contained in A/CN.9/WG.II/WP.145.

Article 7 bis

Appointment of arbitrators in multi-party arbitration — Principle

86. The Working Group recalled that article 7 bis, as referred to in document A/CN.9/WG.II/WP.145, para. 47, had been inserted to deal with the appointment of arbitrators in multi-party cases, in accordance with its discussions at its forty-fifth session (A/CN.9/614, paras. 62 and 63). General support was expressed for the principle contained in article 7 bis that, in case of multiple claimants or respondents, subject to contrary agreement, the multiple claimants, jointly, and the multiple respondents, jointly should appoint an arbitrator. It was suggested that the article should be drafted broadly enough to encompass situations where one side involved multiple parties whilst the other had only one party.

Paragraph (1)

87. A proposal was made to add the word “each” or “each group” after the word “shall” in the first sentence of paragraph (1) to indicate that the multiple claimants on one part and the multiple respondents on the other would each appoint an arbitrator. Another proposal was that, in the second sentence of paragraph (1), the words “shall choose” should be replaced by more flexible wording along the lines of “shall endeavour to choose”. Those proposals were adopted.

Paragraph (2)

Failure to constitute the arbitral tribunal

88. A suggestion was made that the words “In the event of a failure to constitute the arbitral tribunal” should replace the current opening words “In the absence of

appointment pursuant to paragraph 1” for the reason that the power of the appointing authority to constitute the arbitral tribunal should be more broadly formulated to cover all possible failures to constitute the arbitral tribunal and not be limited to those circumstances covered by paragraph (1). That proposal was adopted.

Discretionary right of the appointing authority — Revocation of appointments already made

89. It was questioned whether the discretionary term “may” in relation to power of the appointing authority to constitute the arbitral tribunal at the request of a party was appropriate. Concern was expressed that, as drafted, paragraph (2) appeared to permit the appointing authority, in case of failure to appoint arbitrators, to constitute the arbitral tribunal and revoke appointments already made. It was suggested that that approach might bear the consequence of depriving parties of the right to appoint their own arbitrator and give the multiple parties who failed to appoint an arbitrator the ability to cause all arbitrators to be appointed anew by the appointing authority.

90. Support was expressed for maintaining the principle in paragraph (2) permitting the appointing authority to constitute the arbitral tribunal, including the right to revoke already appointed arbitrators. It was said that the principle in paragraph (2) that the appointing authority should appoint the entire arbitral tribunal when parties on the same side in a multi-party arbitration were unable jointly to agree on an arbitrator was an important principle that should be maintained, in particular in situations like the one which had given rise to the case *Dutco v. BKMI and Siemens*, which had led to revisions of a number of international arbitral rules, including the ICC Rules (Article 10) and the LCIA Arbitration Rules (Article 8.1). It was stated that the decision in *Dutco* was based on the requirement that parties receive equal treatment, a principle that would apply in all countries bound by article 6 of the European Convention on the Protection of Human Rights and Fundamental Freedoms, as well as in many other jurisdictions. It was also stated that, to accommodate the wide variety of situations arising in practice, it was important to maintain a flexible approach, granting discretionary powers to the appointing authority.

91. A widely held view was that the right of parties to appoint their arbitrator should nevertheless be preserved and, in order to clarify that the appointing authority was unambiguously entitled to reappoint an arbitrator agreed upon by one side, the Working Group discussed whether the mechanism of designation by the parties of arbitrators under the Rules should be modified, so as to provide a two-step procedure. According to a proposal made to that effect, a distinction should be made between the stage when parties would nominate their arbitrator and the stage when the arbitrator would be appointed. It was widely felt that such a two-step procedure, while consistent with the rules of a number of arbitral institutions, might lead to unnecessary modifications in the current provisions of the Rules dealing with appointment and revocation of arbitrators. It was suggested that the issue could be settled more simply by inserting the words “or reappoint” after the word “appoint” in paragraph (2) and deleting the reference to the confirmation of an appointment. That proposal received support, and the Working Group agreed to further consider the matter at a future session.

Right of the parties to be heard by the appointing authority

92. It was further suggested that paragraph (2) should expressly recognize the right of all parties to be heard by the appointing authority on the question of constitution of the arbitral tribunal (see above, paragraph 76). That proposal received support.

Time limit

93. It was suggested that time limits could be defined under paragraph (2). The Working Group agreed to further consider that matter at a later stage.

Article 8

94. The Working Group agreed to the deletion of article 8, the substance of which had been placed in article 4 bis on the designating and appointing authorities.

Challenge of arbitrators (Articles 9 to 12)**Article 9**

95. The Working Group adopted article 9 in substance, as contained in A/CN.9/WG.II/WP.145.

Model Statement of Independence

96. The Working Group considered whether guidance should be provided in the Rules on the required content of disclosure, in the form, for instance of a model statement of independence attached as a footnote to article 9 or in any accompanying material and in the form set out in paragraph 50 of A/CN.9/WG.II/WP.145.

97. Concern was expressed that the language used in the two statements differed. It was suggested that, to ensure equivalence between the statements, the words “there are no circumstances, past or present likely to give rise to justifiable doubts as to my impartiality” in the first statement be replaced by words such as “I have no past and present professional, business and other relationships with the parties and there are no other circumstances that might cause my reliability for independent and impartial judgement to be questioned by a party.” It was noted that the language contained in the model statement corresponded with the IBA Rules of Ethics for International Arbitrators (1987). It was noted that the Model Statement of Independence was intended to be contained in the revised Rules as a footnote to article 9.

98. A suggestion was made that the point in time when the arbitrator should provide a statement should be clarified. That suggestion did not receive support.

99. After discussion, the Working Group agreed to adopt in substance the text of the Model Statement of Independence, as contained in A/CN.9/WG.II/WP.145.

Article 10

100. The Working Group adopted the text of article 10 as contained in A/CN.9/WG.II/WP.145.

Article 11

101. The Working Group adopted the text of article 11 as contained in A/CN.9/WG.II/WP.145.

Article 12*Paragraph (1)**Time limits for challenge*

102. A suggestion was made that the time limits provided under paragraph (1) might need to be shortened. After discussion, it was agreed that if, within 15 days from the date of the notice of challenge, any other party did not agree to the challenge and the challenged arbitrator did not withdraw, the party making the challenge could seek a decision on the challenge within thirty days rather than sixty.

Paragraph (2)

103. The Working Group noted that the modified text in paragraph (2) permitted the appointing authority directly to appoint an arbitrator if it considered that the circumstances of the arbitration were such that a party should be deprived of its right to appoint a replacement arbitrator.

104. A proposal was made that that power should be limited to cases where a party had abused the challenge procedure repeatedly. That proposal was objected to on the grounds that the circumstances in which an appointing authority might proceed directly to appoint an arbitrator might extend to various other circumstances. It was thus preferable to formulate the power of the appointing authority in more general terms.

105. The Working Group agreed to maintain the text in general terms but requested the Secretariat to consider preparing, for possible inclusion in any explanatory material, an illustrative list of possible circumstances in which the appointing authority could exercise its power under paragraph (2).

Replacement of an arbitrator**Article 13***Paragraph (1)*

106. The Working Group approved the substance of paragraph (1), as contained in A/CN.9/WG.II/WP.145.

Paragraph (2)

107. The Working Group noted that paragraph (2) provided two different ways for an appointing authority to deal with an unapproved resignation of an arbitrator or failure by an arbitrator to perform his or her functions, being either to appoint directly a substitute arbitrator or allow the proceedings to continue without a substitute arbitrator (A/CN.9/614, para. 70).

108. Concern was expressed with the wording “a party considers that an arbitrator has resigned for invalid reasons or is failing to perform his or her functions”. It was suggested that the original text which referred to an arbitrator who “refuses or fails

to act” was preferable to “failing to perform his or her functions”. That suggestion received support.

109. The Working Group also considered whether there were circumstances in which the arbitrators themselves, rather than just a party, should be given the power either to decide to proceed as a truncated tribunal or seek approval from the appointing authority for so proceeding. Support was expressed for that suggestion as it would encompass situations where an arbitrator was failing to act and none of the parties were aware of that fact. However, it was said that granting the power to the arbitral tribunal to proceed as a truncated tribunal might not provide sufficient safeguards for the parties, in particular in case of collusion between arbitrators. As well, it was said that allowing the arbitral tribunal to seek approval of the appointing authority might be problematic in cases where the parties had not chosen such an appointing authority. It was said that that difficulty could be overcome by providing that the arbitral tribunal should in such cases refer the matter to the parties, who would then proceed with the designation of an appointing authority. It was suggested that a time limit should be introduced for parties to raise objections to an inactive arbitrator.

110. A suggestion was made that the arbitral tribunal should in all cases be involved in the process of replacement of an arbitrator.

111. A view was expressed that the provision on replacement of arbitrators should clearly distinguish the revocation of an arbitrator who failed to act from the resignation of an arbitrator for invalid reasons. It was said that those two circumstances had to be subject to different procedures as each might have different consequences in terms of liability.

112. After discussion, the Working Group requested the Secretariat to prepare alternative formulations, taking account of the suggestions made.

Repetition of hearings in the event of the replacement of an arbitrator

Article 14

113. The Working Group adopted the text of article 14 in substance, as contained in A/CN.9/WG.II/WP.145.

Section III. Arbitral proceedings

General provisions — Article 15

Paragraph (1)

114. The Working Group considered the provision in paragraph (1), which spelled out the general principle that arbitral proceedings should be dealt with by the arbitral tribunal without unnecessary delay. A proposal was made to include an express provision conferring on the arbitral tribunal the power to hold preliminary consultations or meetings either at the request of the parties or at its own initiative. That proposal did not receive support, and the Working Group adopted the substance of paragraph (1), as it appeared in document A/CN.9/WG.II/WP.145/Add.1.

Paragraphs (2) and (3)

115. Paragraphs (2) and (3) were adopted in substance without modification.

*Paragraph (4)**Consolidation of cases before arbitral tribunals*

116. The Working Group noted that, in some cases, under the Rules, consolidation of cases was only possible where the parties specifically so agreed and proceeded to consider whether a provision on that matter should be added to the Rules, as proposed under document A/CN.9/WG.II/WP.145/Add.1.

117. Some support was expressed for inclusion of such a provision. It was said that such a provision could be useful in situations where several distinct disputes arose between the same parties under separate contracts (e.g., related contracts or a chain of contracts) containing separate arbitration clauses or to avoid a situation where a party initiated a separate arbitration in respect of a distinct claim under the same contract in order to gain a tactical advantage. Consolidation in such situations might provide an efficient resolution of the disputes between the parties, and also might reduce the possibility of inconsistent awards in parallel arbitrations.

118. It was said however that such a provision should be carefully drafted in order to clarify that consolidation would only be possible if either the claim was already subject to UNCITRAL Arbitration Rules, or the parties expressly agreed that the claim should be subject to consolidation.

119. However, doubts were expressed as to the workability of such a provision particularly when the Rules applied in non-administered cases. As well, it was said that either the provision was intended to deal with new claims under the same contract, and that situation would be better dealt with under provisions on amendment of the statement of claim, or that provision was intended to cover several distinct disputes arising between the same parties under separate contracts containing separate arbitration clauses. In that latter situation, the application of the provision might subject parties to arbitration proceedings under terms, which differed from those, agreed in their arbitration agreement. It was said that that situation raised complex issues, and might result in unfair solutions.

120. After discussion, the Working Group agreed that it might not be necessary to provide for consolidation under the Rules and deleted subparagraph (a) (see below, paragraphs 157-160).

Joinder

121. The Working Group considered a proposed provision on joinder, as it appeared in document A/CN.9/WG.II/WP.145/Add.1, and noted that the provision was inspired by article 22.1 (h) of the LCIA Arbitration Rules, which provided that the arbitral tribunal could: “allow, only upon the application of a party, one or more third persons to be joined in the arbitration as a party provided any such third person and the applicant party have consented thereto in writing, and thereafter to make a single final award, or separate awards, in respect of all parties so implicated in the arbitration”.

122. Some support was expressed for inclusion of such a principle in the Rules, as it was said to fulfil the useful purpose of allowing interested third parties to join an arbitration in circumstances where the other party objected to such joinder.

However, concerns were expressed that such a provision would run counter to the fundamental principle of consent of parties in arbitration, and that such a provision would be acceptable only if it either contained an opt-in or opt-out proviso or if it were modified so that joinder would only be possible if all parties to the arbitration agreed thereto. It was pointed out that securing agreement of all parties would avoid possible difficulties at the stage of recognition and enforcement of the arbitral award, as it would put the agreement of all parties to the arbitration beyond doubt. In response, it was said that, as parties to arbitration always retained the right to agree on joinder without the need for a specific provision to that effect, requiring consent of all the parties would render the provision unnecessary. It was also noted that, insofar as parties agreed to arbitration under Rules containing the proposed joinder provision, they would have consented to the voluntary joinder of a third party.

123. It was suggested that the provision should clarify that the third party should in the first place agree to be joined in the arbitration, as was provided for under article 22.1 (h) of the LCIA Arbitration Rules.

124. A question was raised whether that provision should clarify on which side the third party should join the arbitration. In response, it was said that the provision might need to remain as flexible as possible to accommodate the varying circumstances in which a third party might seek joinder.

125. A suggestion was made to delete the reference to the making of an award in respect of all parties involved in the arbitration. It was observed that if the third party joined as a party, then there might be no need for such a provision. It was considered preferable to retain a reference to the making of the award, in order to put beyond doubt that the arbitration would be binding on all parties, whether they were the original parties to the arbitration or joined later in the process. As well, it was said that such an express provision in the Rules might serve a useful purpose at the stage of recognition and enforcement of the arbitral award.

126. After discussion, the Working Group agreed that the provision on joinder would constitute a major modification to the Rules, and noted the diverging views, which were expressed on that matter. The Working Group agreed to consider that matter at a future session, on the basis of information to be provided by arbitral institutions to the Secretariat on the frequency and practical relevance of joinder in arbitration.

Confidentiality of proceedings

127. The Working Group considered whether it would be appropriate to include a general provision regarding confidentiality of proceedings, or of the materials (including pleadings) before the arbitral tribunal. The Working Group recalled that, at its forty-fifth session, many delegations expressed the opinion that a general confidentiality provision should not be included. It was also suggested that the matter should be left to be addressed on a case-by-case basis by the arbitrators and the parties (A/CN.9/614, para. 86).

128. Some support was expressed for inclusion of a general provision regarding confidentiality, particularly in light of decisions such as that of the English Court of Appeal in *City of Moscow v. Bankers Trust*, which was said to highlight the importance of including a provision in the Rules. It was said that a number of existing international arbitral rules such as the LCIA Arbitration Rules and WIPO rules contained specific provisions on confidentiality. The attention of the Working

Group was drawn to article 9 of the UNCITRAL Model Law on International Commercial Conciliation as a possible reference for drafting a provision on confidentiality.

129. However, it was cautioned that drafting a general provision on confidentiality would be extremely problematic, since it would require addressing questions such as when the duty of confidentiality arose and ended, whether that duty extended to persons other than the parties, such as witnesses or experts, and what exceptions should be made to that duty.

130. Against inclusion of a general provision of confidentiality, it was suggested that inclusion of such a general provision would run counter to the current trend toward greater transparency in international proceedings. It was also said that the underlying aim of the revision of the Rules was to provide flexibility so as to accommodate evolving law and practices. In that respect, it was noted that confidentiality was an area where law and practices were still developing.

131. In addition, drafting a general provision on confidentiality might not be appropriate in view of the fact that the importance of confidentiality in any given arbitration would depend on the nature of the relationship in question. For example, contracts relating to intellectual property demanded a high degree of confidentiality. For these reasons, it was suggested that the question of confidentiality be left to be addressed by the arbitrators and the parties on a case-by-case basis.

132. A concern was expressed that there might be a large number of users of the Rules who expected the Rules to guarantee confidentiality. To address that concern, a suggestion was made to include a footnote to the model arbitration clause appended to article 1 of the Rules drawing the parties' attention to the possibility of adding a provision on confidentiality including its scope, duration and to whom the duty was addressed. It was said that such a footnote could serve as a reminder that the matter was one which the parties needed to address and was not dealt with in the Rules.

133. After discussion, the Working Group agreed that no provision on confidentiality of proceedings should be included in the Rules.

Extend or shorten time periods

134. The Working Group recalled that a proposal had been made at its forty-fifth session to include in the Rules a general provision in article 15, along the lines of "In discharge of its duties under article 15, paragraph (1), the arbitral tribunal may at any time extend or abridge any period of time prescribed under or pursuant to the Rules" (A/CN.9/614, paras. 41-46).

135. While various views were stated as to whether the arbitral tribunal had an inherent power to change procedural time limits, support was expressed for expressly dealing with that matter in the Rules. However, concern was expressed that it might be inappropriate to permit the arbitral tribunal to modify the parties' agreement, for example an agreement that the arbitration should be completed within a certain period of time. A suggestion was made the arbitral tribunal should be required to provide reasons justifying any change to the procedural time periods, in line with the approach taken in article 23 of the Rules. That proposal was not supported. A question was raised as to any power given to the arbitral tribunal to extend time-limits should also be given to the appointing authority pending the constitution of the arbitral tribunal. It was pointed out that conferring such power on

the arbitral tribunal could create a risk of delaying the constitution of the arbitral tribunal.

136. After discussion, the Working Group agreed that the Rules should establish the authority of the arbitral tribunal to modify the periods of time prescribed in the Rules but not to alter the general time frames that might be set by the parties in their agreements without prior consultation with the parties.

Article 16

Place of arbitration

137. The Working Group considered whether to include terminology differentiating between the “seat of arbitration” (when referring to the legal place of arbitration that determined the applicability of the law governing the arbitration as well as court jurisdiction) and “location” or “venue” (when referring to the place where meetings were actually held). The Working Group also considered whether specific language should be added to article 16 regarding the consequences attaching to the legal place of arbitration.

Use of differentiated terminology

138. It was suggested that it might be necessary to distinguish between the legal and physical places of arbitration, and that modification of the terminology used would promote clarity. It was observed that the modification might also serve an educational purpose, given that users were often unaware of the legal consequences that attached to the term “place of arbitration”. Diverging views were expressed as to how best to achieve distinction between the legal and physical places of arbitration.

139. A proposal was made to replace the words “place of arbitration” in article 16, paragraphs (1) and (4) with words such as the “seat”, “legal seat” or “juridical seat” of arbitration. It was proposed that a term such as “location” be used when dealing with the purely physical or geographical place of arbitration, under paragraphs (2) and (3).

140. Another proposal was made that article 16 might be amended along the lines of article 16 of the LCIA Arbitration Rules, which referred in its paragraph (1) to the “the seat (or legal place)” of the arbitration, and which provided under its paragraph (2) that “the Arbitral Tribunal may hold hearings, meetings and deliberations at any convenient geographical place in its discretion and, if elsewhere than the seat of the arbitration, the arbitration shall be treated as an arbitration conducted at the seat of the arbitration (...)”. That proposal received some support.

141. However, it was cautioned that the use of new terminology might lead to unintended consequences to existing contractual drafting practices that used different expressions, including the “place of arbitration”, with the intention of referring to the legal seat of arbitration. In response, it was said that the word “place” had a generic connotation that could encompass either the legal or physical place depending on the context in which it was used. The Working Group further considered but did not reach a conclusion as to whether the Rules should remain consistent with the UNCITRAL Arbitration Model Law (which currently used the expression “place of arbitration”) or whether a different terminology should be used.

142. In order to clarify that matter, proposals were made to restructure article 16 by merging paragraphs (1) and (4) (which dealt with the legal place of arbitration) and paragraphs (2) and (3) (which dealt with the physical place of arbitration). As well, it was proposed to relocate paragraph (4) under article 32 of the Rules, which dealt with awards.

Consequences arising from the legal place of arbitration

143. A question was raised whether paragraph (1) should clarify that the legal place of arbitration determined the law applicable to the arbitral procedure and court jurisdiction. After discussion, the Working Group agreed that the legal consequences arising from the choice of a seat of arbitration might differ in different legal systems, and that the Rules were not the appropriate instrument to codify that matter.

144. After discussions, the Working Group agreed to further consider that matter at a future session, and requested that the Secretariat provide alternative drafts, based on the discussion in the Working Group. It was agreed that attention should be given to further distinguishing hearings and other meetings held with the parties from meetings held exclusively for the tribunal's deliberations.

Language

Article 17

145. The Working Group agreed to delete the reference to “or languages” in article 17 (as well as in the note to the Model Arbitration Clause) on the basis that, in situations where more than one language was required to be used in arbitral proceeding, the parties were free to agree upon that.

Statement of claim — Article 18

Paragraph (1)

146. A question was raised whether the reference to “a copy of the contract and of the arbitration agreement” was still needed in light of the Working Group's earlier considerations in respect of whether or not to retain the writing requirement (see above, paragraphs 25-31). The view was expressed that, where a written contract and arbitration agreement existed, the obligation to communicate a copy needed to be maintained.

147. After discussion, the Working Group agreed that the drafting of the provision on the communication of the contract and arbitration agreement under articles 3 and 18 should be aligned. A further suggestion was made to simplify that sentence by deleting the words “if not contained in the contract”. That proposal generally supported. The Working Group requested the Secretariat to revise these provisions accordingly.

Paragraph (2)

Subparagraph (a)

148. A suggestion was made that the reference to “addresses of the parties” could be revised in accordance with the earlier discussions of the Working Group concerning article 3, paragraphs (3)(b) and (5)(b) to replace the word “addresses” by the words “contact details” (see above, paragraph 52). That proposal was adopted.

Subparagraph (b)

149. The Working Group considered whether paragraph (2)(b) should be reformulated to read “a statement of the facts and legal principles supporting the claim” in order to encourage the parties to substantiate their claims from a legal point of view. Concern was expressed that the words “legal principles” were too vague and suggestions were made to replace those words with words such as “legal arguments” or “legal grounds”.

150. It was suggested that the proposed change was unnecessary as it would eliminate the existing flexibility in that provision and would not accommodate the various practices that existed in different legal systems. In response, it was said that the fact that there were differing legal practices underscored the importance of addressing that issue in the Rules. Strong support was expressed for adding a reference to the “legal grounds”.

151. After discussion, the Working Group agreed to add a new subparagraph (e) providing that the statement of claim should include a reference to the legal arguments or grounds supporting the claim.

Last sentence of paragraph (2)

152. Support was expressed for the proposal that the last sentence of article 18 (2) be reworded along the following lines: “The statement of claim shall, as far as possible, be accompanied by all documents and other evidentiary materials relied upon by the claimant or by references to them.”

153. Concern was expressed that the use of the word “shall” suggested that the claimant would be obliged to communicate a comprehensive statement of claimant and would be precluded from providing subsequent materials. To address that concern, it was suggested that the word “shall” be replaced by “should” in order to establish a standard for the contents of the statement of claim without imposing rigid consequences for departures from that standard.

154. After discussion, the Working Group requested the Secretariat to prepare a revised text taking account of the discussion.

Statement of claim in multi-party arbitration

155. The Working Group agreed that it was not necessary to amend article 18 to address the question of statement of claim in multi-party arbitration.

Statement of defence**Article 19**

156. The Working Group agreed that, where applicable, the drafting of article 19 should be aligned with the revisions adopted in respect of article 18.

Raising claims for the purpose of set-off and counter-claims

157. The Working Group agreed that article 19 should contain a provision on set-off and that the arbitral tribunal’s competence to consider counter-claims or set-off should, under certain conditions, extend beyond the contract from which the principal claim arose and apply to a wider range of circumstances. To achieve that extension, the revised provision as contained in

document A/CN.9/WG.II/WP145/Add.1 replaced the words “arising out of the same contract” with the words “arising out of the same legal relationship, whether contractual or not”. Some support was expressed for that proposal.

158. A suggestion was made that the provision should be modified so as to allow counter-claims that were substantially connected to (or arose out of) the initial claim. Another suggestion was either to omit the words “arising out of the same legal relationship, whether contractual or not” or that the provision should not require that there be a connection between the claim and the counter-claim or set-off, leaving to the arbitral tribunal the discretion to decide that question. In that context, the view was expressed that removal of any connection between the claim and the counter-claim or set-off might accommodate the needs of specific situations such as investment disputes involving States but might not sufficiently meet the needs of more general commercial disputes.

159. It was suggested that articles 3 (6)(d), 15 (4)(a), 19 (3), and 28 (1) should consistently refer to “counter-claims or claims for the purpose of a set-off.”

160. After discussion, the Working Group agreed that the present wording of article 19 was too narrow and requested the Secretariat to prepare alternative versions taking account of the discussions on that matter, including through a possible revision of article 15 on consolidation.

Amendments to the claim or defence

Article 20

161. The Working Group agreed to adopt article 20 in substance, as contained in A/CN.9/WG.II/WP.145.

Pleas as to jurisdiction of the arbitral tribunal

Article 21

Paragraph (1)

162. In the interests of simplicity, the Working Group agreed to replace the words “ipso jure” with wording as along the lines of “of itself”.

Paragraph (2)

163. The Working Group adopted paragraph (2) in substance, as contained in A/CN.9/WG.II/WP.145.

Paragraph (3)

164. The Working Group noted that paragraph (3) had been revised so as to be consistent with article 16, paragraph (3) of the UNCITRAL Arbitration Model Law, in accordance with the Working Group discussions at its forty-fifth session. A suggestion was made that the provision should allow the parties to request the arbitral tribunal to rule on its jurisdiction as a preliminary question. A question was raised whether the provision should encompass any pending dispute before a court on the arbitration. The Working Group agreed to further consider that matter.

**D. Note by the Secretariat on settlement of commercial disputes:
Revision of the UNCITRAL Arbitration Rules, submitted to the
Working Group on Arbitration at its forty-sixth session
(A/CN.9/WG.II/WP.145 and Add.1) [Original: English]**

CONTENTS

	<i>Paragraphs</i>
Introduction	1-3
1. General remarks.	4-7
2. Notes on a draft of revised UNCITRAL Arbitration Rules	8-56
Section I. Introductory rules	9-42
Section II. Composition of the arbitral tribunal	43-56

Introduction

1. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that, in respect of future work of the Working Group, priority be given to a revision of the UNCITRAL Arbitration Rules (1976) (“the UNCITRAL Arbitration Rules” or “the Rules”).¹ The Commission previously discussed that matter at its thirty-sixth (Vienna, 30 June-11 July 2003), thirty-seventh (New York, 14-25 June 2004) and thirty-eighth (Vienna, 4-15 July 2005) sessions.²

2. At its forty-fifth session (Vienna, 11-15 September 2006), the Working Group undertook to identify areas where a revision of the UNCITRAL Arbitration Rules might be useful. At that session, the Working Group gave preliminary indications as to various options to be considered in relation to proposed revisions, on the basis of documents A/CN.9/WG.II/WP.143 and Add.1, in order to allow the Secretariat to prepare a draft of revised Rules taking account of such indications.

3. This note contains an annotated draft of revised UNCITRAL Arbitration Rules, based on the deliberations of the Working Group at its forty-fifth session and covers articles 1 to 14 of the UNCITRAL Arbitration Rules. Articles 15 to 41 are dealt with under A/CN.9/WG.II/WP.145/Add.1. All references to discussions and considerations

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17* (A/61/17), paras. 182-187.

² *Ibid.*, *Fifty-eighth Session, Supplement No. 17* (A/58/17), para. 204; *ibid.*, *Fifty-ninth Session, Supplement No. 17* (A/59/17), para. 60; *ibid.*, *Sixtieth Session, Supplement No. 17* (A/60/17), para. 178.

by the Working Group in the note are to discussions and considerations made at the forty-fifth session of the Working Group.

1. General remarks

Principles to be applied in revising the UNCITRAL Arbitration Rules

4. It is recalled that, at the thirty-ninth session of the Commission (New York, 19 June-7 July 2006), in recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of the UNCITRAL Arbitration Rules should not alter the structure of the text, its spirit, its drafting style, and should respect the flexibility of the text rather than make it more complex.³

5. At its forty-fifth session (Vienna, 11-15 September 2006), the Working Group agreed that the UNCITRAL Arbitration Rules had been one of the most successful instruments of UNCITRAL and therefore cautioned against any unnecessary amendments or statements being included in the travaux préparatoires that would call into question the legitimacy of prior applications of the Rules in specific cases. It was considered that the focus of the revision should be on updating the Rules to meet changes that had taken place over the last thirty years in arbitral practice (A/CN.9/614, para. 16). It is further recalled that broad support was expressed for a generic approach that sought to identify common denominators that applied to all types of arbitration irrespective of the subject matter of the dispute, in preference to dealing with specific situations (A/CN.9/614, para. 18).

Harmonization of the drafting of the UNCITRAL Arbitration Rules with the UNCITRAL Model Law on International Commercial Arbitration ("Model Law")

6. The Working Group agreed that harmonizing the provisions of the UNCITRAL Arbitration Rules with the corresponding provisions of the Model Law should not be automatic but rather considered only where appropriate (A/CN.9/614, para. 21).

General remark on the reference to "parties" in the Rules

7. Amendments have been proposed in the text of the Rules to replace words such as "both parties", "either party", "one of the parties" with more generic formulation, so as to encompass multi-party arbitration.

2. Notes on a draft of revised UNCITRAL Arbitration Rules

8. All suggested modifications to the UNCITRAL Arbitration Rules are marked up in the text below.

Section I. Introductory rules

[Scope of application] [Applicability]

Article 1

1. *Option 1:* [Where ~~the parties to a contract~~ have agreed [in writing*] that disputes between them in relation to that contract [in respect of a defined legal relationship, whether contractual or not] shall

³ Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), para. 184.

be referred to arbitration under the UNCITRAL Arbitration Rules, then such disputes shall be settled in accordance with these Rules] *[include text from Variants 1, 2 or 3]*

Option 2: [Where there is an agreement [in writing*] to refer disputes to arbitration under the UNCITRAL Arbitration Rules, then such disputes shall be settled in accordance with these Rules] *[include text from Variants 1, 2 or 3]*

Variant 1: [subject to such modification as the parties may agree [in writing].]

Variant 2: [as in effect on the date of commencement of the arbitration, subject to such modification as the parties may agree [in writing].]

Variant 3: [subject to such modification as the parties may agree [in writing]. Unless the parties have agreed to apply the Rules as in effect on the date of their agreement, the parties shall be deemed to have submitted to the Rules in effect on the date of commencement of the arbitration.]

2. These Rules shall govern the arbitration except that where any of these Rules is in conflict with a provision of the law applicable to the arbitration from which the parties cannot derogate, that provision shall prevail.

Remarks

Title

9. The Working Group might wish to consider whether the title of article 1 should read “Applicability” instead of “Scope of application”, given that article 1 contains provisions on the principles of application of the Rules and is not limited to matters relating to the scope of application.

Paragraph (1)

Options 1 and 2

“parties to a contract”

10. Option 1 most closely corresponds to the current version of the Rules, by including a reference to “parties”, whereas option 2 implements a suggestion made in the Working Group to delete any reference to “parties” in the opening words of article 1, paragraph (1) (A/CN.9/614, para. 34). That suggestion was made to address the specific case of arbitration in the context of bilateral investment treaties, where the parties to an investment arbitration treaty containing an arbitration clause differ from the parties to the arbitration. The Working Group might wish to consider whether the deletion of any reference to “parties” could lead to misinterpretation as to which parties are bound by the application of the Rules, particularly in arbitration cases which do not relate to any investment treaty.

“disputes in relation to that contract”

11. If the Working Group decides to retain option 1, it might wish to further discuss the question whether the types of disputes that parties could submit to

arbitration should be limited to “disputes in relation to that contract” (A/CN.9/614, paras. 32-34). It is recalled that the Working Group considered whether article 1, paragraph (1) should be widened to include words consistent with article 7 of the Model Law, which permitted arbitration of disputes “in respect of a defined legal relationship, whether contractual or not” (A/CN.9/614, paras. 32-33). Another option was to avoid limiting the scope of application of the Rules, and to omit any reference to a “contract” or “legal relationship” (A/CN.9/614, para. 33).

The writing requirement for the agreement to arbitrate and for modification of the Rules

12. The Working Group noted that the purpose of the requirement that the arbitration agreement be in writing was to set out the scope of application of the UNCITRAL Arbitration Rules and, unlike the function of the form requirement under the Model Law, might be separate from the question of the validity of the arbitration agreement (which is left to the applicable law) (A/CN.9/614, para. 28).

13. If the Working Group decides to omit the reference to the writing requirement from article 1 (A/CN.9/614, paras. 27-31), the drafting proposal would be to delete the words “in writing” appearing in brackets in the text.

Variants 1, 2 and 3

Applicable version of the UNCITRAL Arbitration Rules

14. Variants 1, 2 and 3 include proposals on the applicable version of the Rules.

15. Variant 1 corresponds to the current version of article 1, which does not include any indication as to the applicable version of the Rules in case of revision.

16. Variant 2 takes account of the preliminary discussions in the Working Group that:

- Some arbitral institutions include an express interpretative provision to the effect that the Rules in force on the date of the commencement of the arbitration (as opposed to the Rules in force on the date of the arbitration agreement) should apply unless the parties have agreed to the contrary (A/CN.9/614, para. 23);
- Some treaties expressly stipulate that, in the event of a revision of the UNCITRAL Arbitration Rules, the applicable version would be the one in force at the time that the arbitration commences (A/CN.9/614, para. 24).

17. Variant 3 addresses the observation made in the Working Group (A/CN.9/614, para. 23) that, in practice, some parties preferred to apply the most up-to-date Rules to their dispute, whereas others preferred the certainty of agreeing on the applicable version of the Rules in existence at the time the arbitration agreement was made.

18. The Working Group might wish to recall the observation made in the Working Group that any provision on the applicable version of the Rules should be consistent with the principle of party autonomy and, if the parties had agreed to apply the former version of the Rules, any transitional provision should not have any retroactive implications for that agreement (A/CN.9/614, para. 25).

19. It is recalled that the Working Group agreed to revisit that question once it had completed its review of the current text of the Rules (A/CN.9/614, para. 26).

*MODEL ARBITRATION CLAUSE [**FOR CONTRACTS**]

Any dispute, controversy or claim arising out of or relating to this contract, or the breach, termination or invalidity thereof shall be settled by arbitration in accordance with the UNCITRAL Arbitration Rules [as at present in ~~force~~ effect].

Note — Parties may wish to consider adding:

- (a) The appointing authority shall be ... (name of institution or person);
- (b) The number of arbitrators shall be ... (one or three);
- (c) The place of arbitration shall be ... (town or country);
- (d) The language(s) to be used in the arbitral proceedings shall be ...
- (e) [The law governing the arbitration agreement shall be ...]

Remarks

Placement of the model arbitration clause

20. The Working Group might wish to consider the proposal to relocate the model arbitration clause if the proposal to modify article 1, paragraph (1), by deleting any reference to a contract, is adopted (A/CN.9/614, para. 38) (see above, paragraph 11).

Proposed modifications to the model arbitration clause

21. The words “as at present in force” are proposed to be replaced by the words “as at present in effect” to better reflect that the Rules have a contractual rather than legislative nature. These words are in brackets, as they should be considered for deletion if a provision referring to the applicable version of the Rules is adopted in article 1, paragraph (1) (see above, paragraphs 16 and 17).

Proposed addition to the note to the model arbitration clause

22. A proposal was made in the Working Group to add to the note to the model arbitration clause a reference to the law governing the arbitration agreement (A/CN.9/614, para. 37). Although that addition would have the benefit of raising awareness on the importance of defining the law applicable to the arbitration

agreement, it addresses only one aspect of the laws applicable in the context of arbitration. In order to further assist the parties on that question, the Working Group might wish to consider whether the model arbitration clause should include a provision on the law applicable to the substance of the dispute, and whether the impact of the place of arbitration on the law applicable to the arbitral proceedings should also be clarified.

23. In recognition of the benefit and value of conciliation as a means of alternative dispute resolution, the Working Group might wish to consider whether a reference to conciliation should be added, possibly in the form of an optional conciliation clause in order to encourage parties to first attempt to reach a settlement of their dispute with the assistance of a neutral third person.

A/CN.9/614, paras. 36-38

Notice, calculation of periods of time

Article 2

1. For the purposes of these Rules, any notice, including a notification, communication or proposal, if not [personally][actually] received by the addressee, is deemed to have been received ~~if it is physically delivered to~~ by the addressee ~~or~~ if it is delivered at ~~his or her~~ its habitual residence, place of business or mailing address, or, if none of these can be found after making reasonable inquiry, then at the addressee's last-known residence or place of business. Notice shall be deemed to have been received on the day it is so delivered.

1 bis. Any notice may be delivered by electronic communication.

2. For the purposes of calculating a period of time under these Rules, such period shall begin to run on the day following the day when a notice, notification, communication or proposal is received. If the last day of such period is an official holiday or a non-business day at the residence or place of business of the addressee, the period is extended until the first business day, which follows. Official holidays or non-business days occurring during the running of the period of time are included in calculating the period.

Remarks

Paragraph (1)

Deemed delivery

24. The physical delivery of notices was listed in paragraph (1) as an option of delivery corresponding to the actual delivery of the notice. In order to clarify that meaning, it is proposed to replace the words “physical delivery” with the words “if not [personally][actually] received”. In addition, the proposed modification confirms the possibility of delivery of notices by electronic means as proposed in paragraph (1 bis).

*Paragraph (1 bis)**Delivery of the notice: "Electronic communication"*

25. The Working Group noted that a number of existing arbitration rules referred to delivery of notice by electronic means and it was suggested that article 2 should be amended to reflect contemporary practice (A/CN.9/614, para. 39).

*Paragraph (2)**Extend or shorten time periods*

26. The Working Group discussed whether paragraph (2) should be amended to provide that the arbitral tribunal might have an express power to extend or shorten the time periods stipulated under the UNCITRAL Arbitration Rules, as necessary for a fair and efficient process of resolving the parties' dispute (A/CN.9/614, paras. 41-46). A proposal was made to include in the Rules a general provision stating that: "In discharge of its duties under article 15, paragraph (1), the arbitral tribunal may at any time extend or abridge any period of time prescribed under or pursuant to the Rules."

27. During discussions on that matter, it was suggested that the power of the arbitral tribunal to modify time limits should be considered under article 15, which provided that the arbitral tribunal could conduct the arbitration in such manner as it considered appropriate. Whether or not that power was already provided under article 15 was subject to differing views (A/CN.9/614, paras. 43-44).

28. A question was raised whether the arbitrators should nevertheless be granted the power to modify time limits even where the parties had agreed on these matters (A/CN.9/614, para. 46).

29. It is recalled that the Working Group agreed that the issue could be assessed once the Working Group had examined all provisions that stipulated a time period, and had determined whether expressly establishing the power of the arbitral tribunal to extend or abridge stipulated time periods was appropriate in each context (A/CN.9/614, para. 45).

Paragraph (2)

A/CN.9/614, paras. 41-46

A/CN.9/WG.II/WP.143, paras. 30-31

Notice of arbitration and response to the notice of arbitration**Article 3**

1. The party initiating recourse to arbitration (hereinafter called the “claimant”) shall give to the other party [or parties] (hereinafter called the “respondent”) a notice of arbitration.
2. Arbitral proceedings shall be deemed to commence on the date on which the notice of arbitration is received by the respondent.
3. The notice of arbitration shall include the following:
 - (a) A demand that the dispute be referred to arbitration;
 - (b) The names and addresses of the parties;
 - (c) ~~A reference to the arbitration clause or the separate~~ Identification of the arbitration agreement that is invoked;
 - (d) ~~A reference to~~ Identification of any contract, ~~or other legal instrument,~~ out of or in relation to which the dispute arises;
 - (e) ~~The general nature~~ A brief description of the claim and an indication of the amount involved, if any;
 - (f) The relief or remedy sought;
 - (g) A proposal as to the number of arbitrators, ~~(i.e. one or three), language and place of arbitration,~~ if the parties have not previously agreed thereon.
4. The notice of arbitration may also include:
 - (a) The proposal for the appointment of an appointing authority referred to in article 4 bis;
 - (a) bis The proposal for the appointments of a sole arbitrator ~~and an appointing authority~~ referred to in article 6, paragraph 1;
 - (b) The notification of the appointment of an arbitrator referred to in article 7 or article 7 bis, paragraph 1;
 - [(c) The statement of claim referred to in article 18.]
5. Within thirty days of the receipt of the notice of arbitration, the respondent shall communicate to the claimant a response to the notice of arbitration, which shall include:
 - (a) Any comment on the demand that the dispute be referred to arbitration;
 - (b) The full name and address of any respondent;
 - (c) Any comment on the arbitration agreement, and on any contract or other legal instrument out of or in relation to which the dispute arises, that are invoked in the notice of arbitration;
 - (d) Any comment on the claim and the amount involved, if any;
 - (e) Any comment on the relief or remedy sought;

- (f) Any comment concerning the number of arbitrators, language and place of arbitration.
- 6. The response to the notice of arbitration may also include:
 - (a) Any comment on the proposal for the appointment of an appointing authority referred to in article 4 bis;
 - (b) Any comment on the proposal for the appointment of a sole arbitrator referred to in article 6, paragraph 1;
 - (c) Any comment on the notification of the appointment of an arbitrator referred to in article 7 or article 7 bis, paragraph 1;
 - (d) A brief description of counter-claims, if any, including where relevant, an indication of the amounts involved, and the relief or remedy sought.
- 7. Failure by the respondent to communicate a response to the notice of arbitration shall not prevent the arbitration from proceeding pursuant to these Rules.

Remarks

Paragraph (1)

30. The Working Group might wish to consider whether paragraph (1) should contain provisions to deal with multi-party arbitration.

Paragraphs (3) and (4)

Contents of notice of arbitration

- 31. A suggestion was made by the Working Group that article 3, paragraphs (3) and (4), which dealt with the contents of the notice of arbitration should be amended to include more detailed or additional information in the interests of improving efficiency of the arbitral procedure (A/CN.9/614, paras. 50-55).
- 32. The Working Group might wish to consider deleting the words “arbitration clause” in paragraph (3) (c) as an arbitration clause might be understood as falling under the more generic definition of arbitration agreement.
- 33. The words “or other legal instruments” in paragraph (3) (d) have been added to deal with the case where a dispute did not arise out of or in relation to a contract (A/CN.9/614, para. 51).
- 34. The amendment under paragraph (3) (e) is in accordance with the proposal made in the Working Group to replace the words “general nature” with the words “brief description” (A/CN.9/614, para. 53).
- 35. A reference to the “language and place of arbitration” has been added in paragraph 3 (g) in line with suggestions made in the Working Group (A/CN.9/614, para. 53). The reference to one or three arbitrators has been deleted, for the reasons explained below (see below, paragraph 43 on the number of arbitrators).
- 36. Paragraph (4) (a) has been split in two subparagraphs, to take account of the proposal to include a provision dealing with the appointing authority (see below, paragraphs 41 and 42 on article 4 bis). Under paragraph (4) (b), a reference has been

added to article 7 bis, which deals with the appointment of arbitrators in multi-party arbitration.

37. The Working Group might wish to consider whether the reference to the statement of claim should be maintained under paragraph (4) (c).

38. The Working Group might wish to further consider which items of the notice of arbitration should remain optional under paragraph (4), and whether the question of how to deal with an incomplete notice of arbitration should be addressed in the revised Rules or left to the discretion of the arbitral tribunal (A/CN.9/614, para. 54).

Paragraphs (5), (6) and (7)

Response to the notice of arbitration; contents and consequences of the failure to respond

39. The Working Group considered whether the respondent should be given an opportunity to state its position before the constitution of the arbitral tribunal, by responding to the notice of arbitration, and before the submission by the claimant of its statement of claim (A/CN.9/614, paras. 56-57). It was suggested that providing such an opportunity or, as proposed by some delegations, a procedural obligation, would have the added advantage of clarifying at an early stage of the proceeding the main issues raised by the dispute. It was said that inclusion of a right for the respondent to reply to the notice of arbitration would provide an appropriate balance between the claimant and the respondent (A/CN.9/614, para. 57). The Working Group might wish to consider the possible contents of the response to the notice of arbitration as defined under paragraphs (5) and (6), as well as the consequences for not responding, as referred to under paragraph (7).

Representation and assistance

Article 4

The parties may be represented or assisted by persons of their choice. The names and addresses of such persons must be communicated in writing to ~~the other~~ all parties; such communication must specify whether the appointment is being made for purposes of representation or assistance [, and where a person is to act as a representative of a party, the communication shall provide information on the scope of authority of such person].

Representation of a party

40. The Working Group might wish to consider whether it would be useful to add language to article 4 aimed at ensuring that when a person is empowered to represent a party, the other party or parties are informed of the content of its representation powers and whether it should be clarified that the absence of such information would not deprive the communication of its validity.

Designating and appointing authorities**Article 4 bis**

1. The parties may agree on a person or institution, including the Secretary-General of the Permanent Court of Arbitration at The Hague, to act as appointing authority under these Rules.
2. In the event that the parties have not agreed on the identity of an appointing authority, or the appointing authority refuses or fails to act in accordance with these Rules, any party may request the Secretary-General of the Permanent Court of Arbitration at The Hague to designate an appointing authority.
3. The appointing authority may require from any party the information it deems necessary to exercise its functions. Copies of all requests or other communications between a party and the appointing authority or the Secretary-General of the Permanent Court of Arbitration at The Hague shall also be provided to all other parties.
4. When an appointing authority is requested to appoint an arbitrator pursuant to articles 6, 7 or 7 bis, the party which makes the request shall send to the appointing authority copies of the notice of arbitration and, if it exists, the response to the notice of arbitration.
5. The appointing authority shall have regard to such considerations as are likely to secure the appointment of an independent and impartial arbitrator and shall take into account as well the advisability of appointing an arbitrator of a nationality other than the nationalities of the parties. Where the names of one or more persons are proposed for appointment as arbitrators, their full names, addresses and nationalities shall be indicated, together with a description of their qualifications.
6. In all cases, the appointing authority may exercise its discretion in appointing an arbitrator.

Remarks*Specific provision on the designating and appointing authorities*

41. The Working Group might wish to consider including in the Rules a provision along the lines contained in article 4 bis, which is intended to deal with the designation and role of the appointing authority, which could be appointed by the parties at any time during the arbitration proceedings, and not only in cases currently provided for in the Rules. Such a provision might clarify for the parties the importance of the role of an appointing authority, particularly in the context of ad hoc arbitrations. That provision simplifies articles 6 and 7 on the appointment of arbitrators, as it includes provisions applicable to both. Article 8 would then

be deleted, as the provisions it contained would be placed in article 4 bis, paragraphs (3) and (5).

Extension of the role of the designating and appointing authorities

42. The Working Group might wish to consider whether the functions and roles of the designating authority and appointing authority should be modified.

Section II. Composition of the arbitral tribunal

Number of arbitrators

Article 5

1. *Option 1:* [If the parties have not previously agreed on the number of arbitrators (~~i.e. one or three~~), and if within [15][30] days after the receipt by the respondent of the notice of arbitration the parties have not agreed [*Variant 1:* that there shall be only one arbitrator, three arbitrators shall be appointed.] [*Variant 2:* on the number of arbitrators, ~~three~~ one arbitrators shall be appointed.]]

Option 2: [If the parties have not previously agreed on the number of arbitrators, the notice of arbitration shall contain a proposal on the number of arbitrators. If the Respondent has not agreed to that proposal by the time at which it is required to communicate its response, any party may request the appointing authority to decide whether one or three arbitrators shall be appointed.]

2. If the parties decide that the arbitral tribunal is to be composed of a number of arbitrators other than one or three, the arbitrators shall be appointed according to the methods agreed upon by the parties.

Remarks

Paragraph (1)

43. The Working Group might wish to recall that diverging views were expressed on whether the default rule on the number of arbitrators should be modified (A/CN.9/614, paras. 59-60). Under option 1, if the parties are unable to agree on the number of arbitrators, a default rule is provided, with two variants for consideration by the Working Group. Under option 2, if the parties are unable to agree, the appointing authority shall decide on the number of arbitrators.

Paragraph (2)

44. The purpose of the proposed paragraph (2) is to clarify that the Rules provide for methods to form either a one or a three member arbitral tribunal and if the parties wish to derogate from that rule (e.g., to have a two-member arbitral tribunal, which is allowed by the UNCITRAL Model Law), they should define their own method for the constitution of the arbitral tribunal.

A/CN.9/614, paras. 59-61

A/CN.9/WG.II/WP.143, paras. 42-44

Appointment of arbitrators (Articles 6 to 8)

Article 6

1. If a sole arbitrator is to be appointed, ~~either a party may propose to the other: (a) The names of one or more persons, one of whom would serve as the sole arbitrator; and~~

~~— (b) If no appointing authority has been agreed upon by the parties, the name or names of one or more institutions or persons, one of whom would serve as appointing authority.~~

2. If within 30 days after receipt by a party of a proposal made in accordance with paragraph (1) the parties have not reached agreement on the choice of a sole arbitrator, the sole arbitrator shall be appointed by the appointing authority agreed upon by the parties. If no appointing authority has been agreed upon by the parties, or if the appointing authority agreed upon refuses to act or fails to appoint the arbitrator within 60 days of the receipt of a party's request therefor, article 4 bis, paragraph (2) shall apply. ~~either party may request the Secretary General of the Permanent Court of Arbitration at The Hague to designate an appointing authority.~~

3. The appointing authority shall, at the request of a party, appoint the sole arbitrator as promptly as possible. In making the appointment the appointing authority shall use the following list procedure, unless the parties agree that the list-procedure should not be used or unless the appointing authority determines in its discretion that the use of the list procedure is not appropriate for the case:

(a) At the request ~~of one of the~~ of a parties the appointing authority shall communicate to ~~both the~~ parties an identical list containing at least three names;

(b) Within 15 days after the receipt of this list, each party may return the list to the appointing authority after having deleted the name or names to which it objects and numbered the remaining names on the list in the order of its preference;

(c) After the expiration of the above period of time the appointing authority shall appoint the sole arbitrator from among the names approved on the lists returned to it and in accordance with the order of preference indicated by the parties;

(d) If for any reason the appointment cannot be made according to this procedure, the appointing authority may exercise its discretion in appointing the sole arbitrator.

4. ~~In making the appointment, the appointing authority shall have regard to such considerations as are likely to secure the appointment of an independent and impartial arbitrator and shall take into account as well the advisability of appointing an arbitrator of a nationality other than the nationalities of the parties.~~

Remarks

45. The modifications to article 6 result from the inclusion of article 4 bis on the designating and appointing authorities. The provisions of paragraph (4) have been placed under article 4 bis, paragraph (5).

Article 7

1. If three arbitrators are to be appointed, each party shall appoint one arbitrator. The two arbitrators thus appointed shall choose the third arbitrator who will act as the presiding arbitrator of the arbitral tribunal.

2. If within 30 days after the receipt of a party's notification of the appointment of an arbitrator the other party has not notified the first party of the arbitrator ~~her or she~~ it has appointed:

(a) The first party may request the appointing authority previously designated by the parties to appoint the second arbitrator; or

(b) If no such authority has been previously designated by the parties, or if the appointing authority previously designated refuses to act or fails to appoint the arbitrator within 30 days after receipt of a party's request therefor, article 4 bis, paragraph (2) shall apply, and the ~~first party may request the Secretary General of the Permanent Court of Arbitration at The Hague to designate the appointing authority. The first party may then request the appointing authority so designated to appoint the second arbitrator. In either case, the appointing authority may exercise its discretion in appointing the arbitrator.~~

3. If within 30 days after the appointment of the second arbitrator the two arbitrators have not agreed on the choice of the presiding arbitrator, the presiding arbitrator shall be appointed by an appointing authority in the same way as a sole arbitrator would be appointed under article 6.

Remarks*Paragraph (2)*

46. The modifications to paragraph (2) are consequential amendments arising from the inclusion of article 4 bis on the designating and appointing authorities. The last sentence of paragraph (2) (b) has been placed under article 4 bis, paragraph (6).

Article 7 bis

1. Where there are multiple claimants or respondents, unless the parties have agreed to another method of appointment of arbitrators, the multiple claimants, jointly, and the multiple respondents, jointly, shall appoint an arbitrator. The two arbitrators thus appointed shall choose the third arbitrator who will act as the presiding arbitrator of the arbitral tribunal.

2. In the absence of appointment pursuant to paragraph 1, the appointing authority shall, at the request of any party, constitute the arbitral tribunal, and in doing so, may revoke any appointment already

made, and appoint each of the arbitrators and designate one of them as the presiding arbitrator; or confirm any appointment already made and make any further appointment.

Remarks

Appointment of arbitrators in multi-party arbitration

47. Article 7 bis has been inserted to deal with the appointment of arbitrators in multi-party cases, in accordance with the discussions of the Working Group (A/CN.9/614, paras. 62 and 63). The Working Group might wish to consider whether time limits should be defined under paragraph (2).

References to previous UNCITRAL documents

A/CN.9/614, paras. 62-63

A/CN.9/WG.II/WP.143, paras. 45-47

Article 8

~~1. When an appointing authority is requested to appoint an arbitrator pursuant to article 6 or article 7, the party which makes the request shall send to the appointing authority a copy of the notice of arbitration, a copy of the contract out of or in relation to which the dispute has arisen and a copy of the arbitration agreement if it is not contained in the contract. The appointing authority may require from either party such information, as it deems necessary to fulfil its function.~~

~~2. Where the names of one or more persons are proposed for appointment as arbitrators, their full names, addresses and nationalities shall be indicated, together with a description of their qualifications.~~

Remarks

48. The substance of article 8 has been placed under article 4 bis on the designating and appointing authorities.

Challenge of arbitrators (Articles 9 to 12)

Article 9

~~A prospective arbitrator shall disclose to those who approach him or her~~ When a person is approached in connexion with his or her possible appointment as an arbitrator, he or she shall disclose any circumstances likely to give rise to justifiable doubts as to his or her impartiality or independence. An arbitrator, ~~once appointed or chosen~~ from the time of his or her appointment and throughout the arbitral proceedings, shall without delay disclose any such circumstances to the parties unless they have already been informed by him or her of these circumstances.

Remarks*On-going nature of the duty to disclose*

49. The proposed amendments to article 9 reflect a suggestion made in the Working Group that the ongoing nature of the duty to disclose be clarified by using similar language to that used in article 12, paragraph (1), of the Model Law (A/CN.9/614, para. 64).

Model statement of independence

50. The Working Group might wish to consider whether guidance should be provided on the required content of the disclosure, in the form, for instance of a model statement of independence attached as a footnote to article 9 or in any accompanying material. Such model statement of independence could read as follows:

No circumstances to disclose: I am independent of each of the parties and intend to remain so. To the best of my knowledge, there are no circumstances, past or present, likely to give rise to justifiable doubts as to my impartiality. I hereby undertake promptly to notify the parties and the other members of the arbitral tribunal of any such circumstance that may subsequently come to my attention during this arbitration.

Circumstances to disclose: I am independent of each of the parties and intend to remain so. Attached is a statement of (a) my past and present professional, business and other relationships with the parties and (b) any other circumstance that might cause my reliability for independent and impartial judgment to be questioned by a party.[include statement] I hereby undertake promptly to notify the parties and the other members of the arbitral tribunal of any such further relationship or circumstance that may subsequently come to my attention during this arbitration.

References to previous UNCITRAL documents

A/CN.9/614, paras. 64-65

A/CN.9/WG.II/WP.143, para. 48

Article 10

1. Any arbitrator may be challenged if circumstances exist that give rise to justifiable doubts as to the arbitrator's impartiality or independence.
2. A party may challenge the arbitrator appointed by ~~him or her~~ it only for reasons of which ~~he or she~~ it becomes aware after the appointment has been made.

Remarks

51. No proposals for modification have been made in relation to article 10.

Article 11

1. A party who intends to challenge an arbitrator shall send notice of ~~his or her~~ its challenge within 15 days after the appointment of the challenged arbitrator has been notified to the challenging party or within 15 days after the circumstances mentioned in articles 9 and 10 became known to that party.
2. The challenge shall be notified to ~~the~~ all other parties, to the arbitrator who is challenged and to the other members of the arbitral tribunal. The notification shall be in writing and shall state the reasons for the challenge.
3. When an arbitrator has been challenged by ~~one~~ a party, ~~the~~ all other parties may agree to the challenge. The arbitrator may also, after the challenge, withdraw from his or her office. In neither case does this imply acceptance of the validity of the grounds for the challenge. In both cases the procedure provided in article 6 or 7 shall be used in full for the appointment of the substitute arbitrator, even if during the process of appointing the challenged arbitrator a party had failed to exercise ~~his or her~~ its right to appoint or to participate in the appointment.

Remarks

52. No proposals for modification have been made in relation to article 11.

Article 12

1. If, within [15] [30] days from the date of the notice of challenge, ~~the any~~ other party does not agree to the challenge and the challenged arbitrator does not withdraw, the party making the challenge may seek, within 60 days from date of the notice of challenge, a decision on the challenge, which will be made:
 - (a) When the initial appointment was made by an appointing authority, by that authority;
 - (b) When the initial appointment was not made by an appointing authority, but an appointing authority has been previously designated, by that authority;
 - (c) In all other cases, by the appointing authority to be designated in accordance with the procedure for designating an appointing authority as provided for in article ~~6~~ 4 bis.
2. If the appointing authority sustains the challenge, a substitute arbitrator shall be appointed or chosen pursuant to the procedure applicable to the appointment or choice of an arbitrator as provided in articles 6 to 9 except that, when this procedure would call for the designation of an appointing authority, or if the appointing authority considers that the circumstances of the arbitration so warrant, the appointment of the arbitrator shall be made by the appointing authority ~~which decided on the challenge~~.

Remarks*Paragraph (1)**Time limits for challenge*

53. The Working Group might wish to further consider revising article 12 so as to introduce time limits by which the party making a challenge should seek a decision by the appointing authority (A/CN.9/614, para. 66).

Paragraph (2)

54. The modification proposed indicates that the appointing authority may directly appoint an arbitrator if the circumstances of the case are such that a party should be deprived of its right to appoint a replacement arbitrator. This could apply in the situation, for example, where a party repetitively used the challenge procedure to delay the arbitral process.

References to previous UNCITRAL documents

A/CN.9/614, para. 66

A/CN.9/WG.II/WP.143, para. 49

Replacement of an arbitrator**Article 13**

1. In the event of the death or resignation of an arbitrator during the course of the arbitral proceedings, a substitute arbitrator shall be appointed or chosen pursuant to the procedure provided for in articles 6 to 9 that was applicable to the appointment or choice of the arbitrator being replaced.

2. In the event that a party considers that an arbitrator has resigned for invalid reasons or is failing to perform his or her functions, it may apply to the appointing authority to request either the replacement of that arbitrator or the authorization for the other arbitrators to proceed with the arbitration and make any decision or award. If the appointing authority considers that the circumstances of the arbitration warrant a substitute arbitrator to be appointed, it shall decide whether to apply the procedure for the appointment of an arbitrator provided for in articles 6 to 9 or to appoint the substitute arbitrator. ~~an arbitrator refuses or fails to act, or in the event of the de jure or de facto impossibility of his or her performing his or her functions, the procedure in respect of the challenge and replacement of an arbitrator as provided in the preceding articles shall apply.~~

Remarks*Paragraph (2)**Unapproved resignation or failure to perform*

55. In accordance with discussions of the Working Group, paragraph (2) provides two different ways of dealing with an unapproved resignation of an arbitrator or failure by an arbitrator to perform his or her functions: the appointing authority may decide either to appoint directly a substitute arbitrator, depriving the party having

initially appointed such arbitrator to proceed with the appointment of its replacement, or to allow the proceedings to continue without a substitute arbitrator (A/CN.9/614, para. 70). The appointing authority shall determine, by reference to the relevant facts and circumstances, whether the resignation or non-performance was acceptable or not (A/CN.9/614, para. 69). The Working Group might wish to consider whether there are circumstances in which the arbitrators themselves, rather than just a party, should be given the power either to decide to proceed as a truncated tribunal or to seek approval for so proceeding.

Repetition of hearings in the event of the replacement of an arbitrator

Article 14

If under articles 11 to 13 an arbitrator is replaced, the proceedings shall resume at the stage where the arbitrator who was replaced ceased to perform his or her functions, unless the arbitral tribunal decides otherwise.

Remarks

56. Article 14 has been revised to take account of the suggestion made in the Working Group that article 14 should be drafted along the lines of article 14 of the Swiss Rules of International Arbitration, which provided that in case of replacement of an arbitrator, the proceedings should resume at the stage where the arbitrator who was replaced ceased his or her functions, unless the arbitral tribunal decided otherwise (A/CN.9/614, para. 75).

UNCITRAL Arbitration Rules, submitted to the Working Group on
Arbitration at its forty-sixth session****ADDENDUM****CONTENTS**

	<i>Paragraphs</i>
Introduction	1-2
Notes on a draft of revised UNCITRAL Arbitration Rules	3-46
Section III. Arbitral proceedings	3-29
Section IV. The award.	30-46
Proposed additional provisions.	47-48

Introduction

1. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that, in respect of future work of the Working Group, priority be given to a revision of the UNCITRAL Arbitration Rules (1976) (“the UNCITRAL Arbitration Rules” or “the Rules”).¹ At its forty-fifth session (Vienna, 11-15 September 2006), the Working Group undertook to identify areas where a revision of the UNCITRAL Arbitration Rules might be useful.

2. This note contains an annotated draft of revised UNCITRAL Arbitration Rules based on the deliberation of the Working Group at its forty-fifth session and continues from article 15 of the Rules. Articles 1 to 14 are dealt with under A/CN.9/WG.II/WP.145. All references to discussions and considerations by the Working Group in the note are to discussions and considerations made at the forty-fifth session of the Working Group.

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 182-187.

Notes on a draft of revised UNCITRAL Arbitration Rules

Section III. Arbitral proceedings

General provisions

Article 15

1. Subject to these Rules, the arbitral tribunal may conduct the arbitration in such manner as it considers appropriate, provided that the parties are treated with equality and that at any appropriate stage of the proceedings each party is given an full opportunity of presenting its case. The arbitral tribunal, in exercising its discretion, shall conduct the proceedings with a view to avoid unnecessary delay and expense and to provide a fair and efficient process for resolving the parties' dispute.

2. If, at any appropriate stage of the proceedings, either any party so requests at any appropriate stage of the proceedings, the arbitral tribunal shall hold hearings for the presentation of evidence by witnesses, including expert witnesses, or for oral argument. In the absence of such a request, the arbitral tribunal shall decide whether to hold such hearings or whether the proceedings shall be conducted on the basis of documents and other materials.

3. All documents or information supplied to the arbitral tribunal by one party shall at the same time be communicated by that party to the all other parties.

4. The arbitral tribunal may, on the application of any party:

(a) assume jurisdiction over any claim involving the same parties and arising out of the same legal relationship, provided that such claims are subject to arbitration under these Rules and that the arbitration proceedings in relation to those claims have not yet commenced;

(b) allow one or more third persons to be joined in the arbitration as a party and, provided such a third person and the applicant party have consented, make an award in respect of all parties involved in the arbitration.

Remarks

Paragraph (1)

Avoidance of unnecessary delays

3. The proposed added language to paragraph (1) deals with the question of delays in arbitral proceedings. The Working Group heard the view that inclusion of such a principle was unnecessary, but that it might nevertheless be useful to provide leverage for arbitrators to take certain steps both vis-à-vis the other arbitrators and the parties (A/CN.9/614, para. 76).

Paragraphs (1) and (2)

“at the appropriate stage” — “an opportunity”

4. The replacement of the words “at any stage of proceedings” by “at an appropriate stage”, and of the phrase “a full opportunity” with “an opportunity” reflects the discussions of the Working Group (A/CN.9/614, para. 77).

Paragraph (4)

Consolidation of cases before arbitral tribunals — joinder

5. Paragraph (4) seeks to address the question of consolidation of cases and joinder. The Working Group might wish to further discuss the workability of such provisions given that the Rules also often apply in non-administered cases (A/CN.9/614, paras. 79-83).

6. The Working Group might wish to note that paragraph (4) (b) on joinder is inspired by article 22.1 (h) of the LCIA Arbitration Rules.

Confidentiality of proceedings

7. The Working Group might wish to further consider whether it would be appropriate to include a general provision regarding confidentiality of proceedings, or of the materials (including pleadings) before the arbitral tribunal.

8. The Working Group noted that the matter of confidentiality was quite complex, that there were diverse views expressed on the importance of confidentiality and that practices and the law were still evolving. It was said that regulating that issue in too much detail could constitute a major departure from the UNCITRAL Arbitration Rules. It was observed that the scope of confidentiality needed could depend on the subject matter of the dispute and the applicable regulatory regimes. The opinion that a general confidentiality provision should not be included was expressed by many delegations. It was also suggested that the matter should be left to be addressed on a case-by-case basis by the arbitrators and the parties (A/CN.9/614, paras.84-86).

References to previous UNCITRAL documents

Paragraph (1) — Avoidance of unnecessary delays

A/CN.9/614, para. 76

A/CN.9/WG.II/WP.143, para. 62

Paragraphs (1) and (2) — “appropriate stage”

A/CN.9/614, para. 77

Paragraph (4) — Consolidation of cases before arbitral tribunals — joinder

A/CN.9/614, paras. 79-83

A/CN.9/WG.II/WP.143, paras. 66-71

Confidentiality of proceedings

A/CN.9/614, paras. 84-86

A/CN.9/WG.II/WP.143, paras. 72-74

Place of arbitration

Article 16

1. Unless the parties have agreed upon the [*option 1*: place] [*option 2*: seat] where the arbitration is to be held, such [*option 1*: place] [*option 2*: seat of arbitration] shall be determined by the arbitral tribunal, having regard to the circumstances of the arbitration.
2. The arbitral tribunal may determine the [*option 1*: location] [*option 2*: place] of the arbitration within the country agreed upon by the parties. It may hear witnesses and hold meetings for consultation among its members at any [place] [location] it deems appropriate, having regard to the circumstances of the arbitration.
3. The arbitral tribunal may meet at any [*option 1*: place] [*option 2*: location] it deems appropriate for the inspection of goods, other property or documents. The parties shall be given sufficient notice to enable them to be present at such inspection.
4. The award shall be deemed to have been made at the [*option 1*: place] [*option 2*: seat] of arbitration.

Remarks

“Place of arbitration” — “seat of arbitration” — “location of arbitration”

9. It is recalled that the Working Group considered whether to clarify the term “place of arbitration” in article 16. The Working Group also considered, but did not reach a conclusion, whether the Rules should remain consistent with the Model Law (which currently uses the expression “place of arbitration”) or whether a differentiated terminology should be used, such as “seat of arbitration” when dealing with the legal place of arbitration, or “location”, when dealing with the place where meetings are actually held. Options are proposed for consideration by the Working Group (A/CN.9/614, paras. 87-89).

Paragraph (4)

“shall be deemed”

10. Paragraph (4) has been amended to take account of a proposal made to provide that an award should be deemed to have been made at the place of arbitration to avoid the uncertainty as to the jurisdiction of courts regarding the award if it was signed in a place other than the seat of arbitration. This wording is consistent with the wording used in article 31, paragraph (3), of the Model Law (A/CN.9/614, para. 90). Article 32, paragraph (4), of the Rules has been changed to take account of that proposed modification (see below, paragraph 34).

References to previous UNCITRAL documents

“Place of arbitration” — “seat of arbitration” — “location”

A/CN.9/614, paras. 87-89

A/CN.9/WG.II/WP.143, paras. 75-76

Paragraph (4) — “shall be deemed”

A/CN.9/614, para. 90

Language

Article 17

1. Subject to an agreement by the parties, the arbitral tribunal shall, promptly after its appointment, determine the language or languages to be used in the proceedings. This determination shall apply to the statement of claim, the statement of defence, and any further written statements and, if oral hearings take place, to the language or languages to be used in such hearings.

2. The arbitral tribunal may order that any documents annexed to the statement of claim or statement of defence, and any supplementary documents or exhibits submitted in the course of the proceedings, delivered in their original language, shall be accompanied by a translation into the language or languages agreed upon by the parties or determined by the arbitral tribunal.

Remarks

11. No proposals for modification have been made in relation to article 17.

References to previous UNCITRAL documents

A/CN.9/614, para. 91

A/CN.9/WG.II/WP.143/Add.1, para. 3

Statement of claim

Article 18

1. Unless the statement of claim was contained in the notice of arbitration, within a period of time to be determined by the arbitral tribunal, the claimant shall communicate ~~his or her~~ its statement of claim in writing to the respondent and to each of the arbitrators. A copy of the contract, and of the arbitration agreement if not contained in the contract, shall be annexed thereto.

2. The statement of claim shall include the following particulars:

- (a) The names and addresses of the parties;
- (b) A statement of the facts supporting the claim;
- (c) The points at issue;
- (d) The relief or remedy sought.

The claimant may annex to its statement of claim all documents ~~he or she~~ it deems relevant or may add a reference to the documents or other evidence ~~he or she~~ it will submit.

Remarks

Paragraph (2)

12. The Working Group might wish to consider whether paragraph (2) (b) should be reformulated to read “a statement of the facts and legal principles supporting the claim” in order to encourage the parties to substantiate their claims from a legal point of view. As well, the Working Group might wish to consider whether that provision should address the question of statement of claim in multi-party arbitration.

13. The Working Group might wish to consider whether the last paragraph of article 18 (2) should be reworded so that the claimant would have an obligation, to the extent feasible, to submit together with its statement of claim documents and evidence which are relevant to the claim. That paragraph could read: “The statement of claim shall, as far as possible, be accompanied by all documents and other evidentiary materials relied upon by the claimant or by references to them.”

References to previous UNCITRAL documents

A/CN.9/614, para. 92

A/CN.9/WG.II/WP.143/Add.1, paras. 4-7

Statement of defence

Article 19

1. Within a period of time to be determined by the arbitral tribunal, the respondent shall communicate its statement of defence in writing to the claimant and to each of the arbitrators.

2. The statement of defence shall reply to the particulars (b), (c) and (d) of the statement of claim (article 18, para. 2). The respondent may annex to its statement the documents on which it relies for its defence or may add a reference to the documents or other evidence it will submit.

3. In its statement of defence, or at a later stage in the arbitral proceedings if the arbitral tribunal decides that the delay was justified under the circumstances, the respondent may make a counter-claim or rely on a claim for the purpose of a set-off arising out of the same contract legal relationship, whether contractual or not, or rely on a claim arising out of the same contract for the purpose of a set-off.

4. The provisions of article 18, paragraph 2, shall apply to a counter claim and a claim relied on for the purpose of a set-off.

Paragraph (1)

14. The Working Group might wish to consider whether that provision should address the question of statement of defence in multi-party arbitration.

Paragraph (2)

15. If the modification proposed in relation to article 18, paragraph (2), is adopted (see above, paragraph 13), article 19, paragraph (2), should then be modified accordingly, and could read: “The statement of defence shall, as far as possible, be

accompanied by all documents and other evidentiary material relied upon by the respondent or by references to them.”

Paragraph 3

Raising claims for the purpose of set-off

16. Article 19, paragraph (3), of the UNCITRAL Arbitration Rules provides that the respondent might make a counter-claim or rely on a claim for the purpose of a set-off if the claim arose “out of the same contract”. Views were expressed in the Working Group that the arbitral tribunal’s competence to consider counter-claims or set-off should, under certain conditions, extend beyond the contract from which the principal claim arose and apply in a wider range of circumstances (A/CN.9/614, para. 93). To achieve that extension, it was proposed to replace the words “arising out of the same contract” with the words “arising out of the same legal relationship, whether contractual or not” (A/CN.9/614, para. 94).

References to previous UNCITRAL documents

A/CN.9/614, paras. 93-96

A/CN.9/WG.II/WP.143/Add.1, paras. 8-10.

Amendments to the claim or defence

Article 20

During the course of the arbitral proceedings ~~either~~ a party may amend or supplement ~~his or her~~ its claim or defence unless the arbitral tribunal considers it inappropriate to allow such amendment having regard to the delay in making it or prejudice to ~~the~~ all other parties or any other circumstances. However, a claim may not be amended in such a manner that the amended claim falls outside the scope of the arbitration clause or separate arbitration agreement.

Remarks

17. No proposals for modification have been made in relation to article 20.

Pleas as to the jurisdiction of the arbitral tribunal

Article 21

~~1. The arbitral tribunal shall have the power to rule on objections that it has no jurisdiction, including any objections with respect to the existence or validity of the arbitration clause or of the separate arbitration agreement.~~

~~2. The arbitral tribunal shall have the power to determine the existence or the validity of the contract of which an arbitration clause forms a part. For the purposes of article 21, an arbitration clause which forms part of a contract and which provides for arbitration under these Rules shall be treated as an agreement independent of the other terms of the contract. A decision by the arbitral tribunal that the contract is null and void shall not entail ipso jure the invalidity of the arbitration clause.~~

1. The arbitral tribunal may rule on its own jurisdiction, including any objections with respect to the existence or validity of the arbitration agreement. For that purpose, an arbitration clause which forms part of a contract shall be treated as an agreement independent of the other terms of the contract. A decision by the arbitral tribunal that the contract is null and void shall not entail ipso jure the invalidity of the arbitration clause.
2. A plea that the arbitral tribunal does not have jurisdiction shall be raised not later than in the statement of defence or, with respect to a counter-claim, in the reply to the counter-claim. A party is not precluded from raising such a plea by the fact that it has appointed, or participated in the appointment of, an arbitrator. A plea that the arbitral tribunal is exceeding the scope of its authority shall be raised as soon as the matter alleged to be beyond the scope of its authority is raised during the arbitral proceedings. The arbitral tribunal may, in either case, admit a later plea if it considers the delay justified.
3. ~~In general, the arbitral tribunal should rule on a plea concerning its jurisdiction as a preliminary question. However, the arbitral tribunal may proceed with the arbitration and rule on such a plea in their final award.~~ The arbitral tribunal may rule on a plea referred to in paragraph (2) of this article either as a preliminary question or in an award on the merits. The arbitral tribunal may continue the arbitral proceedings and make an award, notwithstanding any pending challenge to its jurisdiction before a court.

Remarks

Paragraph (1)

18. Paragraph (1) reflects the view expressed in the Working Group that the existing version of article 21, paragraphs (1) and (2), should be redrafted along the lines of article 16, paragraph (1), of the Model Law in order to make it clear that the arbitral tribunal had the power to raise and decide upon issues regarding the existence and scope of its own jurisdiction (A/CN.9/614, para. 97).

Paragraph (2)

19. A view was expressed in the Working Group that the existing version of article 21, paragraph (3), of the Rules should contain a provision similar to article 16, paragraph (2), of the Model Law, which provided that a party was not precluded from raising a plea as to jurisdiction by the fact that it had appointed, or participated in the appointment of, an arbitrator, and that the arbitral tribunal might, in either case, admit a later plea if it considered the delay justified (A/CN.9/614, para. 98).

Paragraph (3)

20. Paragraph (3), which replaces the existing version of article 21, paragraph (4), of the Rules contains a provision consistent with article 16, paragraph (3), of the Model Law, in accordance with the Working Group discussions (A/CN.9/614, paras. 99-102).

References to previous UNCITRAL documents

A/CN.9/614, paras. 97-102

A/CN.9/WG.II/WP.143/Add.1, paras. 11-14.

Further written statements**Article 22**

The arbitral tribunal shall decide which further written statements, in addition to the statement of claim and the statement of defence, shall be required from the parties or may be presented by them and shall fix the periods of time for communicating such statements.

Remarks

21. No proposals for modification have been made in relation to article 22.

Periods of time**Article 23**

The periods of time fixed by the arbitral tribunal for the communication of written statements (including the statement of claim and statement of defence) should not exceed 45 days. However, the arbitral tribunal may extend the time limits if it concludes that an extension is justified.

Remarks

22. No proposals for modification have been made in relation to article 23.

Evidence and hearings (Articles 24 and 25)**Article 24**

1. Each party shall have the burden of proving the facts relied on to support ~~his or her~~ its claim or defence.

[2. The arbitral tribunal may, if it considers it appropriate, require a party to deliver to the tribunal and to ~~the~~ all other parties, within such a period of time as the arbitral tribunal shall decide, a summary of the documents and other evidence which that party intends to present in support of the facts in issue set out in ~~his or her~~ its statement of claim or statement of defence.]

3. At any time during the arbitral proceedings the arbitral tribunal may require the parties to produce documents, exhibits or other evidence within such a period of time, as the tribunal shall determine.

Remarks*Paragraph (2)*

23. The Working Group might wish to consider whether paragraph (2) should be deleted, as it might not be common practice for an arbitral tribunal to require parties to present a summary of documents and as it may be desirable to promote a system

according to which the parties would attach to their claims the evidentiary materials they are relying on.

References to previous UNCITRAL documents

A/CN.9/614, para. 103

A/CN.9/WG.II/WP.143/Add.1, paras. 15

Article 25

1. In the event of an oral hearing, the arbitral tribunal shall give the parties adequate advance notice of the date, time and place thereof.

2. If witnesses are to be heard, at least 15 days before the hearing each party shall communicate to the arbitral tribunal and to ~~the~~ all other parties the names and addresses of the witnesses ~~he or she~~ it intends to present, the subject upon and the languages in which such witnesses will give their testimony.

2 bis [Witnesses may be heard under conditions set by the arbitral tribunal. Any individual testifying to the arbitral tribunal on any issue of fact or expertise shall be treated as a witness under these Rules notwithstanding that the individual is a party to the arbitration or was or is an officer, employee or shareholder of any party.]

3. The arbitral tribunal shall make arrangements for the translation of oral statements made at a hearing and for a record of the hearing if either is deemed necessary by the tribunal under the circumstances of the case, or if the parties have agreed thereto and have communicated such agreement to the tribunal at least 15 days before the hearing.

4. Hearings shall be held *in camera* unless the parties agree otherwise. The arbitral tribunal may require the retirement of any witness or witnesses during the testimony of other witnesses. The arbitral tribunal is free to determine the manner in which witnesses are examined.

5. Evidence of witnesses may also be presented in the form of written statements signed by them.

6. The arbitral tribunal shall determine the admissibility, relevance, materiality and weight of the evidence offered.

Remarks

Paragraph (2)

24. The Working Group might wish to note that the reference to “witnesses” might be problematic in some legal systems, where the parties themselves, and their senior officers or employees cannot be characterized as witnesses. Paragraph 2bis proposes a definition of “witness” and sets out in more detail the power of the arbitral tribunal.

Interim measures

Article 26

~~1. At the request of either party, the arbitral tribunal may take any interim measures it deems necessary in respect of the subject matter of the dispute, including measures for the conservation of the goods forming the subject matter in dispute, such as ordering their deposit with a third person or the sale of perishable goods.~~

~~2. Such interim measures may be established in the form of an interim award. The arbitral tribunal shall be entitled to require security for the costs of such measures.~~

~~3. A request for interim measures addressed by any party to a judicial authority shall not be deemed incompatible with the agreement to arbitrate, or as a waiver of that agreement.~~

1. The arbitral tribunal may, at the request of a party, grant interim measures.

2. An interim measure is any temporary measure by which, at any time prior to the issuance of the award by which the dispute is finally decided, the arbitral tribunal orders a party to:

(a) Maintain or restore the status quo pending determination of the dispute;

(b) Take action that would prevent, or refrain from taking action that is likely to cause, current or imminent harm or prejudice to the arbitral process itself;

(c) Provide a means of preserving assets out of which a subsequent award may be satisfied; or

(d) Preserve evidence that may be relevant and material to the resolution of the dispute.

3. The party requesting an interim measure under paragraph 2 (a), (b) and (c) shall satisfy the arbitral tribunal that:

(a) Harm not adequately reparable by an award of damages is likely to result if the measure is not ordered, and such harm substantially outweighs the harm that is likely to result to the party against whom the measure is directed if the measure is granted; and

(b) There is a reasonable possibility that the requesting party will succeed on the merits of the claim. The determination on this possibility shall not affect the discretion of the arbitral tribunal in making any subsequent determination.

4. With regard to a request for an interim measure under paragraph 2 (d), the requirements in paragraph 3 (a) and (b) shall apply only to the extent the arbitral tribunal considers appropriate.

5. The arbitral tribunal may modify, suspend or terminate an interim measure it has granted, upon application of any party or, in exceptional circumstances and upon prior notice to the parties, on the arbitral tribunal's own initiative.

6. The arbitral tribunal may require the party requesting an interim measure to provide appropriate security in connection with the measure.
7. The arbitral tribunal may require any party promptly to disclose any material change in the circumstances on the basis of which the measure was requested or granted.
8. The party requesting an interim measure shall be liable for any costs and damages caused by the measure to any party if the arbitral tribunal later determines that, in the circumstances, the measure should not have been granted. The arbitral tribunal may award such costs and damages at any point during the proceedings.

Remarks

25. Article 26 has been amended to take account of the suggestion made in the Working Group that the revised provision on interim measures might clarify the circumstances, conditions and procedure for the granting of interim measures, consistent with Chapter IV A of the Model Law, or be drafted in such a way that they would give effect to the party autonomy provided by Chapter IV A (A/CN.9/614, para. 105).

26. The Working Group might wish to consider whether provisions on preliminary orders should be included in article 26.

References to previous UNCITRAL documents

A/CN.9/614, paras. 104-105

A/CN.9/WG.II/WP.143/Add.1, para. 16

Experts

Article 27

1. The arbitral tribunal may appoint one or more experts to report to it, in writing, on specific issues to be determined by the tribunal. A copy of the experts' terms of reference, established by the arbitral tribunal, shall be communicated to the parties.
2. The parties shall give the expert any relevant information or produce for his or her inspection any relevant documents or goods that he or she may require of them. Any dispute between a party and such expert as to the relevance of the required information or production shall be referred to the arbitral tribunal for decision.
3. Upon receipt of the experts report, the arbitral tribunal shall communicate a copy of the report to the parties who shall be given the opportunity to express, in writing, their opinion on the report. A party shall be entitled to examine any document on which the expert has relied in his or her report.
4. At the request of ~~either~~ any party the expert, after delivery of the report, may be heard at a hearing where the parties shall have the opportunity to be present and to interrogate the expert. At this hearing ~~either~~ any party may present expert witnesses in order to testify on the

points at issue. The provisions of article 25 shall be applicable to such proceedings.

Remarks

27. No proposals for modification have been made in relation to article 27.

References to previous UNCITRAL documents

A/CN.9/614, paras. 106-107

A/CN.9/WG.II/WP.143/Add.1, paras. 17-20

Default

Article 28

1. If, within the period of time fixed by the arbitral tribunal, the claimant has failed to communicate its statement of claim without showing sufficient cause for such failure, the arbitral tribunal shall issue an order for the termination of the arbitral proceedings, unless the respondent has submitted a counter-claim. If, within the period of time fixed by the arbitral tribunal, the respondent has failed to communicate its statement of defence without showing sufficient cause for such failure, the arbitral tribunal shall order that the proceedings continue, without treating such failure in itself as an admission of the claimant's allegations.

2. If ~~one of the~~ a party, duly notified under these Rules, fails to appear at a hearing, without showing sufficient cause for such failure, the arbitral tribunal may proceed with the arbitration.

3. If ~~one of the~~ a party, duly invited by the arbitral tribunal to produce documentary evidence, fails to do so within the established period of time, without showing sufficient cause for such failure, the arbitral tribunal may make the award on the evidence before it.

Remarks

28. The Working Group might wish to consider the proposed modifications to article 28, which are made for the sake of clarity. The addition at the end of paragraph (1) reflects the provisions in article 25 of the Model Law.

Closure of hearings

Article 29

1. The arbitral tribunal may inquire of the parties if they have any further proof to offer or witnesses to be heard or submissions to make and, if there are none, it may declare the hearings closed.

2. The arbitral tribunal may, if it considers it necessary owing to exceptional circumstances, decide, on its own motion or upon application of a party, to reopen the hearings at any time before the award is made.

Remarks

29. No proposals for modification have been made in relation to article 29.

Waiver of rules**Article 30**

A party, who knows that any provision of, or requirement under, these Rules has not been complied with and yet proceeds with the arbitration without promptly stating ~~his or her~~ its objection to such non-compliance, shall be deemed to have waived ~~his or her~~ its right to object.

Section IV. The award**Decisions****Article 31**

1. When there are three arbitrators, any award or other decision of the arbitral tribunal shall be made by a majority of the arbitrators. [When there is no majority, any award or other decision shall be made by the presiding arbitrator alone.]
2. In the case of questions of procedure, when there is no majority or when the arbitral tribunal so authorizes, the presiding arbitrator may decide ~~on his or her own~~ alone, subject to revision, if any, by the arbitral tribunal.

Remarks*Paragraph (1)*

30. It is recalled that, given the differing views expressed, the Working Group requested the Secretariat to prepare various options for consideration by the Working Group (A/CN.9/614, para. 112). One option was to leave article 31 unchanged (A/CN.9/614, para. 111); another option was to revise that paragraph in order to avoid a deadlock situation where no majority decision could be made and to provide that if an arbitral tribunal composed of three arbitrators could not reach a majority, then the award would be decided by the presiding arbitrator as if he or she were a sole arbitrator (A/CN.9/614, para. 108).

31. If the added words are retained, consequential amendments to article 32, paragraph (4), relating to the signing of the award might also need to be considered.

References to previous UNCITRAL documents

A/CN.9/614, paras. 108-112

A/CN.9/WG.II/WP.143/Add.1, paras. 21-24

Form and effect of the award

Article 32

1. [In addition to making a final award, the arbitral tribunal shall be entitled to make interim or interlocutory, ~~or partial~~ awards.]
2. ~~The~~ An award shall be made in writing and shall be final and binding on the parties. The parties undertake to carry out the award without delay and shall be deemed to have waived their right to any form of appeal, review or recourse to any court or other competent authority, insofar as such waiver can be validly made.
3. The arbitral tribunal shall state the reasons upon which the award is based, unless the parties have agreed that no reasons are to be given.
4. An award shall be signed by the arbitrators and it shall contain the date on which the award was made and indicate the place of arbitration. Where there are three arbitrators and one of them fails to sign, the award shall state the reason for the absence of the signature.
5. [*Option 1:* The award may be made public only with the consent of ~~both~~ the parties.] [*Option 2:* The award may be made public with the consent of the parties or where and to the extent disclosure is required of a party by legal duty to protect or pursue a legal right or in relation to legal proceedings before a court or other competent authority.]
6. Copies of the award signed by the arbitrators shall be communicated to the parties by the arbitral tribunal.
7. If the arbitration law of the country where the award is made requires that the award be filed or registered by the arbitral tribunal, the tribunal shall comply with this requirement at the timely request of any party, within the period of time required by law.

Remarks

Paragraph (1)

Form of the award

32. The Working Group might wish to consider whether the types of awards should be left to the practice, and whether paragraph (1) should be deleted.

Paragraph (2)

Waiver of recourse to courts

33. In accordance with a proposal made in the Working Group, the language inserted in paragraph (2) seeks to make it impossible for parties to use recourse to courts that could be freely waived by the parties (for example, in some jurisdictions, an appeal on a point of law), but not to exclude challenges to the award (for example, on matters such as lack of jurisdiction, violation of due process or any other ground for setting aside the award as set out under article 34 of the Model Law), inasmuch as the parties could not exclude them by contract (A/CN.9/614, para. 114).

Paragraph (4)

34. The modification is proposed to be made for the sake of consistency with the modification under article 16, paragraph (4), which deals with the place where the award is deemed to be made (see above, paragraph 10).

Paragraph (5)

35. As agreed by the Working Group, paragraph (5) offers options on the question of publication of awards. Option 1 corresponds to the existing text of the Rules, whereas option 2 covers the situation where a party is under a legal obligation to disclose.

Paragraph (7)

36. Paragraph (7) has been amended so as to avoid an onerous burden being placed on an arbitral tribunal which might not be familiar with the registration requirements at the place of arbitration.

References to previous UNCITRAL documents

A/CN.9/614, paras. 113-121

A/CN.9/WG.II/WP.143/Add.1, paras. 25-29

Applicable law, amiable compositeur**Article 33**

1. The arbitral tribunal shall apply the [*option 1: law*][*option 2: rules of law*] designated by the parties as applicable to the substance of the dispute. Failing such designation by the parties, the arbitral tribunal shall apply the [*option 1: law*] [*option 2: rules of law*] [*variant 1: determined by the conflict of laws rules which it considers applicable*][*variant 2: with which the case has the closest connection*].

2. The arbitral tribunal shall decide as amiable compositeur or ex aequo et bono only if the parties have expressly authorized the arbitral tribunal to do so and if the law applicable to the arbitral procedure permits such arbitration.

3. In all cases, the arbitral tribunal shall decide in accordance with the terms of the contract and shall take into account the usages of the trade applicable to the transaction.

Remarks*Paragraph (1)**Law — Rules of law*

37. The first set of options in paragraph (1) reflects the diverging views expressed in the Working Group on whether the words “rules of law” currently used in article 28 of the Model Law should also be used in a revised version of article 33 of the UNCITRAL Arbitration Rules to replace the term “law” (A/CN.9/614, para. 122).

Conflict of laws rules

38. The second set of variants addresses the proposal made to replace the conflict of laws rules with a direct choice of the rules of law most closely connected to the dispute (A/CN.9/614, para. 123).

References to previous UNCITRAL documents*Paragraph (1)*

A/CN.9/614, paras. 122-123.

A/CN.9/WG.II/WP.143/Add.1, para. 30.

Paragraph (2)

A/CN.9/614, paras. 124

A/CN.9/WG.II/WP.143/Add.1, paras. 31

Settlement or other grounds for termination**Article 34**

1. If, before the award is made, the parties agree on a settlement of the dispute, the arbitral tribunal shall either issue an order for the termination of the arbitral proceedings or, if requested by both parties and accepted by the tribunal, record the settlement in the form of an arbitral award on agreed terms. The arbitral tribunal is not obliged to give reasons for such an award.

2. If, before the award is made, the continuation of the arbitral proceedings becomes unnecessary or impossible for any reason not mentioned in paragraph 1, the arbitral tribunal shall inform the parties of its intention to issue an order for the termination of the proceedings. The arbitral tribunal shall have the power to issue such an order unless a party raises justifiable grounds for objection.

3. Copies of the order for termination of the arbitral proceedings or of the arbitral award on agreed terms, signed by the arbitrators, shall be communicated by the arbitral tribunal to the parties. Where an arbitral award on agreed terms is made, the provisions of article 32, paragraphs 2 and 4 to 7, shall apply.

Remarks

39. No proposals for modification have been made in relation to article 34.

Interpretation of the award**Article 35**

1. Within 30 days after the receipt of the award, either party, with notice to the other party, may request that the arbitral tribunal give an interpretation of the award.

2. The interpretation shall be given in writing within 45 days after the receipt of the request. The interpretation shall form part of the award and the provisions of article 32, paragraphs 2 to 7, shall apply.

Remarks

40. No proposals for modification have been made in relation to article 35.

References to previous UNCITRAL documents

A/CN.9/614, paras. 125-126

A/CN.9/WG.II/WP.143/Add.1, para. 32

Correction of the award**Article 36**

1. Within 30 days after the receipt of the award, either any party, with notice to the other party parties, may request the arbitral tribunal to correct in the award any errors in computation, any clerical or typographical errors, or any errors or omissions of a similar nature. The arbitral tribunal may within 30 days after the communication of the award make such corrections on its own initiative.

2. Such corrections shall be in writing, and the provisions of article 32, paragraphs 2 to 7, shall apply.

Remarks*Paragraph (1)*

41. The word “omissions” has been added to take account of the proposal made in the Working Group to broaden the scope of article 36 to include correction of the award to cover situations such as arbitrator omitting to sign the award or to state the date or place of the award.

References to previous UNCITRAL documents

A/CN.9/614, para. 127

A/CN.9/WG.II/WP.143/Add.1, para. 33

Additional award**Article 37**

1. Within 30 days after the receipt of the award, ~~either a~~ a party, with notice to the other party, may request the arbitral tribunal to make an additional award as to claims presented in the arbitral proceedings but omitted from the award.

2. If the arbitral tribunal considers the request for an additional award to be justified and considers that the omission can be rectified [without any further hearings or evidence], it shall complete its award within 60 days after the receipt of the request.

3. When an additional award is made, the provisions of article 32, paragraphs 2 to 7, shall apply.

Remarks

42. The Working Group might wish to further consider whether the words “without any further hearings or evidence” should be deleted, and whether or not paragraph (2) could be understood as already allowing the arbitral tribunal to make an additional award after holding further hearings and taking further evidence (A/CN.9/614, para. 128).

References to previous UNCITRAL documents

A/CN.9/614, paras. 128-129
A/CN.9/WG.II/WP.143/Add.1, paras. 34

Costs (Articles 38 to 40)**Article 38**

The arbitral tribunal shall fix the costs of arbitration in its award.
The term “costs” includes only:

(a) The fees of the arbitral tribunal to be stated separately as to each arbitrator and to be fixed by the tribunal itself in accordance with article 39;

(b) The reasonable travel and other expenses incurred by the arbitrators;

(c) The reasonable costs of expert advice and of other assistance required by the arbitral tribunal;

(d) The reasonable travel and other expenses of witnesses to the extent such expenses are approved by the arbitral tribunal;

(e) The costs for [legal] representation and assistance of the successful party if such costs were claimed during the arbitral proceedings, and only to the extent that the arbitral tribunal determines that the amount of such costs is reasonable;

(f) Any fees and expenses of the appointing authority as well as the expenses of the Secretary General of the Permanent Court of Arbitration at The Hague.

Remarks

43. The modifications to subparagraphs (b)-(d) reflect the view expressed in the Working Group that the costs and expenses referred to under those subparagraphs should be qualified by the word “reasonable” (A/CN.9/614, para. 132). The Working Group might wish to determine whether the word “legal” in subparagraph (e) should be deleted.

References to previous UNCITRAL documents

A/CN.9/614, paras. 130-132
A/CN.9/WG.II/WP.143/Add.1, paras. 35-36

Article 39

1. The fees of the arbitral tribunal shall be reasonable in amount, taking into account the amount in dispute, the complexity of the subject matter, the time spent by the arbitrators and any other relevant circumstances of the case.

2. If an appointing authority has been agreed upon by the parties or designated by the Secretary-General of the Permanent Court of Arbitration at The Hague, and if that authority has issued a schedule of fees for arbitrators in international cases which it administers, the arbitral tribunal in fixing its fees shall take that schedule of fees into account to the extent that it considers appropriate in the circumstances of the case.

3. If such appointing authority has not issued a schedule of fees for arbitrators in international cases, any party may at any time request the appointing authority to furnish a statement setting forth the basis for establishing fees which is customarily followed in international cases in which the authority appoints arbitrators. If the appointing authority consents to provide such a statement, the arbitral tribunal in fixing its fees shall take such information into account to the extent that it considers appropriate in the circumstances of the case.

4. In cases referred to in paragraphs 2 and 3, when a party so requests and the appointing authority consents to perform the function, the arbitral tribunal shall fix its fees only after consultation with the appointing authority which may make any comment it deems appropriate to the arbitral tribunal concerning the fees.

Remarks

44. The Working Group might wish to further discuss whether the appointing authority should be given a wider role for the determination of the fees or whether it would be preferable to provide a more transparent procedure for agreeing on the method of calculating the arbitral tribunal's fees from the outset.

45. The Working Group might wish to note that the Permanent Court of Arbitration in the Hague has been approached on that matter and agreed to be involved to a greater extent in practical issues relating to the fixing of the fees, in accordance with a provision which could read along the following lines, and which would replace paragraphs (3) and (4): "The arbitral tribunal shall make a proposal setting out the principles according to which its fees are to be fixed, and shall subsequently specify the amounts established by applying those principles. At any stage, (a) the arbitral tribunal, or (b) any party, no later than 15 days after the proposal was made, may ask that the principles or the amounts of the fees, and, if applicable, the deposit, be established by the appointing authority or, if no appointing authority has been agreed upon or if the agreed appointing authority does not decide within thirty days of a party's request, by the Secretary-General of the Permanent Court of Arbitration at The Hague."

References to previous UNCITRAL documents

A/CN.9/614, paras. 133-134

A/CN.9/WG.II/WP.143/Add.1, para. 37

Article 40

1. Except as provided in paragraph 2, the costs of arbitration shall in principle be borne by the unsuccessful party [parties]. However, the arbitral tribunal may apportion each of such costs between the parties if it determines that apportionment is reasonable, taking into account the circumstances of the case.
2. With respect to the costs of [legal] representation and assistance referred to in article 38, paragraph (e), the arbitral tribunal, taking into account the circumstances of the case, shall be free to determine which party [parties] shall bear such costs or may apportion such costs between the parties if it determines that apportionment is reasonable.
3. When the arbitral tribunal issues an order for the termination of the arbitral proceedings or makes an award on agreed terms, it shall fix the costs of arbitration referred to in article 38 and article 39, paragraph 1, in the text of that order or award.
4. No additional fees may be charged by an arbitral tribunal for interpretation or correction or completion of its award under articles 35 to 37.

Remarks

46. Article 40 has been modified so as to be consistent with the proposed modifications to article 38 (e) (see above, paragraph 43).

References to previous UNCITRAL documents

A/CN.9/614, paras. 135

A/CN.9/WG.II/WP.143/Add.1, para. 38

Deposit of costs**Article 41**

1. The arbitral tribunal, on its establishment, may request ~~each~~ the parties to deposit an equal amount as an advance for the costs referred to in article 38, paragraphs (a), (b) and (c).
2. During the course of the arbitral proceedings the arbitral tribunal may request supplementary deposits from the parties.
3. If an appointing authority has been agreed upon by the parties or designated by the Secretary General of the Permanent Court of Arbitration at The Hague, and when a party so requests and the appointing authority consents to perform the function, the arbitral tribunal shall fix the amounts of any deposits or supplementary deposits only after consultation with the appointing authority which may make any comments to the arbitral tribunal which it deems appropriate concerning the amount of such deposits and supplementary deposits.
4. If the required deposits are not paid in full within 30 days after the receipt of the request, the arbitral tribunal shall so inform the parties in order that one or another of them may make the required

payment. If such payment is not made, the arbitral tribunal may order the suspension or termination of the arbitral proceedings.

5. After the award has been made, the arbitral tribunal shall render an accounting to the parties of the deposits received and return any unexpended balance to the parties.

Proposed additional provisions

Liability of arbitrators

Neither the arbitrators nor the appointing authority shall be liable to any person for any act or omission in connection with the arbitration, save for the consequences of conscious and deliberate wrongdoing.

Remarks

47. The Working Group might wish to consider whether the question of liability of arbitrators and institutions performing the function of appointing authority under the UNCITRAL Arbitration Rules should be addressed. In the affirmative, the Working Group might wish to consider the proposed draft provision, according to which arbitrators and appointing authorities should in principle be granted immunity, except in extreme case of “conscious and deliberate wrongdoing”.

References to previous UNCITRAL documents

A/CN.9/614, para. 131

A/CN.9/WG.II/WP.143/Add.1, paras. 39-40

General Principles

In the interpretation of the Rules, regard is to be had to their international origin and to the need to promote uniformity in their application and the observance of good faith. Questions concerning matters governed by these Rules which are not expressly settled in them are to be settled in conformity with the general principles on which these Rules are based.

Remarks

48. The provision seeks to address the suggestion made in the Working Group to include a provision on the interpretation of the Rules in accordance with their international origin in line with the new article 2A of the Model Law (A/CN.9/614, para. 121). The second sentence of that paragraph seeks to clarify that the Rules constitute a self-contained system of contractual norms and that any lacuna in the Rules is to be filled by an interpretation of the Rules themselves, without reference to any non-mandatory provision of applicable procedural law.

Introduction

1. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that Working Group II (Arbitration and Conciliation) should give priority to a revision of the UNCITRAL Arbitration Rules (1976) (“the UNCITRAL Arbitration Rules” or “the Rules”). The Working Group commenced its work on a revision of the Rules at its forty-fifth session (Vienna, 11-15 September 2006).

2. It has been considered appropriate to inform the Commission about the activities of the Secretary-General of the Permanent Court of Arbitration (“the PCA Secretary-General”) under the Rules, including to facilitate the current discussions on the revision of the Rules. The PCA Secretary-General has communicated to the Secretariat on 16 November 2006 a report providing a summary of its activities under the Rules since 1976.

3. It is recalled that articles 6, 7 and 12 of the Rules entrust the PCA Secretary-General, upon the request of a party, to designate an appointing authority for the purpose of appointing members of an arbitral tribunal and ruling on challenges to arbitrators. The PCA Secretary-General may also assist the parties in fixing the arbitrator’s fees and the arbitral tribunal in relation to deposit for costs in accordance with articles 39 and 41 (respectively) of the Rules.

4. The report of the PCA Secretary-General on its activities under the Rules is reproduced in substance below.

Report of the PCA Secretary-General on its activities under the UNCITRAL Arbitration Rules

1. Growth in the PCA appointing authority cases since 1976

5. Since the adoption of the Rules, the PCA Secretary-General has received requests to designate, or to act as, an appointing authority in over 270 cases (see attached annex). Twenty-five institutions and over twenty individuals have been designated by the PCA Secretary-General to act as appointing authorities. The most common request is for the designation of an appointing authority to appoint a second arbitrator on behalf of a defaulting respondent.

6. The significant growth in requests in recent years¹ is partially attributable to arbitrations commenced under bilateral and multilateral investment treaties.² Investment treaty matters have also contributed to the relatively high percentage of cases (approximately 40 per cent) in which a request was received where at least one State or State entity was involved. The PCA has also received an increasing number of requests to provide full administrative support in arbitrations under the Rules.

2. The procedure followed by the PCA Secretary-General in designating appointing authorities³

7. The PCA Secretary-General seeks to make the procedure as efficient as possible, and generally designates an appointing authority within two weeks of receipt of a request that contains all required documents.⁴

8. When the PCA Secretary-General receives a request to designate an appointing authority, he reviews the documents submitted to ensure that, on a prima facie basis, he is competent to act. Once satisfied, the PCA Secretary-General invites the respondent to provide its comments on the claimant's request within five to ten working days. After the respondent's comments have been received or the time

¹ In 2006, the PCA has received to date twenty-four requests.

² In 2005, seven requests for appointing authority services were received in connection with arbitrations commenced under investment treaties; sixteen requests were received in disputes arising under contracts.

³ The PCA has published (1) Procedural Guidelines for Requesting Designation of an Appointing Authority by the PCA Secretary-General under the UNCITRAL Arbitration Rules; (2) PCA Procedures for Cases under the UNCITRAL Arbitration Rules; and (3) Model Clauses for PCA Services under the UNCITRAL Arbitration Rules (see www.pca-cpa.org/ENGLISH/BD/ under the heading "UNCITRAL Rules and Procedures").

⁴ The documents required are: (1) a copy of the arbitration clause or agreement establishing the applicability of the UNCITRAL Arbitration Rules; (2) a copy of the Notice of Arbitration served upon the respondent, as well as the date of such service; (3) an indication of the nationalities of the parties; (4) the names and nationalities of the arbitrators already appointed, if any; (5) the names of any institutions or persons that the parties had considered selecting as appointing authority but which have been rejected; (6) a power of attorney evidencing the authority of the person making the request; and (7) payment of the non-refundable administrative fee of Euro 750 to the PCA.

limit to submit comments has expired, the PCA Secretary-General designates the appointing authority.

9. In making that designation, the PCA Secretary-General generally takes into account the following factors: (i) the comments of the parties; (ii) the nationalities of the parties and the regional or global character of the dispute (in order to select a neutral appointing authority); (iii) the place of arbitration, if specified; (iv) the language of the arbitration, if specified; (v) the complexity of the case and the amounts claimed; (vi) the fees charged by the prospective appointing authority; and (vii) the anticipated reaction time of the appointing authority. The PCA Secretary-General also ascertains the independence and impartiality of the appointing authority prior to designation.

10. The PCA Secretary-General emphasizes to the appointing authority that the designation is “for all purposes under the UNCITRAL Arbitration Rules” and therefore covers appointing arbitrators (articles 6 and 7), deciding challenges (article 12), and assisting with issues relating to arbitrator fees (article 39) as well as costs for deposits (article 41).

3. Noteworthy cases and trends

Replacement of appointing authorities

11. There has been an increasing number of requests to the PCA Secretary-General for the replacement of previously agreed appointing authorities pursuant to articles 6 (2) and 7 (2) (b) of the Rules.

12. For example, in one case, the claimant requested that the PCA Secretary-General replace the appointing authority on the ground of bias in favour of the respondent. Under the Rules, the only grounds for removal of an appointing authority are for failure or refusal to act. The PCA Secretary-General found that he was not empowered to remove the appointing authority on the ground advanced by the claimant and its request was denied. In another case, the claimant requested that the PCA Secretary-General replace an appointing authority on the ground that it had failed to act within the time limit provided for under article 7 (2) (b) of the Rules. The PCA Secretary-General examined the case and discovered that the claimant had not complied with article 8 (1) of the Rules, which required a party to provide an appointing authority with a copy of specified documents. The PCA Secretary-General’s view was that compliance with article 8 (1) was a condition precedent to the replacement of an appointing authority and the request was denied.

13. In yet another case, the claimant requested that the PCA Secretary-General designate a replacement appointing authority on the ground that the agreed appointing authority had failed to act. The agreed appointing authority, a national court judge, explained that the question of arbitrability of the dispute was pending before national courts and she declined to act until the issue was resolved. The PCA Secretary-General interpreted this as a refusal to act under the Rules, and designated a replacement appointing authority.

“Pathological” and problematic clauses

14. The PCA Secretary-General has received a number of requests to designate an appointing authority pursuant to arbitration clauses that are unclear or contain obvious drafting errors.

15. In one case, the claimant requested that the PCA Secretary-General designate an appointing authority to appoint the second arbitrator on behalf of a defaulting respondent. The arbitration clause provided that “[a]ny dispute or difference between the Parties [would be] referred to and determined by arbitration in The Hague under the International Arbitration Rules”. The respondent, when invited by the PCA to comment, objected to the claimant’s request on the ground that the clause was too vague to justify the competence of the PCA. The respondent also refused to agree to the application of the Rules. After reviewing the matter, the PCA Secretary-General informed the parties that he was not satisfied, on the basis of a *prima facie* screening of the documentation submitted by the parties, that he was competent to act.

16. The PCA Secretary-General has also been requested to designate an appointing authority in cases where the arbitration clause contains a reference to an administering body, and one of the parties objects to that administering body acting as the appointing authority. In such cases, the usual practice of the PCA Secretary-General is to designate the administering body referred to in the clause as the appointing authority, on the basis that the parties’ prior agreement was to choose that administering body.⁵

17. On one occasion, the PCA Secretary-General was requested to designate an appointing authority by a claimant who sought to invoke an arbitration clause in a bilateral investment treaty (“BIT”) between the respondent State and a third State by relying on the most favoured nation clause therein. The BIT provided for arbitration under the Rules and specified an appointing authority. The claimant was directed by the PCA Secretary-General to approach the appointing authority specified in the BIT regarding constitution of the tribunal.

4. Fee consultation

18. The PCA Secretary-General has assisted parties in reaching agreements with arbitrators with respect to their fees. It has coordinated a variety of fee arrangements, e.g., having the parties and arbitrators agree on fixed fees or to the fee schedule of an arbitral institution.

19. The PCA Secretary-General has also facilitated fee arrangements where the arbitrators charged different hourly rates. In some cases, co-arbitrators charge one hourly rate and the presiding arbitrator another. In one case, the PCA Secretary-General helped coordinate an arrangement whereby each arbitrator charged an individual hourly rate comparable to what they would normally charge in their home jurisdiction — such rates being significantly different from each other. The advantage of this approach is to avoid that all arbitrators charge at the highest rate.

⁵ For example, in a case, the arbitration clause provided that the proceedings would be “conducted under the Arbitration Rules of United Nations Commission on International Trade Law-UNCITRAL, in effect on the Effective Date and as administered by the London Court of International Arbitration”. The claimant requested that the PCA Secretary-General designate an appointing authority to decide a challenge. The PCA Secretary-General appointed the London Court of International Arbitration as the appointing authority.

IV. TRANSPORT LAW

A. Report of the Working Group on Transport Law on the work of its eighteenth session (Vienna, 6-17 November 2006)

(A/CN.9/616) [Original: English]

CONTENTS

	<i>Paragraphs</i>
Introduction.	1-7
I. Deliberations and decisions.	8
II. Preparation of a draft instrument on the carriage of goods [wholly or partly] [by sea]	9-279
Transport documents and electronic transport records — Chapter 9 (<i>continued</i>)	9-82
Draft article 39. Signature	10-13
Draft article 40. Deficiencies in the contract particulars	14-28
Draft article 41. Qualifying the description of the goods in the contract particulars	29-39
Draft article 42. Reasonable means of checking and good faith	40-44
Draft article 43. Prima facie and conclusive evidence	45-57
Revised text of draft article 43	58-68
Draft article 44. Evidentiary effect of qualifying clauses	69-73
Draft article 45. “Freight prepaid”	74-82
Shipper’s obligations — Chapter 8	83-113
Draft article 31. Shipper’s liability for delay	83-100
Proposals regarding the identification of an appropriate limitation level for shipper liability for delay	101-113
Rights of suit — Chapter 14	114-118
Time for suit — Chapter 15	119-160
Draft article 69. Limitation of actions	127-133
Draft article 70. Commencement of limitation period	134-143
Draft article 71. Extension of limitation period	144-147
Draft article 72. Action for indemnity	148-152
Draft article 73. Counterclaims	153-155

Article 74. Actions against the bareboat charterer	156-157
Possible additional article with regard to the removal of actions pursuant to draft article 80 (2)	158-160
Limitation of carrier's liability — Chapter 13	161-215
Draft article 64. Basis of limitation of liability	162-180
Draft article 65. Liability for loss caused by delay	181-194
Draft article 66. Loss of the right to limit liability	195-204
Draft article 104: Amendment of limitation amounts	205-215
Relation with Other Conventions: draft articles 27, 89 and 90	216-238
General discussion and draft article 27	216-228
Article 89. International instruments governing other modes of transport and Article 90. Prevalence over earlier conventions	229-235
Draft article 64. Basis of limitation of liability (<i>continued</i>)	236-238
General average — Chapter 18	239-244
Jurisdiction — Chapter 16	245-266
Arbitration — Chapter 17	267-279
III. Other business	280-281
Planning of future work	280-281

Introduction

1. At its thirty-fourth session, in 2001, the Commission established Working Group III (Transport Law) and entrusted it with the task of preparing, in close cooperation with interested international organizations, a legislative instrument on issues relating to the international carriage of goods such as the scope of application, the period of responsibility of the carrier, obligations of the carrier, liability of the carrier, obligations of the shipper and transport documents.¹ The Working Group commenced its deliberations on a draft convention on the carriage of goods [wholly or partly] [by sea] at its ninth session in 2002. The most recent

¹ *Official Records of the General Assembly, Fifty-sixth Session, Supplement No. 17* and corrigendum (A/56/17 and Corr.3), para. 345.

compilation of historical references regarding the legislative history of the draft convention can be found in document A/CN.9/WG.III/WP.71.

2. Working Group III (Transport Law), which was composed of all States members of the Commission, held its eighteenth session in Vienna from 6 to 17 November 2006. The session was attended by representatives of the following States members of the Working Group: Algeria, Argentina, Australia, Austria, Belarus, Benin, Brazil, Canada, Chile, China, Colombia, Croatia, Czech Republic, France, Gabon, Germany, India, Iran (Islamic Republic of), Italy, Japan, Mexico, Nigeria, Pakistan, Republic of Korea, Russian Federation, Spain, Sweden, Switzerland, Thailand, Tunisia, Turkey, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

3. The session was also attended by observers from the following States: Bulgaria, Burkina Faso, Congo, Democratic Republic of the Congo, Denmark, Dominican Republic, Finland, Greece, Indonesia, Iraq, Latvia, Libyan Arab Jamahiriya, Malaysia, Netherlands, New Zealand, Norway, Peru, Philippines, Romania, Senegal, Slovakia, Ukraine and Yemen.

4. The session was also attended by observers from the following international organizations:

(a) **United Nations system:** United Nations Conference on Trade and Development (UNCTAD), United Nations Economic Commission for Europe (UNECE);

(b) **Intergovernmental organizations:** Council of the European Union, European Commission (EC), and Intergovernmental Organisation for International Carriage by Rail (OTIF);

(c) **International non-governmental organizations invited by the Working Group:** Association of American Railroads (AAR), BIMCO, Center for International Legal Studies (CILS), Comité Maritime International (CMI), European Shippers' Council (ESC), International Chamber of Commerce (ICC), International Chamber of Shipping (ICS), International Federation of Freight Forwarders Associations (FIATA), International Group of Protection and Indemnity (P&I) Clubs, International Multimodal Transport Association (IMMTA), International Road Transport Union (IRU), International Union of Marine Insurance (IUMI), and The European Law Students' Association International (ELSA).

5. The Working Group elected the following officers:

Chairman: Mr. Rafael Illescas (Spain)

Rapporteur: Mr. Walter de Sá Leitão (Brazil)

6. The Working Group had before it the following documents:

(a) Annotated provisional agenda and corrigendum (A/CN.9/WG.III/WP.71 and A/CN.9/WG.III/WP.71/Corr.1);

(b) A document on transport documents and electronic transport records presented for information by the Government of the United States of America at its seventeenth session, but consideration of which was not completed at that session (A/CN.9/WG.III/WP.62);

(c) A document on the limitation of the carrier's liability in the draft convention presented for information by the Government of China (A/CN.9/WG.III/WP.72);

(d) A document annexing comments and proposals of the International Chamber of Shipping, BIMCO and the International Group of P&I Clubs on topics on the agenda for the 18th session of the Working Group (A/CN.9/WG.III/WP.73);

(e) A document on the shipper's liability for delay presented by the Government of Sweden (A/CN.9/WG.III/WP.74);

(f) A note by the secretariat containing the revised text of chapter 16 of the draft convention on jurisdiction (A/CN.9/WG.III/WP.75);

(g) A document on rights of suit and time for suit in the draft convention on the carriage of goods [wholly or partly] [by sea] presented for information by the Government of Japan (A/CN.9/WG.III/WP.76);

(h) A proposal of the Government of the United States of America with respect to the procedure for the amendment of the limitation amounts in the draft convention (A/CN.9/WG.III/WP.77);

(i) A note by the secretariat on the relation of the draft convention on the carriage of goods [wholly or partly] [by sea] with other conventions (A/CN.9/WG.III/WP.78); and

(j) A document containing a drafting proposal by the Governments of Italy and the Netherlands with respect to the identity of carrier provision in the draft convention on the carriage of goods [wholly or partly] [by sea] (A/CN.9/WG.III/WP.79).

7. The Working Group adopted the following agenda:

1. Election of officers.
2. Adoption of the agenda.
3. Preparation of a draft convention on the carriage of goods [wholly or partly] [by sea].
4. Other business.
5. Adoption of the report.

I. Deliberations and decisions

8. The Working Group continued its review of the draft convention on the carriage of goods [wholly or partly] [by sea] ("the draft convention") on the basis of the text contained in the annexes to a note by the Secretariat (A/CN.9/WG.III/WP.56), and discussed various proposals and revised texts, including the proposal by the International Chamber of Shipping, BIMCO and the International Group of P&I Clubs on topics on the agenda for the 18th session of the Working Group (A/CN.9/WG.III/WP.73); the revised text of chapter 16 of the draft convention on jurisdiction (A/CN.9/WG.III/WP.75); the proposal of the Government of the United States of America with respect to the procedure for the amendment of the limitation amounts in the draft convention (A/CN.9/WG.III/WP.77); the proposal of the Governments of Italy and the Netherlands with respect to the identity of

carrier provision in the draft convention (A/CN.9/WG.III/WP.79). The Secretariat was requested to prepare a revised draft of a number of provisions, based on the deliberations and conclusions of the Working Group. Those deliberations and conclusions are reflected in section II below.

II. Preparation of a draft instrument on the carriage of goods [wholly or partly] [by sea]

Transport documents and electronic transport records — Chapter 9 *(continued)*

9. The Working Group was reminded that its most recent consideration of draft chapter 9 on transport documents and electronic transport records had commenced at its seventeenth session (see A/CN.9/594, paras. 216 to 233), but that it had been interrupted due to time constraints until the current session. It was also recalled that the most recent complete consideration of the topic by the Working Group took place during its eleventh session (see A/CN.9/526, paras. 24-61), and that a written proposal regarding the identity of the carrier in draft article 40 (3) had been submitted for the consideration of the Working Group for this session (see A/CN.9/WG.III/WP.79). The consideration by the Working Group of the provisions of chapter 9 was based on the text as found in annexes I and II of A/CN.9/WG.III/WP.56, and that the text of the provisions set out in A/CN.9/WG.III/WP.62 was the current text of the draft convention as found in A/CN.9/WG.III/WP.56, without modification.

Draft article 39. Signature

10. The Working Group considered the text of draft article 39 as contained in A/CN.9/WG.III/WP.56 and as reproduced in paragraph 19 of A/CN.9/WG.III/WP.62. It was recalled that draft article 39 had been accepted in substance at its eleventh session (see A/CN.9/526, para. 32) and that the only modification to the draft article since then had been to paragraph 2 to ensure that the text conformed with changes made to the text of the draft convention with respect to electronic communication (see A/CN.9/576, paras. 201-205).

11. The Working Group was informed that, in connection with informal consultations that took place in connection with draft article 39, it was suggested that the Working Group may wish to consider whether the draft convention should contain a definition of signature such as, for example, along the lines of that contained in article 14 (3) of the Hamburg Rules or article 5 (k) of the United Nations Convention on International Bills of Exchange and International Promissory Notes (see A/CN.9/WG.III/WP.62, para. 22). No support was expressed in the Working Group for the inclusion of such a definition. It was suggested that such a definition was unnecessary and that what constituted a signature could be determined according to practical commercial needs.

12. Support was expressed for the drafting proposal (see A/CN.9/WG.III/WP.62, para. 24) that the references to “authority” should be deleted from draft paragraphs (1) and (2). It was agreed that the consequences of unauthorized signature should be left to national law.

Conclusions reached by the Working Group regarding draft article 39:

13. After discussion, the Working Group decided that:
- The text of draft article 39 contained in A/CN.9/WG.III/WP.56 should be retained;
 - The expression “by the carrier or a person having authority from the carrier” in draft paragraph (1) be replaced by a phrase such as “by or on behalf of the carrier”; and
 - The expression “of the carrier or a person having authority from the carrier” in draft paragraph (2) be replaced by a phrase such as “of the carrier or a person acting on behalf of the carrier”.

Draft article 40. Deficiencies in the contract particulars

14. The Working Group proceeded to consider draft article 40 as contained in A/CN.9/WG.III/WP.56 and as reproduced in paragraph 25 of A/CN.9/WG.III/WP.62.

Paragraph (1)

15. It was noted that paragraph (1) provided a general rule that the absence of one or more contract particulars referred to in article 38 (1) or inaccuracy of those particulars did not of itself affect the legal character or validity of the transport document or the electronic transport record. The Working Group approved the substance of paragraph (1).

Paragraph (2) “shall be deemed to be”

16. It was recalled that paragraph (2) provided a rule to overcome ambiguity with respect to the significance of a date specified in the contract particulars. Clarification was sought as to whether the phrase “is considered to be” raised a rebuttable presumption or was conclusive in respect of interpreting a date included in the contract particulars. Support was expressed for the view that the phrase “is considered to be” should be taken as conclusive and that the paragraph could be revised to clarify that point, possibly by using a phrase such as “shall be deemed to be” in its stead.

Paragraph (3) and the identity of the carrier

17. The Working Group considered the text of paragraph 3 of draft article 40 as contained in A/CN.9/WG.III/WP.56 relating to transport documents and electronic transport records that were unclear with respect to the identity of the carrier. In connection with the discussion of draft paragraph 3, the drafting proposal set out in A/CN.9/WG.III/WP.79 was considered by the Working Group.

18. By way of introduction, it was explained that the various aspects of the drafting proposal contained in A/CN.9/WG.III/WP.79 were intended to deal principally with three perceived problems in connection with the identification of the carrier in transport documents and electronic transport records. The first problem was said to be when the face of the transport document or electronic transport record was unclear and contained, for example, only the trade names of the carrier or the name of the carrier’s booking agents, rather than identifying the carrier (see A/CN.9/WG.III/WP.79, para. 3). It was proposed that, in keeping with the identification of the carrier requirements of articles 23 (a)(i) and 26 (a)(i) of the

Uniform Customs and Practices for Documentary Credits 500 (UCP 500), draft paragraph 38 (1) (e) regarding the necessary contract particulars should be modified to read: “the name and address of a person identified as the carrier”. General support was expressed in the Working Group for this proposal, however it was recalled that the UCP 600 would soon be made public and should be reviewed to ensure the consistency of the draft convention in this regard.

19. The second practical problem intended to be addressed by the drafting proposal in A/CN.9/WG.III/WP.79 (see para. 4 thereof) was said to be the situation where the information in small print on the reverse side of a transport document in the so-called “identity of carrier” clause conflicted with the information identifying the carrier on the face of the document. In order to solve this ambiguity, it was proposed that a provision be inserted into the draft instrument (see A/CN.9/WG.III/WP.79, para. 4) ensuring that the information regarding the identification of the carrier on the face of the transport document or electronic transport record would prevail over contradictory information on the reverse side. Support was expressed for this proposal in the Working Group, with the caveat that care should be taken in the drafting of the provision to ensure that appropriate text was inserted to find an equivalent for the “reverse side” of an electronic transport record.

20. The third practical problem with which the drafting proposal in A/CN.9/WG.III/WP.79 was intended to deal was the situation when, despite existing requirements, the identity of the carrier remained unclear in the transport document or electronic transport record such as, for example, in the case where the document or record was signed by or on behalf of the master, without stating the basis of the master’s authority. In such cases, it was proposed that the fallback position for the identification of the carrier should be the text as set out in paragraph 5 of A/CN.9/WG.III/WP.79 whereby the registered owner was presumed to be the carrier, unless the owner identified the bareboat charterer, or unless the owner or the bareboat charterer defeated the presumption by identifying the carrier. A corollary of the acceptance of this aspect of the proposal was set out in paragraph 6 of A/CN.9/WG.III/WP.79, which provided for an extension of the limitation period for the commencement of actions by the claimant in such cases. It was stated that national law had in some cases provided a solution for this situation, but that the response in this regard was not uniform. Further, it was said that while presuming the registered owner to be the carrier might be inappropriate in cases where, for example, the owner was a financial institution, it was thought that the owner was nonetheless in the best position to identify the carrier, and thus to rebut the presumption.

21. General support was expressed in the Working Group for this effort to find a compromise solution to the persistent problem of the identification of the carrier. Further, support was expressed in principle for the particular approach to the problem that had been taken in the proposal.

22. However, concerns were expressed regarding the presumption that the registered owner of the ship was the carrier. It was thought that such an approach to the identification of the carrier could be particularly troublesome in the context of multimodal transport, where the registered owner of the ship might not have any knowledge regarding the other legs of the transport. Further, it was noted that the probability of the registered owner being the carrier was small, and that there was likely to be a series of charters from the registered owner, such that the owner may have very little knowledge regarding the identity of the carrier. It was also said to be

erroneous to assume that the registered owner could easily have access to the necessary information to rebut the presumption that it was the carrier.

23. It was said that there were additional complications related to the compromise approach to the identification of the carrier set out in paragraph 5 of A/CN.9/WG.III/WP.79. It was suggested that the presumption created in the proposal could reduce the flexibility of courts as they decided on the identity of the carrier responsible on a case-by-case basis by weighing all of the facts at hand, including the various indicators regarding the identity of the carrier on the transport document or electronic transport record, even though such indicators could conflict. Further, the concern was expressed that a provision such as the one proposed could prevent cargo interests from advancing their claims against the party they believed to be most responsible, and support was expressed for the suggestion that while deletion of the provision on the identity of the carrier was preferred, if it were retained, it was suggested that text along the following lines should also be adopted: "Nothing in this article prevents the claimant from proving that any person other than the registered owner is the carrier."

24. It was also indicated in the Working Group that the discussion had revealed a number of issues on which there was general agreement. The first of these was said to be agreement that the contracting carrier should be responsible for any breach of the contract of carriage. Further, it had already been agreed by the Working Group that draft article 38 should require the carrier to identify itself in the transport document or electronic transport record. It was noted that a presumption regarding the identity of the carrier was necessary only in situations where the carrier had failed to identify itself and left the consignee in the position of not knowing against whom to pursue its claim. Support was expressed for the view that while it was clear that the registered owner may not always have the best information regarding the identity of the carrier, it was likely to have some information regarding its ship, and the approach proposed to that problem was simply a device to allocate the burden of identifying the carrier and to give the consignee an effective remedy. It was also suggested that in order to deal with cases where there was a succession of charters of a vessel, the provision could be modified so as to allow each person in the chain of contracts to rebut the presumption that it was the carrier.

25. In further support of the proposed approach to the identification of the carrier set out in paragraph 5 of A/CN.9/WG.III/WP.79, it was indicated that a number of remedies relating to maritime law adopted a similar approach with respect to the responsibility of the registered owner of the ship, such as in the case of maritime liens or the arrest of a ship.

Paragraph (4)

26. The Working Group approved the substance of paragraph (4).

Possible additional paragraph: Number of originals

27. It was recalled that the Working Group had decided at its seventeenth session to include in draft article 38 regarding the required contract particulars the number of originals of a negotiable transport document issued (see A/CN.9/594, paras. 230 and 232-233). In that regard, the question was raised whether reference should be made in draft article 40 regarding the consequences of failure to include such information in the contract particulars. The Working Group agreed to leave this matter as a drafting issue to be decided by the Secretariat.

Conclusions reached by the Working Group regarding draft article 40:

28. After discussion, the Working Group decided that:
- The text of draft paragraph (1) be adopted;
 - The reference in draft paragraph (2) “is considered to be” is adjusted to render it conclusive;
 - The drafting proposals contained in paragraphs 3 and 4 of A/CN.9/WG.III/WP.79 should be adopted into the text of the draft convention;
 - The existing text of draft paragraph (3) should be maintained for the time being in square brackets;
 - In addition, the Secretariat should prepare revised text of the approach to the identity of the carrier issue in draft paragraph (3) based on principles as enunciated in paragraph 5 of A/CN.9/WG.III/WP.79 and the concerns raised by the Working Group during its consideration of that text;
 - Consideration of the proposal regarding the extension of the limitation period in which to take actions was deferred until the Working Group’s consideration of the revised text to be prepared regarding the identity of carrier problem;
 - The text of draft paragraph (4) be adopted; and
 - The Secretariat should prepare a new version of draft article 40 taking into account the above deliberations and conclusions.

Draft article 41. Qualifying the description of the goods in the contract particulars

29. The Working Group proceeded to consider draft article 41 as contained in A/CN.9/WG.III/WP.56 and reproduced in paragraph 35 of A/CN.9/WG.II/WP.62.

30. It was recalled that draft article 41 was based on the assumption that the shipper was always entitled to obtain a transport document or electronic transport record reflecting the information that it provided to the carrier but that in certain circumstances, a carrier should be entitled to qualify that information. The Working Group was informed that informal consultations had to some extent supported some of the drafting suggestions that had been made at its eleventh session (see A/CN.9/526, para. 37) but which had not been addressed in the text of the draft convention.

Distinction between containerized and non-containerized goods

31. One suggestion made was to either delete draft paragraph (b) and apply draft paragraph (a) to containerized goods, or to include text along the lines of draft article 41 (a)(ii) in draft paragraph (b) to address the situation in which the carrier reasonably considered the information furnished by the shipper regarding the contents of the container to be inaccurate (see A/CN.9/526, para. 37 and A/CN.9/WG.III/WP.62, para. 38).

32. In that respect, a question was raised as to the validity of distinguishing between containerized and non-containerized goods in draft article 41. Some doubt was expressed as to whether that distinction adequately reflected the current state of the industry, given that other means of transport, such as trailers, were sometimes used for goods as well. It was also suggested that paragraph (b) added a new element to the discussion, namely the term “closed”, and that it was not clear what

was meant by the term “closed container”, nor whether for example, a sealed door on a trailer could be considered a “closed container”.

33. In support of the current structure of the article, it was said that the distinction was valid for the reason that, in practice, containerized and non-containerized goods were treated differently, and that there was a presumption that a carrier would not open containerized cargo for inspection. The provision, it was further said, accommodated a wide range of practices, and the broad definition of the term “container” defined in article 1 (y) was sufficient to cover other types of unit loads, such as trailers. However, some support was expressed for combining draft paragraphs (b) and (c), as both paragraphs dealt with closed containers, although draft paragraph (b) dealt with quantity and description of the goods within a container, while draft paragraph (c) referred to the weight of the goods. In addition, a suggestion was made to include a reference to a description of the goods in paragraph (b) along the lines of that contained in article 38 (1) (a).

Requiring carrier to give reasons for qualification

34. Another suggestion made at the eleventh session was to require a carrier that decided to qualify the information mentioned on the transport document to give reasons for that qualification. That suggestion did not receive support.

Agreement by carrier not to include qualification in exchange for guarantee from shipper and the notion of “good faith”

35. A further suggestion was made to deal with the situation where a carrier agreed not to qualify the description of the goods in exchange for a letter of indemnity from the shipper, by providing sanctions and the loss of the right to invoke the limits of liability set forth in the draft convention when the carrier acting in bad faith voluntarily agreed not to qualify the information in the contract particulars. It was agreed, however, that questions of sanctions should be dealt with in provisions relating to the loss of the limitation on liability.

36. There was an extensive exchange of views on the notion of “good faith” in connection with the draft article. The use of the term “good faith” generally in the chapeau of article 41 was questioned not only because the concept of “good faith” had various meanings in different legal systems, but also because the explanation of what constituted “good faith” for the purposes of draft article 41, as set out in draft article 42, was felt to be too narrow. It was said, in that connection, that in legal systems that acknowledged a general obligation for parties to commercial contracts to act in good faith, a breach of such general obligation might also occur in a variety of situations not specifically mentioned in draft article 42.

37. Support was expressed for including examples of what “good faith” was, given that in circumstances where the carrier colluded with the seller it would be the consignee who would suffer as a result. However, strong support was expressed for the deletion of the term “good faith”. It was said that the term was susceptible to differing interpretations in different legal systems and that the term was not merely relative to a contract but applied to the behaviour of all the parties. It was also noted that its inclusion could be misinterpreted as implying that good faith was not required elsewhere in the instrument. It was suggested that one option might be delete the term “good faith” but include the elements in subparagraphs (b)(i) and (ii) of draft article 42 in a rule setting out the conditions for validity of qualifications made by the carrier under draft article 41.

“if the carrier can show”

38. Clarification was sought as to what was intended by the phrase “if the carrier can show” as used in draft paragraphs (a)(i) and (c)(i). It was suggested that if what was intended was that carrier could show to the seller or consignee then that should be expressly stated, but the view was also expressed that evidentiary matters should be left to national law, and that the references in these provisions to “can show” could simply be deleted.

Conclusions reached by the Working Group regarding draft article 41:

39. After discussion, the Working Group decided that:

- The term “good faith” in the chapeau in article 41 and the corresponding term in article 42 should be deleted with elements of the description contained in article 42 possibly being included at an appropriate place in article 41;
- The distinction between containerized and non-containerized goods should be maintained. However, consideration should be given to clarifying what was meant by a “closed container” to indicate that it referred to the situation where there was difficulty in inspecting the goods on the part of the carrier and streamlining paragraphs (b) and (c); and
- The Secretariat should prepare a new version of draft article taking into account the above deliberations and conclusions.

Draft article 42. Reasonable means of checking and good faith

40. It was recalled that at its eleventh session, the substance of draft article 42 was found to be generally acceptable (see A/CN.9/526, para. 43) and that in informal consultations since its seventeenth session, all of the delegates addressing the issue supported draft article 42 in substance as currently drafted (see para. 41 of A/CN.9/WG.III/WP.62).

41. It was agreed that issues addressed under draft article 41 should also be considered in relation to article 42 where relevant, for example, the decision to delete the reference to “good faith”.

42. A proposal was made to add the following wording at the end of paragraph (a): “and not require technical expertise or costs other than what follows from a customary examination of the goods”. It was suggested that if that proposal were accepted, then a consequential amendment would be to reword draft article 38 (1) (a) as follows: “The carrier is required to include in the transport document a description of the goods as provided by the shipper. However, the carrier is not obliged to include lengthy descriptions irrelevant to the contract of carriage or detailed technical descriptions of the goods which, even if controllable by the carrier, are not necessary in order to reasonably identify the goods or may impose an undue burden of control upon the carrier.” Whilst there was some sympathy expressed for the potential problem of increased burden on the carrier or of burdensome inclusions in the contract of carriage, the proposed additional text did not receive support. It was agreed that the matter sought to be covered therein was already encompassed by the phrase “commercially reasonable”. Possible concerns that the term “commercially reasonable” was too imprecise to encompass the intention of the proposal could be addressed, for instance, in a commentary on the draft convention that the Secretariat might wish to prepare.

43. It was noted that the decision to delete references to good faith in draft article 41 would entail deletion of paragraphs (b) and (c) of draft article 42. For that reason, it was suggested that the remainder of draft article 42 (paragraph (a)) could be inserted at the appropriate juncture in draft article 41.

Conclusions reached by Working Group regarding draft article 42:

44. After discussion the Working Group decided that:

- Paragraph (a) be included in a revised version of draft article 41; and
- In accordance with the decision to delete references to “good faith” in article 42, paragraphs (b) and (c) be deleted and the elements that characterized a carrier’s action in good faith to be possibly included in a revised draft article 41.

Draft article 43. Prima facie and conclusive evidence

General discussion

45. The Working Group considered the text of draft article 43 as contained in A/CN.9/WG.III/WP.56 and as reproduced in paragraph 42 of A/CN.9/WG.III/WP.62. It was recalled that draft article 43 had been accepted in substance at its eleventh session (see A/CN.9/526, paras. 44-48).

46. By way of introduction, the Working Group was reminded that draft article 43 set out the conditions, subject to draft article 44, under which transport documents or electronic transport records that evidenced receipt of the goods would constitute conclusive evidence of the carrier’s receipt of the goods as described in the contract particulars, and when they should be regarded as being only prima facie evidence of such receipt. The Working Group was in agreement with the text as set out in draft subparagraph 43 (a).

47. The Working Group agreed that the most controversial aspect of the provision was draft subparagraph 43 (b)(ii) with respect to the evidentiary effect of non-negotiable transport documents or non-negotiable electronic transport records. It was recalled that Variant A of draft subparagraph 43 (b)(ii) was slightly broader than Variant B, in that it did not restrict the protection it offered to third parties to those that had purchased and paid for the goods in reliance on the description of the goods in the contract particulars, and thus would include, for example, a bank that had relied on the contract particulars to advance money to the consignee.

48. The Working Group was reminded that a third variant of this subparagraph had been proposed as Variant C in A/CN.9/WG.III/WP.68, in order to take into account bills of lading consigned to a named person, which were approved by the Working Group for inclusion in the draft convention (see A/CN.9/594, paras. 208-211). The text of Variant C of subparagraph 43 (b)(ii), which was intended to replace Variants A and B, was proposed as follows (see A/CN.9/WG.III/WP.68, para. 21): “If a non-negotiable transport document or a non-negotiable electronic transport record that indicates that it must be surrendered in order to obtain delivery of the goods has been issued, if such document or record has been transferred to the consignee acting in good faith.”

Negotiable versus non-negotiable

49. By way of explanation of Variant C, the Working Group was reminded that the basic rule with respect to evidentiary value was that negotiable documents and records were considered conclusive evidence, while non-negotiable documents and records were considered prima facie evidence. The sole exception to this general approach was said to be sea waybills, to which the Comité Maritime International (CMI) Uniform Rules for Sea Waybills had been agreed to apply. In an effort to elevate the status and use of sea waybills, such documents were deemed conclusive evidence as between the carrier and the consignee. It was said that the primary objection to extending conclusive evidence status to non-negotiable documents and records in the terms set out in Variant A or B was that it was thought to be improper to confer such evidentiary status on the basis of a unilateral act by the consignee, i.e. the act of having relied on the description of the goods. It was suggested that bills of lading to named persons that included a presentation rule were deserving of the status of providing conclusive evidence, but that other non-negotiable documents and records were not. Some support was expressed for the approach set out in Variant C.

50. By way of further clarification, it was observed that the Hague Rules had originally conferred only prima facie evidentiary status on bills of lading or similar documents of title, and that the 1968 Visby Protocol had amended the Hague Rules to provide for conclusive evidentiary status. It was suggested that this amendment had been effected in order to address problems that had arisen because of the lack of uniformity in the application of the prima facie evidentiary rule in regard to bills of lading that had been transferred to third parties acting in good faith. In addition, it was noted that the 1968 amendment had referred only to bills of lading and had not extended to non-negotiable transport documents, because the scope of application of the Hague-Visby Rules was limited to bills of lading and similar documents of title.

51. Some doubts were raised as to whether the appropriate evidentiary weight of a document or record should depend on its negotiable status. It was suggested that there were four categories of documents which should be considered in this regard: negotiable documents and records, which should constitute conclusive evidence; documents and records which were mere receipts and which should not be conclusive evidence; bills of lading to named persons which were non-negotiable but which should nonetheless have the effect of conclusive evidence; and finally, non-negotiable documents and records that evidenced a contract of carriage, such as sea waybills. Of these categories, the evidentiary treatment of the first three was thought to be essentially non-controversial, but it was proposed that the final category could be treated in one of two ways: one option was to provide that unless otherwise stated on its face, the document or record constituted conclusive evidence, while the other option was to provide that unless otherwise stated on its face, the document or record constituted prima facie evidence only. Some support was expressed for a rule holding this fourth category of documents to be conclusive evidence unless otherwise stated on its face. In further support of this proposition, views were expressed that such a rule could also be appropriate in terms of promoting increased recourse to the use of sea waybills in circumstances in which a bill of lading was not necessary. However, some concerns were raised that this approach could cause legal uncertainty by allowing parties to change the legal nature of a document by including a certain statement in it.

52. An additional alternative approach to the problem of how to decide which documents and records should represent prima facie evidence, and which should

represent conclusive evidence, was also proposed. It was suggested that the distinction between documents and records based on their negotiable character should be abandoned in favour of an approach where the document or record would be considered *prima facie* evidence in all cases except those where three requirements were met: the relationship was between the carrier and a third party other than the shipper, and where the third party was acting both in good faith and in reliance on the description of the goods in the transport document or electronic transport record. Where those three requirements were met, the document or record would be considered conclusive evidence.

53. A strongly-held view remained that, with the sole exception of non-negotiable transport documents or electronic transport records that indicated that they had to be surrendered in order to obtain delivery of the goods, the *prima facie* evidence rule should be the general rule for non-negotiable documents or records such as sea waybills, while the conclusive evidence rule should apply only to negotiable transport documents and electronic transport records. It was said that any other approach risked causing significant confusion regarding the legal nature of the documents or records. Support for this view was said to arise from the basic rule that the transferor of a document or a record was not able to transfer to others greater rights than possessed by the transferor, and from the exception to that rule in the case of negotiable instruments, such as promissory notes or bills of lading, whose rights could be invoked from the face of the document or record itself. However, questions were raised whether this rationale unnecessarily intermingled concepts of the law of assignment with the evidentiary effect that the document or record, when functioning as a receipt, should have in respect of the protection of the rights of third parties acting in good faith.

54. A further observation was made that the question in issue should be less one of the law of assignment or of the strict consequences of negotiability, and more one of allocating the risk of relying on inaccurate information in the contract particulars as between the carrier, who possessed specialized knowledge and entered the information, and the innocent consignee. In this vein, the Working Group was urged to depart from the confines of strict domestic legal principle and to make a policy decision to allow non-negotiable documents or records to be considered conclusive evidence in certain situations in order to facilitate trade.

55. In urging the search for a compromise, it was noted that the contents of the contract particulars were dictated by the requirements set out in draft article 38, and that subparagraphs (1) (a), (b) and (c) thereof referred to information to be furnished by the shipper, which the carrier was under no explicit obligation to check. Further, it was observed that, since the carrier never checked the contents of containers in practice, the issue of whether a document or record was to be considered *prima facie* or conclusive evidence was of limited operation, since it did not apply to the container trade at all, and the two types of evidentiary value had similar practical effect.

Notion of “reliance” and “good faith” in relation to third party

56. In addition, concerns were raised regarding the requirement in draft subparagraph 43 (b)(ii) that the evidentiary value of a transport document or electronic transport record would depend on whether a third party had in fact relied on the description of goods in the contract particulars to its own detriment. This approach was said to be relatively unknown in civil law countries, and a preference was expressed for a more general solution linking the evidentiary value of the

transport document or electronic transport record to the function it fulfilled, possibly coupled with a general rule protecting the holder in good faith, in a manner similar to the law that governed negotiable instruments, such as bills of exchange and promissory notes, in many jurisdictions.

Conclusions reached by the Working Group regarding draft article 43:

57. After discussion, the Working Group decided that:

- While in agreement with respect to the text of draft paragraph 43 (a), the discussion of draft paragraph (b) indicated that the differences of approach with respect to the evidentiary treatment that should be conferred on certain transport documents or electronic transport records, be they negotiable or non-negotiable, had not yet sufficiently narrowed to allow for a consensus view to emerge in the Working Group; and
- Several different proposals had been made during the course of discussion, further to which the Secretariat was requested to prepare alternative draft text for consideration at a future discussion, taking into account the various views expressed in the Working Group.

Revised text of draft article 43

58. The Working Group recalled its earlier discussion of draft article 43 on prima facie and conclusive evidence, and its discussion of draft paragraph (b) which indicated differences in approach in the Working Group with respect to the evidentiary treatment that should be conferred on the information in certain transport documents or electronic transport records, be they negotiable or non-negotiable (see paras. 45-57 above). To resolve conflicting views expressed on paragraph 43 (b), a proposal was made to revise the text of draft article 43 as follows:

“Article 43. Evidentiary effect of the description of the goods in the contract

“Except as otherwise provided in article 44, a transport document or an electronic transport record that evidences receipt of the goods is prima facie evidence of the carrier’s receipt of the goods as described in the contract particulars; and

“(a) Proof to the contrary by the carrier in respect of any contract particulars relating to the goods shall not be permissible, when such contract particulars are included in:

“(i) A negotiable transport document or a negotiable electronic transport record that is transferred to a third party acting in good faith, or

“(ii) A non-negotiable transport document or a non-negotiable electronic transport record that indicates that it must be surrendered in order to obtain delivery of the goods and is transferred to the consignee acting in good faith.

“(b) Proof to the contrary by the carrier vis-à-vis the consignee, acting in good faith, shall equally not be permissible in respect of contract particulars relating to the goods included in a non-negotiable transport document or a non-negotiable electronic transport record, when such contract particulars are

furnished by the carrier. For the purpose of this paragraph the number and type of containers is deemed to be information furnished by the carrier.”

Amendments in the proposal

59. It was clarified that the reference to “contract particulars furnished by the carrier” in the proposal included all information listed in subparagraphs 38 (1) (d) to (f) (inclusive), as well as the new subparagraph to be added to draft article 38 (1) regarding the inclusion of the number of original documents issued. It was noted that, in relation to the final sentence of subparagraph 43 (b), some additional drafting might be necessary, such that information with respect to the number and type of containers would be deemed to have been provided by the carrier, whereas information as to the seals on the containers would be deemed to be provided by the shipper. To address those concerns it was proposed to add after the word “containers” in subparagraph (b), the words “, their identifying numbers and the information referred to in article 38, subparagraphs (1) (d) to (f) (inclusive),” as well as the number of original documents issued. Additionally a further sentence along the following lines was proposed to be added at the end of subparagraph (b): “The number of container seals is deemed to be information furnished by the shipper”. Those amendments received strong support.

60. It was noted that the chapeau of paragraph (a) had been modified to the simpler formulation of “proof to the contrary” from the “conclusive evidence” approach, which had been found to be problematic. Further, subparagraph (a)(ii) had been added to the text as representing what was thought to be a consensus in the Working Group regarding the appropriateness of including bills of lading consigned to a named person in draft paragraph (a) (see paras. 48, 49, 51 and 53 above).

61. It was explained that the intention of the proposal had been to preserve the status quo with respect to negotiable transport documents, and to provide a compromise approach for the evidentiary treatment of non-negotiable transport documents in order to bridge the differing views expressed in this regard earlier (see paras. 49-55 above). On this aspect, the main innovation was in draft paragraph (b), which set out the nature of the compromise by drawing a clear demarcation line distinguishing the evidentiary value of information in the contract particulars of non-negotiable transport documents based upon whether that information was provided by the carrier or by the shipper. It was said that in respect of information it furnished in such documents, the carrier should not be permitted to provide proof to the contrary with respect to the consignee, but that such proof should be permitted when such information was furnished by the shipper.

General discussion

62. While some lingering concerns were expressed regarding the replacement of the requirement of reliance on the information with a “good faith” rule, and some doubts were expressed regarding granting any sort of non-negotiable transport documents status in terms of the evidentiary rule, it was generally recognized that the proposal represented a positive development in terms of a compromise approach. Strong overall support was expressed in the Working Group for the approach taken in the revised text of draft article 43 as representing a sound compromise on which to continue discussion.

Subparagraph (b)

63. It was suggested that the practical operation of paragraph (b) of the proposed provision might be unclear in terms of what evidentiary effect the information in the contract particulars in a non-negotiable transport document would have if a carrier chose to make a reservation under article 41 (a)(ii) to shipper-provided information. In response, it was explained that if the carrier inserted a qualifying clause to the shipper information, such as “contents unknown” or “as provided by shipper”, the description of the goods would still be shipper-furnished, but if the carrier (believing that the shipper’s description was incorrect) inserted its own description clause based on article 41 (a)(ii), it would do so at its own peril, and that clause would be considered to be carrier-furnished information.

Inclusion of a “mere receipt”

64. A concern was raised that the definition of a transport document or electronic transport record in draft article 1 (n) was very broad and could include a mere receipt. The question was raised as to whether it was appropriate that a non-negotiable transport document that merely evidenced receipt should be covered in draft paragraph (b), given that a mere receipt was issued only as evidence of receipt as between the shipper and carrier and nothing more. A sea waybill, on the other hand, was a different type of non-negotiable document in that it evidenced the contract of carriage, and which identified the consignee. However, the view was expressed that mere receipts should sometimes be properly included in draft paragraph (b), depending on their nature. Further, it was noted that most domestic legal regimes contained a general principle preventing parties from presenting evidence contrary to statements made by them. Finally, it was observed that, under its terms, this draft paragraph was unlikely to operate frequently, since mere receipts would not often have a function in the relationship between the carrier and the consignee. However, some concerns remained regarding the inclusion of a mere receipt in draft paragraph (b), such that it would have an estoppel effect, in particular in respect of legal regimes that did not have a general rule preventing reliance by a party on its own statement, and a suggestion was made that an effort could be made to investigate whether it was possible to exclude mere receipts from inclusion in draft paragraph (b).

“furnished by”

65. An additional question raised was whether the term “furnished by the carrier” was sufficiently clear, and concerns were raised that it might raise difficulties of proof, since the carrier most often entered the information in the contract particulars. In response, it was said that being required to prove from whom the information came would not be too onerous under modern transport conditions. It was noted that, in the past, carriers often had shipper instruction forms which required the shipper to provide certain specific information, but that nowadays there were established patterns within the industry regarding who had to furnish certain information.

“by the carrier vis-à-vis the consignee”

66. A question was also raised as to why the operation of draft paragraph (b) was limited to “the carrier vis-à-vis the consignee”. In that respect, it was noted that a transport document only had to be signed by the carrier and that article 39 did not require the shipper to sign the transport document, yet the shipper would not under

the current provision be protected in the same way as the consignee. In response, it was noted that the position of the consignee was particular, since the consignee was involved in the transaction without having participated in the contract of carriage, but that the shipper did not require the same protection since it was involved in the contract of carriage and the provision of information in the transport documents.

Freedom of parties to increase evidentiary value of a document

67. In response to a question, it was suggested that pursuant to the draft convention, including draft article 94, parties would not be prevented from agreeing to upgrade the evidentiary value of a non-negotiable transport document by making a statement in that non-negotiable transport document that it was conclusive evidence. It was noted, however, that the parties could not downgrade the evidentiary status of a document, and that although such a statement on the face of a document could change its evidentiary value, it could not change the negotiable or non-negotiable status of the document itself.

Conclusions reached by the Working Group regarding revised text of draft article 43:

68. After discussion, the Working Group decided that

- The compromise proposal, as amended with respect to the closing line of paragraph (b), was acceptable in substance; and
- The Secretariat prepare a text taking account of the comments made for consideration at a future session.

Draft article 44. Evidentiary effect of qualifying clauses

69. The Working Group considered the text of draft article 44 as currently drafted and contained in A/CN.9/WG.III/WP.56 and as reproduced in paragraph 47 of A/CN.9/WG.III/WP.62, and an alternative text contained in paragraph 49 of A/CN.9/WG.III/WP.62. The Working Group was reminded that draft article 44 set out the practical effect of qualifying clauses that fulfilled the requirements of draft article 41, thus permitting the carrier's qualification to supersede the prima facie or conclusive evidence that would otherwise exist under draft article 43. It was further recalled that a view had been expressed at its eleventh session that draft article 44, in its current form, favoured the carrier because it allowed the carrier to rely on its qualifying clauses regardless of its treatment of the goods (A/CN.9/526, para. 50, see also paras. 49-52). The alternative text offered a narrower approach, permitting the carrier to rely on qualifying clauses only when it could demonstrate a chain of custody by delivering a container in substantially the same condition in which it had been received.

70. Some support was expressed in the Working Group for the alternative text reproduced in paragraph 49 of A/CN.9/WG.III/WP.62, as it was said to represent a commercial compromise that preserved a balance between the interests of shippers and carriers. It was further explained that the alternative text had been carefully crafted to permit qualifying clauses where they had previously seldom been allowed, but that care had been taken to ensure that the text did not broadly allow such qualifications without regard to the care that the carrier had taken with respect to the goods.

71. Strong support was expressed in the Working Group for the text of draft article 44 as currently set out in A/CN.9/WG.III/WP.56. In response to the concerns

expressed regarding the need to ensure that care had been taken by the carrier with respect to the goods, the view was expressed that the fact that qualifying clauses must fulfil the requirements of draft article 41 should be sufficient for that purpose, in addition to the fact that draft article 44 only allowed their operation to the extent that they qualified the description of the goods.

72. Clarification was sought as to the relationship between draft articles 41 and 44, and particularly whether draft article 44 was necessary in light of the phrase in draft article 41 that “the carrier does not assume responsibility for the accuracy of the information furnished by the shipper”. In response, it was explained that, whereas draft article 41 provided for the inclusion of a specific qualifying clause that met certain requirements, article 44 was thought to be necessary since it set out the legal effect of such a clause. It was also clarified that *prima facie* or conclusive evidentiary effect of the document or record was not completely superseded by the qualifying clause, since there was certain information in the document or record on which no reservations were allowed. However, a drafting suggestion was made that, given the Working Group’s preference for the text as it appeared in A/CN.9/WG.III/WP.56, consideration could be given to simplifying the text by merging article 44 into article 41.

Conclusions reached by the Working Group regarding draft article 44:

73. After discussion, the Working Group decided that:

- The text of draft article 44 be retained but that its drafting be revisited once the text of draft article 41 had been finalized, with consideration being given to merging draft article 44 into draft article 41.

Draft article 45. “Freight prepaid”

74. It was recalled that, notwithstanding the deletion of the proposed chapter on freight at its thirteenth session, draft article 45 from that chapter had been retained in the text of the draft convention in square brackets. The Working Group was reminded that the provision preserved the carrier’s right to collect freight from the consignee unless an affirmative statement, such as “freight prepaid”, appeared in the negotiable transport document or negotiable electronic transport record. It was further recalled that proponents of the draft article said its inclusion was primarily intended to protect and provide clarity for third party holders of transport documents, such as banks (A/CN.9/552, paras. 163-164).

75. The Working Group considered three options in relation to the treatment of draft article 45: to delete it entirely; to revise the article so as to conform in substance with article 16 (4) of the Hamburg Rules, or to retain the draft article in its current form.

Deletion of the draft article

76. Some support was expressed for the deletion of draft article 45. In that respect, it was suggested that given that the general conditions in which freight should be paid had been left to national law, it was not appropriate to address the circumstances when freight would not have to be paid in the draft convention. As well, it was suggested that the payment of freight was a commercial matter that should be left to be resolved by the parties.

Revision in conformity with article 16 (4) of the Hamburg Rules

77. There was some support for revision of draft article 45 in conformity with article 16 (4) of the Hamburg Rules. However, concern was expressed regarding that provision of the Hamburg Rules, since it contained a reverse presumption regarding payment of freight from that of draft article 45, such that the carrier's right to collect freight from the consignee under the Hamburg Rules was defeated unless an affirmative statement, such as "freight payable by the consignee", appeared on the transport document.

Retention of draft article

78. While it was generally thought that this provision addressed a practical problem but was not a core provision of the draft convention, support was expressed in favour of retaining the provision as currently drafted. It was said that the provision merely represented what was uncontroversial international practice, namely that if freight had been stated to be prepaid the carrier could not claim it from the consignee.

79. In additional support of retention of the draft provision, it was recalled that the draft provision was intended to solve two practical problems. First, if a transport document or electronic transport record contained the statement "freight prepaid" then it would clarify that banks (and third parties generally) would never become liable for freight; and it would defeat a shipper's unjustified defence to a carrier seeking to collect freight therefrom on the basis that a "freight prepaid" document was a receipt issued by the carrier evidencing that the freight had in fact been paid (see A/CN.9/WG.III/WP.62, para. 57). Support was expressed for the retention of the draft article on the basis that it addressed these practical problems.

Carrier's right of retention and other drafting proposals

80. It was noted that, whilst the draft article, as currently drafted, confirmed that a consignee or other third party did not have an obligation to pay the freight, it did not explicitly exclude the possibility of a carrier asserting a lien or right of retention so as to force the consignee or other third party to pay the freight in order to take delivery. Although some concern was raised regarding inclusion of the right to retention in this provision given the agreement of the Working Group to include it elsewhere in the draft convention (see A/CN.9/594, paras. 114-117), support was expressed for inclusion of text along the lines contained in paragraph 59 of A/CN.9/WG.III/WP.62 to address that situation.

81. It was explained that this provision had been historically limited to negotiable transport documents because it was with respect to them that problems had arisen. However, there was support for the proposal that the draft provision should be extended to cover both negotiable and non-negotiable transport documents and electronic transport records, but that this decision could require reconsideration following a decision by the Working Group on the text of draft article 43 on prima facie or conclusive evidence (in this regard, see the revised text and discussion thereon at paras. 58-68 above). In addition, it was suggested that draft article 45 could include a requirement that parties act in good faith along the lines contained in article 43.

Conclusions reached by the Working Group regarding draft article 45:

82. After discussion, the Working Group decided that:

- The text of draft article 45 should be revised:
 - By incorporating text along the lines of that contained in paragraph 59 of A/CN.9/WG.III/WP.62;
 - By broadening the language to cover both negotiable and non-negotiable transport documents; and
 - By considering the inclusion of a requirement that parties must act in good faith in conformity with article 43.

Shipper's obligations — Chapter 8

Draft article 31. Shipper's liability for delay

General discussion of the problem of liability for delay

83. The Working Group was reminded that it had most recently considered the topic of the shipper's liability for delay at its seventeenth session (see A/CN.9/594, paras. 199-207), and that it had previously considered the topic at its sixteenth session (see A/CN.9/591, paras. 133 and 143-147). It was also recalled that a document containing information relating to delay had been presented by the Government of Sweden (A/CN.9/WG.III/WP.74), and that written proposals on this topic had been submitted for the consideration of the Working Group for this session (see A/CN.9/WG.III/WP.73, paras. 24-27), and at its seventeenth session (see A/CN.9/WG.III/WP.67, para. 22 and A/CN.9/WG.III/WP.69, paras. 8 to 14). The consideration by the Working Group of the provisions on the shipper's liability for delay was based on the text as found draft article 31 in annexes I and II of A/CN.9/WG.III/WP.56.

84. The Working Group recalled that, under draft articles 28 and 30, the shipper was obliged to deliver the goods ready for carriage and to provide the carrier with certain information, instructions and documents. It was further recalled that the shipper's liability for delay, due to breach of those obligations, was regulated in draft article 31, while the carrier's liability for delay was regulated in draft article 22, which had last been considered by the Working Group at its thirteenth session (see A/CN.9/552, paras. 18-31). The Working Group was also reminded that, during its sixteenth session, it had decided that the liability for breach of the shipper's obligations should be generally based on fault with an ordinary burden of proof (see A/CN.9/591, para. 138). Two exceptions to this general rule were that the shipper would be held strictly liable for failure to inform the carrier of the dangerous nature of goods being transported or for failure to mark or label such goods accordingly (see draft article 33), or for loss or damage due to the inaccuracy of information and instructions actually provided to the carrier (see A/CN.9/591, paras. 148 to 150). It was also noted that the liability of the shipper in the present text of the draft convention was not limited, such that the shipper, if found liable, could be exposed to enormous and potentially uninsurable liability for any consequential damage as well as any physical loss that resulted from a breach of the shipper's obligations (see A/CN.9/WG.III/WP.69 generally, and para. 8, and A/CN.9/591, paras. 143-147). The Working Group recalled that, as a consequence of that concern, a proposal had been made at its seventeenth session that, in the

absence of an acceptable limitation on the shipper's liability for economic loss or consequential damages arising from delay, liability for economic loss or consequential damages arising from delay on the part of the shipper and of the carrier should be deleted from the draft convention (A/CN.9/WG.III/WP.69, paras. 8 to 14).

Treatment of delay in other conventions and jurisdictions

85. By way of introduction of A/CN.9/WG.III/WP.74, the Working Group heard that the Hague-Visby Rules did not contain provisions on the carrier's liability for delay, but that the Hamburg Rules did contain such a provision based on fault, and limited to an amount equal to two and one-half times the freight payable for the goods delayed (article 6 (1) (b)), but not exceeding the total freight payable under the contract of carriage of the goods by sea. Further, pursuant to the Hague-Visby and Hamburg Rules, the shipper may be liable on a fault basis for damage caused by delay (see articles 4 (3) and 12, respectively) or on a strict liability basis for loss, including that arising from delay, as a result of providing inaccurate information (see articles 3 (5) and 17 (1), respectively), or from failure to mark, label, or inform regarding dangerous goods (see Hamburg Rules, article 13 (2) (a)). It was further recalled that the liability of the shipper under these provisions was unlimited.

86. The Working Group was also reminded that, while liability for physical loss arising from delay was well known and already included in the draft convention, liability for pure economic loss or consequential damages arising from delay on the part of the shipper or the carrier was not a part of transport law in some legal systems. In those jurisdictions, pure economic loss or consequential damages could only be recovered when they were foreseeable, and when such recovery was referred to in the contract of carriage. It was suggested that inclusion of liability for such damages in the draft convention would constitute a major change to the status quo, and would thus have to be one of the issues in the draft convention that needed to be particularly carefully balanced in its treatment. In response to a question, it was clarified that the main concern of shippers with respect to their potential liability for delay was that their failure to provide timely and accurate information and documentation to the carrier, or that damage to the ship by the goods, could result in delaying the departure of the ship, and that the shipper responsible for the delay would be held liable on an unlimited basis for indemnifying the carrier for any amounts for which the carrier was found liable for delay to all of the other shippers with goods on board that ship.

Three possible options for dealing with delay

87. It was suggested that there were three possible approaches that could be taken in the text of the draft convention with respect to the treatment of liability for pure economic loss or consequential damages caused by delay on the part of the shipper or the carrier.

Option one: no liability for delay on the part of the shipper or the carrier

88. The first option was said to be to leave liability for delay completely outside of the scope of the draft convention, except for the liability for delay as a result of the submission by the shipper of inaccurate information. That approach would entail the deletion of all references to delay, which would mean that the question of liability for delay on the part of the shipper and of the carrier would be left to national law, and there would be no uniformity.

89. Some support was expressed for that approach. However, a disadvantage of this approach was said to be that some of the unimodal regional transport conventions, such as the Convention on the Contract for the International Carriage of Goods by Road, 1956, as amended by the 1978 Protocol (CMR) and the Uniform Rules concerning the Contract for International Carriage of Goods by Rail, Appendix to the Convention concerning International Carriage by Rail, as amended by the Protocol of Modification of 1999 (COTIF/CIM), contained provisions on liability for delay in delivery, which could create discrepancies in States that were parties to those conventions. An additional concern raised with respect to this approach was that in the modern transportation era, a key element was “just-in-time” delivery, which would not be taken into account by the draft convention if it were to remove all liability for delay. In addition, it was observed that simple deletion of all references to liability for delay on the part of the shipper in the draft convention would not necessarily absolve the shipper of liability for delay, given the shipper’s obligations set out in chapter 8, including the shipper’s liability for any loss caused by the goods or by breach of its obligations under draft article 31. If the shipper’s liability for economic loss should be left to national law, the entire chapter on shipper’s obligations, or at least draft article 31, should be deleted.

Option two: retain carrier liability for delay but delete shipper liability for delay

90. A second option was said to be to retain carrier liability for delay in the draft convention, but to delete shipper’s liability for delay and leave it to national law. This approach would leave the carrier with uniform limited liability, which was said to be of greater importance than uniform liability of the shipper for delay, since the primary obligation of the shipper under the contract of carriage was to pay the freight, while the primary obligation of the carrier was to deliver the goods. However, option two was still said to create an imbalance in the treatment of shippers and carriers.

91. In support of option two, it was said that liability of the shipper for delay had not been a great problem in practice. In response, however, it was observed that time was becoming increasingly important in modern transport, and as such, it could become a greater problem in the future. Further, it was noted that while, in theory, the carrier should not be responsible to all of the other shippers for one shipper’s delay, in practice, there was still a risk that the carrier would be held responsible to the other shippers, and would then look to the shipper at fault for compensation. Option two was thus said to be unacceptable because it would be unfair to impose broad liability on the carrier without providing the carrier with recourse against the party responsible for the delay. Additional concerns were raised regarding the importance of weighing the perceived benefits of including shipper liability for delay against the difficulty of proceeding with and proving such a claim, whether or not a limitation on liability was in place.

Option three: retain carrier and shipper liability for delay and find an appropriate limitation level for shipper liability

92. A third option was said to be to have the draft convention cover delay on the part of the carrier as well as on the part of the shipper. Some concern was expressed regarding the inclusion of shipper’s liability for delay, since it was thought that this could affect the non-liner trade where there were often damages for delay, and where it could further affect well-established contractual matters such as responsibility for demurrage and detention. Further, general concerns were

expressed regarding the possibility of creating burdens on the shipper that could be said to exceed those in the Hague-Visby or Hamburg Rules.

93. Some of the advantages of option three were thought to be that the approach would be a uniform one that would provide predictability, certainty and balance to the draft convention. The support expressed for variant three was largely premised on finding an acceptable limitation level for shipper liability. It was suggested, however, to clarify the notion of the words “loss” and “delay” used in draft article 31.

Possible methods to limit shipper's liability for delay

94. A number of suggestions were made in the Working Group regarding how best to establish an appropriate limitation level for the liability of shippers. In general, it was thought that an appropriate limitation level could be fairly low, since it was not the goal of the draft convention to provide full compensation for the economic loss in issue. Further, it was thought that the basis of the limitation level should be high enough to provide an incentive for a shipper to do its utmost to meet its obligations under the draft convention.

95. One approach that was suggested was to hold the shipper fully liable for physical loss, such as loss and damage to the ship and other equipment, but limiting the shipper's liability for pure economic loss to an amount equal to the value of the goods shipped. Disadvantages of this approach were thought to be that it could create a certain disparity, since cargo of low value could cause as much damage as cargo of high value, and that it could be difficult to establish the value of the goods. But an advantage was thought to be that it would be equitable that shippers of large volumes of more expensive goods would have to take on greater risk. A further advantage was said to be that the value of most commodities in the liner trade was quite stable over time, and a Special Drawing Rights (SDR) approach could be avoided.

96. Another possible approach to establishing a limitation level for shipper's liability was thought possible by linking it to the amount of the freight payable on the goods shipped, similar to the approach to limit the carrier's liability for delay in draft article 65. One problem with this approach was thought to be that freight rates varied considerably over time, and that this limitation amount was in any event likely to be too low.

97. It was proposed that a further possibility for establishing an appropriate limitation level for shipper's liability would be to use the same limitation of liability as for the carrier in the case of loss or damage to the goods as set out in draft article 64. While the situation of the liability of the shipper for delay could not be said to be the same as that of the carrier for loss or damage to the goods, the advantage of this approach was said to be that it would be fair, and that it was well known and predictable. It was observed that this approach had been taken in one domestic system, and that the results there had not been entirely successful.

98. An additional approach suggested for the establishment of a limitation amount was to simply take a fixed sum at a reasonably insurable rate. Again, the advantages of such an approach were thought to be certainty and predictability.

99. A suggestion was made that the limitation level established for the liability of the shipper should extend to all of its potential liabilities, including those for physical loss. That suggestion received some support. Another suggestion was to

include a provision outlining the circumstances in which that limit could be exceeded. This suggestion was not taken up by the Working Group, nor was a suggestion that demurrage should be linked to delay, and thus subject to a limitation level.

Conclusions reached by the Working Group regarding the treatment of liability for economic or consequential loss occasioned by delay:

100. After discussion, the Working Group decided that:

- The approach to the treatment of liability for pure economic loss or consequential damages caused by delay on the part of the shipper or the carrier set out as “option three” should be pursued as the optimal approach for the draft convention, subject to the Working Group’s ability to identify an appropriate method to limit the liability of the shipper for pure economic loss or consequential damages caused by delay.

Proposals regarding the identification of an appropriate limitation level for shipper liability for delay

101. The Working Group recalled its earlier decision that the approach to the treatment of liability for pure economic loss or consequential damages caused by delay on the part of the shipper or the carrier set out in “option three” (as described in A/CN.9/WG.III/WP.74 and discussed in paras. 92-93 above) should be pursued as the optimal approach for the draft convention, subject to the Working Group’s ability to identify an appropriate method to limit the liability of the shipper for pure economic loss or consequential damages caused by delay.

102. The Working Group was reminded that the proposal to retain shipper liability for delay was to accommodate those jurisdictions where liability for pure economic loss arising from delay on the part of the shipper or the carrier was not recognized unless foreseeable, and such recovery was referred to in the contract of carriage. In such jurisdictions carriers were concerned that, where a shipper was responsible for a delay, the carrier could nevertheless be found liable under the draft convention in respect of that delay to all of the other shippers with goods on board that vessel. Shippers in those jurisdictions were equally concerned about a potentially very high exposure to liability in a recourse action brought by the carrier.

103. It was proposed that any provision on carrier liability for delay should include clarification that the carrier would not be liable for loss or damage to the extent that it was attributable to an act or omission of another shipper. That proposal received support although a concern was expressed that such clarification was unnecessary and might be confusing, given that such an exclusion was already encompassed within the general principle contained in draft article 17 (1), which relieved the carrier of all or part of its liability if it proved that “the cause or one of the causes of the loss, damage or delay is not attributable to its fault or to the fault of any person referred to in article 19”. However, it was suggested that as draft article 17 could be subject to differing judicial interpretation which nevertheless found a carrier liable, perhaps for an overall failure to put into place systems to prevent such a delay, the clarification would still be helpful.

104. It was noted that the intention behind such a provision was only to create a limit in respect of economic loss due to delay but that that limit would not apply to physical or consequential losses due to breach of other contractual obligations such as failure to inform the carrier of the dangerous nature of goods being transported or

failure to mark or label such goods accordingly (see draft article 33) for which the shipper should be subject to strict unlimited liability (see para. 95 above). Further, the shipper would still be liable for consequential loss resulting from physical damage to the vessel, other cargo or personal injury, in respect of any breach of its obligations under articles 28, 30 and 32.

Possible limitation on shipper's liability for delay

105. Recalling the Working Group's earlier discussion on possible methods to limit the shipper's liability for delay (see paras. 94-100 above), it was suggested that a fixed sum of 500,000 SDRs could be considered. It was explained that the reason for proposing a fixed sum was that it had proven difficult to tie the limitation level to the weight or value of the goods or to the freight, as neither of these factors necessarily corresponded with the risk in question. For example, a shipper who shipped waste might cause the same amount of damage as a shipper who shipped electronic equipment. It was noted that, whilst this figure was somewhat arbitrary, the amount chosen was based on the average freight rates for a container of between 1,500 and 3,000 US dollars, and that the total amount of the limitation was thought to be sufficient to ensure shippers were fully liable for ordinary delay cases, but to protect them from excessive exposure in extraordinary cases.

106. It was suggested that insurers be consulted for their views on whether that figure suggested for the limitation was appropriate, or on whether a general limitation on all of the shipper's liability for pure economic loss would be more appropriate. It was suggested that it might be necessary to undertake a cost-benefit analysis of the proposal to determine whether the proposed limitation amount represented an insurable risk and whether or not it would affect freight rates and impact negatively on international trade. In response to a proposal that a general limitation for all liability of the shipper arising from delay might be more appropriate, it was said that such an approach might necessitate a higher limitation to accommodate the relatively remote chance of extraordinary losses.

Proposal regarding recoverability of damages

107. It was noted that the draft convention did not expressly refer to the issue, but that, as in various domestic jurisdictions, foreseeability and causality should be necessary elements for a successful claim for damages. It was said that the draft convention should contain a provision to clarify that the issue of recoverability of pure economic loss was not dealt with in the draft convention and was therefore referred to national law. To clarify such issues, a proposal was made to add an additional provision to the draft convention along the following lines: "Without prejudice to article 23, nothing in this Convention prevents the application of the rules regarding the scope of recoverable damages under the applicable law". It was suggested that that principle should be applicable to both carriers and shippers and that the Secretariat should examine how that principle would apply to the liability regimes covered under the draft convention.

108. A question was raised as to what was meant by the term "applicable law" under the proposal and whether it referred to the contractual law or the law of the forum. In that respect, it was suggested that, as the assessment related to economic loss, reference should be made to law of the forum. A suggestion was made that that question be left to interpretation by the courts. As well, a concern was raised that the proposal could have the effect that there would be no liability in respect of delay at all where, under the applicable law, there was no liability for economic loss.

Proposal on freedom of contract

109. A question was raised whether the limitation on the shipper's liability should be subject to freedom of contract. As noted below (see paras. 190-194 below), the Working Group decided during its consideration of draft article 65 (which dealt with limitation of liability for loss caused by delay of the carrier) to retain the phrase "unless otherwise agreed" in square brackets until the Working Group had decided whether or not liability for delay on the part of the shipper was to be included in the draft convention. It was proposed that, if draft article 65 permitted a carrier to include a clause in its bill of lading that excluded or reduced its liability for delay, that exclusion or limitation should automatically benefit the shipper by a proportionate reduction in its liability for delay. It was suggested that creating a two-way benefit in such a provision would enhance the acceptability of the phrase "unless otherwise agreed" in the text in terms of draft article 65.

The "package" of three proposals

110. It was said that the proposals to render the liability limit subject to freedom of contract and to limit unduly remote damages pursuant to applicable law were complementary. It was noted that article 23 set out a calculation for determining the compensation payable by the carrier in respect of loss or damage to the goods. It was noted that the carrier might also be liable for other losses, and that the proposed provision with respect to the preservation of national rules regarding the causality and foreseeability of damages made explicit what had been implicit under the draft convention.

111. While the Working Group expressed generally positive views about the entire package of three proposals regarding the establishment of a limitation on the shipper's liability for pure economic loss arising from delay, some concerns were raised regarding the proposal on freedom of contract. Some doubts were expressed about how the principle of proportionality would work in practice, particularly in situations where, for example, the contractual freedom was used to choose another measurement for the loss entirely. There was also some concern whether this approach would be appropriate in general, and it was said that it would be necessary to examine the proposed new text carefully.

112. There was support for the view that any text should make clear that the limitation on the shipper's liability did not extend to contractual obligations, such as demurrage or damages for the detention of a vessel arising out of a charter party. It was also agreed that no final decision on the proposals could be taken until a written text was available.

Conclusions reached by the Working Group regarding the three proposals pertaining to the limitation of the shipper's liability for delay:

113. After discussion, the Working Group decided that:

- On the basis of the above discussions, a written proposal on the issue of a limitation on the shipper's liability for delay should be prepared for consideration at a future session;
- In addition, text should be prepared both regarding the preservation of national rules with respect to the recoverability of pure economic loss, and with respect to the possibility of freedom of contract for the adjustment of the limitation on both the

shipper's and the carrier's liability, as linked with the term "unless otherwise agreed" in draft article 65.

Rights of suit — Chapter 14

114. The Working Group had before it chapter 14 comprising draft articles 67 and 68 as currently drafted and contained in A/CN.9/WG.III/WP.56 and an information document concerning this issue in A/CN.9/WG.III/WP.76. The Working Group recalled that it had exchanged preliminary views on the issue of right of suit at its ninth session (A/CN.9/510, paras. 58 to 59) and undertaken a detailed discussion on the issue at its eleventh session (A/CN.9/526, paras. 149 to 162).

115. Before turning to consider the draft chapter substantively, the Working Group considered the question whether its provisions should be retained at all. In that respect, it was recalled that at previous sessions of the Working Group there had been support for deleting the draft chapter altogether (see A/CN.9/WG.III/WP.56, footnote 237; and A/CN.9/526, paras. 152 and 157).

116. It was pointed out that the draft chapter attempted to offer uniform solutions for important practical issues for which various legal systems offered different solutions. It had, however, become apparent that the purpose of the chapter, however laudable, was overly ambitious and that it was unlikely that the Working Group could reach a consensus on the substance dealt with therein.

117. Although certain aspects of draft article 67 could be incorporated into the provisions set forth in chapter 6 regarding liability of the carrier, there was strong support for the deletion of chapter 14 from the draft convention. There were, however, expressions of regret that, by deleting the draft chapter, the draft convention would leave a number of problems relating to the right of suit for possibly diverging domestic laws. For example, often it might be wrongly assumed that the holder of a bill of lading had an exclusive right of suit. Also, in respect of a non-negotiable document, uncertainty would remain as to whether a person that was not party to a contract of carriage but had suffered damage, had a right of suit.

Conclusions reached by the Working Group regarding draft chapter 14:

118. After discussion, the Working Group decided that:

- Chapter 14 be deleted in its entirety;
- Certain aspects of article 67 could be considered for incorporation into chapter 6 (liability of the carrier).

Time for suit — Chapter 15

119. The Working Group had before it chapter 15 comprising draft articles 69 to 71 as currently drafted and contained in A/CN.9/WG.III/WP.56 and an information document concerning this issue in A/CN.9/WG.III/WP.76. The Working Group recalled that it had exchanged preliminary views on the issue of time for suit at its ninth session (A/CN.9/510, para. 60) and undertaken a detailed discussion on the issue at its eleventh session (A/CN.9/526, paras. 163 to 182). It was recalled that the need for the draft chapter had not been questioned in previous sessions of the Working Group.

Types of claims to be covered

120. The Working Group began its deliberations by considering the proper scope of the chapter, in particular what types of claims should be covered.

121. There was general agreement within the Working Group that the draft chapter should apply to claims relating to a contract of carriage arising under the draft convention. Other types of claims between the shipper, the carrier and the maritime performing party (for example, for unpaid freight) should remain unaffected by the draft chapter.

122. The Working Group proceeded to consider whether the limitation period should apply only to claims against the carrier or the maritime performing party, or should also extend to claims made against shippers. The Working Group was reminded that that issue had been considered at its eleventh session (see A/CN.9/526, para. 166).

123. Some support was expressed for restricting the scope of the chapter to claims made against the carrier and the maritime performing party, with the time for suit for all other claims being left to national law. In support of that approach, it was suggested that whilst claims against carriers, which in most cases related to cargo loss or damage, were largely standardized, potential claims against shippers, for instance, as a result of delay attributable to inaccurate information or of damage caused by dangerous goods to a vessel, might cover a much broader spectrum of situations. Such claims might therefore require extensive investigation on the part of the carrier, needing longer than ordinary cargo claims to be properly prepared. They should not, therefore, be subject to a limitation period under the draft convention.

124. Against such restriction it was suggested that the scope should, in the interests of predictability and equal treatment of all parties to a contract of carriage, cover claims against both carriers and shippers. It was said that differences in the nature of the claims that could be brought against shippers as compared to those that could be brought against carriers was not relevant given that the chapter did not require a case to be fully argued within the limitation period, but merely introduced a time period within which judicial or arbitral proceedings should be commenced.

125. The Working Group considered the arguments advanced in favour of both propositions. It eventually agreed that the draft convention should cover claims against both the carrier and the performing party as well as claims against the shipper.

Duration of limitation period

126. The Working Group then turned to the question of the appropriate time during which a suit might be brought. There was some support for the suggestion that different time limits should be provided depending on the nature of the claim. It was said that a longer period of time (possibly two years) would be appropriate with respect to claims against shippers given their likely more complex nature, while a shorter time period of one year could be adopted in respect of claims against carriers. The prevailing view within the Working Group, however, favoured the inclusion of one time period that applied to all parties. Support was expressed for the proposal to apply a limit of one year to all claims, since this was the period currently used in many jurisdictions. A longer period it was said, might impact negatively on settlement of claims, given the tendency observed in practice of delaying the submission of claims for settlement until shortly before the limitation

period expired. The prevailing view within the Working Group, however, was that the potential complexities arising in relation to claims against the shipper might be better taken into account by a limitation period of two years for all claims.

Draft article 69. Limitation of actions

127. The Working Group proceeded to examine the two variants of article 69 as contained in A/CN.9/WG.III/WP.56 and reproduced in paragraph 19 of A/CN.9/WG.III/WP.76. Several issues were considered in relation to article 69. It was noted that Variant A referred to the carrier or shipper being “discharged from liability” if judicial or arbitral proceedings were not instituted within one year. By contrast Variant B referred to “rights” (or “actions”) being “extinguished” (or “time-barred”) if judicial or arbitral proceedings were not commenced within one year.

128. The Working Group recalled that several substantive questions arose in choosing between the variants. It was recalled that the distinction between a “limitation period” and the extinguishment of a right had been discussed at a previous session of the Working Group and that the difference might affect the applicability of the time period or the choice of applicable law (A/CN.9/526, para. 167).

129. The Working Group heard differing views as to the manner in which the principle of a limitation period should be formulated. It was pointed out that there was no uniformity among legal systems as to the nature and effect of a limitation period. While in some legal systems the expiry of a limitation period typically extinguished the right to which the limitation period related, in other legal systems a limitation period only deprived the entitled party of the possibility to enforce its right through court action. Some legal systems applied both rules, depending on the nature of the claim, some being extinguished, while others became unenforceable. It was further pointed out that such a distinction had a number of practical consequences, such as whether a party to a contract whose claim was affected by the limitation period still retained the possibility of invoking its claim, even though time-barred, as a defence in order to obtain a set-off in a claim asserted by the other party to the contract. That possibility existed for claims that were only rendered unenforceable by a limitation period, but was not available when the underlying right was extinguished.

130. There was some support for adopting a rule to the effect that the claimant’s rights under the draft convention would be extinguished by the limitation period, and that, accordingly, the approach taken in Variant A should be adopted. This would mean, in practice, that the party whose right had been extinguished could not use that “time-barred” claim by means of a set-off. Prohibition of the use of “time-barred” claims by means of set-off was said to be supported by the precedent of other international instruments on carriage of goods, in particular the CMR and the Budapest Convention on the Contract for the Carriage of Goods by Inland Waterway, 2000 (CMNI), which expressly precluded set-off of time-barred claims.

131. However, the prevailing view was that draft article 69 should only affect the enforceability of the claimant’s right and that, accordingly, the approach taken in Variant B, subject to retaining only reference to “action” rather than “right” was preferable. That approach, which would preserve the claimant’s right to set-off, was said to be consistent with the solution adopted in the Convention on the Limitation Period in the International Sale of Goods. It also had the advantage of not preserving the parties’ right to choose whether or not to file a claim on the basis of

the party's assessment of the expected benefit, as compared to the costs of the claim. Without the possibility of set-off, parties might be enticed to file even uneconomical claims in order to protect themselves against the possibility of a claim by the other party to the contract.

132. The question was raised as to whether the limitation period provided in the draft convention would be capable of being suspended or interrupted and, if so, under what circumstances. It was said that various legal systems provided a number of possibilities for suspending or interrupting a limitation period, or even making the period start to run again from zero. Given the variety of solutions found under domestic law, there was support for the suggestion that that matter should be left to domestic law. In that connection, it was suggested that the draft convention could include a provision indicating which law should govern that question, in which case a choice should be made between the law applicable to the contract rather than the law of the forum. The Working Group was mindful of the diversity of domestic laws on the question of suspension or interruption of limitation periods, but was generally of the view that the draft convention should offer a uniform rule on the matter, rather than leave it to domestic law. The general agreement within the Working Group was that the draft convention should expressly exclude any form of suspension or interruption of the limitation period, except where such suspension or interruption had been agreed by the parties under draft article 71.

Conclusions reached by the Working Group regarding draft article 69:

133. After discussion, the Working Group decided that:

- Draft article 69 should extend to claims both against the carrier and the shipper;
- The time period be fixed at two years for both types of claims;
- Variant B, without references to extinguishment of "rights" should be used as a basis for expressing the principle of limitation period;
- No suspensions or interruptions of the limitation period should be allowed, except as agreed by the parties under draft article 71;
- The party whose claim was time-barred under draft article 69 should nevertheless retain the possibility of set-off; and
- The Secretariat should prepare a revised version of the draft article, taking into account the above considerations.

Draft article 70. Commencement of limitation period

134. The Working Group noted that draft article 70 which provided for the commencement date of the limitation period had been discussed at its seventeenth session (A/CN.9/526, para. 170). At that time, preference had emerged for a commencement date that was linked to the date of actual delivery rather than the date of delivery stipulated in the contract of carriage, supplemented by a rule that referred to the contractual date of delivery in cases where there was total loss of the goods. An outstanding question in this regard was thought to be whether the same commencement date should be used for claims against the carrier, the maritime performing party and the shipper.

Claims against the carrier and maritime performing party

135. It was generally agreed that the purpose of the provision was to provide certainty by way of an easily determinable commencement date on which a person wishing to bring a claim could bring such a claim, and a person against whom a claim might be made would know whether or not that claim was to be made, so that the expiration of the period would be equally certain and predictable.

136. The question was asked, however, as to whether it was sufficiently clear that the draft article intended to refer to the date of actual delivery. It was said that the cross-reference to draft article 11, paragraphs 4 or 5, on the period of responsibility, obscured that intention, to the extent that such cross-reference might link the notion of “delivery” for the purposes of draft article 70, to the provisions in the contract of carriage that defined the date of delivery. In that respect, it was noted that a court, in determining the question of what constitutes delivery, might refer back to draft article 11 in any event. The Working Group agreed that the draft article should only refer to “delivery”, without reference to draft article 11, paragraphs (4) or (5), since the notion of “delivery”, which was also used in a similar context in article 3 (6) of the Hague-Visby Rules and article 20 (3) of the Hamburg Rules, was well understood and had been amply clarified in case law.

137. A proposal was made that in the case of total loss of the goods, reference could be had to the date on which the carrier took over the goods as the commencement date instead of “completed delivery”. A further proposal was made to use the date on which the carrier took over the goods for the commencement date for both regular claims and cases of total loss. It was said that a reference to the date on which the carrier took over the goods, which should be stated in the contract particulars pursuant to draft article 38, subparagraph (1) (f)(i), would provide an objectively verifiable element for determining when the limitation period would commence and would better promote legal certainty than a reference to “delivery”, which might require a finding of fact. Further, it was thought that the decision of the Working Group to set the limitation period at two years would provide sufficient time to cover the earlier commencement date in this case. That proposal received some support, but a potential problem was thought to be that the limitation period would start running prior to the right to claim arising. Overall, the Working Group preferred to retain the well-known approach of the date of actual delivery as taken in the Hague-Visby Rules and in the Hamburg Rules on the basis that these represented well-tested formulations. However, there was support for future consideration of using the date that the carrier took over the goods as the commencement date in the case of total loss.

138. Some support was expressed for the text used in the Hamburg Rules in that it contained a reference to partial delivery not expressly dealt with in draft article 70 as currently drafted.

139. It was recalled that as currently drafted, article 70 contained a specific rule for situations of total loss of the goods, since in such cases there would obviously be no “delivery”. The default rule in the draft article tied the limitation period to the “[last] day on which the goods should have been delivered”. The view was expressed that the phrase “should have been delivered” might be ambiguous. In response, it was pointed out that the reference to the date when the goods “should have been delivered” was an accepted default provision for situations of total loss, as it made the contractual date of delivery, which should be verifiable from the contract particulars, the starting point for the limitation period. The reference to the

“last” day on which goods should have been delivered, it was further explained, had been included so as to accommodate situations where goods were not required to be delivered at a specific date, but within a certain time, such as in a particular week or month.

140. Some doubts were expressed as to whether the same commencement date should also apply for claims against a maritime performing party. The advantage of one uniform commencement period was that it was said to meet the practical concern of providing predictability and certainty. However some doubts were raised about a uniform commencement period starting before the maritime performing party had received or taken custody of the goods. Some considered that the limitation period should only commence as against maritime performing parties on the date on which damages could be sought. It was noted that whilst that might be true, given that the Working Group had decided on a two-year period and that the date referred only to the commencement of the limitation period, applying the same date would not be too onerous.

Claim against shipper

141. It was recalled that doubts had been raised as to whether the time of delivery was relevant for the limitation period for claims against the shipper (A/CN.9/526, para. 173). It was suggested that, given the different nature of claims that could be made against shippers compared to those that could be made as against carriers, a different commencement period should apply relating to the date on which damages occurred. Generally, it was said that in accordance with well-established principles of law, a limitation period only started to run when the relevant party against which the limitation period operated had accrued a claim against the other party. Given the greater diversity of possible claims by carriers against shippers, as compared to the more standard nature of cargo claims, the Working Group should attempt to devise specific rules. A general rule that referred to the time when the carrier’s claim against the shipper accrued could also be used, if the formulation of more specific rules was not deemed to be feasible. There was some support for that proposal.

142. The countervailing view, however, was that, in the interest of enhancing legal certainty and predictability it would be preferable to provide for the same commencement date for claims against the shipper as for those against the carrier. It was pointed out that in most cases acts by the shipper that might cause damage to the carrier, such as failure to provide information on the dangerous nature of the goods, or appropriate instructions for handling them, would typically occur well before the delivery of the goods, so that, in practice, the carrier already benefited from the fact that the limitation period would not commence before delivery of the goods. Furthermore, it was said that the date of delivery, which was a material event easily ascertainable, better promoted legal certainty than a reference to the time when the shipper breached its obligations or caused damage to the carrier, which would inevitably vary from case to case. The Working Group concurred with the latter view and agreed that the same commencement date should apply to both claims against the shipper and claims against the carrier.

Conclusions reached by the Working Group regarding draft article 70:

143. After discussion, the Working Group decided to:

- Retain the text in draft article 70 but revise it to remove references to article 11 and to take account of the wording in article 20 (2) of the Hamburg Rules; and

- Retain the term “last” and remove the square brackets.

Draft article 71. Extension of limitation period

144. It was observed that a provision that enabled parties to extend the limitation period existed under the Hague-Visby Rules (article 3 (6)) and the Hamburg Rules (article 20 (4)). It was noted that draft article 71 was largely based on the Hamburg Rules in that it permitted a person against which a claim was made to extend the limitation period by declaration any time during the running of the limitation period. It was noted that draft article 71 differed from the Hague-Visby Rules which required an agreement and might permit an extension even after the lapse of the limitation period.

145. In response to a question as to the form requirement for the declaration in article 71, it was pointed out that draft article 3 required the declaration to be in writing but also admitted electronic communications.

146. The Working Group considered the form requirement appropriate.

Conclusions reached by the Working Group regarding draft article 71:

147. After discussion, the Working Group decided that the existing text of draft article 71 should be maintained.

Draft article 72. Action for indemnity

148. The Working Group recalled that draft article 72 provided for a special extension of the time period with respect to recourse action so that, for example, the carrier had sufficient time to bring an action against a sub-carrier when the action against the carrier was brought immediately before the lapse of a limitation period. It was recalled that a similar rule existed in both the Hague-Visby Rules (article 3 (6 bis)) and the Hamburg Rules (article 20 (5)).

149. The Working Group had before it two variants (as contained in A/CN.9/WG.III/WP.56 and reproduced in A/CN.9/WG.III/WP.76, para. 47). It was noted that the variants provided for a different commencement date for the additional 90 days after the expiration of the period contained in article 69.

150. It was recalled that Variant B had been drafted to meet the concern of certain civil law countries where an indemnity action could not be commenced until after the final judgment was rendered. However, paragraph (a) of draft article 72 was said to adequately address that situation by referring to the time allowed by the applicable law in the jurisdiction where proceedings were instituted.

151. To enhance certainty, a proposal was made that a requirement for early notification to the person against whom a claim for indemnity might be sought should be included to allow that person to preserve evidence that might otherwise be lost during the period. It was suggested that that notice be provided within 90 days after the end of the limitation period and that that period not be subject to extension. That proposal received some support.

Conclusions reached by the Working Group regarding draft article 72:

152. After discussion, the Working Group decided that:

- Variant B be deleted; and

- Variant A be retained and revised to include possible variants relating to providing notice of the original action.

Draft article 73. Counterclaims

153. It was recalled that draft article 73 was based on the suggestion made at the eleventh session of the Working Group that the draft convention should address counterclaims and that these types of claims should be treated in a similar fashion to recourse actions (see A/CN.9/526, para. 177).

154. Concerns were expressed that, as drafted, draft article 73 was unclear and too broad. It was suggested that draft article 73 should be revised to limit it to counterclaims that were instituted for set-off. It was recalled that the Working Group had already decided in draft article 69 to retain a reference to “action” rather than “right” which would preserve the claimant’s right to set-off and thus that draft article 73, in its present form, was now otiose. It was agreed that the placement of such a provision on set-off would need to be considered by the Working Group at an appropriate stage.

Conclusions reached by the Working Group regarding draft article 73:

155. After discussion, the Working Group decided that:

- A revised version of draft article 73 dealing with a rule on set-off be prepared and that that version either be located in draft article 73 or at another appropriate place in the draft convention.

Article 74. Actions against the bareboat charterer

156. It was recalled that article 74 addressed the concern that the limitation period might expire before a claimant had identified the bareboat charterer that was the responsible “carrier” under draft article 40 (3). It was agreed that the text in article 74 be modified to take account of the Working Group’s decision to reformulate paragraph 40 (3) (see paras. 17-25 and 28 above) and that the revised version of draft article 74 be retained in square brackets for consideration at a future session.

Conclusions reached by the Working Group regarding draft article 74:

157. After discussion, the Working Group decided that the text in draft article 74 be retained in square brackets and be revised in accordance with its decision taken in relation to draft article 40 (3).

Possible additional article with regard to the removal of actions pursuant to draft article 80 (2)

158. The Working Group recalled that at its sixteenth session, a proposal had been made that the draft convention should provide for the treatment of the time limitation for suit in connection with the removal of actions pursuant to draft article 80 (2) (see A/CN.9/591, para. 57).

159. It was suggested that, in general, any action which could be removed under draft article 80 (2) would be a declaratory action to deny the carrier’s liability and would not include legitimate actions against the shipper such as a claim for liability under chapter 8 (see A/CN.9/591, paras. 57-59). The Working Group agreed that it

was not necessary to have a special rule in connection with the removal of actions pursuant to draft article 80 (2).

Conclusions reached by the Working Group regarding possible additional article:

160. After discussion, the Working Group decided no additional article was required in relation to removal of action.

Limitation of carrier's liability — Chapter 13

161. The Working Group was reminded that it had most recently considered the topic of the limitation of the carrier's liability at its thirteenth session (see A/CN.9/552, paras. 25-31 and 38-62), and that it had previously considered the topic at its tenth session (see A/CN.9/525, paras. 65-70 and 81-92). It was also recalled that a document containing information relating to delay had been presented by the Government of China (A/CN.9/WG.III/WP.72), and that written proposals on this topic had been submitted for the consideration of the Working Group for this session (see A/CN.9/WG.III/WP.73, paras. 29-36, and A/CN.9/WG.III/WP.77). The consideration by the Working Group of the provisions on the limitation of the carrier's liability was based on the text as found in annexes I and II of A/CN.9/WG.III/WP.56.

Draft article 64. Basis of limitation of liability

Paragraph (1)

162. It was noted that paragraph (1) of draft article 64 provided a method for calculating the limitation level of the liability of the carrier. As in the Hague-Visby and the Hamburg Rules, the approach contemplated that calculation on the basis of both a per kilogram and a per package basis of the goods lost or damage, allowing for limitation of liability based on the higher of the two amounts as calculated. It was further recalled that paragraph (1) provided for an exception when the "nature and value" of the goods lost or damaged had been declared by the shipper before shipment and included in the contract particulars, or when a higher amount had been agreed upon by the parties to the contract of carriage. The Working Group agreed that the final amount of the limitation on liability to be inserted into paragraph (1) should be considered as an element of the overall balance in the liability regime provided in the draft convention, and thus agreed to proceed with its consideration of paragraph (1) without making specific reference to numbers or amounts at this stage of the discussions. In addition, factors that were said to be worthy of consideration in this regard were the tacit amendment procedure for the level of the limitation on the carrier's liability as found in draft article 104 of the draft convention, which offered additional flexibility for future adjustments of the liability limits, and the rule for non-localized loss or damage found in paragraph (2) of draft article 64.

General comments

163. The Working Group was reminded of the general principle for which a limitation on the carrier's liability was included in the draft convention and in other transport conventions. It was said the primary purpose of such provisions on limitation of liability was to regulate the relationship between two commercial parties in order to entitle each of them to obtain a benefit. It was recalled that,

without the benefit of a limitation on liability, the carrier would be fully liable for all loss or damage, and that where such goods were in containers, the carrier would have no knowledge regarding their contents, thus potentially exposing the carrier to very high and unexpected risks. Rather than pay expensive insurance costs, and in order to share the burden of that potentially very high risk, the carrier would have to apportion it to every shipper through an increase in freight rates. By allowing for a limitation of the carrier's liability, this allocation of risk allowed the costs of both shippers and carriers to be reduced, with the trade-off that full compensation for high-level losses would not be possible. It was further observed that the aim of an appropriate limitation on liability would reduce the level of recovery for some claims to the limitation amount, but that it would not so limit too many claims. It was also noted that the optimal limitation level would be high enough to provide carriers with an incentive to take proper care of the goods, but low enough to cut off excessive claims, yet to provide for a proper allocation of risk between the commercial parties.

164. The view was expressed that the limits of liability provided in the Hague or Hague-Visby Rules have proven to be satisfactory. It was observed that the limitation on the carrier's liability that appeared in paragraph (1) allowed for a limitation level on a per package or a per kilogram basis, whichever was higher. It was recalled that the Hague Rules contained only a per package limitation, while the Hague-Visby and Hamburg Rules contained both per package and per kilo limitation provisions, but that each of those conventions predated the advent of modern container transport. The importance of this was said to be that prior to widespread containerization, most goods were shipped in a crate or a large wooden box that counted as one package, while with the widespread use of containers, the per package limitation level was instead based on the number of packages inside the container. This development in practice increased the amounts recoverable from the carrier, as compared with the per kilogram limitation level or pre-container per package limitation would have allowed.

165. In further support of the view that the limits of liability provided in the Hague or Hague-Visby Rules were satisfactory, it was said that the limitation levels of other transport conventions, such as the CMR or the COTIF/CIM conventions, were not directly comparable to those in the maritime transport conventions, since several of the unimodal transport conventions included only per kilogram limitation levels. Thus, it was said, while the per kilogram limitation level was much higher than the Hague-Visby level, in fact, the level of recovery was much greater under those conventions that allowed for a per package calculation of the limitation level. It was also said that certain other conventions, such as the Convention for the Unification of Certain Rules for International Carriage by Air, 1999 (Montreal Convention), at 17 SDRs, set a high limitation level in comparison with other transport conventions, but that it also contained provisions rendering its limitation on liability incapable of being exceeded, even in the case of intentional acts or theft, and that the freight payable for the mode of transport covered by those other transport conventions was much higher than under the maritime transport conventions. Further, it was observed that it could be misleading to compare the regimes from unimodal transport conventions, since each convention contained provisions that were particularly geared to the conditions of that type of transport. In this regard, it was noted that it would be helpful to obtain actual figures with respect to recovery in cases of loss or damage to the goods, and to what extent the per package and per kilogram limits had been involved in those recoveries, but that such information had been sought from various sources and was difficult to obtain. The view was also expressed that,

since the transport covered during the door-to-door carriage of the goods could be multimodal, that it might be useful to consider the limitation amounts of other unimodal transport conventions, particularly in reference to cases of non-localized loss or damage to the goods.

166. It was further observed that, through the method in which the goods were packed for shipment, the shipper could essentially unilaterally choose whether any claim for loss or damage would be on the basis of a per package or a per kilogram calculation. In addition, it was noted that while it was not an opportunity of which shippers often availed themselves; a shipper always had the option to declare the value of the cargo it was shipping, or to agree with the carrier on a different limitation level, and thus to avoid falling within the rules for the limitation of the carrier's liability set out in paragraph (1).

167. In further support of the adequacy of the liability limits of the Hague-Visby Rules, it was suggested that, in the bulk trade, the average value of cargo had not increased dramatically since the time of earlier maritime conventions, and that, in the liner trade, the average value of the cargo inside containers had not increased dramatically either.

168. Another strongly supported view, however, was that an increase in the liability limits under the Hague-Visby Rules would be appropriate. It was noted that since broad containerization had meant that cheaper goods could be transported in containers more economically than in the past, examination of figures such as the average value of goods over time could be misleading in attempting to decide upon an equitable limit for the liability of the carrier. It was also pointed out that the value of high-value cargo had increased over the past number of years, and that inflation had also clearly affected the value of goods and depreciated the limitation amounts since the adoption of existing maritime transport conventions, which had been negotiated decades ago. There was support for the view that those factors should be taken into account when considering at what level the limitation in paragraph (1) should be set, and that an increase in the limitation level in traditional maritime conventions should be considered by the Working Group. There were, however, diverging views as to the parameters for such an increase. While there were suggestions that only a moderate increase might be conceivable, there were also views that the liability limits should be based on the amounts set forth in the Hamburg Rules, or above them.

169. In addition to the historical and commercial issues discussed by the Working Group in its consideration of the factors involved in choosing an appropriate level for the limitation of the carrier's liability, the Working Group was encouraged to take into account certain additional factors. In particular, it was said that regard should be had to the need to ensure broad acceptability of the draft convention, such as through careful consideration of the level of the limitation on the carrier's liability in relation to earlier maritime transport conventions. There was support for the view that it was preferable to strike a middle ground in choosing an appropriate limitation level, which might require an increase from levels in historical maritime conventions.

170. A note of caution was voiced that setting the limitation level for the carrier's liability at the level set forth in the Hamburg Rules, which currently governed only a relatively small fraction of the world's shipping, would represent a significant increase for the largest share of the cargo in world trade, which was currently governed by the lower limits of the Hague-Visby Rules, or even lower limits, as was

the case in some of the world's largest economies. However, concern was expressed that anything other than increasing the level of the limitation from previous maritime conventions might be perceived as a move backwards rather than forwards.

171. Having heard those views, the Working Group concluded its discussions by emphasizing their merely indicative nature, at the present stage of the deliberations, and reiterating its understanding that any decision on the limit of liability was to be treated as an element of the overall balance in the liability regime provided in the draft convention.

“nature and value of the goods”

172. A question was raised about the use of the phrase “nature and value of the goods” in paragraph (1), and how that phrase differed from that of “a description of the goods” as found in draft article 38 (1) (a) regarding contract particulars. It was suggested that the term used in draft article 64 (1) should mirror that of draft article 38 (1) (a), since, it was suggested, use of a different term could cause confusion regarding the intention of the shipper with respect to the declared value of the goods. Some reservations were expressed regarding this analysis, as it was thought that since draft article 38 concerned what had been taken into the carrier's custody and what was being transported, rather than a specific declaration of value, a clear difference in the terms used should be retained. However, a suggestion to clarify the drafting and the terms used, possibly by simply deleting the reference to “nature”, received support in the Working Group.

Per package and per kilogram

173. Although the suggestion was made that a final decision on the liability limit might be facilitated by retaining only the weight of the goods as an element to calculate the carrier's liability, the Working Group generally agreed that both package and weight should be retained for the Working Group's further consideration.

Conclusions reached by the Working Group regarding draft article 64 (1):

174. After discussion, the Working Group decided that:

- The mechanism set out in draft article 64 (1) for calculating the limitation level for the carrier's liability was approved;
- The phrase “nature and value of the goods” should be adjusted in keeping with the text set out in draft article 38 (1) (a); and
- A final decision on the limitation level for the carrier's liability would be made on the basis of the entire package of rights and obligations contained in the draft convention.

Paragraph (2)

175. The Working Group next considered paragraph (2) of draft article 64, which contained two variants, both of which set out a special regime for the limitation level with respect to non-localized loss of or damage to the goods. The Working Group agreed to defer its consideration of that provision until it had concluded its

discussion at this session on the relationship of the draft convention with other conventions.

Conclusions reached by the Working Group regarding draft article 64 (2):

176. The Working Group agreed to defer its consideration of draft article 64 (2) until after its discussion of the relationship of the draft convention with other conventions (see paras. 236-238 below).

Paragraph (3)

177. It was pointed out that the origin of this paragraph could be traced back to the Hague-Visby Rules. The Working Group noted that paragraph (3) regulated the limitation of liability in terms of the number of packages or shipping units when using containers, pallets or other means of transport. It was noted that when originally drafted for the Hague-Visby Rules, packages were often quite large but that with containerization the size of packages were now typically much smaller. That meant that carriers, by virtue of the definition of packages, now faced a greater exposure to cargo liability in respect of a single container than at the time the Visby Protocol was adopted.

Conclusions reached by the Working Group regarding draft article 64 (3):

178. After discussion, the Working Group agreed that the existing text of draft article 64 (3) should be maintained.

Paragraph (4)

179. The Working Group noted that paragraph (4) provided that the SDR as defined by the International Monetary Fund should be used as the unit of account for the purpose of calculating the carrier's liability.

Conclusions reached by the Working Group regarding draft article 64 (4):

180. The Working Group approved the paragraph 64 (4) in substance.

Draft article 65: Liability for loss caused by delay

Variant A or B

181. The Working Group had before it two variants and proceeded to consider which was preferable. It was noted that there was little substantive difference between Variant A or Variant B. However, Variant A received greater support on the ground that it provided greater clarity.

182. The Working Group was reminded of the objections that had been raised in connection with the treatment of liability for delay in the draft convention and that, for countries that had raised such objections, either variant of draft article 65 was only acceptable if the draft convention would also contain an equivalent provision for the shipper's liability for delay.

Nature of loss covered by the draft article

183. With a view to facilitating its consideration of the draft article, the Working Group was invited to consider the various types of loss that might be caused by delay in delivery of goods and how each category would be dealt with under the

draft convention. Loss caused by delay was said to fall under essentially three categories. The first category was physical damage or loss of goods (for example, of perishable goods, such as fruits or vegetables). The second category was economic loss sustained by the consignee due to a decrease in the market value of the goods between the time of their expected delivery and the time of their actual delivery. The third category was pure economic loss sustained by the consignee, for example where an industrial plant could not operate because components and parts of an essential machine were delivered late.

184. It was noted that the first category of damage caused by delay was clearly outside the scope of draft article 65, as it was covered by the provisions on the calculation of compensation for physical loss of the goods in draft article 23. The third category of loss (pure economic loss) was said to fall clearly under draft article 65. However, as regards the second category (i.e. loss of market value), the situation was said to be unclear. The Working Group concurred with that analysis and with the need for making it clear that draft article 65 was only concerned with pure economic (consequential) loss and that decline in the good's market value was a type of loss that should be covered by draft article 23.

Limitation level for loss caused by delay

185. There was some support for the suggestion that the main parameter for establishing the carrier's liability for delay should be the same as the calculation of compensation for physical damage to the goods in accordance with draft article 23, paragraph (1), namely the market value of the goods at the place of destination. Moving away from the value of freight as a factor for calculating compensation was said to be justified by the fact that freight rates were subject to large fluctuations, with current rates being much lower than, for example, at the time the Hamburg Rules were adopted, in 1978. Maintaining freight as a factor would therefore mean affording the shipper and the consignee much lower protection than in the past.

186. Yet another proposal was to link the limit of liability to whichever was the lesser of the actual amount of the loss or two and one-half times the freight payable for the goods delayed or the total amount payable as freight for all the goods shipped. That proposal received some support and a suggestion was made that further research be undertaken on the utility of referring to the value of goods in determining liability for loss caused by delay.

187. The prevailing view, however, was that, in keeping with other existing instruments, the amount of freight payable on the goods delayed was a more suitable factor for calculating the carrier's liability for economic loss caused by delay, which might be entirely unrelated to the value of the goods. The freight, in turn, had a direct relationship to the obligation that a carrier failed to perform in the manner agreed. It was said that as market value was often completely unforeseeable, such a limit would impose an unreasonable risk on carriers which in turn would have a negative impact on shippers in terms of higher freight rates. It was noted that compensation for loss due to decline in market value was already dealt with in draft article 23, and if that provision was unclear it ought to be clarified.

188. There were various expressions of support for retaining the liability limit set forth in article 6 (1) (b) of the Hamburg Rules, namely two and one-half times the freight payable for the goods delayed. It was also pointed out that the limitation of liability should provide an incentive for carriers to meet their obligation to deliver in due time, and should not, therefore, be too low.

189. The countervailing and strongly supported view was that liability limit of one times the freight for economic loss caused by delay would be adequate. It was explained that a casual comparison of the liability limits set forth in the Hamburg Rules was misleading, as in practice, they would seldom lead to a recovery of two and one-half times the freight paid. In that respect it was pointed out that whilst the Hamburg Rules included a limit of two and one-half times the freight payable, the overall limit of liability, in accordance with article 6 (1) (b), was the total amount in freight paid for the shipment. In practice, that meant that in most cases the limit was often one times the freight. For example, a shipper might ship ten containers with a rate of 1,000 SDRs each and a delay on one container would impose liability of 2,500 SDRs but, in what was said to be the more common situation where all the containers were delayed, the limit would be one times the total freight amounting to 10,000 SDRs, and not 25,000 SDRs. Furthermore, it was suggested that the liability limits for delay in the Hamburg Rules applied to all types of liability for delay, whereas draft article 65 was limited to economic (consequential) loss. It was suggested that one times the freight was already a substantial exposure given that the carrier could be liable to a large number of shippers in respect of delay and therefore using freight as the liability limit provided sufficient incentive for a carrier to meet its obligation of timely delivery.

“unless otherwise agreed”

190. The Working Group proceeded to consider whether to retain the phrase “unless otherwise agreed”, which appeared in both variants A and B. It was recalled that the intention behind inclusion of that phrase was to permit contractual freedom in relation to the limits of liability in respect of economic loss caused by delay. Opinion was divided on whether or not to retain that phrase.

191. It was said that retaining that phrase would render one of the basic obligations of the carrier, namely to deliver in time, non-mandatory and would undermine the incentive of carriers to meet that fundamental contractual obligation. In favour of deletion, it was noted that the phrase was unnecessary given that if the parties agreed on a higher limit, that possibility was already recognized in chapter 20 and any agreement on a lower limit would be contrary to the provision regarding contractual freedom. There was strong support for the view that the phrase in question would, in practice, mean that shippers and consignees would be deprived of any compensation for delay, as carriers would routinely include in pre-printed transport documents standard clauses reducing liability for delay to a possibly insignificant amount. While this level of freedom of contract might be acceptable for volume contracts where both parties negotiated on equal footing, it would not be appropriate in other situations in liner transportation, where contracts of carriage were contracts of adhesion, and shippers had no fair opportunity to negotiate their terms.

192. There was also strong support for retaining the phrase in question, it was suggested that the qualification was based on mutual agreement between the parties rather than a unilateral declaration by the carrier and that shippers today often had sufficient bargaining power to negotiate better conditions. It was further suggested that commercial flexibility was important to permit parties to impose different limits on consequential loss appropriate to their needs and that that approach met with commercial practices. Moreover, eliminating party autonomy on the matter would amount to making the carriers into insurers of the timeliness of the arrival of goods shipped. That result would impact negatively in a highly competitive industry where

very low freights had been experienced in recent time. Shippers for whom timely arrival was so essential always had the alternative of shipping their cargo by faster means, such as by air, and paying an accordingly higher rate of freight.

193. Having noted the conflicting opinions on the matter, the Working Group agreed that a final decision on whether or not to retain the phrase should be postponed until the Working Group had decided whether or not liability for delay on the part of the shipper would be included in the draft convention. If retained, then that would tend in favour of deletion of the words so as to make that paragraph apply on a mandatory basis.

Conclusions reached by the Working Group regarding draft article 65

194. After discussion, the Working Group decided that:

- The text contained in Variant A was preferred and should be used as the basis for further discussions;
- That the term “unless otherwise agreed” be retained in square brackets for consideration at a future session;
- That any necessary clarification be made to draft articles 23 and 65 with respect to what types of damage were being covered by each provision; and
- That a decision on the appropriate limit of liability for the carrier in respect of consequential loss caused by delay be deferred pending the identification of a consensus regarding any limitation on the liability of the shipper for delay.

Draft article 66. Loss of the right to limit liability

Paragraph (1)

195. The Working Group was reminded that paragraph (1) of draft article 66 set out the conditions which would cause the carrier to lose the benefit of the right to limit its liability. Those conditions were fulfilled if the claimant proved that the loss of, or damage to the goods, or breach of the carrier’s obligation under the draft convention, resulted from a personal act or omission of the person claiming the right to limit liability, done either intentionally or recklessly and with knowledge that the loss or damage would probably occur.

196. It was observed that a provision of this type that allowed for the limitation level to be exceeded in certain circumstances was a common feature in transport conventions. General approval was expressed in the Working Group for the structure and approach of the text in paragraph (1).

“personal”

197. A number of delegations expressed great dissatisfaction with the inclusion of the word “personal” before the phrase “act or omission” in paragraph (1), believing that it made it too difficult for the cargo claimant to prove that the conditions for the provision had been fulfilled and thus for the carrier’s limitation on liability to be exceeded. The Working Group recalled that the issue of whether or not to include this term in the paragraph had been discussed at length during its thirteenth session, and it decided against overturning the decision that it made at that time (see A/CN.9/552, paras. 59-60 and 62).

“[or as provided in the contract of carriage]”

198. The Working Group considered whether to include the phrase “[or as provided in the contract of carriage]” in the text of paragraph (1). The view was expressed that the text could be deleted, since it was thought that the proper conclusion would be reached by those applying the provision regardless of the inclusion of that phrase. In particular, it was thought if the conditions of the paragraph were fulfilled, it would result in a decision that any limitation on liability could be exceeded, regardless of where that limitation was found, and whether or not that particular phrase appeared in the provision. However, concerns were raised that since the draft convention only allowed the parties to agree to increase their level of limitation of liability and not to decrease it, if the phrase were not included, confusion could be caused in some jurisdictions regarding whether or not a higher limitation on liability that was agreed upon should be allowed to stand, even when the conditions of paragraph (1) had been met. After discussion, the Working Group agreed that the square brackets around the text should be deleted, and the phrase should be retained in paragraph (1).

Drafting concerns

199. Concerns were raised regarding the interaction of draft article 64 and the drafting of draft paragraph 66 (1). In particular, since the phrase in the text of draft article 64 “in connection with” had been deleted in favour of the insertion of the phrase “the carrier’s liability for breaches of its obligations under this Convention”, the question was raised whether the revised text included cases of misdelivery of goods or delivery without presentation of the negotiable transport document or for misrepresentation in the transport document. Further, if those situations were not included in draft article 64, the additional question was raised whether these situations could ever result in a case where the carrier’s limitation amount could be exceeded pursuant to draft article 66, since there might never be any intent or knowledge on the part of the carrier.

Conclusions reached by the Working Group regarding draft article 66 (1):

200. After discussion, the Working Group decided that:

- The square brackets around the phrase “or as provided in the contract of carriage” should be deleted and the phrase retained; and
- The text of draft paragraph (1) was approved by the Working Group, subject to any drafting adjustments considered necessary by the Secretariat for clarification.

Paragraph (2)

201. The Working Group was reminded that paragraph (2) of draft article 66 set out the conditions which would result in the carrier losing the benefit of the right to limit its liability in case of delay in delivery. Those conditions were fulfilled if the claimant proved that the delay in delivery resulted from the personal act or omission of the person claiming the right to limit liability, done either intentionally or recklessly and with knowledge that the delay would probably result.

202. The Working Group approved the text of draft paragraph (2), with the understanding that a proposal had been made that if an appropriate limitation level were found for the shipper’s liability for delay, the Working Group should consider

a similar provision to draft paragraph (2) setting out the conditions pursuant to which that limitation level could be exceeded.

203. A drafting concern was raised regarding the phrase “if the claimant proves” in draft article 66 (2) in comparison with the phrase “if it is proved” found in the corresponding provision of the Hamburg Rules at article 8 (1) and of the Hague-Visby Rules at article 4.5 (e), since it was felt that this would place an extra burden on the cargo claimant.

Conclusions reached by the Working Group regarding draft article 66 (2):

204. The Working Group approved draft paragraph (2), bearing in mind that a parallel provision could be needed for the limitation level for the shipper’s liability, should such a level be identified.

Draft article 104: Amendment of limitation amounts

205. In light of the provision’s close relationship with the provisions in chapter 13 on the limitation of liability, the Working Group next considered draft article 104 on the amendment of the limitation amounts in the draft convention. The Working Group recalled that it had requested the Secretariat at its thirteenth session to prepare a specific amendment procedure for the rapid amendment of limitation amounts in the draft convention (see A/CN.9/552, para. 40). The Working Group had before it two texts of draft article 104: that prepared by the Secretariat and inserted into the text of the draft convention in A/CN.9/WG.III/WP.56, and that proposed as a revised version set out in paragraph 9 of A/CN.9/WG.III/WP.77.

206. The view was expressed that a provision such as that in draft article 104, whether it was the proposed revised text or the version set out in A/CN.9/WG.III/WP.56, was directly linked to the level of the limitation of the carrier’s liability. In particular, it was thought that if the amount of the limitation were set at a very high level, the procedure for its amendment should be very strict, but if the amount were set at a relatively low level, the procedure for its amendment should be less strict.

Introduction of the text in paragraph 9 of A/CN.9/WG.III/WP.77

207. By way of introduction of the changes suggested in the proposed revised text, the Working Group heard that, as set out in paragraph (1) thereof, draft article 104 was intended to be a specific amendment procedure to be followed only with respect to the amendment of the limitation on liability of the carrier set out in draft article 64 (1). Any other amendments to the draft convention would be undertaken in the normal course under general treaty law.

208. In paragraph (2) of the proposed revised text, it was proposed that the number of Contracting States required to request the amendment of the limitation amount should be one-half of the number of Contracting States rather than one-quarter. The view was expressed that this change would ensure that there was sufficient consensus and that there was a need for material change of the provision among the parties most affected, in particular, those representing a sufficient percentage of cargo volume or cargo value in transport covered by the draft convention. It was further suggested that paragraph (2) of the proposed revised text should provide for the amendment to be made at a meeting of all Contracting States and Members of the United Nations Commission on International Trade Law (UNCITRAL), since it

was thought that, under existing international private law, significant changes to concluded texts were often produced by the same multilateral bodies that had formulated the original text.

209. A further innovation of the proposed revised text was said to be found in paragraph (4), which avoided the strict and potentially politicizing mechanism of a vote in favour of the normal consensus-based procedures of UNCITRAL. In addition to greater flexibility, resort to a consensus-based approval mechanism was proposed as appropriate for the amendment procedure, given that that was the mechanism that was used for the adoption of the draft convention itself.

210. Draft paragraph (5) of draft article 104 as set out in A/CN.9/WG.III/WP.56 was thought to be unnecessary, and it had been deleted in the proposed revised text of the provision.

211. By way of further introduction, draft paragraph (5) of the proposed revised text was said to be important in order to lend some stability to the draft convention by limiting the frequency with which, and the amount by which, the limitation level could be amended. The proposed text suggested that the appropriate time period for requesting any amendment was seven years after the entry of the draft convention into force, and seven years after any prior amendment procedure. Further, the proposed text suggested that any single increase or decrease in the limitation level should be limited to twenty-one per cent, and that any limit could not be increased or decreased by more than two times the original amount, cumulatively.

212. Draft paragraph (6) of the proposed revised text set out a time period for the amendment's entry into force of twelve months after the date of its adoption by a sufficient number of Contracting States, which was suggested should be the same number as that ultimately agreed upon in draft article 101 as required for entry into force of the draft convention as a whole. Paragraphs (7) and (8) of draft article 104 as set out in A/CN.9/WG.III/WP.56 were said to have established an unnecessarily lengthy period for the coming into force of the amendment.

213. Draft paragraph (7) of the proposed revised text provided that Contracting States would have to denounce the amendment or be bound by it, rather than having adopted the approach in the text in A/CN.9/WG.III/WP.56 whereby Contracting States would have to denounce the entire convention. The approach in the proposed revised text was thought to be a more flexible one, that would allow States that, for example, had difficulties with approving the amendment internally in time for its entry into force, to nonetheless remain parties to the convention itself.

Preliminary reaction to the proposed revised text in paragraph 9 of A/CN.9/WG.III/WP.77

214. It was observed that paragraph (2) of the proposal envisioned three different groups of States attending any UNCITRAL session convened to consider a proposed amendment: Contracting States that were members of UNCITRAL; non-Contracting States that were members of UNCITRAL; and Contracting States that were non-members of UNCITRAL. The question was raised whether there was any precedent for such a mixed body to amend a convention. In response, it was said that the three types of States were included in the text because they constituted the usual members and observers that participated in consensus UNCITRAL deliberations, and that all Contracting States to the convention should also be included in any discussions regarding its amendment. Examples mentioned in this regard were the adoption of the Visby Protocol, which was not limited to a

conference of Contracting Parties, and the negotiation of the 1974 Convention on the Limitation Period in the International Sale of Goods. In response to an additional question on this point with respect to any precedent that could be identified for the adoption of a simplified amendment procedure by a group including non-Contracting States, mention was made of various conventions of the International Maritime Organization that contain specific amendment procedures that are agreed to by consensus.

Conclusions reached by the Working Group regarding draft article 104:

215. After a preliminary discussion, the Working Group decided that:

- More time was required to reflect upon the procedure outlined in draft article 104 in both A/CN.9/WG.III/WP.56 and A/CN.9/WG.III/WP.77; and
- Further discussion of the provision would be deferred until a later date.

Relation with Other Conventions: draft articles 27, 89 and 90

General discussion and draft article 27

216. It was recalled that the Working Group had previously considered the issue of the relationship of the draft convention with other conventions at its eleventh session (see A/CN.9/526, paras. 191-202), and that the Working Group had instructed the Secretariat to prepare conflict of convention provisions for possible insertion into draft chapter 19 during its discussion of draft article 27, also at its 11th session (see A/CN.9/526, paras. 245-250, particularly paras. 247 and 250). Those provisions were currently found in the text at articles 89 and 90. It was also recalled that a note by the Secretariat had been prepared on the relationship of the draft convention with other conventions (A/CN.9/WG.III/WP.78), and that it was intended to be read along with a previous note on the sphere of application of the draft convention that had been prepared by the Secretariat (A/CN.9/WG.III/WP.29). The consideration by the Working Group of draft articles 27, 89 and 90 was based on the text as found in annexes I and II of A/CN.9/WG.III/WP.56.

217. The Working Group heard a presentation from the International Road Union (IRU) that highlighted certain concerns of the IRU regarding the interaction of the draft convention with the CMR. According to the IRU, the draft convention created a competing legal regime to the CMR for the carriage of goods by road. While recognizing that draft article 27 of the draft convention attempted to harmonize the operation of the two conventions, the IRU contended that the combined operation of draft articles 27, 89 and 90 of the draft convention would require a Contracting Party of the CMR that wanted to accede to the draft convention to be in conflict with the provisions of the CMR. The view of the IRU was that the draft convention would operate contrary to the terms of article 41 (1) (b) of the Vienna Convention on the Law of Treaties, with respect to the modification of a treaty, and of article 1 (5) of the CMR, which prohibited Contracting Parties of the CMR from making any special agreements amongst themselves to vary the provisions of the CMR. It was argued by the IRU that any Contracting Party of the CMR would be in conflict with those provisions by ratifying the draft convention, since it was alleged that the door-to-door sphere of application of the draft convention necessarily entailed that the obligations of those Contracting Parties under the CMR would be varied or violated. Of further concern to the IRU was the operation of draft

article 27 of the draft convention, that, in the case of localized loss or damage to the goods, allowed for the operation of mandatory provisions of other conventions that specifically provided for the carrier's liability, limitation of liability or time for suit, which was said to be contrary to the mandatory nature of the whole of the CMR, pursuant to its own provisions (see CMR, article 41).

218. In response to those remarks, it was pointed out that some of the comments of the IRU were based on tentative provisions in the draft convention that were still subject to consideration by the Working Group. It was also observed that the membership of the Contracting Parties of the CMR did not coincide with the membership of the United Nations, and that it was for the Contracting Parties of the CMR to assess the extent of their treaty obligations under public international law. Finally, it was also emphasized that the type of contract of carriage contemplated for coverage by the draft convention was clearly of a different type than that covered by the CMR.

219. The Working Group proceeded to consider the alleged conflicts between the draft convention and other international conventions on the carriage of goods. As a preliminary matter intended to alleviate any perceived concerns with the relationship of the draft convention with other conventions, it was proposed that the text of draft article 89 be modified by replacing the phrase, "and that applies mandatorily to contract of carriage of goods primarily by a mode of transport other than carriage by sea" with the phrase, "to the extent that it applies mandatorily to the contract of carriage in question and cannot be overridden by this Convention." It was explained that this proposed change was intended to ensure that other transport conventions were applied only and to the extent that such application was truly necessary and when the draft convention could not be said to apply. The Working Group took note of that suggestion.

220. It was observed that the draft convention and the CMR each had its particular and discrete sphere of application, based on the type of contract of carriage contemplated for inclusion. It was indicated that the draft convention concerned the "maritime plus" contract of carriage with additional inland carriage, while the CMR concerned contracts for the carriage of goods exclusively by road. It was further observed that the operation of draft article 27 intended to respect and preserve the provisions of the existing conventions for inland carriage of goods relating to liability matters, and that the performing inland carrier would always be subject to its own unimodal inland liability regime, while the overall contracting carrier would be subject to the regime under the draft convention. The Working Group was encouraged to avoid placing too much emphasis on the possible conflict of conventions.

221. The focus of the problem of conflict of conventions was said to be the definition of the contract of carriage in various conventions. For example, it was said that the definition of "contract of carriage" in the draft convention was quite broad, and could include a fairly short sea leg and very long inland carriage. Further, the combined transport provisions of other conventions, such as article 2 of the CMR and article 38 of the Montreal Convention, apply those conventions to the entire carriage in certain cases, regardless of the fact that other modes of transport were involved. This appeared to set up a direct conflict of conventions with the draft convention, but the view was expressed that draft article 27 was the most appropriate mechanism through which to deal with such conflicts, subject to any necessary drafting adjustments.

222. It was suggested that a conflict of conventions arose in the case of transport conventions primarily when the provisions on scope allowed for an overlap in the types of contracts of carriage covered by the convention. In particular, the concern was said to be particularly problematic only when the scope provisions of unimodal transport conventions were read very generously. The view was expressed that the scope provisions of the draft convention were quite modest and precise compared with those of other conventions, and that further precision of the scope of the draft convention had been achieved by allowing for actions against only the contracting carrier and the maritime performing party, leaving inland carriers subject to their unimodal inland regimes. It was acknowledged that, in spite of these mechanisms, there could still exist cases where there was a conflict between the regimes applicable to the overarching umbrella contract of carriage and the unimodal contract of carriage, and that draft article 27 was intended to allow for coordination in those cases by having the draft convention give way to mandatory provisions in present or future conventions but only regarding carrier's liability, limitation of liability or time for suit. The reason for maintaining the priority of the draft convention with respect to all other issues was said to be a matter of utmost concern to the certainty of trade, in that treatment of the documentary aspects of the multimodal shipment had to stay constant and subject to the rules of the draft convention. Otherwise, it was suggested that instability would be created by, for example, having a negotiable transport document suddenly being transformed into a non-negotiable one under the CMR for the land leg of the transport. Similar arguments were said to exist for the preservation of the right to instruct with respect to the goods, and the right of control, in that, unlike under certain unimodal conventions, the shipper could under the provisions of the draft convention prevent a consignee that had not paid for the goods from nonetheless collecting them at the end of the transport.

223. Although there was general satisfaction with the approach to other conventions taken in draft article 27, and although there was general agreement that the Working Group had agreed on adopting a limited network approach in the draft convention (see A/CN.9/526, paras. 219-239), some concerns were raised regarding whether the scope of draft article 27 was broad enough to provide a complete remedy for the conflict of conventions. In particular, since draft article 27 referred only to mandatory provisions, the view was expressed that conflicts could also arise in the case of non-mandatory provisions, such as with respect to notice of damage provisions, and that draft article 27 did not provide a sufficient answer for those situations. As such, it was said that the provisions of the draft convention could be said to overlap with the unimodal transport conventions. A possible solution for the problem regarding non-mandatory provisions was said to be the addition of a provision that parties were deemed to opt out of non-mandatory provisions of other conventions to the extent that they were in conflict with provisions of the draft convention.

224. Another, related problem was said to exist in the wording of draft article 27 (1) (b)(i) itself, which referred to conventions which according to their terms "appl[ied] to all or any of the carrier's activities" under the contract of carriage. It was pointed out that, given the differing scopes of application of the various unimodal transport conventions, their provisions might never apply "according to their terms" and draft article 27 might never operate, thus establishing a uniform system rather than a limited network system. It was suggested that the phrase "according to their terms apply to all or any of the carrier's activities under the contract of carriage during that period" should be deleted and replaced with text

along the following lines: “would have applied if the shipper had made a separate and direct contract with the carrier in respect of the particular stage of transport where the loss or damage occurred”. It was said in further support of a limited network system that it would operate in order to create the preferable situation in which the contracting carrier would be sued by the cargo claimant rather than the performing carrier.

225. The view was expressed by some that draft article 27, perhaps with some drafting adjustments to take into account the specific problems of overlap with conventions such as the Montreal Convention, was sufficient to ensure a solution to any potential conflict of conventions. In light of this, it was said by some that the additional provisions in draft article 89 and 90 were unnecessary, and in fact complicated the clear and predictable approach to the problem provided for in draft article 27. In support of this view, it was said that draft article 89 allowed too much discretion for a decision regarding which convention to apply to be made, and preference was expressed for the more certain approach presented in draft article 27. Further, it was said that using draft article 89 as a solution to the conflict of conventions problem would not provide as precise and uniform an interpretation as could be found by relying on draft article 27. However, others that supported draft article 27 saw a possible continuing role for draft articles 89 and 90, in order to deal with situations such as the direct and unavoidable conflict between the provisions of the draft convention and the operation of the provisions of other conventions, such as articles 18 (4) and 38 of the Montreal Convention. Further, it was thought that the position of draft articles 89 and 90 in the chapter on “Other conventions” was more appropriate for a conflict of conventions provision, and that inclusion of such provisions could provide added security of interpretation should such conflicts arise.

“[national law]”

226. Several delegations expressed the view that the phrase “national law” should be deleted from the chapeau of draft article 27 (1) (b). In support of this view, it was said the deletion of the terms would promote uniformity of interpretation and legal certainty. It was further suggested that the added complexity and expense in a cargo claim of having to determine the applicable provisions of national law argued against retention of that phrase. However, a considerable number of delegations also expressed a desire to retain the text in square brackets, pending further consideration of that phrase. In support of that proposal, the view was expressed that in some situations where the last leg of the carriage was by road and was purely domestic, leaving out the phrase could result in a markedly different regime being applied to that road leg than might be applied under domestic law. It was thought that further consideration should be given to such a possible scenario, or whether such concerns could be accommodated by means of another approach in the draft text.

An additional drafting concern

227. Questions were raised whether it was necessary in draft article 27 (1) (b)(iii) to make reference to “private contracts”, or whether the word “private” could be deleted from the text.

Conclusions reached by the Working Group regarding draft article 27:

228. After discussion, the Working Group decided that:

- The scheme of draft article 27 should be maintained with some possible drafting improvements;
- The brackets around the text of paragraph 1 should be removed and the text retained;
- The Secretariat was requested to consider alternative drafting for aspects such as the phrase “according to their terms apply”;
- To maintain the square brackets around paragraphs 2 and 3; and
- The phrase “[or national law]” in the chapeau of draft article 27 (1) (b) should be retained pending further consideration.

Article 89. International instruments governing other modes of transport and

Article 90. Prevalence over earlier conventions

229. The Working Group continued its discussion of the relationship between the draft convention and other conventions on the basis of draft articles 89 and 90, which, it was recalled, had been included in the draft convention at the request of the Working Group during its eleventh session (see A/CN.9/526, paras. 245-250, particularly paras. 247 and 250), but had not yet been considered by the Working Group.

230. Concern was expressed that draft articles 89 and 90 seemed to contradict each other, such that draft article 89 would allow for the prevalence of other conventions over the draft convention in cases of conflict, while draft article 90 provided for the prevalence of the draft convention over all other conflicting earlier conventions. In light of this, two possible solutions were suggested: the deletion of one or the other of draft articles 89 or 90, or the deletion of both provisions. In this regard, it was suggested that draft article 27 presented a satisfactory solution to the problem of any potential conflict between other unimodal transport conventions and the draft convention, and that no additional provision in this regard was necessary or desirable.

231. Other views were expressed in support of the proposal to delete draft articles 89 and 90 and to allow draft article 27 to stand, along with specific conflict of convention provisions in the draft convention at draft articles 79, 91, 92, 93 and the denunciation provision in draft article 102, as the sole provisions intended to resolve any potential conflict of conventions. In support of this proposal, the view was reiterated that, in terms of other unimodal transport conventions, such as the CMR, there was no conflict with the draft convention because the scope of application of those conventions was tied to contracts of carriage that were different from the “maritime plus” contract of carriage covered by the draft convention (see para. 225 above). Thus, it was said, the subject matter of those conventions and the draft convention was not identical. Secondly, it was said that draft article 27 had been drafted at the outset as a limited network approach to fulfil the role of a conflict of conventions provision, and that separating it from that conflict of conventions role could result in the broad application of draft article 27 to all inland carriage contemplated under the draft convention. It was said that such an interpretation could result in a significant decrease in the recoverability of damages by the shipper, who, in the case of road carriage, would be thus limited to the

8.33 SDR per kilogram limitation amount of the CMR, rather than to a limitation level comparable to, for example, that of the Hague-Visby Rules of 666.67 SDRs per package. In terms of this example, it was said that recovery under the per kilogram limitation of the CMR would be more favourable than under the per package limitation of a provision like that of the Hague-Visby Rules only when an individual package weighed greater than 83 kilograms which, it was said, was a rare occurrence. Finally, it was said that draft articles 89 and 90 were superfluous anyway, since if there was any conflict with another convention with respect to subject matter, in light of article 30 of the Vienna Convention of the Law on Treaties, any later convention dealing with the same subject matter would prevail over the provisions of the earlier convention.

232. While there was general agreement that draft article 90 could be deleted as potentially causing confusion with respect to the application of article 30 of the Vienna Convention on the Law of Treaties, there remained substantial support in the Working Group for the retention of draft article 89, at least for the moment. In this regard, concerns were reiterated from the earlier discussion (see para. 225 above) concerning the adequacy of draft article 27 in dealing with general conflict of conventions issues as they may arise with respect to certain unimodal transport conventions and with regard to some regional unimodal transport instruments other than the CMR, such as the uniform rules on road carriage that had been formulated by the Organization for the Harmonization of Business Law in Africa (OHADA). In particular, it was thought that draft article 89 could provide addition protection against such residual risk of conflict of conventions, to the extent that such protection was necessary in addition to the operation of draft article 27. Further, in supporting the retention of draft article 89, a specific request was made to ensure certainty regarding the intention of that provision by retaining the word “primarily” as found therein and in article 25 (5) of the Hamburg Rules.

233. It was suggested in response that such concerns regarding additional protection were unnecessary and that draft article 27 presented a clear and complete solution to the problem, and that, in fact, adding draft article 89 to the draft convention could result in confusion and could obscure the intended operation of draft article 27. In this regard, the view was also expressed that draft article 89 was too general a provision as currently drafted to fulfil the role envisioned for it of filling any potential gaps left by the application of draft article 27. However, it was suggested that in order to assuage remaining concerns regarding the clarity of the application of draft article 27 as a conflict of convention provision, the Secretariat could propose additional clarifying provisions such as those set out in paragraphs 29 and 36 of A/CN.9/WG.III/WP.78, to the effect that actions under the draft convention were available against only the contracting carrier and the maritime performing party, and that claims against other performing inland carriers were not so included. Additional suggestions were made that, in light of its role as a conflict of conventions provision, the optimal placement of draft article 27 within the draft convention might be reconsidered, and that the Secretariat could also consider clarifications to the text of the draft convention based on the Bimco COMBICONBILL referred to in paragraph 26 of A/CN.9/WG.III/WP.78.

234. Since concerns had been raised regarding a possible conflict of conventions with the Montreal Convention (see para. 225 above), it was suggested that, although the combination of air and sea transport in the same carriage was thought to be rare, additional clarification of the draft convention could be undertaken to ensure that there was no lingering conflict with the Montreal Convention. In this regard,

additional concerns were raised that a direct conflict of convention could also arise between the draft convention and the instruments under certain regional agreements affecting trade and transport, such as OHADA.

Conclusions reached by the Working Group regarding draft articles 89 and 90:

235. After discussion, the Working Group decided that:

- Draft article 89 should be deleted;
- Draft article 90 should be deleted;
- The Secretariat was requested to consider the optimal placement of draft article 27; and
- Possible drafting clarifications to ensure the proper application of the limited network system should be considered to the draft instrument in light of paragraphs 26, 29 and 36 of A/CN.9/WG.III/WP.78, and in order to ensure that there is no conflict between the draft convention and the Montreal Convention.

Draft article 64. Basis of limitation of liability *(continued from paras. 175-176 above)*

Paragraph (2) (continued)

236. The Working Group recalled that draft article 64 (2) contained two variants, both of which set out a special regime for the limitation level with respect to non-localized loss or damage of goods. It further recalled that it had agreed to defer its consideration of that paragraph until after its discussion of the relationship of the draft convention with other conventions (see paras. 175-176 above).

237. The view was expressed that, given the large number of packages that might be placed in a single container, the per package limitation in container trade might in practice lead to a higher compensation in maritime transport as compared to inland transport (see the example in para. 231 above). Therefore, a proposal was made to delete paragraph (2), since it was thought that shippers would obtain higher recovery amounts for damage under the liability regime of the draft convention, and that recovery for non-localized damage should also therefore be subject to the general liability regime under the draft convention. That proposal received some support, with some delegations suggesting that the limitation could be dealt with in draft article 27, and that, in any event, paragraph (2) introduced lack of certainty into the regime. However, it was said that it was premature to delete paragraph (2) and that the Working Group should reconsider the issue once the limitation levels in draft article 64 (1) had been determined. It was also suggested that both variants in paragraph (2) were unclear and, if either were to be retained, they would require substantial redrafting.

Conclusions reached by the Working Group regarding draft article 64 (2):

238. As this was the final issue discussed at its eighteenth session, due to a lack of time, the Working Group suspended its discussion and agreed to continue discussions on draft article 64 (2) at a future session.

General average — Chapter 18

239. The Working Group considered the text of Chapter 18 (comprising articles 87 and 88) as contained in A/CN.9/WG.III/WP.56 and recalled its earlier discussions on that chapter (see A/CN.9/510, paras. 137-143 and A/CN.9/526, paras. 183-190).

Draft article 87

240. It was recalled that draft article 87 largely reproduced the provisions regarding general average as contained in the Hague, Hague-Visby and Hamburg Rules and expressed the agreed policy that the draft convention should not affect the application of provisions in the contract of carriage or national law regarding the adjustment of general average. It was agreed that the principle contained in draft article 87 was useful and should be retained. A suggestion was made that any necessary clarification be made that the operation of article 16 (2) was not intended to have any effect on the existing general average regime.

Draft article 88

241. It was noted that paragraph (1) was intended to reflect the principle that the general average award adjustment must first be made, and the general average award established, and that liability matters would thereafter be determined on the same basis as liability for a claim brought by the cargo owner for loss of or damage to the goods.

242. It was noted that paragraph (2) dealt with the limitation period for claims in general average. It was noted that, when drafted, some doubt existed as to what the applicable time period should be, but that subsequently in 2004 the CMI had issued a revision of the York-Antwerp Rules 1994, which contained a limitation period of one year after the date of the general average adjustment or six years after the date of termination of the common maritime adventure, whichever came first. It was noted that given that it was unclear whether a limitation period in a private contract could override a limitation period in international law, and that the revised York-Antwerp Rules 2004 had not yet achieved general acceptance, it might be helpful to retain paragraph (2) for the sake of clarity, but to adjust its text to reflect the York-Antwerp Rules regarding claims “under general average bonds or guarantees”. Some support was expressed for that proposal.

243. However, opposition was expressed to the retention of article 88. It was said that incorporating the revised time limitation of the York-Antwerp Rules 2004 could create confusion given that the revised rules had not been taken up by all shipowners. It was suggested that the question of a time bar should be left to the existing legal regime for the adjustment of general average.

Conclusions reached by the Working Group regarding Chapter 18:

244. After discussion, the Working Group decided to:

- Retain article 87 in substance; and
- Delete article 88.

Jurisdiction — Chapter 16

General discussion

245. The Working Group was reminded that it had most recently considered the topic of jurisdiction at its sixteenth session (see A/CN.9/591, paras. 9-84), and that it had previously considered the topic at its fourteenth (see A/CN.9/572, paras. 110-150) and fifteenth sessions (see A/CN.9/576, paras. 110-175). It was also recalled that a revised text of the chapter on jurisdiction was prepared for the consideration of the Working Group for this session (see A/CN.9/WG.III/WP.75), which was based upon the text considered at its sixteenth session (see A/CN.9/591, para. 73), as well as consideration of that text (see A/CN.9/591, paras. 74-84). Certain suggestions by the Secretariat for drafting improvements had been included in the text in A/CN.9/WG.III/WP.75, as set out in the footnotes thereto. Discussion in the Working Group of the provisions on jurisdiction was based on the text as found in A/CN.9/WG.III/WP.75.

Proposal for reservation or clause to “opt in” to the chapter

246. It was proposed in the Working Group that, given the range of divergent views that were expressed during its sixteenth session with respect to the treatment and enforcement of choice of court clauses in the jurisdiction chapter of the draft convention, the Working Group should consider the adoption of a clause either allowing for a reservation to be taken by Contracting States to the entire chapter, or that a clause be adopted in the draft convention allowing Contracting States to specifically agree, or “opt in”, to be bound by the chapter on jurisdiction. The view was expressed that this approach would make it more likely that the draft convention would be widely accepted by Contracting States, and that a broader consensus on the chapter on jurisdiction could be reached.

247. In terms of specific drafting, it was suggested that a new provision could be drafted with a Variant A along the lines of: “Any state may make a reservation with respect to this chapter,” and a Variant B with text such as: “The provisions of this chapter will only apply to a Contracting State if that State makes a declaration to that effect.” Further, it was explained that by allowing for a reservation or an “opt in” clause to be taken to the chapter on jurisdiction, the existing provisions in paragraphs 4 and 5 of draft article 76, which allowed for Contracting States to allow choice of court agreements that met different conditions than the rest of the draft provision, could be deleted.

Partial “opt in” approach

248. The view was expressed that allowing for a reservation or “opt in” clause to the entire chapter on jurisdiction could be too extreme, and that a more flexible approach should be considered by the Working Group. It was said that certain States that might choose to become Contracting States of the draft convention might wish to retain draft article 76 in the text of the draft convention in order to give effect to choice of court clauses under conditions different from those set out elsewhere in draft article 76. It was suggested that this would be possible if the Working Group decided to include provisions allowing Contracting States to either “opt in” to the whole chapter excluding draft article 76, or to “opt in” to the entire chapter on jurisdiction, including draft article 76.

Views expressed on the two proposals

249. The Working Group proceeded to consider the two proposals as expressed above. There was strong support for allowing for a reservation or “opt in” clause to be provided for Contracting States in the draft convention with respect to the entire chapter on jurisdiction. A number of delegations that had originally expressed an interest during the sixteenth session in deleting the entire chapter on jurisdiction expressed their satisfaction with respect to this proposal and for the flexibility that it would grant to Contracting States.

250. Interest was also expressed in the partial “opt in” approach with respect to draft article 76. Delegations expressed their desire to see draft text setting out how this approach would operate prior to expressing their views on whether to adopt it or not. In particular, it was said to be important that the draft convention continue to allow for the recognition of choice of court agreements pursuant to draft article 76 (4). In considering the partial reservation or “opt in” approach, the view was expressed that care would have to be taken with respect to consequential amendments that might be necessary to ensure the appropriate operation of draft article 81 bis on recognition and enforcement. This view was echoed with respect to consequential amendments that might be required to draft article 81 bis if the Working Group adopted the approach of providing for a reservation or “opt in” clause with respect to the entire chapter on jurisdiction, as well.

Reservation versus “opt in” approach

251. While no strong view was expressed in favour of or against the reservation or the “opt in” approach, it was suggested that the “opt in” approach might be easier for Contracting States to adopt, as it simply allowed States passively to allow the relevant provisions to remain inoperable rather than to take the positive act of making a reservation with respect to those provisions. The general view in the Working Group was that delegations preferred to review draft text outlining the complete and partial reservation and “opt in” approaches prior to expressing definitive views on those proposed approaches.

Conclusions reached by the Working Group regarding the whole and partial reservation or “opt in” approaches:

252. After discussion, the Working Group decided that:

- There was support in the Working Group for the inclusion in the draft convention of a reservation or an “opt in” clause for the whole of chapter 16;
- Interest was expressed in the reservation or partial “opt in” approach proposed with respect to draft article 76 and the recognition of choice of court agreements pursuant to draft article 76 (4); and
- Draft text setting out in more detail the various approaches proposed should be prepared for the consideration of the Working Group, along with any necessary text on consequential adjustments to other provisions, such as draft article 81 bis.

Discussion of specific provisions in chapter 16

253. The Working Group proceeded to examine the provisions in the chapter on jurisdiction with a view to considering whether a decision could be reached

regarding any alternative text presented in A/CN.9/WG.III/WP.75, and whether resolution could be reached regarding other questions raised.

Draft article 75. Actions against the carrier
