NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

The footnote numbering follows that used in the original documents on which this *Yearbook* is based. Any footnotes added subsequently are indicated by lower-case letters.

Changes of and additions to wording that appeared in earlier drafts of conventions, model laws and other legal texts are in italics, except in the case of headings to articles, which are in italics as a matter of style.

IV. LIST OF DOCUMENTS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW REPRODUCED IN PREVIOUS VOLUMES OF THE <i>YEARBOOK</i>	1391

INTRODUCTION

This is the forty-first volume in the series of *Yearbooks* of the United Nations Commission on International Trade Law (UNCITRAL).¹

The present volume consists of three parts. Part one contains the Commission's report on the work of its forty-third session, which was held in New York, from 21 June-9 July 2010, and the action thereon by the United Nations Conference on Trade and Development (UNCTAD) and by the General Assembly.

In part two, most of the documents considered at the forty-third session of the Commission are reproduced. These documents include reports of the Commission's Working Groups as well as studies, reports and notes by the Secretary-General and the Secretariat. Also included in this part are selected working papers that were prepared for the Working Groups.

Part three contains summary records, the bibliography of recent writings related to the Commission's work, a list of documents before the forty-third session and a list of documents relating to the work of the Commission reproduced in the previous volumes of the *Yearbook*.

I. Introduction

1. The present report of the United Nations Commission on International Trade Law (UNCITRAL) covers the forty-third session of the Commission, held in New York from 21 June to 9 July 2010.

2. Pursuant to General Assembly resolution 2205 (XXI) of 17 December 1966, this report is submitted to the Assembly and is also submitted for comments to the United Nations Conference on Trade and Development.

II. Organization of the session

A. Opening of the session

3. The forty-third session of the Commission was opened by the Under-Secretary-General for Legal Affairs, the Legal Counsel, on 21 June 2010.

B. Membership and attendance

4. The General Assembly, in its resolution 2205 (XXI), established the Commission with a membership of 29 States, elected by the Assembly. By its resolution 3108 (XXVIII) of 12 December 1973, the Assembly increased the membership of the Commission from 29 to 36 States. By its resolution 57/20 of 19 November 2002, the General Assembly further increased the membership of the Commission from 36 States to 60 States. The current members of the Commission, elected on 22 May 2007, on 3 November 2009 and on 15 April 2010, are the following States, whose term of office expires on the last day prior to the beginning

of the annual session of the Commission in the year indicated:¹ Algeria (2016), Argentina (2016), Armenia (2013), Australia (2016), Austria (2016), Bahrain (2013), Belarus (2011), Benin (2013), Bolivia (Plurinational State of) (2013), Botswana (2016), Brazil (2016), Bulgaria (2013), Cameroon (2013), Canada (2013), Chile (2013), China (2013), Colombia (2016), Czech Republic (2013), Egypt (2013), El Salvador (2013), Fiji (2016), France (2013), Gabon (2016), Germany (2013), Greece (2013), Honduras (2013), India (2016), Iran (Islamic Republic of) (2016), Israel (2016), Italy (2016), Japan (2013), Jordan (2016), Kenya (2016), Latvia (2013), Malaysia (2013), Malta (2013), Mauritius (2016), Mexico (2013), Morocco (2013), Namibia (2013), Nigeria (2016), Norway (2013), Pakistan (2016), Paraguay (2016), Philippines (2016), Poland (2012), Republic of Korea (2013), Russian Federation (2013), Senegal (2013), Singapore (2013), South Africa (2013), Spain (2016), Sri Lanka (2013), Thailand (2016), Turkey (2016), Uganda (2016), Ukraine (2014), United Kingdom of Great Britain and Northern Ireland (2013), United States of America (2016) and Venezuela (Bolivarian Republic of) (2016).

5. With the exception of Bahrain, Bolivia (Plurinational State of), Botswana, Gabon, Latvia, Malta, Morocco, Namibia, Sri Lanka and Uganda, all the members of the Commission were represented at the session.

6. The session was attended by observers from the following States: Belgium, Ethiopia, Finland, Ghana, Guatemala, Iraq, Kuwait, Libyan Arab Jamahiriya, Madagascar, Netherlands, Panama, Qatar, Slovakia, Slovenia, Switzerland, Trinidad and Tobago, and United Arab Emirates. In addition, an observer from the Holy See attended the session.

7. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: Office of Legal Affairs of the Secretariat, International Monetary Fund, International Telecommunication Union (ITU), World Bank and World Intellectual Property Organization (WIPO);

(b) *Intergovernmental organizations*: Asian-African Legal Consultative Organization, European Bank for Reconstruction and Development (EBRD), European Union and Permanent Court of Arbitration (PCA);

(c) *Invited non-governmental organizations*: American Arbitration Association (AAA), American Bar Association (ABA), American Bar Foundation, Arab Association for International Arbitration, Asia Pacific Regional Arbitration

¹ Pursuant to General Assembly resolution 2205 (XXI), the members of the Commission are elected for a term of six years. Of the current membership, 30 were elected by the Assembly at its sixty-first session, on 22 May 2007 (decision 61/417), 28 were elected by the Assembly at its sixty-fourth session, on 3 November 2009, and two were elected by the Assembly at its sixty-fourth session, on 15 April 2010. By its resolution 31/99, the Assembly altered the dates of commencement and termination of membership by deciding that members would take office at the beginning of the first day of the regular annual session of the Commission immediately following their election and that their terms of office would expire on the last day prior to the opening of the seventh regular annual session following their election. The following six States members elected by the General Assembly on 3 November 2009 agreed to alternate their membership among themselves until 2016 as follows: Belarus (2010-2011, 2013-2016), Czech Republic (2010-2013, 2015-2016), Poland (2010-2012, 2014-2016), Ukraine (2010-2014), Georgia (2011-2015) and Croatia (2012-2016).

Group, Association for the Promotion of Arbitration in Africa, Association Française des Entreprises Privées, Cairo Regional Centre for International Commercial Arbitration, Center for International Legal Studies, Comité Français de l'Arbitrage, Commercial Finance Association, Consultative Group to Assist the Poor, Corporate Counsel International Arbitration Group, European Communities Trade Mark Association, Independent Film and Television Alliance, Insolvency and Bankruptcy Professionals (INSOL), International Air Transport Association (IATA), International Arbitration Institute, International Association of Restructuring, International Bar Association (IBA), International Institute for Sustainable Development, International Law Institute, International Swaps and Derivatives Association, International Trademark Association, Moot Alumni Association, New York City Bar, Pace Institute of International Commercial Law, Regional Centre for International Commercial Arbitration - Lagos, and Queen Mary University of London, School of International Arbitration;

(d) *Other entities having received a standing invitation to participate as observers in the General Assembly and maintaining permanent offices at Headquarters:* Sovereign Military Order of Malta.

8. The Commission welcomed the participation of international non-governmental organizations with expertise in the major items on the agenda. Their participation was crucial for the quality of texts formulated by the Commission and the Commission requested the Secretariat to continue to invite such organizations to its sessions.

C. Election of officers

9. The Commission elected the following officers:

Chair: Ricardo Sandoval López (Chile)

Vice-Chairs: Salim Moollan (Mauritius)

Kathryn Sabo (Canada)

Wisit Wisitsora-at (Thailand)

Rapporteur: Gerard Jirair Mekjian (Armenia)

D. Agenda

10. The agenda of the session, as adopted by the Commission, was as follows:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Finalization and adoption of a revised version of the UNCITRAL Arbitration Rules.

5. Finalization and adoption of a draft supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property.
6. Finalization and adoption of part three of the UNCITRAL Legislative Guide on Insolvency Law on the treatment of enterprise groups in insolvency.
7. Procurement: progress report of Working Group I.
8. Possible future work in the areas of electronic commerce and online dispute resolution.
9. Possible future work in the area of insolvency law.
10. Possible future work in the area of security interests.
11. Possible future work in the area of microfinance.
12. Monitoring implementation of the 1958 New York Convention.
13. Technical assistance to law reform.
14. Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts.
15. Status and promotion of UNCITRAL legal texts.
16. Working methods of UNCITRAL.
17. Coordination and cooperation:
 - (a) General;
 - (b) Reports of other international organizations.
18. Role of UNCITRAL in promoting the rule of law at the national and international levels.
19. International commercial arbitration moot competitions.
20. Relevant General Assembly resolutions.
21. Other business.
22. Date and place of future meetings.
23. Adoption of the report of the Commission.

E. Establishment of a Committee of the Whole

11. The Commission established a Committee of the Whole and referred to it for consideration agenda item 4. The Commission elected Michael Schneider (Switzerland) to chair the Committee of the Whole in his personal capacity. The Committee of the Whole met from 21 to 25 June 2010 and held 10 meetings. At its 910th meeting, on 25 June, the Commission considered and adopted the report of the Committee of the Whole and agreed to include it in the present report (see para. 187 below). (The report of the Committee of the Whole is reproduced in paras. 16-186 below.)

F. Adoption of the report

12. At its 910th meeting, on 25 June, 915th and 916th meetings, on 30 June, 919th meeting, on 2 July, and 924th meeting, on 9 July 2010, the Commission adopted the present report by consensus.

III. Finalization and adoption of a revised version of the UNCITRAL Arbitration Rules

A. Organization of deliberations

13. The Commission had before it the reports of Working Group II (Arbitration and Conciliation) on the work of its fifty-first (Vienna, 14-18 September 2009) and fifty-second (New York, 1-5 February 2010) sessions (A/CN.9/684 and A/CN.9/688, respectively) and the text of the draft revised UNCITRAL Arbitration Rules, as it resulted from the third reading by the Working Group at its fifty-second session and as contained in document A/CN.9/703 and Add.1. The Commission took note of the summary of the deliberations on the draft revised UNCITRAL Arbitration Rules since the forty-fifth session of the Working Group (Vienna, 11-15 September 2006). The Commission also took note of the comments on the draft revised UNCITRAL Arbitration Rules that had been submitted by Governments and international organizations, as set out in document A/CN.9/704 and Add.1-10.

14. The Commission recalled that, at its thirty-ninth session, in 2006, it had noted that, as one of the early instruments developed by UNCITRAL in the field of arbitration, the UNCITRAL Arbitration Rules (1976)² were widely recognized as a very successful text, having been adopted by many arbitration centres and used in many different instances. In recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of them should not alter the structure of the text, its spirit or its drafting style and should respect the flexibility of the text rather than make it more complex.³ At its fortieth session, in 2007, the Commission had noted that the review should seek to modernize the Rules and to promote greater efficiency in arbitral proceedings. The Commission generally agreed that the mandate of the Working Group to maintain the original structure and spirit of the UNCITRAL Arbitration Rules had provided useful guidance to the Working Group in its deliberations.⁴

15. The Committee of the Whole, established by the Commission at its current session (see para. 11 above), proceeded with the consideration of the text of the draft revised UNCITRAL Arbitration Rules. The report of the Committee is reproduced in section B below.

² *Official Records of the General Assembly, Thirty-first Session, Supplement No. 17 (A/31/17)*, para. 57.

³ *Ibid.*, *Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 184.

⁴ *Ibid.*, *Sixty-second Session, Supplement No. 17 (A/62/17)*, part I, para. 174.

B. Report of the Committee of the Whole

Section I. Introductory rules

Scope of application

Draft article 1

16. The Committee agreed that the words in brackets in paragraph 2 should be replaced with the words “15 August 2010”. The Committee agreed that the revised Rules should be effective as from that date. With that modification, the Committee adopted the substance of draft article 1.

Notice and calculation of periods of time

Draft article 2

17. The Committee considered draft article 2 and noted that it was one of the provisions that had not been fully considered by the Working Group during the third reading of the draft revised Rules.

18. A number of concerns were raised regarding draft article 2. As a matter of structure, it was suggested that it was preferable to describe first the acceptable means of communication, as currently laid out in paragraph 3, and only thereafter to deal with issues regarding receipt of a notice delivered through such means of communication. For that reason, it was proposed to place paragraph 3 as a first paragraph in draft article 2.

19. It was said that the requirement in paragraph 3 for the communication to provide a record of the information contained therein would seem to rule out many commonly used methods of verifying that a communication had been received, such as courier receipts. In addition, the requirement that the means of communication provide a record of its receipt was said to appear inconsistent with the purpose of paragraphs 1 (b) and 2, which dealt with deemed receipt. That requirement was said to be unusual and likely to give rise to practical difficulties. It was proposed to refer instead to the “transmission”, “delivery” or “sending” of the notice and to avoid any reference to the notion of receipt in paragraph 3. It was said that, in cases where the addressee denied that a notice had been received, that matter would have to be dealt with by the arbitral tribunal, according to draft article 27, paragraph 1, on the burden of proof.

20. The Committee recalled the decision made in the Working Group to expressly include in the Rules language that authorized both electronic and traditional forms of communication. In that respect, it was said that the revised version of draft article 2 should include language consistent with previous standards prepared by UNCITRAL in the field of electronic commerce, such as the UNCITRAL Model Law on Electronic Commerce⁵ and the United Nations Convention on the Use of Electronic Communications in International Contracts (2005).⁶ It was suggested that the use of the term “dispatch” in draft article 2 would be more appropriate to align

⁵ United Nations publication, Sales No. E.99.V.4.

⁶ United Nations publication, Sales No. E.07.V.2.

draft article 2 with the aforementioned instruments. Others questioned the appropriateness of the proposed language.

21. In relation to paragraph 2, the view was expressed that that provision should be augmented to deal with the situation where the addressee would refuse to take delivery or receive a notice as it was not viewed as covering that situation.

22. Support was expressed for draft article 2, as it appeared in document A/CN.9/WG.II/WP.157, which was said to follow more closely the language of the 1976 version of that article in the Rules.

23. The Committee considered the following proposal for draft article 2:

“1. A notice, including a notification, communication or proposal, may be transmitted by any means of communication that provides or allows for a record of its transmission.

“2. If an address has been designated by a party specifically for this purpose or authorized by the arbitral tribunal, any notice shall be delivered to that party at that address, and if so delivered shall be deemed to have been received. Delivery by electronic means such as facsimile or e-mail may only be made to an address so designated or authorized.

“3. In the absence of such designation or authorization, a notice is:

“(a) Received if it is physically delivered to the addressee; or

“(b) Deemed to have been received if it is delivered at the place of business, habitual residence or mailing address of the addressee.

“4. If, after reasonable efforts, delivery cannot be effected in accordance with paragraphs 2 or 3, a notice is deemed to have been received if it is sent to the addressee’s last-known place of business, habitual residence or mailing address by registered letter or any other means that provides a record of delivery or of attempted delivery.

“5. A notice shall be deemed to have been received on the day it is delivered in accordance with paragraphs 2, 3 or 4, or attempted to be delivered in accordance with paragraph 4.

“6. For the purpose of calculating a period of time under these Rules, such period shall begin to run on the day following the day when a notice is received. If the last day of such period is an official holiday or a non-business day at the residence or place of business of the addressee, the period is extended until the first business day which follows. Official holidays or non-business days occurring during the running of the period of time are included in calculating the period.”

24. General support was expressed for the substance of the proposal. With a view to clarifying the time of delivery where transmission took place by means of electronic communication, the following proposal was made for a possible addition to paragraph 5: “A notice transmitted by electronic means is deemed to have been received on the day it is transmitted.” Views expressed earlier in the discussion regarding the possible need to ensure consistency between the revised Rules and other UNCITRAL standards dealing with issues of electronic communication were reiterated. More generally, the discussion focused on whether all notices under the

Rules should rely on a receipt or on a dispatch rule. The question whether a specific rule should be designed for the notice of arbitration was also discussed. Support was expressed for a rule under which electronic communication should be deemed to have been received on the day when it was sent. It was generally acknowledged that a rule relying on deemed receipt at the time when notification reached the addressee's electronic address would be more consistent with other UNCITRAL texts and thus more conducive to the promotion of electronic communication in international arbitration. However, concern was expressed that, in daily arbitration practice, requiring a sender of an electronic notice to confirm the date of delivery to the addressee's address before being able to calculate time periods for the parties' further obligations in the arbitration (pursuant to draft art. 2, para. 6) could be excessively burdensome, whereas the date of sending could be readily ascertained. In that regard, it was noted that paragraph 5 only pertains to the question as to *when* a notice sent by electronic means is deemed received. The question *whether* it is deemed received is governed by paragraph 2, which conditions deemed receipt upon delivery of the notice to the address. It was therefore said that it remained open to a non-sending party to object that a particular notice, even if electronically sent to that party's address at an identified time, was in fact not delivered (and thus could not in the end be "deemed received"). The view was expressed that draft article 2 should be reflective of a practice where reliance on electronic communication was still limited.

25. After discussion, the Committee adopted the following wording to be inserted at the end of paragraph 5: "A notice transmitted by electronic means is deemed to have been received on the day it is sent, except that a notice of arbitration so transmitted is only deemed to have been received on the day when it reaches the addressee's electronic address."

26. It was clarified that the words "specifically for this purpose" in paragraph 2 following the words "designated by a party" should be understood as also including the indication of addresses for general notices in contracts that contained or referred to the arbitration agreement.

27. The Committee confirmed its understanding that the first sentence of paragraph 6 was to be understood as encompassing both actual and deemed receipt of a notice.

28. After discussion, the Committee adopted the substance of draft article 2 as contained in paragraphs 23 and 25 above.

Notice of arbitration

Draft article 3

29. For the sake of consistency with the provisions of draft article 2, the Committee agreed to replace the word "give" appearing before the words "to the other party" in paragraph 1 with the word "communicate". With that modification, the Committee adopted the substance of draft article 3.

Response to the notice of arbitration

Draft article 4

30. The Committee recalled that the purpose of draft article 4 was to provide the respondent with an opportunity to state its position before the constitution of the arbitral tribunal by responding to the notice of arbitration, and to clarify at an early stage of the procedure the main issues raised by the dispute.

Paragraph 1

31. It was observed that the 30-day time period for the communication of the response to the notice of arbitration might be too short in certain cases, in particular in complex arbitration or arbitration involving entities such as States or intergovernmental organizations.

32. In that context, it was pointed out that the specific practices and procedures of the United Nations, including its subsidiary organs, and other intergovernmental organizations might affect the ability of such organizations to take action within such time periods.

33. It was said that lengthening the time period for the communication of the response to the notice of arbitration would not be a satisfactory solution in relation to purely commercial arbitration between private parties. It was proposed that the concerns raised in relation to arbitration involving States or intergovernmental organizations or complex arbitration could be dealt with by adding language to the effect that the response to the notice of arbitration should be given “as far as possible” within 30 days. Another proposal was made to provide that the response to the notice of arbitration was only indicative.

34. Those proposals were objected to on the grounds that, in practice, the notice of arbitration and the response thereto were aimed at clarifying outstanding issues, and that goal might not be reached if the time limit for the communication of response to the notice of arbitration was not mandatory.

35. It was said that the response to the notice of arbitration dealt mainly with two types of issue, one relating to the response to the claim and the other to the composition of the arbitral tribunal. It was said that only the first type of issue was a novelty introduced by draft article 4, compared with the 1976 version of the Rules. In addition, it was pointed out that draft article 30, paragraph 1 (b), already provided that a failure by the respondent to communicate its response to the notice of arbitration should not be treated by the arbitral tribunal as an admission of the claimant’s allegations.

36. The Committee agreed that the response to the notice of arbitration was not intended to limit the right of the respondent to respond on the merits of the case at a later stage of the procedure, in particular in its statement of defence as provided in draft article 21. It was further said that the concerns raised in relation to the time period for the communication of the response to the notice of arbitration could be dealt with in practice, by the respondent either requesting an extension of time, or emphasizing the provisional nature of its response.

37. After discussion, the Committee adopted the substance of paragraph 1 without modification.

Paragraph 2

38. As a matter of drafting, the Committee agreed to add the words “to be” before the word “constituted” in paragraph 2 (a) and, with that modification, the Committee adopted the substance of paragraph 2.

Paragraph 3

39. The Committee adopted the substance of paragraph 3 without modification.

Representation and assistance**Draft article 5**

40. A proposal was made to modify the second sentence of draft article 5 along the lines of: “The credentials of such persons (representatives) must be certified in due form in accordance with the private law of the country of arbitration, and their names and addresses must be communicated to all parties and to the arbitral tribunal.” That proposal did not receive support.

41. The Committee adopted the substance of draft article 5 without modification.

Designating and appointing authorities**Draft article 6**

42. The Committee considered draft article 6, which dealt with designating and appointing authorities. That provision reflected the principle that the appointing authority could be appointed by the parties at any time during the arbitration proceedings, and not only in circumstances currently provided for in the Rules. It also sought to clarify the importance of the role of the appointing authority, particularly in the context of non-administered arbitration.

Paragraph 1

43. The question was raised whether the Secretary-General of the PCA should be mentioned in the Rules as one example of who could serve as appointing authority. It was proposed to delete the words “including the Secretary-General of the PCA” in paragraph 1. That proposal did not receive support.

44. It was further suggested that the functions of the Secretary-General of the PCA should be expressly limited under the Rules to those of a designating authority. In response to that suggestion, it was pointed out that there were instances in which the Secretary-General of the PCA had acted also as an appointing authority under the Rules. It was also said that that suggestion, if accepted, would run contrary to that existing practice and entail the risk of invalidating arbitration agreements designating the Secretary-General of the PCA as an appointing authority.

45. After discussion, the Committee adopted the substance of paragraph 1 without modification.

Paragraphs 2 and 3

46. It was stated that the specific practices and procedures of the United Nations, including its subsidiary organs, and other intergovernmental organizations might

affect the ability of such organizations to designate an appointing authority within the time period established under paragraph 2 to take action.

47. The Committee adopted the substance of paragraphs 2 and 3 without modification.

Paragraph 4

48. The Committee noted that paragraph 4 did not deal with the consequences attached to a failure to act of an appointing authority in case of challenge of an arbitrator. Since no time limit had been set for an appointing authority to decide on a challenge under draft article 13, that occurrence did not fall under any of the instances listed in paragraph 4. To address that concern, it was proposed to amend the first sentence of paragraph 4 as follows: "If the appointing authority refuses to act, or if it fails to appoint an arbitrator within 30 days after it receives a party's request to do so, fails to act within any other period provided by these Rules, or fails to decide on a challenge to an arbitrator within a reasonable time after receiving a party's request to do so, any party may request the Secretary-General of the PCA to designate a substitute appointing authority". That proposal was adopted by the Committee.

49. The Committee agreed that, for the sake of clarity, the functions of the Secretary-General of the PCA in relation to the review of fees and expenses of arbitrators should be dealt with under draft article 41, paragraph 4. Consequently, the Committee agreed to delete the last sentence of paragraph 4 and to include the words "Except as referred to in article 41, paragraph 4," as the opening words of draft article 6, paragraph 4.

50. The Committee adopted the substance of paragraph 4 with the modifications referred to in paragraphs 48 and 49 above.

Paragraphs 5-7

51. The Committee adopted the substance of paragraphs 5-7 without modification.

Section II. Composition of the arbitral tribunal

Number of arbitrators

Draft article 7

52. The Committee took note of a proposal to the effect that the single arbitrator who would be designated unless the parties had decided otherwise would be entitled, at the request of any of the parties, to determine that the arbitral tribunal should be composed of three arbitrators (see A/CN.9/704/Add.6). No support was expressed for that proposal.

53. The Committee adopted the substance of draft article 7 without modification.

Appointment of arbitrators (draft articles 8-10)

Draft article 8

54. The Committee adopted the substance of draft article 8 without modification.

Draft article 9*Paragraph 1*

55. It was said that draft article 9, paragraph 1, did not provide for the possibility of consultation between the arbitrators and the parties prior to choosing the presiding arbitrator. In order to avoid draft article 9 being construed as precluding such consultation, which was said to occur in practice, it was proposed to amend the second sentence of draft article 9, paragraph 1, as follows: “The two arbitrators thus appointed shall, after consultation with the parties should the arbitrators so decide, choose the third arbitrator who will act as presiding arbitrator of the arbitral tribunal.”

56. The need to amend paragraph 1 as proposed was questioned. It was said that, while consultations occurred in practice, international arbitral institutions did not provide in the text of their arbitration rules for such consultations. It was also suggested that, before adding such language, more precision was required as to how the arbitrators would carry out such consultations. In response to concern that such consultations between parties and arbitrators could create issues with regard to the duty of impartiality and independence of the arbitrators, the Committee agreed that such consultations should not be considered an infringement of that duty. It was further pointed out that codes of ethics for arbitrators, such as the IBA Rules of Ethics for International Arbitrators⁷ or the AAA/ABA Code of Ethics for Arbitrators in Commercial Disputes⁸ provided in substance that in arbitrations in which the two party-appointed arbitrators were expected to appoint the third arbitrator, each party-appointed arbitrator might consult with the party who appointed him or her concerning the choice of the third arbitrator.

57. After discussion, the Committee adopted the substance of paragraph 1 without modification.

Paragraph 2

58. The Committee adopted the substance of paragraph 2 without modification.

Paragraph 3

59. It was pointed out that paragraph 3 (pursuant to which the presiding arbitrator was to be appointed in the same way as a sole arbitrator would be appointed under draft article 8, paragraph 2), appropriately referred to “article 8, paragraph 2”. In order to capture in draft article 9, paragraph 3, also the important rule of draft article 8, paragraph 1, according to which the appointing authority should act “at the request of a party”, it was proposed that the reference in the last sentence of draft article 9, paragraph 3, should be to article 8 and not only to article 8, paragraph 2. The proposal to delete the words “, paragraph 2” was adopted and, with that modification, the Committee adopted the substance of paragraph 3.

⁷ Available at the date of this report from www.ibanet.org/Publications/publications_IBA_guides_and_free_materials.aspx.

⁸ Available at the date of this report from www.abanet.org/dispute/commercial_disputes.pdf.

Draft article 10

60. It was noted that the principle in paragraph 3 that the appointing authority should appoint the entire arbitral tribunal when parties were unable to do so was an important principle, in particular in situations like the one that had given rise to the case *BKMI and Siemens v. Dutco*.⁹ It was stated that the decision in the *Dutco* case had been based on the requirement that parties received equal treatment, which paragraph 3 addressed by shifting the appointment power to the appointing authority. In that light, a proposal was made to insert at the end of paragraph 3 the words “while respecting the equality of the parties”.

61. The Committee agreed that party equality was one of the fundamental principles of arbitration to also be observed by the appointing authority. However, it was noted that the shifting of all appointing power to the appointing authority safeguarded the principle of equality of the parties. The Committee concluded that there was no need to add such language in the Rules.

62. After discussion, the Committee adopted the substance of draft article 10 without modification.

Disclosures by and challenge of arbitrators (draft articles 11-13)**Draft article 11**

63. It was proposed to include language in draft article 11 that would relieve an arbitrator of his or her obligation to disclose circumstances likely to give rise to justifiable doubts as to his or her impartiality or independence where those circumstances were already known to the parties. That proposal received little support. It was said that that situation was already addressed by both draft article 12, paragraph 2, which gave a party the right to challenge the arbitrator appointed by it only for reasons of which it became aware after the appointment had been made, and draft article 13, paragraph 1, which included a time limit of 15 days for a party to challenge an arbitrator after the circumstances became known to it.

64. Another proposal was to qualify the standard of “circumstances likely to give rise to justifiable doubts” by including the words “in the view of an impartial third party” after the words “justifiable doubts”. That proposal did not find support.

65. After discussion, the Committee adopted the substance of draft article 11 without modification.

Draft article 12

66. The Committee adopted the substance of draft article 12 without modification.

Draft article 13

67. With a view to limiting frivolous challenges, a proposal was made to include at the end of paragraph 2 the following words: “and, as far as possible, the documents and the evidence on which the challenge is based”. Another proposal was made to require the appointing authority to state the grounds on which its decision

⁹ *BKMI and Siemens v. Dutco*, French Court of Cassation, 7 January 1992 (see *Revue de l'Arbitrage*, 1992, p. 470).

on challenge of arbitrator was made. A further proposal was made to include the words “within a reasonable time” at the end of paragraph 4 to avoid needless prolongation of the proceedings if the appointing authority was not sufficiently responsive. Those proposals did not find support.

68. It was noted that draft article 2 provided a general rule of interpretation, according to which periods of time stipulated in the Rules “begin to run on the day following the day when a notice, notification, communication or proposal is received”. It was further noted that draft article 13, paragraph 4, however, referred to the “date of the notice of challenge” rather than the date of its receipt as the starting point for the calculation of the time period. The Committee confirmed that the starting date in draft article 13, paragraph 4, was correctly stated for the purposes of draft article 13, paragraph 4.

69. The Committee adopted the substance of draft article 13 without modification.

Replacement of an arbitrator

Draft article 14

70. The Committee adopted the substance of draft article 14 without modification.

Repetition of hearings in the event of the replacement of an arbitrator

Draft article 15

71. The Committee adopted the substance of draft article 15 without modification.

Exclusion of liability

Draft article 16

72. The Committee considered draft article 16, which aimed at establishing immunity for the participants in the arbitration and sought to preserve exoneration in cases where the applicable law allowed contractual exoneration from liability, to the fullest extent permitted by such law, save for intentional wrongdoing.

73. The Committee recalled that the purpose of the provision was to ensure that arbitrators were protected from the threat of potentially large claims by parties dissatisfied with arbitral tribunals’ rulings or awards who might claim that such rulings or awards arose from the negligence or fault of an arbitrator. It was also recalled that a waiver “to the fullest extent permitted under the applicable law” did not and should not extend to intentional wrongdoing.

74. It was stated that the existence of liability was regulated by the applicable law and not by the agreement between the parties. The Rules, it was further said, were an agreement between the parties. Therefore, the question was raised whether draft article 16 should be amended so as to avoid creating the impression that it regulated the existence of liability, and focus instead on the allocation of its consequences between the parties.

75. It was further said that draft article 16 might give rise to differing interpretations, in particular the proviso “save for intentional wrongdoing” might be interpreted differently in various jurisdictions. Also, the view was expressed that

that proviso might create the impression that the Rules created liability even if there was no such liability under the applicable law.

76. A proposal was made to address those concerns along the lines of: “The parties waive, to the extent permitted under the applicable law, any claim that they may have under that law against the arbitrators, ...”. That proposal did not receive support. The Committee agreed that even though the liability regime differed depending on the applicable law, “intentional wrongdoing” was a concept that would be understandable to judges in different jurisdictions.

77. The Committee noted that the Secretary-General of the PCA was mentioned as being among those against whom parties would waive liability under the revised Rules. However, according to the comments of the Court, it already enjoyed immunity against legal process under various agreements and international conventions. The Committee agreed to delete the words “the Secretary-General of the PCA” in draft article 16 for the reason that a specific waiver under the revised Rules was unnecessary for the Court.

78. After discussion, the Committee adopted the substance of draft article 16 with the modification contained in paragraph 77 above.

Section III. Arbitral proceedings

General provisions

Draft article 17

Paragraph 1

79. It was noted that the Working Group had agreed to delete the word “full” that appeared before the word “opportunity” in article 15, paragraph 1, of the 1976 version of the Rules (corresponding to draft article 17, paragraph 1), in recognition of the fact that the phrase “a full opportunity” could be invoked to delay proceedings or otherwise misused and that it might be more appropriate simply to refer to “an opportunity”.

80. A suggestion was made to include the word “reasonable” or “adequate” before the word “opportunity” in paragraph 1. Objections were made to that suggestion on the ground that it might be interpreted as weakening the ability of parties to present their case. It was also pointed out that the word “opportunity” appeared under various provisions of the Rules and the use of the word “reasonable” before the word “opportunity” in draft article 17, paragraph 1, would create a discrepancy with those other provisions.

81. Strong support was expressed for the inclusion of the word “reasonable” before the word “opportunity” on the ground that it corresponded to a commonly used and well-accepted standard.

82. After discussion, the Committee agreed to replace the word “an” appearing before the word “opportunity” in the first sentence of paragraph 1 with the words “a reasonable”. The Committee adopted the substance of paragraph 1 with that modification.

Paragraph 2

83. It was noted that paragraph 2 provided for the power of the arbitral tribunal to change “any period of time”. A suggestion was made to except from that power extension of the period of time for issuing an award, as certain domestic legislation prohibited any such extension. Accordingly, it was suggested to add at the end of paragraph 2 the words “provided that this does not include the power to alter the period of time for issuing the award”. That suggestion did not receive support. It was explained that draft article 1, paragraph 3, of the Rules contained a general reservation stating that the Rules might not derogate from mandatory provisions of the law applicable to the arbitration, and that provision appropriately addressed that concern.

84. After discussion, the Committee adopted the substance of paragraph 2 without modification.

Paragraph 3

85. The Committee adopted the substance of paragraph 3 without modification.

Paragraph 4

86. A proposal was made to place the provision of paragraph 4, which dealt with all communications, as a new paragraph of draft article 2. It was further proposed to delete from draft articles 20, paragraph 1, 21, paragraph 1, 37, paragraph 1, and 38, paragraph 1, the notification requirement they contained since draft article 17, paragraph 4, it was said, already addressed the matter. Those proposals did not receive support.

87. The Committee considered paragraph 4 in the light of its decision to delete draft article 26, paragraph 9 (see paras. 121-125 below). In order to preserve the possibility for a party to apply to the arbitral tribunal for a preliminary order, it was proposed to modify draft article 17, paragraph 4, as follows:

“All communications to the arbitral tribunal by one party shall at the same time be communicated by that party to all other parties except if delayed communication to the other party is necessary so that the arbitral tribunal can consider, when it is otherwise authorized to do so, a party’s request that it issue a preliminary order directing the other party not to frustrate the purpose of a requested interim measure while the tribunal considers that request.”

88. It was pointed out that there were other instances where communications by a party could not be sent at the same time to the other parties. An example was the situation where arbitral institutions required that all communications be sent through them. With the aim of adopting a broader approach to possible exceptions to the requirement of simultaneous communication, a proposal was made to delete the words “at the same time” from paragraph 4. An alternative proposal was made to amend paragraph 4 as follows:

“All communications to the arbitral tribunal by one party shall at the same time be communicated by that party to all other parties, except as otherwise permitted by the arbitral tribunal.”

89. The alternative proposal received support. It was proposed to add at the end of the alternative proposal the words “or by applicable law”. That proposal received some support, as it was seen as a safeguard and a limit to the possibility for delayed communications.

90. However, it was suggested that that inclusion might import in the Rules application of domestic law principles that might not be desirable, in particular in those instances where the laws did not contain limitations to delayed communications.

91. In order to avoid any ambiguity as to the fact that the exception applied only to the timing of communication, it was suggested to divide the alternative proposal into two sentences along the lines of:

“All communications to the arbitral tribunal by one party shall be communicated by that party to all other parties. Except as otherwise permitted by the arbitral tribunal, all such communications shall be made at the same time.”

92. In response to concerns expressed by a few delegations on the alternative proposal, it was stated that the alternative proposal was not meant to affect the question whether an arbitral tribunal was authorized to issue orders without hearing parties. In that respect, one delegation recalled that draft article 17, paragraph 1, required the arbitral tribunal to treat the parties with equality and to provide a fair and efficient process for resolving their dispute. With a view to clarifying that the Rules remained neutral by reference to applicable law as to whether the arbitral tribunal had the power to permit delayed communications, a suggestion was made to amend the second sentence of the alternative proposal so that paragraph 4 would read as follows:

“All communications to the arbitral tribunal by one party shall be communicated by that party to all other parties. Such communications shall be made at the same time, except as otherwise permitted by the arbitral tribunal if it may do so under applicable law.”

The Committee adopted that suggestion.

93. The Committee adopted the substance of paragraph 4 as it appeared in paragraph 92 above.

Paragraph 5

94. The Committee considered paragraph 5, which allowed the arbitral tribunal to join a third party in the arbitration, under certain circumstances. It was pointed out that paragraph 5 provided that if a joinder would prejudice any of the parties, the provision gave the tribunal the possibility to deny it. It was said that joining a third person might deprive that person of its right to participate in the constitution of the arbitral tribunal. In that respect, it was clarified that the possible impact of the joinder on the validity or the enforceability of the award was a matter to be taken into account by the arbitral tribunal when assessing whether the joinder would cause prejudice to any of the parties.

95. After discussion, the Committee adopted the substance of paragraph 5 without modification.

Place of arbitration**Draft article 18**

96. It was said that draft article 18, paragraph 1, of the Rules stated that “the award shall be deemed to have been made at the place of arbitration”, and it was clarified that when the Rules were used by intergovernmental organizations, including the United Nations and its subsidiary organs, the reference to the place of arbitration should not be interpreted as a waiver of the organizations’ privileges and immunities. It was said that the United Nations and its subsidiary organs were not subject to local laws, including procedural laws concerning the conduct of the arbitration proceedings.

97. The Committee confirmed the decision made by the Working Group to retain the phrase “place of arbitration”, and adopted the substance of draft article 18 without modification.

Language**Draft article 19**

98. The Committee adopted the substance of draft article 19 without modification.

Statement of claim**Draft article 20***Paragraph 1*

99. As a matter of drafting, it was proposed to add the words “referred to” in the second sentence of paragraph 1 before the words “in article 3”. That proposal was adopted by the Committee and, with that modification, the Committee adopted the substance of paragraph 1.

Paragraphs 2 and 3

100. The Committee adopted the substance of paragraphs 2 and 3 without modification.

Paragraph 4

101. A suggestion was made to complement paragraph 4 with a text providing that in case documents could not be submitted with the statement of claim, the statement of claim should provide explanation and an indication as to when the missing document could be made available. That suggestion did not receive support as it was considered overregulating the matter.

102. The Committee adopted the substance of paragraph 4 without modification.

Statement of defence**Draft article 21***Paragraph 1*

103. As a matter of drafting, the Committee agreed to include the words “referred to” before the reference to “article 4” in the second sentence of draft article 21,

paragraph 1. With that modification, the Committee adopted the substance of paragraph 1.

Paragraphs 2 and 3

104. The Committee adopted the substance of paragraphs 2 and 3 without modification.

Paragraph 4

105. It was noted that paragraph 4 provided that draft article 20, paragraphs 2 and 4, applied to a counterclaim and a claim relied on for the purpose of a set-off. It was suggested that a reference to draft article 20, paragraph 3, be added to cater for the situation where a counterclaim or claim for the purpose of a set-off would be based on a contract or legal instrument different from the one submitted by the claimant in the statement of claim.

106. It was also proposed to include the phrase “, a claim under article 4, paragraph 2 (f),” after the words “a counterclaim”, in order to address the situation in which a respondent would have formulated a claim against a party to the arbitration agreement other than the claimant.

107. Both proposals received broad support and the Committee adopted the substance of paragraph 4 with the modifications contained in paragraphs 105 and 106 above.

Amendments to the claim or defence

Draft article 22

108. The Committee adopted the substance of draft article 22 without modification.

Pleas as to the jurisdiction of the arbitral tribunal

Draft article 23

Paragraph 1

109. It was noted that the phrase “shall have the power to rule” contained in article 21, paragraph 1, of the 1976 Rules had been replaced with the words “may rule” in draft article 23 of the revised Rules, which might be interpreted as weakening the power of the arbitral tribunal with respect to decisions on its own jurisdiction. It was explained that the modification had been made for the purpose of aligning the language of the Rules with that of the UNCITRAL Model Law on International Commercial Arbitration.¹⁰ While it was acknowledged that the words “may rule” were appropriate in the context of a legislative text, it was said that the wording of the 1976 version of the Rules should be retained as it better expressed the power granted to the arbitral tribunal under a text of a contractual nature such as the Rules. It was agreed to revert to the language in the 1976 version of the Rules and to replace in the first sentence of paragraph 1 the word “may” appearing before

¹⁰ See article 16, paragraph 1, of the UNCITRAL Model Law on International Commercial Arbitration with amendments as adopted in 2006 (United Nations publication, Sales No. E.08.V.4).

the word “rule” with the words “shall have the power to”. With that modification, the Committee adopted the substance of paragraph 1.

Paragraphs 2 and 3

110. The Committee adopted the substance of paragraphs 2 and 3 without modification.

Further written statements

Draft article 24

111. It was clarified that draft article 24, which dealt with further written statements that might be required from the parties, was meant to be a provision of a general nature and to include the possibility for the arbitral tribunal to require a response by the claimant to a counterclaim or claim for the purpose of a set-off.

112. The Committee adopted the substance of draft article 24 without modification.

Periods of time

Draft article 25

113. It was said that the possibility for the arbitral tribunal to extend time limits provided for in the second sentence of draft article 25 if it considered that an extension was justified defeated the purpose of the first sentence of that provision, which was to determine a maximum time limit of 45 days for the communication of written statements. Therefore, it was proposed to also provide for a time limit with respect to extension of time limits that might be decided by the arbitral tribunal. That proposal did not receive support.

114. The Committee adopted the substance of draft article 25 without modification.

Interim measures

Draft article 26

Paragraph 1

115. The Committee adopted the substance of paragraph 1 without modification.

Paragraph 2

116. As a matter of drafting, it was agreed to replace the words “to, including, without limitation:” appearing in the chapeau of paragraph 2 with the words “, for example and without limitation, to:”.

117. With respect to paragraph 2 (c), which allowed the arbitral tribunal to order a party to provide a means of preserving assets out of which a subsequent award might be satisfied, it was said that the property and assets of the United Nations were immune from search, requisition, confiscation, expropriation and any other form of interference, whether by executive, administrative, judicial or legislative action pursuant to article II, section 3, of the Convention on the Privileges and Immunities of the United Nations.¹¹ It was further said that such immunity was

¹¹ General Assembly resolution 22 A (1).

absolute and might not be disposed of by any court or tribunal. In that regard, it was clarified that paragraph 2 (c) was not intended to affect the regime of privileges and immunities of the United Nations.

118. With regard to state entities, a proposal was made to add to paragraph 2 (c) wording along the lines of: “nothing regarding that paragraph should be construed as derogating from the law on state immunity from execution”. A proposal was made to include a general provision to the effect that nothing in the Rules should be implied as a waiver of state immunities. After discussion, the Committee agreed that such addition to paragraph 2 (c) was not appropriate in view of the generic nature of the Rules. It was also said to be unnecessary as nothing in the Rules was intended to affect the system of immunities and privileges of States and state entities.

119. After discussion, the Committee adopted the substance of paragraph 2 with the modification referred to in paragraph 116 above.

Paragraphs 3-8

120. The Committee adopted the substance of paragraphs 3-8 without modification.

Paragraph 9

121. The Committee recalled that, pursuant to chapter IV A of the Model Law on Arbitration with amendments as adopted in 2006,¹² preliminary orders might be granted by an arbitral tribunal upon request by a party, without prior notice of the request to any other party, in the circumstances where it considered that prior disclosure of the request for the interim measure to the party against whom it was directed risked frustrating the purpose of the measure. The Committee further recalled the extensive discussions in the Working Group that had resulted in the adoption of paragraph 9. It was recalled that there were diverging views in the Working Group with respect to preliminary orders.

122. It was explained that the Working Group had agreed to the inclusion of paragraph 9 on the basis that it clarified that it would not be possible for an arbitral tribunal to grant preliminary orders in legal systems that did not allow them and that the power to grant preliminary orders had to be found outside these Rules. It was further explained that the text of draft paragraph 9 had been initially drafted for insertion in explanatory material accompanying the Rules.

123. It was suggested to delete paragraph 9 on the basis that its drafting was unclear, did not provide a rule and was unnecessary.

124. In support of retaining paragraph 9, it was stated that paragraph 9 reflected existing practice and promoted a neutral approach to the question of preliminary orders. It was also pointed out that draft article 17, paragraph 4, which required that all communications to the arbitral tribunal by one party be at the same time communicated to all other parties, contained a reference to draft article 26, paragraph 9 (see para. 93 above). It was stated that deletion of paragraph 9 would disassemble a carefully crafted compromise, which was seen as reconciling the diverging views expressed in the Working Group on the question of preliminary orders.

¹² United Nations publication, Sales No. E.08.V.4.

125. After discussion, the Committee agreed to delete paragraph 9.

Paragraph 10

126. The Committee adopted the substance of paragraph 10 without modification.

Evidence

Draft article 27

127. In response to a suggestion to include in draft article 27 a provision regarding the possibility of cross-examining witnesses, it was clarified that there were no restrictions under draft article 27 as to the manner in which witnesses might be examined. That suggestion did not receive support.

128. After discussion, the Committee adopted the substance of draft article 27 without modification.

Hearings

Draft article 28

Paragraphs 1-3

129. The Committee adopted the substance of paragraphs 1-3 without modification.

Paragraph 4

130. A suggestion was made to add language at the end of paragraph 4 to clarify that examination of witnesses or experts in a manner that would not require their physical presence should be justified by specific circumstances. In response to that suggestion, it was said that it might not be appropriate to provide for such a restriction in the light of technological developments in the field of communication.

131. After discussion, the Committee adopted the substance of paragraph 4 without modification.

Experts appointed by the arbitral tribunal

Draft article 29

132. The Committee adopted the substance of draft article 29 without modification.

Default

Draft article 30

133. In response to a question whether there could be any inconsistency between draft article 30, paragraph 1 (b), and draft article 32, it was explained that those two provisions dealt with different matters: draft article 30, paragraph 1 (b), addressed matters pertaining to the substance of the case, whereas draft article 32 related to matters of a procedural nature.

134. The Committee adopted the substance of draft article 30 without modification.

Closure of hearings**Draft article 31**

135. In paragraph 1, a drafting suggestion was made to replace the word “or” appearing before the word “witnesses” with the word “including”, as witnesses were a mode of proof. That proposal did not receive support.

136. The Committee adopted the substance of draft article 31 without modification.

Waiver of right to object**Draft article 32**

137. The Committee adopted the substance of draft article 32 without modification.

Section IV. The award**Decisions****Draft article 33**

138. It was suggested to modify draft article 33 to the effect that, in the absence of a majority, the award could be made by the presiding arbitrator alone. In response, the Committee recalled the extensive discussion in the Working Group that had led to the current text of the provision. Since the proposed change continued to provoke a division of opinion, it was not agreed to.

139. After discussion, the Committee adopted the substance of draft article 33 without modification.

Form and effect of the award**Draft article 34***Paragraph 1*

140. The Committee adopted the substance of paragraph 1 without modification.

Paragraph 2

141. The Committee considered paragraph 2 and noted that it was one of the provisions on which the Working Group did not reach agreement during the third reading of the draft revised Rules.

142. The Committee adopted the substance of the first two sentences of paragraph 2. The discussion focused on the third sentence, which contained a waiver to recourse.

143. While some support was expressed for spelling out the recourses that were excluded from the scope of the waiver, it was also felt that the language proposed might create ambiguity regarding the scope of the waiver, in particular with regard to whether the waiver encompassed the ability to resist enforcement of an award. It was proposed to replace the third sentence of paragraph 2 with a formulation along the lines of rule 28, paragraph 6, of the Rules of Arbitration of the International

Chamber of Commerce (ICC)¹³ or rule 26.9 of the Arbitration Rules of the London Court of International Arbitration (LCIA),¹⁴ which provided in substance that the parties waived their rights insofar as such waiver could validly be made, without defining the specific recourses waived.

144. It was also said that it would not be possible to accurately list the exceptions to the waiver as proposed in paragraph 2, as such list would have to cover all forms of recourse that might not be waived in all legal systems. Following that approach, a proposal was made to amend the third sentence of paragraph 2 as follows: “Insofar as they may validly do so by adopting these Rules, the parties waive their right to any form of appeal or review of an award to any court or other competent authority.”

145. The concern was expressed that a general waiver without any qualifications might be ineffective and would not provide sufficient guidance to the parties. Parties might not be aware that certain forms of recourse could not be waived in most legal systems. In the few systems where a waiver was possible, various requirements had to be met for the waiver to be valid, depending on the applicable law. An alternative proposal was made to modify the third sentence of paragraph 2 as follows: “The parties waive their right to any form of appeal, review or recourse against an award to any court or other competent authority that may be waived under the applicable law, and the waiver of which does not require a specific agreement.”

146. Another concern was expressed regarding the consequence that such a general waiver might entail for the privileges and immunities of sovereign entities or intergovernmental organizations when using the UNCITRAL Arbitration Rules. It was pointed out that the provision on waiver of recourses should not be deemed a waiver, express or implied, of any of the privileges and immunities of sovereign entities or of intergovernmental organizations, including the United Nations and its subsidiary organs.

147. In view of the difficulties in properly defining the limits of the waiver, and on the basis that that matter should be left to be addressed by applicable law, a proposal was made to delete the third sentence from paragraph 2 and to place its substance in an annex to the Rules, following the draft model arbitration clause for contracts. That proposal was adopted by the Committee with the waiver statement reading as follows: “The parties hereby waive their right to any form of recourse against an award to any court or other competent authority, insofar as such waiver can validly be made under the applicable law.”

148. It was further proposed to include the waiver statement under the draft model arbitration clause for contracts, as an additional item that the parties should consider adding. In support of that approach, it was said that such a waiver provision in the model arbitration clause would be a useful reminder for the parties to explicitly waive recourses. However, it was said that the matters listed under the model arbitration clause related to basic procedural aspects, such as the number of arbitrators, place of arbitration and language. It was pointed out that the waiver

¹³ Available at the date of this report from www.iccwbo.org/court/arbitration/id4093/index.html.

¹⁴ Available at the date of this report from www.lcia.org/Dispute_Resolution_Services/LCIA_Arbitration_Rules.aspx.

statement was of a different nature, and it would be useful to provide some guidance to the parties on the effect of that statement and its interplay with applicable laws.

149. Therefore, it was proposed to place the waiver statement following the draft model arbitration clause with the heading “Possible waiver statement” and to add a note before the waiver statement along the lines of: “If the parties wish to exclude recourse against the arbitral award that may be available under the applicable law, they may consider adding a provision to that effect as suggested below, considering however that the effectiveness and conditions of such an exclusion depend on the applicable law.” Support was expressed for that proposal.

150. Concern was expressed that not including the waiver in the model arbitration clause might diminish its importance for the users of the Rules. In response, it was said that both the waiver and the model arbitration clause were placed in the annex to the Rules and thus both were optional to the parties.

151. After discussion, the Committee agreed to delete the third sentence of paragraph 2 and to include the “possible waiver statement” following the draft model arbitration clause in the annex to the Rules as provided for in paragraphs 147 and 149 above.

Paragraphs 3-6

152. With respect to paragraph 5, which regulated conditions of publication of an award, it was said that as a means of ensuring the adequate protection of the privileges and immunities of the United Nations, including its subsidiary organs, the Organization generally provided that, when required by law, a third party was allowed to disclose certain information pertaining to the United Nations, subject to and without any waiver of the privileges and immunities of the United Nations. For that reason, third parties were generally required to give the United Nations sufficient prior notice of a request for the disclosure of such information in order to allow the United Nations to take protective measures or such other action as might be appropriate before any such disclosure was made. It was clarified that paragraph 5 should not be interpreted as a limitation on the United Nations ability to impose restrictions on the disclosure of information against its privileges and immunities.

153. The Committee adopted the substance of paragraphs 3-6 without modification.

Applicable law, *amiable compositeur*

Draft article 35

Paragraph 1

154. It was pointed out that the reference in the second sentence of paragraph 1 to “the law” that the arbitral tribunal determined to be appropriate in the absence of an express choice of the parties could be interpreted as excluding the arbitral tribunal’s power to apply “rules of law”. It was said that such an approach would differ from the solutions adopted by rules of other international arbitration institutions (such as art. 17, para. 1, of the ICC Rules, article 22.3 of the LCIA Rules or art. 33, para. 1 of the Swiss Rules of International Arbitration).¹⁵ It was suggested to amend the

¹⁵ Available at the date of this report from www.sccam.org/sa/en/rules.php.

second sentence of draft article 35, paragraph 1, as follows: “Failing such designation by the parties, the arbitral tribunal shall apply the law or rules of law which it determines to be appropriate.”

155. In response, it was explained that paragraph 1 was meant to increase the parties’ and the arbitral tribunal’s flexibility in determining the applicable law. It was noted that, while under the corresponding provision of the 1976 version of the UNCITRAL Arbitration Rules¹⁶ the parties were expected to choose the “law” to be applied to the merits of the dispute, under the draft revised version they would be allowed to choose “rules of law”, a phrase generally understood to mean any body of rules, not necessarily emanating from a State. It was further noted that, regarding the arbitral tribunal’s choice of the applicable law in case the parties had not made a choice themselves, the 1976 version of the Rules instructed the tribunal to choose the governing law by applying conflict-of-laws rules that it considered applicable. It was explained that the draft revised version did not mention conflict-of-laws rules, thereby enhancing flexibility. It was also said that the decision of the Working Group not to give to the arbitral tribunal the discretion to designate “rules of law” where the parties had failed to make a decision regarding the applicable law was the result of careful consideration.

156. It was also stated that, in any case, parties and the arbitral tribunal were not completely free to choose the applicable law. It was explained that the validity and enforceability of the award depended on the applicable law and on the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958)¹⁷ (the New York Convention). For instance, under article V of the New York Convention, an award was invalid or unenforceable if a party to the arbitration agreement was under some incapacity under its law, if the award was on a matter that was not arbitrable under the law applied by the court or if it conflicted with the public policy of the forum. It was highlighted that relevant laws regarding legal capacity, arbitrability and public policy should be taken into consideration.

157. After discussion, the Committee adopted the substance of paragraph 1 without modification.

Paragraphs 2 and 3

158. The Committee adopted the substance of paragraphs 2 and 3 without modification.

Settlement or other grounds for termination

Draft article 36

159. The Committee adopted the substance of draft article 36 without modification.

Interpretation of the award

Draft article 37

160. The Committee adopted the substance of draft article 37 without modification.

¹⁶ See article 33, paragraph 1, of the 1976 UNCITRAL Arbitration Rules.

¹⁷ United Nations, *Treaty Series*, vol. 330, No. 4739.

Correction of the award**Draft article 38**

161. The Committee adopted the substance of draft article 38 without modification.

Additional award**Draft article 39**

162. The Committee adopted the substance of draft article 39 without modification.

Definition of costs**Draft article 40**

163. It was noted that the definition of costs contained in draft article 40, paragraph 2 (f), referred to “any fees and expenses of the appointing authority”, but only to “the expenses” of the Secretary-General of the PCA. It was suggested to add the word “fees” in the reference to the Secretary-General of the PCA in that paragraph. That suggestion received support and, with that modification, the Committee adopted the substance of draft article 40.

Fees and expenses of arbitrators**Draft article 41**

164. The Committee considered draft article 41 and noted that paragraphs 3 and 4 had not been fully considered by the Working Group during the third reading of the draft revised Rules.

Paragraph 1

165. The Committee adopted the substance of paragraph 1 without modification.

Paragraph 2

166. It was observed that the words “has been agreed upon by the parties or designated by the Secretary-General of the PCA, and if that authority” appearing in paragraph 2 could be deleted as they were viewed as redundant. That proposal received support. It was further proposed to replace the word “an” appearing before the words “appointing authority” at the beginning of paragraph 2 with the word “the” for the sake of clarity. Concern was expressed that those proposals would not be consistent with the fact that an appointing authority would not necessarily be designated in each case. To accommodate that concern, it was proposed to begin paragraph 2 with the words “If there is an appointing authority and it applies”. That proposal received broad support. The Committee adopted the substance of paragraph 2 with the aforementioned modification.

Paragraph 3

167. The Committee adopted the substance of paragraph 3 without modification.

Paragraph 4

168. As a matter of principle, the question was raised whether the cost review mechanism designed under draft article 41 should be included in the Rules, as it might be seen as introducing complexities, and might give rise to abuse by losing parties that might seek review of fees to delay enforcement of an award. It was further said that the review mechanism would only address a situation rarely occurring in practice. In response, it was said that the review mechanism included in paragraph 4 would promote confidence in arbitration, that the risk of abuse was countered by the fact that the review did not affect any determination in the award, that paragraph 4 constituted the best compromise reached after extensive discussion in the Working Group and that the review mechanism would make the Rules attractive for users.

169. After discussion, the Committee agreed on the principle of including a cost review mechanism in the Rules and turned its attention to the drafting of paragraph 4 with a view to simplifying it.

170. It was noted that the second and third sentences of paragraph 4 were not consistent as the second sentence dealt with the hypothesis of the non-existence of an appointing authority whereas the third sentence, by referring to draft article 6, paragraph 4, dealt with the situation where the appointing authority refused or failed to act. It was suggested that those words should be deleted along with the second sentence of draft article 6, paragraph 4, and that the second sentence of paragraph 4 be modified along the lines of: “Within 15 days of receiving the arbitral tribunal’s determination of fees and expenses, any party may refer for review such determination to the appointing authority, or if no appointing authority has been agreed upon or designated or if the appointing authority refuses or fails to make any decision, to the Secretary-General of the PCA.”

171. It was further proposed to delete the words “pursuant to article 38” at the end of paragraph 4 and to add a sentence at the end of paragraph 4 along the lines of “Article 38, paragraph 3, shall apply.”, which would clarify that the adjustments to be made on the fees and expenses were not errors or omissions in the sense of draft article 38, but that the procedure of draft article 38, paragraph 3, applied.

172. After discussion, the Committee adopted the substance of paragraph 4 as follows:

“4. (a) When informing the parties of the arbitrators’ fees and expenses that have been fixed pursuant to article 40, paragraphs 2 (a) and (b), the arbitral tribunal shall also explain the manner in which the corresponding amounts have been calculated;

“(b) Within 15 days of receiving the arbitral tribunal’s determination of fees and expenses, any party may refer for review such determination to the appointing authority. If no appointing authority has been agreed upon or designated, or if the appointing authority fails to act within the time specified in these Rules, then the review shall be made by the Secretary-General of the PCA;

“(c) If the appointing authority or the Secretary-General of the PCA finds that the arbitral tribunal’s determination is inconsistent with the arbitral tribunal’s proposal (and any adjustment thereto) under paragraph 3 or is

otherwise manifestly excessive, it shall, within 45 days of receiving such a referral, make any adjustments to the arbitral tribunal's determination that are necessary to satisfy the criteria in paragraph 1. Any such adjustments shall be binding upon the arbitral tribunal;

“(d) Any such adjustments shall either be included by the tribunal in its award or, if the award has already been issued, be implemented in a correction to the award, to which the procedure of article 38, paragraph 3, shall apply.”

Deposit for the payment of the fee review

173. Concern was expressed that draft article 41, paragraph 4, did not provide for the payment of the costs incurred by the appointing authority or the Secretary-General of the Permanent Court of Arbitration for their review of the arbitrator's fees and expenses. In that regard, it was proposed to include an additional paragraph following paragraph 4 along the lines of:

“A party referring for review, under paragraph 4, the arbitral tribunal's determination of fees and expenses shall at the time of such referral deposit with the reviewing authority a sum, to be determined by the reviewing authority to cover the estimated cost of such review. Any excess amount shall be determined by the reviewing authority at the completion of the review.”

Some support was expressed for the inclusion of such a provision on the ground that the payment of a deposit would deter parties from making frivolous requests for review.

174. After discussion and particularly in view of the agreed additions to paragraph 6 (see para. 177 below), the Committee agreed that it was not necessary to include a provision on a deposit for the costs of the reviewing authorities.

Paragraph 5

175. The Committee adopted the substance of paragraph 5 without modification.

Paragraph 6

176. It was said that the cost review mechanism could delay the arbitral proceedings and might go beyond the scope of a review on the costs of the arbitrators only. To address the concern that the cost review might delay the recognition and enforcement of the award, it was proposed to include a second sentence in paragraph 6 along the lines of: “If an award containing the tribunal's determination of its fees and expenses is referred for review pursuant to paragraph 4, all provisions in the award other than those that relate to the determination of fees and expenses shall, to the maximum extent authorized by applicable law, be subject to immediate recognition and enforcement.”

177. That proposal received support and, with a view to simplifying its drafting, the Committee agreed to add at the end of paragraph 6 the words “; nor shall it delay the recognition and enforcement of all parts of the award other than those relating to the determination of the arbitral tribunal's fees and expenses”. With that modification, the Committee adopted the substance of paragraph 6.

Allocation of costs**Draft article 42**

178. The question was raised whether the words “any other award” appearing in paragraph 2 should be replaced with the words “any other decision”, so as to align the wording of that paragraph with the term used in draft article 40, paragraph 1. In response, it was explained that draft article 42 dealt with the determination of amounts that a party might have to pay to another party as a result of the decision on allocation of costs, and that decision was to be found in an award.

179. After discussion, the Committee adopted the substance of draft article 42 without modification.

Deposit of costs**Draft article 43**

180. The Committee adopted the substance of draft article 43 without modification.

Placement of the draft model arbitration clause for contracts and the model statements of independence pursuant to article 11 of the Rules

181. The Committee agreed to place the draft model arbitration clause for contracts and the draft model statements of independence pursuant to article 11 of the Rules in an annex to the revised Rules and to include a reference to them in the table of contents of the revised Rules, as well as in a footnote to the corresponding articles referring to that annex.

Draft model arbitration clause for contracts

182. The Committee adopted the substance of the draft model arbitration clause for contracts without modification.

Draft model statements of independence pursuant to article 11 of the Rules

183. As a matter of drafting, the Committee agreed to delete the word “hereby” where that word appeared in the draft model statements of independence.

184. A proposal was made to include in the statements a reference to legal counsels, witnesses and experts, from which the arbitrator had to be independent. In response, it was said that such a statement would be difficult to make in relation to witnesses and experts, as they were not all known to the arbitrator at the time his or her statement would be made. Although some support was expressed for the inclusion of the legal counsels to the parties, the prevailing view was that such an inclusion might not be necessary as the statement was drafted in a broad manner, encompassing all circumstances likely to give rise to doubts as to the impartiality or independence of the arbitrators.

185. After discussion, the Committee adopted the substance of the draft statements of independence pursuant to article 11 of the Rules with the deletion of the word “hereby” where it appeared in the draft statements.

Note on a statement of availability of the arbitrator

186. It was also observed that the note on a statement of availability could be either requested by the parties or made by the arbitrator on his or her own motion. The Committee adopted the note on the draft statement on the availability of the arbitrator with the following modification to its chapeau: “Note. Any party may consider requesting from the arbitrator the following addition to the statement of independence:”.

C. Adoption of the UNCITRAL Arbitration Rules as revised in 2010

187. At its 910th meeting, on 25 June 2010, the Commission adopted the report of the Committee of the Whole and agreed that it should form part of the present report (see paras. 16-186 above). After considering the text of the draft revised Arbitration Rules (reproduced in annex I to this report), the Commission adopted the following decision:

“The United Nations Commission on International Trade Law,

“Recalling General Assembly resolution 2205 (XXI) of 17 December 1966, which established the United Nations Commission on International Trade Law with the purpose of furthering the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

“Recalling General Assembly resolution 31/98 of 15 December 1976 recommending the use of the UNCITRAL Arbitration Rules,¹⁸

“Recognizing the value of arbitration as a method of settling disputes that may arise in the context of international commercial relations,

“Noting that the UNCITRAL Arbitration Rules are recognized as a very successful text and are used in a wide variety of circumstances covering a broad range of disputes, including disputes between private commercial parties, investor-State disputes, State-to-State disputes and commercial disputes administered by arbitral institutions, in all parts of the world,

“Recognizing the need for revising the UNCITRAL Arbitration Rules to conform to current practices in international trade and to meet changes that have taken place over the last thirty years in arbitral practice,

“Believing that the UNCITRAL Arbitration Rules as revised in 2010 to reflect current practices will significantly enhance the efficiency of arbitration under the Rules,

“Convinced that the revision of the UNCITRAL Arbitration Rules in a manner that is acceptable to countries with different legal, social and economic systems can significantly contribute to the development of harmonious international economic relations,

¹⁸ *Official Records of the General Assembly, Thirty-first Session, Supplement No. 17 (A/31/17), chap. V, sect. C.*

“*Noting* that the preparation of the UNCITRAL Arbitration Rules as revised in 2010 was the subject of due deliberation and extensive consultations with Governments and interested circles and that the revised text can be expected to contribute significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of international commercial disputes,

“*Expressing* its appreciation to Working Group II (Arbitration and Conciliation) for formulating the UNCITRAL Arbitration Rules as revised in 2010,

“1. *Adopts* the UNCITRAL Arbitration Rules as revised in 2010 as they appear in annex I to the present report;

“2. *Recommends* the use of the UNCITRAL Arbitration Rules as revised in 2010 in the settlement of disputes arising in the context of international commercial relations;

“3. *Requests* the Secretary-General to make all efforts to ensure that the UNCITRAL Arbitration Rules as revised in 2010 become generally known and available.”

D. Possible recommendations to arbitral institutions and other interested bodies

188. The Commission had before it a note by the Secretariat on possible recommendations to arbitral institutions and other interested bodies with respect to the revised Rules (A/CN.9/705). The Commission recalled that, at its fifteenth session, in 1982, it had adopted “Recommendations to assist arbitral institutions and other interested bodies with regard to arbitration under the UNCITRAL Arbitration Rules”.¹⁹ The preparation of the Recommendations had been undertaken by the Commission to facilitate the use of the 1976 UNCITRAL Arbitration Rules in administered arbitration and to deal with instances where the Rules were adopted as institutional rules of an arbitral body or when the arbitral body was acting as appointing authority or provided administrative services in ad hoc arbitration under the Rules.

189. After discussion, the Commission agreed that similar recommendations to arbitral institutions and other relevant bodies should be issued with respect to the UNCITRAL Arbitration Rules as revised in 2010 in view of the extended role granted to appointing authorities. It was said that the recommendations would promote the use of the Rules and that arbitral institutions in all parts of the world would be more inclined to accept acting as appointing authorities if they had the benefit of such guidelines. The Commission also agreed that the recommendations on the revised Rules should follow the same pattern as the Recommendations adopted in 1982. The Commission entrusted the Secretariat with the preparation of that document, for consideration by the Commission at a future session.

¹⁹ Ibid., *Thirty-seventh Session, Supplement No. 17* and corrigenda (A/37/17 and Corr.1 and 2), paras. 74-85 and annex I.

E. Future work in the field of settlement of commercial disputes

190. With respect to future work in the field of settlement of commercial disputes, the Commission recalled the decision made at its forty-first session that the topic of transparency in treaty-based investor-State arbitration should be dealt with as a matter of priority immediately after completion of the current revision of the UNCITRAL Arbitration Rules.²⁰ The Commission entrusted its Working Group II (Arbitration and Conciliation) with the task of preparing a legal standard on that topic. The Commission was informed that, pursuant to the request received from the Commission at the forty-first session, the Secretariat had circulated a questionnaire to States with regard to their practice on transparency in investor-State arbitration and that replies thereto would be made available to the Working Group.

191. Support was expressed for the view that the Working Group could also consider undertaking work in respect of those issues which arose more generally in treaty-based investor-State arbitration and would deserve additional work. The prevailing view, in line with the decision previously made by the Commission, was that it was too early to make a decision on the precise form and scope of a future instrument on treaty-based arbitration and that the mandate of the Working Group should be limited to the preparation of rules of uniform law on transparency in treaty-based investor-State arbitration. However, it was agreed that, while operating within that mandate, the Working Group might identify any other topic with respect to treaty-based investor-State arbitration that might also require future work by the Commission. It was agreed that any such topic might be brought to the attention of the Commission at its next session, in 2011.

IV. Finalization and adoption of a draft supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property

A. Introduction

192. The Commission had before it: (a) the draft supplement to the *UNCITRAL Legislative Guide on Secured Transactions* dealing with security rights in intellectual property (A/CN.9/700 and Add.1-7)); (b) the reports of the sixteenth (Vienna, 2-6 November 2009) and seventeenth (New York, 8-12 February 2010) sessions of Working Group VI (Security Interests) (A/CN.9/685 and A/CN.9/689, respectively); (c) chapter V of the report of Working Group V (Insolvency Law) on the work of its thirty-eighth session (New York, 19-23 April 2010) (A/CN.9/691), addressing the impact of insolvency of a licensor or licensee on a security right in that party's rights under a licence agreement; and (d) a note by the Secretariat transmitting comments of international organizations on the draft supplement (A/CN.9/701).

193. At the outset, the Commission expressed its appreciation to Working Group VI (Security Interests) for its work in the development of the draft supplement, to Working Group V (Insolvency Law) for its contribution to the development of the

²⁰ Ibid., *Sixty-third Session, Supplement No. 17* and corrigendum (A/63/17 and Corr.1), para. 314.

insolvency chapter of the draft supplement and to the Secretariat for its work in coordinating this work and preparing the documents for the session. The Commission also expressed its appreciation to all the organizations that have assisted Working Group VI in its work, in particular, to WIPO and to the Permanent Bureau of the Hague Conference on Private International Law.

194. The Commission also noted with appreciation the publication of the *UNCITRAL Legislative Guide on Secured Transactions*²¹ and a separate publication consisting of the terminology and recommendations of the *Guide*.²² Both texts had been adopted by the Commission at the second part of its fortieth session (Vienna, 10-14 December 2007).²³

B. Consideration of the draft supplement

195. With regard to the title of the supplement, the Commission agreed that it should be “UNCITRAL Legislative Guide on Secured Transactions. Supplement on Security Rights in Intellectual Property”. It was also agreed that the notes to the Commission at the beginning of each chapter of the draft supplement, which provided information about the relevant discussion by Working Group VI, would not need to be reproduced in the final version of the supplement. The Commission gave the Secretariat the mandate to make the necessary editorial changes to ensure consistency among the various chapters of the draft supplement and between the draft supplement and the *Guide*.

1. Preface and introduction (A/CN.9/700)

196. With respect to the preface, it was agreed that:

(a) The first sentence of the third paragraph should be revised to read along the following lines: “... the Secretariat organized, with the cooperation of WIPO, a colloquium ...”;

(b) In the third sentence of the fifth paragraph, after the phrase “organizations from the public and the private sector”, the phrase “which attended its meetings as observers” should be added.

197. With respect to the introduction, it was agreed that:

(a) At the end of the second sentence of paragraph 1 and the first sentence of paragraph 7, the phrase “as security for credit” should be added;

(b) The last sentence of paragraph 32 should be revised to read along the following lines: “the expression ‘transfer other than an outright transfer’ may denote the granting of rights from a licensor to a licensee where the licensor retains some control over the use of the intellectual property”;

²¹ United Nations publication, Sales No. E.09.V.12; also available at the date of this report from www.uncitral.org/pdf/english/texts/security-lg/e/09-82670_Ebook-Guide_09-04-10English.pdf.

²³ *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17 (A/62/17)*, part II, para. 100.

(c) At the end of the third sentence of paragraph 41, the phrase “with the consent of the licensor, if the licence agreement provides that the rights of Company D are non-transferable” should be added;

(d) At the end of the last sentence of paragraph 41, the phrase “to determine whether company D may grant a security right” should be added;

(e) Prior to paragraph 43, a subheading “Security rights in tangible assets with respect to which intellectual property is used” should be inserted to cover examples 6 and 7;

(f) The second and third sentences of paragraph 43 should be revised to read along the following lines: “This category of transactions, illustrated by examples 6 and 7 below, involve security rights in tangible assets. As discussed in the

draft supplement, a security right in a tangible asset does not automatically extend to the intellectual property used with respect to that asset, except if otherwise agreed by parties.”;

(g) The third sentence of paragraph 44 should be revised to read along the following lines: “Company F provides bank F with its trademark licence agreements evidencing its right to use the trademarks and to grant a security right in the trademarked inventory, and its obligations to the trademark owner.”;

(h) At the end of the second sentence of paragraph 45, the phrase “and that it has rights to grant a security right in those jeans” should be inserted;

(i) At the end of the second sentence of paragraph 48, the reference to “licensors or licensees” having exclusive rights should be deleted, as only owners had exclusive rights.

198. Subject to those changes, the Commission adopted the substance of the preface and the introduction.

2. Chapter I. Scope of application and party autonomy (A/CN.9/700/Add.1)

199. The Commission agreed that:

(a) In subparagraph (g) dealing with patents in paragraph 11, the word “patent” should be replaced with the word “invention”, as an inventor would invent the invention and not the patent;

(b) A subparagraph (h) should be added under patents in paragraph 11 to refer to “the transferability of patents and the right to grant a licence”;

(c) At the end of paragraph 17, text along the following lines should be added: “A State implementing the recommendations of the Guide may wish to address this question.”

200. Subject to those changes, the Commission adopted the substance of chapter I.

3. Chapter II. Creation of a security right in intellectual property (A/CN.9/700/Add.2 and recommendation 243)

201. It was agreed that paragraph 32 should be revised to refer to cars or other devices that included a copy of copyrighted software or design rights. It was also agreed that the word “product” at the end of the paragraph should be replaced with

the word “component”. Subject to those changes, the Commission adopted the substance of chapter II. The Commission also adopted recommendation 243 unchanged.

4. Chapter III. Effectiveness of a security right in intellectual property against third parties (A/CN.9/700/Add.3, paras. 1-9)

202. It was agreed that the fourth sentence of paragraph 9 should be revised to read along the following lines: “... a security right in intellectual property is treated as another type of (outright or conditional) transfer ...”. Subject to those changes, the Commission adopted the substance of chapter III.

5. Chapter IV. The registry system (A/CN.9/700/Add.3, paras. 10-52, and recommendation 244)

203. It was agreed that:

(a) In the fourth sentence of paragraph 13, the reference to “the Madrid Agreement concerning the International Registration of Marks (1891), the Madrid Protocol (1989)” should be deleted;

(b) After the words “For example” in the second sentence of paragraph 14, the phrase “the Madrid Agreement concerning the International Registration of Marks (1891) and the Protocol Relating to that Agreement (1989) provides for the possibility to record a restriction of the holder’s right of disposal in an international application or registration (see Form MM19 at www.wipo.int/madrid/en/forms/) and” should be inserted;

(c) Paragraph 29 should be revised to avoid unnecessarily emphasizing the fact that the general security rights registry provided less information and to clarify the advantages and disadvantages of such a general registry.

204. Subject to those changes, the Commission adopted the substance of chapter IV. The Commission also adopted recommendation 244 unchanged.

6. Chapter V. Priority of a security right in intellectual property (A/CN.9/700/Add.4 and recommendation 245)

205. The Commission agreed that the phrase in parenthesis at the end of paragraph 35 should be deleted. Subject to that change, the Commission adopted the substance of chapter V. The Commission also adopted recommendation 245 unchanged.

7. Chapter VI. Rights and obligations of the parties to a security agreement relating to intellectual property (A/CN.9/700/Add.5, paras. 1-5, and recommendation 246)

206. The Commission adopted the substance of chapter VI unchanged. The Commission also adopted recommendation 246 unchanged.

8. Chapter VII. Rights and obligations of third-party obligors in intellectual property financing transactions (A/CN.9/700/Add.5, paras. 6-7)

207. The Commission adopted the substance of chapter VII unchanged.

**9. Chapter VIII. Enforcement of a security right in intellectual property
(A/CN.9/700/Add.5, paras. 8-32)**

208. The Commission adopted the substance of chapter VIII unchanged.

**10. Chapter IX. Acquisition financing in an intellectual property context
(A/CN.9/700/Add.5, paras. 33-62, and recommendation 247)**

209. The Commission considered replacing the text in paragraphs 43-47 with a text that would clarify that a licensor or its secured creditor could obtain the benefits of an acquisition security right as it could register the licence or the security right in the relevant intellectual property registry before a secured creditor of the licensee. It was stated that that result would be achieved only if registration of security rights in future intellectual property was not permitted under the relevant specialized registration regime. It was also observed that, if such advance registration was permitted, the general financier of a licensee could obtain priority over an acquisition secured creditor of the licensor. After discussion, it was agreed that, while the proposed text contained an important element that could usefully be added to the text in paragraphs 43-47, it should not replace the text in those paragraphs. The Secretariat was authorized to make the necessary editorial amendments. Subject to that change, the Commission adopted the substance of chapter IX. The Commission also adopted recommendation 247 unchanged.

**11. Chapter X. Law applicable to a security right in intellectual property
(A/CN.9/700/Add.6, paras. 1-54, and recommendation 248)**

210. In addition to options A-D, the Commission considered the following options for recommendation 248:

“Option E

“248. The law should provide that, notwithstanding recommendations 208 and 218, in the case of a security right in intellectual property:

“(a) The law applicable to property issues relating to whether a security right in the intellectual property may be created [, such as whether the intellectual property right exists, whether the grantor has an interest in it, and whether and to whom that interest is transferable,] is the law of the State in which the intellectual property is protected;

“(b) Subject to paragraph (a), the law applicable to the creation of a security right in intellectual property is the law of the State in which the grantor is located;

“(c) The law applicable to the effectiveness against third parties and priority of a security right in intellectual property is the law of the State in which the intellectual property is protected; however, if rights in the intellectual property may not be registered in an intellectual property registry in the State in which the intellectual property is protected, the law applicable to the effectiveness against third parties and priority of the security right in the intellectual property as against another secured creditor or the grantor’s insolvency representative is the law of the State in which the grantor is located; and

“(d) The law applicable to the enforcement of a security right in intellectual property is the law of the State in which the grantor is located, provided that, with respect to sale or other disposition of the intellectual property, the law applicable to property issues relevant to the rights in the intellectual property created by the sale or other disposition is the law of the State in which the intellectual property is protected.

“*Option F*

“248. The law should provide that, notwithstanding recommendations 208 and 218, in the case of a security right in intellectual property:

“(a) The law applicable to property issues relating to whether a security right in the intellectual property may be created and the rights in the intellectual property created by enforcement of the security right is the law of the State in which the intellectual property is protected; [such property issues include those that determine whether the intellectual property right exists, whether the grantor has an interest in it, the transferability of the intellectual property and the requirements for creating a property right in the transferee upon disposition;]

“(b) Subject to paragraph (a), the law applicable to the creation and enforcement of a security right in intellectual property is the law of the State in which the grantor is located; and

“(c) The law applicable to effectiveness against third parties and priority of a security right in intellectual property is the law of the State in which the intellectual property is protected; however, if rights in the intellectual property may not be registered in an intellectual property registry in the State in which the intellectual property is protected, the law applicable to effectiveness against third parties and priority of the security right in the intellectual property as against another secured creditor or the grantor’s insolvency representative is the law of the State in which the grantor is located.

“*Option G*

“The law should provide that the law applicable to the creation, effectiveness against third parties, priority and enforcement of a security right in intellectual property is the law of the State in which the intellectual property is protected. The law should in addition provide that a security right in intellectual property may also be created under the law of the State in which the grantor is located and made effective under that law against third parties other than another secured creditor, a transferee or a licensee.”

211. With respect to options E and F, which were substantially identical, it was stated that they were guided by the twin principles of accommodating the interests of secured creditors and intellectual property right holders, and of appropriately deferring to law relating to intellectual property. It was also observed that options E and F, the preparation of which was significantly aided by discussions at a meeting held in June by the European Max-Planck Group for Conflicts of Laws in Intellectual Property (CLIP), aimed at referring: (a) issues relating to the ownership and transferability of intellectual property to the law of the State in which the intellectual property was protected (*lex protectionis*); (b) the creation and

enforcement of a security right in intellectual property to the law of the State in which the grantor was located; and (c) the third-party effectiveness and priority of a security right in intellectual property, with two narrowly defined exceptions, to the *lex protectionis*.

212. With respect to option E, subparagraph (d), concern was expressed that it might be unworkable to the extent that it appeared to separate enforcement issues into two different categories and refer them to two different laws. In response, it was stated that all enforcement issues were referred to the law of the State in which the grantor was located. It was also observed that, once an enforcement sale was concluded, issues relating to the transfer (and possibly the registration of the intellectual property) would normally be subject to the *lex protectionis*.

213. With respect to option G, it was stated that it was intended to reflect an approach based essentially on the *lex protectionis*, in the sense that it referred the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property to the *lex protectionis*. However, it was also observed that option G permitted the secured creditor to create and make effective against third parties a security right in intellectual property according to the law of the State in which the grantor was located. It was explained that, as a result, that option provided for the application of the law of the State in which the grantor was located to the effectiveness of a security right in the case of the grantor's insolvency. In response to a question, it was explained that if a security right was effective as against an insolvency representative, its effectiveness had to be respected and thus no issue of priority arose.

214. It was also pointed out that option G was short and simple and thus promoted certainty and predictability with respect to the law applicable to a security right in intellectual property. In addition, it was mentioned that another advantage of option G was that it did not distinguish between types of intellectual property that could be registered in an intellectual property registry and those which could not be registered in such a registry. In response to a question, it was observed that, in the case of multiple security rights in multiple intellectual property assets protected under the laws of multiple States, under option G, there would be one law governing priority, namely the law of the State in which the relevant intellectual property asset that was subject to the competing security rights was protected.

215. While it was explained that enforcement in multiple jurisdictions was a common situation with respect to security rights in intellectual property, strong concern was expressed that referring enforcement issues in particular in the case of a security right in a portfolio of intellectual property assets protected under the law of multiple States to the laws of those jurisdictions would add complexity and cost to intellectual property financing transactions and would thus run counter to the overall objective of the *Guide* to facilitate access to secured credit at more affordable rates. The suggestion was thus made that enforcement should be referred to the law of the State in which the grantor was located. There was broad support for that suggestion.

216. After a preliminary discussion, the Commission agreed that, in view of the fact that options E-G had attracted some support and covered all the elements reflected in options B-D, the latter could be set aside. As a result, the Commission decided to focus on options A and E-G.

217. In support of option A, it was stated that it was consistent with various intellectual property conventions. In that regard, some doubt was expressed as to whether those conventions dealt with the law applicable to a security right in intellectual property. It was also observed that option A was consistent with the law in many States. In that connection, it was pointed out that option G was also an approach based on the *lex protectionis*, with the additional advantage that it allowed the secured creditor to obtain a security right that could be created and made effective against the grantor's insolvency representative and judgement creditors under the law of the State in which the grantor was located.

218. Broad support was expressed for option G, provided that it was revised to refer enforcement issues to the law of the grantor's location. To address that point, option G was revised to read as follows:

“The law should provide that:

“(a) The law applicable to the creation, effectiveness against

third parties and priority of a security right in intellectual property is the law of the State in which the intellectual property is protected;

“(b) A security right in intellectual property may also be created under the law of the State in which the grantor is located and may also be made effective under that law against third parties other than another secured creditor, a transferee or a licensee; and

“(c) The law applicable to the enforcement of a security right in intellectual property is the law of the State in which the grantor is located.”

219. General support was expressed for the revised version of option G on the understanding that it: (a) was essentially based on the *lex protectionis*; (b) allowed the secured creditor to obtain a security right that could also be created and made effective against the grantor's insolvency representative and judgement creditors under the law of the State in which the grantor was located; and (c) referred enforcement issues to the law of the State in which the grantor was located.

220. One of the delegations that supported option A stated that, despite the fact that it preferred option A and in view of the overwhelming support for the revised option G, it did not wish to stand in the way of consensus and was thus prepared to accept the revised option G. That delegation added, however, that the commentary should clarify that issues relating to the ownership and transferability of intellectual property would not be affected by the proposed recommendation. It also stated that, if law relating to intellectual property had an intellectual property-specific rule that provided for a different applicable law, that rule would prevail in accordance with recommendation 4, subparagraph (b). There was general agreement that the commentary should include a statement to clarify those matters.

221. After discussion, the Commission adopted the revised option G as recommendation 248.

222. The Commission next turned to the commentary of chapter X. It was agreed that: (a) the analysis of possible approaches should be revised to reflect the Commission's adoption of revised option G and the reasons for that decision; (b) the commentary should emphasize the fact that the *Guide* did not affect the law applicable to ownership and transferability issues, drawing on the relevant text of

options E and F; and (c) like any other recommendation of the *Guide* and the draft supplement, recommendation 248 was subject to recommendation 4, subparagraph (b). It was also agreed that a so-called “accommodation rule”, under which a forum would equate a security right that was created and made effective under the law of the grantor’s location to the closest equivalent of the security right under the *lex protectionis*, was not necessary as the text of recommendation 248 adopted gave appropriate recognition to the *lex protectionis*.

223. Subject to the changes agreed to be made in chapter X under paragraphs 220 and 222 above, the Commission adopted the substance of chapter X.

12. Chapter XI. Transition (A/CN.9/700/Add.6, paras. 55-59)

224. The Commission adopted the substance of chapter XI unchanged.

13. Chapter XII. The impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement (A/CN.9/700/Add.6, paras. 60-82, and A/CN.9/691, paras. 94-98)

225. The Commission noted that Working Group V (Insolvency Law), at its thirty-eighth session (New York, 19-23 April 2010), had considered the text on automatic termination and acceleration clauses in intellectual property licence agreements referred to it by Working Group VI (Security Interests) at its sixteenth session (A/CN.9/685, para. 95; the text currently reflected in A/CN.9/700/Add.6, paras. 64-66). The Commission further noted that Working Group V had approved that text subject to the addition of the following text possibly after paragraph 64 (A/CN.9/691, paras. 94-98):

“The commentary to the *Insolvency Guide* explains the perceived advantages and disadvantages of such clauses, the types of contracts that may be appropriate to be exempted and the inherent tension between promoting the debtor’s survival, which may require the preservation of contracts, and introducing provisions which override contractual clauses. The possible application of such provisions to intellectual property is addressed in the commentary at part two, chapter II, paragraph 115, of the *Insolvency Guide*.”

226. Subject to that change, the Commission adopted the substance of chapter XII.

C. Adoption of the UNCITRAL Legislative Guide on Secured Transactions. Supplement on Security Rights in Intellectual Property

227. At its 914th meeting, on 29 June 2010, the Commission adopted the following decision:

“*The United Nations Commission on International Trade Law,*

“*Recognizing* the importance of efficient secured transactions regimes in promoting access to secured credit,

“*Recognizing also* the need to make secured credit more available and at lower cost to intellectual property owners and other intellectual property right

holders, and thus the need to enhance the value of intellectual property rights as security for credit,

“*Noting that the UNCITRAL Legislative Guide on Secured Transactions generally applies to security rights in intellectual property, without inadvertently interfering with the basic rules and objectives of law relating to intellectual property,*

“*Taking into account the need to address the interaction between secured transactions law and law relating to intellectual property at both national and international levels,*

“*Recognizing that States would need guidance as to how the recommendations of the UNCITRAL Legislative Guide on Secured Transactions would apply in an intellectual property context and as to the adjustments that need to be made in their laws to avoid inconsistencies between secured transactions law and law relating to intellectual property,*

“*Noting further the importance of balancing the interests of all stakeholders, including grantors, whether they are owners, licensors or licensees of intellectual property, and secured creditors,*

“*Noting with satisfaction that the Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property is consistent with the UNCITRAL Legislative Guide on Insolvency Law²⁴ with regard to the treatment of the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement,*

“*Expressing its appreciation to international intergovernmental and non-governmental organizations active in the fields of secured transactions law and law relating to intellectual property, in particular, the World Intellectual Property Organization and the Hague Conference on Private International Law, for their participation in and support for the development of the Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property,*

“*Expressing its appreciation to the participants of Working Group VI (Security Interests), as well as to the Secretariat, for their contribution to the development of the Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property,*

“1. *Adopts the Supplement under the title “UNCITRAL Legislative Guide on Secured Transactions. Supplement on Security Rights in Intellectual Property”, consisting of the text contained in documents A/CN.9/700 and Add.1-7, with the amendments adopted by the Commission at its forty-third session, and authorizes the Secretariat to edit and finalize the text of the Supplement pursuant to the deliberations of the Commission at that session;*

“2. *Requests the Secretary-General to disseminate broadly the text of the Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property, transmitting it to*

²⁴ United Nations publication, Sales No. E.05.V.10.

Governments and other interested bodies, in both the fields of secured financing and intellectual property;

“3. *Recommends* that all States utilize the Supplement to the *UNCITRAL Legislative Guide on Secured Transactions* dealing with security rights in intellectual property, to assess the economic efficiency of their secured transactions regimes as well as their intellectual property regimes and give favourable consideration to the Supplement when revising or adopting legislation relevant to secured transactions and intellectual property, and invites States that have used the *Guide* and the Supplement to advise the Commission accordingly.”

V. Finalization and adoption of part three of the UNCITRAL Legislative Guide on Insolvency Law on the treatment of enterprise groups in insolvency

A. Consideration of draft part three of the UNCITRAL Legislative Guide on Insolvency Law

228. The Commission recalled that, at its thirty-ninth session, in 2006, it had referred the topic of the treatment of corporate groups in insolvency to Working Group V (Insolvency Law) for consideration.²⁵ The term “corporate groups” was subsequently replaced with the term “enterprise groups” (see A/CN.9/622, paras. 77-84, and A/CN.9/643). The Commission also recalled that, at its forty-second session, in 2009, it had taken note of the close connection between the work on the international treatment of enterprise groups and both the *UNCITRAL Model Law on Cross-Border Insolvency*²⁶ and the *UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation*²⁷ and had emphasized the need to ensure consistency with those two texts. The Commission further recalled that, at that session, it had noted that the text resulting from the work on enterprise groups should form part three of the *UNCITRAL Legislative Guide on Insolvency Law* and adopt the same format, that is, recommendations and commentary.²⁸

229. The Commission noted that the Working Group had agreed at its thirty-seventh session (Vienna, 9-13 November 2009) that the draft of part three (as set forth in documents A/CN.9/WG.V/WP.90 and Add.1) should be circulated to Governments in sufficient time for comment and for compilation of those comments for the forty-third session of the Commission (A/CN.9/686, para. 125).

230. The Commission had before it the revised draft of part three (A/CN.9/WG.V/WP.92 and Add.1), which the Working Group had approved at its thirty-eighth session (New York, 19-23 April 2010), the comments by Governments and international organizations on draft part three (A/CN.9/699 and Add.1-4), the

²⁵ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17* (A/61/17), para. 209.

²⁶ United Nations publication, Sales No. E.99.V.3.

²⁷ United Nations publication, Sales No. E.10.V.6.

²⁸ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17* (A/64/17), paras. 303 and 304.

reports of the thirty-seventh and thirty-eighth sessions of the Working Group (A/CN.9/686 and A/CN.9/691, respectively) and a note by the Secretariat on the revision of draft part three as agreed by the Working Group at its thirty-eighth session (A/CN.9/708).

231. The Commission considered the domestic and international treatment of enterprise groups in insolvency as set forth in the documents noted in paragraph 230 above and adopted the commentary and recommendations with the following modifications:

(a) With respect to draft recommendations 242 and 248, the Commission agreed to include the words “to facilitate coordination of those proceedings” at the end of both draft recommendations;

(b) With respect to draft recommendation 244, paragraph (c), the Commission agreed to delete the words “and claims” following the words “substantive rights”, to align it with draft recommendation 243, paragraph (f).

232. With respect to paragraph 28 of document A/CN.9/WG.V/WP.92/Add.1 on recording of the communication by courts as part of the record, it was suggested that the word “may” appearing in the second sentence should be replaced with the word “should”, as the inclusion of the transcript in the record was seen as a mandatory consequence of the recording and the transcribing of the communication. In response, it was widely felt that the language should be kept as wide as possible, in order to maintain flexibility. The Commission agreed to retain the paragraph as drafted.

B. Decision on adoption of part three of the UNCITRAL Legislative Guide on Insolvency Law

233. At its 918th meeting, on 1 July 2010, the Commission adopted the following decision:

“The United Nations Commission on International Trade Law,

“Recognizing that effective insolvency regimes are increasingly seen as a means of encouraging economic development and investment, as well as fostering entrepreneurial activity and preserving employment,

“Noting that because the business of corporations is increasingly conducted, both domestically and internationally, through enterprise groups, the formation of enterprise groups is a feature of the increasingly globalized world economy and thus significant to international trade and commerce,

“Recognizing that where the business of an enterprise group fails, it is important not only to know how the group will be treated in insolvency proceedings, but also to ensure that that treatment facilitates, rather than hinders, the fast and efficient conduct of the insolvency proceedings,

“Being aware that very few States recognize an enterprise group as a legal entity, except in limited ways for specific purposes and that very few, if any, have a comprehensive regime for the treatment of enterprise groups in insolvency,

“Noting that while the *UNCITRAL Legislative Guide on Insolvency Law* provides a sound basis for the unification of insolvency law and forms key elements of a modern commercial law framework, it does not address the insolvency of enterprise groups,

“Recalling the mandate given to Working Group V (Insolvency Law) to complement the *UNCITRAL Legislative Guide on Insolvency Law* with provisions concerning the treatment of enterprise groups in insolvency,

“Appreciating the support for and the participation of international intergovernmental and non-governmental organizations active in the field of insolvency law reform in the development of an additional part of the *UNCITRAL Legislative Guide on Insolvency Law* addressing the treatment of enterprise groups in insolvency,

“Expressing its appreciation to Working Group V (Insolvency Law) for its work in developing part three of the *UNCITRAL Legislative Guide on Insolvency Law* on the treatment of enterprise groups in insolvency,

“1. *Adopts* part three of the *UNCITRAL Legislative Guide on Insolvency Law*, consisting of the text in documents A/CN.9/WG.V/WP.92 and Add.1, the revisions agreed by the Working Group at its thirty-eighth session (as set forth in documents A/CN.9/691 and A/CN.9/708), and the amendments adopted by the Commission at the current session, and authorizes the Secretariat to edit and finalize the text of part three of the *UNCITRAL Legislative Guide on Insolvency Law* in the light of the deliberations of the Commission;

“2. *Requests* the Secretary-General to transmit the text of part three of the *UNCITRAL Legislative Guide on Insolvency Law* to Governments and other interested bodies;

“3. *Recommends* that all States utilize the *UNCITRAL Legislative Guide on Insolvency Law* to assess the economic efficiency of their insolvency law regimes and give favourable consideration to the Guide when revising or adopting legislation relevant to insolvency, and invites States that have used the Guide to advise the Commission accordingly;

“4. *Recommends also* that all States continue to consider implementation of the *UNCITRAL Model Law on Cross-Border Insolvency*;

“5. *Recommends* that the *UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation* continue to be given due consideration by judges, insolvency practitioners and other stakeholders involved in cross-border insolvency proceedings.”

VI. Procurement: progress report of Working Group I

234. The Commission recalled that, at its thirty-seventh session, in 2004, it had agreed that the *UNCITRAL Model Law on Procurement of Goods, Construction and Services* (1994)²⁹ would benefit from being updated to reflect new practices, in

²⁹ United Nations publication, Sales No. E.98.V.13.

particular those resulting from the use of electronic communications in public procurement, and the experience gained in the use of the 1994 Model Procurement Law as a basis for law reform.³⁰ The Commission also recalled that at that session it had decided to entrust the drafting of proposals for the revision of the 1994 Model Procurement Law to its Working Group I (Procurement). The Working Group was given a flexible mandate to identify the issues to be addressed in its considerations.³¹

235. The Commission noted that the Working Group had begun its work at its sixth session (Vienna, 30 August-3 September 2004), since when it had held 13 one-week sessions to consider revisions to the 1994 Model Procurement Law.³² The Commission recalled that, from its thirty-eighth session, in 2005, to its forty-first session, in 2008, it had taken note of the reports of the sixth to thirteenth sessions of the Working Group and had reaffirmed its support for the review being undertaken and for the inclusion of novel procurement practices in a revised model law on public procurement (the revised model law).³³ It also recalled that, at its thirty-ninth session, the Commission recommended that the Working Group, in updating the 1994 Model Procurement Law and the Guide to Enactment, should take into account issues of conflicts of interest and should consider whether any specific provisions addressing those issues would be warranted in the revised model law;³⁴ at its fortieth session, the Commission had recommended that the Working Group should adopt a concrete agenda for its forthcoming sessions in order to expedite progress in its work;³⁵ and, at its forty-first session, the Commission had invited the Working Group to proceed expeditiously with the completion of the project, with a view to permitting the finalization and adoption of the revised model law, together with its guide to enactment, within a reasonable time.³⁶

236. The Commission further recalled that, at its forty-second session, in 2009, it had taken note of the reports of the fourteenth to sixteenth sessions of the Working Group³⁷ and established a Committee of the Whole to consider a draft revised model law, including the issues of defence sector procurement and the use of socioeconomic factors in public procurement.³⁸ At that session, the Commission had also taken note of the report of the Committee of the Whole, in which the Committee in particular had concluded that the revised model law was not ready for

³⁰ *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 17 (A/59/17)*, para. 81.

³¹ *Ibid.*, para. 82.

³² For the reports of the Working Group on the work of its sixth to eighteenth sessions, see A/CN.9/568, A/CN.9/575, A/CN.9/590, A/CN.9/595, A/CN.9/615, A/CN.9/623, A/CN.9/640, A/CN.9/648, A/CN.9/664, A/CN.9/668, A/CN.9/672, A/CN.9/687 and A/CN.9/690, respectively.

³³ *Official Records of the General Assembly, Sixtieth Session, Supplement No. 17 (A/60/17)*, para. 172; *ibid.*, *Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 192; *ibid.*, *Sixty-second Session, Supplement No. 17 (A/62/17)*, part I, para. 170; and *ibid.*, *Sixty-third Session, Supplement No. 17 and corrigendum (A/63/17 and Corr.1)*, para. 307.

³⁵ *Ibid.*, *Sixty-second Session, Supplement No. 17 (A/62/17)*, part I, para. 170.

³⁶ *Ibid.*, *Sixty-third Session, Supplement No. 17 and corrigendum (A/63/17 and Corr.1)*, para. 307.

³⁷ A/CN.9/664, A/CN.9/668 and A/CN.9/672, respectively.

³⁸ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17)*, paras. 11, 48 and 284.

adoption at that session of the Commission, and had requested the Working Group to continue its work on the review of the 1994 Model Procurement Law.³⁹

237. At its forty-third session, the Commission had before it the reports of the seventeenth (Vienna, 7-11 December 2009) and eighteenth (New York, 12-16 April 2010) sessions of the Working Group (A/CN.9/687 and A/CN.9/690, respectively). It noted that the Working Group, at those sessions, had completed a second reading of all chapters of the draft revised model law and had begun a third reading of the text. It was also noted that the Working Group had settled many of the substantive issues and requested the Secretariat to redraft certain provisions to reflect its deliberations at the sessions. The Commission further noted that the Working Group, at its eighteenth session, agreed to address the remaining outstanding issues throughout the draft revised model law with a view to finalizing the text at its nineteenth session. The Commission also noted that the Working Group had also agreed to undertake work on a draft revised guide to enactment. The Commission noted the Working Group's intention to present the draft revised model law for adoption by the Commission at its forty-fourth session, in 2011 (A/CN.9/690, paras. 156-157).

238. The Commission recalled that at its previous sessions it had called for the Working Group to proceed expeditiously with the completion of the project, with a view to permitting the finalization and adoption of the revised model law within a reasonable time (see para. 235 above). Support was expressed for the suggestion that the Commission, at its current session, should ask the Working Group to complete its work so that a draft revised model law could be submitted to the Commission's next session, in 2011, and additionally instruct the Working Group not to reopen issues on which a decision had already been taken.

239. After discussion, the Commission requested the Working Group to complete its work on the revision of the 1994 Model Procurement Law during the next two sessions of the Working Group (see para. 352 (a) below) and present a draft revised model law for finalization and adoption by the Commission at its forty-fourth session, in 2011. The Commission instructed the Working Group to exercise restraint in revisiting issues on which decisions had already been taken.

VII. Possible future work in the areas of electronic commerce and online dispute resolution

A. Possible future work in the area of electronic commerce

1. Introduction

240. It was recalled that, at its fortieth session, in 2007, the Commission had requested the Secretariat to continue to follow closely legal developments in the area of electronic commerce, with a view to making appropriate suggestions in due course.⁴⁰

³⁹ Ibid., paras. 283 and 284.

⁴⁰ Ibid., *Sixty-second Session, Supplement No. 17* (A/62/17), part I, para. 195.

241. At the forty-third session, the Commission had before it a note by the Secretariat (A/CN.9/692) containing an update on the progress of the work of the World Customs Organization (WCO)-UNCITRAL Joint Legal Task Force on Coordinated Border Management incorporating the International Single Window on the implementation and operation of a single window facility. The note also provided information relating to electronic transferable records and an update on recent developments in the field of electronic commerce, with particular regard to identity management and electronic commerce conducted with mobile devices, including payments.

2. Electronic single window facilities

242. The Commission recalled that, at its forty-first session, in 2008, it had requested the Secretariat to engage actively in cooperation with WCO and the United Nations Centre for Trade Facilitation and Electronic Business and, with the involvement of experts, in the study of the legal aspects involved in implementing a cross-border single window facility with a view to formulating a comprehensive international reference document on legal aspects of creating and managing a single window, and to report to the Commission on the progress of that work.⁴¹ That request had been reiterated by the Commission at its forty-second session, in 2009.⁴²

243. The Commission noted with appreciation the involvement of the Secretariat in the second meeting of the Joint Legal Task Force. The Commission took note of the decision of the Joint Legal Task Force to gather the necessary information on possible user models and cases from experts in customs procedures and to compile it for use as reference in legal analysis. With regard to the legal issues identified by the Joint Legal Task Force as suitable for further study, it was suggested that caution should be taken in dealing with issues related to enforcement as those generally fell into the realm of domestic regulatory matters.

244. After discussion, the Commission requested the Secretariat to continue its active participation in the work on single windows carried out by the Joint Legal Task Force and by other organizations, with a view to exchanging views and formulating recommendations on possible legislative work in that domain.

3. Electronic transferable records

245. It was recalled that, at its forty-second session, in 2009, the Commission had requested the Secretariat to prepare a study on electronic transferable records in the light of written proposals received at that session (documents A/CN.9/681 and Add.1 and A/CN.9/682) and to organize a colloquium on that topic, resources permitting, with a view to reconsidering those matters at a future session.⁴³ At the current session, the Commission was reminded that previous documents had already dealt in depth with the substantive aspects of that topic (A/CN.9/WG.IV/WP.69 and A/CN.9/WG.IV/WP.90, which had been before Working Group IV at its thirtieth and thirty-eighth sessions, respectively).

⁴¹ Ibid., *Sixty-third Session, Supplement No. 17* and corrigendum (A/63/17 and Corr.1), paras. 333-338.

⁴² Ibid., *Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 340.

⁴³ Ibid., para. 343.

246. The Commission noted that the use of electronic communications in international trade had gained further acceptance, including with respect to the use of registries for the creation and transfer of rights. The Commission took note of a detailed description of the recently enacted legislation of the Republic of Korea enabling the use of electronic bills of lading based on a designated registry operator approach. In that context, the concern was expressed that any work by the Commission in the area of electronic transferable records should take a cautious approach not to deviate from or contradict other UNCITRAL texts, such as the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (2008) (the Rotterdam Rules).⁴⁴ As an example, it was noted that the registry-based approach, reflected in the legislation of the Republic of Korea, could possibly contradict the control-based approach adopted in the Rotterdam Rules. Another view was that there was not necessarily such a conflict.

247. During the discussion, it was also suggested that work on electronic transferable records could embrace issues related to single window facilities and identity management and that it might be possible to address all those topics in a single project. However, it was also recalled that limited elements of commonality in the different records and rights transferred would not warrant immediate work at the working group level with respect to electronic transferable records.

4. Identity management

248. The Commission took note of the information contained in the note by the Secretariat (A/CN.9/692) regarding the notion of identity management system, its business model, processes and main actors as well as potential benefits. The Commission noted that identity management raised several relevant legal issues and that calls had been made for compiling a set of uniform legal rules to address such issues.

5. Use of mobile devices in electronic commerce

249. With respect to the use of mobile devices in electronic commerce, the Commission agreed that communication via mobile devices could be regarded as a subset of electronic communications as dealt with in relevant legislative standards adopted by UNCITRAL. The Commission further agreed that the predictability of the legal status of transactions conducted with mobile devices would be greatly enhanced by the adoption of appropriate legislation. In that connection, it was acknowledged that guidance on the adoption of appropriate legislative standards, with particular respect to the use of mobile devices, might be useful, in particular, in developing countries, where the broader use of mobile devices could make a significant contribution to widening access to electronic means of communication. It was also noted that payment services had been identified as an area of special importance for mobile technology and that mobile payments could support financial inclusion, especially in rural areas.

⁴⁴ United Nations publication, Sales No. E.09.V.9.

6. Decision by the Commission with respect to future work in the area of electronic commerce

250. After discussion, the Commission requested the Secretariat to convene a colloquium and possibly other informal meetings to discuss all of the above-mentioned topics. The Secretariat was requested to report to the Commission at its next session on the results of the colloquium. The note to be prepared by the Secretariat should summarize the discussion and possibly identify a road map for future work by the Commission in the area of electronic commerce. It was agreed that that note, which would serve as a basis for discussion at the forty-fourth session of the Commission, in 2011, should provide sufficient information for the Commission to make an informed decision and to give a clearly defined mandate to a working group, if deemed appropriate.

B. Possible future work in the area of online dispute resolution in cross-border electronic commerce transactions

1. Introduction

251. It was recalled that, at its forty-second session, in 2009, the Commission had heard a recommendation that a study be prepared on possible future work on the subject of online dispute resolution in cross-border electronic commerce (e-commerce) transactions, with a view to addressing the types of e-commerce dispute that might be solved by online dispute-resolution systems, the appropriateness of drafting procedural rules for online dispute resolution, the possibility or desirability to maintain a single database of certified online dispute-resolution providers and the issue of enforcement of awards made through the online dispute-resolution process under the relevant international conventions.⁴⁵ The Commission had agreed on the importance of the proposals relating to future work in the field of online dispute resolution to promote e-commerce and requested the Secretariat to prepare a study on the basis of the proposals contained in document A/CN.9/681/Add.2 and to hold a colloquium on the issue of online dispute resolution, resources permitting.⁴⁶

252. At its forty-third session, the Commission had before it a note by the Secretariat on the issue of online dispute resolution (A/CN.9/706). The note, in particular, summarized the discussion at the colloquium organized jointly by the Secretariat, the Pace Institute of International Commercial Law and the Penn State University Dickinson School of Law, under the title “A fresh look at online dispute resolution (ODR) and global e-commerce: towards a practical and fair redress system for the 21st century trader (consumer and merchant)” (Vienna, 29 and 30 March 2010).⁴⁷ The Commission also had before it a note by the Secretariat (A/CN.9/710) transmitting information provided by the Institute of International Commercial Law in support of possible future work by UNCITRAL in the field of online dispute resolution.

⁴⁵ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17)*, para. 338, and A/CN.9/681/Add.2, para. 4.

⁴⁶ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17)*, paras. 342-343.

⁴⁷ Information about the colloquium is available at the date of this report from www.uncitral.org/pdf/english/news/IICL_Bro_2010_v8.pdf.

253. The Commission noted that, during the colloquium, it had been said that proposals for regional online dispute-resolution systems were in the process of being developed and it might therefore be timely to deal with the matter internationally from the outset in order to avoid development of inconsistent mechanisms. It was further noted that the goal of any work undertaken by UNCITRAL in that field should be to design generic rules, which, consistent with the approach adopted in UNCITRAL instruments (such as the Model Law on Electronic Commerce),⁴⁸ could apply in both business-to-business and business-to-consumer environments.

254. The Commission was informed that the commonly shared view expressed during the colloquium was that traditional judicial mechanisms for legal recourse did not offer an adequate solution for cross-border e-commerce disputes, and that the solution — providing a quick resolution and enforcement of disputes across borders — might reside in a global online dispute-resolution system for small-value, high-volume business-to-business and business-to-consumer disputes. E-commerce cross-border disputes required tailored mechanisms that did not impose costs, delays and burdens that were disproportionate to the economic value at stake. Those views were generally supported in the Commission. The Commission also noted that work on the topic should recognize the digital divide and that more efforts should be made to hear the views of developing States.

255. The Commission was generally of the view that topics identified at the colloquium required attention and that work by the Commission in the field of online dispute resolution would be timely. However, some concerns were expressed with regard to the scope of work to be undertaken. It was suggested that such scope should be limited, at an initial stage, to business-to-business transactions. It was pointed out that issues related to consumer protection were difficult to harmonize, since consumer protection laws and policies varied significantly from State to State. It was also stated that work in that area should be conducted with extreme caution to avoid undue interference with consumer protection legislation.

256. In response, the view was expressed that, in the present electronic environment, consumer transactions constituted a significant portion of electronic and mobile commercial transactions and were often cross-border in nature. It was also argued that it was practically and theoretically difficult to make a distinction not only between business-to-business and business-to-consumer transactions but also between merchants and consumers. It was concluded that work by a working group should be carefully designed not to affect the rights of consumers. Although it was generally felt that it would be feasible to develop a generic set of rules applicable to both kinds of transactions, it was also agreed that the working group should have the discretion to suggest different approaches, if necessary.

2. Decision by the Commission with respect to future work in the area of online dispute resolution in cross-border e-commerce transactions

257. After discussion, the Commission agreed that a working group should be established to undertake work in the field of online dispute resolution relating to cross-border e-commerce transactions, including business-to-business and business-to-consumer transactions. It was also agreed that the form of the legal standard to be

⁴⁸ United Nations publication, Sales No. E.99.V.4.

prepared should be decided by the working group after further discussion of the topic.

VIII. Possible future work in the area of insolvency law

258. The Commission had before it a series of notes (A/CN.9/WG.V/WP.93 and Add.1-6 and A/CN.9/582/Add.6) setting forth a number of proposals for future work on insolvency law. The proposals contained in those documents were discussed at the thirty-eighth session of Working Group V (Insolvency Law) (A/CN.9/691, paras. 99-107). An additional document (A/CN.9/709) was submitted after that session of Working Group V, which set forth material additional to the proposal of Switzerland contained in document A/CN.9/WG.V/WP.93/Add.5.

259. After discussion, the Commission endorsed the recommendation by Working Group V contained in document A/CN.9/691, paragraph 104, that activity be initiated on two insolvency topics, both of which were of current importance, and where a greater degree of harmonization of national approaches would be beneficial in delivering certainty and predictability. Those topics were:

(a) The United States' proposal as described in paragraph 8 of document A/CN.9/WG.V/WP.93/Add.1 to provide guidance on the interpretation and application of selected concepts of the UNCITRAL Model Insolvency Law relating to centre of main interests and possibly to develop a model law or provisions on insolvency law addressing selected international issues, including jurisdiction, access and recognition, in a manner that would not preclude the development of a convention;⁴⁹

(b) The proposals of the United Kingdom (see A/CN.9/WG.V/WP.93/Add.4), INSOL (A/CN.9/WG.V/WP.93/Add.3) and the International Insolvency Institute (A/CN.9/582/Add.6) concerning the responsibility and liability of directors and officers of an enterprise in insolvency and pre-insolvency cases. In the light of concerns raised during extensive discussion, the Commission agreed that the focus of the work on that topic should only be upon those responsibilities and liabilities that arose in the context of insolvency and that criminal law issues were outside the scope of the mandate.

260. With respect to the proposal by Switzerland, the Commission agreed that the study (see A/CN.9/709, para. 7) should be undertaken by the Secretariat as resources permitted. It was noted in that regard that reports on work being undertaken by a number of other organizations on the same topic were expected by the end of 2010 and that those reports should be factored into the Secretariat's work. It was anticipated that coordination would be sought between the Secretariat and other interested international organizations.

261. The Commission heard a proposal by the Secretariat, which noted that participants in the judicial colloquiums that had been held by UNCITRAL in cooperation with INSOL and the World Bank (the Ninth Colloquium is scheduled for 2011) had indicated a desire for information and guidance for judges on

⁴⁹ See the related proposal of the Union internationale des Avocats referred to in the report of Working Group V on the work of its thirty-seventh session (Vienna, 9-13 November 2009) (A/CN.9/686, paras. 127-130).

cross-border-related issues and in particular on the UNCITRAL Model Insolvency Law. To that end, the Commission was informed that the Secretariat had been working on the preparation of a draft text that provided a judicial perspective on the use and interpretation of the UNCITRAL Model Insolvency Law. The Commission agreed that the Secretariat should be mandated to develop that text in the same flexible manner, resources permitting, as was achieved with respect to the *UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation*. That would involve consultation, principally with judges, but also with insolvency practitioners and professionals; consideration, at an appropriate stage, by Working Group V; and finalization and adoption by the Commission, possibly in 2011.

IX. Possible future work in the area of security interests

262. The Commission recalled that, at its forty-second session, in 2009, it had noted with interest the future work topics discussed by Working Group VI (Security Interests) at its fourteenth and fifteenth sessions (A/CN.9/667, para. 141, and A/CN.9/670, paras. 123-126, respectively). The Commission also noted that, at that session, it had agreed that: (a) the Secretariat could hold an international colloquium early in 2010 with broad participation of experts from Governments, international organizations and the private sector; and (b) the Commission would be in a better position to consider and make a decision on the future work programme of the Working Group at its forty-third session on the basis of a note by the Secretariat.⁵⁰ At its forty-third session, the Commission had before it a note by the Secretariat on possible future work in the area of security interests (A/CN.9/702 and Add.1).

263. In addition, the Commission noted that Working Group VI, at its seventeenth session (New York, 8-12 February 2010), had engaged in a preliminary discussion of its future work programme (A/CN.9/689, paras. 59-61). The Commission also noted that, at that session, some support had been expressed for work on registration of security rights and a model law on secured transactions based on the recommendations of the *UNCITRAL Legislative Guide on Secured Transactions*, while any work on security rights in securities would have to be limited to non-intermediated securities and any work on intellectual property licensing would need to be closely coordinated with WIPO (A/CN.9/689, para. 61).

264. The Commission agreed that four issues related to secured transactions law listed in document A/CN.9/702, paragraph 2 (a)-(d), were interesting (non-intermediated securities, registration of security rights, a model law and a contractual guide on secured transactions) and should be retained on its future work agenda (for the discussion of intellectual property licensing, see paras. 269-273 below). At the same time, in view of the limited resources available to it, the Commission agreed that it could not undertake work on all four issues at the same time and that, as a result, it should set priorities. In that regard, there was general agreement that priority should be given to work on registration of security rights in movable assets.

⁵⁰ *Official Records of the General Assembly, Sixty-fourth session, Supplement No. 17 (A/64/17)*, paras. 313-320.

265. It was widely felt that such a text would usefully supplement the Commission's work on secured transactions and provide urgently needed guidance to States with respect to the establishment and operation of security rights registries. It was stated that secured transactions law reform could not be effectively implemented without the establishment of an efficient publicly accessible security rights registry. It was also emphasized that the *Guide* did not address in sufficient detail the various legal, administrative infrastructural and operational questions that needed to be resolved to ensure the successful and efficient implementation of a registry.

266. It was also agreed that, while the specific form and structure of the text could be left to the Working Group, the text could: (a) include principles, guidelines, commentary, recommendations and model regulations; and (b) draw on the *Guide*, texts prepared by other organizations and national law regimes that have introduced security rights registries similar to the registry recommended in the *Guide*. In response to a statement that work by the Commission on registration of security rights should not duplicate work done, for example, in the context of the Convention on International Interests in Mobile Equipment (Cape Town, 2001),⁵¹ it was pointed out that the Cape Town Convention registry was different from the registry recommended in the *Guide* at least to the extent that the Cape Town Convention registry was an asset-based international registry permitting registration of sales transactions.

267. With respect to work on security rights in non-intermediated securities, differing views were expressed. One view was that work should be undertaken to provide guidance to States with respect to security rights in a very important type of asset. It was stated that non-intermediated securities were used as security for credit in commercial financing transactions and yet they were generally excluded from the scope of the *Guide* and the Unidroit Convention on Substantive Rules for Intermediated Securities (2009).⁵² Another view was that there was no reason why the recommendations of the *Guide* should not apply to security rights in non-intermediated securities, a result that could be achieved by a change in the scope provisions of the *Guide*. It was stated that the Secretariat could study that matter and report to the Commission at a future session. Yet another view was that any work on security rights in non-intermediated securities should be postponed until the International Institute for the Unification of Private Law (Unidroit) had had a chance to complete its work on a commentary and an accession kit to the Geneva Securities Convention, as well as to consider its future work in the area of financial markets.

268. After discussion, the Commission decided that Working Group VI should be entrusted with the preparation of a text on registration of security rights in movable assets as a matter of priority. It was also agreed that other topics, such as security rights in non-intermediated securities, a model law based on the recommendations of the *Guide* and a text dealing with the rights and obligations of the parties should be retained in the future programme of Working Group VI for further consideration

⁵¹ Available at the date of this report from www.unidroit.org/english/conventions/mobile-equipment/mobile-equipment.pdf.

⁵² Available at the date of this report from www.unidroit.org/english/conventions/2009intermediatedsecurities/convention.pdf.

by the Commission at a future session on the basis of notes to be prepared by the Secretariat within the limits of existing resources.

269. The Commission next considered the topic of intellectual property licensing, a topic at the intersection of intellectual property and contract law. It was widely felt that the Commission did not have sufficient information to make a decision as to the desirability and feasibility of any work on that topic. The Commission, therefore, considered whether to request the Secretariat to prepare a desirability and feasibility study that would identify any particular needs and suggest specific ways in which those needs could be addressed by a legal text to be prepared by the Commission with a view to removing any legal obstacles to intellectual property licensing practices hindering the development of international trade.

270. Differing views were expressed as to whether the topic of intellectual property licensing fell within the mandate of the Commission and, as a result, whether the Commission could undertake any work on that topic. One view was that, to the extent that intellectual property licensing involved contract issues and formed an important part of international trade, it was within the mandate of the Commission. Another view was that intellectual property licensing was more properly viewed as an intellectual property law topic that fell within the scope of work of other organizations, such as WIPO. After discussion, the Commission agreed that intellectual property licensing was a topic at the intersection of intellectual property and commercial law and thus, while it fell within the mandate of the Commission, any work by the Commission should be undertaken in cooperation with other organizations, such as WIPO.

271. Differing views were also expressed as to the scope of any study to be prepared by the Secretariat. One view was that the study should examine the desirability and feasibility of work on various issues related to intellectual property licensing. It was stated that the outcome of the study should not be prejudged. In that connection, it was observed that the result of the study could well be that work was both necessary and possible on a narrow topic or on no topic at all. In addition, it was pointed out that the Commission had experience in the preparation of such desirability and feasibility studies in the context of a careful, open and deliberate process, involving expert group meetings, colloquiums and seminars, and was confident that that process would produce the best possible and broadly acceptable result for consideration by the Commission. Moreover, it was said that, as the study would have to be prepared within existing resources and other work had priority, the Secretariat would probably need some time to prepare it.

272. Another view was that the study should examine a narrow topic related to secured transactions, such as, for example, whether licensee rights could be used as security for credit and, if so, in which rights exactly and under which conditions. It was stated that, in the absence of any specific indication of a particular need, no work was warranted of a broader scope. It was also observed that experience gained from work on intellectual property licensing at the national level suggested that such work was not desirable or feasible. In that connection, it was emphasized that issues arising with respect to patent licensing were different from those arising with respect to copyright licensing. It was also pointed out that, even within the area of copyright licensing, the issues arising with respect to software licensing were different from those arising in the context of movie or music licensing. In addition, it was said that difficulties would be compounded at the international level in view

of the wide divergences existing between the various legal systems. Some doubt was expressed as to whether the topic of licensee rights as security for credit warranted any future work in particular in view of the work that had been done by the Commission on the Supplement to the *UNCITRAL Legislative Guide on Secured Transactions* dealing with security rights in intellectual property.

273. After discussion, the Commission requested the Secretariat to prepare a study, within existing resources, that would identify specific topics and discuss the desirability and feasibility of the Commission preparing a legal text with a view to removing specific obstacles to international trade in the context of intellectual property licensing practices. It was widely felt that the study should establish specific needs and appropriate ways in which those needs could be addressed, and carefully identify the suitability and the scope of work to facilitate consideration of the topic by the Commission at a future session. It was also generally agreed that the Secretariat should consult relevant international organizations, such as WIPO, and experts who had significant experience in intellectual property licensing, both from the public and the private sector, including those who relied on the licensing of intellectual property in their own commercial practices. It was also generally agreed that the Secretariat should consider addressing a questionnaire to States to assess the needs and any possible ways in which they could be addressed.

X. Possible future work in the area of microfinance

274. The Commission recalled that, at its forty-second session, in 2009, it had heard a suggestion that it would be timely for UNCITRAL to carry out a study on microfinance with the purpose of identifying the need for a legal and regulatory framework aimed at protecting and developing the microfinance sector so as to allow its continuous development, consistent with the purpose of microfinance, which was to build inclusive financial sectors for development. It was further recalled that, after discussion at that session, the Commission had requested the Secretariat, subject to the availability of resources, to prepare a detailed study on the legal and regulatory issues of microfinance as well as proposals as to the form and nature of a reference document that the Commission might in the future consider preparing with a view to assisting legislators and policymakers around the world in establishing a favourable legal framework for microfinance. The Commission had also requested the Secretariat to work in conjunction with experts and to seek possible cooperation with other interested organizations for the preparation of such a study, as appropriate.⁵³

275. At its forty-third session, the Commission had before it a note by the Secretariat containing a study and proposals as requested (A/CN.9/698). The note, it was explained, sought to examine and provide an overview of the issues relating to the regulatory and legal framework of microfinance.

276. It was recognized that, in facilitating access to financial services to the many poor who were not currently served by the formal financial system, microfinance could play an important role as a tool for the alleviation of poverty and achievement

⁵³ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17)*, paras. 432-433.

of the Millennium Development Goals.⁵⁴ It was also noted that an appropriate regulatory environment contributed to the development of the microfinance sector.

277. A number of delegates cautioned against UNCITRAL straying too far into the field of domestic banking and financial regulation, one delegation noting that this had proved to be a subject of acrimonious debate when raised in other international forums. The question was raised as to whether microfinance was an appropriate field of work for UNCITRAL, given that its mandate related to international trade. It was also stated that many aspects of microfinance seemed to be largely domestic issues and that the supranational aspect of any work in the area should be made clear.

278. One observer outlined some of the key current developments in the field, including the increasing “commercialization” of microfinance over the past several years; the extension of the microfinance concept beyond credit to encompass a wider array of financial services to the poor, including insurance and remittances; the growth of “branchless banking”; and the expansion of mobile telephony in the delivery of financial services.

279. Several speakers noted that, since a number of other organizations were currently actively developing policy and standards in the microfinance field, it was necessary to ensure that any involvement by UNCITRAL should be undertaken in close cooperation with other key players. It was stated that care should be taken to complement, and avoid duplication of, work that other organizations were doing.

280. After discussion, the Commission agreed that the Secretariat should convene a colloquium, with the possible participation of experts from other organizations working actively in that field, to explore the legal and regulatory issues surrounding microfinance that fell within the mandate of UNCITRAL. The colloquium should result in a report to the Commission at its next session, outlining the issues at stake and containing recommendations on work that UNCITRAL might usefully undertake in the field.

XI. Monitoring implementation of the New York Convention

281. The Commission recalled that, at its twenty-eighth session, in 1995, it had approved a project, undertaken jointly with Committee D (now known as the Arbitration Committee) of IBA, aimed at monitoring the legislative implementation of the New York Convention and at considering procedural mechanisms that States had adopted for the recognition and enforcement of arbitral awards under that Convention.⁵⁵ A questionnaire had been circulated to States with the purpose of identifying how the Convention had been incorporated into national legal systems and how it was interpreted and applied. One of the central issues to be considered under that project was whether States parties had included additional requirements for recognition and enforcement of arbitral awards that were not provided for in the Convention. It was also recalled that the Secretariat had presented an interim report

⁵⁴ Further information about the Millennium Development Goals is available at the date of this report from www.un.org/millenniumgoals/bkgd.shtml.

⁵⁵ *Official Records of the General Assembly, Fiftieth Session, Supplement No. 17 (A/50/17)*, paras. 401-404.

to the Commission at its thirty-eighth session, in 2005, which had set out the issues raised by the replies received in response to the questionnaire circulated in connection with the project (A/CN.9/585).⁵⁶

282. The Commission further recalled that, at its forty-first session, in 2008, it had considered a written report in respect of the project, covering implementation of the New York Convention by States, its interpretation and application, and the requirements and procedures put in place by States for enforcing an award under the Convention, based on replies sent by 108 States parties (A/CN.9/656 and Add.1). At that session, the Commission had welcomed the recommendations and conclusions contained in the report, noting that they highlighted areas where additional work might need to be undertaken to enhance uniform interpretation and effective implementation of the Convention. The Commission had been generally of the view that the outcome of the project should consist in the development of a guide to enactment of the Convention, with a view to promoting a uniform interpretation and application of the Convention, thus avoiding uncertainty resulting from its imperfect or partial implementation and limiting the risk that practices of States diverged from the spirit of the Convention. The Commission had requested the Secretariat to study the feasibility of preparing such a guide and to publish on the UNCITRAL website the information collected during the project implementation, in the language in which it was received.⁵⁷

283. The Commission also recalled that, at its forty-second session, in 2009, it had heard an oral report on the project. The Commission had noted in particular that a draft guide to enactment of the New York Convention was being planned for preparation and that information collected during the project implementation, to the extent it was confirmed to be accurate, would be published on the UNCITRAL website.⁵⁸

284. At its current session, the Commission noted with appreciation that, pursuant to its request, the information collected during the project implementation had been published on the UNCITRAL website in the language in which it had been received. To keep the compilation of information up to date and to enable the study based on that compilation to be as effective as possible, the Commission urged States to continue to provide the Secretariat with information regarding their implementation of the Convention. The Commission requested the Secretariat to pursue its efforts towards the preparation of the guide to enactment of the Convention. It was agreed that a more substantive presentation on progress made in the preparation of the guide would be made at a future session of the Commission.

XII. Technical assistance to law reform

285. The Commission had before it a note by the Secretariat (A/CN.9/695 and Add.1) describing the technical cooperation and assistance activities undertaken subsequent to the date of the note on that topic submitted to the Commission at its forty-second session, in 2009 (A/CN.9/675 and Add.1). The Commission

⁵⁶ Ibid., *Sixtieth Session, Supplement No. 17* (A/60/17), paras. 188-191.

⁵⁷ Ibid., *Sixty-third Session, Supplement No. 17 and corrigendum* (A/63/17 and Corr.1), paras. 355-356.

⁵⁸ Ibid., *Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 360.

emphasized the importance of such technical cooperation and assistance, in particular to the adoption and use of UNCITRAL texts, and expressed its appreciation for the activities undertaken by the Secretariat referred to in document A/CN.9/695 and in particular for the broad range of activities undertaken to promote adoption of the Rotterdam Rules (see A/CN.9/695/Add.1). It was emphasized that legislative technical assistance, in particular to developing countries, was an activity that was not less important than the formulation of uniform rules itself. For that reason, the Secretariat was encouraged to continue to provide such assistance to the broadest extent possible and to improve its outreach to developing countries in particular. The Commission welcomed the suggestion of the Secretariat that a special report on promotional activities relating to each of the newly adopted legislative texts could be prepared for the Commission on an annual basis.

286. The Commission noted that the continuing ability to respond to requests from States and regional organizations for technical cooperation and assistance activities was dependent upon the availability of funds to meet associated UNCITRAL costs. The Commission noted in particular that, despite efforts by the Secretariat to solicit new donations, funds available in the UNCITRAL Trust Fund for Symposia were very limited. Accordingly, requests for technical cooperation and assistance activities had to be very carefully considered and the number of such activities limited. The Commission requested the Secretariat to continue exploring alternative sources of extrabudgetary funding and the availability of other resources to provide technical assistance, noting that UNCITRAL should have at its disposal the means necessary to carry out technical cooperation and assistance activities.

287. The Commission appealed to all States to assist the Secretariat in identifying sources of available funding in their States or organizations that might partner with UNCITRAL to support technical cooperation and assistance activities to promote the use and adoption of UNCITRAL texts, as well as wider participation in their development. In particular, the Secretariat was encouraged to explore ways of collaborating further with other organizations, such as Unidroit and the Hague Conference on Private International Law, to jointly promote related texts.

288. The Commission also reiterated its appeal to all States, international organizations and other interested entities to consider making contributions to the UNCITRAL Trust Fund for Symposia, if possible in the form of multi-year contributions, or as specific-purpose contributions, in order to facilitate planning and enable the Secretariat to meet the increasing number of requests from developing countries and countries with economies in transition for technical cooperation and assistance activities. The Commission expressed its appreciation to Cameroon and Singapore for contributing to the Trust Fund since the Commission's forty-second session and to organizations that had contributed to the programme by providing funds or by hosting seminars.

289. The Commission appealed to the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund established to provide travel assistance to developing countries that were members of the Commission.

XIII. Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts

290. The Commission had before it a note by the Secretariat (A/CN.9/696), which set out the current status of the system for the collection and dissemination of case law on UNCITRAL texts (the CLOUT system) and provided an update on work undertaken by the Secretariat on digests of case law relating to the United Nations Convention on Contracts for the International Sale of Goods (1980)⁵⁹ and the Model Law on Arbitration. It also drew attention to the resource-intensive nature of that work and the need for additional resources to sustain it.

291. The Commission noted with appreciation the continuing work under the CLOUT system. As at 14 April 2010, 92 issues of compiled case-law abstracts from the CLOUT system had been published, dealing with 925 cases relating mainly to the United Nations Sales Convention and the Model Law on Arbitration. In addition, the Commission noted the increase in the abstracts of case law on the UNCITRAL Model Insolvency Law as well as the publication of abstracts on the New York Convention. The Commission also noted that a majority of the published abstracts concerned cases from Western European and other States and the remainder of the published abstracts concerned cases from other regions (Asia and the Pacific, Eastern Europe, Africa and Latin America and the Caribbean, listed in order of the number of published abstracts per region). It was widely agreed that the CLOUT system continued to be an important aspect of the overall technical cooperation and assistance activities undertaken by UNCITRAL and that its broad dissemination in all six official languages of the United Nations promoted the uniform interpretation and application of UNCITRAL texts. The Commission expressed its appreciation to the national correspondents and other contributors for their work in developing the CLOUT system. The Secretariat was encouraged to continue its efforts to extend the composition and vitality of the network of contributors to the CLOUT system.

292. The Commission took note that the digest of case law on the United Nations Sales Convention was currently being updated with a view to finalizing the draft in the fourth quarter of 2010. Preparation of the digest on the Model Law on Arbitration was also under way and should continue until the fourth quarter of 2010.

293. The Commission thanked the Secretariat for its work in this area and agreed that CLOUT and digests were important assets — which it was essential to sustain — for promoting awareness, harmonization and uniform interpretation of the law relating to UNCITRAL texts. The Commission fully supported a call for increased resources to support and enlarge the work of the Secretariat in this area.

XIV. Status and promotion of UNCITRAL texts

294. The Commission considered the status of the conventions and model laws emanating from its work and the status of the New York Convention, on the basis of a note by the Secretariat (A/CN.9/694) and information obtained by the Secretariat subsequent to the submission of that note. The Commission noted with appreciation

⁵⁹ United Nations, *Treaty Series*, vol. 1489, No. 25567.

the information on the following treaty actions and legislative enactments received since its forty-second session regarding the following instruments:

- (a) [Unamended] Convention on the Limitation Period in the International Sale of Goods, 1974 (New York)⁶⁰ (28 States parties);
- (b) Convention on the Limitation Period in the International Sale of Goods, as amended, 1980 (New York)⁶¹ (20 States parties);
- (c) United Nations Convention on the Carriage of Goods by Sea, 1978 (Hamburg)⁶² (34 States parties);
- (d) United Nations Convention on Contracts for the International Sale of Goods (1980)⁶³ (new actions by the Dominican Republic and Turkey (accessions); 76 States parties);
- (e) United Nations Convention on International Bills of Exchange and International Promissory Notes (1988)⁶⁴ (the Convention has 5 States parties; it requires 10 States parties for entry into force);
- (f) United Nations Convention on the Liability of Operators of Transport Terminals in International Trade, (1991)⁶⁵ (the Convention has four States parties; it requires five States parties for entry into force);
- (g) United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (1995)⁶⁶ (eight States parties);
- (h) United Nations Convention on the Assignment of Receivables in International Trade (2001)⁶⁷ (the Convention has one State party; it requires five States parties for entry into force);
- (i) United Nations Convention on the Use of Electronic Communications in International Contracts (2005)⁶⁸ (new actions by Honduras and Singapore (ratifications); the Convention has two States parties; it requires three States parties for entry into force);
- (j) United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (the Rotterdam Rules)⁶⁹ (signatures by Armenia, Cameroon, the Congo, Denmark, France, Gabon, Ghana, Greece, Guinea, Madagascar, Mali, the Netherlands, the Niger, Nigeria, Norway, Poland, Senegal,

(p) UNCITRAL Model Law on Cross-Border Insolvency (1997)⁷⁶ (new legislation based on the Model Law has been adopted in Canada (2009) and Greece (2010));

(q) UNCITRAL Model Law on Electronic Signatures (2001)⁷⁷ (new legislation based on the Model Law has been adopted in Jamaica (2006); legislation influenced by the principles on which the Model Law is based has been adopted in India (2009));

(r) UNCITRAL Model Law on International Commercial Conciliation (2002)⁷⁸ (new legislation based on the Model Law has been adopted in Albania (2003) and Honduras (2000)).

295. During the session, Turkey deposited its instrument of accession to the United Nations Sales Convention. In a statement to the Commission, the representative of Turkey stated that the development of international trade on the basis of equality and mutual benefit was an important element in promoting friendly relations among States and that the improvement of the legal framework in which international trade operated was a fundamental aspect of such development process.

296. Following that, Singapore deposited its instrument of ratification to the United Nations Convention on the Use of Electronic Communications in International Contracts during the session. In a statement made by the representative of Singapore, it was noted that the Convention set a new global standard for national

⁷⁰ United Nations, *Treaty Series*, vol. 330, No. 4739.

e-commerce legislation. It was noted that Singapore had been among those States which had been at the forefront of implementing laws relating to e-commerce and information and communications technology. The representative of Singapore indicated that Singapore had enacted legislation to give effect to that Convention in its domestic laws. He noted that wider adoption of the Convention would be an important step towards harmonizing e-commerce legislation. The representative of Honduras, which had deposited its instrument of ratification of the Convention a few weeks before, also emphasized the role that the Convention could play in fostering regional development in the field of e-commerce. He encouraged States to adopt the Convention and promote it in their respective regions.

297. The Commission was informed that Australia had recently enacted legislation based on the UNCITRAL Model Law on Arbitration, as amended in 2006.

298. The Commission was informed, and noted with appreciation, that a number of States were in the process of becoming parties to or adopting various UNCITRAL instruments. Those States were urged to share such information with the Commission and the Secretariat when available.

XV. Working methods of UNCITRAL

299. The Commission recalled that, at the first part of its fortieth session (Vienna, 25 June-12 July 2007), it had had before it observations and proposals by France on the working methods of the Commission (A/CN.9/635) and had engaged in a preliminary exchange of views on those observations and proposals. It was agreed at that session that the issue of working methods would be placed as a specific item on the agenda of the Commission at its resumed fortieth session (Vienna, 10-14 December 2007). In order to facilitate informal consultations among all interested States, the Secretariat was requested to prepare a compilation of procedural rules and practices established by UNCITRAL itself or by the General Assembly in its resolutions regarding the work of the Commission. The Secretariat was also requested to make the necessary arrangements, as resources permitted, for representatives of all interested States to meet on the day prior to the opening of the resumed fortieth session of the Commission and, if possible, during the resumed session.⁷⁹ At its resumed fortieth session, the Commission had considered the issue of working methods on the basis of the observations and proposals by France on the working methods of the Commission (A/CN.9/635) and observations by the United States on the same topic (A/CN.9/639), as well as the requested note by the Secretariat on rules of procedure and methods of work of the Commission (A/CN.9/638 and Add.1-6). The Commission was informed about the informal consultations held on 7 December 2007 among representatives of all interested States on the rules of procedure and methods of work of the Commission. At that session, the Commission had agreed that:

(a) Any future review should be based on the previous deliberations on the subject in the Commission, the observations by France and the United States (A/CN.9/635 and A/CN.9/639, respectively), and the note by the Secretariat

⁷⁹ *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17 (A/62/17)*, part I, paras. 234-241.

(A/CN.9/638 and Add.1-6), which was considered to provide a particularly important historical overview of the establishment and evolution of UNCITRAL rules of procedure and methods of work;

(b) The Secretariat should be entrusted with the preparation of a working document describing current practices of the Commission with the application of rules of procedure and methods of work, in particular as regards decision-making and participation of non-state entities in the work of UNCITRAL, distilling the relevant information from its previous note (A/CN.9/638 and Add.1-6). That working document would serve for future deliberations on the subject in the Commission in formal and informal settings. It was understood that, where appropriate, the Secretariat should indicate its observations on rules of procedure and methods of work for consideration by the Commission;

(c) The Secretariat should circulate the working document to all States for comment and subsequently compile any comments it might receive;

(d) Informal consultations among all interested States might be held, if possible, before the forty-first session of the Commission;

(e) The working document might be discussed already at the Commission's forty-first session, time permitting.⁸⁰

300. The Commission also recalled that, at its forty-first session, in 2008, it had had before it a note by the Secretariat describing current practices of the Commission as regards decision-making, status of observers in UNCITRAL, and preparatory work by the Secretariat (A/CN.9/653). At that session, the Commission had also had before it a note by the Secretariat compiling the comments received on the note by the Secretariat (A/CN.9/653) prior to the Commission's forty-first session (A/CN.9/660 and Add.1-5). The Commission requested the Secretariat to prepare a first draft of a reference document, based on the note by the Secretariat (A/CN.9/653), for use by chairpersons, delegates and observers and by the Secretariat itself. It was understood that the reference document should be somewhat more normative in nature than document A/CN.9/653. While the term "guidelines" was most often used to describe the future reference document, no decision was made as to its final form. The Secretariat was requested to circulate the draft reference document for comments by States and interested international organizations and to prepare a compilation of those comments for consideration by the Commission at its forty-second session. Without prejudice to other forms of consultation, the Commission had decided that two days should be set aside for informal meetings to take place, with interpretation in the six official languages of the United Nations, at the beginning of the forty-second session of the Commission, to discuss the draft reference document.⁸¹

301. The Commission further recalled that, at its forty-second session, in 2009, it had had before it a note by the Secretariat containing a first draft of a reference document (A/CN.9/676), comments by States and interested international organizations (A/CN.9/676/Add.1-9) and a proposal by France (A/CN.9/680) for revisions to be made to the reference document A/CN.9/676. It was recalled that the

⁸⁰ Ibid., (A/62/17), part II, paras. 101-107.

⁸¹ Ibid., *Sixty-third Session, Supplement No. 17* and corrigendum (A/63/17 and Corr.1), paras. 373-381.

Commission had devoted the first two days of that session to informal consultations on the topic of working methods and that the discussion in the plenary had been based on document A/CN.9/676. The Commission also recalled that after discussion in the plenary at that session it had agreed on some revisions to be made in the document, postponed the consideration of other proposed revisions on which the Commission was not able to reach a decision and also deferred the consideration of those parts of the document which the Commission was not able to consider at that session for lack of time.⁸²

302. At its forty-third session, the Commission had before a note by the Secretariat containing a proposed summary of conclusions on UNCITRAL rules of procedure and methods of work (A/CN.9/697). That summary of conclusions had resulted from intersessional consultations among interested delegations. The Commission also had before it a note reproducing comments of Burundi regarding UNCITRAL working methods (A/CN.9/697/Add.1). Those comments, based on document A/CN.9/676, had been received by the Secretariat after the Commission's forty-second session.

303. The Commission considered that document A/CN.9/697 was a suitable basis for continuation of the discussion. It was agreed that the summary of conclusions annexed to that note did not attempt to provide a complete set of rules but constituted the best possible rendition of the main characteristics of the methods of work of UNCITRAL. One delegation regretted that the preparation of a more detailed set of rules of procedure could not be achieved.

304. The Commission agreed that documents previously prepared by the Secretariat, in particular document A/CN.9/638 and Add.1-6, should remain available for future reference.

305. After discussion, the Commission unanimously adopted the summary of conclusions on UNCITRAL rules of procedure and methods of work, as reproduced in annex III to the present report.

306. With respect to the implementation of that text, it was emphasized that all chairpersons should adhere to the principles expressed in the summary of conclusions at future sessions. The Secretariat was requested to issue any reminder that might be necessary to ensure strict compliance with those principles. As to non-governmental organizations, whose contribution was generally recognized as welcome and essential to the work of the Commission and its Working Groups, it was emphasized that only those organizations which were expected to contribute positively to the advancement of a project should be invited to participate in a session.

XVI. Coordination and cooperation

A. General

307. The Commission had before it a note by the Secretariat (A/CN.9/707 and Add.1) providing a brief survey of the work of international organizations related to the harmonization of international trade law, focusing upon substantive legislative

⁸² Ibid., *Sixty-fourth Session, Supplement No. 17* (A/64/17), paras. 379-397.

work. The Commission commended the Secretariat for the preparation of the documents, recognizing their value to coordination of the activities of international organizations in the field of international trade law. The Commission recalled that, at its forty-first and forty-second sessions, in 2008 and 2009, the Secretariat had suggested that the timing of both its general annual report on the current activities of international organizations related to the harmonization and unification of international trade law, as well as its ongoing series of specialized reports on particular topics, would in the future not necessarily be published prior to the annual session of the Commission.⁸³ The Commission welcomed the information that, given the growing interest in insolvency issues that had been witnessed in the light of the ongoing global economic crisis, the Secretariat would soon publish a more detailed study on insolvency-related activities.

308. It was recalled that, at its thirty-seventh session, in 2004, the Commission had agreed that it should adopt a more proactive attitude, through its secretariat, in fulfilling the terms of its mandate as regards coordination activities.⁸⁴ Recalling General Assembly resolution 64/111 of 16 December 2009 (see paras. 340 and 341 below), in which the Assembly had endorsed the efforts and initiatives of the Commission towards coordination of activities of international organizations in the field of international trade law, the Commission noted with appreciation that the Secretariat was taking steps to engage in a dialogue, on both legislative and technical assistance activities, with a number of organizations, including the Hague Conference on Private International Law, the Organization for Economic Cooperation and Development, the Organization of American States, Unidroit, WIPO, the World Bank and other multilateral development banks, and the World Trade Organization. The Commission noted that that work often involved travel to meetings of those organizations and the expenditure of funds allocated for official travel. The Commission reiterated the importance of coordination work being undertaken by UNCITRAL as the core legal body in the United Nations system in the field of international trade law and supported the use of travel funds for that purpose.

309. By way of example of current efforts at coordination, the Commission noted the coordination activities listed in documents A/CN.9/695, paragraphs 26-30, and A/CN.9/695/Add.1, paragraph 13, and in particular the meetings involving the Hague Conference on Private International Law and Unidroit.

B. Reports of other international organizations

310. The Commission took note of statements made on behalf of IATA and ITU.

311. The Commission heard a statement on behalf of IATA concerning its work on e-freight, aimed at taking the paper out of air cargo and replacing it with the exchange of electronic data and messages. Noting that e-freight was live in 24 locations in 2009, IATA was focusing on increasing that number, by the end of 2010, to include 44 e-freight locations and 76 major airports and the number of electronic messaging standards that replace paper documents from 16 to 20. With

⁸³ Ibid., *Sixty-third Session, Supplement No. 17* and corrigendum (A/63/17 and Corr.1), para. 382; and *ibid.*, *Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 398.

⁸⁴ Ibid., *Fifty-ninth Session, Supplement No. 17* (A/59/17), para. 114.

respect to the latter, the Commission was advised that work was proceeding on development of the e-air waybill and that its use was live in more than 20 locations. In total, locations that accounted for more than 80 per cent of all international air freight would be e-freight-capable by the end of 2010.

312. The Commission also heard a statement on behalf of ITU concerning its work on issues of cybersecurity, including identity management, data privacy and security of electronic transactions. The Commission took note of the close cooperation between ITU and UNCITRAL in the formulation of legal standards related to those issues and encouraged further efforts in that direction.

XVII. Role of UNCITRAL in promoting the rule of law at the national and international levels

313. The Commission recalled that this item had been on the agenda of the Commission since its resumed fortieth session (Vienna, 10-14 December 2007). It was further recalled that the decision to consider this item had been taken on the basis of General Assembly resolution 62/70 of 6 December 2007 on the rule of law at the national and international levels.⁸⁵ In paragraph 3 of that resolution as well as paragraph 7 of resolution 63/128 of 11 December 2008, the General Assembly invited the Commission to comment in its report to the Assembly on its current role in promoting the rule of law. The Commission recalled that it had subsequently transmitted its comments, as requested, in its annual reports to the Assembly.⁸⁶

314. At its forty-third session, the Commission took note of General Assembly resolution 64/116 of 16 December 2009 on the rule of law at the national and international levels. The Commission noted in particular that in paragraphs 4 and 8 the General Assembly called upon the United Nations system to systematically address aspects of the rule of law in relevant activities, and encouraged the Secretary-General and the United Nations system to accord high priority to rule of law activities. The Commission further noted that the Assembly in paragraph 9 of that resolution had invited the Commission (together with the International Court of Justice and the International Law Commission) to continue to comment, in its reports to the Assembly, on its current role in promoting the rule of law.

315. The Commission also noted that in paragraph 12 of the same resolution, the General Assembly had decided that at its sixty-fifth session, in 2010, the debates in the Sixth Committee under the agenda item on the rule of law would be focused on the sub-topic "Laws and practices of Member States in implementing international law", without prejudice to the consideration of the item as a whole. The Commission noted that the Sixth Committee had reached the understanding that comments related to this sub-topic should address, among other things, laws and practices in the domestic implementation and interpretation of international law, strengthening and improving coordination and coherence of technical assistance and capacity-building in that area, mechanisms and criteria for evaluating the effectiveness of such assistance, ways and means of advancing donor coherence and

⁸⁵ Ibid., *Sixty-second Session, Supplement No. 17* (A/62/17), part II, paras. 111-113.

⁸⁶ Ibid., *Sixty-third Session, Supplement No. 17* and corrigendum (A/63/17 and Corr.1), para. 386; and *ibid.*, *Sixty-fourth Session, Supplement No. 17* (A/64/17), paras. 415-419.

perspectives of recipient States.⁸⁷ The Commission therefore decided that, at its current session, its comments to the General Assembly would focus on that sub-topic and the issues identified by the Sixth Committee, as envisaged from the perspective of the work of UNCITRAL.

316. The Commission held a panel discussion on the sub-topic. Opening remarks were delivered by the Deputy Secretary-General, who welcomed the panel discussion on the rule of law in trade and commerce and highlighted the relevance of that discussion (and of the work of UNCITRAL in general) for the United Nations entire rule of law agenda. The Deputy Secretary-General referred to the role of UNCITRAL in promoting the rule of law at the national and international levels, the impact of the work of UNCITRAL on economic and social development, including the achievement of the Millennium Development Goals, and in the context of post-conflict reconstruction. She also highlighted the mandate of UNCITRAL to coordinate activities of organizations active in the field of international commercial law and to encourage cooperation among them. The Deputy Secretary-General concluded her remarks by expressing the hope that better integration of the work of UNCITRAL into the United Nations joint rule of law programmes would be achieved. She saw the panel discussion as a welcome step in that direction. She encouraged all concerned to follow-up by raising awareness about the work of UNCITRAL across the United Nations and by promoting regular interaction between UNCITRAL and other relevant actors. To that end, she highlighted the role of the United Nations Rule of Law Coordination and Resource Group, supported by the Rule of Law Unit in the Executive Office of the Secretary-General.

317. A first round of discussion, with presentations by representatives of Ghana, Honduras and Slovenia, focused on the issues of “Laws and practices of States in the domestic implementation and interpretation of UNCITRAL texts: perspectives of recipient States on the work of UNCITRAL”. A second round, with presentations by the Director of the Rule of Law Unit of the Secretariat, the Legal Counsel of the World Bank and the Deputy General Counsel of EBRD, focused on the issues of “Coordination and coherence of technical assistance and capacity-building in the areas of UNCITRAL work, and mechanisms and criteria for evaluating the effectiveness of such assistance”.

318. In his introductory remarks, the Director of the Rule of Law Unit informed the Commission about the mandates of the Unit and the Rule of Law Group.

319. In the course of two rounds of discussion, speakers echoed the Secretary-General’s call for careful and context-specific analysis of the relationship between law and economics, and the impact the economic crisis has had on legal protection, justice and security for the most vulnerable and marginalized populations.⁸⁸ The positive correlation between advancement of democracy, legal reform and economic development was pointed out. The point was also made that laws and regulations governing finance and commerce were not purely technical matters, but embodied particular policy preferences. Their effectiveness should not be measured in isolation but in the context of the broader goals of sustainable, equitable and inclusive growth.

⁸⁷ See the note by the Chairman of the Sixth Committee (A/C.6/63/L.23), para. 3.

⁸⁸ See A/64/298, para. 78.

320. The Commission was also informed that, in a speech to the Security Council on 29 June 2010, the Under-Secretary-General for Legal Affairs, the Legal Counsel, had drawn the attention of the Council on the work of UNCITRAL and emphasized the supportive role played by effective commercial law in addressing root causes of many international problems, such as migration caused by impoverishment, inequality and internal conflicts, or inequitable access to shared resources. The Council had been informed that UNCITRAL would hold a panel discussion to analyse the impact of commercial law and commercial activities on the rule of law, in a debate that was described as rare in the United Nations, where the traditional focus in the context of the rule of law had been on human rights, criminal law and international public law.

A. Laws and practices of States in the domestic implementation and interpretation of UNCITRAL texts: perspectives of recipient States on the work of UNCITRAL

321. In her opening remarks, the Deputy Secretary-General noted that UNCITRAL, with its mandate to work in the interests of all peoples, and in particular those of developing countries, had continuously sought more effective ways to deliver, to build local capacities and to respond to needs “on the ground”. She noted that UNCITRAL promoted the rule of law in both national and cross-border contexts: by developing a modern commercial law framework; by assisting States to implement it; and by helping them to fulfil their international commitments, under the auspices of other international and regional organizations. She also remarked that UNCITRAL had less visible but no less important impacts in addressing the roots of economic tensions and problems, such as poverty and inequality, or disputes over access to shared resources. She also referred to the role of UNCITRAL in promoting regional and international integration, which could deter cross-border tensions from escalating into conflicts. The relevance of the work of UNCITRAL in the areas of arbitration and conciliation, public procurement, privately financed infrastructure projects and microfinance to the challenges of transitional justice and post-conflict reconstruction, such as the creation of jobs for ex-combatants and internally displaced persons, was also highlighted.

322. The Commission was informed that the Secretary-General had called for firmly grounding the United Nations rule of law work in the development agenda of the Organization. The crucial role of the work of UNCITRAL in facilitating economic and social development, including through the achievement of the Millennium Development Goals, was emphasized in that context. Specific reference was made to Goal 8, on the promotion of an open, rule-based, predictable, non-discriminatory trading and financial system. The contribution of UNCITRAL to other Goals in many other ways, direct and indirect, including by the creation of legal frameworks to mobilize resources, was also emphasized.

323. Other speakers elaborated on the above points by illustrating, with practical examples, the impact of UNCITRAL on the promotion of the rule of law in their jurisdictions and in their regions or subregions. They referred to various UNCITRAL instruments (conventions, model laws and legislative guides) as representing globally recognized best practices and balancing the interests of various stakeholders. Organizations that partnered with UNCITRAL in their

activities reported that UNCITRAL texts were used by them as a benchmark in assessing the need for legal reforms in countries where they operated.

324. In the context of the promotion of good governance, specific reference was made by speakers to the 1994 Model Procurement Law, which touched upon such issues as anti-corruption, accountability and transparency in public administration. In the context of promotion of access to justice and culture of the rule of law in the society as a whole, speakers referred to UNCITRAL instruments in the area of commercial dispute resolution. The role of texts produced by UNCITRAL in the area of insolvency, especially at the time of economic crisis, was also highlighted, as providing for rule-based resolution of financial difficulties, exit mechanisms and distribution of assets. The impact of UNCITRAL texts, in particular in the areas of sale of goods and e-commerce, on economic development and modernization of business practices was also underscored. The point was also made that possible future work by UNCITRAL in the area of microfinance could contribute to the achievement of the Millennium Development Goals.

325. The Commission heard that in some countries UNCITRAL texts had facilitated regional integration and that some States used UNCITRAL texts in their bilateral programmes of technical assistance with commercial law reforms, judicial training and promotion of cross-border judicial cooperation.

326. It was reported that, in some States, the policymaking, monitoring, coordination and enforcement mechanisms in relation to international legal standards had not kept pace with the international development of finance and commerce. Another speaker referred to the gap between the quality of such international legal standards and the quality of their implementation in some States. The point was made that good laws denied economic potential if not or not properly implemented and that confidence in the rule of law would inevitably be undermined if the expectation existed that the law would not be enforced.

327. In that context, speakers were unanimous in commending efforts of UNCITRAL aimed at ensuring effective implementation and uniform interpretation of international commercial standards through technical assistance with law reform in the field of commercial law. The importance of the CLOUT system was also emphasized. Speakers expressed the need to secure sufficient resources to sustain and expand the work of UNCITRAL in those areas, which were considered vital for States with limited capacity in the field of commercial law.

328. Concern was expressed about the low representation of developing countries at the sessions of UNCITRAL. It was pointed out that addressing the needs of the global economy required the active participation of developing countries. A participatory and inclusive legislative process was considered critical to the development of well-balanced legislation and essential to ensuring that its legitimacy would be recognized worldwide. The Commission and its secretariat were requested to find ways to increase outreach to developing countries, including through regional and subregional organizations established by those countries.

B. Coordination and coherence of technical assistance and capacity-building in the areas of UNCITRAL work, and mechanisms and criteria for evaluating the effectiveness of such assistance

329. In her opening remarks, the Deputy Secretary-General highlighted the challenges that the United Nations faced in promoting the rule of law, including being more responsive to the needs of Member States; empowering national stakeholders; mobilizing local knowledge and resources; and constantly monitoring and evaluating the impact of work. She emphasized that those challenges and the range of issues related to the rule of law could only be addressed collectively — by the whole United Nations system in close cooperation and coordination with outside actors. In that context, she referred to the special role played by UNCITRAL as the core United Nations legal body in the field of international commercial law with the specific mandate to coordinate activities of organizations active in that field.

330. Coordination was considered by speakers to be essential in achieving coherence, efficient use of scarce resources and for sharing and widely disseminating knowledge and best practices. Coordination with other aid providers, it was pointed out, was often one of the criteria used for evaluating the effectiveness of technical assistance and capacity-building.

331. The need to adjust the approach of the international community to the rule of law in the light of the lessons learned from the most recent economic crisis was emphasized. Particular reference in that regard was made to the need to ensure country-led reform and country-level coordination.

332. It was acknowledged that UNCITRAL played a commendable role in fostering cooperation and coordination in the field of international commercial law. However, practical difficulties faced by UNCITRAL and its secretariat in ensuring better coordination were recognized. The potential facilitating role of the Rule of Law Group and the Rule of Law Unit in that respect was emphasized.

333. The Director of the Rule of Law Unit briefed the Commission about the current work and future plans of the Group and the Unit in achieving coordination and coherence of United Nations rule of law activities. In the Unit's view, it was important to achieve better integration of the expertise of UNCITRAL into the United Nations joint rule of law activities. Although it was recognized that the United Nations engagement often took place in a volatile environment where the dominant concerns were peace and security, it was acknowledged that taking other measures to enable or promote long-term economic and social development was necessary. The Unit would find it helpful to receive from UNCITRAL any reference materials, such as a summary of lessons learned and good practices collected as a result of UNCITRAL technical cooperation and assistance activities, that would facilitate better understanding and integration by the United Nations system of the work of UNCITRAL into the United Nations joint rule of law activities.

C. Decisions by the Commission

334. At the end of the panel discussion, the Commission reiterated its conviction that the promotion of the rule of law in commercial relations should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels, including through the Rule of Law Group supported by the Rule of Law Unit. The Commission looked forward to being part of strengthened and coordinated rule of law activities of the Organization.

335. The Commission considered it essential to keep a regular dialogue with the Rule of Law Group through the Rule of Law Unit and to keep abreast of progress made in the integration of the work of UNCITRAL into the United Nations joint rule of law activities. To that end, it requested the Secretariat to organize briefings by the Rule of Law Unit biannually, when sessions of the Commission were held in New York.

336. The Commission requested the Secretariat to initiate surveys and studies of the impact of the standards and activities of UNCITRAL on the rule of law and development, in cooperation with the World Bank and other partner organizations that would have the required research capacities in those areas. The Commission also requested the Secretariat to review its experience with the operation of the technical cooperation and assistance programme conducted on behalf of the Commission, with a view to identifying lessons learned, best practices and major problems encountered, and to suggesting ways of enhancing technical cooperation and assistance and capacity-building in the field of commercial law and mechanisms for evaluating their effectiveness. The Commission also requested the Secretariat to consider ways of better integrating its technical cooperation and assistance activities into activities conducted on the ground by the United Nations in particular through United Nations Development Programme or other country offices of the United Nations.

XVIII. International commercial arbitration moot competitions

A. Willem C. Vis International Commercial Arbitration Moot 2010

337. It was noted that the Association for the Organization and Promotion of the Willem C. Vis International Commercial Arbitration Moot had organized the Seventeenth Moot. The oral arguments phase had taken place in Vienna from 26 March to 1 April 2010. As in previous years, the Moot had been co-sponsored by the Commission. It was noted that legal issues dealt with by the teams of students participating in the Seventeenth Moot had been based on the United Nations Sales Convention. A total of 252 teams from law schools in 62 countries had participated in the Seventeenth Moot. The best team in oral arguments was that of King's College London. The oral arguments of the Eighteenth Willem C. Vis International Commercial Arbitration Moot would be held in Vienna from 15 to 21 April 2011.

338. It was also noted that the Seventh Willem C. Vis (East) International Commercial Arbitration Moot had been organized by the Chartered Institute of Arbitrators, East Asia Branch, and also co-sponsored by the Commission. The final phase had been organized in Hong Kong Special Administrative Region of China

from 15 to 21 March 2010. A total of 75 teams from 18 countries had taken part in the Seventh (East) Moot. The winning team in the oral arguments was from the University of Freiburg, Germany. The Eighth (East) Moot would be held in Hong Kong SAR from 4 to 10 April 2011.

B. Madrid Commercial Arbitration Moot 2010

339. It was noted that the Carlos III University of Madrid had organized the Second International Commercial Arbitration Competition in Madrid from 28 June to 2 July 2010. The Madrid Moot had also been co-sponsored by the Commission. The legal issues involved in the competition were the Model Law on Arbitration, with amendments as adopted in 2006, the United Nations Sales Convention, the New York Convention, the Unidroit Model Law on Leasing⁸⁹ and the Unidroit Convention on International Financial Leasing (1988).⁹⁰ A total of 18 teams from law schools or master programmes in seven countries had participated in the Madrid Moot in Spanish. The best team in oral arguments was from the University of Zaragoza, Spain. The Third Madrid Moot would be held in 2011 on dates yet to be confirmed. It was also noted that the Centre for the Study of Law, Economics and Politics (CEDEP) had organized a Moot competition in Asunción on 12 June 2010. Legal issues involved in the competition were similar to those of the Madrid Moot. Teams from law schools in three different countries (Argentina, Colombia and Paraguay) participated in the Moot in Asunción. The winning team in oral arguments was from the Universidad Católica “Nuestra Señora de la Asunción”.

XIX. Relevant General Assembly resolutions

340. The Commission took note with appreciation of two General Assembly resolutions related to the work of UNCITRAL, adopted at the sixty-fourth session on the recommendation of the Sixth Committee: resolution 64/111, on the report of UNCITRAL on the work of its forty-second session; and resolution 64/112, on the Practice Guide on Cross-Border Insolvency Cooperation of UNCITRAL, both of 16 December 2009.

341. The Commission noted that, in its resolution 64/111, the General Assembly, *inter alia*:

(a) Commended the completion of the Commission’s project in the area of insolvency law, and welcomed the comprehensive review by the Commission of its working methods, the continuing discussion of its role in promoting the rule of law at the national and international levels, and the progress made in other areas, including public procurement and arbitration, and as regards publication of digests of case law and maintenance of the UNCITRAL website;

(b) Noted with appreciation the Commission’s decisions as regards:
(i) holding colloquiums on electronic commerce and security interests;

⁸⁹ Available at the date of this report from www.unidroit.org/english/documents/2008/study59a/s-59a-17-e.pdf.

⁹⁰ Available at the date of this report from www.unidroit.org/english/conventions/1988leasing/1988leasing-e.htm.

(ii) publication of various texts on security interests prepared by the Commission and its secretariat; and (iii) commending the use of the 2007 revision of the Uniform Customs and Practice for Documentary Credits in transactions involving the establishment of a documentary credit;

(c) Endorsed the efforts and initiatives of the Commission towards implementation of the Commission's programmes of technical assistance, and coordination and cooperation, and in that context: (i) reiterated its appeal to relevant organizations for further cooperation and coordination of their activities with those of the Commission; (ii) encouraged the Commission to explore different approaches to the use of partnerships with non-state actors; (iii) called for contributions to the UNCITRAL trust funds; (iv) noted the Commission's request to the Secretariat to explore the possibility of establishing an UNCITRAL presence in regions or specific countries with a view to facilitating the provision of technical assistance with respect to the use and adoption of UNCITRAL texts; and (v) took note the Commission's comments made in the context of its consideration of the proposed strategic framework for the period 2010-2011 that additional resources were required to be allotted to the Secretariat in particular to meet the increased demand for technical assistance;

(d) Requested the Secretary-General to explore options for the timely publication of the UNCITRAL *Yearbook*, to continue providing summary records of the Commission's meetings relating to the formulation of normative texts, and to bear in mind the particular characteristics of the mandate and work of the Commission in implementing page limits with respect to the documentation of the Commission.

342. The Commission noted that, in its resolution 64/112, the General Assembly requested the Secretary-General to publish, including electronically, the text of the Practice Guide on Cross-Border Insolvency Cooperation, and to transmit it to Governments with the request that the text be made available to relevant authorities so that it becomes widely known and available. The Commission also noted that the Assembly recommended that the Practice Guide be given due consideration, as appropriate, by judges, insolvency practitioners and other stakeholders involved in cross-border insolvency proceedings, and that all States continue to consider implementation of the UNCITRAL Model Insolvency Law.

XX. Other business

A. Internship programme

343. An oral report was presented on the internship programme at the UNCITRAL secretariat. In particular, it was noted that, since the Secretariat's oral report to the Commission at its forty-second session, in July 2009, 26 new interns had undertaken internship with the UNCITRAL secretariat.

344. The Commission noted that the Secretariat, in selecting interns from the Interns Roster maintained and administered by the United Nations Office at Vienna, kept in mind the needs of UNCITRAL and its secretariat at any given period of time, in particular the need to maintain the UNCITRAL website in six official languages of the United Nations. From that perspective, the Commission noted with

regret that during the period under review only a few candidates from Arabic-speaking countries and China had been available for selection from the Interns Roster. The Commission further took note that when a sufficient pool of qualified candidates was available the Secretariat tried to ensure a balanced gender representation and representation of interns from various geographical regions, paying special regard to the needs of developing countries and countries with economies in transition. During the period under review, the secretariat had been able to select 10 female interns and 12 interns from developing countries and countries with economies in transition.

B. Strategic framework for the biennium 2012-2013

345. The Commission had before it the proposed strategic framework for the period 2012-2013 (A/65/6 (Prog. 6)) and was invited to review the proposed biennial programme plan for subprogramme 5 (Progressive harmonization, modernization and unification of the law of international trade) of programme 6 (Legal affairs). The Commission noted that the proposed framework had been reviewed by the Committee for Programme and Coordination at its fiftieth session (7 June-2 July 2010) and would be transmitted to the General Assembly at its sixty-fifth session.

346. Concerns were expressed that the resources allotted to the Secretariat under subprogramme 5 were insufficient for it to meet the increased and pressing demands from developing countries and countries with economies in transition for technical assistance with law reform in the field of commercial law. The Commission urged the Secretary-General to take steps to ensure that the comparatively small amount of additional resources necessary to meet a demand so crucial to development be made promptly available.

347. The Commission was informed that the Secretariat was exploring various means of responding to the growing need for uniform interpretation of UNCITRAL texts. Such uniform interpretation was considered indispensable for the effective implementation of UNCITRAL texts. It was noted that some instruments emanated from the work of UNCITRAL explicitly prescribed that, in their interpretation, regard should be had to their international character and to the need to promote uniformity in their application and the observance of good faith in international trade. Continuing work of the Secretariat on the CLOUT system as a means to comply with such a requirement was considered vital. Concern over the lack of sufficient resources in the Secretariat to sustain and expand such work was noted. Building partnerships with interested institutions and exploring various other means, besides seeking additional resources from the regular budget, were mentioned as possible ways to address that concern. The Commission also took note of the desirability of establishing within its secretariat a third pillar concentrating on the promotion of ways and means of encouraging uniform interpretation of UNCITRAL texts.

C. Evaluation of the role of the Secretariat in facilitating the work of the Commission

348. It was recalled that, as indicated to the Commission at its fortieth session, in 2007,⁹¹ the programme budget for the biennium 2008-2009 listed among the "Expected accomplishments of the Secretariat" its contribution to facilitating the work of UNCITRAL. The performance measure of that expected accomplishment was the level of satisfaction of UNCITRAL with the services provided, as evidenced by a rating on a scale ranging from 1 to 5 (5 being the highest rating).⁹² The Commission agreed to provide feedback to the Secretariat. It was recalled that a similar question regarding the level of satisfaction of UNCITRAL with the services provided by the Secretariat had been asked at the close of the forty-second session of the Commission.⁹³ It was further recalled that, at that session, the question had elicited replies from 15 delegations, with an average rating of 4.66.

349. Appreciation was expressed for efforts by the Secretariat in various fields related to the work of UNCITRAL, including in rendering assistance to various stakeholders in implementing projects aimed at dissemination of information about UNCITRAL texts, such as in organizing international commercial arbitration moot competitions. Satisfaction was expressed for the generally excellent quality of work delivered to UNCITRAL by its secretariat.

XXI. Date and place of future meetings

A. Forty-fourth session of the Commission

350. The Commission approved the holding of its forty-fourth session in Vienna from 27 June to 15 July 2011. The Secretariat was requested to consider shortening the duration of the session by one week if the expected workload of the session would justify doing so.

B. Sessions of working groups

351. At its thirty-sixth session, in 2003, the Commission had agreed that: (a) working groups should normally meet for a one-week session twice a year; (b) extra time, if required, could be allocated from the unused entitlement of another working group provided that such arrangement would not result in the increase of the total number of 12 weeks of conference services per year currently allotted to sessions of all six working groups of the Commission; and (c) if any request by a working group for extra time would result in the increase of the 12-week allotment, it should be reviewed by the Commission, with proper justification being given by

⁹¹ *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17 (A/62/17)*, part I, para. 243.

⁹² A/62/6 (Sect. 8) and Corr.1, table 8.19 (d).

⁹³ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17)*, para. 434.

that working group regarding the reasons for which a change in the meeting pattern was needed.⁹⁴

1. Sessions of working groups up to the forty-fourth session of the Commission

352. The Commission approved the following provisional schedule of meetings for its working groups:

(a) Working Group I (Procurement) would hold its nineteenth session in Vienna from 1 to 5 November 2010 and its twentieth session in New York from 11 to 15 April 2011;

(b) Working Group II (Arbitration and Conciliation) would hold its fifty-third session in Vienna from 4 to 8 October 2010 and its fifty-fourth session in New York from 7 to 11 February 2011;

(c) Working Group III (Online Dispute Resolution) would hold its twenty-second session in Vienna from 11 to 15 October 2010 and its twenty-third session in New York from 14 to 18 March 2011;

(d) Working Group V (Insolvency Law) would hold its thirty-ninth session in Vienna from 6 to 10 December 2010 and its fortieth session in New York from 16 to 20 May 2011;

(e) Working Group VI (Security Interests) would hold its eighteenth session in Vienna from 8 to 12 November 2010 and its nineteenth session in New York from 14 to 18 February 2011.

353. The Commission authorized the Secretariat to adjust the schedule of working group meetings according to the needs of the working groups and the need to hold a colloquium on e-commerce (see para. 250 above) and a colloquium on microfinance (see para. 280 above). The Secretariat was requested to post on the UNCITRAL website the final schedule of the working group meetings once the dates of the meetings had been confirmed.

Additional time

354. Tentative arrangements were made for a session to be held in New York from 23 to 27 May 2011. That time could be used to accommodate the need for a session of a working group or for holding a colloquium, depending on the needs of the working groups and subject to consultation with States.

2. Sessions of working groups in 2011 after the forty-fourth session of the Commission

355. The Commission noted that tentative arrangements had been made for working group meetings in 2011 after its forty-fourth session (the arrangements were subject to the approval of the Commission at its forty-fourth session):

(a) Working Group I (Procurement) would hold its twenty-first session in Vienna from 17 to 21 October 2011;

⁹⁴ Ibid., *Fifty-eighth Session, Supplement No. 17* (A/58/17), para. 275.

(b) Working Group II (Arbitration and Conciliation) would hold its fifty-fifth session in Vienna from 5 to 9 September 2011;

(c) Working Group III (Online Dispute Resolution) would hold its twenty-fourth session in Vienna from 12 to 16 December 2011;

(d) Working Group IV (Electronic Commerce) would hold its forty-fifth session in Vienna from 10 to 14 October 2011;

(e) Working Group V (Insolvency Law) would hold its forty-first session in Vienna from 31 October to 4 November 2011;

(f) Working Group VI (Security Interests) would hold its twentieth session in Vienna from 12 to 16 September 2011.

Annex I

UNCITRAL Arbitration Rules

(as revised in 2010)

Section I. Introductory rules

Scope of application*

Article 1

1. Where parties have agreed that disputes between them in respect of a defined legal relationship, whether contractual or not, shall be referred to arbitration under the UNCITRAL Arbitration Rules, then such disputes shall be settled in accordance with these Rules subject to such modification as the parties may agree.

2. The parties to an arbitration agreement concluded after 15 August 2010 shall be presumed to have referred to the Rules in effect on the date of commencement of the arbitration, unless the parties have agreed to apply a particular version of the Rules. That presumption does not apply where the arbitration agreement has been concluded by accepting after 15 August 2010 an offer made before that date.

3. These Rules shall govern the arbitration except that where any of these Rules is in conflict with a provision of the law applicable to the arbitration from which the parties cannot derogate, that provision shall prevail.

Notice and calculation of periods of time

Article 2

1. A notice, including a notification, communication or proposal, may be transmitted by any means of communication that provides or allows for a record of its transmission.

2. If an address has been designated by a party specifically for this purpose or authorized by the arbitral tribunal, any notice shall be delivered to that party at that address, and if so delivered shall be deemed to have been received. Delivery by electronic means such as facsimile or e-mail may only be made to an address so designated or authorized.

3. In the absence of such designation or authorization, a notice is:

- (a) Received if it is physically delivered to the addressee; or
- (b) Deemed to have been received if it is delivered at the place of business, habitual residence or mailing address of the addressee.

4. If, after reasonable efforts, delivery cannot be effected in accordance with paragraphs 2 or 3, a notice is deemed to have been received if it is sent to the addressee's last-known place of business, habitual residence or mailing address by

* A model arbitration clause for contracts can be found in the annex to the Rules.

registered letter or any other means that provides a record of delivery or of attempted delivery.

5. A notice shall be deemed to have been received on the day it is delivered in accordance with paragraphs 2, 3 or 4, or attempted to be delivered in accordance with paragraph 4. A notice transmitted by electronic means is deemed to have been received on the day it is sent, except that a notice of arbitration so transmitted is only deemed to have been received on the day when it reaches the addressee's electronic address.

6. For the purpose of calculating a period of time under these Rules, such period shall begin to run on the day following the day when a notice is received. If the last day of such period is an official holiday or a non-business day at the residence or place of business of the addressee, the period is extended until the first business day which follows. Official holidays or non-business days occurring during the running of the period of time are included in calculating the period.

Notice of arbitration

Article 3

1. The party or parties initiating recourse to arbitration (hereinafter called the "claimant") shall communicate to the other party or parties (hereinafter called the "respondent") a notice of arbitration.

2. Arbitral proceedings shall be deemed to commence on the date on which the notice of arbitration is received by the respondent.

3. The notice of arbitration shall include the following:

- (a) A demand that the dispute be referred to arbitration;
- (b) The names and contact details of the parties;
- (c) Identification of the arbitration agreement that is invoked;
- (d) Identification of any contract or other legal instrument out of or in relation to which the dispute arises or, in the absence of such contract or instrument, a brief description of the relevant relationship;
- (e) A brief description of the claim and an indication of the amount involved, if any;
- (f) The relief or remedy sought;
- (g) A proposal as to the number of arbitrators, language and place of arbitration, if the parties have not previously agreed thereon.

4. The notice of arbitration may also include:

- (a) A proposal for the designation of an appointing authority referred to in article 6, paragraph 1;
- (b) A proposal for the appointment of a sole arbitrator referred to in article 8, paragraph 1;
- (c) Notification of the appointment of an arbitrator referred to in article 9 or 10.

5. The constitution of the arbitral tribunal shall not be hindered by any controversy with respect to the sufficiency of the notice of arbitration, which shall be finally resolved by the arbitral tribunal.

Response to the notice of arbitration

Article 4

1. Within 30 days of the receipt of the notice of arbitration, the respondent shall communicate to the claimant a response to the notice of arbitration, which shall include:

- (a) The name and contact details of each respondent;
- (b) A response to the information set forth in the notice of arbitration, pursuant to article 3, paragraphs 3 (c) to (g).

2. The response to the notice of arbitration may also include:

- (a) Any plea that an arbitral tribunal to be constituted under these Rules lacks jurisdiction;
- (b) A proposal for the designation of an appointing authority referred to in article 6, paragraph 1;
- (c) A proposal for the appointment of a sole arbitrator referred to in article 8, paragraph 1;
- (d) Notification of the appointment of an arbitrator referred to in article 9 or 10;
- (e) A brief description of counterclaims or claims for the purpose of a set-off, if any, including where relevant, an indication of the amounts involved, and the relief or remedy sought;
- (f) A notice of arbitration in accordance with article 3 in case the respondent formulates a claim against a party to the arbitration agreement other than the claimant.

3. The constitution of the arbitral tribunal shall not be hindered by any controversy with respect to the respondent's failure to communicate a response to the notice of arbitration, or an incomplete or late response to the notice of arbitration, which shall be finally resolved by the arbitral tribunal.

Representation and assistance

Article 5

Each party may be represented or assisted by persons chosen by it. The names and addresses of such persons must be communicated to all parties and to the arbitral tribunal. Such communication must specify whether the appointment is being made for purposes of representation or assistance. Where a person is to act as a representative of a party, the arbitral tribunal, on its own initiative or at the request of any party, may at any time require proof of authority granted to the representative in such a form as the arbitral tribunal may determine.

Designating and appointing authorities

Article 6

1. Unless the parties have already agreed on the choice of an appointing authority, a party may at any time propose the name or names of one or more institutions or persons, including the Secretary-General of the Permanent Court of Arbitration at The Hague (hereinafter called the “PCA”), one of whom would serve as appointing authority.

2. If all parties have not agreed on the choice of an appointing authority within 30 days after a proposal made in accordance with paragraph 1 has been received by all other parties, any party may request the Secretary-General of the PCA to designate the appointing authority.

3. Where these Rules provide for a period of time within which a party must refer a matter to an appointing authority and no appointing authority has been agreed on or designated, the period is suspended from the date on which a party initiates the procedure for agreeing on or designating an appointing authority until the date of such agreement or designation.

4. Except as referred to in article 41, paragraph 4, if the appointing authority refuses to act, or if it fails to appoint an arbitrator within 30 days after it receives a party’s request to do so, fails to act within any other period provided by these Rules, or fails to decide on a challenge to an arbitrator within a reasonable time after receiving a party’s request to do so, any party may request the Secretary-General of the PCA to designate a substitute appointing authority.

5. In exercising their functions under these Rules, the appointing authority and the Secretary-General of the PCA may require from any party and the arbitrators the information they deem necessary and they shall give the parties and, where appropriate, the arbitrators, an opportunity to present their views in any manner they consider appropriate. All such communications to and from the appointing authority and the Secretary-General of the PCA shall also be provided by the sender to all other parties.

6. When the appointing authority is requested to appoint an arbitrator pursuant to articles 8, 9, 10 or 14, the party making the request shall send to the appointing authority copies of the notice of arbitration and, if it exists, any response to the notice of arbitration.

7. The appointing authority shall have regard to such considerations as are likely to secure the appointment of an independent and impartial arbitrator and shall take into account the advisability of appointing an arbitrator of a nationality other than the nationalities of the parties.

Section II. Composition of the arbitral tribunal

Number of arbitrators

Article 7

1. If the parties have not previously agreed on the number of arbitrators, and if within 30 days after the receipt by the respondent of the notice of arbitration

the parties have not agreed that there shall be only one arbitrator, three arbitrators shall be appointed.

2. Notwithstanding paragraph 1, if no other parties have responded to a party's proposal to appoint a sole arbitrator within the time limit provided for in paragraph 1 and the party or parties concerned have failed to appoint a second arbitrator in accordance with article 9 or 10, the appointing authority may, at the request of a party, appoint a sole arbitrator pursuant to the procedure provided for in article 8, paragraph 2, if it determines that, in view of the circumstances of the case, this is more appropriate.

Appointment of arbitrators (articles 8 to 10)

Article 8

1. If the parties have agreed that a sole arbitrator is to be appointed and if within 30 days after receipt by all other parties of a proposal for the appointment of a sole arbitrator the parties have not reached agreement thereon, a sole arbitrator shall, at the request of a party, be appointed by the appointing authority.

2. The appointing authority shall appoint the sole arbitrator as promptly as possible. In making the appointment, the appointing authority shall use the following list-procedure, unless the parties agree that the list-procedure should not be used or unless the appointing authority determines in its discretion that the use of the list-procedure is not appropriate for the case:

(a) The appointing authority shall communicate to each of the parties an identical list containing at least three names;

(b) Within 15 days after the receipt of this list, each party may return the list to the appointing authority after having deleted the name or names to which it objects and numbered the remaining names on the list in the order of its preference;

(c) After the expiration of the above period of time the appointing authority shall appoint the sole arbitrator from among the names approved on the lists returned to it and in accordance with the order of preference indicated by the parties;

(d) If for any reason the appointment cannot be made according to this procedure, the appointing authority may exercise its discretion in appointing the sole arbitrator.

Article 9

1. If three arbitrators are to be appointed, each party shall appoint one arbitrator. The two arbitrators thus appointed shall choose the third arbitrator who will act as the presiding arbitrator of the arbitral tribunal.

2. If within 30 days after the receipt of a party's notification of the appointment of an arbitrator the other party has not notified the first party of the arbitrator it has appointed, the first party may request the appointing authority to appoint the second arbitrator.

3. If within 30 days after the appointment of the second arbitrator the two arbitrators have not agreed on the choice of the presiding arbitrator, the

presiding arbitrator shall be appointed by the appointing authority in the same way as a sole arbitrator would be appointed under article 8.

Article 10

1. For the purposes of article 9, paragraph 1, where three arbitrators are to be appointed and there are multiple parties as claimant or as respondent, unless the parties have agreed to another method of appointment of arbitrators, the multiple parties jointly, whether as claimant or as respondent, shall appoint an arbitrator.

2. If the parties have agreed that the arbitral tribunal is to be composed of a number of arbitrators other than one or three, the arbitrators shall be appointed according to the method agreed upon by the parties.

3. In the event of any failure to constitute the arbitral tribunal under these Rules, the appointing authority shall, at the request of any party, constitute the arbitral tribunal and, in doing so, may revoke any appointment already made and appoint or reappoint each of the arbitrators and designate one of them as the presiding arbitrator.

Disclosures by and challenge of arbitrators (articles 11 to 13)**

Article 11

When a person is approached in connection with his or her possible appointment as an arbitrator, he or she shall disclose any circumstances likely to give rise to justifiable doubts as to his or her impartiality or independence. An arbitrator, from the time of his or her appointment and throughout the arbitral proceedings, shall without delay disclose any such circumstances to the parties and the other arbitrators unless they have already been informed by him or her of these circumstances.

Article 12

1. Any arbitrator may be challenged if circumstances exist that give rise to justifiable doubts as to the arbitrator's impartiality or independence.

2. A party may challenge the arbitrator appointed by it only for reasons of which it becomes aware after the appointment has been made.

3. In the event that an arbitrator fails to act or in the event of the de jure or de facto impossibility of his or her performing his or her functions, the procedure in respect of the challenge of an arbitrator as provided in article 13 shall apply.

Article 13

1. A party that intends to challenge an arbitrator shall send notice of its challenge within 15 days after it has been notified of the appointment of the challenged arbitrator, or within 15 days after the circumstances mentioned in articles 11 and 12 became known to that party.

** Model statements of independence pursuant to article 11 can be found in the annex to the Rules.

2. The notice of challenge shall be communicated to all other parties, to the arbitrator who is challenged and to the other arbitrators. The notice of challenge shall state the reasons for the challenge.

3. When an arbitrator has been challenged by a party, all parties may agree to the challenge. The arbitrator may also, after the challenge, withdraw from his or her office. In neither case does this imply acceptance of the validity of the grounds for the challenge.

4. If, within 15 days from the date of the notice of challenge, all parties do not agree to the challenge or the challenged arbitrator does not withdraw, the party making the challenge may elect to pursue it. In that case, within 30 days from the date of the notice of challenge, it shall seek a decision on the challenge by the appointing authority.

Replacement of an arbitrator

Article 14

1. Subject to paragraph 2, in any event where an arbitrator has to be replaced during the course of the arbitral proceedings, a substitute arbitrator shall be appointed or chosen pursuant to the procedure provided for in articles 8 to 11 that was applicable to the appointment or choice of the arbitrator being replaced. This procedure shall apply even if during the process of appointing the arbitrator to be replaced, a party had failed to exercise its right to appoint or to participate in the appointment.

2. If, at the request of a party, the appointing authority determines that, in view of the exceptional circumstances of the case, it would be justified for a party to be deprived of its right to appoint a substitute arbitrator, the appointing authority may, after giving an opportunity to the parties and the remaining arbitrators to express their views: (a) appoint the substitute arbitrator; or (b) after the closure of the hearings, authorize the other arbitrators to proceed with the arbitration and make any decision or award.

Repetition of hearings in the event of the replacement of an arbitrator

Article 15

If an arbitrator is replaced, the proceedings shall resume at the stage where the arbitrator who was replaced ceased to perform his or her functions, unless the arbitral tribunal decides otherwise.

Exclusion of liability

Article 16

Save for intentional wrongdoing, the parties waive, to the fullest extent permitted under the applicable law, any claim against the arbitrators, the appointing authority and any person appointed by the arbitral tribunal based on any act or omission in connection with the arbitration.

Section III. Arbitral proceedings

General provisions

Article 17

1. Subject to these Rules, the arbitral tribunal may conduct the arbitration in such manner as it considers appropriate, provided that the parties are treated with equality and that at an appropriate stage of the proceedings each party is given a reasonable opportunity of presenting its case. The arbitral tribunal, in exercising its discretion, shall conduct the proceedings so as to avoid unnecessary delay and expense and to provide a fair and efficient process for resolving the parties' dispute.

2. As soon as practicable after its constitution and after inviting the parties to express their views, the arbitral tribunal shall establish the provisional timetable of the arbitration. The arbitral tribunal may, at any time, after inviting the parties to express their views, extend or abridge any period of time prescribed under these Rules or agreed by the parties.

3. If at an appropriate stage of the proceedings any party so requests, the arbitral tribunal shall hold hearings for the presentation of evidence by witnesses, including expert witnesses, or for oral argument. In the absence of such a request, the arbitral tribunal shall decide whether to hold such hearings or whether the proceedings shall be conducted on the basis of documents and other materials.

4. All communications to the arbitral tribunal by one party shall be communicated by that party to all other parties. Such communications shall be made at the same time, except as otherwise permitted by the arbitral tribunal if it may do so under applicable law.

5. The arbitral tribunal may, at the request of any party, allow one or more third persons to be joined in the arbitration as a party provided such person is a party to the arbitration agreement, unless the arbitral tribunal finds, after giving all parties, including the person or persons to be joined, the opportunity to be heard, that joinder should not be permitted because of prejudice to any of those parties. The arbitral tribunal may make a single award or several awards in respect of all parties so involved in the arbitration.

Place of arbitration

Article 18

1. If the parties have not previously agreed on the place of arbitration, the place of arbitration shall be determined by the arbitral tribunal having regard to the circumstances of the case. The award shall be deemed to have been made at the place of arbitration.

2. The arbitral tribunal may meet at any location it considers appropriate for deliberations. Unless otherwise agreed by the parties, the arbitral tribunal may also meet at any location it considers appropriate for any other purpose, including hearings.

Language*Article 19*

1. Subject to an agreement by the parties, the arbitral tribunal shall, promptly after its appointment, determine the language or languages to be used in the proceedings. This determination shall apply to the statement of claim, the statement of defence, and any further written statements and, if oral hearings take place, to the language or languages to be used in such hearings.

2. The arbitral tribunal may order that any documents annexed to the statement of claim or statement of defence, and any supplementary documents or exhibits submitted in the course of the proceedings, delivered in their original language, shall be accompanied by a translation into the language or languages agreed upon by the parties or determined by the arbitral tribunal.

Statement of claim*Article 20*

1. The claimant shall communicate its statement of claim in writing to the respondent and to each of the arbitrators within a period of time to be determined by the arbitral tribunal. The claimant may elect to treat its notice of arbitration referred to in article 3 as a statement of claim, provided that the notice of arbitration also complies with the requirements of paragraphs 2 to 4 of this article.

2. The statement of claim shall include the following particulars:

- (a) The names and contact details of the parties;
- (b) A statement of the facts supporting the claim;
- (c) The points at issue;
- (d) The relief or remedy sought;
- (e) The legal grounds or arguments supporting the claim.

3. A copy of any contract or other legal instrument out of or in relation to which the dispute arises and of the arbitration agreement shall be annexed to the statement of claim.

4. The statement of claim should, as far as possible, be accompanied by all documents and other evidence relied upon by the claimant, or contain references to them.

Statement of defence*Article 21*

1. The respondent shall communicate its statement of defence in writing to the claimant and to each of the arbitrators within a period of time to be determined by the arbitral tribunal. The respondent may elect to treat its response to the notice of arbitration referred to in article 4 as a statement of defence, provided that the response to the notice of arbitration also complies with the requirements of paragraph 2 of this article.

2. The statement of defence shall reply to the particulars (b) to (e) of the statement of claim (art. 20, para. 2). The statement of defence should, as far as possible, be accompanied by all documents and other evidence relied upon by the respondent, or contain references to them.

3. In its statement of defence, or at a later stage in the arbitral proceedings if the arbitral tribunal decides that the delay was justified under the circumstances, the respondent may make a counterclaim or rely on a claim for the purpose of a set-off provided that the arbitral tribunal has jurisdiction over it.

4. The provisions of article 20, paragraphs 2 to 4, shall apply to a counterclaim, a claim under article 4, paragraph 2 (f), and a claim relied on for the purpose of a set-off.

Amendments to the claim or defence

Article 22

During the course of the arbitral proceedings, a party may amend or supplement its claim or defence, including a counterclaim or a claim for the purpose of a set-off, unless the arbitral tribunal considers it inappropriate to allow such amendment or supplement having regard to the delay in making it or prejudice to other parties or any other circumstances. However, a claim or defence, including a counterclaim or a claim for the purpose of a set-off, may not be amended or supplemented in such a manner that the amended or supplemented claim or defence falls outside the jurisdiction of the arbitral tribunal.

Pleas as to the jurisdiction of the arbitral tribunal

Article 23

1. The arbitral tribunal shall have the power to rule on its own jurisdiction, including any objections with respect to the existence or validity of the arbitration agreement. For that purpose, an arbitration clause that forms part of a contract shall be treated as an agreement independent of the other terms of the contract. A decision by the arbitral tribunal that the contract is null shall not entail automatically the invalidity of the arbitration clause.

2. A plea that the arbitral tribunal does not have jurisdiction shall be raised no later than in the statement of defence or, with respect to a counterclaim or a claim for the purpose of a set-off, in the reply to the counterclaim or to the claim for the purpose of a set-off. A party is not precluded from raising such a plea by the fact that it has appointed, or participated in the appointment of, an arbitrator. A plea that the arbitral tribunal is exceeding the scope of its authority shall be raised as soon as the matter alleged to be beyond the scope of its authority is raised during the arbitral proceedings. The arbitral tribunal may, in either case, admit a later plea if it considers the delay justified.

3. The arbitral tribunal may rule on a plea referred to in paragraph 2 either as a preliminary question or in an award on the merits. The arbitral tribunal may continue the arbitral proceedings and make an award, notwithstanding any pending challenge to its jurisdiction before a court.

Further written statements*Article 24*

The arbitral tribunal shall decide which further written statements, in addition to the statement of claim and the statement of defence, shall be required from the parties or may be presented by them and shall fix the periods of time for communicating such statements.

Periods of time*Article 25*

The periods of time fixed by the arbitral tribunal for the communication of written statements (including the statement of claim and statement of defence) should not exceed 45 days. However, the arbitral tribunal may extend the time limits if it concludes that an extension is justified.

Interim measures*Article 26*

1. The arbitral tribunal may, at the request of a party, grant interim measures.

2. An interim measure is any temporary measure by which, at any time prior to the issuance of the award by which the dispute is finally decided, the arbitral tribunal orders a party, for example and without limitation, to:

- (a) Maintain or restore the status quo pending determination of the dispute;
- (b) Take action that would prevent, or refrain from taking action that is likely to cause, (i) current or imminent harm or (ii) prejudice to the arbitral process itself;
- (c) Provide a means of preserving assets out of which a subsequent award may be satisfied; or
- (d) Preserve evidence that may be relevant and material to the resolution of the dispute.

3. The party requesting an interim measure under paragraphs 2 (a) to (c) shall satisfy the arbitral tribunal that:

- (a) Harm not adequately reparable by an award of damages is likely to result if the measure is not ordered, and such harm substantially outweighs the harm that is likely to result to the party against whom the measure is directed if the measure is granted; and
- (b) There is a reasonable possibility that the requesting party will succeed on the merits of the claim. The determination on this possibility shall not affect the discretion of the arbitral tribunal in making any subsequent determination.

4. With regard to a request for an interim measure under paragraph 2 (d), the requirements in paragraphs 3 (a) and (b) shall apply only to the extent the arbitral tribunal considers appropriate.

5. The arbitral tribunal may modify, suspend or terminate an interim measure it has granted, upon application of any party or, in exceptional circumstances and upon prior notice to the parties, on the arbitral tribunal's own initiative.

6. The arbitral tribunal may require the party requesting an interim measure to provide appropriate security in connection with the measure.

7. The arbitral tribunal may require any party promptly to disclose any material change in the circumstances on the basis of which the interim measure was requested or granted.

8. The party requesting an interim measure may be liable for any costs and damages caused by the measure to any party if the arbitral tribunal later determines that, in the circumstances then prevailing, the measure should not have been granted. The arbitral tribunal may award such costs and damages at any point during the proceedings.

9. A request for interim measures addressed by any party to a judicial authority shall not be deemed incompatible with the agreement to arbitrate, or as a waiver of that agreement.

Evidence

Article 27

1. Each party shall have the burden of proving the facts relied on to support its claim or defence.

2. Witnesses, including expert witnesses, who are presented by the parties to testify to the arbitral tribunal on any issue of fact or expertise may be any individual, notwithstanding that the individual is a party to the arbitration or in any way related to a party. Unless otherwise directed by the arbitral tribunal, statements by witnesses, including expert witnesses, may be presented in writing and signed by them.

3. At any time during the arbitral proceedings the arbitral tribunal may require the parties to produce documents, exhibits or other evidence within such a period of time as the arbitral tribunal shall determine.

4. The arbitral tribunal shall determine the admissibility, relevance, materiality and weight of the evidence offered.

Hearings

Article 28

1. In the event of an oral hearing, the arbitral tribunal shall give the parties adequate advance notice of the date, time and place thereof.

2. Witnesses, including expert witnesses, may be heard under the conditions and examined in the manner set by the arbitral tribunal.

3. Hearings shall be held in camera unless the parties agree otherwise. The arbitral tribunal may require the retirement of any witness or witnesses, including expert witnesses, during the testimony of such other witnesses, except that a

witness, including an expert witness, who is a party to the arbitration shall not, in principle, be asked to retire.

4. The arbitral tribunal may direct that witnesses, including expert witnesses, be examined through means of telecommunication that do not require their physical presence at the hearing (such as videoconference).

Experts appointed by the arbitral tribunal

Article 29

1. After consultation with the parties, the arbitral tribunal may appoint one or more independent experts to report to it, in writing, on specific issues to be determined by the arbitral tribunal. A copy of the expert's terms of reference, established by the arbitral tribunal, shall be communicated to the parties.

2. The expert shall, in principle before accepting appointment, submit to the arbitral tribunal and to the parties a description of his or her qualifications and a statement of his or her impartiality and independence. Within the time ordered by the arbitral tribunal, the parties shall inform the arbitral tribunal whether they have any objections as to the expert's qualifications, impartiality or independence. The arbitral tribunal shall decide promptly whether to accept any such objections. After an expert's appointment, a party may object to the expert's qualifications, impartiality or independence only if the objection is for reasons of which the party becomes aware after the appointment has been made. The arbitral tribunal shall decide promptly what, if any, action to take.

3. The parties shall give the expert any relevant information or produce for his or her inspection any relevant documents or goods that he or she may require of them. Any dispute between a party and such expert as to the relevance of the required information or production shall be referred to the arbitral tribunal for decision.

4. Upon receipt of the expert's report, the arbitral tribunal shall communicate a copy of the report to the parties, which shall be given the opportunity to express, in writing, their opinion on the report. A party shall be entitled to examine any document on which the expert has relied in his or her report.

5. At the request of any party, the expert, after delivery of the report, may be heard at a hearing where the parties shall have the opportunity to be present and to interrogate the expert. At this hearing, any party may present expert witnesses in order to testify on the points at issue. The provisions of article 28 shall be applicable to such proceedings.

Default

Article 30

1. If, within the period of time fixed by these Rules or the arbitral tribunal, without showing sufficient cause:

(a) The claimant has failed to communicate its statement of claim, the arbitral tribunal shall issue an order for the termination of the arbitral proceedings, unless there are remaining matters that may need to be decided and the arbitral tribunal considers it appropriate to do so;

(b) The respondent has failed to communicate its response to the notice of arbitration or its statement of defence, the arbitral tribunal shall order that the proceedings continue, without treating such failure in itself as an admission of the claimant's allegations; the provisions of this subparagraph also apply to a claimant's failure to submit a defence to a counterclaim or to a claim for the purpose of a set-off.

2. If a party, duly notified under these Rules, fails to appear at a hearing, without showing sufficient cause for such failure, the arbitral tribunal may proceed with the arbitration.

3. If a party, duly invited by the arbitral tribunal to produce documents, exhibits or other evidence, fails to do so within the established period of time, without showing sufficient cause for such failure, the arbitral tribunal may make the award on the evidence before it.

Closure of hearings

Article 31

1. The arbitral tribunal may inquire of the parties if they have any further proof to offer or witnesses to be heard or submissions to make and, if there are none, it may declare the hearings closed.

2. The arbitral tribunal may, if it considers it necessary owing to exceptional circumstances, decide, on its own initiative or upon application of a party, to reopen the hearings at any time before the award is made.

Waiver of right to object

Article 32

A failure by any party to object promptly to any non-compliance with these Rules or with any requirement of the arbitration agreement shall be deemed to be a waiver of the right of such party to make such an objection, unless such party can show that, under the circumstances, its failure to object was justified.

Section IV. The award

Decisions

Article 33

1. When there is more than one arbitrator, any award or other decision of the arbitral tribunal shall be made by a majority of the arbitrators.

2. In the case of questions of procedure, when there is no majority or when the arbitral tribunal so authorizes, the presiding arbitrator may decide alone, subject to revision, if any, by the arbitral tribunal.

Form and effect of the award*Article 34*

1. The arbitral tribunal may make separate awards on different issues at different times.
2. All awards shall be made in writing and shall be final and binding on the parties. The parties shall carry out all awards without delay.
3. The arbitral tribunal shall state the reasons upon which the award is based, unless the parties have agreed that no reasons are to be given.
4. An award shall be signed by the arbitrators and it shall contain the date on which the award was made and indicate the place of arbitration. Where there is more than one arbitrator and any of them fails to sign, the award shall state the reason for the absence of the signature.
5. An award may be made public with the consent of all parties or where and to the extent disclosure is required of a party by legal duty, to protect or pursue a legal right or in relation to legal proceedings before a court or other competent authority.
6. Copies of the award signed by the arbitrators shall be communicated to the parties by the arbitral tribunal.

Applicable law, *amiable compositeur**Article 35*

1. The arbitral tribunal shall apply the rules of law designated by the parties as applicable to the substance of the dispute. Failing such designation by the parties, the arbitral tribunal shall apply the law which it determines to be appropriate.
2. The arbitral tribunal shall decide as *amiable compositeur* or *ex aequo et bono* only if the parties have expressly authorized the arbitral tribunal to do so.
3. In all cases, the arbitral tribunal shall decide in accordance with the terms of the contract, if any, and shall take into account any usage of trade applicable to the transaction.

Settlement or other grounds for termination*Article 36*

1. If, before the award is made, the parties agree on a settlement of the dispute, the arbitral tribunal shall either issue an order for the termination of the arbitral proceedings or, if requested by the parties and accepted by the arbitral tribunal, record the settlement in the form of an arbitral award on agreed terms. The arbitral tribunal is not obliged to give reasons for such an award.
2. If, before the award is made, the continuation of the arbitral proceedings becomes unnecessary or impossible for any reason not mentioned in paragraph 1, the arbitral tribunal shall inform the parties of its intention to issue an order for the termination of the proceedings. The arbitral tribunal shall have the power to issue such an order unless there are remaining matters that may need to be decided and the arbitral tribunal considers it appropriate to do so.

3. Copies of the order for termination of the arbitral proceedings or of the arbitral award on agreed terms, signed by the arbitrators, shall be communicated by the arbitral tribunal to the parties. Where an arbitral award on agreed terms is made, the provisions of article 34, paragraphs 2, 4 and 5, shall apply.

Interpretation of the award

Article 37

1. Within 30 days after the receipt of the award, a party, with notice to the other parties, may request that the arbitral tribunal give an interpretation of the award.

2. The interpretation shall be given in writing within 45 days after the receipt of the request. The interpretation shall form part of the award and the provisions of article 34, paragraphs 2 to 6, shall apply.

Correction of the award

Article 38

1. Within 30 days after the receipt of the award, a party, with notice to the other parties, may request the arbitral tribunal to correct in the award any error in computation, any clerical or typographical error, or any error or omission of a similar nature. If the arbitral tribunal considers that the request is justified, it shall make the correction within 45 days of receipt of the request.

2. The arbitral tribunal may within 30 days after the communication of the award make such corrections on its own initiative.

3. Such corrections shall be in writing and shall form part of the award. The provisions of article 34, paragraphs 2 to 6, shall apply.

Additional award

Article 39

1. Within 30 days after the receipt of the termination order or the award, a party, with notice to the other parties, may request the arbitral tribunal to make an award or an additional award as to claims presented in the arbitral proceedings but not decided by the arbitral tribunal.

2. If the arbitral tribunal considers the request for an award or additional award to be justified, it shall render or complete its award within 60 days after the receipt of the request. The arbitral tribunal may extend, if necessary, the period of time within which it shall make the award.

3. When such an award or additional award is made, the provisions of article 34, paragraphs 2 to 6, shall apply.

Definition of costs

Article 40

1. The arbitral tribunal shall fix the costs of arbitration in the final award and, if it deems appropriate, in another decision.

2. The term “costs” includes only:
 - (a) The fees of the arbitral tribunal to be stated separately as to each arbitrator and to be fixed by the tribunal itself in accordance with article 41;
 - (b) The reasonable travel and other expenses incurred by the arbitrators;
 - (c) The reasonable costs of expert advice and of other assistance required by the arbitral tribunal;
 - (d) The reasonable travel and other expenses of witnesses to the extent such expenses are approved by the arbitral tribunal;
 - (e) The legal and other costs incurred by the parties in relation to the arbitration to the extent that the arbitral tribunal determines that the amount of such costs is reasonable;
 - (f) Any fees and expenses of the appointing authority as well as the fees and expenses of the Secretary-General of the PCA.
3. In relation to interpretation, correction or completion of any award under articles 37 to 39, the arbitral tribunal may charge the costs referred to in paragraphs 2 (b) to (f), but no additional fees.

Fees and expenses of arbitrators

Article 41

1. The fees and expenses of the arbitrators shall be reasonable in amount, taking into account the amount in dispute, the complexity of the subject matter, the time spent by the arbitrators and any other relevant circumstances of the case.
2. If there is an appointing authority and it applies or has stated that it will apply a schedule or particular method for determining the fees for arbitrators in international cases, the arbitral tribunal in fixing its fees shall take that schedule or method into account to the extent that it considers appropriate in the circumstances of the case.
3. Promptly after its constitution, the arbitral tribunal shall inform the parties as to how it proposes to determine its fees and expenses, including any rates it intends to apply. Within 15 days of receiving that proposal, any party may refer the proposal to the appointing authority for review. If, within 45 days of receipt of such a referral, the appointing authority finds that the proposal of the arbitral tribunal is inconsistent with paragraph 1, it shall make any necessary adjustments thereto, which shall be binding upon the arbitral tribunal.
4.
 - (a) When informing the parties of the arbitrators’ fees and expenses that have been fixed pursuant to article 40, paragraphs 2 (a) and (b), the arbitral tribunal shall also explain the manner in which the corresponding amounts have been calculated;
 - (b) Within 15 days of receiving the arbitral tribunal’s determination of fees and expenses, any party may refer for review such determination to the appointing authority. If no appointing authority has been agreed upon or designated, or if the appointing authority fails to act within the time specified in these Rules, then the review shall be made by the Secretary-General of the PCA;

(c) If the appointing authority or the Secretary-General of the PCA finds that the arbitral tribunal's determination is inconsistent with the arbitral tribunal's proposal (and any adjustment thereto) under paragraph 3 or is otherwise manifestly excessive, it shall, within 45 days of receiving such a referral, make any adjustments to the arbitral tribunal's determination that are necessary to satisfy the criteria in paragraph 1. Any such adjustments shall be binding upon the arbitral tribunal;

(d) Any such adjustments shall either be included by the arbitral tribunal in its award or, if the award has already been issued, be implemented in a correction to the award, to which the procedure of article 38, paragraph 3, shall apply.

5. Throughout the procedure under paragraphs 3 and 4, the arbitral tribunal shall proceed with the arbitration, in accordance with article 17, paragraph 1.

6. A referral under paragraph 4 shall not affect any determination in the award other than the arbitral tribunal's fees and expenses; nor shall it delay the recognition and enforcement of all parts of the award other than those relating to the determination of the arbitral tribunal's fees and expenses.

Allocation of costs

Article 42

1. The costs of the arbitration shall in principle be borne by the unsuccessful party or parties. However, the arbitral tribunal may apportion each of such costs between the parties if it determines that apportionment is reasonable, taking into account the circumstances of the case.

2. The arbitral tribunal shall in the final award or, if it deems appropriate, in any other award, determine any amount that a party may have to pay to another party as a result of the decision on allocation of costs.

Deposit of costs

Article 43

1. The arbitral tribunal, on its establishment, may request the parties to deposit an equal amount as an advance for the costs referred to in article 40, paragraphs 2 (a) to (c).

2. During the course of the arbitral proceedings the arbitral tribunal may request supplementary deposits from the parties.

3. If an appointing authority has been agreed upon or designated, and when a party so requests and the appointing authority consents to perform the function, the arbitral tribunal shall fix the amounts of any deposits or supplementary deposits only after consultation with the appointing authority, which may make any comments to the arbitral tribunal that it deems appropriate concerning the amount of such deposits and supplementary deposits.

4. If the required deposits are not paid in full within 30 days after the receipt of the request, the arbitral tribunal shall so inform the parties in order that one or more of them may make the required payment. If such payment is not made, the arbitral tribunal may order the suspension or termination of the arbitral proceedings.

5. After a termination order or final award has been made, the arbitral tribunal shall render an accounting to the parties of the deposits received and return any unexpended balance to the parties.

Annex

Model arbitration clause for contracts

Any dispute, controversy or claim arising out of or relating to this contract, or the breach, termination or invalidity thereof, shall be settled by arbitration in accordance with the UNCITRAL Arbitration Rules.

Note. Parties should consider adding:

- (a) The appointing authority shall be ... [name of institution or person];
- (b) The number of arbitrators shall be ... [one or three];
- (c) The place of arbitration shall be ... [town and country];
- (d) The language to be used in the arbitral proceedings shall be

Possible waiver statement

Note. If the parties wish to exclude recourse against the arbitral award that may be available under the applicable law, they may consider adding a provision to that effect as suggested below, considering, however, that the effectiveness and conditions of such an exclusion depend on the applicable law.

Waiver

The parties hereby waive their right to any form of recourse against an award to any court or other competent authority, insofar as such waiver can validly be made under the applicable law.

Model statements of independence pursuant to article 11 of the Rules

No circumstances to disclose

I am impartial and independent of each of the parties and intend to remain so. To the best of my knowledge, there are no circumstances, past or present, likely to give rise to justifiable doubts as to my impartiality or independence. I shall promptly notify the parties and the other arbitrators of any such circumstances that may subsequently come to my attention during this arbitration.

Circumstances to disclose

I am impartial and independent of each of the parties and intend to remain so. Attached is a statement made pursuant to article 11 of the UNCITRAL Arbitration Rules of (a) my past and present professional, business and other relationships with the parties and (b) any other relevant circumstances. [Include statement.] I confirm that those circumstances do not affect my independence and impartiality. I shall promptly notify the parties

and the other arbitrators of any such further relationships or circumstances that may subsequently come to my attention during this arbitration.

Note. Any party may consider requesting from the arbitrator the following addition to the statement of independence:

I confirm, on the basis of the information presently available to me, that I can devote the time necessary to conduct this arbitration diligently, efficiently and in accordance with the time limits in the Rules.

Annex II

Terminology and recommendations of the UNCITRAL Legislative Guide on Secured Transactions. Supplement on Security Rights in Intellectual Property

A. Terminology

“Acquisition security right” includes a security right in intellectual property or a licence of intellectual property, provided that the security right secures the obligation to pay any unpaid portion of the acquisition price of the encumbered asset or an obligation incurred or credit otherwise provided to enable the grantor to acquire the encumbered asset.

“Consumer goods” includes intellectual property or a licence of intellectual property used or intended to be used by the grantor for personal, family or household purposes.

“Inventory” includes intellectual property or a licence of intellectual property held by the grantor for sale or licence in the ordinary course of the grantor’s business.

B. Recommendations 243-248

Security rights in tangible assets with respect to which intellectual property is used

243. The law should provide that, in the case of a tangible asset with respect to which intellectual property is used, a security right in the tangible asset does not extend to the intellectual property and a security right in the intellectual property does not extend to the tangible asset.

Impact of a transfer of encumbered intellectual property on the effectiveness of the registration

244. The law should provide that the registration of a notice of a security right in intellectual property in the general security rights registry remains effective notwithstanding a transfer of the encumbered intellectual property.

Priority of rights of certain licensees of intellectual property

245. The law should provide that the rule in recommendation 81, subparagraph (c), applies to the rights of a secured creditor under this law and does not affect the rights the secured creditor may have under the law relating to intellectual property.

Right of the secured creditor to preserve the encumbered intellectual property

246. The law should provide that the grantor and the secured creditor may agree that the secured creditor is entitled to take steps to preserve the encumbered intellectual property.

Application of acquisition security right provisions to security rights in intellectual property

247. The law should provide that the provisions on an acquisition security right in a tangible asset also apply to an acquisition security right in intellectual property or a licence of intellectual property. For the purpose of applying these provisions:

- (a) Intellectual property or a licence of intellectual property:
 - (i) Held by the grantor for sale or licence in the ordinary course of the grantor's business is treated as inventory; and
 - (ii) Used or intended to be used by the grantor for personal, family or household purposes is treated as consumer goods; and
- (b) Any reference to:
 - (i) Possession of the encumbered asset by the secured creditor does not apply;
 - (ii) The time of possession of the encumbered asset by the grantor refers to the time the grantor acquires the encumbered intellectual property or licence of intellectual property; and
 - (iii) The time of the delivery of the encumbered asset to the grantor refers to the time the grantor acquires the encumbered intellectual property or licence of intellectual property.

Law applicable to a security right in intellectual property

248. The law should provide that:

- (a) The law applicable to the creation, effectiveness against third parties and priority of a security right in intellectual property is the law of the State in which the intellectual property is protected;
- (b) A security right in intellectual property may also be created under the law of the State in which the grantor is located and may also be made effective under that law against third parties other than another secured creditor, a transferee or a licensee; and
- (c) The law applicable to the enforcement of a security right in intellectual property is the law of the State in which the grantor is located.

Annex III

UNCITRAL rules of procedure and methods of work

Summary of conclusions

As decided by the Commission at its first session, rules relating to the procedure of committees of the General Assembly, as well as rules 45 and 60, shall apply to the procedure of the Commission. As the Commission has further decided, on matters not covered by these rules, the Commission shall be guided by the general principle that the rules of procedure of the General Assembly should apply, *mutatis mutandis*, to the Commission as may be appropriate for the performance of its functions.

Decision-taking

1. Decisions in the Commission are taken by member States of the Commission. The views of non-member States and observer organizations are for the benefit of member States who may take such views into account in determining their positions on the issue to be decided upon.
2. The practice in the Commission as reflected by existing procedures long used by the Commission is to reach decisions by consensus. The Commission has decided that Commission decisions should be reached by consensus as far as possible; in the absence of a consensus, decisions are to be taken by voting as provided for in the relevant rules of procedure of the General Assembly.
3. States are entitled to make explanations of vote and explanations of position and to have those statements reflected in the report, consistent with the rules of procedure of the General Assembly.
4. Voting is to be regarded as an exceptional procedure. It should be noted that voting in the Commission took place only once on a procedural matter.

Status of non-member States and observer organizations

5. Non-member States are entitled, when they so request, to attend the sessions of the Commission and its working groups as observers and may participate in the collective effort to achieve a generally acceptable text. However, they cannot object to a decision being recorded.
6. As regards observer organizations, sessions of the Commission and its subsidiary organs are open to representatives of international governmental and non-governmental organizations invited by the Commission, as discussed in paragraphs 8 to 10 below.
7. Observers, in particular non-governmental organizations, do not participate in the decision-taking.
8. United Nations organs and specialized agencies brought into relationship with the United Nations are permitted to participate in the sessions and the work of the Commission and its subsidiary organs.

9. The Commission shall draw up, and shall update as necessary, a list of other international organizations and of non-governmental organizations with which UNCITRAL entertains a long-standing cooperation and which have been invited to Commission sessions.

10. In addition, the Secretariat may be requested by the Commission or its subsidiary organs to invite a specific organization to the relevant session. It may also receive a request from an organization to be invited to a session, or it may itself take the initiative to invite an organization on the basis of its assessment of the relevance and potential contribution of the organization concerned to the proceedings of the relevant session. In such cases, the Secretariat shall inform the member States of the Commission. Where an objection is raised, the decision will be taken by the Commission.

Working methods of the UNCITRAL secretariat

11. The Secretariat may make either oral or written statements at any time to the Commission or its subsidiary organs concerning any question under consideration. Within the limits of its available resources, the Secretariat may have recourse to the assistance of outside experts from different legal traditions and affiliations. The Secretariat shall decide on the appropriate form that the assistance of outside experts may take depending on the needs of the Secretariat.

12. The Secretariat is not bound by the advice of such experts. It formulates its proposals to the Commission or its subsidiary organs under its own responsibility and in accordance with specific instructions received from the Commission or its subsidiary organs, if any, also bearing in mind the policies expressed in relevant General Assembly resolutions and decisions adopted previously by the Commission.

13. The Secretariat shall inform member States of the expert group meetings it holds as requested.

14. The UNCITRAL secretariat is committed to endeavour, resources permitting, to provide at such meetings translation and interpretation in as many official languages as appropriate.

15. Colloquiums organized or co-organized by the Secretariat shall be widely advertised, particularly by posting relevant information concerning such events on the UNCITRAL website. Their results shall be reported to the Commission or, as appropriate, to the working groups.

I. Introduction

1. At its 2nd plenary meeting, on 17 September 2010, the General Assembly, on the recommendation of the General Committee, decided to include in the agenda of its sixty-fifth session the item entitled “Report of the United Nations Commission on International Trade Law on the work of its forty-third session” and to allocate it to the Sixth Committee.
2. The Sixth Committee considered the item at its 7th, 25th and 27th meetings, on 11 and 29 October and on 5 November 2010. The views of the representatives who spoke during the Committee’s consideration of the item are reflected in the relevant summary records (A/C.6/65/SR.7, 25 and 27).
3. For its consideration of the item, the Committee had before it the report of the United Nations Commission on International Trade Law on the work of its forty-third session.¹
4. At the 7th meeting, on 11 October, the Chair of the United Nations Commission on International Trade Law at its forty-third session introduced the report of the Commission on the work of its forty-third session.

II. Consideration of proposals

A. Draft resolution A/C.6/65/L.4

5. At the 25th meeting, on 29 October, the representative of Austria, on behalf of Albania, Argentina, Australia, Austria, Belarus, Belgium, Brazil, Bulgaria, Canada, Chile, China, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Fiji, Finland, France, Germany, Greece, Guatemala, Hungary, India, Ireland, Israel, Italy, Japan, Jordan, Liechtenstein, Luxembourg, Malawi, Malaysia, Malta, Mexico, Montenegro, the Netherlands, New Zealand, Norway, Paraguay, the Philippines, Portugal, the Republic of Korea, Romania, the Russian Federation, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Thailand, Trinidad and Tobago, Tunisia, Uganda, Ukraine, the United Kingdom of Great Britain and Northern Ireland and Venezuela (Bolivarian Republic of), subsequently joined by Armenia, Lithuania, Madagascar, Poland and the Republic of Moldova, introduced a draft resolution entitled “Report

¹ *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17 (A/65/17).*

of the United Nations Commission on International Trade Law on the work of its forty-third session” (A/C.6/65/L.4).

6. At its 27th meeting, on 5 November, the Committee adopted draft resolution A/C.6/65/L.4 without a vote (see para. 13, draft resolution I).

B. Draft resolution A/C.6/65/L.5

7. At the 25th meeting, on 29 October, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled “UNCITRAL Arbitration Rules as revised in 2010” (A/C.6/65/L.5).

8. At its 27th meeting, on 5 November, the Committee adopted draft resolution A/C.6/65/L.5 without a vote (see para. 13, draft resolution II).

C. Draft resolution A/C.6/65/L.6

9. At the 25th meeting, on 29 October, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled “UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property” (A/C.6/65/L.6).

10. At its 27th meeting, on 5 November, the Committee adopted draft resolution A/C.6/65/L.6 without a vote (see para. 13, draft resolution III).

D. Draft resolution A/C.6/65/L.7

11. At the 25th meeting, on 29 October, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled “Part three of the UNCITRAL Legislative Guide on Insolvency Law” (A/C.6/65/L.7).

12. At its 27th meeting, on 5 November, the Committee adopted draft resolution A/C.6/65/L.7 without a vote (see para. 13, draft resolution IV).

III. Recommendations of the Sixth Committee

13. The Sixth Committee recommends to the General Assembly the adoption of the following draft resolutions:

Draft resolution I

Report of the United Nations Commission on International Trade Law on the work of its forty-third session

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission on the work of its forty-third session,¹

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note* with appreciation of the report of the United Nations Commission on International Trade Law on the work of its forty-third session;¹

2. *Commends* the Commission for the finalization and adoption of three new international commercial law standards as follows: the UNCITRAL Arbitration Rules as revised in 2010;² the UNCITRAL Legislative Guide on Secured

¹ *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17 (A/65/17).*

² *Ibid.*, chap. III and annex I.

Transactions: Supplement on Security Rights in Intellectual Property;³ and part three of the UNCITRAL Legislative Guide on Insolvency Law on the treatment of enterprise groups in insolvency;⁴

3. *Encourages* the Commission to finalize its work on a revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services⁵ at its forty-fourth session, in 2011;

4. *Welcomes* the decision of the Commission to take up new topics in the areas of settlement of commercial disputes, security interests and insolvency law and undertake work in the area of online dispute resolution;

5. *Also welcomes* the decision of the Commission to hold international colloquiums in order to facilitate identification of a road map for future work by the Commission in the area of electronic commerce and in order to explore the legal and regulatory issues surrounding microfinance that fell within the mandate of the Commission;

6. *Further welcomes* the progress made in the ongoing project of the Commission on monitoring the implementation of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958,⁶ and requests the Secretariat to pursue its efforts towards the preparation of a draft guide on the enactment of the Convention to promote a uniform interpretation and application of the Convention;

7. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of, and cooperation on, legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their legal activities with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law;

8. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical cooperation and assistance in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical cooperation and assistance programme, and in that respect encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work;

(b) Expresses its appreciation to the Commission for carrying out technical cooperation and assistance activities, including at the country, subregional and regional levels, and for providing assistance with legislative drafting in the field of

⁴ Ibid., chap. V.

⁵ Ibid., *Forty-ninth Session, Supplement No. 17* and corrigendum (A/49/17 and Corr.1), annex I.

⁶ United Nations, *Treaty Series*, vol. 330, No. 4739.

international trade law, and draws the attention of the Secretary-General to the limited resources that are made available in this field;

(c) Expresses its appreciation to the Governments whose contributions enabled the technical cooperation and assistance activities, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law Trust Fund for Symposia and, where appropriate, for the financing of special projects, and otherwise to assist the secretariat of the Commission in carrying out technical cooperation and assistance activities, in particular in developing countries;

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission, in the light of the relevance and importance of the work and programmes of the Commission for the promotion of the rule of law at the national and international levels and for the implementation of the United Nations development agenda, including the achievement of the Millennium Development Goals;

(e) Welcomes the Commission's request that the Secretariat consider ways of better integrating its technical cooperation and assistance activities in activities conducted on the ground by the United Nations, in particular through the United Nations Development Programme or other country offices of the United Nations;

9. *Appeals* to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund established to provide travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General, in order to enable renewal of the provision of that assistance and to increase expert representation from developing countries at sessions of the Commission and its working groups, necessary to build local expertise and capacities in the field of international trade law in those countries in order to facilitate the development of international trade and the promotion of foreign investment;

10. *Decides*, in order to ensure full participation by all Member States in the sessions of the Commission and its working groups, to continue, in the competent Main Committee during the sixty-fifth session of the General Assembly, its consideration of the granting of travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General;

11. *Welcomes* the adoption by the Commission of a summary of conclusions on the topic of the Commission's rules of procedure and methods of work,⁷ after the comprehensive review of its working methods undertaken by the Commission from its fortieth to forty-second sessions, in the light of the recent increase in membership of the Commission and the number of topics being dealt with by the Commission, and calls upon Member States, non-member States, observer

⁷ See *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17 (A/65/17)*, para. 305 and annex III.

organizations and the Secretariat to apply the rules of procedure and methods of work, with a view to ensuring the high quality of the work of the Commission and international acceptability of its instruments, and in this regard recalls its previous resolutions related to this matter;

12. *Endorses* the conviction of the Commission that the implementation and effective use of modern private law standards on international trade are essential for advancing good governance, sustained economic development and the eradication of poverty and hunger and that the promotion of the rule of law in commercial relations should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels, including through the Rule of Law Coordination and Resource Group, supported by the Rule of Law Unit in the Executive Office of the Secretary-General;

13. *Welcomes* the panel discussion on the rule of law in trade and commerce, held during the forty-third session of the Commission, and takes note with appreciation of the opening remarks delivered by the Deputy Secretary-General and statements made by representatives of States and multilateral development banks and by the Director of the United Nations Rule of Law Unit, reiterating the role of the Commission in promoting the rule of law at the national and international levels and the impact of the work of the Commission on economic and social development, including the achievement of the Millennium Development Goals, on the promotion of coordination and coherence of technical assistance and capacity-building in the field of international commercial law and in the context of post-conflict reconstruction;⁸

14. *Takes note* of the decisions taken by the Commission at the end of the panel discussion, and in particular welcomes those improving the integration of the work of the Commission into the United Nations joint rule of law programmes, in particular by raising awareness about the work of the Commission across the United Nations and by promoting regular dialogue between the Commission and the Rule of Law Coordination and Resource Group;⁹

15. *Welcomes* the review by the Commission of the proposed biennial programme plan for subprogramme 5 (Progressive harmonization, modernization and unification of the law of international trade) of programme 6 (Legal affairs) in the context of its consideration of the proposed strategic framework for the period 2012-2013,¹⁰ takes note that the Commission also expressed concern that the resources allotted to the Secretariat under subprogramme 5 were insufficient for it to meet the increased demand from developing countries and countries with economies in transition for technical assistance with law reform in the field of commercial law, and also takes note that the Commission urged the Secretary-General to take steps to ensure that the comparatively small amount of additional resources necessary to meet a demand so crucial to development are made available promptly;¹¹

16. *Takes note* of the concern expressed by the Commission over the lack of sufficient resources in its secretariat for responding to the growing need for uniform interpretation of Commission texts, which is considered indispensable for their effective

Draft resolution II

UNCITRAL Arbitration Rules as revised in 2010

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, which established the United Nations Commission on International Trade Law with the purpose of furthering the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

Also recalling its resolution 31/98 of 15 December 1976 recommending the use of the Arbitration Rules of the United Nations Commission on International Trade Law,¹

Recognizing the value of arbitration as a method of settling disputes that may arise in the context of international commercial relations,

Noting that the Arbitration Rules are recognized as a very successful text and are used in a wide variety of circumstances covering a broad range of disputes, including disputes between private commercial parties, investor-State disputes, State-to-State disputes and commercial disputes administered by arbitral institutions, in all parts of the world,

Recognizing the need for revising the Arbitration Rules to conform to current practices in international trade and to meet changes that have taken place over the last thirty years in arbitral practice,

Believing that the Arbitration Rules as revised in 2010 to reflect current practices will significantly enhance the efficiency of arbitration under the Rules,

Convinced that the revision of the Arbitration Rules in a manner that is acceptable to countries with different legal, social and economic systems can significantly contribute to the development of harmonious international economic relations and to the continuous strengthening of the rule of law,

Noting that the preparation of the Arbitration Rules as revised in 2010 was the subject of due deliberation and extensive consultations with Governments and interested circles and that the revised text can be expected to contribute significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of international commercial disputes,

Also noting that the Arbitration Rules as revised in 2010 were adopted by the United Nations Commission on International Trade Law at its forty-third session after due deliberation,²

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for having formulated and adopted the revised provisions of the Arbitration Rules, the text of which is contained in an annex to the report of

¹ *Official Records of the General Assembly, Thirty-first Session, Supplement No. 17 (A/31/17), chap. V, sect. C.*

² *Ibid., Sixty-fifth Session, Supplement No. 17 (A/65/17), chap. III.*

the United Nations Commission on International Trade Law on the work of its forty-third session;³

2. *Recommends* the use of the Arbitration Rules as revised in 2010 in the settlement of disputes arising in the context of international commercial relations;

3. *Requests* the Secretary-General to make all efforts to ensure that the Arbitration Rules as revised in 2010 become generally known and available.

³ Ibid., annex I.

Draft resolution III

UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property

The General Assembly,

Recognizing the importance to all States of efficient secured transactions regimes in promoting access to secured credit,

Recognizing also the need to make secured credit more available and at lower cost to intellectual property owners and other intellectual property right holders, and thus the need to enhance the value of intellectual property rights as security for credit,

Noting that the *UNCITRAL Legislative Guide on Secured Transactions*¹ generally applies to security rights in intellectual property, without inadvertently interfering with the basic rules and objectives of law relating to intellectual property,

Taking into account the need to address the interaction between secured transactions law and law relating to intellectual property at both the national and the international levels,

Recognizing that States would need guidance as to how the recommendations contained in the *UNCITRAL Legislative Guide on Secured Transactions* would apply in an intellectual property context and as to the adjustments that need to be made to their laws to avoid inconsistencies between secured transactions law and law relating to intellectual property,

Noting the importance of balancing the interests of all stakeholders, including grantors, whether they are owners, licensors or licensees of intellectual property, and secured creditors,

Expressing its appreciation to intergovernmental and international non-governmental organizations active in the fields of secured financing and intellectual property, in particular the World Intellectual Property Organization and the Hague Conference on Private International Law, for their participation in and support for the development of the *UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property*,²

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for the completion and adoption of the *UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property*;²

2. *Requests* the Secretary-General to disseminate broadly, including through electronic means, the text of the Supplement and to transmit it to Governments and other interested bodies;

¹ United Nations publication, Sales No. E.09.V.12.

² See *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17 (A/65/17)*, chap. IV.

3. *Recommends* that all States utilize the Supplement to assess the economic efficiency of their intellectual property financing and give favourable consideration to the Supplement when revising or adopting their relevant legislation, and invites States that have done so to advise the Commission accordingly;

4. *Also recommends* that all States continue to consider becoming parties to the United Nations Convention on the Assignment of Receivables in International Trade³ and implementing the recommendations contained in the *UNCITRAL Legislative Guide on Secured Transactions*.¹

³ Resolution 56/81, annex.

Draft resolution IV

Part three of the UNCITRAL Legislative Guide on Insolvency Law

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with the purpose of furthering the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

Recalling also its resolution 59/40 of 2 December 2004 recommending the use of the *UNCITRAL Legislative Guide on Insolvency Law*,¹

Recognizing that effective insolvency regimes are increasingly seen as a means of encouraging economic development and investment, as well as fostering entrepreneurial activity and preserving employment,

Noting that because the business of corporations is increasingly conducted, both domestically and internationally, through enterprise groups, the formation of enterprise groups is a feature of the increasingly globalized world economy and thus significant to international trade and commerce,

Recognizing that where the business of an enterprise group fails, it is important not only to know how the group will be treated in insolvency proceedings, but also to ensure that that treatment facilitates, rather than hinders, the fast and efficient conduct of the insolvency proceedings,

Being aware that very few States recognize an enterprise group as a legal entity, except in limited ways for specific purposes, and that very few, if any, have a comprehensive regime for the treatment of enterprise groups in insolvency,

Noting that the *UNCITRAL Legislative Guide on Insolvency Law*, while providing a sound basis for the unification of insolvency law and forming key elements of a modern commercial law framework, does not address the insolvency of enterprise groups,

Appreciating the support for and the participation of international intergovernmental and non-governmental organizations active in the field of insolvency law reform in the development of an additional part of the *UNCITRAL Legislative Guide on Insolvency Law* addressing the treatment of enterprise groups in insolvency,

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for developing and adopting part three of the *UNCITRAL Legislative Guide on Insolvency Law*¹ on the treatment of enterprise groups in insolvency;²

2. *Requests* the Secretary-General to transmit the text of part three of the *UNCITRAL Legislative Guide on Insolvency Law* to Governments and other interested bodies;

¹ United Nations publication, Sales No. E.05.V.10.

² See *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17 (A/65/17)*, chap. V.

3. *Recommends* that all States utilize the *UNCITRAL Legislative Guide on Insolvency Law* to assess the economic efficiency of their insolvency law regimes and give favourable consideration to the Guide when revising or adopting legislation relevant to insolvency, and invites States that have used the *Guide* to advise the Commission accordingly;

4. *Also recommends* that all States continue to consider implementation of the *UNCITRAL Model Law on Cross-Border Insolvency*;³

5. *Further recommends* that the *UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation* continue to be given due consideration by judges, insolvency practitioners and other stakeholders involved in cross-border insolvency proceedings.

³ United Nations publication, Sales No. E.99.V.3.

D. General Assembly resolutions 65/21, 65/22, 65/23, 65/24 and 65/32**Resolutions adopted by the General Assembly on the report of the Sixth Committee (A/65/465)****65/21. Report of the United Nations Commission on International Trade Law on the work of its forty-third session**

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission on the work of its forty-third session,¹

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law on the work of its forty-third session;¹

2. *Commends* the Commission for the finalization and adoption of three new international commercial law standards as follows: the UNCITRAL Arbitration Rules as revised in 2010;² the UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property;³ and

¹ *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17 (A/65/17).*

² *Ibid.*, chap. III and annex I.

³ *Ibid.*, chap. IV.

part three of the UNCITRAL Legislative Guide on Insolvency Law on the treatment of enterprise groups in insolvency;⁴

3. *Encourages* the Commission to finalize its work on a revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services⁵ at its forty-fourth session, in 2011;

4. *Welcomes* the decision of the Commission to take up new topics in the areas of settlement of commercial disputes, security interests and insolvency law and undertake work in the area of online dispute resolution;

5. *Also welcomes* the decision of the Commission to hold international colloquiums in order to facilitate identification of a road map for future work by the Commission in the area of electronic commerce and in order to explore the legal and regulatory issues surrounding microfinance that fell within the mandate of the Commission;

6. *Further welcomes* the progress made in the ongoing project of the Commission on monitoring the implementation of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958,⁶ and requests the Secretariat to pursue its efforts towards the preparation of a draft guide on the enactment of the Convention to promote a uniform interpretation and application of the Convention;

7. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of, and cooperation on, legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their legal activities with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law;

8. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical cooperation and assistance in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical cooperation and assistance programme, and in that respect encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work;

(b) Expresses its appreciation to the Commission for carrying out technical cooperation and assistance activities, including at the country, subregional and regional levels, and for providing assistance with legislative drafting in the field of international trade law, and draws the attention of the Secretary-General to the limited resources that are made available in this field;

⁴ Ibid., chap. V.

⁵ Ibid., *Forty-ninth Session, Supplement No. 17* and corrigendum (A/49/17 and Corr.1), annex I.

⁶ United Nations, *Treaty Series*, vol. 330, No. 4739.

(c) Expresses its appreciation to the Governments whose contributions enabled the technical cooperation and assistance activities, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law Trust Fund for Symposia and, where appropriate, for the financing of special projects, and otherwise to assist the secretariat of the Commission in carrying out technical cooperation and assistance activities, in particular in developing countries;

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission, in the light of the relevance and importance of the work and programmes of the Commission for the promotion of the rule of law at the national and international levels and for the implementation of the United Nations development agenda, including the achievement of the Millennium Development Goals;

(e) Welcomes the Commission's request that the Secretariat consider ways of better integrating its technical cooperation and assistance activities in activities conducted on the ground by the United Nations, in particular through the United Nations Development Programme or other country offices of the United Nations;

9. *Appeals* to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund established to provide travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General, in order to enable renewal of the provision of that assistance and to increase expert representation from developing countries at sessions of the Commission and its working groups, necessary to build local expertise and capacities in the field of international trade law in those countries in order to facilitate the development of international trade and the promotion of foreign investment;

10. *Decides*, in order to ensure full participation by all Member States in the sessions of the Commission and its working groups, to continue, in the competent Main Committee during the sixty-fifth session of the General Assembly, its consideration of the granting of travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General;

11. *Welcomes* the adoption by the Commission of a summary of conclusions on the topic of the Commission's rules of procedure and methods of work,⁷ after the comprehensive review of its working methods undertaken by the Commission from its fortieth to forty-second sessions, in the light of the recent increase in membership of the Commission and the number of topics being dealt with by the Commission, and calls upon Member States, non-member States, observer

⁷ See *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17 (A/65/17)*, para. 305 and annex III.

organizations and the Secretariat to apply the rules of procedure and methods of work, with a view to ensuring the high quality of the work of the Commission and international acceptability of its instruments, and in this regard recalls its previous resolutions related to this matter;

12. *Endorses* the conviction of the Commission that the implementation and effective use of modern private law standards on international trade are essential for advancing good governance, sustained economic development and the eradication of poverty and hunger and that the promotion of the rule of law in commercial relations should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels, including through the Rule of Law Coordination and Resource Group, supported by the Rule of Law Unit in the Executive Office of the Secretary-General;

13. *Welcomes* the panel discussion on the rule of law in trade and commerce, held during the forty-third session of the Commission, and takes note with appreciation of the opening remarks delivered by the Deputy Secretary-General and statements made by representatives of States and multilateral development banks and by the Director of the United Nations Rule of Law Unit, reiterating the role of the Commission in promoting the rule of law at the national and international levels and the impact of the work of the Commission on economic and social development, including the achievement of the Millennium Development Goals, on the promotion of coordination and coherence of technical assistance and capacity-building in the field of international commercial law and in the context of post-conflict reconstruction;⁸

14. *Takes note* of the decisions taken by the Commission at the end of the panel discussion, and in particular welcomes those improving the integration of the work of the Commission into the United Nations joint rule of law programmes, in particular by raising awareness about the work of the Commission across the United Nations and by promoting regular dialogue between the Commission and the Rule of Law Coordination and Resource Group;⁹

15. *Welcomes* the review by the Commission of the proposed biennial programme plan for subprogramme 5 (Progressive harmonization, modernization and unification of the law of international trade) of programme 6 (Legal affairs) in the context of its consideration of the proposed strategic framework for the period 2012-2013,¹⁰ takes note that the Commission also expressed concern that the resources allotted to the Secretariat under subprogramme 5 were insufficient for it to meet the increased demand from developing countries and countries with economies in transition for technical assistance with law reform in the field of commercial law, and also takes note that the Commission urged the Secretary-General to take steps to ensure that the comparatively small amount of additional resources necessary to meet a demand so crucial to development are made available promptly;¹¹

16. *Takes note* of the concern expressed by the Commission over the lack of sufficient resources in its secretariat for responding to the growing need for uniform

65/22. UNCITRAL Arbitration Rules as revised in 2010

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, which established the United Nations Commission on International Trade Law with the purpose of furthering the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

Recalling also its resolution 31/98 of 15 December 1976 recommending the use of the Arbitration Rules of the United Nations Commission on International Trade Law,¹

Recognizing the value of arbitration as a method of settling disputes that may arise in the context of international commercial relations,

Noting that the Arbitration Rules are recognized as a very successful text and are used in a wide variety of circumstances covering a broad range of disputes, including disputes between private commercial parties, investor-State disputes, State-to-State disputes and commercial disputes administered by arbitral institutions, in all parts of the world,

Recognizing the need for revising the Arbitration Rules to conform to current practices in international trade and to meet changes that have taken place over the last thirty years in arbitral practice,

Believing that the Arbitration Rules as revised in 2010 to reflect current practices will significantly enhance the efficiency of arbitration under the Rules,

Convinced that the revision of the Arbitration Rules in a manner that is acceptable to countries with different legal, social and economic systems can significantly contribute to the development of harmonious international economic relations and to the continuous strengthening of the rule of law,

Noting that the preparation of the Arbitration Rules as revised in 2010 was the subject of due deliberation and extensive consultations with Governments and interested circles and that the revised text can be expected to contribute significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of international commercial disputes,

Noting also that the Arbitration Rules as revised in 2010 were adopted by the United Nations Commission on International Trade Law at its forty-third session after due deliberation,²

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for having formulated and adopted the revised provisions of the Arbitration Rules, the text of which is contained in an annex to the report of the United Nations Commission on International Trade Law on the work of its forty-third session;³

¹ *Official Records of the General Assembly, Thirty-first Session, Supplement No. 17 (A/31/17), chap. V, sect. C.*

65/32. The rule of law at the national and international levels

The General Assembly,

Recalling its resolution 64/116 of 16 December 2009,

Reaffirming its commitment to the purposes and principles of the Charter of the United Nations and international law, which are indispensable foundations of a more peaceful, prosperous and just world, and reiterating its determination to foster strict respect for them and to establish a just and lasting peace all over the world,

Reaffirming that human rights, the rule of law and democracy are interlinked and mutually reinforcing and that they belong to the universal and indivisible core values and principles of the United Nations,

Reaffirming also the need for universal adherence to and implementation of the rule of law at both the national and international levels and its solemn commitment to an international order based on the rule of law and international law, which, together with the principles of justice, is essential for peaceful coexistence and cooperation among States,

Convinced that the advancement of the rule of law at the national and international levels is essential for the realization of sustained economic growth, sustainable development, the eradication of poverty and hunger and the protection of all human rights and fundamental freedoms, and acknowledging that collective security depends on effective cooperation, in accordance with the Charter and international law, against transnational threats,

Reaffirming the duty of all States to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes and principles of the United Nations and to settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered, in accordance with Chapter VI of the Charter, and calling upon States that have not yet done so to consider accepting the jurisdiction of the International Court of Justice in accordance with its Statute,

Convinced that the promotion of and respect for the rule of law at the national and international levels, as well as justice and good governance, should guide the activities of the United Nations and of its Member States,

Recalling paragraph 134 (e) of the 2005 World Summit Outcome,¹

1. *Takes note* of the annual report of the Secretary-General on strengthening and coordinating United Nations rule of law activities;²

2. *Reaffirms* the role of the General Assembly in encouraging the progressive development of international law and its codification, and reaffirms further that States shall abide by all their obligations under international law;

3. *Stresses* the importance of adherence to the rule of law at the national level and the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building, based on greater coordination

¹ See resolution 60/1.

² A/65/318.

and coherence within the United Nations system and among donors, and reiterates its call for greater evaluation of the effectiveness of such activities;

4. *Calls*, in this context, for dialogue to be enhanced among all stakeholders with a view to placing national perspectives at the centre of rule of law assistance in order to strengthen national ownership;

5. *Calls upon* the United Nations system to systematically address, as appropriate, aspects of the rule of law in relevant activities, recognizing the importance of the rule of law to virtually all areas of United Nations engagement;

6. *Expresses full support* for the overall coordination and coherence role of the Rule of Law Coordination and Resource Group within the United Nations system within existing mandates, supported by the Rule of Law Unit in the Executive Office of the Secretary-General, under the leadership of the Deputy Secretary-General;

7. *Requests* the Secretary-General to submit, in a timely manner, his next annual report on United Nations rule of law activities, in accordance with paragraph 5 of its resolution 63/128 of 11 December 2008;

8. *Welcomes* the dialogue initiated by the Rule of Law Coordination and Resource Group and the Rule of Law Unit with Member States on the topic “Promoting the rule of law at the international level”, and calls for the continuation of this dialogue with a view to fostering the rule of law at the international level;

9. *Encourages* the Secretary-General and the United Nations system to accord high priority to rule of law activities;

10. *Invites* the International Court of Justice, the United Nations Commission on International Trade Law and the International Law Commission to continue to comment, in their respective reports to the General Assembly, on their current roles in promoting the rule of law;

11. *Invites* the Rule of Law Coordination and Resource Group and the Rule of Law Unit to continue to interact with Member States on a regular basis, in particular in informal briefings;

12. *Stresses* the need to provide the Rule of Law Unit with the necessary funding and staff in order to enable it to carry out its tasks in an effective and sustainable manner, and urges the Secretary-General and Member States to continue to support the functioning of the Unit;

13. *Decides* to convene a high-level meeting of the General Assembly on the rule of law at the national and international levels during the high-level segment of its sixty-seventh session, the modalities of which will be finalized during its sixty-sixth session;

14. *Also decides* to include in the provisional agenda of its sixty-sixth session the item entitled “The rule of law at the national and international levels”, invites Member States to focus their comments in the upcoming Sixth Committee debate on the sub-topic “Rule of law and transitional justice in conflict and post-conflict situations”,³ without prejudice to the

³ See the note by the Chairman of the Sixth Committee (A/C.6/63/L.23).

consideration of the item as a whole, and invites the Secretary-General, after seeking the views of Member States, to provide information on this sub-topic in his report.

*57th plenary meeting
6 December 2010*

Part Two

STUDIES AND REPORTS ON SPECIFIC SUBJECTS

I. ARBITRATION AND CONCILIATION

A. Report of the Working Group on Arbitration and Conciliation on the work of its fifty-first session (Vienna, 14-18 September 2009) (A/CN.9/684)

[Original: English]

<i>Chapter</i>	<i>Paragraphs</i>
I. Introduction.	1-10
II. Organization of the session	11-18
III. Deliberations and decisions.	19
IV. Revision of the UNCITRAL Arbitration Rules	20-126
Section III. Arbitral proceedings.	21-51
Section IV. The award	52-126

I. Introduction

1. At its thirty-first session (New York, 1-12 June 1998), the Commission, with reference to discussions at the special commemorative New York Convention Day held in June 1998 to celebrate the fortieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (“the New York Convention”), considered that it would be useful to engage in a discussion of possible future work in the area of arbitration. It requested the Secretariat to prepare a note that would serve as a basis for the consideration of the Commission at its next session.¹

2. At its thirty-second session (Vienna, 17 May-4 June 1999), the Commission had before it a note entitled “Possible future work in the area of international commercial arbitration” (A/CN.9/460). Welcoming the opportunity to discuss the desirability and feasibility of further development of the law of international commercial arbitration, the Commission generally considered that the time had come to assess the extensive and favourable experience with national enactments of the UNCITRAL Model Law on International Commercial Arbitration (1985) (“the Model Law”), as well as the use of the UNCITRAL Arbitration Rules (“the UNCITRAL Arbitration Rules” or “the Rules”) and the UNCITRAL Conciliation Rules, and to evaluate, in the universal forum of the Commission, the acceptability of ideas and proposals for improvement of arbitration laws, rules and practices.² When the Commission discussed that topic, it left open the question of what form its

¹ *Official Records of the General Assembly, Fifty-third Session, Supplement No. 17 (A/53/17)*, para. 235.

² *Ibid.*, *Fifty-fourth Session, Supplement No. 17 (A/54/17)*, para. 337.

future work might take. It was agreed that decisions on the matter should be taken later as the substance of proposed solutions became clearer. Uniform provisions might, for example, take the form of a legislative text (such as model legislative provisions or a treaty) or a non-legislative text (such as a model contractual rule or a practice guide).³

3. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that the topic of revising the UNCITRAL Arbitration Rules should be given priority. The Commission noted that, as one of the early instruments elaborated by UNCITRAL in the field of arbitration, the UNCITRAL Arbitration Rules were recognized as a very successful text, adopted by many arbitration centres and used in many different instances, such as, for example, in investor-State disputes. In recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of the UNCITRAL Arbitration Rules should not alter the structure of the text, its spirit, its drafting style, and should respect the flexibility of the text rather than make it more complex. It was suggested that the Working Group should undertake to carefully define the list of topics which might need to be addressed in a revised version of the UNCITRAL Arbitration Rules.⁴

4. The topic of arbitrability was said to be an important question, which should also be given priority. It was said that it would be for the Working Group to define whether arbitral matters could be defined in a generic manner, possibly with an illustrative list of such matters, or whether the legislative provision to be prepared in respect of arbitrability should identify the topics that were not arbitral. It was suggested that studying the question of arbitrability in the context of immovable property, unfair competition and insolvency could provide useful guidance for States. It was cautioned however that the topic of arbitrability was a matter raising questions of public policy, which was notoriously difficult to define in a uniform manner, and that providing a predefined list of arbitral matters could unnecessarily restrict a State's ability to meet certain public policy concerns that were likely to evolve over time.⁵

5. Other topics mentioned for possible inclusion in the future work of the Working Group included issues raised by online dispute resolution. It was suggested that the UNCITRAL Arbitration Rules, when read in conjunction with other instruments, such as the UNCITRAL Model Law on Electronic Commerce and the United Nations Convention on the Use of Electronic Communications in International Contracts, already accommodated a number of issues arising in the online context. Another topic for future work was the issue of arbitration in the field of insolvency. Yet another suggestion was made to address the impact of anti-suit injunctions on international arbitration. A further suggestion was made to consider clarifying the notions used in article I, paragraph (1), of the New York Convention of "arbitral awards made in the territory of a State other than the State where the recognition and enforcement of such awards are sought" or "arbitral awards not considered as domestic awards in the State where their recognition and enforcement are sought", which were said to have raised uncertainty in some State courts. The

⁴ Ibid., *Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 184.

⁵ Ibid., para. 185.

Commission also heard with interest a statement made on behalf of the International Cotton Advisory Committee suggesting that work could be undertaken by the Commission to promote contract discipline, effectiveness of arbitration agreements and enforcement of awards in that industry.⁶

6. After discussion, the Commission was generally of the view that several matters could be dealt with by the Working Group in parallel. The Commission agreed that the Working Group should resume its work on the question of a revision of the UNCITRAL Arbitration Rules. It was also agreed that the issue of arbitrability was a topic which the Working Group should also consider. As to the issue of online dispute resolution, it was agreed that the Working Group should place the topic on its agenda but, at least in an initial phase, deal with the implications of electronic communications in the context of the revision of the UNCITRAL Arbitration Rules.⁷

7. At its fortieth session (Vienna, 25 June-12 July 2007), the Commission noted that the UNCITRAL Arbitration Rules had not been amended since their adoption in 1976 and that the review should seek to modernize the Rules and to promote greater efficiency in arbitral proceedings. The Commission generally agreed that the mandate of the Working Group to maintain the original structure and spirit of the UNCITRAL Arbitration Rules had provided useful guidance to the Working Group in its deliberations to date and should continue to be a guiding principle for its work.⁸ The Commission noted that broad support had been expressed in the Working Group for a generic approach that sought to identify common denominators that applied to all types of arbitration irrespective of the subject matter of the dispute, in preference to dealing with specific situations. However, the Commission noted that the extent to which the revised UNCITRAL Arbitration Rules should take account of investor-State dispute settlement or administered arbitration remained to be considered by the Working Group at future sessions.⁹

8. At its forty-first session (New York, 16 June-3 July 2008), the Commission noted that the Working Group had decided to proceed with its work on the revision of the UNCITRAL Arbitration Rules in their generic form and to seek guidance from the Commission on whether, after completion of its current work on the Rules, the Working Group should consider in further depth the specificity of treaty-based arbitration and, if so, which form that work should take.¹⁰ After discussion, the Commission agreed that it would not be desirable to include specific provisions on treaty-based arbitration in the UNCITRAL Arbitration Rules themselves and that any work on investor-State disputes which the Working Group might have to undertake in the future should not delay the completion of the revision of the UNCITRAL Arbitration Rules in their generic form. As to timing, the Commission agreed that the topic of transparency in treaty-based investor-State arbitration was worthy of future consideration and should be dealt with as a matter of priority immediately after completion of the current revision of the UNCITRAL Arbitration Rules. As to the scope of such future work, the Commission agreed by consensus on the importance of ensuring transparency in investor-State dispute resolution. The

⁶ Ibid., para. 186.

⁷ Ibid., para. 187.

⁸ Ibid., *Sixty-second Session, Supplement No. 17* (A/62/17), part one, para. 174.

⁹ Ibid., para. 175.

¹⁰ Ibid., *Sixty-third Session, Supplement No. 17* (A/63/17), para. 313.

Commission was of the view that, as noted by the Working Group at its forty-eighth session (A/CN.9/646, para. 57), the issue of transparency as a desirable objective in investor-State arbitration should be addressed by future work. As to the form that any future work product might take, the Commission noted that various possibilities had been envisaged by the Working Group (*ibid.*, para. 69) in the field of treaty-based arbitration, including the preparation of instruments such as model clauses, specific rules or guidelines, an annex to the UNCITRAL Arbitration Rules in their generic form, separate arbitration rules or optional clauses for adoption in specific treaties. The Commission decided that it was too early to make a decision on the form of a future instrument on treaty-based arbitration and that broad discretion should be left to the Working Group in that respect.¹¹

9. At its forty-second session (Vienna, 29 June-17 July 2009), the Commission noted that the Working Group had discussed at its forty-ninth session a proposal aimed at expanding the role of the Secretary-General of the Permanent Court of Arbitration at The Hague (“the PCA”) under the UNCITRAL Arbitration Rules (A/CN.9/665, paras. 47-50).¹² After discussion, the Commission agreed that the existing mechanism on designating and appointing authorities, as designed under the 1976 version of the Rules, should not be changed.¹³ It was emphasized that the UNCITRAL Arbitration Rules should not contain a default rule, to the effect that one institution would be singled out as the default appointing authority and be identified in the Rules as a provider of direct assistance to the parties.¹⁴

10. The Commission further noted that the Working Group, at its fiftieth session, agreed to request the Commission for sufficient time to complete its work on the UNCITRAL Arbitration Rules in order to bring the draft text of revised Rules to the level of maturity and quality required (A/CN.9/669, para. 120). The Commission agreed that the time required should be taken for meeting the high standard of UNCITRAL, taking account of the international impact of the Rules, and expressed the hope that the Working Group would complete its work on the revision of the UNCITRAL Arbitration Rules in their generic form, so that the final review and adoption of the revised Rules would take place at the forty-third session of the Commission, in 2010.¹⁵

II. Organization of the session

11. The Working Group, which was composed of all States members of the Commission, held its fifty-first session in Vienna, from 14 to 18 September 2009. The session was attended by the following States members of the Working Group: Algeria, Armenia, Australia, Austria, Bahrain, Belarus, Bolivia (Plurinational State of), Bulgaria, Cameroon, Canada, Chile, China, Colombia, Czech Republic, El Salvador, France, Germany, Greece, Iran (Islamic Republic of), Italy, Japan, Kenya, Lebanon, Malaysia, Mexico, Norway, Pakistan, Paraguay, Poland, Republic

¹¹ *Ibid.*, para. 314.

¹⁵ *Ibid.*, para. 298.

of Korea, Russian Federation, Senegal, Singapore, South Africa, Spain, Switzerland, Thailand, United Kingdom of Great Britain and Northern Ireland, United States of America, Venezuela (Bolivarian Republic of) and Zimbabwe.

12. The session was attended by observers from the following States: Argentina, Belgium, Brazil, Burundi, Croatia, Dominican Republic, Finland, Hungary, Indonesia, Iraq, Lithuania, Mauritius, Netherlands, Oman, Peru, Philippines, Portugal, Romania, Slovakia, Sudan, Sweden, Tajikistan, The former Yugoslav Republic of Macedonia, Tunisia, Turkey, United Republic of Tanzania and Yemen.

13. The session was attended by observers from the following organization of the United Nations System: the United Nations Office of Legal Affairs.

14. The session was attended by observers from the following international intergovernmental organizations invited by the Commission: Asian-African Legal Consultative Organization (AALCO), MERCOSUR and Permanent Court of Arbitration (PCA).

15. The session was also attended by observers from the following international non-governmental organizations invited by the Commission: Alumni Association of the Willem C. Vis International Commercial Arbitration Moot (MAA), American Arbitration Association (AAA), American Bar Association (ABA), Arab Association for International Arbitration (AAIA), Asia Pacific Regional Arbitration Group (APRAG), Association of the Bar of the City of New York (ABCNY), Cairo Regional Centre for International Commercial Arbitration (CRCICA), Center for International Legal Studies (CILS), *Centre pour l'Étude et la Pratique de l'Arbitrage National et International* (CEPANI), Construction Industry Arbitration Council — Singapore International Arbitration Centre (CIAC-SIAC), Council of Bars and Law Societies of Europe (CCBE), European Company Lawyers Association (ECLA), European Law Students' Association (ELSA), Forum for International Conciliation and Arbitration C.I.C. (FICACIC), ICC International Court of Arbitration, Inter-American Bar Association (IABA), International Arbitral Centre of the Austrian Federal Economic Chamber (VIAC), International Bar Association (IBA), International Council for Commercial Arbitration (ICCA), Kuala Lumpur Regional Centre for Arbitration (KLRCA), London Court of International Arbitration (LCIA), Milan Club of Arbitrators, Regional Centre for International Commercial Arbitration — Lagos (RCICAL), School of International Arbitration of the Queen Mary University of London, Swiss Arbitration Association (ASA) and *Union Internationale des Avocats* (UIA).

16. The Working Group elected the following officers:

Chairman: Mr. Michael E. Schneider (Switzerland);

Rapporteur: Mr. Iftikharuddin Riaz (Pakistan)

17. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.155); (b) notes by the Secretariat on a revision of the UNCITRAL Arbitration Rules (A/CN.9/WG.II/WP.151/Add.1, A/CN.9/WG.II/WP.154 and A/CN.9/WG.II/WP.154/Add.1).

18. The Working Group adopted the following agenda:

1. Opening of the session.

2. Election of officers.
3. Adoption of the agenda.
4. Revision of the UNCITRAL Arbitration Rules.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

19. The Working Group resumed its work on agenda item 4 on the basis of the notes prepared by the Secretariat (A/CN.9/WG.II/WP.151/Add.1, A/CN.9/WG.II/WP.154 and A/CN.9/WG.II/WP.154/Add.1). The deliberations and decisions of the Working Group with respect to this item are reflected in chapter IV. The Secretariat was requested to prepare a draft of revised UNCITRAL Arbitration Rules, based on the deliberations and decisions of the Working Group.

IV. Revision of the UNCITRAL Arbitration Rules

20. The Working Group recalled that it had concluded a second reading of articles 18 to 26 of the draft revised Rules at its fiftieth session (A/CN.9/669) and agreed to resume discussions on the revision of the Rules on the basis of document A/CN.9/WG.II/WP.151/Add.1 and the proposed revisions contained therein (to be complemented, as appropriate, by document A/CN.9/WG.II/WP.154 and A/CN.9/WG.II/WP.154/Add.1).

Section III. Arbitral proceedings

Experts appointed by the arbitral tribunal

Article 27

21. The Working Group decided that the substance of article 27, as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable. The Working Group took note that one delegation would make a proposal concerning article 27 with respect to challenge of experts at a future session.

Default

Article 28

Paragraph (1) (a)

22. The view was expressed that article 28, paragraph (1) (a), as contained in document A/CN.9/WG.II/WP.151/Add.1, which provided for an automatic termination of the proceedings in case of failure of a claimant to communicate its statement of claim, “unless the respondent has submitted a counterclaim”, was too limited, as it failed to cover situations where, despite the failure to submit a statement of claim, the issues in dispute might still require a decision to be made by the arbitral tribunal, in particular in view of the interests of the other parties involved. It was also suggested that an arbitral tribunal might need to make a

decision carrying value as *res judicata*, to take care of the fact that arbitration practice had shown that occasionally claimants made harassing claims. It was also pointed out that the reference contained in paragraph (1) (a) to a counterclaim “submitted” by the respondent might not be wide enough, and it should be clarified that a counterclaim mentioned in the response to the notice of arbitration might constitute a sufficient submission for the purpose of article 28, paragraph (1) (a). In that respect, it was proposed to replace the word “submitted” by the word “made”. It was further suggested to add at the end of paragraph (1) (a) the words “or the respondent asks that the tribunal determine the claimant’s claim on the merits and the tribunal determines that it is appropriate to do so under the current circumstances”.

23. Concerns were expressed that a decision of the arbitral tribunal on the merits would be difficult to achieve, if no statement of claim had been submitted as stated in article 28, paragraph (1) (a). Further concerns were expressed that under some jurisdictions, a dismissal with prejudice where no statement of claim had been filed, would be subject to annulment. In response, it was explained that the submissions already made by the parties might be sufficient to allow the arbitral tribunal to decide certain issues, such as matters of jurisdiction or costs.

24. Various proposals were made to broaden article 28, paragraph (1) (a). It was suggested to broaden the mandatory contents of the notice of arbitration, so that a decision on the merits could be made by the arbitral tribunal even in the absence of a statement of claim. Another proposal was made to replace the words “unless the respondent has submitted a counterclaim” by the words “unless there remain other issues to be decided”. It was suggested to clarify that the arbitral tribunal would have the power to continue the arbitral proceedings only upon the request of the respondent, along the lines of “unless the respondent needs other issues to be considered” or “unless the respondent needs matters to be decided”. In response, it was observed that that proposal excluded requests which could be brought by co-claimants and other interested parties and that it might be preferable to adopt wording preserving the flexibility of the provision. In that regard, it was proposed to insert words along the lines of “unless any party to the proceedings requests otherwise” or “unless there are any matters raised by the parties which may be decided.” It was also suggested that the words “other issues” or “other matters” used in some of the above proposals might be too vague, and it was proposed to refer instead to wording along the lines of “with such *res judicata* effect as the tribunal may consider or other issues already joined”.

25. Another proposal was made to leave discretion to the arbitral tribunal to decide whether to terminate or continue the proceedings and to include a provision along the following lines: “unless there are any matters that may be decided and the arbitral tribunal considers it appropriate to do so.” It was proposed to add the word “remaining” before the word “matters” in that proposal, in order to clarify that the matters to be dealt with were those initially included by the parties in the notice of arbitration and response thereto. It was said that rules of some international arbitration centres, such as article 6.3 of the ICC Rules of Arbitration (“ICC rules”), provided for wide discretion of the arbitral tribunal to proceed in case of refusal or failure of any of the parties to take part in the arbitration. However, it was questioned whether it was appropriate to provide for broad discretion of the arbitral tribunal and it was said that guarantee should be given to the respondent that in case

a counterclaim was made, the arbitral tribunal would still consider it. To address that concern, it was proposed to include words along the lines of “unless the respondent has submitted a response and there are any matters that need to be decided”.

26. After discussion, the Working Group agreed that article 28, paragraph (1) (a), as contained in document A/CN.9/WG.II/WP.151/Add.1, should be redrafted, so that it would no longer limit the power of the arbitral tribunal in case the claimant failed to submit its statement of claim to a dismissal order for termination. The Working Group requested the Secretariat to reformulate the text, taking account of the suggestions made, for consideration at a future session.

Paragraph (1) (b)

27. It was observed that some inconsistency existed between the wording of article 28, paragraph (1) (b), as contained in document A/CN.9/WG.II/WP.151/Add.1, and the new article 4, paragraph (3), of the draft revised Rules, as contained in document A/CN.9/WG.II/WP.154, which both dealt with the failure of communication of a response to the notice of arbitration by the respondent. To align both articles, it was proposed to delete the last sentence of the new article 4, paragraph (3) or to add at the end of the new article 4, paragraph (3) the words “consistent with article 28, paragraph (1) (b)”. Those proposals did not receive support, as it was considered self-understood that an arbitral tribunal would proceed as it considered appropriate in compliance with the Rules, including article 28 (1) (b).

Paragraph (2)

28. The Working Group decided that the substance of article 28, paragraph (2), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Paragraph (3)

Placement

29. A question was raised whether article 28, paragraph (3), as contained in document A/CN.9/WG.II/WP.151/Add.1, which dealt with the failure by a party to produce documents, exhibits or other evidence, should be located under article 27 of the draft revised Rules (numbered article 24 in the 1976 version of the Rules), as contained in document A/CN.9/WG.II/WP.154/Add.1 (“draft revised article 27”). It was said that draft revised article 27 covered the general matter of evidence, and paragraph (3) of article 28 dealt with the power of the arbitral tribunal to request a party to produce evidence. It would therefore be logical to place paragraph (3) of article 28 as a part of draft revised article 27. It was noted that a comparable provision was contained in article 34, paragraph (3) of the rules of procedure for arbitration proceedings of the International Centre for Dispute Settlement (“ICSID arbitration rules”) which related to general principles on evidence.

30. Other views were expressed that, considering that paragraph (3) dealt with a default situation, it should remain under article 28. As a practical argument, it was said that it might cause confusion to move that paragraph under a provision on evidence since it was originally to be found under a provision on default. It was

further said that there did not seem to be any compelling reasons to relocate paragraph (3).

31. After discussion, the Working Group agreed that there was no consensus for placing paragraph (3) of article 28, under draft revised article 27, and the Working Group agreed that paragraph (3) should remain located under article 28.

“without showing sufficient cause for such failure”

32. It was pointed out that article 28, paragraph (3) referred to the situation where a party failed to produce evidence, without showing sufficient cause for such failure, but that that paragraph was silent on the failure of a party to submit evidence when there was sufficient cause for such failure. It was proposed either to delete that paragraph or to complement it by adding a provision clarifying that the arbitral tribunal might draw adverse inferences in case of a party's failure to produce evidence without showing sufficient cause. It was said that it should be clearly stated whether the fact that a party failed to submit evidence might itself be used as evidence against that party. It was further said that there were differing approaches to that matter across various jurisdictions and the Rules could usefully provide more guidance in respect of that issue. Those proposals received little support. It was said that it would unnecessarily complicate the provision to spell out the consequences of a default to provide evidence. It was pointed out that the question of the assessment of the weight of evidence was already dealt with under draft revised article 27, as contained in document A/CN.9/WG.II/WP.154/Add.1. It was further said that the provision, as it stood, provided useful guidance to the arbitral tribunals, had not created any difficulties and reflected current practice.

33. After discussion, the Working Group decided that the substance of article 28, paragraph (3), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Closure of hearings

Article 29

Paragraphs (1) and (2)

34. It was observed that the wording of article 29, paragraphs (1) and (2), as contained in document A/CN.9/WG.II/WP.151/Add.1, created the impression that the arbitral tribunal could close the hearings only if there were no further offers of proof or submissions. It was clarified that that was not the intention of the provision as otherwise parties could delay the proceedings by unnecessary offers of proof or submissions. To address that situation, it was suggested to replace the words “if there are none” in paragraph (1) with an expression that would clearly refer to the arbitral tribunal's discretion to rule on the admissibility of the evidence or to add the words “accepted by the tribunal” after the word “none”. In response, it was said that draft revised article 27, paragraph (4), as contained in document A/CN.9/WG.II/WP.154/Add.1, already provided for the arbitral tribunal's discretion to “determine the admissibility, relevance, materiality and weight of the evidence offered”, and that there was therefore no need for further clarification under paragraph (1).

35. It was further said that article 29 did not reflect modern practice and it was suggested to delete article 29 entirely. That suggestion did not find support.

36. Another proposal for modification of article 29 was to replace the word “hearings” by the word “proceedings” where it appeared in that article. It was explained that such replacement in article 29 would not lead to inconsistencies with article 28, paragraph (1) (a), as contained in document A/CN.9/WG.II/WP.151/Add.1, as article 28, paragraph (1) (a) referred to “termination” of proceedings, whereas article 29, paragraph (1) would then refer to the “closure” thereof. Different views were expressed on that proposal.

37. In favour of that proposal, it was stated that the word “proceedings” was broader than the word “hearings”. In that regard, it was noted that the content of article 29 actually referred to the closing of the arguments. It was further noted that using the word “proceedings” instead of the word “hearings” would solve any inconsistency between the English and the French versions of the Rules, as the latter referred to the closure of arguments (“clôture des débats”). It was also said that such modification would constitute a useful revision of the Rules in conformity with the terminology used in, for instance, the Swiss Rules of International Arbitration (“Swiss rules”) and the ICC rules.

38. Against that proposal, it was said that such modification could create inconsistencies with other provisions of the Rules which referred to “proceedings” in a wider sense as well as difficulties in practice due to the broader notion of the word “proceedings”. As a matter of example, it was questioned whether article 41, paragraph (2) of the Rules, which referred to the arbitral tribunal’s power to request supplementary deposit from the parties “during the course of the arbitral proceedings” would still be read as applying after closure of the hearings, in case article 29 would refer to the closing of the proceedings. It was said that the word “proceedings” had a broader meaning under the Rules than the word “hearings”. It was also said that the distinction between the words “closure” and “termination” might not be clear to all potential users of the Rules. The Working Group was reminded of its mandate that the Rules should only be changed if there was a compelling reason therefor.

39. A question was raised whether the word “hearings” was limited to oral hearings or would also include presentation of testimony in written form. In that regard, it was noted that the Model Law differentiated in article 24 between “oral hearings” and “written proceedings”. It was proposed to amend the title of article 28 of the draft revised Rules (numbered article 25 in the 1976 version of the Rules), as contained in document A/CN.9/WG.II/WP.154/Add.1, (“draft revised article 28”) to clarify that that article only referred to oral hearings, whereas the word “hearings” as used in article 29 was meant to encompass both written evidence as well as hearings of witnesses. It was said that such modification to the title of the draft revised article 28 would deserve more consideration. On the other hand, it was also noted that the scope of what the tribunal might “close” under article 29 was clearly indicated in the current text, which referred to whether there was “further proof to offer or witnesses to be heard or submissions to make.”

40. After discussion, the Working Group agreed that the substance of article 29, as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable, and

that no change should be made in the title of draft revised article 28, as contained in document A/CN.9/WG.II/WP.154/Add.1.

Waiver of right to object

Article 30

Proposal to change into affirmative language

41. A proposal was made to clarify and simplify the language of article 30, as contained in document A/CN.9/WG.II/WP.151/Add.1, so that it would be drafted in the affirmative and would read:

“A party which knows:

1. that there has been a failure to comply with any provision of these Rules;
or
2. that there has been a failure to comply with any requirement under the arbitration agreement, and proceeds with the arbitration without making, within a reasonable time, any objection shall be deemed to have waived its right to make such objection.”

42. The proposal did not find broad support. It was stated that it constituted an unnecessary deviation from the approach adopted under the original version of article 30 and also from the corresponding article in the Model Law. In addition, it was said that the proposal did not only change the language into the affirmative but also used different terms such as “within a reasonable time” instead of “without undue delay”, as well as merely “and” instead of “and yet”. It was said that those differences might have practical impacts which would require further assessment.

43. After discussion, the Working Group agreed that the drafting of article 30, in the negative did not create difficulties and should be retained.

Actual — Constructive knowledge

44. It was observed that the waiver of the right to object in article 30, as contained in the 1976 version of the Rules and its proposed revision was based on actual knowledge of the failure to comply with a provision of the Rules or a requirement under the arbitration agreement. It was said that it was difficult in practice to prove actual knowledge of a failure and that in some jurisdictions, actual knowledge was interpreted restrictively, requiring specific proof of a positive knowledge. Therefore, it was proposed to add the words “or ought to have known” after the words “a party which knows”, in order to also capture constructive knowledge of non-compliance with any provision of the Rules or any requirement under the arbitration agreements. It was said that constructive knowledge would allow application of the provision in instances of procedural manoeuvring, and intentional bad faith behaviour of a party. It was also said that the proposed added wording would allow application of the provision in cases where actual knowledge could not be proven.

45. Some views were expressed that such additional wording would create problems and was not commonly found in other arbitration rules. It was said that it could be difficult to evaluate deemed knowledge of non-compliance with any provision of the Rules, and even more difficult concerning requirements under an arbitration agreement. Constructive knowledge in that provision was said to be

problematic in regard to the drastic consequences provided in that article, i.e. that a party would lose its right to object to non-compliance. It was said that the proposed modification introduced subjectivity and possibly different standards for parties in the same proceedings, depending upon the level of arbitration experience of parties or their counsel. It was further stated that, if accepted, the revision could lead to arguments at the enforcement stage of the award. It was pointed out that the Model Law included in its article 4 a similar provision, based on actual knowledge of the non-compliance, and any modification to the corresponding provision in the Rules might be confusing for those countries that had enacted legislation based on the Model Law. It was further observed that the Case Law on UNCITRAL Texts (CLOUT) database showed that there were very few cases relating to article 4, and that the reported cases on article 4 did not relate to the question under consideration.

46. Broad support, however, was expressed for the proposal to address constructive knowledge in article 30, as it was found desirable to allow appropriately dealing with situations of mischief and procedural manoeuvres. It was reiterated that actual knowledge was a highly restrictive concept, difficult to interpret and prove in many different jurisdictions. The deemed waiver of right as provided in article 30 was in any case not automatic, and there should be sufficient safeguards to ensure that the circumstances in which a party failed to object to non-compliance would be taken into account by the tribunal.

47. In order to address concerns expressed by those who favoured limiting waiver of the right to object based on actual knowledge, various proposals were made. Wording along the lines of “taking into account that circumstances indicate that a party was aware of ...” was proposed as a possible compromise for inclusion in article 30. Another proposal was to add language addressing the case where the party had “legitimate grounds” or “valid reasons” for not objecting. Those proposals did not receive support.

48. Article 33 of the ICC arbitration rules was quoted as an example of international arbitration rules that contained a similar provision on waiver, and avoided any reference to knowledge. With the same objective to avoid a reference to knowledge, it was proposed to redraft article 30 as follows: “Any failure to comply with any provision of these Rules or any requirement under the arbitration agreement shall be objected to by the other party without undue delay.” That proposal was objected to on the ground that it would unfairly exclude any extenuating circumstances explaining the failure to object.

49. A view was expressed that the effect of the presumption provision in article 30 was to reverse the burden of proof. In order to avoid departing from article 30, and still address the concerns expressed in relation to actual knowledge, the following drafting proposals were made: “A failure to comply with any provision of these Rules or any requirement of the arbitration agreement may not be invoked by a party that has failed to object without undue delay. This provision does not apply if the party invoking the failure had no knowledge of it.” That proposal, inspired from article 1027 of the German code of civil procedure (ZPO) was said to have the advantage of reversing the burden of proof and to contain safeguards necessary to avoid that a party, acting in good faith, be deprived of its right to object. The provision referred to actual knowledge, as in the 1976 version of the Rules, but placed the burden of proof on the party that relied on lack of knowledge as an excuse. An alternative proposal was presented along the following lines: “A failure

by any party to timely object to any non-compliance with these Rules or with any requirement of the arbitration agreement shall be deemed to be a waiver of the right of such party to make such an objection, unless such party can prove that, under the circumstances, its failure to object was [justified] [excusable]". It was said that the difference between the two alternative proposals was whether the party that failed to object could invoke the absence of knowledge or circumstances justifying failure to object.

50. It was felt that those proposals contained in paragraph 49 above could achieve the purpose of dealing with problems of proving actual knowledge in a manner that provided clarity and useful guidance to the parties as well as the arbitral tribunal, and deserved consideration.

51. After discussion, the Working Group agreed that a revised version of article 30, along the lines of the proposals referred to in paragraph 49 above should be proposed for consideration by the Working Group at a future session. The Secretariat was requested to reformulate the text, taking account of the suggestions made.

Section IV. The award

Decisions

Article 31

Paragraph (1)

52. It was explained that article 31, paragraph (1), as contained in document A/CN.9/WG.II/WP.151/Add.1, stated various options for consideration by the Working Group, in accordance with the discussions at its forty-seventh session (A/CN.9/641, paras. 68-77). Option 1 followed the language contained in article 29 of the Model Law by referring to the majority approach (the so-called "majority requirement") with an opt-out provision for the parties. Option 2, variant 1 provided that when there was no majority, the award would be decided by the presiding arbitrator alone. Option 2, variant 2 reflected the proposal that the presiding arbitrator solution should only apply if the parties had previously agreed to opt into that solution (both variants addressed the so-called "presiding arbitrator solution").

53. It was observed that options 1 and 2 were not mutually exclusive. It was therefore proposed to structure paragraph (1) in such way that a first subparagraph would express the majority requirement, as provided in the 1976 version of the Rules. In case of failure to reach a decision through the majority requirement, the presiding arbitrator solution would then be provided for.

54. It was said that in case one of the variants in option 2 would be retained, the words "on the substance of the dispute" appearing in both variants of option 2 should be deleted, as when read in conjunction with paragraph (2) of article 31, it might create uncertainties as to whether matters of jurisdiction of the tribunal or admissibility of the claim would be covered.

Option 1

55. Option 1 received broad support. It was said that the majority requirement should be the general rule. It was further said that the majority requirement was the

one adopted in the 1976 version of the Rules, and had contributed to the universal applicability of the Rules so that there was no need for modification. It was also said that option 1 met the expectation of parties that all views would be duly taken into consideration by the arbitral tribunal. The Working Group was cautioned that any change to the majority requirement in the 1976 version of the Rules would be a major departure and might also change the dynamics of the decision-making process of the arbitral tribunal. It was questioned whether a problem that arose infrequently justified such a change. It was also pointed out that by the very nature of the problem, it would be difficult to know how frequently it occurred.

56. As a matter of drafting, it was observed that the words “unless otherwise agreed by the parties” in option 1, which were not included in the 1976 version of the Rules, were superfluous as parties could always deviate from the Rules.

57. The supporters of the majority requirement as taken in option 1 expressed the concern that the presiding arbitrator solution, as envisaged in the two variants in option 2, would leave the power in the hands of one person, which was unwise particularly in case of an authoritarian presiding arbitrator. In addition, parties would be put in a delicate position if they had to affirmatively object to the proposal of a decision by the presiding arbitrator, as proposed under option 2, variant 2. Further, it was said that option 2 only offered one solution for a deadlock situation, although there could be many other solutions, as, for example, the appointment of an additional arbitrator.

Option 2, variant 1

58. Option 2, variant 1 also received support. It was said that option 2, variant 1 would provide a good incentive for the arbitrators to reach a unanimous decision. It was further said that the majority requirement often obligated the presiding arbitrator to align itself with the least unreasonable arbitrator. In that respect, it was observed that the perception of increased legitimacy of the decision by the tribunal through the majority requirement was a false perception. Variant 1 was said to have the advantage of providing for a solution in case there was no decision by majority, instead of leaving that choice to be made by the parties. The solution provided by variant 1 was said to be commonly found in international arbitration rules, such as article 25.1 of the ICC rules, article 26.3 of the LCIA rules and article 61 of the arbitration rules of the World Intellectual Property Organization. In response to the concern raised with respect to the concentration of decision-making power in the hands of the presiding arbitrator, it was said that the need for a decision by the presiding arbitrator rarely occurred.

Option 2, variant 2

59. In support of option 2, variant 2, it was said that it constituted a good compromise provision that expressed as a general principle the majority rule, but was still open to the presiding arbitrator solution. It was observed that that approach more truly reflected the spirit of the Rules. Another advantage of option 2, variant 2 was that, as understood by the Working Group, the parties would already know the composition of the arbitral tribunal when reaching agreement on the presiding arbitrator solution. It was suggested that if that variant were to be retained in the revised version of the Rules, parties' decision on the presiding arbitrator solution

could be added as an agenda item in the UNCITRAL Notes on Organizing Arbitral Proceedings.

60. A proposal was made to combine variants 1 and 2 along the lines of “an award or other decision shall be made by the presiding arbitrator unless objected to by one party”. That proposal did not receive support, as it was said that such a provision would require a number of clarifications, for example, as the time when the objection could be raised.

61. After discussion, due to the lack of consensus for changing article 31, paragraph (1), the Working Group agreed to retain paragraph (1) as it appeared in the 1976 version of the Rules with the replacement of the word “three” by the words “more than one”. Many delegates who supported dealing in a revised version of the Rules with a situation where the majority requirement would result in a deadlock, along the lines of option 2, suggested that that should be presented to the Commission as an alternative to retaining the current text of article 31. However, that proposal was not agreed to, as the Working Group considered it preferable to present the Commission with a single text without offering alternatives. In reaching that decision, the Working Group emphasized that the parties had the ability in such situations to agree to another method of decision-making.

Paragraph (2)

62. The Working Group agreed to the replacement of the words “on her or his own” in article 31, paragraph (2) of the 1976 version of the Rules by the word “alone” and the Working Group decided that the substance of article 31, paragraph (2), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Form and effect of the award

Article 32

Paragraph (1)

63. The Working Group recalled its decision at a previous session that there did not exist any practical need to list the various types of awards and it agreed that the first sentence of article 32, paragraph (1), as contained in document A/CN.9/WG.II/WP.151/Add.1, was useful to clarify that the arbitral tribunal might render awards on different issues during the course of the proceedings.

“issues” — “aspects”

64. A concern was expressed that the word “issues” in the first sentence of paragraph (1) might not properly convey the idea that the arbitral tribunal might render partial awards, dealing only with certain aspects of an issue. In order to avoid ambiguity, it was suggested to replace the word “issues” by the words “aspects of the dispute”. Although some support was expressed for that proposal, the prevailing view was that the word “issues” should remain for the main reasons that that word, which was for instance used in article 26.7 of the LCIA rules, did not seem to have given rise to difficulties and that, in practice, the contents of an award usually

clarified whether it dealt with certain aspects of an issue only. After discussion, the Working Group agreed to maintain the word “issues” as contained in paragraph (1).

“same status and effect”

65. It was questioned whether the second sentence of paragraph (1), which provided that “such awards shall have the same status and effect as any other award made by the arbitral tribunal”, was needed. The prevailing view was that that sentence should be deleted, as awards might not necessarily all have the same status and effect. For instance, an award terminating the proceedings would not have the same effect as an award on interim measures. In addition, it was said that the usage of the word “all” before the word “awards” appearing in the first two sentences of paragraph (2) guaranteed that all awards would be final, binding and carried out by the parties without delay.

66. After discussion, the Working Group agreed to delete the second sentence of paragraph (1), so that paragraph (1) would read: “The arbitral tribunal may make separate awards on different issues at different times.”

Paragraph (2)

“final and binding”

67. The Working Group considered whether the first sentence of article 32, paragraph (2), as contained in document A/CN.9/WG.II/WP.151/Add.1, should be amended to clarify the meaning of the words “final and binding”. The view was expressed that using the word “final” could create ambiguity and the award being “final” could be understood in different ways. For example, it was stated that it could mean that the award finally disposed of some, but not all, claims, that the award terminated the proceedings, or that the arbitral tribunal was no longer entitled to revise it. To avoid such ambiguity, it was proposed to delete the word “final”. It was also suggested to replace it by wording along the lines of the proposal contained in paragraph 24 of document A/CN.9/WG.II/WP.151/Add.1, which read: “An award shall be made in writing and shall be binding on the parties. Once rendered, an award shall not be susceptible to revision by the arbitral tribunal, except as provided in article 26, paragraph 6 for interim measures rendered in the form of an award, article 35 and article 36.”

68. Those proposals did not find support. The Working Group was reminded that, at its forty-seventh session, it had agreed that the “final and binding” character of the award should be envisaged in respect of the arbitral tribunal, which could not modify the award after it was rendered, in respect of the parties, who were bound by the findings of the award as of the time it was rendered, and in respect of the courts, which were under a duty not to entertain any recourse against the award, save in the exceptional circumstances that justified the setting aside of the award (A/CN.9/641, para. 81). It was said that the term “final and binding” was widely found in other arbitration rules and had not created any problems in practice. It was pointed out that omission of the word “final” from the long-used term “final and binding” would raise questions in the minds of many users and would thus lead to confusion.

69. It was also suggested to replace the word “all” before the word “awards” in the first and second sentences of paragraph (2) with the word “the”. Against that proposal, it was stated that the modification to the plural had been inserted in order

to avoid any ambiguity in case more than one award had been rendered. The Working Group was reminded that it had previously agreed to delete the last sentence of paragraph (1), on the basis that its content was already captured by the use of the word “all” before the word “awards” in the first and second sentences of paragraph (2) (see above, para. 65).

70. After discussion, the Working Group agreed to maintain the words “final and binding” in the first sentence of paragraph (2). It was noted that the word “final” in the English, French and Spanish language versions differed insofar as the Spanish version provided that the award could not be appealed (“*inapelable*”) and the French version provided that the award could not be appealed before any arbitral tribunal (“*n’est pas susceptible d’appel devant une instance arbitrale*”). It was agreed that the different language versions should be aligned.

Waiver of recourse

General principle

71. The Working Group recalled that, at its forty-fifth and forty-seventh sessions, there was general agreement on the principle that, under the Rules, the parties should be deemed to have waived any right they might have to appeal against the award or to use any other recourse to courts or other competent authority on the merits of the case or on any point of fact or law (A/CN.9/614, para. 114 and A/CN.9/641, paras. 85-90). The effect of a new provision on that matter would be to make it impossible for parties to use those types of recourse that could be freely waived by the parties (for example, in some jurisdictions, an appeal on a point of law), but not to exclude challenges to the award (for example, on matters such as lack of jurisdiction, violation of due process or any other ground for setting aside the award as set out under article 34 of the Model Law). It was also recalled that provisions on waiver of recourse were found in other international arbitration rules, such as the ICC rules (article 28 (6)) and the LCIA rules (article 26 (9)).

72. At its forty-seventh session, the Working Group had agreed that the provision on waiver of recourse by parties to arbitration should avoid creating the impression that it encompassed the waiver of the right to apply for setting aside of the award. In jurisdictions where such a waiver was possible, it could be exercised under the applicable legal regime but the Rules should not result in such waiver being given automatically or merely (and possibly inadvertently) through the submission of a dispute to the Rules (A/CN.9/641, para. 90).

73. At its current session, the Working Group agreed that the right to resist enforcement of an award as provided under article V of the New York Convention and article 36 of the Model Law was to be understood as excluded from the waiver of recourse. The Working Group confirmed that the term “recourse” used in the third sentence of article 32, paragraph (2) was never intended to refer to a ground for resisting enforcement under the New York Convention or under article 36 of the Model Law, and referred on that matter to the explanations contained under paragraph 45 of the Explanatory Note by the UNCITRAL secretariat on the Model Law. In regulating recourse (i.e., the means through which a party might actively “attack” the award), article 34 of the Model Law did not preclude a party from seeking court intervention by way of defence in enforcement proceedings. It was further said that article 32, paragraph (2) of the draft Rules included a reference to

the setting aside of an award, for the reason that the word “recourse” was used in the context of article 34 of the Model Law, the title of which referred to an “application for setting aside as exclusive recourse against arbitral award”. It was said that parties could not be deprived automatically of an exclusive recourse through the submission of a dispute to the Rules, which explained the reference in article 32, paragraph (2) to an express agreement of the parties regarding waiver of the right to apply for setting aside an award.

74. It was further confirmed that the Working Group did not intend the term “recourse” used in the third sentence of paragraph (2) to refer to a ground for resisting execution of the award such as a defence of sovereign immunity.

Remarks on the drafting of the provision on waiver of recourse

75. The Working Group considered the provision on waiver of recourse in article 32, paragraph (2), as contained in A/CN.9/WG.II/WP.151/Add.1, which provided that “insofar as such waiver can be validly made, the parties shall be deemed to have waived their right to any form of appeal, review or recourse to any court or other competent authority. The right to apply for setting aside an award may be waived only if the parties so expressly agree.”

76. Various concerns were expressed regarding that provision. It was said that the waiver was expressed in too broad a manner, which might create ambiguity, as to the determination of the scope of, and exceptions to, the waiver.

77. It was said that the four sentences of paragraph (2) under consideration were not linked together, a fact that created confusion. To address that concern, it was proposed to redraft the last two sentences as follows: “Insofar as such waiver can be validly made, the parties shall be deemed to have waived their right to any form of appeal, review or recourse to any court or other competent authority. However, this deemed waiver of right to recourse shall not extend to an application for setting aside an award which may be waived only if the parties so expressly agree.” Another proposal was made to provide: “Insofar as such waiver can be validly made, the parties shall be deemed to have waived their right to any form of appeal, review or recourse to any court or other competent authority, save that the right to apply for setting aside an award may be waived only if the parties specifically agree.” Yet another proposal was made to link the second and third sentences of paragraph (2) along the lines of: “The parties undertake to carry out all awards without delay and insofar as such waiver can be validly made, the parties shall be deemed to have waived their right to any form of appeal, review or recourse to any court or other competent authority.”

78. A view was expressed that the words “insofar as such waiver can be made” should be deleted for the reason that the interaction of the Rules with national laws was already covered by article 1, paragraph (2) of the Rules (numbered article 1, paragraph (3) in the draft revised Rules contained in document A/CN.9/WG.II/WP.154).

79. Concerning the last sentence of article 32, paragraph (2), it was said that a reference to “setting aside” might not be understood in the same manner in all jurisdictions. For instance, in certain jurisdictions, there would be difficulties in applying the provision as the setting aside was a possible remedy under an application to a State court on the merits. It was also said that it was unclear

whether jurisdictional challenges would be excluded from the waiver. Thus, it was proposed to expressly exclude decisions on jurisdiction from the scope of the waiver.

Proposal to delete the draft provision on waiver of recourse

80. In view of the ambiguities and the potential confusion that might result from the adoption of a provision on waiver, as pointed out in paragraphs 75 to 78 above, it was proposed to delete that provision, as it was clear from the remainder of article 32, paragraph (2) that the parties were under an obligation to carry out the award without delay, and in case of appeal or other recourse, the applicable law would apply. That approach was objected to on the ground that the Working Group had already taken a decision of principle to modify the Rules by including a provision on waiver.

Limited scope of waiver: waiver of appeals on merits

81. It was proposed to make a distinction within the provision between two types of recourse: an appeal on the merits, which could be waived, and a challenge of the award in a setting aside procedure, which in many jurisdictions could not be waived. In line with that proposed approach, the parties would be deemed to have waived their right to “any form of appeal on the merits”, and the words “review or recourse” would be deleted for the reason that those words conveyed a broad meaning and the word “recourse” was used in the context of article 34, paragraph (1) of the Model Law.

82. That proposal received some support. It was said that it would clarify the intent of the Working Group, which was to provide for a waiver of any form of appeal on the merits but to exclude from the waiver recourse on setting aside an award, and enforcement proceedings. It sought to differentiate between the waiver, which should be limitatively defined and the exceptions thereto. An alternative to that approach was to refer to “any appeal or any recourse on the merits”, as the word “appeal” might not be understood in the same manner in all jurisdictions and the word “recourse” conveyed a broader meaning.

83. However, it was observed that that proposal focused on various types of recourse, which might not be understood in the same manner in different countries. Introducing categories carried the risk that not all possible types of recourse were listed and the understanding of such categories might not be universally shared. In addition, it was said that appeals or recourses on matters of procedure were not clearly covered under that proposal.

Broad content of waiver of recourse

84. The Working Group agreed that paragraph (2) should contain a waiver of appeal, review and recourse, and be drafted in a manner that avoided any confusion as to the scope of the waiver. To avoid listing recourses excluded from the waiver, it was proposed to adopt a provision along the lines of: “The parties shall be deemed to have waived their right to any form of appeal, review or recourse to any court or other competent authority that may be waived and the waiver of which does not require express agreement”. It was objected to that proposal, as it would oblige parties to delve into the details of relevant applicable laws and would run counter to

the harmonization objectives of the Rules. It was said that a preferable approach would be that the scope of the waiver be clearly defined in the Rules themselves, without the parties having to determine whether and under which conditions the applicable law permitted such waiver to be made. It was further said that that proposal put the emphasis on whether applicable law would require express agreement of the parties for recourse to be validly waived, a matter that was not necessarily settled in all jurisdictions.

85. In keeping with the approach to define broadly the types of recourse waived, and to clarify the exceptions, a proposal was made along the following lines: “By adopting these Rules, the parties waive their right to any form of appeal, review or recourse to any court or competent authority except for an application for setting aside an award.” That proposal received broad support. The proposed wording was said to address the concerns raised in the course of the discussion that the scope be clearly and concisely defined, and that there were no interference with applicable laws. It removed the reference to a deemed waiver, which was considered to be unnecessary.

86. After discussion, the Working Group agreed that the proposal contained in paragraph 84 above should be included in a revised version of the Rules for consideration by the Working Group at a future session, on the understanding, however, that a few delegations formally objected to amending the Rules on that matter and one delegation requested that it be placed in square brackets.

Paragraphs (3), (4) and (6)

87. The Working Group decided that the substance of article 32, paragraphs (3), (4), and (6), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Paragraph (5)

88. It was suggested that paragraph (5) could be complemented with provisions aimed at reminding the parties that they might agree on the modalities of the publication of the award. That proposal did not receive support.

89. The Working Group decided that the substance of article 32, paragraph (5), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Paragraph (7)

90. The Working Group confirmed its decision taken at its forty-seventh session that article 32, paragraph (7) as contained in the 1976 version of the Rules should be deleted (A/CN.9/641, para. 105).

Applicable law, amiable compositeur

Article 33

Paragraph (1)

91. The Working Group noted that it had agreed that the arbitral tribunal should apply the rules of law designated by the parties and that therefore the words “rules of law” should replace the word “law” in the first sentence of article 33, paragraph (1) (A/CN.9/641, para. 107). In the absence of such designation by the

parties, the Working Group agreed that paragraph (1) should refer to the arbitral tribunal applying the “law” and not the “rules of law” it determined to be applicable, consistent with article 28, paragraph (2) of the Model Law (A/CN.9/641, paras. 108 and 109).

rules of law designated by the parties

92. A suggestion was made to clarify that any designation of law or legal system of a given State by the parties should be construed as referring to the substantive law of that State and not to its conflict-of-law rules. It was said that a similar provision could be found in article 28, paragraph (1) of the Model Law. After discussion, the Working Group considered that such addition was not necessary under the Rules.

Law applied by the arbitral tribunal

93. Concerning the law that an arbitral tribunal should apply to the substance of the dispute, the Working Group considered two options, failing determination by the parties, as contained in document A/CN.9/WG.II/WP.151/Add.1. It was said that both options constituted substantive conflict-of-law rules.

94. Option 2, which provided broad discretion for the arbitral tribunal to apply the law it determined appropriate, received broad support. It was said that that option provided for a flexible solution, and, if adopted, would modernize the Rules by allowing the arbitral tribunal to decide directly on the applicability of the appropriate law.

95. A suggestion was made that the discretion of the arbitral tribunal in determining the more appropriate law to be applied should be limited, or that more guidance should be provided to the tribunal. The suggestion was made to refer to conflict-of-laws rules. It was also proposed to include language which would indicate that the determination should be made by the arbitral tribunal objectively and reasonably. For that purpose, it was suggested to add language along the lines of “based on objective criteria” at the end of paragraph (1), or possibly to merge both options 1 and 2. In response, it was pointed out that the broad discretion left to the arbitral tribunal in the determination of the appropriate law to be applied came into play within the boundaries of the obligation of the arbitral tribunal to render a reasoned award, as provided under article 32, paragraph (3) of the Rules. It was generally felt that there were sufficient safeguards in the Rules in that respect.

96. It was suggested that the provision, by referring to the application of “the law” determined to be appropriate, could be understood as limiting the choice of the arbitral tribunal to one law only. It was pointed out that that might have an impact on the enforceability of the award. However, in international arbitration, it was not unusual that more than one law had to be applied to deal with different issues, such as capacity or corporate matters. After discussion, the Working Group was of the view that the provision was drafted in sufficiently broad terms and it was understood that the tribunal might apply different laws, depending on the issues at stake.

Paragraph (2)

97. The Working Group decided that the substance of article 33, paragraph (2), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Paragraph (3)

“any”

98. It was pointed out that article 33, paragraph (3), as contained in document A/CN.9/WG.II/WP.151/Add.1, had been amended to clarify applicability of the Rules in a situation where a contract was not necessarily the basis of the dispute by referring to the words “any applicable” in relation to a “contract” and “any” in relation to “usages of the trade”. It was said that the language in paragraph (3) might not achieve the objective of clarifying the provision. A better approach, it was said, was to draft paragraph (3) with language along the following lines: “In all cases, the arbitral tribunal shall decide in accordance with the terms of the contract, if any, and shall take into account any usages of trade applicable to the transaction.” That proposal received support.

“agreement” — “contract”

99. A question was raised whether the word “contract” was broad enough to encompass all types of agreements which might form the basis of a transaction. With a view to broadening the scope of that provision, it was proposed to replace the word “contract” by the word “agreement”. It was explained that, in some jurisdictions, the term “contract” was strictly defined, whereas the term “agreement” was understood as including contracts, as well as other forms of agreements on which commercial transactions would usually be based. However, it was objected to that proposal that in some jurisdictions a contract was legally enforceable, which would not necessarily be the case of an agreement. It was also said that the term “contract” was used under the corresponding provision of the Model Law as well as in the European Convention on International Commercial Arbitration of 1961, and using a different language might create difficulties for countries having enacted arbitration law based on the Model Law or countries that were parties to the Convention. In addition, it was said that the term “contract” was used consistently in the Rules, and it might not be appropriate to use a different term under article 33, paragraph (3). Another proposal was made to add the words “or any other legal instrument” after the word “contract” in order to reflect the language adopted by the Working Group when revising the Rules under articles 3 and 18. That proposal did not find support, as the term “legal instruments” would be understood to include, among others, investment treaties, the application of which was not intended to be regulated by that paragraph.

100. After discussion, the Working Group agreed that article 33, paragraph (3), as contained in document A/CN.9/WG.II/WP.151/Add.1, should be amended along the lines of the proposal contained in paragraph 97 above.

Settlement or other grounds for termination**Article 34***Paragraph (1)*

101. A proposal was made to include in the last sentence of article 34, paragraph (1), the words “or for refusing to issue it”, in order to capture situations where the tribunal would refuse to issue an award on legitimate grounds, for example, if rendering the award would violate public policy. That proposal did not receive support. After discussion, the Working Group decided that the substance of article 34, paragraph (1) as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Paragraph (2)

102. The Working Group agreed that the language contained in article 34, paragraph (2), as reflected in document A/CN.9/WG.II/WP.151/Add.1, might need to be amended so as to ensure consistency of that provision with the decision adopted by the Working Group in relation to article 28, paragraph (1) (a) to no longer limit the power of the arbitral tribunal to a dismissal order for termination (see paragraphs 22 to 26 above). The Working Group requested the Secretariat to reformulate article 34 paragraph (2), for consideration at a future session.

Paragraph (3)

103. The Working Group agreed that the last sentence of article 34, paragraph (3), should refer to article 32, paragraphs 2 and “4 to 5”, instead of “4 to 6” as the provision of article 32, paragraph (6) were already reflected in paragraph (3). With that modification, the Working Group decided that the substance of article 34, paragraph (3), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Interpretation of the award**Article 35***Paragraph (1)*

104. A suggestion was made to add language in article 35, paragraph (1), to clarify that the tribunal might give an interpretation of part of the award only, along the lines of the corresponding provision of the Model Law. That proposal did not receive support and the Working Group decided that the substance of article 35, paragraph (1), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Paragraph (2)

105. The Working Group decided that the substance of article 35, paragraph (2), as contained in document A/CN.9/WG.II/WP.151/Add.1, was generally acceptable.

Correction of the award

Article 36

Time limit

106. The Working Group considered whether article 36, should include a time limit within which the arbitral tribunal should correct an award after having been requested to do so by a party. It was said that such a time limit was provided for under article 35, paragraph (2), of the Rules, when the tribunal was requested to make an interpretation of an award. The Working Group generally agreed that the same principle should apply when the tribunal was requested to make correction to an award. Different views were expressed on whether a time limit for allowing a party to request corrections should comprise 45 days as was provided in article 35, paragraph (2) of the Rules or 30 days as provided in article 33, paragraph (2) of the Model Law.

107. After discussion, the Working Group agreed that article 36 should be modified with the inclusion of a time limit for corrections of 45 days. It was clarified that such time limit only applied when a party requested a correction, and not when the arbitral tribunal made such correction at its own initiative. The Working Group requested the Secretariat to prepare a revised version of article 36 taking account of the above discussion.

“a party”

108. The Working Group agreed that article 36, paragraph (1), would refer to “a party” instead of “any party” in order to align the language in article 36 with that in article 37, as contained in document A/CN.9/WG.II/WP.151/Add.1.

scope of omissions

109. A question was raised whether the wording of article 36, paragraph (1), as contained in document A/CN.9/WG.II/WP.151/Add.1, sufficiently clarified the scope of omissions that could be corrected. The Working Group was reminded that the word “omissions” had been added, in order to cover situations such as the arbitrator omitting to sign the award or to state the place of the award. It was not intended to cover omissions on the substance, and it was questioned whether that matter would need clarification. It was also observed that under article 32, paragraph (4), an award should contain the date on which the award was made as well as the place of arbitration. To a question on the interplay between article 32, paragraph (4) and article 36 of the Rules, it was said that, in certain jurisdictions, an award that would not include the date and place would not be considered an award, and in that case, article 36 would not find application. It was said that matters regarding qualification of an award were dealt with under applicable law.

110. It was also said that the words “of a similar nature” included in the first sentence of paragraph (1) after the word “omissions” clarified that intended meaning of the provision, and was a sufficient and appropriate means to implement the decision of the Working Group to include the word “omissions” in paragraph (1) of article 36.

“form part of the award”

111. It was observed that article 35, paragraph (2) of the Rules, provided that “the interpretation shall form part of the award”. A question was raised whether a similar provision should be included in article 36, paragraph (2) to clarify that correction of an award also formed part of the award. It was said that such a provision would create difficulties, in particular with deadlines for recourse, depending on what the date of the corrected award was determined to be. In response, it was pointed out that the applicable national arbitration law would govern the matter and that it was not for the Rules to address it. It was also observed that rules of a number of international arbitration institutions included a similar provision.

112. After discussion, the Working Group agreed, despite one delegation opposing, to provide in article 36 that corrections would also form part of the award.

Additional award

Article 37

113. The attention of the Working Group was drawn to the fact that article 37, was restricted to “additional awards”. It was said that that provision would therefore not find application in case the tribunal would render a termination order and a party wished to request the arbitral tribunal to make an additional decision on claims presented during the arbitral proceedings, but omitted by the tribunal.

114. Various proposals were made to address that matter. A suggestion was made to include in article 40, paragraph (3), language providing that article 37 would apply by analogy. That suggestion received little support.

115. It was suggested to modify the wording of article 37, paragraph (1) along the following lines: “Within 30 days after the receipt of the award or termination order, a party, with notice to the other parties, may request the arbitral tribunal to make an award or an additional award as to claims presented in the arbitral proceedings but not decided by the arbitral tribunal.” That proposal received support as it provided a solution for parties in case the arbitral tribunal failed to address all issues in a termination order. Another proposal was made to address that concern by adopting a more general approach providing in article 34, paragraph (2) that the termination order would have the legal effect or character of an award. It was suggested to insert in article 34, paragraph (2) wording along the lines of “For purposes of article 37, a termination order should be treated as an award.” That approach was also supported.

116. Both proposals contained in paragraph 113 above received support and the Working Group requested the Secretariat to include both proposals in a revised version of the Rules within brackets for consideration by the Working Group at a future session. International arbitral institutions having experience in the manner in which termination orders had been dealt with and of issues arising in that context were invited to provide information to the Secretariat.

Costs

Article 38

117. A question was raised whether the first sentence of article 38, as contained in document A/CN.9/WG.II/WP.151/Add.1, should also include a reference to

“termination orders and awards on agreed terms”. It was pointed out that article 40, paragraph (3), already dealt with that matter. The Working Group considered whether articles 38 and 40 would need to be restructured, in order to avoid any overlapping.

118. It was said that article 38 provided the arbitral tribunal with the power to issue an award on costs and defined the term “costs”, whereas article 40 dealt with questions of allocation of costs, fixing of costs under a termination order or award on agreed terms and fees in the context of interpretation or correction of an award. The concern was expressed that regulating costs in the context of awards, termination orders and awards on agreed terms in one provision might create uncertainty and ambiguity.

119. After discussion, the Working Group agreed that there might be a need for considering to which extent both provisions might overlap, and agreed that that matter might need to be further considered when the Working Group had completed its review of articles 38 to 40.

“an award — any award”

120. It was observed that the arbitral tribunal might fix the costs of the arbitration in more than one award, and the Working Group agreed that a revised version of article 38, should clarify that matter.

“fees stated separately”

121. The question was raised whether the fees of the arbitral tribunal should be stated separately as to each arbitrator as provided currently in article 38, subparagraph (a). In response, it was said that that approach, which was included in the 1976 version of the Rules, had proven useful in particular in disciplining arbitrators and avoiding exaggerated costs.

Article 39

Paragraph (2)

122. The Working Group agreed to replace the words “has issued or endorsed” by the words “has stated it will apply” in article 39, paragraph (2), as that formulation was found to better cover situations where an appointing authority applied a schedule of fees defined by other authorities or rules.

Paragraph (3)

123. The concern was expressed that the reference to the word “methodology” used in article 39, paragraph (3), as contained in document A/CN.9/WG.II/WP.151/Add.1, might not be sufficiently clear, and it was proposed to modify the first sentence of that paragraph as follows: “Promptly after its constitution, the arbitral tribunal shall inform the parties how it proposes to determine the fees of its members.” That proposal was supported.

124. It was further proposed to amend the second sentence of article 39, paragraph (3) by replacing the words “set forth the computation of the amounts due consistent with that methodology” by the words “state how it has computed the fees”. It was said that that proposal aimed at avoiding parties’ allegation that a

calculation of fees was inconsistent with the agreed methodology, and to limit the risk of frivolous litigation that might result from the existing wording. It was also observed that the methodology agreed upon after the constitution of the tribunal might not necessarily apply at the end of the proceedings, in particular in case a party referred the matter to an appointing authority or to the Secretary-General of the PCA, as provided for under article 39, paragraph (4). To address that concern, it was proposed to add at the end of article 39, paragraph (3) the words “fixed by the parties or any other authority having taken a decision on this matter.” The Working Group agreed that further consideration should be given to that question at a future session.

125. It was observed that paragraph (3) should be amended so that the reference contained in its second sentence to article 38 be limited to article 38 (a) and the words “costs of arbitration” be replaced by the words “fees of the arbitral tribunal”. A question was raised whether costs of travels as contained in article 38 (b), or of expert advice as contained in article 38 (c) should also be included as they might be the subject of an agreement between the arbitral tribunal and the parties. The Working Group agreed to give further consideration to that question at a future session.

Paragraph (4)

126. Various concerns were expressed regarding article 39 and different matters were raised for further consideration at a future session. It was said that the chronology of events mentioned in paragraph (4) might need to be revisited. It was questioned whether modification of fees should be deemed part of the award, as that might have consequences in terms of delaying potential recourse. It was pointed out that the decision of the tribunal on costs should be made in a form that could be revised. It was also questioned whether any decision on costs should be made in a separate award. Other issues were proposed for consideration such as the manner in which to address requests for deposit and interim payments.

**B. Note by the Secretariat on settlement of commercial disputes: Revision of the
UNCITRAL Arbitration Rules, submitted to the Working Group on Arbitration
and Conciliation at its fifty-first session
(A/CN.9/WG.II/WP.154/Add.1)**

Table of concordance	

I. Introduction

1. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that, in respect of future work of the Working Group, priority be given to a revision of the UNCITRAL Arbitration Rules (1976) (“UNCITRAL Arbitration Rules” or “Rules”).¹

2. The Working Group started its work on a revision of the UNCITRAL Arbitration Rules at its forty-fifth session² and completed a first reading of a draft revised Rules during its forty-sixth to forty-eighth sessions³ on the basis of document A/CN.9/WG.II/WP.145 and its addendum. At its forty-ninth and fiftieth sessions,⁴ the Working Group made a second reading of a draft revised Rules up to article 26 on the basis of document A/CN.9/WG.II/WP.151 and its addendum.

3. This note contains an annotated draft of revised articles 18 to 26 of the UNCITRAL Arbitration Rules (renumbered articles 20 to 28, see para. 4 below), based on the deliberations of the Working Group at its fiftieth session. The annotated draft of revised articles 1 to 17 of the Rules (renumbered articles 1 to 19) is contained in document A/CN.9/WG.II/WP.154. Unless otherwise indicated, all

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 182-187.

² The report of the forty-fifth session of the Working Group (Vienna, 11-15 September 2006) is contained in document A/CN.9/614.

³ The reports of the forty-sixth (New York, 5-9 February 2007), forty-seventh (Vienna, 10-14 September 2007) and forty-eighth (New York, 4-8 February 2008) sessions of the Working Group are contained in documents A/CN.9/619, A/CN.9/641 and A/CN.9/646, respectively.

⁴ The reports of the forty-ninth (Vienna, 15-19 September 2008) and fiftieth (New York, 9-13 February 2009) sessions of the Working Group are contained in documents A/CN.9/665 and A/CN.9/669, respectively.

references to deliberations by the Working Group in this note are to deliberations made at the fiftieth session of the Working Group.

II. General remark

Numbering of articles

4. The Working Group may wish to consider whether the articles of the revised Rules should be renumbered as proposed in document A/CN.9/WG.II/WP.154 and in this addendum. The cross references contained in the draft articles have been amended accordingly. If the Working Group decides that the articles should be renumbered, it may wish to consider whether to include in the revised Rules a table, as proposed in an annex to document A/CN.9/WG.II/WP.154 and this addendum, showing the concordance between the articles of the 1976 version of the Rules and those of the revised version.

III. Draft revised UNCITRAL Arbitration Rules

Section III. Arbitral proceedings

Statement of claim

Article 20

1. The claimant shall communicate its statement of claim in writing to the respondent and to each of the arbitrators within a period of time to be determined by the arbitral tribunal. The claimant may elect to treat its notice of arbitration in article 3, paragraph 3 as a statement of claim, provided that the notice of arbitration also complies with the requirements of paragraphs 2, 3 and 4 of this article.
2. The statement of claim shall include the following particulars:
 - (a) The names and contact details of the parties;
 - (b) A statement of the facts supporting the claim;
 - (c) The points at issue;
 - (d) The relief or remedy sought;
 - (e) The legal grounds or arguments supporting the claim.
3. A copy of any contract or other legal instrument out of or in relation to which the dispute arises and of the arbitration agreement shall be annexed to the statement of claim.
4. The statement of claim should, as far as possible, be accompanied by all documents and other evidence relied upon by the claimant, or contain references to them.

*Remarks on draft article 20 [numbered article 18 in the 1976 version of the Rules]**Paragraph (1)*

5. The last sentence of paragraph (1) deals with the situation where the claimant decides to treat its notice of arbitration as a statement of claim (A/CN.9/669, para. 19). The words “provided that the notice of arbitration also complies with the requirements of paragraphs 2, 3 and 4 of this article” have been added at the end of paragraph (1) to clarify that a notice of arbitration treated as a statement of claim should also comply with the requirements of draft article 20, paragraphs (2) to (4). With that modification, the Working Group adopted the substance of paragraph (1) (A/CN.9/669, paras. 20-22).

Paragraph (2)

6. The Working Group adopted the substance of paragraph (2), without modifications (A/CN.9/669, para. 23).

Paragraphs (3) and (4)

7. The Working Group agreed that the word “evidence” appearing in the second sentence of paragraph (3), and used in the 1976 version of the Rules should be kept and replace the words “evidentiary materials” which were proposed in earlier draft versions of that article (A/CN.9/669, para. 24). With that modification, the Working Group adopted the substance of paragraph (3).

8. The Working Group may wish to note that the words “out of or in relation to which the dispute arises” have been added to clarify which contract or legal instrument should be annexed to the statement of claim.

9. The provision in paragraph (4) appeared as the second sentence of paragraph (3) in the previous draft of revised Rules. It is proposed to place that provision in a separate paragraph for the sake of clarity (see below, para. 13).

Statement of defence**Article 21**

1. The respondent shall communicate its statement of defence in writing to the claimant and to each of the arbitrators within a period of time to be determined by the arbitral tribunal. The respondent may elect to treat its response to the notice of arbitration in article 4 as a statement of defence, provided that the response to the notice of arbitration also complies with the requirements of paragraph 2 of this article.

2. The statement of defence shall reply to the particulars (b), (c), (d) and (e) of the statement of claim (article 20, paragraph 2). The statement of defence should, as far as possible, be accompanied by all documents and other evidence relied upon by the respondent, or contain references to them.

3. In its statement of defence, or at a later stage in the arbitral proceedings if the arbitral tribunal decides that the delay was justified under the circumstances, the respondent may make a counterclaim or rely on a claim for the purpose of a set-off provided that the arbitral tribunal has jurisdiction over it.

4. The provisions of article 20, paragraphs 2 and 4 shall apply to a counterclaim and a claim relied on for the purpose of a set-off.

Remarks on draft article 21 [numbered article 19 in the 1976 version of the Rules]

Paragraph (1)

10. The last sentence of paragraph (1) addresses the situation where the respondent decides to treat its response to the notice of arbitration as a statement of defence. The words “provided that the response to the notice of arbitration also complies with the requirements of paragraph 2 of this article” have been added at the end of the last sentence of paragraph (1) (A/CN.9/669, para. 25) and that language mirrors the modification adopted in respect of draft article 20, paragraph (1) (see paragraph 5 above). With that modification, the Working Group adopted the substance of paragraph (1).

Paragraph (2)

11. The Working Group adopted paragraph (2) in substance and confirmed, for the sake of consistency with draft article 20, paragraph (3) that the word “evidence”, as used in the 1976 version of the Rules, should be kept (see paragraph 7 above) (A/CN.9/669, para. 26).

Paragraph (3)

12. Paragraph (3) reflects the decision of the Working Group that the arbitral tribunal’s competence to consider counterclaims and claims for the purpose of a set-off should, under certain conditions, extend beyond the contract from which the principal claim arose and apply to a wider range of circumstances (A/CN.9/669, para. 27). To achieve that extension, the Working Group agreed to delete the words “arising out of the same contract” where they appear in the original version of paragraph (3) and to include at the end of paragraph (3) the following words: “provided that the arbitral tribunal has jurisdiction over it”. With that modification, the Working Group adopted the substance of paragraph (3) (A/CN.9/669, paras. 27-32).

Paragraph (4)

13. The Working Group adopted the substance of paragraph (4), without modifications (A/CN.9/669, para. 33). A reference to the provision of article 20, paragraph (4) has been added to take account of the intention of the Working Group that, consistent with article 19, paragraph (4) of the 1976 version of the Rules, a counterclaim or a claim for the purpose of a set-off should, as far as possible, be accompanied by all documents and other evidence relied upon by the claimant, or contain references to them.

Amendments to the claim or defence

Article 22

During the course of the arbitral proceedings a party may amend or supplement its claim or defence, including a counterclaim or a claim for the purpose of a set-off, unless the arbitral tribunal considers it inappropriate to

allow such amendment or supplement having regard to the delay in making it or prejudice to other parties or any other circumstances. However, a claim or defence, including a counterclaim or a claim for the purpose of a set-off, may not be amended or supplemented in such a manner that the amended or supplemented claim or defence falls outside the jurisdiction of the arbitral tribunal.

Remarks on draft article 22 [numbered article 20 in the 1976 version of the Rules]

14. The Working Group agreed that, following the revision adopted under draft article 21, paragraph (3) (see paragraph 12 above), the last sentence of draft article 22 should be amended accordingly, and the reference to “the scope of the arbitration agreement” should be replaced by a reference to “the jurisdiction of the arbitral tribunal” (A/CN.9/669, para. 34).

15. The Working Group further agreed that the words “or defence” should be added in the second sentence of draft article 22 to align it with the wording of the first sentence of that article (A/CN.9/669, para. 35).

16. The Working Group may wish to consider whether, for the sake of consistency:

- The reference to “a claim for the purpose of a set-off” should be added after the words “a counterclaim [or]”, in both sentences of draft article 22;
- The words “or supplement” should be added after the word “amendment” in the first sentence of draft article 22 and the words “or supplemented” should be added after the word “amended” in the second sentence of draft article 22.

Pleas as to the jurisdiction of the arbitral tribunal

Article 23

1. The arbitral tribunal may rule on its own jurisdiction, including any objections with respect to the existence or validity of the arbitration agreement. For that purpose, an arbitration clause which forms part of a contract shall be treated as an agreement independent of the other terms of the contract. A decision by the arbitral tribunal that the contract is null shall not entail automatically the invalidity of the arbitration clause.

2. A plea that the arbitral tribunal does not have jurisdiction shall be raised no later than in the statement of defence or, with respect to a counterclaim or a claim for the purpose of a set-off, in the reply to the counterclaim or to the claim for the purpose of a set-off. A party is not precluded from raising such a plea by the fact that it has appointed, or participated in the appointment of, an arbitrator. A plea that the arbitral tribunal is exceeding the scope of its authority shall be raised as soon as the matter alleged to be beyond the scope of its authority is raised during the arbitral proceedings. The arbitral tribunal may, in either case, admit a later plea if it considers the delay justified.

3. The arbitral tribunal may rule on a plea referred to in paragraph 2 either as a preliminary question or in an award on the merits. The arbitral tribunal may continue the arbitral proceedings and make an award, notwithstanding any pending challenge to its jurisdiction before a court.

*Remarks on draft article 23 [numbered article 21 in the 1976 version of the Rules]**Paragraph (1)*

17. Paragraph (1) reflects the view expressed in the Working Group that the 1976 version of article 21, paragraphs (1) and (2) should be redrafted along the lines of article 16, paragraph (1) of the UNCITRAL Model Law on International Commercial Arbitration (“UNCITRAL Arbitration Model Law”) (A/CN.9/669, paras. 36-39). In accordance with the decisions of the Working Group, in the last sentence of paragraph (1), the words “and void”, which appeared after the word “null” have been deleted (A/CN.9/669, paras. 40-43) and the word “automatically” is used in replacement of the words “ipso jure”. [The words “ipso jure” are retained in the Spanish version of the revised Rules; the appropriate words for the French version of the revised Rules would be “de plein droit” (A/CN.9/669, para. 44)]. With those modifications, the Working Group adopted the substance of paragraph (1).

Paragraph (2)

18. The Working Group adopted the substance of paragraph (2), without modifications (A/CN.9/669, para. 45).

Paragraph (3)

19. The Working Group adopted the substance of paragraph (3), without modifications (A/CN.9/669, para. 46).

Further written statements**Article 24**

The arbitral tribunal shall decide which further written statements, in addition to the statement of claim and the statement of defence, shall be required from the parties or may be presented by them and shall fix the periods of time for communicating such statements.

Remarks on draft article 24 [numbered article 22 in the 1976 version of the Rules]

20. Draft article 24 is reproduced without modifications from the 1976 version of the Rules and was adopted by the Working Group in substance, without modifications (A/CN.9/669, para. 47).

Periods of time**Article 25**

The periods of time fixed by the arbitral tribunal for the communication of written statements (including the statement of claim and statement of defence) should not exceed 45 days. However, the arbitral tribunal may extend the time limits if it concludes that an extension is justified.

Remarks on draft article 25 [numbered article 23 in the 1976 version of the Rules]

21. Draft article 25 is reproduced without modifications from the 1976 version of the Rules and was adopted by the Working Group in substance, without modifications (A/CN.9/669, para. 48).

Interim measures**Article 26**

1. The arbitral tribunal may, at the request of a party, grant interim measures.
2. An interim measure is any temporary measure by which, at any time prior to the issuance of the award by which the dispute is finally decided, the arbitral tribunal orders a party to, including, without limitation:
 - (a) Maintain or restore the status quo pending determination of the dispute;
 - (b) Take action that would prevent, or refrain from taking action that is likely to cause, (i) current or imminent harm or (ii) prejudice to the arbitral process itself;
 - (c) Provide a means of preserving assets out of which a subsequent award may be satisfied; or
 - (d) Preserve evidence that may be relevant and material to the resolution of the dispute.
3. The party requesting an interim measure under paragraph 2 (a), (b) and (c) shall satisfy the arbitral tribunal that:
 - (a) Harm not adequately reparable by an award of damages is likely to result if the measure is not ordered, and such harm substantially outweighs the harm that is likely to result to the party against whom the measure is directed if the measure is granted; and
 - (b) There is a reasonable possibility that the requesting party will succeed on the merits of the claim. The determination on this possibility shall not affect the discretion of the arbitral tribunal in making any subsequent determination.
4. With regard to a request for an interim measure under paragraph 2 (d), the requirements in paragraph 3 (a) and (b) shall apply only to the extent the arbitral tribunal considers appropriate.
5. Nothing in these Rules shall have the effect of creating a right, or of limiting any right which may exist outside these Rules, of a party to apply to the arbitral tribunal for, and any power of the arbitral tribunal to issue, in either case without prior notice to a party, a preliminary order that the party not frustrate the purpose of a requested interim measure.
6. The arbitral tribunal may modify, suspend or terminate an interim measure it has granted, upon application of any party or, in exceptional circumstances and upon prior notice to the parties, on the arbitral tribunal's own initiative.

7. The arbitral tribunal may require the party requesting an interim measure to provide appropriate security in connection with the measure.
8. The arbitral tribunal may require any party promptly to disclose any material change in the circumstances on the basis of which the interim measure was requested or granted.
9. The party requesting an interim measure may be liable for any costs and damages caused by the measure to any party if the arbitral tribunal later determines that, in the circumstances, the measure should not have been granted. The arbitral tribunal may award such costs and damages at any point during the proceedings.
10. A request for interim measures addressed by any party to a judicial authority shall not be deemed incompatible with the agreement to arbitrate, or as a waiver of that agreement.

Remarks on draft article 26 [numbered article 26 in the 1976 version of the Rules]

22. It is proposed to place draft article 26 on interim measures before the provisions on evidence, hearings, and experts so as to group together those provisions (A/CN.9/669, para. 85).
23. Paragraphs (1) to (4) and (6) to (9) are modelled on the provisions on interim measures contained in chapter IV A of the UNCITRAL Arbitration Model Law. Paragraph (5) addresses the question of preliminary orders and paragraph (10) corresponds to article 26, paragraph (3) of the 1976 version of the Rules which the Working Group agreed to retain in the revised Rules (A/CN.9/641, para. 52). The Working Group may wish to consider whether it would be preferable to place the revised version of paragraph (5) before paragraph (10) so that paragraphs (1) to (8) would deal with interim measures granted by arbitral tribunals, paragraph (9) with preliminary orders granted by arbitral tribunals as provided for under applicable law or other applicable instruments, and paragraph (10) with interim measures requested by a party to a State court.

Paragraph (1)

24. The Working Group adopted paragraph (1), without modifications (A/CN.9/669, para. 91).

Paragraph (2)

25. The Working Group agreed to add at the end of the chapeau to paragraph (2) the words “including, without limitation,” to emphasize the non-exclusive nature of the list contained in paragraph (2) (A/CN.9/669, paras. 92-94).
26. An editorial change has been introduced in paragraph (2) (b), consisting in the insertion of “(i)” before the word “current” and “(ii)” before the word “prejudice”, in order to clarify the meaning intended by the drafters of the UNCITRAL Arbitration Model Law that the situation of “prejudice to the arbitral process” is distinct from the situation of “current or imminent harm” (A/CN.9/669, para. 95).

Paragraphs (3) and (4)

27. The Working Group adopted paragraphs (3) and (4), without modifications (A/CN.9/669, para. 99).

Paragraph (5)

28. Paragraph (5), which deals with the power of the arbitral tribunal to grant preliminary orders, reflects the discussions of the Working Group (A/CN.9/669, para. 112). As paragraph (5) leaves the question of preliminary orders entirely to be dealt with under applicable law or other applicable instruments, references to preliminary orders in paragraphs (3) and (6) to (10) of the previous version of draft article 26 (contained in document A/CN.9/WG.II/WP.151/Add.1) have been deleted (A/CN.9/669, paras. 100-112).

Paragraph (6)

29. The Working Group adopted paragraph (6) in substance (A/CN.9/669, para. 113).

Paragraph (7)

30. The Working Group adopted paragraph (7) in substance (A/CN.9/669, para. 114).

Paragraph (8)

31. The Working Group adopted paragraph (8) in substance (A/CN.9/669, para. 115).

Paragraph (9)

32. It was noted that paragraph (9) might have the effect that a party requesting an interim measure be liable to pay costs and damages in situations where, for instance, the conditions of draft article 26 had been met but the requesting party lost the arbitration (A/CN.9/669, para. 116). The Working Group requested the Secretariat to provide information to assist further discussion on how the different *leges arbitri* dealt with the matter of liability for damages that might result from the granting of interim measures (A/CN.9/669, para. 118). In that respect, the Working Group may wish to note that paragraph (9) mirrors article 17 G of the UNCITRAL Arbitration Model Law. At its thirty-ninth and fortieth sessions where the Working Group considered article 17 G, it was also strongly felt that the final decision on the merits should not be an essential element in determining whether the interim measure was justified or not (A/CN.9/545, para. 65), and that the provision of article 17 G, by leaving all determination to the arbitral tribunal, without including any reference to the merits of the case, avoided any requirement that could make liability dependent on the final disposition of the claims on the merits (A/CN.9/547, para. 106).

33. The Working Group may also wish to consider document A/CN.9/WG.II/WP.127, which contains information regarding the liability regimes in the context of national laws on interim measures and was prepared to assist the Working Group when it revised article 17 of the UNCITRAL Arbitration Model Law.

Paragraph (10)

34. The Working Group adopted paragraph (10) in substance (A/CN.9/669, para. 119).

Evidence**Article 27**

1. Each party shall have the burden of proving the facts relied on to support its claim or defence.
2. Unless otherwise directed by the arbitral tribunal, statements by witnesses and experts may be presented in writing and signed by them.
3. At any time during the arbitral proceedings the arbitral tribunal may require the parties to produce documents, exhibits or other evidence within such a period of time as the arbitral tribunal shall determine.
4. The arbitral tribunal shall determine the admissibility, relevance, materiality and weight of the evidence offered.

Remarks on draft article 27 [numbered article 24 in the 1976 version of the Rules]

Title to draft article 27

35. The Working Group may wish to consider whether, in the interest of clarity, draft article 27 should be titled “Evidence” as it deals with evidence and the form in which the statements of witnesses and experts would be presented.

Paragraphs (1) and (3)

36. Paragraphs (1) and (3), which are reproduced from the 1976 version of the Rules, were adopted by the Working Group without modifications (A/CN.9/669, para. 49). As a general remark, the Working Group confirmed its understanding that the power of the arbitral tribunal to refuse late submission is provided for under paragraph (3) (A/CN.9/669, para. 75).

Paragraph (2)

- as contained in the 1976 version of that article

37. Paragraph (2) as contained in the 1976 version of that article has been deleted in accordance with a widely prevailing view in the Working Group that it was not common practice for an arbitral tribunal to require parties to present a summary of documents (A/CN.9/669, paras. 50 and 51).

- as contained in the draft revised version

38. The Working Group may wish to recall its decision to group under draft article 27 all provisions relating to evidence. Therefore, the Working Group agreed that the substance of article 25, paragraph (5) of the 1976 version of the Rules should be deleted from that article and placed as paragraph (2) of draft article 27. The Working Group adopted the substance of paragraph (2), without modifications (A/CN.9/669, paras. 70 and 72).

Paragraph (4)

39. Consistent with the decision mentioned under paragraph 38 above to group under draft article 27 all provisions relating to evidence, the Working Group agreed to place the provision of article 25, paragraph (6) of the 1976 version of the Rules under draft article 27, as a new paragraph (4) (A/CN.9/669, paras. 70 and 73). The Working Group adopted the substance of paragraph (4), without modifications.

Hearings**Article 28**

1. In the event of an oral hearing, the arbitral tribunal shall give the parties adequate advance notice of the date, time and place thereof.
2. Witnesses and experts who are presented by the parties and then admitted to testify to the arbitral tribunal on any issue of fact or expertise may be any individual, notwithstanding that the individual is a party to the arbitration or in any way related to a party. Such witnesses and experts may be heard under the conditions and examined in the manner set by the arbitral tribunal.
3. Hearings shall be held in camera unless the parties agree otherwise. The arbitral tribunal may require the retirement of any witness or expert during the testimony of other witnesses or experts, except that a witness or expert who is a party to the arbitration shall not, in principle, be asked to retire.
4. The arbitral tribunal may direct that witnesses and experts be examined through means of telecommunication that do not require their physical presence at the hearing (such as videoconference).

*Remarks on draft article 28 [numbered article 25 in the 1976 version of the Rules]**Title*

40. The Working Group agreed that draft article 28 be titled “Hearings”, as the purpose of that article is to deal with the organization of hearings (A/CN.9/669, para. 70).

Paragraph (1)

41. Paragraph (1) is reproduced without modification from the 1976 version of the Rules and was adopted in substance by the Working Group (A/CN.9/669, para. 70).

Paragraph (2)

- as contained in the 1976 version of that article

42. The Working Group agreed to delete paragraph (2) as contained in the 1976 version of that article considering that the requirement for an arbitral tribunal to send advance notice to parties in the event of oral hearing in paragraph (1) also cover the identification of persons who are to be examined at the hearing and that the Rules already contain a provision on languages in article 17 (A/CN.9/669, para. 80).

- as contained in the draft revised version

43. The Working Group adopted the substance of paragraph (2) of draft article 28, subject to further drafting consideration (A/CN.9/669, para. 79). The proposed revised version of paragraph (2) is based on drafting suggestions made in the Working Group (A/CN.9/669, paras. 57-60 and 70) and the Working Group may wish to consider whether it adequately addresses the concern expressed by the Working Group that the distinction between experts appointed by a party and by the tribunal be clarified (A/CN.9/669, paras. 76 and 77).

Paragraph (3)

- as contained in the 1976 version of that article

44. The Working Group agreed to delete paragraph (3) as contained in the 1976 version of that article because its provisions have been found too detailed to be included in modern arbitration rules (A/CN.9/669, paras. 63 and 81).

- as contained in the draft revised version

45. The Working Group adopted the substance of paragraph (3) of draft article 28, subject to the clarification that a party appearing as a witness (or expert) should not generally be requested to retire during the testimony of other witnesses (or experts) (A/CN.9/669, paras. 82 and 83). The words “except when the witness or expert is also a party to the arbitration” are proposed to be added at the end of paragraph (3) to address that matter.

Paragraph (4)

46. The Working Group adopted the substance of paragraph (4) (A/CN.9/669, para. 84). Concerning the example of examination by video transmission, the Working Group requested the Secretariat to find appropriate wording to cover the example of examination by video transmission. The Working Group may wish to consider whether the additions of the words “of telecommunication” after the word “means” would appropriately cover all existing and future means of communication and whether the words “videoconference” should be kept in brackets as an example thereof (A/CN.9/669, paras. 65-67 and 84).

47. The Working Group may wish to consider whether a provision should be added to address the situation where a party failed to appear at a hearing without showing sufficient cause.

I. Introduction

1. At its thirty-first session (New York, 1-12 June 1998), the Commission, with reference to discussions at the special commemorative New York Convention Day held in June 1998 to celebrate the fortieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (“the New York Convention”), considered that it would be useful to engage in a discussion of possible future work in the area of arbitration. It requested the

Secretariat to prepare a note that would serve as a basis for the consideration of the Commission at its next session.¹

2. At its thirty-second session (Vienna, 17 May-4 June 1999), the Commission had before it a note entitled “Possible future work in the area of international commercial arbitration” (A/CN.9/460). Welcoming the opportunity to discuss the desirability and feasibility of further development of the law of international commercial arbitration, the Commission generally considered that the time had come to assess the extensive and favourable experience with national enactments of the UNCITRAL Model Law on International Commercial Arbitration (1985) (“the UNCITRAL Model Law”), as well as the use of the UNCITRAL Arbitration Rules (“the UNCITRAL Arbitration Rules” or “the Rules”) and the UNCITRAL Conciliation Rules, and to evaluate, in the universal forum of the Commission, the acceptability of ideas and proposals for improvement of arbitration laws, rules and practices.² When the Commission discussed that topic, it left open the question of what form its future work might take. It was agreed that decisions on the matter should be taken later as the substance of proposed solutions became clearer. Uniform provisions might, for example, take the form of a legislative text (such as model legislative provisions or a treaty) or a non-legislative text (such as a model contractual rule or a practice guide).³

3. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that the topic of revising the UNCITRAL Arbitration Rules should be given priority. The Commission noted that, as one of the early instruments elaborated by UNCITRAL in the field of arbitration, the UNCITRAL Arbitration Rules were recognized as a very successful text, adopted by many arbitration centres and used in many different instances, such as, for example, in investor-State disputes. In recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of the UNCITRAL Arbitration Rules should not alter the structure of the text, its spirit or its drafting style, and should respect the flexibility of the text rather than make it more complex. It was suggested that the Working Group should undertake to carefully define the list of topics which might need to be addressed in a revised version of the UNCITRAL Arbitration Rules.⁴ The most recent compilation of historical references regarding the consideration by the Commission of works of the Working Group can be found in document A/CN.9/WG.II/WP.156, paragraphs 5-20.

II. Organization of the session

4. The Working Group, which was composed of all States members of the Commission, held its fifty-second session in New York, from 1 to 5 February 2010. The session was attended by the following States members of the Working Group: Armenia, Australia, Austria, Belarus, Bolivia (Plurinational State of), Bulgaria, Cameroon, Canada, Chile, China, Colombia, Czech Republic, Ecuador, Egypt,

¹ *Official Records of the General Assembly, Fifty-third Session, Supplement No. 17 (A/53/17)*, para. 235.

² *Ibid.*, *Fifty-fourth Session, Supplement No. 17 (A/54/17)*, para. 337.

³ *Ibid.*, para. 338.

⁴ *Ibid.*, *Sixty-first Session, Supplement No. 17 (A/61/17)*, para. 184.

El Salvador, France, Germany, Greece, Guatemala, India, Iran (Islamic Republic of), Israel, Italy, Japan, Kenya, Lebanon, Madagascar, Malaysia, Mexico, Mongolia, Morocco, Nigeria, Norway, Pakistan, Paraguay, Poland, Republic of Korea, Russian Federation, Senegal, Serbia, Singapore, Spain, Switzerland, Thailand, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

5. The session was attended by observers from the following States: Argentina, Belgium, Costa Rica, Croatia, Cuba, Finland, Indonesia, Iraq, Kuwait, Libyan Arab Jamahiriya, Mauritania, Mauritius, Netherlands, Panama, Peru, Philippines, Qatar, Romania, the former Yugoslav Republic of Macedonia, Turkey and United Arab Emirates.

6. The session was attended by observers from the following non-member States and entities: Holy See and Palestine.

7. The session was attended by observers from the following organization of the United Nations System: the International Centre for Settlement of Investment Disputes (ICSID) and the World Bank.

8. The session was attended by observers from the following invited international intergovernmental organizations: Asian-African Legal Consultative Organization (AALCO), International Cotton Advisory Committee (ICAC) and Permanent Court of Arbitration (PCA).

9. The session was also attended by observers from the following invited international non-governmental organizations: Alumni Association of the Willem C. Vis International Commercial Arbitration Moot (MAA), American Arbitration Association (AAA), American Bar Association (ABA), Arab Association for International Arbitration (AAIA), Asia Pacific Regional Arbitration Group (APRAG), *Asociación Americana de Derecho Internacional Privado (ASADIP)*, Association for the Promotion of Arbitration in Africa (APAA), Association of the Bar of the City of New York (ABCNY), Cairo Regional Centre for International Commercial Arbitration (CRCICA), Center for International Environmental Law (CIEL), *Centre pour l'Étude et la Pratique de l'Arbitrage National et International (CEPANI)*, *Centro de Estudios de Derecho, Economía y Política (CEDEP)*, Chartered Institute of Arbitrators (CIARB), *Comité Français de l'Arbitrage (CFA)*, Construction Industry Arbitration Council (CIAC), Corporate Counsel International Arbitration Group (CCIAG), Council of Bars and Law Societies of Europe (CCBE), Forum for International Conciliation and Arbitration C.I.C. (FICACIC), Gulf Cooperation Council (GCC) Commercial Arbitration Centre, ICC International Court of Arbitration, Institute of International Commercial Law, Inter-American Bar Association (IABA), Inter-American Commercial Arbitration Commission (IACAC), International Arbitral Centre of the Austrian Federal Economic Chamber (VIAC), International Arbitration Institute (IAI), International Bar Association (IBA), International Insolvency Institute (III), International Institute for Sustainable Development (IISD), International Swaps and Derivatives Association (ISDA), Kuala Lumpur Regional Centre for Arbitration (KLRCA), London Court of International Arbitration (LCIA), Milan Club of Arbitrators, Queen Mary University of London School of International Arbitration (QMUL), Regional Centre for International Commercial Arbitration — Lagos (RCICAL) and Swiss Arbitration Association (ASA).

10. The Working Group elected the following officers:
Chairman: Mr. Michael E. Schneider (Switzerland)
Rapporteur: Ms. Susan Downing (Australia)
11. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.156); (b) notes by the Secretariat on a revision of the UNCITRAL Arbitration Rules (A/CN.9/WG.II/WP.157, A/CN.9/WG.II/WP.157/Add.1 and A/CN.9/WG.II/WP.157/Add.2).
12. The Working Group adopted the following agenda:
 1. Opening of the session.
 2. Election of officers.
 3. Adoption of the agenda.
 4. Revision of the UNCITRAL Arbitration Rules.
 5. Other business.
 6. Adoption of the report.

III. Deliberations and decisions

13. The Working Group resumed its work on agenda item 4 on the basis of the notes prepared by the Secretariat (A/CN.9/WG.II/WP.157, A/CN.9/WG.II/WP.157/Add.1 and A/CN.9/WG.II/WP.157/Add.2). The deliberations and decisions of the Working Group with respect to this item are reflected in chapter IV.
14. At the closing of its deliberations, the Working Group requested the Secretariat to prepare a draft of revised UNCITRAL Arbitration Rules, based on the deliberations and decisions of the Working Group, noting those provisions that had not been fully discussed or where disagreement remained (draft article 2, paragraph (2), draft article 6, paragraph (3), draft article 34, paragraph (2) and draft article 41, paragraphs (3) and (4)). The Secretariat was requested to circulate the draft revised Rules to Governments for their comments, with a view to consideration and adoption of the draft revised Rules by the Commission at its forty-third session, scheduled to be held in New York, from 21 June to 9 July 2010.

IV. Revision of the UNCITRAL Arbitration Rules

15. The Working Group recalled that it had concluded a second reading of articles 27 to 39 of the draft revised Rules at its fifty-first session (A/CN.9/684) and agreed to resume discussions on the revision of the Rules on the basis of document A/CN.9/WG.II/WP.157 and its addenda 1 and 2.

Draft article 40

(corresponding to article 38 of the 1976 version of the Rules) — definition of costs

paragraph (1)

16. The Working Group agreed to replace, in paragraph (1), the words “and, if it deems it appropriate, in any other award” by the words “or, if it deems appropriate, in another decision”, in order to clarify that the arbitral tribunal could fix the costs in any decision it might render at any stage of the proceedings. It was further said that article 40, paragraph (3) of the 1976 version of the Rules provided that the arbitral tribunal should fix the costs of arbitration in the text of a termination order or an award on agreed terms when it issued such decisions. It was said that if the Working Group intended to place the substance of article 40, paragraph (3) of the 1976 version of the Rules under draft article 40, paragraph (1), it might then be preferable, for the sake of clarity, to add a reference to “termination order” and “award on agreed terms” in draft article 40, paragraph (1).

17. After discussion, the Working Group agreed with the proposed modifications to paragraph (1), as contained above in paragraph 16 and requested the Secretariat to redraft paragraph (1) accordingly.

paragraph (2)

18. It was noted that the words “if such costs were claimed during the arbitral proceedings” as contained in article 38, paragraph (e) of the 1976 version of the Rules had been deleted in draft article 40, paragraph (2) (e). It was then questioned whether that deletion could be understood as empowering the arbitral tribunal to decide on its own initiative on legal and other costs incurred by the parties in relation to the arbitration, regardless of whether such costs were actually claimed. In response, it was clarified that no such deviation from article 38, paragraph (e) of the 1976 version of the Rules was intended.

19. After discussion, the Working Group agreed that the substance of paragraph (2) was generally acceptable.

Draft article 41

(corresponding to article 39 of the 1976 version of the Rules) - fees of arbitrators

mechanism for review of fees and expenses of the arbitrators

20. The Working Group considered draft article 41, which included revised provisions aimed at providing parties with an opportunity to obtain review by disinterested third persons of whether the fees sought by arbitrators were excessive, in line with the decisions made by the Working Group at its forty-fifth (A/CN.9/614, paras. 133 and 134), forty-eighth (A/CN.9/646, paras. 20 to 27) and fifty-first (A/CN.9/684, paras. 122 to 126) sessions.

21. The necessity of providing a neutral mechanism aimed at such a review of fees charged by arbitrators in the case of non-administered arbitration was underlined. It was said that such a mechanism for review was advisable as a precaution to guard against the rare situations where an arbitrator might seek excessive fees. It was also pointed out that the process for establishing the arbitrators’ fees was crucial for the legitimacy and integrity of the arbitral process itself. It was further said that the revision of the provisions relating to the costs of arbitration, and in particular the

fixing of the fees by the arbitrators without any control thereof, was one of the main reasons for undertaking a revision of the Rules.

22. However, concerns were raised on the risks that draft article 41 might also entail. It was said that, in certain jurisdictions, domestic law provided for challenge and appeal procedures which allowed a State court to make a decision on arbitrators' fees and therefore draft article 41 might create uncertainties as to the beginning of the time period to apply for such challenge or appeal. It was said that according to draft article 41, paragraph (4), the appointing authority or, failing such authority, the Secretary-General of the Permanent Court of Arbitration (PCA) was empowered to impose modifications to the part of the award relating to costs, which might give rise to challenge of the award. Furthermore, the fixing of the fees was said to be a matter of a contractual nature between the parties and the arbitrators, and therefore intervention of a third party in that process was not justified. It was also said that some appointing authorities might inject their own views about appropriate fee levels into the review process, regardless of the arbitrators' original proposal on fees. It was noted that draft article 41, paragraphs (3) and (4) introduced significant time periods for challenging the arbitrator's fees, thereby creating potential delays for the finality of the award.

23. A question was raised whether the decision made by the appointing authority in relation to the fixing of the arbitrators' fees should be of a binding nature. It was said that the appointing authority might not, in all instances, be properly qualified to make such decision. The criteria to be applied by the appointing authority or the Secretary-General of the PCA in paragraph (4) were said not to provide enough guidance to those bodies and might encourage time-consuming scrutiny even of fee determinations that were fully consistent with a fees proposal that had been reviewed and left unchanged under draft article 41, paragraph (3).

24. The length of draft article 41 was found cumbersome. It was observed that the drafting of that provision should be simplified to reflect policy decisions only.

25. After discussion, the Working Group agreed to further consider whether the concerns expressed in the Working Group could be addressed by revising the drafting of paragraphs (3) and (4).

paragraph (3)

26. With a view to simplifying paragraph (3), it was proposed to delete the text referring to the designation of an appointing authority in case no such authority had already been agreed by the parties, and to deal with that question more generally under draft article 6. That proposal was supported. It was further said that the provision to be included under draft article 6 should also clarify whether the designation of an appointing authority would suspend the running of the time period defined under paragraph (3) (see below, para. 127).

27. It was further proposed to simplify the last sentence of paragraph (3) by deleting the words "remain under its continuing duty to". That proposal received support. It was suggested that the last sentence of paragraph (3) should also be made applicable with respect to paragraph (4). That suggestion also received support.

paragraph (4)

“pursuant to article 40, paragraphs 2 (a), (b) and (c)”

28. It was said that it might not be necessary to include in the review undertaken by the appointing authority or the Secretary-General of the PCA the “costs of expert advice and of other assistance required by the arbitral tribunal”. Accordingly, it was suggested that the reference to paragraph “2 (c)” in the first sentence of paragraph (4) be deleted.

“when informing the parties”

29. It was pointed out that the losing party might be tempted to challenge the decision of the arbitrators on fees, thereby delaying the rendering of the final award. It was suggested that paragraph (4) should therefore allow the arbitral tribunal to inform the parties of its decision on fees before a final award was made. To achieve that result, it was proposed to replace the words “when informing the parties of the arbitrators’ fees [and expenses] that have been fixed pursuant to article 40, paragraphs 2 (a), (b) and (c)” by the following words: “On informing the parties of its determination of the fees [and expenses]”. In response, it was said that draft article 40 already provided that the arbitral tribunal could determine the costs in any decision, and the proposed modification might not be necessary.

scope of review

30. In order to limit the scope of revision of costs by the appointing authority or the Secretary-General of the PCA, it was proposed to replace the words “satisfy the criteria in paragraph 1 as applied in” by the words “are consistent with”. However, it was said that retaining a reference to paragraph (1) would be advisable as it referred to the notion of reasonableness of the amount of arbitrators’ fees, an element to be taken into account by the appointing authority in its review. It was also said that such reference could prevent situations where, despite applying the agreed method for determining the fees, arbitrators would charge exaggerated amounts. In order to address the concern that the review process was too intrusive, it was suggested to modify the aforementioned proposal to “are manifestly inconsistent with”.

“fees and expenses”

31. The Working Group considered whether the review mechanism by the appointing authority and the Secretary-General of the PCA should also apply to the expenses of the arbitrators. It was said that review of expenses could be a cumbersome exercise, in particular in complex cases, and that it would be difficult for such a review to be made within 45 days, as currently provided under paragraph (4). In response, it was said that exaggeration also occurred in the determination of expenses and therefore expenses should be covered by the review mechanism.

32. To address the concern regarding time limitation for such a review, several proposals were made. One proposal was to provide that the appointing authority or the Secretary-General of the PCA should simply endeavour to decide on necessary adjustments within 45 days, and not be under an obligation to do so. Another suggestion was that the time period for such review should start running from the

date the appointing authority or the Secretary-General of the PCA received full information for making its decision.

33. After discussion, the inclusion of the expenses in the review to be undertaken by the appointing authority or the Secretary-General of the PCA was generally supported.

“treated as a correction to the award”

34. The Working Group agreed that the last sentence of paragraph (4), which provided that if the award had already been issued, any adjustment decided by the appointing authority or the Secretary-General of the PCA “be treated as a correction to the award pursuant to article 38”, should be clarified. It was observed that a modification of the decision of the arbitral tribunal on costs did not constitute a mere correction. It was suggested to replace the words “be treated as” by the words “has a status equivalent to”. That proposal did not receive support.

proposed new paragraph (5)

35. In order to address the concern regarding additional delays with respect to the rendering of the final award that might result from the application of paragraph (4), it was proposed to add a new paragraph to draft article 41, along the following lines: “A referral under paragraphs (3) and (4) shall not affect [the status] [the final nature] of the arbitral tribunal’s decisions on any matter contained in the award other than the amount of its fees.” It was said that that new paragraph usefully clarified that the finality of the award on decisions pertaining to the merits of the case would not be affected by the mechanism provided under paragraph (4). However, it was pointed out that such a provision might not be applicable in certain jurisdictions. Doubts were also expressed whether an award, which would leave out the decision on costs, could be enforced under the New York Convention. After discussion, the Working Group agreed to include the proposed new paragraph (5) in draft article 41.

proposal for a revision of draft article 41

36. After discussion, there was general support in the Working Group to modify draft article 41, to serve as a basis for the third reading of that article, as follows:

- Paragraph (1): the words “[and expenses]” would be added in square brackets after the word “fees”.
- Paragraph (2) would remain unchanged.
- Paragraph (3) would read as follows: “Promptly after its constitution, the arbitral tribunal shall inform the parties as to how it proposes to determine its fees [and expenses], including any rates it intends to apply. Within 15 days of receiving that proposal, any party may refer the proposal to the appointing authority for review. If, within 45 days of receipt of such a referral, the appointing authority finds that the proposal of the arbitral tribunal is [manifestly] inconsistent with the criteria in paragraph 1, it shall make any necessary adjustments thereto, which shall be binding upon the arbitral tribunal.”

- Paragraph (4) would read as follows: “When informing the parties of the arbitrators’ fees [and expenses] that have been fixed pursuant to article 40, paragraphs 2 (a) and (b), the arbitral tribunal shall also explain the manner in which the corresponding amounts have been calculated. Within 15 days of receiving the arbitral tribunal’s determination of fees [and expenses], any party may refer for review such determination to the appointing authority or, if no appointing authority has been agreed upon or designated or if such an appointing authority fails, refuses, or is unable to fulfil its functions under this paragraph, to the Secretary-General of the PCA. If, within 45 days of receiving such a referral, the appointing authority or the Secretary-General of the PCA finds that the arbitral tribunal’s determination is manifestly inconsistent with the arbitral tribunal’s proposal (as may have been adjusted) under paragraph 3 or with the criteria in paragraph 1, the appointing authority or the Secretary-General of the PCA shall make any necessary adjustments to the arbitral tribunal’s determination, which shall be binding upon the arbitral tribunal. Any such adjustments either shall be included by the tribunal in its award or, if the award has already been issued, shall be [reflected] [implemented] in a correction to the award pursuant to article 38.”
- The following paragraphs would be added. Paragraph (5) would read: “Throughout the procedure under paragraph 3 or 4, the arbitral tribunal shall proceed with the arbitration, in accordance with article 17, paragraph 1.” Paragraph (6) would read: “A referral under paragraph 4 shall not affect any determination in the award other than the arbitral tribunal’s fees and expenses.”

Draft article 42

(corresponding to article 40 of the 1976 version of the Rules) — allocation of costs

37. The Working Group agreed that the substance of draft article 42 was generally acceptable.

Draft article 43

(corresponding to article 41 of the 1976 version of the Rules) — deposit of costs

38. The Working Group agreed that the substance of draft article 43 was generally acceptable.

Draft additional provision — Filling of gaps in the Rules

39. The Working Group considered a proposed draft additional article which established a gap-filling provision aimed at clarifying that matters governed by the Rules which were not expressly settled in them were to be settled in conformity with the general principles on which the Rules were based (A/CN.9/WG.II/WP.157/Add.2, para. 34). The Working Group had agreed, at its forty-eighth session, to further consider whether such a provision should be included in the Rules (A/CN.9/646, paras. 50-53).

40. Some support was expressed in favour of retaining a provision on gap filling in a revised version of the Rules. It was considered useful to emphasize that the Rules constituted a self-contained system of contractual norms and that any lacunae

in the Rules were to be filled by reference to the Rules themselves. It was pointed out that issues might arise that were not addressed in the Rules and it was preferable to provide guidance to the users of the Rules by referring to the general principles on which the Rules were based.

41. Some of the delegations that supported inclusion of a gap-filling provision considered that it might be useful to complement that text by adding language along the lines of article 2A, paragraph (1) of the UNCITRAL Model Law. It was said that referring to the international origin of the Rules, the need to promote their uniform interpretation and application, as well as the observance of good faith would be useful information on the applicable principles. That proposal received little support, as it was pointed out that article 2A, paragraph (1) of the UNCITRAL Model Law was aimed at providing guidance on the interpretation of legislative texts and not on instruments of a contractual nature such as the Rules.

42. In order to avoid referring to the notion of “principles”, which might give rise to uncertainty as to their definition, it was proposed to replace the words “the general principles on which those Rules are based” by the words “the spirit of those Rules”, thereby adopting language closer to article 35 of the Rules of Arbitration of the International Chamber of Commerce (“ICC Rules of Arbitration”) and article 32.2 of the Rules of the London Court of International Arbitration (“LCIA Rules”). That proposal received some support.

43. Those opposing inclusion of a gap-filling provision in the Rules said that since general principles referred to in that provision were not defined, complex issues of interpretation might ensue. It was said that the same concern applied to the use of “the spirit of the Rules”, as proposed above, in paragraph 42. In addition, it was pointed out that the application of such a provision could lead to challenge of awards on the grounds that the procedure adopted by the arbitral tribunal differed from that agreed by the parties. Further, it was pointed out that draft article 17 of the Rules already provided guiding principles regarding the conduct of arbitral proceedings, due process and efficiency of arbitral proceedings. While it was recognized that draft article 17 provided sufficient basis for finding solutions to procedural questions that arose during the proceedings, it was pointed out that issues not related to the conduct of proceedings might arise that were not addressed in the Rules.

44. After discussion, in the absence of consensus, the Working Group agreed not to include a provision on gap filling in a revised version of the Rules.

Draft additional provision, tentatively numbered draft article 16

exclusion of liability

45. The Working Group considered a proposed draft provision on liability, tentatively numbered draft article 16 (A/CN.9/WG.II/WP.157, para. 41). Draft article 16 established immunity for the participants in the arbitration and sought to preserve exoneration in cases where the applicable law allowed contractual exoneration from liability, to the fullest extent permitted by such law (A/CN.9/646, paras. 38-45).

46. The Working Group agreed that participants in the arbitration should in principle be granted immunity or limitation of liability for their acts or omissions in connection with the arbitration to the fullest extent permitted by the applicable law.

It was said that such a provision would ensure that arbitrators were protected from the threat of potentially large claims by parties dissatisfied with arbitral tribunals' rulings or awards who might claim that such rulings or awards arose from the negligence or fault of an arbitrator.

47. It was explained that a waiver "to the fullest extent permitted under the applicable law" did not and should not extend to intentional wrongdoing. Therefore, it was suggested to expressly exclude from the scope of exemption of liability the case of "intentional wrongdoing". That proposal received support.

48. After discussion, the Working Group agreed to revise draft article 16 along the following lines: "Save for intentional wrongdoing, the parties waive, to the fullest extent permitted under the applicable law, any claim against the arbitrators, the appointing authority, the Secretary-General of the PCA and any person appointed by the arbitral tribunal based on any act or omission in connection with the arbitration."

Draft article 29

(corresponding to article 27 of the 1976 version of the Rules) — proposal for a new paragraph on objecting against experts appointed by the arbitral tribunal

principle of inclusion of a provision on challenge of, or on objections against, experts appointed by the arbitral tribunal

49. The Working Group considered whether a procedure for challenging, or objecting against, experts appointed by the arbitral tribunal should be provided for in draft article 29 on the basis of a draft provision contained in document A/CN.9/WG.II/WP.157/Add.1, paragraph 37 ("draft provision"), and of a proposal along the following lines: "1. Within ten days of their being notified of the designation of the expert or experts, the parties may, giving their reasons, challenge the expert or experts. 2. At the request — with reasons given — of the parties, the deadline for the challenging of experts may be extended by the arbitral tribunal. 3. Exceptionally, experts may, up until they are about to render their opinion, be challenged by the parties on the grounds that information casting doubt on their impartiality and independence has recently come to light. 4. The arbitral tribunal shall decide on the challenge, upholding it or confirming the appointment of the expert."

50. The Working Group generally agreed that, as a matter of principle, a procedure for objecting against experts appointed by the arbitral tribunal should be included in the revised Rules. The Working Group took note that the draft provision followed article 6 of the IBA Rules on the Taking of Evidence in International Commercial Arbitration ("IBA Rules") and general support was expressed for adopting the approach reflected in the draft provision.

impartiality and independence

51. The Working Group agreed to include the words "impartiality and" before the word "independence" where that word appeared in the draft provision.

52. It was agreed that objections could be made to an expert's qualifications as well as to his or her independence or impartiality.

53. To align the wording of the draft provision with article 6 of the IBA Rules, it was suggested to provide that the expert should be impartial and independent not only from the parties and the arbitral tribunal but also from the legal advisers. However, it was pointed out that the purpose of broadening application of the provision would be better achieved by deleting the words “from the parties[, their legal advisers] and the arbitral tribunal” at the end of the first sentence of the draft provision. That proposal found broad support.

“before accepting the appointment”

54. It was said that the draft provision did not permit the arbitral tribunal to appoint an expert before he or she submitted his or her statement of independence and impartiality. It was suggested that some level of flexibility should be introduced by including the words “or, as soon as practical” before the word “submit” in the first sentence of the draft provision to accommodate situations in which the arbitral tribunal found urgent need of an expert, such as to evaluate perishable evidence. It was suggested that that objective could also be achieved by including the words “in principle” before the words “before accepting appointment” to highlight the exceptional character of that procedure. Those proposals received support.

“within the time ordered by the arbitral tribunal”

55. It was pointed out that the draft provision enabled the parties to object to the choice of an expert within the time limit provided by the tribunal and that that provision could be understood as prohibiting parties from raising objections thereafter. It was proposed that parties should expressly be allowed to challenge experts anytime and that experts be subject to a continuing duty of disclosure throughout the proceedings. Concern was expressed that allowing parties to challenge experts at any time might give rise to dilatory tactics. It was said that since draft article 27, paragraph (4) provided the arbitral tribunal with the discretion to determine the relevance and weight of the evidence offered, and draft article 29 allowed parties to submit their opinion on the expert’s report, it might not be necessary to specifically address that matter in the draft provision.

additional paragraph to draft article 29

56. After discussion, the Working Group agreed that a new paragraph would be added in draft article 29, after paragraph (1), along the following lines: “The expert shall, in principle before accepting appointment, submit to the arbitral tribunal and to the parties a description of his or her qualifications and a statement of his or her impartiality and independence. Within the time ordered by the arbitral tribunal, the parties shall inform the arbitral tribunal whether they have any objections as to the expert’s qualifications, impartiality or independence. The arbitral tribunal shall decide promptly whether to accept any such objections. After an expert’s appointment, a party may object to the expert’s qualification, impartiality or independence only if the objection is for reasons of which the party becomes aware after the appointment has been made. The arbitral tribunal shall decide promptly what, if any, action to take.”

Draft model arbitration clause for contracts

57. The Working Group agreed that the substance of the draft model arbitration clause for contracts was acceptable.

Draft model statement of independence pursuant to article 11 of the Rules

58. The Working Group approved the draft model statement of independence and took note of the proposed additional statement regarding declaration of availability by the arbitrators. The Working Group agreed that the sentence introducing that statement should read: “Note — The parties may require the arbitrators to also make the following statement:”

Section I. Introductory rules

59. The Working Group commenced its third reading of the draft revised Rules on the basis of document A/CN.9/WG.II/WP.157 and its addenda 1 and 2. The Working Group focused on provisions listed by the Secretariat in the aforementioned document that the Working Group had, in previous sessions, indicated should be further considered, and also on provisions that delegations had identified for additional consideration.

60. Under section I, introductory rules, the Working Group approved the substance of draft articles 1, 3 and 5 without any change.

Draft article 2

notice and calculation of periods of time

paragraphs 1 and 2

61. The Working Group considered paragraphs (1) and (2), which sought to reflect the decision of the Working Group at its forty-ninth session to expressly include in the first paragraph language which authorized delivery of notice by any means of communication that provided a record of transmission and to include in the second paragraph provisions addressing the situation where a notice could not be delivered to the addressee in person (A/CN.9/665, paras. 28 and 29).

62. Various concerns were expressed in relation to those paragraphs. It was said that paragraph (1) only provided that a notice should “be delivered by any means of communication that provides a record of its transmission”, thereby not requiring confirmation of delivery of notices. The term “designated address” in paragraph (2) was found ambiguous and it was said that a better approach would be to replace those words by wording along the lines of “postal address or e-mail address designated by a party for receipt of such notice”.

63. It was further said that the concept of deemed delivery of notice in paragraph (2) might not receive application in those jurisdictions which required actual delivery of notice. It was suggested that draft article 2 should make a clear distinction between delivery and sending of notices, depending on whether the addressee could actually be reached. It was further proposed to clarify the last sentence of paragraph (2) by replacing it by wording along the following lines: “Such notice shall also be deemed to have been received if received via an address

or method as agreed to by the parties or according to the practice followed by the parties in previous dealings.”

64. To address the aforementioned concerns expressed in the Working Group, a proposal was made to replace paragraph (2) by a provision along the following lines: “For the purposes of these Rules, any notice is deemed to have been received if: (a) it is physically delivered to the addressee, or if it is delivered at its habitual residence, place of business, the postal address, or at electronic address or telefax number previously designated by the addressee for this purpose, in each case by means which provide the record of the [actual] delivery, or (b) if none of these can be found after making reasonable inquiry, or if delivery otherwise failed under subparagraph (a), then notice is deemed to have been received if it is sent to the addressee’s last known address or place of business by registered letter or any other means which provides a record of the attempt to deliver it. Notice shall be deemed to have been received on the day it is so delivered.”

65. Concerns were raised that the structure of the proposed amendment to paragraph (2) might be confusing as the chapeau referred to “deemed delivery”, whereas subparagraph (a) referred to actual delivery. It was questioned whether the listing of means of delivery was needed. A proposal was made to amend paragraph (2) along the following lines: “For the purposes of these Rules, any notice is deemed to have been received if (a) it is delivered to the addressee personally, or it is delivered at its place of business, habitual residence, postal address, or (if so designated) electronic address or telefax number, [in each case, by means which provide a record of delivery]; or (b) notwithstanding reasonable efforts, delivery cannot be effected under any of the methods in paragraph (a), it is sent to the addressee’s last known place of business, habitual residence, or postal address, by means which provide a record of the attempt [under subparagraph (a)] to deliver it [under subparagraph (b)]. Notice shall be deemed to have been received on the date it is so delivered or attempted to be delivered.” Some views were expressed that the bracketed text “in each case, by means which provide a record of delivery” was necessary to ensure that the means used provided a record of delivery. In response, it was said that the bracketed language would apply to all transmissions, which might be excessive. The following other matters were raised in the Working Group for future discussion: the list of communications of a particular importance requiring report of receipt, and relying on the burden of proof in the context of notification.

66. After discussion, the Working Group requested the Secretariat to prepare a revised draft of article 2 based on the discussions of the Working Group, for further consideration by the Commission.

Draft article 4

(new article) — response to the notice of arbitration

inclusion of a third party before constitution of the arbitral tribunal

67. It was noted that draft article 17, paragraph (5), which allowed third parties to be joined in the arbitration as a party, only applied after the constitution of the arbitral tribunal. It was further noted that the most appropriate time for a party to be joined in arbitration proceedings was at the early stage of the procedure, before the arbitral tribunal was constituted. In that regard, it was agreed to add in draft

article 4, paragraph (2) a new subparagraph along the following lines: “(f) in so far as the respondent formulates claims against a party to the arbitration agreement other than the claimant, its response shall include a notice of arbitration in accordance with article 3.”

paragraph (3)

68. It was noted that, while the arbitral tribunal was expressly authorized to resolve any controversy regarding the sufficiency of the notice of arbitration under draft article 3, paragraph (5), no corresponding provision could be found in relation to controversy regarding the response to the notice of arbitration in draft article 4, paragraph (3). Therefore, the Working Group agreed to modify draft article 4, paragraph (3) as follows: “The constitution of the arbitral tribunal shall not be hindered by any controversy with respect to the respondent’s failure to communicate a response to the notice of arbitration, or an incomplete or late response to the notice of arbitration, which shall be finally resolved by the arbitral tribunal”.

69. With that modification to paragraph (3), the Working Group approved draft article 4 in substance.

Section II. Composition of the arbitral tribunal

70. Under section II, composition of the arbitral tribunal, the Working Group approved the substance of draft articles 8, 9, 11, 12, 15 and 16 (as article 16 appeared above in para. 48) without any change.

Draft article 7

(corresponding to article 5 of the 1976 version of the Rules) — number of arbitrators

paragraph (2)

71. For the sake of clarity, the Working Group agreed to include in the first line of paragraph (2) the word “other” before the word “party” and the word “party’s” before the word “proposal”.

72. With that modification, the Working Group approved draft article 7 in substance.

Draft article 10 (new article)

paragraph (3)

73. The Working Group recalled its decision at its forty-sixth session to include in draft article 10, paragraph (3), as a matter of principle, a provision authorizing the appointing authority to constitute the arbitral tribunal, including the right to revoke already appointed arbitrators (see A/CN.9/619, paras. 89-91). Although one concern was expressed regarding the use of the word “revoke” in paragraph (3), that paragraph was generally found acceptable.

74. After discussion, the Working Group approved draft article 10 in substance.

Draft article 13

(corresponding to articles 11 and 12 of the 1976 version of the Rules)

paragraph (4)

75. It was suggested to replace the words “all parties do not agree” contained in the first line of draft article 13, paragraph (4) by the words “not all parties agree”, in order to clarify that the disagreement by one party sufficed to trigger the procedure in draft article 13, paragraph (4). In response, it was said that the current wording clearly conveyed that meaning.

76. After discussion, the Working Group approved draft article 13 in substance. The Working Group took note that paragraph (4) would be amended following inclusion in draft article 6 of a general provision regulating the situation where the Rules provided for a period within which a party should act before the appointing authority, and no appointing authority had been agreed upon or designated (see below, para. 127).

Draft article 14

(corresponding to article 13 of the 1976 version of the Rules) - replacement of an arbitrator

*paragraph (2)**role of the appointing authority*

77. The Working Group considered paragraph (2), which referred to situations where a party, in exceptional circumstances, had to be deprived of its right to appoint the substitute arbitrator. A suggestion was made that the arbitrators themselves, rather than just the appointing authority should be given the power to decide to proceed as a truncated tribunal. In response, it was said that allowing the arbitrators to decide whether to proceed as a truncated tribunal might not provide sufficient safeguards for the parties, in particular in the case of collusion between arbitrators. It was also said that in rules of other international arbitral institution, that decision was in the hands of a third party and not of the arbitrators. Article 12 (5) of the ICC Rules of Arbitration was quoted as an illustration. After discussion, the aforementioned suggestion did not receive support.

“in view of the exceptional circumstances of the case”

78. It was suggested to replace the words “exceptional circumstances” appearing before the words “of the case” in paragraph (2) by wording along the lines of “circumstances that lead to the replacement of the arbitrator”, to better define the circumstances that might give rise to the decision by an appointing authority to deprive a party of its right to appoint a substitute arbitrator. However, it was felt that a broader approach might be preferable and a reference to “the circumstances of the case” would allow the appointing authority to take account of all circumstances or incidents which might have occurred during the proceedings.

79. After discussion, the Working Group agreed to retain the words “in view of the exceptional circumstances of the case”.

“if the same occurs”

80. For the sake of clarity, it was proposed to delete the opening words “if the same occurs” in paragraph (2) (b). In response, it was said that those words should be kept as they clarified that an appointing authority might only permit an arbitral tribunal to proceed as a truncated tribunal after the closure of the hearings. In support for the proposal, it was said that those words were likely to create confusion, as it was unclear which occurrence the word “same” was meant to refer to. Further, it was pointed out that those words might be understood as limiting the assessment of the exceptional circumstances by the appointing authority to those circumstances which would have occurred after the closure of the hearings.

81. The Working Group agreed to delete the words “if the same occurs” from paragraph (2) (b).

82. The Working Group approved draft article 14 in substance, with the modifications mentioned above in para. 81.

Section III. Arbitral proceedings

83. Under section III, arbitral proceedings, the Working Group approved the substance of draft articles 18 to 25, 28, 29 (with the inclusion of a new paragraph, as reflected above, in para. 56), 30 and 31 without any change.

Draft article 17

(corresponding to article 15 of the 1976 version of the Rules) - general provisions

paragraph (1)

84. It was pointed out that the first and the second sentences of paragraph (1) might be inconsistent, as the first sentence provided that the arbitral tribunal “may conduct the arbitration in such manner as it considers appropriate”, whereas the second sentence could be read as imposing on the tribunal an obligation to conduct the proceedings in accordance with certain principles. It was therefore proposed to replace the words “in exercising its discretion, shall” by the words “should conduct the proceedings in the manner it considers appropriate”. That proposal did not receive support as it was felt that the existing wording sufficiently reflected the arbitral tribunal’s discretion.

paragraph (2)

85. It was proposed to include as a first sentence in paragraph (2) a provision along the following lines: “As soon as practicable after its constitution and after inviting the parties to express their views, the arbitral tribunal shall establish the provisional timetable of the arbitration”. An objection was made that that attempted to regulate the conduct of proceedings in a way that might not be appropriate in all cases. However, the proposal found broad support on the basis that it would enhance efficiency of the proceedings and reflected good practice.

86. The Working Group agreed to include that proposal in paragraph (2).

paragraph (4)

87. The Working Group considered the words in square brackets in paragraph (4) which read “[except for communications referred to in article 26, paragraph 9]”. The Working Group agreed that those words should be retained in the revised Rules as they usefully clarified the exception to simultaneous communication in the case of preliminary orders.

paragraph (5)

88. It was pointed out that the term “prejudice” contained in paragraph (5) might be understood differently. It was proposed to replace the words “because of prejudice to any of those parties” by the words “taking into consideration fairness to each of the parties”. It was said that the reasons to be taken into account by the arbitral tribunal to refuse joinder of a third person might not be limited to consideration of fairness and should be wider, including the principles in draft article 17, paragraph (1). In addition, it was said that prejudice was only one of those principles, and the reference to it could be understood as excluding application of other principles. Therefore, another proposal was made to include in paragraph (5) a reference to paragraph (1). Those proposals did not find support as the principles in paragraph (1) were viewed to be applicable in any case.

89. After discussion, the Working Group agreed that paragraph (5) should not be amended.

proposed additional provision

90. A proposal was made to include a new provision in draft article 17 along the following lines: “The arbitral tribunal may hold one or more procedural conferences with the parties at any appropriate stage in the arbitral proceedings”. That proposal was not supported, since it was said to overregulate the matter.

91. The Working Group approved draft article 17 in substance, with the modifications mentioned above in para. 85.

Draft article 26

(corresponding to article 26 of the 1976 version of the Rules) - interim measures

paragraph 8

92. The Working Group recalled that, at its fiftieth session, it was considered that paragraph (8) might have the effect that a party requesting an interim measure be liable to pay costs and damages in situations where, for instance, the conditions of draft article 26 had been met, but the requesting party lost the arbitration (A/CN.9/669, para. 116). That included situations where the granting of interim measures was not justified in light of the outcome of the case, in particular where the arbitral tribunal later found that the claim for which the interim measure was sought was not valid. To address that concern, options were proposed for the Working Group’s consideration.

93. The options were that the party requesting an interim measure might be liable for any costs and damages caused by the measure if the arbitral tribunal determined that the measure “should not have been granted” or “was not justified”. Some support was expressed for the inclusion of the words “should not have been

granted” at the end of the first sentence of paragraph (8), for the sake of consistency with the approach taken in article 17 G of the UNCITRAL Model Law. Other views supported the second option in paragraph (8) that the measure “was not justified”, as it was found to better cater for the situation where a measure was granted in compliance with all conditions, but was later found to cause damages.

94. After discussion, the Working Group agreed to modify the first sentence of paragraph (8), so that it would read as follows: “The party requesting an interim measure may be liable for any costs and damages caused by the measure to any party if the arbitral tribunal later determines that, in the circumstances then prevailing, the measure should not have been granted”.

95. With that modification, the Working Group agreed that the substance of draft article 26 was acceptable.

Draft article 27

(corresponding to article 24 of the 1976 version of the Rules) — evidence

paragraph (1)

96. It was observed that paragraph (1), which provided that each party should have the burden of proving the facts relied on to support its claim or defence, might conflict with applicable law on evidence, since there were a variety of legislative approaches to that matter. Therefore, it was proposed to include at the beginning of paragraph (1) the words: “Save as otherwise provided by applicable law”. That proposal found some support on the basis that it expressed a legitimate concern, and would clarify which provision would prevail in circumstances where applicable domestic law would contain a regulation different from paragraph (1). Another view expressed was that paragraph (1) might not serve a useful purpose and could be deleted.

97. Against deletion or modification of paragraph (1), it was said that the purpose of that paragraph was to clarify that the parties should be expected to provide evidence to support their allegations. Arbitrators would in any case have the ability to determine the applicable law, including to the question of evidence and burden of proof. It was also said that the general principle in paragraph (1) had proven useful in the context of treaty-based investor-State arbitration and was found in a number of arbitration rules of arbitral institutions.

98. After discussion, the Working Group agreed to maintain paragraph (1) without any change on the understanding that it did not prevent application of regulations on the burden of proof in the applicable law.

paragraph (2)

99. The Working Group found the reference to “witnesses, including expert witnesses” in paragraph (2) acceptable and approved draft article 27 in substance.

Draft article 32

(corresponding to article 30 in the 1976 version of the Rules) — waiver of right to object

100. The Working Group noted that draft article 32 had been redrafted pursuant to its deliberation at its fifty-first session (A/CN.9/684, paras. 49 and 51).

101. The Working Group approved draft article 32 in substance.

Section IV. The award

102. Under section IV, the award, the Working Group approved the substance of draft articles 33, 35, 37, 38, 40 and 43 without any change.

Draft article 34

(corresponding to article 32 of the 1976 version of the Rules) - form and effect of the award

paragraph (2)

“shall” — “undertake”

103. The Working Group agreed to replace in the second sentence of paragraph (2) the word “undertake” appearing before the words “to carry” by the word “shall”. The Working Group clarified that, by adopting that revised language, it did not intend to modify the substance of that provision, and only wished to address a concern expressed regarding the meaning attributed to that term in certain jurisdictions. The Working Group requested the Secretariat, for the sake of consistency, to replace the word “undertake” by the word “shall”, where that word appeared in the Rules.

“except for an application for setting aside an award”

104. The Working Group considered the third sentence of paragraph (2), which addressed the question of waiver of recourses against an award by the parties. As a matter of principle, the Working Group agreed that paragraph (2) should contain a waiver of all recourses which could be validly waived and be drafted in a manner that avoided any confusion as to the scope of the waiver. Diverging views were expressed regarding the manner in which the scope of the waiver should be determined.

105. A view was expressed that the reference to the setting aside of awards as a recourse to be expressly excluded from the scope of the waiver would give rise to a number of difficulties. That term, it was further said, was not defined in the Rules. Despite being referred to in the context of article V (1) (e) of the New York Convention and article 34 of the UNCITRAL Model Law, the notion of “setting aside” encompassed a variety of procedures and, depending on the jurisdictions, was applied differently. In addition, it was observed that article V (1) (e) of the New York Convention allowed State courts to refuse recognition and enforcement of awards in cases where the award had been set aside or suspended by a competent authority. Therefore, highlighting that particular recourse might have the unintended effect of increasing the number of applications for setting aside, thereby affecting finality of awards.

106. It was proposed to replace the words “except for an application for setting aside an award” by the words “insofar as such waiver can be validly made”, thereby adopting a more general formulation along the lines of corresponding provisions that could be found in rules of other arbitral institutions such as in article 28 (6) of the ICC Rules of Arbitration and article 26.9 of the LCIA Rules. Another proposal

was made to limit the waiver to recourse regarding revision of the award on the merits.

107. Against the approach reflected in those proposals, it was observed that there was doubt on the part of practitioners as to the scope of the waiver and, given that the Working Group did not intend the waiver to extend to actions for setting aside, the revised language should remove such doubt. It was also recalled that the reference in draft article 34, paragraph (2) to an express agreement of the parties regarding waiver of the right to apply for setting aside an award was intended to avoid the situation where parties could be deprived automatically of an exclusive recourse through the submission of a dispute to the Rules. Therefore, it was felt necessary to maintain an express exclusion from the scope of the waiver of that specific recourse, and keep paragraph (2) as it appeared in draft article 34. Some of those in favour of retaining such express exclusion proposed to slightly amend the second sentence of paragraph (2) by replacing the words “for setting aside an award” appearing at the end of paragraph (2) by the words “requesting a setting aside”.

right to resist enforcement of an award

108. With the aim of clarifying the scope of the waiver, the Working Group considered whether additional language should be provided in order to put it beyond doubt that the right to resist enforcement of an award as provided under article V of the New York Convention and article 36 of the UNCITRAL Model Law was to be understood as excluded from the waiver of recourse. Following that approach, it was suggested to insert language modelled on paragraph 45 of the Explanatory Note by the UNCITRAL secretariat on the Model Law, along the lines of: “In regulating recourse, this paragraph does not preclude a party from seeking court control by way of defence in enforcement proceedings.” Towards the same aim, another proposal was made to replace the word “regarding” appearing after the word “recourse” in the third sentence of paragraph (2) by the word “against” so that it would no longer be necessary to include a proposal on enforcement.

proposed revised version of the provision on waiver of recourses

109. In order to reconcile the diverging views, it was proposed to add as the opening words of the third sentence of paragraph (2) wording along the lines of: “Insofar as they may validly do so,”. Further, it was proposed to add a sentence providing that nothing in paragraph (2) should prejudice enforcement of an award. That proposal was supported.

110. After discussion, the following proposal was made: “Insofar as they may validly do so by adopting these Rules, the parties waive their right to [initiate] any form of appeal [or] review [or recourse] against an award to any court or other competent authority [, except for an application requesting a setting aside, and proceedings regarding execution and enforcement of an award]”. That proposal received support. It was suggested that if an exception to the waiver was to be provided, it should then encompass all recourses that were intended to be excluded from the waiver. However, the desirability of expressly listing the exceptions to the general provision on waiver of recourse was questioned, as the two first sentences of draft paragraph (2) made clear that the awards were final and binding on the parties, and parties were under an obligation to carry out all awards without delay.

111. After discussion, the Working Group decided that the proposal should be submitted to the Commission for further consideration.

Draft article 36

(corresponding to article 34 of the 1976 version of the Rules) — settlement or other grounds for termination

112. The Working Group noted that paragraph (2) had been revised for the sake of consistency with the decision made under draft article 30, paragraph (1) (a) to no longer limit the power of the arbitral tribunal to a dismissal order for termination in case the continuation of the arbitral proceedings became unnecessary or impossible. The Working Group found the substance of draft article 36 acceptable.

Draft article 39

(corresponding to article 37 of the 1976 version of the Rules) — additional Award

113. The Working Group noted that paragraph (1) reflected a proposal made at the fifty-first session of the Working Group to clarify that draft article 39 also applied in case the arbitral tribunal rendered a termination order and a party wished to request the tribunal to make an additional decision on claims presented during the arbitral proceedings but omitted by the tribunal (A/CN.9/684, paras. 113-116). The Working Group further noted that paragraphs (2) and (3) had been amended accordingly. The Working Group found the substance of draft article 39 acceptable.

Draft article 41

(corresponding to article 39 of the 1976 version of the Rules) — fees and expenses of arbitrators

114. The Working Group proceeded with its consideration of draft article 41, on the basis of the revised draft discussed by the Working Group at its current session and contained above in paragraph 36.

period of time

115. With a view to removing doubt on the application of time limitation with respect to the determination by the appointing authority of the arbitral tribunal's proposal regarding its fees and expenses, it was suggested to modify the last sentence of draft article 41, paragraph (3) along the following lines: "If, after receipt of such a referral, the appointing authority finds that the proposal of the arbitral tribunal is [manifestly] inconsistent with the criteria in paragraph 1, it shall within 45 days of receipt of the proposal make any necessary adjustments thereto, which shall be binding upon the tribunal." It was noted, that for the sake of consistency, the same modifications should be made in paragraph (4).

116. Questions were raised whether a period of 45 days regarding the determination by the appointing authority of the arbitral tribunal's proposal on its fees and expenses, as contained in paragraphs (3) and (4), was appropriate. Diverging views were expressed on whether a shorter period should be provided. In relation to the timing issue, it was said that the consequences of an appointing authority not responding within the time period prescribed in paragraph (3) were not addressed. Its silence could either be interpreted as an approval of the arbitrators' proposal or, on the contrary, as a failure to act by the appointing authority, thereby allowing a

party to seek appointment of a substitute appointing authority in accordance with the mechanism defined under draft article 6. It was felt that some flexibility should be introduced in paragraphs (3) and (4) by providing that the authority should act “promptly and, save for exceptional circumstances, within 45 days.” That proposal found some support. However, it was pointed out that that provision might be too vague and procedural matters required clear rules.

mechanism

117. It was suggested that if the Secretary-General of the PCA was requested by the parties to designate a replacement appointing authority under paragraph (3), he should be given the discretion to extend the time period within which the existing appointing authority should make its determination. It was also said that it might be simpler to duplicate in paragraph (3) the procedure provided under paragraph (4), and authorize the Secretary-General of the PCA to decide the matter, should the appointing authority fail to act.

118. The Working Group agreed that the proposed revised draft article 41, paragraphs (3) and (4) might need to be revised to provide flexibility in their application and consistency with the general provision on the designating and appointing of authorities contained in draft article 6. Under paragraph (3), at the very early stage of the procedure, promptly after the constitution of the arbitral tribunal, the parties might request the appointing authority chosen or designated in accordance with draft article 6 to decide whether the proposal of the arbitral tribunal on its fees or expenses was consistent with paragraph (1). In case the appointing authority did not reply to the parties within a period of 45 days, the parties might consider that it constituted a failure to act and, under, draft article 6, either agree on the appointment of a substitute appointing authority or request the Secretary-General of the PCA to make that designation. Under paragraph (4), at the late stage of the procedure, when the arbitral tribunal informed the parties of its fees and expenses, any party might refer such determination to the appointing authority for review. In case there was no appointing authority agreed upon or designated at that late stage of the procedure or if such an appointing authority failed, refused, or was unable to fulfil its functions, the matter would then be referred to the Secretary-General of the PCA for determination.

119. Concern was expressed that such provision might be too detailed and create difficulties in practice.

drafting

120. The Working Group considered draft article 41, as modified by the Working Group at its current session (see above, in para. 36). The Working Group reaffirmed its decision (see above para. 33) that the review mechanism by the appointing authority should apply to both the fees and expenses of the arbitrators and agreed to include the words “and expenses” after the word “fees” where it appeared in draft article 41. The Working Group found that the standard of review under paragraph (3) for a proposal for determining fees and expenses of the arbitrators to be “manifestly” inconsistent with paragraph (1) was too high and it agreed to delete the word “manifestly” from paragraph 3. The Working Group further agreed to delete the words “the criteria in” before the word “paragraph” where those words appeared in draft article 41. The Working Group considered proposed alternatives

for words in the last sentence of paragraph (4), and expressed preference for the word “implemented”.

121. With a view to focusing the review function on cases in which abuse might occur and avoiding unnecessary duplication of reviews previously conducted under draft article 41, paragraph (3), it was proposed to amend the third sentence of paragraph (4) as follows: “If, after receiving such a referral, the appointing authority or the Secretary-General of the PCA finds that the arbitral tribunal’s determination of fees and expenses is manifestly excessive, taking into account the arbitral tribunal’s proposal (and any adjustment thereto) under paragraph 3 or, to the extent that the determination of fees and expenses is inconsistent with the proposal, finds that the determination does not satisfy paragraph 1, the appointing authority or the Secretary-General of the PCA shall make any necessary adjustments to the arbitral tribunal’s determination, which shall be binding upon the arbitral tribunal.” In support of that proposal, it was said that a review for “manifestly excessive” fees “taking account the arbitral tribunal’s proposal” was intended to cover situations, for example, where an arbitrator had determined final fees that technically complied with his or her proposal for an hourly rate but that were based on a questionably high number of hours. That proposal was generally supported.

122. After discussion, it was felt that a revised draft of that provision should be considered at a later stage and, in view of the difficulty of reaching a consensus on that provision, the Working Group decided to submit it to the Commission for further consideration.

Draft article 42

(corresponding to article 40 of the 1976 version of the Rules) - allocation of costs

123. It was noted that, although the revised Rules regulated the fixing (draft article 40), allocation (draft article 42) and deposit of costs (draft article 43), it did not contain a provision on the reimbursement of parties. It was also noted that difficulties with the execution of the decision on costs had frequently arisen in certain jurisdictions, where the final order or award had not made specific reference to the amount that one party had to pay to the other party. Consequently, the Working Group agreed to include in the revised Rules a second paragraph to draft article 42 along the following lines: “The arbitral tribunal shall in the final award or, if it deems appropriate, in any other award determine any amount that a party may have to pay to another party as a result of the decision on allocation.”

124. The Working Group approved draft article 42 in substance, with the modifications mentioned above in para. 123.

Placement of the draft model arbitration clause for contracts and the model statements of independence pursuant to article 11

125. The Working Group recalled that it approved the draft model arbitration clause for contracts and draft model statements of independence pursuant to article 11 as contained in A/CN.9/WG.II/WP.157/Add.2, paragraphs 29, 31 and 33 (see above, paras. 57 and 58). The Working Group agreed to place the draft model arbitration clause for contracts and the draft model statements of independence pursuant to article 11 in an annex to the revised Rules and to include a reference to them in the

table of contents of the revised Rules, as well as in a footnote to the corresponding articles referring to that annex.

Table of concordance

126. The Working Group, taking note that the articles of the revised Rules would be renumbered, considered whether to include in the revised Rules a table, as proposed in an annex to the document A/CN.9/WG.II/WP.157, showing the concordance between the articles of the 1976 version of the Rules and those of the revised version. Concerns were expressed that that could be misleading in cases where provisions contained in one article of the 1976 version of the Rules had been distributed between two or more articles of the revised Rules. The Working Group did not take any decision in that respect and took note of the fact that the Secretariat would insert such a table as part of publications to be prepared for the revised version of the Rules.

Draft article 6

proposed additional paragraph

127. Before the close of its session, the Working Group agreed that the new following paragraph should be included in draft article 6 along the lines of “Where these Rules provide for a period within which a party must refer a matter to an appointing authority and no appointing authority has been agreed upon or designated, the period is suspended from the date on which a party initiates the procedure for agreeing on or designating an appointing authority until the date of such agreement or designation.” The Working Group requested the Secretariat to make the necessary adjustments and simplifications to provisions dealing with that matter in its preparation of the draft revised Rules to be considered by the Commission.

**D. Note by the Secretariat on settlement of commercial disputes: Revision of the
UNCITRAL Arbitration Rules, submitted to the Working Group on Arbitration and
Conciliation at its fifty-second session
(A/CN.9/WG.II/WP.157 and Add.1-2)**

I. Introduction

1. At its thirty-ninth session (New York, 19 June-7 July 2006), the Commission agreed that, in respect of future work of the Working Group, priority be given to a revision of the UNCITRAL Arbitration Rules (1976) ("the UNCITRAL Arbitration Rules" or "the Rules").¹ In recognition of the success and status of the UNCITRAL Arbitration Rules, the Commission was generally of the view that any revision of the UNCITRAL Arbitration Rules should not alter the structure of the text, its spirit or its drafting style, and should respect the flexibility of the text rather than make it more complex.² At its forty-second session (Vienna, 29 June-17 July 2009), the Commission agreed that the time required should be taken for meeting the high standard of UNCITRAL, taking account of the international impact of the Rules, and expressed the hope that the Working Group would complete its work on the revision of the UNCITRAL Arbitration Rules in their generic form, so that the final review and adoption of the revised Rules would take place at the forty-third session of the Commission, in 2010.³

2. At its forty-fifth session (Vienna, 11-15 September 2006), the Working Group undertook to identify areas where a revision of the UNCITRAL Arbitration Rules might be useful. At that session, the Working Group gave preliminary indications as to various options to be considered in relation to proposed revisions, on the basis of documents A/CN.9/WG.II/WP.143 and A/CN.9/WG.II/WP.143/Add.1, in order to allow the Secretariat to prepare a draft of revised Rules taking account of such indications. The report of that session is contained in document A/CN.9/614.

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 182-187.

² *Ibid.*, para. 184.

³ *Ibid.*, *Sixty-fourth session, Supplement No. 17 (A/64/17)*, para. 298.

At its forty-sixth (New York, 5-9 February 2007), forty-seventh (Vienna, 10-14 September 2007) and forty-eighth (New York, 4-8 February 2008) sessions, the Working Group discussed a draft of revised Rules, as contained in documents A/CN.9/WG.II/WP.145 and A/CN.9/WG.II/WP.145/Add.1. The reports of those sessions are contained in documents A/CN.9/619, A/CN.9/641 and A/CN.9/646, respectively. At its forty-ninth (Vienna, 15-19 September 2008), fiftieth (New York, 9-13 February 2009), and fifty-first (Vienna, 14-18 September 2009) sessions, the Working Group carried out its second reading of draft articles 1 to 39 of the revised Rules on the basis of documents A/CN.9/WG.II/WP.151 and A/CN.9/WG.II/WP.151/Add.1. The reports of those sessions are contained in documents A/CN.9/665, A/CN.9/669 and A/CN.9/684, respectively.

3. This note contains an annotated draft of revised UNCITRAL Arbitration Rules, based on the deliberations of the Working Group at its forty-ninth to fifty-first sessions. It has been prepared for the consideration of the Working Group for the third reading of the revised version of the Rules, in replacement of documents A/CN.9/WG.II/WP.154 and A/CN.9/WG.II/WP.154/Add.1, as it seemed clearer to propose a complete draft of revised Rules, instead of adding annotations and comments to such previous documents. This note covers draft articles 1 to 16 of the revised Rules. Draft articles 17 to 32 are dealt with under document A/CN.9/WG.II/WP.157/Add.1 and draft articles 33 to 43, as well as the draft model arbitration clause, draft model statements of independence and the proposed additional draft provision on gap filling are dealt with under document A/CN.9/WG.II/WP.157/Add.2. The Working Group may wish to note that where this note refers to the previous draft revised Rules, it refers to the draft as contained in documents A/CN.9/WG.II/WP.151 and A/CN.9/WG.II/WP.151/Add.1.

II. General remarks

Renumbering of articles

4. The Working Group may wish to consider whether the articles of the revised Rules should be renumbered as proposed in this note, and if so, whether to include in the revised Rules a table, as proposed in an annex to this note, showing the concordance between the articles of the 1976 version of the Rules and those of the revised version. The Working Group may also wish to decide whether to place the model arbitration clause and statements of independence at the end of the revised Rules (A/CN.9/665, para. 22).

Provisions to be considered for the third reading of the revised version of the Rules

5. The Working Group may wish to note that it decided at its forty-ninth to fifty-first sessions to give further consideration to the following draft provisions of the revised Rules contained in this note: draft article 2, paragraph (2) on the delivery of the notice of arbitration (see below, para. 8); draft article 7, paragraph (2) on the number of arbitrators (see below, para. 23); draft article 14, paragraph (2) on the replacement of an arbitrator in exceptional circumstances (see below, para. 36); and draft article 16 on liability (see below, para. 41).

III. Draft revised UNCITRAL Arbitration Rules

Section I. Introductory rules

Draft article 1

6. Draft article 1 reads as follows:

Scope of application

1. Where parties have agreed that disputes between them in respect of a defined legal relationship, whether contractual or not, shall be referred to arbitration under the UNCITRAL Arbitration Rules, then such disputes shall be settled in accordance with these Rules subject to such modification as the parties may agree.
2. The parties to an arbitration agreement concluded after [date of adoption by UNCITRAL of the revised version of the Rules] shall be presumed to have referred to the Rules in effect on the date of commencement of the arbitration, unless the parties have agreed to apply a particular version of the Rules. That presumption does not apply where the arbitration agreement has been concluded by accepting after [date of adoption by UNCITRAL of the revised version of the Rules] an offer made before that date.
3. These Rules shall govern the arbitration except that where any of these Rules is in conflict with a provision of the law applicable to the arbitration from which the parties cannot derogate, that provision shall prevail.

Remarks on draft article 1 [article 1 of the 1976 version of Rules]⁴

7. The Working Group agreed to replace the word “another” by the words “a particular” in the first sentence of paragraph (2), and with that modification, the Working Group approved the substance of draft article 1 at its forty-ninth session (A/CN.9/665, paras. 18 to 20). The Working Group may wish to note that, for the sake of clarity, the words “unless the parties have agreed to apply a particular version of the Rules”, which appeared as the opening words of the first sentence of paragraph (2) in the previous draft, have been placed at the end of that first sentence.

Draft article 2

8. Draft article 2 reads as follows:

Notice and calculation of periods of time

1. Any notice, including a notification, communication or proposal shall be delivered by any means of communication that provides a record of its transmission.

⁴ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 22-34; A/CN.9/619 paras. 18-38; A/CN.9/646, paras. 71-78 and A/CN.9/665, paras. 18-20.

2. For the purposes of these Rules, any notice, including a notification, communication or proposal, is deemed to have been received if it is physically delivered to the addressee or if it is delivered at its habitual residence, place of business or designated address, or, if none of these can be found after making reasonable inquiry, then at the addressee's last-known residence or place of business. Notice shall be deemed to have been received on the day it is so delivered.
3. For the purpose of calculating a period of time under these Rules, such period shall begin to run on the day following the day when a notice, notification, communication or proposal is received. If the last day of such period is an official holiday or a non-business day at the residence or place of business of the addressee, the period is extended until the first business day which follows. Official holidays or non-business days occurring during the running of the period of time are included in calculating the period.

Remarks on draft article 2 [article 2 of the 1976 version of the Rules]⁵

9. Paragraphs (1) and (2) seek to reflect the decision of the Working Group at its forty-ninth session to expressly include in the first paragraph language which authorizes delivery of notice by any means of communication that provides a record of transmission and to include in the second paragraph provisions addressing the situation where a notice could not be delivered to the addressee in person (A/CN.9/665, paras. 28 and 29).
10. At its forty-eighth session, the Working Group agreed to replace the word "mailing" appearing before the word "address" by the word "designated" in the first sentence of paragraph (2) (numbered paragraph (1) in the 1976 version of the Rules) (A/CN.9/646, para. 82), and this constitutes the only modification to that paragraph compared to its original version. The Working Group may wish to consider whether additional language should be included in paragraph (2) to provide more guidance to parties, and in particular to limit the risk of communication in arbitration being made through general e-mail addresses that would not be expected to be used for such purposes. Such additional language could provide that any notice may also be delivered to any address agreed by the parties, or failing such agreement, according to the practice followed by the parties in their previous dealings.
11. Paragraph (3) (numbered paragraph (2) in the 1976 version of the Rules) is reproduced without any modification from the 1976 version of the Rules, and was approved in substance by the Working Group at its forty-ninth session (A/CN.9/665, para. 31).

⁵ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 39-47; A/CN.9/619, paras. 44-50; A/CN.9/646, paras. 80-84 and A/CN.9/665, paras. 23-31.

Draft article 3

12. Draft article 3 reads as follows:

Notice of arbitration

1. The party or parties initiating recourse to arbitration (hereinafter called the “claimant”) shall give to the other party or parties (hereinafter called the “respondent”) a notice of arbitration.
2. Arbitral proceedings shall be deemed to commence on the date on which the notice of arbitration is received by the respondent.
3. The notice of arbitration shall include the following:
 - (a) A demand that the dispute be referred to arbitration;
 - (b) The names and contact details of the parties;
 - (c) Identification of the arbitration agreement that is invoked;
 - (d) Identification of any contract or other legal instrument out of or in relation to which the dispute arises or, in the absence of such contract or instrument, a brief description of the relevant relationship;
 - (e) A brief description of the claim and an indication of the amount involved, if any;
 - (f) The relief or remedy sought;
 - (g) A proposal as to the number of arbitrators, language and place of arbitration, if the parties have not previously agreed thereon.
4. The notice of arbitration may also include:
 - (a) A proposal for the designation of an appointing authority referred to in article 6, paragraph 1;
 - (b) A proposal for the appointment of a sole arbitrator referred to in article 8, paragraph 1;
 - (c) Notification of the appointment of an arbitrator referred to in article 9 or article 10.
5. The constitution of the arbitral tribunal shall not be hindered by any controversy with respect to the sufficiency of the notice of arbitration, which shall be finally resolved by the arbitral tribunal.

Remarks on draft article 3 [article 3 of the 1976 version of the Rules]⁶

13. The Working Group agreed that the decision by the claimant that its notice of arbitration would constitute its statement of claim should be postponed until the stage of proceedings reflected in draft article 20 (corresponding to article 18 of the 1976 version of the Rules). It therefore agreed to delete from paragraph (4) the words: “The statement of claim referred to in article 18” (A/CN.9/665, para. 36).

⁶ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 48-55; A/CN.9/619, paras. 51-57 and A/CN.9/665, paras. 32-37 and 42.

With that modification, the substance of draft article 3 was approved by the Working Group at its forty-ninth session (A/CN.9/665, paras. 33-42).

14. The Working Group may wish to note that, as a result of the proposal to insert the provision on the response to the notice of arbitration in a separate article (A/CN.9/665, para. 32), the provision formerly numbered article 3, paragraph (7), dealing with the consequences of an incomplete notice of arbitration or incomplete or missing response thereof, has been split into two paragraphs: draft article 3, paragraph (5) deals with the consequences of an incomplete notice of arbitration, and draft article 4, paragraph (3) deals with the consequences of a missing, incomplete or late response thereof (see below, para. 17). The phrase “the arbitral tribunal shall proceed as it considers appropriate”, which appeared in the previous draft of that paragraph, has been deleted as that discretionary power of the arbitral tribunal is a principle of general application which is already provided for under draft article 17, paragraph (1).

Draft article 4

15. Draft article 4 reads as follows:

Response to the notice of arbitration

1. Within 30 days of the receipt of the notice of arbitration, the respondent shall communicate to the claimant a response to the notice of arbitration, which shall include:

(a) The name and contact details of each respondent;

(b) A response to the information set forth in the notice of arbitration, pursuant to article 3, paragraphs 3 (c) to (g).

2. The response to the notice of arbitration may also include:

(a) Any plea that an arbitral tribunal constituted under these Rules lacks jurisdiction;

(b) A proposal for the designation of an appointing authority referred to in article 6, paragraph 1;

(c) A proposal for the appointment of a sole arbitrator referred to in article 8, paragraph 1;

(d) Notification of the appointment of an arbitrator referred to in article 9 or article 10;

(e) A brief description of counterclaims or claims for the purpose of a set-off, if any, including where relevant, an indication of the amounts involved, and the relief or remedy sought.

3. The constitution of the arbitral tribunal shall not be hindered by failure of the respondent to communicate a response to the notice of arbitration, or by an incomplete or late response to the notice of arbitration.

*Remarks on draft article 4 [new article — numbered article 3, paragraphs (5) to (7) in the previous draft revised Rules]*⁷

16. In the previous draft revised Rules, the provisions on response to the notice of arbitration were included in draft article 3. The Working Group noted that it might be preferable to insert those provisions in a separate article (A/CN.9/665, para. 32). Paragraphs (1) and (2) (numbered article 3, paragraphs (5) and (6) in the previous draft revised Rules) take account of the decisions made in the Working Group to include in paragraph (1) (b) a reference to article 3, paragraph (3) (g) (A/CN.9/665, para. 67); and to provide that any plea that an arbitral tribunal lacks jurisdiction be part of optional items under paragraph (2) (A/CN.9/665, para. 39). With those modifications, the provisions of draft article 4 were approved in substance by the Working Group at its forty-ninth session (A/CN.9/665, paras. 38-42).

17. The Working Group may wish to note that the provision formerly numbered article 3, paragraph (7) dealing with the consequences of an incomplete notice of arbitration or incomplete or missing response thereto has been split into two paragraphs, and paragraph (3) deals with the consequences of a missing, incomplete or late response to the notice of arbitration (see above, para. 14).

Draft article 5

18. Draft article 5 reads as follows:

Representation and assistance

Each party may be represented or assisted by persons chosen by it. The names and addresses of such persons must be communicated to all parties and to the arbitral tribunal. Such communication must specify whether the appointment is being made for purposes of representation or assistance. Where a person is to act as a representative of a party, the arbitral tribunal, on its own initiative or at the request of any party, may at any time require proof of authority granted to the representative in such a form as the arbitral tribunal may determine.

*Remarks on draft article 5 [article 4 of the 1976 version of the Rules]*⁸

19. Draft article 5 includes the drafting modifications agreed by the Working Group (A/CN.9/665, paras. 43-44), and was approved in substance by the Working Group at its forty-ninth session (A/CN.9/665, para. 45).

Draft article 6

20. Draft article 6 reads as follows:

Designating and appointing authorities

1. Unless the parties have already agreed on the choice of an appointing authority, a party may at any time propose the name or names of one or more institutions or persons, including the Secretary-General of the Permanent

⁷ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 56 and 57; A/CN.9/619, paras. 58-60 and A/CN.9/665, paras. 32, 38-42 and 67.

⁸ For discussions at previous sessions of the Working Group, see documents A/CN.9/619, paras. 63-68 and A/CN.9/665, paras. 43-45.

Court of Arbitration at the Hague (hereinafter called the “PCA”), one of whom would serve as appointing authority.

2. If all parties have not agreed on the choice of an appointing authority within 30 days after a proposal made in accordance with paragraph 1 has been received by all other parties, any party may request the Secretary-General of the PCA to designate the appointing authority.

3. If the appointing authority refuses to act, or if it fails to appoint an arbitrator within 30 days after it receives a party’s request to do so, any party may request the Secretary-General of the PCA to designate an appointing authority. If the appointing authority refuses or fails to make any decision on the fees of the arbitrators under article 41, paragraph 4, any party may request the Secretary-General of the PCA to make that decision.

4. In exercising their functions under these Rules, the appointing authority and the Secretary-General of the PCA may require from any party and the arbitrators the information they deem necessary and they shall give the parties and, where appropriate, the arbitrators, an opportunity to present their views in any manner they consider appropriate. All such communications to and from the appointing authority and the Secretary-General of the PCA shall also be provided by the sender to all other parties.

5. When the appointing authority is requested to appoint an arbitrator pursuant to articles 8, 9, 10 or 14, the party making the request shall send to the appointing authority copies of the notice of arbitration and, if it exists, any response to the notice of arbitration.

6. The appointing authority shall have regard to such considerations as are likely to secure the appointment of an independent and impartial arbitrator and shall take into account the advisability of appointing an arbitrator of a nationality other than the nationalities of the parties.

Remarks on draft article 6 [new article — numbered article 4 bis in the previous draft revised Rules]⁹

21. Paragraphs (1) and (4) include the drafting modifications agreed by the Working Group (A/CN.9/665, paras. 51 and 54). With those modifications, the substance of draft article 6 was approved by the Working Group at its forty-ninth session (A/CN.9/665, paras. 51-56).

22. The Working Group may wish to note that in the first sentence of paragraph (4), a reference has been added to “the Secretary-General of the PCA” and to “the arbitrators”, as there are instances (such as a challenge procedure) in which the Secretary-General of the PCA and the appointing authorities, in exercising their functions, may require information from the arbitrators (and not only from the parties).

⁹ For discussions at previous sessions of the Working Group, see documents A/CN.9/619, paras. 69-78 and A/CN.9/665, paras. 46-56. For discussions on the designating and appointing authorities at the forty-second session of the Commission, see *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17* (A/64/17), paras. 292-297.

Section II. Composition of the arbitral tribunal

Draft article 7

23. Draft article 7 reads as follows:

Number of arbitrators

1. If the parties have not previously agreed on the number of arbitrators, and if within 30 days after the receipt by the respondent of the notice of arbitration the parties have not agreed that there shall be only one arbitrator, three arbitrators shall be appointed.
2. Notwithstanding paragraph 1, if no party has responded to a proposal to appoint a sole arbitrator within the time limit provided for in paragraph 1 and the party or parties concerned have failed to appoint a second arbitrator in accordance with article 9 or article 10, the appointing authority may, at the request of a party, appoint a sole arbitrator pursuant to the procedure provided for in article 8, paragraph 2 if it determines that, in view of the circumstances of the case, this is more appropriate.

Remarks on draft article 7 [article 5 of the 1976 version of the Rules]¹⁰

24. Paragraph (1) reflects the decision of the Working Group to maintain the three-arbitrator default rule, as contained in article 5 of the 1976 version of the Rules, with the adjustment that such default rule would apply if the parties failed to reach an agreement on the number of arbitrators, and did not agree that there should be only one arbitrator within the 30-day time limit provided for responding to the notice of arbitration under draft article 4, paragraph (1) (A/CN.9/665, paras. 57-61, 65-67).

25. At its forty-ninth session, the Working Group agreed to further consider paragraph (2), which provides for a corrective mechanism involving the appointing authority in case a party, more likely the respondent, does not participate in the determination of the composition of the arbitral tribunal, and the arbitration case does not warrant the appointment of a three-member arbitral tribunal (A/CN.9/665, paras. 62-64).

Draft article 8

26. Draft article 8 reads as follows:

Appointment of arbitrators (articles 8 to 10)¹¹

1. If the parties have agreed that a sole arbitrator is to be appointed, and if within 30 days after receipt by all other parties of a proposal for the appointment of a sole arbitrator, the parties have not reached agreement thereon, a sole arbitrator shall, at the request of a party, be appointed by the appointing authority.

¹⁰ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 59-61; A/CN.9/619, paras. 79-83 and A/CN.9/665, paras. 57-67.

¹¹ Corresponding to articles 6 to 8 of the 1976 version of the Rules.

2. The appointing authority shall appoint the sole arbitrator as promptly as possible. In making the appointment, the appointing authority shall use the following list-procedure, unless the parties agree that the list-procedure should not be used or unless the appointing authority determines in its discretion that the use of the list-procedure is not appropriate for the case:

(a) The appointing authority shall communicate to each of the parties an identical list containing at least three names;

(b) Within 15 days after the receipt of this list, each party may return the list to the appointing authority after having deleted the name or names to which it objects and numbered the remaining names on the list in the order of its preference;

(c) After the expiration of the above period of time the appointing authority shall appoint the sole arbitrator from among the names approved on the lists returned to it and in accordance with the order of preference indicated by the parties;

(d) If for any reason the appointment cannot be made according to this procedure, the appointing authority may exercise its discretion in appointing the sole arbitrator.

Remarks on draft article 8 [article 6 of the 1976 version of the Rules]¹²

27. Draft article 8 includes the drafting modifications adopted by the Working Group, and with those modifications, the substance of draft article 8 was approved by the Working Group at its forty-ninth session (A/CN.9/665, para. 68).

Draft article 9

28. Draft article 9 reads as follows:

1. If three arbitrators are to be appointed, each party shall appoint one arbitrator. The two arbitrators thus appointed shall choose the third arbitrator who will act as the presiding arbitrator of the arbitral tribunal.

2. If within 30 days after the receipt of a party's notification of the appointment of an arbitrator the other party has not notified the first party of the arbitrator it has appointed, the first party may request the appointing authority to appoint the second arbitrator.

3. If within 30 days after the appointment of the second arbitrator the two arbitrators have not agreed on the choice of the presiding arbitrator, the presiding arbitrator shall be appointed by the appointing authority in the same way as a sole arbitrator would be appointed under article 8, paragraph 2.

¹² For discussions at previous sessions of the Working Group, see documents A/CN.9/619, para. 84 and A/CN.9/665, para. 68.

*Remarks on draft article 9 [article 7 of the 1976 version of the Rules]*¹³

29. The Working Group approved the substance of draft article 9 at its forty-ninth session (A/CN.9/665, para. 69).

Draft article 10

30. Draft article 10 reads as follows:

1. For the purposes of article 9, paragraph 1, where three arbitrators are to be appointed and there are multiple parties as claimant or as respondent, unless the parties have agreed to another method of appointment of arbitrators, the multiple parties jointly, whether as claimant or as respondent, shall appoint an arbitrator.
2. If the parties have agreed that the arbitral tribunal is to be composed of a number of arbitrators other than one or three, the arbitrators shall be appointed according to the method agreed upon by the parties.
3. In the event of any failure to constitute the arbitral tribunal under these Rules, the appointing authority shall, at the request of any party, constitute the arbitral tribunal, and in doing so, may revoke any appointment already made, and appoint or reappoint each of the arbitrators and designate one of them as the presiding arbitrator.

*Remarks on draft article 10 [new article — numbered article 7 bis in the previous draft revised Rules]*¹⁴

31. The Working Group approved the substance of draft article 10 at its forty-ninth session (A/CN.9/665, para. 71). The Working Group may wish to note that the words “under paragraphs 1 and 2” appearing after the phrase “In the event of any failure to constitute the arbitral tribunal”, in the previous draft of paragraph (3), have been deleted and replaced by the words “under these Rules” as that provision may find application in any instances of failure to constitute the arbitral tribunal under the Rules.

Draft article 11

32. Draft article 11 reads as follows:

Disclosures by and challenge of arbitrators (articles 11 to 13)¹⁵

When a person is approached in connection with his or her possible appointment as an arbitrator, he or she shall disclose any circumstances likely to give rise to justifiable doubts as to his or her impartiality or independence. An arbitrator, from the time of his or her appointment and throughout the arbitral proceedings, shall without delay disclose any such circumstances to the parties and the other arbitrators unless they have already been informed by him or her of these circumstances.

¹³ For discussions at previous sessions of the Working Group, see documents A/CN.9/619, para. 85 and A/CN.9/665, para. 69.

¹⁴ For discussions at previous sessions of the Working Group, see documents A/614, para. 62, A/CN.9/619, paras. 86-93 and A/CN.9/665, paras. 70 and 71.

¹⁵ Corresponding to articles 9 to 12 of the 1976 version of the Rules.

*Remarks on draft article 11 [article 9 of the 1976 version of the Rules]*¹⁶

33. The Working Group agreed to add the words “disclosures by and” in the title of draft article 11 and the words “and the other arbitrators” after the word “parties” in the second sentence of draft article 11. With those modifications, the Working Group approved draft article 11 in substance at its forty-ninth session (A/CN.9/665, paras. 73 and 74).

Draft article 12

34. Draft article 12 reads as follows:

1. Any arbitrator may be challenged if circumstances exist that give rise to justifiable doubts as to the arbitrator’s impartiality or independence.
2. A party may challenge the arbitrator appointed by it only for reasons of which it becomes aware after the appointment has been made.
3. In the event that an arbitrator fails to act or in the event of de jure or de facto impossibility of his or her performing his or her functions, the procedure in respect of the challenge of an arbitrator as provided in article 13 shall apply.

Draft article 13

35. Draft article 13 reads as follows:

1. A party that intends to challenge an arbitrator shall send notice of its challenge within 15 days after it has been notified of the appointment of the challenged arbitrator, or within 15 days after the circumstances mentioned in articles 11 and 12 became known to that party.
2. The notice of challenge shall be communicated to all other parties, to the arbitrator who is challenged and to the other arbitrators. The notice of challenge shall state the reasons for the challenge.
3. When an arbitrator has been challenged by a party, all parties may agree to the challenge. The arbitrator may also, after the challenge, withdraw from his or her office. In neither case does this imply acceptance of the validity of the grounds for the challenge.
4. If, within 15 days from the date of the notice of challenge, all parties do not agree to the challenge or the challenged arbitrator does not withdraw, the party making the challenge may elect to pursue it. In that case, within 30 days from the date of the notice of challenge, it shall either seek a decision on the challenge by the appointing authority or, if no appointing authority has been agreed upon or designated, initiate the procedure for agreeing on, or designating an appointing authority and then, within 15 days of such agreement or designation, seek a decision on the challenge.

¹⁶ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 64 and 65, A/CN.9/619, para. 95 and A/CN.9/665, paras. 73 and 74.

Draft article 14

36. Draft article 14 reads as follows:

Replacement of an arbitrator

1. Subject to paragraph (2), in any event where an arbitrator has to be replaced during the course of the arbitral proceedings, a substitute arbitrator shall be appointed or chosen pursuant to the procedure provided for in articles 8 to 11 that was applicable to the appointment or choice of the arbitrator being replaced. This procedure shall apply even if during the process of appointing the arbitrator to be replaced, a party had failed to exercise its right to appoint or to participate in the appointment.

2. If, at the request of a party, the appointing authority determines that, in view of the exceptional circumstances of the case, it would be justified for a party to be deprived of its right to appoint a substitute arbitrator, the appointing authority may, after giving an opportunity to the parties and the remaining arbitrators to express their views: (a) appoint the substitute arbitrator; or (b) if the same occurs after the closure of the hearings, authorize the other arbitrators to proceed with the arbitration and make any decision or award.

Remarks on draft articles 12,¹⁷ 13¹⁸ and 14¹⁹ [articles 10, 11, 12 and 13 of the 1976 version of the Rules]

37. The Working Group may wish to note that, according to its decision at its forty-ninth session, the 1976 version of articles on challenge to arbitrators (articles 10 to 12) and their replacement (article 13) have been restructured. Draft article 12 deals with the reasons for the challenge or instances in which a challenge procedure would apply. Draft article 13 deals with the procedure for challenge. Draft article 14 deals with the replacement procedure. The Working Group may wish to consider whether the proposed draft provisions properly reflect the decisions made by the Working Group.

38. The Working Group may wish to note that draft articles 12, 13 and 14 above include the drafting modifications adopted by the Working Group, and that the Working Group approved the substance of those provisions at its forty-ninth session (A/CN.9/665, paras. 81, 83-84, 88, 91-93, 97, 98 and 102). The Working Group also agreed to further consider draft article 14, paragraph (2) addressing the situation where a party, in exceptional circumstances, has to be deprived of its right to appoint the substitute arbitrator (A/CN.9/665, paras. 115-117).

¹⁷ For discussions at previous sessions of the Working Group, see documents A/CN.9/619, para. 100 and A/CN.9/665, para. 81.

¹⁸ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para. 66, A/CN.9/619, paras. 101-105 and A/CN.9/665, paras. 82-102.

¹⁹ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 63, 67-74, A/CN.9/619, paras. 106-112 and A/CN.9/665, paras. 103-117.

Draft article 15

39. Draft article 15 reads as follows:

Repetition of hearings in the event of the replacement of an arbitrator

If an arbitrator is replaced, the proceedings shall resume at the stage where the arbitrator who was replaced ceased to perform his or her functions, unless the arbitral tribunal decides otherwise.

*Remarks on draft article 15 [numbered article 14 in the 1976 version of the Rules]*²⁰

40. The Working Group approved the substance of draft article 15 at its forty-ninth session (A/CN.9/665, para. 118).

Draft article 16

41. Draft article 16 reads as follows:

Liability

To the fullest extent permitted under the applicable law, the parties waive any claim against the arbitrators, the appointing authority, the Secretary-General of the PCA and any person appointed by the arbitral tribunal based on any act or omission in connection with the arbitration.

*Remarks on draft article 16 (new article)*²¹

42. Draft article 16 on liability seeks to address comments made in the Working Group at its forty-eighth session that the provision establishing immunity should cover the broadest possible range of participants in the arbitration and preserve exoneration in cases where the applicable law allows contractual exoneration from liability, to the fullest extent permitted by such law (A/CN.9/646, paras. 38-45). The Working Group agreed to give further consideration to draft article 16. The Working Group may wish to consider whether draft article 16 should be placed, as proposed, at the end of section II of the Rules.

²⁰ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para. 75, A/CN.9/619, para. 113 and A/CN.9/665, para. 118.

²¹ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para. 136, A/CN.9/646, paras. 38-45.

**Note by the Secretariat on settlement of commercial disputes: Revision
of the UNCITRAL Arbitration Rules, submitted to the Working Group
on Arbitration at its fifty-second session**

ADDENDUM

CONTENTS

<i>Chapter</i>	<i>Paragraphs</i>
I. Introduction	1
II. General remark	2
III. Draft revised UNCITRAL Arbitration Rules	3-43
Section III. Arbitral proceedings (draft articles 17-32)	3-43

I. Introduction

1. This note contains an annotated draft of revised articles 17 to 32 of the UNCITRAL Arbitration Rules, based on the deliberations of the Working Group at its forty-ninth to fifty-first sessions. It has been prepared for the consideration of the Working Group for the third reading of the revised version of the Rules, in replacement of documents A/CN.9/WG.II/WP.154 and A/CN.9/WG.II/WP.154/Add.1, as it seemed clearer to propose a complete draft of revised Rules, instead of adding annotations and comments to such previous documents. The annotated draft of revised articles 1 to 16 of the Rules is contained in document A/CN.9/WG.II/WP.157. The annotated draft of revised articles 33 to 43 of the Rules, as well as of the model arbitration clause, model statements of independence and the proposed additional provision on gap filling is contained in document A/CN.9/WG.II/WP.157/Add.2. The Working Group may wish to note that where this note refers to the previous draft revised Rules, it refers to the draft as contained in documents A/CN.9/WG.II/WP.151 and A/CN.9/WG.II/WP.151/Add.1.

II. General remark

Provisions to be considered for the third reading of the revised version of the Rules

2. The Working Group may wish to note that it decided at its forty-ninth to fifty-first sessions to give further consideration to the following draft provisions of the revised Rules contained in this addendum: draft article 17, paragraph (5) on joinder (see below, para. 3); draft article 26, paragraphs (8) and (9) on interim measures (see below, para. 25); draft article 27, paragraph (2) on the definition of witnesses (see below, para. 30); proposal on the challenge of experts under draft article 29 (see below, para. 37); draft article 30, paragraph (1)(a) on the power of the arbitral tribunal in case the claimant fails to submit its statement of claim (see below, para. 38); and draft article 32 on waiver of right to object (see below, para. 42).

III. Draft revised UNCITRAL Arbitration Rules

Section III. Arbitral proceedings

Draft article 17

3. Draft article 17 reads as follows:

General provisions

1. Subject to these Rules, the arbitral tribunal may conduct the arbitration in such manner as it considers appropriate, provided that the parties are treated with equality and that at an appropriate stage of the proceedings each party is given an opportunity of presenting its case. The arbitral tribunal, in exercising its discretion, shall conduct the proceedings so as to avoid unnecessary delay and expense and to provide a fair and efficient process for resolving the parties' dispute.
2. The arbitral tribunal may, at any time, after inviting the parties to express their views, extend or abridge any period of time prescribed under these Rules or agreed by the parties.
3. If at an appropriate stage of the proceedings any party so requests, the arbitral tribunal shall hold hearings for the presentation of evidence by witnesses, including expert witnesses, or for oral argument. In the absence of such a request, the arbitral tribunal shall decide whether to hold such hearings or whether the proceedings shall be conducted on the basis of documents and other materials.
4. All communications to the arbitral tribunal by one party shall at the same time be communicated by that party to all other parties[, except for communications referred to in article 26, paragraph 9].
5. The arbitral tribunal may, at the request of any party, allow one or more third persons to be joined in the arbitration as a party provided such person is a party to the arbitration agreement, unless the arbitral tribunal finds, after giving all parties, including the person or persons to be joined, the opportunity to be heard, that joinder should not be permitted because of prejudice to any of those parties. The arbitral tribunal may make a single award or several awards in respect of all parties so involved in the arbitration.

Remarks on draft article 17 [article 15 of the 1976 version of the Rules]¹

4. Paragraphs (1), (2) (numbered paragraph (1 bis) in the previous draft revised Rules) and (3) (numbered paragraph (2) in the previous draft revised Rules) were approved in substance by the Working Group at its forty-ninth session (A/CN.9/665, paras. 119, 123, 125 and 126).
5. The Working Group may wish to note that the bracketed text at the end of paragraph (4) (numbered paragraph (3) in the previous draft revised Rules) should be further considered in light of the decision of the Working Group in relation to

¹ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 76-86; A/CN.9/619, paras. 114-136 and A/CN.9/665, paras. 119-135.

draft article 26, paragraph (9) on preliminary orders (A/CN.9/665, para. 127) (see below, para. 29).

6. The Working Group may wish to further consider the language in paragraph (5) on joinder (numbered paragraph (4) in the previous draft revised Rules) which seeks to reflect the decision made by the Working Group that the arbitral tribunal may decide that a party be joined in the arbitration without the consent of that party, but before making its decision, the tribunal should provide that party with an opportunity to be heard and decide on the prejudice (A/CN.9/665, paras. 128-135).

Draft article 18

7. Draft article 18 reads as follows:

Place of arbitration

1. If the parties have not previously agreed on the place of arbitration, the place of arbitration shall be determined by the arbitral tribunal having regard to the circumstances of the case. The award shall be deemed to be made at the place of arbitration.
2. The arbitral tribunal may meet at any location it considers appropriate for deliberations. Unless otherwise agreed by the parties, the arbitral tribunal may also meet at any location it considers appropriate for any other purpose, including hearings.

Remarks on draft article 18 [article 16 of the 1976 version of the Rules]²

8. Draft article 18 includes the drafting modifications adopted by the Working Group. With those modifications, the Working Group approved the substance of draft article 18 at its forty-ninth session (A/CN.9/665, paras. 136-139).

Draft article 19

9. Draft article 19 reads as follows:

Language

1. Subject to an agreement by the parties, the arbitral tribunal shall, promptly after its appointment, determine the language or languages to be used in the proceedings. This determination shall apply to the statement of claim, the statement of defence, and any further written statements and, if oral hearings take place, to the language or languages to be used in such hearings.
2. The arbitral tribunal may order that any documents annexed to the statement of claim or statement of defence, and any supplementary documents or exhibits submitted in the course of the proceedings, delivered in their original language, shall be accompanied by a translation into the language or languages agreed upon by the parties or determined by the arbitral tribunal.

² For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 87-90; A/CN.9/619, paras. 137-144 and A/CN.9/665, paras. 136-139.

Remarks on draft article 19 [article 17 of the 1976 version of the Rules]³

10. Draft article 19 is reproduced without modification from the 1976 version of the Rules, and was approved in substance by the Working Group at its forty-ninth session (A/CN.9/665, paras. 140 and 141).

Draft article 20

11. Draft article 20 reads as follows:

Statement of claim

1. The claimant shall communicate its statement of claim in writing to the respondent and to each of the arbitrators within a period of time to be determined by the arbitral tribunal. The claimant may elect to treat its notice of arbitration in article 3 as a statement of claim, provided that the notice of arbitration also complies with the requirements of paragraphs 2 to 4 of this article.
2. The statement of claim shall include the following particulars:
 - (a) The names and contact details of the parties;
 - (b) A statement of the facts supporting the claim;
 - (c) The points at issue;
 - (d) The relief or remedy sought;
 - (e) The legal grounds or arguments supporting the claim.
3. A copy of any contract or other legal instrument out of or in relation to which the dispute arises and of the arbitration agreement shall be annexed to the statement of claim.
4. The statement of claim should, as far as possible, be accompanied by all documents and other evidence relied upon by the claimant, or contain references to them.

Remarks on draft article 20 [article 18 of the 1976 version of the Rules]⁴

12. Draft article 20 includes the drafting modifications adopted by the Working Group. With those modifications, the Working Group approved draft article 20 in substance at its fiftieth session (A/CN.9/669, paras. 19-24).

13. The Working Group may wish to note that the words “out of or in relation to which the dispute arises” have been added to clarify which contract or legal instrument should be annexed to the statement of claim. The provision in paragraph (4), which appeared as the second sentence of paragraph (3) in the previous draft revised Rules, are placed in a separate paragraph for the sake of clarity (see below, para. 15).

³ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para. 91; A/CN.9/619, para. 145 and A/CN.9/665, paras. 140 and 141.

⁴ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para. 92; A/CN.9/619, paras. 146-155 and A/CN.9/669, paras. 19-24.

Draft article 21

14. Draft article 21 reads as follows:

Statement of defence

1. The respondent shall communicate its statement of defence in writing to the claimant and to each of the arbitrators within a period of time to be determined by the arbitral tribunal. The respondent may elect to treat its response to the notice of arbitration in article 4 as a statement of defence, provided that the response to the notice of arbitration also complies with the requirements of paragraph 2 of this article.
2. The statement of defence shall reply to the particulars (b), (c), (d) and (e) of the statement of claim (article 20, paragraph 2). The statement of defence should, as far as possible, be accompanied by all documents and other evidence relied upon by the respondent, or contain references to them.
3. In its statement of defence, or at a later stage in the arbitral proceedings if the arbitral tribunal decides that the delay was justified under the circumstances, the respondent may make a counterclaim or rely on a claim for the purpose of a set-off provided that the arbitral tribunal has jurisdiction over it.
4. The provisions of article 20, paragraphs 2 and 4 shall apply to a counterclaim and a claim relied on for the purpose of a set-off.

Remarks on draft article 21 [article 19 of the 1976 version of the Rules]⁵

15. The last sentence of paragraph (1) addresses the situation where the respondent decides to treat its response to the notice of arbitration as a statement of defence. The words “provided that the response to the notice of arbitration also complies with the requirements of paragraph 2 of this article” have been added at the end of the last sentence of paragraph (1) (A/CN.9/669, para. 25) and that language mirrors the modification adopted in respect of draft article 20, paragraph (1). Paragraph (3) reflects the decision of the Working Group that the arbitral tribunal’s competence to consider counterclaims and claims for the purpose of a set-off should, under certain conditions, extend beyond the contract from which the principal claim arose and apply to a wider range of circumstances (A/CN.9/669, para. 27). To achieve that extension, the Working Group agreed to delete the words “arising out of the same contract” where they appear in the original version of paragraph (3) and to include at the end of paragraph (3) the following words: “provided that the arbitral tribunal has jurisdiction over it” (A/CN.9/669, paras. 27-32). In paragraph (4), a reference to the provision of article 20, paragraph (4) has been added to take account of the intention of the Working Group that, consistent with article 19, paragraph (4) of the 1976 version of the Rules, a counterclaim or a claim for the purpose of a set-off should, as far as possible, be accompanied by all documents and other evidence relied upon by the claimant, or contain references to them. With those modifications, the Working Group adopted the substance of draft article 21 at its fiftieth session (A/CN.9/669, paras. 25-33).

⁵ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 93-96; A/CN.9/619, paras. 156-160 and A/CN.9/669, paras. 25-33.

Draft article 22

16. Draft article 22 reads as follows:

Amendments to the claim or defence

During the course of the arbitral proceedings, a party may amend or supplement its claim or defence, including a counterclaim or a claim for the purpose of a set-off, unless the arbitral tribunal considers it inappropriate to allow such amendment or supplement having regard to the delay in making it or prejudice to other parties or any other circumstances. However, a claim or defence, including a counterclaim or a claim for the purpose of a set-off, may not be amended or supplemented in such a manner that the amended or supplemented claim or defence falls outside the jurisdiction of the arbitral tribunal.

Remarks on draft article 22 [article 20 of the 1976 version of the Rules]⁶

17. The Working Group agreed that, following the revision adopted under draft article 21, paragraph (3) (see above, para. 15), the last sentence of draft article 22 should be amended accordingly, and the reference to “the scope of the arbitration agreement” should be replaced by a reference to “the jurisdiction of the arbitral tribunal” (A/CN.9/669, para. 34). The Working Group further agreed that the words “or defence” should be added in the second sentence of draft article 22 to align it with the wording of the first sentence of that article (A/CN.9/669, para. 35). With those modifications, the Working Group approved the substance of draft article 22 at its fiftieth session (A/CN.9/669, paras. 34 and 35).

18. The Working Group may wish to note that, for the sake of consistency, the reference to “a claim for the purpose of a set-off” has been added after the words “a counterclaim [or]” in both sentences of draft article 22; the words “or supplement” have been added after the word “amendment” in the first sentence of draft article 22 and the words “or supplemented” have been added after the word “amended” in the second sentence of draft article 22.

Draft article 23

19. Draft article 23 reads as follows:

Pleas as to the jurisdiction of the arbitral tribunal

1. The arbitral tribunal may rule on its own jurisdiction, including any objections with respect to the existence or validity of the arbitration agreement. For that purpose, an arbitration clause which forms part of a contract shall be treated as an agreement independent of the other terms of the contract. A decision by the arbitral tribunal that the contract is null shall not entail automatically the invalidity of the arbitration clause.
2. A plea that the arbitral tribunal does not have jurisdiction shall be raised no later than in the statement of defence or, with respect to a counterclaim or a claim for the purpose of a set-off, in the reply to the counterclaim or to the

⁶ For discussions at previous sessions of the Working Group, see documents A/CN.9/619, para. 161 and A/CN.9/669, paras. 34 and 35.

claim for the purpose of a set-off. A party is not precluded from raising such a plea by the fact that it has appointed, or participated in the appointment of, an arbitrator. A plea that the arbitral tribunal is exceeding the scope of its authority shall be raised as soon as the matter alleged to be beyond the scope of its authority is raised during the arbitral proceedings. The arbitral tribunal may, in either case, admit a later plea if it considers the delay justified.

3. The arbitral tribunal may rule on a plea referred to in paragraph 2 either as a preliminary question or in an award on the merits. The arbitral tribunal may continue the arbitral proceedings and make an award, notwithstanding any pending challenge to its jurisdiction before a court.

*Remarks on draft article 23 [article 21 of the 1976 version of the Rules]*⁷

20. In accordance with the decisions of the Working Group, the words “and void”, which appeared after the word “null” in the last sentence of paragraph (1) have been deleted (A/CN.9/669, paras. 40-43) and the word “automatically” is used in replacement of the words “ipso jure” (A/CN.9/669, para. 44). With those modifications, the Working Group approved the substance of draft article 23 at its fiftieth session (A/CN.9/669, paras. 36-46).

Draft article 24

21. Draft article 24 reads as follows:

Further written statements

The arbitral tribunal shall decide which further written statements, in addition to the statement of claim and the statement of defence, shall be required from the parties or may be presented by them and shall fix the periods of time for communicating such statements.

*Remarks on draft article 24 [article 22 of the 1976 version of the Rules]*⁸

22. Draft article 24 is reproduced without modifications from the 1976 version of the Rules and was approved by the Working Group at its fiftieth session (A/CN.9/669, para. 47).

Draft article 25

23. Draft article 25 reads as follows:

Periods of time

The periods of time fixed by the arbitral tribunal for the communication of written statements (including the statement of claim and statement of defence) should not exceed 45 days. However, the arbitral tribunal may extend the time limits if it concludes that an extension is justified.

⁷ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 97-102; A/CN.9/619, paras. 162-164; A/CN.9/641, para. 18 and A/CN.9/669, paras. 36-46.

⁸ For discussions at previous sessions of the Working Group, see documents A/CN.9/641, para. 19 and A/CN.9/669, para. 47.

Remarks on draft article 25 [article 23 of the 1976 version of the Rules]⁹

24. Draft article 25 is reproduced without modifications from the 1976 version of the Rules and was approved by the Working Group at its fiftieth session (A/CN.9/669, para. 48).

Draft article 26

25. Draft article 26 reads as follows:

Interim measures

1. The arbitral tribunal may, at the request of a party, grant interim measures.
2. An interim measure is any temporary measure by which, at any time prior to the issuance of the award by which the dispute is finally decided, the arbitral tribunal orders a party to, including, without limitation:
 - (a) Maintain or restore the status quo pending determination of the dispute;
 - (b) Take action that would prevent, or refrain from taking action that is likely to cause, (i) current or imminent harm or (ii) prejudice to the arbitral process itself;
 - (c) Provide a means of preserving assets out of which a subsequent award may be satisfied; or
 - (d) Preserve evidence that may be relevant and material to the resolution of the dispute.
3. The party requesting an interim measure under paragraphs 2 (a), (b) and (c) shall satisfy the arbitral tribunal that:
 - (a) Harm not adequately reparable by an award of damages is likely to result if the measure is not ordered, and such harm substantially outweighs the harm that is likely to result to the party against whom the measure is directed if the measure is granted; and
 - (b) There is a reasonable possibility that the requesting party will succeed on the merits of the claim. The determination on this possibility shall not affect the discretion of the arbitral tribunal in making any subsequent determination.
4. With regard to a request for an interim measure under paragraph 2 (d), the requirements in paragraphs 3 (a) and (b) shall apply only to the extent the arbitral tribunal considers appropriate.
5. The arbitral tribunal may modify, suspend or terminate an interim measure it has granted, upon application of any party or, in exceptional circumstances and upon prior notice to the parties, on the arbitral tribunal's own initiative.

⁹ For discussions at previous sessions of the Working Group, see documents A/CN.9/641, para. 20 and A/CN.9/669, para. 48.

6. The arbitral tribunal may require the party requesting an interim measure to provide appropriate security in connection with the measure.
7. The arbitral tribunal may require any party promptly to disclose any material change in the circumstances on the basis of which the interim measure was requested or granted.
8. The party requesting an interim measure may be liable for any costs and damages caused by the measure to any party if the arbitral tribunal later determines that, in [view of all] the circumstances, the measure [should not have been granted] [was not justified]. The arbitral tribunal may award such costs and damages at any point during the proceedings.
9. Nothing in these Rules shall have the effect of creating a right, or of limiting any right which may exist outside these Rules, of a party to apply to the arbitral tribunal for, and any power of the arbitral tribunal to issue, in either case without prior notice to a party, a preliminary order that the party not frustrate the purpose of a requested interim measure.
10. A request for interim measures addressed by any party to a judicial authority shall not be deemed incompatible with the agreement to arbitrate, or as a waiver of that agreement.

Remarks on draft article 26 [article 26 of the 1976 version of the Rules]¹⁰

26. As decided by the Working Group, draft article 26 on interim measures is placed before the provisions on evidence and hearings (A/CN.9/669, para. 85).

27. Paragraphs (1) to (8) are modelled on the provision on interim measures contained in chapter IV A of the Model Law. Paragraph (9) (numbered paragraph (5) in the previous draft revised Rules) addresses the question of preliminary orders and paragraph (10) corresponds to article 26, paragraph (3) of the 1976 version of the Rules (A/CN.9/641, para. 52). At the fiftieth session of the Working Group, the provision on interim measures was extensively discussed on the basis of different proposals. The current version reflects the changes agreed to by the Working Group on draft article 26 (A/CN.9/669, para. 85-119). With those modifications, the Working Group approved in substance paragraphs (1) to (7) and (10) of draft article 26, and agreed to give further consideration to paragraphs (8) and (9).

28. At the fiftieth session of the Working Group, it was said that paragraph (8) might have the effect that a party requesting an interim measure be liable to pay costs and damages in situations where, for instance, the conditions of draft article 26 had been met but the requesting party lost the arbitration (A/CN.9/669, para. 116). This includes situations where the granting of interim measures was not justified with respect to the outcome of the case, in particular where the arbitral tribunal later finds that the claim for which the interim measure was sought is not valid. To address that concern, options in brackets are proposed for the Working Group's consideration. The Working Group will have before it a note prepared by the Secretariat (A/CN.9/WG.II/WP.127) to assist further discussion on how the different

¹⁰ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 104 and 105; A/CN.9/641, paras. 46-60 and A/CN.9/669, paras. 85-119.

leges arbitri deal with the matter of liability for damages that might result from the granting of interim measures (A/CN.9/669, para. 118).

29. Paragraph (9), which deals with the power of the arbitral tribunal to grant preliminary orders, takes account of the discussions of the Working Group at its fiftieth session (A/CN.9/669, para. 112). That provision reflects a proposal made with the aim to reconcile the diverging views expressed in the Working Group on the question of preliminary orders, and the Working Group may wish to give further consideration to that provision.

Draft article 27

30. Draft article 27 reads as follows:

Evidence

1. Each party shall have the burden of proving the facts relied on to support its claim or defence.
2. Witnesses, including expert witnesses, who are presented by the parties to testify to the arbitral tribunal on any issue of fact or expertise may be any individual, notwithstanding that the individual is a party to the arbitration or in any way related to a party. Unless otherwise directed by the arbitral tribunal, statements by witnesses, including expert witnesses, may be presented in writing and signed by them.
3. At any time during the arbitral proceedings the arbitral tribunal may require the parties to produce documents, exhibits or other evidence within such a period of time as the arbitral tribunal shall determine.
4. The arbitral tribunal shall determine the admissibility, relevance, materiality and weight of the evidence offered.

Remarks on draft article 27 [article 24 of the 1976 version of the Rules]¹¹

31. The Working Group may wish to consider whether, in the interest of clarity, draft article 27 should be titled “Evidence” as it deals with evidence and the form in which the statements of witnesses and experts would be presented.

32. Paragraphs (1) and (3), which are reproduced from the 1976 version of the Rules, were adopted by the Working Group without modifications at its fiftieth session (A/CN.9/669, paras. 49, 70 and 75). In accordance with the decision of the Working Group to group under draft article 27 all provisions relating to evidence, the substance of article 25, paragraphs (5) and (6) of the 1976 version of the Rules has been placed under draft article 27 (as paragraph (2), second sentence and paragraph (4), respectively) (A/CN.9/669, para. 70, 72 and 73). The first sentence of paragraph (2) is based on drafting suggestions made in the Working Group and is proposed to be placed under draft article 27, instead of draft article 28, as it relates to the definition of the term “witnesses” (A/CN.9/669, paras. 57-60, 70, 76 and 77).

¹¹ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para. 103; A/CN.9/641, paras. 21-26 and A/CN.9/669, paras. 49-51 and 70-75.

Draft article 28

33. Draft article 28 reads as follows:

Hearings

1. In the event of an oral hearing, the arbitral tribunal shall give the parties adequate advance notice of the date, time and place thereof.
2. Witnesses, including expert witnesses, may be heard under the conditions and examined in the manner set by the arbitral tribunal.
3. Hearings shall be held in camera unless the parties agree otherwise. The arbitral tribunal may require the retirement of any witness or witnesses, including expert witnesses, during the testimony of such other witnesses, except that a witness, including an expert witness, who is a party to the arbitration shall not, in principle, be asked to retire.
4. The arbitral tribunal may direct that witnesses, including expert witnesses, be examined through means of telecommunication that do not require their physical presence at the hearing (such as videoconference).

Remarks on draft article 28 [numbered article 25 in the 1976 version of the Rules]¹²

34. The Working Group agreed that draft article 28 be titled “Hearings” and approved the substance of draft article 28 at its fiftieth session, subject to the clarification in paragraph (3) that a party appearing as a witness (or expert) should not generally be requested to retire during the testimony of other witnesses (or experts) (A/CN.9/669, paras. 82 and 83). The phrase “except that a witness, including an expert witness, who is a party to the arbitration shall not, in principle, be asked to retire” is proposed to be added at the end of paragraph (3) to address that matter.

Draft article 29

35. Draft article 29 reads as follows:

Experts appointed by the arbitral tribunal

1. After consultation with the parties, the arbitral tribunal may appoint one or more independent experts to report to it, in writing, on specific issues to be determined by the tribunal. A copy of the expert’s terms of reference, established by the arbitral tribunal, shall be communicated to the parties.
2. The parties shall give the expert any relevant information or produce for his or her inspection any relevant documents or goods that he or she may require of them. Any dispute between a party and such expert as to the relevance of the required information or production shall be referred to the arbitral tribunal for decision.
3. Upon receipt of the expert’s report, the arbitral tribunal shall communicate a copy of the report to the parties, which shall be given the opportunity to express, in writing, their opinion on the report. A party shall be

¹² For discussions at previous sessions of the Working Group, see documents A/CN.9/641, paras. 27-45 and A/CN.9/669, paras. 52-71, 73 and 76-84.

entitled to examine any document on which the expert has relied in his or her report.

4. At the request of any party, the expert, after delivery of the report, may be heard at a hearing where the parties shall have the opportunity to be present and to interrogate the expert. At this hearing, any party may present expert witnesses in order to testify on the points at issue. The provisions of article 28 shall be applicable to such proceedings.

Remarks on draft article 29 [article 27 of the 1976 version of the Rules]¹³

36. The Working Group found the substance of draft article 29 generally acceptable at its fifty-first session (A/CN.9/684, para. 21). The Working Group may wish to note that the word “independent” has been added in paragraph (1) before the word “expert”.

37. At its fifty-first session, the Working Group took note that one delegation would make a proposal with respect to challenge of experts (A/CN.9/684, para. 21). The substance of that proposal is along the following lines: “Experts appointed by the arbitral tribunal may be challenged for the same reasons and in the same way as the arbitrators”. That proposal may be elaborated upon in document A/CN.9/WG.II/LII/CRP.2. The Working Group may wish to note that another option may consist in adopting a provision along the lines article 6 of the IBA Rules on the taking of evidence in international commercial arbitration, which would then read: “The expert shall, before accepting appointment, submit to the arbitral tribunal and to the parties a description of his or her qualifications and a statement of his or her independence from the parties and the arbitral tribunal. Within the time ordered by the arbitral tribunal, the parties shall inform the arbitral tribunal whether they have any objections as to the expert’s independence. The arbitral tribunal shall decide promptly whether to accept any such objection.” If the Working Group would decide to include a provision on challenge of experts, it may wish to consider including such a provision as a new paragraph (2) of draft article 29.

Draft article 30

38. Draft article 30 reads as follows:

Default

1. If, within the period of time fixed by these Rules or the arbitral tribunal, without showing sufficient cause:

(a) The claimant has failed to communicate its statement of claim, the arbitral tribunal shall issue an order for the termination of the arbitral proceedings, unless there are remaining matters that may need to be decided and the arbitral tribunal considers it appropriate to do so;

(b) The respondent has failed to communicate its response to the notice of arbitration or its statement of defence, the arbitral tribunal shall order that the proceedings continue, without treating such failure in itself as an

¹³ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 106 and 107; A/CN.9/641, para. 61 and A/CN.9/684, para. 21.

admission of the claimant's allegations; the provisions of this subparagraph also apply to a claimant's failure to submit a defence to a counterclaim or to a claim for the purpose of a set-off.

2. If a party, duly notified under these Rules, fails to appear at a hearing, without showing sufficient cause for such failure, the arbitral tribunal may proceed with the arbitration.

3. If a party, duly invited by the arbitral tribunal to produce documents, exhibits or other evidence, fails to do so within the established period of time, without showing sufficient cause for such failure, the arbitral tribunal may make the award on the evidence before it.

Remarks on draft article 30 [article 28 of the 1976 version of the Rules]¹⁴

39. At its fifty-first session, the Working Group approved the substance of draft article 30, paragraphs (1)(b), (2) and (3) (A/CN.9/684, paras. 27, 28 and 33) and agreed to give further consideration to paragraph (1)(a), which has been redrafted to clarify that the power of the arbitral tribunal in case the claimant fails to submit its statement of claim is not limited to a dismissal order for termination (A/CN.9/684, paras. 22-26). The Working Group may wish to note that, for the sake of consistency, a similar amendment has been made to draft article 36, paragraph (2) (see document A/CN.9/WG.II/WP.157/Add.2, para. 10).

Draft article 31

40. Draft article 31 reads as follows:

Closure of hearings

1. The arbitral tribunal may inquire of the parties if they have any further proof to offer or witnesses to be heard or submissions to make and, if there are none, it may declare the hearings closed.

2. The arbitral tribunal may, if it considers it necessary owing to exceptional circumstances, decide, on its own initiative or upon application of a party, to reopen the hearings at any time before the award is made.

Remarks on draft article 31 [article 29 of the 1976 version of the Rules]¹⁵

41. The Working Group approved the substance of draft article 31 at its fifty-first session (A/CN.9/684, paras. 34-40).

¹⁴ For discussions at previous sessions of the Working Group, see documents A/CN.9/641, paras. 62-64 and A/CN.9/684, paras. 22-33.

¹⁵ For discussions at previous sessions of the Working Group, see documents A/CN.9/641, para. 65 and A/CN.9/684, paras. 34-40.

Draft article 32

42. Draft article 32 reads as follows:

Waiver of right to object

A failure by any party to object promptly to any non-compliance with these Rules or with any requirement of the arbitration agreement shall be deemed to be a waiver of the right of such party to make such an objection, unless such party can show that, under the circumstances, its failure to object was justified.

Remarks on draft article 32 [numbered article 30 in the 1976 version of the Rules]¹⁶

43. The Working Group agreed, at its fifty-first session, to give further consideration to draft article 32, which has been redrafted to capture constructive knowledge of non-compliance with any provision of the Rules or any requirement under the arbitration agreement (A/CN.9/684, paras. 49 and 51).

¹⁶ For discussions at previous sessions of the Working Group, see documents A/CN.9/641, paras. 66 and 67 and A/CN.9/684, paras. 41-51.

A/CN.9/WG.II/WP.157/Add.2 (Original: English)**Note by the Secretariat on settlement of commercial disputes: Revision of the UNCITRAL Arbitration Rules, submitted to the Working Group on Arbitration at its fifty-second session****ADDENDUM****CONTENTS**

<i>Chapter</i>	<i>Paragraphs</i>
I. Introduction	1
II. General remark	2
III. Draft revised UNCITRAL Arbitration Rules	3-35
Section IV. The award (draft articles 33-43)	3-28
Draft model arbitration clause for contracts	29-30
Draft model statements of independence pursuant to article 11 of the Rules	31-33
Draft additional provision	34-35

I. Introduction

1. This note contains an annotated draft of revised articles 33 to 43 of the UNCITRAL Arbitration Rules, based on the deliberations of the Working Group at its forty-ninth to fifty-first sessions. It has been prepared for the consideration of the Working Group for the third reading of the revised version of the Rules. The annotated draft of revised articles 1 to 16 of the Rules is contained in document A/CN.9/WG.II/WP.157 and the annotated draft of revised articles 17 to 32 of the Rules is contained in document A/CN.9/WG.II/WP.157/Add.1. The Working Group may wish to note that where this note refers to the previous draft revised Rules, it refers to the draft as contained in documents A/CN.9/WG.II/WP.151 and A/CN.9/WG.II/WP.151/Add.1.

II. General remark*Provisions to be considered for the third reading of the revised version of the Rules*

2. The Working Group may wish to note that it decided at its forty-ninth to fifty-first sessions to give further consideration to the following draft provisions of the revised Rules contained in this addendum: draft article 34, paragraph (2) on waiver of recourse (see below, para. 5); draft article 36, paragraph (2) on termination of proceedings (see below, para. 9); draft article 39 on additional award (see below, para. 15); articles 40 to 43 on costs (see below, paras. 17, 19, 25 and 27); and the proposed additional draft provision on gap filling (see below, para. 34).

III. Draft revised UNCITRAL Arbitration Rules

Section IV. The award

Draft article 33

3. Draft article 33 reads as follows:

Decisions

1. When there is more than one arbitrator, any award or other decision of the arbitral tribunal shall be made by a majority of the arbitrators.
2. In the case of questions of procedure, when there is no majority or when the arbitral tribunal so authorizes, the presiding arbitrator may decide alone, subject to revision, if any, by the arbitral tribunal.

Remarks on draft article 33 [article 31 of the 1976 version of the Rules]¹

4. At the fifty-first session of the Working Group, due to the lack of consensus for changing draft article 33, paragraph (1), the Working Group agreed to retain that provision as it appeared in the 1976 version of the Rules with the replacement of the word “three” by the words “more than one” (A/CN.9/684, para. 61). The Working Group approved paragraph (2) in substance, which is reproduced from the 1976 version of the Rules, with the replacement of the words “on his or her own” by the word “alone” (A/CN.9/684, para. 62).

Draft article 34

5. Draft article 34 reads as follows:

Form and effect of the award

1. The arbitral tribunal may make separate awards on different issues at different times.
2. All awards shall be made in writing and shall be final and binding on the parties. The parties undertake to carry out all awards without delay. By adopting these Rules, the parties waive their right to any form of appeal, review or recourse regarding an award to any court or other competent authority, except for an application for setting aside an award.
3. The arbitral tribunal shall state the reasons upon which the award is based, unless the parties have agreed that no reasons are to be given.
4. An award shall be signed by the arbitrators and it shall contain the date on which the award was made and indicate the place of arbitration. Where there is more than one arbitrator and any of them fails to sign, the award shall state the reason for the absence of the signature.
5. An award may be made public with the consent of all parties or where and to the extent disclosure is required of a party by legal duty, to protect or

¹ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 108-112; A/CN.9/641, paras. 68-77 and A/CN.9/684, paras. 52-62.

pursue a legal right or in relation to legal proceedings before a court or other competent authority.

6. Copies of the award signed by the arbitrators shall be communicated to the parties by the arbitral tribunal.

Remarks on draft article 34 [article 32 of the 1976 version of the Rules]²

6. The Working Group approved the substance of draft article 34, paragraphs (1) and (3) to (6) at its fifty-first session (A/CN.9/684, paras. 66, 87 and 89). The third sentence of paragraph (2) addresses the question of waiver of recourses and has been redrafted for further consideration by the Working Group, based on the discussions of the Working Group at its fifty-first session (A/CN.9/684, paras. 85 and 86).

Draft article 35

7. Draft article 35 reads as follows:

Applicable law, *amiable compositeur*

1. The arbitral tribunal shall apply the rules of law designated by the parties as applicable to the substance of the dispute. Failing such designation by the parties, the arbitral tribunal shall apply the law which it determines to be appropriate.

2. The arbitral tribunal shall decide as *amiable compositeur* or *ex aequo et bono* only if the parties have expressly authorized the arbitral tribunal to do so.

3. In all cases, the arbitral tribunal shall decide in accordance with the terms of the contract, if any, and shall take into account any usage of trade applicable to the transaction.

Remarks on draft article 35 [article 33 of the 1976 version of the Rules]³

8. The drafting modifications decided by the Working Group are reflected in draft article 35, and with those modifications, the Working Group approved draft article 35 at its fifty-first session (A/CN.9/684, paras. 91-100).

Draft article 36

9. Draft article 36 reads as follows:

Settlement or other grounds for termination

1. If, before the award is made, the parties agree on a settlement of the dispute, the arbitral tribunal shall either issue an order for the termination of the arbitral proceedings or, if requested by the parties and accepted by the tribunal, record the settlement in the form of an arbitral award on agreed terms. The arbitral tribunal is not obliged to give reasons for such an award.

² For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 113-121; A/CN.9/641, paras. 78-105 and A/CN.9/684, paras. 63-90.

³ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 122-124; A/CN.9/641, paras. 106-113 and A/CN.9/684, paras. 91-100.

2. If, before the award is made, the continuation of the arbitral proceedings becomes unnecessary or impossible for any reason not mentioned in paragraph 1, the arbitral tribunal shall inform the parties of its intention to issue an order for the termination of the proceedings. The arbitral tribunal shall have the power to issue such an order unless there are remaining matters that may need to be decided and the arbitral tribunal considers it appropriate to do so.
3. Copies of the order for termination of the arbitral proceedings or of the arbitral award on agreed terms, signed by the arbitrators, shall be communicated by the arbitral tribunal to the parties. Where an arbitral award on agreed terms is made, the provisions of article 34, paragraphs 2, 4 and 5 shall apply.

Remarks on draft article 36 [article 34 of the 1976 version of the Rules]⁴

10. The Working Group approved paragraphs (1) and (3) in substance at its fifty-first session (A/CN.9/684, paras. 101 and 103). Paragraph (2) has been revised for the sake of consistency with the modification to draft article 28, paragraph (1) (a) to no longer limit the power of the arbitral tribunal to a dismissal order for termination in case the continuation of the arbitral proceedings becomes unnecessary or impossible (see document A/CN.9/WG.II/WP.157/Add.1, para. 39) (A/CN.9/684, para. 102).

Draft article 37

11. Article 37 reads as follows:

Interpretation of the award

1. Within 30 days after the receipt of the award, a party, with notice to the other parties, may request that the arbitral tribunal give an interpretation of the award.
2. The interpretation shall be given in writing within 45 days after the receipt of the request. The interpretation shall form part of the award and the provisions of article 34, paragraphs 2 to 6, shall apply.

Remarks on draft article 37 [article 35 of the 1976 version of the Rules]⁵

12. The Working Group approved the substance of draft article 37 at its fifty-first session (A/CN.9/684, paras. 104 and 105).

⁴ For discussions at previous sessions of the Working Group, see documents A/CN.9/641, para. 114 and A/CN.9/684, paras. 101-103.

⁵ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 125 and 126; A/CN.9/641, para. 115 and A/CN.9/684, paras. 104 and 105.

Draft article 38

13. Draft article 38 reads as follows:

Correction of the award

1. Within 30 days after the receipt of the award, a party, with notice to the other parties, may request the arbitral tribunal to correct in the award any error in computation, any clerical or typographical error, or any error or omission of a similar nature. If the arbitral tribunal considers that the request is justified, it shall make the correction within 45 days of receipt of the request.
2. The arbitral tribunal may within 30 days after the communication of the award make such corrections on its own initiative.
3. Such corrections shall be in writing, and shall form part of the award. The provisions of article 34, paragraphs 2 to 6, shall apply.

Remarks on draft article 38 [article 36 of the 1976 version of the Rules]⁶

14. Paragraph (1) reflects the decision of the Working Group to include a time limit of 45 days for correction of awards, when the correction is made at the request of a party (and not at the initiative of the tribunal) (A/CN.9/684, para. 107) and to refer to “a party” instead of “any party” to align the language in article 36 with that in article 37 (A/CN.9/684, para. 108). Paragraph (2) reflects the decision of the Working Group that corrections would form part of the award (A/CN.9/684, para. 112). With those modifications, the Working Group approved the substance of draft article 38 at its fifty-first session (A/CN.9/684, paras. 106 to 112).

Draft article 39

15. Draft article 39 reads as follows:

Additional award

1. Within 30 days after the receipt of the termination order or the award, a party, with notice to the other parties, may request the arbitral tribunal to make an award or an additional award as to claims presented in the arbitral proceedings but not decided by the arbitral tribunal.
2. If the arbitral tribunal considers the request for an award or additional award to be justified, it shall render or complete its award within 60 days after the receipt of the request. The arbitral tribunal may extend, if necessary, the period of time within which it shall make the award.
3. When such an award or additional award is made, the provisions of article 34, paragraphs 2 to 6, shall apply.

⁶ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para. 127; A/CN.9/641, para. 116 and A/CN.9/684, paras. 106-112.

*Remarks on draft article 39 [article 37 of the 1976 version of the Rules]*⁷

16. Paragraph (1) reflects a proposal made at the fifty-first session of the Working Group to clarify that draft article 39 also applies in case the arbitral tribunal renders a termination order and a party wishes to request the tribunal to make an additional decision on claims presented during the arbitral proceedings, but omitted by the tribunal (A/CN.9/684, paras. 113-116). Paragraphs (2) and (3) have been amended accordingly. The Working Group agreed at its fifty-first session to give further consideration to that proposal (A/CN.9/684, para. 116).

Draft article 40

17. Draft article 40 reads as follows:

Definition of costs

1. The arbitral tribunal shall fix the costs of arbitration in the final award and, if it deems it appropriate, in any other award.
2. The term “costs” includes only:
 - (a) The fees of the arbitral tribunal to be stated separately as to each arbitrator and to be fixed by the tribunal itself in accordance with article 41;
 - (b) The reasonable travel and other expenses incurred by the arbitrators;
 - (c) The reasonable costs of expert advice and of other assistance required by the arbitral tribunal;
 - (d) The reasonable travel and other expenses of witnesses to the extent such expenses are approved by the arbitral tribunal;
 - (e) The legal and other costs incurred by the parties in relation to the arbitration to the extent that the arbitral tribunal determines that the amount of such costs is reasonable;
 - (f) Any fees and expenses of the appointing authority as well as the expenses of the Secretary-General of the PCA.
3. In relation to interpretation, correction or completion of any award under articles 37 to 39, the arbitral tribunal may charge the costs referred to in paragraphs 2 (b) to (f), but no additional fees.

*Remarks on draft article 40 [article 38 of the 1976 version of the Rules]*⁸

18. Draft article 40 has been modified to take account of the discussions of the Working Group at its fifty-first session (A/CN.9/684, paras. 117-119). Paragraph (1) clarifies that the arbitral tribunal may fix the costs of arbitration in more than one award (A/CN.9/684, para. 120). Paragraph (2) (e) has been modified to provide that the costs incurred by the parties may include legal costs as well as other costs

⁷ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 128 and 129; A/CN.9/641, paras. 117-121 and A/CN.9/684, paras. 113-116.

⁸ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 130-132; A/CN.9/646, paras. 18 and 19 and A/CN.9/684, paras. 117-121.

related to the arbitration. Paragraph (3) contains an amended version of the provision contained in article 40, paragraph (4) of the 1976 version of the Rules. At its forty-eighth session, the Working Group agreed to further consider that provision (A/CN.9/646, paras. 31-36).

Draft article 41

19. Article 41 reads as follows:

Fees of arbitrators

1. The fees of the arbitrators shall be reasonable in amount, taking into account the amount in dispute, the complexity of the subject matter, the time spent by the arbitrators and any other relevant circumstances of the case.
2. If an appointing authority has been agreed upon by the parties or designated by the Secretary-General of the PCA, and if that authority applies or has stated that it will apply a schedule or particular method for determining the fees for arbitrators in international cases, the arbitral tribunal in fixing its fees shall take that schedule or method into account to the extent that it considers appropriate in the circumstances of the case.
3. Promptly after its constitution, the arbitral tribunal shall inform the parties as to how it proposes to determine its fees, including any rates it intends to apply. Within 15 days of receiving that proposal, any party, which considers that the proposal does not satisfy the criteria in paragraph 1 may either refer the proposal to the appointing authority for review or, if no appointing authority has been agreed upon or designated, initiate the procedure for agreeing on, or designating an appointing authority and then, within 15 days of such agreement or designation, refer the proposal of the arbitral tribunal for review. Within 45 days of receipt of such a referral, the appointing authority shall determine whether the proposal of the arbitral tribunal satisfies the criteria in paragraph 1 and, if not, may make any necessary adjustments thereto, which shall be binding upon the arbitral tribunal. Throughout this procedure, the arbitral tribunal shall remain under its continuing duty to proceed with the arbitration, in accordance with article 17, paragraph 1.
4. When informing the parties of the arbitrators' fees [and expenses] that have been fixed pursuant to article 40, paragraphs 2 (a), (b) and (c), the arbitral tribunal shall also explain the manner in which the corresponding amounts have been calculated. Within 15 days of receiving the arbitral tribunal's determination of fees [and expenses], any party may refer such determination to the appointing authority or, if no appointing authority has been agreed upon or designated or if such an appointing authority fails, refuses, or is unable to fulfil its functions under this paragraph, to the Secretary-General of the PCA, for review. Within 45 days of receiving such a referral, the appointing authority or the Secretary-General of the PCA shall determine whether the arbitral tribunal's fees [and expenses] satisfy the criteria in paragraph 1 as applied in the arbitral tribunal's proposal according to paragraph 3 and, if not, may make any necessary adjustments thereto, which shall be binding upon the arbitral tribunal. Any such adjustments either shall be included by the tribunal in its award or, if the award has already been issued, shall be treated as a correction to the award pursuant to article 38.

*Remarks on draft article 41 [article 39 of the 1976 version of the Rules]*⁹

20. Paragraph (1) remains unchanged from the 1976 version of the Rules.
21. Paragraph (2) contains the words “applies or has stated it will apply” to cover situations where an appointing authority, most probably an individual, would apply a schedule of fees defined by an institution (A/CN.9/684, para. 122). The Working Group may wish to note that the provision refers to the “method” for determining the fees in addition to the “schedule of fees”.
22. Paragraphs (3) and (4) were not contained in the 1976 version of the Rules. They are included pursuant to the Working Group’s decision to provide rules on control by the appointing authority or the Secretary-General of the PCA over the fees charged by arbitrators (A/CN.9/646, paras. 20, 21 and 24-27). Both paragraphs seek to address the concerns expressed by the Working Group at its fifty-first session (A/CN.9/684, paras. 123-126).
23. Paragraph (3) deals with the information to be provided at the beginning of the arbitral proceedings by the arbitrators to the parties on the manner in which fees will be determined. It provides an opportunity for the parties to control fee determination at an early stage of the proceedings. It includes specific time limits for referring the proposal of the arbitrators on the method for determining the fees to the appointing authority. It also includes a time limit for the appointing authority to make its determination. The Working Group may wish to note that reference is made to the arbitral tribunal’s duty to proceed with the arbitration as provided for under draft article 17, paragraph (1), so that the issue of fees do not delay the arbitral proceedings.
24. Paragraph (4) regulates the situation where the fees and expenses have been fixed. It establishes a duty for the arbitrators to explain the calculation of the fees in the interest of transparency. It includes time limits, so that the issue of fees do not delay the termination of the arbitral proceedings. For completeness, paragraph (4) addresses the situation where either no appointing authority has been designated or where such authority does not fulfil its functions under paragraph (4). In that case, paragraph (4) enables the decision of the arbitral tribunal on costs to be revised by the Secretary-General of the PCA (A/CN.9/684, para. 126). The words “and expenses” have been placed into brackets where they appear in paragraph (4), as the Working Group may wish to decide whether expenses should also form part of the control by the appointing authority and the Secretary-General of the PCA.

Draft article 42

25. Draft article 42 reads as follows:

Allocation of costs

The costs of the arbitration shall in principle be borne by the unsuccessful party or parties. However, the arbitral tribunal may apportion each of such costs between the parties if it determines that apportionment is reasonable, taking into account the circumstances of the case.

⁹ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 133 and 134; A/CN.9/641, paras. 122-126; A/CN.9/646, paras. 20-27 and A/CN.9/684, paras. 122-126.

*Remarks on draft article 42 [article 40 of the 1976 version of the Rules]*¹⁰

26. At its fifty-first session, the Working Group considered whether articles 38 and 40 of the Rules (corresponding to draft articles 40 and 42) would need to be restructured, to avoid any overlapping (A/CN.9/684, para. 119). Pursuant to that suggestion, paragraph (3) of article 40 of the 1976 version of the Rules has been deleted as its substance is reflected in draft article 40, paragraph (1). Paragraph (4) has been deleted and its substance placed under draft article 40, paragraph (3) (see above, para. 18). It is recalled that article 40, paragraph (2) of the 1976 version of the Rules has been deleted pursuant to the Working Group's decision at its forty-eighth session (A/CN.9/646, paras. 28-36).

Draft article 43

27. Article 43 reads as follows:

Deposit of costs

1. The arbitral tribunal, on its establishment, may request the parties to deposit an equal amount as an advance for the costs referred to in article 40, paragraphs 2 (a), (b) and (c).
2. During the course of the arbitral proceedings the arbitral tribunal may request supplementary deposits from the parties.
3. If an appointing authority has been agreed upon or designated, and when a party so requests and the appointing authority consents to perform the function, the arbitral tribunal shall fix the amounts of any deposits or supplementary deposits only after consultation with the appointing authority, which may make any comments to the arbitral tribunal which it deems appropriate concerning the amount of such deposits and supplementary deposits.
4. If the required deposits are not paid in full within 30 days after the receipt of the request, the arbitral tribunal shall so inform the parties in order that one or more of them may make the required payment. If such payment is not made, the arbitral tribunal may order the suspension or termination of the arbitral proceedings.
5. After a termination order or final award has been made, the arbitral tribunal shall render an accounting to the parties of the deposits received and return any unexpended balance to the parties.

*Remarks on draft article 43 [article 41 of the 1976 version of the Rules]*¹¹

28. Draft article 43 has been adopted in substance by the Working Group at its forty-eighth session (A/CN.9/646/, para. 37). The Working Group may wish to note that the words "After the award", which appeared in article 41, paragraph (5) of the 1976 version of the Rules have been replaced in draft article 43, paragraph (5) by the words "After a termination order or final award".

¹⁰ For discussions at previous sessions of the Working Group, see documents A/CN.9/614, para.135 and A/CN.9/646, paras. 28-36.

¹¹ For discussions at previous sessions of the Working Group, see document A/CN.9/646, para. 37.

Draft model arbitration clause for contracts

29. The model arbitration clause for contracts reads as follows:

Any dispute, controversy or claim arising out of or relating to this contract, or the breach, termination or invalidity thereof, shall be settled by arbitration in accordance with the UNCITRAL Arbitration Rules.

Note — Parties should consider adding:

- (a) The appointing authority shall be ... (name of institution or person);
- (b) The number of arbitrators shall be ... (one or three);
- (c) The place of arbitration shall be ... (town and country);
- (d) The language to be used in the arbitral proceedings shall be

*Remarks on the draft model arbitration clause for contracts*¹²

30. The draft model arbitration clause was approved in substance by the Working Group at its forty-ninth session (A/CN.9/665, para. 21).

Draft model statements of independence pursuant to article 11 of the Rules

31. The model statements of independence pursuant to article 11 of the Rules read as follows:

No circumstances to disclose: I am impartial and independent of each of the parties and intend to remain so. To the best of my knowledge, there are no circumstances, past or present, likely to give rise to justifiable doubts as to my impartiality or independence. I hereby undertake promptly to notify the parties and the other arbitrators of any such circumstances that may subsequently come to my attention during this arbitration.

Circumstances to disclose: I am impartial and independent of each of the parties and intend to remain so. Attached is a statement made pursuant to article 11 of the UNCITRAL Arbitration Rules of (a) my past and present professional, business and other relationships with the parties and (b) any other relevant circumstances. [Include statement] I confirm that those circumstances do not affect my independence and impartiality. I hereby undertake promptly to notify the parties and the other arbitrators of any such further relationships or circumstances that may subsequently come to my attention during this arbitration.

*Remarks on the draft model statements of independence*¹³

32. The model statements of independence seek to reflect the discussions of the Working Group at its forty-ninth session (A/CN.9/665, paras. 75-80). The purpose

¹² For discussions at previous sessions of the Working Group, see documents A/CN.9/614, paras. 36-38, A/CN.9/619, paras. 39-42; A/CN.9/646, para. 79 and A/CN.9/665, paras. 21-22.

¹³ For discussions at previous sessions of the Working Group, see documents A/CN.9/619, paras. 96-99 and A/CN.9/665, paras. 75-80.

of the second statement of independence is to allow parties to decide whether there are actually circumstances that give rise to justifiable doubts as to the arbitrator's impartiality or independence. The modifications made to the second statement of independence aim at ensuring consistency of the statement with draft article 11 (A/CN.9/665, paras. 77 and 80).

33. The Working Group may wish to consider whether the following statement could be added to the model statements of independence:

“Note — The parties may consider adding to the statement of independence:

I confirm, on the basis of the information presently available to me, that I can devote the time necessary to conduct this arbitration diligently, efficiently and in accordance with the time limits in the Rules.”

Draft additional provision

34. The draft additional provision reads as follows:

[Questions concerning matters governed by these Rules which are not expressly settled in them are to be settled in conformity with the general principles on which these Rules are based].

*Remarks on the proposed additional provision*¹⁴

35. The draft additional provision contains a general principle aimed at clarifying that matters governed by the Rules which are not expressly settled in them are to be settled in conformity with the general principles on which the Rules are based. The Working Group agreed, at its forty-eighth session, to further consider whether such a provision should be included in the Rules (A/CN.9/646, paras. 50-53). If the Working Group agrees on the inclusion of that provision in the text of the Rules, it may wish to decide on its placement and to further consider how the general principles on which the Rules are based are to be determined, as the draft provision leaves that question open.

¹⁴ For discussions on the proposed additional provision, see documents A/CN.9/614, paras. 120-121 and A/CN.9/646, paras. 50-53.

I. Introduction

1. At its present session, Working Group VI continued its work on the preparation of a Supplement to the UNCITRAL Legislative Guide on Secured Transactions (hereinafter referred to as “the Guide”) specific to security rights in intellectual property pursuant to a decision taken by the Commission at its fortieth session, in 2007.¹ The Commission’s decision to undertake work on security rights in intellectual property was taken in response to the need to supplement its work on

¹ *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17 (A/62/17 (Part I))*, para. 162.

the Guide by providing specific guidance to States as to the appropriate coordination between secured transactions and intellectual property law.²

2. At its thirty-ninth session, in 2006, the Commission considered its future work on secured financing law. It was noted that intellectual property rights (e.g. copyrights, patents and trademarks) were becoming an extremely important source of credit and should not be excluded from a modern secured transactions law. In addition, it was noted that the recommendations of the draft Guide generally applied to security rights in intellectual property to the extent that they were not inconsistent with intellectual property law. Moreover, it was noted that, as the recommendations of the draft Guide had not been prepared with the special intellectual property law issues in mind, enacting States should consider making any necessary adjustments to the recommendations to address those issues.³

3. In order to provide more guidance to States, the suggestion was made that the Secretariat should prepare, in cooperation with international organizations with expertise in the fields of secured financing and intellectual property law and, in particular the World Intellectual Property Organization (WIPO), a note for submission to the Commission at its fortieth session, in 2007, discussing the possible scope of work that could be undertaken by the Commission as a supplement to the draft Guide. In addition, it was suggested that, in order to obtain expert advice and the input of the relevant industry, the Secretariat should organize expert group meetings and colloquiums as necessary.⁴ After discussion, the Commission requested the Secretariat to prepare, in cooperation with relevant organizations and in particular WIPO, a note discussing the scope of future work by the Commission on intellectual property financing. The Commission also requested the Secretariat to organize a colloquium on intellectual property financing ensuring to the maximum extent possible the participation of relevant international organizations and experts from various regions of the world.⁵

4. Pursuant to the decision of the Commission, the Secretariat organized in cooperation with WIPO a colloquium on security rights in intellectual property rights (Vienna, 18 and 19 January 2007). The colloquium was attended by experts on secured financing and intellectual property law, including representatives of Governments and national and international, governmental and non-governmental organizations. At the colloquium, several suggestions were made with respect to adjustments that would need to be made to the draft Guide to address issues specific to intellectual property financing.⁶

5. At the first part of its fortieth session (Vienna, 25 June-12 July 2007), the Commission considered a note by the Secretariat entitled "Possible future work on security rights in intellectual property" (A/CN.9/632). The note took into account the conclusions reached at the colloquium on security rights in intellectual property rights. In order to provide sufficient guidance to States as to the adjustments that they might need to make in their laws to avoid inconsistencies between secured

financing and intellectual property law, the Commission decided to entrust Working Group VI (Security Interests) with the preparation of an annex to the draft Guide specific to security rights in intellectual property rights.⁷

6. At its resumed fortieth session (Vienna, 10-14 December 2007), the Commission finalized and adopted the Guide on the understanding that an annex to the Guide specific to security rights in intellectual property rights would subsequently be prepared.⁸

7. At its thirteenth session (New York, 19-23 May 2008), the Working Group considered a note by the Secretariat entitled "Security rights in intellectual property rights" (A/CN.9/WG.VI/WP.33 and Add.1). At that session, the Working Group requested the Secretariat to prepare a draft of the Annex to the Guide on security rights in intellectual property reflecting the deliberations and decisions of the Working Group (see A/CN.9/649, para. 13). As the Working Group was not able to reach agreement as to whether certain matters related to the impact of insolvency on a security right in intellectual property (see A/CN.9/649, paras. 98-102) were sufficiently linked with secured transactions law so as to justify their discussion in the Annex to the Guide, it decided to revisit those matters at a future meeting and to recommend that Working Group V (Insolvency Law) be requested to consider those matters (see A/CN.9/649, para. 103).

8. At its forty-first session (New York, 16 June-3 July 2008), the Commission noted with satisfaction the good progress achieved by the Working Group. The Commission also noted the decision of the Working Group with respect to certain matters related to the impact of insolvency on a security right in intellectual property and decided that Working Group V should be informed and invited to express any preliminary opinion at its next session. It was also decided that, should any remaining issue require joint consideration by the two working groups after that session, the Secretariat should have discretion to organize a joint discussion of the impact of insolvency on a security right in intellectual property when the two Working Groups meet back to back in the spring of 2009.⁹

9. At its fourteenth session (Vienna, 20-24 October 2008), the Working Group continued its work based on a note prepared by the Secretariat entitled "Annex to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property" (A/CN.9/WG.VI/WP.35 and Add.1). At that session, the Working Group requested the Secretariat to prepare a revised version of the draft annex reflecting the deliberations and decisions of the Working Group (see A/CN.9/667, para. 15). The Working Group also referred to Working Group V (Insolvency Law) certain matters relating to the impact of insolvency on a security right in intellectual property (see A/CN.9/667, paras. 129-140). In that connection, it was widely felt that every effort should be made to conclude discussions of these matters as soon as possible, so that the result of those discussions could be included in the draft annex by the fall of 2009 or the early spring of 2010 and the draft annex could be submitted to the Commission for final approval and adoption at its forty-third session in 2010 (see A/CN.9/667, para. 143).

⁸ *Ibid.*, *Sixty-second session, Supplement No. 17 (A/62/17 (Part II))*, paras. 99-100.

⁹ *Ibid.*, *Sixty-third session, Supplement No. 17 (A/63/17)*, para. 326.

10. At its fifteenth session (New York, 27 April-1 May 2009), the Working Group continued its work based on a note by the Secretariat entitled “Draft Annex to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property” (A/CN.9/WG.VI/WP.37 and Add.1-4). At that session, the Working Group requested the Secretariat to prepare a revised version of the draft Annex reflecting the deliberations and decisions of the Working Group (see A/CN.9/670, para. 16). In addition, the Working Group, having taken note of a note by the Secretariat entitled “Discussion of intellectual property in the Legislative Guide on Insolvency Law” (A/CN.9/WG.V/WP.87), approved the substance of the discussion of the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement (see A/CN.9/WG.VI/WP.37/Add.4, paras. 22-40) and referred it to Working Group V (see A/CN.9/670, paras. 116-122). Moreover, the Working Group had a preliminary discussion about its future work programme (see A/CN.9/670, paras. 123-126).

11. At its thirty-sixth session, Working Group V (Insolvency Law) considered the insolvency-related issues referred to it by Working Group VI on the basis of documents A/CN.9/WG.V/WP.87 and A/CN.9/WG.VI/WP.37/Add.4 and an extract from the report of the Working Group (see A/CN.9/670, paras. 116-122). At that session, Working Group V approved the contents of those parts of the draft Annex dealing with the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement, as set forth in document A/CN.9/WG.VI/WP.37/Add.4, paragraphs 22-40, and the conclusions and revisions of Working Group VI reached at its fifteenth session (see A/CN.9/670, paras. 116-122).

12. At its forty-second session (Vienna, 29 June-17 July 2009), the Commission expressed its appreciation to the Working Group and the Secretariat for the progress achieved thus far and emphasized the importance of the draft Supplement (referred to above as the “draft Annex”). The Commission also noted with appreciation the results of the coordination efforts of Working Groups V and VI on insolvency-related matters in an intellectual property context. Noting the interest of the international intellectual property community, the Commission requested the Working Group to expedite its work so as to finalize the draft Supplement in one or two sessions and submit it to the Commission for finalization and adoption at its forty-third session, in 2010, so that the draft Supplement may be offered to States for adoption as soon as possible. In addition, the Commission noted with interest the future work topics discussed by the Working Group at its fourteenth and fifteenth sessions and agreed that, depending on the availability of time, preparatory work could be advanced through a discussion at the sixteenth session of the Working Group. As to the process for the preparation of a future work programme for the Working Group, the Commission agreed that the Secretariat could hold an international colloquium early in 2010 with broad participation of experts from Governments, international organizations and the private sector. It was generally agreed that, on the basis of a note to be prepared by the Secretariat, the Commission would be in a better position to consider and make a decision on the future work programme of the Working Group at its forty-third session, in 2010.¹⁰

¹⁰ Ibid., *Sixty-fourth session, Supplement No. 17* (A/64/17), paras. 317-319.

II. Organization of the session

13. The Working Group, which was composed of all States members of the Commission, held its sixteenth session in Vienna from 2 to 6 November 2009. The session was attended by representatives of the following States members of the Working Group: Algeria, Australia, Austria, Belarus, Bolivia (Plurinational State of), Bulgaria, Canada, China, Colombia, Egypt, El Salvador, France, Germany, India, Iran (Islamic Republic of), Italy, Japan, Lebanon, Mexico, Norway, Poland, Republic of Korea, Russian Federation, Singapore, Spain, Switzerland, Thailand, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

14. The session was attended by observers from the following States: Angola, Argentina, Belgium, Côte d'Ivoire, Croatia, Democratic Republic of the Congo, Dominican Republic, Georgia, Indonesia, Philippines, Qatar, Romania, Slovakia, Slovenia, Tajikistan, the Former Yugoslav Republic of Macedonia, Togo and United Republic of Tanzania. The session was also attended by the following Entity maintaining a Permanent Observer Mission: Palestine.

15. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: The World Bank;

(b) *Intergovernmental organizations*: Hague Conference on Private International Law (HCCH);

(c) *International non-governmental organizations invited by the Commission*: American Bar Association (ABA), Association of European Trade Mark Owners (MARQUES), Commercial Finance Association (CFA), European Brands Association (AIM), European Communities Trademark Association (ECTA), Forum for International Conciliation and Arbitration (FICACIC), Fédération Internationale des Associations de Distributeurs de films (FIAD), Independent Film and Television Alliance (IFTA), Inter-American Bar Association (IABA), International Federation of Film Producers Association (FIAPF), International Federation of the Phonographic Industry (IFPI), International Insolvency Institute (III) and International Trademark Association (INTA).

16. The Working Group elected the following officers:

Chairman: Ms. Kathryn SABO (Canada)

Rapporteur: Mr. Magued Sobhy BOULOS (Egypt)

17. The Working Group had before it the following documents: A/CN.9/WG.VI/WP.38 (Provisional Agenda), A/CN.9/WG.VI/WP.39 and Addenda 1 to 7 (Draft Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property) and A/CN.9/WG.VI/WP.40 (Proposal by the Permanent Bureau of the Hague Conference on Private International Law).

18. The Working Group adopted the following agenda:

1. Opening of the session and scheduling of meetings.

2. Election of officers.
3. Adoption of the agenda.
4. Security rights in intellectual property.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

19. The Working Group considered a note by the Secretariat entitled “Draft Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property” (A/CN.9/WG.VI/WP.39 and Addenda 1 to 7) and a proposal by the Permanent Bureau of the Hague Conference on Private International Law (A/CN.9/WG.VI/WP.40). The deliberations and decisions of the Working Group are set forth below in chapter IV. The Secretariat was requested to prepare a revised version of the draft Supplement reflecting the deliberations and decisions of the Working Group.

IV. Security rights in intellectual property

A. Introduction (A/CN.9/WG.VI/WP.39, paras. 1-59)

1. Background (A/CN.9/WG.VI/WP.39, paras. 1-12)

20. The Working Group approved the substance of paragraphs 1-12 unchanged.

2. The interaction between secured transactions and law relating to intellectual property (A/CN.9/WG.VI/WP.39, paras. 13-18)

21. The Working Group agreed that the draft Supplement should state in a broad manner the general principle of property and secured transactions law that a security right in an encumbered asset was limited to the grantor’s rights in the asset as those rights were determined by property or contract law. It was widely felt that, as a result of that principle, the secured creditor could acquire no greater rights in the encumbered asset than the grantor had, whether the encumbered asset was a tangible asset, a receivable or intellectual property (referred to as the “*nemo dat* principle”). Subject to that change, the Working Group approved the substance of paragraphs 13-18.

3. Terminology (A/CN.9/WG.VI/WP.39, paras. 19-39)

22. It was agreed that: (a) in the last sentence of paragraph 22, it should be clarified that the owner, licensor or licensee could encumber all or part of its rights, but only if they were transferable under law relating to intellectual property; and (b) in the second sentence of paragraph 36, reference should be made to an “outright transferee” rather than to a “transferee”. Subject to those changes, the Working Group approved the substance of paragraphs 19-39.

4. Valuation of intellectual property to be encumbered (A/CN.9/WG.VI/WP.39, paras. 40-41)

23. The Working Group approved the substance of paragraphs 40-41 unchanged.

5. Examples of financing practices relating to intellectual property (A/CN.9/WG.VI/WP.39, paras. 42-52)

24. It was agreed that paragraph 43 and examples 5 and 6 could be retained for educational reasons, but placed at the end of the examples with additional wording explaining that they did not involve transactions in which a security right was created in intellectual property. It was also agreed that paragraph 44 did not need to refer to example 7 as reflecting a combination of other categories of transactions. Subject to those changes, the Working Group approved the substance of paragraphs 42-52.

6. Key objectives and fundamental policies (A/CN.9/WG.VI/WP.39, paras. 53-59)

25. The Working Group approved the substance of paragraphs 53-59 unchanged.

B. Scope of application and party autonomy (A/CN.9/WG.VI/WP.39/Add.1, paras. 1-24)

1. Broad scope of application (A/CN.9/WG.VI/WP.39/Add.1, paras. 1-21)

26. The Working Group considered the question whether the commentary should suggest that States enacting the recommendations of the Guide might consider permitting the registration of a notice of an outright transfer of intellectual property in the general security rights registry, so as to rationalize and harmonize the recordation of all transfers of intellectual property whether or not they were registered in an intellectual property registry. The Working Group confirmed its earlier decision (see A/CN.9/649, para. 81) that outright transfers of intellectual property should not be dealt with in the draft Supplement as they did not involve financing transactions. It was widely felt that outright transfers were matter of law relating to intellectual property, as they were not financing transactions, even in the case of securitization, in which typically securitization of receivables was involved, not of intellectual property. The Working Group approved the substance of paragraphs 1-21 unchanged.

2. Application of the principle of party autonomy to security rights in intellectual property (A/CN.9/WG.VI/WP.39/Add.1, paras. 22-24)

27. It was agreed that the last sentence of paragraph 24 should be separated into two parts and the first part should be revised to clarify that the right to pursue infringement claims could not be used as security for credit under law relating to intellectual property. Subject to that change, the Working Group approved the substance of paragraphs 22-24.

**C. Creation of a security right in intellectual property
(A/CN.9/WG.VI/WP.39/Add.2, paras. 1-43)**

**1. The concepts of creation and third-party effectiveness
(A/CN.9/WG.VI/WP.39/Add.2, paras. 1-3)**

28. It was agreed that, in the third sentence of paragraph 2, reference should be made to the registration of a notice of a security right as a method of achieving third-party effectiveness of the security right. Subject to that change, the Working Group approved the substance of paragraphs 1-3.

**2. Functional, integrated and unitary concept of a security right
(A/CN.9/WG.VI/WP.39/Add.2, para. 4)**

29. The Working Group deferred its consideration of paragraph 4 until it had the opportunity to consider acquisition financing in an intellectual property context (see para. 70 below).

**3. Requirements for the creation of a security right in intellectual property
(A/CN.9/WG.VI/WP.39/Add.2, paras. 5-8)**

30. It was agreed that paragraphs 5-8 should be recast to clarify that: (a) if law relating to intellectual property required a specific description of certain types of intellectual property, such as copyrights, recommendation 14, subparagraph (d), was sufficiently flexible to permit such a specific description; and (b) to the extent that in certain cases recommendation 14, subparagraph (d), was inconsistent with law relating to intellectual property, under recommendation 4, subparagraph (b), the latter prevailed. It was also agreed that, as a matter of drafting, paragraph 7 should be revised to refer to: (a) the nature of copyright as a bundle of rights and to the ability of a copyright owner to grant a security right in one or the other or all of the rights rather than to the divisibility of intellectual property rights, which was a different concept; and (b) the possibility that a copyright owner had the right to use rights to obtain credit from another creditor to the extent those rights were not encumbered. Subject to those changes, the Working Group approved the substance of paragraphs 5-8.

**4. Rights of a grantor with respect to the intellectual property to be encumbered
(A/CN.9/WG.VI/WP.39/Add.2, para. 9)**

31. The Working Group approved the substance of paragraph 9 unchanged.

5. Distinction between a secured creditor and an owner with respect to intellectual property (A/CN.9/WG.VI/WP.39/Add.2, paras. 10-12)

32. The Working Group approved the substance of paragraphs 10-12 unchanged.

**6. Types of encumbered asset in an intellectual property context
(A/CN.9/WG.VI/WP.39/Add.2, paras. 13-36)**

33. It was agreed that: (a) in the second sentence of paragraph 13, it should be clarified that a security right in a tangible asset with respect to which intellectual property was used did not automatically extend to the relevant intellectual property;

(b) in the second sentence of paragraph 14, it should be clarified that, if the recommendations of the Guide were enacted in a particular State, there would be no obstacles to the assignability of future receivables, and, in the last sentence of paragraph 14, a reference should be made to paragraphs 22-29 dealing with the treatment of the right to the payment of royalties; (c) in the second sentence of paragraph 15 and in paragraph 17, it should be clarified that the right to sue infringers and the right to register intellectual property could, in certain circumstances, be exercised by a secured creditor but those rights were not part of the encumbered asset and that that issue should be dealt with in Chapter VII of the draft Supplement on the rights and obligation of the parties to a security agreement relating to intellectual property; (d) in paragraphs 19 and 21, it should be clarified that whether the right to pursue infringers and obtain an injunction and compensation could constitute proceeds of encumbered intellectual property was a matter of law relating to intellectual property; (e) in paragraph 28, the reference to “future” royalties was superfluous and should be deleted; and (f) the examples in paragraph 35 should be deleted and the paragraph should be recast to refer to the general or specific description of encumbered assets in line with paragraphs 5-8 of that section (see para. 30 above). Subject to those changes, the Working Group approved the substance of paragraphs 13-36, as well as recommendation 243.

7. Security rights in future intellectual property (A/CN.9/WG.VI/WP.39/Add.2, paras. 37-41)

34. It was agreed that: (a) the last two sentences of paragraph 39 should be revised so as not to describe the *nemo dat* principle as a statutory prohibition; (b) paragraph 40 should be revised to clarify how the concepts of “improvements” or “adaptations” related to limitations to the use of future intellectual property as security for credit. Subject to those changes, the Working Group approved the substance of paragraphs 37-41.

8. Legal or contractual limitations on the transferability of intellectual property (A/CN.9/WG.VI/WP.39/Add.2, paras. 42-43)

35. The Working Group approved the substance of paragraphs 42-43 unchanged.

D. Effectiveness of a security right in intellectual property against third parties (A/CN.9/WG.VI/WP.39/Add.3, paras. 1-9)

1. The concept of third-party effectiveness (A/CN.9/WG.VI/WP.39/Add.3, paras. 1-3)

36. The Working Group approved the substance of paragraphs 1-3 unchanged.

2. Third-party effectiveness of security rights in intellectual property that are registered in an intellectual property registry (A/CN.9/WG.VI/WP.39/Add.3, paras. 4-7)

37. The Working Group approved the substance of paragraphs 4-7 unchanged.

3. Third-party effectiveness of security rights in intellectual property that are not registered in an intellectual property registry (A/CN.9/WG.VI/WP.39/Add.3, paras. 8-9)

38. The Working Group approved the substance of paragraphs 8-9 unchanged.

E. The registry system (A/CN.9/WG.VI/WP.39/Add.3, paras. 10-42)

1. The general security rights registry (A/CN.9/WG.VI/WP.39/Add.3, paras. 10-11)

39. The Working Group approved the substance of paragraphs 10-11 unchanged.

2. Asset-specific intellectual property registries (A/CN.9/WG.VI/WP.39/Add.3, paras. 12-14)

40. The Working Group approved the substance of paragraphs 12-14 unchanged.

3. Coordination of registries (A/CN.9/WG.VI/WP.39/Add.3, paras. 15-20)

41. It was agreed that, in paragraph 18, reference should be made to paragraph 4. Subject to that change, the Working Group approved the substance of paragraphs 15-20.

4. Registration of notices about security rights in future intellectual property (A/CN.9/WG.VI/WP.39/Add.3, paras. 21-23)

42. The Working Group approved the substance of paragraphs 21-23 unchanged.

5. Dual registration or search (A/CN.9/WG.VI/WP.39/Add.3, paras. 24-27)

43. It was agreed that: (a) in paragraph 25, the last two sentences should be revised to provide that a secured creditor that registered a notice of its security right in a specialized registry had a right to rely on that registration and on the priority attributed to that registration under the recommendations of the Guide; and (b) in paragraph 26, a reference should be added to online searching in intellectual property registries for free. It was also agreed that the note to paragraph 27 should be retained, subject to the clarification of the examples in paragraphs 2, 4, 5 and the last two sentences of the note. Subject to those changes, the Working Group approved the substance of paragraphs 24-27 and the note to paragraph 27.

6. Time of effectiveness of registration (A/CN.9/WG.VI/WP.39/Add.3, paras. 28-30)

44. The Working Group approved the substance of paragraphs 28-30 unchanged.

7. Impact of a transfer of encumbered intellectual property on the effectiveness of registration (A/CN.9/WG.VI/WP.39/Add.3, paras. 31-36)

45. It was agreed that: (a) at the end of the first sentence of paragraph 32, words along the lines “upon the completion of enforcement by the secured creditor” should be added and the second sentence should be deleted; (b) the draft recommendation in the note after paragraph 36 should be recast to mirror recommendation 62, dealing with the impact of a transfer of an encumbered asset on the effectiveness of registration, as recommendation 31 was sufficient to deal with the continuity of

third-party effectiveness of a security right after the transfer of the encumbered asset; (c) reference should be made in the commentary in the note after paragraph 36 to the fact that the examples dealt with transfers and that, under the Guide, a licence was not a transfer, although the Guide deferred to law relating to intellectual property as to the exact meaning of a licence (see A/CN.9/WG.VI/WP.39/Add.4, para. 15). Subject to those changes, the Working Group approved the substance of paragraphs 31-36, as well as the recommendation and the commentary contained in the note after paragraph 36.

8. Registration of security rights in trademarks (A/CN.9/WG.VI/WP.39/Add.3, paras. 37-42)

46. In response to a question, it was noted that, in the case of insolvency of the mark owner, the secured creditor or the insolvency representative should be able to take steps to maintain the mark when necessary. The Working Group approved the substance of paragraphs 37-42 unchanged.

F. Priority of a security right in intellectual property (A/CN.9/WG.VI/WP.39/Add.4, paras. 1-15 and A/CN.9/WG.VI/WP.39/Add.5, paras. 1-22)

1. The concept of priority (A/CN.9/WG.VI/WP.39/Add.4, paras. 1-2)

47. It was agreed that paragraph 2 should be revised to: (a) refer to language along the lines “the grant of exclusive rights, in particular in the case of patents and trademarks” rather than “to notion of title and basic effectiveness”; and (b) elaborate on the notion of priority under law relating to intellectual property, for example, by explaining that a conflict between two secured creditors might not be a priority conflict because of the application of the *nemo dat* rule. Subject to those changes, the Working Group approved the substance of paragraphs 1-2.

2. Identification of competing claimants (A/CN.9/WG.VI/WP.39/Add.4, paras. 3-4)

48. It was agreed that the first sentence of paragraph 4 should be reviewed to ensure that it covered all the possible conflicts. Subject to that change, the Working Group approved the substance of paragraphs 3-4.

3. Relevance of knowledge of prior transfers or security rights (A/CN.9/WG.VI/WP.39/Add.4, paras. 5-6)

49. The Working Group approved the substance of paragraphs 5-6 unchanged.

4. Priority of security rights in intellectual property that are not registered in an intellectual property registry (A/CN.9/WG.VI/WP.39/Add.4, paras. 7-8)

50. The Working Group approved the substance of paragraphs 7-8 unchanged.

5. Priority of security rights in intellectual property that are registered in an intellectual property registry (A/CN.9/WG.VI/WP.39/Add.4, paras. 9-11)

51. It was agreed that paragraph 9 should be aligned with recommendation 78, which referred to security rights that were registered in a specialized registry.

Subject to that change, the Working Group approved the substance of paragraphs 9-11.

52. It was suggested that a new recommendation should be prepared to provide that a security right in intellectual property registered in an intellectual property registry should have priority only as against a transferee of intellectual property and not as against another secured creditor. In support, it was stated that the former priority conflict could be referred to the law of the State in which the intellectual property was protected, while the latter priority conflict could be referred to the law of the State in which the grantor was located. That suggestion was objected to. It was stated that issues of substantive law should be addressed separately from conflict-of-laws issues and the substantive recommendations of the Guide could not be changed to address conflict-of-law issues.

**6. Rights of transferees of encumbered intellectual property
(A/CN.9/WG.VI/WP.39/Add.4, paras. 12-15)**

53. In response to a question, it was noted that the Guide did not contain a recommendation dealing with ordinary-course-of-business transfers of intangible assets (recommendation 81, subparagraph (a), dealt with such transfers of tangible assets only). With respect to paragraph 14, it was agreed that it should be revised to clarify that: (a) the preceding analysis dealt with a priority conflict between a security right and the rights of a subsequent transferee; (b) paragraph 14 dealt with a different situation that involved a transfer of an asset and the subsequent creation of a security right in the asset by the transferor; (c) the latter matter was dealt with by the *nemo dat* rule (and recommendation 13), but was not a priority issue under the Guide; and (d) in the last sentence reference should be made to a secured creditor that acquired its right in an encumbered asset without knowledge of a prior transfer of the encumbered asset. Subject to those changes, the Working Group approved the substance of paragraphs 12-15.

7. Rights of licensees in general (A/CN.9/WG.VI/WP.39/Add.5, paras. 1-6)

54. It was agreed that: (a) the first sentence of paragraph 2 should be split into two parts, the first part stating that, under the Guide, the secured creditor did not become an owner, and the second part stating that whether the intellectual property owner could still exercise the rights of an owner and, for example, grant a licence was a matter of law relating to intellectual property; (b) the first sentence of paragraph 3 should be revised to refer directly to the fact that, if the owner created first a security right in its rights and then granted a licence in breach of an agreement with the secured creditor, the granting of the licence by the owner would be an event of default; (c) the fourth sentence of paragraph 3 should be revised to read along the following lines: "If the encumbered asset is the owner's intellectual property right, the secured creditor may collect the royalties as proceeds of the encumbered asset." Subject to those changes, the Working Group approved the substance of paragraphs 1-6.

8. Rights of certain licensees (A/CN.9/WG.VI/WP.39/Add.5, paras. 7-14)

55. It was agreed that: (a) in the second sentence of paragraph 8, a reference should be added to the enforcement remedies of the secured creditor under the Guide to ensure that any remedies of the secured creditor under law relating to

intellectual property would not be affected; (b) in the penultimate sentence of paragraph 8, reference should be made to the objective of recommendation 81, subparagraph (c), “to limit the enforcement remedies of the secured creditor under the Guide”, rather than “to protect” every day, legitimate transactions; (c) the second sentence of paragraph 11 should be revised to reflect the fact that the statement contained therein was not accurate in all cases; (d) the penultimate sentence of paragraph 11 should refer to “licences”, rather than “copies”, of copyrighted software. Subject to those changes and any consequential changes as a result of recommendation 244 and the relevant commentary, the Working Group approved the substance of paragraphs 7-14.

56. The Working Group considered a new draft recommendation 244 with two alternatives (A and B), which was intended to replace recommendation 81, subparagraph (c), as it applied to the rights of certain licensees of intellectual property as against the rights of a secured creditor of the licensor.

57. Some support was expressed for alternative B. It was stated that alternative B was simple and referred to notions used in law relating to intellectual property, namely, the notions of authorization of a licence by the secured creditor and party autonomy. It was stated, however, that alternative B failed to address the question whether certain licensees should be exempted from the obligation of having to check in the registry to determine whether the licensor had granted a security right in its rights, which was said to be the main objective of recommendation 244.

58. Some support was also expressed for the deletion of recommendation 244. It was observed that both alternatives A and B addressed the rights of certain licensees in terms that were unknown to intellectual property law. For that reason, it was suggested that the matter should be left to intellectual property law, which would prevail over the provisions of the law recommended in the Guide under recommendation 4, subparagraph (b). In that regard, reference was made to the notions of exhaustion and authorization of a licence by a secured creditor. That suggestion was objected to. It was recalled that a new recommendation was necessary to replace recommendation 81, subparagraph (c), which would apply in the absence of a contrary provision of law relating to intellectual property. It was also observed that the concept of exhaustion was not generally applicable to all types of intellectual property and, in any case, there was no universal understanding of its exact meaning.

59. However, the prevailing view was that recommendation 244, alternative A, should be retained and alternative B should be deleted. It was widely felt that alternative A was preferable as it addressed the issue of the rights of certain licensees as against the rights of a secured creditor of the licensor in a manner that was compatible with law relating to intellectual property, in particular, by avoiding any reference to the notion of ordinary-course-of-business licences. As to the exact formulation of alternative A, several suggestions were made, including that: (a) the reference within square brackets in the chapeau to recommendation 80, subparagraph (b), should be deleted and the matter should be explained in the commentary; (b) the reference in the chapeau to end-user licensees should be retained outside square brackets with an explanation in the commentary that it referred to both natural and legal persons; (c) subparagraph (a) should be placed in the commentary with appropriate explanation that the recommendation referred to legitimate, authorized licences; (d) subparagraph (c) or (e) (ii) should be deleted as

they dealt with the same issues; (e) subparagraph (d) should be deleted as it unnecessarily limited the scope of recommendation 244.

60. There was sufficient support for suggestions (a), (b) and (c) above on the understanding that these matters would be addressed in the commentary. However, with respect to suggestion (b), the concern was expressed that, as in the chapeau of recommendation 244 reference was made to a security right “created by the licensor”, limiting the scope of recommendation 244 to end-user licensees would result in such a licensee being exposed to security rights created by a person other than its immediate licensor. In order to address that concern, it was suggested that the words “by the licensor” should be deleted so that an end-user licensee would be protected against certain enforcement remedies of a secured creditor of a licensor higher in the chain of licensing. There was sufficient support for that suggestion on the understanding that the commentary would explain that recommendation 244 referred to enforcement of a security right under the law recommended in the Guide and did not affect the rights of a secured creditor under law relating to intellectual property law (for example, to pursue an unauthorized licensee as an infringer).

61. There was insufficient support for suggestion (d). It was explained that subparagraph (e) (ii) was necessary to deal with the non-customization of the initial licence, while subparagraph (c) was necessary to deal with the non-customization of subsequent adaptations. There was both support for and opposition to suggestion (e). In support, it was stated that the reference in subparagraph (b) to non-exclusive licences was sufficient to define the scope of recommendation 244. In opposition, it was observed that deletion of subparagraph (d) would broaden excessively the scope of application of recommendation 244, which would then cover licences such as theatrical motion picture licences, music performance licences, trademark licences and patent licences.

62. However, there was broad support for a revision of subparagraph (d). Several suggestions were made, including that it should read along the following lines: “the transaction involves a licence of copyrighted software and the delivery of tangible copies thereof”, “the licence covers the right to use copyrighted or patented software” or “the licence covers one or any of the exclusive rights relating to copyrighted software”. With respect to the first of those three drafting proposals, the concern was expressed that the paper or electronic character of the copy should not make a difference in the rule. However, there was sufficient support for the latter two drafting proposals, although it was observed that the third one might inadvertently be overly broad as it appeared covering rights other than the right to use or exploit copyrighted software.

63. In the discussion, the concern was expressed that, as the scope of recommendation 244 was narrower than the scope of recommendation 81, subparagraph (c), the latter might still be applicable to intellectual property licences not covered in recommendation 244. In order to address that concern, it was agreed that the commentary should explain that recommendation 81, subparagraph (c), would not apply at all to any intellectual property licence and that recommendation 80, subparagraph (b) would apply to an intellectual property licence other than a software licence covered in recommendation 244. As a result, in order to be protected as against a secured creditor of the licensor, a person obtaining an intellectual property licence other than a software licence should ensure that the

licensor was authorized by its secured creditor to grant such a licence unaffected by the security right.

64. After discussion, it was agreed that: (a) the reference within square brackets in the chapeau to recommendation 80, subparagraph (b), should be deleted; (b) the reference in the chapeau to end-user licensees should be retained outside square brackets and the words “by the licensor” should be deleted; (c) subparagraph (a) could be deleted, while all those matters should be discussed in the commentary as suggested above; (d) subparagraph (c) should be retained but placed after subparagraph (e); (e) the above-mentioned alternative wording (see para. 62 above) should be retained within square brackets in subparagraph (d) for further consideration by the Working Group; and (f) subparagraph (e) (i) should be revised to read along the following lines: “The licensor is generally in the business of granting non-exclusive licenses *of the kind referred to in (ii).*” Subject to those changes, the Working Group approved the substance of recommendation 244 and the commentary contained in the note after paragraph 14.

9. Priority of a security right in intellectual property granted by a licensor as against a security right granted by a licensee (A/CN.9/WG.VI/WP.39/Add.5, paras. 15-19)

65. It was agreed that paragraph 15 should be revised to clarify that, where the royalties payable by a licensee to a licensor took the form of a percentage of the sub-royalties payable to the licensee as a sub-licensor by sub-licensees: (a) in order to prevail over the secured creditor of the licensee with a security right in all present and future receivables of the licensee, the secured creditor of the licensor would need to either register a notice of its security right in the relevant intellectual property registry, register a notice thereof first in the general security rights registry or obtain a subordination agreement from the secured creditor of the licensee; and (b) the same rule would apply to a priority conflict between an outright assignee of the licensor and a secured creditor of the licensee, as outright assignments were subject, in particular with respect to registration and priority, to the rules applicable to assignments for security purposes. It was also agreed that paragraph 19 should be revised to clarify that the acquisition financing recommendations of the Guide applied to competitions between security rights created by the same grantor and not by different persons (for example, by the licensor and by the licensee). Subject to those changes, the Working Group approved the substance of paragraphs 15-19.

66. The Working Group proceeded to discuss a set of draft recommendations providing for an acquisition security right in intellectual property or a licence of intellectual property. There was broad support in the Working Group for an acquisition security right in intellectual property or a licence of intellectual property. It was widely felt that, for the same reasons the Guide provided for an acquisition security right in tangible assets, the draft Supplement should provide for an acquisition security right in intellectual property or a licence of intellectual property. However, differing views were expressed as to whether the draft Supplement should depart from the approach followed in the Guide and provide, for example, for an acquisition security right in proceeds of intellectual property or a licence of intellectual property, even if those proceeds took the form of cash proceeds (namely, receivables, negotiable instruments and the like).

67. One view was that intellectual property owners and licensors needed to be able to rely on their rights to payment of royalties so as to be able to develop new ideas protected by intellectual property rights and give a licence to others to use them. It was stated that, if the general secured creditors of licensees had always priority over the secured creditors of intellectual property owners or licensors, owners or licensors would not be able to use their rights to payment of royalties as security for credit, a result that could limit their ability to create and licence new ideas protected by an intellectual property right. In addition, it was observed that the different nature of intellectual property rights warranted a different approach in that regard from the approach followed with respect to acquisition financing relating to tangible assets.

68. The prevailing view, however, was that intellectual property owners and licensors could achieve the result described in the preceding paragraph by ensuring that they or their secured creditors obtained: (a) a security right in or an outright assignment of a right to payment of a percentage of the sub-royalties payable to the licensee as a sub-licensor by sub-licensees and registered a notice thereof in the relevant intellectual property registry; (b) a security right in or an outright assignment of a right to payment of a percentage of the sub-royalties payable to the licensee as a sub-licensor by sub-licensees and registered first a notice thereof in the general security rights registry; or (c) a subordination agreement from the secured creditor of the licensee. It was stated that that result could not be achieved through the application of the acquisition financing recommendations of the Guide in an intellectual property context, since: (a) those recommendations dealt with priority conflicts between security rights created by the same grantor; and (b) the priority of an acquisition security right did not extend to cash proceeds of inventory and thus could not extend to proceeds of intellectual property or a licence of intellectual property held by the grantor for licensing or sub-licensing. In addition, it was observed that it was essential for the Guide to provide one acquisition financing regime for all types of asset and not to introduce several regimes depending on the type of asset involved, a result which would make the Guide very difficult to understand and apply. Moreover, it was pointed out that it would be too risky for the Guide to recommend an approach, which would change the balance established after discussions over a long period of time among the interests of the various credit providers and essentially was not followed in any legal system.

69. In response to a question, it was noted that, according to recommendation 181 of the Guide, an acquisition security right, a notice of which was registered in the general security rights registry, did not have priority over a non-acquisition security right, a notice of which was registered in a specialized registry. As a result, by registering a notice of its security right in the specialized registry, the secured creditor of an intellectual property owner or licensor could always obtain priority over the general secured creditor of the licensee. It was agreed that the matter should be discussed in the commentary.

70. After discussion, the Working Group agreed that the Supplement should include new terminology and recommendations making the acquisition financing terminology and recommendations of the Guide (relating to tangible assets) apply to an intellectual property context. The Working Group also agreed that appropriate commentary should be included in the draft Supplement to explain the new terminology and recommendations. The Working Group also agreed that, as with the

exception of conditional transfers (which, in some States, would include exclusive licences), there were no widely used devices to secure the purchase price of intellectual property, it would be sufficient to explain in the commentary that States that preferred to follow a non-unitary approach to acquisition financing would need to appropriately adjust the new terminology and recommendations. In addition, the Working Group agreed that paragraph 4 of document A/CN.9/WG.VI/WP.39/Add.2, dealing with the functional, integrated and unitary concept of a security right, should be adjusted accordingly.

10. Priority of a security right in intellectual property as against the right of a judgement creditor (A/CN.9/WG.VI/WP.39/Add.5, paras. 20-21)

71. The Working Group approved the substance of paragraphs 20-21 unchanged.

11. Subordination (A/CN.9/WG.VI/WP.39/Add.5, para. 22)

72. The Working Group approved the substance of paragraph 22 unchanged.

G. Rights and obligations of the parties to a security agreement relating to intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 1-5)

1. Application of the principle of party autonomy (A/CN.9/WG.VI/WP.39/Add.6, para. 1)

73. The Working Group agreed that paragraph 1 should be aligned with the text of recommendation 245. Subject to that change, the Working Group approved the substance of paragraph 1.

2. Preservation of the encumbered intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 2-5)

74. The Working Group agreed that paragraph 4 should be aligned with the text of recommendation 245. Subject to that change, the Working Group approved the substance of paragraphs 2-5.

75. The Working Group considered alternatives A and B of recommendation 245. It was noted that alternative A, combined with recommendation 4, subparagraph (b), would lead to the same result as alternative B. However, general preference was expressed for alternative B referring party autonomy to law other than the law recommended in the Guide. It was generally understood that the intellectual property owner was the person responsible for the preservation of encumbered intellectual property and that the secured creditor's role in performing that function could be safely described in terms of an entitlement. After discussion, the Working Group decided that alternative B should be retained, subject to describing the role of the secured creditor in the preservation of encumbered intellectual property as an entitlement, and that alternative A should be deleted.

H. Rights and obligations of third-party obligors in intellectual property financing transactions (A/CN.9/WG.VI/WP.39/Add.6, paras. 6-7)

76. The Working Group agreed that the last sentence of paragraph 6 should be revised to read along the following lines: “Similarly, where a licensee assigned to *its secured creditor the licensee’s* claim against a sub-licensee for the payment of royalties under a sub-licence agreement, the sub-licensee would be a third-party obligor *with respect to the licensee’s secured creditor* in the sense of the Guide.” Subject to that change, the Working Group approved the substance of paragraphs 6-7.

I. Enforcement of a security right in intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 8-32)

1. Intersection of secured transactions law and law relating to intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 8-11)

77. The Working Group approved the substance of paragraphs 8-11 unchanged.

2. Enforcement of a security right in different types of intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 12-13)

78. The Working Group approved the substance of paragraphs 12-13 unchanged.

3. Taking “possession” of documents necessary for the enforcement of a security right in intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 14-15)

79. The Working Group approved the substance of paragraphs 14-15 unchanged.

4. Disposition of encumbered intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 16-17)

80. The Working Group approved the substance of paragraphs 16-17 unchanged.

5. Rights acquired through disposition of encumbered intellectual property (A/CN.9/WG.VI/WP.39/Add.6, paras. 18-20)

81. It was agreed that, in paragraph 19, a clear distinction should be drawn between the secured creditor’s enforcement rights under secured transactions law and the secured creditor’s enforcement rights under law relating to intellectual property. Subject to that change, the Working Group approved the substance of paragraphs 18-20.

6. Proposal by the secured creditor to acquire the encumbered intellectual property (A/CN.9/WG.VI/WP.39/Add.6, para. 21)

82. The Working Group approved the substance of paragraph 21 unchanged.

7. Collection of royalties and licence fees (A/CN.9/WG.VI/WP.39/Add.6, para. 22)

83. The Working Group approved the substance of paragraph 22 unchanged.

8. Licensor's other contractual rights (A/CN.9/WG.VI/WP.39/Add.6, para. 23)

84. The Working Group approved the substance of paragraph 23 unchanged.

9. Enforcement of security rights in tangible assets with respect to which intellectual property is used (A/CN.9/WG.VI/WP.39/Add.6, para. 24-27)

85. It was agreed that: (a) in the second sentence of paragraph 24, the word "only" should be inserted before the words "if there is an authorization from the intellectual property owner"; (b) at the end of the third sentence of paragraph 25, the phrase in parenthesis should be deleted because there were instances where an intellectual property right could be exhausted even prior to a sale (for example, where products bearing a trademark had passed the quality control of the trademark owner); (c) in the first sentence of paragraph 26, the reference to "the grantor" should be qualified by wording along the following lines "a grantor that attempts to grant a security right in that product, under law relating to intellectual property, ..."; (d) in the second sentence of paragraph 26, the phrase "is in breach of the licence agreement" should be replaced with wording along the following lines "acts in a manner contrary to the limitations in the licence agreement", since the secured creditor would normally not be a party to the licence agreement and thus could not be in breach of that agreement; and (e) the third sentence of paragraph 27 should be revised to take into account that it would be unlikely that the secured creditor would be willing or able to continue production of partially completed products. Subject to those changes, the Working Group approved the substance of paragraphs 24-27.

10. Enforcement of a security right in a licensee's rights (A/CN.9/WG.VI/WP.39/Add.6, para. 28-32)

86. It was agreed that: (a) at the end of the second sentence of paragraph 28, words along the following lines could be added "or some combination of the foregoing" to cover all possibilities; (b) in the first sentence of paragraph 29, reference should be made to the licensee's rights under the licence agreement and, in the third sentence, reference should be made to the right of the grantor under the secured transactions law and rights of the licensor under law relating to intellectual property; (c) the last sentence of paragraph 30 should be revised along the following lines "If creation by the licensee-sub-licensor of a security right in its right to royalties from its sub-licensee constitutes a breach of an initial or intervening licence agreement, then enforcement of that agreement may prevent the secured creditor from collecting royalties from the sub-licensee or otherwise deprive it of the benefits of its agreement."; and (d) the third sentence of paragraph 32 should be revised to take into account that, in most States, exclusive licensees could sue infringers on their own. Subject to those changes, the Working Group approved the substance of paragraphs 28-32.

J. Law applicable to a security right in intellectual property (A/CN.9/WG.VI/WP.39/Add.7, paras. 1-23)**1. Law applicable to property matters (A/CN.9/WG.VI/WP.39/Add.7, paras. 1-21)**

87. Several drafting suggestions were made. One suggestion was that, to avoid giving prominence to one approach over the other, reference should be made early

in the discussion to all possible approaches, while the detailed discussion should follow. A similar suggestion was that the commentary should follow the order of the alternatives. Those suggestions were objected to. It was widely felt that as each section of the draft Supplement the section on conflicts of laws should start with an explanation of the approach of the Guide. Another suggestion was that the commentary should set out examples explaining each of the proposed alternatives. Yet another suggestion was that the commentary should set out the advantages and disadvantages of each proposed alternative, without suggesting that any of those alternatives could not work at all. There was broad support for those suggestions.

2. Law applicable to contractual matters (A/CN.9/WG.VI/WP.39/Add.7, paras. 22-23)

88. There was broad support in the Working Group for referring the mutual rights and obligations of the grantor and the secured creditor to the law chosen by them and, in the absence of a choice of law, to the law governing the security agreement (see recommendation 216). The Working Group approved the substance of paragraphs 22-23 unchanged.

3. Recommendation 246

89. The Working Group considered the issue of the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property on the basis of alternatives A to D. It also considered another alternative similar to alternative D (see A/CN.9/WG.VI/WP.40). It was noted that, to the extent that not all matters were referred to one and the same law, problems of qualification would arise, unless a State enacted also the substantive law recommendations of the Guide. Otherwise, it was noted, for example, creation could be referred to the law of one State and third-party effectiveness to the law of another State.

90. While there was broad support for referring issues related to the transferability of intellectual property rights to the law of the State in which the intellectual property was protected, diverging views were expressed as to the law applicable to security rights in intellectual property. One view was that the principle of national treatment embodied in international conventions protecting intellectual property implicitly imposed a universal applicable law rule referring all matters arising with respect to property rights in intellectual property to the law of the State in which the intellectual property was protected ("*lex loci protectionis*"). Reference was made in that regard to article 2(1) of the Paris Industrial Property Convention and article 5(2) of the Berne Intellectual Property Convention. On that basis, preference was expressed for an approach based on the law of the State where the intellectual property was protected. It was stated that such an approach would result in applying one law to all property rights relating to intellectual property.

91. Another view was that the above-mentioned interpretation of intellectual property conventions was highly controversial. It was stated that those conventions simply provided that the extent of protection and the rights of redress of intellectual property owners was subject to the law of the State in which the intellectual property was protected, making no reference to the law applicable to security rights. It was also observed that, even if those conventions provided an applicable law rule for security rights, they did not cover all aspects of the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property.

On that basis, preference was expressed for an approach based on the law of the grantor's location, with the exception of a priority conflict between a security right and the rights of a transferee or licensee of the encumbered intellectual property, which could be referred to the *lex loci protectionis*. It was stated that an approach based on the law of the grantor's location would result in all matters with respect to security rights in intellectual property being referred to one law, which would have the additional advantage of being the law governing the grantor's insolvency proceedings (as location was defined by reference to the place where the grantor had its central administration).

92. Yet another view was that a different combination of the above-mentioned approaches might be more appropriate. Several suggestions were made in that regard. One suggestion was that, while the creation of a security right could be referred to the law of the State in which the grantor was located, the third-party effectiveness, priority and enforcement of such a security right should be referred to the law of the State in which the intellectual property was protected. Another suggestion was that security rights to intellectual property that could be registered in an intellectual property registry could be referred to the law of the State under whose authority the registry was maintained. It was observed that such an approach would be consistent with the approach followed in recommendation 205 of the Guide with respect to tangible assets, security rights in which were subject to registration in a specialized registry (such as ships or aircraft). It was also pointed out that such an approach appeared in a previous version of the draft Supplement, but was eliminated on the grounds that it could create uncertainty or increase the time and cost required to conclude a transaction (see A/CN.9/667, para. 124). Moreover, it was noted that, while language could be included in the commentary providing that reference to a State would apply equally to a regional economic integration organization, caution should be exercised not to refer to a regional law that had not provisions or had insufficient provisions on secured transactions. It was also noted that caution should be exercised not to refer to the law of an intellectual property registry, if the majority of laws did not allow registration of security rights in such a registry, because in such a case the approach suggested would simply lead to a legal vacuum.

93. Yet another suggestion was that, while the basic rule should refer to the law of the grantor's location, a priority conflict between a security right registered in the general security rights registry and a security right registered in an intellectual property registry could be referred to the law of the State under whose authority the intellectual property registry was maintained. It was observed that such an approach would be consistent with the approach followed in recommendation 209 of the Guide with respect to receivables arising from a sale, lease or transaction secured by a security agreement. Yet another suggestion was the draft Supplement should make no recommendation at all, leaving the matter to enacting States that would take into account the commentary and the intellectual property conventions, or make more than one recommendation for States to choose from.

94. Several examples were mentioned, in which one or the other approach appeared to be more workable. It was widely felt that there was not one approach that could produce perfect results in all cases. Accordingly, the Working Group agreed that three alternatives should be retained in the draft Supplement. The first alternative should refer the creation, third-party effectiveness, priority and

enforcement of a security right in intellectual property to the law of the State in which the encumbered intellectual property was protected. The second alternative should have two parts; the first part should refer all matters relating to intellectual property rights that could be registered in an intellectual property registry to the law of the State under whose authority the registry was maintained; the second part should refer all matters relating to intellectual property rights that could not be registered in an intellectual property registry to the law of the State in which the grantor was located. The third alternative should refer to the law of the State in which the grantor was located all matters except third-party effectiveness and priority of a security right in intellectual property as against the right of a transferee or a licensee of the encumbered intellectual property, which should be referred to the law of the State in which the intellectual property was protected. It was noted that issues relating to transferability would not be covered in any of the three alternatives (as they are not covered in the other conflict-of-laws recommendations of the Guide and the Guide specifically recommends that statutory limitations on transferability should not be overridden; see recommendation 18).

K. The impact of insolvency of a licensor or licensee of intellectual property on a security right in that party's rights under a license agreement (A/CN.9/WG.VI/WP.39/Add.7, paras. 24-42)

95. The Working Group approved the substance of paragraphs 24-42 unchanged. The Working Group also agreed that text along the following lines should be included in the draft Supplement to deal with automatic termination and acceleration clauses in intellectual property licence agreements and referred it to Working Group V (Insolvency Law):

“The UNCITRAL Legislative Guide on Insolvency Law (“the Insolvency Guide”) recommends that any contractual clauses that automatically terminate and accelerate a contract upon an application for commencement, or commencement, of insolvency proceedings or upon the appointment of an insolvency representative should be unenforceable as against the insolvency representative and the debtor (see recommendation 70). The Insolvency Guide also recommends that the insolvency law should specify the contracts that are exempt from the operation of this recommendation, such as financial contracts, or are subject to special rules, such as labour contracts (see recommendation 71).

The commentary of the Insolvency Guide states that some laws uphold these clauses in some circumstances and explains the reasons for this approach. These reasons include “the need for creators of intellectual property to be able to control the use of that property and the effect on a counterparty’s business of termination of a contract, especially one with respect to an intangible” (see Part Two, chapter II, para. 115). For example, automatic termination and acceleration clauses contained in intellectual property licence agreements may be upheld as the insolvency of the licensee may have a negative impact not only on the licensor’s rights but also on the intellectual property right itself. This is the case, for example, where the insolvency of a licensee of a trademark used on products may affect the market value of the trademark and the trademarked products. In any case, clauses included in

intellectual property licence agreements that provide, for example, that a licence terminates after X years or upon material breach such as failure of the licensee to upgrade or market the licensed products on time (that is, where the event that triggers the automatic termination is not insolvency) are not affected (see footnote 39, recommendation 72 of the Insolvency Guide).

The commentary of the Insolvency Guide also states that other laws override these clauses and explains the relevant reasons (see Part Two, chapter II, paras. 116 and 117). The commentary further explains that, although some insolvency laws do permit these types of clause to be overridden if insolvency proceedings are commenced, this approach has not yet become a general feature of insolvency laws. In this regard, the commentary speaks of an inherent tension between promoting the debtor's survival, which may require the preservation of contracts, and affecting commercial dealings by creating a variety of exceptions to general contract rules. The commentary concludes by expressing the desirability that an insolvency law permit such clauses to be overridden (see Part Two, chapter II, para. 118)."

V. Future work

96. The Working Group noted that its seventeenth session is scheduled to take place in New York from 8 to 12 February 2010. The Working Group also noted the plans of the Secretariat to hold the Third International Colloquium on Secured Transactions in Vienna from 1 to 3 March 2010. In that regard, it was noted that, in line with the decision taken by the Commission at its forty-second session (see para. 12 above), the purpose of the Colloquium was for the Secretariat to obtain the views of experts from Governments, international organizations and the private sector on the future work programme of the Commission on security interests and to prepare a note to assist the Commission in its consideration of the matter at its forty-third session, in 2010.

**B. Note by the Secretariat on the Draft Supplement to the
UNCITRAL Legislative Guide on Secured Transactions dealing with
security rights in intellectual property, submitted to the
Working Group on Security Interests at its sixteenth session
(A/CN.9/WG.VI/WP.39 and Add.1-7)**

I. Introduction

A. Background

[Note to the Working Group: For paras. 1-12, see A/CN.9/WG.VI/WP.37, paras. 1-8, A/CN.9/670, paras. 17 and 117, A/CN.9/WG.VI/WP.37/Add.4, chapter XI, note to the Working Group, paras. 1-4, A/CN.9/WG.VI/WP.35, paras. 1-7, A/CN.9/667, para. 16, A/CN.9/WG.VI/WP.36, para. 12, A/CN.9/WG.VI/WP.33, paras. 1-5, A/CN.9/WG.VI/WP.34, paras. 10 and 11 and A/63/17, para. 326.]

1. At its thirty-ninth session, in 2006, the Commission considered its future work on secured financing law. It was noted that intellectual property rights (for example, copyrights, patents and trademarks) were increasingly becoming an extremely important source of credit and should not be excluded from a modern secured transactions law. In addition, it was noted that the recommendations of the draft Legislative Guide on Secured Transactions (“the draft Guide”) generally applied to security rights in intellectual property to the extent that they were not inconsistent with intellectual property law. Moreover, it was noted that, as the recommendations had not been prepared with the special intellectual property law issues in mind, the draft Guide suggested that enacting States might consider making any necessary adjustments to the recommendations to address those issues.¹

2. In order to provide more guidance to States, the suggestion was made that the Secretariat should prepare, in cooperation with international organizations with

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 81 and 82.

expertise in the fields of secured financing and intellectual property law and in particular the World Intellectual Property Organization (WIPO), a note for submission to the Commission at its fortieth session, in 2007, discussing the possible scope of work that could be undertaken by the Commission as a supplement to the draft Guide. In addition, it was suggested that, in order to obtain expert advice and the input of the relevant industry, the Secretariat should organize expert group meetings and colloquiums as necessary.² After discussion, the Commission requested the Secretariat to prepare, in cooperation with relevant organizations and in particular WIPO, a note discussing the scope of future work by the Commission on intellectual property financing. The Commission also requested the Secretariat to organize a colloquium on intellectual property financing ensuring to the maximum extent possible the participation of relevant international organizations and experts from various regions of the world.³

3. Pursuant to that decision of the Commission, the Secretariat organized in cooperation with WIPO a colloquium on security rights in intellectual property rights (Vienna, 18 and 19 January 2007). The colloquium was attended by experts on secured financing and intellectual property law, including representatives of Governments and national and international, governmental and non-governmental organizations. At the colloquium, several suggestions were made with respect to adjustments that would need to be made to the draft Guide to address issues specific to intellectual property financing.⁴

4. At the first part of its fortieth session (Vienna, 25 June-12 July 2007), the Commission considered a note by the Secretariat entitled "Possible future work on security rights in intellectual property" (A/CN.9/632). The note took into account the conclusions reached at the colloquium. In order to provide sufficient guidance to States as to the adjustments that they might need to make in their laws to avoid inconsistencies between secured financing and intellectual property law, the Commission decided to entrust Working Group VI (Security Interests) with the preparation of an annex to the draft Guide specific to security rights in intellectual property rights.⁵

5. At its resumed fortieth session (Vienna, 10-14 December 2007), the Commission finalized and adopted the UNCITRAL Legislative Guide on Secured Transactions (the "*Guide*") on the understanding that an annex to the *Guide* specific to security rights in intellectual property rights would subsequently be prepared.⁶

6. At its thirteenth session (New York, 19-23 May 2008), Working Group VI considered a note by the Secretariat entitled "Security rights in intellectual property rights" (A/CN.9/WG.VI/WP.33 and Add.1). That note included a brief discussion of insolvency-related matters. At that session, the Working Group requested the Secretariat to prepare a draft of the annex to the *Guide* on security rights in intellectual property ("the Annex") reflecting the deliberations and decisions of the Working Group (see A/CN.9/649, para. 13). At the same session, the Working Group

⁵ *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17* (A/62/17 (Part I)), paras. 156, 157 and 162.

⁶ Ibid., *Sixty-second Session, Supplement No. 17* (A/62/17 (Part II)), paras. 99 and 100.

felt that, while due deference should be expressed to intellectual property law, the point of reference for the Annex should be the *Guide* and not national secured transactions law (see A/CN.9/649, para. 14). As the Working Group was not able to reach agreement as to whether certain matters related to the impact of insolvency on a security right in intellectual property (see A/CN.9/649, paras. 98-102) were sufficiently linked with secured transactions law so as to justify their discussion in the Annex, it decided to revisit those matters at a future meeting and to recommend that Working Group V (Insolvency Law) be requested to consider those matters (see A/CN.9/649, para. 103).

7. At its forty-first session (New York, 16 June-3 July 2008), the Commission noted with satisfaction the good progress achieved by the Working Group. The Commission also noted the above-mentioned discussion and decision of Working Group VI with respect to certain insolvency-related matters and decided that Working Group V should be informed and invited to express any preliminary opinion at its next session.⁷

8. At its fourteenth session (Vienna, 20-24 October 2008), the Working Group continued its work based on a note prepared by the Secretariat entitled "Annex to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property (A/CN.9/WG.VI/WP.35 and Add.1). At that session, the Working Group requested the Secretariat to prepare a revised version of the draft Annex reflecting the deliberations and decisions of the Working Group (see A/CN.9/667, para. 15). The Working Group also referred to Working Group V (Insolvency Law) certain matters relating to the impact of insolvency on a security right in intellectual property (see A/CN.9/667, paras. 129-143). In that connection, it was widely felt that every effort should be made to conclude discussions of these matters as soon as possible, so that their results could be included in the draft Annex by the fall of 2009 or the early spring of 2010 and the draft Annex could be submitted to the Commission for final approval and adoption at its forty-third session in 2010 (see A/CN.9/667, para. 143).

9. At its thirty-fifth session (Vienna, 17-21 November 2008), Working Group V reviewed the issues involving insolvency law referred to it by Working Group VI for inclusion in the draft Annex and confirmed that the responses given in the table at the end of document A/CN.9/667 accurately reflected the impact of the Insolvency Guide. In that connection, it was suggested that those considerations might be included in a commentary to be prepared. With respect to the possibility that a licensee under a licence agreement rejected by the insolvency representative of the licensor might be permitted, under some laws, to continue to exercise its rights under that agreement notwithstanding the rejection, the Working Group agreed that it was not in a position to properly consider that question without a better understanding of the scope and extent of the issues involved and requested the Secretariat to prepare a working paper, for consideration at its next session, that would provide background information on the discussion of the treatment of contracts that had taken place in the course of the development of the Insolvency Guide and the recommendations that had been adopted. Working Group V reached the same conclusion with respect to the issue of whether a secured creditor could request the licensor's insolvency representative or the insolvency court to set a

⁷ Ibid., *Sixty-second Session, Supplement No. 17* (A/62/17 (Part I)), para. 326.

deadline within which the insolvency representative should decide whether to continue or reject a licence agreement and set a special hearing before the insolvency court to address any dispute (see A/CN.9/666, paras. 112-117).

10. At its fifteenth session (New York, 27 April-1 May 2009), the Working Group continued its work based on a note prepared by the Secretariat entitled “Draft Annex to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property” (A/CN.9/WG.VI/WP.37 and Add.1-4). At that session, the Working Group requested the Secretariat to prepare a revised version of the draft Annex reflecting the deliberations and decisions of the Working Group (see A/CN.9/670, para. 16). In addition, the Working Group, having taken note of a note by the Secretariat entitled “Discussion of intellectual property in the Legislative Guide on Insolvency Law” (A/CN.9/WG.V/WP.87), approved the substance of the discussion of the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement (see A/CN.9/WG.VI/WP.37/Add.4) and referred it to Working Group V (see A/CN.9/670, paras. 116-122). Moreover, the Working Group had a preliminary discussion about its future work programme (see A/CN.9/670, paras. 123-126).

11. At its thirty-sixth session (New York, 18-22 May 2009), Working Group V (Insolvency Law) considered the insolvency-related issues referred to it by Working Group VI on the basis of documents A/CN.9/WG.V/WP.87 and A/CN.9/WG.VI/WP.37/Add.4 and an extract from the report of the Working Group (see A/CN.9/670, paras. 116-122). At that session, Working Group V approved the contents of those parts of the draft Annex dealing with the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement, as set forth in document A/CN.9/WG.VI/WP.37/Add.4, paragraphs 22-40, and the conclusions and revisions of Working Group VI reached at its fifteenth session (see A/CN.9/670, paras. 116-122).

12. At its sixteenth session (Vienna, 2-6 November 2009), the Working Group continued its work based on a note prepared by the Secretariat entitled “Draft Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property” (A/CN.9/WG.VI/WP.39 and Add.1-7). [...]

B. The interaction between secured transactions law and law relating to intellectual property

[Note to the Working Group: For paras. 13-18, see A/CN.9/WP.37, paras. 9-14, A/CN.9/670, para. 18, A/CN.9/WG.VI/WP.35, paras. 8-11, A/CN.9/667, paras. 17-19 and A/CN.9/WG.VI/WP.33, paras. 76-82.]

13. With only limited exceptions, the recommendations of the *Guide* apply to security rights in all types of movable asset, including intellectual property (see recommendations 2 and 4-7). With respect to intellectual property, the law recommended in the *Guide* does not apply insofar as its provisions are inconsistent with national law or international agreements, to which the State enacting the law is a party, relating to intellectual property (see recommendation 4, subparagraph (b)).

14. Recommendation 4, subparagraph (b), sets out the basic principle with respect to the interaction of secured transactions and intellectual property law. The meaning given to the term “intellectual property” is intended to ensure consistency of the *Guide* with intellectual property laws and treaties (see paras. 26-28 below). The term “law relating to intellectual property” includes both statutory and case law and is broader than the term “intellectual property law”, but narrower than general contract or property law. The scope of recommendation 4, subparagraph (b), will, consequently, be broader or narrower, depending on how a State defines the scope of intellectual property. It is understood that a State will do so in compliance with its international obligations flowing from intellectual property law treaties (such as the Agreement on Trade Related Aspects of Intellectual Property Rights — generally referred to as “the TRIPS Agreement”), as provided in those treaties. The term “law relating to intellectual property” is used in the Supplement to refer to national law or law flowing from international agreements, to which a State is a party, relating to intellectual property that governs specifically security rights in intellectual property, and not law that generally governs security rights in various types of asset and that may happen to govern security rights in intellectual property (see para. 29 below).

15. The purpose of recommendation 4, subparagraph (b), is to ensure that, when States adopt the recommendations of the *Guide*, they do not inadvertently change basic rules of law relating to intellectual property. As issues relating to the existence, validity and content of a grantor’s intellectual property rights are matters to which the *Guide* does not speak (see A/CN.9/WG.VI/WP.39/Add.1, section II.A.4), the occasions for possible conflict in regimes on these issues are limited. Nevertheless, in matters relating to the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property, it is possible that in some States the two regimes will provide for different rules. Where this is the case, recommendation 4, subparagraph (b), preserves the precedence of the intellectual-property-specific rule.

16. It bears noting, however, that rules of law relating to intellectual property in some States relate only to forms of secured transactions that are not unique to intellectual property and that will no longer be available once a State adopts the recommendations of the *Guide* (for example, pledges, mortgages and transfers or trusts of intellectual property for security purposes). For this reason, States that adopt the *Guide* may also wish to review their law relating to intellectual property to coordinate it with the secured transactions law recommended in the *Guide*. In that connection, States enacting the law recommended in the *Guide* will have to ensure that their law reflects in particular the integrated and functional approach recommended in the *Guide*, without modifying the basic policies and objectives of their law relating to intellectual property.

17. The Supplement is intended to provide guidance to States with respect to such an integrated secured transactions and intellectual property law system. Building on the commentary and the recommendations of the *Guide*, the Supplement discusses how the principles of the *Guide* apply where the encumbered asset consists of intellectual property and, where necessary, adds new commentary and recommendations. As is the case with the other asset-specific commentary and recommendations, the intellectual-property-specific commentary and recommendations modify or supplement the general commentary and

recommendations of the *Guide*. Accordingly, subject to contrary provisions of law relating to intellectual property and any asset-specific commentary and recommendations of the Supplement, a security right in intellectual property may be created, be made effective against third parties, have priority and be enforced as provided in the general recommendations of the *Guide*.

18. While it is not the purpose of the Supplement to make any recommendations for changes to a State's law relating to intellectual property, as mentioned above, it may have an impact on that law. The Supplement discusses this impact and, occasionally, includes in the commentary modest suggestions for the consideration of enacting States (the expression used is "States might" or "States may wish to consider ...", rather than "States should"). These suggestions are based on the premise that, by enacting secured transactions laws of the type recommended by the *Guide*, States have made a policy decision to modernize their secured transactions law. The suggestions seek, therefore, to point out where this modernization might lead States to consider how best to coordinate their secured transactions law with their law relating to intellectual property.

C. Terminology⁸

[*Note to the Working Group: For paras. 19-39, see A/CN.9/WG.VI/WP.37, paras. 15-32, A/CN.9/670, paras. 19 and 20, A/CN.9/WG.VI/WP.35, paras. 12-21, A/CN.9/667, paras. 20-22, A/CN.9/WG.VI/WP.33, paras. 39-60, and A/CN.9/649, paras. 104-107.*]

(a) Competing claimant

19. In secured transactions law, the concept of a "competing claimant" is used to identify parties other than the secured creditor in a specific security agreement that might claim a right in an encumbered asset or the proceeds from its disposition (see term "competing claimant", Introduction to the *Guide*, para. 20). Thus, the *Guide* uses the term "competing claimant" in the sense of a claimant that competes with a secured creditor (that is, another secured creditor with a security right in the same asset, another creditor of the grantor that has a right in the same asset, the insolvency representative in the insolvency of the grantor, a buyer or other transferee, or a lessee or licensee of the same asset). The term "competing claimant" is essential for the application in particular of the priority rules recommended in the *Guide*, such as for example of the rule in recommendation 76, under which a secured creditor with a security right in receivables that registered a notice of its security right in the general security rights registry has priority over another secured creditor that acquired a security right in the same receivables by the same grantor before the other secured creditor but failed to register.

20. In law relating to intellectual property, however, the notion of a "competing claimant" is not used, and priority conflicts typically refer to conflicts among transferees and licensees, even if no conflict with a secured creditor is involved (infringers are not competing claimants and, if they are only alleged infringers that

⁸ For the easy reference of the reader, the Supplement follows the order in which the issues are discussed in the *Guide* (that is, Introduction with terminology, examples and key objectives and fundamental policies, Scope, Creation of a security right etc.).

prove that they have a legitimate claim, they are transferees or licensees, and not infringers). Secured transactions law does not interfere with the resolution of such conflicts that do not involve a secured creditor (including a transferee in a transfer for security purposes, who is treated in the *Guide* as a secured creditor). Thus, a conflict between two outright transferees would not be covered by the *Guide*. However, a conflict between an outright transferee of intellectual property rights and a transferee for security purposes of the same intellectual property rights by the same grantor would be covered by the *Guide* (subject to the limitation of recommendation 4, subparagraph (a)).

(b) Encumbered asset

21. The *Guide* uses the term “encumbered asset” to denote an asset that is subject to a security right. While the *Guide* refers by convention to a security right in an “encumbered asset”, what is really encumbered and meant is “whatever right the grantor has in an asset and intends to encumber”.

22. The *Guide* also uses various terms to denote the particular type of intellectual property that may be used as an encumbered asset without interfering with the nature, the content or the legal consequences of such terms for purposes of law relating to intellectual property, as well as contract and property law. These types of intellectual property that may be used as security for credit include the rights of an intellectual property owner (“owner”), the rights of an assignee or successor in title to an owner, the rights of a licensor or licensee under a licence agreement and the rights in intellectual property used with respect to a tangible asset, provided that the intellectual property right is described as an encumbered asset in the security agreement. The owner, licensor or licensee may encumber all or part of its rights.

23. Under law relating to intellectual property, the rights of an intellectual property owner generally include the right to prevent unauthorized use of its intellectual property, the right to renew registrations and the right to transfer and grant licences in its intellectual property. For example, in the case of a patent, the patent owner has exclusive rights to prevent certain acts, such as making, using or selling the patented product without the patent owner’s authorization.

24. Typically, under law relating to intellectual property law and contract law, the rights of a licensor and a licensee depend on the terms of the licence agreement (in the case of a contractual licence), law (in the case of compulsory or statutory licence) or the legal consequences of specific conduct (in the case of an implied licence). In addition, normally, the rights of a licensor include the right to claim payment of royalties and terminate the licence agreement. Similarly, the rights of a licensee include the licensee’s authorization to use the licensed intellectual property in accordance with the terms of the licence agreement and possibly the right to enter into sub-licence agreements and the right to obtain payment of sub-royalties. The rights of a grantor of a security right in a tangible asset with respect to which intellectual property is used are described in the agreement between the secured creditor and the grantor (owner, licensor or licensee of the relevant intellectual property) in line with secured transactions law and law relating to intellectual property.

(c) Grantor

25. As already mentioned, in a secured transaction relating to intellectual property, the encumbered asset may be the intellectual property rights of the intellectual property owner, the rights of a licensor (including the right to the payment of royalties) or the authorization of the licensee to use or exploit the licensed intellectual property, the right to grant sub-licences and the right to the payment of sub-royalties. Thus, depending on the kind of intellectual property that is encumbered, the term “grantor” will refer to an owner, a licensor or a licensee (although, unlike an owner, a licensor or a licensee may not necessarily enjoy exclusive rights as this term is understood under law relating to intellectual property). Finally, as is the case with any secured transaction relating to other types of movable asset, the term “grantor” may reflect a third party granting a security right in its intellectual property to secure the obligation owed by a debtor to a secured creditor.

(d) Intellectual property

26. Under the *Guide*, the term “intellectual property” means copyrights, trademarks, patents, service marks, trade secrets and designs and any other asset considered to be intellectual property under the domestic law of the enacting State or under an international agreement to which the enacting State is a party (such as, for example, neighbouring, allied or related rights⁹ or plant varieties). Thus, references in the *Guide* to “intellectual property” are to be understood as references to “intellectual property rights”, such as the rights of an intellectual property owner, licensor or licensee. The commentary to the *Guide* explains that the meaning given to the term “intellectual property” in the *Guide* is intended to ensure consistency of the *Guide* with law relating to intellectual property, while at the same time respecting the right of a State enacting the recommendations of the *Guide* to align the definition with its own law, whether national law or law flowing from treaties (see Introduction to the *Guide*, footnote 24). An enacting State may add to the list mentioned above or remove from it types of intellectual property so that it conforms to national law.¹⁰ That is, the *Guide* treats as “intellectual property”, for the purposes of the *Guide*, whatever an enacting State considers to be intellectual property in conformity with its national law and compliance with its international obligations.

27. For purposes of secured transactions law, the intellectual property right itself is distinct from the income streams that flow from it, such as the income received

⁹ Closely related to “copyright” are “neighbouring rights”, also called allied or related rights. These are rights that are said to be “in the neighbourhood” of copyright. The term typically covers the rights of performers, producers of phonograms and broadcasting organizations, but in some countries it can also include the rights of film producers, or rights in photographs. Sometimes these are called *Diritti Connessi* (“connected rights”) or *Verwandte Schutzrechte* (“related rights”) or *Droits Voisins* (“neighbouring rights”), but the common term is the English “neighbouring rights.” Internationally, neighbouring rights are generally protected under the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations done Oct. 26, 1961. Additional protections are accorded to certain performers and phonogram producers in the WIPO Performances and Phonograms Treaty done December 20, 1996.

¹⁰ See footnote 32 of the Introduction to the *Guide*.

from the exercise of broadcasting rights. Under the *Guide* these income streams are characterized as “receivables” and could be the original encumbered asset, if described as such in the security agreement, or proceeds of intellectual property, if the original encumbered asset is intellectual property. However, this treatment of these income streams in the *Guide* does not preclude a different treatment for purposes of law relating to intellectual property. For example, for the purposes of law relating to intellectual property, a right of a licensor to payment of equitable remuneration could be treated as part of the intellectual property right of the licensor.

28. It is also important to note that a licence agreement relating to intellectual property is not a secured transaction and a licence with a right to terminate the licence agreement is not a security right. Thus, secured transactions law does not affect the rights and obligations of a licensor or a licensee under a licence agreement. For example, the owner’s, licensor’s or licensee’s ability to limit the transferability of its intellectual property rights remains unaffected. In any case, it should be noted that, while the question whether an intellectual property owner may grant a licence is a matter of law relating to intellectual property, the question whether the owner’s secured creditor may prohibit by agreement the owner from granting a licence is a matter of secured transactions law addressed in the draft Supplement (see A/CN.9/WG.VI/WP.39/Add.6, para. 1).

(e) Law and law relating to intellectual property

29. As also already mentioned, the commentary also clarifies that references to the term “law” throughout the *Guide* include both statutory and non-statutory law. In addition, the *Guide* clarifies that the expression “law relating to intellectual property” (see recommendation 4, subparagraph (b)) is broader than intellectual property law (dealing, for example, with patents, trademarks or copyrights) but narrower than general contract or property law (see Introduction to the *Guide*, para. 19). In particular, the expression “law relating to intellectual property” means national law or law flowing from international agreements, to which a State is a party, relating to intellectual property that governs specifically security rights in intellectual property, and not law that generally governs security rights in various types of asset and that may happen to govern security rights in intellectual property. An example of a “law relating to intellectual property” might be intellectual property law that applies specifically to pledges or mortgages of copyrights in software, assuming of course that the specific law in question arises as a matter of law relating to intellectual property and is not simply the application of a State’s general law of pledges or mortgages to the intellectual property context.

(f) Licence

30. The *Guide* also uses the term “licence” as a general concept, while recognizing that, under law relating to intellectual property, a distinction may often be drawn: (a) between contractual licences (whether express or implied) and compulsory or statutory licences, in which a licence is not the result of an agreement; (b) between a licence agreement and the licence that is granted by the agreement (for example, the authorization to use or exploit the licensed intellectual property); and (c) between exclusive licences (which, under law relating to intellectual property in some States, may be treated as transfers) and non-exclusive licences. In addition, under the

Guide, a licence agreement does not in itself create a security right and a licence with a right to terminate the licence agreement is not a security right.

31. However, the exact meaning of these terms is left to law relating to intellectual property, as well as to contract and other law that may be applicable (such as the Joint Recommendation Concerning Trademark Licences, adopted by the Paris Union Assembly and the WIPO General Assembly (2000)¹¹ and the Singapore Treaty on the Law of Trademarks (2006)).¹² In particular, the *Guide* does not interfere with the limits or terms of a licence agreement that may refer to the description of the specific intellectual property, the authorized or restricted uses, geographic area of use, and the duration of use. For example, an exclusive licence to exercise the “theatrical rights” in Film A in Country X for “10 years starting 1 Jan. 2008” may be given and it will be different from an exclusive licence to exercise the “video rights” in Film A in Country Y for “10 years starting 1 Jan. 2008”.

32. In addition, the *Guide* does not affect in any way the particular characterization of rights under a licence agreement given by law relating to intellectual property. For example, the *Guide* does not affect the nature of rights created under an exclusive licence agreement as rights in rem or the nature of an exclusive licence as a transfer, as is the case under some laws relating to intellectual property. Moreover, the *Guide* does not affect any limitations included in the licence agreement as to the transferability of licensed rights.

(g) Receivable and assignment

33. The term “receivable” is used in the *Guide* and in the United Nations Convention on the Assignment of Receivables in International Trade (hereinafter referred to as the “United Nations Assignment Convention”)¹³ to reflect a right to payment of a monetary obligation and thus, for the purposes of the *Guide*, includes the right of a licensor (that may be an owner or not) or a licensee/sub-licensor to obtain payment of licence royalties (without affecting the terms and conditions of the licence agreement, such as an agreement between the licensor and the licensee that the licensee will not create a security right in its right to payment of sub-royalties). The exact meaning and scope of licence royalties are subject to the terms and conditions of the licence agreement relating to the payment of royalties, such as that payments are to be staggered or that there might be percentage payments depending on market conditions or sales figures (for a discussion of the term “secured creditor”, see paras. 35-37 below; for a discussion of the distinction between a secured creditor and an intellectual property owner, see A/CN.9/WG.VI/WP.39/Add.2, paras. 10-12).

34. The term “assignment” is used in the *Guide* with respect to receivables to denote not only outright assignments but also assignments for security purposes (treated under the *Guide* as secured transactions) and transactions creating a security right in a receivable. To avoid creating the impression that the recommendations of the *Guide* relating to assignments of receivables apply also to “assignments” of intellectual property, the term “transfer” (rather than the term “assignment”) is used in the Supplement to denote the transfer of the rights of an intellectual property

¹¹ www.wipo.int/export/sites/www/about-ip/en/development_iplaw/pdf/pub835.pdf.

¹² www.wipo.int/treaties/en/ip/singapore.

¹³ United Nations publication Sales No. E.04.V.14.

owner. While the *Guide* applies to all types of assignment of receivables, it does not apply to outright transfers of any right other than a receivable (see recommendations 2, subparagraph (d), and 3). It should also be noted that, while what is a “transfer” or a “licence” is left to the relevant property or contract law, the term “transfer” is not used in the *Guide* to denote a licence agreement.

(h) Owner

35. The *Guide* does not explain the term “owner” of an encumbered asset, whether that asset is intellectual property or not. This is a matter of the relevant property law. Accordingly, the *Guide* uses the term “intellectual property owner” referring to the understanding of this term under law relating to intellectual property, generally denoting the person that is entitled to enforce the exclusive rights flowing from intellectual property or its transferee, that is, the creator, author or inventor or their successor in title (as to whether a secured creditor may exercise the rights of an intellectual property owner, see para. 37).

(i) Secured creditor

36. The *Guide* recognizes that a security agreement creates a security right, that is, a limited property right, not an ownership right, in an encumbered asset, provided, of course, that the grantor has the right to create a security right in the asset. Thus, in the *Guide*, the term “secured creditor” (which includes a transferee by way of security) is not used to denote a transferee or an owner. In other words, a secured creditor that acquires a security right under the *Guide* is not presumed to acquire ownership thereby. This approach is mainly intended to protect the grantor/owner that retains ownership and often possession or control of the encumbered asset, while sufficiently securing the secured creditor if the grantor or other debtor defaults on the payment of the secured obligation. In any case, secured creditors normally do not wish to accept the responsibilities and costs of ownership, and the *Guide* does not require that the secured creditor do so. This means, for example, that, even after the creation of a security right, the owner of the encumbered asset may exercise all its rights as an owner (subject, of course, to any limitations it may have agreed to with the secured creditor). Accordingly, when the secured creditor disposes of the encumbered asset enforcing its security right after default, the secured creditor does not necessarily become an owner. In this case, the secured creditor merely exercises its security right. Only where, after default, the secured creditor becomes the owner after exercising the remedy of proposing to acquire the grantor’s ownership rights in the encumbered asset in total or partial satisfaction of the secured obligation (in the absence of any objection by the debtor and the debtor’s other creditors), or acquires the grantor’s ownership rights by purchasing the asset at a public sale in the context of an enforcement, will the secured creditor ever become an owner.

37. For the purposes of secured transactions law, this characterization of a security agreement and the rights of a secured creditor applies to situations where the encumbered asset is intellectual property. However, the *Guide* does not affect different characterizations under law relating to intellectual property law with respect to matters specific to intellectual property. Under law relating to intellectual property, a security agreement may be characterized as a transfer of the intellectual property rights of an owner and the secured creditor may have the rights of an

owner, a licensor or a licensee), such as the right to preserve the encumbered intellectual property and thus to deal with State authorities, grant licences or pursue infringers. So, for example, nothing in secured transactions law prevents a secured creditor from agreeing with the grantor/owner, licensor or licensee to become an owner, licensor or licensee of the encumbered intellectual property. If the agreement does or is intended to secure the performance of an obligation and intellectual property law permits a secured creditor to become an owner, licensor or licensee, the term “secured creditor” may denote an owner, licensor or licensee to the extent permitted under law relating to intellectual property. In such a case, secured transactions law will apply with respect to issues normally addressed in that law, such as the creation, third-party effectiveness, priority and enforcement of a security right (subject to the limitation of recommendation 4, subparagraph (b)); and law relating to intellectual property will apply with respect to issues that are normally addressed in that law, such as dealing with State authorities, granting licences or pursuing infringers.

(j) Security right

38. The *Guide* uses the term “security right” to refer to all types of property right in a movable asset that are created by agreement to secure payment or other performance of an obligation, irrespective of how they are denominated (see definition of the term “security right” in the Introduction to the *Guide*, para. 20 and recommendations 2, subparagraph (d), and 8). Thus, the term “security right” would cover the right of a pledgee or mortgagee of intellectual property, as well as of a transferee in a transfer for security purposes. States that adopt the recommendations of the *Guide* may wish to review their law relating to intellectual property and coordinate the terminology used in that law with the terminology used in the law recommended in the *Guide*.

(k) Transfer

39. While the *Guide* uses the term “outright transfer” to denote transfer of ownership (see chapter I of the *Guide* on scope, para. 25), the exact meaning of this term is a matter of property law. The *Guide* also uses the term “transfer for security purposes” to refer to a transaction that is in name only a transfer but functionally a secured transaction. In view of the functional, integrated and comprehensive approach it takes to secured transactions (see recommendations 2, subparagraph (d), and 8), for the purposes of secured transactions law, the *Guide* treats a transfer for security purposes as a secured transaction. To the extent that a different characterization of a transfer for security purposes in other law would apply to all assets, this is not an issue with respect to which the *Guide* would defer to law relating to intellectual property (see recommendation 4, subparagraph (b), and paras. 12-17 above). However, this approach does not affect a different characterization of a transfer other than an outright transfer for the purposes of law relating to intellectual property. For example, under intellectual property law, the expression “transfer other than an outright transfer” may denote a transfer of parts of exclusive rights from a licensor to a licensee where the licensor retains some rights.

D. Valuation of intellectual property to be encumbered

[Note to the Working Group: For paras. 40-52, see A/CN.9/WG.VI/WP.37, paras. 33-46, A/CN.9/670, paras. 21-26, A/CN.9/WG.V/WP.35, paras. 22-41, A/CN.9/667, paras. 23 and 24, A/CN.9/WG.VI/WP.33, paras. 8-21, and A/CN.9/649, para. 108.]

40. The valuation of assets to be encumbered is an issue that any prudent grantor and secured creditor have to address irrespective of the type of asset to be encumbered. However, valuation of intellectual property is harder at least to the extent it raises the issue whether intellectual property is an asset that may be exploited economically to generate income. For example, once a patent is created, the question arises whether it has any commercial application and, if so, what would be the amount of income that could be generated from the sales of any patented product.

41. Secured transactions law cannot answer this question. However, insofar as it affects the use of intellectual property as security for credit, some of the complexities involved in appraising the value of intellectual property need to be understood and addressed. For example, one issue is that, although the appraisal must take into account the value of the intellectual property itself and the expected cash flow, there are no universally accepted formulae for making this calculation. However, because of the increasing importance of intellectual property as security for credit, in some States, lenders and borrowers are often able to seek guidance from independent appraisers of intellectual property. In addition, parties in some States may be able to rely on valuation methodologies developed by national institutions, such as bank associations. Moreover, parties may be able to rely on training for valuation of intellectual property in general or for the purpose of licence agreements in particular provided by international organizations, such as WIPO. Parties may also be able to rely on standards for the valuation of intellectual property as assets that can be used as security for credit developed by other international organizations, such as the Organization for Economic Cooperation and Development.

E. Examples of financing practices relating to intellectual property

42. Secured transactions relating to intellectual property can usefully be divided into three broad categories. The first category consists of transactions in which the intellectual property rights themselves serve as security for the credit (that is, the rights of an owner, the rights of a licensor or the rights of a licensee). In these transactions, the provider of credit is granted a security right in patents, trademarks, copyrights or other intellectual property rights of the borrower. Examples 1 through 4 below each involve such a situation. In example 1, the encumbered assets are the rights of an owner. In examples 2 and 3, the encumbered assets are the rights of a licensor, and, in example 4, the encumbered assets are the rights of a licensee.

43. The second category of transactions involves situations in which assets other than intellectual property, such as inventory or equipment, serve as security for credit, but the value of these assets is based to some extent upon the intellectual

property with which they are associated. This category of transactions is illustrated by examples 5 and 6.

44. The third category of transaction involves financing transactions that combine the elements of the first two categories. An illustration of this type of transaction is found in Example 7, which involves a credit facility to a manufacturer, secured by a security right covering substantially all of the manufacturer's assets, including its intellectual property rights.

45. Each of the examples illustrates how owners, licensors and licensees of intellectual property, or owners of assets, the value of which depends significantly on associated intellectual property, can use these assets as security for credit. In each case, a prudent prospective lender will engage in due diligence to ascertain the nature and extent of the rights of the owners and licensees of the intellectual property involved, and to evaluate the extent to which the proposed financing would or would not interfere with such rights. The ability of a lender to address these issues in a satisfactory manner, obtaining consents and other agreements where necessary from the owners of the intellectual property, will affect the lender's willingness to extend the requested credit and the cost of such credit. Each of these categories of transaction involves not only different types (or combinations) of encumbered asset, but also presents different legal issues for a prospective lender or other credit provider.¹⁴

Example 1 (rights of an owner in a portfolio of patents and patent applications)

46. Company A, a pharmaceutical company that is constantly developing new drugs, wishes to obtain a revolving line of credit from Bank A secured in part by Company A's portfolio of existing and future drug patents and patent applications. Company A provides Bank A with a list of all of its existing patents and patent applications, as well as their chain of title. Bank A evaluates which patents and patent applications it will include in the "borrowing base" (that is, the pool of patents and patent applications to which Bank A will agree to attribute value for borrowing purposes), and at what value they will be included. In connection therewith, Bank A obtains an appraisal of the patents and patent applications from an independent appraiser of intellectual property. Bank A then obtains a security right in the portfolio of patents and patent applications and registers a notice of its security right in the appropriate national patent registry (assuming that the applicable law provides for registration of security rights in the patents registry). When Company A obtains a new patent, it provides its chain of title and valuation to Bank A for inclusion in the borrowing base. Bank A evaluates the information, determines how much additional credit it will extend based on the new patent, and adjusts the borrowing base. Bank A then makes appropriate registrations in the patent registry reflecting its security right in the new patent.

¹⁴ Some of these questions might be addressed in asset-specific intellectual property legislation. For example, article 19 of the Council Regulation (EC) No. 40/94 on the Community Trademark provides that a security right may be created in a community trademark and, on request of one of the parties, such a right may be registered in the community trademark registry.

Example 2 (rights of a licensor in royalties from the licence of visual art)

47. Company B, a publisher of comic books, licenses its copyrighted characters to a wide array of manufacturers of clothing, toys, interactive software and accessories. The licensor's standard form of licence agreement requires licensees to report sales, and pay royalties on such sales, on a quarterly basis. Company B wishes to borrow money from Bank B secured by the anticipated stream of royalty payments arising under these licence agreements. Company B provides Bank B with a list of the licences, the credit profile of the licensees, and the status of each licence agreement. Bank B then requires Company B to obtain an "estoppel certificate" from each licensee verifying the existence of the licence, the absence of default and the amount due, and confirming the licensee's agreement to pay future royalties to appropriate party (for example, Company B, Bank B or an escrow account) until further notice.

Example 3 (rights of a licensor in royalties from the licence of a motion picture)

48. Company C, a motion picture company, wishes to produce a motion picture. Company C sets up a separate company to undertake the production and hire the individual writers, producers, directors and actors. The production company obtains a loan from Bank C secured by the copyright, service contracts and all revenues to be earned from the exploitation of the motion picture in the future. The production company then enters into licence agreements with distributors in multiple countries who agree to pay "advance guarantees" against royalties upon completion and delivery of the picture. For each licence, the production Company C, Bank C and the distributor/licensee enter into an "acknowledgement and assignment" agreement under which the licensee acknowledges the prior security right of Bank C and the assignment of its royalty payments to Bank C, while Bank C agrees that, in case of enforcement of its security right in the licensor's rights, it will not terminate the licence so long as the licensee makes payments and otherwise abides by the terms of the licence agreement.

Example 4 (authorization of a licensee to use or exploit licensed software)

49. Company D is a developer of sophisticated software used in various architectural applications. In addition to certain software components created by the company's in-house software engineers (which the company licenses to its customers), Company D also incorporates into its products software components that it licenses from third parties (and then sub-licenses to its customers). Company D wishes to borrow money from Bank D secured by a security right in its rights as licensee of intellectual property from third parties, that is, its right to use and incorporate into its software some software components that it licenses from third parties. For evidence, the software developer can provide Bank D with a copy of its software components licence agreement.

Example 5 (rights of a manufacturer of trademarked inventory)

50. Company E, a manufacturer of designer jeans and other high-fashion clothing, wishes to borrow money from Bank E secured in part by Company E's inventory of finished products. Many of the items manufactured by Company E bear well-known trademarks licensed from third parties under licence agreements that give Company E the right to manufacture and sell the products. Company E provides

Bank E with its trademark licence agreements evidencing its right to use the trademarks and its obligations to the trademark owner. Bank E extends credit to Company E against the value of the inventory.

Example 6 (rights of a distributor of trademarked inventory)

51. Company F, one of Company E's distributors, wishes to borrow money from Bank F secured in part by its inventory of designer jeans and other clothing that it purchases from Company E, a significant portion of which bears well-known trademarks licensed by Company E from third parties. Company F provides Bank F with invoices from Company E evidencing that it acquired the jeans in an authorized sale, or copies of the agreements with Company E evidencing that the jeans distributed by Company F are genuine. Bank F extends credit to Company F against the value of the inventory.

Example 7 (security right in all assets of an enterprise)

52. Company G, a manufacturer and distributor of cosmetics, wishes to obtain a €200 million credit facility to provide ongoing working capital for its business. Bank G is considering extending this facility, provided that the facility is secured by an "enterprise mortgage" granting to the bank a security right in substantially all of Company G's existing and future assets, including all existing and future intellectual property rights that it owns or licenses from third parties.

F. Key objectives and fundamental policies

[*Note to the Working Group: For paras. 53-59, see A/CN.9/WG.VI/WP.37, paras. 47-53, A/CN.9/670, para. 27, A/CN.9/WG.VI/WP.35, paras. 42-45, A/CN.9/667, paras. 25-28, A/CN.9/WG.VI/WP.33, paras. 61-75, and A/CN.9/649, paras. 88-97.*]

53. The overall objective of the *Guide* is to promote secured credit. In order to achieve this general objective, the *Guide* elaborates and discusses several additional objectives, including the objectives of predictability and transparency (see Introduction to the *Guide*, section D.2). The *Guide* also rests on and reflects several fundamental policies. These include providing for comprehensiveness in the scope of secured transactions laws, the integrated and functional approach to secured transactions (under which all transactions performing security functions, however denominated, are considered to be security devices) and the possibility of granting a security right in future assets (see Introduction to the *Guide*, section D.3).

54. These key objectives and fundamental policies are equally relevant to secured transactions relating to intellectual property. Accordingly, the overall objective of the *Guide* with respect to intellectual property is to promote secured credit for businesses that own or have the right to use intellectual property, by permitting them to use rights pertaining to intellectual property as encumbered assets, while not interfering with the legitimate rights of the owners, licensors and licensees of intellectual property under law relating to intellectual property, as well as under contract or general property law. Similarly, all the objectives and fundamental policies mentioned above apply to secured transactions in which the

encumbered asset is or includes intellectual property. For example, the *Guide* is designed to:

- (a) Allow persons with rights in intellectual property to use intellectual property as security for credit (see Key objective 1, subparagraph (a));
- (b) Allow persons with rights in intellectual property to use the full value of their assets to obtain credit (see Key objective 1, subparagraph (b));
- (c) Enable persons with rights in intellectual property to create a security right in such rights in a simple and efficient manner (see Key objective 1, subparagraph (c));
- (d) Allow parties to secured transactions relating to intellectual property maximum flexibility to negotiate the terms of their security agreement (see Key objective 1, subparagraph (i));
- (e) Enable interested parties to determine the existence of security rights in intellectual property in a clear and predictable way (see Key objective 1, subparagraph (f));
- (f) Enable secured creditors to determine the priority of their security rights in intellectual property in a clear and predictable way (see Key objective 1, subparagraph (g)); and
- (g) Facilitate efficient enforcement of security rights in intellectual property (see Key objective 1, subparagraph (h)).

55. A general policy objective of law relating to intellectual property law is to prevent unauthorized use of intellectual property or to protect the value of intellectual property and thus to encourage further innovation and creativity. To accomplish this general policy objective, law relating to intellectual property accords certain exclusive rights to intellectual property owners, licensors or licensees. To ensure that the key objectives of secured transactions law will be achieved in a way that does not interfere with the objectives of intellectual property law and thus provide mechanisms to fund the development and dissemination of new works, the *Guide* states a general principle for dealing with the interaction of secured transactions law and law relating to intellectual property. The principle is set out in recommendation 4, subparagraph (b) (see paras. 13-18 above and A/CN.9/WG.VI/WP.39/Add.1, section II, A.4).

56. At this stage, it is sufficient to note that the regime elaborated in the *Guide* does not, in itself, in any way define the content of any intellectual property right, describe the scope of the rights that an owner, licensor or licensee may exercise or impede their rights to preserve the value of their intellectual property rights by preventing their unauthorized use. Thus, the key objective of promoting secured credit with respect to intellectual property will be achieved in a way that does not interfere with the objectives of law relating to intellectual property to prevent unauthorized use of intellectual property or to protect the value of intellectual property and thus to encourage further innovation and creativity.

57. Similarly, this key objective of promoting secured credit without interfering with the objectives of law relating to intellectual property means that neither the existence of the secured credit regime nor the creation of a security right in intellectual property should diminish the value of intellectual property. Thus, for

example, the creation of a security right in intellectual property should not be misinterpreted as constituting an inadvertent abandonment of intellectual property (for example, failure to use a trademark properly, to use it on all products or services or to maintain adequate quality control may result in loss of value to, or even abandonment of, the intellectual property) by the owner or the secured creditor.

58. In addition, this key objective means, in the case of products or services associated with marks, that secured transactions law should avoid causing consumer confusion as to the source of products or services. For example, if a secured creditor replaces the manufacturer's name and address on the products with a sticker bearing its name and address or retains the trademark and sells the products in a jurisdiction where the trademark is owned by a different person, confusion as to the source of the products is bound to arise.

59. Finally, this key objective means that secured transactions law should not provide that a security right in the rights of a licensee that are non-transferable without the consent of the licensor may be created without the consent of the licensor.

<i>Chapter</i>	<i>Paragraphs</i>
II. Scope of application and party autonomy	1-24
A. Broad scope of application	1-21
B. Application of the principle of party autonomy to security rights in intellectual property.....	22-24

II. Scope of application and party autonomy

[Note to the Working Group: For paras. 1-24, see A/CN.9/WG.VI/WP.37/Add.1, paras. 1-24, A/CN.9/670, paras. 28-34, A/CN.9/WG.VI/WP.35, paras. 46-67, A/CN.9/667, paras. 29-31, A/CN.9/WG.VI/WP.33, paras. 82-108, and A/CN.9/649, paras. 81-87.]

A. Broad scope of application

1. The *Guide* applies to security rights in all types of movable asset, including intellectual property (for the meaning of the term “intellectual property”, see A/CN.9/WG.VI/WP.39, paras. 24-26). A security right covered in the *Guide* may be created or acquired by a legal or natural person, or secure any type of obligation (see recommendation 2). The *Guide* applies to all transactions serving security purposes, regardless of the form of the transaction or the terminology used by the parties (see recommendations 2, subparagraph (d), and 8). The Supplement has an equally broad scope with respect to security rights in intellectual property.

1. Encumbered assets covered

2. The question of characterization of types of intellectual property and the question of whether each type of intellectual property is transferable and may thus be encumbered are matters of law relating to intellectual property. However, the *Guide* and the Supplement are based on the general assumption that a security right may be created in any type of intellectual property, such as a patent, a trademark or a copyright. The *Guide* and the Supplement are also based on the assumption that the encumbered asset may be any of the various exclusive rights of an owner, the rights of a licensor, the rights of a licensee or the rights in intellectual property used with respect to a tangible asset.

3. However, there is an important limitation to the scope of the *Guide* and the Supplement as just set out. In line with general rules of property law, the right to be encumbered has to be transferable under general property law and law relating to intellectual property. For example, typically, under law relating to intellectual property, only the economic rights under a copyright may be transferred (and thus encumbered), but not the moral rights of an author. The *Guide* does not affect such limitations. More specifically, the law recommended in the *Guide* does not override provisions of any other law (including law relating to intellectual property) to the extent that they limit the creation or enforcement of a security right in or the transferability of specific types of asset, including intellectual property (see recommendation 18). The only exception to this rule relates to statutory limitations to the assignability of future receivables and receivables assigned in bulk (see recommendation 23).

2. Transactions covered

4. As mentioned, the *Guide* applies to all transactions serving security purposes, regardless of how they are denominated by the parties or by law relating to intellectual property. In other words, even if law relating to intellectual property characterizes a transfer of intellectual property to a creditor for security purposes as a conditional transfer or even as an “outright” transfer, the *Guide* treats this transaction as giving rise to a security right and thus applies to it as long as it serves security purposes.

3. Outright transfers of intellectual property

5. To some extent, the *Guide* applies to an outright transfer (that is, a transfer of ownership) of a receivable (see recommendation 3). As the *Guide* treats royalties payable by the licensee of intellectual property to its licensor as receivables of the licensor, it applies, to some extent, to the outright transfer of the right to the payment of royalties (without affecting the terms and conditions of the licence agreement, such as an agreement between the licensor and the licensee that the licensee will not create a security right in its right to payment of sub-royalties). The inclusion of outright transfers of receivables in the scope of the *Guide* reflects the fact that such transfers are usually seen as financing transactions and are often difficult in practice to distinguish from loans against the receivables. However, simply because the *Guide* generally applies to outright transfers of receivables, this does not mean that the *Guide* re-characterizes an outright transfer of a receivable as a secured transaction as this could negatively affect important receivables financing practices, such as factoring (for outright transfers of receivables, see chapter I of the *Guide* on scope, paras. 25-31; for an example of a factoring transaction, see Introduction to the *Guide*, paras. 31-34).

6. The *Guide* also applies to transfers of all movable assets for security purposes, which it treats as security devices (see recommendations 2, subparagraph (d), and 8). Thus, if a State enacts the recommendations of the *Guide*, a transfer of intellectual property (whether of full title or rights limited in scope, time or territory) for security purposes would be treated as a secured transaction. This approach of the *Guide* is based on the principle that, in determining whether a transactions is a secured transaction or not, substance prevails over form. Accordingly, parties will be able to simply create a security right in intellectual

property using the methods provided in the law recommended in the *Guide* without the need to adopt other formalities of a “transfer” for purposes of secured transactions law. This result will not affect licence practices as, under the *Guide*, a licence agreement does not in itself create a security right and a licence with the right to terminate the licence agreement is not a security right (see A/CN.9/WG.VI/WP.39, para. 30).

7. However, the *Guide* does not apply to outright transfers of any movable asset other than receivables, including intellectual property (the term assignment is used in the *Guide* only with respect to receivables to avoid that the recommendations that apply to the assignment of receivables apply to security rights in intellectual property; see Introduction to the *Guide*, footnote 24). The *Guide* may, however, affect the rights of an outright transferee of an encumbered asset to the extent that there is a priority conflict between the rights of that transferee and a secured creditor with a security right in the asset. The reason for the exclusion of outright transfers of any movable asset other than receivables, including intellectual property, is that they are sufficiently covered by other law, including law relating to intellectual property.

4. Limitations on scope

8. The *Guide* assumes that, in order to facilitate access to financing based on intellectual property, States enacting the recommendations of the *Guide* will include rules on security rights in intellectual property in their modern secured transactions regime. Accordingly, States enacting the recommendations of the *Guide* may wish to review their laws relating to intellectual property with a view to replacing all devices by way of which a security right in intellectual property may be created (including pledges, mortgages and conditional transfers) with the general concept of a security right. However, the *Guide* also recognizes that this must be done in a manner that is consistent with the policies and infrastructure of law relating to intellectual property of each enacting State.

9. The potential points of intersection between secured transactions law and law relating to intellectual property are dealt with in detail in the introduction (see A/CN.9/WG.VI/WP.39, Introduction, section B) and in various chapters of this Supplement. To provide a context for this more detailed discussion of the implications of recommendation 4, subparagraph (b), it is helpful at this point to delineate: (a) issues that are clearly the province of law relating to intellectual property and are not intended to be affected in any way by the *Guide*; and (b) issues on which the rules set out in the *Guide* may be pre-empted or supplemented by a rule of the law relating to intellectual property that regulates the same issue in a different manner from the *Guide*.

(a) Distinction between intellectual property rights and security rights in intellectual property rights

10. The *Guide* addresses only legal issues unique to secured transactions law as opposed to issues relating to the nature and legal attributes of the asset that is the object of the security right. The latter are the exclusive province of the body of property law that applies to the particular asset (with the partial unique exception of receivables to the extent that outright transfers of receivables are also covered in the *Guide*).

11. In the context of intellectual property financing, it follows that the *Guide* does not affect and does not purport to affect issues relating to the existence, validity, enforceability and content of a grantor's intellectual property rights. These issues are determined solely by law relating to intellectual property. Of course, the secured creditor will need to pay attention to those rules in order to assess the existence and quality of the assets to be encumbered, but this would be the case with any type of encumbered asset (for example, whether a right to payment of funds credited to a bank account exists, its exact content and enforceability are matters for law other than secured transactions law). What follows is an indicative, non-exhaustive list of issues that may be addressed by law relating to intellectual property relevant to that assessment. Law relating to intellectual property may deal with issues not included in the following list.

Copyright:

- (a) The determination of who is the author or joint author;
- (b) The duration of copyright protection;
- (c) The economic rights granted under the law and limitations on and exceptions to protection;
- (d) The nature of the protected subject matter (expression embodied in the work, as opposed to the idea behind it, and the dividing line between these);
- (e) The transferability of economic rights as a matter of law and the right to grant a licence;
- (f) The possibility to terminate a transfer or licence of copyright, or otherwise regulate a transfer or licence;
- (g) The scope and non-transferability of moral rights;
- (h) Presumptions relating to the exercise and transfer of rights and limitations relating to who may exercise rights;
- (i) Attribution of original ownership in the case of commissioned works and works created by an employee within the scope of employment.

Neighbouring (allied or related) rights:

- (a) The meaning and extent of neighbouring rights, including whether a State may recognize certain neighbouring rights within copyright or other law;
- (b) The persons entitled to claim neighbouring rights;
- (c) The type of protected expression;
- (d) The relationship between holders of neighbouring rights and holders of copyright;
- (e) The extent of exclusive rights or rights of equitable remuneration with respect to neighbouring rights;
- (f) Any connecting factors or formalities for protection, such as fixation, publication, or notice;
- (g) Any limitations and exceptions to protection for neighbouring rights;

- (h) The duration of protection for neighbouring rights;
- (i) The transferability of any neighbouring rights as a matter of law and the right to grant licences;
- (j) The possibility to terminate a transfer or licence of neighbouring rights, or otherwise regulate a transfer or licence;
- (k) The scope, duration and non-transferability of any related moral rights.

Patents:

- (a) The determination of who is the patent owner or co-owner;
- (b) The validity of a patent;
- (c) The limitations on and exceptions to protection;
- (d) Scope and duration of protection;
- (e) The grounds for invalidity challenges (obviousness or lack of novelty);
- (f) Whether certain prior publication is excluded from prior art and thus may not preclude patentability;
- (g) Whether protection is granted to a person who first invented the patent or to a person who first filed an application.

Trademarks and service marks:

- (a) The determination of who is the first user or the owner of the mark;
- (b) Whether protection of the mark is granted to a person that uses the mark first or to a person that files an application first and whether protection is granted to a subsequently registered mark if it conflicts with a previously registered mark;
- (c) Whether ex ante use is a prerequisite to registration in a mark registry or whether the right is secured by initial registration and maintained by later use;
- (d) The basis of protection of the right (distinctiveness);
- (e) The basis for losing protection (holder's failure to ensure that mark retains its association with the owner's products in the marketplace), as in the case of:
 - (i) Licensing without the licensor directly or indirectly controlling the quality or character of the products or services associated with the mark (so called "naked licensing"); and
 - (ii) Altering the mark so its appearance does not match the mark as registered;
- (f) Whether the mark may be transferred with or without goodwill.

(b) Areas of potential overlap between secured transactions law and law relating to intellectual property

12. The issues just addressed do not create any necessity for deference to law relating to intellectual property, since the *Guide* does not purport to address these

issues. In other words, they are not issues where the principle of recommendation 4, subparagraph (b), has any application. The deference issue arises when the law relating to intellectual property of the enacting State provides an intellectual-property-specific rule on an issue falling within the scope of the *Guide*, namely, an issue relating to the creation, third-party effectiveness, priority, enforcement of or law applicable to a security right in intellectual property (see A/CN.9/WG.VI/WP.39, Introduction, Section B).

13. The precise scope and implications of deference to law relating to intellectual property cannot be stated in the abstract since there is great variation among States on the extent to which intellectual-property-specific rules have been established, and indeed even within the same State depending on which category of intellectual property is at issue. In addition, the harmonization and modernization of the secured financing law achieved through the *Guide* has its limitations, since the *Guide* addresses issues of secured transactions law only and, under certain conditions defers to law relating to intellectual property (see recommendation 4, subparagraph (b)). Another fact that limits the impact of the *Guide* is that law relating to intellectual property in the various States does not address all secured transactions law issues in a comprehensive or coordinated way. For this reason, optimal results can only be obtained if the harmonization and modernization of secured transactions law achieved through the *Guide* is accompanied by a review of intellectual property financing law to ensure compatibility and coordination with the secured transactions law recommended in the *Guide*. The following examples illustrate some typically encountered patterns.

Example 1

14. In some States, in which security rights are created by a transfer of title to the encumbered asset, a security right may not be created in a trademark. The reason is a concern that the secured creditor's title would impair the quality control required of the trademark holder. Adoption of the recommendations of the *Guide* by such a State would make transfers of title unnecessary to create a security right in a trademark and eliminate the rationale for this prohibition, since the grantor retains ownership of the encumbered trademark under the *Guide*'s concept of security right. Whether the secured creditor may become the owner, licensor or licensee of rights in the trademark for the purposes of law relating to intellectual property is a different matter (under secured transactions law, a secured creditor does not become the owner, licensor or licensee). Nonetheless, adoption of the recommendations of the *Guide* would not automatically eliminate the prohibition, because, to the extent it is inconsistent with law relating to intellectual property, the *Guide* defers to that law. As a result, a specific amendment to the relevant law relating to intellectual property would be needed to harmonize it with the law recommended in the *Guide*.

Example 2

15. In some States, only transfers of intellectual property (whether outright or for security purposes) may be registered in a specialized intellectual property registry and such registration is mandatory for the effectiveness of a transfer. In other States, a security right in intellectual property may also be registered and such registration has constitutive or third-party effects. In view of the principle of deference to law relating to intellectual property embodied in recommendation 4, subparagraph (b),

adoption of the *Guide*'s recommendations would not affect the operation of such a rule and such specialized registration will continue to be required. However, deference to law relating to intellectual property will not always be sufficient to address the issue of coordination between the general security rights registry and intellectual property registries (see A/CN.9/WG.VI/WP.39/Add.3, paras. 15-20) or the question whether a security right may be created in and a notice may refer to a future intellectual property right (see A/CN.9/WG.VI/WP.39/Add.2, paras. 37-41, and A/CN.9/WG.VI/WP.39/Add.3, paras. 21-23).

Example 3

16. In some States, law relating to intellectual property provides for registration of both outright transfers and security rights in various intellectual property registries, but registration is not a mandatory precondition to effectiveness. However, registration has priority consequences in that rights arising from an unregistered transaction can be subject to rights arising from a registered transaction. In the case of such a State, recommendation 4, subparagraph (b), would preserve that rule of law relating to intellectual property of the State and, accordingly, a secured creditor desiring optimal protection may need to register both a notice of its security right in the general security rights registry and the security agreement or a notice thereof in the relevant intellectual property registry (although, if the intellectual property registry permits registration of security rights, registration there would be sufficient for all purposes). This is because: (a) registration in that State's general security rights registry is a necessary prerequisite to third-party effectiveness under secured transactions law (unless law relating to intellectual property allows registration of a security right in the relevant intellectual property registry to achieve third-party effectiveness); and (b) registration in the intellectual property registry will be necessary to protect the secured creditor against the risk of finding its security right affected by the rights of a competing transferee or secured creditor registered in the intellectual property registry pursuant to the priority rules of law relating to intellectual property.

17. In some States, registration of transfers and security rights in the relevant intellectual property registry provides protection only against a prior unregistered transfer or security right and only if the person with the registered right took without notice of the prior unregistered right (the *Guide* would defer to this rule as it is a rule of law relating to intellectual property rather than a general rule of secured transactions law present throughout the State's legal system; see recommendation 4, subparagraph (b)). In those States, adoption of the *Guide*'s recommendation will raise the further question as to whether registration of a notice of a security right in intellectual property in the general security rights registry constitutes constructive notice to a subsequent transferee or secured creditor that registers its transfer or security right in the intellectual property registry. If so, under the law of such a State, it would be unnecessary for a secured creditor that has registered a notice of its security right in the general security rights registry to also register a document or notice thereof in the intellectual property registry in order to prevail as against subsequent transferees and secured creditors. Otherwise, under the law of that State, registration of a document or notice of the security right in the intellectual property registry may be required to gain priority over subsequent transferees and secured creditors.

Example 4

18. As a matter of law relating to intellectual property, some States provide for registration in the relevant intellectual property registry of a document or notice of a transfer of, but not of a security right in, intellectual property. In such situations, registration has priority consequences only as between transferees, and not as between a transferee and a secured creditor. In States that adopt this approach, a secured creditor will need to ensure that a document or notice of all transfers of intellectual property to its grantor is duly registered in the intellectual property registry so as to avoid the risk of the grantor's title being defeated by the subsequently registered rights of a transferee. In all other respects, however, the secured creditor's rights will be determined by the secured transactions regime. Likewise, the secured creditor will need to ensure that a document or notice of a transfer for security purposes made to it by the grantor is duly registered in the intellectual property registry in order to avoid the risk that the rights of a subsequent transferee of the grantor will defeat the rights arising from the security transfer in favour of the secured creditor.

Example 5

19. As a matter of law relating to intellectual property, in some States, registration of a document or notice of a transfer and a security right in an intellectual property registry is purely permissive and intended only to facilitate identification of the current owner. Failure to register neither invalidates the transaction nor affects its priority (although it might create evidentiary presumptions). In States that adopt this approach, the position is essentially the same as when no specialized registry exists at all, as is often the case for copyright. Where these issues are dealt with by law relating to intellectual property, the *Guide* defers to it. Where, however, these issues are left to be determined by general property law, no issue of deference arises since the pre-*Guide* rules were not derived from the law relating to intellectual property but rather from property law generally. Thus, adoption of the *Guide* will replace the existing rules on creation, third-party effectiveness, priority and so forth for security rights in intellectual property. Of course, the old rules on these issues will continue to apply to outright transfers of intellectual property since the *Guide* only covers security rights in intellectual property. Consequently, the secured creditor will need to verify whether a purported transfer is actually an outright transfer or a disguised secured transaction (that is, a transaction which, although not called a secured transaction by the parties, serves security purposes). However, this type of risk management is no different from that necessary for any other type of encumbered asset for which a specialized registry does not exist.

Example 6

20. The question of who is the intellectual property owner in a chain of transferees of intellectual property is a matter of law relating to intellectual property. At the same time, the question of whether a transfer is an outright transfer or a transfer for security purposes is a matter of general property and secured transactions law. Finally, the rights and obligations flowing from a licence agreement is a matter of law relating to intellectual property and contract law.

Example 7

21. If law relating to intellectual property has specialized rules governing specifically the enforcement of a security right in intellectual property, these rules will prevail over the enforcement regime of the *Guide*. However, if there is no specific rule of law relating to intellectual property on the matter and the enforcement of security rights in intellectual property is a matter left to general civil procedure law, the enforcement regime for security rights elaborated in the *Guide* would take precedence. Similarly, if there is no specific rule of law relating to intellectual property on extrajudicial enforcement, the relevant regime of the *Guide* on extrajudicial enforcement of security rights would apply (see A/CN.9/WG.VI/WP.39/Add.6, chapter IX on enforcement).

B. Application of the principle of party autonomy to security rights in intellectual property

22. The *Guide* generally recognizes the principle of party autonomy, although it does elaborate a number of exceptions (see recommendations 10 and 111-113). This principle applies equally to security rights in intellectual property to the extent that law relating to intellectual property does not limit party autonomy (see A/CN.9/WG.VI/WP.39/Add.6, para. 1). It should be noted that recommendations 111-113 apply only to tangible assets, as they refer to the possession of encumbered assets and intangible assets are by definition not subject to possession.

23. An example of the application of the principle of party autonomy in secured transactions relating to intellectual property would be the following: if not prohibited by law relating to intellectual property, under secured transactions law, a grantor and a secured creditor may agree that the secured creditor may acquire certain rights of an owner, licensor or licensee and thus become an owner, licensor or licensee entitled to deal with public authorities (for example, to register or renew registrations), as well as to sue infringers, make further transfers or grant licences. This agreement could take the form of a special clause in the security agreement or a separate agreement between the grantor and the secured creditor, since, under the *Guide*, a secured creditor does not, by the mere fact of obtaining a security right, become an owner, licensor or licensee.

24. Another example of the application of the principle of party autonomy would be the following: if not prohibited by law relating to intellectual property, under secured transactions law, a grantor and a secured creditor may agree that damages for infringement, as well as for lost profits and devaluation of the encumbered intellectual property, are included in the original encumbered assets. In the absence of such an agreement, such damages may still be treated as proceeds under the *Guide*, provided that that treatment is not inconsistent with law relating to intellectual property (see recommendation 4, subparagraph (b)). However, the right to pursue infringement claims (as opposed to the right to the payment of damages for infringement) is a different matter. Typically, this right cannot be used a security for credit and it would not constitute proceeds as it would not fall under the words “whatever is received in respect of encumbered assets” in the definition of proceeds (see Introduction to the *Guide*, para. 20).

III. Creation of a security right in intellectual property

[Note to the Working Group: For paras. 1-43, see A/CN.9/WG.VI/WP.37/Add.1, paras. 25-64, A/CN.9/670, paras. 35-55, A/CN.9/WG.VI/WP.35, paras. 68-102, A/CN.9/667, paras. 32-54, A/CN.9/WG.VI/WP.33, paras. 112-133, and A/CN.9/649, paras. 16-28.]

A. The concepts of creation and third-party effectiveness

1. With respect to all types of encumbered asset (including intellectual property), the *Guide* draws a distinction between the creation of a security right (its effectiveness as between the parties) and its effectiveness against third parties, providing different requirements to achieve each of these outcomes. In effect, this means that the requirements for the creation of a security right can be kept to a minimum, while any additional requirements are aimed at addressing the rights of third parties. The main reason for this distinction is to achieve three of the key objectives of the law recommended in the *Guide*, namely, establishing a security right in a simple and efficient way, enhancing certainty and transparency, and establishing clear priority rules (see recommendation 1, subparagraphs (c), (f) and (g)).

2. Under the *Guide*, a security right may be created by an agreement between the grantor and the secured creditor (see recommendation 13 and paras. 5-8 below). For the security right to be effective against third parties, an additional step is required. For intangible assets this step is notice to third parties of the possible existence of the security right, which establishes an objective criterion for determining priority between a secured creditor and a competing claimant (see recommendation 29; for the term “competing claimant”, see A/CN.9/WG.VI/WP.39, paras. 19 and 20). Accordingly, if a security right has been created in accordance with the requirements set out in the *Guide*, the security right is effective between the grantor and the secured creditor even if the additional steps necessary to make the security right effective against third parties have not been taken (see recommendation 30). As a result, the secured creditor may enforce the security right in accordance with the procedures set out in chapter IX of the *Guide*, subject to the rights of competing claimants in accordance with the priority rules set out in chapter V.

3. This distinction between creation and effectiveness against third parties applies equally to security rights in intellectual property. Thus, under the *Guide* a security right in intellectual property can be effective between the grantor and the secured creditor even if it is not effective against third parties. In some States, law relating to intellectual property draws such a distinction. In other States, however, such a distinction is not drawn in law relating to intellectual property, which provides that the same actions are required for both the creation of a security right and its effectiveness against third parties. In such a case, as required by recommendation 4, subparagraph (b), the *Guide* defers to that law. To ensure better coordination between secured transactions law and law relating to intellectual property, States enacting the recommendations of the *Guide* may wish to consider reviewing their law relating to intellectual property. Such a review should make it possible for States to determine whether: (a) the fact that law relating to intellectual property does not draw a distinction between creation and third-party effectiveness of a security right in intellectual property serves specific policy objectives of law relating to intellectual property (rather than other law, such as general property law, contract law or secured transactions law) and should be retained; or (b) the distinction should be introduced in law relating to intellectual property so as to harmonize it with the relevant approach of the law recommended in the *Guide*.

B. Functional, integrated and unitary concept of a security right

4. To the extent law relating to intellectual property permits the creation of a security right in intellectual property, it may do so by referring to outright or conditional transfers of intellectual property, mortgages, pledges, trusts or similar terms. The *Guide* uses the term “security right” to refer to all transactions that serve security purposes. This is referred to as the “functional, integrated and unitary approach” to secured transactions (see chapter I of the *Guide* on the scope of application, paras. 110-112, and recommendation 8). Although the *Guide* contemplates, by exception, that States may adopt a non-unitary approach in the limited context of acquisition financing and may retain transactions denominated as retention of title or financial lease, this exception only applies to tangible assets (see chapter IX of the *Guide* on acquisition financing), and would, consequently, not be relevant in an intellectual property context (see,

however, A/CN.9/WG.VI/WP.39/Add.5, para. 19, note to the Working Group). Thus, States enacting the recommendations of the *Guide* may wish to review their law relating to intellectual property with a view to: (a) replacing all terms used to refer to the right of a secured creditor with the term “security right”; or (b) providing that, whatever the term used, rights performing security functions are treated in the same way and that such a way is not inconsistent with the treatment of security rights in the *Guide*.

C. Requirements for the creation of a security right in intellectual property

5. Under the *Guide*, the creation of a security right in an intangible asset requires a written document, which by itself or in conjunction with the course of conduct between the parties evidences the agreement of the parties to create a security right. In addition, the grantor must have rights in the asset to be encumbered or the power to encumber it either at the time of the conclusion of the security agreement or thereafter. The agreement must reflect the intent of the parties to create a security right, identify the secured creditor and the grantor, and describe the secured obligation and the encumbered assets in a manner that reasonably allows their identification (see recommendations 13-15). As already mentioned, no additional step is required for the creation of a security right in an intangible asset. The additional steps (for example, registration of a notice in a general security rights registry) required for third-party effectiveness of that security right are not required for the security right to be created effectively as between the grantor and the secured creditor.

6. However, law relating to intellectual property in many States imposes different requirements for the creation of a security right in intellectual property. For example, registration of a document or notice of a security right in intellectual property (for example, a transfer for security purposes, a mortgage or pledge of intellectual property) in the relevant intellectual property registry may be required for the creation of the security right. In addition, under law relating to intellectual property, the intellectual property to be encumbered may need to be described specifically in a security agreement. Similarly, as some intellectual property registries index registered transactions by the specific intellectual property to which they relate, and not the grantor’s name or other identifier, registration of a document that merely states “all intellectual property of the grantor” would not be sufficient to create a security right. It would instead be necessary to identify each intellectual property right in the security agreement or in any other document to be registered in the intellectual property registry for the purposes of creating the security right.

7. Specific identification of the encumbered intellectual property right will, in particular, be necessary for copyright. This is so because, in some States, copyright is conceptualized as comprising a bundle of rights and, unless the parties intended to encumber all those rights, they would need to describe the assets to be encumbered specifically in the security agreement. In such a case, law relating to copyright requires a specific description for certainty as to assets that are subject to a security right. Under such an approach, the copyright owner may use non-encumbered rights to obtain credit from another credit provider. It should also be noted, however, that the divisibility of intellectual property rights always allows parties to divide them

and encumber them separately, if they wish. Thus, if the parties wish to describe the encumbered intellectual property rights in a specific way, they are always entitled to do so and will probably do so in most cases; but this should not deprive the parties of the right to describe the encumbered intellectual property rights in a general way. In any case, the standard reflected in recommendation 14, subparagraph (d), is sufficiently flexible to accommodate all different situations in that it refers to a description of the encumbered assets “in a manner that reasonably allows their identification”. Thus, this standard could vary depending on what is a reasonable description under the relevant law and practice.

8. Furthermore, in all these situations, under the principle embodied in recommendation 4, subparagraph (b), the law recommended in the *Guide* would apply only insofar as it is not inconsistent with law relating to intellectual property. Of course, States enacting the *Guide* may wish to consider reviewing their laws relating to intellectual property to determine whether the different concepts and requirements with respect to the creation of security rights in intellectual property serve specific policy objectives of law relating to intellectual property and should be retained or whether they should be harmonized with the relevant concepts and requirements of the law recommended in the *Guide*.

D. Rights of a grantor with respect to the intellectual property to be encumbered

9. As already mentioned a grantor of a security right must have rights in the asset to be encumbered or the power to encumber it at the time of the security agreement or at a later time (see recommendation 13). This is a principle of secured transactions law that applies equally to intellectual property. A grantor may encumber its full rights or only limited rights. So, an intellectual property owner, licensor or licensee may encumber its full rights or rights limited in time, scope or territory. In addition, as a matter of general property law, a grantor may encumber its assets only to the extent that the assets are transferable under general property law (the *Guide* does not affect such limitations; see recommendation 18 and paras. 42 and 43 below). This principle also applies to secured transactions relating to intellectual property. So, an owner, licensor or licensee may only encumber its rights to the extent these rights are transferable under law relating to intellectual property.

E. Distinction between a secured creditor and an owner with respect to intellectual property

10. For the purposes of secured transactions law under the *Guide*, the secured creditor does not become an owner, licensor or licensee (depending on the rights of the grantor) on the sole ground that it acquired a security right in intellectual property (this may be the case though under law relating to intellectual property; see A/CN.9/WG.VI/WP.39, Introduction to the Supplement, section C, terms “owner” and “secured creditor”).

11. However, the exercise of the secured creditor’s rights upon default of the grantor will often result in the grantor’s encumbered intellectual property rights

being transferred and, thus, the identity of the owner, licensor or licensee (depending on the rights of the grantor), as determined by law relating to intellectual property, might change. This may happen in situations in which the enforcement of the security right in the intellectual property results in acquisition of the encumbered intellectual property by the secured creditor in a disposition (see recommendations 141 and 148) or in an acquisition of the encumbered intellectual property by the secured creditor in satisfaction of the secured obligation (see recommendations 156 and 157).

12. In any case, the question of who is the owner, licensor or licensee with respect to intellectual property and whether the parties may determine it for themselves is a matter of law relating to intellectual property. Under law relating to intellectual property, a secured creditor may be treated as an owner, licensor or licensee. Should intellectual property law so permit, the secured creditor could, for example, renew registrations or pursue infringers or agree with the owner, licensor or licensee that the secured creditor will become the owner, licensor or licensee.

F. Types of encumbered asset in an intellectual property context

13. Under the *Guide*, a security right may be created not only in the rights of an intellectual property owner but also in the rights of a licensor or licensee under a licence agreement (see A/CN.9/WG.VI/WP.39, Introduction to the Supplement, section C, term “encumbered asset”, and A/CN.9/WG.VI/WP.39/Add.1, paras. 2 and 3). In addition, a security right may be created in a tangible asset with respect to which intellectual property is used (for example, designer watches or clothes bearing a trademark). As already mentioned, the intellectual property to be encumbered needs to be described in the security agreement in a manner that reasonably allows its identification (see recommendation 14, subparagraph (d), and paras. 5-8 above).

14. It should be noted that the *Guide* does not override any provisions of law relating to intellectual property (or other law) that limit the creation or enforcement of a security right or the transferability of an intellectual property (or other) asset (see recommendation 18). The only exception in the *Guide* refers to legal limitations to the assignability of future receivables or of receivables assigned in bulk or in part on the sole ground that they are future receivables or are assigned in bulk or in part (see recommendation 23). Similarly, the *Guide* does not affect contractual limitations to the transferability of intellectual property rights. Under certain conditions, it does affect, however, contractual limitations to the assignability of receivables (see paras. 22-28 below and recommendation 24). As a result, if, under law relating to intellectual property, a security right may not be created or enforced in an intellectual property right or if that intellectual property right is non-transferable, the law recommended in the *Guide* will not interfere with these limitations.

1. Rights of an owner

15. The *Guide* applies to secured transactions in which the encumbered assets are the rights of an owner. Typically the essence of the rights of an owner is the right to enjoy its intellectual property, the right to prevent unauthorized use of its

intellectual property and to sue infringers, the right to register intellectual property, the right to authorize others to use or exploit the intellectual property and the right to collect royalties.

16. If, under law relating to intellectual property, a security right may be created and enforced in these rights or these rights are transferable, the owner may encumber all or some of them with a security right under the law recommended in the *Guide* and that law will apply to such a security right subject to recommendation 4, subparagraph (b). In such a case, all these rights would constitute the original encumbered assets (any royalties would be proceeds of the owner's rights, unless of course included in the description of the encumbered assets in the security agreement). If these rights may not be encumbered or transferred under law relating to intellectual property, they may not be encumbered by a security right under the law recommended in the *Guide*, since, as already mentioned, the *Guide* does not affect legal provisions that limit the creation or enforcement of a security right, or the transferability of assets, with the exceptions of provisions relating to the assignability of future receivables and receivables assigned in bulk (see recommendation 18).

17. Whether the right of an owner to preserve its intellectual property and thus, for example, to pursue infringers and obtain an injunction and compensation, is a movable asset that may be transferred separately from the other rights of the owner is a matter for law relating to intellectual property. Typically, under law relating to intellectual property, the right to pursue infringers is part of the owner's rights and cannot be transferred separately from the owner's rights. However, the benefits from the exercise of this right to pursue infringers (such as damages arising from an infringement once collected) may be a movable asset that may be transferred or encumbered separately from the owner's rights.

18. If, under law relating to intellectual property, the owner's right to pursue infringers is a transferable movable asset, whether a security right may be created in that right is a matter of secured transactions law, which would apply only if law related to intellectual property does not address that matter in a different way (see recommendation 4, subparagraph (b)). Thus, unless not permitted by law relating to intellectual property, the owner/grantor and the secured creditor may agree that the right of the owner to pursue infringers and obtain an injunction and compensation would be part of the original encumbered intellectual property.

19. For example, if, after the creation of a security right in the rights of an intellectual property owner, an infringement has been committed, the owner has sued infringers and infringers have paid compensation to the owner (for an infringement that occurred before or after the creation of the security right), the secured creditor may claim the compensation paid as proceeds of the original encumbered intellectual property. If the compensation has not been paid at the time of creation of the security right, but is paid later after default of the owner/grantor, the secured creditor could again claim the compensation paid as proceeds of the original encumbered intellectual property. To the contrary, the right to pursue infringers and obtain an injunction and compensation would normally not constitute proceeds of the original encumbered intellectual property, unless permitted under law relating to intellectual property and certain conditions are met (see Introduction to the *Guide*, section B, "proceeds"). However, if the owner/grantor has filed a suit against an infringer and the lawsuit is still pending at the time of creation of the

security right, a person that bought the encumbered intellectual property in a sale in the context of enforcement of a security right should be able to take over the lawsuit and obtain any compensation granted (again, if permitted under law relating to intellectual property).

20. Similar considerations apply to the question of whether the right to deal with authorities in the various stages of the registration process (for example, the right to file an application for or register intellectual property, or the right to renew a registration) or the right to grant licences may be encumbered or transferred, and thus be part of the encumbered intellectual property. Whether the right to deal with authorities or to grant licences may be encumbered or is an inalienable right of the owner is a matter of law relating to intellectual property. Whether it is part of the encumbered rights of the owner is a matter of the description of the encumbered asset in the security agreement (for a discussion of whether the secured creditor may preserve the encumbered assets by pursuing infringers or dealing with authorities before default of the owner/grantor, see A/CN.9/WG.VI/WP.39/Add.6, paras. 2-5).

2. Rights of a licensor

21. Under the *Guide*, a security right may be created in a licensor's rights under a licence agreement. If a licensor is an owner, it can create a security right in (all or part of) its rights as mentioned above (see paras. 15-20 above). If a licensor is not an owner but a licensee that grants a sub-licence, typically, it may create a security right in its right to the payment of royalties owed under the sub-licence agreement. In such a case where the grantor creating a security right in sub-royalties is a licensor but not the intellectual property owner, the sub-royalties would be the original encumbered assets, while, where the grantor creating a security right in the intellectual property itself is the intellectual property owner, the sub-royalties would be proceeds of the original encumbered intellectual property, unless the sub-royalties were included in the description of the original encumbered assets in the security agreement (for the licensee's rights, see paras. 30 and 31 below). Such a licensor may also create a security right in other contractual rights of value that the licensor might have under the licence agreement and the relevant law. These other contractual rights might include, for example, the licensor's right to compel the licensee to advertise the licensed intellectual property or product with respect to which the intellectual property is used, or the right to compel the licensee to market the licensed intellectual property only in a particular manner, as well as the right to terminate the licence agreement on account of the licensee's breach.

22. Following the approach taken in most legal systems and reflected in the United Nations Assignment Convention, the *Guide* treats rights to the payment of royalties arising from the licence of intellectual property as receivables. This means that the general discussion and recommendations dealing with security rights, as modified by the receivables-specific discussion and recommendations, apply to rights to the payment of royalties. Thus, under the *Guide*, statutory prohibitions that relate to the assignment of future receivables or receivables assigned in bulk or partial assignments on the sole ground that they are future receivables or receivables that are assigned in bulk or in part are rendered unenforceable (see recommendation 23). However, other statutory prohibitions or limitations are not affected (see recommendation 18). In addition, a licensee could raise against an assignee of the

royalties all defences or rights of set-off arising from the licence agreement or any other agreement that was part of the same transaction (see recommendation 120).

23. In this context, it is important to note that the statutory prohibitions set aside refer to future receivables only as future receivables, or receivables assigned in bulk or in part. They do not affect statutory prohibitions based on the nature of receivables, for example, as wages or royalties that may by law be payable directly only to authors or collecting societies. Many countries have “author-protective” or similar legislation that designates a certain portion of income earned from exploitation of the intellectual property rights as “equitable remuneration” or the like which must be paid to authors or other entitled parties or their collecting societies. These laws often make such payment rights expressly non-assignable. The *Guide*’s recommendations with respect to limitations to the assignment of receivables do not apply to these or other legal limitations.

24. Furthermore, it is important to note that the treatment of the right to the payment of royalties as receivables for the purposes of the secured transactions law recommended in the *Guide* does not affect the different treatment of this right to the payment of royalties for the purposes of law relating to intellectual property.

25. Finally, it is equally important to note that the treatment of rights to receive payment of royalties in the same way as any other receivable does not affect the terms and conditions of the licence agreement relating to the payment of royalties, such as that payments are to be staggered or that there might be percentage payments depending on market conditions or sales figures.

26. Under the *Guide*, if a licence (or a sub-licence) agreement, under which royalties are payable, includes a contractual provision that restricts the ability of the licensor (or a sub-licensor) to assign the right to the payment of royalties to a third party (“assignee”), an assignment of the right to the payment of royalties by the licensor (or sub-licensor) is nonetheless effective and the licensee (or sub-licensee) cannot terminate the licence agreement (or sub-licence agreement) on the sole ground of the assignment of the royalties (see recommendation 24). However, under the *Guide*, the rights of a licensee (as a debtor of the assigned receivables) are not affected except as otherwise provided in the secured transactions law recommended in the *Guide* (see recommendation 117, subparagraph (a)). Specifically, the licensee is entitled to raise against the assignee all defences or rights of set-off arising from the licence agreement or any other agreement that was part of the same transaction (see recommendation 120, subparagraph (a)). In addition, the *Guide* does not affect any liability that the licensor (or sub-licensor) may have under other law for breach of the anti-assignment agreement (see recommendation 24).

27. It is important to note that recommendation 24 applies only to receivables, and not to intellectual property rights. This means that it does not apply to an agreement between a licensor and a licensee according to which the licensee does not have the right to grant sub-licences. It is equally important to note that recommendation 24 applies only to an agreement between a creditor of a receivable and the debtor of the receivable that the receivable owed to the creditor by the debtor may not be assigned. It does not apply to an agreement between a creditor of a receivable and the debtor of the receivable that the debtor may not assign receivables that may be owed to the debtor by third parties. Thus, recommendation 24 does not apply to an agreement between a licensor and a licensee that the licensee will not assign its

right to receive payment of sub-licence royalties from third-party sub-licensees. Such an agreement may exist, for example, where the licensor and the licensee agree that sub-licence royalties will be used by the licensee to further develop the licensed intellectual property. Thus, recommendation 24 does not affect the right of the licensor to negotiate the licence agreement with the licensee so as to control by agreement who can use the intellectual property or the flow of royalties from the licensee and sub-licensees. However, a licensor, while entitled to claim the payment of royalties, might not be able to control by agreement the flow of royalties in situations where the licensee in its capacity as a sub-licensor creates a security right in its right to the payment of sub-royalties (unless, of course, the licensor prohibits sub-licences).

28. In addition, recommendation 24 does not apply to an agreement between a licensor and a licensee that the licensor will terminate the licence agreement if the licensee violates the agreement not to assign the right to the payment of royalties payable to the licensee by sub-licensees. In this context, it should be noted that the right of the licensor to terminate the licence agreement if the licensee breaches this agreement gives the sub-licensees a strong incentive to make sure that the licensor will receive payment. Moreover, recommendation 24 does not affect the right of the licensor to: (a) agree with the licensee that part of the licensee's royalties (representing a source for the payment of the royalties the licensee owes to the licensor) be paid by sub-licensees to an account in the name of the licensor; or (b) obtain a security right in the licensee's future royalties to be paid by sub-licensees, register a notice in that regard in the general security rights registry (or the relevant intellectual property registry) and thus obtain a security right with priority over the licensee's other creditors (subject to the recommendations of the *Guide* for obtaining third-party effectiveness and priority of security rights; see A/CN.9/WG.VI/WP.39/Add.5, paras. 15-19).

29. Under the *Guide*, a secured creditor with a security right in a receivable has the benefit of a security right in intellectual property securing payment of the receivable (see recommendation 25). However, this does not mean that legal limitations to the transferability of intellectual property rights are set aside (see recommendation 18). Similarly, this does not mean that contractual limitations to the transferability of intellectual property rights are affected, as recommendation 24 applies to assignment of receivables and not to transfers of intellectual property rights.

3. Rights of a licensee

30. A licensee may have the right to grant sub-licences and to receive as a sub-licensor the payment of any royalties flowing from a sub-licence agreement, unless the licence agreement or law relating to intellectual property provides otherwise. The discussion above with respect to the rights of a licensor would apply equally to the rights of a licensee as a sub-licensor (see paras. 21-29 above).

31. Typically, a licensee is authorized to use or exploit the licensed intellectual property in line with the terms of the licence agreement. Some laws relating to intellectual property provide that the licensee may not create a security right in its authorization to use or exploit the licensed intellectual property without the licensor's consent (although in many States an exception may arise where the licensee sells its business as a going concern). The reason is that it is important for

the licensor to retain control over the licensed intellectual property and who can use it. If such control cannot be exercised, the value of the licensed intellectual property may be materially impaired or lost completely. If, however, the rights of a licensee under a licence agreement are transferable and the licensee grants a security right in them, the secured creditor will take the licensee's rights subject to the terms and conditions of the licence agreement. If the licence is transferable and the licensee transfers it, the transferee will take the licence subject to the terms and conditions of the licence agreement. The *Guide* does not affect these licensing practices.

4. Rights in tangible assets with respect to which intellectual property is used

32. Intellectual property may be used with respect to a tangible asset. For example: a tangible asset may be manufactured according to a patented process or through the exercise of patented rights; jeans may bear a trademark or cars may contain a chip which includes a copy of copyrighted software; or a CD may contain a software programme or a heat pump may contain a patented product.

33. Where intellectual property is used in connection with a tangible asset, two different types of asset are involved. One is the intellectual property; another is the tangible asset. These assets are separate. Law relating to intellectual property allows an intellectual property owner the ability to control many but not all uses of the tangible asset. For example, law relating to copyright allows an author to prevent unauthorized duplication of a book, but typically not to prevent an authorized bookstore that bought the book in an authorized sale to re-sell it or the end-buyer to make notes in the margin while reading. As such, a security right in intellectual property does not extend to the tangible asset with respect to which intellectual property is used, and a security right in a tangible asset does not extend to the intellectual property used with respect to the tangible asset.

34. However, the parties to the security agreement may always agree that a security right is granted both in a tangible asset and in intellectual property used with respect to that asset. For example, a security right may be taken in inventory of trademarked jeans and in the trademark giving the right to the secured creditor in the case of default of the grantor to sell both the encumbered trademarked jeans and the right to produce other jeans bearing the encumbered trademark. In such a case, where the manufacturer/grantor is the trademark owner, the encumbered assets are the owner's rights. Where the manufacturer/grantor is a licensee, the encumbered assets are the licensee's rights under a valid licence agreement.

35. The exact extent of the security right depends on the description of the encumbered asset in the security agreement. In this regard, the question arises as to whether the description of the encumbered tangible assets should be specific (for example, "my entire inventory with all associated intellectual property rights and other rights") or whether a general description ("my entire inventory") would suffice. As already noted (see paras. 5-8 above), under the *Guide*, a description that reasonably allows the identification of the encumbered assets is sufficient (see recommendation 14, subparagraph (d)). It would thus seem that a general description of the encumbered tangible asset would be in line with the principles of the *Guide* and the reasonable expectations of the parties, with the realization that separate assets are involved. At the same time, key principles of law relating to intellectual property with respect to a specific description of intellectual property to be encumbered in a security agreement are accommodated.

36. As already mentioned, a security right in a tangible asset, in connection with which an intellectual property right is used, does not extend to the intellectual property used with respect to the tangible asset, but does apply to the tangible asset itself, including those characteristics of the asset that use the intellectual property (for example, the security right applies to a television set as a functioning television set). Thus, a security right in such an asset does not give the secured creditor the right to manufacture additional assets using the intellectual property. Upon default, however, the secured creditor with a security right in the tangible assets could exercise the remedies recognized under secured transactions law, provided that such exercise of remedies did not interfere with rights existing under law relating to intellectual property. It may be that, under applicable law relating to intellectual property, the “exhaustion doctrine” (or similar concepts) might apply to the enforcement of the security right (for a discussion of enforcement issues, see A/CN.9/WG.VI/WP.39/Add.6, paras. 24-27).

Recommendation 243¹

The law should provide that, in the case of a tangible asset with respect to which intellectual property is used, unless otherwise specified in the security agreement, a security right in intellectual property does not extend to the tangible asset with respect to which it is used, and a security right in such a tangible asset does not extend to the intellectual property. However, nothing in this recommendation limits the remedies that a secured creditor with a security right in such intellectual property has with respect to the tangible asset to the extent permitted by law relating to intellectual property. Similarly, nothing in this recommendation limits the enforcement remedies that a secured creditor with a security right in the tangible asset has with respect to the tangible asset to the extent permitted by law relating to intellectual property.

G. Security rights in future intellectual property

37. The *Guide* provides that a person may grant a security right in a future asset, namely an asset created or acquired by the grantor after the creation of a security right (see recommendation 17). Like any other recommendation of the *Guide*, this recommendation too applies to intellectual property, except insofar as it is inconsistent with law relating to intellectual property (see recommendation 4, subparagraph (b)). Accordingly, under the *Guide*, a security right can be created in future intellectual property (as to legislative limitations in that regard, see recommendation 18 and paras. 42 and 43 below). This approach is justified by the commercial utility in allowing a security right to extend to future intellectual property.

38. Many laws relating to intellectual property follow the same approach, allowing owners to obtain financing useful in the development of new works, provided that their value can be reasonably estimated in advance. For example, it is usually possible to create a security right in a copyrighted motion picture or software (the

¹ If it could be included in the *Guide*, this recommendation would be included in chapter II on the creation of a security right as recommendation 28 bis.

security right is created when the copyrighted work is created). In some States, a security right may be created in a patent application before the patent right is granted.

39. However, in certain cases, law relating to intellectual property may limit the transferability of various types of future intellectual property to achieve specific policy goals. For example, in some cases, a transfer of rights in new media or technological uses that are unknown at the time of the transfer may not be effective in view of the need to protect authors. In other cases, transfers of future rights may be subject to a statutory right of cancellation after a certain period. In other cases, the notion of “future intellectual property” may include registrable rights created but not yet registered. Statutory prohibitions may also take the form of a requirement for a specific description of intellectual property. Finally, as is the case with assets other than intellectual property, statutory prohibitions may be the result of the *nemo dat* principle, in accordance with which a creditor obtaining a security right does not obtain any rights greater than the rights of the grantor. In this connection, it should be noted that, if the grantor were a licensee, the licensee could not give anything more than the right granted to the licensee from the licensor (in other words, these rights would be subject to the terms and conditions of the licence agreement).

40. Other limitations on the use of future intellectual property as security for credit may be the result of the meaning of the concepts of “improvements” or “adaptations” under law relating to intellectual property. The secured creditor should understand how these concepts are interpreted under law relating to intellectual property and how they may affect the concept of “ownership”, which is essential in the creation of a security right in intellectual property. This determination is of particular relevance in the case of software subject to a copyright, for example. In some States a security right in a version of software which exists at the time of the financing may extend to modifications made to that version following the financing. However, in other States, this may not be the case, if it is determined that, under law relating to intellectual property, the modifications to such version are considered to be new works (adaptations) for which a new transfer is required. In any case, the *Guide* does not affect these limitations (see recommendation 18).

41. If law relating to intellectual property limits the transferability of future intellectual property, the law recommended in the *Guide* does not apply to this matter insofar as it is inconsistent with law relating to intellectual property (see recommendation 4, subparagraph (b)). Otherwise, the *Guide* applies and permits the creation of a security right in future assets (see recommendation 17). States enacting the *Guide* may wish to review their law relating to intellectual property with a view to establishing whether the benefits from these limitations (for example, the protection of the owner from undue commitments) outweigh the benefits from the use of such assets as security for credit (for example, the financing of research and development activities).

H. Legal or contractual limitations on the transferability of intellectual property

42. Specific rules of law relating to intellectual property may limit the ability of an intellectual property owner, licensor or licensee to create an effective security right in certain types of intellectual property. In many States, only the economic rights of an author are transferable; the moral rights are not transferable. In addition, legislation in many States provides that an author's right to receive equitable remuneration may not be transferable. Moreover, in many States, trademarks are not transferable without their associated goodwill. The *Guide* respects all these limitations on the transferability of intellectual property (see recommendation 18).

43. The only limitations on the transferability of certain assets that the *Guide* may affect are the legislative limitations on the transferability of future receivables, receivables assigned in bulk and parts of or undivided interests in receivables, as well as to contractual limitations on the assignment of receivables arising for the sale or licence of intellectual property rights (see articles 8 and 9 of the United Nations Assignment Convention and recommendations 23-25). In addition, the *Guide* may affect contractual limitations, but only with respect to receivables (not intellectual property) and only in a certain context, that is, in an agreement between the creditor of a receivable and the debtor of that receivable (see paras. 37-41 above).

IV. Effectiveness of a security right in intellectual property against third parties

[Note to the Working Group: For paras. 1-9, see A/CN.9/WG.VI/WP.37/Add.2, paras. 1-9, A/CN.9/670, paras. 56-61, A/CN.9/WG.VI/WP.35/Add.1, paras. 1-14, A/CN.9/667, paras. 55-63, A/CN.9/WG.VI/WP.33, paras. 137-145, and A/CN.9/649, paras. 29-31.]

A. The concept of third-party effectiveness

1. As already noted, the *Guide* distinguishes between the creation of a security right (effectiveness of the security right as between the parties) and its effectiveness

against third parties. Subject to recommendation 4, subparagraph (b), this distinction applies equally to security rights in intellectual property (see A/CN.9/WG.VI/WP.39/Add.2, paras. 1-3).

2. In some States, there are no special rules governing the creation and third-party effectiveness of security rights in intellectual property and those issues are governed by the same rules that apply to security rights in other types of intangible asset. In other States, however, law relating to intellectual property may provide for particular methods in which a security right in some types of intellectual property may be created and made effective against third parties. The rules often differ for rights in intellectual property that are subject to a specialized registration system (such as patents, trademarks and, in some States, copyrights), and rights in intellectual property that are not subject to such registration (such as trade secrets, industrial designs and, in some States, copyrights). These matters are addressed in sections B and C below.

3. In the *Guide*, the concept of “effectiveness against third parties” refers to whether a security right in an encumbered asset as a property right is effective against parties other than the grantor and the secured creditor that have at that time or may acquire in the future a security or other right in that encumbered asset. Such third parties (“competing claimants”) include creditors of the grantor, the insolvency representative in the insolvency of the grantor, as well as transferees, lessees and licensees of the encumbered asset. In law relating to intellectual property, by contrast, the phrase “third-party effectiveness” is often used to refer to the effectiveness of ownership or other similar rights in intellectual property itself, rather than to the effectiveness of a security right. These two sorts of references should not be confused. While effectiveness of a security right in intellectual property as against competing claimants is a matter of secured transactions law, effectiveness of ownership rights or rights of a licensor or licensee against transferees of those rights is a matter of law relating to intellectual property. In this context, it should be noted that, for purposes of secured transactions law, infringers are not competing claimants. Thus, the *Guide* does not apply to a “conflict” between a secured creditor and a purported infringer and, if, for example, the infringer asserts as a defence against a secured creditor that the infringer is a transferee or a licensee of the encumbered intellectual property, the matter is to be determined in accordance with the law relating to intellectual property.

B. Third-party effectiveness of security rights in intellectual property that are registered in an intellectual property registry

4. Under the *Guide*, security rights in intangible assets may be made effective against third parties by registration of a notice in the general security rights registry or of a document or notice in a specialized registry. The *Guide* assumes that where a State maintains a specialized registry, it will permit registration of a notice of a security right as a method of achieving third-party effectiveness of the security right (see recommendations 34, subparagraph (a) (iii), and 38, subparagraph (a)) (see also paras. 12-14 below).

[Note to the Working Group: At its fifteenth session, the Working Group considered that: “With respect to paragraph 4, it was suggested that it should be

revised to clarify that only registries that ensured third-party effectiveness of security rights qualified as specialized registries under the Guide. There was support for the principle reflected in that suggestion. However, it was widely felt that it should be expressed not in narrow technical terms of third-party effectiveness but broader notions of public accessibility of registered information so as to ensure, for example, that specialized ship, aircraft or intellectual property registries that provided for effectiveness in general were not undermined, while registries serving purely administrative purposes would not qualify as specialized registries under the Guide.” (see A/CN.9/670, para. 57)

The Working Group may wish to note that the preparatory work of the Guide (reports of the Working Group and the Commission, and the various drafts of the Guide) and the Guide (commentary and recommendations, in particular recommendation 38) do not define a specialized title registry. Nor do they require that the legal consequence of registration in a specialized title registry under specialized registration law has to be third-party effectiveness of a security right. Nor, finally, do they address the question whether a document or a notice has to be registered. The Guide does not do so as the approaches taken to all these issues vary widely from State to State and, in any case, these are all matters of specialized registration law. The only reference that the Guide makes in this regard is the following: “Consequently, the Guide assumes that where a State maintains a specialized registry, it will permit registration of a notice of a security right as a method of achieving third-party effectiveness of the security right (see recommendations 34, subparagraph (a) (iii), and 38, subparagraph (a)).” (see chapter V on third-party effectiveness of a security right, para. 70 at the end)

This sentence was added in paragraph 4 above. The Working Group may wish to consider that it does not need an elaboration or explanation in particular as to whether the third-party effects have to be provided in the specialized registration law or in the law recommended in the Guide that would be applicable unless specialized registration law provided otherwise. The Working Group may thus consider that the Supplement is not the appropriate place to explain or interpret the Guide, unless an issue arises that is specific to intellectual property or a different approach is to be taken with respect to intellectual property. In any case, paragraph 69 of the commentary of chapter V makes clear that immovable property, ship and aircraft registries, many of which do not distinguish between general effectiveness and third-party effectiveness, are specialized registries under specialized registration law and thus under the Guide.]

5. Registration in a specialized intellectual property registry differs from State to State in many respects, including: (a) whether transfers, licences or also security rights may be registered; (b) whether rights in patents, trademarks, copyrights or other types of intellectual property may be registered; (c) whether a document, summary or notice need be registered; and (d) what are the legal consequences of registration. In some cases, the answers to all these questions are not easy to obtain even in one and the same legal system.

6. For example, under law relating to intellectual property, in some States, a security right is not created or made effective against third parties, unless and until a document or notice of it is registered in the relevant intellectual property registry. In other States, law relating to intellectual property provides that a security right is created and, at the same time, becomes effective against third parties when the

security agreement is entered into between the parties, even without registration. In these cases, registration in the relevant intellectual property registry allows certain third parties (typically transferees that are not aware that the asset is encumbered; “good faith transferees”), to invoke a priority rule, according to which a registered security right takes precedence over an unregistered prior security right, but the unregistered security right still remains effective against other third parties. In still other States, a security right is created when the security agreement is entered into between the parties, but registration in the relevant intellectual property registry is necessary to make the security right effective against third parties, for example, by way of an evidentiary rule that prohibits evidence of unregistered security rights. In still other States, the registration system does not readily accommodate registration of documents or notices of security rights, and creation and third-party effectiveness of security rights must be achieved outside the intellectual property registration system. Finally, in some States that distinguish between creation and third-party effectiveness, it is possible to achieve third-party effectiveness of a security right by using either the intellectual property registry or an available general security rights registry. If any of these methods existing under law relating to intellectual property is intended to be the exclusive method of obtaining effectiveness of a security right against third parties, in accordance with recommendation 4, subparagraph (b), it takes precedence over any of the methods provided in the law recommended in the *Guide*.

7. The *Guide* recommends a general security rights registry and, where specialized registries exist that permit registration of a notice of a security right as a method of achieving third-party effectiveness of the security right, avoids undermining them by accepting registration in such registries as method of achieving third-party effectiveness of a security right and attributing priority results to such a registration (see recommendations 38, 77 and 78). As this matter is beyond the scope of secured transactions law and, in any case, would require additional effort and expense by States, the *Guide* does not recommend that States that currently do not have a specialized registry for certain types of intellectual property create such registries in order to permit the registration of a notice of a security right in intellectual property. For the same reason, the *Guide* does not recommend that States that currently do not permit the registration of a notice of a security right in an intellectual property registry amend their laws to permit such registrations. Finally, to avoid duplication of effort and expense, the *Guide* does not recommend a rule that requires registration of a notice of a security right in both the relevant intellectual property registry and in the general security rights registry. However, if States enacting the recommendations of the *Guide* have specialized intellectual property registries and wish to use them for registration of security rights in intellectual property, making use of the options offered in recommendation 38 of the *Guide*, they may wish to review their law relating to intellectual property and consider whether to permit the registration of notices of security rights with third-party effects in such already existing intellectual property registries. States that do not have specialized intellectual property registries or have such registries but do not wish to use them for registration of security rights in intellectual property, may always use the general security rights registry for registration of notices of security rights in all types of movable asset, including intellectual property.

C. Third-party effectiveness of security rights in intellectual property that are not registered in an intellectual property registry

8. As already mentioned, under the *Guide*, a security right in intellectual property may become effective against third parties by registration of a notice in the general security rights registry (see recommendation 32). This is possible even if the encumbered intellectual property rights may not be registered in an intellectual property registry (as is typically the case, for example, with copyrights, industrial designs or trade secrets). The same rule would apply in cases where a document or notice of a security right in intellectual property may be registered in an intellectual property registry but it is not actually registered. In these cases, registration of a notice in the general security rights registry is sufficient and the legal consequence of registration is to make the security right effective against third parties (see recommendations 29, 32, 33 and 38). However, in the particular case where law relating to intellectual property provides that a security right in intellectual property may be made effective against third parties only by registration in an intellectual property registry, a security right cannot not be made effective against third parties by registration in the general security rights registry (see recommendation 4, subparagraph (b)).

9. As already mentioned, there are different approaches in law relating to intellectual property to the question of registration of a document or notice of a security right in intellectual property. In some States, often those whose secured transactions law derives from non-possessory pledge concepts, either no rights at all may be registered in some types of intellectual property or only outright transfers of intellectual property may be registered. This means that a security right in such intellectual property cannot be made effective against third parties by registration in an intellectual property registry. In other States, often those whose secured transactions law utilizes mortgage concepts, a security right is treated as another type of (outright or conditional) transfer and is, therefore, created and made effective against third parties to the same extent as any other transfer. Consequently, in those States, a document or notice of title-based security rights must often be registered in the relevant intellectual property registry in order for it to be created and made effective against third parties, but non-title-based security rights cannot be so registered. In some of those States, such registration has third-party effects. Finally, in a few States, there are additional requirements. These commonly include payment of a stamp duty or other transaction tax, or a requirement to give notice to an administrative body, such as a national authors association or collecting society. If States enacting the recommendations of the *Guide* harmonize their secured transactions laws and their laws relating to intellectual property, replacing all existing security devices with an integrated notion of a security right, or, at least, subjecting title-based security rights to the same rules that are applicable to security rights (see A/CN.9/WG.VI/WP.39/Add.2, para. 4), in those jurisdictions that permit registrations of transfers of intellectual property, it would be possible to register a security right in intellectual property.

V. The registry system

[*Note to the Working Group: For paras. 10-42, see A/CN.9/WG.VI/WP.37/Add.2, paras. 10-42, A/CN.9/670, paras. 62-72, A/CN.9/WG.VI/WP.35, paras. 15-31, A/CN.9/667, paras. 64-85, A/CN.9/WG.VI/WP.33, paras. 149-161, and A/CN.9/649, paras. 32-40.*]

A. The general security rights registry

10. As already noted, the *Guide* recommends that States establish a general security rights registry (see recommendations 54-75). In general, the purpose of the registry system in the *Guide* is to: (a) provide an efficient method for making a security right in existing or future assets effective against third parties; (b) establish an effective point of reference for priority rules based on the time of registration; and (c) provide an objective source of information for third parties dealing with a grantor's assets as to whether the assets are encumbered by a security right (see purpose section of chapter IV of the *Guide* on the registry). Under this approach, registration is accomplished through registration of a notice of a security right, as opposed to registration of the security agreement or other document (see recommendation 54, subparagraph (b)). The notice need only provide basic information concerning the security right, that is: (a) the identifier of the grantor and the secured creditor or its representative; (b) a description of the encumbered asset; (c) the duration of registration; and (d) a statement of the maximum amount for which the security right may be enforced, if so provided in a State enacting the recommendations of the *Guide* (see recommendation 57).

11. The *Guide* provides precise rules for identifying the grantor of the security right, whether an individual or a legal person. This is because notices are indexed and can be retrieved by searchers according to the name or some other reliable identifier of the grantor (see recommendations 54, subparagraph (h), and 58-63). The *Guide* contains other recommendations to simplify the operation and use of the registry. For example, the *Guide* provides that, to the extent possible, the registry should be electronic and permit registration and searching by electronic means (see recommendation 54, subparagraph (j)). The *Guide* also provides that fees for registration and searching, if any, should be set at a level no higher than necessary to permit cost recovery (see recommendation 54, subparagraph (i)).

B. Asset-specific intellectual property registries

12. As discussed above, many States maintain registries for registering (or recording) transactions (such as transfers) relating to intellectual property. In some of those registries, security rights may also be initially filed (that is, an application for registration may be made) and then registered. For example, patent and trademark registries exist in most States, but not all provide for the registration of a document or notice of a security right. In addition, in some States, the registration of a notice (whether of a security right or some other right) does not produce third-party effects. Moreover, a number of States have similar registries for copyrights, but the practice is not universal.

13. While some States have notice-based intellectual property registries, a larger number of States use recording act structures or “document registration” systems. In those systems, it is necessary to record the entire instrument of transfer, or, in some cases, a memorandum describing essential terms of the transfer. A more modern approach is to simplify the registration process by registering a limited amount of information (such as the names of the parties and a general description of the encumbered assets). For example, the registration requirements for trademarks are simplified by the Trademark Law Treaty (1994), the Singapore Treaty on the Law of Trademarks, as well as by the Madrid Agreement (1891), the Madrid Protocol (1989) and the model international registration forms attached to both treaties. Similarly, the Patent Law Treaty (Geneva, 2000) and the Council Regulation (EC) No. 40/94 of 20 December 1993 on the Community Trademark simplify registration requirements. The reason for requiring registration of the transaction document or a memorandum stating the essential terms of the transaction is the need for transparency. Thus, it is essential for a transfer instrument or memorandum to identify the precise right being transferred in order to give effective notice to searchers and to allow efficient utilization of assets. In addition, the intellectual property registries sometimes index registrations by the specific intellectual property, and not by the grantor’s identifier. This is because the central focus is on the intellectual property itself, which may have multiple co-owners or co-authors and may be subject to multiple changes in ownership as transfers are made.

14. In addition to national registries, there are a number of international intellectual property registries and registration in these registries is subject to relatively modern treaties or other international legislative texts that simplify the registration process. For example, under the Community Trademark regulation, a statement may be registered referring not only to ownership but also to security rights with third-party effects. Another example is the treaty on the International Registration of Audiovisual Works (“Film Register Treaty”), adopted at Geneva on April 18, 1989, under the auspices of WIPO. The Film Register Treaty creates an international registry, which permits the registration of statements concerning audiovisual works and rights in such works, including, in particular, rights relating to their exploitation (the records of the diplomatic conference indicate statements concerning security rights were also contemplated). The Film Register Treaty provides an evidentiary presumption of validity for registered statements. The international registry allows two types of application. A work-related application identifies an existing or future work at least by title or titles. A “person-related application” identifies one or more existing or future works by the natural person or legal entity that makes or owns, or is expected to make or own, the work or works. The international registry maintains an electronic database that allows cross indexing between the different types of registrations. There is also a procedure to request removal of contradictory filings.

C. Coordination of registries

15. As already mentioned (see paras. 4 and 5 above), the *Guide* neither recommends the creation of a specialized registration system (for intellectual property or for other assets), if one does not exist, nor interferes with existing specialized registration systems. However, where, under law relating to intellectual

property, a document or notice of a security right in intellectual property may be registered in an intellectual property registry and, at the same time, under the law recommended in the *Guide*, that security right may also be registered in the general security rights registry, there is a need to address the issue of coordination between these two registries. In order to avoid interfering with law relating to intellectual property, the *Guide* addresses it through the general deference to law relating to intellectual property (see recommendation 4, subparagraph (b)) and appropriate priority rules.

16. Thus, the *Guide* does not address or purport to address whether a security right in intellectual property may be registered in an intellectual property registry, the requirements for such registration (for example, document or notice registration) or its legal consequences (for example, effectiveness or presumption of effectiveness against all parties or only against third parties). Even if an intellectual property registry does not provide for the registration of security rights, provides for the registration of a document rather than a notice thereof or, having provided for such registration, does not give registration third-party effects, the *Guide* provides no recommendation to the contrary and takes the specialized registration system, if any, as is.

17. However, the *Guide* does make recommendations concerning the registration of a notice of a security right in intellectual property in the general security rights registry. For this reason, to the extent that law relating to intellectual property addresses the effects of registration of security rights in an intellectual property registry in a way that would be inconsistent with the third-party effects given to such registration by the *Guide* (see recommendation 38), the *Guide* defers to that law (recommendation 4, subparagraph (b)). By contrast, if law relating to intellectual property does not address these issues, there is no overlap or conflict with law relating to intellectual property, the issue of deference to law relating to intellectual property will not arise and thus the *Guide* will apply giving such specialized registration third-party effects.

18. In addition, the *Guide* addresses the issue of coordination between a specialized registry (including an intellectual property registry) and the general security rights registry recommended in the *Guide* through appropriate priority rules. Thus, in order to preserve the reliability of intellectual property (and other specialized) registries (in particular, in cases where law relating to intellectual property provides no rule for determining priority), the *Guide* provides that a security right in intellectual property, a document or notice of which is registered in the relevant intellectual property registry, has priority over a security right in the same intellectual property, a notice of which is registered in the general security rights registry (see recommendation 77, subparagraph (a)). For the same reason, the *Guide* provides that a transferee of intellectual property acquires it, in principle, free of a previously created security right in that property, unless a document or notice of the security right is registered in the intellectual property registry (see recommendations 78 and 79). Under recommendation 4, subparagraph (b), this rule would apply only if it was not inconsistent with a rule of law relating to intellectual property (see A/CN.9/WG.VI/WP.39/Add.4, paras. 12-15).

19. If States enacting the recommendation of the *Guide* have specialized intellectual property registries and wish to use them for registration of security rights in intellectual property, making use of the options offered in

recommendation 38 of the *Guide*, they may wish to consider ways aimed at coordinating their existing intellectual property registries with the general security rights registry introduced by the *Guide*. For example, States may wish to consider permitting the registration of a notice of a security right in intellectual property in an intellectual property registry with third-party effects. In addition, States may wish to consider whether asset-based intellectual property registries should also have a debtor-based index (and vice versa). Moreover, States may wish to consider requiring the transmission of a notice about a registration in an intellectual property registry to the general security rights registry (or vice versa). Of course, coordination of registries in this way would be easier, simpler, quicker and less expensive in an electronic registration system rather than in a paper-based registration system.

20. An alternative to a system permitting the forwarding of notices from one registry to the other might be a system implementing a common gateway to both the general security rights registry and to various specialized registries. Such a common gateway would enable registrants to enter the notice simultaneously in both registries. Several steps would have to be taken in order to ensure the efficiency and effectiveness of a common gateway, including that a simple notice should be enough, the notice should include the identifiers of both the grantor and the secured creditor (or its representative) and an asset-specific description of the encumbered assets, searches in both registries should be possible with a single request and both grantor-based and asset-based indices should be maintained with cross references in each registry to the other registry (see chapter III of the *Guide* on the effectiveness of a security right against third parties, paras. 80-82).

D. Registration of notices about security rights in future intellectual property

21. An essential feature of the general security rights registry recommended in the *Guide* is that a notice of a security right can refer to future assets of the grantor. This means that the security right can cover assets to be later produced or acquired by the grantor (see recommendation 17) and the notice may cover assets described in a manner that allows their identification (see recommendation 63). Thus, if the encumbered assets are described in the security agreement as all existing and future inventory, the notice may so identify such inventory. Since priority is determined by date of registration, the priority of the security rights extends to future inventory. This approach greatly facilitates revolving credit arrangements, since a lender extending new credit under such a facility knows that it can maintain its priority position in new assets that are included in the borrowing base.

22. Existing intellectual property registries, however, in many States, do not readily accommodate registration of rights in future intellectual property. As transfers of or security rights in intellectual property are indexed against each specific intellectual property right, they can only be effectively registered after the intellectual property is first registered in the intellectual property registry. This means that a blanket registration of a security right in future intellectual property in an intellectual property registry would not be effective and a new registration of the security right would be required each time new intellectual property is acquired.

23. If, under law relating to intellectual property, intellectual property may not be acquired, transferred or encumbered before it is actually registered in an intellectual property registry, the *Guide* does not interfere with that prohibition and does not make the grant of a security right in such future intellectual property possible. However, if the creation of a security right in future intellectual property is not prohibited under law relating to intellectual property (as is the case, for example, with a patent or trademark while the application for its registration in the patent or trademark registry is pending), a security right in such an asset could be created and made effective against third parties under the *Guide*. States enacting the recommendations of the *Guide* may wish to consider reviewing their law relating to intellectual property to determine whether a notice of a security right may refer to future intellectual property.

E. Dual registration or search

24. As already mentioned, the *Guide* leaves to law relating to intellectual property the details of registration of a document or notice of a security right in an intellectual property registry and expressly gives priority, as a matter of secured transactions law, to rights with respect to which a registration is made in such a registry (see paras. 4, 17 and 18 above). As also noted above, this means that the *Guide* often obviates the need for dual registration or search. In particular, registration only in the general security rights registry would seem to be necessary and useful for secured transactions purposes: (a) where the encumbered asset is a type of intellectual property with respect to which no registration is required under law relating to intellectual property (for example, copyrights or trade secrets in many States); (b) where a document or notice of security right in intellectual property may not be registered in an intellectual property registry; (c) where a notice of security right in intellectual property may be registered in an intellectual property registry, but such registration has effects that are inconsistent with third-party effects; and (d) where there are other secured creditors that register only in the general security rights registry. On the other hand, registration in the relevant intellectual property registry may be preferable, for example: (a) where the encumbered asset is a type of asset for which a registration system exists and allows registration of documents or notices of security rights (for example, patents or trademarks in many States); or (b) where the secured creditor needs to ensure priority over other secured creditors or transferees under the relevant law relating to intellectual property.

25. Before a security agreement is entered into, a secured creditor exercising normal due diligence will typically conduct a search to determine whether there are prior competing claimants that have priority over the proposed security right. As a first step, the secured creditor will search the chain of title to identify prior transfers and to determine whether the grantor actually has rights in the intellectual property so that the security right can become effective in the first instance (this due diligence requirement applies to all movable assets). Unlike intellectual property registries, the general security rights registry does not record title and, as a result, a search of the chain of title will involve a search of the relevant intellectual property registry, provided that rights in intellectual property may be registered in that registry. As a next step, the secured creditor will search to determine whether each

prior party in the chain of title has granted a security right which might have priority over the proposed security right. Finally, the secured creditor will determine the applicable priority as between rights registered in one of the two registries. In cases where the priority is determined solely by registration in the relevant intellectual property registry, as provided in the *Guide*, a search of only that registry may be sufficient. Otherwise, a secured creditor may have to search in both registries.

26. Under the *Guide*, it is envisaged that the general security rights registry will be electronic and will accept registration of notices of possible security rights with third-party effects at a nominal cost (based on cost recovery), if any, for registration and searching (see recommendation 54, subparagraph (i)). This means that, in States that enact the recommendations of the *Guide*, registration and searching in the general security rights registry is likely to be simple, quick and inexpensive. However, under law relating to intellectual property, registries may not necessarily be fully electronic (although an increasing number of intellectual property registries allow online searching for a small fee). In addition, the document of a transaction or a summary thereof may need to be filed (instead of a notice). Moreover, the document filed may have to be checked by the registry staff at least to the extent that the legal consequence of registration may be conclusive or presumptive evidence of the existence of a right in intellectual property.

27. Thus, while the relevant fees vary widely from State to State, the cost of registration of a document of a security right in an intellectual property registry may reasonably be assumed to be higher than the cost of registration of a notice of a security right in the general security rights registry. As to the cost and time of searching, again searching in a document registry (whether electronic or not) is likely to be more time-consuming and costly than searching in an electronic notice-based general security rights registry. These differences, of course, will be minimized to the extent that an intellectual property registry permits the online registration of a notice of a security right, for a nominal fee, with third-party effects by and is organized in a way that also permits searching in a time- and cost-efficient way. At the same time though, registration in the relevant intellectual property registry would provide more information (for example, because of the specific description of the encumbered assets and the information about transfers) and probably more certain information (for example, because registration may constitute or provide firm evidence as to the existence of a right).

[Note to the Working Group: At its fifteenth session, the Working Group agreed that, to assess the impact of registration in an intellectual property registry or in a general security rights registry, it could consider an analysis of costs involved in the registration of a security right in one or the other type of registry (see A/CN.9/670, para. 69). The Working Group may wish to consider that paragraphs 26 and 27, which discuss the cost of registering and searching in one or the other registry, may be usefully supplemented by the text below.]

“The differences in cost of registration and searching may be illustrated by the following examples (which are based on the assumption that there is an intellectual property registry that accepts registration of security rights in intellectual property):

1. A grantor, who is the initial owner of an intellectual property right, grants a secured creditor a security right in that intellectual property right. Whether registration is made in the general security rights registry or in the relevant intellectual property registry, the secured creditor needs to register only one notice. A searcher though may need to search in both registries. Of course, the intellectual property registration system may require registration of a document and the registrar may have to check the document and issue a certificate that may constitute evidence of the existence of the security right. These characteristics are likely to affect the time- and cost-efficiency of the registration process. On the other hand, while the notice-based registration system of the general security rights registry may be more protective of the confidentiality of a transaction than the document-based registration system of the intellectual property registry, it will not provide a searcher as much information as a document-based registration system.
2. A grantor, who is the initial owner of 10 intellectual property rights, grants a secured creditor a security right in all 10 intellectual property rights. If registration is made in the general security rights registry, the secured creditor needs to register only one notice and a searcher needs to conduct only one search against the name of the grantor to find competing security rights (although it may be necessary to search against each intellectual property right to find other competing claimants). However, if registration is made in an intellectual property registry for each intellectual property right (although if all intellectual property rights are of the same type, for example, patents, it may be possible to register one document that refers to all 10 patents). Similarly, the secured creditor may need to register a document or notice for each intellectual property right and a searcher needs to conduct a search against each intellectual property right to find both prior security rights and other competing claimants. In this case too, both registration and search in the general security rights registry would be more efficient in terms of time and cost involved.
3. In the example under paragraph 2 above, if the grantor is not the initial owner but a transferee in a chain of transferees, registration in the general security rights registry may still be more efficient than registration in an intellectual property registry, if the secured creditor need not register an amendment notice each time the intellectual property right is transferred. However, the situation may be different with respect to searching. If each of the 10 intellectual property rights has 10 prior owners, a searcher would have to conduct 10 searches outside the security rights registry to identify the transferees of each intellectual property right and then 100 searches (10 owners x 10 intellectual property rights) to identify all prior security rights. If a security right is registered in an intellectual property registry, the secured creditor need only conduct 10 searches, that is, one for each intellectual property right. In this case, the efficiency of the registration in the general security rights registry will depend on the approach taken in the relevant State to the issue of the effectiveness of registration in the case of a transfer of the encumbered intellectual property. As to searching, it would seem that searching in the intellectual property registry would be more cost-efficient.
4. Again in example 2, the secured creditor need register only one notice in the general security rights registry. Moreover, if a security right granted by a prior party is not effective against the grantor unless there is a specific notice registered in the name of the grantor as a transferee of the encumbered intellectual property,

the secured creditor need conduct only one search in the general security rights registry. If a document or notice is registered in an intellectual property registry, however, the secured creditor must make 10 registrations and 10 searches for each intellectual property right in each intellectual property registry. In this case, registration and searching in the general security rights registry should be more cost-efficient than registration in the intellectual property registry.

5. *However, the situation may be different if a grantor is a start-up company that seeks to earn income from exploiting its intellectual property rights through transfers (for example, an entertainment company that makes numerous exclusive licences each of which is treated as a “transfer”). The grantor intends to grant 5 exclusive licences. The secured creditor wants its security right to be effective against each of the exclusive licensees and their potential secured creditors. If registration is made in the intellectual property registry, the secured creditor needs to make only 10 registrations, one for each intellectual property right. If registration is made in the general security rights registry, however, the secured creditor must register one notice against its grantor and one notice against each of the 5 licensees for each of the 10 intellectual property rights (that is, $5 \times 10 = 50$ notices). This may require that a secured creditor make a substantial effort to monitor not only the actions of its grantor, but also exclusive licensees and sub-licensees with whom the secured creditor may not have any direct contractual relationship. This situation might discourage secured financing for start-up companies.*

6. *These examples indicate that, while the general security rights registry in the Guide may better accommodate some types of intellectual property financing, this may not always be the case and would depend on the circumstances of each case and the law applicable (see section G below).*

7. *The law applicable to third-party effectiveness and priority will also have an impact on the time- and cost-efficiency of registration. If the law applicable to these matters is the law of the State in which the encumbered intellectual property is protected, in the case of a portfolio of intellectual property rights, registration and searching will involve several States. The result would be different if third-party effectiveness and priority were to be governed by the law of the State in which the grantor is located. However, in any case, the main cause of the difference would be the applicable law and not the type of registration. Therefore, this matter is discussed in chapter X on the law applicable to a security right in intellectual property.”*

The Working Group may also wish to consider that the above-mentioned analysis is useful in cases where registration or search take place in one or the other registry. The Working Group may also wish to consider, however, that, in view of the priority of a security right registered in an intellectual property registry and the need to establish a chain of transferees, registration and search may need to take place in the intellectual property registry in most cases (of course, where registration of a security right in an intellectual property registry is possible).]

F. Time of effectiveness of registration

28. Under the *Guide*, registration of a notice of a security right becomes effective against third parties when the information in the notice is entered into the registry records and becomes available to searchers (see recommendation 70). Where the registry is electronic, registration of a notice will become effective immediately upon registration. However, where the registry is paper-based, registration of a notice will become effective sometime after registration.

29. Under law relating to intellectual property, specialized registration systems may have different rules with respect to the time of effectiveness of registration of a security right. For example, under law relating to patents and trademarks in many States, third-party effectiveness of a registered security or other right in a patent or a trademark dates back to the date of filing (that is, submission to the registry of an application for registration). Such an approach is useful where the registry takes time to actually register the security right in the patent or trademark, but may mislead a searcher as to whether specific intellectual property is encumbered.

30. As already mentioned, the *Guide* deals with coordination issues by giving priority to a security right a document or notice of which is registered in a specialized registry (or with respect to which a notation is made on a title certificate) irrespective of the time of registration (see recommendations 77 and 78). Thus, the difference in the approach as to the time of effectiveness of registration may not cause any problems in determining the priority of a security right in intellectual property registered in the relevant intellectual property registry.

G. Impact of a transfer of encumbered intellectual property on the effectiveness of registration

31. The *Guide* recommends that the secured transactions law should address the impact of a transfer of an encumbered asset on the effectiveness of registration of a notice in the general security rights registry (see recommendation 62). This recommendation is equally applicable to security rights in intellectual property made effective against third parties by registration of a notice in the general security rights registry. However, this recommendation does not apply if:

(a) The transferee of an encumbered asset acquires it free of the security right, as is the case, for example, where the transfer is authorized by the secured creditor free of the security right (see recommendation 80);

(b) A document or notice of the security right has been registered in an intellectual property (or other specialized) registry;

(c) The grantor has transferred all its rights in the encumbered asset before granting a security right in that asset (in such situations, under the *Guide*, no security right is created; see recommendation 13); and

(d) There is no transfer of ownership, but a licence in intellectual property.

32. With respect to subparagraph (a) in the preceding paragraph, it should be noted that, if the secured creditor did not authorize a licence (that is, if the licensee did not acquire the asset free of the security right) and enforced its security right

enforcement would amount to termination of the licence and any sub-licence, which would make all the “licensees” infringers. Thus, the secured creditor could disregard security rights granted by unauthorized licensees. With respect to subparagraph (d), it should be noted that recommendation 62 might apply to a licence, if, under law relating to intellectual property, it is treated as a transfer of ownership (although, under the *Guide*, a licence is not a transfer).

33. The commentary discusses three ways in which an enacting State may wish to address the matter. One way is to provide that, where the encumbered asset is transferred and the transferee does not acquire it free of the security right, the secured creditor must register an amendment identifying the transferee within a certain specified period after the transfer. If the secured creditor fails to do so, the original third-party effectiveness is maintained in principle. However, the security right is subordinated to intervening secured creditors and transferees whose rights arise after the transfer of the encumbered asset and before the amendment notice is registered. A second way in which enacting States may wish to address this issue is to provide that the grace period for the registration of an amendment is triggered only once the secured creditor acquires actual knowledge of the transfer of the encumbered asset by the grantor. A third way might be to provide that a transfer of an encumbered asset has no impact on the third-party effectiveness of a registered security right.

34. If an enacting State adopts the third approach, a secured creditor of the transferor need not register a notice of its security right again identifying the transferee. In such a case, the security right in the asset now owned by the transferee would remain effective against third parties. However, transferees down in the chain of transferees might not be able to discover, through a search in the general security rights registry, a security right granted by any person other than their immediate transferor. In such cases, they would still have to search the chain of title and status of an encumbered asset outside the general security rights registry. On the other hand, if an enacting State adopts the first or the second approach discussed above, a secured creditor will have to register a new notice identifying the transferee. In such a case, the secured creditor will have the burden of monitoring the status of the encumbered asset (to a different degree, depending on whether the first or the second approach is followed). At the same time, however, transferees down the chain of title will be able to identify a security right granted by a person other than their immediate transferor.

35. States enacting the *Guide* will have to consider the relative advantages and disadvantages of these different approaches mentioned above and, in particular, their impact on rights in intellectual property. For example, under the first approach, a secured creditor extending credit against the entire copyright in a movie would need to make continuous registrations against tiers of licensees and sub-licensees (if the applicable law relating to copyrights treated a licence as a transfer that may be registered) to maintain its priority against them or their own secured creditors. This would be a significant burden on such lenders and might discourage credit against such assets. On the other hand, such an approach would make it easier for a lender to a sub-licensee to find a security right created by its sub-licensor by a simple search only against the identifier of the sub-licensor. Here, the trade-off is between the relative costs of monitoring and multiple registrations by the lender to the “upstream” party as against the costs of conducting a search of the entire chain of

title for security rights created by the “downstream” party. In this regard, it should be noted that typically under law relating to intellectual property a prior transfer retains its priority over later transfers without the need for an additional registration in the name of a transferee of an encumbered asset.

36. As already mentioned, if a State does not follow the third option, a secured creditor would have to register a notice of amendment in the general security rights registry each time the encumbered intellectual property became the subject of an unauthorized transfer, licence or sub-licence (if licences are treated as transfers under the relevant law relating to intellectual property), at the risk of losing its priority if it were not informed and had not acted promptly.

[Note to the Working Group: At its fifteenth session, the Working Group requested the Secretariat to prepare and place within square brackets a recommendation implementing the third way in which a State might address the matter covered in recommendation 62, providing that a registration is effective without the need for a new registration in the case of a transfer of the encumbered assets (see A/CN.9/670, para. 71).

Such a recommendation could read as follows: “The law should provide that the transfer of intellectual property that is subject to a security right does not affect the third-party effectiveness of the security right. As a result, the secured creditor does not have to register an amendment notice indicating the name of the transferee of the encumbered intellectual property.”

In considering this recommendation, the Working Group may wish to take into account the following examples:

- 1. If a grantor of a security right in an intellectual property right is not the initial owner but a transferee with 10 prior transferees and if a secured creditor need not register an amendment notice in the name of each transferee of the encumbered intellectual property right, the secured creditor need only register one notice in a general security rights registry (however, a searcher would have to conduct 10 searches outside the security rights registry to identify each owner and any security right granted by any owner).*
- 2. If, however, the law requires a new notice each time the encumbered intellectual property is transferred, the secured creditor must register one notice against its grantor and one for each of the 10 prior owners. This may require that the secured creditor make a substantial effort to monitor not only the actions of its grantor, but also transferees (and licensees, if a licence is treated as a transfer).*
- 3. These examples indicate that, if the law requires the secured creditor to register a new notice each time the encumbered intellectual property is transferred or licensed, intellectual property financing would be discouraged or become more expensive.]*

H. Registration of security rights in trademarks

37. The International Trademark Association (“INTA”) issued a series of recommendations with respect to the registration of security rights in trademarks

and service marks (collectively referred to a “marks”).¹ More specifically, INTA endorsed uniformity and best practice in registration mechanisms and methods regarding security rights in trademarks, recognizing that: intellectual property rights, including marks, are a major and growing factor in commercial lending transactions; lack of consistency in the registration of security rights in marks fosters commercial uncertainty, and also poses a risk that a mark owner may forfeit or otherwise endanger its mark-related rights; many States have no recording mechanisms (or have insufficient mechanisms) for the registration of security rights in marks; many countries apply different and conflicting criteria for determining what can and will be recorded; and international initiatives on security rights in intellectual property rights by organizations such as UNCITRAL will have broad implications for the way secured financing laws are implemented to deal with registration and other aspects of trademark security rights, especially in developing countries. It should be noted that the recommendations do not address issues relating to the registration of security rights in marks that may not be registered in a trademark office, leaving those issues to domestic secured transactions law (including the law recommended in the *Guide*). In addition, the recommendations address third-party effectiveness issues but do not set out priority rules, leaving them to domestic secured transactions law (including the law recommended in the *Guide*).

38. The main features of such best practices are the following:

(a) A security right in a mark covered by a pending application or registration should be registrable in the national Trademark Office;

(b) For purposes of giving notice of a security right, registration in the applicable national Trademark Office or in any applicable commercial registry is recommended, with free public accessibility, preferably through electronic means;

(c) The grant of a security right in a mark should not have the effect of a transfer of legal or equitable title to the mark that is subject to the security right, and should not confer upon the secured creditor a right to use the mark;

(d) The security agreement creating the security right should clearly set forth provisions acceptable under local law enabling the renewal of the marks by the secured creditor, if necessary to preserve the mark registration;

(e) Valuation of marks for purposes of security rights should be made in any manner that is appropriate and permitted under local law and no particular system or method of valuation is preferred or recommended;

(f) Registration of security rights in the local Trademark Office should suffice for purposes of perfecting a security right in a mark; at the same time, registration of a security right in any other place allowed under local law, such as a commercial registry, should also suffice;

(g) If local law requires that a security right be registered in a place other than the local Trademark Office in order to be perfected, such as in a commercial registry, dual registration of the security right should not be prohibited;

¹ See www.inta.org/index.php?option=com_content&task=view&id=1517&Itemid.

(h) Formalities in connection with registration of a security right and the amount of any government fees should be kept to a minimum; a document evidencing: (i) existence of a security right, (ii) the parties involved, (iii) the mark(s) involved by application and/or registration number, (iv) a brief description of the nature of the security right, and (v) the effective date of the security right, should suffice for purposes of making a security right effective against third parties;

(i) Regardless of the procedure, enforcement of a security right through foreclosure, after a judgement, administrative decision or other triggering event, should not be an unduly burdensome process;

(j) The applicable Trademark Office should promptly record the entry of any judgement or adverse administrative or other decision against its records and take whatever administrative action is necessary; the filing of a certified copy of the judgement or decision should be sufficient;

(k) In the event that enforcement is triggered by means other than a judgement or administrative decision, local law should provide for a simple mechanism enabling the holder of the security right to achieve registration, with free public accessibility, preferably through electronic means;

(l) In cases where the mark owner is bankrupt or otherwise unable to maintain the marks which are subject to a security right, absent specific contract provisions, the holder of the security right (or the administrator or executor, as the case may be) should be permitted to maintain the marks, provided that nothing shall confer upon the secured creditor the right to use the marks; and

(m) The relevant government agency or office should promptly record the filing of documentation reflecting release of the security right in its records, with free public accessibility, preferably through electronic means.

39. Recommendations (a), (b), (f) and (g), dealing with third-party effectiveness of a security right in a mark, are compatible with the *Guide* in that they promote the objectives of certainty and transparency (see recommendation 1, subparagraph (f)).

40. Recommendation (c), providing that the creation of a security right in a mark does not result in a transfer of the mark or confer upon the secured creditor the right to use the mark, is also compatible with the *Guide*. It should be noted that, under the *Guide*, the secured creditor has a right, but no obligation, to preserve an encumbered intangible asset (such an obligation is foreseen only for tangible assets; see recommendation 111). If, in the case of the owner's insolvency, neither the owner nor the insolvency representative nor the secured creditor takes the necessary steps to preserve the encumbered mark, the mark may still be preserved under law relating to intellectual property (for example, under the doctrine of the "excusable non-use" of a mark).

41. In addition, recommendation (d) is compatible with the *Guide* in that it sets forth a default rule for the rights of the parties within the limits of the applicable law. Recommendation (e) is also compatible with the *Guide* to the extent it emphasizes the importance of valuation of marks without suggesting any particular system of valuation. Recommendation (h) is also compatible with the *Guide* in that it recommends notice filing even in relation to mark registries. It should be noted that the reference to "the date of the security right" is a reference to the time of effectiveness of the security right between the parties and not against third parties.

42. Moreover, recommendations (i), (j) and (k) are compatible with the *Guide* in the sense that they provide for efficient enforcement mechanisms and registration of court judgements or administrative enforcement decisions. Finally, recommendation (m), which is subject to approval by the appropriate Government authorities, is compatible with the *Guide's* recommendations with respect to efficient registration procedures.

VI. Priority of a security right in intellectual property

[Note to the Working Group: For paras. 1-15 below and paras. 1-22 of A.CN.9/WG.VI/WP.39/Add.5, see A.CN.9/WG.VI/WP.37/Add.2, paras. 43-55, A.CN.9/WG.VI/WP.37/Add.3, paras. 1-23, A/CN.9/670, paras. 73-95, A/CN.9/WG.VI/WP.35/Add.1, paras. 33-61, A/CN.9/667, paras. 86-103, A/CN.9/WG.VI/WP.33/Add.1, paras. 1-25, and A/CN.9/649, paras. 41-56.]

A. The concept of priority

1. Under the *Guide*, the concept of priority of a security right as against competing claimants refers to the question of whether the secured creditor may derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant (as to the meaning of the term “competing claimant”, see A/CN.9/WG.VI/WP.39, paras. 19-20, and para. 3 below). It should also be noted that a conflict between two persons, neither of whom is a secured creditor, is not a priority conflict under the *Guide*.

2. By contrast, in law relating to intellectual property, the notion of the priority of intellectual property rights may relate to notions of title and basic effectiveness. In most States, once intellectual property is transferred by the intellectual property owner, a second transfer by the same person will normally transfer no rights to the second transferee (except if the first transferee does not comply with statutory

registration requirements or the second transferee is a good faith purchaser; for the relevance of knowledge of prior transfers, see paras. 5-6). In such a case, the issue of priority in the sense that this term is used in the *Guide* does not arise. Accordingly, the *Guide* would not apply and this matter would be left to law relating to intellectual property. In any case, it should be noted that, under the *Guide*, a party that has no rights in, or the power to encumber, an asset may not create a security right in the asset (see recommendation 13).

B. Identification of competing claimants

3. Under the *Guide*, the notion of “competing claimant” with a right in an encumbered asset means another secured creditor with a security right in the same asset (which includes a transferee in a transfer by way of security), a transferee, lessee or licensee of the encumbered asset, a judgement creditor with a right in the encumbered asset and an insolvency representative in the insolvency of the grantor. In particular, the *Guide* applies to priority conflicts: (a) between two security rights in intellectual property, notices of which are registered in the general security rights registry (see recommendation 76, subparagraph (a)); (b) between a security right, a notice of which is registered in the general security rights registry, and a security right, a document or notice of which is registered in the relevant intellectual property registry (see recommendation 77, subparagraph (a)); (c) between two security rights, documents or notices of which are registered in the relevant intellectual property registry (see recommendation 77, subparagraph (b)); (d) between the rights of a transferee or licensee of intellectual property and a security right in that intellectual property that may be registered in an intellectual property registry (see recommendation 78); (e) between the rights of a transferee or licensee of intellectual property and a security right in that intellectual property that may not be registered in an intellectual property registry (see recommendations 79-81); and (f) between two security rights, one of which is granted by the grantor and the other is granted by the transferee, lessee or licensee of the encumbered asset (see recommendations 31, 79 and 82). The last conflict is addressed in the sense that the transferee takes the asset subject to the security right (see recommendations 79 and 82) and the secured creditor of the transferee takes no more rights than the transferee had (see recommendation 31).

4. In an intellectual property context, the notion of “conflicting transferees” is used instead and it includes transferees and licensees competing among themselves. If no conflict with a security right in intellectual property (which includes the right of a transferee by way of security) is involved, the law recommended in the *Guide* does not apply and the matter is left to law relating to intellectual property. If a conflict with such a security right is involved, the law recommended in the *Guide* does not apply insofar as its provisions are inconsistent with the enacting State’s law relating to intellectual property (see recommendation 4, subparagraph (b)). Furthermore, the *Guide* does not apply to a conflict between a transferee of an encumbered asset that acquired the asset from a secured creditor enforcing its security right and another secured creditor that later received a right in the same asset from the same grantor (that no longer had any rights in the encumbered asset). This is not a real priority conflict under the *Guide* (but it may well be a conflict addressed by law relating to intellectual property).

C. Relevance of knowledge of prior transfers or security rights

5. Under the *Guide*, knowledge of the existence of a prior security right on the part of a competing claimant is generally irrelevant for determining priority (see recommendation 93; however, knowledge that a transfer violates the rights of a secured creditor may be relevant; see recommendation 81, subparagraph (a)). Thus, the security right of a secured creditor that has knowledge of a security right created earlier may nonetheless have priority over the earlier-created security right if a notice of the later-created security right was registered before the earlier-created security right was made effective against third parties (see recommendation 76, subparagraph (a)).

6. By contrast, in many States, law relating to intellectual property provides that a later conflicting transfer or security right may only gain priority if it is registered first and taken without knowledge of a prior conflicting transfer. The deference to law relating to intellectual property under recommendation 4, subparagraph (b), should preserve these knowledge-based priority rules to the extent they apply specifically to security rights in intellectual property.

D. Priority of security rights in intellectual property that are not registered in an intellectual property registry

7. As already mentioned, if law relating to intellectual property has priority rules dealing with the priority of security rights in intellectual property that apply specifically to intellectual property and the priority rules of the law recommended in the *Guide* are inconsistent with those rules, the law recommended in the *Guide* does not apply (see recommendation 4, subparagraph (b)). However, if law relating to intellectual property does not have such rules or the priority rules of the law recommended in the *Guide* are not inconsistent with those rules, the priority rules of the law recommended in the *Guide* apply.

8. Under the *Guide*, priority between security rights granted by the same grantor in the same encumbered asset that were made effective against third parties by registration in the general security rights registry is determined by the order of registration of a notice in that registry (see recommendation 76, subparagraph (a)). This rule applies if a notice or document of a security right may not be registered or is not registered in a specialized registry. If such a notice or document may be registered and is registered in a specialized registry, different rules apply (see recommendation 77 and paras. 9-11 below). In addition, if a security right is granted by a different grantor (for example, a transferee of the initial grantor), different rules apply (see recommendation 79-83 and paras. 12-15 below and A/CN.9/WG.VI/WP.39/Add.5, paras. 1-14). All these rules apply equally to security rights in intellectual property.

E. Priority of security rights in intellectual property that are registered in an intellectual property registry

9. The *Guide* recommends that a security right with respect to which a document or notice may be registered and is registered in a specialized registry and thus is

effective against third parties (see recommendation 38) should have priority over a security right, with respect to which a notice was registered in the general security rights registry, regardless of the order of those registrations (see recommendation 77, subparagraph (a)). It also recommends that a security right, with respect to which a document or notice may be registered and is registered in a specialized registry, has priority over a security right that was subsequently registered in the specialized registry (see recommendation 77, subparagraph (b)). In addition, if an encumbered asset is transferred, leased or licensed and, at the time of the transfer, lease or licence, the security right has been made effective against third parties by registration in the relevant intellectual property registry, the transferee or licensee takes its rights subject to the security right. If a security right may be registered but is not registered in a specialized registry, a transferee, lessee or licensee of an encumbered asset will take the asset free of the security right, even if a notice of the security right was registered in the general security rights registry (see recommendation 78). If the security right may not be registered in a specialized registry, a transferee of the encumbered asset takes it subject to the security right, unless certain exceptional conditions are met (see recommendations 79-81). A secured creditor of a transferee takes subject to a security right created by a transferor (see recommendations 31 and 82).

10. These recommendations are equally applicable to security rights in intellectual property. Thus, if there is a conflict between two security rights in intellectual property, one of which is the subject of a notice registered in the general security rights registry and the other is the subject of a document or notice registered in the relevant intellectual property registry, the *Guide* applies and gives priority to the latter security right (see recommendation 77, subparagraph (a)). If there is a conflict between security rights with respect to which documents or notices are registered in the relevant intellectual property registry, the right a document or notice of which is registered first has priority, and the *Guide* confirms that result (see recommendation 77, subparagraph (b)). If there is a conflict between the rights of a transferee of intellectual property and a security right with respect to which, at the time of the transfer, a document or notice could be registered and was registered in the relevant intellectual property registry, the transferee would take the encumbered intellectual property subject to the security right. However, if a security right in intellectual property may be registered but is not registered, the transferee or licensee of the encumbered intellectual property takes the encumbered intellectual property free of the security right, even if the security right was registered in the general security rights registry (see recommendation 78). In some States, under law relating to intellectual property, a secured creditor would have priority in this case, if the transferee is not a good faith purchaser. Following recommendation 4, subparagraph (b), the *Guide* would defer to that rule if it applied specifically to intellectual property. Finally, a secured creditor of a transferee of intellectual property takes the intellectual property subject to the security right of the transferor (see recommendations 31 and 82).

11. For example, if A creates a security right in a patent in favour of B that registers a notice of its security right in the general security rights registry, and then A transfers title to the patent to C, which registers a document or notice of its transfer in the patent registry, under the *Guide*, C would take the patent free of the security right, because no document or notice of the security right was registered in the patent registry (see recommendation 78). Similarly, if A, instead of making a

transfer, creates a second security right in favour of C and only C registers a document or notice of the security right in the patent registry, under the *Guide*, C would prevail (see recommendation 77, subparagraph (a)). In either case, as registration of a document or notice in the patent registry gives superior rights, under the *Guide*, third-party searchers could rely on a search in that registry and would not need to search in the general security rights registry. In all these examples, the questions of who is a transferee and what are the requirements for a transfer are matters of law relating to intellectual property. It should also be noted that registration in the intellectual property registry would normally refer only to a security right in intellectual property. It would not refer to a security right in tangible assets with respect to which intellectual property is used.

F. Rights of transferees of encumbered intellectual property

12. Under the *Guide*, a transferee of an encumbered asset (including intellectual property) normally takes the asset subject to a security right that was effective against third parties at the time of the transfer (see recommendation 79). There are two exceptions to this rule. The first exception arises where the secured creditor authorizes the disposition free of the security right (see recommendation 80, subparagraph (a) for sales of encumbered assets and subparagraph (b) for leases or licences of encumbered assets). The second exception relates to a transfer in the ordinary course of the seller's, lessor's or licensor's business where the buyer, lessee or licensee has no knowledge that the sale, lease or licence violates the rights of the secured creditor under the security agreement (see recommendation 81, subparagraph (a) for sales of encumbered assets, subparagraph (b) for leases and subparagraph (c) for licences). If a security right may be registered (whether registered or not) in an intellectual property registry, as already mentioned (see paras. 9-11 above), a different rule applies (see recommendation 78).

13. Recommendation 79 applies equally to security rights in intellectual property that may not be registered (whether registered or not) in an intellectual property registry (and recommendation 78 applies to security rights in intellectual property that may be registered (whether registered or not) in an intellectual property registry). Thus, if a notice in respect of a security right is registered in the general security rights registry, a transferee or licensee of intellectual property will take the encumbered intellectual property subject to the security right, unless one of the exceptions set out in recommendations 80-82 applies (with respect to recommendation 81, subparagraph (c), see A/CN.9/WG.VI/WP.39/Add.5, paras. 7-14). These recommendations do not apply, under recommendation 4, subparagraph (b), if there are contrary priority rules of the law relating to intellectual property that apply specifically to intellectual property.

14. It is important to note that, if intellectual property is transferred before the creation of a security right, the secured creditor will have no security right at all on the basis of the generally acceptable *nemo dat* property law rule, the application of which the *Guide* does not affect. This approach is reflected in the general rule in the *Guide* that a grantor can create a security right only in an asset in which the grantor has rights or the power to create a security right (see recommendation 13). This rule would be displaced though by a rule of law relating to intellectual property giving

priority to a good faith purchaser of the encumbered intellectual property (see recommendation 4, subparagraph (b)).

15. It is also important to note that, as already mentioned (see A/CN.9/WG.VI/WP.39/Add.3, paras. 31-36), under the *Guide*, a licence of intellectual property is not a transfer of the licensed intellectual property. Thus, the rules of the *Guide* that apply to transfers of encumbered assets do not apply to licences. However, the *Guide* would defer to law relating to intellectual property treating certain licences (in particular, exclusive licences) as transfers (see recommendation 4, subparagraph (b)).

K. Subordination	22

**VI. Priority of a security right in intellectual property
(*continued*)**

G. Rights of licensees in general

1. Intellectual property is routinely licensed. In such cases, the retained rights of a licensor, such as the ownership right, rights associated with ownership and the rights of a licensor under a licence agreement (such as the right to grant further licences or to obtain payment of royalties) may be used by the licensor as security for credit. Similarly, the licensee's authorization to use or exploit the intellectual property or the licensee's right to grant sub-licences and obtain payment of royalties (in both cases according to the terms of the licence agreement) may be used by the licensee as security for credit (as to the types of encumbered asset in an intellectual property context, see A/CN.9/WG.VI/WP.39/Add.2, paras. 13-36).

2. Under the *Guide*, where the intellectual property owner has created a security right in favour of a secured creditor, the owner may still grant a licence in the encumbered intellectual property as long as it remains the intellectual property owner. However, under general principles of law relating to intellectual property (with which the *Guide* is consistent), the owner may not grant a licence in its encumbered intellectual property if the secured creditor becomes the owner of the intellectual property with authority to grant licences while the security right is in place. In this situation, a licence granted by the original owner would be an unauthorized licence under law relating to intellectual property and the licensee or its secured creditor would obtain nothing based on the *nemo dat* principle.

3. If the owner remains the owner but its ability to grant licences is limited by agreement with the secured creditor (to the extent such agreement is permitted under law relating to intellectual property), the owner may theoretically grant a licence, but the result would normally be the same, because the granting of a licence by the owner in breach of its agreement with the secured creditor would be an event of default. As a result, the owner's secured creditor could enforce its security right and, exercising the rights of the owner sell the licensed intellectual property or grant another licence free of the pre-existing licence (and any security right granted by the licensee) as that licensee would normally have taken its licence subject to the security right of the owner's secured creditor (see recommendations 79 and 161-163). Alternatively, the owner's secured creditor could enforce its security right upon default by collecting the royalties owed by the licensee to the owner as licensor. If the encumbered asset is the owner's rights, the secured creditor may collect the royalties as proceeds of the encumbered intellectual property (see recommendations 19, 39, 40, 100 and 168). If the encumbered asset is the right of the owner as licensor to the payment of royalties, the secured creditor may collect the royalties as the original encumbered asset. In either case, the secured creditor may collect royalties even before default but only if there is an agreement to that effect between the owner and its secured creditor. In any case, if the licensee took the licensed intellectual property free of the security right granted by the owner in the intellectual property (that is, if the secured creditor authorized the granting of the licence or the licence is a non-exclusive licence granted by the owner in its ordinary course of business), the licensee could retain its licence and the secured creditor could only seek to collect the royalties owed by the licensee to the owner (see recommendations 80, subparagraph (b), and 81, subparagraph (c)).

4. If the licensee also creates a security right in its rights under the licence agreement (for example, the authorization to use or exploit the licensed intellectual property), that security right would be in a different asset (that is, not in the owner's rights). If the security right created by the licensee were in the same asset, it would be subject to the security right created by the owner (and made effective against third parties). The reason for this result is that the licensee would have taken its rights subject to the security right created by the owner (see recommendation 79) and the licensee could not have given to its secured creditor more rights than the licensee had (based on the *nemo dat* principle). So, if the secured creditor of the owner enforced its security right and disposed of the encumbered intellectual property free of the licence, the licence would terminate upon that disposition and the licensee's encumbered asset would cease to exist. Likewise, whether or not the owner had granted a security right to one of its creditors, if the licensee defaults on the licence agreement, the owner as licensor can terminate it to the extent permitted under law relating to intellectual property and the licensee's secured creditor would be again left without an asset encumbered by its security right.

5. The rights of the licensor and the licensee under the licence agreement and the relevant law relating to intellectual property would remain unaffected by secured transactions law. So, if the licensee defaulted on the licence agreement, the licensor could exercise any available right to terminate it and the licensee's secured creditor would be again left without security. Similarly, secured transactions law would not affect an agreement between the licensor and the licensee prohibiting the licensee from granting sub-licences or assigning to the licensor the licensee's rights to the payment of royalties owed by sub-licensees to the licensee as sub-licensor.

6. Under the *Guide*, as a matter of secured transactions law, there are two exceptions to the rule that a licensee of encumbered intellectual property takes the licence subject to a pre-existing security right (see recommendation 79). The first exception arises where the secured creditor authorizes the licence free of the security right (see recommendation 80, subparagraph (b)). The second exception relates to a non-exclusive licence in the ordinary course of the licensor's business (see recommendation 81, subparagraph (c), and paras. 8-10 below).

H. Rights of certain licensees

7. As already mentioned, the first exception to the principle of the *Guide* that a licensee of an encumbered asset takes the asset subject to the security right (see recommendation 79) arises where the secured creditor approved the granting of licences by the grantor free of the security right (see recommendation 80, subparagraph (b)). Thus, under the *Guide*, in the case of the grantor's default, the secured creditor could collect any royalties owed by the licensee to the grantor as licensor, but not sell the licensed intellectual property free of the rights of the existing licensee or grant another licence with the effect of terminating the rights of the existing licensee as long as the licensee performs the terms of the licence agreement.

8. The second exception to the principle embodied in recommendation 79 is that a non-exclusive licensee that takes a licence in the ordinary course of business of the licensor without knowledge that the licence violated the rights of the secured creditor in the licensed intellectual property, takes its rights under the licence agreement unaffected by a security right previously granted by the licensor (see recommendation 81, subparagraph (c)). The result of this rule is that, in the case of enforcement of the security right in the licensed intellectual property by the secured creditor of the licensor, the secured creditor could collect any royalties owed by the licensee to the licensor, but not sell the licensed intellectual property free of the rights of the existing licensee or grant another licence with the effect of terminating the rights of the existing licensee as long as the licensee performs the terms of the licence agreement. This rule is intended to protect everyday, legitimate transactions, such as off-the-shelf purchases of copies of copyrighted software with end-user licence agreements. In such transactions, purchasers should not have to do a search in a registry or acquire the software subject to security rights created by the software developer or its distributors.

9. Recommendation 81, subparagraph (c), is based on the assumption that the grantor retains ownership of the encumbered intellectual property. This means that recommendation 81, subparagraph (c), does not apply if, under law relating to intellectual property, the grantor is no longer authorized to grant a licence because it has transferred the owner's rights to the secured creditor. In addition, recommendation 81, subparagraph (c), does not affect the relationship between the licensor and the licensee and does not mean that the licensee would obtain a licence free of the terms and conditions of the licence agreement and the law applicable to it (nor does it affect limitations in the licence agreement on the licensee entering into sub-licence agreements). Moreover, this recommendation and the *Guide* as a whole do not interfere with the enforcement of provisions as between the secured creditor and the grantor/licensor (or between the licensor and its licensee) that the

grantor/licensor place in all of the non-exclusive ordinary-course-of-business licences a provision that the licence will terminate if the licensor's secured creditor enforces its security right.

10. The secured creditor may elect to avoid extending any credit until it has an opportunity to review and approve the terms of the sub-licences. For example, the secured creditor may wish to ensure that expected royalties are paid upfront, termination is permitted in the case of non-payment of royalties and assignment of sub-royalties is prohibited. In addition, if the secured creditor of the licensor does not want to encourage non-exclusive licences, it can, in its security agreement (or elsewhere), require the grantor (the licensor) to place in all of the non-exclusive licences a provision that the licence will terminate if the licensor's secured creditor enforces its security right. Similarly, if the licensor does not want its licensee to grant any sub-licences, it can include in the licence agreement a provision that the granting of a sub-licence by the licensee is an event of default under the licence agreement that would entitle the licensor to terminate the licence. Nothing in the *Guide* would interfere with the enforcement of such provisions as between the secured creditor and its borrower (or as between the licensor and its licensee). Ordinarily, the secured creditor will have no interest in doing that, since the licensor (and any licensee) is in the business of granting non-exclusive licences and the secured creditor expects the grantor to use the fees paid under those licence agreements to pay the secured obligation.

11. From the discussion above it becomes clear that the scope of application of recommendation 81, subparagraph (c), is very limited for a number of reasons. First, secured creditors typically have no interest in limiting the ability of an owner/grantor to grant licences in its intellectual property and collect royalties. As a matter of fact, a secured creditor is normally interested in permitting licensing so that the owner/grantor may repay the secured obligation. Second, by its wording, recommendation 81, subparagraph (c), applies only where there is a non-exclusive licence, one that includes a legitimate "off-the-shelf" purchase of copies of copyrighted software or patent pools used with respect to equipment and only where the licensee had no knowledge that the licence violated the rights of the secured creditor under the security agreement. Such off-the shelf licences may be described without reference to the ordinary-course-of-business concept.

12. In addition, the impact of the application of recommendation 81, subparagraph (c), is very limited. The effectiveness, priority and enforceability of the security right against competing claimants (other than the specific licensee) under secured transactions law are not affected. At the same time, if the secured creditor has other rights under law relating to intellectual property law (for example, the rights of an owner), these rights are not affected by recommendation 81, subparagraph (c). The extent of such rights or remedies is a matter of law relating to intellectual property.

13. However, the concept of ordinary course of business is rarely used in intellectual property law and may create confusion in an intellectual property financing context. In many States, a different rule applies that provides that a licensee of encumbered intellectual property takes the licence subject to a security right created by the licensor, unless the secured creditor (to whom the grantor has given the right to authorize licences) authorized the granting of the licence free of the security right. To the extent that a State has such a rule recommendation 81,

subparagraph (c), would not apply (see recommendation 4, subparagraph (b)). As a result, unless the secured creditor authorized the grantor to grant licences unaffected by the security right (which will typically be the case as the grantor will rely on its royalty income to pay the secured obligation), the licensee would take the licence subject to the security right. Thus, if the grantor defaults, the secured creditor would be able to enforce its security right in the licensed intellectual property and sell or licence it free of the licence. In addition, a person obtaining a security right from the licensee will not obtain an effective security right as the licensee would have received an unauthorized licence and would have no right to give.

14. If law relating to intellectual property does not address this matter at all or does not address it inconsistently with recommendation 81, subparagraph (c), recommendation 81, subparagraph (c), will apply in the limited cases and with the limited impact described above (see recommendation 4, subparagraph (b)).

[Note to the Working Group: At its fifteenth session, the Working Group requested the Secretariat to prepare a revised version of alternative A of this recommendation with appropriate commentary. This revised recommendation and commentary are set out below. The Working Group may wish to consider whether the bracketed language is necessary as it states the obvious. The Working Group may also wish to consider whether subparagraph (d) should be retained as it appears to be too restrictive. If the Working Group decides to delete subparagraph (d) and considers that it is somehow useful, it could consider including it in the commentary as an explanation.]

Recommendation 244¹

Priority of rights of certain licensees of intellectual property

Alternative A

The law should provide that[, in cases that are not covered by recommendation 80, subparagraph (b),] the right of a[n end-user] licensee of intellectual property to use or exploit the licensed intellectual property pursuant to the terms and conditions of the licence agreement is not limited by the enforcement of a security right in the licensed intellectual property created by the licensor before the licence was granted, provided that:

- (a) The licence is granted by a party that, under law relating to intellectual property, is authorized to grant a licence in the relevant intellectual property;*
- (b) The licence is non-exclusive;*
- (c) The licensed intellectual property and the rights and obligations under the licence agreement are not customized for the licensee;*
- (d) The licence covers copies of copyrighted software or patent pools used with respect to equipment; and*
- (e) At the time of the conclusion of the licence agreement:*

¹ If this recommendation could be included in the *Guide*, it would be placed in the chapter on the priority of a security right as recommendation 81 bis. As an asset-specific recommendation, this recommendation would modify the general recommendation 81, subparagraph (c), which refers to non-exclusive licensees of intangible assets in general.

- (i) *The licensor is generally in the business of granting non-exclusive licences in the licensed intellectual property;*
- (ii) *The licensor grants licences of the licensed intellectual property on substantially the same terms to any person that agrees to perform in accordance with such terms, and the licence agreement is on such terms; and*
- (iii) *The licensee does not have knowledge that the licence violates the rights of the secured creditor under the security agreement.*

Commentary

1. This recommendation does not affect:

(a) *The effectiveness of a security right in licensed intellectual property, its priority as against a competing claimant other than a licensee as described in this recommendation or the enforcement remedies of the secured creditor that do not affect the right of the licensee to use or exploit the licensed intellectual property;*

(b) *Any right that the licensor may have to terminate the licence for non-compliance of the licensee with the licence agreement; or*

(c) *The rights of a secured creditor as an owner under law relating to intellectual property.*

2. *It should also be noted that the rights of the licensee under this recommendation may be derogated from by agreement of the licensee in the licence agreement or otherwise. Like any other recommendation of the Guide, this recommendation is subject to recommendation 4, subparagraph (b).*

3. *The following examples are mentioned to clarify the situations to which this recommendation would apply and the impact from its application. In each example, it should be assumed that:*

(a) *O owns intellectual property;*

(b) *O grants a security right in the intellectual property to SC;*

(c) *O's security right is effective against third parties either in accordance with the recommendations of the Guide or, pursuant to recommendation 4, subparagraph (b), under the law relating to intellectual property;*

(d) *SC has not agreed, in the security agreement or otherwise, that any licensee of the intellectual property from O will enjoy its rights free of SC's security right; and*

(e) *Except as indicated, the transaction satisfies each provision of recommendation 244.*

4. *After SC takes the steps necessary to make its security right effective against third parties, O, who is in the business of granting non-exclusive licences of the intellectual property on substantially the same terms to any person who agrees to perform in accordance with such terms, offers to license the intellectual property to L. L enters into a licence agreement with O on those terms. O defaults on the obligation secured by the security right and SC sets out to enforce its security right. The right of L to use the intellectual property is protected by recommendation 244 against enforcement by SC of its security right because the licence and the*

transaction satisfy each provision of recommendation 244. However, SC still has whatever rights it may have against L under law relating to intellectual property.

5. After SC takes the steps necessary to make its security right effective against third parties, O grants a licence in the intellectual property to L. The licence agreement provides that L may grant sub-licences in the intellectual property only for educational markets. L grants a sub-licence in a commercial market to S. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. If, under the law relating to intellectual property, the sub-licence to S is not authorized, the right of S to use the intellectual property is not protected by recommendation 244 against enforcement by SC of its security right (and, as rights and obligations under the licence agreement go together, L is no longer bound by the obligations set out in the licence agreement).

6. After SC takes the steps necessary to make its security right effective against third parties, O grants a licence in the intellectual property to L. The licence agreement provides that L has exclusive rights to use the intellectual property in State Z. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 244 against enforcement by SC of its security right because the licence is exclusive.

7. After SC takes the steps necessary to make its security right effective against third parties, O, who is in the business of granting non-exclusive licences of the intellectual property on substantially the same terms to any person who agrees to perform in accordance with such terms, offers to license the intellectual property to L on such terms. L declines to enter into a licence agreement with O on those terms. Instead, O grants a licence in the intellectual property to L, pursuant to which L has greater rights in the intellectual property than under the licences generally offered to others. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 244 against enforcement by SC of its security right because the licence is not on substantially the same terms as other licences of the same intellectual property.

8. Before O and L enter into the licence agreement, L discovers the notice filed to make SC's security right effective against third parties and, accordingly, asks to see a copy of the security agreement relating to that notice. The security agreement is furnished to L by O. Upon reading the security agreement, L discovers that the licence to it would violate the rights of SC. Nonetheless, L enters into the licence agreement with O. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 244 against enforcement by SC of its security right because L had knowledge that the licence agreement would violate SC's rights.

9. After SC takes the steps to make its security right effective against third parties, O offers to license the intellectual property — but only to parties who have experience in using this type of intellectual property. O grants a licence to L, who has that experience. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 244 against enforcement by SC of its

security right because O did not make a licence of the intellectual property available on substantially the same terms to any person who agreed to perform the obligations of the licensee under the licence agreement in accordance with such terms.

10. Same facts as under para. 8 above, except that, O does not furnish a copy of the security agreement to L and, as a result, L does not know that the licence would violate the rights of SC. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is protected by recommendation 244 against enforcement by SC of its security right because the licence and the transaction satisfy each provision of recommendation 244.

11 After SC registers its security right, O grants a non-exclusive licence to a patent pool. The patent pool will grant a non-exclusive licence to any interested person. SC forecloses on the intellectual property. The licence is not discharged as a result of the foreclosure because the licence and the transaction satisfy each provision of recommendation 244.

Alternative B

The law should provide that, if the security agreement between a licensor and its secured creditor does not address the question whether the licensor may grant licences in the encumbered intellectual property free of the security right, the licensor is deemed to have been authorized by the secured creditor to grant licences free of the security right.]

I. Priority of a security right in intellectual property granted by a licensor as against a security right granted by a licensee

15. The licensor's right to the payment of the royalties owed to the licensor by the licensee under a licence agreement is not affected by any security right granted by the licensee in any royalties due to the licensee under any sub-licence agreement. Such a security right, though, can have an impact on the licensee's ability to pay the licensor if the licensee is in default with respect to its secured creditor inasmuch as that secured creditor may seek to collect the sub-royalties itself. In addition, if the licensee, in payment of royalties owed by the licensee to the licensor, assigns to the licensor the right to the payment of a percentage of the sub-royalties that the licensee will obtain as sub-licensor from sub-licensees, then a priority conflict may arise between a secured creditor of the licensor and a secured creditor of the licensee. In such a case, if the assignment of sub-royalties takes place before a licence is granted and a security right is created and made effective by the licensee, the licensee does not have a right in the assigned sub-royalties at the time it creates a security right and thus a secured creditor of the licensee takes its security right in the sub-royalties subject to the security right of the licensor's secured creditor. If, however, the assignment takes place after a licence is granted and a security right is created and made effective by the licensee in all its future royalties, the licensor takes the assignment subject to the security right of the licensee's secured creditor and thus the licensor's secured creditor takes its security right also subject to the security right of the licensee's secured creditor (see recommendations 13 and 31).

16. The following example may be useful in illustrating the problem. A creates a security right in all its future assets or royalties in favour of secured creditor SC1. A then takes an intellectual property licence from licensor B and, in payment of royalties owed to B, licensee A assigns to licensor B the right to payment of a percentage of the sub-royalties payable to licensee A as a sub-licensor. Licensor B creates and makes effective against third parties a security right in these royalties in favour of secured creditor SC2. Licensee A's secured creditor SC1 will prevail as licensor B took the assignment of the sub-royalties subject to licensee A's secured creditor SC1 security right and licensor B's secured creditor SC1 can have no greater rights than licensor B.

17. If, however, licensee B first creates a security right in its right to the payment of sub-royalties and then assigns to licensor A the right to payment of a percentage of the sub-royalties, SC2 (that is, the licensee's secured creditor) will prevail. The licensor has numerous ways to protect itself in this circumstance. For example, the licensor can protect its rights by: (a) ensuring that its secured creditor registers first in the relevant intellectual property registry or requiring the secured creditor of the licensee to enter into a subordination agreement with the licensor's secured creditor before granting a licence; (b) prohibiting the licensee from granting a security right in its right to the payment of sub-royalties; (c) terminating the licence in cases where the licensee created a security right in its sub-royalties in breach of such a prohibition; or (d) agreeing that any sub-licensee pay its sub-royalties directly to the licensor. The *Guide* does not interfere with any agreements of this kind between licensor and licensee, if they are effective under law relating to intellectual property and the law of obligations. In addition, the licensor could insist that the licensee grant to the licensor a security right in its right to the payment of sub-royalties.

18. However, these steps may protect the licensor to a certain extent only, because, for example, rights in the encumbered intellectual property may not be subject to registration in an intellectual property registry or it may not be commercially practicable for the licensor to prohibit sub-licensing, terminate the licence agreement or obtain a subordination agreement. In addition, the priority of a security right created by the licensor as against another security right created by the licensee in its right to the payment of sub-royalties would be subject to the general rules explained above (see para. 15).

19. In situations where the encumbered asset is a tangible asset with respect to which intellectual property is used, in certain circumstances, a security right may qualify as an acquisition security right. This means that a secured creditor of a lessor may obtain priority over a secured creditor of a lessee, even if the lessor's secured creditor registers second. However, as discussed in the chapter on enforcement, that right encumbers the tangible asset and not the intellectual property. The right of the acquisition secured creditor to dispose of the encumbered assets as they are (that is, including the application of the intellectual property in that specific encumbered asset) is treated as a matter of enforcement and, as discussed below, is subject either to the exhaustion of the rights of the owner of the intellectual property used in the specific tangible encumbered assets or to the authorization given to the secured creditor by the owner to dispose of the encumbered assets as they are (see A/CN.9/WG.VI/WP.39/Add.6, paras. 24-27 below).

[Note to the Working Group: The Working Group may wish to note that, in accordance with historical commercial and legal practices in many States, the discussion of acquisition financing in the Guide is limited to tangible assets (other than negotiable instruments and negotiable documents). The Guide does not address explicitly the question whether an acquisition security right in tangible assets with respect to which software is used extends to the software. However, under the Supplement, that result would be possible under the same conditions under which a security right in tangible assets extends to intellectual property used with respect to those assets (see A/CN.9/WG.VI/WP.39/Add.2, paras. 32-36).

It is argued though that, in modern credit economies, it would be useful to have the same rules apply to security rights securing amounts used for the acquisition (but not the original creation) of intellectual property. It is also argued that this would provide parity in the treatment of tangible assets and intellectual property assets. Thus, the Working Group agreed to consider a proposal that would apply the principles of the Guide on acquisition security rights in tangible assets to security rights in intellectual property securing amounts used for the acquisition of that intellectual property (see A/CN.9/670, paras. 89-93). The following text has been prepared so as to assist the Working Group in its consideration of that proposal.

In some legal systems, an acquisition security right in software is possible but only if: (a) the security right accompanies a security right in a tangible asset, (b) the software is acquired by the grantor in a transaction integrated with the transaction in which the grantor acquired the tangible asset, and (c) the grantor acquires the software for the principal purpose of using the software in the tangible asset. In other legal systems, it is possible for a secured creditor to obtain an acquisition security right in intangible assets (including intellectual property, whether or not the intellectual property is used in connection with tangible assets). In yet other legal systems, where the law (for example a civil code) does not contain the concept of an acquisition security right, a similar result may be achieved through a reservation of title, a financial lease or a hypothec securing the sale price of a movable asset. In each case, the transaction may relate to an intangible asset, although this is rarely seen. In yet other legal systems, a “mortgage” or “fixed charge” securing the acquisition of intellectual property is possible and it can prevail over a pre-existing “floating charge”.

The existing rules in the Guide with respect to acquisition security rights in tangible assets could be made to apply to similar rights in intellectual property by:

(a) Providing that acquisition security rights can exist in intellectual property, as well as in tangible assets;

(b) In cases in which the intellectual property that is subject to an acquisition security right is held by the grantor for sale, lease or licence in the ordinary course of the grantor’s business, the acquisition security right is treated as an acquisition security right in inventory;

(c) In cases in which the intellectual property subject to an acquisition security right is used or intended by the grantor to be used for personal, family or household purposes, the acquisition security right is treated as an acquisition security right in consumer goods;

(d) *In cases in which the intellectual property that is subject to an acquisition security right is not held by the grantor for sale, lease or licence in the ordinary course of the grantor's business or to be used for personal, family or household purposes, the acquisition security right is treated as an acquisition security right in tangible assets other than inventory or consumer goods;*

(e) *Deleting references to possession and delivery of the encumbered asset.*

Terminology and recommendations

The Working Group may wish to consider terminology (to be added to the terminology part of the Supplement) and recommendations (to be added to a new chapter of the Supplement on acquisition financing) along the following lines:

“Acquisition security right” also includes a security right in intellectual property and a licence in intellectual property, provided that the security right secures the obligation to pay any unpaid portion of the acquisition price of the encumbered asset or an obligation incurred or credit otherwise provided to enable the grantor to acquire the encumbered asset.

“Consumer goods” for the purposes of the Supplement includes intellectual property or a licence used or intended by the grantor to be used for personal, family or household purposes.

“Inventory” for the purposes of the Supplement includes intellectual property or a licence used or intended by the grantor to be used for sale or licence in the ordinary course of the grantor's business.

- 1. The law should provide that all references to acquisition security rights in tangible assets also refer to an acquisition security right in intellectual property or a licence in intellectual property.*
- 2. The law should provide that, if intellectual property or a licence in intellectual property that is subject to an acquisition security right is held for sale or licence in the ordinary course of the grantor's business, the acquisition security right is treated as an acquisition security right in inventory.*
- 3. The law should provide that, if intellectual property or a licence in intellectual property that is subject to an acquisition security right is used or intended by the grantor to be used for personal, family or household purposes, the acquisition security right is treated as an acquisition security right in consumer goods.*
- 4. The law should provide that, if intellectual property or a licence in intellectual property is subject to an acquisition security right, any reference in such recommendations to possession of the encumbered asset by the secured creditor does not apply.*
- 5. The law should provide that, if intellectual property or a licence in intellectual property is subject to an acquisition security right, any reference in such recommendations to the time of possession of the encumbered asset by the grantor refers to the time the grantor obtains the encumbered intellectual property or licence.*
- 6. The law should provide that, if intellectual property or a licence in intellectual property is subject to an acquisition security right, any reference in such*

recommendations to time of the delivery of the encumbered asset to the grantor refers to the time the grantor obtains the encumbered intellectual property or licence.

Examples

The following examples have been prepared to assist the Working Group in its consideration of the proposal. In all these examples, the owner or a second secured creditor financing the acquisition of intellectual property or a licence in intellectual property has an acquisition security right with special priority under the conditions described in the examples.

Acquisition security right in intellectual property securing the purchase price of the intellectual property (other than inventory or consumer goods)

1. *B grants a security right in all of its present and future movable assets to SC, who takes the actions necessary to make that security right effective against third parties. Subsequently, B acquires a patent from O to be used in B's business. Pursuant to the agreement between B and O, B agrees to pay the purchase price to O over time and B grants O a security right in the patent to secure B's obligation to pay the purchase price. O makes that security right effective against third parties within a short period of time, such as 20 or 30 days of B obtaining the patent. O's security right is an acquisition security right and has priority over the security right of SC (see recommendation 180, alternative A, subparagraph (a), or alternative B, subparagraph (b)). Whether the priority of O's security right extends to proceeds of the patent in the form of receivables depends on which version of recommendation 185 a State enacts. Under alternative A, the priority of O's security right carries over to the receivables (see recommendation 185, alternative A, subparagraph (a)). Under alternative B, O's security right in the receivables would have only the priority of a non-acquisition security right (see recommendation 185, alternative B).*

Acquisition security right in intellectual property securing the purchase price of the intellectual property (inventory)

2. *B grants a security right in all of its present and future movable assets to SC1, who takes the actions necessary to make the security right effective against third parties. Subsequently, B acquires a patent from O for the purpose of licensing it to third parties in the ordinary course of B's business. B obtains the money necessary to pay the purchase price to O by borrowing money from SC2, to whom B grants a security right in the patent to secure B's repayment obligation. Before B obtains the patent, SC2: (a) takes the actions necessary to make its security right effective against third parties, and (b) notifies SC1 that SC2 will have an acquisition security right. SC2's security right is an acquisition security right and has priority over the security right of SC1 (see recommendation 180, alternative A, subparagraph (b), or alternative B, subparagraph (b)). Under alternative A, this result is brought about by recommendation 180, subparagraph (b), which requires all of the facts listed in this example. Under alternative B, the result is the same. Indeed, under alternative B, the security right of SC2 would have priority over the security right of SC1 so long as SC2 takes the actions necessary to make its security right effective against third parties within a short period of time such as 20 or 30 days of B*

obtaining the patent, and there would be no necessity of notifying SC1. The priority of SC2's security right does not extend to proceeds of the patent in the form of receivables (see recommendation 185). This is the case no matter which alternative version of recommendation 185 a State enacts. Under alternative A, this result is brought about by recommendation 185, subparagraph (b). Under Alternative B, the result is brought about by recommendation 185.

Acquisition security right in an intellectual property licence securing the purchase price of the licence (other than inventory or consumer goods)

3. *B has granted a security right in all of its present and future movable assets to SC, who has taken the actions necessary for that security right to be effective against third parties. Subsequently, B obtains a licence from O to use a patent owned by O in B's business. B agrees to pay the licence fee to O over time and grants O a security right in B's rights as licensee to secure B's payment obligation. O makes that security right effective against third parties within xx days of B obtaining the licence. O's security right in B's rights under the licence agreement is an acquisition security right and has priority over the security right of SC (see recommendation 180, alternative A, subparagraph (a), or alternative B, subparagraph (b)). Whether the priority of O's security right extends to proceeds of B's rights as licensee in the form of receivables depends on which version of recommendation 185 a State enacts. Under alternative A, the priority of O's security right carries over to the receivables (see recommendation 185, alternative A, subparagraph (a)). Under alternative B, O's security right in the receivables would have only the priority of a non-acquisition security right (see recommendation 185, alternative B). It should be noted that O's rights pursuant to its security right are separate from O's rights under the licence agreement to terminate the licence agreement upon B's default in its obligations under the licence agreement.*

Acquisition security right in an intellectual property licence securing the purchase price of the licence (inventory)

4. *B grants a security right in all of its present and future movable assets to SC1, who takes the actions necessary to make the security right effective against third parties. Subsequently, B obtains a licence from O, the patent owner, for the purpose of sub-licensing the patent to third parties in the ordinary course of B's business. B obtains the money necessary to pay its licence fee by borrowing money from SC2, to whom B grants a security right in B's rights as licensee to secure B's repayment obligation. Before B obtains the licence, SC2: (a) takes the actions necessary to make its security right effective against third parties; and (b) notifies SC1 that SC2 will have an acquisition security right. SC2's security right is an acquisition security right and has priority over the security right of SC1 (see recommendation 180, alternative A, subparagraph (b), or alternative B, subparagraph (b)). The priority of O's security right does not extend to proceeds of the licence in the form of receivables (see recommendation 185, alternative A or alternative B). This is the case no matter which alternative version of recommendation 185 a State enacts. Under alternative A, this result is brought about by recommendation 185, subparagraph (b). Under alternative B, the result is brought about by recommendation 185.]*

J. Priority of a security right in intellectual property as against the right of a judgement creditor

20. The *Guide* recommends that a security right that was made effective against third parties before a judgement creditor obtained rights in the encumbered asset has priority as against the right of the judgement creditor. However, if an unsecured creditor obtained a judgement against the grantor and took the steps necessary under the law governing the enforcement of judgements to acquire rights in the encumbered assets before the security right became effective against third parties, the right of the judgement creditor has priority (see recommendation 84).

21. This recommendation applies equally to security rights in intellectual property (subject to the principle embodied in recommendation 4, subparagraph (b)). In such a case, under law relating to intellectual property the judgement creditor may have to obtain a transfer of the intellectual property and a document or notice thereof may have to be registered in an intellectual property registry for the judgement creditor to obtain priority. If this transfer takes place before a security right was made effective against third parties, both under the law recommended in the *Guide* (see recommendation 13) and law relating to intellectual property (*nemo dat*), the transferee of encumbered intellectual property will take the encumbered intellectual property free of the security right.

K. Subordination

22. The *Guide* recognizes the principle of subordination (see recommendation 94). The essence of this principle is that, as long as the rights of third parties are not affected, competing claimants may alter by agreement the priority of their competing claims in an encumbered asset. The principle applies equally to security rights in intellectual property.

**VII. Rights and obligations of the parties to a security agreement
relating to intellectual property**

[*Note to the Working Group: For paras. 1-5, see A/CN.9/WG.VI/WP.37/Add.3, paras. 19-22, A/CN.9/670, paras. 96-103, A/CN.9/WG.VI/WP.35/Add.1, paras. 62-63, A/CN.9/667, paras. 104-108, A/CN.9/WG.VI/WP.33/Add.1, paras. 26-30, and A/CN.9/649, paras. 57-59.*]

A. Application of the principle of party autonomy

1. With few exceptions, the *Guide* generally recognizes the freedom of the parties to the security agreement to tailor their agreement so as to meet their practical needs (see recommendation 10). The principle of party autonomy applies equally to security rights in intellectual property, subject to any limitations specifically introduced by law relating to intellectual property. For example, unless otherwise provided by law relating to intellectual property, an owner that is a grantor and its secured creditor may agree that: (a) the secured creditor may exercise some of the rights of the owner (for example, to deal with authorities and renew registration or sue infringers; see A/CN.9/WG.VI/WP.39/Add.1, para. 23); (b) the grantor may not grant licences (in particular exclusive licences) without the consent of the secured creditor; or (c) the secured creditor may collect royalties owed to the grantor as a licensor even before default on the part of the grantor-licensor.

B. Preservation of the encumbered intellectual property

2. Under secured transactions law, the party in possession of an encumbered asset has the obligation to take reasonable steps to preserve it (see recommendation 111). Similar rules apply to intellectual property. For example, the grantor has an obligation to deal with authorities, pursue infringers and renew registrations. In some States, law relating to patents provides that the patent owner may not revoke or limit the encumbered patent without the consent of the secured creditor.

3. In addition, under secured transactions law, the secured creditor should be able to agree with the intellectual property owner that the secured creditor would be entitled to take steps to preserve the encumbered intellectual property by dealing with authorities, pursuing infringers or renewing registrations even before default on the part of the owner-grantor, provided that this is not prohibited by law relating to intellectual property. Otherwise, the encumbered asset could lose its value, if the owner of the encumbered intellectual property failed to exercise this right in a timely fashion. This result could negatively affect the use of intellectual property as security for credit. This approach would not interfere with the rights of the owner as its consent would be necessary. Similarly, this approach would not interfere with law relating to intellectual property because such an agreement would be null and void, if it were concluded in violation of law relating to intellectual property. Of course, States enacting the recommendations of the *Guide* may wish to consider their law relating to intellectual property so as to determine whether such agreements should be permitted, as this could facilitate the use of intellectual property as security for credit.

4. Moreover, unless prohibited by law relating to intellectual property, the secured creditor should be able to request the owner that is a grantor to allow the secured creditor to protect the value of the encumbered intellectual property, for example, by renewing registration or pursuing infringers. Otherwise, the value of the encumbered intellectual property could diminish; such a result could negatively affect the use of intellectual property as security for credit.

5. If the owner-grantor accepts this request, the secured creditor would be entitled to exercise those rights with the explicit consent of the owner-grantor; if the

owner-grantor did not respond, the secured creditor would be entitled to exercise those rights with the implicit consent of the owner-grantor; and, if the owner-grantor rejected the request, the secured creditor would not be entitled to exercise those rights. In addition, if the grantor failed to pursue infringers or renew registrations, the secured creditor could consider that that failure constitutes an event of default as described in the security agreement and could enforce its security right in the encumbered intellectual property. Again, these results would not interfere with law relating to intellectual property as recommendation 4, subparagraph (b) would defer to that law in case of any inconsistency.

Recommendation 245¹

Alternative A

The law should provide that the grantor of a security right in intellectual property and its secured creditor may agree as to who may preserve the encumbered intellectual property and, for example, deal with authorities, pursue infringers or renew registrations of the encumbered intellectual property, as well as under what circumstances the secured creditor may do so.

Alternative B

The law should provide that, if under other law the grantor of a security right in intellectual property and its secured creditor may agree that the secured creditor is [entitled] [obliged] to preserve the encumbered asset and, for example, deal with authorities, pursue infringers or renew registrations of the encumbered intellectual property, as well as under what circumstances the secured creditor may do so, nothing in the law prevents the grantor and the secured creditor from doing so.

[Note to the Working Group: The Working Group may wish to note that, at its fifteenth session, it requested the Secretariat to prepare an alternative recommendation along the lines of alternative B (see A/CN.9/670, paras. 101 and 103). The Working Group may wish to note that the main difference between alternatives A and B lies in the fact that alternative A provides party autonomy as a matter of secured transactions law, while alternative B provides that secured transactions law does not limit party autonomy if it exists under law outside secured transactions law. If the Working Group decides to retain alternative B, it may wish to determine whether the preservation of the encumbered asset should be formulated as a right or as an obligation.]

VIII. Rights and obligations of third-party obligors in intellectual property financing transactions

[Note to the Working Group: For paras. 6-7, see A/CN.9/WG.VI/WP.37/Add.1, para. 23, A/CN.9/670, para. 104, A/CN.9/WG.VI/WP.35/Add.1, para. 64, A/CN.9/667, para. 109, A/CN.9/WG.VI/WP.33/Add.1, paras. 32, and A/CN.9/649, para. 60.]

¹ If this recommendation could be included in the *Guide*, it would be placed in the chapter on the rights and obligations of the parties to a security agreement as recommendation 116bis.

6. Where a licensor assigns its claim against a licensee for the payment of royalties under a licence agreement, the licensee (as the debtor of the assigned receivable) would be a third-party obligor under the *Guide* and its rights and obligations would be the rights and obligations of a debtor of a receivable. Similarly, where a licensee assigned its claim against a sub-licensee for the payment of royalties under a sub-licence agreement, the sub-licensee would be a third-party obligor in the sense of the *Guide*.

7. As a result, for example, in a claim by an assignee of the right to the payment of royalties, a licensee as a debtor of the assigned receivable may raise against the assignee all defences and rights of set-off arising from the licence agreement or any other agreement, which are part of the same transaction and of which the licensee could avail itself as if the assignment had not been made and such claim had been made by the licensor. In addition, the licensee may raise against the assignee of the right to the payment of royalties any other right of set-off, provided that that right was available to the licensee at the time notification of the assignment was received by the licensee. However, any defences or rights of set-off that may be available to the licensee under law other than secured transactions law for breach of an agreement between the licensor and the licensee that the licensor will not assign its rights to the payment of royalties are not available to the licensee against the assignee (see recommendation 120). This recommendation also is subject to the principle of deference to law relating to intellectual property embodied in recommendation 4, subparagraph (b).

IX. Enforcement of a security right in intellectual property

[*Note to the Working Group: For paras. 8-32, see A/CN.9/WG.VI/WP.35/Add.3, paras. 24-48, A/CN.9/670, paras. 105-114, A/CN.9/WG.VI/WP.35/Add.1, paras. 65-89, A/CN.9/667, paras. 110-123, A/CN.9/WG.VI/WP.33/Add.1, paras. 35-44, and A/CN.9/649, paras. 61-73.*]

A. Intersection of secured transactions law and law relating to intellectual property

8. States typically do not provide for specific enforcement remedies for security rights in intellectual property in their laws relating to intellectual property. The general law of secured transactions normally applies to the enforcement of security rights in intellectual property. To the extent that law relating to intellectual property in some States actually does address the enforcement of security rights in different types of intellectual property, it merely engrafts existing secured transactions enforcement regimes onto the regime governing intellectual property. As a consequence, States that enact the *Guide*'s recommendations will normally be simply substituting the *Guide*'s recommended enforcement regime for the prior enforcement regime derived from, for example, a civil code and code of civil procedure, the common law of floating and fixed charges, a mortgage act or some other general law of enforcement, as the case may be.

9. This approach to the enforcement of security rights applies not only to intellectual property (for example, a patent, a copyright or a trademark), but also to

other rights that are derived from these types of intellectual property. Hence, consistently with the United Nations Assignment Convention, assets, such as royalties and licence fees, are treated as receivables and are subject to the enforcement regime recommended in the *Guide* for assignments (that is, outright transfers, security transfers and security rights) in receivables. Likewise, a licensor's or sub-licensor's other contractual rights as against a licensee or sub-licensee will also be governed by a State's general law of obligations, and security rights in these contractual rights will be enforced under a State's general secured transactions law. And again, a licensee's or sub-licensee's rights of use are treated in the same way as a lessee's or purchaser's rights, and are governed by a State's general law of obligations, except as regards questions of registration (where specifically mentioned in law relating to intellectual property).

10. On occasion, States incorporate special procedural controls on the enforcement of security rights in intellectual property into law relating to intellectual property. In addition, the general procedural norms of secured transactions law in a State may be given a specific content in the context of enforcement of security rights in intellectual property. So, for example, the determination of what is commercially reasonable where the encumbered asset is intellectual property may depend on law and practice relating to intellectual property. This standard of commercial reasonableness may well vary from State to State, as well as from intellectual property regime to intellectual property regime. The *Guide* recognizes this procedural specificity and, in so far as any procedural rules apply specifically to security rights in intellectual property and impose greater obligations on parties than those of the enforcement regime set out in the recommendations of the *Guide*, they will, under the principle set out in recommendation 4, subparagraph (b), displace the general recommendations of the *Guide*. Of course, if these procedural rules and definitional specifications apply to security rights in assets other than intellectual property as well, they will be displaced by the recommendations of the *Guide* in States that enact them.

11. As for substantive enforcement rights of secured creditors, once a State adopts the *Guide*'s recommendations, there is no reason to develop different or unusual remedial principles to govern enforcement of security rights in intellectual property serving as encumbered assets. The *Guide* merely recommends a more efficient, transparent and effective enforcement regime of a secured creditor's rights, without in any way limiting the rights that the owner of intellectual property may exercise to protect its rights against infringement or to collect royalties from a licensee or sub-licensee. As pointed out in the chapter of the Supplement on creation of a security right (see A/CN.9/WG.VI/WP.39/Add.2, para. 9), the secured creditor can never acquire security in more rights than the rights with which the grantor is vested at the time of the conclusion of the security agreement or when the grantor acquires rights in the encumbered asset or the power to encumber it (see recommendation 13).

B. Enforcement of a security right in different types of intellectual property

12. The *Guide* elaborates a detailed regime governing the enforcement of security rights in different types of encumbered asset. Its basic assumption is that

enforcement remedies must be tailored to ensure the most effective and efficient enforcement while ensuring appropriate protection of the rights of the grantor and third parties. This assumption and approach of the *Guide* should apply equally to the enforcement of security rights in the various categories of intellectual property. Currently, the law of most States recognizes a wide variety of rights relating to intellectual property, including:

- (a) The intellectual property in itself;
- (b) Receivables arising under a licence agreement;
- (c) The licensor's other contractual rights under a licence agreement;
- (d) The licensee's rights under a licence agreement;
- (e) The owner's, licensor's and licensee's rights in tangible assets with respect to which intellectual property is used.

13. The enforcement regime recommended in the *Guide*, and applicable to each of these different rights in intellectual property, will be discussed separately in the following sections.

C. Taking “possession” of documents necessary for the enforcement of a security right in intellectual property

14. The right of the secured creditor to take possession of the encumbered asset as set out in recommendations 146 and 147 of the *Guide* is normally not relevant if the encumbered asset is an intangible asset such as intellectual property (as the term “possession”, as defined in the *Guide*, means *actual* possession; see Introduction to the *Guide*, section B on terminology and interpretation). These two recommendations deal only with the taking of possession of tangible assets. However, consistently with the general principle of extrajudicial enforcement, the secured creditor should be entitled to take possession of any documents necessary for the enforcement of its security right where the encumbered asset is intellectual property. Such a right will normally be provided for in the security agreement. In the event that the documents are necessary for the enforcement of a security right in the encumbered intellectual property, the creditor should be able to obtain possession whether or not those documents were specifically mentioned as encumbered assets in the security agreement.

15. It may be thought that, where a secured creditor takes possession of a tangible asset that is produced using intellectual property or in which a chip containing a programme produced using an intellectual property is included, the secured creditor is also taking possession of the encumbered intellectual property. This is not the case. It is important to distinguish properly the asset encumbered by the security right. Even though many tangible assets, whether equipment or inventory, may be produced through the application of intellectual property such as a patent, the security right is in the tangible asset and does not, absent specific language in the security agreement purporting to encumber the intellectual property itself, encumber the intellectual property with the use of which the asset was produced (the use meant here is use consistent with the authorization of the owner or other licensor; if the use is unauthorized, the products are unauthorized and the secured creditor may

be an infringer). So, for example, the secured creditor may take possession of a tangible asset, such as a compact disc or a digital video disc, and may exercise its enforcement remedies against the discs under the *Guide*'s recommendations. In cases where the secured creditor also wishes to obtain a security right in the intellectual property itself (including, to the extent the grantor has the right to sell or otherwise dispose of, or license the intellectual property, the right to sell or otherwise dispose of, or license), it would be necessary for the secured creditor to specifically mention such intellectual property as encumbered assets in the security agreement with the owner of such intellectual property.

D. Disposition of encumbered intellectual property

16. Under the *Guide*, the secured creditor has the right upon the grantor's default to dispose of or grant a licence in the encumbered intellectual property, but always within the limits of the rights of the grantor. As a result, if the grantor is the owner, the secured creditor should, in principle, have the right to sell or otherwise dispose of, or license the encumbered intellectual property. However, if the grantor had previously granted an exclusive licence to a third party free of the security right, upon default, the secured creditor will be unable to grant another licence, as the grantor had no such right at the time the secured creditor acquired its security right (*nemo dat quod non habet*). The situation will be different if, for example, the grantor grants an exclusive licence that is limited geographically. In such a case, the secured creditor may be able to grant another licence outside the geographic limits of the exclusive licence granted by the grantor.

17. In the above-mentioned situation, under the *Guide*, the enforcing secured creditor does not acquire the intellectual property against which the security right is being enforced. Instead, the secured creditor disposes of the encumbered intellectual property (by assigning, licensing or sub-licensing it) in the name of the grantor. Until the assignee or licensee (as the case may be) that acquires the rights upon a disposition by the enforcing creditor registers a notice (or other document) of its rights in the relevant registry (assuming the rights in question may be registered), the grantor will appear on the registry as the owner of the relevant intellectual property.

E. Rights acquired through disposition of encumbered intellectual property

18. Under the *Guide*, rights in intellectual property acquired through judicial disposition would be regulated by the relevant law applicable to the enforcement of court judgements. In the case of an extrajudicial disposition in line with the provisions of secured transactions law, the first point to note is that the transferee or licensee takes its rights directly from the grantor. The secured creditor that chooses to enforce its rights in this manner does not become the owner as a result of this enforcement process, unless the secured creditor acquires the encumbered intellectual property in satisfaction of the secured obligation or at an enforcement sale (see recommendations 148 and 156).

19. The second point is that the transferee or licensee could only take such rights as were actually encumbered by the enforcing creditor's security right. Under the *Guide*, the transferee or licensee would take the intellectual property free of the security right of the enforcing secured creditor and any lower-ranking security rights, but subject to any higher-ranking security rights. Similarly, a good faith transferee or licensee that acquired a right in intellectual property pursuant to an extrajudicial disposition that is inconsistent with the provisions of the secured transactions law would take the intellectual property free of the security right of the enforcing secured creditor and any lower-ranking security rights (see recommendations 161-163).

20. A security right in a tangible asset extends to and may be enforced against attachments to that asset (see recommendation 21 and 166). To ensure that the security right also covers assets produced or manufactured from encumbered assets, the security agreement normally provides expressly that the security right extends to such manufactured assets. Where the encumbered asset is intellectual property, it is important to determine whether the asset that is disposed of to the transferee or licensee is simply the intellectual property as it existed at the time the security right became effective against third parties or whether it is that intellectual property including any subsequent enhancements to it (for example, an improvement to a patent). Generally, laws relating to intellectual property treat such improvements as separate assets and not as integral parts of existing intellectual property. As a result, the prudent secured creditor that wishes to ensure that improvements are encumbered with the security right should describe the encumbered asset in the security agreement in a manner that ensures that enhancements are directly encumbered by the security right.

F. Proposal by the secured creditor to acquire the encumbered intellectual property

21. Under the enforcement regime recommended in the *Guide*, the secured creditor has the right to propose to the grantor that it acquire the grantor's rights in satisfaction of the secured obligation. If the grantor is the owner of intellectual property, the secured creditor could itself become the owner in the way prescribed by law relating to intellectual property, provided that the grantor and its creditors do not object (see recommendations 156-159). Should the owner have licensed its intellectual property to a licensee that acquired its rights under the licence agreement free of the rights of the enforcing secured creditor, when the secured creditor acquires the intellectual property from the grantor, it acquires that right subject to the prior-ranking licence in accordance with the *nemo dat* principle. Once a secured creditor becomes the owner of intellectual property, its rights and obligations are regulated by the relevant law relating to intellectual property. In particular, the secured creditor may need to register a notice or document confirming that it acquired the intellectual property to enjoy the rights of an owner or to obtain any relevant priority. Finally, the secured creditor that acquires the encumbered intellectual property in full or partial satisfaction of the secured obligation would take the intellectual property free of the security right of any lower-ranking security rights, but subject to any higher-ranking security rights (see recommendation 161).

G. Collection of royalties and licence fees

22. Under the *Guide*, where the encumbered asset is the right to receive payment of royalties or other fees under a licence agreement, the secured creditor should be entitled to enforce the security right by simply collecting the royalties and other licence fees upon default and notification to the person that owes the royalties or fees (see recommendation 168). In all these situations, the right to the payment of royalties and other licence fees is, for the purposes of secured transactions laws, a receivable (see A/CN.9/WG.VI/WP.39/Add.2, paras. 22-29). Thus, the rights and obligations of the parties will be governed by the principles pertaining to receivables that are elaborated in the United Nations Assignment Convention and the *Guide* for receivables. Once again, the secured creditor that has taken a security right in the right to the payment of present and future royalties is entitled to enforce only such rights to the payment of royalties as were vested in the grantor (licensor) at the time of the conclusion of the security agreement or when the grantor acquired rights in the encumbered receivable or the power to encumber it (see recommendation 13). In addition, subject to any contrary provision of law relating to intellectual property (see recommendation 4, subparagraph (b)), the secured creditor's rights to collect royalties includes the right to collect or otherwise enforce any personal or property right that secures payment of the royalties (see recommendation 169).

H. Licensor's other contractual rights

23. In addition to the right to collect royalties, the licensor will normally include a number of other contractual rights in its agreement with the licensee (see A/CN.9/WG.VI/WP.39/Add.2, para. 21). These may include, for example, a limitation in the licence agreement on the right of the licensee to grant any sub-licence or a prohibition on the granting of security rights by the licensee in its rights under the licence agreement, including the right to terminate the licence agreement under a set of specified conditions. These rights will remain vested in the licensor if the security right is only in the right to the payment of royalties. However, if the secured creditor also wishes to obtain a security right in these other rights of the licensor, they would have to be included in the description of the encumbered assets in the security agreement. It should also be noted that, if the secured creditor enforces its security right and takes the encumbered and licensed intellectual property subject to a licence, as a matter of contract law, the secured creditor will have to abide by the licence agreement.

I. Enforcement of security rights in tangible assets with respect to which intellectual property is used

24. In principle, except where the so-called "exhaustion doctrine" applies, the intellectual property owner has the right to control the manner and place in which tangible assets, with respect to which intellectual property is used (in line with the authorization of the owner), are sold. That is, in the event that the relevant intellectual property right has not been exhausted, the secured creditor should be able to dispose of the assets upon default, if there is an authorization from the

intellectual property owner. In both these cases, it is assumed that the security agreement does not encumber the intellectual property right itself.

25. There is no universal understanding of the “exhaustion doctrine” (often referred to as “exhaustion of rights” or “first sale doctrine”) and the Supplement makes reference to the doctrine not as a universal concept, but as it is actually understood in each State. Nonetheless, where the exhaustion doctrine applies under law relating to intellectual property, the basic idea is that an intellectual property owner will lose or “exhaust” certain rights when specific conditions are met, such as the first marketing or sale of the product embodying the intellectual property. For example, the ability of a trademark owner to control further sales of a product bearing its trademark is generally “exhausted” following the sale of that product (if, however, the product has not been put onto the market or sold, the trademark has not been exhausted). The rule serves to protect a person that resells that product from infringement liability. However, it is important to note that such protection extends only to the point where the products have not been altered so as to be materially different from those originating from the trademark owner. In addition, the exhaustion doctrine does not apply if a licensee produces products bearing the licensed trademark without complying with the terms and conditions of the licence agreement (for example, as to quality or quantity).

26. In situations where a product is produced with the use of intellectual property that has been licensed to the grantor, the licensor may provide that the licensee cannot grant security rights in such products or that a creditor that takes security may only enforce its rights in a manner agreed to by the licensor. In both these cases, the licensor will typically provide in the licence agreement that the licence may be revoked if the grantor or secured creditor is in breach of the licence agreement. As a consequence, to enforce effectively its security right in the product, in the absence of prior agreement between the secured creditor and the owner-licensor, the secured creditor would either need to obtain the consent of the owner-licensor or rely on the relevant law relating to intellectual property and the operation of the exhaustion doctrine.

27. In cases where the secured creditor also wishes to obtain a security right in the intellectual property itself (including, to the extent the grantor has the right to sell or license the intellectual property, the right to sell or license), it would be necessary for the secured creditor to specifically mention such intellectual property as an encumbered asset in the security agreement. Here, the encumbered asset is not the product produced using the intellectual property, but rather the intellectual property itself (or the licence to manufacture tangible assets using the intellectual property). A prudent secured creditor will normally take a security right in such intellectual property so as to be able to continue the production of partially completed products.

J. Enforcement of a security right in a licensee’s rights

28. In the discussion above, the grantor of the security right has been assumed to be the owner of the relevant intellectual property. The encumbered asset was the intellectual property itself, the right of the owner-licensor to receive royalties and fees or the right of the owner-licensor to enforce other contractual terms relating to the intellectual property. Only in the discussion of security rights in tangible assets

produced by using intellectual property (section I above) were the rights of the owner-licensor and the rights of the licensee treated together. However, most of the issues addressed in sections C to H also are relevant in situations where the encumbered asset is not the intellectual property itself but the rights of a licensee (or sub-licensee) arising from a licence (or sub-licence) agreement (see A/CN.9/WG.VI/WP.39/Add.2, paras. 30-31). In cases where the encumbered asset is merely a licence, the secured creditor obviously may only enforce its security right against the licensee's rights and may do so only in a manner that is consistent with the terms of the licence agreement.

29. In situations where the grantor is a licensee, upon the grantor's default, the secured creditor will have the right to enforce its security right in the licence and to dispose of the licence to a transferee, provided that the licensor consents or the licence is transferable, which is rarely the case. Likewise, the enforcing secured creditor may grant a sub-licence, provided that the licensor consents or the grantor-licensee had, under the terms of the licence agreement, the right to grant sub-licences. In situations where the secured creditor proposes to a grantor-licensee to acquire the licence in full or partial satisfaction of the secured obligation and neither the grantor nor other interested parties (for example, the licensor) object (and the licence agreement does not prohibit the transfer of the licence), the secured creditor becomes vested with the licence according to the terms of the licence agreement between the licensee and the licensor. Assuming that registration of licences is possible under law relating to intellectual property, registration of the licence by the licensee-secured creditor that acquires the licence in full or partial satisfaction of the secured obligation may be a condition of the effectiveness of the licensee's rights or may simply serve information purposes.

30. Where the encumbered asset is the sub-licensor's right to the payment of royalties under a sub-licence agreement, the *Guide* treats the asset as a receivable. This means that the secured creditor may collect the royalties to the extent that these were vested in the grantor-sub-licensor at the time when the security right in the receivable is enforced. If enforcement of the security right in the right to the payment of royalties owed by a sub-licensee constituted a breach of the licence agreement, then the secured creditor would not be able to collect any receivables arising after that breach.

31. Where the encumbered asset is another contractual right stipulated in the sub-licence agreement, the secured creditor may enforce its security right in this contractual right as if it were any other encumbered asset, and the fact that the licensor may have revoked the licence for the future, or may have itself claimed a prior right to receive payment of sub-royalties, has no direct bearing on the right of the secured creditor to enforce these other contractual rights set out in the licence agreement.

32. The rights acquired by a transferee of the licence, a sub-licensee upon disposition by the secured creditor or by a secured creditor that acquires the licence in full or partial satisfaction of the secured obligation may be significantly limited by the terms of the licence agreement. For example, a non-exclusive licensee cannot enforce the intellectual property against another non-exclusive licensee or against an infringer of the intellectual property. Only the licensor (or the owner) may do so, although, in some States, exclusive licensees may join the licensor as a party to the proceedings. In addition, depending upon the terms of the licence agreement and the

description of the encumbered asset in the security agreement, a transferee of the licence may not have access to information such as a source code. In order to ensure the effectiveness of the licence being transferred or sub-licensed, the security agreement will have to include such rights within the description of the assets encumbered by the grantor-licensee, to the extent that the licence agreement and relevant law permits it to encumber these rights as well.

X. Law applicable to a security right in intellectual property

[*Note to the Working Group: For paras. 1-23, see A/CN.9/WG.VI/WP.37/Add.4, paras. 1-21, A/CN.9/670, para. 115, A/CN.9/WG.VI/WP.35/Add.1, paras. 90-98, A/CN.9/667, paras. 124-128, A/CN.9/WG.VI/WP.33/Add.1, paras. 53-57, and A/CN.9/649, paras. 77-80.*]

A. Law applicable to property matters

1. Generally, the conflict-of-laws rules of the *Guide* deal with the law applicable to the creation, effectiveness against third parties, priority as against the rights of competing claimants and enforcement of a security right. They also determine the territorial scope of the substantive rules envisaged in the *Guide*, that is, if and when the substantive rules of the State enacting the regime envisaged in the *Guide* apply (see chapter X on conflict of laws, paras. 1-9 of the *Guide*). In many States, the conflict-of-laws rules that apply to security rights in intangible assets apply also to security rights in intellectual property. Similarly, the conflict-of-laws rules recommended in the *Guide* with respect to security rights in intangible assets would also apply to security rights in intellectual property, if no asset-specific rule is provided for intellectual property.

2. Thus, if a State enacts the conflict-of-laws recommendations of the *Guide*, without making any changes with respect to intellectual property, the law of the

grantor's location would apply to the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property (see recommendations 208, and 218, subparagraph (b)). The location of the grantor is defined as its place of central administration, that is, the real rather than the statutory seat, of the grantor (see recommendation 219). Of course, recommendation 4, subparagraph (b), would also apply and defer to any applicable law rule of the law relating to intellectual property that applied specifically to intellectual property.

3. The principal advantage of the grantor's law approach is that it leads to the application of a single law to the creation, third-party effectiveness, priority and enforcement of a security right. So, for example, a secured creditor that obtains a security right in all present and future intangible assets (including intellectual property) of a grantor could obtain a security right, make it effective against third parties, ascertain its priority and have it enforced by referring to the law of only one State, even if the assets have connections with several States. In particular, both registration and searching costs would in most cases be reduced, as a secured creditor would need to register and a searcher would need to search only in the State in which the grantor is located. This would reduce transaction costs and enhance certainty, a result that is likely to have a beneficial impact on the availability and the cost of credit. If the grantor is not the initial owner, the secured creditor would need to establish the chain of title and to conduct a search outside the security rights registry to determine if the initial owner (or, as the case may be, an intermediate transferor) has granted a security right in the same intellectual property. If the initial owner or another transferor is located in a State other than the State of the grantor's location, the secured creditor would have to search in the security rights registry (and possibly in the relevant intellectual property registry, if any) of any such other State.

4. Another important advantage of the law of the grantor's location results from the meaning attributed in the *Guide* to the term "location" in cases where the grantor has places of business in more than one State (see recommendation 219). In this case, "location" refers to the State in which the grantor has its place of central administration (that is, its real, rather than its statutory, seat). This is the law of the State in which the main insolvency proceedings with respect to the grantor are likely to be administered (as to the meaning of a main proceeding, see, for example, articles 2, subparagraph (b), and 16, paragraph 3 of the UNCITRAL Model Law on Cross-Border Insolvency). As a result, the law governing the creation, third-party effectiveness and priority of a security right and the law governing, for example, stays, avoidance proceedings, treatment of assets and ranking of claims are likely to be the law of one and the same jurisdiction. While in some cases the statutory seat may be easier to determine than the real seat, referring to the statutory seat would result to a conflict of the law of the statutory seat with the *lex fori concursus*, a conflict which is likely to be resolved in favour of the application of the *lex fori concursus*.

5. International conventions designed to protect intellectual property generally adopt the principle of territoriality. Thus, in many States, the law applicable to ownership of intellectual property is the law of the State where the intellectual property is protected (*lex protectionis*), while the law applicable to contractual matters is the proper law of the contract (*lex contractus*). Accordingly, the law applicable to issues of protection of intellectual property rights country by country

(such as the comparative rights of an intellectual property owner as against a licensee in a particular country) is the *lex protectionis*. A common example is a licence to copyrighted work transmitted routinely across national borders via satellite.

6. While there is very little precedent on the application of the *lex protectionis* to security rights in intellectual property, a conflict-of-laws rule on security rights in intellectual property must take into account the *lex protectionis*, as this is the law governing ownership in intellectual property and a security right in intellectual property could not be created, made effective against third parties and be enforced in a country where the encumbered intellectual property right does not exist. This would be necessary in particular to the extent that, under law relating to intellectual property, a secured creditor may be treated as a transferee. In the case of a priority conflict between a security right in intellectual property and the ownership right of an outright transferee of the encumbered intellectual property, an approach based on the law of the grantor's location would not refer that priority conflict to one single law as outright transfers would still be governed by the *lex protectionis*.

7. In order for a secured creditor to be able to obtain an effective and enforceable security right in an intellectual property right under the law of a State, the intellectual property right must be protected under the law of that State. So, the principal advantage of the *lex protectionis* is that, in recognition of the principle of territoriality adopted in international conventions for the protection of intellectual property, its application would result in the same law applying to both security rights and ownership rights in intellectual property.

8. However, there are also disadvantages to an approach based on the *lex protectionis* as the applicable law for security rights, especially in transactions in which the encumbered assets are not limited to intellectual property that is used and protected under the law of a single State. The advantages and disadvantages of the two approaches mentioned above may be illustrated with the following examples dealing separately with creation, third-party effectiveness, priority and enforcement issues.

9. Intellectual property owner A located in State X creates, pursuant to a single security agreement, a security right in its patent, trademark and copyright portfolio, protected under the laws of States X and Y, in favour of secured creditor SC1 located in State Y. Under the law of the grantor's location approach, A and SC1 would need to meet the requirements of State X for the creation of its security right (that is, its effectiveness between the grantor and the secured creditor). Under the *lex protectionis* approach, A and SC1 would have to meet the creation requirements of State X with respect to the rights protected under the laws of State X and the requirements of State Y with respect to the rights protected under the laws of State Y. If they fail to do so, the security agreement may achieve only part of its intended purpose, that is, create a security right under the law of State X, but fail to create a security right under the law of State Y.

10. When the differences between the laws of States X and Y with respect to the creation of a security right are only a matter of form (as when, for example, State X that has not enacted the recommendations of the *Guide* requires more formalities in a security agreement than does State Y that has enacted the recommendations of the *Guide*), this difficulty can be overcome by preparing the security agreement so that

it satisfies the requirements of the most stringent State. Even that will create additional costs for the transaction. When States X and Y have inconsistent requirements with respect to formalities, though, this approach will not suffice. Similarly, where the agreement contemplates multiple present and future intellectual property rights as encumbered assets, difficulties cannot be overcome when a State has enacted the recommendations of the *Guide* (allowing a single security agreement to create security rights in multiple present and future assets), while another State does not allow a security agreement to create a security right in assets not yet in existence or not yet owned by the grantor or do not allow multiple assets to be encumbered in one and the same agreement. As creation of a security right means its effectiveness between the grantor and the secured creditor (and not as against third parties), the policy that underlies the *lex protectionis* does not appear to dictate referring the creation of a security right to that law.

11. In order to make its security right effective against third parties, under the law of the grantor's location approach, it would be sufficient for secured creditor SC1 to meet the third-party effectiveness requirements of State X. Any potential creditors of intellectual property owner A would need to search only in the relevant registry in State X. Under the *lex protectionis* approach, however, secured creditor SC1 would need to meet the third-party effectiveness requirements of States X and Y to make its security right in intellectual property rights effective against third parties in States X and Y respectively. This would possibly necessitate the filing of multiple notices with respect to the security right in the relevant registries of those States; and potential creditors would have to search in all those registries. Of course, this disadvantage would be alleviated if there were an international registry in which notices with respect to security rights, the third-party effectiveness of which is governed by different States, could be registered. This situation could be further complicated by the fact that some of those States might utilize the general security rights registry for such notices, other States might provide the option of utilizing a specialized registry, and still other States, might utilize an intellectual property registry that is mandatory under recommendation 4, subparagraph (b). However, if secured creditor SC1 has to register a notice of its security right in a patent registry, such registration can only take place in the patent registry in the State in which the patent is registered. It cannot take place in the patent registry in another State (for example, the law of the State in which the grantor is located) in which the patent is not protected.

12. If intellectual property owner A creates another security right in its patent and trademarks protected in State Y in favour of secured creditor SC2, there will be a priority conflict between the security rights of SC1 and SC2 in the patents and trademarks protected in State Y. Under the law of the grantor's location approach, this priority conflict would be governed by the law of the State in which the grantor is located, that is, State X. Under the *lex protectionis* approach, however, this priority conflict would be governed by the laws of State Y. In particular in situations in which third-party effectiveness is established by way of registration in a specialized registry, the State in which the intellectual property right is registered would be the State whose law would be the most appropriate to resolve priority conflicts.

13. Another example will illustrate how the law of the grantor's location will apply in the case of multiple transfers in a chain of title, where the transferor and

each transferee create security rights. A, located in State X, owns a patent in State X. Owner A grants a security right in the patent to secured creditor SC1. A then transfers the patent to B, located in State Y, grants a security right to SC2. Whether transferee B obtains the patent subject to the security right of SC1 will be determined in accordance with the *lex protectionis*, that is, the law of State X, which happens to be also the law of the grantor's location. If B takes the patent subject to the security right, then SC2 acquires no more rights than B had. If B assigns the patent to C, located in State Z, grants a security right to SC3, C and SC3 will not acquire more rights than B had. This example demonstrates that reliance on the law of the grantor's location is possible to resolve a priority dispute with a transferee only when such law is also the *lex protectionis*.

14. In the example mentioned in the preceding paragraph, if grantor A is located in State X and the patent is protected in State Y, application of the law of the grantor's location will not allow SC1 to obtain an effective security right with priority over the rights of the transferee because the patent does not exist in State X. Only the application of the *lex protectionis* will allow SC1 to obtain an effective security right in the patent with priority over the rights of transferee B.

15. Finally, if intellectual property owner A does business in States X, Y and Z and uses a particular trademark under the laws of each of those States, those trademark rights may well have greater value taken together than they do separately because they operate collectively. Thus, if A grants a security right in those trademark rights, secured creditor SC1 would likely prefer to dispose of them together upon A's default because such a disposition would likely yield greater proceeds (thus also benefitting A). Yet, this is likely to be difficult or impossible if States X, Y and Z have different rules for disposition of encumbered intellectual property rights. If State X allows only a judicial disposition of an encumbered asset, while States Y and Z allow a non-judicial disposition, disposition of the trademark rights in a single transaction might be impossible. Even if all of the relevant States allow non-judicial disposition, the differences in required procedures may make a disposition of the rights in a single transaction inefficient at best.

16. Moreover, enforcement of a security right is not a single event; rather it is a series of actions. So, upon A's default, secured creditor SC1, located in State Y, may notify A, located in State X, that the security right in its trademark rights protected under the laws of States X, Y and Z is in default. Secured creditor SC1 may then advertise the disposition of the trademark right in States X, Y and Z; indeed, it may advertise the disposition worldwide by use of the Internet. Secured creditor SC1 may then identify a buyer located in State Z, who buys the encumbered asset pursuant to a contract governed by the laws of State X. Under the *lex protectionis* approach, secured creditor SC1 would need to enforce its security right in the trademark protected in State X in accordance with the law of State X, its security right in the trademark protected in State Y in accordance with the law of State Y and its security right in the trademark protected in State Z in accordance with the law of State Z. Under the law of the grantor's location approach, enforcement of the security right in the trademark would be governed by the law of the State in which the grantor, that is A, has the place of its central administration. Of course, no matter which approach is followed, if secured creditor SC1 sells the encumbered trademarks, the transferee has to register its rights in the trademark registry of each State in which the trademark is registered and protected, that is, States X, Y and Z.

17. However, another example may illustrate the importance of the *lex protectionis* approach. A (located in State X) may create a security right in a patent registered only in State Y (and not in State X). Under the law of State X (the State of the grantor's location), for a security right in a patent to be effective against third parties, it must be registered in the national patent registry. If State Y follows an approach based on the law of the grantor's location (referring to the law of State X) to determine third-party effectiveness and priority of a security right, A could not grant B an effective and enforceable security right in its patents in State Y because in State X the patent is not protected and registration of a security right in a non-existent patent is not possible. If grantor A were located in State Y, then A could grant B such a security right, because in State Y the patent exists and a security right may be registered in the patent registry. This example illustrates that intellectual property does not exist "in the abstract" but rather is a legal right supported by a specific national legal system, which must of necessity be responsible for its recognition and enforcement against third parties within the borders of a national jurisdiction.

18. Where grantor A, located in State X, grants a security right in a patent registered in the national patent office in State Y and then grantor A becomes insolvent, the law applicable to the creation, third-party effectiveness, priority and enforcement of the security right will be the law of State X or Y, depending on whether an approach based on the law of the grantor's location or an approach based on the *lex protectionis* is followed in the forum State. Under the *Guide*, the application of any of these laws is subject to the *lex fori concursus* with respect to issues such as avoidance, treatment of secured creditors, ranking of claims or distribution of proceeds (see recommendation 223). Where the insolvency proceeding is opened in State X in which the grantor is located, the *lex fori concursus* and the law of the grantor's location will be the law of one and the same jurisdiction. Where the insolvency proceeding is opened in another State, where, for example, the grantor has assets, that may not be the case.

19. To combine consistency with the law applicable to ownership rights and the benefit of the application of a single law for security rights issues, the *lex protectionis* approach could be combined with the law of the grantor's location approach in the sense that creation and enforcement of a security right could be referred to the law of the grantor's location, while third-party effectiveness and priority could be referred to the *lex protectionis*.

20. Other combinations of the two approaches might be possible. For example, the approach based on the law of the grantor's location could be subject to a variation whereby a priority conflict involving the rights of an outright transferee would be governed by the *lex protectionis*. With this variation, a secured creditor would also need to establish its right under the *lex protectionis* only in instances where a competition with an outright transferee is a concern. In the typical case where the insolvency of the grantor is the main concern, it would be sufficient for the secured creditor to rely on the law of the State in which the grantor is located, as would be the case for certain other categories of intangible assets (such as receivables). The problem with this approach would be that, to ensure priority over potential outright transferees, secured creditors would need to establish their rights under the *lex protectionis* in any case.

21. A further variation would be to defer to the *lex protectionis* only where that law provides that the intellectual property concerned may be registered in an intellectual property registry. This further variation might, however, be unsatisfactory for outright transferees of intellectual property not subject to registration under the *lex protectionis*. They would have to investigate the law of the State of the grantor's location to ensure that their transfer is not subject to a previous security right. This approach would not provide sufficient certainty as to the law applicable.

Recommendation 245¹

Alternative A

The law should provide that the law applicable to the creation, effectiveness against third parties, priority and enforcement of a security in intellectual property is the law of the State in which the intellectual property is protected. [However, subject to recommendation 223, the law applicable to a priority conflict between a secured creditor and the grantor's insolvency representative is the law of the State in which the grantor is located.]

Alternative B

The law should provide that the law applicable to the creation of a security right in intellectual property is the law [of the State in which the grantor is located] [chosen by the parties]. However, the law applicable to the effectiveness against third parties, priority and enforcement of a security in intellectual property is the law of the State in which the intellectual property is protected.

Alternative C

The law should provide that the law applicable to the creation and enforcement of a security right in intellectual property is the law of the State in which the grantor is located. However, the law applicable to the third-party effectiveness and priority of a security right in intellectual property is the law of the State in which the intellectual property is protected.

Alternative D

The law should provide that the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property is the law of the State in which the grantor is located. However, the law applicable to the third-party effectiveness and priority of a security right in intellectual property as against the right of a transferee or licensee of the encumbered intellectual property is the law of the State in which the intellectual property is protected.

[Note to the Working Group: The Working Group may wish to note that:

(a) The bracketed text in alternative A was added, since at the fifteenth session of the Working Group the suggestion was made that, for efficiency reasons,

¹ If this recommendation could be included in the *Guide*, it would be placed in chapter X on conflict of laws as recommendation 214 bis.

a priority conflict with an insolvency representative should be governed by the law of a single State, that is, the law of the State in which the grantor is located, and that matter was not clear in the version of alternative C that was before the Working Group at that session (see A/CN.9/670, para. 115). The Working Group may wish to note that, at least to the extent that an insolvency representative may be considered as a transferee, the bracketed text may be inconsistent with alternative A and create uncertainty as to the law applicable.

(b) Alternative B was prepared in accordance with a suggestion made at the fifteenth session of the Working Group. The first sentence deals with the effectiveness of the security right (property effects) as between the parties. It includes two alternatives, one that, in line with the approach taken in the Guide, provides that the law applicable to property effects is the law of the grantor's location and another that refers the matter to party autonomy. Under either of these two approaches, the creation of a security right would be subject to a single law, a result that would enhance certainty and efficiency. The second sentence follows the approach recommended in alternative A (lex protectionis), with respect to all issues except creation of a security right. This approach may result in the application of multiple laws but is consistent with the fundamental principle of territoriality of intellectual property rights.

(c) Alternative C remains unchanged.

(d) Alternative D has been revised to ensure that the third-party effectiveness and priority of a security right as against the right of a transferee or licensee are referred to the law of the same jurisdiction. Otherwise, the third-party effectiveness of a security right would be subject to the law of the grantor's location, while its priority would be subject to the lex protectionis, a result that could create problems and inconsistencies.

(e) The reference to "region", which was intended to refer to regional rules, such as those of the European Union, has been deleted. The Working Group may wish to consider whether a regional economic integration organization which is constituted by sovereign States and has competence over certain matters governed by the Guide and the Supplement should be treated as a State, to the extent that such an organization has competence over matters governed by the Guide and the Supplement. If so, any reference to a "State" in the Guide and the Supplement would apply equally to a regional economic integration organization where the context so requires. Such an approach would ensure that where the lex protectionis is the law of a regional economic integration organization, such as the European Union, reference to the law of the State in which intellectual property is protected would refer to law of a regional economic integration organization.]

B. Law applicable to contractual matters

22. Under the *Guide*, the law applicable to the mutual rights and obligations of the grantor and the secured creditor (the contractual aspects of the security agreement) with respect to the security right is left to party autonomy. In the absence of a choice of law by the parties, the law applicable to these matters is the law governing the security agreement as determined by the conflict-of-laws rules generally applicable

to contractual obligations (see chapter X of the *Guide*, para. 61 and recommendation 216).

23. In view of the wide acceptability of the application of the principle of party autonomy to contractual matters,² the same rule should apply to the mutual rights and obligations of the grantor and the secured creditor in the case of a security right in intellectual property.

XI. The impact of insolvency of a licensor or licensee of intellectual property on a security right in that party's rights under a licence agreement

[Note to the Working Group: For paras. 24-42, see A/CN.9/WG.V/WP.87, A/CN.9/WG.VI/WP.37/Add.4, paras. 22-40, A/CN.9/671, paras. 125-127, A/CN.9/670, para. 116-122, A/CN.9/WG.VI/WP.35/Add.1, chapter XI, A/CN.9/667, paras. 129-140, A/CN.9/WG.VI/WP.33/Add.1, paras. 58-72, A/CN.9/649, paras. 98-103 and A/63/17, para. 326.]

A. General

24. A licensor or a licensee of intellectual property under a licence agreement may create a security right in its rights under the licence agreement. If the grantor is the licensor, typically its secured creditor will have a security right in the licensor's right to receive royalties from the licensee as well as the right to enforce non-monetary terms of the licence agreement and the right to terminate the licence agreement upon breach. If the licensee is the grantor, typically its secured creditor will have a security right in the licensee's right to use or exploit the licensed intellectual property subject to the terms of the licence agreement, but not a security right in the intellectual property itself. The secured creditor may then take the steps necessary to make that security right effective against third parties (see recommendation 29).

25. Insolvency law, subject to avoidance actions, will typically respect the effectiveness of such a security right (see recommendation 88 of the Insolvency Guide). Similarly, insolvency law, subject to any limited and clearly stated exceptions, will respect the priority of a security right that is effective against third parties (see recommendations 238-239). However, if the licensor or the licensee becomes subject to insolvency proceedings, there may be an effect on the rights of the parties to the licence agreement that will have an impact on a security right granted by the licensor or the licensee. In the case of a chain of licence and sub-licence agreements, the insolvency of any party in the chain will have an impact on several other parties in the chain and their secured creditors. For example, an insolvency of a party in the middle of the chain will affect the licence of subsequent sub-licensees and sub-licensors, but will not have any legal effect on previous ones. The terms of a licence agreement may provide for different results (for example,

² See www.hcch.net/upload/wop/genaff_concl09e.pdf on the development of a future instrument on the choice of law in international contracts by the Hague Conference on Private International Law.

automatic termination of all licences upon the insolvency of any licensee up or down in the chain from the insolvent licensee), but these results will be subject to limitations under insolvency law (for example, rendering unenforceable automatic termination clauses).

26. Outside of insolvency, there may be statutory or contractual limitations on the ability of the licensor and the licensee to grant and enforce a security right in a right to the payment of royalties. Secured transactions law will typically not affect statutory limitations, other than mainly those relating to a future receivable, or a receivable assigned in bulk or in part on the sole ground that it is a future receivable, or a receivable assigned in bulk or in part (see recommendation 23). Secured transactions law may affect contractual limitations (see recommendations 18 and 24-25). What effect, if any, an insolvency proceeding may have on those limitations on the assignment of receivables independent of secured transactions law is a matter of insolvency law (see recommendations 83-85 of the Insolvency Guide).

27. The Insolvency Guide contains extensive recommendations concerning the impact of insolvency proceedings on contracts with respect to which both the debtor and its counterparty have not fully performed their obligations under the contract (see recommendations 69-86 of the Insolvency Guide). A licence agreement could be such a contract, if it has not been fully performed by both parties and the term of the licence agreement has not been completed (so that there is remaining performance by the licensor). However, a licence agreement is not such a contract, if it has been fully performed by the licensee through an advance payment of the entire amount of the royalties owed by the licensee to the licensor, as may be the case in the event of an exclusive licence agreement, and the absence of any ongoing obligations of the licensor. The insolvent debtor could be the licensor (owing the licensee the right to use or exploit the licensed intellectual property in line with the terms and conditions of the licence agreement) or the licensee (owing payment of royalties and the obligation to use or exploit the licensed intellectual property in accordance with the licence agreement).

28. Under the recommendations of the Insolvency Guide, the insolvency representative may continue or reject a licence agreement as a whole, if it has not been fully performed by both parties (see recommendations 72-73 of the Insolvency Guide). In the case of one licence agreement, continuation or rejection of the licence agreement by the insolvency representative of one party will affect the rights of the other party. In the case of a chain of licence and sub-licence agreements, continuation or rejection of a licence agreement will affect the rights of all subsequent parties in the chain. Finally, in the case of cross-licensing agreements (where a licensor grants a licence, the licensee then further develops the licence and grants a licence in the further developed licensed product to the licensor), continuation or rejection of a licence agreement will affect each party both in its capacity as licensor and licensee.

29. If the insolvency representative chooses to continue a licence agreement, which has not been fully performed by both parties and as to which the insolvent debtor (licensor or licensee) is in breach, the breach must be cured, the non-breaching counterparty must be substantially returned to the economic position that it was in before the breach, and the insolvency representative must be able to perform the licence agreement (see recommendation 79 of the Insolvency Guide). In this case, the insolvency proceedings will have no impact on the legal status of a

security right granted by the licensor or the licensee. However, if the insolvency representative chooses to reject the licence agreement, there will be an impact on a security right granted by the licensor or the licensee (for a full understanding of the treatment of contracts in the case of insolvency, the reader is referred to the text of the Insolvency Guide, part two, chapter II, section E).

B. Insolvency of the licensor

30. If the licensor's insolvency representative decides to continue a licence agreement, there will be no impact on a security right granted by the licensor or the licensee. If the licensor is the insolvent debtor and has granted a security right in its rights under the licence agreement, and the licensor's insolvency representative decides to continue the licence agreement, the licence agreement will remain in place, the licensee will continue to owe royalties under the licence agreement and the licensor's secured creditor will continue to have a security right in those royalty payments. In this case of the licensor's insolvency, if the licensee has granted a security right in its rights under the licence agreement, the licensor will continue to owe the licensee unimpeded use of the licensed intellectual property under the licence agreement and the licensee's secured creditor will continue to have a security right in the licensee's rights under that agreement.

31. However, if the licensor's insolvency representative decides to reject the licence agreement, there will be an impact on a security right granted by the licensor or the licensee. If the licensor has granted a security right in its rights under the licence agreement, the licence agreement will no longer be effective, the licensee will no longer owe royalties under the licence agreement, and, thus, there will be no royalties for the licensor's secured creditor to be able to apply to satisfy the secured obligation. In this case of the licensor's insolvency, if the licensee has granted a security right in its rights under the licence agreement, the licensee will no longer have the authority to use the licensed intellectual property and its secured creditor will lose its security right in the encumbered asset (that is, the licensee's authority to use or exploit the licensed intellectual property).

32. As a practical matter, a secured creditor with a security right in a licensor's rights under a licence agreement may protect itself from the consequences of a rejection of the licence agreement by the licensor's insolvency representative. Such a secured creditor may, for example, protect itself by obtaining and making effective against third parties (in addition to a security right in the licensor's rights under the licence agreement, that is, principally the royalties), a security right in the licensed intellectual property itself. Then, if the insolvency representative of the licensor rejects the licence agreement, the secured creditor of the licensor (subject to the stay and any other limitations imposed by insolvency law on the enforcement of a security right in insolvency proceedings) can enforce its security right in the licensed intellectual property by disposing of it or by entering into a new licence agreement with a new licensee similar to the licence that had been rejected and thus re-establishing the royalty stream (see recommendation 149). The funds received from the disposition of the encumbered intellectual property or the royalties received pursuant to this new licence agreement would then be distributed to the secured creditor pursuant to recommendations 152-155. As a practical matter,

however, this arrangement would be worthwhile only for significant licence agreements.

33. Similarly, a secured creditor with a security right in a licensee's rights under a licence agreement may seek to protect itself from the consequences of a rejection of the licence agreement by the licensor's insolvency representative, by, for example, declining to make the secured loan unless the licensee obtains and makes effective against third parties a security right in the licensed intellectual property to secure the licensee's rights under the licence agreement. Then, if the insolvency representative of the licensor rejects the licence agreement, the licensee (subject to the stay and any other limitations imposed by insolvency law on the enforcement of security rights in insolvency proceedings) can enforce the security right in the licensed intellectual property itself by disposing of it or by entering into a new licence agreement with a new licensor, and the rights thereby obtained would be proceeds in which the secured creditor would have a security right. As a practical matter, this arrangement too would be worthwhile only for significant licence agreements.

34. As already mentioned, if at least one party has fully performed its obligations with respect to a licence agreement, the licence agreement is not subject to the recommendations of the Insolvency Guide concerning treatment of contracts. Where neither the licensor nor the licensee has fully performed its obligations under the licence agreement, however, the licence agreement would be subject to rejection under those recommendations. To protect long-term investments of licensees and in recognition of the fact that a licensee may depend on the use of rights under a licence agreement, some States have adopted rules that give additional protection to a licensee (and, in effect, its secured creditor) in the case of a licence agreement that would otherwise be subject to rejection in the insolvency of the licensor. Such protection is particularly important where there is a chain of licence and sub-licence agreements and thus several parties may be affected by the insolvency of one party in the chain.

35. For example, some States give a licensee the right to continue to use or exploit the licensed intellectual property, following the rejection of the licence agreement by the licensor's insolvency representative, as long as the licensee continues to pay royalties to the estate as provided in the licence agreement and otherwise continues to perform the licence agreement. The only obligation imposed upon the licensor's estate as a result of this rule is the obligation to continue honouring the terms and conditions of the licence agreement, an obligation that does not impose upon the resources of the licensor's estate. This approach has the effect of balancing the interest of the insolvent licensor to escape affirmative burdens under the licence agreement and the interest of the licensee to protect its investment in the licensed intellectual property.

36. In other States, licence agreements may not be subject to rejection under insolvency law because: (a) a rule that excludes the leases of immovable property from insolvency rules on rejection of contracts in the case of the lessor's insolvency applies by analogy to licence agreements in the licensor's insolvency; (b) licence agreements relating to exclusive licences create property rights (rights in rem) that are not subject to rejection (but may be subject to avoidance); (c) licence agreements are not regarded as contracts that have not been fully performed by both parties as the licensor has already performed its obligations by granting the licence;

(d) they are registered in the relevant intellectual property registry. In these States, the licensee may be able to retain the licence as long as it pays the royalties owed under the licence agreement.

37. In yet other States, licence agreements may be rejected, subject to the application of the so-called “abstraction principle”. Under this principle, the licence does not depend on the effectiveness of the underlying licence agreement. Thus, the licensee may retain the right to use or exploit the licensed intellectual property, even if a licence agreement has been rejected by the licensor’s insolvency representative. However, the licensor’s insolvency representative has a claim for the withdrawal of the licence based on the principle of unjust enrichment. Until such withdrawal, the licensee has to pay for the use of the licensed intellectual property on the basis of the principle of unjust enrichment an amount equal to the royalties owed under the licence agreement that was rejected.

38. It should be noted that the Insolvency Guide provides that “Exceptions to the power to reject may also be appropriate in the case of labour agreements, agreements where the debtor is a lessor or franchisor or a licensor of intellectual property and termination of the agreement would end or seriously affect the business of the counterparty, in particular where the advantage to the debtor may be relatively minor, and contracts with government, such as licensing agreements and procurement contracts” (see Insolvency Guide, part two, chapter II, paragraph 143). To protect long-term investments and expectations of licensees and their creditors from the ability of the licensor’s insolvency representative in effect to renegotiate licence agreements existing at the commencement of insolvency proceedings, States may wish to consider adopting rules similar to those described in the preceding paragraphs. Any such rules would have to take account of the general rules of insolvency law and the overall effect on the insolvency estate, as well as law relating to intellectual property. States may also wish to consider to what extent the commercial practices described in paragraphs 30 and 31 above would provide adequate practical solutions.

C. Insolvency of the licensee

39. If the licensee is the insolvent debtor and has granted a security right in its rights under the licence agreement, and the licensee’s insolvency representative decides to continue the licence agreement, the licence agreement will remain in place, the licensee will continue to have its rights under the licence agreement to use or exploit the licensed intellectual property (in accordance with the terms and conditions of the licence agreement) and the licensee’s secured creditor will continue to have a security right in those rights. In this case, if the licensor has granted a security right in its rights to the payment of royalties under the licence agreement, the licensor’s secured creditor will continue to have a security right in the licensor’s right to the payment of royalties.

40. In cases in which the licensee’s insolvency representative decides to reject the licence agreement, however, and the licensee has granted a security right in its rights under the licence agreement, the licence agreement will no longer be effective, the licensee will no longer have a right to use or exploit the licensed intellectual property and the licensee’s secured creditor will not be able to use the

value of the licensee's rights under the licence agreement to satisfy the secured obligation. In this case too, if the licensor has granted a security right in its right to the payment of royalties under the licence agreement, the licensor will lose its royalty stream and its secured creditor will lose its encumbered asset.

41. A secured creditor with a security right in a licensor's or licensee's rights under a licence agreement may seek to protect itself from the consequences of a rejection of the licence agreement by the licensee's insolvency representative by adopting comparable measures as described above (see paras. 32-33 above).

42. In the case of the insolvency of the licensee, it is important to ensure that the licensor either receive its royalties and the licensee otherwise performs the licence agreement, or that the licensor has a right to terminate the licence agreement. Insolvency law rules, such as those relating to curing any default of the licence agreement in the event that the licence agreement is continued (see para. 29 above), are essential. In addition, in situations where the insolvent licensee has granted a security right in its rights to receive sub-royalties, those sub-royalties will likely be a source of funds for the licensee to pay the royalties that it owes to the licensor. If the licensee's secured creditor claims all the royalties and the licensee does not have another source for payment of royalties to the licensor, it is essential that the licensor has a right to terminate the license to protect its rights.

Annex

The following text briefly describes the impact of the insolvency of a licensor or licensee on a security right that party's in rights under a licence agreement.

**C. Note by the Secretariat on the Draft Supplement to the
UNCITRAL Legislative Guide on Secured Transactions dealing
with security rights in intellectual property, Proposal by the
Permanent Bureau of the Hague Conference on Private
International Law, submitted to the Working Group on
Security Interests at its sixteenth session
(A/CN.9/WG.VI/WP.40)**

[Original: English]

1. The Annex to this note contains a proposal submitted by the Permanent Bureau of the Hague Conference on Private International Law (the “Hague Conference”) with respect to the law applicable to security rights in intellectual property in chapter X on conflict of laws of the Draft Supplement to the *UNCITRAL Legislative Guide on Secured Transactions* (the “*Guide*”) dealing with security rights in intellectual property.
2. The Hague Conference is an intergovernmental organization with 69 Member States. Its origins date back to 1893. The Organization’s core mission is the “progressive unification of the rules of private international law” (see Art. 1 of the Hague Conference Statute). To this effect, the Hague Conference has adopted 38 multilateral treaties (mostly Conventions), including several Conventions on international commercial and finance law.
3. In line with the mandate of the Hague Conference and its field of expertise, the Permanent Bureau welcomes the opportunity to comment on uniform rules of private international law developed under the auspices of other international organizations. It should be noted that the Permanent Bureau participated in the development and supported the adoption of the *Guide*, the conflict-of-law recommendations of which were prepared in close cooperation with the Permanent Bureau.

Annex

Proposal by the Permanent Bureau of the Hague Conference on Private International Law

I. Relevance and function of conflict-of-law recommendations in the Draft Supplement

1. As a preliminary remark, the Permanent Bureau wishes to underscore the importance of including conflict-of-law recommendations in the Draft Supplement to the UNCITRAL Legislative Guide on Secured Transactions (the “*Guide*”) dealing with security rights in intellectual property (the “Draft Supplement”). Its subject matter, that is, security rights in intellectual property, is a very specific and generally unaddressed topic in private international law. Therefore, guidance from a future UNCITRAL legislative instrument is in every respect an important development.

2. However, it must be noted that conflict-of-law recommendations serve a different purpose to that of the Draft Supplement’s substantive recommendations. While the adoption of the latter would address the possible inconsistencies between secured financing and intellectual property law by introducing unifying or harmonizing solutions for the interested States, conflict-of-law recommendations, by their very nature, cannot produce the same unifying or harmonizing effect on national laws. Their effect is limited to the law selection level. In other words, any conflict-of-law recommendation can result only in the use of a uniform criterion (or “connecting factor”) to be applied, which in turn leads to the application of a particular law. No unifying or harmonizing effect on the substantive level can be achieved by means of conflict-of-law recommendations.

3. On the structure of chapter X of the Draft Supplement on conflict of laws, the Permanent Bureau fully concurs with the distinction that the Draft Supplement makes between the law applicable to property matters and the law applicable to contractual matters. This distinction is fundamental in conflicts of laws because the degree of party autonomy accepted for contractual matters generally is greater than the party autonomy accepted for property matters. For this reason, the Permanent Bureau does not support the second version of Alternative B in brackets, as it enables the application of a law chosen by the parties to the “creation” of a security right in intellectual property.

II. Law applicable to property matters

4. The Permanent Bureau applauds the attempts to unify the conflict-of-law rules applicable to the property aspects of secured transactions in intellectual property rights. As such, guidance from the Draft Supplement is to be welcomed, especially since specific consideration of this question in national or international law is very limited.

A. International conventions protecting intellectual property

5. At the outset, it may be considered that the principle of national treatment embodied in international conventions protecting intellectual property implicitly imposes a universal rule in favour of the *lex loci protectionis* (“*lex protectionis*”). Provisions such as Article 2(1) of the Paris Industrial Property Convention or Article 5(2) of the Berne Intellectual Property Convention appear to leave no room for a connecting factor other than the place of protection of the relevant intellectual property right. In other words, no law other than the law of the protecting State could be applied. Such an approach suggests that Contracting States to any of these international conventions have chosen to set aside the possibility of freely determining their conflict-of-law rules in reciprocal relationships.

6. The Permanent Bureau stresses that it is highly controversial to confer such an extensive effect on international intellectual property conventions with respect to the issue of the applicable law. Even assuming that these international conventions can impose a given conflict-of-law rule, it would still be questionable whether the scope of application of that rule covers all property effects contemplated by the Draft Supplement, that is, the creation, effectiveness against third parties, priority as against the rights of competing claimants and enforcement of a security right.

7. Accordingly, recommendations on the governing law of security rights in intellectual property will at the very least perform a gap-filling function with regard to any possible conflict-of-law consequences resulting from existing international intellectual property conventions. More likely however, the formulation of conflict-of-law rules in the Draft Supplement will be a welcome development since international intellectual property conventions do not provide for the determination of the applicable law in international cases dealing with security rights in intellectual property.

B. Which conflict-of-law rules for the Draft Supplement?

8. Fully acknowledging the desirability of conflict-of-law rules in the Draft Supplement, the Permanent Bureau now considers how these rules should be best drafted. In this regard, it is noted that the Draft Supplement sets out four alternatives. Each of them offers a combination of the law of the State in which the intellectual property is protected and the law of the place where the grantor is located.

9. In light of the general objectives of the Draft Supplement, the Permanent Bureau supports the idea of a comparative assessment of these connecting factors for each and every one of the proprietary issues addressed in the Draft Supplement, that is, the creation, effectiveness against third parties, priority as against the rights of competing claimants and the enforcement of a security right.

10. As a preliminary remark, it must be stressed that the law governing the intellectual property as such provides whether a security right can be vested in that intellectual property. This is in line with recommendation 4, subparagraph (b), of the *Guide*. Therefore, none of the recommendations contemplated in the Draft Supplement can override the application of the law governing the intellectual property to the preliminary issue of the viability of a security right in intellectual property.

11. Example: a copyright cannot be pledged under the law of State X. Therefore, even if the recommendations of the Draft Supplement are adopted in State X, they cannot override the application of the law of State X prohibiting the pledge on a copyright.

C. A balanced conflict-of-law rule

12. The Permanent Bureau favours the adoption of a recommendation which combines an application of the law of the State in which the grantor is located with the law of the State in which the intellectual property is protected.

13. We respectfully submit the following proposal for the consideration of the Working Group:

“Within the limits of the law governing the transferability of an intellectual property, the law should provide that the law applicable to the creation, effectiveness against third parties, priority as against competing claimants and enforcement of a security in intellectual property is the law of the State in which the grantor is located. However, the law applicable to the third-party effectiveness and the priority of a security right in intellectual property as against the right of a transferee or a licensee of the encumbered intellectual property is the law of the State in which the intellectual property is protected.”

14. We note that this proposal follows Alternative D of the Draft Supplement to a large extent. This proposal preserves the predominant application of a single connecting factor (that is, the law of the State in which the grantor is located), in line with the recommendations adopted in the *Guide*. Insofar as possible, a single law would govern the effectiveness of the security right between the parties and as to third parties, a priority conflict between two secured creditors etc. Simplicity, certainty and predictability are hence enhanced.

D. Limitations to the application of the law of the State in which the grantor is located

15. The application of the law of the State in which the grantor is located is nevertheless subject to two important limitations. First, as stated above, the transferability of the intellectual property right is a preliminary issue to be addressed before the creation of a security in intellectual property. Accordingly, it is important to reiterate the importance of the law governing the intellectual property as the legal framework for the creation of a security right in intellectual property.

16. Second, we suggest the introduction of an exception in favour of the *lex protectionis* where a conflict arises between a secured creditor and an outright transferee or licensee. In these cases, the *lex protectionis* is to be considered the proper law in adjudicating third-party effectiveness and priority, taking into consideration the legitimate expectations of a transferee or licensee.

17. It follows that the secured creditor must fulfil the requirements of (each) *lex protectionis* to ensure that the security right will prevail in case of a licence or transfer. This may appear cumbersome for secured creditors but is to be considered a balanced solution for the evident conflict of interests between these secured creditors and the transferees or licensees.

18. Example: Grantor A, located in State X, holds a patent in State Y. It grants a security right in that patent to a secured creditor in State Y. Grantor A subsequently assigns the same patent to transferee B.

19. If the proposed recommendation is followed, it is for the law of State Y (*lex protectionis*) and not for the law of State X (the law of the grantor's location) to apply to third-party effectiveness and priority between the secured creditor and the outright transferee. In case the law of State Y (*lex protectionis*) stipulates that the security right is enforceable against B, the enforcement of the security right will take place in conformity with the law of State X (the law of the grantor's location).

III. Law applicable to contractual matters

20. Party autonomy is the key to addressing the question of what is the appropriate applicable law to contractual matters. It is acknowledged the grantor and the secured creditor may decide which law applies to the security agreement. From the Permanent Bureau's perspective, the reference to party autonomy is very positive in view of our ongoing work on the promotion of party autonomy in the field of international commercial contracts. The specific reference to the Hague Conference's future instrument in the Draft Supplement is very much appreciated; it shows how various international instruments from different organizations are carefully drafted to work together and to support each other.

21. The Permanent Bureau of the Hague Conference stands ready to further collaborate in the consideration and discussion of chapter X of the Draft Supplement. We remain at the Working Group's disposal for any further information.

I. Introduction

1. At its present session, Working Group VI (Security Interests) continued its work on the preparation of an annex to the UNCITRAL Legislative Guide on Secured Transactions (hereinafter referred to as “the Guide”)¹ specific to security rights in intellectual property, pursuant to a decision taken by the Commission at its

¹ Currently available on the UNCITRAL website (www.uncitral.org/pdf/english/texts/security-ig/e/final-final-e.pdf). To be issued as a United Nations sales publication.

fortieth session, in 2007.² The Commission's decision to undertake work on security rights in intellectual property was taken in response to the need to supplement its work on the Guide by providing specific guidance to States as to the appropriate coordination between secured transactions and intellectual property law.³

2. At its thirty-ninth session, in 2006, the Commission considered its future work on secured financing law. It was noted that intellectual property rights (e.g. copyrights, patents and trademarks) were becoming an extremely important source of credit and should not be excluded from a modern secured transactions law. In addition, it was noted that the recommendations of the draft Guide generally applied to security rights in intellectual property to the extent that they were not inconsistent with intellectual property law. Moreover, it was noted that, as the recommendations of the draft Guide had not been prepared with the special intellectual property law issues in mind, enacting States should consider making any necessary adjustments to the recommendations to address those issues.⁴

3. In order to provide more guidance to States, the suggestion was made that the Secretariat should prepare, in cooperation with international organizations with expertise in the fields of secured financing and intellectual property law and in particular the World Intellectual Property Organization (WIPO), a note for submission to the Commission at its fortieth session, in 2007, discussing the possible scope of work that could be undertaken by the Commission as a supplement to the draft Guide. In addition, it was suggested that, in order to obtain expert advice and the input of the relevant industry, the Secretariat should organize expert group meetings and colloquiums as necessary.⁵ After discussion, the Commission requested the Secretariat to prepare, in cooperation with relevant organizations and in particular WIPO, a note discussing the scope of future work by the Commission on intellectual property financing. The Commission also requested the Secretariat to organize a colloquium on intellectual property financing ensuring to the maximum extent possible the participation of relevant international organizations and experts from various regions of the world.⁶

4. Pursuant to those requests, the Secretariat organized in cooperation with WIPO a colloquium on security rights in intellectual property rights (Vienna, 18 and 19 January 2007). The colloquium was attended by experts on secured financing and intellectual property law, including representatives of Governments and national and international, governmental and non-governmental organizations. At the colloquium, several suggestions were made with respect to adjustments that would need to be made to the draft Guide to address issues specific to intellectual property financing.⁷

5. At the first part of its fortieth session (Vienna, 25 June-12 July 2007), the Commission considered a note by the Secretariat entitled "Possible future work on

⁴ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 81 and 82.

⁵ *Ibid.*, para. 83.

⁶ *Ibid.*, para. 86.

⁷ See www.uncitral.org/uncitral/en/commission/colloquia/2secint.html.

security rights in intellectual property” (A/CN.9/632). The note took into account the conclusions reached at the colloquium on security rights in intellectual property rights. In order to provide sufficient guidance to States as to the adjustments that they might need to make in their laws to avoid inconsistencies between secured financing and intellectual property law, the Commission decided to entrust Working Group VI (Security Interests) with the preparation of an annex to the draft Guide specific to security rights in intellectual property rights.⁸

6. At the resumed fortieth session (Vienna, 10-14 December 2007), the Commission finalized and adopted the Guide on the understanding that an annex to the Guide specific to security rights in intellectual property rights would subsequently be prepared.⁹

7. At its thirteenth session (New York, 19-23 May 2008), the Working Group considered a note by the Secretariat entitled “Security rights in intellectual property rights” (A/CN.9/WG.VI/WP.33 and Add.1). At that session, the Working Group requested the Secretariat to prepare a draft of the annex to the Guide on security rights in intellectual property rights (“the draft Annex”) reflecting the deliberations and decisions of the Working Group (see A/CN.9/649, para. 13). As the Working Group was not able to reach agreement as to whether certain matters related to the impact of insolvency on a security right in intellectual property (see A/CN.9/649, paras. 98-102) were sufficiently linked with secured transactions law as to justify their discussion in the draft annex, it decided to revisit those matters at a future meeting and to recommend that Working Group V (Insolvency Law) be requested to consider those matters (see A/CN.9/649, para. 103).

8. At its forty-first session (New York, 16 June-3 July 2008), the Commission noted with satisfaction the good progress achieved by the Working Group. The Commission also noted the decision of the Working Group with respect to certain matters related to the impact of insolvency on a security right in intellectual property and decided that Working Group V should be informed and invited to express any preliminary opinion at its next session. It was also decided that, should any remaining issue require joint consideration by the two working groups after that session, the Secretariat should have discretion to organize a joint discussion of the impact of insolvency on a security right in intellectual property.¹⁰

9. At its fourteenth session (Vienna, 20-24 October 2008), the Working Group continued its work based on a note prepared by the Secretariat entitled “Annex to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property” (A/CN.9/WG.VI/WP.35 and Add.1). At that session, the Working Group requested the Secretariat to prepare a revised version of the draft annex reflecting the deliberations and decisions of the Working Group (see A/CN.9/667, para. 15). The Working Group also referred to Working Group V (Insolvency Law) certain matters relating to the impact of insolvency on a security right in intellectual property (see A/CN.9/667, paras. 129-140). In that connection, it was widely felt that every effort should be made to conclude discussions of these matters as soon as possible, so that the result of those discussions could be included

⁸ *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17* (A/62/17 (Part I)), paras. 156, 157 and 162.

⁹ *Ibid.*, *Sixty-second session, Supplement No. 17* (A/62/17 (Part II)), paras. 99-100.

¹⁰ *Ibid.*, *Sixty-third session, Supplement No. 17* (A/63/17), para. 326.

in the draft annex by the fall of 2009 or the early spring of 2010 and the draft annex could be submitted to the Commission for final approval and adoption at its forty-third session in 2010 (see A/CN.9/667, para. 143).

10. At its fifteenth session (New York, 27 April-1 May 2009), the Working Group continued its work based on a note by the Secretariat entitled “Draft Annex to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property” (A/CN.9/WG.VI/WP.37 and Add.1-4). At that session, the Working Group requested the Secretariat to prepare a revised version of the draft Annex reflecting the deliberations and decisions of the Working Group (see A/CN.9/670, para. 16). In addition, the Working Group, having taken note of a note by the Secretariat entitled “Discussion of intellectual property in the Legislative Guide on Insolvency Law” (A/CN.9/WG.V/WP.87), approved the substance of the discussion of the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement (see A/CN.9/WG.VI/WP.37/Add.4, paras. 22-40) and referred it to Working Group V (see A/CN.9/670, paras. 116-122). Moreover, the Working Group had a preliminary discussion about its future work programme (see A/CN.9/670, paras. 123-126).

11. At its thirty-sixth session, Working Group V (Insolvency Law) considered the insolvency-related issues referred to it by Working Group VI on the basis of documents A/CN.9/WG.V/WP.87 and A/CN.9/WG.VI/WP.37/Add.4 and an extract from the report of the Working Group (see A/CN.9/670, paras. 116-122). At that session, Working Group V approved the contents of those parts of the draft Annex dealing with the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party’s rights under a licence agreement, as set forth in document A/CN.9/WG.VI/WP.37/Add.4, paragraphs 22-40, and the conclusions and revisions of Working Group VI reached at its fifteenth session (see A/CN.9/670, paras. 116-122).

12. At its forty-second session (Vienna, 29 June-17 July 2009), the Commission expressed its appreciation to the Working Group and the Secretariat for the progress achieved thus far and emphasized the importance of the draft Supplement (referred to above as the “draft Annex”). The Commission also noted with appreciation the results of the coordination efforts of Working Groups V and VI on insolvency-related matters in an intellectual property context. Noting the interest of the international intellectual property community, the Commission requested the Working Group to expedite its work so as to finalize the draft Supplement in one or two sessions and submit it to the Commission for finalization and adoption at its forty-third session, in 2010, so that the draft Supplement might be offered to States for adoption as soon as possible. In addition, the Commission noted with interest the future work topics discussed by the Working Group at its fourteenth and fifteenth sessions and agreed that, depending on the availability of time, preparatory work could be advanced through a discussion at the sixteenth session of the Working Group. As to the process for the preparation of a future work programme for the Working Group, the Commission agreed that the Secretariat could hold an international colloquium early in 2010 with broad participation of experts from Governments, international organizations and the private sector. It was generally agreed that, on the basis of a note to be prepared by the Secretariat, the Commission

would be in a better position to consider and make a decision on the future work programme of the Working Group at its forty-third session, in 2010.¹¹

13. At its sixteenth session (Vienna, 2-6 November 2009), the Working Group continued its work based on a note by the Secretariat entitled "Draft Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property" (A/CN.9/WG.VI/WP.39 and Addenda 1 to 7) and a proposal by the Permanent Bureau of the Hague Conference on Private International Law (A/CN.9/WG.VI/WP.40). At that session, the Working Group requested the Secretariat to prepare a revised version of the draft Supplement reflecting the deliberations and decisions of the Working Group (see A/CN.9/685, para. 19). In addition, the Working Group approved the substance of the discussion of automatic termination and acceleration clauses contained in intellectual property agreements in the case of insolvency of a licensor or licensee of intellectual property and referred it to Working Group V (see A/CN.9/685, para. 95).

II. Organization of the session

14. The Working Group, which was composed of all States members of the Commission, held its seventeenth session in New York from 8 to 12 February 2010. The session was attended by representatives of the following States members of the Working Group: Belarus, Cameroon, Canada, China, Colombia, Egypt, France, Germany, Greece, Guatemala, India, Iran (Islamic Republic of), Italy, Japan, Kenya, Madagascar, Mexico, Morocco, Norway, Pakistan, Poland, Republic of Korea, Russian Federation, Spain, Switzerland, Thailand, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

15. The session was attended by observers from the following States: Bangladesh, Belgium, Ghana, Indonesia, Panama, Philippines, Qatar, Romania and Turkey. The session was also attended by observers from the following non-member State and Entity: Holy See and Palestine.

16. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: World Bank and World Intellectual Property Organization (WIPO);

(b) *Intergovernmental organizations*: Caribbean Community Secretariat (CARICOM) and Hague Conference on Private International Law (HCCH);

(c) *International non-governmental organizations invited by the Commission*: American Bar Association (ABA), American Intellectual Property Organization (AIPLA), Commercial Finance Association (CFA), European Communities Trade Mark Association (ECTA), European Law Students' Association (ELSA), Forum for International Conciliation and Arbitration (FICACIC), Independent Film and Television Alliance (IFTA) and International Trademark Association (INTA).

¹¹ Ibid., *Sixty-fourth session, Supplement No. 17* (A/64/17), paras. 317-319.

17. The Working Group elected the following officers:

Chair: Ms. Kathryn SABO (Canada)

Rapporteur: Mr. Léopold Noel BOUMSONG (Cameroon)

18. The Working Group had before it the following documents: A/CN.9/WG.VI/WP.41 (Annotated provisional agenda) and A/CN.9/WG.VI/WP.42 and Addenda 1 to 7 (Draft supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property).

19. The Working Group adopted the following agenda:

1. Opening of the session and scheduling of meetings.
2. Election of officers.
3. Adoption of the agenda.
4. Security interests in intellectual property.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

20. The Working Group considered a note by the Secretariat entitled “Draft Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property” (A/CN.9/WG.VI/WP.42 and Addenda 1 to 7). The deliberations and decisions of the Working Group are set forth below in chapters IV and V. Subject to changes mentioned in chapter IV, the Working Group adopted the recommendations and the substance of the commentary of the draft Supplement. The Secretariat was requested to prepare a final version of the draft Supplement to be submitted to the Commission at its forty-third session (New York, 21 June-9 July 2010) for finalization and adoption.

IV. Security rights in intellectual property

A. Preface and introduction (A/CN.9/WG.VI/WP.42)

21. With respect to the preface and the introduction, it was agreed that paragraph 29 should clarify that, upon default, the secured creditor had a right to dispose of the encumbered asset and the transferee acquired the rights of the grantor free of security rights with a lower priority ranking than that of the security right of the enforcing secured creditor. In addition, it was agreed that, in paragraph 29, appropriate cross-references to the relevant part of chapter VIII of the Guide and the draft Supplement on the enforcement of a security right should be included. Moreover, it was agreed that paragraph 51 should include an example of consumer confusion with respect to trademarks replacing the current example, which referred to plain infringement. Subject to those changes, the Working Group adopted the substance of the preface and the introduction.

B. Scope of application and party autonomy (A/CN.9/WG.VI/WP.42/Add.1)

22. With respect to chapter I on the scope of application and party autonomy, it was agreed that the last sentence of paragraph 11 should clarify that the list of issues that followed was indicative and thus law relating to intellectual property could also deal with issues that were not included in that list. In addition, it was agreed that paragraph 19 should avoid referring to voluntary registration of a security right in a copyright, which as a matter of law relating to copyright was dealt with differently from State to State. Moreover, it was agreed that paragraph 22 should clarify that the notion of “possession” could not apply to intangible assets, because it was defined in the Guide to mean “actual possession”. Subject to those changes, the Working Group adopted the substance of chapter I on the scope of application and party autonomy.

C. Creation of a security right in intellectual property (A/CN.9/WG.VI/WP.42/Add.2)

23. With respect to chapter II on the creation of a security right in intellectual property, it was agreed that:

(a) Paragraph 2 should clarify that, under the Guide, a security right in intellectual property could be created by a written agreement between the grantor and the secured creditor;

(b) The fifth sentence of paragraph 4 should clarify that, in some cases, the secured creditor was the transferor of an asset, while, in other cases, the secured creditor was the transferee and that, in either case, a security right was created to secure the unpaid portion of the purchase price;

(c) Paragraph 7 should clarify that the requirement of specific identification of the encumbered assets in the security agreement applied to types of intellectual property other than copyright (e.g. patents) as well and that, under law relating to intellectual property, the parties could simply encumber the exclusive rights under a copyright separately;

(d) Paragraphs 17 and 18 should be reviewed to avoid any inconsistency with paragraphs 23 and 24 of chapter I;

(e) At the end of paragraph 27, reference should be added to the possibility that the secured creditor might seek to control by agreement the flow of royalties, not only by prohibiting the licensee from sublicensing the encumbered intellectual property, but also by prohibiting the assignment of the right to payment of sub-licence royalties; and

(f) In the same paragraph, it should be clarified that breach of any of the above-mentioned agreements by the licensee could make the licensee liable to damages but not invalidate any security right created by the licensee in breach of an agreement with the licensor.

24. Subject to those changes, the Working Group adopted the substance of chapter II on the creation of a security right in intellectual property.

25. The Working Group next considered recommendation 243. It was agreed that the words “unless otherwise agreed by the parties to the security agreement” were superfluous, as recommendation 10 of the Guide was sufficient in enshrining party autonomy, and should thus be deleted. It was also agreed that the second sentence of recommendation 243 should be moved to the commentary as it dealt with a matter addressed in chapter VIII on the enforcement of a security right in intellectual property. In response to a question, it was noted that the “exhaustion” doctrine was irrelevant to recommendation 243. Subject to the above changes, the Working Group adopted recommendation 243.

D. Effectiveness of a security right in intellectual property against third parties (A/CN.9/WG.VI/WP.42/Add.3, paras. 1-10)

26. With respect to chapter III on the effectiveness of a security right in intellectual property against third parties, it was agreed that paragraph 4 should be revised to refer to the possibility that not only a notice but also a document about a security right could be registered in a specialized registry. Subject to that change, the Working Group adopted the substance of chapter III on the effectiveness of a security right in intellectual property against third parties.

E. The registry system (A/CN.9/WG.VI/WP.42/Add.3, paras. 10-54)

27. With respect to chapter IV on the registry system, it was agreed that:

(a) Paragraph 19 should explain that the issue of coordination with a general security rights registry would arise even if an international or regional specialized registry was involved;

(b) Paragraphs 26 and 27 should avoid making general assumptions about the cost of registration in a specialized registry as it varied from State to State and the development of electronic registries tended to reduce costs associated with registration;

(c) Paragraphs 28 to 36 should clarify the assumptions on which those paragraphs were based; and

(d) Paragraph 48 should explain why recommendation 244 took a different approach with respect to the impact of a transfer of an encumbered asset on the effectiveness of registration of a security right in intellectual property from the approach followed in recommendation 62 with respect to security rights in other types of asset (for example, multiplicity of licences and frequency of transfers of intellectual property).

28. Subject to those changes, the Working Group adopted the substance of chapter IV on the registry system.

29. The Working Group next considered recommendation 244. It was agreed that the first sentence of recommendation 244 should be reformulated to read as follows: “The law should provide that the registration of a notice of a security right in intellectual property in the general security rights registry remains effective notwithstanding a transfer of the encumbered intellectual property.” With respect to

the second sentence of recommendation 244, the Working Group agreed that it should be placed in the commentary and revised to refer to its objective of ensuring that the effectiveness of registration of a notice in the general security rights registry would be maintained. Subject to those changes, the Working Group adopted recommendation 244.

**F. Priority of a security right in intellectual property
(A/CN.9/WG.VI/WP.42/Add.4, paras. 1-49)**

30. With respect to chapter V on the priority of a security right in intellectual property, it was agreed that:

(a) Paragraph 28 should be revised to explain that:

(i) “Ordinary course of business” was a concept of commercial or secured transactions law and was not drawn from law relating to intellectual property;

(ii) Law relating to intellectual property did not distinguish among different types of non-exclusive licences but addressed the issue whether they were authorized or not and thus whether a secured creditor, if it were a right holder under intellectual property law, could pursue a purported licensee as an infringer; and

(iii) Recommendation 81, subparagraph (c), did not affect the rights of the secured creditor, if it were a right holder under law relating to intellectual property (for example, to pursue infringers);

(b) Paragraph 40 was ambiguous and should be clarified;

(c) The commentary should generally clarify that:

(i) Recommendation 81, subparagraph (c), applied to situations in which the security right was created before the conclusion of the licence agreement; and

(ii) If the security right was created after the conclusion of the licence agreement, the secured creditor would have no greater rights than the grantor (in accordance with the *nemo dat* principle; see also recommendation 13); and

(d) The commentary should list examples to explain the impact of recommendation 81, subparagraph (c), in an intellectual property context, one of which could reflect the matter covered by the current formulation of recommendation 245.

31. Subject to those changes, the Working Group adopted the substance of chapter V on the priority of a security right in intellectual property.

32. The Working Group next considered recommendation 245. It was widely felt that, in its current formulation, recommendation 245 was too restricted in its scope, if compared with recommendation 81, subparagraph (c). Therefore, the suggestion was made that the recommendation should be reformulated to provide that the rule in recommendation 81, subparagraph (c), did not affect the rights of the secured creditor, if it were a right holder under the law relating to intellectual property. Some doubt was expressed as to whether such a revised recommendation would be useful as it merely restated the principle enshrined in recommendation 4,

subparagraph (b), and was based on the mistaken assumption that there was a rule of law relating to intellectual property that would displace the rule in recommendation 81, subparagraph (c). However, the prevailing view was that the suggested formulation would appropriately address the problems raised by recommendation 81, subparagraph (c). It was stated that the principle of recommendation 4, subparagraph (b), was so important that its restatement in that context was beneficial. It was also observed that no general statement could be made about the contents of law relating to intellectual property in that respect, as it differed from State to State. After discussion, it was agreed that recommendation 245 should be reformulated to read as follows: “The law should provide that the rule in recommendation 81, subparagraph (c), applies to the rights of a secured creditor under this law and does not affect the rights the secured creditor may have under the law relating to intellectual property.” Subject to those changes, the Working Group adopted recommendation 245.

G. Rights and obligations of the parties to a security agreement relating to intellectual property (A/CN.9/WG.VI/WP.42/Add.5, paras. 1-5)

33. The Working Group adopted the substance of chapter VI on the rights and obligations of the parties to a security agreement relating to intellectual property unchanged.

34. The Working Group next considered recommendation 246. It was widely felt that in its current formulation the recommendation was not useful, since the law recommended in the Guide recognized party autonomy did not include a limitation with respect to the preservation of encumbered assets and deferred to law relating to intellectual property to the extent that that law contained a limitation of party autonomy. At the same time, it was agreed that, in certain cases (for example, insolvency of the grantor, see A/CN.9/WG.VI/WP.42/Add.3, subpara. 1), it was important to permit the secured creditor to take steps to preserve the encumbered intellectual property. After discussion, it was agreed that recommendation 246 should be reformulated to read as follows: “The law should provide that the grantor and the secured creditor may agree that the secured creditor is entitled to take steps to preserve the encumbered intellectual property.” Subject to those changes, the Working Group adopted recommendation 246.

H. Rights and obligations of third-party obligors in intellectual property financing transactions (A/CN.9/WG.VI/WP.42/Add.5, paras. 6-7)

35. The Working Group adopted the substance of chapter VII on the rights and obligations of third-party obligors in intellectual property financing transactions unchanged.

**I. Enforcement of a security right in intellectual property
(A/CN.9/WG.VI/WP.42/Add.5, paras. 8-32)**

36. With respect to chapter VIII on the enforcement of a security right in intellectual property, it was agreed that the last sentence of paragraph 30 should clarify that in case of a breach of a licence agreement: (a) the licensor retained all its contractual rights, including the right to terminate the licence agreement; and (b) the secured creditor of the licensee with a security right in the licensee's right to payment of sub-royalties retained its right to collect the sub-royalties. Subject to that change, the Working Group adopted the substance of chapter VIII on the enforcement of a security right in intellectual property.

**J. Acquisition financing in an intellectual property context
(A/CN.9/WG.VI/WP.42/Add.5, paras. 33-58)**

37. With respect to chapter IX on acquisition financing in an intellectual property context, there was broad support in the Working Group for a regime that would transpose the commentary and recommendations of the Guide with respect to tangible assets so that they would become applicable in an intellectual property context. With regard to the terminology used, it was agreed that, rather than referring in an intellectual property context to consumer goods, equipment or inventory, reference should be made to intellectual property held by the grantor for personal, family or household use, business use or sale and licensing respectively (see Introduction, section C, terminology). Some doubt was expressed as to whether reference could be made to intellectual property held by the grantor for sale or licence in the grantor's ordinary course of business, in view of the fact that the notion of "ordinary course of business" was not drawn from law relating to intellectual property. It was stated, however, that use of that concept in the acquisition financing chapter of the draft Supplement represented an acceptable compromise to establish a regime of acquisition financing rights in intellectual property that would be parallel to the acquisition financing regime with respect to tangible assets.

38. As to the criterion that should be used for determining whether a transaction was in the ordinary course of business, differing views were expressed. One view was that a transaction based on standard terms agreed upon without negotiation would typically be an ordinary-course-of-business transaction, while a customized transaction concluded after negotiation would be a transaction outside the ordinary course of business. Another view was that emphasis should be placed on the primary purpose of the use of the intellectual property by the grantor. It was stated that, if intellectual property was held by the grantor for sale or licence, a transaction relating to such intellectual property would typically be a transaction in the grantor's ordinary course of business. However, it was observed that intellectual property could be used for multiple purposes (for example, a patent could be used by a manufacturer in its business and by other persons to whom the manufacturer licensed it). For that reason, it was pointed out that, reference should be made to the primary purpose of the relevant intellectual property. After discussion, it was agreed that the commentary of chapter IX on acquisition financing in an intellectual

property context should clarify that the distinctions made among various types of intellectual property should be based on the primary purpose of their use.

39. Subject to those changes, the Working Group adopted the substance of chapter IX on acquisition financing in an intellectual property context.

40. The Working Group then considered recommendations 247-252. It was agreed that those recommendations could be presented as one recommendation stating how the acquisition financing recommendations of the Guide would apply to an intellectual property context. It was also agreed that, in recommendation 248, reference should be made to the purpose for which the intellectual property was held by the grantor. Subject to those changes, the Working Group adopted recommendations 247-252.

K. Law applicable to a security right in intellectual property (A/CN.9/WG.VI/WP.42/Add.6, paras. 1-40)

41. With respect to chapter X on the law applicable to a security right in intellectual property, it was agreed that:

(a) Paragraph 10 should clarify that, where the grantor of a security right in intellectual property was located in a State other than the State in which the intellectual property was protected, the security right might not be effective under the law of the protecting State;

(b) The commentary should reflect the fact that, in some States, enforcement issues were regulated by law relating to intellectual property, meaning that the law of the protecting State would be applicable to those issues; and

(c) The reference to the change of location of “the encumbered asset” should be deleted in paragraph 36 and its heading, since an intellectual property right as an intangible right had no location.

42. Subject to those changes and on the understanding that, depending on its decision with respect to recommendation 253, it might have to revert to chapter X, the Working Group approved the substance of chapter X on the law applicable to a security right in intellectual property.

43. The Working Group then considered recommendation 253. In addition to the three options presented at the end of chapter X, a fourth option was proposed that read as follows:

“Within the limits of the law relating to the transferability of intellectual property, the law should provide that:

(a) Where the intellectual property is registered in a specialized registry, the law applicable to the creation, effectiveness against third parties and priority of a security right in intellectual property is the law of the State under whose authority the registry is maintained. However, the law applicable to the enforcement of such a security right is the law of the State in which the grantor is located; and

(b) Where the intellectual property is not registered in a specialized registry or where no specialized registry exists, the law applicable to issues of

creation, effectiveness against third parties and enforcement of a security right in intellectual property is the law of the State in which the grantor is located, whenever possible. However, the law of the State in which the intellectual property is protected is the law applicable to priority as against competing claimants and, in particular, the priority of a security right in intellectual property as against the right of a transferee or a licensee of the encumbered intellectual property.”

44. It was explained that the proposed text was based on options B and C of recommendation 253 presented at the end of chapter X (A/CN.9/WG.VI/WP.42/Add.6) and that it would apply to the extent its application was not inconsistent to law relating to intellectual property (see recommendation 4, subparagraph (b)). It was also explained that reference was made to registration of an intellectual property right (and not a security right in intellectual property) in an intellectual property registry on the assumption that law relating to intellectual property allowed the registration of a notice or document of a security right in an intellectual property registry with third-party effects (see A/CN.9/WG.VI/WP.42/Add.3, para. 4).

45. A number of suggestions were made. One suggestion was that, if the chapeau referring to the law applicable to transferability were retained, it should be accompanied by an explanation in the commentary that none of the applicable law recommendations of the Guide addressed issues of transferability; otherwise, it should be deleted. Another suggestion was that reference should be made to whether an intellectual property right might be registered, and not whether it was actually registered. Yet another suggestion was that issues of third-party effectiveness and priority should be referred to the law of the same State. Yet another suggestion was that the words “whenever possible” undermined the certainty sought to be achieved as to the law applicable and should be deleted. There was support for all those suggestions.

46. The concern was expressed, however, that an approach based on whether an intellectual property right might be registered or not in an intellectual property registry for determining the applicable law might run counter to the requirement for the equal treatment of right holders under constitutional law in certain States and the approach taken in Directive 2004/48/EC of the European Parliament and of the Council of 29 April 2004 on the enforcement of intellectual property rights (also known as “(IPR) Enforcement Directive” or “IPRED”). In response, it was stated that the concern about equal treatment of right holders was not valid, since: (a) the rule under discussion addressed the issue of the law applicable to security rights and not the substantive rights of right holders; (b) European Union Member States already followed that approach and there was no issue of them being in violation of the IPR Enforcement Directive; (c) such an approach would be justified on the basis of expectations of the parties to security agreements (not intellectual property right holders) associated with existing intellectual property registries; and (d) the Guide already followed that approach with respect to tangible assets (see recommendations 203 and 205).

47. However, to address the concern expressed above and to assist the Working Group in reaching agreement on a so-called “mixed” or “blended” approach that would combine the law of the protecting State and the law of the State of the grantor’s location, a fifth option was proposed. According to that option, the creation and enforcement of a security right in intellectual property could be

referred to the law of the State in which the intellectual property was protected, unless the parties chose the law of the grantor's location; and the third-party effectiveness and priority of such a security right would be referred to the law of the State in which the intellectual property was protected.

48. While some support was expressed with respect to the fifth option, a number of concerns were also expressed. One concern was that, by referring matters of property law and civil procedure law to party autonomy, it went far beyond generally accepted conflict-of-law principles and the general approach of the Guide, which referred only the mutual rights and obligations of the grantor and the secured creditor to the law chosen by them (see recommendations 10 and 216). Another concern was that, by making it possible that creation issues might be referred to the law of one State and third-party effectiveness issues to the law of another State, the proposed text limited its usefulness to States that had implemented the substantive law recommendations of the Guide that treated creation and third-party effectiveness as two distinct issues.

49. In order to assist the Working Group in reaching consensus, a sixth option was proposed to replace all other options, which read as follows:

“The law should provide that the law applicable to the creation of a security right in intellectual property is the law of the State in which the grantor is located unless the parties to the security agreement select the law of the State in which the intellectual property is protected as the law applicable to such issue.

The law should provide that the law applicable to the effectiveness and priority of a security in intellectual property as against the rights of a transferee, licensee or another secured creditor is the law of the State in which the intellectual property is protected.

The law should provide that the law applicable to the effectiveness and priority of a security in intellectual property as against all other competing claimants is the law of the State in which the grantor is located.

The law should provide that the law applicable to the enforcement of a security right in intellectual property is the law of the State in which the grantor is located unless the parties to the security agreement select the law of the State in which the intellectual property is protected as the law applicable to such issue.”

50. While some support was expressed for that proposal, several concerns were also expressed. The concerns mentioned above with respect to the fifth option were reiterated. In addition, the concern was expressed that the proposed rule might be too complex and difficult to apply. In that connection, it was suggested that the proposed rule could be simplified along the following lines:

“The law should provide that:

(a) Unless the parties to the security agreement select the law of the State in which the intellectual property is protected, the law applicable to the creation and enforcement of a security right in intellectual property is the law of the State in which the grantor is located;

(b) The law applicable to the effectiveness and priority of a security right in intellectual property as against the right of a transferee, licensee, or another secured creditor is the law of the State in which the intellectual property is protected; and

(c) The law applicable to the effectiveness and priority of a security right in intellectual property as against all other claimants is the law of the State in which the grantor is located.”

51. It was stated that the rule mentioned above could be re-formulated to have the law of the protecting State apply to creation and enforcement issues in the absence of an agreement by the parties to the contrary. While some support was expressed for that proposal, the concerns mentioned above about referring creation and third-party effectiveness to the laws of different States and about referring creation and enforcement issues to party autonomy were reiterated. In that connection, reference was made to the possibility that the law chosen by the parties on matters relating to creation and enforcement of a security right might be set aside as manifestly contrary to the public policy or through the application of mandatory law provisions of the forum State (see recommendation 222). In addition, the concern was expressed that the creation of a security right in a patent or trademark registered in a national patent or trademark registry could be referred to the law of the grantor’s location. Moreover, it was observed that the proposed rule should be first tested against specific examples. It was also stated that adoption of such a rule would require substantial changes in the commentary. It was also pointed out that, if agreement could not be reached on one recommendation, it would be better to present options for the Commission to make a final decision. In that connection, it was stated that, in particular in the area of conflicts of laws, it was important to reach agreement on one recommendation, since otherwise a different rule would apply depending on the conflict-of-laws rule of the forum State, a situation that would perpetuate the currently prevailing uncertainty and have a negative impact on the cost and the availability of credit.

52. In the discussion, the view was expressed that the law of the protecting State was generally enshrined in intellectual property law treaties and could not be ignored. In response, it was stated that, while the importance of an approach based on the law of the protecting State could not be ignored, not all intellectual property law treaties led to that result at the level of domestic law relating to intellectual property.

53. Support was expressed for all of the three options presented at the end of chapter X (A/CN.9/WG.VI/WP.42/Add.6). Support was also expressed for the fourth option mentioned above (see para. 43). In that regard, it was agreed that the fourth option was an improved version of option B set out in chapter X and should replace option B.

54. However, as the Working Group was not able to reach consensus on any of those options and in an effort to reach consensus on one recommendation, the Working Group engaged in a discussion of a combined version of the fifth and sixth options (see para. 50) that read as follows:

“Version A: The law should provide that the law applicable to the creation and enforcement of a security right in intellectual property is the law of the States in which the intellectual property is protected, except to the extent that the

security agreement provides that these matters are to be governed by the law of the State in which the grantor is located. The law should provide that the law applicable to the effectiveness against third parties and priority of a security right in intellectual property as against the rights of a transferee, licensee or another secured creditor is the law of the State in which the intellectual property is protected. The law should provide that the law applicable to the effectiveness against third parties and priority of a security right in intellectual property as against all other claimants is the law of the State in which the grantor is located.”

“Version B: The law should provide that the law applicable to the creation and enforcement of a security right in intellectual property is the law of the State in which the grantor is located, except to the extent that the security agreement provides that these matters are to be governed by the law of the State in which the intellectual property is protected. The law should provide that the law applicable to the effectiveness against third parties and priority of a security right in intellectual property as against the rights of a transferee, licensee or another secured creditor is the law of the State in which the intellectual property is protected. The law should provide that the law applicable to the effectiveness against third parties and priority of a security right in intellectual property as against all other claimants is the law of the State in which the grantor is located.”

55. It was stated that the difference between the first and the second version lay in the fact that, in the absence of an agreement of the parties, under the first version, the creation and enforcement of a security right in intellectual property would be governed by the law of the protecting State, while, under the second version, those matters would be governed by the law of the State of the grantor’s location. Several delegations observed that, to the extent that the proposed text appropriately combined the law of the protecting State with the law of the grantor’s location, it constituted an acceptable compromise. In addition, it was pointed out that the proposed text would be acceptable, in particular, if the reference to party autonomy with respect to the law applicable to the creation and enforcement of a security right were omitted. As a matter of drafting, it was noted that the two versions could be combined with the first sentence of each of them being presented within square brackets.

56. While support was expressed for both versions of the above-mentioned “compromise” proposal, preference was expressed for version A. However, as the Working Group was not able to reach consensus, it decided that the three options presented at the end of chapter X, with the substitution of the second option by the text mentioned above (see para. 43), and the two versions of the compromise proposal mentioned above should be retained for further consideration by the Commission. It was widely felt that, in order to ensure certainty as to the law applicable to security rights in intellectual property, it would be essential that every effort be made for consensus to be reached on one recommendation at the Commission session. In that regard, it was stated that, in the absence of an intellectual-property specific recommendation, the general recommendations of the Guide as to the law applicable to security rights in intangible assets would apply (see recommendations 208 and 218, subpara. (b)).

L. Transition (A/CN.9/WG.VI/WP.42/Add.6, paras. 41-45)

57. The Working Group adopted the substance of chapter XI on transition unchanged.

M. The impact of insolvency of a licensor or licensee of intellectual property on a security right in that party's rights under a license agreement (A/CN.9/WG.VI/WP.42/Add.6, paras. 46-67)

58. The Working Group adopted the substance of chapter XII on the impact of insolvency of a licensor or licensee of intellectual property on a security right in that party's rights under a license agreement unchanged.

V. Future work

59. The Working Group noted that the draft Supplement would be considered by the Commission at its forty-third session,¹² which was scheduled to take place in New York from 21 June to 9 July 2010.

60. The Working Group also noted that, in line with a decision taken by the Commission at its forty-second session¹² the Third International Colloquium on Secured Transactions was scheduled to take place in Vienna from 1 to 3 March 2010. The Working Group also noted that the purpose of the Colloquium was for the Secretariat to obtain the views of experts from Governments, international organizations and the private sector in order to prepare a note to the Commission as to possible future work in the area of secured transactions.

61. The Working Group engaged in a preliminary discussion of future work. A suggestion was made that issues pertaining to a possible international registry on security rights in intellectual property should also be included in the future work topics. In response, it was noted that such a project would need to be closely coordinated with WIPO as that topic, as well as the topic of intellectual property licensing, would generally fall under the mandate of WIPO. With regard to the topics that had already been presented as possible future topics, some support was expressed for work on regulations on registration of security rights and a model law on secured transactions based on the recommendations of the Guide. With regard to a supplement to the Guide on certain types of securities not covered by the Unidroit Convention on Substantive Rules for Intermediated Securities, it was observed that that work would have to be limited to non-intermediated securities as much work had already been done by Unidroit and the Hague Conference on intermediated securities.

Preface

[Note to the Working Group: The Working Group may wish to note that, for reasons of consistency with the Guide, the former section A of the Introduction has been shortened and is being presented as a preface to the draft Supplement.]

The Supplement to the *UNCITRAL Legislative Guide on Secured Transactions* (the “*Guide*”) was prepared by the United Nations Commission on International Trade Law (UNCITRAL).

At its thirty-ninth session, in 2006, the Commission considered and approved in principle the substance of the recommendations of the *Guide*. At that session, the Commission also considered its future work on secured financing law. Noting that the recommendations of the *Guide* generally applied to security rights in intellectual property rights, the Commission requested the Secretariat to prepare, in cooperation with relevant organizations and in particular World Intellectual Property Organization (WIPO), a note for submission to the Commission at its fortieth session, in 2007, discussing the scope of future work on intellectual property financing in a supplement (initially called annex) to the *Guide*. The Commission also requested the Secretariat to organize a colloquium on intellectual property financing ensuring to the maximum extent possible the participation of relevant international organizations and experts from various regions of the world.¹

¹ *Official Records of the General Assembly, Sixty-first Session, Supplement No. 17 (A/61/17)*, paras. 81, 82 and 86.

Pursuant to that decision of the Commission, the Secretariat organized in cooperation with WIPO a colloquium on security rights in intellectual property rights (Vienna, 18 and 19 January 2007). The colloquium was attended by experts on secured financing and intellectual property law, including representatives of Governments and national and international, governmental and non-governmental organizations. At the colloquium, several suggestions were made with respect to adjustments that would need to be made to the *Guide* to address issues specific to intellectual property financing.²

At the first part of its fortieth session, in June 2007, the Commission considered a note by the Secretariat entitled "Possible future work on security rights in intellectual property" (A/CN.9/632). The note took into account the conclusions reached at the colloquium. In order to provide sufficient guidance to States as to the adjustments that they might need to make in their laws to avoid inconsistencies between secured financing law and law relating to intellectual property, the Commission decided to entrust Working Group VI (Security Interests) with the preparation of a supplement to the *Guide* specific to security rights in intellectual property rights.³ At its resumed fortieth session, in December 2007, the Commission finalized and adopted the *Guide* on the understanding that a supplement to the *Guide* specific to security rights in intellectual property rights would subsequently be prepared.⁴

The work of Working Group VI was developed through 5 one-week sessions, the final session taking place in February 2010.⁵ At its fourteenth, fifteenth and sixteenth sessions, the Working Group referred certain insolvency-related matters to Working Group V (Insolvency Law),⁶ which Working Group V considered at its thirty-fifth, thirty-sixth and [...] sessions.⁷ In addition, the Working Group cooperated with WIPO and other intellectual property organizations from the public and the private sector to ensure that the Supplement would be sufficiently coordinated with law relating to intellectual property. Moreover, the Working Group closely cooperated with the Permanent Bureau of the Hague Conference in the preparation of the chapter of the Supplement on conflict of laws.⁸

[At its forty-third session, in 2010, the Commission considered and approved the Supplement. Subsequently, the General Assembly adopted resolution ...].

⁴ *Ibid.*, *Sixty-second Session, Supplement No. 17* (A/62/17 (Part II)), paras. 99 and 100.

⁵ The reports of the Working Group on its work during these 5 sessions are contained in documents A/CN.9/649, A/CN.9/667, A/CN.9/670, A/CN.9/685 and A/CN.9/689. During these sessions, the Working Group considered A/CN.9/WG.VI/WP.33 and Add.1, A/CN.9/WG.VI/WP.35 and Add.1, A/CN.9/WG.VI/WP.37 and Add.1-4, A/CN.9/WG.VI/WP.39 and Add.1-7, and A/CN.9/WG.VI/WP.42 and Add.1-7.

⁶ A/CN.9/667, paras. 129-140 and, A/CN.9/670, paras. 116-122, and A/CN.9/685, para. 95.

⁷ A/CN.9/666, paras. 112-117, A/CN.9/WG.V/WP.87, A/CN.9/671, paras. 125-127, and [A/CN.9/..., paras. ...].

⁸ At its sixteenth session, the Working Group considered a proposal by the Permanent Bureau of the Hague Conference on Private International Law (A/CN.9/WG.VI/WP.40).

Introduction¹

A. Purpose of the draft Supplement

[Note to the Working Group: For paras. 1-7, see A/CN.9/WG.VI/WP.39, paras. 13-18, A/CN.9/685, para. 21, A/CN.9/WP.37, paras. 9-14, A/CN.9/670, para. 18, A/CN.9/WG.VI/WP.35, paras.8-11, A/CN.9/667, paras.17-19 and A/CN.9/WG.VI/WP.33, paras. 76-82.]

1. The overall objective of the *Guide* is to promote low-cost credit by enhancing the availability of secured credit (see recommendation 1, subparagraph (a)). In line with this objective, the draft Supplement is intended to make credit more available and at lower cost to intellectual property owners and other intellectual property rights holders, thus enhancing the value of intellectual property rights. The draft Supplement, however, seeks to achieve this objective without interfering with fundamental policies of law relating to intellectual property (see section E below).

[Note to the Working Group: The Working Group may wish to note that new section A, Purpose of the draft Supplement has been added for reasons of consistency of the draft Supplement with the Guide and for the ease of understanding of the purpose of the Guide by the reader.]

B. The interaction between secured transactions law and law relating to intellectual property

2. With only limited exceptions, the law recommended in the *Guide* applies to security rights in all types of movable asset, including intellectual property (see recommendations 2 and 4-7). However, with respect to intellectual property, the law recommended in the *Guide* does not apply insofar as its provisions are inconsistent with national law or international agreements, to which the State enacting the law is a party, relating to intellectual property (see recommendation 4, subparagraph (b)).

3. Recommendation 4, subparagraph (b), sets out the basic principle with respect to the interaction of secured transactions and law relating to intellectual property. The meaning given to the term “intellectual property” is intended to ensure consistency of the *Guide* with laws and treaties relating to intellectual property. As used in the *Guide*, the term “intellectual property” means any asset considered to be intellectual property under law relating to intellectual property. In addition, references in the *Guide* to “intellectual property” are to be understood as references to “intellectual property rights” (see paras. 18-20 below). The term “law relating to intellectual property” is used in the draft Supplement to refer to national law or law flowing from international agreements, to which a State is a party, relating to intellectual property that governs specifically security rights in intellectual property,

¹ For the easy reference of the reader, the draft Supplement follows the order in which the issues are discussed in the *Guide* (that is, Introduction with purpose, terminology, examples and key objectives and fundamental policies, Scope, Creation of a security right, etc.). In each section, the draft Supplement summarizes briefly the general considerations of the *Guide* and then goes on to discuss how they apply to an intellectual property context. Therefore, the draft Supplement has to be read together with the *Guide*.

and not law that generally governs security rights in various types of asset and that may happen to govern security rights in intellectual property (see para. 22 below). The term includes both statutory and case law and is broader than the term “intellectual property law”, but narrower than general contract or property law. The scope of recommendation 4, subparagraph (b), will, consequently, be broader or narrower, depending on how a State defines the scope of intellectual property. It is understood that a State will do so in compliance with its international obligations flowing from intellectual property law treaties (such as various conventions administered by the World Intellectual Property Organization (WIPO) or the Agreement on Trade Related Aspects of Intellectual Property Rights (the “TRIPS Agreement”)), as provided in those treaties.

4. The purpose of recommendation 4, subparagraph (b), is to ensure that, when States adopt the recommendations of the *Guide*, they do not inadvertently change basic rules of law relating to intellectual property. As issues relating to the existence, validity and content of a grantor’s intellectual property rights are matters to which the *Guide* does not speak (see A/CN.9/WG.VI/WP.42/Add.1, section II.A.4), the occasions for possible conflict in regimes on these issues are limited. Nevertheless, in matters relating to the creation, third-party effectiveness, priority, enforcement of and law applicable to a security right in intellectual property, it is possible that in some States the two regimes will provide for different rules. Where this is the case, recommendation 4, subparagraph (b), preserves the intellectual-property-specific rule against being overridden inadvertently as a result of adoption by a State of the law recommended in the *Guide*.

5. It bears noting, however, that rules of law relating to intellectual property in some States relate only to forms of secured transactions that are not unique to intellectual property and that will no longer be available once a State adopts the law recommended in the *Guide* (for example, pledges, mortgages and transfers or trusts of intellectual property for security purposes). For this reason, States that adopt the law recommended in the *Guide* may also wish to review their law relating to intellectual property to coordinate it with the secured transactions law recommended in the *Guide*. In that connection, States enacting the law recommended in the *Guide* will have to ensure that their law reflects in particular the integrated and functional approach recommended in the *Guide*, without modifying the basic policies and objectives of their law relating to intellectual property.

6. The draft Supplement is intended to provide guidance to States with respect to such an integrated secured transactions and intellectual property law system. Building on the commentary and the recommendations of the *Guide*, the draft Supplement discusses how the commentary and recommendations of the *Guide* apply where the encumbered asset consists of intellectual property and, where necessary, adds new commentary and recommendations. As is the case with the other asset-specific commentary and recommendations, the intellectual-property-specific commentary and recommendations modify or supplement the general commentary and recommendations of the *Guide*. Accordingly, subject to contrary provisions of law relating to intellectual property and any asset-specific commentary and recommendations of the draft Supplement, a security right in intellectual property may be created, be made effective against third parties, have priority, be enforced and be made subject to applicable law as provided in the general recommendations of the *Guide*.

7. A State enacting the law recommended in the *Guide* with a view to making credit more available and at lower cost to owners of assets such as goods and receivables will most likely wish to make the benefits of such modernization available also to the owners of intellectual property, thereby enhancing the value of the intellectual property. This may have an impact on law relating to intellectual property. While it is not the purpose of the draft Supplement to make any recommendations for changes to a State's law relating to intellectual property, as already mentioned, it may have an impact on that law. The draft Supplement discusses this impact and, occasionally, includes in the commentary modest suggestions for the consideration of enacting States (the expression used is "States might" or "States may wish to consider ...", rather than "States should"). These suggestions are based on the premise that, by enacting secured transactions laws of the type recommended by the *Guide*, States have made a policy decision to modernize their secured transactions law. The suggestions seek, therefore, to point out where this modernization might lead States to consider how best to coordinate their secured transactions law with their law relating to intellectual property. Thus, recommendation 4, subparagraph (b), is intended to foreclose only inadvertent change to law relating to intellectual property, not all change after careful consideration by a State enacting the law recommended in the *Guide*.

C. Terminology

[*Note to the Working Group: For paras. 8-32, see A/CN.9/WG.VI/WP.39, paras. 19-39, A/CN.9/685, para. 22, A/CN.9/WG.VI/WP.37, paras. 15-32, A/CN.9/670, paras. 19 and 20, A/CN.9/WG.VI/WP.35, paras. 12-21, A/CN.9/667, paras. 20-22, A/CN.9/WG.VI/WP.33, paras. 39-60 and A/CN.9/649, paras. 104-107.*]

(a) Acquisition security right

8. As used in the *Guide*, the term "acquisition security right" means a security right in a tangible asset (other than a negotiable instrument or negotiable document) that secures the obligation to pay any unpaid portion of the purchase price of the asset or an obligation incurred or credit otherwise provided to enable the grantor to acquire the asset. An acquisition security right need not be denominated as such. Under the unitary approach, the term includes a right that is a retention-of-title right or a financial lease right (see the term "acquisition security right", Introduction to the *Guide*, section B on terminology and interpretation).

9. For the purposes of the draft Supplement, the term includes a security right in intellectual property or a licence of intellectual property, provided that the security right secures the obligation to pay any unpaid portion of the acquisition price of the encumbered asset or an obligation incurred or credit otherwise provided to enable the grantor to acquire the encumbered asset.

(b) Consumer goods

10. The *Guide* uses the term "consumer goods" to refer to goods that a grantor uses or intends to use for personal, family or household purposes (see the term "consumer goods", Introduction to the *Guide*, section B on terminology and

interpretation). For the purposes of the draft Supplement, the term includes intellectual property or a licence of intellectual property used or intended by the grantor to be used for personal, family or household purposes.

(c) Competing claimant

11. In secured transactions law, the concept of a “competing claimant” is used to identify parties other than the secured creditor in a specific security agreement that might claim a right in an encumbered asset or the proceeds from its disposition (see the term “competing claimant”, Introduction to the *Guide*, section B on terminology and interpretation). Thus, the *Guide* uses the term “competing claimant” in the sense of a claimant that competes with a secured creditor (that is, the claimant is another secured creditor with a security right in the same asset, another creditor of the grantor that has a right in the same asset, the insolvency representative in the insolvency of the grantor, a buyer or other transferee, or a lessee or licensee of the same asset). The term “competing claimant” is essential for the application in particular of the priority rules recommended in the *Guide*, such as for example of the rule in recommendation 76, under which a secured creditor with a security right in receivables that registered a notice of its security right in the general security rights registry has priority over another secured creditor that acquired a security right in the same receivables from the same grantor before the other secured creditor but failed to register a notice of its security right.

12. In law relating to intellectual property, however, the notion of a “competing claimant” is not used, and priority conflicts typically refer to conflicts among intellectual property transferees and licensees, even if no conflict with a secured creditor is involved (infringers are not competing claimants and, if an alleged infringer proves that it has a legitimate claim, it is a transferee or licensee, and not an infringer). Secured transactions law does not interfere with the resolution of such conflicts that do not involve a secured creditor (including a transferee in a transfer for security purposes that is treated in the *Guide* as a secured creditor). Thus, a conflict between two outright transferees would not be covered by the *Guide*. However, a conflict between a transferee for security purposes of intellectual property rights and an outright transferee of the same intellectual property rights would, subject to the limitation of recommendation 4, subparagraph (b), be covered by the *Guide* (see recommendations 78 and 79).

(d) Encumbered asset

13. The *Guide* uses the term “encumbered asset” to denote an asset that is subject to a security right (see the term “encumbered asset”, Introduction to the *Guide*, section B on terminology and interpretation). While the *Guide* refers by convention to a security right in an “encumbered asset”, what is really encumbered and meant is “whatever right the grantor has in an asset and intends to encumber”.

14. The *Guide* also uses various terms to denote the particular type of intellectual property that may be used as an encumbered asset without interfering with the nature, the content or the legal consequences of such terms for purposes of law relating to intellectual property, as well as contract and property law. These types of intellectual property that may be used as security for credit include the rights of an intellectual property owner (“owner”), the rights of an assignee or successor in title to an owner, the rights of a licensor or licensee under a licence agreement and the

rights in intellectual property used with respect to a tangible asset, provided that the intellectual property right is described as an encumbered asset in the security agreement. The owner, licensor or licensee may encumber all or part of its rights, if they are transferable under law relating to intellectual property.

15. Under law relating to intellectual property, the rights of an intellectual property owner generally include the right to prevent unauthorized use of its intellectual property, the right to renew registrations, the right to sue infringers and the right to transfer and grant licences in its intellectual property. For example, in the case of a patent, the patent owner has exclusive rights to prevent certain acts, such as making, using or selling the patented product without the patent owner's authorization.

16. Typically, under law relating to intellectual property and contract law, the rights of a licensor and a licensee depend on the terms of the licence agreement (in the case of a contractual licence), law (in the case of compulsory or statutory licence) or the legal consequences of specific conduct (in the case of an implied licence). In addition, normally, the rights of a licensor include the right to claim payment of royalties and to terminate the licence agreement. Similarly, the rights of a licensee include the authorization given to the licensee to use the licensed intellectual property in accordance with the terms of the licence agreement and possibly the right to enter into sub-licence agreements and the right to obtain payment of sub-royalties (see the term "licence", paras. 23-25 below). The rights of a grantor of a security right in a tangible asset with respect to which intellectual property is used are described in the agreement between the secured creditor and the grantor (owner, licensor or licensee of the relevant intellectual property) in line with secured transactions law and law relating to intellectual property.

(e) Grantor

17. The *Guide* uses the term "grantor" to denote the person creating a security right to secure either its own obligation or that of another person (see the term "grantor", Introduction to the *Guide*, section B on terminology and interpretation). As already mentioned, in a secured transaction relating to intellectual property, the encumbered asset may be the rights of the intellectual property owner, the rights of a licensor (including the right to the payment of royalties) or the authorization of the licensee to use or exploit the licensed intellectual property, the right to grant sub-licences and the right to the payment of sub-royalties. Thus, depending on the kind of intellectual property that is encumbered, the term "grantor" will refer to an owner, a licensor or a licensee (although, unlike an owner, a licensor or a licensee may not necessarily enjoy exclusive rights as this term is understood under law relating to intellectual property). Finally, as is the case with any secured transaction relating to other types of movable asset, the term "grantor" may reflect a third party granting a security right in its intellectual property to secure the obligation owed by a debtor to a secured creditor.

(f) Intellectual property

18. As used in the *Guide* (see the term "intellectual property", Introduction to the *Guide*, section B on terminology and interpretation), the term "intellectual property" means copyrights, trademarks, patents, service marks, trade secrets and designs and any other asset considered to be intellectual property under the domestic law of the

enacting State or under an international agreement to which the enacting State is a party (such as, for example, neighbouring, allied or related rights² or plant varieties). Furthermore, references in the *Guide* to “intellectual property” are to be understood as references to “intellectual property rights”, such as the rights of an intellectual property owner, licensor or licensee. The commentary to the *Guide* explains that the meaning given to the term “intellectual property” in the *Guide* is intended to ensure consistency of the *Guide* with law relating to intellectual property, while at the same time respecting the right of a State enacting the recommendations of the *Guide* to align the definition with its own law, whether national law or law flowing from treaties (see Introduction to the *Guide*, footnote 24). An enacting State may add to the list mentioned above or remove from it types of intellectual property so that it conforms to national law.³ As a result, the *Guide* treats as “intellectual property”, for the purposes of the *Guide*, whatever an enacting State considers to be intellectual property in conformity with its national law and compliance with its international obligations.

19. For purposes of secured transactions law, the intellectual property right itself is distinct from the income streams that flow from it, such as the income received, for example, from the exercise of broadcasting rights. Under the *Guide* these income streams are characterized as “receivables” and could be the original encumbered asset, if described as such in the security agreement, or proceeds of intellectual property, if the original encumbered asset is intellectual property. However, this treatment of these income streams in the *Guide* does not preclude a different treatment for purposes of law relating to intellectual property. For example, for the purposes of law relating to intellectual property, a right of a licensor to payment of equitable remuneration might be treated as part of the intellectual property right of the licensor (for the treatment of receivables under secured transactions law and law relating to intellectual property, see A/CN.9/WG.VI/42/Add.2, paras. 21-29).

20. It is also important to note that a licence agreement relating to intellectual property is not a secured transaction and a licence with a right to terminate the licence agreement is not a security right. Thus, secured transactions law does not affect the rights and obligations of a licensor or a licensee under a licence agreement. For example, the owner’s, licensor’s or licensee’s ability to limit the transferability of its intellectual property rights remains unaffected. In any case, it should be noted that, while the question whether an intellectual property owner may grant a licence is a matter of law relating to intellectual property, the question whether the owner’s secured creditor may prohibit by agreement the owner from granting a licence is a matter of secured transactions law addressed in the draft Supplement (see A/CN.9/WG.VI/WP.42/Add.5, para. 1).

² Closely related to “copyright” are “neighbouring rights”, also called allied or related rights. These are rights that are said to be “in the neighbourhood” of copyright. The term typically covers the rights of performers, producers of phonograms and broadcasting organizations, but in some countries it can also include the rights of film producers, or rights in photographs. Sometimes these are called *Diritti Connessi* (“connected rights”) or *Verwandte Schutzrechte* (“related rights”) or *Droits Voisins* (“neighbouring rights”), but the common term is the English “neighbouring rights.” Internationally, neighbouring rights are generally protected under the Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations of 26 October 1961. Additional protections are accorded to certain performers and phonogram producers in the WIPO Performances and Phonograms Treaty of 20 December 1996.

³ See footnote 24 of the Introduction to the *Guide*.

(g) Inventory

21. As used in the *Guide*, the term “inventory” means tangible assets held for sale or lease in the ordinary course of a grantor’s business, as well as raw and semi-processed materials (work-in-process) (see the term “inventory”, Introduction to the *Guide*, section B on terminology and interpretation). For the purposes of the draft Supplement, the term includes intellectual property or a licence of intellectual property used or intended by the grantor to be used for sale or licence in the ordinary course of the grantor’s business.

(h) Law and law relating to intellectual property

22. As already mentioned (see para. 3 above), the commentary of the *Guide* also clarifies that references to the term “law” throughout the *Guide* include both statutory and non-statutory law. In addition, the commentary on the *Guide* clarifies that the expression “law relating to intellectual property” (see recommendation 4, subparagraph (b)) is broader than intellectual property law (dealing, for example, directly with patents, trademarks or copyrights) but narrower than general contract or property law (see Introduction to the *Guide*, para. 19). In particular, the expression “law relating to intellectual property” means national law or law flowing from international agreements, to which a State is a party, relating to intellectual property that governs specifically security rights in intellectual property, and not law that generally governs security rights in various types of asset and, as a result, may govern security rights in intellectual property. An example of a “law relating to intellectual property” might be law that applies specifically to pledges or mortgages of copyrights in software, assuming that it is part of the law relating to intellectual property and is not simply the application of a State’s general law of pledges or mortgages in an intellectual property context.

(i) Licence

23. The *Guide* also uses the term “licence” (which includes a sub-licence) as a general concept, while recognizing that, under law relating to intellectual property, a distinction may often be drawn: (a) between contractual licences (whether express or implied) and compulsory or statutory licences, in which a licence is not the result of an agreement; (b) between a licence agreement and the licence that is granted by the agreement (for example, the authorization to use or exploit the licensed intellectual property); and (c) between exclusive licences (which, under law relating to intellectual property in some States, may be treated as transfers) and non-exclusive licences. In addition, under the *Guide*, a licence agreement does not in itself create a security right and a licence with a right to terminate the licence agreement is not a security right.

24. However, the exact meaning of these terms is left to law relating to intellectual property, as well as to contract and other law that may be applicable (such as the Joint Recommendation Concerning Trademark Licences, adopted by the Paris Union Assembly and the WIPO General Assembly (2000)⁴ and the Singapore Treaty on the Law of Trademarks (2006)).⁵ In particular, a security right in rights under a licence agreement does not affect the terms and conditions of the licence agreement (in the

⁴ www.wipo.int/export/sites/www/about-ip/en/development_iplaw/pdf/pub835.pdf.

⁵ www.wipo.int/treaties/en/ip/singapore.

same way that a security right in a sales receivable does not affect the terms and conditions of the sales contract). This means, *inter alia*, that the secured creditor does not acquire more rights than its grantor (see recommendation 13). For example, the *Guide* does not interfere with the limits or terms of a licence agreement that may refer to the description of the specific intellectual property, the authorized or restricted uses, geographic area of use and the duration of use. As a result, an exclusive licence to exercise the “theatrical rights” in Film A in Country X for “10 years starting 1 January 2008” may be given and it will be different from an exclusive licence to exercise the “video rights” in Film A in Country Y for “10 years starting 1 January 2008”.

25. In addition, the *Guide* does not affect in any way the particular characterization of rights under a licence agreement given by law relating to intellectual property. For example, the *Guide* does not affect the nature of rights created under an exclusive licence agreement as rights in rem or the nature of an exclusive licence as a transfer, as is the case under some laws relating to intellectual property. Moreover, the *Guide* does not affect any limitations included in the licence agreement as to the transferability of licensed rights (see A/CN.9/WG.VI/WP.42/Add.2, para. 31, A/CN.9/WG.VI/WP.42/Add.3, paras. 40-41, and A/CN.9/WG.VI/WP.42/Add.4, paras. 15 and 24-25).

(j) Receivable and assignment

26. The term “receivable” is used in the *Guide* (see the term “receivable”, Introduction to the *Guide*, section B on terminology and interpretation) and in the United Nations Convention on the Assignment of Receivables in International Trade (hereinafter referred to as the “United Nations Assignment Convention”; see article 2)⁶ to reflect a right to payment of a monetary obligation. Thus, for the purposes of the *Guide*, the term includes the right of a licensor (that may be an owner or not) or a licensee/sub-licensor to obtain payment of licence royalties (without affecting the terms and conditions of the licence agreement, such as an agreement between the licensor and the licensee that the licensee will not create a security right in its right to payment of sub-royalties). The exact meaning and scope of licence royalties are subject to the terms and conditions of the licence agreement relating to the payment of royalties, such as that payments are to be staggered or that there might be percentage payments depending on market conditions or sales figures (for a discussion of the term “secured creditor”, see paras. 29-30 below; for a discussion of the distinction between a secured creditor and an intellectual property owner, see A/CN.9/WG.VI/WP.42/Add.2, paras. 10-12).

27. The term “assignment” is used in the *Guide* with respect to receivables to denote not only outright assignments but also assignments for security purposes (treated under the *Guide* as secured transactions) and transactions creating a security right in a receivable. To avoid creating the impression that the recommendations of the *Guide* relating to assignments of receivables apply also to “assignments” of intellectual property (as the term “assignment” is used in law relating to intellectual property), the term “transfer” (rather than the term “assignment”) is used in the draft Supplement to denote the transfer of the rights of an intellectual property owner. While the law recommended in the *Guide* applies to all types of assignment of

⁶ United Nations publication Sales No. E.04.V.14.

receivables, it does not apply to outright transfers of any right other than a receivable (see recommendations 2, subparagraph (d), and 3; see also A/CN.9/WG.VI/WP.42/Add.1, paras. 5-7). It should also be noted that, while what is a “transfer” or a “licence” is left to the relevant property or contract law, the term “transfer” is not used in the *Guide* to denote a licence agreement.

(k) Owner

28. The *Guide* does not explain the term “owner” of an encumbered asset, whether that asset is intellectual property or not. This is a matter of the relevant property law. Accordingly, the *Guide* uses the term “intellectual property owner” referring to the understanding of this term under law relating to intellectual property, generally denoting the person that is entitled to enforce the exclusive rights flowing from intellectual property or its transferee, that is, the creator, author or inventor or their successor in title (as to whether a secured creditor may exercise the rights of an intellectual property owner, see paras. 29-30 below and A/CN.9/WG.VI/WP.42/Add.2, paras. 10-12).

(l) Secured creditor

29. The *Guide* recognizes that a security agreement creates a security right, that is, a limited property right, not an ownership right, in an encumbered asset, provided, of course, that the grantor has the right to create a security right in the asset (see recommendation 13). Thus, in the *Guide*, the term “secured creditor” (which includes a transferee by way of security) is used to denote a person that has a security right and not an outright transferee or an owner (although, for convenience of reference, the term includes an outright assignee of receivables; see the term “secured creditor”, Introduction to the *Guide*, section B on terminology and interpretation). In other words, a secured creditor that acquires a security right under the *Guide* is not presumed to acquire ownership thereby. This approach is mainly intended to protect the grantor/owner that retains ownership and often possession or control of the encumbered asset, while sufficiently securing the secured creditor if the grantor or other debtor defaults on the payment of the secured obligation. In any case, secured creditors normally do not wish to accept the responsibilities and costs of ownership, and the *Guide* does not require a secured creditor to do so. This means, for example, that, even after the creation of a security right, the owner of the encumbered asset may exercise all its rights as an owner (subject, of course, to any limitations it may have agreed to with the secured creditor). It should also be noted that, even when the secured creditor disposes of the encumbered asset enforcing its security right after default, the secured creditor does not necessarily become an owner. In this case, the secured creditor merely exercises its security right. Only where, after default, the secured creditor becomes the owner after exercising the remedy of proposing to acquire the grantor’s ownership rights in the encumbered asset in total or partial satisfaction of the secured obligation (in the absence of any objection by the grantor, the debtor and any other affected person; see recommendations 157-158), or acquires the grantor’s ownership rights by purchasing the asset at a sale in the context of an enforcement, will the secured creditor ever become an owner.

30. For the purposes of secured transactions law, this characterization of a security agreement and the rights of a secured creditor applies also to situations where the

encumbered asset is intellectual property. However, the *Guide* does not affect different characterizations under law relating to intellectual property law with respect to matters specific to intellectual property. Under law relating to intellectual property, a security agreement may be characterized as a transfer of the intellectual property rights of an owner, licensor or licensee and the secured creditor may have the rights of an owner, licensor or licensee, such as the right to preserve the encumbered intellectual property and thus to deal with State authorities, grant licences or pursue infringers. So, for example, nothing in secured transactions law prevents a secured creditor from agreeing with the grantor/owner, licensor or licensee to become an owner, licensor or licensee of the encumbered intellectual property (see recommendation 10 and A/CN.9/WG.VI/WP.42/Add.5, para. 1). If the agreement does or is intended to secure the performance of an obligation and intellectual property law permits a secured creditor to become an owner, licensor or licensee, the term “secured creditor” may denote an owner, licensor or licensee to the extent permitted under law relating to intellectual property. In such a case, secured transactions law will apply with respect to issues normally addressed in that law, such as the creation, third-party effectiveness, priority, enforcement of and law applicable to a security right (subject to the limitation of recommendation 4, subparagraph (b)); and law relating to intellectual property will apply with respect to issues that are normally addressed in that law, such as dealing with State authorities, granting licences or pursuing infringers (for the distinction between a secured creditor and an owner with respect to intellectual property, see also A/CN.9/WG.VI/WP.42/Add.2, paras. 10-12).

(m) Security right

31. The *Guide* uses the term “security right” to refer to all types of property right in a movable asset that are created by agreement to secure payment or other performance of an obligation, irrespective of how they are denominated (see the term “security right”, Introduction to the *Guide*, section B on terminology and interpretation, and recommendations 2, subparagraph (d), and 8). Thus, the term “security right” would cover the right of a pledge or mortgagee of intellectual property, as well as of a transferee in a transfer for security purposes. States that adopt the law recommended in the *Guide* may wish to review their law relating to intellectual property and coordinate the terminology used in that law with the terminology used in the law recommended in the *Guide*.

(n) Transfer

32. While the *Guide* uses the term “outright transfer” to denote transfer of ownership (see chapter I of the *Guide* on scope, para. 25), the exact meaning of this term is a matter of property law. The *Guide* also uses the term “transfer for security purposes” to refer to a transaction that is in name only a transfer but functionally a secured transaction. In view of the functional, integrated and comprehensive approach it takes to secured transactions (see recommendations 2, subparagraph (d), and 8), for the purposes of secured transactions law, the *Guide* treats a transfer for security purposes as a secured transaction. To the extent that a different characterization of a transfer for security purposes in other law would apply to all assets, this is not an issue with respect to which the *Guide* would defer to law relating to intellectual property (see recommendation 4, subparagraph (b), and paras. 2-7 above). However, this approach does not affect a different

characterization of a transfer other than an outright transfer for the purposes of law relating to intellectual property. For example, under intellectual property law, the expression “transfer other than an outright transfer” may denote a transfer of parts of exclusive rights from a licensor to a licensee where the licensor retains some rights (for a discussion of outright transfers of intellectual property, see A/CN.9/WG.VI/WP.42/Add.1, paras. 5-7).

D. Valuation of intellectual property to be encumbered

[Note to the Working Group: For paras. 33-45, see A/CN.9/WG.VI/WP.39, paras. 40-52, A/CN.9/685, para. 23, A/CN.9/WG.VI/WP.37, paras. 33-46, A/CN.9/670, paras. 21-26, A/CN.9/WG.V/WP.35, paras. 22-41, A/CN.9/667, paras. 23 and 24, A/CN.9/WG.VI/WP.33, paras. 8-21, and A/CN.9/649, para. 108.]

33. The valuation of assets to be encumbered is an issue that any prudent grantor and secured creditor have to address irrespective of the type of asset to be encumbered. However, valuation of intellectual property may be harder at least to the extent that it raises the issue whether intellectual property is an asset that may be exploited economically to generate income. For example, once a patent is created, the question arises whether it has any commercial application and, if so, what would be the amount of income that could be generated from the sales of any patented product.

34. Secured transactions law cannot answer this question. Still, insofar as it affects the use of intellectual property as security for credit, some of the complexities involved in appraising the value of intellectual property need to be understood and addressed. For example, one issue is that, although the appraisal must take into account the value of the intellectual property itself and the expected cash flow, there are no universally accepted formulae for making this calculation. However, because of the increasing importance of intellectual property as security for credit, in some States, lenders and borrowers are often able to seek guidance from independent appraisers of intellectual property. In addition, parties in some States may be able to rely on valuation methodologies developed by national institutions, such as bank associations. Moreover, parties may be able to rely on training for valuation of intellectual property in general or for the purpose of licence agreements in particular provided by international organizations, such as WIPO. Parties may also be able to rely on standards for the valuation of intellectual property as assets that can be used as security for credit developed by other international organizations, such as the Organization for Economic Cooperation and Development.

E. Examples of financing practices relating to intellectual property

35. Secured transactions relating to intellectual property can usefully be divided into two broad categories. The first category consists of transactions in which the intellectual property rights themselves serve as security for the credit (that is, the rights of an owner, the rights of a licensor or the rights of a licensee). In these transactions, the provider of credit is granted a security right in patents, trademarks, copyrights or other intellectual property rights of the borrower. Examples 1 through 4 below each involve such a situation. In example 1, the encumbered assets are the

rights of an owner. In examples 2 and 3, the encumbered assets are the rights of a licensor, and, in example 4, the encumbered assets are the rights of a licensee.

36. The second category of transaction involves financing transactions that involve intellectual property in combination with other movable assets, such as equipment, inventory or receivables. An illustration of this type of transaction is found in Example 5, which involves a credit facility to a manufacturer, secured by a security right covering substantially all of the manufacturer's assets, including its intellectual property rights.

37. Each of the examples illustrates how owners, licensors and licensees of intellectual property can use these assets as security for credit. In each case, a prudent prospective lender will engage in due diligence to ascertain the nature and extent of the rights of the owners and licensees of the intellectual property involved, and to evaluate the extent to which the proposed financing would or would not interfere with such rights. The ability of a lender to address these issues in a satisfactory manner, obtaining consents and other agreements where necessary from the owners of the intellectual property, will affect the lender's willingness to extend the requested credit and the cost of such credit. Each of these categories of transaction involves not only different types (or combinations) of encumbered assets, but also presents different legal issues for a prospective lender or other credit provider.⁷

Example 1 (rights of an owner in a portfolio of patents and patent applications)

38. Company A, a pharmaceutical company that is constantly developing new drugs, wishes to obtain a revolving line of credit from Bank A secured in part by Company A's portfolio of existing and future drug patents and patent applications. Company A provides Bank A with a list of all of its existing patents and patent applications, as well as their chain of title. Bank A evaluates which patents and patent applications it will include in the "borrowing base" (that is, the pool of patents and patent applications to which Bank A will agree to attribute value for borrowing purposes), and at what value they will be included. In connection therewith, Bank A obtains an appraisal of the patents and patent applications from an independent appraiser of intellectual property. Bank A then obtains a security right in the portfolio of patents and patent applications and registers a notice of its security right in the appropriate national patent registry (assuming that the applicable law provides for registration of security rights in the patents registry). When Company A obtains a new patent, it provides its chain of title and valuation to Bank A for inclusion in the borrowing base. Bank A evaluates the information, determines how much additional credit it will extend based on the new patent, and adjusts the borrowing base. Bank A then makes appropriate registrations in the patent registry reflecting its security right in the new patent.

⁷ Some of these questions might be addressed in asset-specific intellectual property legislation. For example, article 19 of the Council Regulation (EC) No. 40/94 on the Community Trademark provides that a security right may be created in a community trademark and, on request of one of the parties, such a right may be registered in the community trademark registry.

Example 2 (rights of a licensor in royalties from the licence of visual art)

39. Company B, a publisher of comic books, licenses its copyrighted characters to a wide array of manufacturers of clothing, toys, interactive software and accessories. The licensor's standard form of licence agreement requires licensees to report sales, and pay royalties on such sales, on a quarterly basis. Company B wishes to borrow money from Bank B secured by the anticipated stream of royalty payments arising under these licence agreements. Company B provides Bank B with a list of the licences, the credit profile of the licensees, and the status of each licence agreement. Bank B then requires Company B to obtain an "estoppel certificate" from each licensee verifying the existence of the licence, the absence of default and the amount due, and confirming the licensee's agreement to pay future royalties to appropriate party (for example, Company B, Bank B or an escrow account) until further notice.

Example 3 (rights of a licensor in royalties from the licence of a motion picture)

40. Company C, a motion picture company, wishes to produce a motion picture. Company C sets up a separate company to undertake the production and hire the individual writers, producers, directors and actors. The production company obtains a loan from Bank C secured by the copyright, service contracts and all revenues to be earned from the exploitation of the motion picture in the future. The production company then enters into licence agreements with distributors in multiple countries who agree to pay "advance guarantees" against royalties upon completion and delivery of the picture. For each licence, the production Company C, Bank C and the distributor/licensee enter into an "acknowledgement and assignment" agreement under which the licensee acknowledges the prior security right of Bank C and the assignment of its royalty payments to Bank C, while Bank C agrees that, in case of enforcement of its security right in the licensor's rights, it will not terminate the licence so long as the licensee makes payments and otherwise abides by the terms of the licence agreement.

Example 4 (authorization of a licensee to use or exploit licensed software)

41. Company D is a developer of sophisticated software used in various architectural applications. In addition to certain software components created by the company's in-house software engineers (which the company licenses to its customers), Company D also incorporates into its products software components that it licenses from third parties (and then sub-licenses to its customers). Company D wishes to borrow money from Bank D secured by a security right in its rights as licensee of intellectual property from third parties, that is, its right to use and incorporate into its software some software components that it licenses from third parties. For evidence, the software developer can provide Bank D with a copy of its software components licence agreement.

Example 5 (security right in all assets of an enterprise)

42. Company E, a manufacturer and distributor of cosmetics, wishes to obtain a €200 million credit facility to provide ongoing working capital for its business. Bank E is considering extending this facility, provided that the facility is secured by a so called "enterprise mortgage", "floating charge" or all asset-security right granting to the bank a security right in substantially all of Company E's existing and

future assets, including all existing and future intellectual property rights that it owns or licenses from third parties.

43. Apart from the transactions mentioned above, there are transactions in which assets other than intellectual property, such as inventory or equipment, serve as security for credit, while the value of these assets is based to some extent upon the intellectual property with which they are associated. This category of transactions is illustrated by examples 6 and 7 below. As discussed in the draft Supplement (see A/CN.9/WG.VI/WP.42/Add.2, paras. 32-36), a security right in a tangible asset does not automatically extend to the intellectual property used with respect to that asset. If a secured creditor wishes to take a security right in such intellectual property, the intellectual property has to be described in the security agreement as part of the encumbered asset.

Example 6 (rights of a manufacturer of trademarked inventory)

44. Company F, a manufacturer of designer jeans and other high-fashion clothing, wishes to borrow money from Bank F secured in part by Company F's inventory of finished products. Many of the items manufactured by Company F bear well-known trademarks licensed from third parties under licence agreements that give Company F the right to manufacture and sell the products. Company F provides Bank F with its trademark licence agreements evidencing its right to use the trademarks and its obligations to the trademark owner. Bank F extends credit to Company F against the value of the inventory.

Example 7 (rights of a distributor of trademarked inventory)

45. Company G, one of Company F's distributors (see example 6), wishes to borrow money from Bank G secured in part by its inventory of designer jeans and other clothing that it purchases from Company F, a significant portion of which bears well-known trademarks licensed by Company G from third parties. Company G provides Bank G with invoices from Company F evidencing that it acquired the jeans in an authorized sale, or copies of the agreements with Company F evidencing that the jeans distributed by Company G are genuine. Bank G extends credit to Company G against the value of the inventory.

F. Key objectives and fundamental policies

[Note to the Working Group: For paras. 46-52, see A/CN.9/WG.VI/WP.39, paras. 53-59, A/CN.9/685, para. 25, A/CN.9/WG.VI/WP.37, paras. 47-53, A/CN.9/670, para. 27, A/CN.9/WG.VI/WP.35, paras. 42-45, A/CN.9/667, paras. 25-28, A/CN.9/WG.VI/WP.33, paras. 61-75, and A/CN.9/649, paras. 88-97.]

46. As already mentioned (see para. 1 above), the overall objective of the *Guide* is to promote secured credit. In order to achieve this general objective, the *Guide* elaborates and discusses several additional objectives, including the objectives of predictability and transparency (see Introduction to the *Guide*, section D.2). The *Guide* also rests on and reflects several fundamental policies. These include providing for comprehensiveness in the scope of secured transactions laws, the integrated and functional approach to secured transactions (under which all transactions performing security functions, however denominated, are considered to

be security devices) and the possibility of granting a security right in future assets (see Introduction to the *Guide*, section D.3).

47. These key objectives and fundamental policies are equally relevant to secured transactions relating to intellectual property. Accordingly, the overall objective of the *Guide* with respect to intellectual property is to promote secured credit for businesses that own or have the right to use intellectual property, by permitting them to use rights pertaining to intellectual property as encumbered assets, without interfering with the legitimate rights of the owners, licensors and licensees of intellectual property under law relating to intellectual property, as well as under contract or general property law. Similarly, all the objectives and fundamental policies mentioned above apply to secured transactions in which the encumbered asset is or includes intellectual property. For example, the *Guide* is designed to:

- (a) Allow persons with rights in intellectual property to use intellectual property as security for credit (see Key objective 1, subparagraph (a));
- (b) Allow persons with rights in intellectual property to use the full value of their assets to obtain credit (see Key objective 1, subparagraph (b));
- (c) Enable persons with rights in intellectual property to create a security right in such rights in a simple and efficient manner (see Key objective 1, subparagraph (c));
- (d) Allow parties to secured transactions relating to intellectual property maximum flexibility to negotiate the terms of their security agreement (see Key objective 1, subparagraph (i));
- (e) Enable interested parties to determine the existence of security rights in intellectual property in a clear and predictable way (see Key objective 1, subparagraph (f));
- (f) Enable secured creditors to determine the priority of their security rights in intellectual property in a clear and predictable way (see Key objective 1, subparagraph (g)); and
- (g) Facilitate efficient enforcement of security rights in intellectual property (see Key objective 1, subparagraph (h)).

48. A general policy objective of law relating to intellectual property law is to prevent unauthorized use of intellectual property or to protect the value of intellectual property and thus to encourage further innovation and creativity. To accomplish this general policy objective, law relating to intellectual property accords certain exclusive rights to intellectual property owners, licensors or licensees. To ensure that the key objectives of secured transactions law will be achieved in a way that does not interfere with the objectives of intellectual property law and thus provide mechanisms to fund the development and dissemination of new works, the *Guide* states a general principle for dealing with the interaction of secured transactions law and law relating to intellectual property. The principle is set out in recommendation 4, subparagraph (b) (see paras. 2-7 above and A/CN.9/WG.VI/WP.42/Add.1, section II, A.4).

49. At this stage, it is sufficient to note that the regime elaborated in the *Guide* does not, in itself, in any way define the content of any intellectual property right, describe the scope of the rights that an owner, licensor or licensee may exercise or

impede their rights to preserve the value of their intellectual property rights by preventing their unauthorized use. Thus, the key objective of promoting secured credit with respect to intellectual property will be achieved in a way that does not interfere with the objectives of law relating to intellectual property to prevent unauthorized use of intellectual property or to protect the value of intellectual property and thus to encourage further innovation and creativity.

50. Similarly, this key objective of promoting secured credit without interfering with the objectives of law relating to intellectual property means that neither the existence of the secured credit regime nor the creation of a security right in intellectual property should diminish the value of intellectual property. Thus, for example, the creation of a security right in intellectual property should not be misinterpreted as constituting an inadvertent abandonment of intellectual property by the owner or the secured creditor (for example, failure to use a trademark properly, to use it on all products or services or to maintain adequate quality control may result in loss of value to, or even abandonment of, the intellectual property).

51. In addition, in the case of products or services associated with marks, this key objective means that secured transactions law should avoid causing consumer confusion as to the source of products or services. For example, if a secured creditor replaces the manufacturer's name and address on the products with a sticker bearing its name and address or retains the trademark and sells the products in a jurisdiction where the trademark is owned by a different person, confusion as to the source of the products is bound to arise.

52. Finally, this key objective means that secured transactions law should not provide that a security right in the rights of a licensee that are non-transferable without the consent of the licensor may be created without the consent of the licensor.

A/CN.9/WG.VI/WP.42/Add.1 (Original: English)**Note by the Secretariat on the Draft Supplement to the UNCITRAL
Legislative Guide on Secured Transactions dealing with security
rights in intellectual property, submitted to the Working Group on
Security Interests at its seventeenth session.****ADDENDUM****CONTENTS**

<i>Chapter</i>	<i>Paragraphs</i>
I. Scope of application and party autonomy.	1-24
A. Broad scope of application	1-21
B. Application of the principle of party autonomy to security rights in intellectual property.	22-24

I. Scope of application and party autonomy

[*Note to the Working Group: For paras. 1-24, see A/CN.9/WG.VI/WP.39/Add.1, paras. 1-24, A/CN.9/685, para. 26-27, A/CN.9/WG.VI/WP.37/Add.1, paras. 1-24, A/CN.9/670, paras. 28-34, A/CN.9/WG.VI/WP.35, paras. 46-67, A/CN.9/667, paras. 29-31, A/CN.9/WG.VI/WP.33, paras. 82-108 and A/CN.9/649, paras. 81-87.*]

A. Broad scope of application

1. The law recommended in the *Guide* applies to security rights in all types of movable asset, including intellectual property (for the meaning of the term “intellectual property”, see A/CN.9/WG.VI/WP.42, paras. 18-20). Under the law recommended in the *Guide*, a legal or natural person may create or acquire a security right, and a security right may secure any type of obligation (see recommendation 2). The law recommended in the *Guide* applies to all transactions serving security purposes, regardless of the form of the transaction or the terminology used by the parties (see recommendations 2, subparagraph (d), and 8). The draft Supplement has an equally broad scope with respect to security rights in intellectual property.

1. Encumbered assets covered

2. The characterization of different types of intellectual property and the question of whether each type of intellectual property is transferable and may thus be encumbered are matters of law relating to intellectual property. However, the *Guide* and the draft Supplement are based on the general assumption that a security right may be created in any type of intellectual property, such as a patent, a trademark or a copyright. The *Guide* and the draft Supplement are also based on the assumption that the encumbered asset may be any of the various exclusive rights of an owner,

the rights of a licensor, the rights of a licensee or the rights in intellectual property used with respect to a tangible asset.

3. However, there is an important limitation to the scope of the *Guide* and the draft Supplement. In line with general rules of property law, for a security right to be created in an asset, including intellectual property, the asset has to be transferable under property law, including law relating to intellectual property. For example, typically, under law relating to intellectual property, only the economic rights under a copyright may be transferred (and thus encumbered), but not the moral rights of an author. The law recommended in the *Guide* does not affect such limitations. More specifically, the law recommended in the *Guide* does not override provisions of any other law (including law relating to intellectual property) to the extent that they limit the creation or enforcement of a security right in or the transferability of specific types of asset, including intellectual property (see recommendation 18). The only exception to this rule relates to statutory limitations to the assignability of future receivables and receivables assigned in bulk, which would be removed or overridden by a rule or law enacting the relevant recommendation of the *Guide* (see recommendation 23).

2. Transactions covered

4. As already mentioned (see para. 1 above), the law recommended in the *Guide* applies to all transactions serving security purposes, regardless of how they are denominated by the parties or by law relating to intellectual property. In other words, even if law relating to intellectual property characterizes a transfer of intellectual property to a creditor for security purposes as a conditional transfer or even as an “outright” transfer, the law recommended in the *Guide* treats this transaction as giving rise to a security right and thus applies to it as long as it serves security purposes (see recommendations 2, subparagraph (d), and 8).

3. Outright transfers of intellectual property

5. To some extent, the law recommended in the *Guide* applies to an outright transfer (that is, a transfer of ownership) of a receivable (see recommendation 3). As the law recommended in the *Guide* treats royalties payable by the licensee of intellectual property to its licensor as receivables of the licensor, it applies, to some extent, to the outright transfer of the right to the payment of royalties (without affecting the terms and conditions of the licence agreement, such as an agreement between the licensor and the licensee that the licensee will not create a security right in its right to payment of sub-royalties). The inclusion of outright transfers of receivables in the scope of the law recommended in the *Guide* reflects the fact that such transfers are usually seen as financing transactions and are often difficult in practice to distinguish from loans against the receivables. However, simply because the law recommended in the *Guide* generally applies to outright transfers of receivables, this does not mean that the law re-characterizes an outright transfer of a receivable as a secured transaction as this could negatively affect important receivables financing practices, such as factoring (for outright transfers of receivables, see chapter I of the *Guide* on scope, paras. 25-31; for an example of a factoring transaction, see Introduction to the *Guide*, paras. 31-34).

6. The law recommended in the *Guide* also applies to transfers of all movable assets for security purposes, which it treats as a transaction giving rise to a security

right (see recommendations 2, subparagraph (d), and 8). Thus, if a State enacts the recommendations of the *Guide*, a transfer of intellectual property (whether of full title or rights limited in scope, time or territory) for security purposes would be treated as a secured transaction. This approach of the law recommended in the *Guide* is based on the principle that, in determining whether a transaction is a secured transaction or not, substance prevails over form. Accordingly, parties will be able to simply create a security right in intellectual property using the methods provided in the law recommended in the *Guide* without the need to adopt other formalities of a “transfer” for purposes of secured transactions law. This result will not affect licensing practices as, under the law recommended in the *Guide*, a licence agreement does not in itself create a security right and a licence with the right to terminate the licence agreement is not a security right (see A/CN.9/WG.VI/WP.42, paras. 30-32).

7. However, the law recommended in the *Guide* does not apply to outright transfers of any movable asset other than receivables, including intellectual property (the term assignment is used in the *Guide* only with respect to receivables to avoid any implication that the recommendations that apply to the assignment of receivables apply more generally to security rights in intellectual property; see Introduction to the *Guide*, footnote 24). The law recommended in the *Guide* may, however, affect the rights of an outright transferee of an encumbered asset to the extent that there is a priority conflict between the rights of that transferee and a secured creditor with a security right in the asset. The reason for the exclusion of outright transfers of any movable asset other than receivables, including intellectual property, is that they are normally subject to and sufficiently covered by other law, including law relating to intellectual property.

4. Limitations on scope

8. The *Guide* is based on the assumption that, in order to facilitate access to financing based on intellectual property, States enacting the recommendations of the *Guide* will include rules on security rights in intellectual property in their modern secured transactions regime. Accordingly, States enacting the recommendations of the *Guide* may wish to review their laws relating to intellectual property with a view to replacing all devices by way of which a security right in intellectual property may be created (including pledges, mortgages and conditional transfers) with the general concept of a security right. However, the *Guide* also recognizes that this must be done in a manner that is consistent with the policies and infrastructure of law relating to intellectual property of each enacting State.

9. The potential points of intersection between secured transactions law and law relating to intellectual property are dealt with in detail in the introduction (see A/CN.9/WG.VI/WP.42, Introduction, section B) and in various chapters of the draft Supplement. To provide a context for this more detailed discussion of the implications of recommendation 4, subparagraph (b), it is helpful at this point to delineate: (a) issues that are clearly the province of law relating to intellectual property and are not intended to be affected in any way by the *Guide*; and (b) issues on which the rules set out in the *Guide* may be pre-empted or supplemented by a rule of the law relating to intellectual property that regulates the same issue in a different manner from the *Guide*.

(a) **Distinction between intellectual property rights and security rights in intellectual property rights**

10. The law recommended in the *Guide* addresses only legal issues unique to secured transactions law as opposed to issues relating to the nature and legal attributes of the asset that is the object of the security right. The latter are the exclusive province of the body of property law that applies to the particular asset (with the partial unique exception of receivables to the extent that outright transfers of receivables are also covered in the law recommended in the *Guide*).

11. In the context of intellectual property financing, it follows that the law recommended in the *Guide* does not affect and does not purport to affect issues relating to the existence, validity, enforceability and content of a grantor's intellectual property rights. These issues are determined solely by law relating to intellectual property. Of course, the secured creditor will need to pay attention to those rules in order to assess the existence and quality of the assets to be encumbered, but this would be the case with any type of encumbered asset (for example, whether a right to payment of funds credited to a bank account exists, its exact content and enforceability are matters for law other than secured transactions law). What follows is an indicative, non-exhaustive list of issues that may be addressed by law relating to intellectual property relevant to that assessment. Law relating to intellectual property may deal with issues not included in the following list.

Copyright:

- (a) The determination of who is the author, joint author or right holder;
- (b) The duration of copyright protection;
- (c) The economic rights granted under the law and limitations on and exceptions to protection;
- (d) The nature of the protected subject matter (expression embodied in the work, as opposed to the idea behind it, and the dividing line between these);
- (e) The transferability of economic rights as a matter of law and the right to grant a licence;
- (f) The possibility to terminate a transfer or licence of copyright, or otherwise regulate a transfer or licence;
- (g) The scope and non-transferability of moral rights;
- (h) Presumptions relating to the exercise and transfer of rights and limitations relating to who may exercise rights;
- (i) Attribution of original ownership in the case of commissioned works and works created by an employee within the scope of employment.

Neighbouring (allied or related) rights:

- (a) The meaning and extent of neighbouring rights, including whether a State may recognize certain neighbouring rights within copyright or other law;
- (b) The persons entitled to claim neighbouring rights;

- (c) The type of protected expression;
- (d) The relationship between holders of neighbouring rights and holders of copyright;
- (e) The extent of exclusive rights or rights of equitable remuneration with respect to neighbouring rights;
- (f) Any connecting factors or formalities for protection, such as fixation, publication or notice;
- (g) Any limitations and exceptions to protection for neighbouring rights;
- (h) The duration of protection for neighbouring rights;
- (i) The transferability of any neighbouring rights as a matter of law and the right to grant licences;
- (j) The possibility to terminate a transfer or licence of neighbouring rights, or otherwise regulate a transfer or licence;
- (k) The scope, duration and non-transferability of any related moral rights.

Patents:

- (a) The determination of who is the patent owner or co-owner;
- (b) The validity of a patent;
- (c) The limitations on and exceptions to protection;
- (d) Scope and duration of protection;
- (e) The grounds for invalidity challenges (obviousness or lack of novelty);
- (f) Whether certain prior publication is excluded from prior art and thus may not preclude patentability;
- (g) Whether protection is granted to a person who first invented the patent or to a person who first filed an application.

Trademarks and service marks:

- (a) The determination of who is the first user or the owner of the mark;
- (b) Whether protection of the mark is granted to a person that uses the mark first or to a person that files an application first and whether protection is granted to a subsequently registered mark if it conflicts with a previously registered mark;
- (c) Whether ex ante use is a prerequisite to registration in a mark registry or whether the right is secured by initial registration and maintained by later use;
- (d) The basis of protection of the right (distinctiveness);
- (e) The basis for losing protection (holder's failure to ensure that mark retains its association with the owner's products in the marketplace), as in the case of:
 - (i) Licensing without the licensor directly or indirectly controlling the quality or character of the products or services associated with the mark (so called "naked licensing"); and

- (ii) Altering the mark so its appearance does not match the mark as registered;
- (f) Whether the mark may be transferred with or without goodwill.

(b) Areas of potential overlap between secured transactions law and law relating to intellectual property

12. The issues just addressed do not create any necessity for deference to law relating to intellectual property, since the law recommended in the *Guide* does not purport to address these issues. In other words, they are not issues where the principle of recommendation 4, subparagraph (b), has any application. The deference issue arises when the law relating to intellectual property of the State enacting the law recommended in the *Guide* provides an intellectual-property-specific rule on an issue falling within the scope of the law recommended in the *Guide*, namely, an issue relating to the creation, third-party effectiveness, priority, enforcement of or law applicable to a security right in intellectual property (see A/CN.9/WG.VI/WP.42, Introduction, Section B).

13. The precise scope and implications of deference to law relating to intellectual property cannot be stated in the abstract since there is great variation among States on the extent to which intellectual-property-specific rules have been established, and indeed even within the same State depending on which category of intellectual property is at issue. In addition, the harmonization and modernization of the secured financing law achieved through the law recommended in the *Guide* has its limitations, since that law addresses issues of secured transactions law only and, under certain conditions defers to law relating to intellectual property (see recommendation 4, subparagraph (b)). Another fact that limits the impact of the law recommended in the *Guide* is that law relating to intellectual property in the various States does not address all secured transactions law issues in a comprehensive or coordinated way. For this reason, optimal results can only be obtained if the harmonization and modernization of secured transactions law achieved through the law recommended in the *Guide* is accompanied by a review of intellectual property financing law to ensure compatibility and coordination with the secured transactions law recommended in the *Guide*. The following examples illustrate some typically encountered patterns.

Example 1

14. In some States, in which security rights are created by a transfer of title to the encumbered asset, a security right may not be created in a trademark. The reason is a concern that the secured creditor's title would impair the quality control required of the trademark holder. Adoption of the law recommended in the *Guide* by such a State would make transfers of title unnecessary to create a security right in a trademark and eliminate the rationale for this prohibition, since the grantor retains ownership of the encumbered trademark under the concept of security right of the law recommended in the *Guide*. Whether the secured creditor may become the owner, licensor or licensee of rights in the trademark for the purposes of law relating to intellectual property is a different matter (for purposes of secured transactions law, a secured creditor does not become the owner, licensor or licensee). Nonetheless, adoption of the law recommended in the *Guide* would not automatically eliminate the prohibition, because, to the extent that it is inconsistent

with law relating to intellectual property, the law recommended in the *Guide* defers to that law. As a result, a specific amendment to the relevant law relating to intellectual property may be needed to harmonize it with the law recommended in the *Guide*.

Example 2

15. In some States, only transfers of intellectual property (whether outright or for security purposes) may be registered in a specialized intellectual property registry and such registration is mandatory for the effectiveness of a transfer. In other States, a security right in intellectual property may also be registered and such registration has constitutive or third-party effects. In view of the principle of deference to law relating to intellectual property embodied in recommendation 4, subparagraph (b), adoption of the law recommended in the *Guide* would not affect the operation of such a rule and such specialized registration will continue to be required. However, deference to law relating to intellectual property will not always be sufficient to address the issue of coordination between the general security rights registry and intellectual property registries (see A/CN.9/WG.VI/WP.42/Add.3, paras. 15-20) or the question whether a security right may be created in and a notice may refer to a future intellectual property right (see A/CN.9/WG.VI/WP.42/Add.2, paras. 37-41, and A/CN.9/WG.VI/WP.42/Add.3, paras. 21-23).

Example 3

16. In some States, law relating to intellectual property provides for registration of both outright transfers and security rights in various intellectual property registries, but registration is not a mandatory precondition to effectiveness. However, registration has priority consequences in that rights arising from an unregistered transaction can be subject to rights arising from a registered transaction. In the case of such a State, recommendation 4, subparagraph (b), would preserve that rule of law relating to intellectual property of the State and, accordingly, a secured creditor desiring optimal protection may need to register both a notice of its security right in the general security rights registry and the security agreement or a notice thereof in the relevant intellectual property registry (although, if the intellectual property registry permits registration of security rights, registration there would be sufficient for all purposes). This is because: (a) registration in that State's general security rights registry is a necessary prerequisite to third-party effectiveness under secured transactions law (unless law relating to intellectual property allows registration of a security right in the relevant intellectual property registry to achieve third-party effectiveness); and (b) registration in the intellectual property registry will be necessary to protect the secured creditor against the risk of finding its security right affected by the rights of a competing transferee or secured creditor registered in the intellectual property registry pursuant to the priority rules of law relating to intellectual property.

17. In some States, registration of transfers and security rights in the relevant intellectual property registry provides protection only against a prior unregistered transfer or security right and only if the person with the registered right took without notice of the prior unregistered right (the law recommended in the *Guide* would defer to this rule as it is a rule of law relating to intellectual property rather than a general rule of secured transactions law present throughout the State's legal system; see recommendation 4, subparagraph (b)). In those States, adoption of the

law recommended in the *Guide* will raise the further question as to whether registration of a notice of a security right in intellectual property in the general security rights registry constitutes constructive notice to a subsequent transferee or secured creditor that registers its transfer or security right in the intellectual property registry. If so, under the law of such a State, it would be unnecessary for a secured creditor that has registered a notice of its security right in the general security rights registry to also register a document or notice thereof in the intellectual property registry in order to prevail as against subsequent transferees and secured creditors. Otherwise, under the law of that State, registration of a document or notice of the security right in the intellectual property registry may be required to gain priority over subsequent transferees and secured creditors.

Example 4

18. As a matter of law relating to intellectual property, some States provide for registration in the relevant intellectual property registry of a document or notice of a transfer of, but not of a security right in, intellectual property. In such situations, registration has priority consequences only as between transferees, and not as between a transferee and a secured creditor. In States that adopt this approach, a secured creditor will need to ensure that a document or notice of all transfers of intellectual property to its grantor is duly registered in the intellectual property registry so as to avoid the risk of the grantor's title being defeated by the subsequently registered rights of a transferee. In all other respects, however, the secured creditor's rights will be determined by the secured transactions regime. Likewise, the secured creditor will need to ensure that a document or notice of a transfer for security purposes made to it by the grantor is duly registered in the intellectual property registry in order to avoid the risk that the rights of a subsequent transferee of the grantor will defeat the rights arising from the security transfer in favour of the secured creditor.

Example 5

19. As a matter of law relating to intellectual property, in some States, registration of a document or notice of a transfer and a security right in an intellectual property registry is purely permissive and intended only to facilitate identification of the current owner. Failure to register neither invalidates the transaction nor affects its priority (although it might create evidentiary presumptions). In States that adopt this approach, the position is essentially the same as when no specialized registry exists at all, as is often the case for copyright. Where these issues are dealt with by law relating to intellectual property, the law recommended in the *Guide* defers to it. Where, however, these issues are left to be determined by general property law, no issue of deference arises since the pre-*Guide* rules were not derived from the law relating to intellectual property but rather from property law generally. Thus, adoption of the law recommended in the *Guide* will replace the existing rules on creation, third-party effectiveness, priority, enforcement and law applicable to security rights in intellectual property. Of course, the old rules on these issues will continue to apply to outright transfers of intellectual property since the law recommended in the *Guide* only covers security rights in intellectual property. Consequently, the secured creditor will need to verify whether a purported transfer is actually an outright transfer or a disguised secured transaction (that is, a transaction which, although not called a secured transaction by the parties, serves

security purposes). However, this type of risk management is no different from that necessary for any other type of encumbered asset for which a specialized registry does not exist.

Example 6

20. The question of who is the intellectual property owner in a chain of transferees of intellectual property is a matter of law relating to intellectual property. At the same time, the question of whether a transfer is an outright transfer or a transfer for security purposes is a matter of general property and secured transactions law. Finally, the rights and obligations flowing from a licence agreement is a matter of law relating to intellectual property and contract law. If a State adopts the law recommended in the *Guide*, transfers for security purposes will be treated as secured transactions.

Example 7

21. If law relating to intellectual property has specialized rules governing specifically the enforcement of a security right in intellectual property, these rules will prevail over the enforcement regime recommended in the *Guide*. However, if there is no specific rule of law relating to intellectual property on the matter and the enforcement of security rights in intellectual property is a matter left to general civil procedure law, the enforcement regime for security rights recommended in the *Guide* would take precedence. Similarly, if there is no specific rule of law relating to intellectual property on extrajudicial enforcement, the relevant regime recommended in the *Guide* on extrajudicial enforcement of security rights would apply (see A/CN.9/WG.VI/WP.42/Add.5, chapter IX on enforcement).

B. Application of the principle of party autonomy to security rights in intellectual property

22. The law recommended in the *Guide* generally recognizes the principle of party autonomy, although it does elaborate a number of exceptions (see recommendations 10 and 111-113). This principle applies equally to security rights in intellectual property to the extent that law relating to intellectual property does not limit party autonomy (see A/CN.9/WG.VI/WP.42/Add.5, para. 1). It should be noted that recommendations 111-113 apply only to tangible assets, as they refer to the possession of encumbered assets and intangible assets are by definition not subject to possession.

23. An example of the application of the principle of party autonomy in secured transactions relating to intellectual property would be the following: if not prohibited by law relating to intellectual property, under secured transactions law, a grantor and a secured creditor may agree that the secured creditor may acquire certain rights of an owner, licensor or licensee and thus become an owner, licensor or licensee entitled to deal with public authorities (for example, to register or renew registrations), as well as to pursue infringers, make further transfers or grant licences. This agreement could take the form of a special clause in the security agreement or a separate agreement between the grantor and the secured creditor, since, under the *Guide*, a secured creditor does not, by the mere fact of obtaining a security right, become an owner, licensor or licensee.

24. Another example of the application of the principle of party autonomy would be the following: if not prohibited by law relating to intellectual property, under secured transactions law, a grantor and a secured creditor may agree that damages for infringement, as well as for lost profits and devaluation of the encumbered intellectual property, are included in the original encumbered assets. In the absence of such an agreement, such damages may still be treated as proceeds under the law recommended in the *Guide*, provided that that treatment is not inconsistent with law relating to intellectual property (see recommendation 4, subparagraph (b)). However, the right to pursue infringement claims (as opposed to the right to the payment of damages for infringement) is a different matter. Typically, under law relating to intellectual property, this right cannot be used as security for credit. In addition, under the law recommended in the *Guide*, this right would not constitute proceeds as it would not fall under the scope of “whatever is received in respect of encumbered assets” (see the term “proceeds”, Introduction to the *Guide*, section B on terminology and interpretation).

Recommendation 243	

II. Creation of a security right in intellectual property

[*Note to the Working Group: For paras. 1-44, see A/CN.9/WG.VI/WP.39/Add.2, paras. 1-43, A/CN.9/685, paras. 28-35, A/CN.9/WG.VI/WP.37/Add.1, paras. 25-64, A/CN.9/670, paras. 35-55, A/CN.9/WG.VI/WP.35, paras. 68-102, A/CN.9/667, paras. 32-54, A/CN.9/WG.VI/WP.33, paras. 112-133, and A/CN.9/649, paras. 16-28.*]

A. The concepts of creation and third-party effectiveness

1. With respect to all types of encumbered asset (including intellectual property), the law recommended in the *Guide* draws a distinction between the creation of a security right (its effectiveness as between the parties) and its effectiveness against third parties, providing different requirements to achieve each of these outcomes. In effect, this means that the requirements for the creation of a security right can be kept to a minimum, while any additional requirements are aimed at addressing the rights of third parties. The main reason for this distinction is to achieve three of the key objectives of the law recommended in the *Guide*, namely, to establish a security right in a simple and efficient way, to enhance certainty and transparency and to establish clear priority rules (see recommendation 1, subparagraphs (c), (f) and (g)).

2. Under the law recommended in the *Guide*, a security right may be created by agreement between the grantor and the secured creditor (see recommendation 13 and paras. 5-8 below). For the security right to be effective against third parties, an additional step is required. For most intangible assets, this step is registration of a notice about the possible existence of the security right in a public registry, which establishes an objective criterion for determining priority between a secured creditor and a competing claimant (see recommendation 29; for the term “competing claimant”, see A/CN.9/WG.VI/WP.42, paras. 11-12). Accordingly, if a security right has been created in accordance with the requirements set out in the law recommended in the *Guide*, the security right is effective between the grantor and the secured creditor even if the additional steps necessary to make the security right effective against third parties have not yet been taken (see recommendation 30). As a result, the secured creditor may enforce the security right in accordance with the enforcement procedures set out in chapter VIII of the law recommended in the *Guide*, subject to the rights of competing claimants in accordance with the priority rules set out in chapter V.

3. This distinction between creation and effectiveness against third parties applies equally to security rights in intellectual property. Thus, under the law recommended in the *Guide*, a security right in intellectual property can be effective between the grantor and the secured creditor even if it is not effective against third parties. In some States, law relating to intellectual property draws such a distinction. In other States, however, such a distinction is not drawn in law relating to intellectual property, which provides that the same actions are required for both the creation of a security right and its effectiveness against third parties. In such a case, as required by recommendation 4, subparagraph (b), the law recommended in the *Guide* defers to that law. To ensure better coordination between secured transactions law and law relating to intellectual property, States enacting the law recommended in the *Guide* may wish to consider reviewing their law relating to intellectual property. Such a review should make it possible for States to determine whether: (a) the fact that law relating to intellectual property does not draw a distinction between creation and third-party effectiveness of a security right in intellectual property serves specific policy objectives of law relating to intellectual property (rather than other law, such as general property law, contract law or secured transactions law) and should be retained; or (b) the distinction should be introduced in law relating to intellectual property so as to harmonize it with the relevant approach of the law recommended in the *Guide*.

B. Functional, integrated and unitary concept of a security right

4. To the extent law relating to intellectual property permits the creation of a security right in intellectual property, it may do so by referring to outright or conditional transfers of intellectual property, mortgages, pledges, trusts or similar terms. The *Guide* uses the term “security right” to refer to property rights in movable assets that are created by agreement and secure payment or other performance of an obligation, regardless of whether the parties have denominated it as a security right (see the term “security right”, Introduction to the *Guide*, section B on terminology and interpretation). This approach is referred to as the “functional, integrated and unitary approach” to secured transactions (see chapter I of the *Guide*

on the scope of application, paras. 110-112, and recommendation 8). The *Guide* contemplates, by exception, that States may adopt a non-unitary approach in the limited context of acquisition financing and may retain transactions denominated as retention of title or financial lease of tangible assets (see chapter IX of the *Guide* on acquisition financing). A similar approach may be followed with respect to conditional transfers, outright transfers in which the transferee creates a security right in favour of the transferor or retention-of-title transactions with respect to intellectual property that secure any unpaid portion of the purchase price or an obligation incurred or credit provided to enable the grantor to acquire intellectual property or a licence (see the term “acquisition security right”, Introduction to the *Guide*, section B on terminology and interpretation, as well as A/CN.9/WG.VI/WP.42/Add.5, chapter IX acquisition financing in an intellectual property context). Thus, States enacting the law recommended in the *Guide* may wish to review their law relating to intellectual property with a view to: (a) replacing all terms used to refer to the right of a secured creditor with the term “security right”; or (b) providing that, whatever the term used, rights performing security functions are treated in the same way and that such a way is not inconsistent with the treatment of security rights in the law recommended in the *Guide*.

C. Requirements for the creation of a security right in intellectual property

5. Under the law recommended in the *Guide*, the creation of a security right in an intangible asset requires a written document, which by itself or in conjunction with the course of conduct between the parties evidences the agreement of the parties to create a security right. In addition, the grantor must have rights in the asset to be encumbered or the power to encumber it either at the time of the conclusion of the security agreement or thereafter. The agreement must reflect the intent of the parties to create a security right, identify the secured creditor and the grantor, and describe the secured obligation and the encumbered assets in a manner that reasonably allows their identification (see recommendations 13-15). As already mentioned, no additional step is required for the creation of a security right in an intangible asset. The additional steps (for example, registration of a notice in a general security rights registry) required for third-party effectiveness of that security right are not required for the security right to be created and thus be effective as between the grantor and the secured creditor.

6. However, law relating to intellectual property in many States imposes different requirements for the creation of a security right in intellectual property. For example, registration of a document or notice of a security right in intellectual property (for example, a transfer for security purposes, a mortgage or pledge of intellectual property) in the relevant intellectual property registry may be required for the creation of the security right. In addition, under law relating to intellectual property, the intellectual property to be encumbered may need to be described specifically in a security agreement. Similarly, as some intellectual property registries index registered transactions by the specific intellectual property to which they relate, and not the grantor’s name or other identifier, registration of a document that merely states “all intellectual property of the grantor” would not be sufficient to

create a security right. It would instead be necessary to identify each intellectual property right in the security agreement or in any other document to be registered in the intellectual property registry for the purposes of creating the security right.

7. Specific identification of the encumbered intellectual property right will, in particular, often be necessary for copyright. This is so because, under law relating to copyright, copyright is often conceptualized as comprising a bundle of rights and, unless the parties intended to encumber all those rights, they may need to describe the assets to be encumbered specifically in the security agreement. In such a case, law relating to copyright may require a specific description for certainty as to assets that are subject to a security right. Under such an approach, the copyright owner may use specifically identified rights to obtain credit from another credit provider. It should also be noted, however, that the nature of copyright as a bundle of rights typically allows parties to divide the exclusive rights under a copyright into separate rights and encumber them separately, if they wish. Thus, if the parties wish to describe the encumbered intellectual property rights in a specific way, they are always entitled to do so and will probably do so in most cases; but this should not deprive the parties of the right to describe the encumbered intellectual property rights in a general way.

8. It should be noted that the standard to be met with regard to the description of the encumbered assets in the security agreement under the law recommended in the *Guide* is sufficiently flexible to accommodate all different situations in that it refers to a description of the encumbered assets “in a manner that reasonably allows their identification” (see recommendation 14, subparagraph (d)); the same standard applies to the notice to be registered, see A/CN.9/WG.VI/WP.42/Add.3, para. 21, and recommendation 63). Thus, this standard could vary depending on what is a reasonable description under the relevant law and practice with respect to the particular encumbered asset. Furthermore, in all these situations, under the principle embodied in recommendation 4, subparagraph (b), the law recommended in the *Guide* would apply only insofar as it is not inconsistent with law relating to intellectual property. States enacting the law recommended in the *Guide* may wish to consider reviewing their laws relating to intellectual property to determine whether the different concepts and requirements with respect to the creation of security rights in intellectual property serve specific policy objectives of law relating to intellectual property and should be retained or whether they should be harmonized with the relevant concepts and requirements of the law recommended in the *Guide*.

D. Rights of a grantor with respect to the intellectual property to be encumbered

9. As already mentioned (see para. 5 above), a grantor of a security right must have rights in the asset to be encumbered or the power to encumber it at the time of the security agreement or at a later time (see recommendation 13). This is a principle of secured transactions law that applies equally to intellectual property. A grantor may encumber its full rights or only limited rights. So, an intellectual property owner, licensor or licensee may encumber its full rights or rights limited in time, scope or territory. In addition, as a matter of general property law, a grantor may encumber its assets only to the extent that the assets are transferable under

general property law (the law recommended in the *Guide* does not affect such limitations; see recommendation 18 and paras. 43 and 44 below). This principle also applies to secured transactions relating to intellectual property. So, an owner, licensor or licensee may only encumber its rights to the extent that these rights are transferable under law relating to intellectual property.

E. Distinction between a secured creditor and an owner with respect to intellectual property

10. For the purposes of the law recommended in the *Guide*, the secured creditor does not become an owner, licensor or licensee (depending on the rights of the grantor) on the sole ground that it acquired a security right in intellectual property. This may also be the case though under law relating to intellectual property (see the terms “owner” and “secured creditor”, A/CN.9/WG.VI/WP.42, Introduction to the draft Supplement, section C on terminology).

11. However, the exercise of the secured creditor’s rights upon default of the grantor will often result in the grantor’s encumbered intellectual property rights being transferred and, thus, the identity of the owner, licensor or licensee (depending on the rights of the grantor), as determined by law relating to intellectual property, might change. This may happen in situations in which the enforcement of the security right in the intellectual property results in acquisition of the encumbered intellectual property by the secured creditor in a disposition (see recommendations 142 and 148) or in an acquisition of the encumbered intellectual property by the secured creditor in satisfaction of the secured obligation (see recommendations 156-159).

12. In any case, the question of who is the owner, licensor or licensee with respect to intellectual property and whether the parties may determine it for themselves is a matter of law relating to intellectual property. Under law relating to intellectual property, a secured creditor may at times be treated as an owner, licensor or licensee. Should intellectual property law so provide, the secured creditor could, for example, renew registrations or pursue infringers or agree with the owner, licensor or licensee that the secured creditor will become the owner, licensor or licensee (see A/CN.9/WG.VI/WP.42/Add.5, paras. 2-5).

F. Types of encumbered asset in an intellectual property context

13. Under the law recommended in the *Guide*, a security right may be created not only in the rights of an intellectual property owner but also in the rights of a licensor or licensee under a licence agreement (see the term “encumbered asset”, A/CN.9/WG.VI/WP.42, Introduction to the draft Supplement, section C on terminology, as well as A/CN.9/WG.VI/WP.42/Add.1, paras. 2 and 3). In addition, although a security right in a tangible asset with respect to which intellectual property is used (for example, designer watches or clothes bearing a trademark) does not extend to the intellectual property (see paras. 32-36 below), such a security right may have an impact on the intellectual property used with respect to the tangible asset to the extent the secured creditor may enforce its security right in the tangible asset (see A/CN.9/WG.VI/WP.42/Add. 5, paras. 24-27). As already

mentioned (see paras. 5-8 above), under the law recommended in the *Guide*, the intellectual property to be encumbered needs to be described in the security agreement in a manner that reasonably allows its identification and this standard is sufficiently flexible to accommodate any requirements of law relating to intellectual property for a specific description of intellectual property to be encumbered (see recommendation 14, subparagraph (d)).

14. It should be noted that the law recommended in the *Guide* does not override any provisions of law relating to intellectual property (or other law) that limit the creation or enforcement of a security right or the transferability of an intellectual property (or other) asset (see recommendation 18). In addition, the law recommended in the *Guide* does not affect contractual limitations to the transferability of intellectual property rights (recommendation 23 deals only with contractual limitations on the assignability of receivables). As a result of these two recommendations, if, under law relating to intellectual property, a security right may not be created or enforced in an intellectual property right or if that intellectual property right is non-transferable by law or contract, the law recommended in the *Guide* will not interfere with these limitations. The law recommended in the *Guide*, however, does override legal limitations to the assignability of future receivables or of receivables assigned in bulk or in part on the sole ground that they are future receivables or are assigned in bulk or in part (see recommendation 23). In addition, under certain conditions, the law recommended in the *Guide* affects contractual limitations to the assignability of receivables (without affecting the different treatment of receivables for purposes of law relating to intellectual property; see recommendation 24 and paras. 26-29 below). As a result, to the extent that the law recommended in the *Guide* is enacted by a State, these legal or contractual limitations to the assignability of such receivables will no longer apply.

1. Rights of an owner

15. The law recommended in the *Guide* applies to secured transactions in which the encumbered assets are the rights of an owner. Typically, the essence of the rights of an owner is the right to enjoy its intellectual property, the right to prevent unauthorized use of its intellectual property and to sue infringers, the right to register intellectual property, the right to authorize others to use or exploit the intellectual property and the right to collect royalties (for the owner's rights to preserve the encumbered intellectual property by pursuing infringers and renewing registrations, see paras. 17-19 below).

16. If, under law relating to intellectual property, these rights are transferable, the owner may encumber all or some of them with a security right under the law recommended in the *Guide*. That law will apply to such a security right subject to recommendation 4, subparagraph (b). In such a case, all these rights would constitute the original encumbered assets (any royalties would be proceeds of the owner's rights, unless included in the description of the encumbered assets in the security agreement). If these rights may not be transferred under law relating to intellectual property, they may not be encumbered by a security right under the law recommended in the *Guide*, since, as already mentioned (see para. 14 above), the law recommended in the *Guide* does not affect legal provisions that limit the creation or enforcement of a security right, or the transferability of assets, with the

exception of provisions relating to the assignability of future receivables and receivables assigned in bulk (see recommendation 18 and paras. 22-25 below).

17. Whether the right of an owner to preserve its intellectual property and thus, for example, to pursue infringers and obtain an injunction and compensation, is a movable asset that may be transferred separately from the other rights of the owner is a matter of law relating to intellectual property. Typically, under law relating to intellectual property, the right to pursue infringers is part of the owner's rights and cannot be transferred separately from the owner's rights (see A/CN.9/WG.VI/WP.42/Add.5, paras. 2-5).

18. However, under law relating to intellectual property, the benefits from the exercise of this right to pursue infringers (such as damages arising from an infringement once collected) may be a movable asset that may be transferred separately from the owner's rights. Whether a security right may be created in that right is a matter of secured transactions law, which would apply only if law relating to intellectual property does not address that matter in a different way (see recommendation 4, subparagraph (b)). Thus, unless not permitted by law relating to intellectual property, the grantor as an owner and the secured creditor may agree that the benefits from the exercise of the right of the grantor to pursue infringers and obtain an injunction and compensation would be part of the original encumbered intellectual property.

19. For example, if, after the creation of a security right in the rights of an intellectual property owner, an infringement has been committed, the owner has sued infringers and infringers have paid compensation to the owner (for an infringement that occurred before or after the creation of the security right), the secured creditor may be able to claim the compensation paid either as proceeds of the original encumbered intellectual property or as an original encumbered asset if properly so described in the security agreement. If the compensation has not been paid at the time of creation of the security right, but is paid later after default of the grantor (owner), the secured creditor could also be able to claim the compensation paid either as proceeds of the original encumbered intellectual property or if appropriately so described in the security agreement as an original encumbered asset. To the contrary, under law relating to intellectual property, the right to pursue infringers and obtain an injunction and compensation would normally not constitute proceeds of the original encumbered intellectual property or an original encumbered asset (see para. 17 above). However, if the grantor (owner) has filed a suit against an infringer and the lawsuit is still pending at the time of enforcement of the security right, a person that acquired the grantor's rights in the encumbered intellectual property in the context of enforcement of the security right should be able to take over the lawsuit and obtain any compensation granted (again, if permitted under law relating to intellectual property).

20. Similar considerations apply to the question of whether the right to deal with authorities in the various stages of the registration process (for example, the right to file an application for or register intellectual property, or the right to renew a registration) or the right to grant licences may be transferred, and thus be part of the encumbered intellectual property. Whether the right to deal with authorities or to grant licences may be transferred or is an inalienable right of the owner is a matter of law relating to intellectual property. Whether it is part of the encumbered rights of the owner is a matter of the description of the encumbered asset in the security

agreement (assuming that it may be transferred under law relating to intellectual property).

2. Rights of a licensor

21. Under the law recommended in the *Guide*, a security right may be created in a licensor's rights under a licence agreement. If a licensor is an owner, it can create a security right in (all or part of) its rights as mentioned above (see paras. 15-20 above). If a licensor is not an owner but a licensee that grants a sub-licence, typically, it may create a security right in its right to the payment of royalties owed by sub-licensees under the sub-licence agreement. In such a case where the grantor creating a security right in sub-royalties is a licensor but not the intellectual property owner, the sub-royalties would be the original encumbered assets; where the grantor creating a security right in the intellectual property itself is the intellectual property owner, the sub-royalties would be proceeds of the original encumbered intellectual property, unless the sub-royalties were included in the description of the original encumbered assets in the security agreement (for the licensee's rights, see paras. 30-31 below). Such a licensor may also create a security right in other contractual rights of value that the licensor might have under the licence agreement and the relevant law. These other contractual rights might include, for example: (a) the licensor's right to compel the licensee to advertise the licensed intellectual property or product with respect to which the intellectual property is used; (b) the licensor's right to compel the licensee to market the licensed intellectual property only in a particular manner; and (c) the licensor's right to terminate the licence agreement on account of the licensee's breach.

22. Following the approach taken in most legal systems and reflected in the United Nations Assignment Convention (see article 2), the law recommended in the *Guide* treats rights to the payment of royalties arising from the licence of intellectual property as receivables (see the term "receivable", Introduction to the *Guide*, section B on terminology and interpretation). This means that the general discussion and recommendations dealing with security rights, as modified by the receivables-specific discussion and recommendations of the *Guide*, apply to rights to the payment of royalties. Thus, under the law recommended in the *Guide*, statutory prohibitions that relate to the assignment of future receivables or receivables assigned in bulk or partial assignments on the sole ground that they are future receivables or receivables that are assigned in bulk or in part are rendered unenforceable (see recommendation 23). However, other statutory prohibitions or limitations are not affected (see recommendation 18). In addition, a licensee could raise against an assignee of the right to the payment of royalties all defences or rights of set-off arising from the licence agreement or any other agreement that was part of the same transaction (see recommendation 120).

23. In this context, it is important to note that the statutory prohibitions set aside refer to future receivables only as future receivables, or receivables assigned in bulk or in part. They do not affect statutory prohibitions based on the nature of receivables, for example, as wages or royalties that may by law be payable directly only to authors or collecting societies. Many countries have "author-protective" or similar legislation that designates a certain portion of income earned from exploitation of the intellectual property rights as "equitable remuneration" or the like which must be paid to authors or other entitled parties or their collecting

societies. These laws often make such payment rights expressly non-assignable. The *Guide's* recommendations with respect to limitations on the assignment of receivables do not apply to these or other legal limitations.

24. Furthermore, it is important to note that the treatment of the right to the payment of royalties as receivables for the purposes of the secured transactions law recommended in the *Guide* does not affect the different treatment of this right to the payment of royalties for the purposes of law relating to intellectual property.

25. Finally, it is equally important to note that the treatment of rights to receive payment of royalties in the same way as any other receivable does not affect the terms and conditions of the licence agreement relating to the payment of royalties, such as that payments are to be staggered or that there might be percentage payments depending on market conditions or sales figures.

26. Under the law recommended in the *Guide*, if a licence agreement, under which royalties are payable, includes a contractual provision that restricts the ability of the licensor to assign the right to the payment of royalties to a third party ("assignee"), an assignment of the right to the payment of royalties by the licensor is nonetheless effective and the licensee cannot terminate the licence agreement on the sole ground of the assignment by the licensor of the right to the payment of royalties (see recommendation 24). However, under the law recommended in the *Guide*, the rights of a licensee (as a debtor of the assigned receivables) are not affected except as otherwise provided in the secured transactions law recommended in the *Guide* (see recommendation 117, subparagraph (a)). Specifically, the licensee is entitled to raise against the assignee all defences or rights of set-off arising from the licence agreement or any other agreement that was part of the same transaction (see recommendation 120, subparagraph (a)). In addition, the law recommended in the *Guide* does not affect any liability that the licensor (or sub-licensor) may have under other law for breach of the anti-assignment agreement (see recommendation 24). As the term "licence" includes a sub-licence (see A/CN.9/WG.VI/WP.42, para. 23), the same principles apply to a provision in a sub-licence agreement under which a sub-licensee restricts the ability of its sub-licensor to assign the right to the payment of the sub-royalties due from the sub-licensee to the sub-licensor.

27. It is important to note that recommendation 24 applies only to receivables, and not to intellectual property rights. This means that it does not apply to an agreement between a licensor and a licensee according to which the licensee does not have the right to grant sub-licences. It is equally important to note that recommendation 24 applies only to an agreement between a creditor of a receivable and the debtor of the receivable that the receivable owed to the creditor by the debtor may not be assigned. It does not apply to an agreement between a creditor of a receivable and the debtor of the receivable that the debtor may not assign receivables that may be owed to the debtor by third parties. Thus, recommendation 24 does not apply to an agreement between a licensor and a licensee that the licensee will not assign its right to receive payment of sub-licence royalties from third-party sub-licensees. Such an agreement may exist, for example, where the licensor and the licensee agree that sub-licence royalties will be used by the licensee to further develop the licensed intellectual property. Thus, recommendation 24 does not affect the right of the licensor to negotiate the licence agreement with the licensee so as to control by agreement who can use the intellectual property or the flow of royalties from the licensee and sub-licensees. However, a licensor, while entitled to claim the payment

of royalties, might not be able to control by agreement the flow of royalties in situations where the licensee in its capacity as a sub-licensor creates a security right in its right to the payment of sub-royalties (unless the licensor prohibits sub-licences).

28. In addition, recommendation 24 does not apply to an agreement between a licensor and a licensee that the licensor will terminate the licence agreement if the licensee violates the agreement not to assign the right to the payment of royalties payable to the licensee by sub-licensees. In this context, it should be noted that the right of the licensor to terminate the licence agreement if the licensee breaches this agreement gives the sub-licensees a strong incentive to make sure that the licensor will receive payment. Moreover, recommendation 24 does not affect the right of the licensor to: (a) agree with the licensee that part of the licensee's royalties (representing a source for the payment of the royalties the licensee owes to the licensor) be paid by sub-licensees to an account in the name of the licensor; or (b) obtain a security right in the licensee's right to the payment of royalties by sub-licensees, register a notice in that regard in the general security rights registry (or the relevant intellectual property registry) and thus obtain a security right with priority over the licensee's other creditors (subject to the recommendations of the *Guide* for obtaining third-party effectiveness and priority of security rights; see A/CN.9/WG.VI/WP.42/Add.4, paras. 41-46).

29. Under the law recommended in the *Guide*, a secured creditor with a security right in a receivable has the benefit of a security right in intellectual property securing payment of the receivable (see recommendation 25). However, this does not mean that legal limitations on the transferability of intellectual property rights are set aside (see recommendation 18). Similarly, this does not mean that contractual limitations to the transferability of intellectual property rights are affected, as recommendation 24 applies to assignment of receivables and not to transfers of intellectual property rights.

3. Rights of a licensee

30. Under an intellectual property licence agreement and the law governing it, a licensee may have the right to grant sub-licences and to receive as a sub-licensor the payment of any royalties flowing from a sub-licence agreement. The discussion above with respect to the rights of a licensor (see paras. 21-29 above) would apply equally to the rights of a licensee as a sub-licensor.

31. Typically, a licensee is authorized to use or exploit the licensed intellectual property in line with the terms and conditions of the licence agreement. Some laws relating to intellectual property provide that the licensee may not create a security right in its authorization to use or exploit the licensed intellectual property without the licensor's consent (although in many States an exception may arise where the licensee sells its business as a going concern). The reason is that it is important for the licensor to retain control over the licensed intellectual property and who can use it. If such control cannot be exercised, the value of the licensed intellectual property may be materially impaired or lost completely. If, however, the rights of a licensee under a licence agreement are transferable and the licensee grants a security right in them, the secured creditor will take a security right in the licensee's rights subject to the terms and conditions of the licence agreement. If the licence is transferable and the licensee transfers it, the transferee will take the licence subject to the terms and

conditions of the licence agreement. The law recommended in the *Guide* does not affect these licensing practices.

4. Tangible assets with respect to which intellectual property is used

32. Intellectual property may be used with respect to a tangible asset. For example: (a) a tangible asset may be manufactured according to a patented process or through the exercise of patented rights; (b) jeans may bear a trademark or cars may contain a chip which includes a copy of copyrighted software; (c) a compact disk may contain a software programme; or (d) a heat pump may contain a patented product.

33. Where intellectual property is used in connection with a tangible asset, two different types of asset are involved. One is the intellectual property; another is the tangible asset. These assets are separate. Law relating to intellectual property allows an intellectual property owner the ability to control many but not all uses of the tangible asset. For example, law relating to copyright allows an author to prevent unauthorized duplication of a book, but typically not to prevent an authorized bookstore that bought the book in an authorized sale to re-sell it or the end-buyer to make notes in the margin while reading. As such, a security right in a tangible asset does not extend to the intellectual property used with respect to a tangible asset, and a security right in intellectual property does not extend to the tangible asset with respect to which the intellectual property is used (see recommendation 243 below).

34. However, under the law recommended in the *Guide*, the parties to the security agreement may always agree that a security right is created both in a tangible asset and in intellectual property used with respect to that asset (see recommendation 10). For example, a security right may be taken in inventory of trademarked jeans and in the trademark giving the right to the secured creditor in the case of default of the grantor to sell both the encumbered trademarked jeans and the right to produce other jeans bearing the encumbered trademark. In such a case, where the manufacturer/grantor is the trademark owner, the encumbered assets are the owner's rights. Where the manufacturer/grantor is a licensee, the encumbered assets are the licensee's rights under a valid licence agreement.

35. The exact extent of the security right depends on the description of the encumbered asset in the security agreement. As already noted (see paras. 5-8 above), a description of the encumbered assets "in a manner that reasonably allows their identification" is sufficiently flexible to accommodate all different situations (see recommendation 14, subparagraph (d)), as it sets a standard that could vary depending on what is a reasonable description under the relevant law and practice. It would thus seem that a general description of the encumbered tangible asset would be in line with the principles of the *Guide* and the reasonable expectations of the parties. At the same time, key principles of law relating to intellectual property with respect to a specific description of intellectual property to be encumbered in a security agreement would be accommodated by the law recommended in the *Guide*. In any case, if under the law recommended in the *Guide*, a general description of the encumbered intellectual property would be sufficient, while under law relating to intellectual property a specific description would be necessary, the latter requirement would apply to encumbered intellectual property under recommendation 4, subparagraph (b) of the *Guide*.

36. As already mentioned (see para. 33 above), a security right in a tangible asset, with respect to which intellectual property is used, does not extend to the intellectual property, but it does encumber the tangible asset itself, including those characteristics of the asset that use the intellectual property (for example, the security right applies to a television set as a functioning television set). Thus, a security right in such an asset does not give the secured creditor the right to manufacture additional assets using the intellectual property. Upon default, however, the secured creditor with a security right in the tangible assets could exercise the remedies recognized under secured transactions law, provided that such exercise of remedies did not interfere with rights existing under law relating to intellectual property. It may be that, under applicable law relating to intellectual property, the “exhaustion doctrine” (or similar concepts) might apply to the enforcement of the security right (for a discussion of enforcement issues, see A/CN.9/WG.VI/WP.42/Add.5, paras. 24-27).

G. Security rights in future intellectual property

37. The law recommended in the *Guide* provides that a person may grant a security right in a future asset, namely an asset created or acquired by the grantor after the creation of a security right (see recommendation 17). Like any other rule recommended in the *Guide*, this rule too applies to intellectual property, except insofar as it is inconsistent with law relating to intellectual property (see recommendation 4, subparagraph (b)). Accordingly, under the law recommended in the *Guide*, a security right can be created in future intellectual property (as to legal limitations in that regard, see recommendation 18 and paras. 43-44 below). This approach is justified by the commercial utility in allowing a security right to extend to future intellectual property.

38. Many laws relating to intellectual property follow the same approach, allowing intellectual property owners to obtain financing useful in the development of new works, provided that their value can be reasonably estimated in advance. For example, it is usually possible to create a security right in a copyrighted motion picture or software (the security right is created when the copyrighted work is created; see A/CN.9/WG.VI/WP.42, para. 40, example 3). In some States, a security right may be created in a patent application before the patent right is granted (typically, after the patent right is granted, it is considered as having been created at the time of the application).

39. However, in certain cases, law relating to intellectual property may limit the transferability of various types of future intellectual property to achieve specific policy goals. For example, in some cases, a transfer of rights in new media or technological uses that are unknown at the time of the transfer may not be effective in view of the need to protect authors from undue commitments. In other cases, transfers of future rights may be subject to a statutory right of cancellation after a certain period. In other cases, the notion of “future intellectual property” may include registrable rights created but not yet registered. Statutory prohibitions may also take the form of a requirement for a specific description of intellectual property.

40. Other limitations on the use of future intellectual property as security for credit may be the result of the meaning of the concepts of “improvements”, “updates”, “adaptations” or other changes to intellectual property under law relating to intellectual property. Such “other changes” in relation to copyrighted content can be, for example, changes regarding the quality of the content or the form of its delivery, such as the re-mastering or the digital conversion of a sound recording or new forms of electronic delivery of a sound recording which might lead to new, yet to be invented forms of uses, whether dependent or independent of any physical carrier.

41. The secured creditor should understand how these concepts are interpreted under law relating to intellectual property and how they may affect the concept of “ownership”, which is essential in the creation of a security right in intellectual property. For example, this determination is of particular relevance in the case of copyrighted software. In some States a security right in a version of copyrighted software which exists at the time of the financing may extend automatically to modifications made to that version following the financing. However, typically law relating to intellectual property treat such future improvements as separate assets and not as integral parts of existing intellectual property. Thus, if future intellectual property rights may be encumbered, a prudent secured creditor that wishes to ensure that improvements are encumbered should describe the encumbered asset in the security agreement in a manner that ensures that improvements are directly encumbered (see A/CN.9/WG.VI/WP.42/Add.5, para. 20). If future intellectual property rights may not be encumbered, improvements may not be encumbered either and, the law recommended in the *Guide* does not affect any such limitations (see recommendation 18).

42. If law relating to intellectual property limits the transferability of future intellectual property, the law recommended in the *Guide* does not apply to this matter insofar as it is inconsistent with law relating to intellectual property (see recommendation 4, subparagraph (b)). Otherwise, the law recommended in the *Guide* applies and permits the creation of a security right in future assets (see recommendation 17). States enacting the law recommended in the *Guide* may wish to review their law relating to intellectual property with a view to establishing whether the benefits from these limitations (for example, the protection of the owner from undue commitments) outweigh the benefits from the use of such assets as security for credit (for example, the financing of research and development activities).

H. Legal or contractual limitations on the transferability of intellectual property

43. Specific rules of law relating to intellectual property may limit the ability of an intellectual property owner, licensor or licensee to create an effective security right in certain types of intellectual property. In many States, only the economic rights of an author are transferable; the moral rights are not transferable. In addition, legislation in many States provides that an author’s right to receive equitable remuneration may not be transferable. Moreover, in many States, trademarks are not transferable without their associated goodwill. Finally, as is the case with assets other than intellectual property, an asset may not be encumbered by a person if that

person does not have rights in the asset or the power to encumber it (see recommendation 13 and the *nemo dat* principle). The law recommended in the *Guide* respects all these limitations on the transferability of intellectual property (see recommendation 18).

44. The only limitations on the transferability of certain assets that the law recommended in the *Guide* may affect and remove are the legal limitations on the transferability of future receivables, receivables assigned in bulk and parts of or undivided interests in receivables, as well as to contractual limitations on the assignment of receivables arising for the sale or licence of intellectual property rights (see articles 8 and 9 of the United Nations Assignment Convention and recommendations 23-25). In addition, the law recommended in the *Guide* may affect and render ineffective contractual limitations, but only with respect to receivables (not intellectual property) and only in a certain context, that is, in an agreement between the creditor of a receivable and the debtor of that receivable (see paras. 26-29 above).

Recommendation 243¹

Security rights in tangible assets with respect to which intellectual property is used

The law should provide that, in the case of a tangible asset with respect to which intellectual property is used, unless otherwise agreed by the parties to a security agreement, a security right in the tangible asset does not extend to the intellectual property and a security right in the intellectual property does not extend to the tangible asset. However, to the extent permitted by law relating to intellectual property, this recommendation does not limit the enforcement remedies of a secured creditor with a security right in the tangible asset or in the intellectual property.

[Note to the Working Group: The Working Group may wish to consider whether the words “unless otherwise agreed by the parties to the security agreement”, included in the first sentence of this recommendation, should be retained. The Working Group may wish to note that recommendation 10 states that the law should provide that the grantor and the secured creditor may derogate by agreement from the provisions of the law relating to their respective rights and obligations, unless otherwise provided in the law. As a result, the reference to party autonomy in the first sentence of this recommendation may create doubt as to the application of the principle of party autonomy to other provisions of the law that do not include similar language and thus create problems of interpretation. The Working Group may also wish to consider whether the second sentence of this recommendation could be placed in the commentary as it addresses an issue discussed in the enforcement chapter (see A/CN.9/WG.VI/WP.42/Add.5, paras. 24-27).]

¹ If it could be included in the *Guide*, this recommendation would be included in chapter II on the creation of a security right as recommendation 28 bis.

Recommendation 244	

**III. Effectiveness of a security right in intellectual property
against third parties**

[Note to the Working Group: For paras. 1-9, see A/CN.9/WG.VI/WP.39/Add.3, paras. 1-9, A/CN.9/685, paras. 36-38, A/CN.9/WG.VI/WP.37/Add.2, paras. 1-9, A/CN.9/670, paras. 56-61, A/CN.9/WG.VI/WP.35/Add.1, paras. 1-14, A/CN.9/667, paras. 55-63, A/CN.9/WG.VI/WP.33, paras. 137-145, and A/CN.9/649, paras. 29-31.]

A. The concept of third-party effectiveness

1. As already noted (see A/CN.9/WG.VI/WP.42/Add.2, paras. 1-3), the law recommended in the *Guide* distinguishes between the creation of a security right (effectiveness of the security right as between the parties) and its effectiveness against third parties. This distinction applies equally to security rights in intellectual property. However, to the extent that law relating to intellectual property makes no such distinction and this is an intellectual-property specific approach, the law recommended in the *Guide* would defer to that law (see recommendation 4, subparagraph (b)).

2. In addition, in some States, the creation and third-party effectiveness of security rights in intellectual property are governed by the same rules that apply to security rights in other types of intangible asset. In other States, however, law relating to intellectual property may provide for particular methods in which a security right in some types of intellectual property may be created and made effective against third parties. The rules often differ for rights in intellectual property that are subject to a specialized registration system (such as patents, trademarks and, in some States, copyrights), and rights in intellectual property that are not subject to such registration (such as trade secrets, industrial designs and, in some States, copyrights). These matters are addressed in sections B and C below.

3. In the law recommended in the *Guide*, the concept of “effectiveness against third parties” refers to whether a security right in an encumbered asset as a property right is effective against parties other than the grantor and the secured creditor that have at that time or may acquire in the future a security or other right in that encumbered asset. Such third parties (“competing claimants”) include creditors of the grantor, the insolvency representative in the insolvency of the grantor, as well as transferees, lessees and licensees of the encumbered asset (see A/CN.9/WG.VI/WP.42, paras. 11-12). In law relating to intellectual property, by contrast, the phrase “third-party effectiveness” is often used to refer to the effectiveness of exclusive rights associated with ownership or rights of a licensor or licensee in intellectual property, rather than to the effectiveness of a security right. These two sorts of references should not be confused. While effectiveness of a security right in intellectual property as against competing claimants is a matter of secured transactions law, effectiveness of exclusive rights associated with ownership rights or rights of a licensor or licensee against transferees of those rights is a matter of law relating to intellectual property. In this context, it should be noted that, for purposes of secured transactions law, infringers are not competing claimants. Thus, the law recommended in the *Guide* does not apply to a “conflict” between a secured creditor and a purported infringer. In addition, if, for example, the infringer asserts as a defence against a secured creditor that the infringer is a transferee or a licensee of the encumbered intellectual property, the matter is to be determined in accordance with the law relating to intellectual property. If the purported infringer is proven to be a transferee or licensee and there is a priority conflict with a security right, the law recommended in the *Guide* applies to that priority conflict (see A/CN.9/WG.VI/WP.42/Add.4, sections F, G and H).

B. Third-party effectiveness of security rights in intellectual property that are registered in an intellectual property registry

4. Under the law recommended in the *Guide*, security rights in intangible assets may be made effective against third parties by registration of a notice in the general security rights registry or of a document or notice in a specialized registry, if any. The law recommended in the *Guide* is based on the assumption that where a State maintains a specialized registry, it will permit registration of a notice of a security right as a method of achieving third-party effectiveness of the security right (see recommendations 34, subparagraph (a) (iii), and 38, subparagraph (a)) (see also paras. 12-14 below).

5. Registration in an intellectual property registry differs from State to State in many respects, including: (a) whether transfers, licences or also security rights may be registered; (b) whether rights in patents, trademarks, copyrights or other types of intellectual property may be registered; (c) whether a document, summary or notice need be registered; and (d) what are the legal consequences of registration. In some cases, the answers to all these questions are not easy to obtain even in one and the same legal system.

6. For example, under law relating to intellectual property, in some States, a security right is not created or made effective against third parties, unless and until a document or notice of it is registered in the relevant intellectual property registry. In other States, law relating to intellectual property provides that a security right is created and, at the same time, becomes effective against third parties when the security agreement is entered into between the parties, even without registration. In these cases, registration in the relevant intellectual property registry allows certain third parties (typically transferees that are not aware that the asset is encumbered; “good faith transferees”), to invoke a priority rule, according to which a registered security right takes precedence over an unregistered prior security right, but the unregistered security right still remains effective against other third parties. In still other States, a security right is created when the security agreement is entered into between the parties, but registration in the relevant intellectual property registry is necessary to make the security right effective against third parties, for example, by way of an evidentiary rule that prohibits evidence of unregistered security rights. In still other States, the registration system does not readily accommodate registration of documents or notices of security rights, and creation and third-party effectiveness of security rights must be achieved outside the intellectual property registration system. Finally, in some States that distinguish between creation and third-party effectiveness, it is possible to achieve third-party effectiveness of a security right by using either the intellectual property registry or an available general security rights registry. If any of these methods existing under law relating to intellectual property is intended to be the exclusive method of obtaining effectiveness of a security right against third parties, in accordance with recommendation 4, subparagraph (b), it takes precedence over any of the methods provided in the law recommended in the *Guide*.

7. The *Guide* recommends a general security rights registry and, where specialized registries exist that permit registration of a notice of a security right as a method of achieving third-party effectiveness of the security right, avoids undermining them by accepting registration in such registries as a method of

achieving third-party effectiveness of a security right and attributing priority results to such a registration (see recommendations 38, 77 and 78). As this matter is beyond the scope of secured transactions law and, in any case, would require additional effort and expense by States, the *Guide* does not recommend that States that currently do not have a specialized registry for certain types of intellectual property create such registries in order to permit the registration of a notice of a security right in intellectual property. For the same reason, the *Guide* does not recommend that States that currently do not permit the registration of a notice of a security right in an intellectual property registry amend their laws to permit such registrations. Finally, to avoid duplication of effort and expense, the *Guide* does not recommend a rule that requires registration of a notice of a security right in both the relevant intellectual property registry and in the general security rights registry. However, if States enacting the recommendations of the *Guide* have specialized intellectual property registries and wish to use them for registration of security rights in intellectual property, making use of the options offered in recommendation 38 of the *Guide*, they may wish to review their law relating to intellectual property and consider whether to permit the registration of notices of security rights with third-party effects in such already existing intellectual property registries. States that do not have specialized intellectual property registries or have such registries but do not wish to use them for registration of security rights in intellectual property, may always use the general security rights registry for registration of notices of security rights in all types of movable asset, including intellectual property.

C. Third-party effectiveness of security rights in intellectual property that are not registered in an intellectual property registry

8. As already mentioned (see para. 4 above), under the law recommended in the *Guide*, a security right in intellectual property may become effective against third parties by registration of a notice in the general security rights registry (see recommendation 32). This is possible even if the encumbered intellectual property rights may not be registered in an intellectual property registry (as is typically the case, for example, with copyrights, industrial designs or trade secrets). The same rule would apply in cases where a document or notice of a security right in intellectual property may be registered in an intellectual property registry but is not actually registered. In these cases, registration of a notice in the general security rights registry is sufficient and the legal consequence of registration is to make the security right effective against third parties (see recommendations 29, 32, 33 and 38). However, in the particular case where law relating to intellectual property provides that a security right in intellectual property may be made effective against third parties only by registration in an intellectual property registry, a security right cannot be made effective against third parties by registration in the general security rights registry (see recommendation 4, subparagraph (b)).

9. As also already mentioned (see paras. 5-6 above), there are different approaches in law relating to intellectual property to the question of registration of a document or notice of a security right in intellectual property. In some States (often those whose secured transactions law derives from non-possessory pledge concepts), either no rights at all may be registered in some types of intellectual

property or only outright transfers of intellectual property may be registered. This means that a security right in such intellectual property cannot be made effective against third parties by registration in an intellectual property registry. In other States (often those whose secured transactions law utilizes mortgage concepts), a security right is treated as another type of (outright or conditional) transfer and is, therefore, created and made effective against third parties to the same extent as any other transfer. Consequently, in those States, a document or notice of title-based security rights must often be registered in the relevant intellectual property registry in order for it to be created and made effective against third parties, but non-title-based security rights cannot be so registered. In some of those States, such registration has third-party effects. Finally, in a few States, there are additional requirements. These commonly include payment of a stamp duty or other transaction tax, or a requirement to give notice to an administrative body, such as a national authors association or collecting society. If States enacting the law recommended in the *Guide* wish to harmonize their secured transactions laws and their laws relating to intellectual property by: (a) replacing all existing security devices with an integrated notion of a security right, or, at least, subjecting title-based security rights to the same rules that are applicable to security rights (see A/CN.9/WG.VI/WP.42/Add.2, para. 4); and (b) permitting the registration of a notice of a security right in intellectual property in the relevant intellectual property registry (at least for intellectual property rights that may already be registered therein) as a method of achieving third-party effectiveness.

IV. The registry system

[*Note to the Working Group: For paras. 10-54, see A/CN.9/WG.VI/WP.39/Add.3, paras. 10-42, A/CN.9/WG.VI/WP.37/Add.2, paras. 10-42, A/CN.9/670, paras. 62-72, A/CN.9/WG.VI/WP.35, paras. 15-31, A/CN.9/667, paras. 64-85, A/CN.9/WG.VI/WP.33, paras. 149-161, and A/CN.9/649, paras. 32-40.*]

A. The general security rights registry

10. As already noted, the *Guide* recommends that States establish a general security rights registry (see recommendations 54-75). In general, the purpose of the registry system recommended in the *Guide* is to: (a) provide an efficient method for making a security right in existing or future assets effective against third parties; (b) establish an effective point of reference for priority rules based on the time of registration; and (c) provide an objective source of information for third parties dealing with a grantor's assets as to whether the assets may be encumbered by a security right (see purpose section of chapter IV on the registry of the law recommended in the *Guide*). Under this approach, registration is accomplished through registration of a notice of a security right, as opposed to registration of the security agreement or other document (see recommendation 54, subparagraph (b)). The notice need only provide basic information concerning the security right, that is: (a) the name or identifier of the grantor and the secured creditor or its representative; (b) a description of the encumbered asset; (c) the duration of registration; and (d) a statement of the maximum amount for which the security

right may be enforced, if so provided in a State enacting the law recommended in the *Guide* (see recommendation 57).

11. The law recommended in the *Guide* provides precise rules for identifying the grantor of the security right, whether an individual or a legal person. This matter is important because notices are indexed and can be retrieved by searchers according to the name or other identifier of the grantor (see recommendations 54, subparagraph (h), and 58-63). In addition, the law recommended in the *Guide* contains a number of rules to simplify the operation and use of the registry. For example, the law recommended in the *Guide* provides that, to the extent possible, the registry should be electronic and permit registration and searching by electronic means (see recommendation 54, subparagraph (j)). Moreover, the law recommended in the *Guide* provides that fees for registration and searching, if any, should be set at a level no higher than necessary to permit cost recovery (see recommendation 54, subparagraph (i)).

B. Asset-specific intellectual property registries

12. As already mentioned (see paras. 7-11 above), many States maintain registries for registering (or recording) transactions (such as transfers) relating to intellectual property. In some of those registries, security rights may also be initially filed (that is, an application for registration may be made) and then registered. For example, patent and trademark registries exist in most States, but not all provide for the registration of a document or notice of a security right. In addition, in some States, the registration of a notice (whether of a security right or some other right) does not produce third-party effects. Moreover, a number of States have similar registries for copyrights, but the practice is not universal.

13. While some States have notice-based intellectual property registries, a larger number of States use recording act structures or “document registration” systems. In those systems, it is necessary to record the entire instrument of transfer, or, in some cases, a memorandum describing the essential terms of the transfer. A more modern approach is to simplify the registration process by registering a limited amount of information (such as the names of the parties and a general description of the encumbered assets). For example, the registration requirements for trademarks are simplified by the Trademark Law Treaty (1994), the Singapore Treaty on the Law of Trademarks, as well as by the Madrid Agreement (1891), the Madrid Protocol (1989) and the model international registration forms attached to both treaties. Similarly, the Patent Law Treaty (Geneva, 2000) and the Council Regulation (EC) No. 40/94 of 20 December 1993 on the Community Trademark simplify registration requirements. The reason for requiring registration of the transaction document or a memorandum stating the essential terms of the transaction is the need for transparency. Thus, it is essential for a transfer instrument or memorandum to identify the specific right being transferred in order to give effective notice to searchers and to allow efficient utilization of assets. In addition, the intellectual property registries sometimes index registrations by the specific intellectual property, and not by the grantor’s identifier. This is because the central focus is on the intellectual property itself, which may have multiple co-owners or co-authors and may be subject to multiple changes in ownership as transfers are made.

14. In addition to national registries, there are a number of international intellectual property registries and registration in these registries is subject to relatively modern treaties or other international legislative texts that simplify the registration process. For example, under the Community Trademark regulation, a statement may be registered referring not only to ownership but also to security rights with third-party effects. Another example is the treaty on the International Registration of Audiovisual Works (the “Film Register Treaty”), adopted at Geneva on 18 April 1989, under the auspices of WIPO. The Film Register Treaty creates an international registry, which permits the registration of statements concerning audiovisual works and rights in such works, including, in particular, rights relating to their exploitation (the records of the diplomatic conference indicate statements concerning security rights were also contemplated). The Film Register Treaty provides an evidentiary presumption of validity for registered statements. This international registry allows two types of application. A work-related application identifies an existing or future work at least by title or titles. A person-related application identifies one or more existing or future works by the natural person or legal entity that makes or owns, or is expected to make or own, the work or works. The international registry maintains an electronic database that allows cross-indexing between the different types of registrations. There is also a procedure to request removal of contradictory filings.

C. Coordination of registries

15. As already mentioned (see paras. 4 and 5 above), the *Guide* neither recommends the creation of a specialized registration system (for intellectual property or for other assets), if one does not exist, nor interferes with existing specialized registration systems. However, where, under law relating to intellectual property, a document or notice of a security right in intellectual property may be registered in an intellectual property registry and, at the same time, under the law recommended in the *Guide*, that security right may also be registered in the general security rights registry, there is a need to address the issue of coordination between these two registries. In order to avoid interfering with law relating to intellectual property, the law recommended in the *Guide* addresses it through the general deference to law relating to intellectual property (see recommendation 4, subparagraph (b)) and appropriate priority rules.

16. Thus, the law recommended in the *Guide* does not address or purport to address the question whether a security right in intellectual property may be registered in an intellectual property registry, the requirements for such registration (for example, document or notice registration) or its legal consequences (for example, effectiveness or presumption of effectiveness against all parties or only against third parties). Even if an intellectual property registry does not provide for the registration of security rights, provides for the registration of a document rather than a notice thereof or, having provided for such registration, does not give registration third-party effects, the *Guide* provides no recommendation to the contrary and takes the specialized registration system, if any, as is.

17. However, the *Guide* does make recommendations concerning the registration of a notice of a security right in intellectual property in the general security rights registry. For this reason, to the extent that law relating to intellectual property

addresses the effects of registration of security rights in an intellectual property registry in a way that would be inconsistent with the third-party effects given to such registration by the law recommended in the *Guide* (see recommendation 38), the law recommended in the *Guide* defers to that law (recommendation 4, subparagraph (b)). By contrast, if law relating to intellectual property does not address these issues and there is no overlap or conflict with law relating to intellectual property, then the issue of deference to law relating to intellectual property will not arise and thus the law recommended in the *Guide* will apply giving such specialized registration third-party effects.

18. In addition, the *Guide* addresses the issue of coordination between a specialized registry (including an intellectual property registry) and the general security rights registry recommended in the *Guide* through appropriate priority rules. Thus, in order to preserve the reliability of intellectual property (and other specialized) registries (in particular, in cases where law relating to intellectual property provides no rule for determining priority), the law recommended in the *Guide* provides that a security right in intellectual property, a document or notice of which is registered in the relevant intellectual property registry (see para. 4 above), has priority over a security right in the same intellectual property, a notice of which is registered in the general security rights registry (see recommendation 77, subparagraph (a)). For the same reason, the law recommended in the *Guide* provides that a transferee of intellectual property acquires it, in principle, free of a previously created security right in that property, unless a document or notice of the security right is registered in the intellectual property registry (see recommendations 78 and 79). Under recommendation 4, subparagraph (b), this rule would apply only if it was not inconsistent with a rule of law relating to intellectual property (see A/CN.9/WG.VI/WP.42/Add.4, paras. 12-15).

19. If States enacting the recommendation of the *Guide* have specialized intellectual property registries and wish to use them for registration of security rights in intellectual property, making use of the options offered in recommendation 38 of the *Guide*, they may wish to consider ways aimed at coordinating their existing intellectual property registries with the general security rights registry recommended in the *Guide*. For example, States may wish to consider permitting the registration of a notice of a security right in intellectual property in an intellectual property registry with third-party effects. In addition, States may wish to consider whether asset-based intellectual property registries should also have a debtor-based index (and vice versa). Moreover, States may wish to consider requiring the transmission of a notice about a registration in an intellectual property registry to the general security rights registry (or vice versa). Of course, coordination of registries in this way would be easier, simpler, quicker and less expensive in an electronic registration system rather than in a paper-based registration system.

20. An alternative to a system permitting the forwarding of notices from one registry to the other might be a system implementing a common gateway to both the general security rights registry and to various specialized registries. Such a common gateway would enable registrants to enter the notice simultaneously in both registries. Several steps would have to be taken in order to ensure the efficiency and effectiveness of a common gateway, including that a simple notice should be enough, the notice should include the identifiers of both the grantor and the secured

creditor (or its representative) and an asset-specific description of the encumbered assets, searches in both registries should be possible with a single request and both grantor-based and asset-based indices should be maintained with cross references in each registry to the other registry (see chapter III of the *Guide* on the effectiveness of a security right against third parties, paras. 80-82).

D. Registration of notices about security rights in future intellectual property

21. An essential feature of the general security rights registry recommended in the *Guide* is that a notice of a security right can refer to future assets of the grantor. This means that the security right can cover assets to be later produced or acquired by the grantor (see recommendation 17) and the notice may cover assets described in a manner that reasonably allows their identification (see recommendation 63 and A/CN.9/WG.VI/WP.42/Add.2, paras. 5-8 and 37-42). Thus, if the encumbered assets are described in the security agreement as all existing and future inventory, the notice may also describe the inventory in the same manner. Since priority is determined by date of registration, the priority of the security rights extends to future inventory. This approach greatly facilitates revolving credit arrangements, since a lender extending new credit under such a facility knows that it can maintain its priority position in new assets that are included in the borrowing base.

22. Existing intellectual property registries, however, in many States, do not readily accommodate registration of rights in future intellectual property. As transfers of or security rights in intellectual property are indexed against each specific intellectual property right, they can only be effectively registered after the intellectual property is first registered in the intellectual property registry. This means that a blanket registration of a security right in future intellectual property in an intellectual property registry would not be effective and a new registration of the security right would be required each time new intellectual property is acquired.

23. If, under law relating to intellectual property, intellectual property may not be acquired, transferred or encumbered before it is actually registered in an intellectual property registry, the law recommended in the *Guide* does not interfere with that prohibition and does not make the grant of a security right in such future intellectual property possible. However, if the creation of a security right in future intellectual property is not prohibited under law relating to intellectual property (as is the case, for example, with a patent or trademark while the application for its registration in the patent or trademark registry is pending), a security right in such an asset could be created and made effective against third parties under the law recommended in the *Guide*. States enacting the recommendations of the *Guide* may wish to consider reviewing their law relating to intellectual property to determine whether a notice of a security right may refer to future intellectual property.

E. Dual registration or search

24. As already mentioned, the law recommended in the *Guide* gives priority, as a matter of secured transactions law, to rights with respect to which a registration is made in an intellectual property registry and defers to any rules of law relating to

intellectual property governing the registry with respect to the details of registration of a document or notice of a security right (see paras. 4, 17 and 18 above). As also noted above, this means that the law recommended in the *Guide* often obviates the need for dual registration or search. In particular, registration only in the general security rights registry would seem to be necessary and useful for secured transactions purposes: (a) where the encumbered asset is a type of intellectual property with respect to which no registration system exists under law relating to intellectual property (for example, copyrights or trade secrets in many States); (b) where the encumbered asset is a type of intellectual property with respect to which ownership rights may be registered in an intellectual property registry, but not a document or notice of security right; and (c) where a notice of security right in intellectual property may be registered in an intellectual property registry, but such registration has effects that are inconsistent with third-party effects. On the other hand, registration in the relevant intellectual property registry may be preferable, for example: (a) where the encumbered asset is a type of asset for which a registration system exists and allows registration of documents or notices of security rights (for example, patents or trademarks in many States); or (b) where the secured creditor needs to ensure priority over other secured creditors or transferees under the relevant law relating to intellectual property.

25. Before credit is extended or committed pursuant to a security agreement, a secured creditor exercising normal due diligence will typically conduct a search to determine whether there are prior competing claimants that have priority over the proposed security right. As a first step, the secured creditor will search the chain of title to identify prior transfers and to determine whether the grantor actually has rights in the intellectual property or other movable assets to be encumbered so that the security right can become effective in the first instance. For types of intellectual property as to which ownership transfers must be recorded in a specialized registry in order to be effective against third parties, this chain of title search will be easier than for types of encumbered assets for which no such registry exists (the general security rights registry does not record title). As a next step, the secured creditor will search to determine whether each prior party in the chain of title has granted a security right which might have priority over the proposed security right. If there are no such security rights, a secured creditor will be able to reliably extend or commit credit on the basis of that intellectual property so long as it takes the steps necessary under the law recommended in the *Guide* to assure third-party effectiveness. Finally, in cases where a secured creditor registered a notice or document of its security right in the relevant intellectual property registry, the secured creditor has a right to rely on that registration and on the priority attributed to that registration under the law recommended in the *Guide*. In such cases, a potential third-party creditor may need to search only in the relevant intellectual property registry. In other cases, such a third-party creditor may need to search in both the relevant intellectual property registry (for ownership transfers) and in the general security rights registry (for security rights that may not be registered in the relevant intellectual property registry).

26. Under the law recommended in the *Guide*, it is envisaged that the general security rights registry will be electronic and will accept registration of notices of possible security rights with third-party effects at a nominal cost (based on cost recovery), if any, for registration and searching (see recommendation 54, subparagraph (i)). This means that, in States that enact the recommendations of the

Guide, registration and searching in the general security rights registry is likely to be simple, quick and inexpensive. However, under law relating to intellectual property, registries may not necessarily be fully electronic (although an increasing number of intellectual property registries allow online searching for a small fee or for free). In addition, the document of a transaction or a summary thereof may need to be registered (instead of a notice). Moreover, the document registered may have to be checked by the registry staff at least to the extent that the legal consequence of registration may be conclusive or presumptive evidence of the existence of a right in intellectual property.

27. Thus, while the relevant fees vary widely from State to State, the cost of registration of a document of a security right in an intellectual property registry may reasonably be assumed to be higher than the cost of registration of a notice of a security right in the general security rights registry. As to the cost and time of searching, searching in a document registry (whether electronic or not) may be more time-consuming and costly than searching in an electronic notice-based general security rights registry. These differences, of course, will be minimized to the extent that an intellectual property registry permits the online registration of a notice of a security right, for a nominal fee, with third-party effects and is organized in a way that also permits searching in a time- and cost-efficient way. At the same time though, registration in the relevant intellectual property registry would provide more information (for example, because of the specific description of the encumbered assets and the information about transfers) and probably more certain information (for example, because registration may constitute or provide firm evidence as to the existence of a right).

28. The differences in cost of registration and searching may be illustrated by the following examples. For convenience, the examples assume that only the law of a single State applies, that the State has enacted the law recommended in the *Guide* and that (where applicable) the State also has an intellectual property registry that accepts registration of security rights in intellectual property.

29. A grantor that is the initial owner of a single intellectual property right creates a security right in that intellectual property right. Whether registration is made in the general security rights registry or in the relevant intellectual property registry, the secured creditor needs to register only one notice in order for the security right to be effective against third parties (unless the secured creditor prefers to register in the relevant intellectual property registry, if any, because of the priority rules recommended in the *Guide*). A searcher that wants to extend credit on the basis of the encumbered intellectual property right will mainly need to search in the relevant intellectual property registry as by registering in that registry the searcher's security right would gain priority even over a security right, a notice of which was registered earlier in the general security rights registry. It should be noted, however, that the intellectual property registration system may require registration of a document and the registrar may have to check the document to ensure that it can be registered. These characteristics may affect the time- and cost-efficiency of the registration process. While the notice-based registration system of the general security rights registry gives less information about the specifics of a transaction and thus has the advantage of providing greater confidentiality and simplicity than the document-based registration system of the intellectual property registry, it has the

disadvantage that it may not provide a searcher as much information as a document-based registration system.

30. A grantor that is the initial owner of ten intellectual property rights creates a security right in all ten intellectual property rights. If there is no specialized registry in which security rights in intellectual property rights may be registered, then registration has to be made in the general security rights registry. In such a case, the secured creditor needs to register only one notice, listing the grantor's name and indicating the intellectual property rights as encumbered assets. As the grantor is assumed to be the initial owner, a secured creditor need only be concerned about competing transfers made only by the grantor and not by any prior party in the chain of title. Thus, a searcher needs to conduct only one search in the general security rights registry against the name of the grantor to find competing security rights.

31. However, a searcher will also need to conduct ten searches against each intellectual property right in the intellectual property registry to determine if there are other competing claimants such as outright transferees. If there is a specialized registry in which security rights in the intellectual property may be registered and the secured creditor, cognizant of the priority advantages of registration in such a registry, decides to search that registry and register its security right there, the secured creditor may need to register a document or notice for each intellectual property right separately, although in some cases it may be possible to register a single document that identifies some or all of the encumbered intellectual property (for example, if all the intellectual property rights are patents). In such a case, a searcher needs to conduct a search in the intellectual property registry against each of the ten intellectual property rights to find both prior security rights and other competing claimants.

32. In summary, in this example, a secured creditor need only register one notice in the general security rights registry but may need to make up to ten separate registrations in the intellectual property registry. A searcher needs to make: (a) one search in the general security rights registry to find competing security rights plus ten searches to find other competing claimants for each intellectual property right; or (b) ten searches to find competing security rights and other competing claimants in the specialized intellectual property registry.

33. In the example mentioned above, if the grantor is not the initial owner but a transferee in a chain of transferees and each of the ten intellectual property rights has ten prior owners, registration in the general security rights registry may still be more efficient than registration in an intellectual property registry. A secured creditor would only need to register one notice in the general security rights registry against the grantor, but up to ten notices in any relevant intellectual property registry against each of the ten intellectual property rights. However, with respect to searching, if a security right remains effective against transferees without the need for an amendment notice to be registered in the general security rights registry (see paras. 45-48 and recommendation 244 below), then a searcher would have to conduct ten searches outside the security rights registry to identify the prior owners of each intellectual property right and then conduct a search of each prior owner in the general security rights registry to discover whether there are prior competing security rights, that is one hundred searches (10 prior owners x 10 intellectual property rights) in the general security rights registry to identify all prior security rights. However, if a security right is registered in an intellectual property registry,

if any, the secured creditor need only conduct ten searches, that is, one for each intellectual property right, since the search in the intellectual property registry will disclose both prior competing security rights and other competing claimants. Thus, as to searching with respect to intellectual property rights that have had many previous owners, it would seem that searching in the intellectual property registry, if any, would be more time- and cost-efficient.

34. In summary, in cases where there are multiple intellectual property rights with multiple prior transferees in the chain of title: (a) if there is no specialized intellectual property registry and the law does not require registration of an amendment notice in the general security rights registry for the registration to remain effective against a transferee, then the secured creditor need only register one notice in the general security rights registry, but needs to conduct a search in any relevant intellectual property registry for each intellectual property right to find other prior transferees and then must also search against each of these prior transferees in the general security rights registry to find prior competing security rights; and (b) if there is an intellectual property registry in which notices of security rights may be registered, a secured creditor may need to register a notice for each intellectual property right individually (unless in some cases one document can apply to multiple intellectual property rights), but need to only search in the intellectual property registry to find all prior competing security rights and transferees.

35. These examples indicate that, while the general security rights registry in the *Guide* may better accommodate intellectual property financing in some contexts, this may not always be the case and would depend on the circumstances of each case (see also section G below). They also indicate that, in view of the priority of a security right registered in an intellectual property registry and the need for the secured creditor to establish that the grantor has rights in the intellectual property to be encumbered, registration and search may need to take place in the intellectual property registry in most cases (of course, where registration of a security right in an intellectual property registry is possible).

36. The law applicable to third-party effectiveness and priority will also have an impact on the time- and cost-efficiency of registration. If the law applicable to these matters is the law of the State in which the encumbered intellectual property is protected, in the case of a portfolio of intellectual property rights, registration and searching will involve several States. The result would be different if third-party effectiveness and priority were to be governed by the law of the State in which the grantor is located (unless, of course, the grantor moves to another country or the encumbered intellectual property right is transferred from a person in one country to a person in another country, in which the law of more than one State will be involved; see recommendations 45, 219 and 220). However, in any case, the main cause of the difference would be the applicable law and not the type of registration. Therefore, this matter is discussed in chapter X on the law applicable to a security right in intellectual property.

F. Time of effectiveness of registration

37. Under the law recommended in the *Guide*, registration of a notice of a security right becomes effective against third parties when the information in the notice is entered into the registry records and becomes available to searchers (see recommendation 70). Where the registry is electronic, registration of a notice will become effective immediately upon registration. However, where the registry is paper-based, registration of a notice will become effective some time after registration.

38. Under law relating to intellectual property, specialized registration systems may have different rules with respect to the time of effectiveness of registration of a security right. For example, under law relating to patents and trademarks in many States, third-party effectiveness of a registered security or other right in a patent or a trademark dates back to the date of filing (that is, submission to the registry of an application for registration). Such an approach is useful where the registry takes time to actually register the security right in the patent or trademark, but may mislead a searcher as to whether specific intellectual property is encumbered.

39. As already mentioned (see paras. 17-18 above), the law recommended in the *Guide* deals with coordination issues by giving priority to a security right a document or notice of which is registered in a specialized registry (or with respect to which a notation is made on a title certificate) irrespective of the time of registration (see recommendations 77 and 78). Thus, the difference in the approach as to the time of effectiveness of registration may not cause any problems in determining the priority of a security right in intellectual property registered in the relevant intellectual property registry.

G. Impact of a transfer of encumbered intellectual property on the effectiveness of registration

40. The *Guide* recommends that the secured transactions law should address the impact of a transfer of an encumbered asset on the effectiveness of registration of a notice in the general security rights registry (see recommendation 62). This recommendation is equally applicable to security rights in intellectual property made effective against third parties by registration of a notice in the general security rights registry. However, this recommendation does not apply if:

(a) The transferee of an encumbered asset acquires it free of the security right, as is the case, for example, where the transfer is authorized by the secured creditor free of the security right (see recommendation 80);

(b) A document or notice of the security right has been registered in an intellectual property (or other specialized) registry;

(c) The grantor has transferred all its rights in the encumbered asset before granting a security right in that asset (in such situations, under the *Guide*, no security right is created; see recommendation 13); and

(d) There is no transfer of ownership, but only a licence in intellectual property.

41. With respect to subparagraph (a) in the preceding paragraph, it should be noted that, if the secured creditor did not authorize a licence (that is, if the licensee did not acquire the asset free of the security right) and enforced its security right, enforcement would amount to termination of the licence and any sub-licence, which would make all the “licensees” infringers upon completion of enforcement of the security right. With respect to subparagraph (d), it should be noted that recommendation 62 might apply to a licence, if, under law relating to intellectual property, it is treated as a transfer of ownership (while under the *Guide*, a licence is not a transfer, the exact meaning of the term “licence”, including the question whether an exclusive licence is to be treated as a transfer is a matter of law relating to intellectual property; see A/CN.9/WG.VI/WP.42, paras. 23-25, and A/CN.9/WG.VI/WP.42/Add.4, para. 15).

42. The commentary discusses three ways in which an enacting State may wish to address the matter. One way is to provide that, where the encumbered asset is transferred and the transferee does not acquire it free of the security right, the secured creditor must register an amendment notice identifying the transferee within a certain specified period after the transfer. If the secured creditor fails to do so, the original registration continues to be effective in principle. However, the security right is subordinated to intervening secured creditors and transferees whose rights arise after the transfer of the encumbered asset and before the amendment notice is registered. A second way in which enacting States may wish to address this issue is to provide that the grace period for the registration of an amendment notice is triggered only once the secured creditor acquires actual knowledge of the transfer of the encumbered asset by the grantor. A third way might be to provide that a transfer of an encumbered asset has no impact on the effectiveness of registration of a security right.

43. If an enacting State adopts the third approach, a secured creditor of the transferor need not register a notice of its security right again identifying the transferee. In such a case, the original registration of a notice of security right in the asset now owned by the transferee would remain effective. However, transferees down in the chain of transferees might not readily be able to discover, through a search in the general security rights registry, a security right granted by any person other than their immediate transferor. In such cases, they would still have to search the chain of title and status of an encumbered asset outside the general security rights registry. On the other hand, if an enacting State adopts the first or the second approach discussed above, a secured creditor will have to register an amendment notice identifying the transferee. In such a case, the secured creditor will have the burden of monitoring the status of the encumbered asset (to a different degree, depending on whether the first or the second approach is followed). At the same time, however, transferees down the chain of title will readily be able to identify a security right granted by a person other than their immediate transferor.

44. States enacting the law recommended in the *Guide* will have to consider the relative advantages and disadvantages of these different approaches mentioned above and, in particular, their impact on rights in intellectual property. For example, under the first approach, a secured creditor extending credit against the entire copyright in a movie would need to make continuous registrations against tiers of licensees and sub-licensees (if the applicable law relating to copyrights treated such an exclusive licence as a transfer that may be registered) to maintain its priority

against them or their own secured creditors. This would be a significant burden on such lenders and might discourage credit against such assets. On the other hand, such an approach would make it easier for a lender to a sub-licensee to find a security right created by its sub-licensor by a simple search only against the identifier of the sub-licensor. Here, the trade-off is between the relative costs of monitoring and multiple registrations by the lender to the “upstream” party as against the costs of conducting a search of the entire chain of title for security rights created by the “downstream” party. In this regard, it should be noted that typically under law relating to intellectual property a prior transfer retains its priority over later transfers without the need for an additional registration in the name of a transferee of an encumbered asset.

45. As already mentioned, if a State does not follow the third option, a secured creditor would have to register an amendment notice in the general security rights registry each time the encumbered intellectual property became the subject of an unauthorized transfer, licence or sub-licence (if licences are treated as transfers under the relevant law relating to intellectual property), at the risk of losing its priority if it were not informed and had not acted promptly. The following examples may highlight the need for such an approach (see recommendation 244 below).

46. If a grantor of a security right in an intellectual property right is not the initial owner but a transferee with ten prior transferees and if a secured creditor need not register an amendment notice in the name of each transferee of the encumbered intellectual property right, the secured creditor need only register one notice in a general security rights registry. However, a searcher would have to conduct ten searches outside the security rights registry to identify each owner and then search the general security rights registry for each of the ten prior owners to determine if there are any prior security rights granted by any owner.

47. If, however, the law requires a new notice each time the encumbered intellectual property is transferred, the secured creditor must register one notice against its grantor and one for each of the ten prior owners. This may require that the secured creditor make a substantial effort to monitor not only the actions of its grantor, but also transferees (and licensees, if a licence is treated as a transfer).

48. These examples indicate that, if the law requires the secured creditor to register an amendment notice each time the encumbered intellectual property is transferred or licensed, intellectual property financing would be discouraged or become more expensive.

H. Registration of security rights in trademarks

49. The International Trademark Association (“INTA”) issued a series of recommendations with respect to the registration of security rights in trademarks and service marks (collectively referred to as “marks”).¹ More specifically, INTA endorsed uniformity and best practice in registration mechanisms and methods regarding security rights in trademarks, recognizing that: intellectual property rights, including marks, are a major and growing factor in commercial lending transactions; lack of consistency in the registration of security rights in marks

¹ See www.inta.org/index.php?option=com_content&task=view&id=1517&Itemid.

fosters commercial uncertainty, and also poses a risk that a mark owner may forfeit or otherwise endanger its mark-related rights; many States have no recording mechanisms (or have insufficient mechanisms) for the registration of security rights in marks; many countries apply different and conflicting criteria for determining what can and will be recorded; and international initiatives on security rights in intellectual property rights by organizations such as UNCITRAL will have broad implications for the way secured financing laws are implemented to deal with registration and other aspects of trademark security rights, especially in developing countries. It should be noted that the recommendations do not address issues relating to the registration of security rights in marks that may not be registered in a trademark office, leaving those issues to domestic secured transactions law (including the law recommended in the *Guide*). In addition, the recommendations address third-party effectiveness issues but do not set out priority rules, leaving them to domestic secured transactions law (including the law recommended in the *Guide*).

50. The main features of such best practices are the following:

(a) A security right in a mark covered by a pending application or registration should be registrable in the national Trademark Office;

(b) For purposes of giving notice of a security right, registration in the applicable national Trademark Office or in any applicable commercial registry is recommended, with free public accessibility, preferably through electronic means;

(c) The grant of a security right in a mark should not have the effect of a transfer of legal or equitable title to the mark that is subject to the security right, and should not confer upon the secured creditor a right to use the mark;

(d) The security agreement creating the security right should clearly set forth provisions acceptable under local law enabling the renewal of the marks by the secured creditor, if necessary to preserve the mark registration;

(e) Valuation of marks for purposes of security rights should be made in any manner that is appropriate and permitted under local law and no particular system or method of valuation is preferred or recommended;

(f) Registration of security rights in the local Trademark Office should suffice for purposes of perfecting a security right in a mark; at the same time, registration of a security right in any other place allowed under local law, such as a commercial registry, should also suffice;

(g) If local law requires that a security right be registered in a place other than the local Trademark Office in order to be perfected, such as in a commercial registry, dual registration of the security right should not be prohibited;

(h) Formalities in connection with registration of a security right and the amount of any government fees should be kept to a minimum; a document evidencing: (i) existence of a security right, (ii) the parties involved, (iii) the mark(s) involved by application and/or registration number, (iv) a brief description of the nature of the security right, and (v) the effective date of the security right, should suffice for purposes of making a security right effective against third parties;

(i) Regardless of the procedure, enforcement of a security right through foreclosure, after a judgement, administrative decision or other triggering event, should not be an unduly burdensome process;

(j) The applicable Trademark Office should promptly record the entry of any judgement or adverse administrative or other decision against its records and take whatever administrative action is necessary; the filing of a certified copy of the judgement or decision should be sufficient;

(k) In the event that enforcement is triggered by means other than a judgement or administrative decision, local law should provide for a simple mechanism enabling the holder of the security right to achieve registration, with free public accessibility, preferably through electronic means;

(l) In cases where the mark owner is bankrupt or otherwise unable to maintain the marks which are subject to a security right, absent specific contract provisions, the holder of the security right (or the administrator or executor, as the case may be) should be permitted to maintain the marks, provided that nothing shall confer upon the secured creditor the right to use the marks; and

(m) The relevant government agency or office should promptly record the filing of documentation reflecting release of the security right in its records, with free public accessibility, preferably through electronic means.

51. Recommendations (a), (b), (f) and (g), dealing with third-party effectiveness of a security right in a mark, are compatible with the law recommended in the *Guide* in that they promote the objectives of certainty and transparency (see recommendation 1, subparagraph (f)).

52. Recommendation (c), providing that the creation of a security right in a mark does not result in a transfer of the mark or confer upon the secured creditor the right to use the mark, is also compatible with the law recommended in the *Guide*. It should be noted that, under the law recommended in the *Guide*, the secured creditor has a right, but no obligation, to preserve an encumbered intangible asset (such an obligation is foreseen only for tangible assets; see recommendation 111). If, in the case of the owner's insolvency, neither the owner nor the insolvency representative nor the secured creditor takes the necessary steps to preserve the encumbered mark, the mark may still be preserved under law relating to intellectual property (for example, under the doctrine of the "excusable non-use" of a mark).

53. In addition, recommendation (d) is compatible with the law recommended in the *Guide* in that it sets forth a default rule for the rights of the parties within the limits of the applicable law. Recommendation (e) is also compatible with the law recommended in the *Guide* to the extent it emphasizes the importance of valuation of marks without suggesting any particular system of valuation. Recommendation (h) is also compatible with the law recommended in the *Guide* in that it recommends notice filing even in relation to mark registries. It should be noted that the reference to "the date of the security right" is a reference to the time of effectiveness of the security right between the parties and not against third parties.

54. Moreover, recommendations (i), (j) and (k) are compatible with the law recommended in the *Guide* in the sense that they provide for efficient enforcement mechanisms and registration of court judgements or administrative enforcement

decisions. Finally, recommendation (m), which is subject to approval by the appropriate Government authorities, is compatible with the law recommended in the *Guide* with respect to efficient registration procedures.

Recommendation 244²

Impact of a transfer of encumbered intellectual property on the effectiveness of registration

The law should provide that the transfer of intellectual property that is subject to a security right does not affect the effectiveness of the registration of the security right. As a result, the secured creditor does not have to register an amendment notice indicating the name of the transferee of the encumbered intellectual property.

[Note to the Working Group: The Working Group may wish to consider whether the second sentence of recommendation 244 should be moved to the commentary as it deals with the result of the application of this recommendation.]

² If it could be included in the *Guide*, this recommendation would be included in chapter IV on the registry system as recommendation 62 bis.

V. Priority of a security right in intellectual property

[Note to the Working Group: For paras. 1-49 below, see A/CN.9/WG.VI/WP.39/Add.4, paras. 1-15, A/CN.9/WG.VI/WP.42/Add.5, paras. 1-12, A/CN.9/685, paras. 47-72, A/CN.9/WG.VI/WP.37/Add.2, paras. 43-55, A/CN.9/WG.VI/WP.37/Add.3, paras. 1-23, A/CN.9/670, paras. 73-95, A/CN.9/WG.VI/WP.35/Add.1, paras. 33-61, A/CN.9/667, paras. 86-103, A/CN.9/WG.VI/WP.33/Add.1, paras. 1-25, and A/CN.9/649, paras. 41-56.]

A. The concept of priority

1. As used in the *Guide*, the concept of priority of a security right as against competing claimants refers to the question of whether the secured creditor may derive the economic benefit of its security right in an encumbered asset in preference to a competing claimant (see the term “priority”, Introduction to the *Guide*, section B on terminology and interpretation; see also the term “competing claimant”, Introduction to the draft Supplement, section C on terminology, A/CN.9/WG.VI/WP.42, paras. 22-23, as well as paras. 3-5 below). It should also be noted that a conflict between two persons, neither of whom is a secured creditor, is not a priority conflict under the law recommended in the *Guide*.

2. By contrast, in law relating to intellectual property, the notion of the priority of intellectual property rights may relate to notions of exclusive rights, in particular in the case of patents and trademarks. In most States, once intellectual property is transferred by the intellectual property owner, a second transfer by the same person will normally transfer no rights to the second transferee (except if the first transferee does not comply with statutory registration requirements or the second transferee is a good faith purchaser; for the relevance of knowledge of prior transfers, see paras. 5-6 below). Similarly, if both the first and the second transferee create a security right in their intellectual property rights, there may be no priority conflict under the law recommended in the *Guide* to the extent the second transferee did not have any intellectual property rights to create a security right in. In such a case, the issue of priority in the sense that this term is used in the *Guide* does not arise. Accordingly, the law recommended in the *Guide* would not apply and this matter would be left to law relating to intellectual property, which would typically resolve them by reference to the *nemo dat* principle and principles about good faith acquisition of assets. In any case, it should be noted that, under the law recommended in the *Guide*, a party that has no rights in, or the power to encumber, an asset may not create a security right in the asset (see recommendation 13).

B. Identification of competing claimants

3. The *Guide* uses the term “competing claimant” to refer to another secured creditor with a security right in the same asset (which includes a transferee in a transfer by way of security), an outright transferee, lessee or licensee of the encumbered asset, a judgement creditor with a right in the encumbered asset and an insolvency representative in the insolvency of the grantor (see the term “competing claimant”, Introduction to the draft Supplement, section C on terminology, A/CN.9/WG.VI/WP.42, paras. 22-23). In particular, the law recommended in the *Guide* applies to priority conflicts: (a) between two security rights, notices of which are registered in the general security rights registry (see recommendation 76, subparagraph (a)); (b) between a security right, a notice of which is registered in the general security rights registry, and a security right, a document or notice of which is registered in the relevant intellectual property registry (see recommendation 77, subparagraph (a)); (c) between two security rights, documents or notices of which are registered in the relevant intellectual property registry (see recommendation 77, subparagraph (b)); (d) between the rights of a transferee or licensee of intellectual property and a security right in that intellectual property, a notice or document of

which may be registered in an intellectual property registry (see recommendation 78); (e) between the rights of a transferee or licensee of intellectual property and a security right in that intellectual property, a notice or document of which may not be registered in an intellectual property registry (see recommendations 79-81); and (f) between two security rights, one of which is granted by the grantor and the other is granted by the transferee, lessee or licensee of the encumbered asset (see recommendations 31, 79 and 82). The last conflict is addressed in the sense that the transferee takes the asset subject to the security right (see recommendations 79 and 82) and the secured creditor of the transferee takes no more rights than the transferee had (see recommendation 31).

4. In an intellectual property context, the notion of “conflicting transferees” is used instead and it includes transferees and licensees competing with each other. If no conflict with a security right in intellectual property (which includes the right of a transferee by way of security) is involved, the law recommended in the *Guide* does not apply and the matter is left to law relating to intellectual property. If a conflict with such a security right is involved, the law recommended in the *Guide* does not apply insofar as its provisions are inconsistent with the enacting State’s law relating to intellectual property (see recommendation 4, subparagraph (b)). Furthermore, the law recommended in the *Guide* does not apply to a conflict between a transferee of an encumbered asset that acquired the asset from a secured creditor enforcing its security right and another secured creditor that later received a right in the same asset from the same grantor (that no longer had any rights in the encumbered asset). This is not a priority conflict under the law recommended in the *Guide*, but it may well be a conflict addressed by law relating to intellectual property.

C. Relevance of knowledge of prior transfers or security rights

5. Under the law recommended in the *Guide*, knowledge of the existence of a prior security right on the part of a competing claimant is generally irrelevant for determining priority (see recommendation 93; however, knowledge that a transfer violates the rights of a secured creditor may be relevant; see recommendation 81, subparagraph (a)). Thus, a later created but first registered security right has priority over an earlier created but later registered security right, even if the holder of the former security right has knowledge of the existence of the earlier created security right (see recommendation 76, subparagraph (a)).

6. By contrast, in many States, law relating to intellectual property provides that a later conflicting transfer or security right may only gain priority if it is registered first and taken without knowledge of a prior conflicting transfer. The deference to law relating to intellectual property under recommendation 4, subparagraph (b), should preserve these knowledge-based priority rules to the extent they apply specifically to security rights in intellectual property.

D. Priority of security rights in intellectual property that are not registered in an intellectual property registry

7. As already mentioned, if law relating to intellectual property has priority rules dealing with the priority of security rights in intellectual property that apply specifically to intellectual property and the priority rules of the law recommended in the *Guide* are inconsistent with those rules, the law recommended in the *Guide* does not apply (see recommendation 4, subparagraph (b)). However, if law relating to intellectual property does not have such rules or the priority rules of the law recommended in the *Guide* are not inconsistent with those rules, the priority rules of the law recommended in the *Guide* apply.

8. Under the law recommended in the *Guide*, priority between security rights granted by the same grantor in the same encumbered asset that were made effective against third parties by registration in the general security rights registry is determined by the order of registration of a notice in that registry (see recommendation 76, subparagraph (a)). This rule applies if a notice or document of a security right may not be registered or is not registered in a specialized registry. If such a notice or document may be registered and is registered in a specialized registry, different rules apply (see recommendation 77 and paras. 9-11 below). In addition, if a security right is granted by a different grantor (for example, a transferee of the initial grantor), different rules apply (see recommendation 79-83 and paras. 12-29 below). All these rules apply equally to security rights in intellectual property.

E. Priority of security rights in intellectual property that are registered in an intellectual property registry

9. The *Guide* recommends that a security right in an asset that is made effective against third parties by registration in a specialized registry (see recommendation 38) should have priority over a security right in the same asset, which is made effective against third parties by another method (see recommendation 77, subparagraph (a)). It also recommends that a security right in an asset that is made effective against third parties by registration in a specialized registry has priority over a security right that was subsequently registered in the specialized registry (see recommendation 77, subparagraph (b)). In addition, the *Guide* recommends that, if an encumbered asset is transferred, leased or licensed and, at the time of the transfer, lease or licence, the security right has been made effective against third parties by registration in a specialized registry, the transferee, lessee or licensee takes its rights subject to the security right. If such a security right has not been registered in a specialized registry, a transferee, lessee or licensee of an encumbered asset takes the asset free of the security right, even if a notice of the security right was registered in the general security rights registry (see recommendation 78). These rules are subject to certain exceptions (see paras. 12-29 below, as well as recommendations 79-81). In addition, if a transferee, lessee or licensee of an encumbered asset acquires its rights in the asset free of a security right, any person that subsequently acquires rights in the asset acquires its rights free of the security right (see recommendations 31 and 82).

10. These recommendations are equally applicable to security rights in intellectual property. Thus, if there is a conflict between two security rights in intellectual property, one of which is the subject of a notice registered in the general security rights registry and the other is the subject of a document or notice registered in the relevant intellectual property registry, the law recommended in the *Guide* applies and gives priority to the latter security right (see recommendation 77, subparagraph (a)). If there is a conflict between security rights with respect to which documents or notices are registered in the relevant intellectual property registry, the right a document or notice of which is registered first has priority, and the law recommended in the *Guide* confirms that result (see recommendation 77, subparagraph (b)). If there is a conflict between the rights of a transferee of intellectual property and a security right with respect to which, at the time of the transfer, a document or notice could be registered and was registered in the relevant intellectual property registry, the transferee would take the encumbered intellectual property subject to the security right. However, if a security right in intellectual property may be registered but is not registered, the transferee or licensee of the encumbered intellectual property takes the encumbered intellectual property free of the security right, even if the security right was registered in the general security rights registry (see recommendation 78). In some States, under law relating to intellectual property, a secured creditor would have priority in this case, if the transferee is not a good faith purchaser. Following recommendation 4, subparagraph (b), the law recommended in the *Guide* would defer to that rule if it applied specifically to intellectual property. Finally, a secured creditor of a transferee of intellectual property takes the intellectual property subject to the security right of the transferor (see recommendations 31 and 82).

11. For example, if A creates a security right in a patent in favour of B that registers a notice of its security right in the general security rights registry, and then A transfers title to the patent to C, which registers a document or notice of its transfer in the patent registry, under recommendation 78 of the *Guide*, C would take the patent free of the security right of B. If A, instead of making a transfer, creates a second security right in favour of C and C registers a document or notice of the security right in the patent registry, under recommendation 77, subparagraph (a), of the *Guide*, C would prevail. In either case, as registration of a document or notice in the patent registry gives superior rights, under the law recommended in the *Guide*, third-party searchers could rely on a search in that registry and would not need to search in the general security rights registry. In all these examples, the questions of who is a transferee and what are the requirements for a transfer are matters of law relating to intellectual property. It should also be noted that registration in the intellectual property registry would normally refer only to a security right in intellectual property. It would not refer to a security right in tangible assets with respect to which intellectual property is used.

F. Rights of transferees of encumbered intellectual property

12. Under the law recommended in the *Guide*, a transferee of an encumbered asset (including intellectual property) normally takes the asset subject to a security right that was effective against third parties at the time of the transfer. There are two exceptions to this rule (recommendation 79). The first exception arises where

the secured creditor authorizes the sale or other disposition free of the security right (see recommendation 80, subparagraph (a)). The second exception relates to a transfer in the ordinary course of the seller's business where the buyer has no knowledge that the sale or other disposition violates the rights of the secured creditor under the security agreement (see recommendation 81, subparagraph (a)). If a security right may be registered (whether registered or not) in an intellectual property registry, as already mentioned (see paras. 9-11 above), a different rule applies (see recommendation 78).

13. Recommendation 79 applies equally to security rights in intellectual property that may not be registered in an intellectual property registry and recommendation 78 applies to security rights in intellectual property that may be registered (whether registered or not) in an intellectual property registry. Thus, if a notice in respect of a security right is registered in the general security rights registry, a transferee or licensee of intellectual property will take the encumbered intellectual property subject to the security right, unless one of the exceptions set out in recommendations 80-82 applies (with respect to recommendation 81, subparagraph (c), see paras. 21-29). These recommendations do not apply, under recommendation 4, subparagraph (b), if they are inconsistent with the priority rules of the law relating to intellectual property that apply specifically to intellectual property.

14. The preceding analysis deals with a priority conflict between a security right and the rights of a subsequent transferee. The situation is different where intellectual property is transferred before the creation of a security right, as no priority conflict arises here under the law recommended in the *Guide*. In this case, as a result of the *nemo dat* principle, the secured creditor will have no security right at all. As already mentioned, the *Guide* does not interfere with the application of the *nemo dat* principle. To the contrary, this approach is reflected in the general rule in the law recommended in the *Guide* that a grantor can create a security right only in an asset in which the grantor has rights or the power to create a security right (see recommendation 13). This rule would be displaced though by a rule of law relating to intellectual property giving priority to a secured creditor that took a security right in intellectual property without knowledge of a prior transfer of the intellectual property by the grantor (see recommendation 4, subparagraph (b)).

15. It is also important to note that, as already mentioned (see A/CN.9/WG.VI/WP.42, paras. 23-25, and A/CN.9/WG.VI/WP.42/Add.3, paras. 40-41), under the *Guide*, a licence of intellectual property is not a transfer of the licensed intellectual property. Thus, the rules of the law recommended in the *Guide* that apply to transfers of encumbered assets do not apply to licences. However, the law recommended in the *Guide* would defer to law relating to intellectual property treating certain licences (in particular, exclusive licences) as transfers (see recommendation 4, subparagraph (b)).

G. Rights of licensees in general

16. Intellectual property is routinely licensed. In such cases, the retained rights of a licensor, such as the ownership right, rights associated with ownership and the rights of a licensor under a licence agreement (such as the right to grant further

licences or to obtain payment of royalties) may be used by the licensor as security for credit. Similarly, the licensee's authorization to use or exploit the intellectual property or the licensee's right to grant sub-licences and obtain payment of royalties (in both cases according to the terms of the licence agreement) may be used by the licensee as security for credit (as to the types of encumbered asset in an intellectual property context, see A/CN.9/WG.VI/WP.42/Add.2, paras. 13-36).

17. Typically, under secured transactions law, including the law recommended in the *Guide*, a secured creditor does not become an owner of the encumbered asset, unless upon default, the secured enforces its security right and acquires the asset in an enforcement sale or in satisfaction of the secured obligation (see A/CN.9/WG.VI/WP.42, paras. 28-30, A/CN.9/WG.VI/WP.42/Add.1, paras. 10-12, and A/CN.9/WG.VI/WP.42/Add.5, paras. 16-17 and 21). The question whether the intellectual property owner that has created a security right in its intellectual property is still, the owner and may, for example, grant a licence in the encumbered intellectual property is a matter of law relating to intellectual property. Under general principles of law relating to intellectual property (with which the law recommended in the *Guide* is consistent), the owner may not grant a licence in its encumbered intellectual property if the secured creditor becomes the owner (or may exercise the rights of an owner) of the intellectual property with authority to grant licences while the security right is in place (see A/CN.9/WG.VI/WP.42/Add.5, para. 1). In this situation, a licence granted by the original owner would be an unauthorized licence under law relating to intellectual property and the licensee or its secured creditor would obtain nothing based on the *nemo dat* principle.

18. If the owner, after creating a security right in its intellectual property, remains the owner but its ability to grant licences is limited by agreement with the secured creditor (to the extent such agreement is permitted under law relating to intellectual property), the owner may theoretically grant a licence, but the granting of a licence by the owner in breach of its agreement with the secured creditor would be an event of default. As a result, the owner's secured creditor could enforce its security right and, exercising the rights of the owner sell the licensed intellectual property or grant another licence free of the pre-existing licence (and any security right granted by the licensee) as that licensee would normally have taken its licence subject to the security right of the owner's secured creditor (see recommendations 79 and 161-163). Alternatively, the owner's secured creditor could enforce its security right upon default by collecting the royalties owed by the licensee to the owner as licensor. If the encumbered asset is the owner's intellectual property rights, the secured creditor may collect the royalties as proceeds of the encumbered asset (see recommendations 19, 39, 40, 100 and 168). If the encumbered asset is the right of the owner as licensor to the payment of royalties, the secured creditor may collect the royalties as the original encumbered asset. In either case, the secured creditor may collect royalties even before default but only if there is an agreement to that effect between the owner and its secured creditor (see recommendation 168). In any case, if the licensee took the licensed intellectual property free of the security right granted by the owner in the intellectual property, the licensee could retain its licence and the secured creditor could only seek to collect the royalties owed by the licensee to the owner (see recommendations 80, subparagraph (b), and 245).

19. If the licensee also creates a security right in its rights under the licence agreement (for example, the authorization to use or exploit the licensed intellectual

property), that security right would be in a different asset (that is, not in the owner's rights). If the security right created by the licensee were in the same asset, it would be subject to the security right created by the owner (and made effective against third parties). The reason for this result is that the licensee would have taken its rights subject to the security right created by the owner (see recommendation 79) and the licensee could not have given to its secured creditor more rights than the licensee had (based on the *nemo dat* principle). So, if the secured creditor of the owner enforced its security right and disposed of the encumbered intellectual property free of the licence, the licence would terminate upon that disposition and the licensee's encumbered asset would cease to exist. Likewise, whether or not the owner had granted a security right to one of its creditors, if the licensee defaults on the licence agreement, the owner as licensor can terminate it to the extent permitted under law relating to intellectual property and the licensee's secured creditor would be again left without an asset encumbered by its security right.

20. As already mentioned (see A/CN.9/WG.VI/WP.42, paras. 23-25, A/CN.9/WG.VI/WP.42/Add.3, paras. 40-41, and para. 15 above), the rights of the licensor and the licensee under the licence agreement and the relevant law relating to intellectual property would remain unaffected by secured transactions law. So, if the licensee defaulted on the licence agreement, the licensor could exercise any available right to terminate it and the licensee's secured creditor would be again left without security. Similarly, secured transactions law would not affect an agreement between the licensor and the licensee prohibiting the licensee from granting sub-licences or assigning to the licensor the licensee's rights to the payment of royalties owed by sub-licensees to the licensee as sub-licensor (see A/CN.9/WG.VI/WP.42/Add.2, paras. 26-28).

H. Rights of certain licensees

21. As already mentioned (see para. 12 above), there are two exceptions to the rule that a licensee of encumbered intellectual property takes the licence subject to a pre-existing security right (see recommendation 79).

22. The first exception arises where the secured creditor authorized the licence free of the security right (see recommendation 80, subparagraph (b)). Thus, under the law recommended in the *Guide*, in the case of the grantor's default, the secured creditor could collect any royalties owed by the licensee to the grantor as licensor, but not sell the licensed intellectual property free of the rights of the existing licensee or grant another licence with the effect of terminating the rights of the existing licensee as long as the licensee performs the terms of the licence agreement.

23. The second exception to the principle embodied in recommendation 79 is that a non-exclusive licensee that takes a licence in the ordinary course of business of the licensor without knowledge that the licence violated the rights of the secured creditor in the licensed intellectual property, takes its rights under the licence agreement unaffected by a security right previously granted by the licensor (see recommendation 81, subparagraph (c), which applies to intangible assets generally). The result of this rule is that, in the case of enforcement of the security right in the licensed intellectual property by the secured creditor of the licensor under the

enforcement rules of the law recommended in the *Guide*, the secured creditor could collect any royalties owed by the licensee to the licensor, but not sell the licensed intellectual property free of the rights of the existing licensee or grant another licence with the effect of terminating the rights of the existing licensee as long as the licensee performs the terms of the licence agreement. This rule is intended to protect everyday, legitimate transactions, such as off-the-shelf purchases of copyrighted software with end-user licence agreements by limiting the enforcement remedies of a secured creditor under the enforcement rules of the law recommended in the *Guide*. In such transactions, the essence of the protection meant here is that purchasers should not have to do a search in a registry or acquire the copyrighted software subject to security rights created by the software developer or its distributors.

24. Recommendation 81, subparagraph (c), is based on the assumption that the grantor retains ownership of the encumbered intellectual property. This means that recommendation 81, subparagraph (c), does not apply if, under law relating to intellectual property, the grantor is no longer authorized to grant a licence because it has transferred the owner's rights to the secured creditor. In addition, recommendation 81, subparagraph (c), does not affect the relationship between the licensor and the licensee and does not mean that the licensee would obtain a licence free of the terms and conditions of the licence agreement and the law applicable to it (nor does it affect limitations in the licence agreement on the licensee entering into sub-licence agreements). Moreover, this recommendation and the *Guide* as a whole do not interfere with the enforcement of provisions as between the secured creditor and the grantor/licensor (or between the licensor and its licensee) that the grantor/licensor place in all of the non-exclusive ordinary course-of-business licences a provision that the licence will terminate if the licensor's secured creditor enforces its security right.

25. The secured creditor may elect to avoid extending any credit until it has an opportunity to review and approve the terms and conditions of any sub-licence agreement. For example, the secured creditor may wish to ensure that expected royalties are paid upfront, termination is permitted in the case of non-payment of royalties and assignment of sub-royalties is prohibited. In addition, if the secured creditor of the licensor does not want to encourage non-exclusive licences, it can, in its security agreement (or elsewhere), require the grantor (the licensor) to place in all of the non-exclusive licences a provision that the licence will terminate if the licensor's secured creditor enforces its security right. Similarly, if the licensor does not want its licensee to grant any sub-licences, it can include in the licence agreement a provision that the granting of a sub-licence by the licensee is an event of default under the licence agreement that would entitle the licensor to terminate the licence. Nothing in the *Guide* would interfere with the enforcement of such provisions as between the secured creditor and its borrower (or as between the licensor and its licensee). Ordinarily, the secured creditor will have no interest in doing that, since the licensor (and any licensee) is in the business of granting non-exclusive licences and the secured creditor expects the grantor to use the fees paid under those licence agreements to pay the secured obligation.

26. From the discussion above it becomes clear that the scope of application of recommendation 81, subparagraph (c), is very limited for a number of reasons. First, secured creditors often have no interest in limiting the ability of an owner/grantor to

grant licences in its intellectual property and collect royalties. As a matter of fact, a secured creditor is in many cases interested in permitting licensing so that the owner/grantor may repay the secured obligation. Second, by its wording, recommendation 81, subparagraph (c), applies only where there is a non-exclusive licence, one that includes a legitimate “off-the-shelf” purchase of licences of copyrighted software used with respect to equipment and only where the licensee had no knowledge that the licence violated the rights of the secured creditor under the security agreement. Such off-the shelf licences may be described without reference to the ordinary-course-of-business concept (see recommendation 245 below).

27. In addition, the impact of the application of recommendation 81, subparagraph (c), is very limited. The effectiveness, priority and enforceability of the security right against competing claimants (other than the specific licensee) under secured transactions law are not affected. At the same time, if the secured creditor has other rights under law relating to intellectual property law (for example, the rights of an owner), these rights are not affected by recommendation 81, subparagraph (c). The extent of such rights or remedies is a matter of law relating to intellectual property.

28. However, the concept of ordinary course of business is rarely used in intellectual property law and may create confusion in an intellectual property financing context. In many States, a different rule applies that provides that a licensee of encumbered intellectual property takes the licence subject to a security right created by the licensor, unless the secured creditor (to whom the grantor has given the right to authorize licences) authorized the granting of the licence free of the security right. To the extent that a State has such a rule recommendation 81, subparagraph (c), would not apply (see recommendation 4, subparagraph (b)). As a result, unless the secured creditor authorized the grantor to grant licences unaffected by the security right (which will typically be the case as the grantor will rely on its royalty income to pay the secured obligation), the licensee would take the licence subject to the security right. Thus, if the grantor defaults, the secured creditor would be able to enforce its security right in the licensed intellectual property and sell or licence it free of the licence. In addition, a person obtaining a security right from the licensee will not obtain an effective security right as the licensee would have received an unauthorized licence and would have no right to give.

29. If law relating to intellectual property does not address this matter at all or addresses it consistently with the way in which it is addressed in recommendation 81, subparagraph (c), recommendation 81, subparagraph (c), will apply in the limited cases and with the limited impact described above (see recommendation 4, subparagraph (b)).

30. However, in order to avoid any possible inconsistency between the law recommended in the *Guide* and law relating to intellectual property, a different approach could be followed (see recommendation 245 below) that would ensure that the law recommended in the *Guide* does not affect: (a) The effectiveness of a security right in licensed intellectual property, its priority as against a competing claimant other than a non-exclusive licensee or the enforcement remedies of the secured creditor that do not affect the rights of the licensee; (b) Any right that the licensor may have to terminate the licence for non-compliance of the licensee with

the licence agreement; or (c) The rights of a secured creditor as an owner under law relating to intellectual property.

31. It should be noted that: (a) the rights of the licensee as against a secured creditor of the licensor under such an approach may be derogated from by agreement of the licensee in the licence agreement or otherwise (see recommendation 10); and (b) like any other approach recommended in the *Guide* with respect to security rights in intellectual property, this approach also would be subject to recommendation 4, subparagraph (b). In addition, it should be noted that: (a) references in the *Guide* and the draft Supplement to a security right in a priority context refer to a security right that is effective against third parties (otherwise no priority dispute may arise under the *Guide*); (b) references in the *Guide* and the draft Supplement to an intellectual property licence refer to a licence granted by a person that is authorized to grant a licence in that intellectual property under the law relating to intellectual property.

32. The following examples are designed to clarify the situations to which this approach would apply and the impact from its application. In each example, it should be assumed that: (a) O owns intellectual property; (b) O creates a security right in the intellectual property in favour of SC; (c) O's security right is effective against third parties either in accordance with the recommendations of the *Guide* or assuming the law recommended in the *Guide* does not apply, in accordance with recommendation 4, subparagraph (b), under the law relating to intellectual property; (d) SC has not agreed, in the security agreement or otherwise, that any licensee of the intellectual property from O will enjoy its rights free of SC's security right; and (e) the transaction satisfies each provision of recommendation 245.

33. After SC takes the steps necessary to make its security right effective against third parties, O, who is in the business of granting non-exclusive licences of the intellectual property on substantially the same terms to any person who agrees to perform in accordance with such terms, offers to license the intellectual property to L. L enters into a licence agreement with O on those terms. O defaults on the obligation secured by the security right and SC sets out to enforce its security right. The right of L to use the intellectual property is protected by recommendation 245 against enforcement by SC of its security right because the licence and the transaction satisfy each provision of recommendation 245. However, SC still has whatever rights it may have against L under law relating to intellectual property and contract law.

34. After SC takes the steps necessary to make its security right effective against third parties, O grants a licence in the intellectual property to L. The licence agreement provides that L may grant sub-licences in the intellectual property only for educational markets. L grants a sub-licence in a commercial market to S. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. If, under the law relating to intellectual property, the sub-licence to S is not authorized, the right of S to use the intellectual property is not protected by recommendation 245 against enforcement by SC of its security right (and, as rights and obligations under the licence agreement go together, L is no longer bound by the obligations set out in the licence agreement).

35. After SC takes the steps necessary to make its security right effective against third parties, O grants a licence in the intellectual property to L. The licence

agreement provides that L has exclusive rights to use the intellectual property in State Z. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 245 against enforcement by SC of its security right because the licence is exclusive.

36. After SC takes the steps necessary to make its security right effective against third parties, O, who is in the business of granting non-exclusive licences of the intellectual property on substantially the same terms to any person who agrees to perform in accordance with such terms, offers to license the intellectual property to L on such terms. L declines to enter into a licence agreement with O on those terms. Instead, O grants a licence in the intellectual property to L, pursuant to which L has greater rights in the intellectual property than under the licences generally offered to others. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 245 against enforcement by SC of its security right because the licence is not on substantially the same terms as other licences of the same intellectual property.

37. Before O and L enter into the licence agreement, L discovers the notice filed to make SC's security right effective against third parties and, accordingly, asks to see a copy of the security agreement relating to that notice. The security agreement is furnished to L by O. Upon reading the security agreement, L discovers that the licence to it would violate the rights of SC. Nonetheless, L enters into the licence agreement with O. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 245 against enforcement by SC of its security right because L had knowledge that the licence agreement would violate SC's rights.

38. However, if O does not furnish a copy of the security agreement to L and, as a result, L does not know that the licence would violate the rights of SC, the right of L to use the intellectual property is protected by recommendation 245 against enforcement by SC of its security right because the licence and the transaction satisfy each provision of recommendation 245.

39. After SC takes the steps to make its security right effective against third parties, O offers to license the intellectual property but only to parties who have experience in using this type of intellectual property. O grants a licence to L, who has that experience. O defaults on the obligation secured by the security right, and SC sets out to enforce its security right. The right of L to use the intellectual property is not protected by recommendation 245 against enforcement by SC of its security right because O did not make a licence of the intellectual property available on substantially the same terms to any person who agreed to perform the obligations of the licensee under the licence agreement in accordance with such terms.

40. After SC registers its security right, O grants a non-exclusive licence to a patent pool. The patent pool will grant a non-exclusive licence to any interested person. SC forecloses on the intellectual property. The licence is not discharged as a result of the foreclosure because the licence and the transaction satisfy each provision of recommendation 245.

I. Priority of a security right in intellectual property granted by a licensor as against a security right granted by a licensee

41. Under the law recommended in the *Guide*, with limited exceptions (see recommendations 80, subparagraphs (b) and (c), and 245), a licensee takes its rights subject to a security right granted by the licensor in its rights (see recommendation 79). As already explained (see paras. 22-23 above), this means that, upon default, the secured creditor may enforce its security right and sell or licence the grantor's rights in the intellectual property. If the licensee also grants a security right in its rights as a sub-licensor against the sub-licensee, no priority conflict arises under the law recommended in the *Guide* between the two security rights because they encumber different assets. The licensor's secured creditor has a security right in the licensor's right to the payment of the royalties owed to the licensor by the licensee under the licence agreement, while the licensee's secured creditor has a security right in any sub-royalties due to the licensee (as sub-licensor) by a sub-licensee under a sub-licence agreement.

42. However, a security right created by a licensee as a sub-licensor in sub-royalties can have an impact on the licensee's ability to pay royalties to the licensor if the licensee is in default with respect to its obligations to its secured creditor inasmuch as that secured creditor may seek to collect the sub-royalties itself. In addition, if the licensee, in payment of royalties owed by the licensee to the licensor, assigns to the licensor the right to the payment of a percentage of the sub-royalties that the licensee will obtain as a sub-licensor from sub-licensees, then a priority conflict may arise between a secured creditor of the licensor and a secured creditor of the licensee under the law recommended in the *Guide*. In such a case, if the assignment of the sub-royalties takes place before a licence is granted and a security right is created and made effective by the licensee, the licensee does not have a right in the assigned sub-royalties at the time it creates a security right and thus a secured creditor of the licensee takes its security right in the sub-royalties subject to the security right of the licensor's secured creditor. If, however, the assignment takes place after a licence is granted and a security right is created and made effective by the licensee in all its future royalties, the licensor takes the assignment subject to the security right of the licensee's secured creditor and thus the licensor's secured creditor takes its security right also subject to the security right of the licensee's secured creditor (see recommendations 13 and 31).

43. The following example may be useful in illustrating the problem. A creates a security right in all its future assets or royalties in favour of secured creditor SC1. A then takes an intellectual property licence from licensor B and, in payment of royalties owed to B, licensee A assigns to licensor B the right to payment of a percentage of the sub-royalties payable to licensee A as a sub-licensor. Licensor B creates and makes effective against third parties a security right in these royalties in favour of secured creditor SC2. Licensee A's secured creditor SC1 will prevail as licensor B took the assignment of the sub-royalties subject to licensee A's secured creditor SC1 security right and licensor B's secured creditor SC2 can have no greater rights than licensor B.

44. In this regard, it should be noted that the licensor has, under the law recommended in the *Guide*, numerous ways to protect itself in this circumstance. For example, the licensor can protect its rights by: (a) ensuring that its secured

creditor registers first a notice of its security right in the general security rights registry; (b) ensuring that its secured creditor registers a notice or document in the relevant intellectual property registry; (c) requiring the secured creditor of the licensee to enter into a subordination agreement with the licensor's secured creditor before granting a licence; (d) prohibiting the licensee from granting a security right in its right to the payment of sub-royalties; (e) terminating the licence in cases where the licensee created a security right in its sub-royalties in breach of such a prohibition; or (f) prior to the licensee as sub-licensor granting a security right to its secured creditor, granting a security right in its right to payment of a percentage of the sub-royalties payable to the licensee as sub-licensor by sub-licensees and agreeing that any sub-licensee pay its sub-royalties directly to an account of the licensor. The *Guide* does not interfere with any agreements of this kind between licensor and licensee, if they are effective under law relating to intellectual property and contract law. In addition, the licensor could insist that the licensee grant to the licensor a security right in its right to the payment of sub-royalties and take as a secured creditor the steps just mentioned.

45. However, these steps may protect the licensor to a certain extent only, because, for example, rights in the encumbered intellectual property may not be subject to registration in an intellectual property registry or it may not be commercially practicable for the licensor to prohibit sub-licensing, terminate the licence agreement or obtain a subordination agreement. In addition, the priority of a security right created by the licensor as against another security right created by the licensee in its right to the payment of sub-royalties would be subject to the general rules explained above (see para. 41).

46. It should be noted that a secured creditor financing the acquisition of an intellectual property right or an intellectual property licence may have the special priority status of an acquisition secured creditor. However, this priority status will be relevant only if there is a priority dispute between security rights created by the same grantor in the same asset. Thus, this priority status does not apply to a priority dispute between a security right created by a licensor and a security right created by a licensee.

J. Priority of a security right in intellectual property as against the right of a judgement creditor

47. The *Guide* recommends that a security right that was made effective against third parties before a judgement creditor obtained rights in the encumbered asset has priority as against the right of the judgement creditor. However, if an unsecured creditor obtained a judgement against the grantor and took the steps necessary under the law governing the enforcement of judgements to acquire rights in the encumbered assets before the security right became effective against third parties, the right of the judgement creditor has priority (see recommendation 84).

48. This recommendation applies equally to security rights in intellectual property (subject to the principle embodied in recommendation 4, subparagraph (b)). In such a case, under law relating to intellectual property the judgement creditor may have to obtain a transfer of the intellectual property and a document or notice thereof may have to be registered in an intellectual property registry for the judgement creditor

to obtain priority. If this transfer takes place before a security right was made effective against third parties, both under the law recommended in the *Guide* (see recommendation 13) and law relating to intellectual property (*nemo dat*), the transferee of encumbered intellectual property will take the encumbered intellectual property free of the security right.

K. Subordination

49. The law recommended in the *Guide* recognizes the principle of subordination (see recommendation 94). The essence of this principle is that, as long as the rights of third parties are not affected, competing claimants may alter by agreement the priority of their competing claims in an encumbered asset. The principle applies equally to security rights in intellectual property.

Recommendation 245¹

Priority of rights of certain licensees of intellectual property

The law should provide that the enforcement of a security right in licensed intellectual property created before the licence was granted does not affect the rights of an end-user licensee of intellectual property under the licence agreement, provided that:

- (a) The licence is non-exclusive;
- (b) The licence covers [copyrighted or patented software] [one or more exclusive rights relating to copyrighted software];
- (c) At the time of the conclusion of the licence agreement:
 - (i) The licensor is generally in the business of granting non-exclusive licences in the intellectual property on substantially the same terms to any person that agrees to perform the licence agreement in accordance with such terms, and the licence agreement is on such terms; and
 - (ii) The licensee does not have knowledge that the licence violates the rights of the secured creditor under the security agreement; and
- (d) The licensed intellectual property and the rights and obligations under the licence agreement are not customized for the licensee.

¹ If this recommendation could be included in the *Guide*, it would be placed in the chapter on the priority of a security right as recommendation 81 bis. As an asset-specific recommendation, this recommendation would replace the general recommendation 81, subparagraph (c), to the extent that it applies to intellectual property licences.

A/CN.9/WG.VI/WP.42/Add.5 (Original: English)**Note by the Secretariat on the Draft Supplement to the UNCITRAL
Legislative Guide on Secured Transactions dealing with security rights in
intellectual property, submitted to the Working Group on Security
Interests at its seventeenth session****ADDENDUM****CONTENTS**

Recommendations 247-252	

VI. Rights and obligations of the parties to a security agreement relating to intellectual property

[*Note to the Working Group: For paras. 1-5, see A/CN.9/WG.VI/WP.39/Add.6, paras. 1-5, A/CN.9/685, paras. 73-75, A/CN.9/WG.VI/WP.37/Add.3, paras. 19-22, A/CN.9/670, paras. 96-103, A/CN.9/WG.VI/WP.35/Add.1, paras. 62-63, A/CN.9/667, paras. 104-108, A/CN.9/WG.VI/WP.33/Add.1, paras. 26-30, and A/CN.9/649, paras. 57-59.*]

A. Application of the principle of party autonomy

1. With few exceptions, the law recommended in the *Guide* generally recognizes the freedom of the parties to the security agreement to tailor their agreement so as to meet their practical needs (see recommendation 10). The principle of party autonomy applies equally to security rights in intellectual property, subject to any limitations specifically introduced by law relating to intellectual property (see recommendation 4, subparagraph (b)). For example, unless otherwise provided by law relating to intellectual property, an owner/grantor and its secured creditor may agree that: (a) the secured creditor may exercise some of the rights of the owner/grantor (for example, to deal with authorities and renew registration or pursue infringers; see A/CN.9/WG.VI/WP.42/Add.1, para. 23); (b) the owner/grantor may not grant licences (in particular exclusive licences) without the consent of the secured creditor; or (c) the secured creditor may collect royalties owed to the owner/grantor as a licensor even before default on the part of the grantor.

B. Preservation of the encumbered intellectual property

2. Under the law recommended in the *Guide*, the party in possession of an encumbered asset has the obligation to take reasonable steps to preserve it (see recommendation 111). Similar rules apply to intellectual property. For example, the grantor has an obligation to deal with authorities, pursue infringers and renew registrations. In some States, law relating to patents provides that the owner/grantor may not revoke or limit the encumbered patent without the consent of the secured creditor.

3. In addition, under the law recommended in the *Guide*, the secured creditor is free to agree with the owner/grantor that the secured creditor would be entitled to take steps to preserve the encumbered intellectual property by dealing with authorities, pursuing infringers or renewing registrations even before default (see recommendation 10), provided that this is not prohibited by law relating to intellectual property (see recommendation 4, subparagraph (b)). If the owner/grantor failed to exercise this right in a timely fashion, the encumbered intellectual property could lose its value, a result that could negatively affect the use of intellectual property as security for credit. This approach would not interfere with the rights of the owner/grantor as its consent would be necessary. Similarly, this approach would not interfere with law relating to intellectual property because such an agreement would be null and void, if it were concluded in violation of law relating to intellectual property. States enacting the recommendations of the *Guide* may wish to

consider their law relating to intellectual property so as to determine whether such agreements should be permitted, as this could facilitate the use of intellectual property as security for credit.

4. Moreover, under the law recommended in the *Guide*, the secured creditor should be able to request the owner/grantor to allow the secured creditor to protect the value of the encumbered intellectual property, for example, by renewing registrations or pursuing infringers (see recommendation 10), unless prohibited by law relating to intellectual property (see recommendation 4, subparagraph (b)). Otherwise, the value of the encumbered intellectual property could diminish and such a result could negatively affect the use of intellectual property as security for credit.

5. If the owner/grantor accepts this request, the secured creditor would be entitled to exercise those rights with the explicit consent of the owner/grantor; if the owner/grantor did not respond, the secured creditor would be entitled to exercise those rights with the implicit consent of the owner/grantor; and, if the owner/grantor rejected the request, the secured creditor would not be entitled to exercise those rights. In addition, if the owner/grantor failed to pursue infringers or renew registrations, the secured creditor could consider that that failure constitutes an event of default as described in the security agreement and could enforce its security right in the encumbered intellectual property. Again, these results would not interfere with law relating to intellectual property as recommendation 4, subparagraph (b) would defer to that law in case of any inconsistency.

Recommendation 246¹

Right of the secured creditor to preserve the encumbered intellectual property

The law should provide that it does not prevent the grantor of a security right in intellectual property and its secured creditor from agreeing that the secured creditor is entitled to take steps to preserve the encumbered intellectual property (for example, to deal with authorities, pursue infringers or renew registrations of the encumbered intellectual property).

[Note to the Working Group: The Working Group may wish to consider whether this recommendation is necessary, as it deals with an issue that will never arise under the law recommended in the Guide, as: (a) the law recognizes party autonomy; (b) does not include a limitation on the matter dealt with in this recommendation; and (c) defers to law relating to intellectual property to the extent that that law contains such a limitation (see recommendations 10 and 4, subparagraph (b)).

The Working Group may also wish to consider whether the recommendation could be retained if it were revised to:

(a) limit party autonomy as provided in recommendation 10, stating that the secured creditor may exercise this right only if permitted under law relating to intellectual property (see A/CN.9/WG.VI/WP.42/Add.2, paras. 10-12); or

¹ If this recommendation could be included in the *Guide*, it would be placed in the chapter on the rights and obligations of the parties to a security agreement as recommendation 116 bis.

(b) repeat the result of the application of recommendations 10 and 4, subparagraph (b), stating that the grantor and the secured creditor may agree that the secured creditor is entitled to take steps to preserve the encumbered intellectual property, unless otherwise provided by law relating to intellectual property.

The Working Group may also wish to note that paragraphs 1-5 of the commentary above, reflect the status of the law recommended in the Guide based on recommendations 10 and 4, subparagraph (b), and may need to be revised depending on the decision of the Working Group with regard to recommendation 246.]

VII. Rights and obligations of third-party obligors in intellectual property financing transactions

[Note to the Working Group: For paras. 6-7, see A/CN.9/WG.VI/WP.39/Add.6, paras. 6-7, A/CN.9/685, para. 76, A/CN.9/WG.VI/WP.37/Add.3, para. 23, A/CN.9/670, para. 104, A/CN.9/WG.VI/WP.35/Add.1, para. 64, A/CN.9/667, para. 109, A/CN.9/WG.VI/WP.33/Add.1, paras. 32, and A/CN.9/649, para. 60.]

6. Where a licensor assigns to its assignee its claim against a licensee for the payment of royalties under a licence agreement, the licensee (as the debtor of the assigned receivable) would be a third-party obligor under the *Guide* and its rights and obligations would be the rights and obligations of a debtor of a receivable. Similarly, where a licensee assigns to its assignee its claim against a sub-licensee for the payment of sub-royalties under a sub-licence agreement, the sub-licensee would be a third-party obligor with respect to the licensee's assignee in the sense of the *Guide*.

7. As a result, for example, in a claim by an assignee of a licensor's right to the payment of royalties, a licensee as a debtor of the assigned receivable may raise against the licensor's assignee all defences and rights of set-off arising from the licence agreement or any other agreement, which are part of the same transaction and of which the licensee could avail itself as if the assignment had not been made and such claim had been made by the licensor. In addition, the licensee may raise against the licensor's assignee of the right to the payment of royalties any other right of set-off, provided that that right was available to the licensee at the time notification of the assignment was received by the licensee. However, any defences or rights of set-off that may be available to the licensee under law other than secured transactions law for breach of an agreement between the licensor and the licensee that the licensor will not assign its rights to the payment of royalties are not available to the licensee against the licensor's assignee (see recommendation 120). This recommendation also is subject to the principle of deference to law relating to intellectual property embodied in recommendation 4, subparagraph (b).

VIII. Enforcement of a security right in intellectual property

[Note to the Working Group: For paras. 8-32, see A/CN.9/WG.VI/WP.39/Add.6, paras. 8-32, A/CN.9/685, paras. 77-86, A/CN.9/WG.VI/WP.37/Add.3, paras. 24-48, A/CN.9/670, paras. 105-114, A/CN.9/WG.VI/WP.35/Add.1, paras. 65-89,

A/CN.9/667, paras. 110-123, A/CN.9/WG.VI/WP.33/Add.1, paras. 35-44, and A/CN.9/649, paras. 61-73.]

A. Intersection of secured transactions law and law relating to intellectual property

8. States typically do not provide for specific enforcement remedies for security rights in intellectual property in their laws relating to intellectual property. The general law of secured transactions normally applies to the enforcement of security rights in intellectual property. To the extent that law relating to intellectual property in some States actually does address the enforcement of security rights in different types of intellectual property, it merely engrafts existing secured transactions enforcement regimes onto the regime governing intellectual property. As a consequence, States that enact the *Guide*'s recommendations will normally be simply substituting the *Guide*'s recommended enforcement regime for the prior enforcement regime derived from, for example, a civil code and code of civil procedure, the common law of floating and fixed charges, a mortgage act or some other general law of enforcement, as the case may be.

9. This approach to the enforcement of security rights applies not only to intellectual property (for example, a patent, a copyright or a trademark), but also to other rights that are derived from these types of intellectual property. Hence, consistently with the United Nations Assignment Convention, assets, such as royalties and licence fees, are treated as receivables and are subject to the enforcement regime recommended in the *Guide* for assignments (that is, outright transfers, security transfers and security rights) in receivables (see A/CN.9/WG.VI/WP.42/Add.2, paras. 21-29). Likewise, a licensor's or sub-licensor's other contractual rights as against a licensee or sub-licensee will also be governed by a State's general law of obligations, and security rights in these contractual rights will be enforced under a State's general secured transactions law. And again, a licensee's or sub-licensee's rights of use are treated in the same way as a lessee's or purchaser's rights, and are governed by a State's general law of obligations, except as regards questions of registration (where specifically mentioned in law relating to intellectual property).

10. On occasion, States incorporate special procedural controls on the enforcement of security rights in intellectual property into law relating to intellectual property. In addition, the general procedural norms of secured transactions law in a State may be given a specific content in the context of enforcement of security rights in intellectual property. So, for example, the determination of what is commercially reasonable where the encumbered asset is intellectual property may depend on law and practice relating to intellectual property. This standard of commercial reasonableness may well vary from State to State, as well as from intellectual property regime to intellectual property regime. The *Guide* recognizes this procedural variation and, in so far as any procedural rules apply specifically to security rights in intellectual property and impose greater obligations on parties than those of the enforcement regime set out in the recommendations of the *Guide*, they will, under the principle set out in recommendation 4, subparagraph (b), displace the general recommendations of the *Guide*. If these procedural rules and definitional specifications apply to security rights in assets other than intellectual property as

well, they will be displaced by the recommendations of the *Guide* in States that enact them.

11. As for substantive enforcement rights of secured creditors, once a State adopts the recommendations of the *Guide*, there is no reason to develop different or unusual remedial principles to govern enforcement of security rights in intellectual property serving as encumbered assets. The *Guide* merely recommends a more efficient, transparent and effective enforcement regime of a secured creditor's rights, without in any way limiting the rights that the owner of intellectual property may exercise to protect its rights against infringement or to collect royalties from a licensee or sub-licensee. As pointed out in the chapter of the draft Supplement on the creation of a security right in intellectual property (see A/CN.9/WG.VI/WP.42/Add.2, para. 9), the secured creditor generally cannot acquire security in more rights than the rights with which the grantor is vested at the time of the conclusion of the security agreement or when the grantor acquires rights in the encumbered asset or the power to encumber it (see recommendation 13).

B. Enforcement of a security right relating to different types of intellectual property

12. The *Guide* recommends a detailed regime governing the enforcement of security rights in different types of encumbered asset. Its basic assumption is that enforcement remedies must be tailored to ensure the most effective and efficient enforcement while ensuring appropriate protection of the rights of the grantor and third parties. This assumption and approach recommended in the *Guide* should apply equally to the enforcement of security rights in the various categories of intellectual property. Currently, the law of most States recognizes a wide variety of rights relating to intellectual property, including:

- (a) The intellectual property in itself;
- (b) Receivables arising under a licence agreement;
- (c) The licensor's other contractual rights under a licence agreement;
- (d) The licensee's rights under a licence agreement;
- (e) The owner's, licensor's and licensee's rights in tangible assets with respect to which intellectual property is used.

13. The enforcement regime recommended in the *Guide*, and applicable to each of these different rights in intellectual property, will be discussed separately in the following sections.

C. Taking "possession" of documents necessary for the enforcement of a security right in intellectual property

14. The right of the secured creditor to take possession of the encumbered asset as set out in recommendations 146 and 147 of the *Guide* is normally not relevant if the encumbered asset is an intangible asset such as intellectual property (as the term "possession", as defined in the *Guide*, means *actual* possession; see Introduction to the *Guide*, section B on terminology and interpretation). These

two recommendations deal only with the taking of possession of tangible assets. However, consistently with the general principle of extrajudicial enforcement, the secured creditor should be entitled to take possession of any documents necessary for the enforcement of its security right where the encumbered asset is intellectual property. Such a right will normally be provided for in the security agreement. In the event that the documents are necessary for the enforcement of a security right in the encumbered intellectual property, the creditor should be able to obtain possession whether or not those documents were specifically mentioned as encumbered assets in the security agreement.

15. It may be thought that, where a secured creditor takes possession of a tangible asset that is produced using intellectual property or in which a chip containing a programme produced using an intellectual property is included, the secured creditor is also taking possession of the encumbered intellectual property. This is not the case. It is important to distinguish properly the asset encumbered by the security right. Even though many tangible assets, whether equipment or inventory, may be produced through the application of intellectual property such as a patent, the security right is in the tangible asset and does not, absent specific language in the security agreement purporting to encumber the intellectual property itself, encumber the intellectual property with the use of which the asset was produced (the use meant here is use consistent with the authorization of the owner or other licensor; if the use is unauthorized, the products are unauthorized and the secured creditor may be an infringer if the secured creditor uses the encumbered asset in an unauthorized manner). So, for example, the secured creditor may take possession of a tangible asset, such as a compact disc or a digital video disc, and may exercise its enforcement remedies against the discs under the rules of the law recommended in the *Guide*. In cases where the secured creditor also wishes to obtain a security right in the intellectual property itself (including, to the extent the grantor has the right to sell or otherwise dispose of, or license the intellectual property, the right to sell or otherwise dispose of, or license), it would be necessary for the secured creditor to specifically mention such intellectual property as encumbered assets in the security agreement with the owner of such intellectual property (see A/CN.9/WG.VI/WP.42/Add.2, paras. 32-36 and recommendation 243).

D. Disposition of encumbered intellectual property

16. Under the law recommended in the *Guide*, upon the grantor's default, the secured creditor has the right to dispose of or grant a licence in the encumbered intellectual property (but always within the limits of the rights of the grantor; see recommendation 148). As a result, if the grantor is the owner, the secured creditor should, in principle, have the right to sell or otherwise dispose of, or license the encumbered intellectual property. However, if the grantor had previously granted an exclusive licence to a third party free of the security right, upon default, the secured creditor will be unable to grant another licence covering the same use in the same State, as the grantor had no such right at the time the secured creditor acquired its security right (*nemo dat quod non habet*). The situation will be different if, for example, the grantor grants an exclusive licence that is limited geographically. In such a case, the secured creditor may be able to grant another licence outside the geographic limits of the exclusive licence granted by the grantor.

17. In the above-mentioned situation, under the law recommended in the *Guide*, the enforcing secured creditor does not acquire the intellectual property against which the security right is being enforced. Instead, the secured creditor disposes of the encumbered intellectual property (by assigning, licensing or sub-licensing it) in the name of the grantor. Under law relating to intellectual property, until the assignee or licensee (as the case may be) that acquires the rights upon a disposition by the enforcing creditor registers a notice (or other document) of its rights in the relevant registry (assuming the rights in question may be registered), the grantor will appear on the registry as the owner of the relevant intellectual property.

E. Rights acquired through disposition of encumbered intellectual property

18. Under the law recommended in the *Guide*, rights in intellectual property acquired through judicial disposition would be regulated by the relevant law applicable to the enforcement of court judgements (see recommendation 160). In the case of an extrajudicial disposition in line with the provisions of secured transactions law, the first point to note is that the transferee or licensee takes its rights directly from the grantor. The secured creditor that chooses to enforce its rights in this manner does not become the owner as a result of this enforcement process, unless the secured creditor acquires the encumbered intellectual property in satisfaction of the secured obligation or at an enforcement sale (see recommendations 148 and 156).

19. The second point is that the transferee or licensee could only take such rights as were actually encumbered by the enforcing creditor's security right. Under the law recommended in the *Guide*, the transferee or licensee would take the intellectual property free of the security right of the enforcing secured creditor and any lower-ranking security rights, but subject to any higher-ranking security rights. Similarly, a good faith transferee or licensee that acquired a right in intellectual property pursuant to an extrajudicial disposition that is inconsistent with the provisions of the secured transactions law would take the intellectual property free of the security right of the enforcing secured creditor and any lower-ranking security rights (see recommendations 161-163).

20. Under the law recommended in the *Guide*, a security right in a tangible asset extends to and may be enforced against attachments to that asset (see recommendation 21 and 166). To ensure that the security right also covers assets produced or manufactured by the grantor from encumbered assets, the security agreement normally provides expressly that the security right extends to such manufactured assets. Where the encumbered asset is intellectual property, it is important to determine whether the asset that is disposed of to the transferee or licensee is simply the intellectual property as it existed at the time the security right became effective against third parties or whether it is that intellectual property including any subsequent enhancements to it (for example, an improvement to a patent). Generally, laws relating to intellectual property treat such improvements as separate assets and not as integral parts of existing intellectual property. As a result, the prudent secured creditor that wishes to ensure that improvements are encumbered with the security right should describe the encumbered asset in the

security agreement in a manner that ensures that enhancements are directly encumbered by the security right (see A/CN.9/WG.VI/WP.42/Add.2, para. 40-41).

F. Proposal by the secured creditor to acquire the encumbered intellectual property

21. Under the enforcement regime recommended in the *Guide*, the secured creditor has the right to propose to the grantor that it acquire the grantor's rights in total or partial satisfaction of the secured obligation. If the grantor is the owner of intellectual property, the secured creditor could itself become the owner in the way prescribed by law relating to intellectual property, provided that the grantor and any other interested party (such as the debtor, any other person owing performance of the secured obligation or any person with rights in the encumbered asset) do not object (see recommendations 156-159). Should the owner have licensed its intellectual property to a licensee that acquired its rights under the licence agreement free of the rights of the enforcing secured creditor, when the secured creditor acquires the intellectual property from the grantor, it acquires that right subject to the prior-ranking licence in accordance with the *nemo dat* principle. Once a secured creditor becomes the owner of intellectual property, its rights and obligations are regulated by the relevant law relating to intellectual property. In particular, the secured creditor may need to register a notice or document confirming that it acquired the intellectual property to enjoy the rights of an owner or to obtain any relevant priority. Finally, the secured creditor that acquires the encumbered intellectual property in total or partial satisfaction of the secured obligation would take the intellectual property free of the security right of any lower-ranking security rights, but subject to any higher-ranking security rights (see recommendation 161).

G. Collection of royalties and licence fees

22. Under the enforcement regime recommended in the *Guide*, where the encumbered asset is the right to receive payment of royalties or other fees under a licence agreement, the secured creditor should be entitled to enforce the security right by simply collecting the royalties and other licence fees upon default and notification to the person that owes the royalties or fees (see recommendation 168). In all these situations, the right to the payment of royalties and other licence fees is, for the purposes of secured transactions laws, a receivable (see A/CN.9/WG.VI/WP.42/Add.2, paras. 22-29). Thus, the rights and obligations of the parties will be governed by the principles pertaining to receivables that are elaborated in the United Nations Assignment Convention and the regime recommended in the *Guide* for receivables. Once again, the secured creditor that has taken a security right in the right to the payment of present and future royalties is entitled to enforce only such rights to the payment of royalties (including rights to the payment of future royalties under existing licenses) as were vested in the grantor (licensor) at the time of the conclusion of the security agreement or when the grantor acquired rights in the encumbered receivable or the power to encumber it (see recommendation 13). In addition, subject to any contrary provision of law relating to intellectual property (see recommendation 4, subparagraph (b)), the

secured creditor's rights to collect royalties includes the right to collect or otherwise enforce any personal or property right that secures payment of the royalties (see recommendation 169).

H. Licensor's other contractual rights

23. In addition to the right to collect royalties, the licensor will normally include a number of other contractual rights in its agreement with the licensee (see A/CN.9/WG.VI/WP.42/Add.2, para. 21). These may include, for example, a limitation in the licence agreement on the right of the licensee to grant any sub-licence or a prohibition on the granting of security rights by the licensee in its rights under the licence agreement, including the right to terminate the licence agreement under a set of specified conditions. These rights will remain vested in the licensor if the security right is only in the right to the payment of royalties. However, if the secured creditor also wishes to obtain a security right in these other rights of the licensor, they would have to be included in the description of the encumbered assets in the security agreement. It should also be noted that, if the secured creditor enforces its security right and takes the encumbered and licensed intellectual property subject to a licence, as a matter of contract law, the secured creditor will have to abide by the licence agreement.

I. Enforcement of security rights in tangible assets with respect to which intellectual property is used

24. In principle, except where the so-called "exhaustion doctrine" applies, the intellectual property owner has the right to control the manner and place in which tangible assets, with respect to which intellectual property is used (in line with the authorization of the owner), are sold. That is, in the event that the relevant intellectual property right has not been exhausted, the secured creditor should be able to dispose of the assets only upon default, if there is an authorization from the intellectual property owner. In both these cases, it is assumed that the security agreement does not encumber the intellectual property right itself (see A/CN.9/WG.VI/WP.42/Add.2, paras. 32-36 and recommendation 243).

25. As there is no universal understanding of the "exhaustion doctrine" (often referred to as "exhaustion of rights" or "first sale doctrine"), the draft Supplement makes reference to the doctrine not as a universal concept, but as it is actually understood in each State. Nonetheless, where the exhaustion doctrine applies under law relating to intellectual property, the basic idea is that an intellectual property owner will lose or "exhaust" certain rights when specific conditions are met, such as the first marketing or sale of the product embodying the intellectual property. For example, the ability of a trademark owner to control further sales of a product bearing its trademark is generally "exhausted" following the sale of that product. The rule serves to protect a person that resells that product from infringement liability. However, it is important to note that such protection extends only to the point where the products have not been altered so as to be materially different from those originating from the trademark owner. In addition, the exhaustion doctrine does not apply if a licensee produces products bearing the licensed trademark

without complying with the terms and conditions of the licence agreement (for example, as to quality or quantity).

26. In situations where a product is produced with the use of intellectual property that has been licensed to a grantor that attempts to create a security right in that product, under law relating to intellectual property, the licensor may provide that the licensee cannot grant security rights in such products or that a secured creditor may only enforce its security right in a manner agreed to by the licensor. In both these cases, the licensor will typically provide in the licence agreement that the licence may be revoked by the licensor if the licensee as grantor or the secured creditor acts in a manner that is contrary to the limitations contained in the licence agreement. As a consequence, to enforce effectively its security right in the product, in the absence of prior agreement between the secured creditor and the owner/licensor, the secured creditor would either need to obtain the consent of the owner/licensor or rely on the relevant law relating to intellectual property and the operation of the exhaustion doctrine.

27. In cases where the secured creditor also wishes to obtain a security right in the intellectual property itself (including, to the extent the grantor has the right to sell or license the intellectual property, the right to sell or license), it would be necessary for the secured creditor to specifically mention such intellectual property as an encumbered asset in the security agreement. Here, the encumbered asset is not the product produced using the intellectual property, but rather the intellectual property itself (or the licence to manufacture tangible assets using the intellectual property). A prudent secured creditor will normally seek to take a security right in such intellectual property so as to be able to enforce its security right and sell or license the intellectual property to ensure that the licensee will be able to continue the production of any partially completed products.

J. Enforcement of a security right in a licensee's rights

28. In the discussion above, the grantor of the security right has been assumed to be the owner of the relevant intellectual property. The encumbered asset is one or more of the following rights: the intellectual property itself; the right of the owner/licensor to receive royalties and fees; or the right of the owner/licensor to enforce other contractual terms relating to the intellectual property. Only in the discussion of security rights in tangible assets produced by using intellectual property (section I above) were the rights of the owner/licensor and the rights of the licensee treated together. However, most of the issues addressed in sections C to H also are relevant in situations where the encumbered asset is not the intellectual property itself but the rights of a licensee (or sub-licensee) arising from a licence agreement (see A/CN.9/WG.VI/WP.42/Add.2, paras. 30-31). In cases where the encumbered asset is merely a licence, the secured creditor obviously may only enforce its security right against the licensee's rights and may do so only in a manner that is consistent with the terms of the licence agreement.

29. In situations where the grantor is a licensee, upon the grantor's default, the secured creditor will have the right to enforce its security right in the licensee's rights under the licence agreement and to dispose of the licence to a transferee, provided that the licensor consents or the licence is transferable, which is rarely the

case. Likewise, the enforcing secured creditor may grant a sub-licence, provided that the licensor consents or the grantor-licensee had, under the terms of the licence agreement, the right to grant sub-licences. In situations where the secured creditor proposes to a grantor-licensee to acquire the licence in full or partial satisfaction of the secured obligation and neither the grantor nor any other interested party (such as the debtor, any other person owing performance of the secured obligation or any person with rights in the encumbered asset; see recommendations 157-158) object (and the licence agreement does not prohibit the transfer of the licence), the secured creditor becomes vested with the licence according to the terms of the licence agreement between the licensee and the licensor. Assuming that registration of licences is possible under law relating to intellectual property, registration of the licence by the licensee-secured creditor that acquires the licence in full or partial satisfaction of the secured obligation may be a condition of the effectiveness of the licensee's rights or may simply serve information purposes.

30. Where the encumbered asset is the sub-licensor's right to the payment of royalties under a sub-licence agreement, the regime recommended in the *Guide* treats the asset as a receivable. This means that the secured creditor of the licensee/sub-licensor may collect the royalties to the extent that these were vested in the grantor-sub-licensor at the time when the security right in the receivable is enforced. If creation by the licensee/sub-licensor of a security right in its right to royalties from its sub-licensee constitutes a breach of an initial or intervening licence agreement, then enforcement of that agreement may prevent the secured creditor from collecting royalties from the sub-licensee or otherwise deprive it of the benefits of its agreement.

31. Where the encumbered asset is another contractual right stipulated in the sub-licence agreement, the secured creditor may enforce its security right in this contractual right as if it were any other encumbered asset, and the fact that the licensor may have revoked the licence for the future, or may have itself claimed a prior right to receive payment of sub-royalties, has no direct bearing on the right of the secured creditor to enforce these other contractual rights set out in the licence agreement.

32. The rights acquired by a transferee or sub-licensee of the encumbered licensee's rights upon disposition by the secured creditor or by a secured creditor that acquires the licensee's rights in full or partial satisfaction of the secured obligation may be significantly limited by the terms of the licence agreement. For example, a non-exclusive licensee cannot enforce the intellectual property against another non-exclusive licensee or against an infringer of the intellectual property. Only the licensor (or the owner) may do so, although, in some States, exclusive licensees may join the licensor as a party to the proceedings or even pursue infringers on their own. In addition, depending upon the terms of the licence agreement and the description of the encumbered asset in the security agreement, a transferee of the licence may not have access to information such as a source code. In order to ensure the effectiveness of the licence being transferred or sub-licensed, the security agreement will have to include such rights within the description of the assets encumbered by the grantor-licensee, to the extent that the licence agreement and relevant law permits it to encumber these rights as well.

IX. Acquisition financing in an intellectual property context

[*Note to the Working Group: For paras. 33-57 and recommendations 247-252, see A/CN.9/WG.VI/WP.39/Add.5, note after para. 19, A/CN.9/685, paras. 66-70 and A/CN.9/670, paras. 32-36.*]

A. Introduction

33. Historically and in contemporary commercial and legal practice, many States have enacted a special regime to govern acquisition financing with respect to tangible assets. In accordance with these widespread practices, the discussion of acquisition financing in the *Guide* focuses on tangible assets such as consumer goods, equipment and inventory. The *Guide* does not make recommendations with respect to acquisition financing of other types of tangible assets such as negotiable instruments and negotiable documents. In addition, the *Guide* does not recommend that a special regime should be established for acquisition financing with respect to intangible assets. Moreover, the *Guide* does not address explicitly the question whether a security right, and in particular an acquisition security right in a tangible asset with respect to which software is used extends to the software (an intangible asset). However, the draft Supplement makes clear that a security right of any type in a tangible asset does not extend to intellectual property used with respect to that asset (see A/CN.9/WG.VI/WP.42/Add.2, paras. 32-36 and recommendation 243).

34. In particular, the *Guide* leaves open the question whether, in a modern credit economy, it would be useful to permit the creation of acquisition security rights in favour of lenders that finance the acquisition (but not the original creation) of intellectual property. Such an approach would provide general parity in the treatment of tangible assets and intellectual property assets. Given the important differences in legal regimes between intellectual property and other types of asset, if such an approach were adopted, the principles of the *Guide* on acquisition financing with respect to tangible assets could not simply be transposed to the intellectual property context. They would have to be adapted, as discussed in the sections B and C below, to apply with respect to intellectual property.

B. Unitary approach

35. The basic idea of providing a special regime of acquisition financing for intellectual property is not unknown. For example, in some legal systems, a creditor may obtain an acquisition security right in copyrighted software, but only if: (a) the security right accompanies a security right in a tangible asset; (b) the software is acquired by the grantor in a transaction integrated with the transaction in which the grantor acquired the tangible asset; and (c) the grantor acquires the software for the principal purpose of using the software in the tangible asset. In other legal systems, it is possible for a secured creditor to obtain an acquisition security right in intangible assets (including intellectual property, whether or not the intellectual property is used in connection with tangible assets). In yet other legal systems, where the general law as set out, for example, in a civil code does not contain the concept of an acquisition security right, a similar result may be achieved through a reservation of title, a financial lease or a hypothec securing the sales price of a

movable asset. In each of these cases, the transaction may relate to an intangible asset, including an intellectual property right, although this is not common. Finally, in yet other legal systems, it is possible to use a “mortgage” or “fixed charge” to secure the payment obligation of the purchaser of intellectual property and, in such cases, the “mortgage” or “fixed charge” may prevail over a pre-existing “floating charge”.

36. The rules on acquisition financing in the law recommended in the *Guide* are meant to rationalize and streamline different legal techniques by which creditors may obtain an acquisition security right in a tangible asset. To achieve general parity in regimes governing tangible assets and intellectual property rights the following basic adjustments to the law recommended in the *Guide* would be necessary:

(a) It would be necessary to provide explicitly that acquisition security rights can exist in intellectual property, as well as in a tangible asset;

(b) It would be necessary to provide that States could adopt either a unitary or a non-unitary approach to acquisition financing;

(c) It would be necessary to eliminate any references to possession and delivery of the encumbered asset; and

(d) It would be necessary to develop appropriate distinctions between the acquisition financing of the intellectual property right itself and the acquisition financing of a licence or sub-licence of that intellectual property right.

37. In addition to these general adjustments, a number of more specific adjustments would be required. These would relate to: (a) the third-party effectiveness and priority of an acquisition security right in intellectual property; (b) the priority of a security right registered in an intellectual property registry; and (c) the priority of a security right in proceeds of encumbered intellectual property. These specific adjustments are considered below in turn.

1. Third-party effectiveness and priority of an acquisition security right in intellectual property

38. In the chapter on acquisition financing, the *Guide* distinguishes among three different types of asset, namely consumer goods, inventory, and property that is neither consumer goods nor inventory (such as equipment). The law recommended in the *Guide* provides that an acquisition security right in consumer goods (goods held for personal, family or household purposes) is automatically effective against third parties upon its creation (that is, is effective against third parties without the need for registration) and has priority against a competing non-acquisition security right (recommendation 179).

39. The law recommended in the *Guide* offers alternatives for obtaining third-party effectiveness in relation to inventory and equipment. Under one alternative, an acquisition security right in assets other than consumer goods or inventory (that is, in assets not held by the grantor for sale, lease or licence in the ordinary course of the grantor’s business) would have priority over a competing non-acquisition security right granted in the same asset by the same grantor, provided that a notice of the acquisition security right would be registered in the general security rights registry within a short period of time after the grantor obtains

possession (recommendation 180, alternative A, subparagraph (a)). A different rule would apply with respect to security rights in inventory. In this situation, registration in the general security rights registry would have to occur before delivery of the inventory to the grantor and secured creditors with earlier registered non-acquisition security rights are notified of the acquisition secured creditor's intention to claim an acquisition security right (see recommendation 180, alternative A, subparagraph (b)). By contrast, under a second alternative, no distinction would be drawn between inventory and assets other than consumer goods or inventory. The rule applicable to assets other than inventory would apply to all types of assets other than consumer goods (see recommendation 180, alternative B).

40. To adapt the law recommended in the *Guide* to intellectual property rights, the following adjustments would be necessary. In cases in which the intellectual property that is subject to an acquisition security right is held by the grantor for personal, family or household purposes, the acquisition security right would be treated according to the same rules as the rules that govern an acquisition security right in consumer goods. In cases in which the intellectual property that is subject to an acquisition security right is held by the grantor for sale, lease or licence in the ordinary course of the grantor's business, the acquisition security right would be treated according to the same rules as the rules that govern an acquisition security right in inventory. And in cases in which the intellectual property that is subject to an acquisition security right is not held by the grantor for sale, lease or licence in the ordinary course of the grantor's business or for personal, family or household purposes, the acquisition security right would be treated according to the same rules as the rules that govern an acquisition security right in tangible assets other than inventory or consumer goods.

41. If these adjustments were made, the law relating to third-party effectiveness and priority of acquisition security rights in intellectual property would be as follows. In cases where the intellectual property right is acquired for personal, family or household purposes the acquisition security right would be automatically effective against third parties upon its creation (that is, is effective against third parties without the need for registration) and would have priority against a competing non-acquisition security right (transposing recommendation 179). In cases involving inventory and equipment, it would be necessary to transpose both alternatives set out in the *Guide*. Under alternative A, an acquisition security right in intellectual property or a licence for use in its business and not for licensing or sub-licensing respectively would have priority over another security right granted in the same asset by the same grantor, provided that a notice of the acquisition security right would be registered in the general security rights registry within a short period of time after the grantor acquired the intellectual property or licence (transposing recommendation 180, alternative A, subparagraph (a)). Also under this alternative, an acquisition security right in intellectual property or a licence not held by the grantor for use in its business but meant for licensing or sub-licensing respectively would have priority over another security right granted in the same asset by the same grantor, provided that a notice of the acquisition security right would be registered in the general security rights registry prior to the license being granted and secured creditors with earlier registered non-acquisition security rights are notified of the acquisition secured creditor's intention to claim an acquisition security right before the grant of the license (transposing recommendation 180, alternative A, subparagraph (b)). Under alternative B, the regime governing

intellectual property rights held for use in the grantor's business and not for licensing or sub-licensing would apply for all types of intellectual property or licences (transposing recommendation 180, alternative B).

2. Priority of a security right registered in an intellectual property registry

42. As a general rule, the law recommended by the *Guide* does not seek to modify any rules set out in other law that are applicable to specialized registries whether in relation to third-party effectiveness (recommendations 34, 38 and 42) or priority (recommendations 77, 78). This policy is also adopted in the chapter on acquisition financing (recommendation 181). Two consequences follow. First, the special priority status granted to an acquisition security right over prior registered non-acquisition security rights refers only to security rights registered in the general security rights registry and not to security rights registered in specialized registries. Second, the general priority afforded by other law to security rights registered in specialized registries is maintained by the law recommended in the *Guide*, regardless of whether the security right is or is not an acquisition security right. Thus, the priority of an acquisition security right in intellectual property registered in an intellectual property registry does not override the priority of an earlier-registered security right registered in the intellectual property registry. If the priority rules set out by other law governing the specialized registry itself afford priority to a later-registered acquisition security right, this priority would not be affected by the law recommended in the *Guide*.

43. The approach recommended in the *Guide* is justified by the need to avoid interfering with specialized registration regimes. However, it may create an obstacle to acquisition financing to the extent an acquisition security right in intellectual property would not have a special priority status as against any type of security right registered in an intellectual property registry. As already mentioned (see A/CN.9/WG.VI/WP.42/Add.3, para. 9), States enacting the recommendations of the *Guide* may wish to review their law relating to intellectual property with a view to determining whether the registration of notices of security rights in an intellectual property registry should be permitted. States may also wish to consider extending the special priority status of an acquisition security right to an acquisition security right registered in an appropriate manner in an intellectual property registry.

44. The following example may be useful in clarifying why such a regime might merit consideration. State A that has enacted the recommendations of the *Guide* also decides to permit registration of notices of security rights in intellectual property (even future intellectual property) in the relevant intellectual property registry as a method of achieving third-party effectiveness. A bank has extended credit to the grantor, and this credit is secured by a security right in all present and future intellectual property rights. The bank has made that right effective against third parties by registering in the specialized registry. The security right in each future item of intellectual property is not effective against third parties until the grantor acquires that item. Nonetheless, under the general priority principles recommended in the *Guide*, which the State would presumably adopt if it were to permit registration of notices of security rights in future intellectual property, priority dates from the date of registration (see recommendation 76).

45. The grantor then wants to buy a particular item of intellectual property on credit. The seller is willing to sell on credit only if it is granted a security right in

the item to secure the remaining payment obligation. Under the rules of the law recommended in the *Guide*, there is no way that the seller can achieve the status of an acquisition financier with a special priority over already registered non-acquisition security rights. If the seller registers in the intellectual property registry, it will be second in line behind the bank. That is to say, even if the seller wishing to achieve the special priority status of an acquisition security right follows all the steps necessary to claim such a right, and files a notice in the general security rights registry (see recommendation 180 as transposed), recommendation 181 will cede before the priority set out in the specialized registry (which typically provide that registration in a specialized registry always beats registration in the general registry (see recommendation 77)). Thus, if the earlier-registered security right in present and future intellectual property is registered in the relevant intellectual property registry, there is no way for an acquisition financier that takes a security right in the intellectual property being sold to achieve a special priority with respect to that property. Such a seller would have to rely on a transaction by which it retained title to the intellectual property right in question (see section C below).

3. Priority of security right in proceeds of encumbered intellectual property

46. A key feature of the regime of acquisition financing recommended in the *Guide* relates to the manner in which the general rules recommended in the *Guide* with respect to security rights in proceeds of encumbered assets should be applicable to acquisition security rights. The general rule in the law recommended by the *Guide* is that the priority of a security right in proceeds should follow that of the security right in the original encumbered assets (recommendations 76, 100). By contrast, the priority of a security right in proceeds of an asset that was subject to an acquisition security right does not automatically follow that of the initial encumbered asset. Once again, a distinction is drawn among consumer goods, inventory and assets that are neither consumer goods nor inventory, such as equipment (see recommendation 185). As in the case of the original encumbered asset, the *Guide* offers alternatives.

47. Under alternative A, a security right in proceeds of assets other than inventory or consumer goods has the same priority as the acquisition security right itself (recommendation 185, alternative A, subparagraph (a)). However, a security right in proceeds of inventory only has this priority if the proceeds are not in the form of receivables, negotiable instruments, rights to payment of funds credited to a bank account or rights to receive proceeds under an independent undertaking (recommendation 185, alternative A, subparagraph (b)). Under alternative B, the security right in proceeds of an original encumbered asset has only the priority of a non-acquisition security right (recommendation 185, alternative B). The consequence is that, when either of the alternatives of recommendation 185 is transposed to acquisition security rights in intellectual property, the revenue stream generated by the licensing or sub-licensing of an intellectual property right continues to be encumbered with the security right, but that the security right in the royalties will not have the special priority of an acquisition security right.

48. It might be argued that this direct transposition is not optimal in the case of acquisition security rights in intellectual property. For example, intellectual property owners and licensors typically rely on their rights to payment of royalties so as to be able to develop new ideas protected by intellectual property rights and give a

licence to others to use them. Additionally, if the general secured creditors of licensees always had priority over the secured creditors of intellectual property owners or licensors, owners or licensors would not be able to use their rights to payment of royalties as security for credit. By contrast, it might also be argued that intellectual property owners and licensors could achieve an equivalent result by ensuring that they or their secured creditors obtained: (a) a security right in or an outright assignment of a right to payment of a percentage of the sub-royalties payable to the licensee as a sub-licensor by sub-licensees and registered a notice thereof in the relevant intellectual property registry; (b) a security right in or an outright assignment of a right to payment of a percentage of the sub-royalties payable to the licensee as a sub-licensor by sub-licensees and registered first a notice thereof in the general security rights registry; or (c) a subordination agreement from the secured creditor of the licensee.

49. As the objective of transposing the recommendations of the *Guide* to the intellectual property context is to ensure a parity of treatment between acquisition security rights in tangible assets and acquisition security rights in intellectual property tangible, it is preferable to retain the same outcome in both cases. This would be particularly important where a grantor constitutes a general security right over present and future tangible and intangible property. As a result, in the draft Supplement, it is recommended that the rules recommended in the *Guide* with respect to security rights in proceeds of original encumbered tangible assets subject to an acquisition security right be transposed without further modification into the regime governing acquisition financing of intellectual property.

4. Examples illustrating how the acquisition financing recommendations of the *Guide* could apply in an intellectual property context

50. The following may be useful in clarifying how the recommendations of the *Guide* could apply in an intellectual property context. In all these examples, the owner or a later secured creditor financing the acquisition of intellectual property or a licence in intellectual property has an acquisition security right with special priority over a non-acquisition security right under the conditions described in the examples.

(a) Acquisition security right in intellectual property securing the purchase price of the intellectual property (assets other than inventory or consumer goods)

51. B creates a security right in all of its present and future movable assets (including intellectual property) in favour of SC, who takes the actions necessary to make that security right effective against third parties. Subsequently, B acquires a patent from O to be used in B's business. Pursuant to the agreement between B and O, B agrees to pay the purchase price to O over time and B grants O a security right in the patent to secure B's obligation to pay the purchase price. O makes that security right effective against third parties within a short period of time such as 20 or 30 days of B obtaining the patent. O's security right is an acquisition security right and has priority over the security right of SC (see recommendation 180, alternative A, subparagraph (a), or alternative B, subparagraph (b)). Whether the priority of O's security right extends to proceeds of the patent in the form of receivables, negotiable instruments, rights to payment of funds credited to a bank account or rights to receive proceeds under an independent undertaking depends on

which version of recommendation 185 a State enacts. Under alternative A, the priority of O's security right carries over into the proceeds (see recommendation 185, alternative A, subparagraph (a), as transposed). Under alternative B, O's security right in the proceeds would have only the priority of a non-acquisition security right (see recommendation 185, alternative B, as transposed).

(b) Acquisition security right in intellectual property securing the purchase price of the intellectual property (inventory)

52. B creates a security right in all of its present and future movable assets (including intellectual property) in favour of SC1, who takes the actions necessary to make the security right effective against third parties. Subsequently, B acquires a patent from O for the purpose of licensing it to third parties in the ordinary course of B's business. B obtains the money necessary to pay the purchase price to O by borrowing money from SC2, to whom B grants a security right in the patent to secure B's repayment obligation. Before B obtains the patent, SC2: (a) takes the actions necessary to make its security right effective against third parties, and (b) notifies SC1 that SC2 will have an acquisition security right. SC2's security right is an acquisition security right and has priority over the security right of SC1 (see recommendation 180, alternative A, subparagraph (b), and alternative B, subparagraph (b), as transposed). The priority of SC2's security right does not extend to proceeds of the patent in the form of receivables, negotiable instruments and rights to payment of funds credited to a bank account or rights to receive proceeds under an independent undertaking (see recommendation 185, alternative A, subparagraph (b), and alternative B, as transposed).

(c) Acquisition security right in an intellectual property licence securing the purchase price of the licence (assets other than inventory or consumer goods)

53. B has created a security right in all of its present and future movable assets (including intellectual property) in favour of SC, who has taken the actions necessary for that security right to be effective against third parties. Subsequently, B obtains a licence from O to use a patent owned by O in B's business. B agrees to pay the licence fee to O over time and grants O a security right in B's rights as licensee to secure B's payment obligation. O makes that security right effective against third parties within a short period of time such as 20 or 30 days of B obtaining the licence. O's security right in B's rights under the licence agreement is an acquisition security right and has priority over the security right of SC (see recommendation 180, alternative A, subparagraph (a), or alternative B, subparagraph (b)). Whether the priority of O's security right extends to proceeds of B's rights as licensee in the form of receivables, negotiable instruments and rights to payment of funds credited to a bank account or rights to receive proceeds under an independent undertaking depends on which version of recommendation 185 a State enacts. Under alternative A, the priority of O's security right carries over to the receivables (see recommendation 185, alternative A, subparagraph (a), as transposed). Under alternative B, O's security right in the receivables would have only the priority of a non-acquisition security right (see recommendation 185, alternative B, as transposed). It should be noted that O's rights pursuant to its security right are separate from and subject to different requirements than are

O's rights under the licence agreement to terminate the licence agreement upon B's default in its obligations under the licence agreement.

(d) Acquisition security right in an intellectual property licence securing the purchase price of the licence (inventory)

54. B grants a security right in all of its present and future movable assets (including intellectual property) to SC1, who takes the actions necessary to make the security right effective against third parties. Subsequently, B obtains a licence from O, the patent owner, for the purpose of sub-licensing the patent to third parties in the ordinary course of B's business. B obtains the money necessary to pay its licence fee by borrowing money from SC2, to whom B grants a security right in B's rights as licensee to secure B's repayment obligation. Before B obtains the licence, SC2: (a) takes the actions necessary to make its security right effective against third parties; and (b) notifies SC1 that SC2 will have an acquisition security right. SC2's security right is an acquisition security right and has priority over the security right of SC1 (see recommendation 180, alternative A, subparagraph (b), and alternative B, subparagraph (b), as transposed). The priority of O's security right does not extend to proceeds of the licence in the form of receivables, negotiable instruments and rights to payment of funds credited to a bank account (see recommendation 185, alternative A, subparagraph (b), and alternative B, as transposed).

C. Non-unitary approach

55. The above paragraphs address the issue of intellectual property acquisition financing on the hypothesis that a State adopts the "unitary approach" to acquisition financing as provided in recommendations 178-186 of the *Guide*. They are based on the assumption that, if a State adopts the unitary approach to acquisition financing of tangible assets, it would also adopt the unitary approach to acquisition financing of intellectual property. To do otherwise would risk creating unnecessary confusion in relation to creation, third party effectiveness, priority and enforcement of transactions providing for acquisition financing.

56. For the same reasons, if a State adopts the "non-unitary approach" to acquisition financing of tangible assets, it is reasonable to assume that the State would also adopt the non-unitary approach to acquisition financing of intellectual property. The non-unitary approach to acquisition financing of intellectual property rights might be reflected, for example, by contractual terms providing for a conditional transfer (which, under law relating to intellectual property, may include a conditional exclusive licence), a retention-of-title right, a financial lease right or a similar transaction with respect to an intellectual property right. Under the non-unitary approach, in addition, it is possible for an owner or for a third-party financier such as a bank to take an acquisition security right of the type available under the unitary approach.

57. Each of these acquisition financing transactions can be adapted relatively easily to the financing of intellectual property rights. Unlike the case with the unitary approach, however, it is not possible to directly transpose the recommendations governing retention-of-title rights and financial lease rights to

situations where the licensee is acquiring a non-exclusive licence. In these situations, there is no particular right that is being retained by the licensor in addition to its continuing right as owner (subject to the terms of the licence). The normal remedy for the licensor in such cases is simply to revoke the licence. By contrast, a non-licensor acquisition financier (for example, a bank that finances acquisition of the licence by the licensee) would take an ordinary acquisition security right in the licensee's rights.

58. In drafting provisions to enact a non-unitary regime for acquisition financing States would have to take into account two considerations. First, in order to ensure the same functional outcomes as would result were the unitary approach to be adopted, States will have to address all the issues covered by the six recommendations relating to the unitary approach as set out in this chapter (see recommendations 247-252). Second, specific provisions of the law to be enacted would have to be adjusted in the same manner that, for tangible assets, recommendations 192-194 and recommendation 199 of the *Guide* (non-unitary approach) were adjusted to mirror recommendations 180 and 185 of the *Guide* (unitary approach) respectively. In other words, to achieve a non-unitary regime for acquisition financing of intellectual property rights, States would need to provide detailed rules to address issues of third-party effectiveness and the transformation of a transferee's ownership right, retention-of-title or similar right into a security right in the proceeds of the intellectual property that was transferred or title in which was retained (for a discussion of these adjustments in the case of the non-unitary approach to acquisition financing, see Chapter IX, Acquisition financing).

Recommendations 247-252

Application of acquisition financing provisions to intellectual property

247. The law should provide that the provisions on acquisition security rights in a tangible asset also apply to an acquisition security right in intellectual property or a licence of intellectual property.

Acquisition security right in intellectual property held for sale or licence

248. The law should provide that, if intellectual property or a licence in intellectual property that is subject to an acquisition security right is held for sale or licence in the ordinary course of the grantor's business, the acquisition security right is treated as an acquisition security right in inventory.

Acquisition security right in intellectual property held for personal, family or household purposes

249. The law should provide that, if intellectual property or a licence in intellectual property that is subject to an acquisition security right is used or intended by the grantor to be used for personal, family or household purposes, the acquisition security right is treated as an acquisition security right in consumer goods.

Inapplicability of the concept of possession to an acquisition security right in intellectual property

250. The law should provide that, if intellectual property or a licence in intellectual property is subject to an acquisition security right, any reference in such provisions to possession of the encumbered asset by the secured creditor does not apply.

Relevance of time when the grantor acquires the encumbered intellectual property

251. The law should provide that, if intellectual property or a licence in intellectual property is subject to an acquisition security right, any reference in such provisions to the time of possession of the encumbered asset by the grantor refers to the time the grantor acquires the encumbered intellectual property or licence.

252. The law should provide that, if intellectual property or a licence in intellectual property is subject to an acquisition security right, any reference in such provisions to time of the delivery of the encumbered asset to the grantor refers to the time the grantor acquires the encumbered intellectual property or licence.

X. Law applicable to a security right in intellectual property

[*Note to the Working Group: For paras. 1-46, see A/CN.9/WG.VI/WP.39/Add.7, paras. 1-23, A/CN.8/685, paras. 87-94, A/CN.9/WG.VI/WP.37/Add.4, paras. 1-21, A/CN.9/670, para. 115, A/CN.9/WG.VI/WP.35/Add.1, paras. 90-98, A/CN.9/667, paras. 124-128, A/CN.9/WG.VI/WP.33/Add.1, paras. 53-57, and A/CN.9/649, paras. 77-80.*]

A. Law applicable to property matters

1. Purpose and scope

1. Generally, the conflict-of-laws rules recommended in the *Guide* deal with the law applicable to the creation, effectiveness against third parties, priority as against the rights of competing claimants and enforcement of a security right. They also determine the territorial scope of the substantive law rules recommended in the *Guide*, that is, if and when the substantive law rules of the State enacting the law recommended in the *Guide* apply (see chapter X on conflict of laws, paras. 1-9 of the *Guide*).

2. The conflict-of-laws chapter of the *Guide* does not define the security rights to which the conflict-of-laws rules apply. Normally, the characterization of a right as a

security right for conflict-of-laws purposes reflects the substantive secured transactions law in a State. However, the *Guide* recommends that a State that enacts the recommendations of the *Guide* following a non-unitary approach to acquisition financing should apply the conflict-of-laws provisions governing security rights to retention-of-title rights or financial leases (see recommendation 201). Similarly, (as the term security right includes the right of an outright assignee of receivables; see the term “security right”, Introduction to the *Guide*, section B on terminology and interpretation), the *Guide* recommends that such a State should apply the conflict-of-laws provisions governing security assignments of receivables to outright assignments of receivables (see recommendation 208).

3. In principle, a court or other authority will use its own law whenever it is required to characterize an issue for the purpose of selecting the appropriate conflict-of-laws rule. As the conflict-of-laws recommendations of the *Guide* have been prepared to reflect the substantive law recommendations of the *Guide*, a State that enacts both the substantive law and the conflict-of-laws recommendations of the *Guide* will have no difficulty in applying either. If, however, a State does not enact the substantive law recommendations of the *Guide*, it may find it difficult to apply the conflict-of-laws recommendations of the *Guide*. This may be so to the extent that that State treats creation and third-party effectiveness as one issue, while the conflicts-of-laws recommendations in the *Guide* treat them as two separate issues and refer them to the laws of different States. This difficulty will not arise, however, with regard to the distinction between the creation of a security right in an intangible asset (referred to the law of the grantor’s location; see recommendation 208) and the mutual rights and obligations of the parties (referred to the law chosen by them; see recommendation 216). This is so, because the *Guide* follows the approach followed in most States, drawing a distinction between property rights (referred to a specific law) and contractual rights (typically referred to the law chosen by the parties).

4. In any case, the question whether an asset (including intellectual property) may be transferred or encumbered is a preliminary issue to be addressed before the creation of a security right and is not addressed by the conflict-of-laws recommendations of the *Guide*. Thus, to the extent that conflict-of-laws rules outside those recommended in the *Guide* refer issues of transferability of intellectual property rights to the law of the State in which the intellectual property is protected (*lex loci protectionis*; hereinafter referred to as the “*lex protectionis*”), the *Guide* does not affect them. This is so not because the law recommended in the *Guide* defers to law relating to intellectual property but because the law recommended in the *Guide* does not address these issues. Following the same approach, the substantive law provisions recommended in the *Guide* do not override statutory limitations to transferability (see recommendation 18).

5. When the conflict of laws rules of the law recommended in the *Guide* refer a matter relating to security rights to the law of a particular State, the reference is to the entire body of law in effect in that State, including not only statutory and non-statutory law (see Introduction to the *Guide*, para. 19) and the law in effect in particular territorial units of a multi-unit State (see recommendations 224-227) but also legal rules in effect in that State as a result of treaties, conventions, and other international obligations. Thus, for example, if a conflict-of-laws rule refers a matter relating to security rights in intellectual property to the law of a State in

which the law for that matter has been promulgated by a regional economic integration organization, the reference to the law of that State.

6. Finally, it should be noted that, like all the other provisions of the law recommended in the *Guide*, the conflict-of-laws provisions as well do not apply in so far as they are inconsistent with national law or international agreements, to which the State is a party, relating to intellectual property, if any (see recommendation 4, subparagraph (b)).

2. The approach recommended in the *Guide*

7. In many States, the conflict-of-laws rules that apply to security rights in intangible assets apply also to security rights in intellectual property. Similarly, the conflict-of-laws rules recommended in the *Guide* with respect to security rights in intangible assets would also apply to security rights in intellectual property, if no asset-specific rule is provided for intellectual property. Thus, if a State enacts the conflict-of-laws recommendations of the *Guide*, making them applicable to security rights in intellectual property without any change, the law of the State in which the grantor is located would apply to the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property (see recommendations 208, and 218, subparagraph (b)). The location of the grantor is defined as its place of central administration, that is, the real rather than the statutory seat, of the grantor (see recommendation 219). Recommendation 4, subparagraph (b), would also apply and, to the extent of any inconsistency between the conflict-of-laws rules recommended in the *Guide* and those of the law relating to intellectual property that applied specifically to intellectual property, defer to any conflict-of-laws rule of the law relating to intellectual property.

8. The principal advantage of an approach based on the law of the grantor's location is that it leads to the application of a single law to the creation, third-party effectiveness, priority and enforcement of a security right. So, for example, a secured creditor that obtains a security right in all present and future intangible assets (including both intellectual property and other assets) of a grantor could obtain a security right, make it effective against third parties, ascertain its priority and have it enforced by referring to the law of a single State, even if the assets have connections with several States. In particular, both registration and searching costs would in most cases be reduced, as a secured creditor would need to register and a searcher would need to search only in the State in which the grantor is located. This would reduce transaction costs and enhance certainty, a result that is likely to have a beneficial impact on the availability and the cost of credit.

9. Another particularly important advantage of an approach based on the law of the grantor's location results from the meaning attributed in the *Guide* to the term "location" in cases where the grantor has a place of business in more than one State (see recommendation 219). In this case, "location" refers to the State in which the grantor has its place of central administration (that is, its real, rather than its statutory, seat). This is also the law of the State in which the main insolvency proceedings with respect to the grantor are likely to be administered (as to the meaning of a main proceeding, see, for example, articles 2, subparagraph (b), and 16, paragraph 3 of the UNCITRAL Model Law on Cross-Border Insolvency). As a result, the law governing the creation, third-party effectiveness, priority and enforcement of a security right and the law governing, for example, stays, avoidance

proceedings, treatment of assets and ranking of claims are likely to be the law of one and the same State. It should be noted that, while in some cases the statutory seat may be easier to determine than the real seat, referring to the statutory seat would result to a conflict of the law of the statutory seat with the law of the State in which insolvency proceedings will be opened (*lex fori concursus*), a conflict which is likely to be resolved in favour of the application of the *lex fori concursus*.

10. However, the approach based on the law of the grantor's location has also disadvantages. For example, if the grantor is not the initial owner of the encumbered asset but a transferee that has not taken the asset free of a security right or other right created by the initial or intermediate owner, a potential secured creditor would need to conduct a search outside the security rights registry to determine the chain of transferees. The potential secured creditor would then need to conduct another search in the security rights registry (and possibly in the relevant intellectual property registry, if any) to determine if the initial or intermediate owner has created a security right in the same intellectual property. In addition, if the initial or intermediate owner is located in a State other than the State of the grantor's location, the secured creditor would have to search in the security rights registry (and possibly in the relevant intellectual property registry, if any) of any such other State. Moreover, a conflict-of-laws rule based on the grantor's location would nevertheless require a reference to the *lex protectionis* for certain issues. In particular, as the *lex protectionis* is typically the law governing ownership in intellectual property, a priority conflict between a security right in intellectual property and the ownership right of an outright transferee of the encumbered intellectual property would have to be governed by the *lex protectionis*, at least insofar as determination of the rights of the putative transferee is concerned.

3. The law of the State of protection (*lex protectionis*)

11. Although international conventions designed to protect intellectual property do not expressly address the law applicable to issues arising with respect to security rights in intellectual property, they generally adopt the principle of territoriality. Thus, in States parties to these conventions, the law applicable to ownership and issues of protection of intellectual property rights (such as the comparative rights of an intellectual property owner in one State as against a licensee in another State) is the *lex protectionis*.

12. The view is expressed¹ that the principle of national treatment embodied in international conventions protecting intellectual property implicitly imposes a universal rule in favour of the *lex protectionis* for determining the law applicable not only to ownership of intellectual property but also to issues arising with respect to security rights in intellectual property. In accordance with that view, it is asserted that provisions such as Article 2(1) of the Paris Industrial Property Convention or Article 5(2) of the Berne Intellectual Property Convention leave no room for a connecting factor other than the place of protection of the relevant intellectual property right. In other words, under this view, States parties to any of these international conventions cannot freely determine their conflict-of-law rules and no

¹ See report of Working Group VI (Security Interests) on the work of its sixteenth session (A/CN.9/685, para. 90).

law other than the *lex protectionis* could be applied to issues arising with respect to security rights in intellectual property.

13. As a result of this view, in order for a secured creditor to be able to obtain an effective and enforceable security right in an intellectual property right in a State, in which the intellectual property right exists, the secured creditor would have to fulfil the requirements of that State. So, the principal advantage of the *lex protectionis* is that, in recognition of the principle of territoriality adopted in international conventions for the protection of intellectual property, its application would result in the same law applying to both security rights and ownership rights in intellectual property.

14. However, there are also disadvantages to an approach based on the *lex protectionis* as the applicable law for security rights, especially in transactions in which a portfolio of intellectual property rights is used as security for credit or transactions in which the encumbered assets are not limited to intellectual property that is used and protected under the law of a single State.

4. Other approaches

15. The view mentioned above (see paras. 12-13 above), attributing such an extensive effect to international intellectual property conventions with respect to the issue of the law applicable to issues relating to security rights in intellectual property, is not universally accepted. In addition, there is very little precedent on the application of the *lex protectionis* to issues arising with respect to security rights in intellectual property. Even assuming that these international conventions could impose a given conflict-of-laws rule, it would still be questionable whether the scope of application of this rule would cover all property effects contemplated by the draft Supplement, that is, the creation, effectiveness against third parties, priority as against the rights of competing claimants and enforcement of a security right in intellectual property.

16. Accordingly, even if one accepts the extensive effect of international intellectual property conventions described in paragraphs 12-13 above, it would still be necessary or useful to formulate a recommendation on the law applicable to issues arising with respect to security rights in intellectual property. Such a recommendation would, at the very least, perform a gap-filling function with regard to any possible conflict-of-laws consequences resulting from existing international intellectual property conventions.

17. In view of the above-mentioned considerations, to combine consistency with the law applicable to ownership rights and the benefits of the application of a single law for security rights issues, the *lex protectionis* approach could be combined with the law of the grantor's location approach in the sense that some issues could be referred to the law of the grantor's location, while other issues could be referred to the *lex protectionis*.

18. For example, issues arising with respect to a security right in intellectual property that is subject to registration in an intellectual property registry may be referred to the law of the State under whose authority the registry is maintained (this approach is followed in the *Guide* with respect to security rights in tangible assets that are subject to specialized registration; see recommendation 205). At the same time, issues arising with respect to a security right in intellectual property that

is not subject to such registration may be referred to the law of the State in which the grantor is located. This combination of the two approaches might, however, add cost and complexity to outright transfers of intellectual property rights that are not subject to such registration under the *lex protectionis*. This is so because an outright transferee of such an intellectual property right would have to investigate the law of the State of the grantor's location to ensure that the transfer is not subject to a prior security right.

19. Other combinations of the two approaches might also be possible. For example, the approach based on the law of the grantor's location could be subject to a variation whereby the third-party effectiveness and priority of a security right as against the rights of an outright transferee or licensee of intellectual property would be governed by the *lex protectionis* (whether or not the *lex protectionis* provides for registration of a security right in intellectual property in an intellectual property registry). With this variation, a secured creditor would also need to establish its right under the *lex protectionis* only in instances where a competition with an outright transferee is a concern. In the typical case where the insolvency of the grantor is the main concern (because the grantor cannot pay all its creditors), it would be sufficient for the secured creditor to rely on the law of the State in which the grantor is located, as would be the case for other types of intangible asset (such as receivables).

20. The advantages and disadvantages of the approaches mentioned above (see paras. 7-20 above) may be illustrated with the examples discussed below (see paras. 21-35), dealing separately with creation, third-party effectiveness, priority and enforcement issues.

5. Examples for a comparative analysis of the various approaches

(a) Creation issues

21. Intellectual property owner A, located in State X, creates pursuant to a single security agreement with secured creditor SC1, located in State Y, a security right in a copyright portfolio, protected under the laws of State X, and in a patent and trademark portfolio, protected under the laws of State Y.

22. Under the law of the grantor's location approach, A and SC1 would need to meet the requirements of State X for the creation of its security right in all intellectual property rights (that is, for the security right to be effective between grantor A and secured creditor SC1).

23. Under the *lex protectionis* approach, A and SC1 would have to meet the creation requirements of State X with respect to the copyright portfolio protected under the law of State X and the requirements of State Y with respect to patent and trademark portfolio protected under the law of State Y. If they fail to do so, the security agreement will achieve only part of its intended purpose, that is, create a security right under the law of State X, but fail to create a security right under the law of State Y.

24. Under the approach that distinguishes between security rights in intellectual property rights that may be registered in an intellectual property registry and those that may not be registered in such a registry, creation issues with respect to the security right in the copyright portfolio would be referred to the law of State X

(assuming that copyrights may not be registered in a specialized registry); and creation issues with respect to the security right in the patent and trademark portfolio would be referred to the law of State Y (assuming that rights in patents and trademarks may be registered in specialized registries in that State).

25. When the only difference between the laws of States X and Y with respect to the creation of a security right lies in the fact that, for example, State X that has not enacted the recommendations of the *Guide* requires more formalities in a security agreement than does State Y that has enacted the recommendations of the *Guide*, this difficulty can be overcome by preparing the security agreement so that it satisfies the requirements of the most stringent law (although even that will create additional costs for the transaction). However, when States X and Y have inconsistent requirements with respect to formalities, this approach will not suffice to overcome this problem. Similarly, where the agreement contemplates multiple present and future intellectual property rights as encumbered assets, difficulties cannot be overcome. This is so in particular when a State has enacted the recommendations of the *Guide* (allowing a single security agreement to create security rights in multiple present and future assets), while another State does not allow a security agreement to create a security right in assets not yet in existence or not yet owned by the grantor, or does not allow multiple assets to be encumbered in one and the same agreement. It should finally be noted that, as creation of a security right means that it is effective between the grantor and the secured creditor (and not as against third parties), the policy that underlies the *lex protectionis* does not appear to dictate referring the creation of a security right to that law.

(b) Third-party effectiveness issues

26. In order to make its security right effective against third parties, under the law of the grantor's location approach, it would be sufficient for secured creditor SC1 to meet the third-party effectiveness requirements of State X. Any potential creditors of intellectual property owner A would need to search only in the relevant registry in State X.

27. Under the *lex protectionis* approach, however, secured creditor SC1 would need to meet the third-party effectiveness requirements of State X to make its security right in the copyright portfolio effective against third parties and the requirements of in State Y to make its security right in the patent and trademark portfolio effective against third parties. This would possibly necessitate the registration of multiple notices with respect to the security right in the relevant registries of those States; and potential creditors would have to search in all those registries. This situation could be further complicated by the fact that some of those States might utilize the general security rights registry for such notices, other States might provide the option of utilizing a specialized registry, and still other States, might utilize an intellectual property registry that is mandatory under recommendation 4, subparagraph (b). This disadvantage would be alleviated if there were an international registry in which notices with respect to security rights, the third-party effectiveness of which is governed by the law of different States, could be registered.

28. Under the approach that distinguishes between security rights in intellectual property that may be registered in an intellectual property registry and security rights in intellectual property that may not be so registered, SC1 would need to meet

the third-party effectiveness requirements of State X with respect to the security right in the copyright portfolio and the third-party effectiveness of State Y respect to the security right in the patent and trademark portfolio.

(c) Priority issues

29. If intellectual property owner A creates another security right in its patent and trademark portfolios protected in State Y in favour of secured creditor SC2, there will be a priority conflict between the security rights of SC1 and SC2 in the patents and trademarks protected in State Y.

30. Under the law of the grantor's location approach, this priority conflict would be governed by the law of State X in which the grantor is located. Under the *lex protectionis* approach, however, this priority conflict would be governed by the laws of State Y. The law of State Y would govern this priority conflict also under the approach referring priority of a security right in intellectual property that may be registered in an intellectual property registry to the law of the State under whose authority the registry is maintained.

31. Another example will illustrate how the *lex protectionis* will apply in the case of multiple transfers in a chain of title, where the transferor and each of the transferees create security rights. A, located in State X, owns a patent in State X. Owner A grants a security right in the patent to secured creditor SC1. A then transfers the patent to B, located in State Y, who creates a security right in favour of SC2. Whether transferee B obtains the patent subject to the security right of SC1 will be determined in accordance with the *lex protectionis*, that is, the law of State X, which happens to be also the law of the grantor's location. Whether secured creditor SC2 takes its security right in the patent from transferee B subject to the security right of SC1 will also be determined in accordance with the *lex protectionis* (normally, under the *nemo dat* principle, SC2 will acquire no more rights than B had).

(d) Enforcement issues

32. If intellectual property owner A does business in States X, Y and Z and uses a particular trademark under the law of each of those States, those trademark rights may well have greater value taken together than they do separately because they operate collectively. Thus, if A grants a security right in those trademarks, secured creditor SC1 would likely prefer to dispose of them together upon A's default because such a disposition would likely yield greater proceeds (thus also benefitting A). Yet, this is likely to be difficult or impossible if States X, Y and Z have different rules for disposition of encumbered intellectual property rights. If State X allows only a judicial disposition of an encumbered asset, while States Y and Z allow a non-judicial disposition, disposition of the trademark rights in a single transaction might be impossible. Even if all of the relevant States allow non-judicial disposition, the differences in required procedures may make a disposition of the rights in a single transaction inefficient at best.

33. Moreover, enforcement of a security right is not a single event; rather it is a series of actions. So, upon A's default, secured creditor SC1, located in State Y, may notify A, located in State X, that it will enforce its security right in its trademark rights protected under the laws of States X, Y and Z. Secured creditor SC1 may then

advertise the disposition of the trademark right in States X, Y and Z; indeed, it may advertise the disposition worldwide by use of the Internet. Secured creditor SC1 may then identify a buyer located in State Z, who buys the encumbered asset pursuant to a contract governed by the laws of State X.

34. Under an approach based on the *lex protectionis* (or the law of the State under whose authority the registry is maintained), secured creditor SC1 would need to enforce its security right in the trademark protected in State X in accordance with the law of State X, its security right in the trademark protected in State Y in accordance with the law of State Y and its security right in the trademark protected in State Z in accordance with the law of State Z. Under the law of the grantor's location approach, enforcement of the security right in the trademark would be governed by the law of the State in which grantor A is located. It should be noted that, no matter which approach is followed, if secured creditor SC1 sells the encumbered trademarks, the transferee has to register its rights in the trademark registry of each State in which the trademark is registered and protected, that is, States X, Y and Z.

35. Where grantor A, located in State X, creates a security right in a patent registered in the national patent office in State Y and then grantor A becomes insolvent, the law applicable to the creation, third-party effectiveness, priority and enforcement of the security right will be the law of State X or Y, depending on whether an approach based on the law of the grantor's location or an approach based on the *lex protectionis* is followed in the forum State. Under the law recommended in the *Guide*, the application of any of these laws is subject to the *lex fori concursus* with respect to issues such as avoidance, treatment of secured creditors, ranking of claims or distribution of proceeds (see recommendation 223). Where the insolvency proceeding is opened in State X in which the grantor is located, the *lex fori concursus* and the law of the grantor's location will be the law of one and the same jurisdiction. Where the insolvency proceeding is opened in another State, where, for example, the grantor has assets, that may not be the case.

(e) Change of location of the grantor or the encumbered asset and relevant time for determining location

36. It should be noted that where the grantor or the encumbered asset moves from one State to another State that has enacted the recommendations of the *Guide*, different rules apply. According to these rules, if the grantor or the encumbered asset (whichever determines the applicable law under the relevant conflict-of-laws provisions) moves to a State that has enacted the recommendations of the *Guide*, a security right remains effective against third parties for a short period of time without any action on the part of the secured creditor and then only if the third-party effectiveness requirements of the State of the new location are met (see recommendation 45).

37. For example, grantor A, located in State X, creates a security right in favour of secured creditor SC1 in a copyright protected in States X and Y, and then A moves to State Y that has enacted the recommendations of the *Guide* and creates another security in the copyright in favour of secured creditor SC2 in State Y. If State Y has enacted the recommendations of the *Guide*, the security right of SC1 has priority over the security right of SC2 for a short period of time without any action on the part of SC1 and then only if SC1 meets the third-party effectiveness requirements of

State Y. This result is the result of a rule based on recommendation 45 and not of a conflict-of-laws rule. If A, instead of moving to State Y, transfers the copyright to transferee B in State Y, as mentioned above (see para. 31 above), whether transferee B obtains the copyright subject to the security right of secured creditor SC1 will be determined in accordance with the *lex protectionis*. Similarly, whether secured creditor SC2 takes its security right subject to the security right of SC1 will be determined in accordance with the *lex protectionis*.

38. It should also be noted that, under the law recommended in the *Guide*, the relevant time for determining the location of the grantor for creation issues is the time of the putative creation of a security right and for third-party effectiveness and priority issues the time the issue arises (see recommendation 220). As a result, under the law recommended in the *Guide*, the creation of the security right of SC1 would be subject to law of State X and the creation of the security right of SC2 would be subject to the law of State Y. The third-party effectiveness and priority of the security right of SC1 as against transferee B and its secured creditor SC2 would, after a short grace period (see recommendation 45), be subject to the law of State Y.

B. Law applicable to contractual matters

39. Under the law recommended in the *Guide*, the law applicable to the mutual rights and obligations of the grantor and the secured creditor arising from the security agreement (the contractual aspects of the security agreement) is left to party autonomy. In the absence of a choice of law by the parties, the law applicable to these matters is the law governing the security agreement as determined by the conflict-of-laws rules generally applicable to contractual obligations (see chapter X of the *Guide*, para. 61 and recommendation 216).

40. In view of the wide acceptability of the application of the principle of party autonomy to contractual matters,² the same rule should apply to the mutual rights and obligations of the grantor and the secured creditor in the case of a security right in intellectual property.

Recommendation 253³

Law applicable to a security right in intellectual property

Alternative A

The law should provide that the law applicable to the creation, effectiveness against third parties, priority and enforcement of a security right in intellectual property is the law of the State in which the intellectual property is protected.

² See www.hcch.net/upload/wop/genaff_concl09e.pdf on the development of a future instrument on the choice of law in international contracts by the Hague Conference on Private International Law.

³ If this recommendation could be included in the *Guide*, it would be placed in chapter X on conflict of laws as recommendation 214 bis.

Alternative B

The law should provide that the law applicable to the creation, effectiveness against third parties, priority and enforcement of a security right in intellectual property that may be registered in an intellectual property registry is the law of the State under whose authority the registry is maintained. The law applicable to those matters with respect to a security right in intellectual property that may not be registered in an intellectual property registry is the law of the State in which the grantor is located.

Alternative C

The law should provide that the law applicable to the creation, effectiveness against third parties, priority and enforcement of a security right in intellectual property is the law of the State in which the grantor is located. However, the law applicable to the effectiveness against third parties and priority of a security right in intellectual property as against the right of a transferee or licensee of the encumbered intellectual property is the law of the State in which the intellectual property is protected.

XI. Transition

41. Under the recommendations of the *Guide*, the law should set out the date as of which it will come into force (the “effective date”) and specify the extent to which, after the effective date, the new law applies to security rights that existed before the effective date (see chapter XI on transition, paras. 1-3).

42. The different approaches to establishing an effective date as set out in the *Guide* offer States different possibilities for doing so. Whichever is selected, however, will provide a clear mechanism for determining when the law or its various parts will come into force (chapter XI on transition, paras. 4-6). Neither the *Guide* nor the draft Supplement recommends that the effective date of the provisions of the law relating to security rights in intellectual property should be different than the effective date of other provisions of the law. Thus, the approaches discussed in chapter XI of the *Guide* can be applied without modification to determine the date at which the provisions with respect to security rights in intellectual property will come into force. The only additional considerations are the following: (a) the entire law recommended in the *Guide* must come into force either at the time or before the provisions relating to security rights in intellectual property come into force; and (b) the provisions with respect to intellectual property rights must come into force as a whole. In other words, States may defer the coming into force of the provisions relating to security rights in intellectual property until a date after the general law has come into force, but when they decide to proclaim in force the provisions relating to security on intellectual property, they must do so in a manner that ensures that all these provisions come into force at the same time.

43. The *Guide* also contains recommendations relating to the protection of rights acquired before the effective date of the new law. The general principle is that the new law applies even security rights that exist at the effective date. Consequently, if registration of a notice of a security right in the general security rights registry or in the relevant intellectual property registry becomes newly possible, States will have

to provide for a grace period to enable notices of these security rights to be registered (thereby protecting both third-party effectiveness and priority as it existed under prior law). This principle and its implications are elaborated in the *Guide* (see chapter XI on transition, paras. 20-26).

44. A particular transition issue arises in relation to enforcement, that is, whether enforcement proceedings that had commenced prior to the effective date of the new law would have to be abandoned and recommenced under the new law. To avoid this result, the law recommended in the *Guide* provides that, once enforcement proceedings have been commenced in a court or binding arbitral tribunal, they may continue under prior law. However, it is possible for the enforcing secured creditor to abandon proceedings under prior law and recommence enforcement under the new law, in particular if the new law recommended in the *Guide* provides secured creditors with remedies not available under prior law (see chapter XI on transition, paras. 27-33). This principle should be equally applicable to enforcement proceedings commenced in respect of security rights in intellectual property.

45. Because the recommendations of the *Guide* relating to security rights in intellectual property offer financing and transactional opportunities that have not heretofore existed in many States, it might be thought that special provisions to govern transition to the new law would be required. The above review suggests, however, that the basic transition principles set out in the law recommended in the *Guide* can be applied without modification to the regime of security rights in intellectual property as recommended in the draft Supplement. No additional recommendations are needed for this purpose.

XII. The impact of insolvency of a licensor or licensee of intellectual property on a security right in that party's rights under a licence agreement

[*Note to the Working Group: For paras. 46-54, see A/CN.9/WG.VI/ WP.37/Add.7, paras. 24-42, A/CN.9/685, para. 95, A/CN.9/WG.V/ WP.87, A/CN.9/WG.VI/ WP.37/Add.4, paras. 22-40, A/CN.9/671, paras. 125-127, A/CN.9/670, para. 116-122, A/CN.9/WG.VI/ WP.35/Add.1, chapter XI, A/CN.9/667, paras. 129-140, A/CN.9/WG.VI/ WP.33/Add.1, paras. 58-72, A/CN.9/649, paras. 98-103 and A/63/17, para. 326.*]

A. General

46. A licensor or a licensee of intellectual property under a licence agreement may create a security right in its rights under the licence agreement. If the grantor is the licensor, typically its secured creditor will have a security right in the licensor's right to receive royalties from the licensee as well as the right to enforce non-monetary terms of the licence agreement and the right to terminate the licence agreement upon breach. If the licensee is the grantor, typically its secured creditor will have a security right in the licensee's right to use or exploit the licensed intellectual property subject to the terms of the licence agreement, but not a security right in the intellectual property itself. The secured creditor may then take the steps

necessary to make that security right effective against third parties (see recommendation 29).

47. Insolvency law, subject to avoidance actions, will typically respect the effectiveness of such a security right (see recommendation 88 of the Insolvency Guide). Similarly, insolvency law, subject to any limited and clearly stated exceptions, will respect the priority of a security right that is effective against third parties (see recommendations 238-239). However, if the licensor or the licensee becomes subject to insolvency proceedings, there may be an effect on the rights of the parties to the licence agreement that will have an impact on a security right granted by the licensor or the licensee. In the case of a chain of licence and sub-licence agreements, the insolvency of any party in the chain will have an impact on several other parties in the chain and their secured creditors. For example, an insolvency of a party in the middle of the chain will affect the licence of subsequent sub-licensees and sub-licensors, but will not have any legal effect on previous ones. The terms of a licence agreement may provide for different results (for example, automatic termination of all licences upon the insolvency of any licensee up or down in the chain from the insolvent licensee), but these results will be subject to limitations under insolvency law (for example, rendering unenforceable automatic termination clauses).

48. Outside of insolvency, there may be statutory or contractual limitations on the ability of the licensor and the licensee to grant and enforce a security right in a right to the payment of royalties. Secured transactions law will typically not affect statutory limitations, other than mainly those relating to a future receivable, or a receivable assigned in bulk or in part on the sole ground that it is a future receivable, or a receivable assigned in bulk or in part (see recommendation 23). Secured transactions law may affect contractual limitations (see recommendations 18 and 24-25). What effect, if any, an insolvency proceeding may have on those limitations on the assignment of receivables independent of secured transactions law is a matter of insolvency law (see recommendations 83-85 of the Insolvency Guide).

49. The Insolvency Guide contains extensive recommendations concerning the impact of insolvency proceedings on contracts with respect to which both the debtor and its counterparty have not fully performed their obligations under the contract (see recommendations 69-86 of the Insolvency Guide). A licence agreement could be such a contract, if it has not been fully performed by both parties and the term of the licence agreement has not been completed (so that there is remaining performance by the licensor). However, a licence agreement is not such a contract, if it has been fully performed by the licensee through an advance payment of the entire amount of the royalties owed by the licensee to the licensor, as may be the case in the event of an exclusive licence agreement, and the absence of any ongoing obligations of the licensor. The insolvent debtor could be the licensor (owing the licensee the right to use or exploit the licensed intellectual property in line with the terms and conditions of the licence agreement) or the licensee (owing payment of royalties and the obligation to use or exploit the licensed intellectual property in accordance with the licence agreement).

50. The Insolvency Guide recommends that any contractual clauses that automatically terminate and accelerate a contract upon an application for commencement, or commencement, of insolvency proceedings or upon the

appointment of an insolvency representative should be unenforceable as against the insolvency representative and the debtor (see recommendation 70 of the Insolvency Guide). The Insolvency Guide also recommends that the insolvency law should specify the contracts that are exempt from the operation of this recommendation, such as financial contracts, or are subject to special rules, such as labour contracts (see recommendation 71 of the Insolvency Guide).

51. The commentary of the Insolvency Guide states that some laws uphold these clauses in some circumstances and explains the reasons for this approach. These reasons include “the need for creators of intellectual property to be able to control the use of that property and the effect on a counterparty’s business of termination of a contract, especially one with respect to an intangible” (see part two, chapter II, para. 115 of the Insolvency Guide). For example, automatic termination and acceleration clauses contained in intellectual property licence agreements may be upheld as the insolvency of the licensee may have a negative impact not only on the licensor’s rights but also on the intellectual property right itself. This is the case, for example, where the insolvency of a licensee of a trademark used on products may affect the market value of the trademark and the trademarked products. In any case, clauses included in intellectual property licence agreements that provide, for example, that a licence terminates after X years or upon material breach such as failure of the licensee to upgrade or market the licensed products on time (that is, where the event that triggers the automatic termination is not insolvency) are not affected (see footnote 39, recommendation 72 of the Insolvency Guide).

52. The commentary of the Insolvency Guide also states that other laws override these clauses and explains the relevant reasons (see part two, chapter II, paras. 116 and 117 of the Insolvency Guide). The commentary further explains that, although some insolvency laws do permit these types of clause to be overridden if insolvency proceedings are commenced, this approach has not yet become a general feature of insolvency laws. In this regard, the commentary speaks of an inherent tension between promoting the debtor’s survival, which may require the preservation of contracts, and affecting commercial dealings by creating a variety of exceptions to general contract rules. The commentary concludes by expressing the desirability that an insolvency law permit such clauses to be overridden (see part two, chapter II, para. 118 of the Insolvency Guide).

53. Under the recommendations of the Insolvency Guide, the insolvency representative may continue or reject a licence agreement as a whole, if it has not been fully performed by both parties (see recommendations 72-73 of the Insolvency Guide). In the case of one licence agreement, continuation or rejection of the licence agreement by the insolvency representative of one party will affect the rights of the other party. In the case of a chain of licence and sub-licence agreements, continuation or rejection of a licence agreement will affect the rights of all subsequent parties in the chain. Finally, in the case of cross-licensing agreements (where a licensor grants a licence, the licensee then further develops the licence and grants a licence in the further developed licensed product to the licensor), continuation or rejection of a licence agreement will affect each party both in its capacity as licensor and licensee.

54. If the insolvency representative chooses to continue a licence agreement, which has not been fully performed by both parties and as to which the insolvent debtor (licensor or licensee) is in breach, the breach must be cured, the

non-breaching counterparty must be substantially returned to the economic position that it was in before the breach, and the insolvency representative must be able to perform the licence agreement (see recommendation 79 of the Insolvency Guide). In this case, the insolvency proceedings will have no impact on the legal status of a security right granted by the licensor or the licensee. However, if the insolvency representative chooses to reject the licence agreement, there will be an impact on a security right granted by the licensor or the licensee (for a full understanding of the treatment of contracts in the case of insolvency, see part two, chapter II, section E of the Insolvency Guide).

B. Insolvency of the licensor

55. If the licensor's insolvency representative decides to continue a licence agreement, there will be no impact on a security right granted by the licensor or the licensee. If the licensor is the insolvent debtor and has granted a security right in its rights under the licence agreement, and the licensor's insolvency representative decides to continue the licence agreement, the licence agreement will remain in place, the licensee will continue to owe royalties under the licence agreement and the licensor's secured creditor will continue to have a security right in those royalty payments. In this case of the licensor's insolvency, if the licensee has granted a security right in its rights under the licence agreement, the licensor will continue to owe the licensee unimpeded use of the licensed intellectual property under the licence agreement and the licensee's secured creditor will continue to have a security right in the licensee's rights under that agreement.

56. However, if the licensor's insolvency representative decides to reject the licence agreement, there will be an impact on a security right granted by the licensor or the licensee. If the licensor has granted a security right in its rights under the licence agreement, the licence agreement will no longer be effective, the licensee will no longer owe royalties under the licence agreement, and, thus, there will be no royalties for the licensor's secured creditor to be able to apply to satisfy the secured obligation. In this case of the licensor's insolvency, if the licensee has granted a security right in its rights under the licence agreement, the licensee will no longer have the authority to use the licensed intellectual property and its secured creditor will lose its security right in the encumbered asset (that is, the licensee's authority to use or exploit the licensed intellectual property).

57. As a practical matter, a secured creditor with a security right in a licensor's rights under a licence agreement may protect itself from the consequences of a rejection of the licence agreement by the licensor's insolvency representative. Such a secured creditor may, for example, protect itself by obtaining and making effective against third parties (in addition to a security right in the licensor's rights under the licence agreement, that is, principally the royalties), a security right in the licensed intellectual property itself. Then, if the insolvency representative of the licensor rejects the licence agreement, the secured creditor of the licensor (subject to the stay and any other limitations imposed by insolvency law on the enforcement of a security right in insolvency proceedings) can enforce its security right in the licensed intellectual property by disposing of it or by entering into a new licence agreement with a new licensee similar to the licence that had been rejected and thus re-establishing the royalty stream (see recommendation 149). The funds received

from the disposition of the encumbered intellectual property or the royalties received pursuant to this new licence agreement would then be distributed to the secured creditor pursuant to recommendations 152-155. As a practical matter, however, this arrangement would be worthwhile only for significant licence agreements.

58. Similarly, a secured creditor with a security right in a licensee's rights under a licence agreement may seek to protect itself from the consequences of a rejection of the licence agreement by the licensor's insolvency representative, by, for example, declining to make the secured loan unless the licensee obtains and makes effective against third parties a security right in the licensed intellectual property to secure the licensee's rights under the licence agreement. Then, if the insolvency representative of the licensor rejects the licence agreement, the licensee (subject to the stay and any other limitations imposed by insolvency law on the enforcement of security rights in insolvency proceedings) can enforce the security right in the licensed intellectual property itself by disposing of it or by entering into a new licence agreement with a new licensor, and the rights thereby obtained would be proceeds in which the secured creditor would have a security right. As a practical matter, this arrangement too would be worthwhile only for significant licence agreements.

59. As already mentioned, if at least one party has fully performed its obligations with respect to a licence agreement, the licence agreement is not subject to the recommendations of the Insolvency Guide concerning treatment of contracts. Where neither the licensor nor the licensee has fully performed its obligations under the licence agreement, however, the licence agreement would be subject to rejection under those recommendations. To protect long-term investments of licensees and in recognition of the fact that a licensee may depend on the use of rights under a licence agreement, some States have adopted rules that give additional protection to a licensee (and, in effect, its secured creditor) in the case of a licence agreement that would otherwise be subject to rejection in the insolvency of the licensor. Such protection is particularly important where there is a chain of licence and sub-licence agreements and thus several parties may be affected by the insolvency of one party in the chain.

60. For example, some States give a licensee the right to continue to use or exploit the licensed intellectual property, following the rejection of the licence agreement by the licensor's insolvency representative, as long as the licensee continues to pay royalties to the estate as provided in the licence agreement and otherwise continues to perform the licence agreement. The only obligation imposed upon the licensor's estate as a result of this rule is the obligation to continue honouring the terms and conditions of the licence agreement, an obligation that does not impose upon the resources of the licensor's estate. This approach has the effect of balancing the interest of the insolvent licensor to escape affirmative burdens under the licence agreement and the interest of the licensee to protect its investment in the licensed intellectual property.

61. In other States, licence agreements may not be subject to rejection under insolvency law because: (a) a rule that excludes the leases of immovable property from insolvency rules on rejection of contracts in the case of the lessor's insolvency applies by analogy to licence agreements in the licensor's insolvency; (b) licence agreements relating to exclusive licences create property rights (rights in rem) that

are not subject to rejection (but may be subject to avoidance); (c) licence agreements are not regarded as contracts that have not been fully performed by both parties as the licensor has already performed its obligations by granting the licence; (d) they are registered in the relevant intellectual property registry. In these States, the licensee may be able to retain the licence as long as it pays the royalties owed under the licence agreement.

62. In yet other States, licence agreements may be rejected, subject to the application of the so-called “abstraction principle”. Under this principle, the licence does not depend on the effectiveness of the underlying licence agreement. Thus, the licensee may retain the right to use or exploit the licensed intellectual property, even if a licence agreement has been rejected by the licensor’s insolvency representative. However, the licensor’s insolvency representative has a claim for the withdrawal of the licence based on the principle of unjust enrichment. Until such withdrawal, the licensee has to pay for the use of the licensed intellectual property on the basis of the principle of unjust enrichment an amount equal to the royalties owed under the licence agreement that was rejected.

63. It should be noted that the Insolvency Guide provides that “Exceptions to the power to reject may also be appropriate in the case of labour agreements, agreements where the debtor is a lessor or franchisor or a licensor of intellectual property and termination of the agreement would end or seriously affect the business of the counterparty, in particular where the advantage to the debtor may be relatively minor, and contracts with government, such as licensing agreements and procurement contracts” (see Insolvency Guide, part two, chapter II, paragraph 143). To protect long-term investments and expectations of licensees and their creditors from the ability of the licensor’s insolvency representative in effect to renegotiate licence agreements existing at the commencement of insolvency proceedings, States may wish to consider adopting rules similar to those described in the preceding paragraphs. Any such rules would have to take account of the general rules of insolvency law and the overall effect on the insolvency estate, as well as law relating to intellectual property. States may also wish to consider to what extent the commercial practices described in paragraphs 30 and 31 above would provide adequate practical solutions.

C. Insolvency of the licensee

64. If the licensee is the insolvent debtor and has granted a security right in its rights under the licence agreement, and the licensee’s insolvency representative decides to continue the licence agreement, the licence agreement will remain in place, the licensee will continue to have its rights under the licence agreement to use or exploit the licensed intellectual property (in accordance with the terms and conditions of the licence agreement) and the licensee’s secured creditor will continue to have a security right in those rights. In this case, if the licensor has granted a security right in its rights to the payment of royalties under the licence agreement, the licensor’s secured creditor will continue to have a security right in the licensor’s right to the payment of royalties.

65. In cases in which the licensee’s insolvency representative decides to reject the licence agreement, however, and the licensee has granted a security right in its

rights under the licence agreement, the licence agreement will no longer be effective, the licensee will no longer have a right to use or exploit the licensed intellectual property and the licensee's secured creditor will not be able to use the value of the licensee's rights under the licence agreement to satisfy the secured obligation. In this case too, if the licensor has granted a security right in its right to the payment of royalties under the licence agreement, the licensor will lose its royalty stream and its secured creditor will lose its encumbered asset.

66. A secured creditor with a security right in a licensor's or licensee's rights under a licence agreement may seek to protect itself from the consequences of a rejection of the licence agreement by the licensee's insolvency representative by adopting comparable measures as described above (see paras. 32-33 above).

67. In the case of the insolvency of the licensee, it is important to ensure that the licensor either receive its royalties and the licensee otherwise performs the licence agreement, or that the licensor has a right to terminate the licence agreement. Insolvency law rules, such as those relating to curing any default of the licence agreement in the event that the licence agreement is continued (see para. 29 above), are essential. In addition, in situations where the insolvent licensee has granted a security right in its rights to receive sub-royalties, those sub-royalties will likely be a source of funds for the licensee to pay the royalties that it owes to the licensor. If the licensee's secured creditor claims all the royalties and the licensee does not have another source for payment of royalties to the licensor, it is essential that the licensor has a right to terminate the license to protect its rights.

Appendix

The following text briefly describes the impact of the insolvency of a licensor or licensee on a security right that party's in rights under a licence agreement.

	<i>Licensor is insolvent</i>	<i>Licensee is insolvent</i>
<i>Licensor grants a security right in its rights under a licence agreement (primarily the right to receive royalties)</i>	<p>Question:</p> <p>What happens if the licensor or its insolvency representative decides to continue the performance of the licence agreement under the insolvency law (see recommendations 69-86 of the <i>UNCITRAL Legislative Guide on Insolvency Law</i>)?^a</p> <p>Answer:</p> <p>The licensee continues to owe royalties under the licence agreement and the secured creditor of the licensor continues to have a security right both in the licensor's right to royalties under the licence agreement and in the proceeds of that right, in other words, any royalty payments that are paid.</p>	<p>Question:</p> <p>What happens if the licensee or its insolvency representative decides to continue the performance of the licence agreement under the insolvency law (see recommendations 69-86 of the <i>UNCITRAL Legislative Guide on Insolvency Law</i>)?</p> <p>Answer:</p> <p>The licensor continues to have a right to receive royalties under the licence agreement and thus the secured creditor of the licensor continues to have a security right both in the licensor's right to royalties under the licence agreement and in the proceeds of that right, in other words, any royalty payments that are made.</p>
	<p>Question:</p> <p>What happens if the licensor or its insolvency representative rejects the licence agreement under the insolvency law (see recommendations 69-86 of the <i>UNCITRAL Legislative Guide on Insolvency Law</i>)?</p> <p>Answer:</p> <p>The licensee does not owe royalties under the licence agreement with respect to periods after rejection, but still owes any unpaid royalties for periods before rejection; the secured creditor of the licensor thus has a security right in the right to collect such royalties for periods prior to the rejection and in the royalties paid for those periods, but has no security right in rights to any future royalties because there will be no future royalties under the rejected agreement.</p>	<p>Question:</p> <p>What happens if the licensee or its insolvency representative rejects the licence agreement under the insolvency law (see recommendations 69-86 of the <i>UNCITRAL Legislative Guide on Insolvency Law</i>)?</p> <p>Answer:</p> <p>The licensee does not continue to owe royalties under the licence agreement with respect to periods after rejection, but still owes any unpaid royalties for periods before rejection; the secured creditor of the licensor thus has a security right in the right to collect such royalties for periods prior to the rejection and in the royalties paid for those periods, but has no security right in rights to any future royalties because there will be no future royalties under the rejected agreement.</p>

A/CN.9/WG.VI/WP.42/Add.7 (Original: English)**Note by the Secretariat on the Draft Supplement to the UNCITRAL
Legislative Guide on Secured Transactions dealing with security rights in
intellectual property, submitted to the Working Group on Security
Interests at its seventeenth session****ADDENDUM****CONTENTS****Annex I**

Terminology and recommendations of the draft Supplement to the UNCITRAL Legislative Guide on Secured Transactions dealing with security rights in intellectual property	
Terminology	
Recommendations 243-253	

Annex I**Terminology and recommendations of the draft
Supplement to the UNCITRAL Legislative Guide on
Secured Transactions dealing with security rights in
intellectual property****Terminology¹**

“Acquisition security right” includes a security right in intellectual property or a licence of intellectual property, provided that the security right secures the obligation to pay any unpaid portion of the acquisition price of the encumbered asset or an obligation incurred or credit otherwise provided to enable the grantor to acquire the encumbered asset.

“Consumer goods” includes intellectual property or a licence of intellectual property used or intended by the grantor to be used for personal, family or household purposes.

“Inventory” includes intellectual property or a licence of intellectual property used or intended by the grantor to be used for sale or licence in the ordinary course of the grantor’s business.

¹ If it could be included in the *Guide*, this text would be included in the relevant terms in section B, terminology and interpretation.

Recommendations

Security rights in tangible assets with respect to which intellectual property is used²

243. The law should provide that, in the case of a tangible asset with respect to which intellectual property is used, unless otherwise agreed by the parties to a security agreement, a security right in the tangible asset does not extend to the intellectual property and a security right in the intellectual property does not extend to the tangible asset. However, to the extent permitted by law relating to intellectual property, nothing in this recommendation limits the enforcement remedies of a secured creditor with a security right in the tangible asset or in the intellectual property.

[Note to the Working Group: The Working Group may wish to consider whether the words “unless otherwise agreed by the parties to the security agreement”, included in the first sentence of this recommendation, should be retained. The Working Group may wish to note that recommendation 10 states that the law should provide that the grantor and the secured creditor may derogate by agreement from the provisions of the law relating to their respective rights and obligations, unless otherwise provided in the law. As a result, the reference to party autonomy in the first sentence of this recommendation may create doubt as to the application of the principle of party autonomy to other provisions of the law that do not include similar language and thus create problems of interpretation. The Working Group may also wish to consider whether the second sentence of this recommendation could be placed in the commentary as it addresses an issue discussed in the enforcement chapter (see A/CN.9/WG.VI/WP.42/Add.5, paras. 24-27).]

Impact of a transfer of encumbered intellectual property on the effectiveness of the registration³

244. The law should provide that the transfer of intellectual property that is subject to a security right does not affect the effectiveness of registration of the security right. As a result, the secured creditor does not have to register an amendment notice indicating the name of the transferee of the encumbered intellectual property.

[Note to the Working Group: The Working Group may wish to consider whether the second sentence of recommendation 244 should be moved to the commentary as it deals with the result of the application of this recommendation.]

² If it could be included in the *Guide*, this recommendation would be included in chapter II on the creation of a security right as recommendation 28 bis.

³ If it could be included in the *Guide*, this recommendation would be included in chapter IV on the registry system as recommendation 62 bis.

Priority of rights of certain licensees of intellectual property⁴

245. The law should provide that the enforcement of a security right in licensed intellectual property created before the licence was granted does not affect the rights of an end-user licensee of the intellectual property under the licence agreement, provided that:

- (a) The licence is non-exclusive;
- (b) The licence covers [copyrighted or patented software] [one or any of the exclusive rights relating to copyrighted software];
- (c) At the time of the conclusion of the licence agreement:
 - (i) The licensor is generally in the business of granting non-exclusive licences in the intellectual property on substantially the same terms to any person that agrees to perform them in accordance with such terms, and the licence agreement is on such terms; and
 - (ii) The licensee does not have knowledge that the licence violates the rights of the secured creditor under the security agreement; and
- (d) The licensed intellectual property and the rights and obligations under the licence agreement are not customized for the licensee.

Right of the secured creditor to preserve the encumbered intellectual property⁵

246. The law should provide that it does not prevent the grantor of a security right in intellectual property and its secured creditor from agreeing that the secured creditor is entitled to take steps to preserve the encumbered intellectual property (for example, to deal with authorities, pursue infringers or renew registrations of the encumbered intellectual property).

[Note to the Working Group: The Working Group may wish to consider whether this recommendation is necessary, as it deals with an issue that will never arise under the law recommended in the Guide, as: (a) the law recognizes party autonomy; (b) does not include a limitation on the matter dealt with in this recommendation; and (c) defers to law relating to intellectual property to the extent that that law contains such a limitation (see recommendations 10 and 4, subparagraph (b)).]

The Working Group may also wish to consider whether the recommendation could be retained if it were revised to:

- (a) *Limit party autonomy as enshrined in the law recommended in the Guide, stating that the secured creditor may exercise this right only if permitted under law relating to intellectual property; or*

⁴ If this recommendation could be included in the *Guide*, it would be placed in the chapter on the priority of a security right as recommendation 81 bis. As an asset-specific recommendation, this recommendation would replace the general recommendation 81, subparagraph (c), to the extent it applies to intellectual property licences.

⁵ If this recommendation could be included in the *Guide*, it would be placed in the chapter on the rights and obligations of the parties to a security agreement as recommendation 116 bis.

(b) Repeat the result of the application of recommendations 10 and 4, subparagraph (b), stating that the grantor and the secured creditor may agree that the secured creditor is entitled to take steps to preserve the encumbered intellectual property, unless otherwise provided by law relating to intellectual property.]

Application of acquisition financing provisions to intellectual property⁶

247. The law should provide that the provisions on acquisition security rights in a tangible asset also apply to an acquisition security right in intellectual property or a licence of intellectual property.

Acquisition security right in intellectual property held for sale or licence

248. The law should provide that, if intellectual property or a licence of intellectual property that is subject to an acquisition security right is held for sale or licence in the ordinary course of the grantor's business, the acquisition security right is treated as an acquisition security right in inventory.

Acquisition security right in intellectual property held for personal, family or household purposes

249. The law should provide that, if intellectual property or a licence of intellectual property that is subject to an acquisition security right is used or intended by the grantor to be used for personal, family or household purposes, the acquisition security right is treated as an acquisition security right in consumer goods.

Inapplicability of the concept of possession to an acquisition security right in intellectual property

250. The law should provide that, if intellectual property or a licence of intellectual property is subject to an acquisition security right, any reference in such provisions to possession of the encumbered asset by the secured creditor does not apply.

Relevance of time when the grantor acquires the encumbered intellectual property

251. The law should provide that, if intellectual property or a licence of intellectual property is subject to an acquisition security right, any reference in such provisions to the time of possession of the encumbered asset by the grantor refers to the time the grantor acquires the encumbered intellectual property or licence.

252. The law should provide that, if intellectual property or a licence of intellectual property is subject to an acquisition security right, any reference in such provisions to time of the delivery of the encumbered asset to the grantor refers to the time the grantor acquires the encumbered intellectual property or licence.

⁶ If recommendations 247-252 could be included in the *Guide*, they would be placed in the chapter on acquisition financing after recommendation 186.

Law applicable to a security right in intellectual property⁷

253.

Alternative A

The law should provide that the law applicable to the creation, effectiveness against third parties, priority and enforcement of a security right in intellectual property is the law of the State in which the intellectual property is protected.

Alternative B

The law should provide that the law applicable to the creation, effectiveness against third parties, priority and enforcement of a security right in intellectual property that may be registered in an intellectual property registry is the law of the State under whose authority the registry is maintained. The law applicable to those matters with respect to a security right in intellectual property that may not be registered in an intellectual property registry is the law of the State in which the grantor is located.

Alternative C

The law should provide that the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in intellectual property is the law of the State in which the grantor is located. However, the law applicable to the third-party effectiveness and priority of a security right in intellectual property as against the right of a transferee or licensee of the encumbered intellectual property is the law of the State in which the intellectual property is protected.

⁷ If this recommendation could be included in the *Guide*, it would be placed in chapter X on conflict of laws as recommendation 214 bis.

III. INSOLVENCY LAW

A. Report of the Working Group on Insolvency Law on the work of its thirty-seventh session (Vienna, 9-13 November 2009) (A/CN.9/686)

C. Domestic issues	67-125
D. Future Work	126-131

I. Introduction

1. At its thirty-ninth session in 2006, the Commission agreed that the topic of the treatment of corporate groups in insolvency was sufficiently developed for referral to Working Group V (Insolvency Law) for consideration and that the Working Group should be given the flexibility to make appropriate recommendations to the Commission regarding the scope of its future work and the form it should take, depending upon the substance of the proposed solutions to the problems the Working Group would identify under that topic.

2. The Working Group agreed at its thirty-first session, held in Vienna from 11 to 15 December 2006, that the UNCITRAL Legislative Guide on Insolvency Law and the UNCITRAL Model Law on Cross-Border Insolvency provided a sound basis for the unification of insolvency law, and that the current work was intended to complement those texts, not to replace them (see A/CN.9/618, para. 69). A possible method of work would entail the consideration of those provisions contained in existing texts that might be relevant in the context of corporate groups and the identification of those issues that required additional discussion and the preparation of additional recommendations. Other issues, although relevant to corporate groups, could be treated in the same manner as in the Legislative Guide and Model Law. It was also suggested that the possible outcome of that work might be in the form of legislative recommendations supported by a discussion of the underlying policy considerations (see A/CN.9/618, para. 70).

3. The Working Group continued its consideration of the treatment of corporate groups in insolvency at its thirty-second session in May 2007, on the basis of notes

by the Secretariat covering both domestic and international treatment of corporate groups (A/CN.9/WG.V/WP.76 and Add.1). For lack of time, the Working Group did not discuss the international treatment of corporate groups contained in document A/CN.9/WG.V/WP.76/Add.2.

4. At its thirty-third session in November 2007, its thirty-fourth session in March 2008, its thirty-fifth session in November 2008 and its thirty-sixth session in May 2009, the Working Group continued its discussion of the treatment of enterprise groups, previously referred to as corporate groups, in insolvency, on the basis of notes by the Secretariat (A/CN.9/WG.V/WP.78 and Add.1, A/CN.9/WG.V/WP.80 and Add.1, A/CN.9/WG.V/WP.82 and Add.1-4 and A/CN.9/WG.V/WP.85 and Add.1). At its thirty-sixth session, the Working Group decided that the draft recommendations on the international treatment of enterprise groups in insolvency should be included in part three of the Legislative Guide and adopt the same format as the preceding parts of the Legislative Guide (see A/CN.9/671, para. 55).

II. Organization of the session

5. Working Group V (Insolvency Law), which was composed of all States members of the Commission, held its thirty-seventh session in Vienna from 9 to 13 November 2009. The session was attended by representatives of the following States members of the Working Group: Algeria, Australia, Austria, Belarus, Bolivia (Plurinational State of), Bulgaria, Canada, China, Colombia, Czech Republic, Egypt, El Salvador, France, Germany, Iran (Islamic Republic of), Italy, Japan, Lebanon, Malaysia, Mexico, Mongolia, Paraguay, Republic of Korea, Russian Federation, Senegal, Serbia, Spain, Switzerland, Thailand, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

6. The session was also attended by observers from the following States: Argentina, Belgium, Croatia, Denmark, Dominican Republic, Indonesia, Lithuania, Philippines, Portugal, Romania, Slovakia, Slovenia and United Republic of Tanzania.

7. The session was also attended by observers from the following international organizations:

(a) *Organizations of the United Nations system*: International Monetary Fund (IMF) and the World Bank;

(b) *Invited international non-governmental organizations*: American Bar Association (ABA), American Bar Foundation (ABF), Center For International Legal Studies (CILS), INSOL International (INSOL), International Bar Association (IBA), International Credit Insurance and Surety Association (ICISA), International Insolvency Institute (III), International Swaps And Derivatives Association (ISDA), International Women's Insolvency & Restructuring Confederation (IWIRC) and Union internationale des Avocats (UIA).

8. The Working Group elected the following officers:

Chairman: Mr. Wisit Wisitsora-At (Thailand)

Rapporteur: Mme. Kaïré Sow FALL (Senegal)

9. The Working Group had before it the following documents:
 - (a) Annotated provisional agenda (A/CN.9/WG.V/WP.89);
 - (b) A note by the Secretariat on the treatment of enterprise groups in insolvency (A/CN.9/WG.V/WP.90 and Add.1-2).
10. The Working Group adopted the following agenda:
 1. Opening of the session.
 2. Election of officers.
 3. Adoption of the agenda.
 4. Consideration of the treatment of enterprise groups in insolvency.
 5. Other business.
 6. Adoption of the report.

III. Deliberations and decisions

11. The Working Group continued its discussion of the treatment of enterprise groups in insolvency on the basis of documents A/CN.9/WG.V/WP.90 and Add.1-2 and other documents referred therein. The deliberations and decisions of the Working Group on these topics are reflected below.

IV. Treatment of enterprise groups in insolvency

12. The Working Group commenced its work with a discussion on the inclusion of a general purpose clause for the recommendations applicable to enterprise groups in part three of the Legislative Guide.

A. General purpose clause

13. It was generally agreed that there was a need to include a statement of general purpose for the recommendations applicable to enterprise groups in part three of the Legislative Guide. To that end, a text along the following lines was proposed: “The purpose of this part of the Legislative Guide is to permit the courts to consider the insolvency of one or more enterprise group members, within the context of the group where the group is found to exist, in order to promote the key objectives in recommendation 1 in both the domestic and cross-border contexts.” Another suggestion made was to include only the wording contained in document A/CN.9/WG.V/WP.90/Add.2, paragraph 3 that “The purpose of this part of the Legislative Guide is to achieve a better, more effective result for the enterprise group as a whole.” A further proposal to combine those two suggestions was widely supported.

14. Noting that the insolvency laws of different jurisdictions accorded different roles to the courts in insolvency, a more general formulation deleting the reference

to the court was proposed. It was also observed that the purpose was not only better solutions for the enterprise group members, but also for the creditors. The Secretariat was requested to prepare a draft text for further consideration taking account of those various proposals.

15. The Working Group considered and adopted the draft general purpose clause for part three prepared by the Secretariat along the following lines:

“The purpose of this part is to permit, in both domestic and cross-border contexts, treatment of the insolvency proceedings of one or more enterprise group members within the context of the enterprise group to address the issues particular to insolvency proceedings involving enterprise groups and to achieve a better, more effective result for the enterprise group as a whole and its creditors and, in particular:

“(a) To promote the key objectives of recommendation 1; and

“(b) To more effectively address, in the context of recommendation 5, instances of cross-border insolvency proceedings involving enterprise group members.”

16. The Secretariat was requested to place the new purpose clause in the appropriate position in the revised text of part three of the Legislative Guide.

B. International issues

17. The Working Group continued its discussion on the international treatment of enterprise groups in insolvency on the basis of document A/CN.9/WG.V/WP.90/Add.1.

18. It was observed that an element missing from the current draft text was that of recognition of foreign proceedings and enforcement of foreign orders, which were regarded as prerequisites for cross-border cooperation and coordination in many jurisdictions. The concern was expressed that recognition and enforcement were difficult issues, which could require lengthy discussion and might delay the completion of this work. One view was that document A/CN.9/WG.V/WP.90/Add.1, paragraphs 8-10 sufficiently addressed those issues. Another view was that the draft recommendations might be indicated as applying in the international context only where a State had enacted the Model Law. In response, it was said that such wording would unnecessarily limit the application of part three, which was intended to extend the operation of the Model Law and to apply to cross-border insolvency proceedings between jurisdictions that had not enacted the UNCITRAL Model Law, as discussed in the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation (the “Practice Guide”). In that regard, it was suggested that the Practice Guide should be treated more comprehensively in the commentary.

19. In order to reconcile the different views, it was proposed that a recommendation to the effect that foreign proceedings should be recognized under domestic law should be included. A further proposal was to extend the recommendation to provide for access of foreign insolvency representatives to the courts and for recognition of relief. It was observed that providing for recognition and relief might be too ambitious and unnecessarily complex. After discussion, the

Working Group agreed to include a new recommendation along the lines that the insolvency law should provide direct access to courts for the foreign insolvency representative.

20. The Working Group considered a draft recommendation prepared by the Secretariat. The substance of a draft recommendation along the following lines was adopted:

Access to courts and recognition of foreign proceedings

“The insolvency law should provide, in the context of insolvency proceedings with respect to enterprise group members,

“(a) Access to the courts for foreign representatives and creditors; and

“(b) Recognition of the foreign proceedings, if necessary under applicable law.”

21. The Secretariat was requested to place the draft recommendation in the appropriate position in the revised text of part three of the Legislative Guide.

Draft recommendations 240-247

Purpose Clause

22. The Working Group agreed to include the words “involving courts” after the word “cooperation” in the chapeau, in order to clarify its relationship with the following draft recommendations on cooperation between the courts.

Draft recommendation 240: cooperation between the court and foreign courts or foreign representatives

23. It was observed that the word “other” should be inserted before the words “members of that enterprise group” in the second last line of draft recommendation 240.

24. With respect to the text in square brackets, support was expressed for its deletion as it was viewed as redundant. In support of deletion, it was further stated that the reference to the term “court” could lead to confusion, as in some jurisdictions the competent authority was an administrative authority rather than the courts. In response, it was recalled that the glossary of the Legislative Guide made it clear that the term “court” included a reference to an administrative authority. It was also recalled that the draft recommendation reflected article 27(a) of the Model Law, which referred to that person “acting at the direction of the court” rather than to that person being appointed by the court. Moreover, it was clarified that the reference to the person appointed for that purpose was not a reference to a person who was either an additional insolvency representative or a substitute for an insolvency representative, but rather to a person appointed solely for the purpose of facilitating cooperation, whether between the courts or between the courts and insolvency representatives.

25. After discussion, the Working Group agreed to remove the square brackets, retain the text and align the wording of the draft recommendation with the wording used in the Model Law. The Working Group further agreed to include a footnote to

the term “foreign representative” referring to the definition in article 2(d) of the Model Law, in order to clarify its meaning.

Draft recommendation 241: cooperation between the insolvency representative and foreign courts

26. The Working Group adopted draft recommendation 241 in substance.

Draft recommendation 242: cooperation to the maximum extent possible involving courts

27. As a matter of drafting, it was proposed that the reference to recommendations 240 and 241 in the chapeau of draft recommendation 242 was not required and could be deleted. That proposal was supported. A further suggestion was that the words “to the maximum extent possible” should also be deleted from the chapeau on the basis that they might unnecessarily restrict the notion of cooperation. That suggestion was not supported.

28. Other proposals were that the examples of means of communication included in paragraph (b) and the types of documents referred to in paragraphs (c) and (d) should be moved to the commentary and that, since paragraphs (b) to (d) were simply examples of means of communication referred to in paragraph (a), they could be included in that paragraph. The Secretariat was requested to consider redrafting the recommendation along those lines.

29. Concern was expressed with respect to paragraph (e) and the possibility that it might be interpreted as supporting substantive consolidation in a cross-border context. For that reason, it was suggested that the paragraph should focus on consideration, in a coordinated manner, of insolvency solutions available for group members subject to insolvency proceedings. A further suggestion was to add the words “to facilitate coordination” at the end of paragraph (f). Those proposals were not supported.

30. The relationship in those draft recommendations between cooperation, coordination and communication was questioned. It was suggested, in particular, that coordination and cooperation were distinct concepts and that while paragraphs (a) to (d) of draft recommendation 242 addressed examples of cooperation, paragraphs (e) to (g) related to coordination, which should be addressed in a separate recommendation. While it was recalled that the Model Law treated communication and coordination as examples of how cooperation might be achieved, it was observed that since coordination was of relatively greater importance in the context of enterprise groups than in the case of an individual debtor, a slightly different approach might be justified in those recommendations. A different proposal was that the drafting of recommendation 242 should make it clear that communication and coordination were examples of how cooperation might be achieved. The Working Group supported the latter proposal and agreed that paragraphs (e) to (g) should be retained in the draft recommendation as currently drafted with the deletion of the square brackets.

Draft recommendation 243: direct communication between the court and foreign courts or foreign representatives

31. The concern was expressed that draft recommendation 243 might permit unconditioned communication between courts and foreign courts or foreign

representatives. To address that concern, a closer link with draft recommendation 245 was required. Another concern was that since in some jurisdictions such direct communication was not allowed, the provision would create difficulties. In response, it was observed that draft recommendations 243 and 244 were only permissive in nature, not directive. It was further explained that draft recommendations 243-244 were consistent with the corresponding articles of the Model Law.

32. A different concern raised was whether communication between courts and foreign representatives could take place without recognition of the relevant foreign proceedings as provided in the Model Law. The Working Group recalled that it had already discussed that issue and agreed to include a recommendation on access to courts and granting of recognition (see paragraph 20 above). It was also noted that the issue of communication was independent from recognition, which was generally regulated by domestic procedural law and adoption of the Model Law. It was further noted that the Model Law did not condition communication upon recognition.

33. After discussion, the Working Group adopted draft recommendation 243 in substance.

Draft recommendation 244: direct communication between the court and foreign courts or foreign representatives

34. The Working Group adopted draft recommendation 244 in substance and requested the Secretariat to include appropriate references to the Model Law when preparing the final document.

Draft recommendation 245: conditions applicable to cross-border communications involving courts

35. Paragraph (a) was adopted in substance, with the deletion of the alternative text in square brackets.

36. Concern was expressed that paragraph (b) established an obligation to provide notice that was too broad and could operate to hinder, rather than to facilitate communication. It was proposed that if notice were required, it could be provided after the communication had taken place. Alternatively, since the issue of provision of notice was often determined by procedural rules rather than the insolvency law, it was suggested that the recommendation could refer to provision of notice in accordance with applicable law. That approach was widely supported.

37. Further concerns related to the use of the term “affected persons”. The first was that it was not a term used in the Legislative Guide and for consistency, the term “parties in interest” should be used. The second was that in the context of the draft recommendation it could be interpreted to include creditors and might therefore be too broad and onerous to implement. After discussion, the Working Group agreed that “affected persons” should be replaced with “parties in interest”.

38. The scope of paragraph (c) was also felt to be too broad and potentially difficult to implement, particularly when there were numerous parties that might participate in person in a communication. It was noted that in some States it would be difficult to restrict a party in interest’s right to appear and be heard and that the scope of the court’s discretion to limit participation in a communication might vary

from State to State. A proposal was made to limit the paragraph to participation by insolvency representatives and parties in interest along the following lines: “The insolvency representative should be entitled to participate in person in a communication. A party in interest may participate in accordance with applicable law and when determined by the court to be appropriate.” That proposal, with the deletion of the phrase “in person”, received support.

39. It was pointed out with respect to paragraph (d) that if the transcript was made part of the record of the proceedings it would be publicly available and the requirement to make it available to specified parties was unnecessary. The Working Group agreed that the draft recommendation should end with the words “as part of the record of the proceedings”, with the remaining text deleted.

40. Paragraphs (e) and (f) were approved in substance with the words “affected persons” replaced by the words “parties in interest”.

41. The Working Group adopted the substance of draft recommendation 245 with those amendments.

Draft recommendation 246

42. A proposal to revise the chapeau of the draft recommendation as follows was supported: “The insolvency law should specify that a communication made in accordance with these recommendations shall not imply:”. For greater clarity, it was proposed that the reference to “these recommendations” be replaced with a specific reference to recommendations 240-245 and that the words “between the courts” be added after the word “communication”.

43. A concern was expressed with respect to the use of the words “in controversy” in paragraph (b) and the words “lacking consensus” were proposed as an alternative. Another proposal was to delete the words “in controversy” completely, so that the recommendation would simply refer to “any matter before the court”. That proposal was supported. A further concern with respect to paragraph (b) was that it might prevent the courts, in the course of a communication, from reaching agreement with respect, for example, to approval of an agreement in accordance with draft recommendation 254. In response, it was pointed out that paragraph (b) was not intended to exclude explicit agreements being reached, but rather sought to prevent agreement being implied from the fact of communication. It was suggested that that concern might be addressed in the commentary, rather than by adding further text to the recommendation. That solution was supported.

44. The Working Group agreed that the words “[or the foreign court]” should be deleted from paragraphs (b) and (d) on the basis that domestic legislation generally would not address what occurred in a foreign court and, in any event, could not affect decisions taken in those courts.

45. The Working Group adopted the substance of draft recommendation 246 with those amendments.

Draft recommendation 247: coordination of hearings

46. Various views were expressed with respect to the reference to “joint” hearings. One view referred to practical experience with such hearings and suggested that the reference might be retained as reflecting that practical experience, albeit that it was

not widespread. Another view was that joint hearings could not be contemplated under domestic law and that the reference should be to “coordinated” hearings. Yet another view was that since the recommendations sought to promote and develop practice with respect to coordination, the reference to “joint” hearings should be retained. It was pointed out that since paragraph 35 of the commentary indicated that the reference to “coordinated hearings” might include joint, simultaneous or parallel hearings, all that was required in the recommendation was a reference to “coordinated hearings”. The Working Group agreed to delete the references to “joint” hearings.

47. The Working Group agreed that the last sentence should be retained without the brackets. Since that sentence emphasized the independence of each court, the words “and independence” in the second sentence of the draft recommendation were not required. That solution was agreed.

48. The Working Group adopted the substance of draft recommendation 247 with those amendments.

Draft recommendations 248-250

Purpose Clause

49. The Working Group adopted the draft purpose clause in substance.

Draft recommendation 248: cooperation between insolvency representatives

50. General support was expressed for draft recommendation 248. One suggestion made was to clarify that the “foreign representatives” referred to in draft recommendations 248 and 249 were appointed in insolvency proceedings commenced in other States with respect to other members of that enterprise group. After discussion, the Working Group agreed to include the suggested modification and to retain the text of draft recommendation 248 without the brackets.

Draft recommendation 249: communication between insolvency representatives

51. The Working Group agreed to retain the text of the draft recommendation without the brackets, and to align it with the modification agreed for draft recommendation 248. A proposal to delete the second sentence of draft recommendation 249 was supported.

Draft recommendation 250: cooperation to the maximum extent possible between insolvency representatives

52. A proposal to replace the words “should be implemented” in the chapeau with the words “may be implemented” was broadly supported.

53. The Working Group adopted paragraph (a) of draft recommendation 250 in substance.

54. A proposal to replace the word “use” with the word “conclusion” in paragraph (b) was not supported. After discussion, the Working Group adopted paragraph (b) of draft recommendation 250 in substance without any modification.

55. The concern was expressed that the words “division of the exercise of powers” at the beginning of paragraph (c) suggested that the legal obligations of insolvency

representatives could be reduced. To address that concern, it was suggested that the words “division of the exercise of powers and” be deleted. That proposal found broad support. Another proposal made was to delete the words “or leading” in front of the word “role”. That proposal was also widely supported. The Working Group adopted paragraph (c) of draft recommendation 250 in substance with both proposed modifications.

56. The Working Group adopted paragraphs (d)-(e) of draft recommendation 250 in substance.

57. A proposal to align the wording of paragraph (e) of draft recommendation 242 with the wording used in paragraph (d) of draft recommendation 250 to avoid the reference to “assets” was supported.

Draft recommendations 251-252

Purpose clause

58. The Working Group agreed that the draft purpose clause should more closely reflect the content of draft recommendations 251 and 252 and include the idea that the appointment of the same or a single insolvency representative was only appropriate in some cases and would be the result of careful consideration by the court, as well as noting the need to address conflicts of interest.

59. It was also suggested that those ideas should be discussed in the commentary, with emphasis being given to the need for the insolvency representative appointed in such circumstances to have the necessary qualifications and international experience.

Draft recommendation 251: appointment of the same insolvency representative and draft recommendation 252: conflict of interest

60. The Working Group agreed to retain the text “in appropriate cases” in draft recommendation 251, deleting the brackets, and to move the second text in brackets to the purpose clause. The Working Group also agreed to retain draft recommendation 252 as drafted and delete the brackets. It was noted that the use of the phrase “the same or a single” was not consistent in that section and should be aligned.

61. The Working Group adopted the substance of draft recommendations 251 and 252 with those amendments.

Draft recommendations 253-254

Purpose clause

62. A proposal was made to add a reference to approval by the creditor committee to the draft purpose clause. Although acknowledging that creditor committees may have a role to play with respect to approving cross-border insolvency agreements, the Working Group adopted the substance of the draft purpose clause with the deletion of the brackets.

Draft recommendations 253: authority to enter into cross-border insolvency agreements and draft recommendation 254: approval or implementation of cross-border insolvency agreements

63. Despite initial support for retaining the text “to the extent permitted or in the manner required by applicable law” in draft recommendation 253, it was agreed, after discussion, that those words should be deleted as they might unnecessarily limit the use of insolvency agreements where applicable law contained such limitations. It was emphasized that the purpose of the recommendation was to promote the use of such agreements, particularly in situations where the law currently contained potential barriers to their use.

64. The retention of the text “involving two or more members of an enterprise group” without the brackets in both draft recommendations was generally supported.

65. The Working Group adopted the substance of draft recommendations 253 and 254 with those amendments.

Commentary

66. It was agreed that the Secretariat would revise the commentary to reflect the issues raised in the course of the Working Group’s deliberations on draft recommendations 240 to 254, including the issues of recognition and access, and include more comprehensive references to, and material from, the UNCITRAL Practice Guide.

C. Domestic issues

67. The Working Group continued its deliberations on enterprise groups in insolvency in the domestic context as set forth in A/CN.9/WG.V/WP.90, commencing with the glossary and recommendations 211-216 on post-commencement finance.

1. Glossary

68. The Working Group adopted the glossary in substance.

2. Post-commencement finance — draft recommendations 211-216

Purpose clause

69. It was proposed that at the end of paragraph (d) the words “affected by or benefitting from the post-commencement finance” should replace the word “involved”, to ensure greater clarity of meaning. In response, it was observed that addition of the word “involved” had been agreed at the last session of the Working Group (A/CN.9/671, paragraph 82) and that it was clear from the context that the reference was to the creditors involved in the post-commencement finance.

70. The Working Group adopted the substance of the draft purpose clause without modification.

Draft recommendation 211: provision of post-commencement finance by a group member subject to insolvency proceedings to another group member subject to insolvency proceedings

71. Concern was expressed as to whether paragraph (b) of draft recommendation 211 adequately addressed the situation of an insolvent group member receiving post-commencement finance based on the granting of a security interest by another insolvent group member, in accordance with recommendations 65-67. In response, it was confirmed that those recommendations should apply to the receiving group member in the same way as they applied to any other debtor receiving post-commencement finance, but that that issue could be expressly addressed in the commentary to ensure the connection between the earlier recommendations and the recommendations on enterprise groups. The situation of a solvent group member receiving finance on the basis of a security interest provided by an insolvent group member had previously been discussed in the context of disposal of assets (see A/CN.9/666, paragraph 67).

72. The Working Group agreed to remove the brackets and adopt the substance of recommendation 211.

Draft recommendation 212: provision of post-commencement finance by a group member subject to insolvency proceedings to another group member subject to insolvency proceedings

73. As a general consideration, it was suggested that the commentary should discuss the manner in which post-commencement finance in the group context might be negotiated between insolvency representatives and occur only as the result of an agreement between them.

74. General preference was expressed in favour of using the word “provided” in the chapeau to align the draft recommendation with the general usage in the Guide concerning post-commencement finance.

75. The Working Group discussed the question of whether paragraphs (a) to (c) should be cumulative or whether paragraphs (a) and (b) should be alternatives. One view was that the three paragraphs should be cumulative. Another view was that paragraphs (a) and (b) should be alternatives: paragraph (a) was appropriate in the case of reorganization, paragraph (b) related more to liquidation and was not required in cases of reorganization and paragraph (c) should apply in both of those cases. After discussion, it was agreed that paragraphs (a) and (b) were alternatives and could be combined in a single paragraph and that paragraph (c) would then form a second requirement.

76. With respect to paragraph (c), the Working Group agreed to delete the words in brackets and to add the words “of that group member” after the word “creditors”.

77. The Working Group agreed to remove the brackets and adopted the substance of the following revision of draft recommendation 212:

“The insolvency law should specify that post-commencement finance may be provided in accordance with recommendation 211, where the insolvency representative of the group member advancing finance, granting a security interest or providing a guarantee or other assurance:

“(a) Determines it to be necessary for the continued operation or survival of the business of that enterprise group member or for the preservation or enhancement of the value of the estate of that enterprise group member; and

“(b) Determines that any harm to creditors of that group member is offset by the benefit to be derived from advancing finance, granting a security interest or providing a guarantee or other assurance.”

Draft recommendation 213

78. The Working Group agreed that the words “advancing finance, granting a security interest or providing a guarantee or other assurance” as used in draft recommendation 212 should be repeated in draft recommendation 213 as follows:

“The insolvency law may require the court to authorize or creditors to consent to the advancing of finance, granting of a security interest or provision of a guarantee or other assurance in accordance with recommendations 211 and 212.”

79. The Working Group agreed to remove the brackets and adopted the substance of draft recommendation 213 with that amendment.

Draft recommendation 214: post-commencement finance obtained by a group member subject to insolvency proceedings from another group member subject to insolvency proceedings

80. It was clarified that draft recommendation 214 was based upon recommendation 63 and addressed the situation of an enterprise group member receiving post-commencement finance, as distinct from draft recommendations 211 and 212, which addressed the situation of an enterprise group member advancing post-commencement finance.

81. The Working Group agreed to remove the brackets and adopted the substance of draft recommendation 214.

Draft recommendation 215: priority for post-commencement finance

82. The Working Group recalled that the purpose of draft recommendation 215 was to draw the attention of the legislator to the need to address the priority applying to the provision of post-commencement finance by one enterprise group member subject to insolvency proceedings to another group member subject to insolvency. It was further recalled that draft recommendation 215 left that priority to be regulated by domestic law, as the Working Group had agreed not to specify the ranking of priorities in the group context. The Working Group agreed to remove the brackets and adopted the substance of draft recommendation 215.

Draft recommendation 216: security for post-commencement finance

83. The Working Group agreed to remove the brackets and adopted the substance of draft recommendation 216.

3. Joint application for commencement — draft recommendations 199-201

Purpose clause

84. The Working Group adopted paragraph (a) of the draft purpose clause in substance.

85. A proposal was made to include words along the lines of “a court of competent jurisdiction” in paragraph (b) of the draft purpose clause, to clarify that, in some States, different courts might have jurisdiction with respect to commencement of insolvency concerning different enterprise group members. A different understanding was that a joint application should be considered by a single court, as otherwise coordination would be required. After discussion, the Working Group adopted paragraph (b) of the draft purpose clause in substance and agreed to address the issue of more than one competent court in the commentary.

86. It was noted that the benefit of a joint application was the overall benefit to the administration. In that light, it was suggested that the words “associated with commencement of those insolvency proceedings” following the word “costs” in paragraph (c) should be deleted. That proposal found broad support. The Working Group adopted paragraph (c) of the draft purpose clause in substance with the suggested modification.

Draft recommendation 199: joint application for commencement of insolvency proceedings

87. The Working Group adopted draft recommendation 199 in substance.

Draft recommendation 200: persons permitted to apply

88. The Working Group agreed that since paragraph (a) included a reference to recommendation 15, paragraph (b) should include a reference to recommendation 16. The Working Group adopted the substance of draft recommendation 200 with that amendment.

Draft recommendation 201: competent court

89. The Working Group adopted draft recommendation 201 in substance.

4. Procedural coordination — draft recommendations 202-210

Purpose clause and draft recommendations 202-203: procedural coordination of two or more insolvency proceedings

90. The Working Group adopted the draft purpose clause on procedural coordination and draft recommendations 202-203 in substance.

Draft recommendation 204: procedural coordination of two or more insolvency proceedings

91. The Working Group agreed to delete the text in brackets and adopted the substance of draft recommendation 204.

Draft recommendation 205: timing of application and draft recommendation 206: persons permitted to apply

92. The Working Group adopted draft recommendations 205-206 in substance.

Draft recommendation 207: coordinating consideration of an application

93. The Working Group recalled its discussion on “joint hearings” in the international context (see paragraph 46 above) and agreed that the same approach should be adopted in the domestic context, replacing the word “joint” with “coordinated”. The Working Group adopted the substance of draft recommendation 207 with that amendment.

Draft recommendations 208: modification or termination of an order for procedural coordination, draft recommendation 209: competent courts and draft recommendation 210: notice of procedural coordination

94. The Working Group adopted draft recommendations 208-210 in substance.

5. Avoidance proceedings — draft recommendations 217-218

Purpose Clause

95. In response to a question, it was clarified that the draft purpose clause on avoidance proceedings was to draw the attention of legislators to the need to give special consideration to the avoidance of transactions occurring in the context of enterprise groups. For that reason, it was proposed that the words “to take into account” should be replaced with the words “to examine the transaction”. Another proposal was to delete the word “specific” before the word “circumstances”, to show the general nature of the purpose clause. After discussion, the Working Group agreed to retain the text of the draft purpose clause without the brackets and with the deletion of the word “specific”.

Draft recommendation 217: avoidable transaction and draft recommendation 218: elements of avoidance and defences

96. The Working Group adopted draft recommendations 217-218 in substance.

6. Substantive consolidation — draft recommendations 219-232

Purpose clause

97. The Working Group adopted the substance of the draft purpose clause.

Draft recommendation 219: exceptions to the principle of separate legal identity

98. The Working Group adopted the substance of draft recommendation 219 and agreed to revise the heading to “The principle of separate legal identity”.

Recommendation 220: circumstances in which substantive consolidation may be available

99. A proposal to delete the brackets and retain the text in the chapeau with the addition of the word “only” before “in the following limited circumstances” was widely supported.

100. The reference to “disproportionate” in paragraph (a) was questioned on the basis that the concept implied a comparison that was missing from the text of the paragraph.

101. A proposal to redraft paragraph (b) in order to align it with paragraph (a), as follows, was widely supported:

“Where the court is satisfied that enterprise group members are engaged in a fraudulent scheme or activity with no legitimate business purpose and that substantive consolidation is essential to rectify that scheme or activity.”

102. The Working Group adopted the substance of draft recommendation 220 with those amendments.

Draft recommendation 221: Exclusions from substantive consolidation

103. The Working Group discussed the circumstances that would give rise to the desirability of excluding assets and related claims from an order for substantive consolidation in order to provide greater clarity to the draft recommendation and guidance to legislators and judges. Examples of those circumstances included where part of the business activities of the group could be separated from the intermingled assets or the fraudulent scheme or where the ownership of certain assets could readily be identified. It was proposed that those examples be discussed in more detail in the commentary.

104. Since it was agreed, after discussion, that it was not possible to identify with clarity all situations in which it might be appropriate to exclude assets and claims, it was proposed that the draft recommendation should operate to permit exclusions, that the word “specified” should be deleted, and that an insolvency law should include appropriate standards or guidelines to cover those situations. Noting that draft recommendation 220 was a permissive provision, it was agreed that draft recommendation 221 should be revised along the following lines:

“Where the insolvency law provides for substantive consolidation in accordance with recommendation 220, the insolvency law should permit the court to exclude assets and claims from an order for substantive consolidation and specify standards applicable to those exclusions.”

Draft recommendation 222: application for substantive consolidation — timing of an application

105. The Working Group agreed that the proviso at the end of the draft recommendation should be deleted and that the word “impracticability” in the footnote should be replaced with the word “possibility”. It was also agreed that that footnote should be aligned with the footnote to draft recommendation 205, which addressed a similar issue of timing.

106. The Working Group adopted the substance of draft recommendation 222 with those amendments.

Draft recommendation 223: application for substantive consolidation — persons permitted to apply

107. A proposal to align the order of the persons permitted to apply under the draft recommendation with the order in which they were discussed in paragraph 153 of

the commentary was supported. The Working Group adopted the substance of draft recommendation 223 with that amendment.

Draft recommendation 224: effect of an order for substantive consolidation

108. Several views were expressed with respect to the words in brackets in paragraph (c). One view was that in order to align that paragraph with paragraph (a) and the definition of substantive consolidation, the word “single” should be used. Another view was that while it was acceptable to use the word “single” in the context of the phrase “treated as if they were part of a single insolvency estate”, that formulation was not used in paragraph (c) and to avoid confusion, the word “consolidated” was preferred. After discussion, the Working Group agreed to retain the word “single”, without the brackets and delete the word “consolidated”.

109. Another view with respect to paragraph (c) was that it essentially repeated the ideas contained in paragraph (a) and was thus superfluous. A different view was that it addressed a different situation and could be retained in order to make it clear how claims were treated.

110. A question was raised as to the impact of paragraph (c) on guarantees. Three situations in which that question might be relevant were identified. The first involved a guarantee provided by one group member to another group member, where they were both subject to the order for substantive consolidation. The second also involved an intra-group guarantee, but the guarantor was not subject to the order for substantive consolidation. The third situation involved provision of a guarantee by an external guarantor to a group member that was subject to substantive consolidation. It was pointed out that in the first situation, where both group members were consolidated, the guarantee and any associated claims would be extinguished under paragraph (b). The second situation might be addressed by provisions in the Legislative Guide on related person transactions. The third situation was not covered by draft recommendation 226 and would therefore be subject to treatment under domestic law, which very often restricted the guarantor’s claim where it had made a payment under the guarantee, unless the Working Group decided to recommend the adoption of special rules. After discussion, the Working Group agreed that it would not address that issue in a recommendation, but that it should be discussed in the commentary.

111. A question was raised with respect to the effect of substantive consolidation on the avoidance of intra-group transactions. It was noted that the other recommendations of the Guide would address the question of transactions between external entities and consolidated members of the group. Moreover, draft recommendation 229 addressed calculation of the suspect period when substantive consolidation was ordered. However, the question raised was not specifically addressed, but could be included in the commentary.

112. After discussion, the Working Group approved the substance of draft recommendation 224, with the amendment to paragraph (c) noted above.

Draft recommendation 225: effect of an order for substantive consolidation

113. The Working Group was reminded that draft recommendation 225 responded to a request at the last session of the Working Group to include a recommendation to the effect that labour and secured creditors should not be able to enhance their

position as the result of an order for substantive consolidation (see A/CN.9/671, para. 110). Several concerns were expressed with respect to the draft recommendation. One concern expressed was that referring only to labour claims and claims by creditors holding a security interest over an asset of an enterprise group member was discriminatory and neither reasonable nor desirable. If any priority claims were to be addressed, the draft recommendation should refer to all priority claims. In addition, the Working Group was cautioned that in draft recommendation 225 there might be a confusion between the issue of priority of a claim and its value as opposed to the amount recovered on the claim; the value of a claim would not be affected by substantive consolidation, whereas the actual recovery might be. Another concern was expressed with regard to a security interest covering all of the assets of a group member (floating charge) and, in particular whether, as a result of substantive consolidation, the assets covered by that security interest could be extended to all assets included in the consolidated estate.

114. Various proposals were made to address the concerns expressed. One proposal was to broaden the scope of draft recommendation 225 by replacing the word “labour” with the words “a creditor holding a” or by referring generally to all priority claims. Another proposal was to include in draft recommendations 226 and 227 the purpose of draft recommendation 225. Another proposal was to replace the word “should” with the word “may”. A different proposal was to delete draft recommendation 225 and to reflect the issues discussed in the Working Group in the commentary. It was emphasized that draft recommendations 226 and 227 sufficiently addressed the issue of respecting priorities by use of the words “as far as possible”, noting that an order for substantive consolidation would occur only in the case of intermingling of assets or fraud, when priorities could not be easily identified or quantified. After discussion, the prevailing view was to delete draft recommendation 225 and to reflect the discussion in the commentary.

Draft recommendation 226: treatment of security interests in substantive consolidation

115. A proposal to broaden the types of secured claim referred to in draft recommendation 226 did not find support, as it would require earlier parts of the Legislative Guide to be reconsidered, in particular the approach to, and possibly the definition of, security interests. The Working Group adopted draft recommendation 226 in substance.

Draft recommendation 227: recognition of priorities in substantive consolidation and draft recommendation 228: meetings of creditors

116. The Working Group adopted draft recommendations 227-228 in substance.

Draft recommendation 229: calculation of the suspect period in substantive consolidation

117. Concern was expressed that draft recommendation 229 provided unnecessary detail by specifying the different ways of calculating the suspect period in substantive consolidation. In response, it was observed that the draft recommendation should include sufficient details to provide guidance to the legislator. After discussion, the Working Group agreed to adopt draft recommendation 229 in substance.

Draft recommendation 230: modification of an order for substantive consolidation

118. A concern was expressed that the current language of draft recommendation 230 was not satisfactory as it would not be possible to modify an order for substantive consolidation without affecting actions or decisions already taken. It was observed that the purpose of the modification might be to undo what had already been done, but what should be avoided was unjustly affecting vested rights and interests arising from the original order. A proposal was made to revise draft recommendation 230 along the lines of “Without prejudice to the effects of what has already occurred, the insolvency law may specify that an order substantive for consolidation may be modified.” In response, it was said that the current drafting of the recommendation adequately conveyed that purpose and that the concerns expressed could be further addressed in the commentary. After discussion, the Working Group adopted draft recommendation 230 in substance.

Draft recommendations 231: competent court and draft recommendation 232: notice

119. The Working Group adopted draft recommendations 231-232 in substance.

7. Participants — draft recommendations 233-237*Purpose clause*

120. The Working Group adopted the draft purpose clause in substance. It was agreed that the commentary could address issues relating to the appointment of an interim insolvency representative and clarify that the objectives of cooperation noted in paragraph (b) of the purpose clause related to the determination that the appointment of a single or the same insolvency representative would be in the best interest of the administration of the insolvency. It was also agreed that the domestic commentary would be aligned with the international commentary.

Draft recommendation 233: appointment of a single or the same insolvency representative, draft recommendation 234: conflict of interest, draft recommendation 235: cooperation between two or more insolvency representatives in a group context and recommendation 236: cooperation between two or more insolvency representatives in procedural coordination

121. The Working Group adopted draft recommendations 233-236 in substance.

Draft recommendation 237: forms of cooperation [cooperation to the maximum extent possible]

122. The Working Group agreed with the deletion of the reference limiting the substance of draft recommendation 237 to what was permitted under applicable law as noted in paragraph 12 of document A/CN.9/WG.V/WP.90/Add.2. A concern was expressed that draft recommendation 237 included too much detail and might be misinterpreted. A proposal to include the words “including intra-group claims” after the word “claims” found broad support. A proposal to align draft recommendation 237 with draft recommendation 250 on cooperation between insolvency representatives in the international context received support. Accordingly, draft recommendation 237 would have the same heading as draft recommendation 250 and paragraph (b) of draft recommendation 237 would follow the changes agreed with respect to paragraph (c) of draft recommendation 250. After discussion, the Working Group adopted the substance of draft recommendation 237 with the amendments noted above.

8. Reorganization of two or more enterprise group members — draft recommendations 238-239

Purpose clause and draft recommendations 238-239: reorganization plans

123. The Working Group adopted the draft purpose clause and draft recommendations 238-239 in substance.

9. Commentary

124. The Working Group made the following proposals with respect to the commentary:

- (a) To add further explanation of what is meant by vertical or horizontal integration of enterprise groups;
- (b) To add a reference to insolvency representatives in paragraph 8;
- (c) To include “income trusts” in paragraph 9 as an additional example of the types of entity that might be part of an enterprise group;
- (d) To address a concern with respect to paragraph 28 by deleting the sentences beginning with “The opportunities for...”;
- (e) To add further explanation to the final sentence of paragraph 54;
- (f) To modify the reference in paragraph 57 to “all parties in interest, including creditors” on the basis that it was too broad;
- (g) To delete the reference to “very small claims” in paragraph 77;
- (h) To modify paragraphs 103 and 109 to capture concerns expressed in the course of discussions in the Working Group with respect to post-commencement finance; in particular, to replace the word “applying” in the penultimate sentence of paragraph 103 with the word “including”;
- (i) To simplify the last sentence of paragraph 144;
- (j) To provide more detail of the operation of contribution orders;
- (k) To reflect, in paragraphs 176-177, the need to consider the nature of the group — including the level of integration and business structure — in deciding whether it is appropriate to appoint a single/same insolvency representative and to stress the importance of the competence, knowledge and expertise of any person to be appointed in that capacity; and
- (l) Generally to align the commentary to take account of revisions made to the recommendations.

10. Completion of work

125. The Working Group agreed that its work on the treatment of enterprise groups in insolvency would be sufficiently mature to be considered by the Commission for finalization and adoption in 2010 and requested the Secretariat to circulate the draft of part three to Governments as soon as possible to ensure sufficient time was available for comment and for compilation of those comments for the next session of the Commission.

D. Future work

126. The Working Group had a preliminary exchange of views on possible topics for future work.

127. It had before it a proposal by the Union Internationale des Avocats (UIA) on a possible international convention in the field of international insolvency law, which might cover the following issues:

- (a) Granting of access to courts to foreign insolvency representatives;
- (b) Recognition of foreign insolvency proceedings (with the effect of granting the foreign proceeding the rights of a national proceeding or triggering a secondary proceeding); and
- (c) Cooperation and communication between insolvency representatives and courts.

128. If agreement on those issues seemed possible, the proposal suggested the international convention might also contain provisions on:

- (a) Direct competence (“convention double”);
- (b) Applicable law (“convention triple”, could be part of a separate protocol).

129. Other topics proposed for consideration included: liability of directors and officers of enterprises in insolvency or in proximity to insolvency; insolvency of banks and financial institutions; the concept of centre of main interests (COMI) of an enterprise and the factors relevant to its determination, as well as issues of jurisdiction and recognition; the development of a Model Law based on the Legislative Guide or on some aspects of the Legislative Guide, including the recommendations currently being finalized on international aspects of the treatment of enterprise groups; review of the enactment of the Model Law and promotion of its wider adoption; sovereign insolvency; and the insolvency of public or State-owned enterprises.

130. Preliminary support was expressed in favour of various proposals, noting that more detailed information would be required in order to facilitate discussion, possibly at the next session of the Working Group. It was suggested that the feasibility of some proposals would depend upon the scope of the work proposed and, in the case of the proposal for an international convention, upon support from Governments and cooperation with other international organizations with competence in related areas. Support was expressed in favour of the goal of developing an international convention, but there were reservations with respect to the feasibility of reaching agreement, particularly in view of the difficulties encountered in the past in the area of international insolvency law. With respect to other proposals, in particular the insolvency of banks and financial institutions, more information was required with respect to work currently being undertaken by other international organizations in order to consider whether there was any scope for work by UNCITRAL.

131. The Working Group agreed that it should discuss those proposals further and in more detail at its next session.

**B. Note by the Secretariat on the treatment of enterprise groups
in insolvency, submitted to the Working Group on Insolvency Law
at its thirty-seventh session
(A/CN.9/WG.V/WP.90 and Add.1-2)**

[Original: English]

1. This note sets forth the draft commentary and recommendations of part three of the UNCITRAL Legislative Guide on Insolvency Law. The commentary is a revised version of the text previously included in documents A/CN.9/WG.V/WP.82 and Addenda 1-3. The recommendations are based on the recommendations set forth in document A/CN.9/WG.V/WP.85 and Add.1 and revised on the basis of the Report of Working Group V on the work of its thirty-sixth session in May 2009 (A/CN.9/671).
2. A/CN.9/WG.V/WP.90 addresses the treatment of enterprise groups in the domestic context, while A/CN.9/WG.V/WP.90/Add.1 addresses the international context. A/CN.9/WG.V/WP.90/Add.2 is provided for the information and consideration of the Working Group. It includes some explanatory notes that are intended to explain revisions made to the draft recommendations, to facilitate discussion and to raise questions for consideration by the Working Group; it is not intended that the content of A/CN.9/WG.V/WP.90/Add.2 would form part of the text of part three of the Legislative Guide.

Introduction

UNCITRAL Legislative Guide on Insolvency Law

Part three: Treatment of enterprise groups in insolvency

1. Part three of the *Legislative Guide* focuses on the treatment of enterprise groups in insolvency. Where an approach different to that taken in part two might be required with respect to a particular issue as it affects an enterprise group or where the treatment of enterprise groups in insolvency raises issues additional to those discussed in part two, they are addressed in this part. Where the treatment of an issue in the context of an enterprise group is the same as discussed above, it is not repeated in this part. The substance of part two is therefore applicable to enterprise groups unless otherwise indicated in this part.

2. Chapter I addresses general features of enterprise groups. Chapter II deals with the insolvency of group members in a domestic context and proposes a number of recommendations to supplement the recommendations of part two, in so far as additional issues arise by virtue of the group context. Chapter III addresses the cross-border insolvency of enterprise groups, building upon the UNCITRAL Model

Law on Cross-Border Insolvency, which is relevant to cross-border insolvency proceedings with respect to an individual group member, but does not address issues pertinent to the insolvency of different group members in different States.

Glossary

3. The following additional terms relate specifically to enterprise groups and should be read in conjunction with the terms and explanations included in the main glossary above.

(a) “Enterprise group”: two or more enterprises that are interconnected by control or significant ownership;

(b) “Enterprise”: any entity, regardless of its legal form, that is engaged in economic activities and may be governed by the insolvency law;¹

(c) “Control”: the capacity to determine, directly or indirectly, the operating and financial policies of an enterprise;

(d) “Procedural coordination”: coordination of the administration of two or more insolvency proceedings in respect of enterprise group members. Each of those members, including its assets and liabilities, remains separate and distinct;²

(e) “Substantive consolidation”: the treatment of the assets and liabilities of two or more enterprise group members as if they were part of a single insolvency estate.³

I. Enterprise groups: general features

A. Introduction

4. Most jurisdictions recognize the legal concept of “corporation”, an entity which has a legal personality separate from the individuals comprising it, whether as owners, managers, or employees. As a legal or juristic person, a corporation is capable of enjoying and being subject to certain legal rights, duties and liabilities, such as the capacity to sue and be sued, to hold and transfer property, to sign contracts and to pay taxes. The corporation also enjoys the characteristic of perpetuity, in the sense that its existence continues, independent of its members at any given time and over time, and shareholders can transfer their shares without affecting the entity’s corporate existence. Corporations may also have limited

¹ Consistent with the approach adopted with respect to individual debtors, the focus of this part is upon the conduct of economic activities by entities that would conform to the types of entities described as an “enterprise”. It is not intended to include consumers or other entities of a specialized nature (e.g. banks and insurance companies) that would not be governed by insolvency law pursuant to recommendations 8 and 9 (see above, footnote 6 to recommendation 9). The special considerations arising from the insolvency of such debtors are not specifically addressed in the *Legislative Guide* (see above, part two, chap. I, paras. 1-11).

² The concept of procedural coordination is explained in detail in the commentary, see below paras. 63-66.

³ For the effects of substantive consolidation and the treatment of security interests, see below, recommendations 224 to 226 and the commentary at paras. 159-162.

liability, whereby investors will only be liable for the amount they have intentionally put at risk in the enterprise, providing certainty and encouraging investment; without that limitation, investors would put their entire assets at risk for every business venture they entered into. A corporation depends on a legal process to obtain its legal persona and once formed, will be subject to the regulatory regime applying to entities so formed. That law generally will determine not only the requirements for formation, but also the consequences of formation, such as the powers and capacities of the company, the rights and duties of its members and the extent to which members may be liable for the company's debts. The corporate form can thus be seen as promoting certainty in the ordering of business affairs, as those dealing with a corporation know that they can rely upon its legal personality and the rights, duties and obligations that attach to it.

5. The business of corporations is increasingly conducted, both domestically and internationally, through "enterprise groups". The term "enterprise group" covers different forms of economic organization based upon the single entity and for a working definition may be loosely described as two or more corporations that are linked together by some form of control (whether direct or indirect) or ownership (see below). The size and complexity of enterprise groups may not always be readily apparent, as the public image of many is that of a unitary organization operating under a single corporate identity.

6. Enterprise groups have been in existence for some time, emerging in some countries, according to commentators, at the end of the 19th and beginning of the 20th centuries through a process of internal expansion, which involved companies taking control of their own financial, technical or commercial capacities. These single entity enterprises then expanded externally to take legal or economic control of other corporations. Initially these other corporations may have been in the same market, but eventually the expansion encompassed corporations working in related fields and later in fields that were different or unrelated, whether by reference to a product or geographical location or both. One of the factors supporting this expansion, at least in some jurisdictions, was the legitimatization of ownership of the shares of one corporation by another corporation; a phenomenon originally prohibited in both common law and civil law systems.

7. Throughout this expansion, corporations retained and continue to retain, their separate legal personality even though individual corporations are now probably the typical form of organization only for small private businesses. Enterprise groups are ubiquitous in both emerging and developed markets, with a common characteristic of operations across a large number of often-unrelated industries, often with family ownership in combination with varying degrees of participation by outside investors. The largest economic entities in the world include not only States, but also equal numbers of multinational enterprises. Major multinational groups may be responsible for significant percentages of Gross National Product worldwide and have annual growth rates and turnovers that exceed those of many States.

8. Despite the reality of the enterprise group, however, much of the legislation relating to corporations and particularly to their treatment in insolvency, deals with the single corporate entity. Despite the absence of legislation, judges in many countries, faced with issues that may be addressed by reference to a single

enterprise rather than a single corporate entity,⁴ have developed solutions to achieve results that better reflect the economic reality of modern business.

B. Nature of enterprise groups

9. Enterprise group structures may be simple or highly complex, involving numbers of wholly or partly owned subsidiaries, operating subsidiaries, sub-subsidiaries, sub-holding companies, service companies, dormant companies, cross directorships, equity ownership and so forth. They may also involve other types of entity, such as special purpose entities (SPE),⁵ joint ventures,⁶ offshore trusts⁷ and partnerships.

10. Enterprise groups may have a hierarchical or vertical structure, with succeeding layers of parent and controlled companies, which may be subsidiaries or other types of affiliated or related companies, operating at different points in a production or distribution process. They may also have a more horizontal structure, with many sibling group members, often with a high degree of cross-ownership, operating at the same level in that process. The businesses they conduct may be in a related field or in a diverse range of unrelated fields. It has been suggested that horizontal groups are more common in some parts of the world, such as Europe, while vertical groups are more common in others, such as the USA and Japan.

⁴ Discussed further below, see E, paras. 34-42.

⁵ Special purpose entities (SPE, also known as a “special purpose vehicle” or “bankruptcy-remote entity”) are created to fulfil narrow or temporary objectives, such as the acquisition and financing of specific assets, primarily to isolate financial risk or enhance tax efficiency. An SPE is typically a subsidiary owned almost entirely by the parent corporation; certain jurisdictions require that another investor own at least 3 per cent. Its asset and liability structure and legal status generally makes its obligations secure even if the parent becomes insolvent. The corporation establishing the SPE can accomplish its purpose without having to carry any of the associated assets or liabilities on its own balance sheet, thus they are “off-balance sheet.” SPEs may also be used for competitive reasons to ensure intellectual property, such as for the development of new technology, is owned by a separate entity that is not affected by pre-existing licence agreements.

⁶ A joint venture is often a contractual arrangement or partnership between two or more parties to pursue a joint business purpose. Such an arrangement may sometimes result in the formation of one or more legal entities that may involve both parties contributing equity, and sharing in the revenues, expenses, and control of the enterprise. The venture could be for one specific project only, or a continuing business relationship. Joint ventures are widely used in an international context, as some countries require foreign corporations to form joint ventures with a domestic partner in order to enter a market. This requirement often results in technology and managerial control being transferred to the domestic partner. Forming a joint venture might assist in spreading costs and risks; improving access to financial resources; providing economies of scale and advantages of size; and facilitating access to new technologies and customers or to innovative managerial practices. It may also serve competitive and strategic goals such as influencing structural evolution of an industry; pre-empting competition; creating stronger competitive units; and facilitating transfer of technology and skills, as well as diversification.

⁷ An offshore trust is a conventional trust that is formed under the laws of an offshore jurisdiction. They are similar in nature and effect to onshore trusts, involving a transfer of assets to a trustee to manage for the benefit of a person or class of persons. Offshore trusts may be formed for tax purposes or asset protection. In practice the effectiveness of such trusts may be limited if the insolvency law of the home jurisdiction of the person transferring the assets operates to set aside transfers to the trusts, and transactions entered into to defraud creditors.

11. The research literature on enterprise groups clearly shows that they can be based on different types of alliances such as bank relationships, interlocking board directorates, owner alliances, information sharing, joint ventures, and cartels. The research also shows that enterprise group structures vary across corporate governance systems. In some States, they are organized either vertically or horizontally and develop across industries. They generally include a bank, a parent or holding company⁸ (referred to as “parent company”) or a trading company, and a diverse group of manufacturing firms. In contrast, in other States such groups are typically controlled by a single family or a small number of families and are uniformly vertically organized or have strong ties to the State, but not to particular families. Degrees of diversification also vary considerably, with some groups involving significant intra-group trading and other not.⁹

12. The degree of financial and decision-making autonomy in enterprise groups can vary considerably. In some groups, members may be active trading entities, with primary responsibility for their own business goals, activities and finances. In others, strategic and budgetary decisions may be centralized, with group members operating as divisions of a larger business and exercising little independent discretion within the cohesive economic unit. A parent company may exercise close control by allocating equity and loan capital to group members through a central group finance operation, deciding their operational and financial policies, setting performance targets, selecting directors and other key personnel, and continuously monitoring their activities. The power of the group may be centralized in the ultimate parent company or in a company further down the group chain, with the parent company owning the key group shares, but not having any direct productive or managerial role. The largest groups might have their own banks and perform the principal functions of a capital market. Group financing might involve intra-group lending between the parent company and subsidiaries, involving loans both from and to the parent company and the granting of cross-guarantees.¹⁰ Intra-group lending might be working capital or unpaid short-term debt, such as unpaid

⁸ A holding company or parent company is a company that directly or indirectly owns enough voting stock in another firm to control management and operations by influencing or electing its board of directors. The term may signify a company that does not produce goods or services itself, but whose purpose is to own shares of other companies (or own other companies outright).

⁹ Some research suggests that groups in Chile, for example, are more diverse than groups in South Korea, while groups in the Philippines are more vertically integrated than groups in India and far more involved in financial services than groups in Thailand. See T. Khanna and Y. Yafeh, *Business Groups in Emerging Markets: Paragons or Parasites?* *Journal of Economic Literature*, Vol. XLV (June 2007) pp331-372.

¹⁰ In many countries a significant method of enterprise group capital raising is cross-guarantee financing, where each company within a group guarantees the performance of the others. Implementing cross-guarantee claims in liquidation has proved difficult in some jurisdictions and they have sometimes been set aside. In one jurisdiction, cross-guarantees may operate to reduce the regulatory burden on companies by bestowing accounting and auditing relief on companies that are party to the arrangement. The deed of cross-guarantee makes the group of companies that are party to that deed akin to a single legal entity in many respects and operates as a form of voluntary contribution or pooling in the event that one or more of the companies party to the deed goes into liquidation while the cross-guarantee is still operative. One advantage of this arrangement is that creditors and potential creditors can focus on the consolidated position for those entities, rather than on the individual financial statements of the wholly owned subsidiaries that are party to the deed.

dividends or credit in respect of intra-group trading; they may or may not involve the payment of interest.

13. In some States, family ties play an important connecting factor in enterprise groups and it may be the case, for example, that the more important family members and close associates of family members will sit on the board of the parent company of a group, with members of that board spread around the boards of group members so that there is a web of interlinked common directorships, enabling the family to maintain control over the group. For example, the chart of a large group in India shows a complex web of shared directorships between the board of the parent company and 45 other group members.¹¹

14. In some countries, enterprise groups have enjoyed close ties to governments and government policies, such as those affecting access to credit and foreign currency and competition, which have significantly influenced the development of groups. Equally, there are examples where government policies have targeted the operations of enterprise groups, removing certain types of preferential treatment, such as access to capital.

15. The structure of many enterprise groups shows the dimension and potential complexity of the arrangements. They may involve many layers of different companies controlled to a greater or lesser extent by the level or levels above, in some cases involving hundreds if not thousands of different companies.¹²

16. A study based upon the 1979 accounts and reports of a number of large British-based multinationals, for example, had to be abandoned with respect to two of the largest groups, with 1,200 and 800 subsidiaries respectively, because of the impossibility of completing the task. Researchers noted that few people inside the group could have had a clear understanding of the precise legal relationships between all group members and that none of the groups studied appeared to have its own complete chart.¹³ Similarly, the group charts of several Hong Kong property groups such as Carrian, which failed over 20 years ago, ran to several pages and a reader would have needed a good magnifying glass to identify the subsidiaries. The group chart of the Federal Mogul group, an automotive component supplier, when blown up to the point where you can read the names of all the subsidiaries, fills a wall of a small office. The group chart of Collins and Aikman, another automotive group, is printed in a book, with sub-sub-groups having the complexity of structure of many domestic enterprise groups.

17. The degree of integration of a group might be determined by reference to a number of factors, which might include the economic organization of the group

¹¹ See Khanna and Yafeh, note 9.

¹² A 1997 survey in Australia of the Top 500 listed companies showed that 89 per cent of those companies controlled other companies; the greater the market capitalization of a listed company, the more companies it was likely to control (this ranged from an average of 72 controlled companies for those companies with the largest market capitalization to an average of 9 for the smallest); 90 per cent of controlled companies were wholly owned; the number of vertical subsidiary levels in an enterprise group ranged from 1 to 11, with an overall average of 3 to 4. In other countries the figures are much larger. Cited in Companies and Securities Advisory Committee (CASAC), Corporate Groups Final Report, 2000 (Australia), paragraph 1.2.

¹³ Hadden, Inside Corporate Groups, 1984 *International Journal of Sociology of Law*, 12, 271-286, p. 273.

(e.g., whether the administrative structure is arranged centrally or maintains the independence of the various members, whether subsidiaries depend on the enterprise group for financing or loan guarantees, whether personnel matters are handled centrally, the extent to which the parent makes key decisions on policy, operations and budget and the extent to which the businesses of the group are integrated vertically or horizontally); how the group manages its marketing (e.g., the importance of intra-group sales and purchases, the use of common trademarks, logos and advertising programmes and the provision of guarantees for the products); and the public image of the group (e.g., the extent to which the group presents itself as a single enterprise and the extent to which the activities of the constituent companies are described as operations of the group in external reports, such as those for shareholders, regulators and investors).

18. The legal structure of a group as a number of separate legal entities is not necessarily determinative of how the business of the group is managed. While each group member is a separate entity, management may be arranged in divisions along product lines and subsidiaries may have one or many product lines with the result that they fall across different divisions. In some cases, management may treat wholly owned subsidiaries as if they were branches of the parent company.

C. Reasons for conducting business through enterprise groups

19. Diverse factors shape the formation, operation and evolution of enterprise groups, ranging from legal and economic factors to societal, cultural, institutional and other norms. State leadership, inheritance customs, kinship structures (including inter-generational considerations), ethnicity and national ideology, as well as the level of development of the legal (e.g., effectiveness of contract enforcement) and institutional framework supporting commercial activity may influence enterprise groups in different environments. Some studies suggest that group structures can make up for under-developed institutions, with consequent benefits for transaction costs.

20. The advantages of conducting business through an enterprise group structure may include reduction of commercial risk and maximization of financial returns, by enabling the group to diversify its activities into various types of businesses, each operated by a separate group company. One company may acquire another to expand and increase market power, at the same time preserving the acquired company and continuing to operate it as a separate entity to utilize its corporate name, goodwill and public image. Expansion may occur to acquire new, technical or management skills. Once formed, groups may continue to exist and proliferate because of the administrative costs associated with rationalizing and liquidating redundant subsidiaries.

21. A group structure may enable a group to attract capital to only part of its business without forfeiting overall control, by incorporating that part of the business as a separate subsidiary and allowing outside investors to acquire a minority shareholding in it. A group structure may enable a group to lower the risk of legal liability by confining high liability risks, such as environmental and consumer liability, to particular group members, thus isolating the remaining group assets from this potential liability. Better security for debt or project financing may be

facilitated by moving specific assets into a separate member incorporated for that purpose, thus ensuring that the lender has a first priority over the whole or most of the new member's property. A separate group member may also be formed to undertake a particular project and obtain additional finance by means of charges over its own assets and undertaking or may be required for the purpose of holding a government license or concession. A group structure can simplify the partial sale of a business as it may be easier, and sometimes more tax effective, to transfer the shares of a group member to the purchaser, rather than sell discrete assets. A group may also be formed incidentally when a company acquires another company, which in turn might be a parent company for various other companies.

22. Meeting prudential or other statutory requirements may be easier where the companies subject to those regulatory requirements are separate group members. In the case of multinational groups, the domestic law of particular countries in which the group wishes to conduct business may require that local businesses be conducted through separate subsidiaries (sometimes subject to minimum local equity requirements) or impose other requirements or limitations, relating for example to employment and labour regulation. Arrangements not involving equity have been used for foreign expansion because of, for example, local obstacles to equity participation, the level of regulation imposed upon foreign investment operations and the relative cost advantages of those types of arrangement. Another relevant factor for multinational groups may be geographical imperatives, such as the need to acquire raw materials or to market products through a subsidiary established in a particular location. A related consideration of increasing importance that perhaps relates more to where parts of the groups structure are to be located than to the question of whether or not to organize a business through a group structure, is the importance of local law on issues such as cost and simplicity of incorporation in the first instance, obligations of incorporated entities and treatment of the group in insolvency. Differences in law across jurisdictions can significantly complicate these issues.

23. Other key drivers for complicated group structures include fiscal considerations and their influence on the flow of money within groups. The incidence of tax is often cited as the reason for the formation of and subsequent growth of enterprise groups and many legal systems have traditionally given weight to the economic unity of related entities. While separate taxation of individual entities might be the underlying principle, it may be qualified to fulfil basic purposes such as protecting the revenue interests of governments and alleviating the tax burden that would otherwise result from the separate taxation of each group member.¹⁴ Measures that take into account the connections between parent and subsidiary companies include tax exemptions for intra-group dividends; group relief; and measures aimed at combating tax evasion. Tax exemptions may be available, for example, on the dividends paid by a company to its resident corporate shareholders and for intra-group dividends where companies are linked by substantial ownership. Tax credits may be allowed for the foreign tax paid on the underlying profits of the subsidiary and for the foreign tax that is charged directly on a dividend. Group relief might be available where related companies can be treated as a single fiscal unit and file consolidated accounts. The losses of

¹⁴ International Investment and Multinational Enterprises — Responsibility of parent companies and their subsidiaries, OECD, 1979.

one subsidiary may be offset against the income of another or profits and losses may be pooled amongst group members.

24. As a result of the importance of fiscal considerations, inter-group pricing policies and national taxation rates and policies often determine the distribution of assets and liabilities within enterprise groups. Differential corporate tax rates across jurisdictions, as well as certain exceptions (such as reduced tax rates for profits from manufacturing activities or financial services income) applicable in some jurisdictions may make those jurisdictions more attractive than others that have higher tax rates and fewer or no exceptions. Nevertheless, tax authorities may have the right to revisit transfer-pricing structures aimed at locating profits in low taxation domiciles.

25. Choices such as between establishing a branch or a subsidiary might also be affected by fiscal regulation where, for example, repatriation of profits from a foreign subsidiary may be effected tax free by loan repayments to a parent company or may be tax free provided the parent owns a specified percentage (ranging from 5-20 per cent) of the foreign company's share capital; interest on funds borrowed to finance the acquisition of a subsidiary can be offset against their profits and as already noted, the subsidiaries profits and losses can be offset against each other in a consolidated tax return. Business activities have also been divided between two or more corporations to exploit tax allowances, limits imposed on the amounts of tax allowances or progressive rates of taxation. Other reasons might include: taking advantage of differences in accounting methods, taxable years, depreciation methods, inventory valuation methods and foreign tax credits; segregating activities that if combined in a single taxable entity, might be disadvantageous in fiscal terms; and taking advantage of favourable treatment for certain activities (e.g., anticipated or potential sales, mergers, liquidations or intra-family gifts or bequests) that is available for some operations, but not for others.

26. Accounting requirements also have a role to play in determining the structure of enterprise groups. In some jurisdictions, certain devices such as "agent only" subsidiaries might be created to manage certain aspects of the business and enable the parent company to avoid submitting detailed trading accounts for that subsidiary, which is just an agent of the parent company that owns all of the relevant assets.

27. Many of these benefits of conducting business through an enterprise group may be illusory. Protection against devastating losses may fall away as a result of group financing agreements; intra-group trading; cross-guarantees; and letters of comfort¹⁵ given to group auditors and the inclination of major creditors, and particularly bankers, to ensure that they have the indemnity of the top member in any group.

¹⁵ A letter of comfort is generally provided by a parent company to persuade another entity to enter into a transaction with a subsidiary. It may include various types of undertaking, none of which would amount to a guarantee, which may include an undertaking to maintain its shareholding or other financial commitment to a subsidiary; using its influence to see that the subsidiary meets its obligation under a primary contract; or confirming that it is aware of a contract with the subsidiary, but without any express indication that it will assume any responsibility for the primary obligation.

28. To avoid doubt, group structures are not required from the accounting point of view — accountants are just as happy with consolidating branches as groups of subsidiaries. It seems probable that the banking, commercial and legal sectors often fail to appreciate the accounting aspects of enterprise groups. The opportunities for misunderstanding will increase in the transition to new international financial reporting standards and as many groups change their consolidation approach from one that has regard for the substance of transactions, to one that requires legal form to prevail over substance. It was the “off-balance” accounting structures that made Enron, WorldCom and other failures possible and the need for clarity of financial statements is widely acknowledged.

D. Defining the “enterprise group” — ownership and control

29. Although the existence of enterprise groups and the importance of relationships between the group members are increasingly acknowledged, both in legislation and court decisions, there is no coherent body of rules that directly governs those relationships in a comprehensive manner. In jurisdictions where there is legislation that recognizes enterprise groups, it may not specifically deal with the regulation of such groups, by way of commercial or corporate legislation, but rather be contained in legislation on taxation, corporate accounting, competition and mergers or other issues; legislation addressing the treatment of enterprise groups in insolvency is rare. Furthermore, an analysis of legislation that does address aspects of enterprise groups reveals a diversity of approaches to the various issues associated with groups, not only between jurisdictions, but also on a comparison of the different legislation within a single jurisdiction. Thus different tests may apply to what constitutes a group for different purposes, although there may be common elements, and where those tests employ a particular concept, such as “control”, definitions may be broader or narrower, depending upon the purpose of the legislation, as noted above.

30. While much legislation avoids specifically defining the term “enterprise group”, several concepts are common to determining what relationships between companies will be sufficient to constitute them as an enterprise group for certain specific purposes, such as extending liability, accounting purposes, taxation and so on. These concepts are found both in legislation and in numerous court decisions on groups in various countries and generally include aspects of ownership and control or influence, both direct and indirect, although in some examples only direct ownership or control or influence is considered. The choice between the two concepts often reflects a balance between the desirability of certainty, which can be achieved by setting a prescribed level of ownership, and flexibility, which might be better achieved by referring to control and acknowledging the diverse economic realities of enterprise groups.

31. Some examples consider ownership by reference to a formal relationship between the companies, such as what constitutes a parent-subsidiary relationship. This may be determined by reference to a formal standard — the holding, whether directly or indirectly, of a specified percentage of capital or votes. Examples of those percentages vary from as little as 5 per cent to more than 80 per cent. Those laws specifying lower percentages generally consider additional factors such as the ones discussed below as indicators of control. In some examples, the percentages

establish a rebuttable presumption as to ownership, while higher percentages establish a conclusive presumption.

32. Other examples of what constitutes an enterprise group adopt a more functional approach and focus on aspects of control, or controlling or decisive influence (referred to in this note as control), where “control” is often a defined term. The key elements of control include actual control or capacity to control, either directly or indirectly, financial and operating policy and decision-making. Where the definition includes capacity to control, it generally envisages a passive potential for control, rather than focusing upon control that is actively exercised. Control may be obtained by ownership of assets, or through rights or contracts that give the controlling party the capacity to control. What is important is not so much the strict legal form of the relationship, such as parent-subsidiary, between the entities, but rather the substance of that relationship.

33. Factors that might indicate the existence of control of one entity by another could include: the ability to dominate the composition of the board of directors or governing body of the second entity; the ability to appoint or remove all or a majority of the directors or governing members of the second entity; the ability to control the majority of the votes cast at a meeting of the board or governing body of the second entity; and the ability to cast or regulate the casting of, a majority of the votes that are likely to be cast at a general meeting of the second entity, irrespective of whether that capacity arises through shares or options. Information that may be relevant to consideration of these factors might include: the group member’s incorporation documents; details about the member’s shareholding; information relating to substantive strategic decisions of the member; internal and external management agreements; details of bank accounts and their administration and authorized signatories; and information relating to employees.

E. Regulation of enterprise groups

34. Regulation of enterprise groups is generally based on one of two approaches or in some cases on a combination of the two: the separate entity approach (which is the traditional approach and by far the most prevalent) and the single enterprise approach.

35. The separate entity approach relies on several basic principles, foremost of which is the separate legal personality of each group company. It is also based upon the limited liability of shareholders of each group company and the duties of directors of each separate group entity to that entity.

36. The separate legal personality of a corporation generally means that it has its own rights and duties, irrespective of who controls it or owns it (i.e., whether it is wholly or partly owned by another company) and its participation in the activities of the enterprise group. The debts it incurs are its debts and the assets of the group generally cannot be pooled¹⁶ to pay for these debts. Contracts entered into with external persons do not automatically involve the parent company or other group members. A parent company cannot take into account the undistributed profits of other group companies in determining its own profits. Limited liability of a

¹⁶ See below, paras. 143-172 for a discussion of substantive consolidation.

corporation means that unlike in a partnership or sole proprietorship, enterprise group members have no liability for the group's debts and obligations, with the result that potential losses cannot exceed the amount contributed to the group member by purchasing shares.

37. The single enterprise approach, in comparison, relies upon the economic integration of enterprise group members, treating the group as a single economic unit that operates to further the interests of the group as a whole, or of the dominant corporate body, rather than of individual members. Borrowing may be conducted on a group basis, with group treasury arrangements being used to offset the credit and debit balances of each group member; group members may be permitted to operate at a loss, or be undercapitalized, as part of the overall group financial structure and strategy; assets and liabilities may be moved between group members in various ways; and intra-group loans, guarantees or other financial arrangements may be entered into on essentially preferential terms.

38. While many countries follow the separate entity approach, there are some countries that recognize exceptions to strict application of that approach and others that have introduced, either by legislation or through the courts, a single enterprise approach that applies to certain situations.

39. Some of the circumstances in which strict application of the separate entity approach has been overridden may include: consolidation of enterprise group accounts for a company and any controlled entity; related person transactions (where a public company is otherwise prohibited from giving any financial benefit, including intra-group loans, guarantees, indemnities, releases of debt or asset transfers, to a related company unless that transaction is approved by shareholders or is otherwise exempt); cross-shareholding (where group members are generally prohibited from acquiring, or taking a security over, the shares of any controlling member or issuing or transferring their shares to any controlled member); and insolvent trading (where a parent company which ought to suspect the insolvency of a subsidiary can be made liable for the debts of that subsidiary incurred when it was insolvent).

40. A few countries have established various categories of enterprise groups that can operate as a single enterprise, in exchange for enhanced protection of creditors and minority shareholders. In one,¹⁷ enterprise group structures involving public companies are divided into three categories: (a) integrated groups; (b) contract groups; and (c) de facto groups, to which a set of harmonized single enterprise principles dealing with corporate governance and liability applies:

(a) Integrated groups are based upon a vote, by a specified proportion of shareholders of the parent company, which in turn owns a specified proportion of the shares of the subsidiary, to approve the complete integration of the subsidiary. The parent company will have unlimited power to direct the subsidiary, in return for the parent company being jointly and severally liable for the debts and obligations of the subsidiary;

(b) Contract groups can be formed by a specified proportion of shareholders of each of two companies entering into a contract that grants one company (the parent) the right to direct the other company, provided the directions are consistent

¹⁷ Germany.

with the interest of the parent company or the group as a whole. In return for giving the parent company the right of control, minority shareholders and creditors are given enhanced protection; and

(c) De facto groups are those where one company exercises, either directly or indirectly, a dominant influence over another company. Although not created by any formal arrangement, there must nevertheless be systematic involvement by the parent in the affairs of the controlled company.

41. In one country¹⁸ where single enterprise principles have been introduced into corporate legislation, directors of wholly or partly owned subsidiaries may act in the interests of the parent company rather than their subsidiary company; there are provisions for streamlined group mergers; and legislation also permits contribution and pooling orders.

42. In another country,¹⁹ commercial regulatory laws affecting enterprise groups increasingly use single enterprise principles to ensure that the policy underlying specific commercial legislation cannot be undermined or avoided by the use of enterprise groups. The courts have assisted in this development, selectively introducing the single enterprise concept to achieve the underlying policies of the legislation. The concept has been applied to insolvency law to avoid specified intra-group transactions, to support intra-group guarantees and in limited cases, to achieve substantive consolidation. The courts also have the power to alter the priority of claims in the liquidation of a group entity, either by treating some intra-group loans to that entity as equity rather than debt, or by subordinating intra-group loans to that entity to the claims of its external creditors.

II. Addressing the insolvency of groups: domestic issues

A. Introduction

43. Enterprise groups may be structured in ways that minimize the threat of insolvency to one or more group members, by entering into cross-guarantees, indemnities and similar types of arrangements. Where problems do arise, a parent or controlling group member may seek to avoid the insolvency of other group members in order to preserve its reputation and maintain its credit in commercial and financial spheres by providing additional finance and agreeing to subordinate intra-group claims to external liabilities.

44. However, if the complexity of an enterprise group's structure is disturbed by the onset of financial difficulty affecting one or more, or even all of the group members that leads to insolvency, problems arise simply because the group is constituted by members that are each recognized as having a separate legal personality and existence. Since, as noted above, the great majority of domestic insolvency and corporate laws do not address the insolvency of enterprise groups, even though group issues might be addressed outside the insolvency area in relation to accounting treatment, regulatory issues and taxation, the absence of legislative authority to the contrary or judicial discretion to intervene in insolvency means that

¹⁸ New Zealand.

¹⁹ USA.

each entity has to be separately considered and, if necessary, separately administered in insolvency. In certain situations, such as where the business activity of group members is closely integrated, that approach may not always achieve the best result for the individual debtor or for the business of the group as a whole, unless the multiple, parallel proceedings can be closely coordinated.

45. Much of what already exists in domestic law regarding the insolvency of enterprise groups concentrates on the circumstances in which it might be appropriate to consolidate insolvency estates. What is lacking is more guidance on how the insolvency of enterprise groups should be addressed more comprehensively and, in particular, whether and in what circumstances enterprise groups should be treated differently from a single corporate entity.

46. A second key issue in the treatment of enterprise groups in insolvency is the degree to which the group is economically and organizationally integrated and how that level of integration might affect treatment of the group in insolvency and in particular, the extent to which a highly integrated group should be treated differently to a group where individual members retain a high degree of independence. In some cases, where for example the structure of a group is diverse, involving unrelated businesses and assets, the insolvency of one or more group members may not affect other members or the group as a whole and the insolvent members can be administered separately. In other cases, however, the insolvency of one group member may cause financial distress in other members or in the group as a whole, because of the group's integrated structure, with a high degree of interdependence and linked assets and debts between its different parts. In those circumstances, it might often be the case that the insolvency of several or many group members would lead inevitably to the insolvency of all members (the "domino effect") and there may be some advantage in judging the imminence of the insolvency by reference to the group situation as a whole or coordinating that consideration with respect to multiple members.

B. Application and commencement

47. General considerations with respect to application for and commencement of insolvency proceedings are discussed above in part two, chapters I and II. Since those chapters apply equally to individual enterprise group members, they should be considered in conjunction with the additional issues specific to enterprise groups discussed below.

1. Joint application for commencement

(a) Background

48. As a general rule, insolvency laws respect the separate legal status of each enterprise group member and a separate application for commencement of insolvency proceedings is required to be made for each of those members that satisfy the standard for commencement of insolvency proceedings and are covered by the insolvency law (see recommendation 10). There are some limited exceptions that allow a single application to be extended to other group members where, for example, all interested parties consent to the inclusion of more than one group member; the insolvency of one group member has the potential to affect other group

members; the parties to the application are closely economically integrated, such as by intermingling of assets or a specified degree of control or ownership; or consideration of the group as a single entity has special legal relevance, especially in the context of reorganization plans.

49. The recommendations of the *Legislative Guide* concerning application for and commencement of insolvency proceedings would apply to debtors that are enterprise group members in the same manner as they apply to debtors that are individual commercial enterprises. Recommendations 15 and 16 establish the standards for debtor and creditor applications for commencement of insolvency proceedings and form the basis upon which an application could be made for each group member that satisfied those standards, including imminent insolvency in the case of an application by a debtor. In the enterprise group context, the insolvency of a parent or controlling group member may affect the financial stability of a subsidiary or controlled member or the insolvency of a number of such members might affect the solvency of others, so that insolvency is imminent more widely across the group. That situation is likely to be covered by the terms of recommendation 15 if, at the time of the application with respect to the insolvent group members, it could be said of the other group members that they would be unable to pay their debts as they mature.

(b) Purpose of a joint application

50. Permitting those group members that satisfy the commencement standard to make a joint application for commencement of insolvency proceedings would facilitate the coordinated consideration of those applications by the court, without affecting the separate identity of the applicants or removing the need for each one to individually satisfy the applicable commencement standard. It would also alert the court to the existence of a group, particularly if the application were to be accompanied by information substantiating the existence of the group and the relationship between the debtors and, where proceedings subsequently commenced on the basis of that joint application, would have the advantage of establishing a common commencement date for relevant group members.

51. Such a joint application might include, where permitted under the law and feasible in the circumstances, a single application covering all group members that satisfy the commencement standard or parallel applications made at the same time in respect of each of those members. The latter approach may be appropriate where the group members are not located in the same domestic jurisdiction and different courts have competence (as discussed below) or where other circumstances of the case, such as that there is a significant number of proceedings to be coordinated, suggest that a single application would not be practical. In both cases, the insolvency law should facilitate the court undertaking a coordinated consideration of whether the commencement standards with respect to the individual group members are satisfied, taking into account the group context where relevant.

(c) Joint application and procedural coordination distinguished

52. The making of a joint application for commencement of insolvency proceedings should be distinguished from what is referred to below as procedural coordination. The purpose of permitting a joint application is to facilitate coordination of commencement considerations and potentially reduce costs.

Commencement of multiple proceedings on the basis of a joint application should also facilitate coordination of those proceedings; the commencement date, and any other dates calculated by reference to that date, such as those relating to the suspect period, would be the same for each member. Permitting a joint application is not intended to predetermine how, if the proceedings commence, they will be administered and, in particular, whether they will be subject to procedural coordination. Nevertheless, a joint application for commencement might include an application for procedural coordination, as noted below, and might facilitate the court taking a decision on procedural coordination.

(d) Including a solvent group member in a joint application

53. A question that is often discussed in the group context is whether a solvent group member can be included in an application for commencement of insolvency proceedings with respect to other group members and if so, in what circumstances. Where a group member appears to be solvent, but further investigation shows insolvency to be imminent, inclusion of that member in the application would be covered by recommendation 15 of the *Legislative Guide*, as noted above.

54. Where the question is not one of imminent insolvency and the group member is clearly solvent, different approaches may be taken. Where a group is closely integrated, an insolvency law may permit an application for commencement to include group members that do not satisfy the commencement standard, on the basis that it is desirable in the interests of the group as a whole that those members be included in the proceedings. Factors relevant to determining whether the necessary degree of integration exists might include: the relationship between the group members that is variously described, but involves, for example, a significant degree of interdependence or control; intermingling of assets; unity of identity, reliance on management and financial support or other similar factors that need not necessarily arise from the legal relationship (such as parent-subsidiary) between the group members. A further situation in which including a solvent group member in a joint application might be appropriate is where the existence of a “group” is fictitious.

55. Such an approach may facilitate development of an insolvency solution for the whole group, avoiding piecemeal commencement of proceedings over time, if and when additional group members became affected by the insolvency proceedings initiated against the originally insolvent members. It could also facilitate the preparation of a comprehensive reorganization plan, addressing the assets of both solvent and insolvent group members.

56. One of the problems with including a solvent group member, however, is that the insolvency law will generally only cover those entities properly regarded as satisfying the standard for commencement of insolvency proceedings. A solvent group member may, however, be voluntarily included in a reorganization plan, where a commercial decision is taken by that member that it should participate in the plan (see below, para. 184).

57. A joint application for commencement might also be permitted where all interested group members consent to the inclusion of one or more other members, whether they are insolvent or not, or all parties in interest, including creditors, so consent. An insolvency law might also consider whether a group member not involved at the time of commencement of insolvency proceedings against other

group members might later be joined in those proceedings if it is subsequently affected by those proceedings or it is determined that its joinder would be in the interests of the group as a whole.

(e) Persons permitted to make a joint application

58. Consistent with the approach of recommendation 14 of the *Legislative Guide*, an insolvency law may permit a joint application to be made by two or more enterprise group members that satisfy the commencement standard of the insolvency law. It might also be made by any creditor with respect to the group members of which it is a creditor. Permitting a creditor to make an application with respect to group members of which it is not a creditor would be inconsistent with the commencement standard of recommendation 14.

(f) Competent courts

59. A joint application for commencement with respect to two or more enterprise group members may raise issues of jurisdiction, even in the domestic context, if those group members are located in different places with different courts potentially being competent to consider the application. This may occur, for example, in respect of a group operating nationally in States where jurisdiction for insolvency matters lies with courts in different places or applications for commencement may be made in different courts. Some laws may allow a joint application for commencement to be handled by a single court. Although that approach is desirable, it will ultimately be a question of whether domestic law permits joint applications involving different debtors (albeit members of the same group) in different jurisdictions or courts to be treated in such a way. Various criteria might be relevant to determining the appropriate court for handling such an application. It might, for example, be the court with competence to administer insolvency proceedings with respect to the parent or controlling member of a group, where that member is included in the application. Other criteria, such as the size of indebtedness of the various group members or the centre of control of the group might also be chosen to establish the prevailing competence of one court in the domestic setting. Creditors of different group members might also be located in different places, raising issues of representation and the location in which creditor committees would meet or be constituted.

60. The fees payable and other associated procedural issues arising out of a joint application for commencement may need to be addressed.

61. Although the issue of which court is competent to consider a joint application for commencement where the subject group members are located in different domestic jurisdictions might be addressed by law other than the insolvency law, it is desirable that the approach of recommendation 13 of the *Legislative Guide* be followed. This would require the insolvency law to clearly indicate or include a reference to the relevant law that establishes the court with jurisdiction over such an application. Adoption of that approach should make it clear to all relevant parties where and how such an application can be pursued.

(g) Notice of application

62. The recommendations of the *Legislative Guide* with respect to notification of an application for commencement of insolvency proceedings would apply to a joint application. A joint application by a creditor should be notified to the group members that are the subject of the application in accordance with recommendation 19 (a). Where group members make a joint application, notice would not be required until proceedings commenced on the basis of that application, in accordance with recommendation 22.

Recommendations 199-201**Purpose of legislative provisions**

The purpose of provisions on joint application²⁰ for commencement of insolvency proceedings with respect to two or more enterprise group members is:

(a) To facilitate coordinated consideration of an application for commencement of insolvency proceedings with respect to those enterprise group members;

(b) To enable the court to obtain information concerning the enterprise group that would facilitate determination of whether commencement of insolvency proceedings with respect to those group members should be ordered;

(c) To facilitate efficiency and reduce the costs associated with commencement of those insolvency proceedings; and

(d) To provide a mechanism²¹ for the court to assess whether procedural coordination of those insolvency proceedings would be appropriate.

Contents of legislative provisions***Joint application for commencement of insolvency proceedings***

199. The insolvency law may specify that a joint application for commencement of insolvency proceedings may be made with respect to two or more enterprise group members, each of which satisfies the applicable commencement standard.²²

Persons permitted to apply

200. The insolvency law should specify that a joint application may be made by:

(a) Two or more enterprise group members, each of which satisfies the applicable commencement standard in recommendation 15; or

(b) A creditor, provided it is a creditor of each group member that is to be included in the joint application.

²⁰ A joint application for commencement does not affect the legal identity of each group member included in the application; each member remains separate and distinct.

²¹ A joint application is not a pre-requisite for procedural coordination, but may facilitate the court's consideration of whether an order for procedural coordination should be made.

²² See above, recommendation 15, which addresses debtor applications and recommendation 16, which addresses creditor applications for commencement.

Competent courts

201. For the purposes of recommendation 13, the words “commencement and conduct of insolvency proceedings, including matters arising in the course of those proceedings” include a joint application for commencement of insolvency proceedings with respect to two or more enterprise group members.²³

2. Procedural coordination**(a) Purpose of procedural coordination**

63. Procedural coordination is intended to promote procedural convenience and cost-efficiency and may facilitate comprehensive information being obtained on the business operations of the group members subject to the insolvency proceedings; assist the valuation of assets and the identification of creditors and others with legally recognized interests; and avoid duplication of effort. Procedural coordination refers to what may in practice be varying degrees of coordination with respect to the administration of multiple insolvency proceedings commenced with respect to two or more enterprise group members involving, possibly, one or more courts. Although administered in a coordinated manner, the assets and liabilities of each group member involved in the procedural coordination remain separate and distinct, thus preserving the integrity of the individual enterprises of the group and the substantive rights of claimants. Accordingly, the effect of procedural coordination is limited to administrative aspects of the proceedings and does not touch upon substantive issues. The scope of an order for procedural coordination would generally be determined by the court in each case.

64. Multiple proceedings may be streamlined in various ways through an order for procedural coordination, facilitating sharing of information to obtain a more comprehensive picture of the situation of the various debtors; combining of hearings and meetings, including joint meetings of creditors; preparation of a single list of creditors and other parties in interest for the provision of notice and coordination of the provision of notice; establishment of joint deadlines; agreement on a joint claims procedure and coordinated sale of assets; coordination of avoidance proceedings; and the holding of single creditor meetings or coordination among creditor committees. Streamlining may also be facilitated by the appointment of a single or the same insolvency representative to administer the insolvency proceedings or by ensuring coordination between insolvency representatives where two or more are appointed (see below, paras. 173-177). It may also involve cooperation between two or more courts or, when permitted by domestic law, administration of the multiple proceedings concerning group members in a single court.

65. Where two or more courts are involved, cooperation between them might include, for example, coordinating the holding of hearings, including joint hearings, and sharing and disclosure of information. As noted below with respect to cross-border cooperation (see part three, chap. III, paras. ...), joint or coordinated hearings

²³ Recommendation 13 provides: The insolvency law should clearly indicate (or include a reference to the relevant law that establishes) the court that has jurisdiction over the commencement and conduct of insolvency proceedings, including matters arising in the course of those proceedings. The criteria that might be relevant to determining the competent court are discussed in the commentary, see above, para. 59.

may significantly promote the efficiency of parallel insolvency proceedings involving members of an enterprise group by bringing relevant stakeholders together at the same time to discuss and resolve outstanding issues or potential conflicts, thus avoiding protracted negotiations and resulting time delays. Such hearings would generally involve two or more courts holding hearings at the same time with provision for simultaneous communication so that parties can at least hear and preferably see the proceedings in each court. These hearings may be relatively more convenient to organize in a domestic setting, as they would not generally involve the challenges posed by different languages, time zones, laws, procedures and judicial traditions that may occur in the cross-border context. However, as in the international context, the conduct of such hearings might require the use of common procedures and agreement, for example, as to how filing of documents and submission of information is to be handled between different courts.

66. Various factors might be relevant to considering whether procedural coordination is appropriate in a particular case. These may relate, for example, to information substantiating the existence of the group and identifying the linkages between group members, including the position in the group of each member covered by the application, particularly where one of them was the controlling group member or parent. Although the provision of such detail might be onerous in cases where creditors are permitted to apply for procedural coordination, the essence of the application is that the debtors are group members and the court would generally need to be satisfied as to that relationship when determining whether proceedings should commence and procedural coordination be ordered.

(b) Creditor participation

67. With respect to creditor participation, the interests of creditors of the different group members have the potential to diverge and it is unlikely that those interests could be represented in a single committee. It may be, however, that in cases of procedural coordination involving many group members, establishing a separate committee for the creditors of each member might prove to be extremely costly and inefficient for administration of the proceedings. For that reason, the courts in some States have the discretion not to establish a creditor committee for each separate entity in appropriate circumstances. Accordingly, the general principle may be that it is desirable that the insolvency law permit a single creditor committee to be established in suitable cases.

(c) Timing of application

68. Since the benefits to be derived from procedural coordination may be apparent at the time an application for commencement is made or may arise after proceedings have commenced, it is desirable that an insolvency law adopt a flexible approach to the timing of an application for procedural coordination. An application might therefore be made at the same time as an application for commencement of proceedings or at any subsequent time. However, since the goal of procedural coordination is to coordinate the administration of multiple proceedings, the feasibility of making an order at a late stage of the proceedings would be limited, in practice, by the usefulness of so doing. In other words, there may be little advantage in seeking to coordinate proceedings that are almost completed. The same approach

might apply to adding group members to an existing order for procedural coordination where those additional members became insolvent at a later time.

69. An insolvency law might adopt the approach of stipulating a time limit for applying for procedural coordination to provide a degree of certainty. However, as is generally the case with any consideration of the need for a time limit, the advantages of establishing such a limit must be weighed against the potential disadvantages of inflexibility and the need to ensure that the time limit is properly observed.

(d) Persons permitted to apply

70. It is desirable that procedural coordination be as widely available as possible and that the court be given the discretion to consider whether coordination of the various proceedings would advantage their administration. The court may consider whether to order procedural coordination on its own initiative, particularly to address situations it is determined that procedurally coordinating the proceedings would be in the best interests of the enterprise group and facilitate administration, but no application for procedural coordination is forthcoming from a party authorized to do so. The court might also order procedural coordination in response to an application from authorized parties, such as any group member subject to insolvency proceedings, the insolvency representative of a member, who would generally possess the information most relevant for making such an application, or a creditor.

71. In the case of creditors, the eligibility limitation that applies with respect to an application for commencement of insolvency proceedings should not necessarily apply. Where the application for procedural coordination is made at the time of the application for commencement, the issue of commencement might be treated separately from that of procedural coordination. Similarly, once proceedings have commenced, there is no reason to limit the ability to apply for procedural coordination to those creditors who are creditors of the members to be coordinated — the decision to order procedural coordination should not be conditioned upon the status of the creditor applying.

(e) Competent courts

72. Procedural coordination may also raise the issues of jurisdiction noted above with respect to joint applications for commencement (see above, paras. 59-61), where different domestic courts have competence over the various group members subject to insolvency proceedings. In jurisdictions where those issues arise, they would generally be determined by reference to domestic procedural law. In some States, different proceedings may be consolidated or transferred to a single court, for example, the court with competence to administer insolvency proceedings with respect to the parent of a group. A range of other criteria, such as priority of filing, size of indebtedness or centre of control, might also be chosen to establish the prevailing competence of one court in the domestic setting. A key element of consolidating or transferring proceedings to a single court would be establishing communication between the courts involved prior to that transfer. Creditors of different group members might also be located in different places, raising issues of representation and the location in which creditor committees would meet or be constituted.

73. Although these issues might be addressed by law other than the insolvency law, it is desirable, as noted above with respect to joint applications (see para. 61), that the approach of recommendation 13 be followed. That would require the insolvency law to clearly indicate or include a reference to the relevant law that establishes the court with jurisdiction over an application for procedural coordination.

(f) Notice with respect to procedural coordination

74. An application for procedural coordination may be subject to the same requirements for giving of notice as an application for commencement of proceedings under the *Legislative Guide* (see recommendations 19, 22-24). When made at the same time as the application for commencement of proceedings, only an application for procedural coordination by creditors would require notice to be given to the relevant debtors, consistent with recommendation 19.

75. An application made at that time by group members should not require creditors to be notified, consistent with recommendations 23-24, but relevant information, such as the content or implications of the order, could be included with the notice of commencement of proceedings.

76. When an application for procedural coordination is made subsequent to commencement of proceedings, it may be appropriate to provide notice to creditors, notwithstanding that procedural coordination does not affect the substantive rights of creditors. The provision of notice may be particularly important where the law makes provision, as noted above, for cases commenced in different jurisdictions to be transferred to, or administered by, a single court and that transfer may affect procedural aspects of the proceedings of interest to creditors, such as the location of meetings of a creditor committee or the place for submission of claims.

77. Provision of notice to all creditors may be satisfied with collective notification, such as by notice in a particular legal publication, when domestic legislation so permits and when appropriate, for instance, in the case of a large number of creditors with very small claims. In addition to the information required by the recommendations above addressing provision of notice on commencement of proceedings (recommendation 25), notice of an order for procedural coordination might include the terms of the order and information relevant to, for example, coordination of hearings and meetings, and arrangements to be made with respect to lending.

(g) Modifying or terminating an order for procedural coordination

78. Given that the purpose of procedural coordination is to promote administrative convenience and cost-efficiency, an insolvency law may include provisions relating to modification or reversal of an order to accommodate changed circumstances. That approach might be appropriate when, for example, a coordinated reorganization is not successful and the individual members should be liquidated separately. Reversal of an order, although rarely required, should be possible as the initial order is not intended to affect substantive rights. As a safeguard, the insolvency law could provide that reversal or modification would be possible, provided it was without prejudice to actions already taken or rights affected by the initial order.

Recommendations 202-210**Purpose of legislative provisions**

The purpose of provisions on procedural coordination of insolvency proceedings with respect to two or more enterprise group members is:

- (a) To facilitate coordination of the administration of those insolvency proceedings, while respecting the separate legal identity of each group member; and
- (b) To promote cost-efficiency and a better return to creditors.

Contents of legislative provisions*Procedural coordination of two or more insolvency proceedings*

202. The insolvency law should specify that the administration of insolvency proceedings with respect to two or more enterprise group members may be coordinated for procedural purposes.

203. The insolvency law should specify that, at the request of a person permitted to make an application under recommendation 206 or on its own initiative, the court²⁴ may order procedural coordination.

204. Procedural coordination may involve, for example, joint provision of notice; coordination of procedures for submission and verification of claims; appointment of a single or the same insolvency representative; coordination of avoidance proceedings; cooperation between the courts, including coordination of hearings; and cooperation between insolvency representatives, including information sharing and coordination of negotiations. The scope and extent of the procedural coordination [in each case] should be specified by the court.

*Application for procedural coordination**- Timing of application*

205. The insolvency law should specify that an application for procedural coordination may be made at the time of an application for commencement of insolvency proceedings or at any subsequent time.²⁵

Persons permitted to apply

206. The insolvency law should specify that an application for procedural coordination may be made by:

- (a) An enterprise group member that is subject to an application for commencement of insolvency proceedings or subject to insolvency proceedings;
- (b) The insolvency representative of an enterprise group member; or

²⁴ Coordination might involve different courts competent with respect to different group members or a single court that is competent with respect to a number of different insolvency proceedings concerning members of the same group. Accordingly, an order for procedural coordination may require action by more than one court.

²⁵ The impracticability of ordering procedural coordination at an advanced stage of the insolvency proceedings is discussed in the commentary; see above, paras.68-69.

(c) A creditor²⁶ of an enterprise group member that is subject to an application for commencement of insolvency proceedings or subject to insolvency proceedings.

Coordinating consideration of an application

207. The insolvency law should specify that the court²⁷ may take appropriate steps to coordinate with any other competent court consideration of an application for procedural coordination of insolvency proceedings concerning two or more enterprise group members. Those steps might involve, for example, coordinated proceedings; joint hearings; sharing and disclosure of information.

Modification or termination of an order for procedural coordination

208. The insolvency law should specify that an order for procedural coordination may be modified or terminated, provided that any actions or decisions already taken pursuant to the order should not be affected by the modification or termination. Where more than one court is involved in ordering procedural coordination, those courts may take appropriate steps to coordinate modification or termination of the procedural coordination.

Competent courts

209. For the purposes of recommendation 13, the words “commencement and conduct of insolvency proceedings, including matters arising in the course of those proceedings” include applications and orders for procedural coordination of insolvency proceedings with respect to two or more enterprise group members.²⁸

Notice of procedural coordination

210. The insolvency law should establish requirements for giving notice with respect to applications and orders for procedural coordination and modification or termination of procedural coordination, including the scope and extent of the order; to whom notice should be given; the party responsible for giving notice; and the content of the notice.

C. Treatment of assets on commencement of insolvency proceedings

79. The manner in which the commencement of insolvency proceedings affects the debtor and its assets is discussed in detail above (see part two, chap. II). In general, those effects would apply equally to commencement of insolvency proceedings against two or more enterprise group members. Some of the effects that might differ in the group context are discussed below, with respect to protection and preservation of the insolvency estate; post-commencement finance; avoidance; subordination; and remedies, including substantive consolidation orders.

²⁶ To be eligible to make an application for procedural coordination, a creditor does not have to be a creditor of all the group members in respect of which it is seeking procedural coordination.

²⁷ See note 23 above.

²⁸ The criteria that might be relevant to determining the competent court are discussed in the commentary, see above, para.59 and note 23.

1. Protection and preservation of the insolvency estate

(a) Application of the stay to a solvent group member

80. As noted above (see part two, chap. II, para. 26), many insolvency laws include a mechanism to protect the value of the insolvency estate that not only prevents creditors from commencing actions to enforce their rights through legal remedies during some or all of the period of insolvency proceedings, but also suspends actions already under way against the debtor. The recommendations relating to the application of that mechanism, referred to as a “stay”, would apply generally in the case of insolvency proceedings against two or more enterprise group members (see recommendations 39-51).

81. One issue that might arise in the context of the insolvency of enterprise groups, but not in the case of individual debtors, is the extension of the stay to an enterprise group member that is not subject to the insolvency proceedings (where the insolvency law permits a group member that is not insolvent to be included in the proceedings, this issue will not arise). The issue may be of particular relevance to enterprise groups because of the interrelatedness of the business of the group. For example, when finance is arranged on a group basis by way of cross-guarantees or cross-collateralization, the finance provided to one member might affect the liabilities of another, or actions affecting the assets of group members not subject to insolvency proceedings may also affect the assets and liabilities or the ability to continue their ordinary course of business of group members with respect to which applications for commencement have been made or insolvency proceedings have commenced.

82. Extension of the stay to include the solvent member might be sought in a number of situations, for example, to protect an intra-group guarantee that relies upon the assets of the solvent group member providing the guarantee; to restrain a lender from seeking to enforce an agreement against a solvent group member, where that enforcement might affect the liability of another member subject to an application for insolvency proceedings; and to restrain enforcement of a security interest against assets of a solvent member that are central to the business of the group, including the business of group members subject to an application for insolvency proceedings. Extension of the stay in these cases has the potential to affect the business of the solvent member and the interests of its creditors, depending upon the nature of the solvent member and its function within the group structure. The day-to-day activities of a trading group member, for example, may be more adversely affected than those of a group member established to hold certain assets or obligations.

83. In some States, ordering insolvency-related relief with respect to a solvent group member (not included in insolvency proceedings) might not be possible as it would conflict, for example, with the protection of property rights or raises issues of constitutional rights. Nevertheless, it might be possible to achieve the same effect if a court could order measures of protection in conjunction with the commencement of insolvency proceedings with respect to other enterprise group members in certain cases, such as where there is an intra-group guarantee. The measures may be available at the courts’ discretion, subject to such conditions as the court determines appropriate.

84. These measures might be covered by recommendation 48, which provides for the court to grant relief in addition to any relief that might be applicable automatically on commencement of insolvency proceedings (as addressed in recommendation 46). As the footnote to recommendation 48 points out, that additional relief would depend upon the types of measures available in a particular jurisdiction and the measures that might be appropriate in a particular insolvency proceeding.

85. Measures might also be available on a provisional basis. Recommendation 39 addresses provisional measures, specifying the types of relief that might be available “at the request of the debtor, creditors or third parties, where relief is needed to protect and preserve the value of the assets of the debtor or the interests of creditors, between the time an application to commence insolvency proceedings is made and commencement of the proceedings”.

86. Protection for the interests of the creditors, both secured and unsecured, of the solvent group member, might also be found in the relevant recommendations above. Recommendation 51, for example, specifically addresses the issue of protection of secured creditors and grounds for relief from the stay applicable on commencement and might be extended to secured creditors of the solvent group member. Other grounds for relief from the stay might relate to the financial situation of the solvent member and the continuing effect of the stay on its day-to-day operations and, potentially, its solvency.

87. Where a secured creditor is a member of the same enterprise group as the debtor or debtors, a different approach to the question of protection might be required, especially where the insolvency law permits substantive consolidation or subordination of related person claims (see below, paras.121-126).

(b) Post-application finance

88. The discussion on post-commencement finance in part two, chapter II recognizes that the continued operation of the debtor’s business after the commencement of insolvency proceedings is critical to reorganization and, to a lesser extent, liquidation, where the business is to be sold as a going concern. To maintain its business activities, the debtor must have access to funds to enable it to continue to pay for crucial supplies of goods and services, including labour costs, insurance, rent, maintenance of contracts and other operating expenses, as well as costs associated with maintaining the value of assets.

89. The same need for finance also occurs in the period between the time an application for commencement of insolvency proceedings is made and commencement of those proceedings (referred to as post-application finance). When an enterprise group member becomes insolvent and makes an application for commencement of insolvency proceedings, that application often triggers an event of default under existing loan agreements, entitling the lender to discontinue advancing funds under those agreements. Where an insolvency law does not provide for automatic commencement of insolvency proceedings upon application, it can often take a period of several months between the making of an application and the commencement of the proceedings, during which time, the courts must make an independent evaluation as to whether the debtors subject to the application meet the statutory criteria to commence proceedings. However, if the group member is to

continue as a going concern while this determination is being made, it must be able to continue to conduct its business, pay its employees, pay its suppliers and generally continue its day-to-day activities. The availability or lack of financing during this interim period can determine or significantly influence whether reorganization will ultimately be a viable option or whether liquidation will be required.

90. As noted above (part two, chap. II, para. 96), in the absence of enabling or clarifying treatment in the insolvency law, the provision of finance in this period before commencement of the insolvency proceedings may raise difficult questions relating to the application of avoidance powers and the liability of both the lender and the debtor. Some insolvency laws provide, for example, that where a lender advances funds to an insolvent debtor in the period before commencement of proceedings, the lender may be responsible for any increase in the liabilities of other creditors or the advance may be subject to avoidance in any ensuing insolvency proceedings as a preferential transaction.

91. The existence of a provision under the insolvency law enabling finance to be obtained for the period of time between the making of an application and the commencement of the proceedings would provide the necessary authorization and give any existing or new lender the assurance and incentive necessary to provide additional financing to cover that period.

92. Recommendation 39 permits the court to order provisional measures to preserve the assets of the debtor prior to the commencement of insolvency proceedings, where those measures are needed to protect those assets and the interests of creditors. Since those measures could include authorizing post-application, the provision of that finance should therefore be regarded as being within the purview of recommendation 39.

2. Use and disposal of assets

93. It is noted above (see part two, chap. II, para. 74) that, although as a general principle it is desirable that an insolvency law not interfere unduly with the ownership rights of third parties or the interests of secured creditors, the conduct of insolvency proceedings will often require assets of the insolvency estate, and assets in the possession of the debtor being used in the debtor's business, to continue to be used or disposed of (including by way of encumbrance) in order to enable the goal of the particular proceedings to be realized.

94. Where insolvency proceedings concern two or more enterprise group members, issues may arise with regard to the use of assets belonging to a group member not subject to insolvency proceedings to support ongoing operations of those members subject to such proceedings, pending resolution of the proceedings. Where those assets are in the possession of one of the group members subject to insolvency proceedings, recommendation 54, which addresses the use of third-party owned assets in the possession of the debtor, may be sufficient.

95. Where those assets are not in the possession of any of the group members subject to insolvency proceedings, recommendation 54 generally will not apply. There may be circumstances, however, where the solvent group member in possession of those assets is included in the insolvency proceedings or the provisions of a group reorganization plan should cover the assets (see below,

para. 184, for a discussion of the inclusion of a solvent group member in a reorganization plan). Where the solvent group member is not included in the proceedings, the question will be whether those assets can be used to support group members subject to insolvency proceedings and if so, the conditions to which that use would be subject. The use of those assets might raise questions of avoidance, particularly where the supporting member subsequently became insolvent, and also raises concerns for creditors of that member.

3. Post-commencement finance

(a) The need for post-commencement finance

96. The discussion on post-commencement finance above in part two, chapter II (see paras. 94-95) recognizes that the continued operation of the debtor's business after the commencement of insolvency proceedings is critical to reorganization and, to a lesser extent, liquidation where the business is to be sold as a going concern. To maintain its business activities, the debtor must have access to funds to enable it to continue to pay for crucial supplies of goods and services, including labour costs, insurance, rent, maintenance of contracts and other operating expenses, as well as costs associated with maintaining the value of assets. It is also noted, however, that many jurisdictions restrict the provision of new money in insolvency or do not specifically address the issue of new finance or the priority for its repayment in insolvency. Of those laws that do address post-commencement finance, very few, if any, specifically address the issue in the context of enterprise groups.

97. Post-commencement finance may be even more important in the group context than it is in the context of individual insolvency proceedings. If there are no ongoing funds there is very little prospect of reorganizing an insolvent enterprise group or selling all or parts of it as a going concern. The economic impact of that failure is likely to be much greater, especially in large groups, than it would be in the case of an individual debtor. The reasons for promoting the availability of post-commencement finance in the group context are therefore similar to the case of the individual debtor, although a number of issues different to those relating to the individual debtor are likely to arise. These issues may include: balancing the interests of individual enterprise group members with what is required for the reorganization of the group as a whole; provision of post-commencement finance by solvent group members, especially in cases where issues of control might arise (such as where that solvent member is controlled by the insolvent parent of the group); treatment of transactions that are essentially between related parties (see glossary, para. (jj)); provision of finance by other group members subject to insolvency proceedings; the possibility of conflict of interest between the needs of the different debtors with respect to ongoing finance where a single insolvency representative is appointed to several group members; and the desirability of maintaining, in insolvency proceedings, the financing structure that the group had before the onset of insolvency, especially where that structure involved pledging all of the assets of the group for finance that was channelled through a centralized group entity with treasury functions.

98. Recommendations 63-68 aim to promote the availability of finance for continued operation or survival of the debtor's business and ensure appropriate protection for the providers of post-commencement finance, as well as for other parties whose rights may be affected by the provision of post-commencement

finance. In the enterprise group context, these recommendations would apply to post-commencement finance provided by both lenders external to the group and solvent members of the group.

(b) Sources of post-commencement finance in a group context

99. As noted above in part two, chapter II (see para. 99), post-commencement finance is likely to come from a limited number of sources. In the enterprise group context, that might include sources both external and internal to the group, where internal sources might include both solvent group members and group members already subject to insolvency proceedings. While some of the incentives for providing post-commencement finance might be the same for internal and external lenders, internal lenders may have the added inducement of their own survival where they are to be part of a reorganization.

(i) Provision of post-commencement finance by a solvent group member

100. As noted above, one of the questions with respect to post-commencement finance in the enterprise group context is whether the assets of a solvent group member can be used, such as by provision of a security interest or guarantee, to obtain financing for an insolvent member from an external source or to fund the insolvent member directly and, if so, the implications for the recommendations concerning priority and security. A solvent group member might have an interest in the financial stability of the parent, other group members or the group as a whole in order to ensure its own financial stability and the continuation of its business, particularly where it is closely integrated with or reliant upon insolvent members for ongoing business activity. Different types of solvent entities, such as special purpose entities with few liabilities and valuable assets, might be involved in different ways in the insolvency of other group members, such as granting a guarantee or security interest to insolvent group members to help obtain new finance.

101. However, use of the assets of a solvent group member in that way, especially where that solvent member is likely to become, or subsequently becomes, insolvent, raises a number of questions. While the solvent entity might provide that finance on its own authority under relevant company law in a commercial context and not under the insolvency law, the consequences of that provision of finance ultimately may be regulated by the insolvency law. Questions may arise, for example, as to: whether a solvent group member would be entitled to the priority provided by recommendation 64 if it provided funding to an insolvent group member; whether the claim arising from that transaction would be subject to special treatment because the transaction occurred between related parties pursuant to recommendation 184; or whether such a transaction might be considered a preferential transaction in any subsequent insolvency of the member providing the finance. Under some laws, providing such finance may be prohibited as constituting a transfer of the assets of a solvent entity to an insolvent entity to the detriment of the creditors and shareholders of the solvent entity.

102. Some of the difficulties associated with provision of finance by a solvent group member might be solved if addressed in the context of a reorganization plan, in which the solvent group member, as well as external finance providers, could participate on a contractual basis. While there might be situations in which that

approach would be appropriate, the requirement for post-commencement finance at any early stage of the insolvency proceedings — in reorganization proceedings, before a plan could be negotiated and, in cases such as liquidation on a going concern basis, where there would be no reorganization plan — suggests it is likely to be of limited application.

103. Recommendation 63 establishes the basis for obtaining post-commencement finance (that the insolvency representative determines it to be necessary for the continued operation or survival of the business of the debtor or the preservation or enhancement of the value of the estate) and its authorization (by the court or by creditors). Those requirements remain relevant in the context of enterprise groups and for the avoidance of doubt, recommendation 63 should be interpreted as applying to a group member subject to insolvency proceedings that obtains post-commencement finance from either an external lender or a solvent member of the same group. What recommendation 63 does not address is a group member subject to insolvency proceedings providing post-commencement finance directly to another group member or facilitating its provision by way of security interest or guarantee.

(ii) *Provision of post-commencement finance by an insolvent group member*

104. Provision of post-commencement finance by one group member subject to insolvency proceedings to another such member is not directly addressed elsewhere in the *Guide*. Some of the general prohibitions under existing laws associated with insolvent entities borrowing and lending funds may need to be further considered to facilitate provision of post-commencement finance in that situation (see above, para. 96). The policy rationale for these prohibitions is likely to be even more evident when both the lender and the borrower are not only insolvent and subject to insolvency proceedings, but also members of the same enterprise group. The group context may also raise concerns with respect to the duties and obligations of the insolvency representative, when the insolvency representative of one insolvent group member seeks to facilitate the provision of post-commencement finance to another insolvent group member.

105. While it may generally be expected that a group member subject to insolvency proceedings would not have the ability to provide post-commencement finance to another such member or to provide support for its provision, there may be circumstances, albeit potentially limited, where it would be both possible, and desirable, particularly when the interests of the enterprise group are considered as a whole. To the extent that the provision of such finance has an impact on the rights of existing creditors, both secured and unsecured, of both group members, it is desirable that it be balanced against the prospect that preservation of going concern value by the continued operation of the business will ultimately provide benefit to those creditors. A balance might also be desirable between sacrificing one group member for the benefit of other members and achieving a better overall result for all members. Although potentially difficult to achieve, the goal might be fair apportionment of any harm that arises from such post-commencement finance in the short term with a view to the long term gain, rather than the sacrifice of one member (and its creditors) for the benefit of others involved in the post-commencement finance.

Conflict of interest

106. The provision of finance in the group context raises issues concerning possible prejudice and conflict of interest that are not relevant in the case of a single debtor. A conflict of interest might arise, for example, in balancing the interests of the group as a whole against the potentially different interests of the lender and the receiver of post-commencement finance, particularly where a single insolvency representative is appointed to the insolvency proceedings of a number of group members. For example, the insolvency representative of the member providing the finance might also be the insolvency representative of the receiving member. That situation might be addressed in several ways in the insolvency law, such as by requiring court or creditor approval of the post-commencement finance or by appointing one or more additional insolvency representatives to ensure the interests of the creditors of the different group members are protected (see below, paras. 173-178). The appointment might be to address that specific conflict or on more general terms for the duration of the proceedings.

107. There is also the question of whether an insolvent group member might, as part of the financing arrangements of the enterprise group as a whole, be requested to guarantee finance provided to a solvent group member. Since the provision of that guarantee is likely to constitute a disposal of the assets of the insolvent group member, it would probably be covered by the recommendations addressing that issue (see recommendations 52-62).

(iii) Priority for post-commencement finance

108. Recommendation 64 specifies the need to establish the priority to be accorded to post-commencement finance and the level of that priority, i.e. ahead of ordinary unsecured creditors, including those with administrative priority. While priority generally provides an important incentive for the provision of such financing, the inducement required in the group context is perhaps slightly different than in the situation of the individual debtor. The particular interest of the group member providing finance may relate more to the insolvency outcome for the group as a whole (including that member), than to commercial considerations of profit or short-term gains. In those circumstances, it might be necessary to consider whether the level of priority accorded by recommendation 64 would be appropriate. One view might be that that level of priority provides appropriate incentive for the provision of finance and affords appropriate protection to the creditors of the provider. Another view might be that because of the related person nature of the transaction and the group context (including the finance provider's self-interest in the outcome of the insolvency proceedings for the group as a whole), suggest the desirability of according a lower priority to protect the interests of creditors more generally and achieve a balance between the interests of the finance provider's creditors and those of the group member receiving the finance. Whichever approach is adopted, it is desirable that the insolvency law accord priority to such lending and specify the appropriate level.

(iv) Security for post-commencement finance

109. Recommendations 65-67 address issues relating to the granting of security for post-commencement finance and generally would be applicable in the enterprise group context. A group member subject to insolvency proceedings may grant a

security interest of the type referred to in recommendation 65 to secure post-commencement finance it has obtained for its own use. That situation is covered by recommendations 65-67. A group member subject to insolvency proceedings may also grant a security interest of the type referred to in recommendation 65 to secure repayment of post-commencement finance provided to another group member subject to insolvency proceedings. In the latter situation, the group member is granting the security over its unencumbered assets, but is not directly receiving the benefit of the post-commencement finance and is potentially diminishing the pool of assets available to its creditors. It may, however, derive an indirect benefit when the provision of the finance facilitates a better solution for the insolvency of the group as a whole and, as noted above, any short-term detriment is offset by the long-term gain for creditors, including its own creditors. The member receiving the finance is deriving a direct benefit, but increasing its indebtedness to the potential detriment of its creditors, although they should also benefit in the longer term.

110. To parallel the requirements of recommendation 63 with respect to the receiving group member, it might be desirable to require the insolvency representative of the providing group member to determine that the provision of the post-commencement finance is necessary for the continued operation or survival of the business of that group member or the preservation or enhancement of the value of its estate. An additional requirement might be that any harm to creditors of the providing group member must be offset by the benefit to be derived from the granting of the security interest.

111. Consistent with recommendation 63, the insolvency law might also require the court to authorize or creditors of the providing group member to consent to the post-commencement finance. Given that new finance may be required on a fairly urgent basis to ensure the continuity of the business, it is desirable that the number of authorizations required be kept to a minimum. The advantages and disadvantages of the different considerations with respect to authorization that would also apply in the group context are discussed above (see part two, chap. II, paras. 105-106). It may be added that since the issues to be determined are likely to be more complex in that context, involving as they do a larger number of parties and complex interrelationships, it is most likely to be the insolvency representatives of the relevant group members that will be in the best position to assess the impact of the proposed financing arrangement, in much the same way as they are with respect to determining the need for new finance under recommendation 63. If the involvement of the courts or creditors is considered desirable, however, it should be borne in mind that issues of delay may be encountered where there are a large number of creditors to be consulted or where the court does not have the ability to make speedy decisions.

112. Where it is considered desirable to accord a security interest granted to secure new finance a priority ahead of an existing security interest over the same asset, as contemplated by recommendation 66, the safeguards applicable under that recommendation and recommendation 67 would apply in the group context.

(v) *Guarantee or other assurance of repayment for post-commencement finance*

113. The granting of a guarantee by one group member for payment of new finance to another is not a situation that arises in the case of an individual debtor and is

therefore not addressed elsewhere in the *Guide*. However, since the considerations that arise are similar to those discussed above with respect to the granting of a security interest, it may be appropriate to adopt the same approach with respect to the determinations to be made by the insolvency representative and the possible authorization by the court or consent of creditors.

Recommendations 211-216

Purpose of legislative provisions

The purpose of provisions on post-commencement finance for enterprise groups is:

- (a) To facilitate finance to be obtained by enterprise group members subject to insolvency proceedings for the continued operation or survival of their business or the preservation or enhancement of the value of their assets;
- (b) To facilitate the provision of finance by enterprise group members, including group members subject to insolvency proceedings;
- (c) To ensure appropriate protection for the providers and receivers of post-commencement finance and for those parties whose rights may be affected by the provision of that finance; and
- (d) To advance the objective of fair apportionment of the benefit and detriment associated with the provision of post-commencement finance among all group members involved.

Contents of legislative provisions²⁹

Provision of post-commencement finance by a group member subject to insolvency proceedings to another group member subject to insolvency proceedings

[211. The insolvency law should permit an enterprise group member subject to insolvency proceedings to:

- (a) Advance post-commencement finance to other enterprise group members subject to insolvency proceedings;
- (b) Grant a security interest over its assets for post-commencement finance provided to another enterprise group member subject to insolvency proceedings; and
- (c) Provide a guarantee or other assurance of repayment for post-commencement finance provided to another enterprise group member subject to insolvency proceedings.]

[212. The insolvency law should specify that post-commencement finance may be [provided] [advanced or facilitated] in accordance with recommendation 211, where the insolvency representative of the group member advancing finance, granting a security interest or providing a guarantee or other assurance:

- (a) Determines it to be necessary for the continued operation or survival of the business of that enterprise group member;

²⁹ Recommendations 211 to 216 were revised at the 36th session of the Working Group, but not considered for lack of time. Accordingly, they are included here in square brackets.

(b) Determines it to be necessary for the preservation or enhancement of the value of the estate of that enterprise group member; and

(c) Determines [in accordance with the insolvency law] that any harm to creditors is offset by the benefit to be derived from advancing finance, granting a security interest or providing a guarantee or other assurance.]

[213. The insolvency law may require the court to authorize or creditors to consent to the provision of post-commencement finance in accordance with recommendations 211 and 212.]

Post-commencement finance obtained by a group member subject to insolvency proceedings from another group member subject to insolvency proceedings

[214. The insolvency law should specify that in accordance with recommendation 63, post-commencement finance may be obtained from an enterprise group member subject to insolvency proceedings by another group member subject to insolvency proceedings where the insolvency representative of the receiving group member determines it to be necessary for the continued operation or survival of the business of that group member or the preservation or enhancement of the value of the estate. The insolvency law may require the court to authorize or creditors to consent to the obtaining of that post-commencement finance.]

Priority for post-commencement finance

[215. The insolvency law should specify the priority that applies to post-commencement finance provided by one enterprise group member subject to insolvency proceedings to another group member that is subject to insolvency proceedings.]

Security for post-commencement finance

[216. The insolvency law should specify that recommendations 65, 66 and 67 apply to the granting of a security interest in accordance with recommendation 211(b).]

4. Avoidance proceedings

(a) Nature of enterprise group transactions

114. Recommendations 87-99 relating to avoidance would generally apply to avoidance of transactions in the context of an enterprise group, although additional considerations may apply to transactions between group members because of the group structure and the different relationships that group members may have vis-à-vis each other. A significant expenditure of time and money may be required to disentangle the layers of intra-group transactions in order to determine which, if any, are subject to avoidance. Some transactions that might appear to be preferential or undervalued as between the immediate parties might be considered differently when viewed in the broader context of an enterprise group, where the benefits and detriments of transactions might be more widely assigned. Those transactions, for

example, contracts entered into for purposes of transfer pricing³⁰ may involve terms and conditions that are different to those included in similar contracts entered into by unrelated commercial parties on usual commercial terms. Similarly, some legitimate transactions occurring within an enterprise group may not be commercially viable outside the group context if the benefits and detriments were to be analysed on normal commercial grounds.

115. Intra-group transactions may represent trading between group members; channelling of profits upwards from one group member to a controlling group member; loans from one member to another to support continued trading by the borrowing member; asset transfers and guarantees between group members; payments by one group member to a creditor of a related group member; a guarantee or mortgage given by one group member to support a loan by an outside party to another group member; or a range of other transactions. A group may have the practice of putting all available money and assets in the group to the best commercial use in the interests of the group as a whole, as opposed to the benefit of the group member to which they belong. This might include sweeping cash from some group members into the financing group member. Although this might not always be in the best interests of the individual group members, some laws permit directors of wholly owned group members, for example, to act in that manner, provided it is in the best interests of the controlling group member.

(b) Avoidance criteria in the enterprise group context

116. An issue that may need to be considered in the group context is whether the goal of avoidance provisions is to protect intra-group transactions in the interests of the group as a whole, on the basis that they are normal “ordinary course” business transactions or subject them to particular scrutiny and a greater likelihood of avoidance because of the relationship between transacting parties as group members and the provisions of the insolvency law applicable to related person transactions. “Related person” is defined to include enterprise group members such as a parent, subsidiary, partner or affiliate of the insolvent group member against which insolvency proceedings have commenced or a person, including a legal person, that is or has been in control of the debtor (glossary, para. (jj)). While in some cases, a stricter regime may be justified on the basis that these parties are more likely to be favoured and tend to have the earliest knowledge of when the debtor is, in fact, in financial difficulty, the mere existence of the enterprise group may not always provide sufficient justification to treat all intra-group transactions as transactions between related persons that should be subject to avoidance, as noted above (part two, chap. V, para. 48).

117. Some of the transactions occurring in the group context may be clearly identified as falling within the categories of transactions subject to avoidance under recommendation 87. Other transactions may not be so clearly within the scope of that recommendation and may raise issues concerning the extent to which the group

³⁰ Transfer pricing refers to the pricing of goods and services within a multi-divisional organization. Goods from the production division may be sold to the marketing division, or goods from a parent company may be sold to a foreign subsidiary. The choice of the transfer prices affects the division of the total profit among the parts of the company. It can be advantageous to choose them so that, in terms of bookkeeping, most of the profit is made in a country with low taxes.

was operated as a single enterprise or the assets and liabilities of group members were closely intermingled, thus potentially affecting the nature of the transactions between members and between members and external creditors. There may be transactions that are intra-group transactions because they cannot be conducted in other ways or because they result from the manner in which the group is structured. In some situations, for example, finance may only be available on an intra-group basis and there would be no justification to treat such a transaction more strictly than if it involved an external lender. Similarly, a group may involve centralized cash flow and transfers of cash, as noted above, that would not occur where there was no group.

118. There may also be transactions that are not covered by the terms of avoidance provisions. Some insolvency laws, for example, provide for avoidance of preferential payments to a debtor's own creditors, but not to the creditors of a related group member, unless the payment is made, for example, pursuant to a guarantee. For these reasons, it is desirable that an insolvency law consider those issues in the group context and include group-related factors as matters to be taken into account in determining whether a particular transaction between group members would be subject to avoidance under recommendation 87.

119. Recommendation 97 addresses the elements to be proven to avoid a particular transaction and defences to avoidance. It may be appropriate to consider how those elements would apply in the group context and whether a different approach is required. One approach to the burden of proof in the case of transactions with related persons, for example, might be to provide that the requisite intent or bad faith is deemed or presumed to exist where certain types of transactions are undertaken within the suspect period and the counterparty to the transaction will have the burden of proving otherwise. Some laws, for example, have established a rebuttable presumption that certain transactions among group members and the shareholders of that group would be detrimental to creditors and therefore subject to avoidance. A different approach would be to acknowledge that, as noted above, transactions occurring within a group, although not always commercially viable if occurring outside the group context, are generally legitimate, especially when occurring within the limits of relevant applicable law and within the ordinary course of business of the group members concerned. Such a transaction might nevertheless be subjected to special scrutiny (in much the same way as is recommended for claims by related persons in recommendation 184, an approach followed by some laws that also permit the rights of related group members under intra-group debt arrangements to be deferred or subordinated to the rights of external creditors of the insolvent members.

120. Recommendation 93 makes limited provision for a creditor to commence an avoidance proceeding with the approval of the insolvency representative or leave of the court. In the group context, the level of integration of the group may have the potential to significantly affect the ability of creditors to identify the group member with which they dealt and thus provide the requisite information for commencing avoidance proceedings.

Recommendations 217-218**Purpose of legislative provisions**

The purpose of avoidance provisions as among enterprise group members is [to provide, in addition to the considerations set forth in recommendations 87-99, that the insolvency law may permit the court to take into account that the transaction took place in the context of an enterprise group and establish the specific circumstances that may be considered by the court.]

Contents of legislative provisions*Avoidable transactions*

217. The insolvency law should specify that, in considering whether a transaction of the kind referred to in recommendation 87 (a), (b) or (c) that took place between enterprise group members or an enterprise group member and other related persons should be avoided, the court may have regard to the circumstances in which the transaction took place. Those circumstances may include: the relationship between the parties to the transaction; the degree of integration between enterprise group members that are parties to the transaction; the purpose of the transaction; whether the transaction contributed to the operations of the group as a whole; and whether the transaction granted advantages to enterprise group members or other related persons that would not normally be granted between unrelated parties.

Elements of avoidance and defences

218. The insolvency law should specify the manner in which the elements referred to in recommendation 97 would apply to avoidance of transactions in the enterprise group context.³¹

5. Subordination

121. It is noted above (see part two, chap. V, para. 56) that subordination refers to a rearranging of creditor priorities in insolvency and does not relate to the validity or legality of the claim. Notwithstanding the validity of a claim, it might nevertheless be subordinated because of a voluntary agreement or a court order. Two types of claims that typically may be subordinated in insolvency are those of persons related to the debtor and of owners and equity holders of the debtor.

(a) Related person claims

122. In the enterprise group context, subordination of related person claims might mean, for example, that the rights of group members under intra-group arrangements could be deferred to the rights of external creditors of those group members subject to insolvency proceedings.

123. As explained, the term “related person” would include enterprise group members. However, the mere fact of a special relationship with the debtor, including, in the group context, membership of the same enterprise group, may not be sufficient in all cases to justify special treatment of a creditor’s claim. In some

³¹ That is, the elements to be proved in order to avoid a transaction, the burden of proof, specific defences to avoidance and the application of special presumptions.

cases, those claims will be entirely transparent and should be treated in the same manner as similar claims made by creditors who are not related persons; in other cases, they may give rise to suspicion and will deserve special attention. An insolvency law may need to include a mechanism to identify those types of conduct or situation in which claims will deserve additional attention. Similar considerations apply, as noted above, with respect to avoidance of transactions occurring between enterprise group members.

124. A number of situations in which special treatment of a related person's claim might be justified (e.g. where the debtor is severely undercapitalized and where there is evidence of self-dealing) are identified in part two, chapter V, para. 48. In the group context, additional considerations might include, as between a parent and a controlled group member: the parent's participation in the management of the group member; whether the parent has sought to manipulate intra-group transactions to its own advantage at the expense of external creditors; or whether the parent has otherwise behaved unfairly, to the detriment of creditors and shareholders of the controlled group member. Under some laws, the existence of those circumstances might result in the parent having its claims subordinated to those of unrelated unsecured creditors or even minority shareholders of the controlled group member.

125. Some laws include other approaches to intra-group transactions such as permitting debts owed by a group member that borrowed funds under an intra-group lending arrangement to be involuntarily subordinated to the rights of external creditors of that borrowing member; permitting the court to review intra-group financial arrangements to determine whether particular funds given to a group member should be treated as an equity contribution rather than as a loan, where the law subordinates equity contributions to creditor claims (on treatment of equity, see below); and allowing voluntary subordination of intra-group claims to those of external creditors.

126. The practical result of a subordination order in an enterprise group context might be to reduce or effectively extinguish any repayment to those group members whose claims have been subordinated if the claims of secured and unsecured external creditors are large in relation to the funds available for distribution. In some cases this might threaten the viability of the subordinated group member and be detrimental not only to its own creditors, but also its shareholders and, in the case of reorganization, to the group as a whole. The adoption of a policy of subordinating such claims may also have the effect of discouraging intra-group lending.

(b) Treatment of equity

127. Many insolvency laws distinguish between the claims of owners and equity holders that may arise from loans extended to the debtor or their ownership interest in the debtor (see above, part two, chap. V, para. 76). With respect to claims arising from equity interests, many insolvency laws adopt the general rule that the owners and equity holders of the business are not entitled to a distribution of the proceeds of assets until all other claims that are senior in priority have been fully repaid (including claims of interest accruing after commencement). As such, these parties will rarely receive any distribution in respect of their interest in the debtor. Where a distribution is made, it would generally be made in accordance with the ranking of

shares specified in the company law and the corporate charter. Debt claims, such as those relating to loans, however, are not always subordinated.

128. Few insolvency laws specifically address subordination of equity claims in the enterprise group context. One law that does allow the courts to review intra-group financial arrangements to determine whether particular funds given to a group member subject to insolvency proceedings should be treated as an equity contribution, rather than as an intra-group loan, enabling it to be postponed behind creditors' claims. Those funds are likely to be treated as equity where the original debt to equity ratio was high before the funds were contributed and the funds would reduce the ratio; if the paid-up share capital was inadequate; if it is unlikely that an external creditor would have made a loan in the same circumstances; and if the terms on which the advance was made were not reasonable and there was no reasonable expectation of repayment.

129. Subordination is discussed above in the context of treatment of claims and priorities, but the *Guide* does not recommend the subordination of any particular types of claims under the insolvency law, simply noting that subordinated claims would rank after claims of ordinary unsecured creditors (recommendation 189).³²

D. Remedies

130. Because of the nature of enterprise groups and the way in which they operate, there may be a complex web of financial transactions between group members, and creditors may have dealt with different members or even with the group as a single economic entity, rather than with members individually. Disentangling the ownership of assets and liabilities and identifying the creditors of each group member may involve a complex and costly legal inquiry. However, because adherence to the separate entity approach means that each group member is only liable to its own creditors, it may become necessary, when insolvency proceedings have commenced with respect to one or more of the group members, to disentangle the ownership of their assets and liabilities.

131. When this disentangling can be effected, adherence to the separate entity principle operates to limit creditor recovery to the assets of the specific group member of which they were a creditor. Where it cannot be affected or other specified reasons exist to treat the group as a single enterprise, some laws include remedies that allow the single entity approach to be set aside. Historically, these remedies have been developed to overcome the perceived inefficiency and unfairness of the traditional separate entity approach in specific group cases. In addition to setting aside intra-group transactions or subordinating intra-group lending, the remedies may include: the extension of liability for external debts to solvent group members, as well as to office holders and shareholders; contribution orders; and pooling or substantive consolidation orders. Some of these remedies require findings of fault to be made, while others rely upon the establishment of certain facts with respect to the operations of the enterprise group. In some cases, particularly where misfeasance of management is involved, other remedies might

³² See also the UNCITRAL Legislative Guide on Secured Transactions.

more appropriately be employed, such as removing the offending directors and limiting management participation in reorganization.

132. Because of the potential inequity that may result when one group member is forced to share assets and liabilities with other group members that may be less solvent, remedies setting aside the single entity approach are not universally available, generally not comprehensive and apply only in restricted circumstances. Those remedies involving extension of liability may involve “piercing” or “lifting the corporate veil”, which may result in shareholders, who are generally shielded from liability for the enterprise’s activities, being held liable for certain activities. The remedies discussed below do not involve lifting the corporate veil, although in some circumstances the effect may appear to be similar.

1. Extension of liability

133. Extending the liability for external debts and, in some cases, the actions of the group members subject to insolvency proceedings to solvent group members and relevant office holders is a remedy available under some laws to individual creditors on a case-by-case basis and depends upon the circumstances of that creditor’s relationship with the debtor.

134. Many laws recognize circumstances in which exceptions to the limited liability of corporate entities are available and one group member and relevant office holders could be found liable for the debts and actions of another group member. Some laws adopt a prescriptive approach and the circumstances are strictly limited; other laws adopt a more expansive approach, giving the courts broad discretion in evaluating the circumstances of a particular case on the basis of specific guidelines. In both cases, however, the basis for extending liability beyond the insolvent group member is the relationship between that group member and related group members in terms of both ownership and control. A further relevant factor may be the conduct of the related group member vis-à-vis the creditors of the member subject to insolvency proceedings.

135. Whilst there are different formulations of the circumstances in which liability might be extended, examples generally fall into the following categories, although it should be noted that not all laws reflect all of these categories and to some extent they may overlap:

(a) Exploitation or abuse by one group member (perhaps the parent) of its control over another group member, including operating that group member continually at a loss in the interests of the controlling group member;

(b) Fraudulent conduct by the dominant shareholder, which might include fraudulently siphoning off a group member’s assets or increasing its liabilities, or conducting the affairs of the group member with an intent to defraud creditors;

(c) Operating a group member as the parent or controlling group member’s agent, trustee or partner;

(d) Conducting the affairs of the group or of a group member in such a way that some classes of creditors might be prejudiced (for example, incurring liabilities to employees of one group member);

(e) Artificial fragmentation of a unitary enterprise into several entities for the purposes of insulating the single entity from potential liabilities; failure to follow the formalities of treating group members as separate legal entities, including disregarding the limited liability of group members or confusing personal and corporate assets; or where the enterprise group structure is a mere sham or facade, such as where the corporate form is used as a device to circumvent statutory or contractual obligations;

(f) Inadequate capitalization of an entity, so that it does not have an adequate capital basis for carrying out its operations. This may apply at the time of establishment, or be the result of depletion of the capital by way of refunds to shareholders or by shareholders drawing more than distributable profits;

(g) Misrepresentation of the real nature of the enterprise group, leading creditors to believe that they are dealing with a single enterprise, rather than with a member of a group;

(h) Misfeasance, where any person, including a group member, can be required to compensate for any loss or damage to another group member arising from fraud, breach of duty or other misfeasance, such as actions causing significant injury or environmental damage;

(i) Wrongful trading, where directors, including shadow directors of a group member have a duty to monitor, for example, whether that group member can properly continue carrying on business in the light of its financial condition and are required to apply for insolvency within a specified period once it has become insolvent. Permitting or directing a group member to incur debts when it is or is likely to become insolvent would fall into this category; and

(j) Failing to observe regulatory requirements, such as keeping regular accounting records of a subsidiary or controlled group member.

136. Generally, the mere incidence of control or domination of a group member by another group member, or other form of close economic integration within an enterprise group, is not regarded as sufficient reason to justify disregarding the separate legal personality of each group member and piercing the corporate veil.

137. In a number of the examples where liability might be extended to the controlling group member, that liability may include the personal liability of the members of the board of directors of the controlling group member (who may be described as *de facto* or shadow directors). While directors of an individual group member may generally owe certain duties to that group member, they may be faced with balancing those duties against the overall commercial and financial interests of the group. Achieving the general interests of the group, for example, may require that the interests of individual members be sacrificed in certain circumstances. Some of the factors that might be relevant to determining whether directors of a controlling group member will be personally liable for the debts or actions of a controlled group member subject to insolvency proceedings include: whether there was active involvement in the management of the controlled group member; whether there was grievous negligence or fraud in the management of the insolvent group member; whether the management of the controlling group member could be in breach of duties of care and diligence or there was abuse of managerial power; or whether there was a direct relationship between the management of the controlled

group member and its insolvency. In some jurisdictions, directors may also be found criminally liable. One of the principal difficulties with extending liability in such cases is proving the behaviour in question to show that the controlling group member was acting as a de facto or shadow director.

138. There are also laws that provide for controlling group member or parents to accept liability for debts of controlled group members or subsidiaries by contract, especially where the creditors involved are banks, or by entering into voluntary cross-guarantees. Under other laws, which provide for various forms of integration of enterprise groups, the principal group member can be jointly and severally liable to the creditors of the integrated group members, for liabilities arising both before and after the formalization of the integration.

2. Contribution orders

139. A contribution order is an order by which a court can require a solvent group member to contribute specific funds to cover all or some of the debts of other group members subject to insolvency proceedings. Although contribution orders are not widely available under insolvency laws, a few jurisdictions have adopted or are considering adopting these measures, generally only in liquidation proceedings.

140. A number of the issues noted below may not require specific provisions to be included in the insolvency law, as remedies may already exist under other laws, such as those addressing liability and wrongful trading.

141. Under those laws that do permit contribution orders, the problem, as noted above, of reconciling the interests of the two sets of unsecured creditors that have dealt with the two separate group members, has meant that the power to make a contribution order is not commonly exercised. Courts have also taken the view that a full contribution order may be inappropriate if the effect is to threaten the solvency of the group member not already in liquidation, although it might be possible to order a partial contribution that is limited to certain assets, such as the balance remaining after meeting bona fide obligations.

142. Under one law that does provide for contribution orders, the court must take into account certain specified circumstances in considering whether to make an order. These include: the extent to which a related group member took part in the management of the group member in liquidation; the conduct of the related group member towards the creditors of the member in liquidation, although creditor reliance on the existence of a relationship between the group members is not sufficient grounds for making an order; the extent to which the circumstances giving rise to liquidation are attributable to the actions of the related group member; the conduct of a solvent group member after commencement of liquidation proceedings with respect to another group member, particularly if that conduct indirectly or directly affects the creditors of the group member subject to insolvency proceedings, such as with respect to failure to perform a contract; and such other matters as the court thinks fit.³³ Such an order might also be possible, for example, in cases when the subsidiary or controlled group member had incurred significant liability for personal injury or the parent or controlling group member had permitted the subsidiary or controlled group member to continue trading whilst insolvent.

³³ New Zealand Companies Act 1993, Sections 271 (1) (a) and 272 (1).

3. Substantive consolidation

(a) Introduction

143. As noted above, when procedural coordination is ordered, the assets and liabilities of the debtors remain separate and distinct, with the substantive rights of claimants unaffected. Substantive consolidation, on the other hand, permits the court, in insolvency proceedings involving two or more enterprise group members, to disregard the separate identity of each group member in appropriate circumstances and consolidate their assets and liabilities, treating them as though held and incurred by a single entity. The assets are thus treated as if they were part of a single estate for the general benefit of all creditors of the consolidated group members. Few jurisdictions provide statutory authority for consolidation orders and in those where the remedy is available, it is not widely used. A principal concern is that consolidation overturns the principle of the separate legal identity of each group member, which is often used to structure an enterprise group to respond to various business considerations, serving different purposes and having important implications, in terms for example of taxation law, corporate law and corporate governance rules. If the courts routinely agreed to substantive consolidation, many of the benefits to be derived from the flexibility of enterprise structure could be undermined.

144. Notwithstanding the absence of direct statutory authority or a prescribed standard for the circumstances in which substantive consolidation orders can be made, the courts of some jurisdictions have played a direct role in developing these orders and delimiting the appropriate circumstances. This practice reflects increased judicial recognition of the widespread use of interrelated corporate structures for taxation and business purposes. The circumstances that would support a consolidation order are, nevertheless, very limited and tend to be those where a high degree of integration of the group members, through control or ownership, would make it difficult, if not impossible, without expending significant time and resources, to disentangle the assets and liabilities of the different group members.

145. Consolidation is typically discussed in the context of liquidation and the legislation that authorizes it does so only in that context. There are, however, legislative proposals that would permit consolidation in the context of various types of reorganization. In jurisdictions without specific legislation, consolidation orders may be available in both liquidation and reorganization, where such an order would, for example, assist the reorganization of the group. While typically requiring a court order, consolidation may also be possible on the basis of consensus of the relevant interested parties. Some commentators suggest that consolidation by consensus frequently occurs in cases involving enterprise groups, and often in situations where the courts would generally uphold creditor objections to consolidation if a formal application were to be made. It may also be possible by way of a reorganization plan. Some laws permit a plan to include proposals for a debtor to be consolidated with other group members, whether insolvent or solvent, which could be implemented with creditor approval.

146. Consolidation might be appropriate where it leads to greater return of value for creditors, either because of the structural relationship between the group members and their conduct of business and financial relationships or because of the value of assets common to the whole group, such as intellectual property in both a process

conducted across numerous group members and the product of that process. A further ground might be where there is no real separation between the group members, and the group structure is being maintained solely for dishonest or fraudulent purposes.

147. The principal concerns with the availability of such orders, in addition to those associated with the fundamental issue of overturning the separate entity principle, include the potential unfairness caused to one creditor group when forced to share *pari passu* with creditors of a less solvent group member and whether the savings or benefits to the collective class of creditors outweighs incidental detriment to individual creditors. Some creditors might have relied on the separate assets or separate legal entity of a particular group member when trading with it, and should therefore not be denied a full payout because of their trading partner's relationship with another group member of which they were unaware. Other creditors might have relied upon the assets of the whole group and it would be unfair if they were limited to recovery against the assets of a single group member.

148. Because it involves pooling the assets of different group members, consolidation may not lead to increased recovery for each creditor, but rather operate to level the recoveries across all creditors, increasing the amount distributed to some at the expense of others. Additionally, the availability of consolidation may enable stronger, larger creditors to take advantage of assets that should not be available to them; encourage creditors who disagree with such an order to seek its review, thus prolonging the insolvency proceedings; and damage the certainty and enforceability of security interests (where intra-group claims disappear as a result of consolidation, creditors that have security interests in those claims would lose their rights).

149. Consolidation would generally involve the group members subject to insolvency proceedings, but in some cases and as permitted by some insolvency laws, might extend to an apparently solvent group member. This might occur when the affairs of that member were so closely intermingled with those of other group members that it would be beneficial to include it in the consolidation, when further investigation showed it to be actually insolvent because of the intermingling of assets or where the legal entity is a sham or involves a fraudulent scheme. Where the solvent group member is to be included, the creditors of that group member may have particular concerns and a limited approach might be taken so that the consolidation order extended only to the net equity of the solvent group member in order to protect the rights of those creditors, although this would be difficult in cases of intermingling or fraud.

(b) Circumstances supporting consolidation

150. A number of elements have been identified as relevant to determining whether or not substantive consolidation is warranted, both in the legislation that authorizes consolidation orders and in those cases where the courts have played a role in developing those orders. In each case, it is a question of balancing the various elements to reach a just and equitable decision; no single element is necessarily conclusive and all of the elements do not need to be present in any given case. Those elements have included: the presence of consolidated financial statements for the group; the use of a single bank account for all group members; the unity of interests and ownership between the group members; the degree of difficulty in

segregating individual assets and liabilities; sharing of overhead, management, accounting and other related expenses among different group members; the existence of intra-group loans and cross-guarantees on loans; the extent to which assets were transferred or funds moved from one member to another as a matter of convenience without observing proper formalities; adequacy of capital; commingling of assets or business operations; appointment of common directors or officers and the holding of combined board meetings; a common business location; fraudulent dealings with creditors; the practice of encouraging creditors to treat the group as a single entity, creating confusion among creditors as to which of the group members they were dealing with and otherwise blurring the legal boundaries of the group members; and whether consolidation would facilitate a reorganization or is in the interests of creditors.

151. While these many factors remain relevant, some courts have begun to focus on a limited number and in particular on whether the affairs of the group members are so intermingled that separating assets and liabilities can only be achieved at extraordinary cost and expenditure of time or group members are engaged in fraudulent schemes or business activity that has no legitimate business purpose. With respect to the first ground, the degree of intermingling required is hard to quantify and has been variously described by different courts as involving a degree of intermingling that was hopeless or a practical impossibility to disentangle; that would require such time and expense to disentangle the interrelationships between the group members and the ownership of assets that it would be disproportionate to the result, or was so substantial that it would threaten the realization of any net assets for the creditors; or that the allocation of assets and liabilities between the relevant members was essentially arbitrary and without economic reality. In reaching a decision that the degree of intermingling in a particular case justifies substantive consolidation, the courts have looked at various factors, including the manner in which the group members operated and related to each other, including with respect to management and financial matters; the sufficiency of record keeping of the individual group members; the observance of proper corporate formalities; the manner in which funds and assets were transferred between the various members; and other similar factors concerning group operations.

152. The type of fraud contemplated is not fraud occurring in the daily operations of a company, but rather the total absence of a legitimate business purpose, which may relate either to the reasons for which the company was formed or, once formed, the activities it undertakes (see above, para. 135(e)). Examples of such fraud may include transfers by a debtor of substantially all of its assets to a newly formed entity or to self-owned separate entities for the purpose of preserving and conserving those assets for its own benefit and to hinder, delay and defraud its creditors, simulation³⁴ or Ponzi³⁵ and other such fraudulent schemes.

³⁴ Simulation may involve contracts that either do not express the true intent of the parties and have no effect between the parties or produce different effects between the parties than those expressed in the contracts, i.e. sham contracts.

³⁵ A fraudulent investment operation that pays returns to separate investors from their own money or money paid by subsequent investors, rather than from any actual profit earned.

(c) **Applications for substantive consolidation**

(i) *Persons permitted to apply*

153. An insolvency law should address the question of who may apply for substantive consolidation and at what time. With respect to the parties permitted to apply, it would seem appropriate to follow the approach of recommendation 14 concerning the parties permitted to apply for commencement of insolvency proceedings. In the group context, that would include a group member and a creditor of any such group member. In addition, it would be appropriate to permit applications by the insolvency representative of any group member, since in many instances, it will be the insolvency representative or representatives appointed to administer group members that will have the most complete information on group members and are therefore in the best position to assess the appropriateness or desirability of substantive consolidation.

154. Although in some States it might be possible for the court to act on its own initiative to order substantive consolidation, the serious impact of such an order requires that a fair and equitable process be followed and that parties in interest have the opportunity to be heard and to object to such an order, in accordance with recommendations 137-138. For that reason, and since the *Legislative Guide* generally adopts the approach that courts do not act on their own initiative in insolvency matters, it may be appropriate to follow that approach in the case of substantive consolidation.

(ii) *Timing of an application*

155. Since the factors supporting substantive consolidation might not always be apparent or certain at the time insolvency proceedings commence, it is desirable that an insolvency law adopt a flexible approach to the issue of timing, allowing an application to be made at the same time as an application for commencement of proceedings or at any subsequent time. It should be noted, however, that the possibility of applying for substantive consolidation subsequent to commencement might be limited, in practice, by the state reached in administration of the proceedings, particularly for example, with respect to implementation of a reorganization plan. Certain key matters may already have been resolved, such as sale or disposal of assets or submission and admission of claims, or certain decisions taken and acted upon with respect to individual group members, creating practical difficulties with consolidating partly administered proceedings. In this situation, it is desirable that the order take account of the status of administration, consolidating the separate proceedings already in progress and preserving existing rights. Claims already admitted against a group member, for example, might therefore be treated as claims admitted against the consolidated estate.

156. The same approach might apply to adding group members to an existing substantive consolidation. As the administration of various enterprise group members proceeds, it may become apparent that additional group members should be included because the grounds for the initial order are also satisfied with respect to those members. If the consolidation order was made with the consent of the creditors, or if creditors were given the opportunity to object to a proposed order, the addition of another group member at a later stage of the proceedings has the potential to vary the pool of assets from that originally agreed or notified to

creditors. In that situation, it is desirable that creditors have a further opportunity to consent or object to the addition to the consolidation. Where substantive consolidation is ordered subsequent to a partial distribution to creditors, the introduction of a hotchpot rule might be desirable. This would help to ensure that a creditor who has received a partial distribution in respect of its claim against the single group member may not receive payment for the same claim in the consolidated proceedings, so long as the payment of the other creditors of the same class is proportionately less than the partial distribution the creditor has already received.

(d) Competing interests in consolidation

157. In addition to the competing interests of the creditors of the different group members, the interests of other stakeholders may warrant consideration in the context of consolidation, including those of creditors vis-à-vis shareholders; of the shareholders of the different group members, in particular those who are shareholders of some of the members but not of others; and of secured and priority creditors of different consolidated group members.

(i) Owners and equity holders

158. Many insolvency laws adopt the general rule that the rights of creditors outweigh those of owners and equity holders, with owners and equity holders being ranked after all other claims in the order of priority for distribution. Often this results in owners and equity holders not receiving a distribution (see part two, chap. V, para. 76 and recommendation 189). In the enterprise group context, the shareholders of some group members with many assets and few liabilities may receive a return, while the creditors of other group members with fewer assets and more liabilities may not. If the general approach of ranking shareholders behind unsecured creditors were to be extended in consolidation to the group as a whole, all creditors could be paid before the shareholders of any group member received a distribution.

(ii) Secured creditors

159. The position of secured creditors in insolvency proceedings is discussed throughout the *Legislative Guide* (see Annex I for relevant references) and the approach adopted that, as a general principle, the effectiveness and priority of a valid security interest should be recognized and the economic value of the encumbered assets should be preserved in insolvency proceedings. That approach will also apply to the treatment of secured creditors in the enterprise group context. It is also recognized that an insolvency law may nevertheless affect the rights of secured creditors in order to implement business and economic policies, subject to appropriate safeguards (see part two, chap. II, para. 59).

160. Questions arising with respect to consolidation might include: whether a security interest over some or all of the assets of one group member could extend to include assets of another group member where a consolidation order was made or whether that security interest should be limited to the defined pool of assets upon which the secured creditor had originally relied; whether secured creditors with insufficient security could make a claim against the pooled assets as unsecured creditors; and whether internal secured creditors (i.e. creditors that are at the same

time group members) should be treated differently to external secured creditors. Security interests over the whole of a debtor's estate would generally crystallize on the commencement of insolvency proceedings and the issue of that interest expanding to cover the pooled assets should not arise. To allow any secured creditor's security interest to be extended or expanded as the result of an order for substantive consolidation would improve that creditor's position at the expense of other creditors and amount to an unjust benefit or windfall, which is generally undesirable. The same point could be made with respect to employee claims.

161. One solution with respect to the treatment of external secured creditors might be to exclude them from the process of consolidation, thus achieving what might be termed a partial or limited consolidation. Individual secured creditors that relied upon the separate identity of group members, such as where they relied upon an intra-group guarantee, might require special consideration. Where encumbered assets are required for reorganization, a different solution might be possible, such as allowing the court to adjust the consolidation order to make specific provision for such assets or requiring the consent of the affected secured creditor. A secured creditor could surrender its security interest following consolidation, and the debt would become payable by all of the consolidated entities.

162. The interests of internal secured creditors might also need to be considered. Under some laws, those internal security interests might be extinguished, leaving the creditors with an unsecured claim, or those claims might be modified or subordinated.

(iii) *Priority creditors*

163. Similar questions arise with respect to the treatment of priority creditors. Practically, they might benefit or lose from the pooling of the group's assets in the same way as other unsecured creditors. Where priorities, such as those for employee benefits or tax, are based on the single entity principle, the treatment of those priorities across the group may need to be considered, especially where they interact with each other. For example, employees of a group member that has many assets and few liabilities will potentially compete with those of a group member in the opposite situation, with few assets and many liabilities, if there is consolidation. While priority creditors generally might obtain a better result at the expense of unsecured creditors without priority, the different groups of those priority creditors might have to adjust any expectations they may have as a result of their priority position with respect to the assets of a single entity. Where there is intermingling of assets so that it is not possible to determine who owns what assets, it may be very difficult to determine how much might be available to settle the claims of priority creditors. Accordingly, although it is desirable that the priorities established under the insolvency law with respect to each individual debtor be recognized where that debtor is subject to substantive consolidation, it might not always be possible to give them full effect.

(e) *Notification of creditors*

164. An application for substantive consolidation may be subject to the same requirements for giving notice as an application for commencement of

proceedings.³⁶ When made at the same time as the application for commencement of proceedings, only an application for substantive consolidation by creditors would require notice to be given to the relevant debtors, consistent with recommendation 19. An application by group members made at the same time as the application for commencement would not require creditors to be notified under recommendations 22 and 23, which do not mandate notification of an application for commencement of insolvency proceedings to the creditors of the concerned entity.

165. The potential impact of substantive consolidation on creditor rights suggests that affected creditors should have the right to be notified of any order for consolidation made at the time of commencement and have the right to appeal, consistent with recommendation 138. One issue to be considered is whether a single objection would be sufficient to prevent consolidation from occurring. It may be possible, for example, to provide objecting creditors who will be significantly disadvantaged by the consolidation relative to other creditors with a greater level of return than other unsecured creditors, thus departing from the strict policy of equal distribution. It may also be possible to exclude specific groups of creditors with certain types of contracts, for example, limited recourse project financing arrangements entered into with clearly identified group members at arm's length commercial terms.

166. Where the application is made by creditors after proceedings have commenced, it might be desirable for notice of the application to be given to insolvency representatives of the entities to be consolidated. Notice should be given in an effective and timely manner in the form determined by domestic law.

(f) Effect of an order for substantive consolidation

167. The insolvency law should establish the effects of an order for substantive consolidation. These might include: the treatment of assets and liabilities of the consolidated group members as if they were part of a single insolvency estate; the extinguishment of intra-group claims; treatment of claims against the individual group members to be consolidated as claims against the consolidated estate; recognition of priorities established against the individual group members as priorities against the consolidated estate (to the extent possible, given the difficulty noted above); and the convening of a single meeting for creditors of all consolidated group members. Concerning liquidation value for the purposes of recommendation 152 (b), that value in substantive consolidation would be the liquidation value of the consolidated estate, and not the liquidation value of the individual members before substantive consolidation. An order for substantive consolidation might also combine the creditors for the purposes of voting on any reorganization plan for the consolidated group members. Intra-group claims would generally disappear on consolidation on the basis that since the claim and the obligation to pay belong or are owed by the same insolvency estate, they effectively cancel each other out.

168. Where substantive consolidation is ordered after the commencement of proceedings or where group members are added to a substantive consolidation at different times, the choice of the date from which the suspect period for the

³⁶ See above, part two, chap. I, para. 64-71 and recommendations 19 (a), 22-25.

purposes of avoidance (see recommendation 89) would be calculated may need to be considered to provide certainty for lenders and other third parties. The issue may become more important as the period of time between an application for or commencement of individual insolvency proceedings and the order for substantive consolidation increases. Choosing the date of the order for substantive consolidation for calculation of the suspect period for avoidance purposes may create problems with respect to transactions entered into between the date of application for or commencement of insolvency proceedings for individual group members and the date of the substantive consolidation. One approach might be to calculate that date in accordance with recommendation 89. Another approach may be to establish a common date by reference to the earliest date on which there was an application for commencement or commencement of insolvency proceedings with respect to those group members to be consolidated. In either case, it is desirable that the date be specified in the insolvency law to ensure transparency and predictability.

(g) Modification of an order

169. Although modification of an order for substantive consolidation might not always be possible or desirable, given the substantive effect of that order, there may be cases where circumstantial changes or the availability of new information indicate the desirability of modifying the original order. Any such modification should be subject to the condition that any actions or decision taken pursuant to the initial order should be unaffected by the order for modification. Those actions or decisions, whether taken by the court or the insolvency representative, may include sales of assets and provision of finance to group members, provided they were taken in good faith.

(h) Exclusions from an order for substantive consolidation

170. Some laws make provision for what may be termed an order for partial or limited substantive consolidation, that is, an order for substantive consolidation that excludes certain assets or claims.

171. These exclusions will be rare, given the assumption in favour of substantive consolidation where the requirement for intermingling is met. Consolidation might be limited, for example, to unsecured creditors, thereby excluding external secured creditors, who might be free to enforce their security interests (unless those security interests depend upon the separate identity of the group members to be consolidated), or to only those assets and liabilities that are intermingled, thus exempting those assets whose ownership might be clear. Claims associated with any such excluded assets would go with the asset. Another approach excludes certain assets from substantive consolidation if otherwise creditors would be unfairly prejudiced, although this ground is unlikely to be relevant in cases of intermingling or fraud.

(i) Competent court

172. The issues discussed above with respect to both joint applications and procedural coordination would apply also with respect to the court competent to order substantive consolidation (see above, paras. 59-61 and recommendation 209).

Recommendations 219-232**Purpose of legislative provisions**

The purpose of provisions on substantive consolidation is:

- (a) To provide legislative authority for substantive consolidation, while respecting the basic principle of the separate legal identity of each enterprise group member;
- (b) To specify the very limited circumstances in which the remedy of substantive consolidation may be available in order to ensure transparency and predictability; and
- (c) To specify the effect of an order for substantive consolidation, including the treatment of security interests.

Contents of legislative provisions*Exceptions to the principle of separate legal identity*

219. The insolvency law should respect the separate legal identity of each enterprise group member. Exceptions to that general principle should be limited to the grounds set forth in recommendation 220.

Circumstances in which substantive consolidation may be available

220. The insolvency law may specify that, at the request of persons permitted to make an application under recommendation 223, the court may order substantive consolidation with respect to two or more enterprise group members [in the following limited circumstances]:

- (a) Where the court is satisfied that the assets or liabilities of the enterprise group members are intermingled to such an extent that the ownership of assets and responsibility for liabilities cannot be identified without disproportionate expense or delay; or
- (b) Where the enterprise group members are engaged in a fraudulent scheme or activity with no legitimate business purpose and the court is satisfied that substantive consolidation is essential to rectify that scheme or activity.

Exclusions from substantive consolidation

221. The insolvency law may permit the court to exclude specified assets and claims from an order for substantive consolidation.

*Application for substantive consolidation**- Timing of application*

222. The insolvency law should specify that an application for substantive consolidation may be made at the time of an application for commencement of

insolvency proceedings with respect to enterprise group members or at any subsequent time,³⁷ provided the conditions of recommendation 220 are satisfied.

- *Persons permitted to apply*

223. The insolvency law should specify the persons permitted to make an application for substantive consolidation, which may include an enterprise group member, the insolvency representative of an enterprise group member or a creditor of any such group member.

Effect of an order for substantive consolidation

224. The insolvency law should specify that an order for substantive consolidation has the following effects:³⁸

(a) The assets and liabilities of the consolidated group members are treated as if they were part of a single insolvency estate;

(b) Claims and debts between group members included in the order are extinguished; and

(c) Claims against group members included in the order are treated as claims against the [single] [consolidated] insolvency estate.

225. [The insolvency law should specify that a creditor holding a security interest over an asset of an enterprise group member or a labour claim against that enterprise group member cannot [improve][enhance] the value, ranking or priority of their security interest or claim as a result of an order for substantive consolidation affecting that enterprise group member.]

Treatment of security interests in substantive consolidation

226. The insolvency law should specify that the rights and priorities of a creditor holding a security interest over an asset of an enterprise group member subject to an order for substantive consolidation should, as far as possible, be respected in substantive consolidation, unless:

(a) The secured indebtedness is owed solely between enterprise group members and is extinguished by an order for substantive consolidation;

(b) It is determined that the security interest was obtained by fraud in which the creditor participated; or

(c) The transaction granting the security interest is subject to avoidance in accordance with recommendations 87, 88 and 217.

Recognition of priorities in substantive consolidation

227. The insolvency law should specify that the priorities established under insolvency law and applicable to individual enterprise group members prior to an

³⁷ The impracticability of ordering substantive consolidation at an advanced stage of the insolvency proceedings is discussed in the commentary, see above, paras. 155-156.

³⁸ The effect on security interests is addressed in recommendation 226.

order for substantive consolidation should, as far as possible, be recognized in substantive consolidation.

Meetings of creditors

228. The insolvency law should specify that, to the extent a meeting of creditors is required by the law to be held subsequent to an order for substantive consolidation, creditors of all consolidated group members are eligible to attend.

Calculation of suspect period in substantive consolidation

229. (1) The insolvency law should specify the date from which the suspect period with respect to avoidance of transactions of the type referred to in recommendation 87 should be calculated when substantive consolidation is ordered.

(2) When substantive consolidation is ordered at the same time as commencement of insolvency proceedings, the specified date from which the suspect period is calculated retrospectively should be determined in accordance with recommendation 89.

(3) When substantive consolidation is ordered subsequent to commencement of insolvency proceedings, the specified date from which the suspect period is calculated retrospectively may be:

(a) A different date for each enterprise group member included in the substantive consolidation, being either the date of application for or commencement of insolvency proceedings with respect to each such group member, in accordance with recommendation 89; or

(b) A common date for all enterprise group members included in the substantive consolidation, being the earliest of the dates of application for, or commencement of, insolvency proceedings with respect to those group members.

Modification of an order for substantive consolidation

230. The insolvency law should specify that an order for substantive consolidation may be modified, provided that any actions or decisions already taken pursuant to the order are not affected by the modification.³⁹

Competent court

231. For the purposes of recommendation 13, the words “commencement and conduct of insolvency proceedings, including matters arising in the course of those proceedings” include an application or order for substantive consolidation, including modification of that order.⁴⁰

³⁹ It is not intended that use of the term “modification” would include termination of an order for substantive consolidation.

⁴⁰ The criteria that might be relevant to determining the competent court are discussed in the commentary, see above, paras. 59-61 and note 23.

Notice

232. The insolvency law should establish requirements for giving notice with respect to applications and orders for substantive consolidation and modification of substantive consolidation, including the parties to whom notice should be given; the party responsible for giving notice; and the content of the notice.

E. Participants**1. Appointment of an insolvency representative****(a) Coordination of proceedings**

173. When multiple proceedings commence with respect to group members, an order for procedural coordination may or may not be made, but in either case, coordination of those proceedings may be facilitated if the insolvency law was to include specific provisions promoting coordination and indicating how it might be achieved, along the lines of article 27 of the Model Law. That approach could be adopted with respect to coordination between the different courts involved in administering proceedings for different group members and between the different insolvency representatives appointed in those proceedings. The appointment and role of the insolvency representative are discussed above (see part two, chap. III, paras. 36-74). The issues discussed, together with recommendations 115-125 would generally apply in the group context. The obligations of an insolvency representative under the *Legislative Guide* (specifically, recommendations 111, 116-117, and 120) might be extended in the group context to include various aspects of coordination, including: sharing and disclosure of information; approval or implementation of agreements with respect to division of the exercise of powers and allocation of responsibilities between insolvency representatives; cooperation on use and disposal of assets; proposal and negotiation of coordinated reorganization plans (unless preparation of a single group plan is possible as discussed below); coordination of the use of avoidance powers; obtaining of post-commencement finance; coordination of the submission and admission of claims; and distributions to creditors. The insolvency law could also address timely resolution of disputes between the different insolvency representatives appointed.

174. Where a number of insolvency representatives are appointed to the different proceedings concerning group members, the insolvency law may permit one of them to take a leading role in coordinating those proceedings. That representative could be, for example, the representative of the parent or controlling group member if it is subject to proceedings. While such a leading role might reflect the economic reality or structure of the enterprise group, equality under the law of all insolvency representatives should be preserved. Coordination under the leadership of one insolvency representative may also be achieved on a voluntary basis, to the extent possible under applicable law.

175. In certain jurisdictions, courts, rather than insolvency representatives, may have the principal authority to coordinate insolvency proceedings. When the insolvency law so provides, and different courts are involved in administering proceedings for different group members, it is desirable that the provisions

concerning coordination of proceedings apply also to the courts and that they have powers along the lines of article 27 of the Model Law.

(b) Appointment of a single or the same insolvency representative

176. Coordination of multiple proceedings might also be facilitated by the appointment of a single or the same insolvency representative to administer the different group members subject to insolvency. In practice, it might be possible to appoint one insolvency representative to administer multiple proceedings or it might be necessary to appoint the same insolvency representative to each of the proceedings to be coordinated, depending upon procedural requirements and the number of courts involved. Although the administration of each of the group members would remain separate (as in the case of procedural coordination), such an appointment could help to ensure coordination of the administration of the various group members, reduce related costs and delays and facilitate the gathering of information on the group as a whole. With respect to the latter point, care might need to be exercised in how that information is treated, ensuring in particular that confidentiality requirements with respect to separate group members are observed. While many insolvency laws do not address the question of appointing a single insolvency representative, there are some jurisdictions where such an appointment in the group context has become a practice. This has also been achieved to a limited extent in some cross-border insolvency cases, where insolvency representatives from the same international firm have been appointed in the different jurisdictions.

177. Where a single or the same insolvency representative is appointed to administer several members of a group with complex financial and business relationships and different groups of creditors, there is the potential for loss of neutrality and independence. Conflicts of interest may arise, for example, with respect to cross guarantees, intra-group claims and debts, post-commencement finance, lodging and verification of claims; or the wrongdoing by one group member with respect to another group member. The obligation to disclose potential or existing conflicts of interest contained in recommendations 116 and 117 would be relevant to the group context. As a safeguard against possible conflicts, the insolvency representative could be required to provide an undertaking or be subject to a practice rule or statutory obligation to seek direction from the court. Additionally, the insolvency law could provide for the appointment of one or more further insolvency representatives to administer the entities in conflict. That appointment might relate to the specific area of conflict, with the appointment being limited to its resolution, or be more general and for the duration of the proceedings.

(c) Debtor in possession

178. When the insolvency law permits the debtor to remain in possession of the business, and no insolvency representative is appointed, special consideration may be required to determine how multiple proceedings should be coordinated and the extent to which the obligations applicable to the insolvency representative, including any additional obligations referred to above, will apply to the debtor in possession (see above, part two, chap. III, paras. 16-18). To the extent that the debtor in possession performs the functions of an insolvency representative, consideration might also be given to how provisions of an insolvency law permitting the appointment of a single or the same insolvency representative or one of several

insolvency representatives to take a lead role in coordinating proceedings might apply to the debtor in possession context.

Recommendations 233-237

Purpose of legislative provisions

The purpose of provisions on appointment of insolvency representatives in an enterprise group context is:

(a) To permit appointment of a single or the same insolvency representative to facilitate coordination of insolvency proceedings commenced with respect to two or more enterprise group members; and

(b) To encourage cooperation where two or more insolvency representatives are appointed, with a view to avoiding duplication of effort; facilitating gathering of information on the financial and business affairs of the enterprise group as a whole; and reducing costs.

Contents of legislative provisions

Appointment of a single or the same insolvency representative

233. The insolvency law should specify that, where it is determined to be in the best interests of the administration of the insolvency proceedings with respect to two or more enterprise group members, a single or the same insolvency representative may be appointed to administer those proceedings.⁴¹

Conflict of interest

234. The insolvency law should specify measures to address any conflict of interest that might arise when a single or the same insolvency representative is appointed to administer insolvency proceedings with respect to two or more enterprise group members. Such measures may include the appointment of one or more additional insolvency representatives.

Cooperation between two or more insolvency representatives in a group context

235. The insolvency law may specify that when different insolvency representatives are appointed to administer insolvency proceedings with respect to two or more enterprise group members, those insolvency representatives should cooperate with each other to the maximum extent possible.⁴²

⁴¹ Although recommendation 118 addresses selection and appointment of the insolvency representative, it does not recommend appointment by any particular authority, but leaves it up to the insolvency law. Whichever mechanism is used with respect to domestic appointment would apply to recommendation 233.

⁴² In addition to the provisions of the insolvency law with respect to cooperation and coordination, the court generally may indicate measures to be taken to that end in the course of administration of the proceedings.

Cooperation between two or more insolvency representatives in procedural coordination

236. The insolvency law should specify that, when more than one insolvency representative is appointed to administer insolvency proceedings that are subject to procedural coordination, those insolvency representatives should cooperate with each other to the maximum extent possible.

Forms of cooperation [Cooperation to the maximum extent possible]

237. The insolvency law should specify that the cooperation to the maximum extent possible between insolvency representatives referred to in recommendations 235 and 236, should be implemented by any appropriate means, including:

- (a) Sharing and disclosure of information;
- (b) Approval or implementation of agreements with respect to division of the exercise of powers and allocation of responsibilities between insolvency representatives, including one insolvency representative taking a coordinating or leading role;
- (c) Coordination with respect to administration and supervision of the affairs of the group members subject to insolvency proceedings, including day-to-day operations where the business is to be continued; post-commencement finance; safeguarding of assets; use and disposition of assets; use of avoidance powers; submission and admission of claims; and distributions to creditors; and
- (d) Coordination with respect to proposal and negotiation of reorganization plans, communication with creditors and meetings of creditors.

F. Reorganization of two or more enterprise group members

179. Recommendations 139-159 address issues specific to the preparation, proposal, content, approval and implementation of a reorganization plan. In general, those recommendations will be applicable in the context of an enterprise group.

1. Coordinated reorganization plans

180. When reorganization proceedings commence with respect to two or more enterprise group members, irrespective of whether or not those proceedings are to be procedurally coordinated, one issue not addressed elsewhere in the *Legislative Guide* is whether it will be possible to reorganize the debtors through a single reorganization plan covering several members or through coordinated, substantially similar plans or each member. Such plans have the potential to deliver savings across the group's insolvency proceedings, ensure a coordinated approach to the resolution of the group's financial difficulties, and maximize value for creditors. Although several insolvency laws permit the negotiation of a single reorganization plan, under some laws this approach is only possible where the proceedings are procedurally coordinated or substantively consolidated, while under other laws it would generally only be possible where the proceedings could be coordinated on a voluntary basis.

181. In practice, the concept of a single reorganization plan or coordinated plans would require the same or a similar reorganization plan to be prepared and approved

in each of the proceedings concerning group members covered by the plan. Approval of such a plan would be considered on a member-by-member basis with the creditors of each group member voting in accordance with the voting requirements applicable to a plan for a single debtor; it would not be desirable to consider approval on a group basis and allow the majority of creditors of the majority of members to compel approval of a plan for all members. The process for preparation of the plan and solicitation of approval should take into account the need for all group members to approve the plan and it would accordingly need to address the benefits to be derived from such approval and the information required to obtain that approval. Those issues would be covered by recommendations 143 and 144 concerning content of the plan and the accompanying disclosure statement. Additional details that could relevantly be disclosed in the group context might include details with respect to group operations, the linkages between group members, the position in the group of each member covered by the plan and functioning of the group as such.

182. Such a reorganization plan or plans would need to take into account the different interests of the different groups of creditors, including the possibility that providing varying rates of return for the creditors of different group members might be desirable in certain circumstances. Achieving an appropriate balance between the rights of different groups of creditors with respect to approval of the plan, including appropriate majorities, both among the creditors of a single group member and between creditors of different group members is also desirable. Classification of claims and classes of creditors also needs to be considered, as does voting of creditors and approval of a plan, particularly when group members are creditors of each other and therefore “related persons”. Calculation of applicable majorities in the group context may require consideration of how creditors with the same claim against different group members should be counted for voting purposes, particularly where the claims may have different priorities. Some consideration may also need to be given to whether rejection by the creditors of one of several group members might prevent approval of the plan across the group and the consequences of that rejection. One approach might be based upon provisions applicable to the approval of a reorganization plan for a single debtor. Another approach might be to devise different majority requirements that are specifically designed to facilitate approval in the group context. Safeguards analogous to those in recommendation 152 could also be included, with an additional requirement that the plans should be fair as between the creditors of different group members.

183. In the group context, a related person includes a person who is or has been in a position of control of the debtor or a parent, subsidiary or affiliate of the debtor (see glossary, (jj)). Voting by related persons on approval of the plan is discussed above (see part two, chap. IV, para. 46) and it is noted that although some insolvency laws restrict the ability of related persons to vote in various ways, most insolvency laws do not specifically address the issue. It should be noted that where the insolvency law includes such restrictions, they might cause difficulty in some groups when a particular member has only creditors classified as related persons or a very limited number of creditors who are not related persons.

184. An insolvency law might also include provisions addressing the consequences of failure to approve such a reorganization plan as addressed by recommendation 158. One law, for example, provides that the consequence of

failure to approve a plan is the liquidation of all insolvent group members. Where solvent members participated in the plan by consent, special provisions may be required to prevent undue advantages arising from that liquidation.

2. Inclusion of a solvent group member in a reorganization plan

185. Paragraphs 53-57 above discuss the possibility of including a solvent group member in an application for commencement of proceedings. It is noted that an apparently solvent member may, on further investigation, satisfy the commencement standard of imminent insolvency and thus be covered, for commencement purposes, by recommendation 15. That situation may not be uncommon in an enterprise group where the insolvency of some members leads almost inevitably to the insolvency of others. Where imminent insolvency is not an issue, however, a solvent group member generally could not participate in a reorganization plan for other members of the same group in insolvency proceedings under the insolvency law. There may, however, be circumstances in which different levels of participation by a solvent member in a reorganization plan might be both appropriate and feasible, on a voluntary basis. Such participation by solvent group members is, in fact, not unusual in practice. The solvent group member could thus aid the reorganization of other enterprise group members and would be contractually bound by the plan once it were approved and, where required, confirmed. The decision of a solvent group member to participate in a reorganization plan would be an ordinary business decision of that member, and the consent of creditors would not be necessary unless required by applicable company law. With respect to any disclosure statement accompanying a plan that included a solvent group member, caution would need to be exercised in disclosing information relating to that solvent group.

Recommendations 238-239

Purpose of legislative provisions

The purpose of provisions relating to reorganization plans in an enterprise group context is:

- (a) To facilitate the coordinated rescue of the businesses of enterprise group members subject to the insolvency law, thereby preserving employment and, in appropriate cases, protecting investment; and
- (b) To facilitate the negotiation and proposal of coordinated reorganization plans in insolvency proceedings with respect to two or more enterprise group members.

Contents of legislative provisions

Reorganization plan

238. The insolvency law should permit coordinated reorganization plans to be proposed in insolvency proceedings with respect to two or more enterprise group members.

239. The insolvency law should specify that an enterprise group member that is not subject to insolvency proceedings may voluntarily participate in a reorganization plan proposed for two or more enterprise group members subject to insolvency proceedings.

A/CN.9/WG.V/WP.90/Add.1 (Original: English)**Note by the Secretariat on the treatment of enterprise groups in insolvency, submitted to the Working Group on Insolvency Law at its thirty-seventh session****ADDENDUM****CONTENTS**

<i>Chapter</i>	<i>Paragraphs</i>
III. Addressing the insolvency of groups: international issues	1-47
A. Introduction	1-6
B. Promoting cross-border cooperation and coordination of enterprise group insolvencies	7-47

III. Addressing the insolvency of groups: international issues**A. Introduction**

1. The introduction to the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation [the Practice Guide]¹ notes that although the number of cross-border insolvency cases has increased significantly since the 1990s, the adoption of legal regimes, either domestic or international, equipped to address cases of a cross-border nature has not kept pace. The lack of such regimes has often resulted in inadequate and uncoordinated approaches that have not only hampered the rescue of financially troubled businesses and the fair and efficient administration of cross-border insolvencies, but also impeded the protection and maximization of the value of the assets of the insolvent debtor and are unpredictable in their application. Moreover, the disparities in and, in some cases, conflicts between national laws have created unnecessary obstacles to the achievement of the basic economic and social goals of insolvency proceedings. There has often been a lack of transparency, with no clear rules on recognition of the rights and priorities of existing creditors, the treatment of foreign creditors and the law that will be applicable to cross-border issues. While many of these inadequacies are also apparent in domestic insolvency regimes, their impact is potentially much greater in cross-border cases, particularly where reorganization is the goal.

2. In addition to the inadequacy of existing laws, the absence of predictability as to their application in practice and associated cost and delay has added a further layer of uncertainty that can impact upon capital flows and cross-border investment. Acceptance of different types of proceedings, understanding of key concepts and the treatment accorded to parties with an interest in insolvency proceedings differs. Reorganization or rescue procedures, for example, are more prevalent in some countries than others. The involvement of, and treatment accorded to, secured creditors in insolvency proceedings varies widely. Different countries also recognize

¹ Adopted by the Commission on 1 July 2009.

different types of proceedings with different effects. An example in the context of reorganization proceedings is the cases in which the law of one State envisages a debtor in possession continuing to exercise management functions, while under the law of another State in which contemporaneous insolvency proceedings are being conducted with respect to the same debtor, existing management will be displaced or the debtor's business liquidated. Many national insolvency laws have claimed, for their own insolvency proceedings, application of the principle of universality, with the objective of a unified proceeding where court orders would be effective with respect to assets located abroad. At the same time, those laws do not accord recognition to universality claimed by foreign insolvency proceedings. In addition to differences between key concepts and treatment of participants, some of the effects of insolvency proceedings, such as the application of a stay or suspension of actions against the debtor or its assets, regarded as a key element of many laws, cannot be applied effectively across borders.

3. In the international context, the models that have been created to address cross-border insolvency issues have always stopped short of dealing satisfactorily with enterprise groups. When the United Kingdom's House of Lords sitting under the chairmanship of Lord Hoffmann considered whether the United Kingdom should subscribe to the European Convention on Insolvency Proceedings, the committee commented on the failure of the convention to deal with groups of companies — the most common form of business model. When the convention became the European Council (EC) Regulation No. 1346/2000 of 29 May 2000 on insolvency proceedings (the EC Regulation), it still did not address the issue. When the text of what became the UNCITRAL Model Law on Cross-Border Insolvency was debated, groups were regarded as "a stage too far".

4. A well-reported case that illustrates one of the key problems with respect to groups in the international context was the KPNQwest group, which failed the day the EC Regulation came into force, 31 May 2002. KPNQwest was a telecoms group that owned and operated a fibre-optic cable network around Europe and to the United States. The main cables were in rings: for the ring around Europe, the French part of the ring was owned by a French subsidiary; the German part by a German subsidiary, and so on. When the Dutch parent failed, many of the subsidiaries were obliged to file for the protection of the court in the jurisdictions in which they were incorporated. No one was able to coordinate the proceedings and it was effectively broken up. A discussion of other international cross-border cases would confirm the shortcomings of the existing system; there is often a clear tension between the traditional separate legal entity approach to corporate regulation and its implications for insolvency and the facilitation of insolvency proceedings against a group or part of a group in a cross border situation in a manner that would enable the goal of maximizing value for the benefit of all creditors to be achieved. The history of cross-border insolvency since the Maxwell case in 1991² underscores the problems encountered in managing numbers of parallel proceedings, and the need for the creative solutions that have been developed and adopted. Some of these solutions are discussed in the Practice Guide, but the development of a legislative regime to

² This case involved the United States and the United Kingdom. United States Bankruptcy Court for the Southern District of New York, Case No. 91 B 15741 (15 January 1992), and the High Court of Justice, Chancery Division, Companies Court, Case No. 0014001 of 1991 (31 December 1991).

address the cross-border insolvency of enterprise groups remains a challenge to be met.

5. There has been considerable discussion in recent times as to what might form the basis of a legal regime to address the cross-border insolvency of enterprise groups. Some suggestions have included adapting the concept of “centre of main interests” as it applies to an individual debtor and to an enterprise group to enable all proceedings with respect to group members to be commenced in, and administered from, a single centre through one court and subject to a single governing law. Another suggestion has been to identify a coordination centre for the group, which might be determined by reference to the location of the controlling member of the group or to permit group members to apply for insolvency in the State in which proceedings have commenced with respect to the insolvent parent of the group.³

6. These proposals raise significant and difficult issues. Some relate to the very nature of multinational enterprise groups and how they operate — how to define what constitutes an enterprise group for insolvency purposes and identify the factors that might appropriate to determine where the group centre is located, assuming that there is only one centre for each group — as well as to questions of jurisdiction over the constituent members of the group, eligibility to commence insolvency proceedings and applicable law. Others relate to the challenge of reaching broad international agreement on these issues in order to achieve a consistently, widely applied and, possibly, binding solution that will deliver certainty and predictability to the cross-border insolvency of enterprise groups.

B. Promoting cross-border cooperation and coordination of enterprise group insolvencies

1. Introduction

7. The first step in finding a solution to the problem of how to facilitate the global treatment of enterprise groups in insolvency might be to ensure existing principles for cross-border cooperation apply to enterprise group insolvencies. Cooperation between courts and insolvency representatives in insolvency proceedings involving multinational enterprise groups may help to facilitate commercial predictability and increase certainty for trade and commerce, as well as fair and efficient administration of proceedings that protects the interests of the parties, maximizes the value of the assets of group members to preserve employment and minimizes costs. Although there are enterprise groups where separate insolvency proceedings may be a feasible option because there is a low degree of integration in the group and group members are relatively independent of each other, for many groups, cooperation may be the only way to reduce the risk of piecemeal insolvency proceedings that have the potential to destroy going concern value and lead to asset ring-fencing, as well as asset shifting or forum shopping by debtors.

³ These issues are discussed in some detail in the working papers of UNCITRAL Working Group V (Insolvency law) — see A/CN.9/WG.V/WP.85/Add.1, paras. 3-12; A/CN.9/WG.V/WP.82/Add.4, paras. 3-15; A/CN.9/WG.V/WP.76/Add.2, paras. 2-17; A/CN.9/WG.V/WP.74/Add.2, paras. 6-12.

8. A widespread limitation on cooperation and coordination between courts and insolvency representatives from different jurisdictions in cases of cross-border insolvencies derives from a lack of a legislative framework, or from uncertainty regarding the scope of the existing legislative authorization, for pursuing cooperation with foreign courts and insolvency representatives. The Model Law provides that legislative framework authorizing cross-border cooperation and communication between courts, between courts and insolvency representatives and between insolvency representatives.

9. However, since the provisions of the Model Law focus on individual debtors, they have limited application to enterprise groups. A key difference in coordinating enterprise group insolvencies is that the court in one jurisdiction is not necessarily dealing with the same debtor as the courts in other jurisdictions (although there may be a common debtor in the case of individual group members with assets in different States, a situation within the scope of the Model Law). The link between parallel proceedings is not a common debtor, but rather that the debtors are all members of the same enterprise group. Unless the existence (and possibly the extent) of that group is or can be recognized under national law, each proceeding will appear to be unconnected to each other proceeding and cooperation will appear to be unwarranted on the basis that it might interfere with the independence of local courts or be deemed unnecessary because each proceeding is, essentially, a national proceeding. While it may be possible in some instances to treat each group member entirely separately, for many enterprise groups the best result for each of the different members may be achieved through a more widely-based and potentially global solution that reflects the manner in which the group conducted its business and addresses either distinct business sections or the enterprise group as a whole, particularly where the business is closely integrated.

10. For these reasons, it is desirable that an insolvency law recognize the existence of enterprise groups and the need, with respect to cross-border cooperation, for courts to cooperate with other courts and with insolvency representatives, not just with respect to insolvency proceedings concerning the same debtor, but also with respect to different members of an enterprise group.

2. Forms of cooperation involving courts

11. Cooperation in cross-border insolvencies may take different forms and may include, as suggested in article 27 of the Model Law, communication between the courts, between the courts and insolvency representatives and between the insolvency representatives, as well as the use of cross-border insolvency agreements, coordination of hearings, and coordination of the supervision and administration of the debtor's affairs. In the context of a single debtor, authorization for cooperation is provided by articles 25 and 26 of the Model Law. Article 25 authorizes the court to cooperate to the maximum extent possible with foreign courts, while Article 26 authorizes an insolvency representative, in the exercise of its functions and subject to the supervision of the court, to cooperate to the maximum extent possible with foreign courts and representatives. The issue of cooperation is also addressed, within the European Union, by the EC Insolvency Regulation. Recital 20 notes that in the context of main and secondary proceedings the liquidators must cooperate closely, in particular by exchanging a sufficient amount of information. The liquidator in the main proceedings should have the

ability to intervene in the secondary proceedings and to propose a restructuring plan or apply for suspension of the realization of assets in those proceedings. Article 31 of the EC Regulation establishes a duty of liquidators in main and secondary proceedings to communicate information, particularly information that may be relevant to the other proceedings and relates to progress made with respect to the submission and verification of claims and measures aimed at terminating the proceedings. Neither the Model Law nor the EC Regulation addresses the need for cooperation with respect to enterprise groups, where those obligations need to be more broadly applicable and the distinction between main and non-main or secondary proceedings is not relevant, except as it applies to multiple proceedings concerning an individual group member.

(a) Communication between courts

(i) General considerations

12. The Guide to Enactment of the Model Law⁴ points to the desirability of enabling courts in cross-border insolvency proceedings to communicate directly with foreign courts and insolvency representatives in order to avoid the use of the traditional, time-consuming procedures, such as letters rogatory or other diplomatic or consular channels and communications via higher courts. This ability is critical when the courts consider they should act with urgency to avoid potential conflicts or preserve value or the issues to be considered are time-sensitive. That ability to communicate should include the ability to initiate communication, by requesting information or assistance from foreign courts and insolvency representatives, as well as the ability to receive and process such requests from abroad.

13. The different approaches taken to communication between the courts and parties serve to illustrate some of the problems that might be encountered when seeking to promote cross-border cooperation. In addition to the question of whether there is specific authorization for communication between courts, there is very often hesitation or reluctance on the part of courts of different jurisdictions to communicate directly with each other. That hesitation or reluctance may be based upon ethical considerations; legal culture; language; or lack of familiarity with foreign laws and their implementation. They may also relate to concerns about the implications of communication for judicial independence and impartial decision-making. Some States have a relatively liberal approach to communication between judges, while in other States judges may not communicate directly with parties or insolvency representatives or indeed with other judges, as such communication may give rise to constitutional issues. In some States, ex parte communications with the judge are considered normal and necessary, while in other States such communications would not be acceptable. Within States, judges and lawyers may have quite different views about the propriety of contacts between judges without the knowledge or participation of the attorneys for the parties. Some judges, for example, accept that there is no difficulty with private contact amongst themselves, while some lawyers would strongly disagree with that practice. Courts typically focus on the matters before them and, as noted above, may be reluctant to provide assistance to related proceedings in other States, particularly when the

⁴ Guide to Enactment of the UNCITRAL Model Law on Cross-Border Insolvency, para. 179.

proceedings for which they are responsible do not appear to involve an international element in the form of a foreign debtor, foreign creditors or foreign operations.

14. A further issue of relevance to facilitating cooperation between insolvency proceedings affecting group members might be the ability or willingness of courts to take a global view of the business of the debtor and note what is occurring in insolvency proceedings in other jurisdictions concerning the same debtor or other members of the same group. This may be of particular importance where what occurs in other jurisdictions is likely to have a domestic impact (e.g. with respect to local employees and other social policy issues). Whilst it would not change the powers the courts would have under domestic law, knowledge of or about the foreign proceedings might nevertheless affect the court's approach to local proceedings and its willingness to coordinate them with the foreign proceedings. The challenge, however, is for the court to obtain the necessary information about a debtor's global operations and concurrent insolvency proceedings. One approach might be to permit appropriate documentary evidence to be provided or a foreign practitioner or insolvency representative of related group members to appear in the local court. Notwithstanding the practical difficulties, it is desirable that a court be able to take note of foreign proceedings that might affect local proceedings, particularly where a global solution for a multinational enterprise group is being sought.

15. Establishing communication in cross-border cases involving enterprise groups may facilitate cross-border proceedings in many ways. For instance, it may assist parties to better understand the implications or application of foreign law, particularly the differences or overlaps that may otherwise lead to litigation; advance resolution of issues through a negotiated result acceptable to all; and provoke more reliable responses from parties, avoiding inherent bias and adversarial distortion that may be apparent where parties represent their own particular concerns in their own jurisdictions. It may also serve international interests by creating better understanding that will encourage international business and preserving value that would otherwise be lost through fragmented judicial action. Some of the potential benefits may be hard to identify at the outset, but may become apparent once the parties have communicated. Cross-border communication may reveal, for example, some fact or procedure that will substantially inform the best resolution of the case and may, in the longer term, serve as an impetus to law reform.

16. Communication between judges or other interested parties should follow proper procedures in order to ensure the communication is transparent, effective and credible. At a general level, it might be appropriate to consider whether communication should be treated as a matter of course or as a last resort; whether a judge may advocate that a particular course of action be taken; and, with respect to the conditions that might apply to communication, such as those mentioned below, whether they should apply in all cases or whether there might be exceptions. While courts should be given broad discretion in carrying out their communications with foreign bodies, they should not be required to engage in communications they consider inappropriate in the circumstances of a particular case. A further issue relates to the subject matter of the communication, and in particular whether communication could address only matters of procedure or also matters of substance. Some judges take the view that they could discuss case management

issues, issues of timing, use of cross-border agreements and which court might resolve which issue, but not substantive issues that touched upon the merits of the case.

(ii) *Means of communication*

17. Information may be communicated in several ways, such as by exchange of documents (e.g. copies of formal orders, judgements, opinions, reasons for decisions, transcripts of proceedings, affidavits and other evidence) or orally. The means of communication may be post, fax or e-mail or other electronic means, or telephone or videoconference, depending upon what is available and affordable in the States involved in the communication and what is appropriate or required in each case. Copies of written communications may also be provided to the parties in accordance with applicable notice provisions. Communication may be affected directly between judges or between or through court officials (or a court appointed intermediary) or insolvency representatives, subject to local rules. The development of new communication technologies supports various aspects of cooperation and coordination, with the potential to reduce delays and, as appropriate, facilitate face-to-face contact. As global litigation multiplies, these methods of direct communication are increasingly being used. Videoconferences, for example, have been used in preference to telephone conferences, as they provide reasonable control of the process and facilitate disciplined organization of the communication as the participants can hear and see each other, an aspect that is central to court proceedings generally. However, since these technologies are not available to all courts, it is desirable that the focus be upon how the communication might be facilitated to suit the needs of the particular case, rather than upon the use of any particular technology.

(iii) *Establishing rules or procedures for court-to-court communication*

18. In any particular case it will be desirable to determine, as appropriate to the relevant jurisdictions and in accordance with applicable law, procedures to govern court-to-court communication to balance the interests of the different stakeholders and ensure that no one is prejudiced in any material way. The procedures might address: the parties to be notified of the proposed communication (e.g. all affected parties and their representatives or counsel); the persons permitted to participate in the communication and any limitations that will apply; the questions to be considered; whether the parties share the same intentions or understanding with respect to communication; organization and timing of the communication; recording of the communication; any safeguards that will apply to protect the substantive and procedural rights of the parties; the language of the communication and any consequent need for translation of written documents or interpretation of oral communications (and who should bear the administrative costs); acceptable methods of communication; handling of objections to the proposed communication; and questions of confidentiality.

19. Courts may adopt guidelines, such as the Court-to-Court Guidelines,⁵ to address some of these issues. These guidelines typically are intended to promote transparent communication between courts, permitting courts of different jurisdictions to communicate with one another, without changing the applicable domestic rules or procedures or to affecting or curtailing the substantive rights of any party in proceedings before the courts.

- Time, place and manner of communication

20. Generally, it is desirable that communications proceed at a time and place and in a manner mutually determined between the courts, the insolvency representatives and other stakeholders, as applicable. These arrangements need not necessarily involve the judges directly, but might be made through relevant court officials.

- Notice of proposed communication

21. In insolvency proceedings involving multinational enterprise groups, a balance needs to be struck between facilitating the communication in a practical and convenient manner and protecting the integrity of the communication by ensuring an open and transparent process. Various parties may be affected by communications between courts, and it may often be difficult, if not impractical, to ascertain the identity of all of those parties, including, for example, the creditors. Moreover, the jurisdictions involved may operate under different rules regarding the provision of notice, affecting issues of timing and the identity of recipients (i.e., not all stakeholders may be entitled to notice of certain issues). A key question will therefore concern the parties to be notified of any proposed communication. The absence of clear rules on how this issue should be approached has the potential to cause delay and erosion of value, especially where the communication is required to resolve or avoid conflicts or to address the coordination of particular issues, such as sale of assets or submission and verification of claims.

22. Provision of notice generally might be assisted by cooperation between the various courts to develop a list of parties required to be notified, which may include parties that are entitled to notice of any court business related to the insolvency proceedings, including communication.⁶ Coordination of the provision of notice may be managed through an electronic system or a website, which could facilitate tracking of the changing identity of stakeholders entitled to notice in many insolvency proceedings, resulting from, for example, assignment or trading of claims; minimizing the costs associated with provision of notice; and the differences in the laws applicable to the provision of notice being taken into account. It would also, however, have to be taken into consideration possible language, access, and confidentiality issues.

- Right to participate

23. To ensure the credibility of the communication and the parties directly involved in it, as well as fairness and transparency, it is desirable that

⁵ Guidelines Applicable to Court-to-Court Communications in Cross-Border Cases, published by the American Law Institute (16 May 2000) and adopted by the International Insolvency Institute (10 June 2001), available online at www.ali.org/doc/Guidelines.pdf.

⁶ See Court-to-Court Communication Guideline 12.

communications proceed in a manner that is open to participation by relevant parties, rather than *ex parte*.

24. As noted above, however, there is a need to balance those requirements against the practicalities of organizing and conducting the communication. This may require participants to be limited to “affected parties”. Although different standards may govern the issue of who constitutes an “affected party” in the jurisdictions involved, it might generally be assumed that key stakeholders would include the debtor, the insolvency representative and relevant legal counsel. While the general principle should be that affected parties are entitled to participate, it may be desirable for the courts to have the right to agree, as required, to limit the number of participants in order to ensure the process is manageable.

- Recording of the communication as part of the record

25. To further ensure the transparency of court-to-court communication, the insolvency law may permit any communication to be recorded and a transcript prepared. The transcript may be made part of the record of the proceedings and, as such, be available at least to those participating in the communication or, more generally, in accordance with the rules applicable to the availability of such court records.

- Confidentiality

26. In general, communications between courts involved in parallel insolvency proceedings related to members of a multinational group should be as transparent as possible to ensure fairness to the parties involved and avoid creating incentives for the parties to hedge against the possibility of an adverse outcome. It is desirable that information not be treated as confidential simply because the communication occurs in a cross-border context.

27. However, much of the information relating to the debtors and their affairs that needs to be considered and shared in insolvency proceedings involving multinational enterprise groups may be commercially sensitive, confidential, or subject to obligations owed to third persons (such as trade secrets, research and development information, and customer information). Such information may be especially sensitive in the case of a debtor in reorganization proceedings where its continued ability to operate in the market and the protection of value may require confidentiality. Accordingly, the use of such information may need to be carefully considered and disclosure appropriately restricted to prevent third parties from taking unfair advantage of it.

28. The jurisdictions involved in insolvency proceedings relating to multinational enterprise group members may have different substantive rules regarding confidentiality and the release of information to parties. Those differences may need to be taken into account when considering cross-border communication and how they will be conducted and recorded, permitting the courts to reach agreement on the protections necessary to comply with applicable law.

29. Confidentiality of information may also be addressed in a cross-border insolvency agreement,⁷ which can establish requirements for access to that information, including the use of confidentiality agreements.

- Costs of communication

30. The issue of costs of the communication may be a consideration, especially where many parties are affected and a means of communication is used that entails, in some States, relatively high costs, such as videoconferencing. Moreover, the use of multiple languages may complicate communication, with cost implications where translation of documents and interpretation of oral communication is required. It will be important to determine how the costs are to be borne by, or apportioned between, the relevant insolvency proceedings. If reimbursement of the costs of certain parties is involved, it should be clear how, and the currency in which, that will occur.

- Effect of communication

31. Where a court communicates with a foreign court in the context of cross-border insolvency proceedings, the insolvency law should make it clear that the communication would not have a substantive effect on the authority or powers of the court, the matters before it, its orders, or the rights and claims of parties participating in the communication. Such a proviso reassures the parties that the communication between the authorities involved in the insolvency proceedings will not jeopardize their rights nor affect the authority and independence of the court before which they are appearing. It is likely to reduce the likelihood of objections to planned communication and furnish the courts and their representatives with greater flexibility in their cooperation with each other. Such a proviso may also ensure that courts and their representatives do not operate beyond the limits of their authority in engaging in communication with their counterparties in different jurisdictions.

(b) Coordination of the debtor's assets and affairs

32. The conduct of cross-border insolvency proceedings concerning enterprise groups will often require assets of the different insolvency estates to continue to be used, realized or disposed of in the course of the proceedings. Coordination of such use, realization and disposal will help to avoid disputes and ensure that the benefit of all parties in interest is the key focus, particularly in reorganization. For example, one member of an enterprise group may serve as the exclusive supplier of another group member or have exclusive control over a key resource used by another member, so that insolvency proceedings with respect to one of those members might have profound consequences on the continuing operation of the entire group. Coordinating the debtor's assets and affairs may involve both the courts and the insolvency representatives. Some matters may require specific approval by the courts, while others may be addressed by agreement between the insolvency representatives.

33. Some of the issues to be considered in facilitating this coordination may include: the location of the various assets and the identification of the jurisdiction to

⁷ See UNCITRAL Practice Guide, III.B, paras. 168-171; Legislative Guide, part two, chap. III, paras. 28, 52, 115 and recommendation 111.

which they are subject; determination of the law governing the assets and the parties responsible for determining how they can be used or disposed of (e.g., the insolvency representative, the courts or in some cases the debtor), including the approvals required; the extent to which responsibility for those assets can be shared among or allocated to those different parties in different States; how information can be shared to ensure coordination and cooperation; and the sequence in which proceedings should evolve. Coordination may be relevant to investigating the debtor's assets, considering possible avoidance proceedings, and restricting the debtor's ability to move assets to locations beyond the reach of the court or insolvency representative. It may also require the courts to identify the optimal forum for addressing a particular issue, such as sale or disposal of a certain asset, and defer to that forum to the extent permitted by law.⁸

(c) Appointment of a court representative

34. Such a person may be appointed by a court to facilitate coordination of insolvency proceedings concerning enterprise group members taking place in different jurisdictions. The person may have a variety of possible functions including: acting as a go-between for the courts involved, especially where issues of language are raised; developing an agreement in consultation with the relevant parties; promoting consensual resolution of issues between the parties; and ensuring that notice with respect to certain business before the courts is given to all parties in interest (other members of the enterprise group, creditors, and foreign courts or insolvency representatives). The appointing court will typically outline the terms under which the appointee is authorized to act and the extent of its powers. The person may be required to report to the court or courts involved in the proceedings on a regular basis, as well as to the parties.

(d) Use of cross-border agreements (see 4. below)

(e) Coordination of hearings

35. Hearings that might variously be described as joint, simultaneous or coordinated⁹ ("coordinated hearings") can significantly promote the efficiency of parallel insolvency proceedings involving members of a multinational enterprise group by bringing relevant stakeholders together at the same time to discuss and resolve outstanding issues or potential conflicts, thus avoiding protracted negotiations and resulting time delays. What needs to be emphasized with respect to such hearings, however, is that each court should reach its own decision independently and without influence from the other courts. While such hearings may be relatively convenient to organize in a domestic setting to ensure coordination of proceedings with respect to different group members, they can be logistically very complicated to organize in an international setting, involving as they may different languages, time zones, laws, procedures and judicial traditions. They may result in a deadlock if, for example, the competencies of the authorities engaged in the hearing are not precisely agreed or established.

⁸ Allocation of responsibility for certain actions between the different courts is discussed in the UNCITRAL Practice Guide, Section II.B, paras. 18-20; section III.B, paras. 55-60, 71-74.

⁹ These types of hearings are discussed in the UNCITRAL Practice Guide, III.B, paras. 145-150.

36. Although they are potentially difficult to organize, such hearings have been used between some States that share a common language, legal tradition and similar time zones and have led to the successful resolution of difficult issues to the benefit of all parties concerned.¹⁰ Such hearings might, however, be more widely used in the future, with the assistance of appropriate procedures and safeguards to assist careful planning and avoid complications. Those rules of procedure might address, for example, use of pre-hearing conferences; conduct of the hearings, including the language to be used and need for interpretation; requirements for the provision of notice; methods of communication to be used so that the courts can simultaneously hear each other; conditions applicable to the right to appear and be heard; documents that may be submitted; the courts to which participants may make submissions; the manner of submission of documents to the court and their availability to other courts; question of confidentiality; limitations on the jurisdiction of each court to the parties appearing before it; and rendering of decisions.¹¹

37. Some guidelines and agreements dealing with these types of hearings provide that in order to best plan for orderly administration, the courts, their appointees, or the insolvency representatives should communicate with their foreign counterparties in advance of the hearing to establish guidelines related to all procedural, administrative, and preliminary matters. Once a hearing has been concluded, the relevant authorities may further communicate to assess the contents of the hearing, discuss next steps (including additional hearings), develop or modify guidelines for future hearings, consider whether issuing joint orders would be feasible or warranted and how certain procedural issues that were raised in the hearing should be resolved.¹²

Recommendations 240-247

Purpose of legislative provisions

The purpose of legislative provisions on cooperation in the context of multinational enterprise groups is:

- (a) To authorize cooperation between the courts seized of insolvency proceedings relating to different members of an enterprise group in different States;
- (b) To authorize cooperation between those courts and insolvency representatives appointed to those different proceedings; and
- (c) To facilitate and promote the use of various forms of cooperation to coordinate insolvency proceedings with respect to different enterprise groups members in different States and establish the conditions and protections that should

¹⁰ See for example, the cases of *Quebecor World Inc.*, Montreal Superior Court, Commercial Division, (Canada) No. 500-11-032338-085 and the United States Bankruptcy Court for the Southern District of New York, No. 08-10152 (JMP) (2008) and *Solv-Ex Canada Limited and Solv-Ex Corporation*, Alberta Court of Queen's Bench, Case No. 9701-10022 (28 January 1998), and the United States Bankruptcy Court for the District of New Mexico, Case No. 11-97-14362-MA (28 January 1998).

¹¹ Cf. UNCITRAL Model Law, article 10.

¹² See also UNCITRAL Practice Guide, III.B, paras. 145-150; Court-to-Court Communication Guideline 9 (e).

apply to those forms of cooperation to protect the substantive and procedural rights of parties and the authority and independence of the courts.

Contents of legislative provisions

Cooperation between the court and foreign courts or foreign representatives

240. The insolvency law should permit the court that is competent with respect to insolvency proceedings concerning an enterprise group member to cooperate to the maximum extent possible with foreign courts or foreign representatives, either directly or through the insolvency representative or other person appointed [for that purpose by the court], to facilitate coordination of those proceedings and insolvency proceedings commenced in other States with respect to members of that enterprise group.

Cooperation between the insolvency representative and foreign courts

241. The insolvency law should permit the insolvency representative appointed to administer insolvency proceedings with respect to an enterprise group member, in the exercise of its functions and subject to the supervision of the court, to cooperate to the maximum extent possible with foreign courts to facilitate coordination of those proceedings and insolvency proceedings commenced in other States with respect to members of that enterprise group.

Cooperation to the maximum extent possible involving courts

242. The insolvency law should specify that the cooperation to the maximum extent possible between the courts and between the courts and foreign representatives, [referred to in recommendations 240 and 241], may be implemented by any appropriate means, including:

- (a) Communication of information by any means considered appropriate by the court;
- (b) Participation in communications with the foreign court or foreign representative by telephone, videoconference or other electronic means;
- (c) Provision to the foreign court or the foreign representative of copies of documents issued by the court concerning the enterprise group members subject to insolvency proceedings, including formal orders, judgements, and transcripts of proceedings;
- (d) Provision of copies of documents that have been or are to be filed with the court concerning the enterprise group members subject to insolvency proceedings to the foreign court or foreign representative;
- [(e) Coordination of the administration and supervision of the assets and affairs of the enterprise group members subject to insolvency proceedings];
- [(f) Appointment of a person or body to act at the direction of the court]; and
- [(g) Approval or implementation of agreements concerning coordination of insolvency proceedings in accordance with recommendation 254.]

Direct communication between the court and foreign courts or foreign representatives

243. The insolvency law should permit the court that is competent with respect to insolvency proceedings concerning an enterprise group member to communicate directly with, or to request information or assistance directly from, foreign courts or foreign representatives concerning those proceedings and insolvency proceedings commenced in other States with respect to members of that enterprise group.

244. The insolvency law should permit an insolvency representative appointed to administer insolvency proceedings with respect to an enterprise group member, in the exercise of its functions and subject to the supervision of the court, to communicate directly with foreign courts concerning those proceedings and insolvency proceedings commenced in other States with respect to members of that enterprise group.

Conditions applicable to cross-border communication involving courts

245. The insolvency law should specify that communication between the courts and between courts and foreign representatives should be subject to the following conditions:

(a) The time, place and manner of communication should be determined [by] between the courts or [by] between the courts and foreign representatives;

(b) Notice of any proposed communication should be provided to affected parties [or their representatives] in all relevant States in accordance with applicable law and in the manner considered appropriate by the courts, unless otherwise agreed by the courts;

(c) Affected parties or their representatives, as appropriate, should be entitled to participate in person during the communication, unless otherwise agreed by the courts;

(d) The communication may be recorded and a written transcript prepared as directed by the courts. That transcript may be treated as an official transcript of the communication, filed as part of the record of the proceedings and made available to the courts and to [affected parties or their] representatives involved in the communication;

(e) Communications should only be treated as confidential in exceptional cases to the extent considered appropriate by the courts and in accordance with applicable law; and

(f) Communication should respect the mandatory rules of the jurisdictions involved in the communication as well as the substantive and procedural rights of affected parties, in particular the confidentiality of information.

246. The insolvency law should specify that:

(a) No compromise or waiver by the court of any powers, responsibilities or authority;

(b) No substantive determination of any matter in controversy before the court [or the foreign court];

(c) No waiver by any of the parties of any of their substantive rights and claims; and

(d) No diminution of the effect of any of the orders made by the court [or the foreign court], shall be implied as the result of [any] communication made in accordance with these recommendations.

Coordination of hearings

247. The insolvency law may permit the court to conduct a [joint] hearing in coordination with a foreign court. Where hearings are coordinated, they may be subject to certain conditions to safeguard the substantive and procedural rights of parties and the jurisdiction [and independence] of each court. Those conditions might address the rules applicable to the conduct of the hearing; the requirements for the provision of notice; the method of communication to be used; the conditions applicable to the right to appear and be heard; the manner of submission of documents to the court and their availability to other courts; and limitations of the jurisdiction of each court to the parties appearing before it.¹³ [Notwithstanding the conduct of a joint or coordinated hearing, each court remains responsible for reaching its own decision on the matters before it.]

3. The insolvency representative

(a) Cooperation between insolvency representatives

38. As noted in the Legislative Guide, the insolvency representative plays a central role in the effective and efficient implementation of the insolvency law, with day-to-day responsibility for administration of the insolvency estate of the debtor. As such, the insolvency representatives will play a key role in ensuring the successful coordination of multiple proceedings concerning enterprise group members through working with other insolvency representatives and the courts concerned. In order to fulfil that role, the insolvency representative, like the court, will need to have appropriate authorization to undertake the necessary tasks of, for example, sharing information, coordinating day to day administration and supervision of the debtors' affairs, negotiating cross-border insolvency agreements and so forth.

Recommendations 248-250

Purpose of legislative provisions

The purpose of legislative provisions on cooperation between insolvency representatives in the context of multinational enterprise groups is:

(a) To authorize cooperation between insolvency representatives appointed to administer insolvency proceedings relating to different members of an enterprise group in different States; and

(b) To facilitate and promote the use of various forms of cooperation between those insolvency representatives and establish the conditions and protections that should apply to those forms of cooperation to protect the substantive and procedural rights of parties.

¹³ See also UNCITRAL Model Law, article 10.

Contents of legislative provisions

Cooperation between insolvency representatives

248. [The insolvency law should permit the insolvency representative appointed to administer insolvency proceedings with respect to an enterprise group member, in the exercise of its functions and subject to the supervision of the court, to cooperate to the maximum extent possible with foreign representatives to facilitate coordination of those proceedings and insolvency proceedings commenced in other States with respect to members of that enterprise group.]

Communication between insolvency representatives

249. [The insolvency law should permit an insolvency representative appointed to administer insolvency proceedings with respect to an enterprise group member, in the exercise of its functions and subject to the supervision of the court, to communicate directly with foreign representatives concerning those proceedings and insolvency proceedings commenced in other States with respect to members of that enterprise group.] The insolvency law should permit insolvency representatives to communicate with each other as soon as they are appointed.

Cooperation to the maximum extent possible between insolvency representatives

250. The insolvency law should specify that the cooperation to the maximum extent possible between insolvency representatives, referred to in recommendation 248, should be implemented by any appropriate means, including:

- (a) Sharing and disclosure of information concerning the enterprise group members subject to insolvency proceedings, provided appropriate arrangements are made to protect confidential information;
- (b) Use of cross-border insolvency agreements in accordance with recommendation 253;¹⁴
- (c) Division of the exercise of powers and allocation of responsibilities between insolvency representatives, including one insolvency representative taking a coordinating or leading role;
- (d) Coordination with respect to administration and supervision of the affairs of the group members subject to insolvency proceedings; and
- (e) Coordination with respect to proposal and negotiation of coordinated reorganization plans, communication with creditors and meetings of creditors.

(b) Appointment of a single or the same insolvency representative

39. The issue of promoting coordination may also be approached via the appointment of the insolvency representative, by considering, for example, the appointment of the same insolvency representative in multiple proceedings affecting members of the same group in different States, where that person (whether natural or legal) met applicable local requirements (see above, paras. 173-178 with respect to domestic proceedings). Where such a person could be appointed, they would be

¹⁴ See the UNCITRAL Practice Guide, which compiles practice with respect to the use and negotiation of these agreements, including a discussion of the issues typically addressed.

subject to the local law of the States in which they were appointed, in particular as regards qualification, licensing (where applicable), powers and duties and supervision by the court. Accordingly, the insolvency representative would be subject to the same local requirements as any insolvency representative appointed in one of those States would be.

40. The appointment could be of a natural person qualified to act in different States or legal person, where that legal person employed or had as its members appropriately qualified persons who could serve as insolvency representatives in a number of different States. Although the availability of those qualified persons might generally be limited, there may be regions where it is more common or the globalization of trade and services makes it increasingly feasible.

41. Where such an approach is adopted, provisions to avoid potential conflicts of interest along the lines of draft recommendation 231 may need to be considered. Such a conflict of interest might arise when the group members represented by a single insolvency representative had different interests in a particular issue, for example, post-commencement finance or verification and admission of claims or when the obligations of the insolvency representative under different insolvency laws were directly in conflict. Those cases might be addressed in the same manner as indicated above with respect to appointment of a single or the same insolvency representative in the domestic context (see recommendation 234).

Recommendations 251-252

Purpose of legislative provisions

[The purpose of legislative provisions on appointment of the insolvency representative is, in the interests of promoting efficient and effective administration of insolvency proceedings members of the same enterprise group in different States, to authorize the appointment of a single or the same insolvency representative to those multiple proceedings.]

Contents of legislative provisions

Appointment of the same insolvency representative

251. The insolvency law should permit the court, [in appropriate cases,][where the court determines it to be in the best interests of the relevant insolvency proceedings] to coordinate with foreign courts with respect to the appointment of the same insolvency representative to administer insolvency proceedings concerning members of the same enterprise group in different States, provided that the insolvency representative is qualified to be appointed in each of the relevant States. To the extent required by the [insolvency] law, the insolvency representative would be subject to the supervision of each of the appointing courts.

Conflict of interest

[252. The insolvency law should specify measures to address any conflict of interest that might arise when a single or the same insolvency representative is appointed to administer insolvency proceedings with respect to two or more enterprise group members in different States. Such measures may include the appointment of one or more additional insolvency representatives.]

4. Use of cross-border insolvency agreements¹⁵

42. The insolvency community, faced with the daily necessity of dealing with insolvency cases and attempting to coordinate administration of cross-border insolvencies in the absence of widespread adoption of facilitating national or international laws, has developed cross-border insolvency agreements. These agreements are discussed in detail in the UNCITRAL Practice Guide. They are designed to address issues arising in cross-border cases, facilitating their resolution through cooperation between the courts, the debtor, and other stakeholders across jurisdictional lines to work efficiently, and increase realizations for stakeholders in potentially competing jurisdictions. Their use can effectively reduce the cost of litigation and enable parties to focus on the conduct of the insolvency proceedings, rather than upon resolving conflict of laws and other such disputes. Moreover, in addition to clarifying parties' expectations, these agreements can assist with preservation of the debtor's assets and maximization of value.

43. Cross-border insolvency agreements are generally entered into for the purpose of facilitating international cooperation and coordination of multiple insolvency proceedings in different States. Typically, they are designed to assist in the management of those proceedings and are intended to reflect the harmonization of procedural rather than substantive issues between the jurisdictions involved (although in limited circumstances, substantive issues may also be addressed). They vary in form (written versus oral) and scope (generic to specific) and may be entered into by different parties. Simple generic agreements may emphasize the need for close cooperation between the parties, without addressing specific issues, while more detailed, specific agreements establish a framework of principles to govern multiple insolvency proceedings and may be approved by the courts involved.

44. They can be regarded as contracts between the signatories or, in case of approval by the court, may obtain the legal status of a court order. Agreements may cover one or more matters and nothing prevents parties from concluding several agreements as proceedings progress to address different issues arise. It is not uncommon, for example, to have agreements addressing general communication and cooperation at the start of insolvency proceedings, followed by specific agreements on claims procedures at a later point. The conclusion of a cross-border insolvency agreement is thus not limited to a certain time period, such as before the commencement of proceedings. While it is certainly preferable at an early stage of the proceedings in order to address expectations and provide clarity, an agreement may be concluded at a later stage, when particular issues arise that indicate a need for cooperation. Existing agreements may also be modified, subject to any requirements of the agreement for modification.

45. As noted above, cross-border insolvency agreements may include only general principles on how cooperation and coordination should be handled, or also address specific issues depending upon the needs of the particular case and the issues to be resolved. Issues typically addressed include some of all of the following: (a) allocation of responsibility for various aspects of the conduct and administration of the proceedings between the different courts involved and between insolvency

¹⁵ For a detailed discussion of cross-border insolvency agreements, see the UNCITRAL Practice Guide.

representatives, including limitations on authority to act without the approval of the other courts or insolvency representatives; (b) availability and coordination of relief; (c) coordination of recovery of assets for the benefit of creditors generally, in case claims for assets of a group member subject to bankruptcy proceedings in a different state are raised; (d) submission and treatment of claims; (e) use and disposal of assets; (f) methods of communication, including language, frequency, and means; (g) provision of notice; (h) coordination and harmonization of reorganization plans; (i) issues related specifically to the agreement, including amendment and termination, interpretation, effectiveness and dispute resolution; (j) administration of proceedings, in particular with respect to stays of proceedings or agreement between the parties not to take certain legal actions; (k) choice of applicable law with respect to overlapping issues; (l) the allocation of responsibilities between the parties to the agreement; (m) costs and fees; and (n) safeguards. The latter typically relate to ensuring that there are no derogations from court independence and authority, public policy and applicable law, particularly with respect to any obligations undertaken by the insolvency representative or parties, including the debtor, in the agreement.

46. These agreements are increasingly common, especially in certain States, and have been successfully employed in different situations, such as concurrent reorganization and liquidation proceedings in different states; main and non-main proceedings as defined by the Model Law; and concurrent insolvency and non-insolvency proceedings in different States. It should be noted, however, that while the insolvency law of certain States may permit courts to approve cross-border agreements regarding the same debtor (for example, through provisions analogous to article 27 of the Model Law), that authorisation may not necessarily extend to the use of such agreements in the group context. What might be required to facilitate global resolution of a group's financial difficulties (be it global reorganization or a combination of different procedures) is an agreement to coordinate multiple proceedings with respect to different debtors in different States, albeit members of the same group. Many laws may lack the provisions necessary to enable a court to approve or recognize an agreement relating not only debtors subject to its jurisdiction, but also to debtors that are not, albeit that they are members of the same enterprise group.

47. It is desirable, therefore, that in order to enhance cross-border cooperation an insolvency law should authorize the relevant parties — insolvency representatives and other parties in interest — to conclude cross-border insolvency agreements concerning different group members in different States and permit the courts to approve or implement them, taking into consideration the group context. It should be noted that different States may have different form requirements that will have to be observed in order for these agreement to be effective in the relevant jurisdictions.

Recommendations 253-254

Purpose of legislative provisions

[The purpose of legislative provisions with respect to cross-border insolvency agreements is to ensure that the insolvency law permits the use of such agreements to facilitate cooperation with respect to insolvency proceedings concerning enterprise group members in different States and authorizes their approval by the court, as appropriate.]

Contents of legislative provisions*Authority to enter into cross-border insolvency agreements*

253. The insolvency law should permit the insolvency representative and other parties in interest to enter into, [to the extent permitted or in the manner required by applicable law,] a cross-border insolvency agreement [involving two or more members of an enterprise group in different States] to facilitate coordination of insolvency proceedings with respect to those group members.

Approval or implementation of cross-border insolvency agreements

254. The insolvency law should permit the court to approve or implement a cross-border insolvency agreement [involving two or more members of an enterprise group in different States] to facilitate coordination of the insolvency proceedings with respect to those enterprise group members.

A/CN.9/WG.V/WP.90/Add.2 (Original: English)**Note by the Secretariat on the treatment of enterprise groups in insolvency, submitted to the Working Group on Insolvency Law at its thirty-seventh session****ADDENDUM****I. Introduction**

1. This document sets forth explanatory notes with respect to the revisions of the recommendations contained in A/CN.9/WG.V/WP.90 and Add.1 and raises a number of questions for consideration by the Working Group concerning those recommendations and possible additional recommendations.

II. Domestic treatment of enterprise groups in insolvency**A. General issues**

2. The draft recommendations on the domestic treatment of enterprise groups are based upon a fundamental principle that the insolvency law should recognize the existence of enterprise groups, as defined in the glossary, and accord them special treatment as outlined in recommendations 199-239 in order to achieve a more efficient and effective outcome for the group as a whole and for individual members because of their group connection. The existence of such a principle in national law becomes especially important when looking to facilitate cooperation and coordination of enterprise group insolvencies in the international context. However, there is no general recommendation to that effect, along the lines of the general principles contained in part one of the Legislative Guide, recommendations 1-5. The Working Group may wish to consider whether a statement of that fundamental principle should be included as a recommendation.

3. The fundamental principle might also be reflected in relevant purpose clauses. For example, the purpose clause on procedural coordination might include, in paragraph (a), words to the effect of “with a view to achieving a better, more effective result for the enterprise group”.

B. Post-commencement finance

4. Draft recommendations 211-216 were revised during the thirty-sixth session of the Working Group, but not further considered for lack of time.

5. Draft recommendation 213 refers to the consent of creditors to the provision of post-commencement finance in accordance with recommendations 211 and 212. It is perhaps implied that they are the creditors of the insolvent group member providing the finance, but given the group context and the interest of creditors of both receiving and providing members, it might be clearer to stipulate which creditors are intended. The same approach might be helpful in draft recommendation 214

which deals with the obtaining of post-commencement finance in accordance with recommendation 63.

C. Avoidance proceedings

6. In accordance with the discussion by the Working Group at its thirty-sixth session (A/CN.9/671, paragraph 97), a new purpose clause reflecting more clearly the group context is proposed for consideration.

D. Substantive consolidation

7. Draft recommendation 221 has been revised, to improve the drafting, from “The insolvency law may specify that the court may exclude specified assets and claims from an order for substantive consolidation” to “The insolvency may permit the court to exclude specified assets and claims from an order for substantive consolidation.”

8. While draft recommendation 221 addresses exclusions from an order for substantive consolidation, it does not indicate how those exclusions would be treated in practice. Limited explanation is given in paragraph 171 of the commentary. The Working Group may wish to consider whether the draft recommendation or the commentary should provide more detail, and if so, the explanation to be included.

9. At its thirty-sixth session, the Working Group discussed the need to address the issue of a secured creditor or employee enhancing their position when an order for substantive consolidation was made. The issue is addressed in paragraph 160 of the commentary and draft recommendation 225 has been included for consideration by the Working Group.

10. Draft recommendation 226 addresses the recognition of security interests in substantive consolidation, requiring that they should “as far as possible” be recognized in substantive consolidation. Issues associated with secured creditors are discussed in paragraphs 159-162 of the commentary. The Working Group might wish to consider whether that discussion provides sufficient guidance as to what recognition to the extent possible might mean in practice.

11. Draft recommendation 227 addresses the recognition of priorities in substantive consolidation, also requiring that they should be recognized “as far as possible”. The commentary, paragraph 163, includes a limited explanation. The Working Group may wish to consider whether further material should be provided to explain what recognition to the extent possible might mean in practice, in order to provide guidance to readers unfamiliar with substantive consolidation and its effects.

E. Insolvency representative

12. Draft recommendation 237 included a reference which limited the substance of the article to what was permitted under applicable law. That reference has been deleted on the basis that the purpose of the Guide is to influence the substance of

applicable law and, as far as possible, change it to reflect the recommendations. The purpose of draft recommendation 237 is to foster coordination and cooperation. To the extent applicable law defeated the types of cooperation referred to, the recommendation would be devoid of meaning. Limiting a recommendation to what is permitted by applicable law is not an approach used elsewhere in the Guide. The Working Group may wish to consider whether the deletion of that phrase is appropriate.

F. Reorganization plans

13. Draft recommendation 238 addresses the proposal of coordinated reorganization plans, but goes no further. The Working Group may wish to consider whether the draft recommendation should also address approval and other aspects of those plans, perhaps by reference to the other recommendations of the Guide and the issues addressed in the commentary.

III. International treatment of enterprise groups in insolvency

A. General issues

14. To build upon the issue noted above with respect to recognition of the enterprise groups in domestic law, the Working Group might wish to consider whether it might be desirable to include a statement to the effect that, as a general principle, these recommendations on international treatment are intended to facilitate global solutions to the insolvency of enterprise groups.

B. Coordination involving the courts

15. A new purpose clause has been added to draft recommendations 240-247 to address the general issue of coordination.

16. The draft recommendations have been rearranged to include in the first group (recommendations 240-247), those that relate to the court. Cooperation and communication strictly between insolvency representatives is now set forth in section 3, recommendations 248-250.

17. Draft recommendations 242 and 250, with respect to cooperation to the maximum extent possible, have been revised (taking into account the slightly different context of each recommendation) in accordance with the decision of the Working Group in order to align them with the domestic provision, draft recommendation 237, concerning cooperation between insolvency representatives.

18. Draft recommendation 246 is based upon a version approved by the Working Group at its thirty-sixth session (A/CN.9/671, paragraph 38). The Working Group may wish to consider whether, given that the draft recommendation refers to the content of domestic law, it is appropriate to retain the references to the foreign court in paragraphs (b) and (d).

19. Draft recommendation 247 has been revised to include a second sentence based upon what was previously contained in a footnote, as requested by the Working Group at its thirty-sixth session (A/CN.9/671, paragraph 41). It also includes a third sentence to address, in the context of coordinated hearings, the need to ensure that each court reaches its own decision free of influence of any other court.

20. The Working Group might wish to consider whether a further recommendation along the lines of article 16(2) of the Model Law, providing a presumption as to authenticity of documents, might be useful in the context, in particular, of coordinated hearings, where documents might be shared between the different courts. It might also have some bearing on sharing of documents between courts under the draft recommendations on coordination.

C. Cooperation involving insolvency representatives

21. New purpose clauses have been added to draft recommendations 248-250, addressing cooperation between insolvency representatives and to draft recommendations 251-252, addressing appointment of a single or the same insolvency representative.

22. Draft recommendation 252 has been added at the request of Working Group (A/CN.9/671, paragraph 51) to reflect the approach taken to conflicts in the domestic context under draft recommendation 234.

D. Cross-border insolvency agreements

23. A new purpose clause has been added to the recommendations on cross-border insolvency agreements.

24. Draft recommendation 253 includes certain words in square bracket following a suggestion at the thirty-sixth session (A/CN.9/671, paragraph 48). For the reasons noted above with respect to draft recommendation 237, the inclusion of the words “to the extent permitted by applicable law” have the potential to render the recommendation devoid of meaning, as they would defeat what the recommendation is seeking to promote. The second set of words “or in the manner required by applicable law” might usefully be retained to reflect form requirements included in applicable law. The other words in square brackets (“involving two or more members of an enterprise group in different States”) are included in draft recommendations 253 and 254 to align them with the formulation used in other draft recommendations.

**C. Report of the Working Group on Insolvency Law

C. Addressing the insolvency of enterprise groups: domestic issues	20-62
D. Addressing the insolvency of enterprise groups: international issues	63-93
V. The impact of insolvency of a licensor or licensee on a security right in that party's rights under a licence agreement: discussion in the draft supplement to the Legislative Guide on Secured Transactions dealing with security rights in intellectual property	94-98
VI. Future work	99-107

I. Introduction

1. At its thirty-ninth session in 2006, the Commission agreed that the topic of the treatment of corporate groups in insolvency was sufficiently developed for referral to Working Group V (Insolvency Law) for consideration and that the Working Group should be given the flexibility to make appropriate recommendations to the Commission regarding the scope of its future work and the form it should take, depending upon the substance of the proposed solutions to the problems the Working Group would identify under that topic.

2. The Working Group agreed at its thirty-first session, held in Vienna from 11 to 15 December 2006, that the UNCITRAL Legislative Guide on Insolvency Law (the "Guide" or "Legislative Guide") and the UNCITRAL Model Law on Cross-Border Insolvency provided a sound basis for the unification of insolvency law, and that the current work was intended to complement those texts, not to replace them (see A/CN.9/618, para. 69). A possible method of work would entail the consideration of those provisions contained in existing texts that might be relevant in the context of corporate groups and the identification of those issues that required additional discussion and the preparation of additional recommendations. Other issues, although relevant to corporate groups, could be treated in the same manner as in the Legislative Guide and Model Law. It was also suggested that the possible outcome of that work

might be in the form of legislative recommendations supported by a discussion of the underlying policy consideration (see A/CN.9/618, para. 70).

3. The Working Group continued its consideration of the treatment of corporate groups in insolvency at its thirty-second session in May 2007, on the basis of notes by the Secretariat covering both domestic and international treatment of corporate groups (A/CN.9/WG.V/WP.76 and Add.1). For lack of time, the Working Group did not discuss the international treatment of corporate groups contained in document A/CN.9/WG.V/WP.76/Add.2.

4. At its thirty-third session in November 2007, its thirty-fourth session in March 2008, its thirty-fifth session in November 2008, its thirty-sixth session in May 2009 and its thirty-seventh session in November 2009, the Working Group continued its discussion of the treatment of enterprise groups, previously referred to as corporate groups, in insolvency, on the basis of notes by the Secretariat (A/CN.9/WG.V/WP.78 and Add.1, A/CN.9/WG.V/WP.80 and Add.1, A/CN.9/WG.V/WP.82 and Add.1-4, A/CN.9/WG.V/WP.85 and Add.1 and A/CN.9/WG.V/WP.90 and Add.1-2). At its thirty-sixth session, the Working Group decided that the draft recommendations on the international treatment of enterprise groups in insolvency should be included in part three of the Legislative Guide and adopt the same format as the preceding parts of the Legislative Guide (see A/CN.9/671, para. 55).

5. At its thirty-seventh session in November 2009, the Working Group commenced a preliminary discussion on possible future work (see Report of Working Group V (Insolvency Law) on the work of its thirty-seventh session, document A/CN.9/686, paras. 126-131). Topics suggested for future work included an international insolvency convention, liability of directors and officers of enterprises in insolvency or in proximity to insolvency, insolvency of large and complex financial institutions, the concept of centre of main interests (COMI) of an enterprise and the factors relevant to its determination, as well as issues of jurisdiction and recognition.

II. Organization of the session

6. Working Group V (Insolvency Law), which was composed of all States members of the Commission, held its thirty-eighth session in New York from 19 to 23 April 2010. The session was attended by representatives of the following States members of the Working Group: Belarus, Benin, Bulgaria, Cameroon, Canada, Chile, China, Colombia, Czech Republic, Egypt, El Salvador, Germany, Greece, Guatemala, India, Iran (Islamic Republic of), Italy, Japan, Madagascar, Malaysia, Mexico, Morocco, Pakistan, Paraguay, Poland, Republic of Korea, Russian Federation, Senegal, Spain, Sri Lanka, Switzerland, Thailand, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

7. The session was also attended by observers from the following States: Angola, Bangladesh, Croatia, Cuba, Denmark, Indonesia, Iraq, Kuwait, Lithuania, Panama, Philippines, Slovenia and Turkey.

8. Non-Member States and entities: Holy See and Palestine.

9. The session was also attended by observers from the following international organizations:

(a) *Organizations of the United Nations system*: International Monetary Fund (IMF) and the World Bank;

(b) *Invited intergovernmental organizations*: European Commission (EC);

(c) *Invited international non-governmental organizations*: American Bar Association (ABA), American Bar Foundation (ABF), Center For International Legal Studies (CILS), INSOL International (INSOL), International Bar Association (IBA), International Credit Insurance and Surety Association (ICISA), International Insolvency Institute (III), International Law Institute (ILI), International Women's Insolvency and Restructuring Confederation (IWIRC), Inter-Pacific Bar Association (IPBA) and Union Internationale des Avocats (UIA).

10. The Working Group elected the following officers:

Chairman: Mr. Wisit Wisitsora-At (Thailand)

Rapporteur: Mr. Maged Sobhy Siweha (Egypt)

11. The Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.V/WP.91);

(b) A note by the Secretariat on the treatment of enterprise groups in insolvency (A/CN.9/WG.V/WP.92 and Add.1-2);

(c) A note by the Secretariat on future work (A/CN.9/WG.V/WP.93);

(d) A proposal for future work by the delegation of the United States of America (A/CN.9/WG.V/WP.93/Add.1-2);

(e) A proposal by INSOL International: Directors' and officers' responsibilities and liabilities in insolvency and pre-insolvency cases (A/CN.9/WP.93/Add.3);

(f) A proposal by the delegation of the United Kingdom for the development of guidelines on directors' and officers' responsibilities and liabilities in insolvency and pre-insolvency cases (A/CN.9/WP.93/Add.4);

(g) A proposal by the delegation of Switzerland for preparation of a study on the feasibility of an instrument regarding the cross-border resolution of large and complex financial institutions (A/CN.9/WP.93/Add.5); and

(h) Comments by the International Bar Association respecting proposals to consider an international convention and/or Model Law on Cross-border Enterprise Group Insolvency (A/CN.9/WP.93/Add.6).

12. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Consideration of the treatment of enterprise groups in insolvency and future work.

5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

13. The Working Group continued its discussion of the treatment of enterprise groups in insolvency on the basis of documents A/CN.9/WG.V/WP.92 and Add.1-2 and other documents referred to therein. The deliberations and decisions of the Working Group on these topics are reflected below.

IV. Treatment of enterprise groups in insolvency

14. The Working Group commenced its work with the domestic treatment of enterprise groups in insolvency as set forth in A/CN.9/WG.V/WP.92.

A. Introduction to part three

1. General purpose clause

15. The Working Group recalled its decision at its thirty-seventh session to include a statement of general purpose for the recommendations applicable to enterprise groups in part three of the Legislative Guide. It approved the substance of the draft purpose clause, subject to the addition of text clarifying what was intended by the words “a better, more effective result” for the enterprise group. It was also suggested that the wording of the first sentence might be clearer if it referred to the “treatment of the insolvency proceedings concerning one or more members of an enterprise group”.

2. Glossary

16. The Working Group approved the substance of the draft glossary.

B. General features of enterprise groups

1. Introduction, paragraphs 1-5

17. The Working Group approved the substance of paragraphs 1-5, subject to substituting the words “legal persona” in paragraph 1 with the words “legal personality”.

2. Nature of enterprise groups, paragraphs 6-16

18. A proposal to move footnote 9 to the glossary was not supported. A further proposal to broaden the language of paragraph 9 so as to include examples of parent or holding entities that were not incorporated, such as foundations, received support. Another suggestion was to align the language of the footnote with the language used in the glossary with respect to control and ownership.

3. Reasons for conducting business through enterprise groups, paragraphs 17-25; Defining the enterprise group, paragraphs 26-30; and Regulation of enterprise groups, paragraphs 31-39

19. The Working Group approved the substance of paragraphs 17 to 39.

C. Addressing the insolvency of enterprise groups: domestic issues

1. Introduction, paragraphs 1-4

20. The Working Group approved the substance of paragraphs 1 to 4.

2. Application and commencement

(a) Introduction and joint application for commencement

Commentary, paragraphs 5-21

21. A proposal to delete the third sentence of paragraph 6 because it might prove confusing, was not supported on the basis that it provided background to the issue and examples of the approach adopted by some insolvency laws, consistent with the approach generally taken by the Legislative Guide.

Purpose clause

22. In response to a suggestion that footnotes 22 and 23 conveyed new explanations or repeated information set forth in other recommendations or in the commentary, and might not be required, it was noted that such explanations and reminders were found elsewhere in the footnotes included in the Guide and served to emphasize several key points. The Working Group approved the substance of the purpose clause as drafted.

Draft recommendation 199

23. The Working Group approved the substance of draft recommendation 199.

Draft recommendation 200

24. The Working Group supported the proposal in paragraph 2 of document A/CN.9/WG.V/WP.92/Add.2, retaining the text proposed in square brackets in the chapeau and removing the brackets. With respect to paragraph (b), the Working Group agreed with a proposal to redraft it to ensure greater clarity, as follows:

“(b) A creditor, provided that:

- (i) It is a creditor of each group member to be included in the application; and
- (ii) Each of those group members satisfies the commencement standard of recommendation 16.”

Draft recommendation 201

25. The Working Group approved the substance of draft recommendation 201.

(b) Procedural coordination*Commentary, paragraphs 22-37*

26. A proposal to substitute the words “others with legally recognized interests” in paragraph 22 with the words “parties in interest” was supported. A further proposal to replace the word “reversal” in paragraph 37 with the word “termination” to align it with draft recommendation 208 was also supported.

Purpose clause

27. The Working Group approved the substance of the draft purpose clause.

Draft recommendation 202

28. The Working Group approved the substance of draft recommendation 202.

Draft recommendation 203

29. To improve the drafting of footnote 26, a proposal to revise the second sentence was approved as follows: “Accordingly, an order for procedural coordination may require action by one or more than one court.”

Draft recommendation 204

30. A proposal that draft recommendation 204 should include a reference to creditor committees and the possibility of establishing a single committee in appropriate cases, as noted in paragraph 26 of the commentary, or of the need for coordination if there was more than one creditor committee, was supported. The Working Group approved the substance of draft recommendation 204 as follows:

“Procedural coordination may involve, for example, appointment of a single or the same insolvency representative; establishment of a single creditor committee, as appropriate; cooperation between courts, including coordination of hearings; cooperation between insolvency representatives, including information sharing and coordination of negotiations; joint provision of notice; coordination between creditor committees; coordination of procedures for submission and verification of claims; and coordination of avoidance proceedings. The scope and extent of the procedural coordination should be specified by the court.”

31. The Working Group noted that paragraph 26 would require some revision and in particular, deletion of the final sentence, as well as addition of references to the discussion of creditor committees in part two of the Guide and more discussion of the need to protect the interests of creditors and the circumstances in which a single creditor committee might be appropriate.

Draft recommendation 205

32. It was noted that while draft recommendation 203 made reference to the possibility of a court ordering procedural coordination on its own initiative, draft recommendation 205 only addressed the timing issue with respect to an application under draft recommendation 206 and not with respect to the time when the court might initiate procedural coordination. A proposal to consider an additional recommendation addressing that issue was not supported.

Draft recommendations 206-209

33. The Working Group approved the substance of the draft recommendations.

Draft recommendation 210

34. A suggestion that the draft recommendation should also refer to the modalities of giving notice and the time frame within which it should be given did not receive support. The Working Group approved the substance of the draft recommendation.

3. Treatment of assets on commencement of insolvency proceedings

(a) Introduction and protection and preservation of the insolvency estate, paragraphs 38-51

35. The Working Group approved the substance of paragraphs 38-51.

(b) Use and disposal of assets, paragraphs 52-54

36. The Working Group approved the substance of paragraphs 52-54.

(c) Post-commencement finance

Commentary, paragraphs 55-74

37. It was noted that the reference to the glossary in paragraph 56 should refer to the glossary at the commencement of the Legislative Guide, rather than to the glossary to part three. It was also noted that the reference to “related parties” should be replaced with the term “related persons”. The Working Group approved the substance of paragraphs 55-74.

Purpose clause

38. The Working Group approved the substance of the draft purpose clause.

Draft recommendation 211

39. The Working Group approved the substance of draft recommendation 211.

Draft recommendation 212

40. The Working Group supported the proposal in paragraph 6 of document A/CN.9/WG.V/WP.92/Add.2 to replace the word “is” in paragraph (b) with either “will be” or “is likely to be”. After discussion, the prevailing view was that “will be” was preferred. The Working Group approved the substance of the draft recommendation with that revision.

Draft recommendations 213-216

41. The Working Group approved the substance of the draft recommendations.

(d) Avoidance proceedings

Commentary, paragraphs 75-82

42. The Working Group approved the substance of paragraphs 75-82.

Purpose clause and draft recommendations 217-218

43. The Working Group approved the substance of the purpose clause and the draft recommendations.

(e) **Subordination, paragraphs 83-91**

44. The Working Group approved the substance of paragraphs 83-91.

4. Remedies

(a) **Introduction, extension of liability and contribution orders, paragraphs 92-104**

45. The Working Group approved the substance of paragraphs 92-104.

(b) **Substantive consolidation**

Commentary, paragraphs 105-137

46. A proposal to delete the final sentence of paragraph 136 was not supported. A proposal to ensure that references to “consolidation”, particularly in paragraphs 106-107, be revised to “substantive consolidation” was supported. The Working Group approved the substance of paragraphs 105-137 with that revision.

Purpose clause

47. The Working Group approved the substance of the purpose clause.

Draft recommendations 219-220

48. The Working Group approved the substance of the draft recommendations.

Draft recommendation 221

49. The Working Group supported the proposal in paragraph 8 of document A/CN.9/WG.V/WP.92/Add.2, with the final word “ordered” being replaced with the word “appropriate”. As a matter of drafting, it was agreed that dividing the draft recommendation into two subparagraphs providing that the insolvency law should (a) permit the court to exclude specified assets, and (b) specify the circumstances in which those exclusions might be appropriate, would assist with clarity and understanding. It was also agreed that the commentary should be expanded to include additional examples of situations in which exclusions might be appropriate, including where there were burdensome assets, such as assets carrying an environmental liability or assets that would be difficult or costly to administer, or where the consequences of fraud might be exacerbated if certain assets were to be included in the order for substantive consolidation.

Draft recommendations 222-223

50. The Working Group approved the substance of the draft recommendations.

Draft recommendation 224

51. The Working Group supported the proposal in paragraph 11 of document A/CN.9/WG.V/WP.92/Add.2 to treat claims “as if they were claims against the single insolvency estate” in paragraph (c) of the draft recommendation.

Draft recommendations 225-227

52. The Working Group approved the substance of the draft recommendations.

Draft recommendation 228

53. The Working Group supported the proposal in paragraphs 12-15 of document A/CN.9/WG.V/WP.92/Add.2 to revise the draft recommendation. As a matter of drafting, it was noted that the recommendation should refer to the calculation of the suspect period “retroactively”. The draft recommendation was adopted as follows:

“228. (1) The insolvency law should specify the date from which the suspect period with respect to avoidance of transactions of the type referred to in recommendation 87 should be calculated when substantive consolidation is ordered with respect to two or more enterprise group members.

(2) The specified date from which the suspect period is calculated retroactively in accordance with recommendation 89 may be:

(a) A different date for each enterprise group member included in the substantive consolidation, being either the date of application for or commencement of insolvency proceedings with respect to each such group member; or

(b) A common date for all enterprise group members included in the substantive consolidation, being either (i) the earliest of the dates of application for, or commencement of, insolvency proceedings with respect to those group members; or (ii) the date on which all applications for commencement were made or all proceedings commenced.”

Draft recommendations 229-230

54. The Working Group approved the substance of the draft recommendations.

Draft recommendation 231

55. The Working Group supported the proposal in paragraph 16 of document A/CN.9/WG.V/WP.92/Add.2 to align the draft recommendation with draft recommendation 210 and approved the substance of the draft recommendation on that basis. A proposal to add a reference to the right to be heard and to appeal was not supported on the basis that those matters were already addressed in recommendations 137 and 138.

5. Participants

Commentary, paragraphs 138-145

56. The Working Group approved the substance of paragraphs 138-145.

Purpose clause

57. The Working Group approved the substance of the purpose clause.

Draft recommendations 232-235

58. The Working Group approved the substance of the draft recommendations. In response to a question concerning the party responsible for making the determinations under draft recommendation 232, it was recalled that that issue should be considered in the context of recommendation 118 and the mechanism adopted by insolvency law for appointment of the insolvency representative.

Draft recommendation 236

59. The Working Group noted the proposal in paragraph 18 of document A/CN.9/WG.V/WP.92/Add.2 to align the draft recommendation with draft recommendations 235, 241 and 250. With respect to the use of “should” or “may”, the Working Group agreed, after discussion, that both words could be deleted, as the remaining draft “The insolvency law should specify that cooperation ... be implemented” would be sufficient. It was noted that that change should also be made to draft recommendation 250.

60. The Working Group also agreed with the proposal to relocate the reference to communication with creditors to paragraph (c). With respect to the proposal concerning paragraph (d), the prevailing view was to retain the text “Coordination with respect to the proposal and negotiation of reorganization plans”, with the brackets removed. The Working Group adopted the substance of the draft recommendation with those modifications.

6. Reorganization of two or more enterprise group members*Commentary, paragraphs 146-152*

61. The Working Group approved the substance of paragraphs 146-152.

Draft recommendations 237-238

62. The Working Group agreed that the reference to “two or more enterprise group members” in draft recommendation 238 should be revised to “one or more” on the basis that a solvent group member could participate in a reorganization plan concerning only one group member, as well as in a plan concerning multiple group members. The Working Group approved the substance of draft recommendations 237-238 with that modification.

D. Addressing the insolvency of enterprise groups: international issues

63. The Working Group continued its deliberations on enterprise groups in insolvency in the international context as set forth in A/CN.9/WG.V/WP.92/Add.1.

1. Introduction, paragraphs 1-6

64. The Working Group approved the substance of paragraphs 1-6.

2. Promoting cross-border cooperation in enterprise group insolvencies

(a) Introduction, paragraphs 7-10

65. The Working Group approved the substance of paragraphs 7-10.

(b) Access to courts and recognition of foreign proceedings

Commentary, paragraphs 11-13

66. The Working Group approved the substance of paragraphs 11-13.

Purpose clause

67. The Working Group agreed that the words “two or more” and “where access to the courts and recognition of those foreign proceedings are prerequisites to cooperation between the courts, insolvency representatives and creditors” should be deleted and the square brackets removed. With those deletions, the Working Group approved the substance of the purpose clause.

Draft recommendation 239

68. The Working Group noted that the comma after the word “necessary” in paragraph (b) was not included in the original draft of the text approved at its thirty-seventh session (A/CN.9/686, para. 20) and should therefore be deleted. With that modification, the Working Group approved the substance of draft recommendation 239.

3. Forms of cooperation involving courts

(a) Communication by courts

Commentary, paragraphs 14-34

69. The Working Group approved the substance of paragraphs 14-34, noting that additional footnotes referring to specific paragraphs of the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation should be added throughout those paragraphs to draw the reader’s attention to the Practice Guide and to underline its importance as a reference tool on cross-border insolvency.

(b) Coordination of the debtor’s assets and affairs

Commentary, paragraph 35-36

70. The Working Group approved the substance of paragraphs 35-36.

(c) Appointment of a court representative

Commentary, paragraph 37

71. Some concerns were raised with respect to the qualifications and integrity required of a person to be appointed by the court and issues of conflict of interest. It was emphasized that such a person was not generally an insolvency representative and that recommendations 115-125 therefore were not intended to apply. A proposal to address those issues in detail was not supported, a preference being expressed in favour of leaving those issues to the domestic law and the appointing court.

However, the Working Group agreed to revise the fourth sentence of paragraph 37 along the following lines: “The appointing court may consider the qualifications required to perform the functions to be undertaken, as well as issues of conflict of interest and will typically outline the terms under which the appointee is authorized to act and the extent of its powers.” Subject to that addition, the Working Group approved the substance of paragraph 37.

(d) Coordination of hearings

Commentary, paragraphs 38-40

72. The Working Group approved the substance of paragraphs 38-40.

Purpose clause

73. The Working Group agreed to add the words “and facilitate” after the word “authorize” in paragraphs (a) and (b). With those additions, the Working Group approved the substance of the purpose clause.

Draft recommendation 240

74. The Working Group agreed to replace the reference to “that enterprise group” at the end of the draft recommendation with the words “the same enterprise group” to align it with draft recommendations 242 and 246-249 and approved the substance of draft recommendation 240 with that modification.

Draft recommendation 241

75. The Working Group agreed to retain the text in square brackets in paragraph (a) and remove the brackets. To address concerns that the use of the word “including” in the chapeau might operate to limit the provision in some legal systems, it was agreed that words such as “for example” might be added. The Working Group approved the substance of draft recommendation 241 with those modifications.

Draft recommendation 242

76. The Working Group agreed to replace the reference to “that enterprise group” at the end of the draft recommendation with the words “the same enterprise group” to align it with draft recommendations 240 and 246-249 and approved the substance of draft recommendation 242 with that modification.

Draft recommendation 243

77. The Working Group agreed to delete the words in square brackets in the chapeau. A proposal to replace the word “may” in both sentences of paragraph (d) with “should” was not supported. The Working Group approved the substance of draft recommendation 243 with the modification of the chapeau.

Draft recommendation 244

78. The Working Group considered the proposals contained in paragraphs 25 and 26 of document A/CN.9/WG.V/WP.92/Add.2 to revise draft recommendation 244. The Working Group agreed to delete the words in square brackets in the chapeau and

to align the chapeau with that of draft recommendation 243 as follows: “The insolvency law should specify that communication between courts and between courts and foreign representatives shall not imply:”. A proposal to revise paragraph (c) to refer to “substantive or procedural rights” and thus align it with the usage in draft recommendation 243, paragraph (f) was supported.

79. The Working Group approved the substance of draft recommendation 244 with those revisions.

Draft recommendation 245

80. A proposal to require coordinated hearings to be subject to the conditions set forth in the second sentence of the draft recommendation by replacing “may” with “should” was supported. A further proposal to revise the final sentence was supported as follows: “Notwithstanding the coordination of hearings, each court should maintain its independence in reaching its own decision on the matters before it.” The Working Group adopted the substance of the draft recommendation with those revisions.

4. Forms of cooperation involving insolvency representatives

(a) Cooperation by the insolvency representatives

Commentary, paragraphs 41-42

81. The Working Group approved the substance of paragraphs 41-42.

Purpose clause

82. The Working Group approved the substance of the purpose clause with the following revisions: (a) addition of the words “and between insolvency representatives and foreign courts” after the word “representatives” in the chapeau, in order to align it with the substance of the following recommendations; and (b) addition of the words “and facilitate” after the word “authorize” in paragraph (a), to align it with the modifications agreed for the purpose clause to recommendations 240-245.

Draft recommendations 246-249

83. The Working Group supported the proposal contained in paragraph 30 of document A/CN.9/WG.V/WP.92/Add.2 to adopt the words “the same” and remove the square brackets. With that modification, it approved the substance of the draft recommendations.

Draft recommendation 250

84. The Working Group supported the proposal contained in paragraph 33 of document A/CN.9/WG.V/WP.92/Add.2 to retain the wording in square brackets in paragraph (d) and remove the brackets, in order to align the draft recommendation with draft recommendation 236. For the same reason, the word “may” was deleted from the chapeau. With those modifications, the Working Group approved the substance of draft recommendation 250.

(b) Appointment of a single or the same insolvency representative*Commentary, paragraphs 43-47*

85. The Working Group approved the substance of paragraphs 43-47, with the addition in paragraph 46 of a reference to the paragraphs of part II, chapter III, dealing with appointment of the insolvency representative, and to the explanation of the term “insolvency representative” in the glossary.

Purpose clause

86. The Working Group approved the substance of the purpose clause.

Draft recommendation 251

87. The Working Group noted the proposal contained in paragraph 35 of document A/CN.9/WG.V/WP.92/Add.2 to revise the draft recommendation and agreed to retain the reference to “applicable law” and remove the square brackets. With that modification, the Working Group approved the substance of draft recommendation 251.

Draft recommendation 252

88. A proposal to delete the second sentence of the draft recommendation was not supported. Noting that the draft recommendation was the same as draft recommendation 233, which had been approved as drafted, the Working Group approved the substance of draft recommendation 252.

5. Use of cross-border insolvency agreements*Commentary, paragraphs 48-54*

89. The Working Group approved the substance of paragraphs 48-54.

Purpose clause

90. The Working Group approved the substance of the purpose clause.

Draft recommendations 253-254

91. The Working Group approved the substance of draft recommendations 253-254.

6. Possible additional recommendations

92. The Working Group considered the proposals contained in paragraphs 38-39 of document A/CN.9/WG.V/WP.92/Add.2 to include an additional recommendation to permit an insolvency representative to act in a foreign State on behalf of the proceedings in which the insolvency representative was appointed (along the lines of article 5 of the Model Law) or to seek information or assistance directly from the foreign court (in accordance with article 25 of the Model Law). After discussion, the Working Group agreed to revise draft recommendation 248 as follows:

“The insolvency law should permit an insolvency representative appointed to administer insolvency proceedings with respect to an enterprise group

member, in the exercise of its functions and subject to the supervision of the court, to communicate directly with, or to request information or assistance directly from, foreign courts concerning those proceedings and insolvency proceedings commenced in other States with respect to members of the same enterprise group.”

93. The Working Group requested the Secretariat to make the necessary adjustments to the draft of part three of the Legislative Guide as agreed upon at the current session. The Working Group proceeded to adopt the draft of part three of the Legislative Guide on the treatment of enterprise groups as contained in documents A/CN.9/WG.V/WP.92 and Add.1 and recommended it to the Commission for possible finalization and adoption at its forty-third session in 2010.

V. The impact of insolvency of a licensor or licensee on a security right in that party’s rights under a licence agreement: discussion in the draft supplement to the Legislative Guide on Secured Transactions dealing with security rights in intellectual property

94. The Working Group was informed that, in the course of its work on a supplement to the Legislative Guide on Secured Transactions dealing with security rights in intellectual property, Working Group VI (Security interests) had agreed to include text on automatic termination and acceleration clauses in intellectual property licence agreements. Working Group VI (Security interests) further agreed to refer that text to Working Group V for its consideration and approval (see document A/CN.9/685, para. 95), as that text contains references to and seeks to summarize portions of the UNCITRAL Legislative Guide on Insolvency Law.

95. The Working Group considered the text referred to it by Working Group VI (Security interests) and contained in document A/CN.9/WG.VI/WP.42/Add.6, paras. 50-52:

“50. The Insolvency Guide recommends that any contractual clauses that automatically terminate and accelerate a contract upon an application for commencement, or commencement, of insolvency proceedings or upon the appointment of an insolvency representative should be unenforceable as against the insolvency representative and the debtor (see recommendation 70 of the Insolvency Guide). The Insolvency Guide also recommends that the insolvency law should specify the contracts that are exempt from the operation of this recommendation, such as financial contracts, or are subject to special rules, such as labour contracts (see recommendation 71 of the Insolvency Guide).

“51. The commentary of the Insolvency Guide states that some laws uphold these clauses in some circumstances and explains the reasons for this approach. These reasons include ‘the need for creators of intellectual property to be able to control the use of that property and the effect on a counterparty’s business of termination of a contract, especially one with respect to an intangible’ (see part two, chapter II, para. 115 of the Insolvency Guide). For example, automatic termination and acceleration clauses contained in

intellectual property licence agreements may be upheld as the insolvency of the licensee may have a negative impact not only on the licensor's rights but also on the intellectual property right itself. This is the case, for example, where the insolvency of a licensee of a trademark used on products may affect the market value of the trademark and the trademarked products. In any case, clauses included in intellectual property licence agreements that provide, for example, that a licence terminates after X years or upon material breach such as failure of the licensee to upgrade or market the licensed products on time (that is, where the event that triggers the automatic termination is not insolvency) are not affected (see footnote 39, recommendation 72 of the Insolvency Guide).

"52. The commentary of the Insolvency Guide also states that other laws override these clauses and explains the relevant reasons (see part two, chapter II, paras. 116 and 117 of the Insolvency Guide). The commentary further explains that, although some insolvency laws do permit these types of clause to be overridden if insolvency proceedings are commenced, this approach has not yet become a general feature of insolvency laws. In this regard, the commentary speaks of an inherent tension between promoting the debtor's survival, which may require the preservation of contracts, and affecting commercial dealings by creating a variety of exceptions to general contract rules. The commentary concludes by expressing the desirability that an insolvency law permit such clauses to be overridden (see part two, chapter II, and para. 118 of the Insolvency Guide)."

96. Some concerns were expressed that while not an inaccurate summary of the material in the Insolvency Guide, the paragraphs presented did not reflect the nuanced treatment of those issues in the Insolvency Guide. After discussion, there was support for a proposal to address those concerns by adding the following sentence to refer to the Insolvency Guide. That sentence could be inserted in the appropriate place, possibly following paragraph 50:

"The commentary to the Insolvency Guide explains the perceived advantages and disadvantages of such clauses, the types of contracts that may be appropriate to be exempted and the inherent tension between promoting the debtor's survival, which may require the preservation of contracts, and introducing provisions which override contractual clauses. The possible application of such provisions to intellectual property is addressed in the commentary at part two, chapter II, paragraph 115 of the Insolvency Guide."

97. It was suggested that in referring to the recommendations of the Insolvency Guide it might be noted that those recommendations are directed at the content of the insolvency law.

98. The Working Group approved the text of paragraphs 50-52 as presented by Working Group VI with the modifications noted above.

VI. Future work

99. The Working Group recalled its preliminary exchange of views on possible topics for future work at its last session (see document A/CN.9/686, paras. 126-131) and continued its discussion on future work, hearing presentations on a series of proposals by the delegations of the United States, the United Kingdom, Switzerland, INSOL International, the International Bar Association (IBA), the International Insolvency Institute (III) and the Union Internationale des Avocats (UIA) contained in documents A/CN.9/WG.V/WP.93 and Add.1-6 and other documents referred to therein.

100. With respect to the United States proposal concerning, *inter alia*, the centre of main interests (COMI and related issues, it was observed that although some common threads could be distinguished in the cases being considered, there was an increasing divergence in the manner in which COMI and other related issues were interpreted and determined in different States and thus growing unpredictability with respect to what might constitute, for example, the COMI of a debtor or foreign proceedings within the meaning of the Model Law. That lack of predictability had economic implications arising from the location in which insolvency proceedings might commence, which would in turn affect the priorities applicable in insolvency proceedings and could affect lending decisions at the outset. It was observed that because COMI and the related issues were the subject of much study and discussion, considerable work had already been done that could assist the Working Group in its deliberations on such a topic.

101. It was noted that the United States proposal included different phases, the latter of which, for the development of a model law on jurisdiction, access and recognition, was closely related to the proposal by the UIA and the IBA to develop a convention addressing, *inter alia*, those issues. There was considerable support for the view that, in line with the approach adopted in previous work of the Working Group, the topics could be approached in a manner that would not preclude the development of a convention. At the outset, the particular type of instrument to be developed could be left open and, if a considerable degree of consensus could be reached, it might be possible to conclude some form of binding instrument. The hope was expressed that the work could be taken to a level of consensus beyond that reached in the Legislative Guide. A different view was that the work should focus only upon providing non-prescriptive guidance and should be developed as additions to existing texts, such as the Legislative Guide and the Practice Guide.

102. With respect to the proposals relating to the liability and responsibility of directors and officers, it was observed that the topic was increasingly important, particularly in the context of enterprise groups. It was noted that provisions on duties and responsibilities might operate as an incentive to management of the debtor to reorganize at an early stage rather than wait until that possibility had passed and liquidation was inevitable. Moreover, the topic had been recognized in the work of regional and international organizations as one to be addressed in the future and particularly in the international context as there was an absence of international standards addressing those duties and responsibilities in the shadow of, or in, insolvency and a real divergence in the approaches adopted under national law. It was observed that the financial crisis had demonstrated not only the global effect of insolvencies, but also that national responses were often insufficient to resolve issues such as those raised with respect to the responsibility of directors and officers. Some concern was expressed as to whether such

duties and responsibilities fell within the purview of insolvency law or more commonly within that of company law or criminal law. It was observed, in response, that the proposal was not intended to cover areas of criminal liability or to deal with core areas of company law.

103. It was noted with respect to the proposal on large and complex financial institutions that those institutions had not been covered by UNCITRAL's work to date for various reasons, such as the prevalence of special regulatory regimes which focus on the need to prevent systemic risk, ensure the safety of payment systems and protect depositors. It was suggested however, that the work undertaken by UNCITRAL was of direct relevance to the possible treatment of those institutions in the international context and that UNCITRAL was well placed to address the topic, particularly since it could involve in its deliberations parties with the relevant expertise and experience. A different view, however, was that UNCITRAL may not be the appropriate organization to undertake such work given the need to involve central banks and supervisory agencies and because work was already being undertaken by other regional and international organizations, including the IMF, the World Bank, the European Commission and the Basel Committee on Banking Supervision, as noted in A/CN.9/WG.V/WP.93, paragraphs 9-15. It was noted that the work of UNCITRAL had been cited in the work of some of those organizations and, on that basis, it was suggested that the Secretariat might be requested to monitor the development of that work with a view to reporting to the Working Group and the Commission, pursuant to its coordination function.

104. After discussion, the Working Group recommended that activity be initiated on two insolvency topics, both of which were of current importance and where a greater degree of harmonization of national approaches would be beneficial in delivering certainty and predictability. Those topics were:

(a) The United States proposal as described in paragraph 8 of A/CN.9/WG.V/WP.93/Add.1 to provide guidance on the interpretation and application of selected concepts of the Model Law relating to COMI and possibly to develop a model law or provisions on insolvency law addressing selected international issues, including jurisdiction, access and recognition, in a manner that would not preclude the development of a convention; and

(b) The proposals of the United Kingdom (set forth in document A/CN.9/WG.V/WP.93/Add.4), INSOL International (as set forth in document A/CN.9/WG.V/WP.93/Add.3) and the International Insolvency Institute (as set forth in document A/CN.9/582/Add.6) concerning the responsibility and liability of directors and officers in insolvency and pre-insolvency cases.

105. The Working Group was of the view that work should begin in 2010 because of the current circumstances facing many States as a result of the global financial crisis and the divergent approaches taken by national laws to those issues. The Working Group was also of the view that the proposal documents, together with existing comparative studies and publications would provide a sufficient basis for initiating this activity in 2010.

106. The Working Group recommended that it be given the flexibility to make recommendations to the Commission regarding the scope of its future work and the

form it should take and to determine the manner in which the work might be organized and proceed.

107. The Working Group agreed that other proposals that had received support should be referred for the consideration of the Commission.

**D. Note by the Secretariat on the treatment of enterprise groups
in insolvency, submitted to the Working Group on Insolvency
Law at its thirty-eighth session
(A/CN.9/WG.V/WP.92 and Add.1-2)**

[Original: English]

I. General features of enterprise groups

**II. Addressing the insolvency of enterprise groups: domestic
issues**

1. This note sets forth the draft commentary and recommendations of part three of the UNCITRAL Legislative Guide on Insolvency Law. The commentary and recommendations are revised versions of the text previously included in documents A/CN.9/WG.V/WP.90 and Addenda 1, revised on the basis of the Report of Working Group V on the work of its thirty-seventh session in November 2009 (A/CN.9/686).

2. A/CN.9/WG.V/WP.92 addresses the treatment of enterprise groups in the domestic context, while A/CN.9/WG.V/WP.92/Add.1 addresses the international context. A/CN.9/WG.V/WP.92/Add.2 is provided for the information and consideration of the Working Group. It includes some explanatory notes that are intended to explain revisions made to the draft recommendations, to facilitate discussion and to raise questions for consideration by the Working Group; it is not intended that the content of A/CN.9/WG.V/WP.92/Add.2 would form part of the text of part three of the Legislative Guide.

Part three

Treatment of enterprise groups in insolvency

Introduction to part three

1. Part three focuses on the treatment of enterprise groups in insolvency. Where an approach different to that taken in part two might be required with respect to a particular issue as it affects an enterprise group or where the treatment of enterprise groups in insolvency raises issues additional to those discussed in part two, they are addressed in this part. Where the treatment of an issue in the context of an enterprise group is the same as discussed above, it is not repeated in this part. The substance of part two is therefore applicable to enterprise groups unless indicated otherwise in this part.

2. Chapter I addresses general features of enterprise groups. Chapter II deals with the insolvency of group members in a domestic context and proposes a number of recommendations to supplement the recommendations of part two, in so far as

additional issues arise by virtue of the group context. Chapter III addresses the cross-border insolvency of enterprise groups, building upon the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law), which is relevant to cross-border insolvency proceedings with respect to an individual group member, but does not address issues pertinent to the insolvency of different group members in different States and upon the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation (the Practice Guide).

Purpose of part three

3. The purpose of this part is to permit, in both domestic and cross-border contexts, treatment of the insolvency proceedings of one or more enterprise group members within the context of the enterprise group to address the issues particular to insolvency proceedings involving those groups and to achieve a better, more effective result for the enterprise group as a whole and its creditors and, in particular:

- (a) To promote the key objectives of recommendation 1; and
- (b) To more effectively address, in the context of recommendation 5, instances of cross-border insolvency proceedings involving enterprise group members.

Glossary

4. The following additional terms relate specifically to enterprise groups and should be read in conjunction with the terms and explanations included in the main glossary above.

- (a) “Enterprise group”: two or more enterprises that are interconnected by control or significant ownership;
- (b) “Enterprise”: any entity, regardless of its legal form, that is engaged in economic activities and may be governed by the insolvency law;¹
- (c) “Control”: the capacity to determine, directly or indirectly, the operating and financial policies of an enterprise;
- (d) “Procedural coordination”: coordination of the administration of two or more insolvency proceedings in respect of enterprise group members. Each of those members, including its assets and liabilities, remains separate and distinct;²

¹ Consistent with the approach adopted with respect to individual debtors, the focus of this part is upon the conduct of economic activities by entities that would conform to the types of entities described as an “enterprise”. It is not intended to include consumers or other entities of a specialized nature (e.g. banks and insurance companies) that would not be governed by insolvency law pursuant to recommendations 8 and 9 (see above, footnote 6 to recommendation 9). The special considerations arising from the insolvency of such debtors are not specifically addressed in the *Legislative Guide* (see above, part two, chap. I, paras. 1-11).

² The concept of procedural coordination is explained in detail in the commentary, see below paras. 22-25.

(e) “Substantive consolidation”: the treatment of the assets and liabilities of two or more enterprise group members as if they were part of a single insolvency estate.³

I. General features of enterprise groups

A. Introduction

1. Most jurisdictions recognize the legal concept of “corporation”, an entity which has a legal personality separate from the individuals comprising it, whether as owners, managers, or employees. As a legal or juristic person, a corporation is capable of enjoying and being subject to certain legal rights, duties and liabilities, such as the capacity to sue and be sued, to hold and transfer property, to sign contracts and to pay taxes. The corporation also enjoys the characteristic of perpetuity, in the sense that its existence continues, independent of its members at any given time and over time, and shareholders can transfer their shares without affecting the entity’s corporate existence. Corporations may also have limited liability, whereby investors will only be liable for the amount they have intentionally put at risk in the enterprise, providing certainty and encouraging investment; without that limitation, investors would put their entire assets at risk for every business venture they entered into. A corporation depends on a legal process to obtain its legal persona and once formed, will be subject to the regulatory regime applying to entities so formed. That law generally will determine not only the requirements for formation, but also the consequences of formation, such as the powers and capacities of the company, the rights and duties of its members and the extent to which members may be liable for the company’s debts. The corporate form can thus be seen as promoting certainty in the ordering of business affairs, as those dealing with a corporation know that they can rely upon its legal personality and the rights, duties and obligations that attach to it.

2. The business of corporations is increasingly conducted, both domestically and internationally, through “enterprise groups”. The term “enterprise group” covers different forms of economic organization based upon the single entity and for a working definition may be loosely described as two or more legal entities (group members) that are linked together by some form of control (whether direct or indirect) or ownership (see below). The size and complexity of enterprise groups may not always be readily apparent, as the public image of many is that of a unitary organization operating under a single corporate identity.

3. Enterprise groups have been in existence for some time, emerging in some countries, according to commentators, at the end of the 19th and beginning of the 20th centuries through a process of internal expansion, which involved companies taking control of their own financial, technical or commercial capacities. These single entity enterprises then expanded externally to take legal or economic control of other corporations. Initially these other corporations may have been in the same market, but eventually the expansion encompassed corporations working in related fields and later in fields that were different or unrelated, whether by reference to a

³ For the effects of substantive consolidation and the treatment of security interests, see below, recommendations 224 to 225 and the commentary at chap. II, paras. 129-133.

product or geographical location or both. One of the factors supporting this expansion, at least in some jurisdictions, was the legitimatization of ownership of the shares of one corporation by another corporation, a phenomenon originally prohibited in both common law and civil law systems.

4. Throughout this expansion, corporations retained and continue to retain, their separate legal personality even though individual corporations are now probably the typical form of organization only for small private businesses. Enterprise groups are ubiquitous in both emerging and developed markets, with a common characteristic of operations across a large number of sometimes unrelated industries, often with family ownership in combination with varying degrees of participation by outside investors. The largest economic entities in the world include not only States, but also equal numbers of multinational enterprise groups. Major multinational groups may be responsible for significant percentages of Gross National Product worldwide and have annual growth rates and turnovers that exceed those of many States.

5. Despite the reality of the enterprise group, however, much of the legislation relating to corporations and particularly to their treatment in insolvency, deals with the single corporate entity. Despite the absence of legislation, judges and insolvency representatives in many countries, faced with issues that may better be addressed by reference to a single enterprise rather than a single corporate entity,⁴ have developed solutions to achieve results that more accurately reflect the economic reality of modern business.

B. Nature of enterprise groups

6. Enterprise group structures may be simple or highly complex, involving numbers of wholly or partly owned subsidiaries, operating subsidiaries, sub-subsidiaries, sub-holding companies, service companies, dormant companies, cross directorships, equity ownership and so forth. They may also involve other types of entity, such as special purpose entities (SPE),⁵ joint ventures,⁶ offshore trusts,⁷ income trusts⁸ and partnerships.

⁴ The distinction is discussed further below, see E, paras. 31-39.

⁵ Special purpose entities (SPE, also known as a “special purpose vehicle” or “bankruptcy-remote entity”) are created to fulfil narrow or temporary objectives, such as the acquisition and financing of specific assets, primarily to isolate financial risk or enhance tax efficiency. An SPE is typically a subsidiary owned almost entirely by the parent corporation; certain jurisdictions require that another investor own at least 3 per cent. Its asset and liability structure and legal status generally makes its obligations secure even if the parent becomes insolvent. The corporation establishing the SPE can accomplish its purpose without having to carry any of the associated assets or liabilities on its own balance sheet, thus they are “off-balance sheet.” SPEs may also be used for competitive reasons to ensure intellectual property, such as for the development of new technology, is owned by a separate entity that is not affected by pre-existing licence agreements.

⁶ A joint venture is often a contractual arrangement or partnership between two or more parties to pursue a joint business purpose. Such an arrangement may sometimes result in the formation of one or more legal entities that may involve both parties contributing equity, and sharing in the revenues, expenses, and control of the enterprise. The venture could be for one specific project only, or a continuing business relationship. Joint ventures are widely used in an international context, as some countries require foreign corporations to form joint ventures with a domestic partner in order to enter a market. This requirement often results in technology and managerial

7. Enterprise groups may have a hierarchical or vertical structure, with succeeding layers of parent and controlled companies, which may be subsidiaries or other types of affiliated or related companies, operating at different points in a production or distribution process. Vertical integration generally takes place within a single industry and combines, for example, some or all of the sequential operations between the sourcing of raw materials and sale of the final product. It can be pursued as a strategy by acquiring suppliers, wholesalers, and retailers to increase control and reliability. It can also be achieved when a company gains strong control over suppliers or distributors, usually by exercising purchasing power. One example of vertical integration that is often cited is the oil industry, where the large oil groups conduct exploration and crude recovery, transport and refining, and retail distribution and sale of fuel.

8. Enterprise groups may also have a horizontal structure, with many sibling group members, often with a high degree of cross-ownership, operating at the same level in a particular process, for example in book publishing, where one publisher might acquire others in order to increase its range of editors and authors or to otherwise enhance its competitiveness or the media industry, where one group may own multiple media outlets running the same or very similar content. Horizontal integration is generally associated with control of a single stage of production or a single industry, enabling the group to take advantage of economies of scale, but horizontally integrated groups may also conduct businesses in a related field or in a diverse range of unrelated fields. It has been suggested that horizontal groups are more common in some parts of the world, such as Europe, while vertical groups are more common in others, such as the USA and Japan. Additionally, vertical integration might be more common in manufacturing, while horizontal integration is more common in marketing.

9. The research literature on enterprise groups clearly shows that they can be based on different types of alliances such as bank relationships, interlocking board directorates, owner alliances, information sharing, joint ventures, and cartels. The research also shows that enterprise group structures vary across corporate

control being transferred to the domestic partner. Forming a joint venture might assist in spreading costs and risks; improving access to financial resources; providing economies of scale and advantages of size; and facilitating access to new technologies and customers or to innovative managerial practices. It may also serve competitive and strategic goals such as influencing structural evolution of an industry; pre-empting competition; creating stronger competitive units; and facilitating transfer of technology and skills, as well as diversification.

⁷ An offshore trust is a conventional trust that is formed under the laws of an offshore jurisdiction. They are similar in nature and effect to onshore trusts, involving a transfer of assets to a trustee to manage for the benefit of a person or class of persons. Offshore trusts may be formed for tax purposes or asset protection. In practice the effectiveness of such trusts may be limited if the insolvency law of the home jurisdiction of the person transferring the assets operates to set aside transfers to the trusts, and transactions entered into to defraud creditors. An income trust is an investment trust holding income-producing assets. It may also refer to a legal entity, capital structure and ownership vehicle for certain assets or businesses. Its shares or trust units are traded on securities exchanges and income is passed on to the investors or unit holders, through monthly or quarterly distributions.

⁸ An income trust is an investment trust holding income-producing assets. It may also refer to a legal entity, capital structure and ownership vehicle for certain assets or businesses. Its shares or trust units are traded on securities exchanges and income is passed on to the investors or unit holders, through monthly or quarterly distributions.

governance systems. In some States, they may be organized either vertically or horizontally and develop across industries. They generally include a bank, a parent or holding company⁹ (referred to as “parent company”) or a trading company, and a diverse group of manufacturing firms. In contrast, in other States such groups are typically controlled by a single family or a small number of families and are uniformly vertically organized or have strong ties to the State, but not to particular families. Degrees of diversification also vary considerably, with some groups involving significant intra-group trading and others not.¹⁰

10. The degree of financial and decision-making autonomy in enterprise groups can vary considerably. In some groups, members may be active trading entities, with primary responsibility for their own business goals, activities and finances. In others, strategic and budgetary decisions may be centralized, with group members operating as divisions of a larger business and exercising little independent discretion within the cohesive economic unit. A parent company may exercise close control by allocating equity and loan capital to group members through a central group finance operation, deciding their operational and financial policies, setting performance targets, selecting directors and other key personnel, and continuously monitoring their activities. The power of the group may be centralized in the ultimate parent company or in a company further down the group chain, with the parent company owning the key group shares, but not having any direct productive or managerial role. The largest groups might have their own banks and perform the principal functions of a capital market. Group financing might involve intra-group lending between the parent company and subsidiaries, involving loans both from and to the parent company and the granting of cross-guarantees.¹¹ Intra-group lending might be working capital or unpaid short-term debt, such as unpaid dividends or credit in respect of intra-group trading; they may or may not involve the payment of interest.

⁹ A holding company or parent company is a company that directly or indirectly owns enough voting stock in another firm to control management and operations by influencing or electing its board of directors. The term may signify a company that does not produce goods or services itself, but whose purpose is to own shares of other companies (or own other companies outright).

¹⁰ Some research suggests that groups in Chile, for example, are more diverse than groups in South Korea, while groups in the Philippines are more vertically integrated than groups in India and far more involved in financial services than groups in Thailand. See T. Khanna and Y. Yafeh, *Business Groups in Emerging Markets: Paragons or Parasites?* *Journal of Economic Literature*, Vol. XLV (June 2007) pp. 331-372.

¹¹ In many countries a significant method of enterprise group capital raising is cross-guarantee financing, where each company within a group guarantees the performance of the others. Implementing cross-guarantee claims in liquidation has proved difficult in some jurisdictions and they have sometimes been set aside. In one jurisdiction, cross-guarantees may operate to reduce the regulatory burden on companies by bestowing accounting and auditing relief on companies that are party to the arrangement. The deed of cross-guarantee makes the group of companies that are party to that deed akin to a single legal entity in many respects and operates as a form of voluntary contribution or pooling in the event that one or more of the companies party to the deed goes into liquidation while the cross-guarantee is still operative. One advantage of this arrangement is that creditors and potential creditors can focus on the consolidated position for those entities, rather than on the individual financial statements of the wholly owned subsidiaries that are party to the deed.

11. In some States, family ties play an important connecting factor in enterprise groups. It may be the case, for example, that the more important family members and close associates of family members will sit on the board of the parent company of a group, with members of that board spread around the boards of group members so that there is a web of interlinked common directorships, enabling the family to maintain control over the group. For example, the chart of a large group in India shows a complex web of shared directorships between the board of the parent company and 45 other group members.¹²

12. In some countries, enterprise groups have enjoyed close ties to governments and government policies, such as those affecting access to credit and foreign currency and competition, which have significantly influenced the development of groups. Equally, there are examples where government policies have targeted the operations of enterprise groups, removing certain types of preferential treatment, such as access to capital.

13. The structure of many enterprise groups shows the dimension and potential complexity of the arrangements. They may involve many layers of different companies controlled to a greater or lesser extent by the level or levels above,¹³ in some cases involving hundreds if not thousands of different companies.

14. A study based upon the 1979 accounts and reports of a number of large British-based multinationals, for example, had to be abandoned with respect to two of the largest groups, with 1,200 and 800 subsidiaries respectively, because of the impossibility of completing the task. Researchers noted that few people inside the group could have had a clear understanding of the precise legal relationships between all group members and that none of the groups studied appeared to have its own complete chart.¹⁴ Similarly, the group charts of several Hong Kong property groups such as Carrian, which failed over 20 years ago, ran to several pages and a reader would have needed a good magnifying glass to identify the subsidiaries. The group chart of the Federal Mogul group, an automotive component supplier, when blown up to the point where you can read the names of all the subsidiaries, fills a wall of a small office. The group chart of Collins and Aikman, another automotive group, is printed in a book, with sub-sub-groups having the complexity of structure of many domestic enterprise groups.

15. The degree of integration of a group might be determined by reference to a number of factors, which might include the economic organization of the group (e.g., whether the administrative structure is arranged centrally or maintains the independence of the various members, whether subsidiaries depend on the enterprise group for financing or loan guarantees, whether personnel matters are

¹² See Khanna and Yafeh, note 10.

¹³ A 1997 survey in Australia of the Top 500 listed companies showed that 89 per cent of those companies controlled other companies; the greater the market capitalization of a listed company, the more companies it was likely to control (this ranged from an average of 72 controlled companies for those companies with the largest market capitalization to an average of 9 for the smallest); 90 per cent of controlled companies were wholly owned; the number of vertical subsidiary levels in an enterprise group ranged from 1 to 11, with an overall average of 3 to 4. In other countries the figures are much larger. Cited in Companies and Securities Advisory Committee (CASAC), Corporate Groups Final Report, 2000 (Australia), paragraph 1.2.

¹⁴ Hadden, *Inside Corporate Groups*, 1984 *International Journal of Sociology of Law*, 12, pp. 271-286, at 273.

handled centrally, the extent to which the parent makes key decisions on policy, operations and budget and the extent to which the businesses of the group are integrated vertically or horizontally); how the group manages its marketing (e.g., the importance of intra-group sales and purchases, the use of common trademarks, logos and advertising programmes and the provision of guarantees for the products); and the public image of the group (e.g., the extent to which the group presents itself as a single enterprise and the extent to which the activities of the constituent companies are described as operations of the group in external reports, such as those for shareholders, regulators and investors).

16. The legal structure of a group as a number of separate legal entities is not necessarily determinative of how the business of the group is managed. While each group member is a separate entity, management may be arranged in divisions along product lines and subsidiaries may have one or many product lines with the result that they fall across different divisions. In some cases, management may treat wholly owned subsidiaries as if they were branches of the parent company.

C. Reasons for conducting business through enterprise groups

17. Diverse factors shape the formation, operation and evolution of enterprise groups, ranging from legal and economic factors to societal, cultural, institutional and other norms. State leadership, inheritance customs, kinship structures (including inter-generational considerations), ethnicity and national ideology, as well as the level of development of the legal (e.g., effectiveness of contract enforcement) and institutional framework supporting commercial activity may influence enterprise groups in different environments. Some studies suggest that group structures can make up for under-developed institutions, with consequent benefits for transaction costs.

18. The advantages of conducting business through an enterprise group structure may include reduction of commercial risk and maximization of financial returns, by enabling the group to diversify its activities into various types of businesses, each operated by a separate group company. One company may acquire another to expand and increase market power, at the same time preserving the acquired company and continuing to operate it as a separate entity to utilize its corporate name, goodwill and public image. Expansion may occur to acquire new, technical or management skills. Once formed, groups may continue to exist and proliferate because of the administrative costs associated with rationalizing and liquidating redundant subsidiaries.

19. A group structure may enable a group to attract capital to only part of its business without forfeiting overall control, by incorporating that part of the business as a separate subsidiary and allowing outside investors to acquire a minority shareholding in it. A group structure may enable a group to lower the risk of legal liability by confining high liability risks, such as environmental and consumer liability, to particular group members, thus isolating the remaining group assets from this potential liability. Better security for debt or project financing may be facilitated by moving specific assets into a separate member incorporated for that purpose, thus ensuring that the lender has a first priority over the whole or most of the new member's property. A separate group member may also be formed to

undertake a particular project and obtain additional finance by means of charges over its own assets and undertaking or may be required for the purpose of holding a government license or concession. A group structure can simplify the partial sale of a business as it may be easier, and sometimes more tax effective, to transfer the shares of a group member to the purchaser, rather than sell discrete assets. A group may also be formed incidentally when a company acquires another company, which in turn might be a parent company for various other companies.

20. Meeting regulatory requirements may be easier where the companies subject to those requirements are separate group members. In the case of multinational groups, the domestic law of particular countries in which the group wishes to conduct business may require that local businesses be conducted through separate subsidiaries (sometimes subject to minimum local equity requirements) or impose other requirements or limitations, relating for example to employment and labour regulation. Arrangements not involving equity have been used for foreign expansion because of, for example, local obstacles to equity participation, the level of regulation imposed upon foreign investment operations and the relative cost advantages of those types of arrangement. Another relevant factor for multinational groups may be geographical imperatives, such as the need to acquire raw materials or to market products through a subsidiary established in a particular location. A related consideration of increasing importance that perhaps relates more to where parts of the groups structure are to be located than to the question of whether or not to organize a business through a group structure, is the importance of local law on issues such as the cost and simplicity of incorporation in the first instance, obligations of incorporated entities and treatment of the group in insolvency. Differences in law across jurisdictions can significantly complicate these issues.

21. Other key drivers for complicated group structures include fiscal considerations and their influence on the flow of money within groups. The incidence of tax is often cited as the reason for the formation of and subsequent growth of enterprise groups and many legal systems have traditionally given weight to the economic unity of related entities. While separate taxation of individual entities might be the underlying principle, it may be qualified to fulfil basic purposes such as protecting the revenue interests of governments and alleviating the tax burden that would otherwise result from the separate taxation of each group member.¹⁵ Measures that take into account the connections between parent and subsidiary companies include tax exemptions for intra-group dividends; group relief; and measures aimed at combating tax evasion. Tax exemptions may be available, for example, on the dividends paid by a company to its resident corporate shareholders and for intra-group dividends where companies are linked by substantial ownership. Tax credits may be allowed for the foreign tax paid on the underlying profits of the subsidiary and for the foreign tax that is charged directly on a dividend. Group relief might be available where related companies can be treated as a single fiscal unit and file consolidated accounts. The losses of one subsidiary may be offset against the income of another or profits and losses may be pooled amongst group members.

¹⁵ International Investment and Multinational Enterprises — Responsibility of parent companies and their subsidiaries, OECD, 1979.

22. As a result of the importance of fiscal considerations, inter-group pricing policies and national taxation rates and policies often determine the distribution of assets and liabilities within enterprise groups. Differential corporate tax rates across States, as well as certain exceptions (such as reduced tax rates for profits from manufacturing activities or financial services income) applicable in some States may make them more attractive locations than others that have higher tax rates and fewer or no exceptions. Nevertheless, tax authorities may have the right to revisit transfer-pricing structures aimed at locating profits in low taxation domiciles.

23. Choices such as between establishing a branch or a subsidiary might also be affected by fiscal regulation where, for example, repatriation of profits from a foreign subsidiary may be effected tax free by loan repayments to a parent company or may be tax free provided the parent owns a specified percentage (ranging from 5-20 per cent) of the foreign company's share capital; interest on funds borrowed to finance the acquisition of a subsidiary can be offset against their profits and as already noted, the profits and losses of different subsidiaries can be offset against each other in a consolidated tax return. Business activities have also been divided between two or more corporations to exploit tax allowances, limits imposed on the amounts of tax allowances or progressive rates of taxation. Other reasons might include: taking advantage of differences in accounting methods, taxable years, depreciation methods, inventory valuation methods and foreign tax credits; segregating activities that if combined in a single taxable entity, might be disadvantageous in fiscal terms; and taking advantage of favourable treatment for certain activities (e.g., anticipated or potential sales, mergers, liquidations or intra-family gifts or bequests) that is available for some operations, but not for others.

24. Accounting requirements also have a role to play in determining the structure of enterprise groups. In some jurisdictions, certain devices such as "agent only" subsidiaries might be created to manage certain aspects of the business and enable the parent company to avoid submitting detailed trading accounts for that subsidiary, which is just an agent of the parent company that owns all of the relevant assets.

25. Many of these benefits of conducting business through an enterprise group may be illusory. Protection against devastating losses may fall away as a result of group financing agreements; intra-group trading; cross-guarantees; and letters of comfort¹⁶ given to group auditors and the inclination of major creditors, and particularly bankers, to ensure that they have the indemnity of the top member in any group. To avoid doubt, group structures are not required from the accounting point of view — accountants are just as happy with consolidating branches as groups of subsidiaries. It seems probable that the banking, commercial and legal sectors often fail to appreciate the accounting aspects of enterprise groups.

¹⁶ A letter of comfort is generally provided by a parent company to persuade another entity to enter into a transaction with a subsidiary. It may include various types of undertaking, none of which would amount to a guarantee, which may include an undertaking to maintain its shareholding or other financial commitment to a subsidiary; using its influence to see that the subsidiary meets its obligation under a primary contract; or confirming that it is aware of a contract with the subsidiary, but without any express indication that it will assume any responsibility for the primary obligation.

D. Defining the “enterprise group” — ownership and control

26. Although the existence of enterprise groups and the importance of relationships between the group members are increasingly acknowledged, both in legislation and court decisions, there is no coherent body of rules that directly governs those relationships in a comprehensive manner. In jurisdictions where there is legislation that recognizes enterprise groups, it may not specifically deal with the regulation of such groups, by way of commercial or corporate legislation, but rather be contained in legislation on taxation, corporate accounting, competition and mergers or other issues; legislation addressing the treatment of enterprise groups in insolvency is rare. Furthermore, an analysis of legislation that does address aspects of enterprise groups reveals a diversity of approaches to the various issues associated with groups, not only between jurisdictions, but also on a comparison of the different legislation within a single jurisdiction. Thus different tests may apply to what constitutes a group for different purposes, although there may be common elements, and where those tests employ a particular concept, such as “control”, definitions may be broader or narrower, depending upon the purpose of the legislation, as noted above.

27. While much legislation avoids specifically defining the term “enterprise group”, several concepts are common to determining the relationships between companies that will be sufficient to constitute them as an enterprise group for certain specific purposes, such as extending liability, accounting purposes, taxation and so on. These concepts are found both in legislation and in numerous court decisions concerning groups in various countries and generally include aspects of ownership and ability to control or influence, both direct and indirect, although in some examples only direct ownership or ability to control or influence is considered. The choice between the two concepts often reflects a balance between the desirability of certainty, which can be achieved by setting a prescribed level of ownership, and flexibility, which might be better achieved by referring to the ability to control or influence and acknowledging the diverse economic realities of enterprise groups.

28. Some examples consider ownership by reference to a formal relationship between the companies, such as what constitutes a parent-subsidary relationship. This may be determined by reference to a formal standard, such as the holding, whether directly or indirectly, of a specified percentage of capital or votes. Examples of those percentages vary from as little as 5 per cent to more than 80 per cent. Those laws specifying lower percentages generally consider additional factors such as the ones discussed below as indicators of control or influence. In some examples, the percentages may establish a rebuttable presumption as to ownership, while higher percentages may establish a conclusive presumption.

29. Other examples of what constitutes an enterprise group adopt a more functional approach and focus on aspects of control, or controlling or decisive influence (referred to as “control”), where “control” is often a defined term. The key elements of control include actual control or capacity to control, either directly or indirectly, financial and operating policy and decision-making. Where the definition includes capacity to control, it generally envisages a passive potential for control, rather than focusing upon control that is actively exercised. Control may be obtained by ownership of assets, or through rights or contracts that give the

controlling party the capacity to control. What is important is not so much the strict legal form of the relationship, such as parent-subsidary, between the entities, but rather the substance of that relationship.

30. Factors that might indicate the existence of control of one entity by another could include: the ability to dominate the composition of the board of directors or governing body of the second entity; the ability to appoint or remove all or a majority of the directors or governing members of the second entity; the ability to control the majority of the votes cast at a meeting of the board or governing body of the second entity; and the ability to cast or regulate the casting of, a majority of the votes that are likely to be cast at a general meeting of the second entity, irrespective of whether that capacity arises through shares or options. Information that may be relevant to consideration of these factors might include: the group member's incorporation documents; details about the member's shareholding; information relating to substantive strategic decisions of the member; internal and external management agreements; details of bank accounts and their administration and authorized signatories; and information relating to employees.

E. Regulation of enterprise groups

31. Regulation of enterprise groups is generally based on one of two approaches or in some cases on a combination of the two: the separate entity approach (which is the traditional approach and by far the most prevalent) and the single enterprise approach.

32. The separate entity approach relies on several basic principles, foremost of which is the separate legal personality of each group company. It is also based upon the limited liability of shareholders of each group company and the duties of directors of each separate group entity to that entity.

33. The separate legal personality of a corporation generally means that it has its own rights and duties, irrespective of who controls it or owns it (i.e., whether it is wholly or partly owned by another company) or its participation in the activities of the enterprise group. The debts it incurs are its debts and the assets of the group generally cannot be pooled¹⁷ to pay for these debts. Contracts entered into with external persons do not automatically involve the parent company or other group members. A parent company cannot take into account the undistributed profits of other group companies in determining its own profits. Limited liability of a corporation means that unlike in a partnership or sole proprietorship, enterprise group members generally have no liability for the group's debts and obligations, with the result that potential losses cannot exceed the amount contributed to the group member by purchasing shares.

34. The single enterprise approach, in comparison, relies upon the economic integration of enterprise group members, treating the group as a single economic unit that operates to further the interests of the group as a whole, or of the dominant group member, rather than of individual members. Borrowing may be conducted on a group basis, with group treasury arrangements being used to offset the credit and debit balances of each group member; group members may be permitted to operate

¹⁷ See part three, chap. II, paras. 105-137 for a discussion of substantive consolidation.

at a loss, or be undercapitalized, as part of the overall group financial structure and strategy; assets and liabilities may be moved between group members in various ways; and intra-group loans, guarantees or other financial arrangements may be entered into on essentially preferential terms.

35. While many countries follow the separate entity approach, there are some countries that recognize exceptions to strict application of that approach and others that have developed, either by legislation or the courts, a single enterprise approach that applies to certain situations.

36. Some of the circumstances in which strict application of the separate entity approach has been overridden may include: consolidation of enterprise group accounts for a company and any controlled entity; related person transactions (where a company is otherwise prohibited from giving any financial benefit, including intra-group loans, guarantees, indemnities, releases of debt or asset transfers, to a related company unless that transaction is approved by shareholders or is otherwise exempt); cross-shareholding (where group members are generally prohibited from acquiring, or taking a security over, the shares of any controlling member or issuing or transferring their shares to any controlled member); and insolvent trading (where a parent company which ought to suspect the insolvency of a subsidiary can be made liable for the debts of that subsidiary incurred when it was insolvent).

37. A few countries have established various categories of enterprise groups that can operate as a single enterprise, in exchange for enhanced protection of creditors and minority shareholders. In one,¹⁸ enterprise group structures involving public companies are divided into three categories: (a) integrated groups; (b) contract groups; and (c) de facto groups, to which a set of harmonized single enterprise principles dealing with corporate governance and liability applies:

(a) Integrated groups are based upon a vote, by a specified proportion of shareholders of the parent company, which in turn owns a specified proportion of the shares of the subsidiary, to approve the complete integration of the subsidiary. The parent company will have unlimited power to direct the subsidiary, in return for the parent company being jointly and severally liable for the debts and obligations of the subsidiary;

(b) Contract groups can be formed by a specified proportion of shareholders of each of two companies entering into a contract that grants one company (the parent) the right to direct the other company, provided the directions are consistent with the interests of the parent company or the group as a whole. In return for giving the parent company the right of control, minority shareholders and creditors are given enhanced protection; and

(c) De facto groups are those where one company exercises, either directly or indirectly, a dominant influence over another company. Although not created by any formal arrangement, there must nevertheless be systematic involvement by the parent in the affairs of the controlled company.

¹⁸ Germany.

38. In one country¹⁹ where single enterprise principles have been introduced into corporate legislation, directors of wholly or partly owned subsidiaries may act in the interests of the parent company rather than their subsidiary company; there are provisions for streamlined group mergers; and legislation also permits contribution and substantive consolidation or pooling orders.

39. In another country,²⁰ commercial regulatory laws affecting enterprise groups increasingly use single enterprise principles to ensure that the policy underlying specific commercial legislation cannot be undermined or avoided by the use of enterprise groups. The courts have assisted in this development, selectively introducing the single enterprise concept to achieve the underlying policies of the legislation. The concept has been applied to insolvency law to avoid specified intra-group transactions, to support intra-group guarantees and in limited cases, to achieve substantive consolidation. The courts also have the power to alter the priority of claims in the liquidation of a group entity, either by treating some intra-group loans to that entity as equity rather than debt, or by subordinating intra-group loans to that entity to the claims of its external creditors.

II. Addressing the insolvency of enterprise groups: domestic issues

A. Introduction

1. Enterprise groups may be structured in ways that minimize the threat of insolvency to one or more group members, by entering into cross-guarantees, indemnities and similar types of arrangements. Where problems do arise, a parent or controlling group member may seek to avoid the insolvency of other group members in order to preserve its reputation and maintain its credit in commercial and financial spheres by providing additional finance and agreeing to subordinate intra-group claims to external liabilities.

2. However, if the complexity of an enterprise group's structure is disturbed by the onset of financial difficulty affecting one or more, or even all of the group members that leads to insolvency, problems arise simply because the group is constituted by members that are each recognized as having a separate legal personality and existence. Since, as noted above, the great majority of domestic insolvency and corporate laws do not address the insolvency of enterprise groups, even though group issues might be addressed outside the insolvency area in relation to accounting treatment, regulatory issues and taxation, the absence of legislative authority to the contrary or judicial discretion to intervene in insolvency means that each entity has to be separately considered and, if necessary, separately administered in insolvency. In certain situations, such as where the business activity of group members is closely integrated, that approach may not always achieve the best result for the individual debtor or for the business of the group as a whole, unless the parallel insolvency proceedings concerning all group members can be closely coordinated.

¹⁹ New Zealand.

²⁰ USA.

3. Much of what already exists in domestic law regarding the insolvency of enterprise groups concentrates on the circumstances in which it might be appropriate to consolidate insolvency estates. What is lacking is guidance on how the insolvency of enterprise groups should be addressed more comprehensively and, in particular, whether and in what circumstances enterprise groups should be treated differently from a single corporate entity.

4. A second key issue with respect to the treatment of enterprise groups in insolvency is the degree to which the group is economically and organizationally integrated and how that level of integration might affect treatment of the group in insolvency and in particular, the extent to which a highly integrated group should be treated differently to a group where individual members retain a high degree of independence. In some cases, where for example the structure of a group is diverse, involving unrelated businesses and assets, the insolvency of one or more group members may not affect other members or the group as a whole and the insolvent members can be administered separately. In other cases, however, the insolvency of one group member may cause financial distress in other members or in the group as a whole, because of the group's integrated structure, with a high degree of interdependence and linked assets and debts between its different parts. In those circumstances, it might often be the case that the insolvency of one or more group members would lead inevitably to the insolvency of all members (the "domino effect") and there may be some advantage in judging the imminence of the insolvency by reference to the group situation as a whole or coordinating that consideration with respect to multiple members.

B. Application and commencement

5. General considerations with respect to application for and commencement of insolvency proceedings are discussed above in part two, chapters I and II. Since those chapters apply equally to individual enterprise group members, they should be considered in conjunction with the additional issues specific to enterprise groups discussed below.

1. Joint application for commencement

(a) Background

6. As a general rule, insolvency laws respect the separate legal status of each enterprise group member and a separate application for commencement of insolvency proceedings is required to be made with respect to each of those members. Moreover, each of those members must be covered by the insolvency law (see recommendation 10) and satisfy the standard for commencement of insolvency proceedings (see recommendations 15 and 16). Some laws make provision for limited exceptions that allow a single application to be extended to other group members where, for example, all interested parties consent to the inclusion of more than one group member; the insolvency of one group member has the potential to affect other group members; the parties to the application are closely economically integrated, such as by intermingling of assets or a specified degree of control or ownership; or consideration of the group as a single entity has special legal relevance, especially in the context of reorganization plans.

7. The recommendations above concerning application for and commencement of insolvency proceedings apply to debtors that are enterprise group members in the same manner as they apply to debtors that are individual commercial enterprises. Recommendations 15 and 16 establish the standards for debtor and creditor applications for commencement of insolvency proceedings and form the basis upon which an application could be made for each group member that satisfied those standards.²¹ In the enterprise group context, the insolvency of a parent or controlling group member may affect the financial stability of a subsidiary or controlled member or the insolvency of a number of such members might adversely affect the solvency of others, so that insolvency is imminent across the group. That situation is covered by the terms of recommendation 15 if, at the time of applications by the insolvent group members, it could be said of the other group members that they are or will be generally unable to pay their debts as they mature.

(b) Purpose of a joint application

8. Permitting group members that satisfy the commencement standard to make a joint application for commencement of insolvency proceedings has the potential to improve efficiency and reduce costs by facilitating the coordinated consideration of those applications by the court, without affecting the separate identity of each of those group members or removing the need for each to individually satisfy the applicable commencement standard. It would also alert the court to the existence of a group, particularly if the application was accompanied by information substantiating the existence of the group and the relationship between the relevant group members and, where proceedings subsequently commenced on the basis of that joint application, would have the advantage of establishing a common commencement date for each insolvent group member. This common date could simplify compliance with time deadlines and the calculation of the suspect period for avoidance purposes.

9. Such a joint application might include, where permitted under the law and feasible in the circumstances, a single application covering all group members that satisfy the commencement standard or parallel applications made at the same time in respect of each of those members. The latter approach may be appropriate where the group members are not located in the same domestic jurisdiction and different courts have competence (as discussed below) or where other circumstances of the case, such as that there is a significant number of proceedings to be coordinated, suggest that a single application would not be practical. In both cases, it is desirable that the insolvency law facilitate the court undertaking a coordinated consideration of whether the commencement standards with respect to the individual group members are satisfied, taking into account the group context where relevant.

(c) Joint application and procedural coordination distinguished

10. The making of a joint application for commencement of insolvency proceedings should be distinguished from an application for what is referred to below as procedural coordination. The purpose of permitting a joint application is to facilitate coordination of commencement considerations and potentially reduce costs. Commencement of multiple proceedings on the basis of a joint application

²¹ In the case of an application by a debtor, recommendation 15 includes imminent insolvency.

should also facilitate coordination of those proceedings; the commencement date, and any other dates calculated by reference to that date, such as those relating to the suspect period, would be the same for each member. Permitting a joint application is not intended to predetermine, if the proceedings commence, how they would be administered and, in particular, whether they would be subject to procedural coordination. It is desirable, therefore, that an insolvency law does not establish a joint application as a prerequisite for procedural coordination. Nevertheless, a joint application for commencement might include an application for procedural coordination, as noted below, and might facilitate the court taking a decision on procedural coordination.

(d) Including a solvent group member in a joint application

11. A question that is often discussed in the group context is whether a solvent group member can be included in an application for commencement of insolvency proceedings with respect to insolvent group members and if so, in what circumstances. Where a group member appears to be solvent, but further investigation shows insolvency to be imminent, inclusion of that member in the application would be covered by recommendation 15, as noted above.

12. Where the question is not one of imminent insolvency and the group member is clearly solvent, different approaches may be taken. Where a group is closely integrated, an insolvency law may permit an application for commencement to include group members that do not satisfy the commencement standard, on the basis that it is desirable in the interests of the group as a whole that those members be included in the proceedings. Factors relevant to determining whether the necessary degree of integration exists might include: the relationship between the group members that is variously described, but involves, for example, a significant degree of interdependence or control; intermingling of assets; unity of identity, reliance on management and financial support or other similar factors that need not necessarily arise from the legal relationship (such as parent-subsidiary) between the group members. A further situation in which including a solvent group member in a joint application might be appropriate is where the existence of the “group” is fictitious. This might occur where, for example, the activities of the group are conducted as if they relate to a single entity and the existence of the group is a mere front for the activities of that single entity. It may also occur where members are so interlinked that there is really only one asset base and the legal separation between group members is not maintained, with management and creditors treating the different entities as if they were one and the same.

13. Such an approach may facilitate development of an insolvency solution for the whole group, avoiding piecemeal commencement of proceedings over time, if and when additional group members become affected by the insolvency proceedings initiated against the originally insolvent members. It could also facilitate the preparation of a comprehensive reorganization plan, covering the assets of both solvent and insolvent group members.

14. One of the problems with including a solvent group member, however, is that the insolvency law will generally only cover those entities properly regarded as satisfying the standard for commencement of insolvency proceedings. A solvent group member may, however, be voluntarily covered by a reorganization plan, where a commercial decision is taken by the board of directors or the management

of that member (in accordance with applicable law) that it should participate in the plan (see below, para. 152).

15. A joint application for commencement might also be permitted under some insolvency laws where all interested group members consent to the inclusion of one or more other members, whether they are insolvent or not, or all parties in interest, including creditors, so consent. It would generally be the case, however, that obtaining the consent of all creditors in such circumstances could prove to be very difficult and potentially time-consuming. An insolvency law might also consider whether a group member not involved at the time of commencement of insolvency proceedings with respect to other group members might later be joined in those proceedings if it is subsequently adversely affected by those proceedings or it is determined that its joinder would be in the interests of the group as a whole.

(e) Persons permitted to make a joint application

16. Consistent with the approach of recommendation 14, an insolvency law may permit a joint application to be made by two or more enterprise group members that satisfy the commencement standard of the insolvency law (see part two, chap. I, paras. 32-53). An application might also be made by a creditor with respect to any of the group members of which it is a creditor. Permitting a creditor to make an application with respect to group members of which it is not a creditor would be inconsistent with the commencement standard of recommendation 14.

(f) Competent courts

17. A joint application for commencement with respect to two or more enterprise group members may raise issues of jurisdiction, even in the domestic context, if those group members are located in different places and different courts potentially have jurisdiction over those individual group members and therefore competence to consider the application. This may occur, for example, in respect of a group operating nationally in States where jurisdiction for insolvency matters lies with courts in different places or applications for commencement may be made in different courts. Some laws may allow a joint application for commencement to be handled by a single court that will have jurisdiction over the individual group members included in the application.

18. Although that approach is desirable, it will ultimately be a question of whether domestic law permits joint applications involving different debtors (albeit members of the same group) in different jurisdictions or courts to be treated in such a way. In some States, proceedings in different courts may be transferred to or consolidated in a single court. Various criteria might be relevant, in such circumstances, to determining which court would be the most appropriate to handle such an application. It might, for example, be the court with competence to administer insolvency proceedings with respect to the parent or controlling member of a group, where that member is included in the application. Other criteria, such as the size of indebtedness of the various group members or the centre of control of the group might also be chosen to establish the prevailing competence of one court in the domestic setting. Creditors of different group members might also be located in different places, raising issues of representation and the location in which creditor committees would meet or be constituted.

19. Although the issue of which court is competent to consider a joint application for commencement where the subject group members are located in different domestic jurisdictions might be addressed by law other than the insolvency law, it is desirable that the approach of recommendation 13 be followed. This would require the insolvency law to clearly indicate, or include a reference to, the law that establishes the court with jurisdiction over such an application. Adoption of that approach should make it clear to all relevant parties where and how such an application can be pursued. This will be of particular importance where more than one court might have jurisdiction over individual group members.

20. Where a joint application is permitted under the insolvency law, there is the potential for cost savings where, for example, the same court is considering the commencement criteria with respect to a number of members of the same enterprise group at the same time. The fees payable and other associated procedural issues associated with an application for, and commencement of, insolvency proceedings may therefore merit reconsideration in the context of joint applications (see part two, chap. I, paras. 76-78).

(g) Notice of application

21. The recommendations above with respect to notification of an application for commencement of insolvency proceedings would apply to a joint application (see part two, chap. I, paras. 64-67). A joint application by a creditor should be notified to the group members that are the subject of the application in accordance with recommendation 19 (a). Where group members make a joint application, notice to creditors and other parties in interest would not be required until proceedings commenced on the basis of that application, in accordance with recommendation 22.

Recommendations 199-201

Purpose of legislative provisions

The purpose of provisions on joint application²² for commencement of insolvency proceedings with respect to two or more enterprise group members is:

- (a) To facilitate coordinated consideration of an application for commencement of insolvency proceedings with respect to those enterprise group members;
- (b) To enable the court to obtain information concerning the enterprise group that would facilitate determination of whether commencement of insolvency proceedings with respect to those group members should be ordered;
- (c) To promote efficiency and reduce the costs; and
- (d) To provide a mechanism²³ for the court to assess whether procedural coordination of those insolvency proceedings would be appropriate.

²² A joint application for commencement does not affect the legal identity of each group member included in the application; each member remains separate and distinct.

²³ A joint application is not a prerequisite for procedural coordination, but may facilitate the court's consideration of whether an order for procedural coordination should be made.

Contents of legislative provisions

Joint application for commencement of insolvency proceedings (para. 8)

199. The insolvency law may specify that a joint application for commencement of insolvency proceedings may be made with respect to two or more enterprise group members, each of which satisfies the applicable commencement standard.²⁴

Persons permitted to apply (para. 16)

200. [Where the insolvency law provides for joint applications in accordance with recommendation 199,] the insolvency law should specify that a joint application may be made by:

- (a) Two or more enterprise group members, each of which satisfies the applicable commencement standard in recommendation 15; or
- (b) A creditor, provided it is a creditor of each group member that satisfies the commencement standard in recommendation 16 and is to be included in the joint application.

Competent courts (paras. 17-19)

201. For the purposes of recommendation 13, the words “commencement and conduct of insolvency proceedings, including matters arising in the course of those proceedings” include a joint application for commencement of insolvency proceedings with respect to two or more enterprise group members.²⁵

2. Procedural coordination

(a) Purpose of procedural coordination

22. Procedural coordination is intended to promote procedural convenience and cost-efficiency and may not only facilitate comprehensive information being obtained on the business operations of the group members subject to the insolvency proceedings, but also assist the valuation of assets and the identification of creditors and others with legally recognized interests and avoid duplication of effort. Procedural coordination refers to what in practice may be varying degrees of coordination with respect to the conduct and administration of multiple insolvency proceedings commenced with respect to two or more enterprise group members involving, possibly, one or more courts. Although administered in a coordinated manner, the assets and liabilities of each group member involved in the procedural coordination remain separate and distinct, thus preserving the integrity and identify of individual group members and the substantive rights of claimants. Accordingly, the effect of procedural coordination is limited to administrative aspects of the

²⁴ See above, recommendation 15, which addresses debtor applications and recommendation 16, which addresses creditor applications for commencement.

²⁵ Recommendation 13 provides: The insolvency law should clearly indicate (or include a reference to the relevant law that establishes) the court that has jurisdiction over the commencement and conduct of insolvency proceedings, including matters arising in the course of those proceedings. The criteria that might be relevant to determining the competent court are discussed in the commentary, see above, para. 18.

proceedings and does not touch upon substantive issues. The scope of an order for procedural coordination would generally be determined by the court in each case.

23. Multiple proceedings may be streamlined in various ways through an order for procedural coordination, facilitating sharing of information to obtain a more comprehensive evaluation of the situation of the various debtors; combining of hearings and meetings, including joint meetings of creditors; preparation of a single list of creditors and other parties in interest for the provision of notice and coordination of the provision of notice; establishment of joint deadlines; agreement on a joint claims procedure and coordinated realization and sale of assets; coordination of avoidance proceedings; and the holding of single creditor meetings or coordination among creditor committees. Streamlining may also be facilitated by the appointment of a single or the same insolvency representative to administer the insolvency proceedings or by ensuring coordination between insolvency representatives where two or more are appointed (see below, paras. 139-140). It may also involve cooperation between two or more courts or, when permitted by domestic law, administration of the multiple proceedings concerning group members in a single court.

24. Where two or more courts are involved, cooperation between them might include, for example, coordinating the holding of hearings and sharing and disclosure of information. As noted below with respect to cross-border cooperation (see chap. III, paras. 38-40), coordinated hearings may significantly promote the efficiency of parallel insolvency proceedings involving members of an enterprise group by bringing relevant stakeholders together at the same time to discuss and resolve outstanding issues or potential conflicts, thus avoiding protracted negotiations and resulting time delays. Such hearings would generally involve two or more courts holding hearings at the same time with provision for simultaneous communication so that parties can at least hear and preferably see the proceedings in each court. These hearings may be relatively more convenient to organize in a domestic setting, as they would not generally involve the challenges posed by different languages, time zones, laws, procedures and judicial traditions that may occur in the cross-border context. However, as in the international context, the conduct of such hearings might require the use of common procedures and agreement, for example, as to how filing of documents and submission of information is to be handled between different courts.

25. Various factors might be relevant to considering whether procedural coordination is appropriate in a particular case. These may relate, for example, to information substantiating the existence of the group and identifying the linkages between group members, including the position in the group of each member covered by the application, particularly where one of them was the controlling group member or parent. Although a requirement to provide such detail might be onerous in cases where creditors are permitted to apply for procedural coordination, the essence of the application is that the debtors are members of the same group and that procedural coordination will benefit the conduct and administration of insolvency proceedings. Accordingly, the court would need to be satisfied as to that relationship when determining whether proceedings should commence and procedural coordination should be ordered.

(b) Creditor participation

26. With respect to creditor participation, the interests of creditors of the different group members have the potential to diverge and it is unlikely that those interests could be represented in a single committee. It may be, however, that in cases of procedural coordination involving many group members, establishing a separate committee for the creditors of each member might prove to be extremely costly and inefficient for administration of the proceedings. For that reason, the courts in some States have the discretion not to establish a creditor committee for each separate entity in appropriate circumstances. Accordingly, the general principle may be that it is desirable that the insolvency law permit a single creditor committee to be established in suitable cases.

(c) Timing of application

27. The benefits to be derived from procedural coordination may be apparent at the time an application for commencement is made or may arise after proceedings have commenced. It is therefore desirable that an insolvency law adopt a flexible approach to the timing of an application for procedural coordination. An application might be made at the same time as an application for commencement of proceedings or at any subsequent time. However, since the goal of procedural coordination is to coordinate the administration of multiple proceedings, the feasibility of making an order at a late stage of the proceedings would be limited, in practice, by the usefulness of so doing. In other words, there may be little advantage in seeking to coordinate proceedings that are almost completed. Similarly, the time at which additional group members became insolvent would determine whether they could be added to an existing order for procedural coordination.

28. An insolvency law might adopt the approach of stipulating a time limit for applying for procedural coordination to provide a degree of certainty. However, as is generally the case with any consideration of the need for a time limit, the advantages of establishing such a limit must be weighed against the potential disadvantages of inflexibility and the need to ensure that the time limit is properly observed (see part two, chap. I, para. 60).

(d) Persons permitted to apply

29. It is desirable that procedural coordination be as widely available as possible and that the court be given the discretion to consider whether coordination of the various proceedings would advantage their administration. The court may consider whether to order procedural coordination on its own initiative, particularly to address situations where it is determined that procedurally coordinating the proceedings would be in the best interests of the enterprise group and facilitate administration, but no application for procedural coordination is forthcoming from a party authorized to do so. The court might also order procedural coordination in response to an application from authorized parties, such as any group member subject to insolvency proceedings, the insolvency representative of a member, who would generally possess the information most relevant for making such an application, or a creditor.

30. In the case of creditors, the eligibility limitation that applies with respect to an application for commencement of insolvency proceedings (recommendation 200 (b))

need not necessarily apply. Where the application for procedural coordination is made at the time of the application for commencement, the issue of commencement should be treated separately from that of procedural coordination, since the criteria required to satisfy each issue will generally be different. Once proceedings have commenced, there is no reason to limit the ability to make an application for procedural coordination to those creditors who are creditors of the group members to be coordinated, if procedural coordination will benefit the conduct and administration of the proceedings. Creditors of other group members might also apply; the decision to order procedural coordination should not be conditioned upon the status of the creditor applying.

(e) Competent courts

31. Procedural coordination may also raise the issues of jurisdiction noted above with respect to joint applications for commencement (see above, paras. 17-19), where different domestic courts have competence over the various group members subject to insolvency proceedings. In jurisdictions where those issues arise, they would generally be determined by reference to domestic procedural law. In some States, proceedings in different courts may be consolidated or transferred to a single court, for example, the court with competence to administer insolvency proceedings with respect to the parent of a group. A range of other criteria, such as priority of filing, size of indebtedness or centre of control, might also be chosen to establish the prevailing competence of one court in the domestic setting. A key element of consolidating or transferring proceedings to a single court would be establishing communication between the courts involved prior to that transfer. Creditors of different group members might also be located in different places, raising issues of representation and the location in which creditor committees would meet or be constituted.

32. Although these issues might be addressed by law other than the insolvency law, it is desirable, as noted above with respect to joint applications (see para. 19), that the approach of recommendation 13 be followed. That would require the insolvency law to clearly indicate or include a reference to the relevant law that establishes the court with jurisdiction over an application for procedural coordination.

(f) Notice with respect to procedural coordination

33. An application for procedural coordination could be subject to the same requirements for giving of notice as an application for commencement of proceedings (see recommendations 19, 22-24 and part two, chap. I, paras. 64-68). When made at the same time as the application for commencement of proceedings, only an application for procedural coordination by creditors would require notice to be given to the relevant debtors, consistent with recommendation 19.

34. An application made at that time by group members would not require creditors to be notified, consistent with recommendations 23-24, but relevant information, such as the content or implications of the order, could be included with the notice of commencement of proceedings.

35. When an application for procedural coordination is made subsequent to commencement of proceedings, it may be appropriate to provide notice to creditors, notwithstanding that procedural coordination does not affect their substantive rights.

The provision of notice may be particularly important where the law makes provision, as noted above, for cases commenced in different jurisdictions to be transferred to, or administered by, a single court and that transfer may affect procedural aspects of the proceedings of interest to creditors, such as the location of meetings of a creditor committee or the place for submission of claims.

36. Provision of notice to all creditors may be satisfied with collective notification, such as by notice in a particular legal publication, when domestic legislation so permits and when appropriate, for instance, in the case of a large number of creditors (see part two, chap. I, paras. 69-70). In addition to the information required by the recommendations above addressing provision of notice on commencement of proceedings (recommendation 25 and part two, chap. I, para. 71), notice of an order for procedural coordination might include the terms of the order and information relevant to, for example, coordination of hearings and meetings, and arrangements to be made with respect to post-commencement finance.

(g) Modifying or terminating an order for procedural coordination

37. Given that the purpose of procedural coordination is to promote administrative convenience and cost-efficiency, an insolvency law may include provisions relating to modification or reversal of an order for procedural coordination to accommodate changed circumstances. That approach might be appropriate when, for example, a coordinated reorganization is not successful and the individual members should be liquidated separately. Reversal of an order, although rarely required, should be possible as the initial order is not intended to affect substantive rights. As a safeguard, the insolvency law could provide that reversal or modification would be possible, provided it was without prejudice to vested rights and interests arising from the initial order.

Recommendations 202-210

Purpose of legislative provisions

The purpose of provisions on procedural coordination of insolvency proceedings with respect to two or more enterprise group members is:

- (a) To facilitate coordination of the administration of those insolvency proceedings, while respecting the separate legal identity of each group member; and
- (b) To promote cost-efficiency and a better return to creditors.

Contents of legislative provisions

Procedural coordination of two or more insolvency proceedings

202. The insolvency law should specify that the administration of insolvency proceedings with respect to two or more enterprise group members may be coordinated for procedural purposes.

203. The insolvency law should specify that, at the request of a person permitted to make an application under recommendation 206 or on its own initiative, the court²⁶ may order procedural coordination.

204. Procedural coordination may involve, for example, appointment of a single or the same insolvency representative; cooperation between the courts, including coordination of hearings; cooperation between insolvency representatives, including information sharing and coordination of negotiations; joint provision of notice; coordination of procedures for submission and verification of claims; and coordination of avoidance proceedings. The scope and extent of the procedural coordination should be specified by the court.

Application for procedural coordination

— *Timing of application*

205. The insolvency law should specify that an application for procedural coordination may be made at the same time as an application for commencement of insolvency proceedings or at any subsequent time.²⁷

— *Persons permitted to apply*

206. The insolvency law should specify that an application for procedural coordination may be made by:

- (a) An enterprise group member that is subject to an application for commencement of insolvency proceedings or subject to insolvency proceedings;
- (b) The insolvency representative of an enterprise group member; or
- (c) A creditor²⁸ of an enterprise group member that is subject to an application for commencement of insolvency proceedings or subject to insolvency proceedings.

Coordinating consideration of an application

207. The insolvency law should specify that the court²⁹ may take appropriate steps to coordinate with any other competent court consideration of an application for procedural coordination of insolvency proceedings concerning two or more enterprise group members. Those steps might involve, for example, coordinated proceedings; coordinated hearings; sharing and disclosure of information.

²⁶ Coordination might involve different courts competent with respect to different group members or a single court that is competent with respect to a number of different insolvency proceedings concerning members of the same group. Accordingly, an order for procedural coordination may require action by more than one court.

²⁷ The possibility of ordering procedural coordination at an advanced stage of the insolvency proceedings is discussed in the commentary; see above, para. 27.

²⁸ To be eligible to make an application for procedural coordination, a creditor does not have to be a creditor of all the group members in respect of which it is seeking procedural coordination.

²⁹ See recommendation 203, footnote 26 above.

Modification or termination of an order for procedural coordination

208. The insolvency law should specify that an order for procedural coordination may be modified or terminated, provided that any actions or decisions already taken pursuant to the order should not be affected by the modification or termination. Where more than one court is involved in ordering procedural coordination, those courts may take appropriate steps to coordinate modification or termination of the procedural coordination.

Competent courts

209. For the purposes of recommendation 13, the words “commencement and conduct of insolvency proceedings, including matters arising in the course of those proceedings” include applications and orders for procedural coordination of insolvency proceedings with respect to two or more enterprise group members.³⁰

Notice of procedural coordination

210. The insolvency law should establish requirements for giving notice with respect to applications and orders for procedural coordination and modification or termination of procedural coordination, including the scope and extent of the order; the parties to whom notice should be given; the party responsible for giving notice; and the content of the notice.

C. Treatment of assets on commencement of insolvency proceedings

38. The manner in which the commencement of insolvency proceedings affects the debtor and its assets is discussed in detail above in part two, chapter II. In general, those effects would apply equally to commencement of insolvency proceedings with respect to two or more enterprise group members. Some of the effects that might differ in the group context are discussed below, with respect to protection and preservation of the insolvency estate; post-application finance; use and disposal of assets; post-commencement finance; avoidance; subordination; and remedies, including substantive consolidation orders.

1. Protection and preservation of the insolvency estate**(a) Application of the stay to a solvent group member**

39. As noted above (see part two, chap. II, para. 26), many insolvency laws include a mechanism to protect the value of the insolvency estate that not only prevents creditors from commencing actions to enforce their rights through legal remedies during some or all of the period of insolvency proceedings, but also suspends actions already under way against the debtor. The recommendations relating to the application of that mechanism, referred to as a “stay”, would apply generally in the case of insolvency proceedings concerning two or more enterprise group members (see recommendations 39-51).

³⁰ The criteria that might be relevant to determining the competent court are discussed in the commentary, see above, para. 18.

40. One issue that might arise in the context of the insolvency of enterprise groups, but not in the case of individual debtors, is the extension of the stay to an enterprise group member that is not subject to the insolvency proceedings (where the insolvency law permits a group member that is not insolvent to be included in the proceedings, this issue will not arise). The issue may be of particular relevance to enterprise groups because of the interrelatedness of the business of the group. For example, when finance is arranged on a group basis by way of cross-guarantees or cross-collateralization, the finance provided to one member might affect the liabilities of another, or actions affecting the assets of group members not subject to insolvency proceedings may also affect the assets and liabilities or the ability to continue their ordinary course of business of group members with respect to which applications for commencement have been made or insolvency proceedings have commenced.
