Article 8.28 of the CETA provides for the establishment of an appellate tribunal responsible for reviewing awards rendered by the aforementioned CETA tribunal. The appellate tribunal may uphold, reverse or modify awards on three bases: (a) errors in the application or interpretation of the law; (b) manifest errors in the appreciation of the facts, including the appreciation of relevant domestic law; (c) the grounds for annulment set out in article 52 (1) (a)-(e) of the ICSID Convention, in so far as they are not covered by paragraphs (a) and (b) above.

Article 13, under sub-chapter II, of chapter 8 of the Agreement between the European Union and Viet Nam also provides for a permanent appeal tribunal and establishes grounds for appeal similar to those under the CETA.

(b) Permanent mechanism

Article 8.29 of CETA, entitled "Establishment of a multilateral investment tribunal and appellate mechanism", provides that the Parties shall pursue the establishment of a multilateral investment tribunal and/or a permanent appellate mechanism. It also provides that upon the establishment of such a tribunal, the Joint Committee shall adopt a decision providing that disputes under the CETA be resolved by that tribunal, and make appropriate transitional arrangements.

Article 15 of the Agreement between the European Union and Viet Nam, entitled "Multilateral dispute settlement mechanisms", provides that the Parties to the Agreement shall enter into negotiations for an international agreement providing for a multilateral investment tribunal and a multilateral appellate mechanism. The Trade Committee is to be responsible for adopting transitional arrangements for the purposes of converting the bilateral system into a multilateral system.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The international investment agreements that are currently in force do not necessarily contain provisions on their amendment. However, that does not prevent some of them from being amended, as demonstrated, for example, by the exchange of letters of 20 March 1986 between the Government of France and the Government of Egypt amending the Convention on the Reciprocal Encouragement and Protection of Investments of 22 December 1974 (see Decree No. 87-58 of 29 January 1987: https://www.legifrance.gouv.fr/jo_pdf.do?id=JORFTEXT000000882548). The agreements that contain provisions on their amendment include:

The Agreement between the Government of France and the Government of Colombia on the Reciprocal Encouragement and Protection of Investments, signed on 10 July 2014 and currently in the process of being approved, article 18 (2) of which establishes that the Parties may amend the Agreement and that amendments must be approved in accordance with the constitutional requirements of the Parties. Those amendments are regarded an integral part of the Agreement and enter into force on the date agreed upon by the Parties (the Agreement is not yet in force, but the text is already available online at https://www.legifrance.gouv.fr/jo_pdf.do?id=JORFTEXT000000882548).

The text of that agreement does not provide for any transitional arrangements. However, establishing the date of entry into force of amendments should ensure the protection of the rights of investors whose investments have been made under the original agreement. Article 42 of the Energy Charter Treaty also allows the Parties to the Treaty to propose amendments, which may be submitted to the Energy Charter Conference for adoption and enter into force on the ninetieth day following deposit of the instruments of approval or ratification by at least three fourths of the Contracting Parties (see http://www.assemblee-nationale.fr/14/pdf/projets/pl3745-ai.pdf).

The CETA and the Agreement between the European Union and Viet Nam both contain, in articles 30.2 and X.6 respectively (chapter 17: http://trade.ec.europa.eu/doclib/docs/2016/february/tradoc_154231.pdf), a clause providing for amendment to the terms of the Agreement, including provisions on investment protection and investor-State dispute settlement. They provide that an amendment will enter into force following the exchange of written notifications certifying the Parties' fulfilment of their obligations and the completion of their internal procedures required for the entry into force of the amendment, or on the date agreed upon by the Parties.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

With regard to court decisions, a distinction should be made between decisions of the Court of Justice of the European Union (CJEU) and other international decisions (excluding those of the International Criminal Court). In the context of the law of the European Union, whose focus on integration distinguishes it from other international organizations, the General Court and CJEU render decisions that have a direct effect on the domestic law of member States. There are several types of remedy (actions for annulment, actions for failure to act, infringement proceedings and the mechanism of referral by the courts of member States to CJEU for a preliminary ruling). No domestic legal action is required to ensure that the decisions of CJEU and the General Court are enforced. However, member States may need to take legislative or regulatory measures in order to comply with those decisions. Lastly, if a member State does not comply with the decisions of CJEU, the European Commission is entitled to refer the matter back to CJEU so that the Court can, on the basis of the State's failure to give effect to a judgment of the Court of Justice and thus to fulfil its obligations, order the member State in question to pay a fine and a daily penalty.

In addition to the law of the European Union, France is also a party to the European Convention for the Protection of Human Rights and Fundamental Freedoms, which established the European Court of Human Rights. That court renders final judgments. Article 46 (1) of the European Convention on Human Rights provides that States must abide by the decisions of the Court in cases to which they are parties. In particular, States must pay any compensation ordered by the Court and take any measures set out in the decision with regard to the persons who have brought the case before the Court. It is not necessary to apply again to a national court following the delivery of a judgment by the European Court of Human Rights.

With regard to other international courts, taking into account that criminal courts are not covered by this questionnaire, disputes are of an inter-State nature. It should be recalled in this respect that other international dispute resolution mechanisms, such as the Dispute Settlement Body of the World Trade Organization, are available to States. Of course, it is not necessary to adopt laws or apply to a judge to make such decisions rendered by international courts enforceable.

The national legal framework does not contain specific provisions on the recognition and enforcement of decisions of international courts.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Under current legislation, international arbitral awards cannot be appealed against before the French courts.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

France wishes to thank CIDS for its valuable contribution to the ongoing discussions on the possibility of reforming the procedures for investor-State dispute settlement. The research paper reviews various options that could lead to the establishment of a permanent international tribunal for settling investment-related disputes or an appeal mechanism for controlling the awards and decisions rendered in the context of investor-State disputes. Several options regarding the control of those decisions are addressed in the CIDS research paper, in addition to a number of options regarding the composition of a possible permanent international tribunal, the appointment of its members, the enforcement of its judgments and the applicable law. The research paper also examines the possibility of applying those new mechanisms to existing investment agreements through an agreement based on the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration. It appears that those issues are closely interrelated, and that the approach adopted in relation to a particular aspect inevitably affects the other aspects of the proposed reform, the

main priorities and objectives of which require further discussion before a position can be taken regarding the various options discussed in the CIDS research paper.

It is also important to highlight that the European Union and its member States have already engaged in an in-depth reflection on the reform of investor-State dispute settlement. That work was undertaken in the context of the negotiation of trade agreements with third States containing a section on investment, and led to the development of a new approach, the "Investment Court System", which the European Union now promotes in all its trade negotiations and which France has undertaken to include in its next model agreement on the promotion and protection of investments, which is currently being drafted. Under this new approach, the European Union also promotes the establishment of a permanent court dedicated to settling investor-State disputes as an alternative to the current system. France has called for this reform and has directly contributed to the development of the new approach promoted by the European Union by publishing, as early as May 2015, a series of innovative and far-reaching proposals, which include the establishment of a permanent multilateral court (see http://www.diplomatie.gouv.fr/fr/IMG/pdf/20150530_isds_papier_fr_vf_cle432fca.pdf).Therefore, France fully endorses this proposed reform and hopes that the preliminary and exploratory work already undertaken by the member States of the European Union, as well as within and beyond the European institutions, to explore ways of establishing such a court will be actively pursued. However, the initiative remains a long-term project which requires further consideration at this stage.

30. Mexico

[Original: Spanish]
[Date: 10 March 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Mexico has signed 12 free trade agreements and 32 agreements on the promotion and reciprocal protection of investments, 29 of which are in force. Of the 12 free trade agreements to which Mexico is a party, 10 contain a chapter on investment with substantive disciplines and mechanisms for the settlement of investor-State disputes (the texts of the agreements signed by Mexico are available at http://www.gob.mx/se/acciones-y-programas/comercio-exterior-paises-con-tratados-y-acuerdos-firmados-con-mexico?state=published).

Those free trade agreements and agreements on the promotion and reciprocal protection of investments provide that an investor of a member country may use a dispute settlement mechanism to resolve an investment dispute that arises between it and the member country that receives its investment.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

None of the agreements to which Mexico is a party provide for permanent courts or tribunals. The agreements signed by Mexico provide for the possibility of referring to the Convention on the Settlement of Investment Disputes between States and Nationals of Other States of the International Centre for Settlement of Investment Disputes (ICSID), the ICSID Additional Facility, or to the United Nations Commission on International Trade Law; the establishment of ad hoc tribunals is also provided for.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

The agreements in force in Mexico do not contain provisions whereby arbitral awards may be subject to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The agreements in force in Mexico do not provide for any such permanent mechanisms.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The existing agreements on the promotion and reciprocal protection of investments and free trade agreements with chapters on investment contain provisions on amendments and the termination of those agreements. In a number of cases, rights are established for investors, with transitional arrangements in case of termination (for example, article 19.6 of the free trade agreement with the Republic of Peru provides that, in the event of termination of the agreement, investors will be protected during the 10 years following termination). Certain procedures are also included to enable the entry into force of those arrangements.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Under article 1347-A of the Code of Commerce, published in the Official Gazette on 7 April 2016, judgments and decisions may be enforced if they meet certain requirements, as listed in that paragraph.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Mexican legislation does not provide for the appeal of arbitral awards.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Mexico does not have any comments regarding the CIDS research paper.

31. Pakistan

[Original: English]
[Date: 21 February 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Pakistan has concluded a number of Bilateral and Multilateral treaties on the Protection of foreign investment. The world's first Bilateral Investment Treaty (BIT) was signed on November 25, 1959 between Pakistan and Germany. To date Pakistan has signed BITs with 48 countries/organizations. Pakistan has also signed FTAs with Sri Lanka (12-06-2005), China (24-112006) and Malaysia (08-11-2007). The latter two FTAs are comprehensive and contain chapter on Investment embodied in the text. Most of the BITs that Pakistan signed with other states allow for a dispute resolution mechanism, whereby an investor whose rights under the BIT have been violated can have recourse to competent judicial, arbitral or administrative bodies of the host country where investment has been made or can approach for international arbitration under the auspices of the ICSID, or Rules of Arbitration of UNCITRAL or Rules of Arbitration of International Chamber of Commerce.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

The existing model BIT template of Pakistan do not provide for permanent courts or tribunals (as opposed to investor-state arbitration). However, it provides for all the available remedial national/international forums like mutual negotiations and consultations, the competent judicial, arbitral or administrative bodies of the Contracting Party in whose territory the investment has been made; or international arbitration under the Convention of 18 March 1965 on the Settlement of Investment Disputes between States and Nationals of other States under ICSID or the Rules of Arbitration of the United Nations Commission on International Trade Law (UNCITRAL), or the Rules of Arbitration of the International Chamber of Commerce (ICC).

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

The existing model BIT template of Pakistan does not provide provisions whereby investor-state arbitral awards may be subject to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Pakistani model BIT template do not provide for possible creation in the future of a bilateral or multilateral appellate mechanism for investor-state arbitral awards: and/or a bilateral or multilateral permanent investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The existing model BIT template of Pakistan contains provisions on the amendments of the BITs. The following is the text of the provision: "Any changes and amendments to this Agreement may be made by the mutual agreement of the Contracting Parties, which shall form protocols to this Agreement and shall have the same effect, as if it were part of this Agreement".

Though Pakistani model BIT template do not specifically contain provisions regarding safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the BITs, however, it provides that the BIT shall remain in force for a further period of five years in case the agreement is terminated in the prescribed manner.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

The Government of Pakistan has ratified the New York Convention of 1958 through legislation known as Recognition and Enforcement (Arbitration Agreements and Foreign Arbitral Awards) Act, 2011 conferring jurisdiction on the High Court which shall recognize and enforce the foreign arbitral award in the same manner as a judgement or order of the court in Pakistan. Further, the recognition of a foreign arbitral award shall not be refused except in accordance with Article V of the New York Convention. However, this Act shall not apply to foreign arbitral awards made before 14 July 2005.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Under the domestic legislation, there is no right of appeal against the Arbitral Awards made by the Court or Tribunal in cases of International Arbitration.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

We may support in principle a multilateral dispute settlement system, resulting in creation of single International Tribunal for Investments potentially competent to resolve investment disputes concerning as many States as would opt into it and creation of one single Appeal mechanism potentially competent to serve as an appellate tribunal for Investor-State arbitral awards across all States. We believe that foreign investors look favourably upon the existence of bilateral and multilateral investment treaties between their home and host country as a means to have stronger protections of their investments.

However it may also be kept in view while designing such a system for dispute resolution that at the international level there is a serious concern over the dispute resolution provisions in BITs that allows investors to enter arbitration with states over treaty violations. Furthermore, the existing applicable legal frameworks provide for compensation in cases of direct expropriation and indirect expropriation and the meaning of indirect expropriation is constantly expanding to include even delays in decisions of the court, change in legislation and adverse decision of domestic courts. Some of the recently concluded BITs even did not contain investor-State Arbitration clause in them and a number of governments are now terminating or revising their BITs. In this background Government of Pakistan is also revising its BIT template and has initiated negotiations for revoking investor-State Arbitration Clause in BITs with some of the countries. We propose that while designing a system for broader reforms of the investor state dispute settlement framework, the above hitches of the existing framework may be looked into and appropriate redress may be provided in the new model.

32. Russian Federation

[Original: Russian]
[Date: 16 February 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

The Russian Federation has concluded 82 bilateral treaties on the promotion and mutual protection of capital investments (international investment agreements, or IIAs) of which 65 have entered into force. The Russian Federation is also a party to the multilateral Agreement on Promotion and Mutual Protection of Investments in the Member States of the Eurasian Economic Community and to multilateral treaties relating to the protection of foreign investment (the Agreement on partnership and cooperation establishing a partnership between the European Communities and their Member States, of one part, and the Russian Federation, of the other part (hereinafter, the Partnership Agreement between the Russian Federation and the European Union) and the Treaty on the Eurasian Economic Union).

The international investment agreement (IIA) of, and the Treaty on, the Eurasian Economic Union contain provisions on the procedure for the settlement of disputes between States and foreign investors.

The Partnership Agreement between the Russian Federation and the European Union does not contain specific provisions on the procedure for the settlement of disputes between States and foreign investors.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Almost all the international investment agreements (IIAs) contain provisions on the settlement of disputes between States and foreign investors. Most of the international investment agreements (IIAs) provide for the investor having the choice of settling

disputes through courts in the place of investment or an arbitral tribunal (commercial arbitration) or the International Centre for Settlement of Investment Disputes (ICSID).

Examples include the agreement between the Government of the Union of Soviet Socialist Republics (USSR) and the Government of the Republic of Italy on the promotion and mutual protection of capital investments (signed in Rome on 30 November 1989), the agreement between the Government of the Russian Federation and the Government of the Kingdom of Cambodia on the promotion and mutual protection of capital investments (signed in Moscow on 3 March 2015) and the Treaty on the Eurasian Economic Union (subsection 6 of section VII on trade in services, facilities, activities and investments (annex 16 to the Treaty on the Eurasian Economic Union)).

Some IIAs do not provide for the settlement of disputes between a State and foreign investor in the State court of a contracting party, for example in the agreement between the Government of the USSR and the Government of the Kingdom of Belgium and the Grand Duchy of Luxembourg on the mutual promotion and protection of capital investment (signed in Moscow on 9 February 1989).

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No IIAs contain provisions whereby arbitral awards in disputes between States and foreign investors may be subject to appeal.

Approximately 50 IIAs and the Treaty on the Eurasian Economic Union contain a special provision whereby the arbitral award on the investment dispute between the State and the foreign investor is final and binding for both parties.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The Russian Federation's IIAs do not address the possible creation in the future of: (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; or (b) a bilateral or multilateral permanent investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Most of the IIAs contain provisions on the amendment of the IIA, such as the agreement between the Government of the Russian Federation and the Government of the Republic of Singapore concerning the encouragement and reciprocal protection of investment (concluded in Singapore in 27 September 2010). However, the IIAs do not contain provisions safeguarding investors' rights, nor do they provide for transitional arrangements in case of modifications or amendments of the IIA.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Russian legislation does not contain specific provisions on the procedure of recognizing or enforcing judgments of international courts and tribunals, except for a number of provisions relating to the implementation of European Court of Human Rights (ECHR) decisions. The decisions of the ECHR are implemented in the Russian Federation under the obligations set forth in the Convention for the Protection of Human Rights and Fundamental Freedoms, if not contrary to the Constitution of the Russian Federation. There are no procedures for the enforcement of these decisions, but procedural legislation provides for the possibility of reviewing previous decisions of Russian courts in the light of ECHR decisions.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Russian legislation on international arbitration does not contain any provisions on appeal against arbitral awards but does provide for application to set aside the decision.

In accordance with the Russian Federal Arbitration Procedure Code (article 233), an international commercial arbitration decision may be set aside by an arbitral tribunal on the grounds provided for in an international treaty of the Russian Federation and the Federal Act on international commercial arbitration.

Russian Federal Act No. 5338-1 of 7 July 1993 on international commercial arbitration provides that any arbitral award which has been challenged in a State court may be changed only by applying for its setting aside.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The Russian Federation supports the UNCITRAL initiative to explore international practice in establishing institutional arbitral tribunals and bodies for the settlement of investment disputes and is prepared to engage constructively in the discussion of possible options for reforming investment arbitration.

33. Switzerland

[Original: French]
[Date: 29 December 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

There are currently 113 bilateral investment protection agreements concluded by Switzerland in force, 92 of which provide for an ISDS mechanism. Furthermore, free trade agreements with Japan, Singapore and South Korea, as well as the Energy Charter Treaty, contain provisions on investment protection, including an ISDS mechanism.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

No, the international investment agreements concluded by Switzerland do not provide for permanent courts or tribunals. Moreover, Switzerland does not have a model international investment agreement.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No, the international investment agreements concluded by Switzerland do not contain any provisions allowing appeals to be made against investor-State arbitral awards.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

No, the international investment agreements concluded by Switzerland provide neither for the future creation of a bilateral or multilateral appeal mechanism for investor-State arbitral awards nor for the future creation of a bilateral or multilateral permanent investment court or tribunal.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

In general, the international investment agreements concluded by Switzerland do not include provisions relating to their amendment. However, some of the international investment agreements concluded by Switzerland do include such provisions, although recourse has never been made to them.

In contrast, none of the international investment agreements concluded by Switzerland provide for the protection of investors' rights or transitional measures in the event of the modification or amendment of those agreements. The international investment agreements concluded by Switzerland do, however, include provisions for the protection of investors' rights in the event of termination of the agreement. Those provisions thus establish the period, from the date of termination of the agreement, during which the agreement continues to apply to investments made before that date.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

According to article 46 of the European Convention for the Protection of Human Rights and Fundamental Freedoms, "The High Contracting Parties undertake to abide by the final judgment of the Court [European Court of Human Rights (ECHR)] in any case to which they are parties. The final judgment of the Court shall be transmitted to the Committee of Ministers, which shall supervise its execution." On the basis of that obligation, Switzerland, since its accession to the European Convention on Human Rights in 1974, has implemented about 100 ECHR judgments, with adoption of the necessary measures, including individual measures (payment of just satisfaction and other individual measures) and in some cases general measures (adaptation of practice and legislative amendments).

With regard to the other individual measures in particular, reference should be made to the possibility under Swiss law of reviewing the decision of the Federal Tribunal following a judgment by ECHR. If, in a final judgment, the latter finds that there has been a violation of the European Convention on Human Rights, a review of the contested decision of the Federal Tribunal may be requested, provided that the following two cumulative conditions are met: compensation does not remedy the effects of the violation, and a review is necessary to remedy the effects of the violation.

It should also be noted that the Committee of Ministers (Department for the Execution of Judgments of the European Court of Human Rights) has compiled a "Country Profile" for each of the 47 member States of ECHR, including Switzerland. Those country profiles provide a brief overview of the main issues being monitored by the Committee of Ministers and the main reforms adopted in closed cases, as well as general statistics. The profiles will be made available to the public shortly.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Actions for annulment against international awards delivered by Swiss arbitral tribunals may be brought before the Swiss Federal Tribunal (the "Federal Tribunal"). Any such actions must be based on one of the five grievances set out in article 190 (2) of the Federal Act on Private International Law, namely: if the tribunal was not properly constituted; if the tribunal lacked jurisdiction; if the tribunal ruled on a matter beyond the claims submitted to it; if the tribunal failed to respect the right of the parties to be heard or if the award was incompatible with public policy. Only parties to the proceedings have the right to take legal action.

The Federal Act on Private International Law that is currently in force does not contain any provisions relating to the appeal or review of arbitral awards. However, in international arbitration, Swiss legal opinion allows for the possibility of review without exceptions, even in the absence of a legal basis, through the analogous application of article 121 et seq. of the Federal Supreme Court Act. Only parties to the proceedings are entitled to take legal action.

The Federal Act on Private International Law currently in force does not contain express provisions on the interpretation or rectification of an arbitral award. However, legal opinion accepts that Swiss law allows arbitral tribunals, in cases of international arbitration in Switzerland, to interpret awards and rectify oversights. The parties to the proceedings are also entitled to apply to the court for the interpretation or rectification of an arbitral award.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Switzerland welcomes the discussions currently taking place at the multilateral level relating to options for reforming the investor-State arbitration regime, and is actively participating in those discussions. In view of the fact that existing investment arbitration institutions are governed at the multilateral level, any reforms should also be undertaken at the multilateral level, and not as part of bilateral free trade agreements.

Proposals to create a permanent tribunal to resolve investment disputes between investors and States and/or an appeal mechanism for awards rendered following a dispute between investors and States must be thoroughly examined. As a first step, the various elements (legal issues etc.) should be identified and compiled by experts. Switzerland will then decide on its position on the basis of those analyses.

(A/CN.9/918/Add.6) (Original: English/French/Spanish)

Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: compilation of comments

ADDENDUM

III. Compilation of comments

34. Canada

[Original: English]
[Date: 20 April 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Canada is party to a significant number of both bilateral and multilateral international investment agreements (as the term is defined here). All of Canada's international investment agreements contain provisions on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Article 8.27 of the Comprehensive Economic and Trade Agreement signed between Canada and the European Union provides for the establishment of a permanent tribunal to resolve investor-State disputes under the Agreement. The text of the Agreement is available at http://www.international.gc.ca/trade-commerce/trade-agreements-accords-commerciaux/agr-acc/ceta-aecg/text-texte/08.aspx?lang=eng.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Article 8.28 of the Comprehensive Economic and Trade Agreement signed between Canada and the European Union provides for the establishment of a permanent appellate tribunal to review awards rendered by the investor-State Tribunal established in the Agreement. The text of the Agreement is available at http://www.international.gc.ca/trade-commerce/trade-agreements-accords-commerciaux/agr-acc/ceta-aecg/text-texte/08.aspx?lang=eng.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Article 8.29 of the Comprehensive Economic and Trade Agreement signed between Canada and the European Union commits Canada to pursue the establishment of a multilateral investment tribunal and appellate mechanism for the resolution of investment disputes. The text of the Agreement is available at http://www.international.gc.ca/trade-commerce/trade-agreements-accords-commerciaux/agr-acc/ceta-aecg/text-texte/08.aspx?lang=eng. Other Canadian IIAs,

contain similar language. For example, Annex 8E of the Canada-Korea FTA provides that the Parties are to consider the establishment of a "bilateral appellate body or similar mechanism to review awards." The text of that Agreement is available at http://international.gc.ca/trade-commerce/trade-agreements-accords-commerciaux/agr-acc/korea-coree/fta-ale/08.aspx?lang=eng.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Some, but not all, of Canada's international investment agreements contain provisions on amendment. In general, those provisions provide for the possibility of amendment based on the mutual agreement of the Parties. For example, Article 2202: Amendments, of NAFTA provides that "1. The Parties may agree on any modification of or addition to this Agreement. 2. When so agreed, and approved in accordance with the applicable legal procedures of each Party, a modification or addition shall constitute an integral part of this Agreement." Article 30.2 of CETA provides that "1. The Parties may agree, in writing, to amend this Agreement. An amendment shall enter into force after the Parties exchange written notifications certifying that they have completed their respective applicable internal requirements and procedures necessary for the entry into force of the amendment, or on the date agreed by the Parties."

Canada has used the amendment procedures in its FTAs to make amendments. To give a recent example, in September 2013, Canada and Chile reached an agreement to amend the Canada-Chile FTA in order to add a chapter on financial services and make updates to the customs procedures, government procurement and dispute settlement chapters. The Article on Amendments in the Canada-Chile FTA is P-02, and it provides "1. The Parties may agree on any modification of or addition to this Agreement. 2. When so agreed, and approved in accordance with the applicable legal procedures of each Party, a modification or addition shall constitute an integral part of this Agreement." More information on this amendment is available at http://www.international.gc.ca/trade-agreements-accords-commerciaux/agr-acc/chile-chili/amend1.aspx?lang=eng. While these amendments did not specifically relate to the investment provisions of the FTA, the same procedures would have applied to such amendments.

For the most part, Canada's IIAs provide for amendments to be effective on a date agreed to by the Parties or once the respective legal procedures have been completed and appropriate notifications exchanged (see examples provided above). However, the IIA between Canada and Egypt provides in Article XVII:

> "(2) This Agreement shall remain in force for a period of 15 years and thereafter shall continue in force indefinitely unless either Contracting Party notifies the other Contracting Party in writing of its intention to terminate it. The termination of this Agreement shall become effective one year after notice of termination has been received by the other Contracting Party. In respect of investments or commitments to invest made prior to the date when the termination of this Agreement becomes effective, the provisions of Articles I to XVII inclusive of this Agreement shall remain in force for a period of fifteen years.
>
> (3)(a) This Agreement may be amended or modified with the agreement, in writing, of the Contracting Parties. (b) Any amendment or modification of this Agreement shall enter into force in accordance with the procedure set out in paragraph (2) above."

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Under the Canadian federal system, the recognition and enforcement of foreign civil judgments, including judgments on commercial matters, generally falls under the legislative authority of the provinces and territories.

Recognition and enforcement of such judgments may be sought under legislation, where such legislation has been adopted (for example, under the Civil Code of Québec, the Saskatchewan Enforcement of Foreign Judgments Act, the British Columbia Court Order Enforcement Act, or the New Brunswick Foreign Judgments Act). As the legislation is not uniform across Canada, requirements may vary from one jurisdiction to another.

Legislation in all jurisdictions except in Québec also provides for recognition and enforcement under the 1984 Convention between Canada and the United Kingdom of Great Britain and Northern Ireland providing for the Reciprocal Recognition and Enforcement of Judgments in Civil and Commercial Matters.

Recognition and enforcement of foreign civil judgments may also be sought at common law (except in Québec), that is, in accordance with norms established by Canadian courts. At common law, the basic requirement for recognizing and enforcing a foreign civil judgment is the existence of a real and substantial connection between the court that rendered the judgment and the subject matter giving rise to the claim or the defendant.

We are not aware of any cases where a Canadian court has been asked to recognize and enforce the judgment of an "international" tribunal (i.e., one created by treaty such as the Caribbean Court of Justice or the CJEU).

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Canada's domestic legislation on international arbitration does not contain provisions allowing for an appeal against arbitral awards.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Canada is currently exploring the possibility of establishing a multilateral mechanism for the resolution of investment disputes between investors and States as a way of addressing concerns about the legitimacy of the adjudication process and to improve the quality and consistency of awards. Canada is presently engaging in consultations with respect to the multilateral mechanism, its design and implementation, and the way forward.

35. Côte d'Ivoire

[Original: French]
[Date: 21 March 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Côte d'Ivoire has concluded several agreements, including tax agreements. The international tax agreements are designed to eliminate double taxation which would result from each of the States concerned applying its own tax laws with respect to income, registration fees, stamp duty and, in some instances, inheritance, and to protect and encourage investments on a reciprocal basis. These agreements do not include provisions on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Côte d'Ivoire is a party to the Treaty on the Harmonization of Business Law in Africa (OHADA), signed in Port Louis on 17 October 1993. Strictly speaking, the Treaty is not an IIA and the Common Court of Justice and Arbitration that it establishes is not a court for the settlement of investor-State disputes. However, they could, arguably, be considered as such.

In its preamble, the treaty seeks, inter alia, to restore the legal and judicial security of economic activities in order to ensure investor confidence and facilitate interaction between the States Parties. These are all elements which form the fundamental principle of IIAs. The treaty provides for uniform acts which are rules that are common, simple, modern, tailored to the economic situation, directly applicable and binding in States Parties, notwithstanding any prior or subsequent contrary provision of domestic law.

The Common Court of Justice and Arbitration (CCJA) acts as the court of cassation, in place of National Courts of Cassation, in all uniform law disputes. Cases may be brought to the court by a party to proceedings before a national court or by referral through a national court itself. This also includes cases between private investors and a State in the third instance, in other words: an appeal in cassation. This permanent court is therefore not intended solely to settle disputes between member States and investors, but it may do so.

Decree No. 84-447 of 22 March 1984 on agreements for the promotion and mutual guarantee of investments provides for a model IIA. Article 1 stipulates that the Minister of Economy and Finance and the Minister for Foreign Affairs are authorized to negotiate and sign with States, upon request, agreements for the promotion and mutual guarantee of investments within the scope of the provisions of the framework agreement for the promotion and mutual guarantee of investments, which is an annex to the decree.

This model provides, for example in the case of expropriation in the public interest, for parties (investors and States) to have recourse to the International Centre for Settlement of Investment Disputes (ICSID) if the panel of experts charged with considering a case has not communicated its decision within three months.

Several investor-State agreements do in fact include provisions for recourse to the ICSID.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

There are currently no provisions within Côte d'Ivoire's legal system, in IIAs or the model IIA, whereby investor-State arbitral awards may be subject to appeal (as distinguished from annulment).

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

On the issue of IIAs concluded by Côte d'Ivoire or the current model IIA which address the possible creation in the future of: (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court, Côte d'Ivoire has not yet taken any concrete steps in these matters.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Regarding whether IIAs to which Côte d'Ivoire is a party contain provisions on their amendment, this is not yet the case.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

There is a statutory basis or judicial mechanism in Côte d'Ivoire for recognizing and enforcing judgments of international courts (as opposed to arbitral awards).

The Code of Civil, Commercial and Administrative Procedure provides for enforcement proceedings.

Article 345 stipulates that judicial decisions, whether contentious or non-contentious, made in a foreign country cannot be enforced or made public in the

Republic until they have been declared enforceable, subject to special provisions resulting from international agreements. This allows for an exception to be made, in order to adhere to treaties providing for the application of international standards and their direct execution, which overrides all other forms of proceedings. This applies, for example, to the judgments of the WAEMU (West African Economic and Monetary Union) Court of Justice, which are mandatory for member countries, including Côte d'Ivoire, under article 20 of Additional Protocol No. 1 and article 57 of the Rules of Procedure. Even if the court has not yet ruled on the execution of its decisions without an enforcement order, this should be possible and in accordance with national procedures.

The Ivorian courts have already implemented decisions of international courts, in accordance with Côte d'Ivoire's observance of its international commitments.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Ivorian legislation on international arbitration does not contain any specific provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The reform proposed by the CIDS would be welcome to the extent that it seeks to address weaknesses or legal loopholes regarding the settlement of investor-State disputes in the States targeted. It could thus seek to establish links with existing systems in order to avoid contravening the principles of State sovereignty and Community law.

36. El Salvador

[Original: Spanish]
[Dates: 30 January and 13 February 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

El Salvador is a party to both free trade agreements and bilateral investment treaties containing chapters on investment protection.

It is worth mentioning that there are currently around 19 bilateral investment treaties in force in El Salvador, which are available at http://www.sice.oas.org/ctyindex/SLV/SLVBITS_e.asp and which contain provisions on the settlement of investor-State disputes.

There are also nine trade agreements in force in El Salvador. However, only six of those trade agreements, listed below, contain chapters relating to the protection of investors and provisions on the settlement of investor-State disputes:

- Free trade agreement with Chile, chapter 10
- Free trade agreement between Central America and Mexico, chapter 11
- Free trade agreement with Taiwan Province of China, chapter 10
- Free trade agreement with Panama, chapter 10
- Free trade agreement with Colombia, chapter 12
- Free trade agreement with the United States of America, chapter 10.

As mentioned, El Salvador is a State party to bilateral investment treaties and free trade agreements containing chapters on investment protection. In both cases, the agreements include provisions on the settlement of investor-State disputes. The

Dominican Republic-Central America Free Trade Agreement (CAFTA-DR), for example, contains a specific chapter governing investment (see chapter 10, section B, of the Agreement). At the bilateral level, the Agreement on the Promotion and Reciprocal Protection of Investments between El Salvador and Uruguay also illustrates the procedure that has been established for the settlement of disputes between the Government and an investor (see article 9).

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

No, all the trade agreements concluded by El Salvador that provide for the settlement of investor-State disputes contain provisions for the settlement of such disputes by international arbitration: primarily ad hoc arbitral tribunals constituted under the rules of the International Centre for the Settlement of Investment Disputes or the rules of the United Nations Commission on International Trade Law.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Only the Dominican Republic — Central America — United States Free Trade Agreement (CAFTA-DR) provides, in annex 10-F of the Agreement, for the possible development in the future of an appellate mechanism or similar body to review awards rendered by tribunals in accordance with chapter 10 of the Agreement, relating to investment.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Annex 10-F of the Dominican Republic — Central America — United States Free Trade Agreement addresses the possible development by the parties to the Agreement of provisions intended to establish an appellate body within the framework of the Agreement. To date, the parties to the Agreement have not agreed on actions for the development of that mechanism.

The text of the above-mentioned annex expressly provides as follows:

> "1. Within three months of the date of entry into force of this Agreement, the Commission shall establish a Negotiating Group to develop an appellate body or similar mechanism to review awards rendered by tribunals under this Chapter. Such appellate body or similar mechanism shall be designed to provide coherence to the interpretation of investment provisions in the Agreement. The Commission shall direct the Negotiating Group to take into account the following issues, among others: (a) the nature and composition of an appellate body or similar mechanism; (b) the applicable scope and standard of review; (c) transparency of proceedings of an appellate body or similar mechanism; (d) the effect of decisions by an appellate body or similar mechanism; (e) the relationship of review by an appellate body or similar mechanism to the arbitral rules that may be selected under Articles 10.16 and 10.25; and (f) the relationship of review by an appellate body or similar mechanism to existing domestic laws and international law on the enforcement of arbitral awards.
>
> 2. The Commission shall direct the Negotiating Group to provide to the Commission, within one year of establishment of the Negotiating Group, a draft amendment to the Agreement that establishes an appellate body or similar mechanism. On approval of the draft amendment by the Parties, in accordance with Article 22.2 (Amendments), the Agreement shall be so amended."

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The majority of the agreements concluded by El Salvador provide for the "termination or denunciation" of the agreement by one of the contracting parties. Typically, that termination is not immediate, but rather a time frame is established for the termination to take effect.

As a mechanism for protecting investments, it is established that those investments made prior to the termination of agreements shall continue to be covered for a certain period following termination or denunciation.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

In El Salvador, the applicable legislation for the recognition and enforcement of judgments of international courts is the Code of Civil and Commercial Procedure, article 555 of which provides as follows: "Foreign instruments — Art. 555. — Final judgments and other final decisions delivered by foreign courts, and foreign arbitral awards recognized in El Salvador are also enforceable instruments. Such instruments shall be enforceable under the terms indicated by international multilateral treaties, provisions governing international legal cooperation or agreements concluded with the country in which the instruments were issued. Once the foreign instrument has been recognized, it shall be enforced in accordance with the rules of compulsory enforcement set out in this Code, unless international agreements provide otherwise."

There is both a statutory basis and a judicial mechanism for the recognition and enforcement of judgments rendered by international courts or tribunals. The Constitution of El Salvador and the Code of Civil and Commercial Procedure recognize the power of those courts and tribunals to render judgments in cases under their jurisdiction.

The procedure for recognizing foreign instruments is established in article 558 of the aforementioned Code. In accordance with article 562 of the Code, the court of first instance with jurisdiction over the place of domicile of the judgment debtor is competent to enforce any such instruments. If the judgment debtor does not reside in El Salvador, the courts of first instance of the place in which the property that should be surrendered is located, or the place chosen by the judgment creditor owing to the fact that the property that should be surrendered is located there, have jurisdiction.

If there is no international treaty recognizing foreign instruments as enforceable instruments in El Salvador, article 556 of the Code of Civil and Commercial Procedure establishes the procedure to be followed in order to obtain that recognition: "Art. 556: Where there are no international treaties or provisions applicable to the recognition of a foreign instrument as an enforceable instrument in El Salvador, such recognition may be granted if at least one of the following requirements is met: 1. The judgment, which has the effect of res judicata in the State in which it has been delivered, has been rendered by a competent court in accordance with the provisions of El Salvador regarding international jurisdiction. 2. The respondent against whom enforcement is sought has been duly summoned, even if that respondent has been declared in contempt of court, provided that the respondent's right to defend itself has been guaranteed and it has been served with the decision. 3. The judgment fulfils the elements required in order for it to be regarded as enforceable in the place in which it was rendered, and meets the conditions of authenticity required by national law."

The judgment shall not affect the constitutional principles or the public policy principles of the law of El Salvador, and the fulfilment of the obligation it entails should be lawful in El Salvador.

There are no ongoing proceedings in El Salvador, nor has an enforceable judgment with the effect of res judicata been issued by a court of El Salvador.

In El Salvador, the procedure for the enforcement of foreign instruments is known as a writ of *pareatis* or *exequatur*, which is governed by civil and commercial procedural legislation. In that regard, the Supreme Court is the authority that is competent to grant, in accordance with the law and where necessary, the enforcement of judgments of foreign courts in any part of El Salvador. On that basis, the Code of Civil and Commercial Procedure recognizes foreign final legal decisions as enforceable instruments, and makes them enforceable, on the basis of the provisions of international multilateral treaties, provisions on international legal cooperation or agreements concluded with the country in which the instruments were issued.

In El Salvador, domestic courts have been requested to recognize or enforce judgments of international courts, particularly in relation to judgments rendered by the Inter-American Court of Human Rights in cases against El Salvador. Similarly, at the national level, a judgment rendered by the International Court of Justice in relation to a frontier dispute has been enforced, while at the regional level a judgment rendered by the Central American Court of Justice has also been enforced.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Article 3 (h) of the Mediation, Conciliation and Arbitration Act of El Salvador provides for four different kinds of arbitration: ad hoc, institutional, international and foreign, and considers arbitration to be international in any of the following cases: 1. When the parties to an arbitration agreement are domiciled in different States at the time of conclusion of that agreement. 2. If one of the following places is located outside the State in which the parties are domiciled: (a) The place of arbitration, whether this has been expressly established in the arbitration agreement, or in accordance therewith; (b) The place where a substantial part of the obligations of the legal relationship is to be performed or the place with which the subject matter of the dispute is most closely connected. For the purposes of this subparagraph, if a party has more than one domicile, the domicile will be that which is most closely connected to the arbitration agreement; if a party does not have a domicile, reference is to be made to the party's residence.

A Foreign Arbitration is an arbitration in which the arbitral award has not been delivered in El Salvador.

In that regard, article 66-A of the Act provides for the possibility of submitting an appeal against an arbitral award delivered in arbitration proceedings, with suspensive effect, within seven working days of notice of the award or of the order through which clarification, corrections or additional information are provided, before the second-instance chamber with jurisdiction over civil cases in the place of domicile of the respondent or, in the case of more than one respondent, the place of domicile of any one of those respondents.

Legislative Decree No. 914 of 2002 establishes the Mediation, Conciliation and Arbitration Act, which lays down the applicable legal regime with regard to arbitration, without prejudice to the provisions of international treaties or conventions currently in force. Article 66-A recognizes the possibility of submitting appeals against arbitral awards delivered by national courts or tribunals: "An arbitral award delivered in arbitration proceedings may be appealed against with suspensive effect, within seven working days of notice of the award or of the order through which clarification, corrections or additional information are provided, before the second-instance chamber with jurisdiction over civil cases in the place of domicile of the respondent or, in the case of more than one respondent, the place of domicile of any one of those respondents. With regard to all other aspects, the processing of appeals shall be subject to the provisions of ordinary law. No appeals may be made against the decision of the second-instance chamber."

37. India

[Original: English]
[Date: 28 April 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

India inked Bilateral Investment Promotion and Protection Agreements (BIPPAs)/ BITs with 83 countries since 1994. However, India unilaterally abrogated the said BIPPAs/BITs with 43 of the said 73 countries with whom the initial duration of 10/15 years of the said agreements was already over and which allowed for such a

termination as per the decision of the Government of India to this effect. With respect to the remaining countries, a request of a Joint Interpretative Statement was issued. The erstwhile BIPPAs/BITs with these countries which are still alive would be terminated at the expiry of the initial duration. Currently, India is in the process of renegotiating with partner countries on new BITs based on India's new model text. India is also a signatory to FTAs with many partner countries. India's BITs and model BIT do contain provisions on settlement of Investor State Disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

None of the IIAs nor the Model BIT provide for permanent courts or tribunals as such.

However, under Article 29 of India's new model BIT, it does mention about developing an institutional mechanism with an appellate body in future for investment treaty disputes.

Article 29 of India's new Model BIT reads as follows:

Article 29

Appeals Facility

The Parties may by agreement or after the completion of their respective procedures regarding the enforcement of this Treaty may establish an institutional mechanism* to develop an appellate body or similar mechanism to review awards rendered by tribunals under this chapter. Such appellate body or similar mechanism may be designed to provide coherence to the interpretation of provisions in this Treaty. In developing such a mechanism, the Parties may take into account the following issues, among others:

(a) the nature and composition of an appellate body or similar mechanism;

(b) the scope and standard of review of such an appellate body;

(c) transparency of proceedings of the appellate body;

(d) the effect of decisions by an appellate body or similar mechanism;

(e) the relationship of review by an appellate body or similar mechanism to the arbitral rules that may be selected under Articles 20.1 of this Treaty; and

(f) the relationship of review by an appellate body or similar mechanism to existing domestic laws and international law on the enforcement of arbitral awards.

*This may include an appellate mechanism for reviewing investor-state disputes established under a separate multilateral agreement in future.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Article 29 as quoted in the answer to question 2 describes about appeals facility. Ongoing negotiations are on the basis of this new model BIT.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

India's model BIT text does envisage the creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court. Article 29 as quoted in the above answers includes reference to a mechanism in future under a multilateral agreement.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

(a) There are explicit provisions for amendment of an IIA in existing BITs and India's model text. The exact text of the provisions regarding amendments in the model BIT is as follows:

Article 37

Amendments

1. This Treaty may be amended at any time at the request of either Party. The requesting Party must submit its request in written form explaining the grounds on which the amendment shall be made. The other Party shall consult with the requesting Party regarding the proposed amendment and must also respond to the request in writing.

1. This Treaty will stand automatically amended at all times to the extent that the Parties agree. Any agreement to amend the treaty pursuant to this Article must be expressed in writing, whether in a single written instrument or through an exchange of diplomatic notes. These amendments shall be binding on the tribunals constituted under Chapter IV or Chapter V of this Treaty and a tribunal award must be consistent with all amendments to this Treaty."

(b) There are no instances of such an amendment in any case of a BIT between India and a partner country.

(c) India's model BIT text or any of the BITs concluded by India so far do not contain provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

No.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The legislation does provide for challenge of awards on certain grounds, however, the legislation does not specify an appeal before another arbitration tribunal.

However, the Supreme Court of India recently in Centrotrade Minerals & Metal vs. Hindustan Copper Ltd, held that parties may provide for appeal in the arbitration agreement.

In this case the first award was under an arbitration administered by ICA (Indian Council of Arbitration) the aggrieved party then by means of an appeal as provided in the agreement brought about the subsequent appellate arbitration seated in London under ICC Rules.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

It is important to start with a blank canvas to devise a more fair, a more legitimate, and a more self-contained system of ISDS with internal checks and balances to ensure a good quality of decision-making. This new system of dispute resolution should also be one which can seamlessly be merged into the current landscape of enforcement of decisions — with possibly one or two tweaks to facilitate better and quicker enforcement.

One of the most critical areas in designing a permanent investment court relates to its composition, structure and certainty.

One of the drawbacks of the current landscape of BIT arbitrations is the number of inconsistent or even contradictory awards — for instance, on the proper interpretation

of umbrella clauses, the effect of an MFN clause, whether the FET standard only requires the minimum standard under CIL or if it is more expansive. Critics have also pointed to the CME and Lauder cases against the Czech Republic where the same facts led to two different decisions by two arbitral tribunals.

The legal and practical challenges to establishing a world investment court should not be underestimated. These have been quite exhaustively dealt with in the CIDS analysis. It is also a welcome to have an opt in clause unlike in the Mauritius Convention where India had raised the issue with the opt out clause.

India welcomes the move to have discussions and deliberations on the proposal, and further comments could be provided in due course.

(A/CN.9/918/Add.7) (Original: English)

Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: comments from International Intergovernmental Organizations

ADDENDUM

Contents

IV. Comments from International Intergovernmental Organizations

This section reproduces comments received by the Secretariat from the Organisation for Economic Cooperation and Development (OECD) and the United Nations Conference on Trade and Development (UNCTAD) regarding activities in relation to the investor-State dispute settlement framework.

1. Organisation for Economic Cooperation and Development (OECD)

[Original: English]
[Date: 8 June 2017]

Table of contents

A. Introduction

1. An OECD-hosted inter-governmental Roundtable that gathers over 55 economies from around the world has engaged in regular analysis and discussion of investment treaties and investor-state dispute settlement (ISDS) since 2011. The vigorous discussions have been enriched by input from business, civil society and NGOs, and

experts. The Roundtable has also benefited from presentations of investment treaty policy and/or new model treaties from numerous governments including Brazil, the European Union, India, Indonesia, and South Africa. Summaries of Roundtable discussions and background papers are made public. This document briefly outlines these Roundtable discussions and background analysis.

2. The following economies are invited to participate in the Roundtable: Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, Chile, People's Republic of China, Colombia, Costa Rica, Czech Republic, Denmark, Egypt, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, India, Indonesia, Ireland, Israel, Italy, Japan, Jordan, Korea, Latvia, Lithuania, Luxembourg, Malaysia, Mexico, Morocco, Netherlands, New Zealand, Norway, Paraguay, Peru, Poland, Portugal, Romania, Russian Federation, Saudi Arabia, Singapore, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Thailand, Tunisia, Turkey, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America and the European Union. Participation typically varies somewhat depending on the issues being discussed. International organizations including UNCTAD, ICSID, UNCITRAL and the PCA have also participated in Roundtable work on investment treaties. In addition to Roundtable work on investment treaties, governments also identify salient investment treaty issues and chair inter-governmental discussions in a separate regular OECD-hosted Investment Treaty Dialogue. For example, the EU and Canada prepared and chaired a Dialogue on a possible multilateral investment court in 2016.

3. This short outline focuses on work at the OECD directly addressing investment treaties and ISDS, which is centred in the Roundtable. In the field of investment, OECD work also addresses Responsible Business Conduct, the Policy Framework for Investment (helping governments improve the investment climate through a broad range of policies), Investment Policy Reviews, investment statistics and many other areas. More broadly, work on investment treaties and policy at the OECD takes place in the broader context of work with governments across the full range of policy fields at issue in ISDS (e.g. policies on the environment, health, energy, finance, budget, anti-bribery, competition, good regulation, etc.).

B. Initial Roundtable work on ISDS (2011-2012) (Roundtables 15, 16, 17; public consultation)[1]

4. The initial Roundtable work focused on dispute settlement centred on discussion of a wide-ranging scoping paper on ISDS.[2] The goals were to (i) develop a broad picture of the ISDS system including recent developments and emerging issues of interest to governments; (ii) build up the stock of comparative information about dispute resolution under the system; and (iii) invite a broad range of governments to engage over time in a wide ranging, strategic and intergovernmental discussion of investment treaties. This section first summarises some findings about the diversity of government policies, treaty writing practices and experiences with ISDS and then outlines work on key issues in ISDS.

1. Findings on the diversity of government policies, treaty writing practices and experiences with investment arbitration

- *Diverse legal sources.* Investment law differs from other major bodies of international economic law in that it is spread across an extraordinary range of international and domestic sources of law. Rather than being primarily anchored in a compact and broadly-applicable body of instruments (as at the WTO, for example, where key agreements apply to all 164 WTO members), investment law is contained in (i) some 3,000 bilateral or multilateral investment treaties

[1] See Summaries of discussions 15th Roundtable (http://oe.cd/1Zm), 16th Roundtable (http://oe.cd/1Zn), and 17th Roundtable (http://oe.cd/1Zo) and Public consultation on ISDS (http://oe.cd/1Zp).

[2] See Gaukrodger, D. and K. Gordon (2012), "Investor-State Dispute Settlement: A Scoping Paper for the Investment Policy Community", OECD Working Papers on International Investment, 2012/03. http://dx.doi.org/10.1787/5k46b1r85j6f-en.

with generally similar but by no means identical provisions; (ii) other international treaties (notably the ICSID Convention and the New York Convention); (iii) various arbitration rules including those primarily developed by governments (ICSID, UNCITRAL) as well as rules developed by business organizations (e.g., ICC, SCC); (iv) customary international law; and (v) the domestic law of many States. The diversity of the applicable procedural rules and substantive law makes it difficult to grasp the issues presented by the system.

- *Wide recognition that comparative analysis between ISDS and other international dispute resolution systems is informative.* Governments in the Roundtable considered how ISDS compares with dispute resolution at the WTO and under the European Court of Human Rights (ECHR) system. Although the systems address similar and at times overlapping issues, they vary in many respects (such as the types of parties with access to the system, remedies, selection and status of adjudicators, availability of appeal and timing).

- *A broadly-recognised need for empirical analysis of a fast-evolving system.* Roundtable governments supported sustained government attention to evaluating the system in light of increasing use and greater political debate in parliaments and societies.

- *Diverse bilateral investment treaty practice on regulating dispute settlement.* A large-scale statistical survey of ISDS provisions in bilateral investment treaties[3] showed that, although the vast majority contained ISDS provisions, their content varied markedly. ISDS through investment arbitration had become a common feature, but the 1,660 treaties in the sample contain an estimated 1,200 different rule sets on ISDS. There were differences in approach to many procedural issues (e.g., selection and regulation of arbitrators) as well as small differences in language.

- *Light but growing regulation of ISDS in bilateral investment treaties.* Most investment treaties were either silent or contained little or only sporadic guidance on important aspects of the conduct of ISDS. As a result, key decisions regarding the conduct of the proceedings were largely left to the disputing parties if they could agree, or to arbitral panels. Treaties that permitted covered investors to choose between bringing claims in local courts or ISDS, or to choose between arbitration options could give claimant investors considerable influence over significant issues.

- *Diverse experiences with regard to exposure to investor claims.* The countries represented at the Roundtable had had diverse experiences with ISDS. Some countries had defended multiple cases while others had not yet faced a claim. Some had adjusted the ISDS provisions in their model treaty texts and their agreed treaties to reflect their experiences as respondents.

- *Diverse policies and attitudes.* As outlined in a 2012 Roundtable progress report on its work on ISDS,[4] most countries in the Roundtable considered that the ISDS system was valuable but could be improved. Several countries stated that they consider that it is important to recognise that the ISDS system has worked well overall. It was also noted that the domestic courts in some countries perform poorly or are inefficient. Some countries participating in the Roundtable voiced fundamental concerns about the design and impact of ISDS and/or had never agreed to ISDS.

2. Key issues in ISDS

5. The ISDS scoping paper[5] and early Roundtable discussions on ISDS also addressed a range of key issues, some longstanding and others only emerging at that time:

- *Access to justice for different types of investors and for other victims of government misconduct.* A survey of the available information about ISDS claimants showed that (i) there was little or no public information about many investor claimants in ISDS; (ii) small investors were present as ISDS claimants; and (iii) medium and large multinational enterprises accounted for about half of the cases surveyed. Completion rates for claims and outcomes were not evaluated. Nationality of the controlling entity/individual was often hard to determine. It was noted that while ISDS is a powerful international dispute resolution system available to covered foreign investors, other investors and other non-state actors without access to ISDS must generally rely on their home States for espousal of international claims (unless they have access to certain regional human rights systems).
- *Costs and third party financing of investment arbitration claims.* The ISDS scoping paper noted generally that: (i) costs of ISDS were high and some reform efforts were underway to try to reduce them; and (ii) rules for allocating these costs among the parties were very flexible and were a source of uncertainty. Limited available information suggested average costs of USD 8 million/case. The high costs and potentially high damages awards characteristic of ISDS appeared to make it an attractive market for third party funders.
- *The question of a level playing field between foreign and domestic investors: remedies and treaty shopping.* The question of whether investment treaties give covered foreign investors greater substantive and procedural rights than those of domestic investors under domestic law has been debated in a number of jurisdictions in recent years, as have the relevant policy conclusions. Initial analysis and discussions focused on available remedies (generally only non-pecuniary remedies under domestic law in contrast to money damages in ISDS) and the broad availability of "treaty shopping" in ISDS.
- *Enforcement of ISDS awards.* At the time of the initial discussions, state compliance with ISDS arbitration awards was generally considered to have been good, but some problems had arisen with compliance with both ICSID and non-ISCID awards. A number of Roundtable participants and stakeholders expressed concerns about enforcement.
- *Characteristics, selection, incentives and regulation of arbitrators.* The Roundtable considered an overview in the ISDS scoping paper of available information and policy issues relating to the (i) characteristics of the pool of investment arbitrators (e.g., elite status in the legal profession, preponderance of lawyers in private practice, low levels of government and public law backgrounds, contrast between regional origins of arbitrators and respondent states, 95 per cent/5 per cent gender balance, etc.); (ii) selection of arbitrators including the debate over appointment of arbitrators by parties and their counsel in ISDS, and the issue of information asymmetries between disputing parties; (iii) the issue of economic incentives of arbitrators and conflicts of interest; and (iv) the limited regulation of arbitrators including as applied to emerging issues such as the multiple roles of individuals as arbitrator, legal counsel and expert.

C. Follow-up work on consistency in ISDS and government input into interpretation, and on shareholder claims for reflective loss (2012-2014) (Roundtables 18, 19, 20, 21)[6]

6. The initial work on ISDS had addressed the issue of consistency and a substantial number of Roundtable participants expressed serious concerns about inconsistencies in ISDS decisions. Some others took a more positive view, highlighting differences between treaties and contexts. Many tools exist for governments to communicate about how treaties should be interpreted. The Roundtable requested follow-up work on consistency including on the role of government input into interpretation. It subsequently addressed (i) different forms of government "voice" as an alternative to "exit" from treaties perceived as subject to unwanted interpretations; [7] (ii) the legal regime governing joint government interpretations of investment treaties;[8] and (iii) and state-to-state dispute settlement (SSDS) as a possible method to improve treaty interpretation.[9]

7. Roundtable work on the acceptance in ISDS of claims by covered shareholders for losses incurred by companies in which they own shares (claims for reflective loss) began as part of the work on consistency. A paper on the impact of reflective loss claims on consistency[10] outlined the sharply contrasting approaches to such claims between advanced systems of corporate law on the one hand (where reflective loss claims are generally barred for policy reasons) and in ISDS on the other hand (where reflective loss claims have been widely permitted). It noted that while the ISDS approach provides benefits to claimant shareholders, the consistency-related risks associated with reflective loss claims included concurrent or multiple claims arising out of the same facts and parties, inconsistent decisions, exposure of governments to double recovery, reduced predictability, hindrance of amicable settlement of claims and facilitation of treaty shopping.

8. The initial work on shareholders had also noted that the unusual approach to claims for reflective loss in ISDS can disrupt the hierarchy of claims on company assets. It may create new risks for some investors in companies (creditors and non-covered shareholders), possibly increasing uncertainty and raising the overall costs of capital for investment. (Creditors were broadly defined to include contractual claimants on the company, including bondholders and other lenders, employees, suppliers and others.) The Roundtable subsequently further investigated the corporate law issues raised by reflective loss claims[11] including the impact on corporate finance and investment, corporate governance and the transferability of shares; it also addressed relevant investment treaty practice.[12] A further paper presented the issues primarily to a business audience.[13]

D. Current Roundtable work on investment treaties (2014-present) (Roundtables 22, 23, 24, 25, 26)[14]

1. The balance between investor protection and governments' right to regulate

9. Governments are now frequently called on to explain their policy choices in particular with respect to the balance between governments' right to regulate and the protection of foreign and domestic investors. Suggested methods to address the balance in investment treaties can include adjustments to substantive law that (i) define or limit individual treaty protections for foreign investors; (ii) establish carve-outs or special regimes for particular sectors; (iii) incorporate general exceptions, right-to-regulate clauses or clarifications; (iv) clarify or establish conditions on access to treaty benefits, such as compliance with domestic law; or (v) align the treatment of foreign and domestic investors. They can also include the design of dispute resolution (see below).

10. The ongoing work in this area has included (i) discussion of a scoping paper on balancing investor protection and governments' right to regulate; [15] (ii) an examination of fair and equitable treatment (FET) provisions with particular regard to NAFTA government policy [16] and views about FET as one possible method to address the balance by limiting FET to customary international law and actively intervening on its interpretation; and (iii) an Investment Treaty Conference addressing The Quest for Balance.[17]

2. Societal benefits and costs of investment treaties

11. Early Roundtable discussions considered the development impacts of ISDS, including its impact on domestic institutions of public governance. Since 2014, broader work on the societal benefits and costs of investment treaties has generated an inventory of evidence on the economic effects for home, host and transit economies; the effects on global and domestic governance; and the impact on the pursuit of strategic foreign policy objectives. The work also identifies information needed to make a more comprehensive assessment of benefits and costs. The issues were discussed at the 2017 Investment Treaty Conference on Evaluating and Enhancing the Outcomes of Investment Treaties.[18]

3. Arbitrators, adjudicators and appointing authorities

12. Ongoing work has reviewed recent developments in this area including the investment court system approach to a standing tribunal as set out in the recent Comprehensive Economic and Trade Agreement between Canada and the EU (CETA). It is also considering the role and importance of appointing authorities in investor-state arbitration. Appointing authorities are typically charged with appointing the chair of an arbitral tribunal if the parties or co-arbitrators are unable to agree on one. Negotiation theory suggests that appointing authority nominating practices likely have significant influence on the composition of investor-state arbitration tribunals and the overall pool of arbitrators. The impact of dispute settlement institutions on the balancing of interests was also addressed at the

Investment Treaty Conference on The Quest for Balance,[19] and a possible multilateral investment court was addressed in an Investment Treaty Dialogue.

E. Other work partly relating to investment treaties (Responsible Business Conduct, State-owned enterprises, investment facilitation)

13. Many governments are seeking to attract investment that meets the standards of responsible business conduct (RBC) and sustainable development. A broad survey of treaty provisions in 2014[20] revealed that only 12 per cent contained references to these issues. However, practices varied by country and the frequency of inclusion was increasing rapidly. The potential role of investment treaties in fostering RBC was discussed at the first government-led Investment Treaty Dialogue in 2015. Together with the Roundtable, several OECD Committees have engaged in an intensive discussion of the role of state-owned enterprises in domestic and international markets,[21] with attention given to relevant investment treaty policy. The Roundtable is also considering the issue of investment facilitation, building on the long-standing attention to many similar issues in the development and application of the Policy Framework for Investment.

F. Conclusion

14. The views shared by countries participating in the Roundtable and supporting background studies by the OECD Secretariat have generated information that can advance mutual understanding and help governments with their treaty and investment policy.

2. United Nations Conference on Trade and Development

[Original: English]
[Date: 12 June 2017]

Growing unease with the current functioning of the global international investment agreements (IIA) regime, together with today's sustainable development imperative, has triggered a move towards reforming international investment rule making. Over the past years, countries have built consensus on the need for reform, identified reform areas and approaches, reviewed their IIA networks, developed new model treaties and started to negotiate new, more modern IIAs. Significant progress has been made during this first phase of IIA reform, but much remains to be done. To move to phase 2 of IIA reform, policy attention needs to focus on comprehensively modernizing the stock of outdated, first-generation treaties. In the World Investment Report 2017, UNCTAD presents and analyses the pros and cons of 10 policy options for reforming existing old-generation IIAs (UNCTAD, 2017). Reforming investment dispute settlement is high on the agenda, with concrete steps undertaken, including at the multilateral level. Some of the reform steps could potentially extend to the existing stock of older treaties. Overall, reform efforts should aim at a holistic approach, ensuring a transparent and inclusive process, and not losing sight of the overarching objective of sustainable development.

I. Reforming investment dispute settlement as part of UNCTAD's Road Map for IIA Reform

UNCTAD's advocacy for systemic and sustainable development-oriented investment policymaking started in 2010. Following UNCTAD's Investment Policy Framework for Sustainable Development (published in 2012 and updated in 2015) (figure 1), which offers policy options for designing new-generation IIAs, it culminated in UNCTAD's Road Map for IIA Reform (2015) (figure 2), which sets out five action areas for reform: (i) safeguarding the right to regulate, while providing protection; (ii) reforming investment dispute settlement; (iii) promoting and facilitating investment; (iv) ensuring responsible investment; and (v) enhancing systemic consistency.

Figure 1
UNCTAD's Investment Policy Framework for Sustainable Development [*Source*: ©UNCTAD]

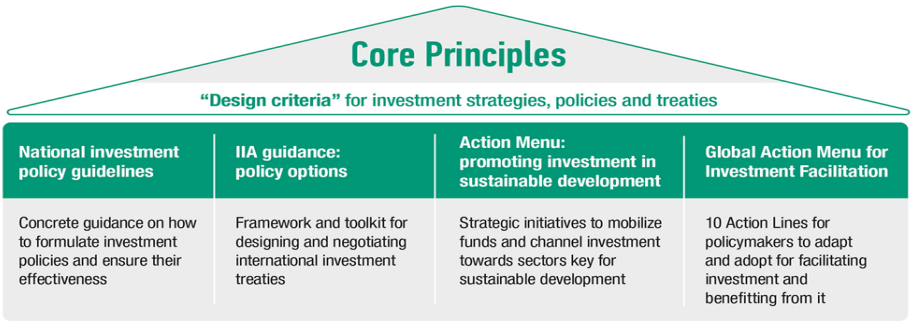

Figure 2
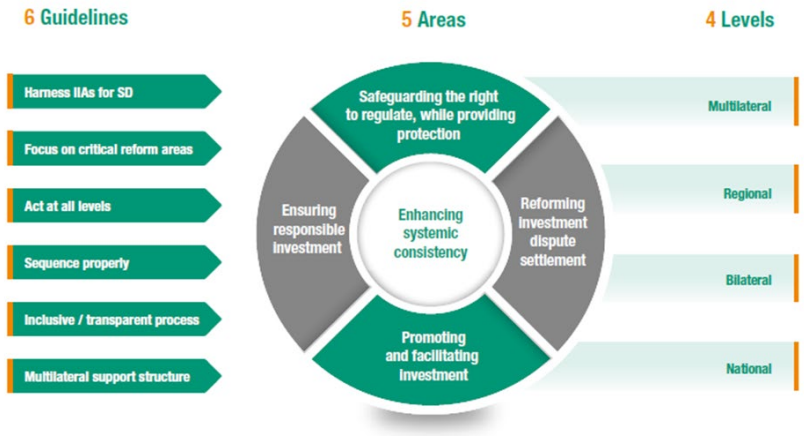
UNCTAD's Road Map for IIA Reform [*Source*: ©UNCTAD]



Building on UNCTAD's past work on investor-State dispute settlement (ISDS),[22] the Road Map identified three sets of options for improving investment dispute settlement

[22] This includes, for example, the 2012 version of UNCTAD's Investment Policy Framework for Sustainable Development (UNCTAD, 2012 at http://unctad.org/en/PublicationsLibrary/diaepcb2012d5_en.pdf), the World Investment Report 2013 (UNCTAD, 2013, at http://unctad.org/en/PublicationsLibrary/wir2013_en.pdf) and the Sequel on ISDS (UNCTAD, 2014, at http://unctad.org/en/PublicationsLibrary/diaeia2013d2_en.pdf). See also "Policy Options for IIAs: Part A. Post-Establishment" in the 2015 version of UNCTAD's Investment Policy Framework for Sustainable Development (UNCTAD, 2015a, at http://unctad.org/en/PublicationsLibrary/diaepcb2015d5_en.pdf).

along two prongs of actions: reforming the existing mechanism of ad hoc arbitration for ISDS, while keeping its basic structure; or replacing it (table 1).[23]

Table 1
Sets of options for reforming investment dispute settlement

Reforming existing investor-State arbitration		Replacing existing investor-State arbitration
Fixing existing ISDS mechanisms	Adding new elements to existing ISDS mechanisms	
1. **Improving the arbitral process**, e.g. by making it more transparent and streamlined, discouraging submission of unfounded claims, addressing ongoing concerns about arbitrator appointments and potential conflicts. 2. **Limiting investors' access**, e.g. by reducing the subject-matter scope, circumscribing the range of arbitrable claims, setting time limits, and preventing abuse by "mailbox" companies 3. **Using filters for channelling sensitive cases** to State-State dispute settlement 4. **Introducing local litigation requirements** as a precondition for ISDS	1. **Building in effective alternative dispute resolution** 2. **Introducing an appeals facility** (whether bilateral, regional or multilateral)	1. **Creating a standing international investment court** 2. **Replacing ISDS by State-State dispute settlement** 3. **Replacing ISDS by domestic dispute resolution**

Source: ©UNCTAD, World Investment Report 2015.

All identified reform options have their pros and cons, and pose their own specific challenges. Whatever option countries prefer, they need to bear in mind three challenges: (i) what is needed is comprehensive reform, applying not only to ISDS but also to the substantive IIA provisions; (ii) reform steps ideally should not only apply to future treaties, but also address the stock of existing IIAs; and (iii) domestic capacity-building is needed for improving developing countries' administrative and judicial capacities, a prerequisite for some of the reform options.

A. Reforming existing investor-State arbitration

The option of keeping and reforming the existing system of investor-State arbitration has two entry points: fixing the existing system and adding to it.

Fixing the existing ISDS mechanisms

Reform elements could be the inclusion in IIAs of new provisions designed to (1) improve the arbitral process; (2) refine investors' access to investment arbitration; (3) establish filters for channelling sensitive cases to State-State dispute settlement; and (4) introduce local litigation requirements. These reform options could be implemented by contracting States in existing and future individual IIAs and would not require coordinated actions by a large number of countries.

(1) Improving the arbitral process: This option focuses on reforming the way arbitration proceedings are conducted while preserving the main features of the ISDS system. The goals of such modifications are to (i) enhance the legitimacy of the ISDS system, (ii) enhance the contracting parties' control over the interpretation of their treaties and/or to (iii) streamline the process and make it more efficient.

[23] For a more detailed analysis of the set of options for reforming investment dispute settlement, including their pros and cons, see UNCTAD (2015b at http://unctad.org/en/PublicationsLibrary/wir2015_en.pdf), Chapter IV, pp. 145-155.

(2) Limiting investors' access to ISDS: This approach aims to narrow the range of situations in which foreign investors may resort to international arbitration, thereby reducing States' exposure to legal and financial risks posed by ISDS.

(3) Using filters for channelling sensitive cases to State-State dispute settlement: This reform option provides for State-State dispute settlement if a joint committee fails to resolve a case. While maintaining the overall structure of today's ISDS mechanism, this constitutes a "renvoi" of disputes on sensitive issues to State-State dispute settlement.

(4) introducing local litigation requirements as a precondition for ISDS (including exhaustion of local remedies): This reform option aims to promote recourse by foreign investors to domestic courts while retaining the option for investor-State arbitration, as a remedy of last resort (i.e. after a certain period of time of litigating the dispute in domestic courts or after exhaustion of local remedies). In so doing, it would respond to some of the concerns arising from the steep rise in ISDS cases over the last decade.

Adding new elements to the existing ISDS mechanisms

These policy options add new elements to complement the existing investor-State arbitration mechanism. They can be combined with the above-mentioned improvements of the mechanism.

(1) Building in effective alternative dispute resolution: This approach to ISDS reform promotes the use of alternative dispute resolution (ADR) mechanisms as a step before the commencement of international investment arbitration. Although ADR cannot in itself solve key ISDS-related challenges, it can reduce the number of disputes which result in full-scale arbitration. This renders it a complementary, rather than a stand-alone, avenue for ISDS reform. Policy options are available at the national and the international level (through the IIA), that can be complementary, such as the designation of lead agencies for amicable settlements or ombuds offices at the national level and the inclusion of ADR provisions in IIAs (UNCTAD, 2015b).

(2) Appeals facility: This option would preserve the structure of the existing investment arbitration mechanism and add a new layer to it. An appeals facility could take two main forms: either a standing or an ad hoc body. It could have the competence to undertake a substantive review and correct the arbitral tribunals' first instance decisions. An appellate mechanism could be given review jurisdiction that goes beyond the scope of review available under the existing annulment procedures under the ICSID Convention. It could serve to enhance the predictability of treaty interpretation and improve consistency among arbitral awards. All this could significantly contribute to enhancing the political acceptability of ISDS and the IIA regime as a whole.

Should countries decide to opt for establishing such an appeals mechanism, questions would need to be resolved regarding several sets of issues: (i) the establishment of such a body, notably whether it would have a bilateral, regional or multilateral nature; whether it would be permanent or ad hoc; (ii) its organization and institutional set-up; (iii) the added time and cost of the proceedings; and (iv) the competence of such a body.

B. Replacing the existing ISDS system with other dispute resolution mechanisms

The options below would abolish the existing system of ad hoc investor-State arbitration and replace it with other mechanisms for settling investment disputes. Potential replacements include (1) the creation of a standing international investment court, (2) State-State dispute settlement, and/or (3) reliance on domestic judicial systems of the host State. The replacement options differ in the extent of change they bring. States can focus on one of the options or can pursue them in parallel or in combination.

(1) Standing international investment court: This option retains investors' right to bring claims against host States but replaces the system of multiple ad hoc arbitral tribunals with a single institutional structure, a standing international investment court. Such a court would consist of judges appointed or elected by States on a permanent basis; it would be competent for all investment disputes arising from IIAs made subject to its jurisdiction and could also have an appeals chamber. A standing investment court would be a public institution serving the interests of investors, States and other stakeholders and, more broadly, strengthening the legitimacy of the investor-State regime. It has also been suggested, that the competence of the court be broadened, depending upon the content of the agreements made subject to its jurisdiction, for example, by giving legal standing or procedural rights to other stakeholders.

Clearly, establishing such a court raises a number of important legal and political challenges, and, in its very nature, would constitute a long-term project. As countries move in this direction, they need to consider a number of key issues: (i) the establishment of such a court, such as the need to build consensus among a critical mass of countries around a convention establishing such a court; (ii) the organization and institutional set-up, such as the location, financing and staffing of the court; (iii) the participation of countries in the court and how to transition from a possible bilateral or plurilateral court to a more universal structure serving the needs of developing and least developed countries; (iv) the competence of the court, such as the type of treaties and cases it is competent to address.

(2) State-State dispute settlement: State-State arbitration is included in virtually all existing IIAs, and it is also the approach taken by the WTO for resolving international trade disputes. Unlike the fostering of State-State dispute resolution as a complement to ISDS, this option presupposes that State-State proceedings would be the only way of settling investment disputes at the international level. The home State would have discretion on whether to bring a claim. States would need to decide on the court that should hear a case; options include the International Court of Justice, ad hoc tribunals or an international court as envisaged above. The option of replacing ISDS with State-State dispute settlement can help to address some of the concerns with regard to ISDS. However, it also raises a number of difficult challenges that would need to be addressed before taking this route.

(3) Exclusive reliance on domestic dispute resolution: This option abolishes investors' right to bring claims against host States in international tribunals and limits their options for dispute resolution to domestic courts. Unlike the promotion of domestic resolution as a step preceding investor claims at the international level (e.g. exhaustion of local remedies, local litigation requirement), under this option, domestic judicial institutions would be the only and final mechanism for settling investor-State disputes. This option entails a number of pros and cons, and some have noted that it has merits mainly in countries where reliance on ISDS is less important because of their sound legal systems, good governance and local courts' expertise.

II. Recent developments

So far, 109 countries have been respondents to one or more known ISDS claims (UNCTAD, 2017). In 2016, 62 new cases were initiated, bringing the total number of known cases to 767. This number is lower than the 74 initiated in the preceding year, but higher than the 10-year average of 49 cases per year (2006-2015). About two thirds of ISDS cases in 2016 were brought under bilateral investment treaties (BITs), most of them dating back to the 1980s and 1990s. The IIAs most frequently invoked in 2016 were the Energy Charter Treaty (ECT) (with 10 cases), the North American Free Trade Agreement (NAFTA) and the Russian Federation — Ukraine BIT (3 each).

In terms of treaty-making, most of today's new IIAs include sustainable development-oriented reform elements that preserve the right to regulate, while maintaining protection, foster responsible investment and improve investment dispute settlement

(UNCTAD, 2017). A comparison of treaties over time shows that selected ISDS reform options are more frequently found in recent BITs than in earlier ones (table 2).

Table **2**
Selected ISDS options in IIAs — comparison of "old" and "new" BITs

Treaty provisions Selected ISDS options	**UNCTAD Policy Framework Option**	**Earlier BITs** (1959-2010) (2,432)	**Recent BITs** (2011-2016) (110)
Limit treaty provisions subject to ISDS or exclude policy areas from ISDS	6.2.1	8%	29%
Limit time period to submit claims	6.2.1	5%	40%

Source: ©UNCTAD, IIA Mapping Project.[24]

Among the IIAs signed in 2015 and 2016, most of the treaties reviewed included at least one element limiting access to ISDS (e.g. limiting treaty provisions subject to ISDS, excluding policy areas from ISDS or limiting time period to submit claims), with several omitting ISDS altogether (e.g. those signed by Brazil with its treaty partners).

To these reform efforts add steps for improving investment dispute settlement undertaken at the multilateral level. Current discussions on the establishment of a multilateral investment court and/or appellate mechanism could result in an instrument that ultimately changes ISDS provisions included in earlier treaties. Such efforts to reform investment dispute settlement can help address key concerns and pursue procedural and institutional improvements.

III. Conclusions: a holistic, inclusive and sustainable development-oriented process for reforming investment dispute settlement

The IIA regime is currently facing several challenges of which ISDS is but one part. To effectively reform the current IIA regime, more thinking would be needed on how to synchronize reform of investment dispute settlement and the reform of substantive IIA content. UNCTAD's Road Map for IIA Reform can provide guidance for addressing these key areas of IIA reform (UNCTAD, 2015a) and so can UNCTAD's 10 policy options for modernizing the existing stock of old-generation IIAs, as set out in the World Investment Report 2017.[25]

Throughout, countries' engagements in reform initiatives should be guided by three key considerations:[26]

(i) Taking a holistic approach to IIAs and IIA reform; exploring new ways for dispute settlement, while not losing sight of substantive content of the current stock of treaties.

(ii) Ensuring an inclusive and transparent process, addressing the "development challenge" (i.e. avoiding a situation in which countries with small

[24] The numbering refers to "Policy Options for IIAs: Part A. Post-Establishment" in the 2015 version of UNCTAD's Investment Policy Framework for Sustainable Development (UNCTAD, 2015a). Data derived from UNCTAD's IIA Mapping Project. The Mapping Project is an UNCTAD-led collaboration of more than 45 universities around the globe. Over 2,500 IIAs have been mapped to date, for 100 features each (including some 20 options for the settlement of investment disputes).

[25] For a detailed analysis of the 10 policy options for phase 2 of IIA reform, and their pros and cons, see Chapter III of the World Investment Report 2017 (UNCTAD, 2017), at http://unctad.org/en/PublicationsLibrary/wir2017_en.pdf.

[26] See also "UNCTAD Director contributes to exploratory discussions on a multilateral investment court", 15 December 2016, available at http://investmentpolicyhub.unctad.org/News/Calendar/Archive/533.

bargaining power or latecomers find themselves in the role of "rule-takers") and involving other affected stakeholders.

(iii) Not losing sight of the overarching objective of sustainable development-oriented IIA reform, pursuing an IIA regime that is conducive to sustainable development and mobilizes investment required for achieving the Sustainable Development Goals (SDGs).

Comprehensive regime reform — addressing new and existing treaties across the five action areas identified in UNCTAD's Road Map — would benefit from intensified multilateral backstopping. UNCTAD, through its three pillars of work (research and policy analysis, technical assistance and intergovernmental consensus building) can play a key role in this regard. As the United Nations' focal point for international investment and the international forum for high-level and inclusive discussions on today's existing multi-layered and multifaceted IIA regime, UNCTAD can help bring coordination and coherence to reform efforts.

Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: compilation of comments

ADDENDUM

Contents

III. Compilation of comments

38. Israel

[Original: English]
[Date: 26 June 2017]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Yes, both BITs and FTAs. ISDS provisions are included.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs — Question 3: Provisions on appeal to investor-State arbitral awards in IIAs — Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

No.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Yes, some IIAs concluded by Israel contain provisions on the amendment of the IIAs. These provisions were never used. Most of Israel's IIAs include a provision protecting investors' rights in the case of termination of the IIA ("sun-set" provision).

Examples of Israel's amendment provisions:

Israel — Ukraine (signed: 2010; in force: 2012)

Article 14 Amendment of the Agreement

Changes and amendments to this Agreement shall be made by mutual written consent of the Contracting Parties and be formed in Protocols, which constitute its integral part and shall into force in accordance with Article 16 of this Agreement.

Israel — Turkey (signed: 1996; in force 1998)

Article 14 Duration and Termination

[...] This Agreement may by amended by written agreement between the Contracting Parties. Any amendment shall enter into force after each Contracting Party has notified the other that it has completed all its internal requirements for the entry into force of such amendment. In respect of investments made while this Agreement is in force, its provisions shall continue in effect with respect to such investments for a period of 10 years after the date of termination.

Israel — Lithuania (signed: 1994; in force: 1996)

Article 13 Amendments

At the time of entry into force of this Agreement, or at any time thereafter, the provisions of this Agreement may be amended in such manner as may be agreed between the Contracting Parties. Such amendments shall enter into force pursuant to the terms of Article 14.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

No.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The applicable legislation provides that enforcement of foreign arbitral awards is done in accordance with an applicable treaty to which Israel is a party (if the award is subject to such a treaty) (Article 29A, Arbitration Law — 1958). There are no statutory provisions allowing for direct appeal against foreign awards.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Israel believes UNCITRAL could be one of several appropriate global forums for discussing tools in relation to a permanent investment court and an appeal mechanism, due to the opportunities this can provide for smaller Member States from various geographic locations to participate in the discussions. As an initial stage, discussions in a Working Group on the topic could focus on clarifications of the proposals suggested in the CIDS paper. This could facilitate a common understating of the specifics of the options before the UNCITRAL member states in order to decide which of the approaches suggested has more potential of ultimately gaining consensus and resulting in a concrete outcome. Such a direction could also facilitate subsequent focused deliberations on the challenges and obstacles and identification of means to resolve them.

Israel stresses, however, that its support for continuation of work in this area does not imply support for the idea of a permanent court or an appellate mechanism, nor does it mean that Israel will join a Convention on this issue if such a Convention is finalized.

39. Republic of Korea

[Original: English]
[Date: 13 July 2017]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

As of December 31, 2016, the Republic of Korea has signed 95 bilateral investment treaties (BITs) among which 87 agreements are in effect. The Republic of Korea is a signatory to 15 Free Trade Agreements (FTAs).

As for BITs, 83 agreements out of 87 which are in effect contain provisions on the settlement of investor-State disputes. Four agreements that do not contain such provisions are Korea-German BIT, Korea-France BIT, Korea-Pakistan BIT and Korea-Bangladesh BIT.

As for FTAs, 14 agreements contain provisions on the settlement of investor-State disputes except for Korea-EU FTA.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs — Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

As of December 31, 2016, no IIA to which the Republic of Korea is a party includes (i) any provision on permanent courts or tribunals; and (ii) any provision whereby investor-State arbitral awards may be subject to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Four FTAs, the Korea-United States FTA, the Korea-Australia FTA, the Korea-Canada FTA and the Korea-New Zealand FTA, contain provisions addressing the possible future creation of a bilateral or similar appellate mechanism to review investment treaty arbitral awards.

The texts are provided in the following:

The Korea-United States FTA, Chapter 11 (Investment), Annex 11-D Possibility of a bilateral appellate mechanism

> "Within three years after the date this Agreement enters into force, the Parties shall consider whether to establish a bilateral appellate body or similar mechanism to review awards rendered under Article 11.26 in arbitrations commenced after they establish the appellate body or similar mechanism."

(signed on June 30, 2007; date of entry into force: March 15, 2012)

The Korea-Australia FTA, Chapter 11 (Investment), Article 11.20 Conduct of the arbitration

> "13. If a separate, multilateral agreement enters into force between the Parties that establishes an appellate body for the purposes of reviewing awards rendered by tribunals constituted pursuant to international trade or investment arrangements to hear investment disputes, the Parties shall strive to reach an agreement that would have such appellate body review awards rendered under Article 11.26 in arbitrations commenced after the multilateral agreement enters into force between the Parties."

-Annex 11-E, Possibility of a bilateral appellate mechanism

> "Within three years after the date of entry into force of this Agreement, the Parties shall consider whether to establish a bilateral appellate body or similar mechanism to review awards rendered under Article 11.26 in arbitrations commenced after they establish the appellate body or similar mechanism."

(signed on April 8, 2014; date of entry into force: December 12, 2014)

The Korea-Canada FTA, Chapter 8, Annex 8-E, Possibility of a bilateral appellate mechanism

> "Within three years after the date this Agreement enters into force, the Parties shall consider whether to establish an appellate body or similar mechanism to review awards rendered under Article 8.24 in arbitrations commenced after they establish the appellate body or similar mechanism."

(signed on September 22, 2014; date of entry into force: January 1, 2015)

The Korea-New Zealand FTA, Article 10.26 Conduct of the arbitration

> "9. If a separate, multilateral agreement enters into force between the Parties that establishes an appellate body for the purposes of reviewing awards rendered by tribunals constituted pursuant to international trade or investment arrangements to hear investment disputes, the Parties shall strive to reach an agreement that would have such appellate body review decisions and awards rendered under this Article and Article 10.30 in arbitrations commenced after the multilateral agreement enters into force between the Parties."

(signed on March 23, 2015; date of entry into force: December 20, 2015)

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

As for BITs, 25 agreements out of 87 which are in effect contain provisions on the amendment of the BITs. As for FTAs, all agreements signed contain provisions on the amendment of the FTAs. As of December 31, 2016, no IIA to which the Republic of Korea is a party includes any provision safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Article 6, Paragraph 1 of the Constitution of the Republic of Korea provides that, "Treaties duly concluded and promulgated under the Constitution and the generally recognized rules of international law shall have the same effect as the domestic laws of the Republic of Korea." Therefore, if there are treaties or conventions regarding recognition and/or enforcement of international court judgments, they can so be recognized and enforced accordingly.

Apart from that, there are no specific legal provisions or judicial organizations in the Korean legal system that deal with such recognition and/or enforcement of judgments delivered by "international courts".

However, we do have provisions on the recognition and enforcement of judgments rendered by foreign courts, where the recognition and enforcement procedures are carried out not by international courts but by domestic courts, as provided in Article 217 of the Civil Procedure Act and Article 26 and 27 of the Civil Execution Act.

For your information, there have not been any known cases whereupon Korean domestic courts were requested to recognize or to enforce a judgment from an "international court".

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

In the Korean law system, the Arbitration Act stipulates on international arbitration. However, it does not contain any provisions on appeal by State courts or arbitral tribunals against arbitral awards.

40. Republic of Indonesia

[Original: English]
[Date: 16 March 2018]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

As of December 31, 2017, the Republic of Indonesia has signed 64 bilateral investment treaties (BITs) among which 42 agreements are in effect and 22 agreements have been discontinued.

The Republic of Indonesia is a signatory to 9 Free Trade Agreements (FTAs),[1] 7 of them have Investment Chapter.

All 64 BITs contain provisions on the settlement of investor-State disputes. As for the FTAs, only the ASEAN-Hong Kong FTA does not have such provisions.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs — Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

As of December 31, 2017, no BITs or Investment Chapter in the FTAs to which the Republic of Indonesia is a party includes (i) any provision on permanent courts or tribunals; and (ii) any provision whereby investor-State arbitral awards may be subject to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

No BITs or Investment Chapter in the FTAs signed by Indonesia, contain provisions addressing the possible future creation of a bilateral or similar appellate mechanism to review investment treaty arbitral awards.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

All BITs and FTAs signed by Indonesia contain provisions on amendment. As of December 31, 2017, no BITs or FTAs to which the Republic of Indonesia is a party

[1] AANZFTA (ASEAN-Australia-New Zealand), AIFTA (ASEAN-India), AKFTA (ASEAN-Korea), ACIA (ASEAN Comprehensive Investment Agreement), AJCEP (ASEAN-Japan), ACFTA (ASEAN-China), AHKFTA (ASEAN-Hong Kong), IJEPA (Indonesia-Japan), ICCEPA (Indonesia-Chile).

include any provision safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments occurred.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

There are no legal provisions or judicial organizations in the Indonesian legal system that deal with the recognition and/or enforcement of judgments delivered by "international courts". Recognition and enforcement of a judgment or decision made by a domestic court of foreign countries is subject to review by the Indonesian courts.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

In accordance with Article 70 Law Number 30 Year 1999 on Arbitration and Alternative Dispute Settlement, arbitral awards are only subject to annulment by the District Court of Jakarta (without any recourse to any appellate review). The decision of annulment by the District Court of Jakarta may be appealed before the Supreme Court which shall decide the matter as the court of final instance.

H. Note by the Secretariat: proposal of the Comité Maritime International (CMI) for possible future work on cross-border issues related to the judicial sale of ships

(A/CN.9/923)

[Original: English]

In preparation for the fiftieth session of the Commission, the Comité Maritime International (CMI) submitted to the Secretariat a proposal for possible future work by UNCITRAL on cross-border issues related to the Judicial sale of ships. The text received by the Secretariat on 13 April 2017 is reproduced as an annex to this note.

Annex

Proposal of the Comité Maritime International for possible future work on cross-border issues related to the Judicial sale of ships

1. Introduction

The Comité Maritime International (CMI) has been in existence since 1897 when it was formed by a number of far sighted representatives in both government and business who were dedicated to seeking to achieve uniformity in international law in relation to shipping. The object of CMI, as enunciated in Article 1 of its Constitution, is:

> "... to contribute by all appropriate means and activities to the unification of maritime law in all its aspects. To this end it shall promote the establishment of national associations of maritime law and shall cooperate with other international organizations."

There are over 50 National Maritime Law Associations (NMLAs) around the world who are members of CMI.

2. Background to the Judicial Sales project

Following on a paper given by Professor Henry Li of China in 2007 which drew attention to problems arising around the world from the failure to give recognition to judgments in other jurisdictions when ordering the sale of ships, the Executive Council of CMI proposed that an International Working Group (IWG) conduct a preliminary study of the issues in relation to the Judicial Sale of Ships.

3. The draft international instrument

The work which has been done by CMI commenced with a detailed Questionnaire being sent to the Maritime Law Association members of CMI, the results of which were discussed at a Colloquium held in October 2010 in Buenos Aires. Members of IWG summarized the responses which had been received at that time from 19 Maritime Law Associations. Since then at subsequent meetings of CMI, the topic has been discussed and a draft international instrument prepared at numerous meetings including the Beijing Conference in 2012, the Dublin meeting of 2013 and the Hamburg Conference of 2014 where a draft instrument was completed, and approved. The proposal for approval of the final text of the draft international instrument was made by the China Maritime Law Association at the CMI Assembly in Hamburg in 2014. The proposal was supported by 24 acceptances with two abstentions and no vote against. The 24 acceptances comprised the national Maritime Law Associations of Argentina, Australia, Belgium, Canada, China, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Malta, the Netherlands, New Zealand, Nigeria, Norway, the Republic of Korea, Spain, Sweden, Switzerland, Turkey, the

United Kingdom of Great Britain and Northern Ireland and the United States of America. The two abstentions were the national Maritime Law Associations of Brazil and Poland. Throughout its preparation it received widespread support from delegations.

It was felt that a simple, largely procedural, international instrument addressing the recognition of foreign Judicial sales would fill a gap left open by the International Convention on Maritime Liens and Mortgages, 1993, the International Convention Relating to the Arrest of Sea-Going Ships, 1952 and the International Convention on the Arrest of Ships, 1999, and meet the commercial needs of the industry.

4. The prevalence of Judicial Sales

While there has been no exhaustive compilation of data on the number of ships sold by way of Judicial sale, the data from four significant maritime jurisdictions in Asia (Republic of Korea, China, Singapore and Japan) show that, during the period 2010-2014, more than 480 ships were sold by way of Judicial sale per year in those countries. It follows that the number of ship sales that would benefit from the certainty provided by the draft international instrument would run to many hundreds of ships a year.

It is apparent that many hundreds of ships are sold each year through some competent form of Judicial sale. The underlying cause or causes of a Judicial sale may be numerous, but usually include the non-payment of debts due and owing by the ship owner.

5. Clean Title; Reflagging

Purchasers, and subsequent purchasers, must be able to take clean title to the ship so sold and be able to de-flag the ship from its pre-sale registry and re-flag the ship in the purchaser's selected registry so as to be able to trade the vessel appropriately without the threat of costly delays and expensive litigation. This, in turn, will enable the purchased ship to trade freely; and ensures that the ship will realize a greater sale price which will benefit all the related parties, including creditors (which could include port authorities and other government instrumentalities that have provided services to a ship owner).

It is important to highlight the important legal principle that flows from a Judicial sale that once a ship is sold by way of a Judicial sale, the ship should, with only very limited exceptions, no longer be subject to arrest for any claim arising prior to its Judicial sale. If purchasers and their financiers lose confidence in the predictability of obtaining a clean title and being able to reflag the vessel after acquiring a ship from a Judicial sale the process becomes less attractive and effective to the detriment of the purchaser and other creditors of the ship owner whose vessel is to be sold by way of Judicial sale.

The purchase of vessels is generally financed by a ship mortgage from a bank where the bank's main security for repayment is the ship itself. The international instrument, once it has received widespread support, will permit banks to provide ship finance with greater confidence that the ship will realize its full market value at a Judicial sale and not the reduced value realisable where there is the risk, as at present, that the ship may be subsequently arrested for claims predating the Judicial sale, and by reason of a general loss of confidence in the sanctity of the process.

6. Judicial Pronouncements

In the English case "Acrux"[1] Mr. Justice Hewson confirmed that Courts must recognise: "proper sales by competent Courts of Admiralty, or prize, abroad — it is part of the comity of nations as well as a contribution to the general well-being of international maritime trade".[2]

---

[1] [1962] Vol. 1, Lloyds Law Reports at p. 405.

[2] Ibid., at p. 409.

The study by CMI also drew to light a number of Judicial pronouncements from various jurisdictions that highlighted difficulties that parties had experienced in having a foreign Judicial sale of a ship recognized by another court. In one Canadian decision the court went so far as to say that the matter could only be repaired by an international instrument regulating the Judicial sale of ships and their enforcement. Apart from the reported cases there are many unreported cases and cases which do not go to full hearings of which the maritime legal community is aware.

Most importantly, the judiciaries of many countries have observed that the need to recognize Judicial sales by foreign, competent courts forms part of the comity of nations and contributes to the general well-being of international trade.

There is currently no international instrument that addresses the recognition of Judicial sales. Nor is there any instrument that adequately protects purchasers from prior claims and which addresses the de-registration on re-flagging and re-registration of ships from and to national registries.

As there is currently no international instrument dealing with the recognition of foreign Judicial sales of ships it can be said, with some confidence, that in this regard maritime transportation is neither secure nor efficient and hinders rather than promotes global trade and the world economy. The need for intervention by inter-governmental and international organizations has been clearly recognized both Judicially and by national and international maritime bodies. The recognition of foreign Judicial ship sales is fundamental to international maritime law.

The difficulties that arise when one country will not recognize an order for the Judicial sale of a ship in another country has been succinctly summarized as follows:

(1) It is an affront to the Court and the State ordering the sale;

(2) It represents a refusal by that country to abide by the decisions of a Court in another country, and an exception to a rule honoured by most nations in the world;

(3) If other countries, or other debtors, decided to follow this bad example, it could create confusion in the area which can be effectively controlled only with the good faith of all seafaring nations.[3]

The recognition of Judicial sales at an international level has also been highlighted in the Canadian case of the ship "Galaxias"[4] where the Court noted that:

(1) While a purchaser on a Judicial sale will take a clean title free and clear of all encumbrances according to the laws of Canada and notwithstanding that it is clear that Canadian Courts desire and expect that the Courts and Governments of other nations will respect its orders and judgments, particularly in the area of maritime law, however this was not an area over which a national jurisdiction exercises control, nor is it appropriate that it attempt to do so;

(2) International regulation of the Judicial sales was necessary; and

(3) In order to promote the free flow of maritime traffic, countries have, generally speaking, agreed to apply a uniform set of admiralty rules and laws. This would not, however, prevent any country from legally completely ignoring or setting aside any normally accepted practice or any law which is universally recognized in admiralty matters or even a rule of law which that country might previously have adopted by treaty. This is precisely what territorial jurisdiction means, and, until there exists some world authority with a superior globally enforceable overriding jurisdiction this is what we all must live with.[5]

In commenting on judicial orders for the sales of ships that did not ensure the passing of clean title, the same Court noted that admiralty lawyers and all lay people in the shipping world, involved in any way in the purchase and sale of ships, will invariably feel that this would greatly reduce the amounts which can be obtained from court sales

[3] Associate Chief Justice Noel in *Vrac Mar Inc. v Demetries Karamanlis et al* [1972] FC 430 at p. 434 (Canada).

[4] (1988) LMLN 240, being a judgment of the Federal Court of Canada.

[5] Ibid. at p. 11 of the judgment.

of vessels and render some ships completely unsaleable. The legitimate claims of many local and foreign creditors would thus be defeated by the resulting low bids made at the auction conducted by the court seized of the case.

In order for the recognition of foreign Judicial ship sales to be uniformly accepted by way of an international instrument, the intervention of UNCITRAL would be of considerable benefit to the international maritime community.

Necessary and sufficient protection should be provided to purchasers of ships at Judicial sales by limiting the remedies available to interested parties to challenge the validity of the Judicial sale and the subsequent transfer of the ownership in the ship.

7. Other Conventions

The International Convention on Maritime Liens and Mortgages, 1993 has not been successful as it contains controversial provisions which do not solve the problems of the recognition of foreign Judicial sales, and the wording with respect to recognition is more in the nature of denying recognition, rather than granting recognition of the Judicial sale. However, wherever possible, the draft international instrument has been prepared so that its provisions do not conflict with those set out in the Maritime Liens and Mortgages Convention.

While the International Convention Relating to the Arrest of Sea-going Ships, 1952 seeks to regulate the claims that can be enforced by the arrest of a vessel, it does not provide for the Judicial sale of a ship.

The International Convention on the Arrest of Ships, 1999 mentions the Judicial or forced sale of ships, but only in the context of its article 3.3, allowing, as an exception to the general rule, the arrest of a ship owned by a person not liable for the claim.

8. International Maritime Organization (IMO)

CMI first approached the IMO Legal Committee in view of its past involvement with the Maritime Liens and Mortgages Conventions, and made an information presentation to the IMO Legal Committee in 2015 with a view to making a formal request twelve months later that it add this work to its agenda.

A further presentation was made in June 2016. Two sponsors were required for that work and in the lead up to the IMO Legal Committee meeting in 2016, China and the Republic of Korea agreed to sponsor this work. The IMO Legal Committee did not accept the proposal for the inclusion of this work on its agenda. It was, however, left open for the matter to be raised again at a later date.

The views expressed by delegates at the time included: while it was felt that this was an important subject of interest to the Committee some considered it to be a matter of private and commercial law and did, therefore, not fall within the remit of the Committee; some delegations appeared not to want to take on new work, although other delegations highlighted that they accepted foreign Judicial sales of ships in their national legislation and that it entailed a lot of benefits, in particular because it provided certainty towards stakeholders; others pointed out that it was also an important issue from the perspective of the port industry, as arrests of vessels can negatively affect efficient port operations.

9. Hague Conference on Private International Law (HCCH)

After the IMO Legal Committee had declined to take on this project, CMI approached the Hague Conference, which was working on its project entitled the Recognition and Enforcement of Foreign Judgments. Representatives of CMI attended the recent meeting of the Special Commission on the Recognition and Enforcement of Foreign Judgments of HCCH, held between 16 and 24 February 2017 at which a presentation was made on behalf of CMI to suggest that the CMI's draft Instrument on the Judicial Sale of Ships could be accommodated within that work. It was decided, however, by that Commission, not to proceed down that route. CMI was therefore invited to present an information paper to the Council of HCCH on 15 March 2017 so that consideration could be given at the HCCH Council meeting in 2018 to add this project

to its work programme as a new stand-alone topic. Opinions were expressed by some delegations at that time to the effect that such an esoteric and industry-specific topic might be better suited to UNCITRAL and others preferred not to take on new work until the current programme was concluded. The matter is, presently, to be revisited at the Hague Conference's Council meeting in 2018.

10. Conclusion

The failure of States to recognize the Judicial Sale of a ship in another jurisdiction reduces confidence in the international maritime community in the system of Judicial sales. They will only be supported, and proper values for ships fetched, if the prospective purchasers can be confident of receiving the vessel with a clean title, free of any encumbrances and capable of being deleted from its old registry and registered in a new register of the purchaser's choice. Thereafter, the purchaser must also be able to trade the ship without it being subject to arrest in respect of any claim arising prior to its Judicial sale.

CMI has experience working with UNCITRAL, most recently, on the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea, 2008 (the "Rotterdam Rules"). Members of Maritime Law Associations were appointed to national delegations and were able to assist in the work of UNCITRAL in the development of those Rules, which CMI had initially drafted. CMI does not expect UNCITRAL to rubber stamp its draft international instrument. CMI takes comfort in UNCITRAL's "universal" coverage in terms of the States participating in negotiations; and the fact that it is a specialist organization on private international law that is experienced in working on standards in the area of commercial and international trade law.

CMI is therefore requesting UNCITRAL to add this topic to its work programme. If UNCITRAL decides to add this topic to its work programme (either on its own or in conjunction with another body), CMI will not pursue its requests to IMO or HCCH to pursue this work.

I. Note by the Secretariat on possible future coordination and technical assistance work on security interests and related topics

(A/CN.9/924)

[Original: English]

Contents

I. Introduction

1. This document contains a summary of the considerations and conclusions reached at the Colloquium with respect to possible future coordination and technical assistance work on security interests and related topics.

II. Possible future coordination and technical assistance work topics

A. The law applicable to proprietary effects of assignments of receivables

1. Continued divergence in national law approaches

2. The panel that dealt with the law applicable to proprietary effects of assignments of receivables agreed that national disharmony in the conflict-of-law rules for determining the law applicable to the assignment of receivables is a long-standing problem in private international law. That said, a multilateral consensus appears to have been reached on the following three issues. First, the applicable law should be the same for both the outright assignment of and the grant of security in receivables. Second, relations between the assignor and assignee should be governed by the law applicable to the contract of assignment. Third, relations between the assignee and the debtor of the receivable should be governed by the law applicable to the assigned receivable (meaning the law applicable to the contract giving rise to the receivable in the case of contract-generated receivables). The consensus on these three issues is reflected: (a) at the international level, in the United Nations Convention on the Assignment of Receivables in International Trade (the “Assignment Convention”), the Secured Transactions Guide and the Model Law; and (b) in the European Union,

in article 14 of the Rome I Regulation (Regulation (EC) 593/2008 on the law applicable to contractual obligations).

3. Where consensus remains elusive is with respect to the appropriate connecting factor for determining the law applicable to the proprietary effects of an assignment of receivables against third parties, and the priority of the assignee's right against competing claimants (including the assignor's insolvency administrator). As a result of the uncertainty with respect to the law applicable to these matters, credit on the basis of receivables is less available or is available at a higher cost.

4. Under the UNCITRAL instruments referred to above, the law of the State in which the assignor is located (place of business and, in the case of places of business in more than one State, the centre of main interests) applies as a general rule (subject to exclusions and exceptions for certain types of receivables, notably financial receivables arising from bank accounts, securities, financial market and derivatives transactions, and transactions on regulated exchanges and clearing and settlement systems).

5. As reflected in the panel presentations, however, national laws continue to diverge on this issue. For example, under the statutory conflict-of-laws rules in effect in the territorial units that make up the United States of America and Canada (including in the case of Canada, the civil law province of Quebec), the law of the assignor's location generally applies in both the intrastate and international conflict-of-laws contexts. While this solution is in line with the UNCITRAL approach, Japan's private international law statute, enacted in 2006, refers the effects of an assignment against both the debtor and third parties to the law applicable to the assigned receivable.

2. Current status of the matter in the European Union

6. As explained in the panel presentations, the member States of the European Union have also yet to agree on a uniform solution. In 2005, the European Commission proposed adoption of the law of the assignor's habitual residence in line with the UNCITRAL approach (habitual residence was defined to be close to the place of business and the place of central administration) and the views of the majority of respondents to the European Commission's 2003 Green Paper. It was ultimately decided, however, that the issue required further study and the proposed rule was omitted from the 2008 Rome I Regulation. Instead, article 27(2) required the European Commission to submit a report on the issue, accompanied by a proposal for a potential future European solution. The European Commission engaged the British Institute of International and Comparative Law (BIICL) to carry out a study (published in 2011) and submitted its report in 2016. Based on the BIICL study, the European Commission report confirmed the need for a uniform European legislative solution.

7. Importantly, the European Commission report also emphasized the need for a future proposal to also address the existing disharmony on the conflict-of-laws rules applicable to cross-border transactions in securities. Existing European Union directives have harmonized these rules only to a limited extent and have been transposed into national law in divergent ways. There are also divergent views on whether certain types of intangible assets are more appropriately characterized as securities or receivables.

8. To ensure coordination, the Capital Markets Union (CMU) Action Plan (2015) and CMU Communication (2016) envisages a dedicated legislative proposal from the European Commission on the law applicable to the ownership of securities and the third-party effects of the assignment of receivables. To this end, an inception impact assessment was published in 28 February 2017, to be followed by a detailed online public consultation with stakeholders to be launched in the first quarter of 2017 (the public consultation was in fact launched on 7 April 2017 with a deadline of 30 June for receiving responses). It is also planned to set up an advisory expert group composed of experts on private international law and finance markets. A stakeholders' meeting to discuss the results of the public consultation is envisaged for early

September 2017, followed by publication of an impact assessment of the ultimate proposal in mid-September 2017. Adoption of a proposal by the European Commission is anticipated by December 2017.

3. Possible future solutions in the European Union

9. While confirming the demand for a uniform rule on the law applicable to the third-party effects and the priority of the assignee's rights, the panel noted that the 2011 BIICL study reported divergent sectoral, expert and Member State views as to which law should apply. Based on the alternative drafting proposals set out in the BIICL study (with minor modifications), the 2016 Commission Report presented three possible solutions: (a) the law applicable to the contract between the assignor and the assignee; (b) the law applicable to the assigned receivable; and (c) the law of the assignor's habitual residence (i.e. the UNCITRAL approach). The advantages and disadvantages of each of these possibilities was addressed in the BIICL study and the European Commission report and discussed by the various panel participants.

Law of the assignor's location (the UNCITRAL approach)

10. The principal advantages of this solution are seen to be: (a) facilitation of bulk assignments insofar as a single law applies to an assignment of receivables owed by multiple debtors in multiple States; (b) facilitation of assignments of receivables arising under future contracts insofar as the applicable law can be determined ex ante when the assignment is made; (c) increased legal certainty and predictability insofar as the applicable law can be easily ascertained by both assignees and third parties including the assignor's creditors; and (d) coincidence of the applicable law with the insolvency law in the event of the assignor's insolvency, thereby minimizing potential conflicts and the need to demarcate whether an issue relates to insolvency law or to the proprietary effects of the assignment on third parties.

11. The principal disadvantages are seen to be: (a) separation of the law applicable to the effects of the assignment as against the debtor and as against third parties, raising characterization and demarcation challenges; (b) the potential for multiple laws to apply in the event of: (i) a change in the assignor's location over time with the result that a different law may apply in a priority competition with a subsequent assignee or other competing claimant; (ii) subsequent assignments by the original assignee if the subsequent assignee is located in a different State than the original assignee; and (iii) the assignment of an unseverable debt owed jointly to multiple assignors located in different states; and (c) the potential unsuitability of this approach to certain types of financial claims and instruments.

12. To mitigate certain of these disadvantages, the European Commission report and BIICL study suggest: (a) questions of third-party effectiveness and priority in the event of a change in the location of the assignor over time could be resolved by referring to the law of the State in which the assignor is located as of the date of the last assignment or other event giving rise to a competing right; and (b) the perceived incompatibility of this approach for financial claims could be addressed by a limited exception, pointing to the law governing the assigned receivable (or to some other appropriate law depending on the particular type of receivable).[1] While such an exception is compatible with the exclusions and exceptions in the Assignment Convention and other UNCITRAL instruments, it was noted that demarcating the exceptional group of receivables that should be subject to a special rule would be challenging.

Law applicable to the assigned receivable

13. The principal advantages of this solution are seen to be: (a) the same law applies to the effects of the assignment against the debtor and third parties, thereby avoiding the need to delineate whether an issue is an assignee-debtor issue or an assignee-third-party issue; (b) enhanced stability of the applicable law both because the law governing the assigned receivable is unlikely to change over time and because the

[1] Article 91 of the Model Law addresses this issue.

same law would normally also govern subsequent assignments by the original assignee to a new assignee.

14. The principal disadvantages are seen to be: (a) this solution does not permit a determination of the law applicable to an assignment of future receivables arising under contracts that have not yet been concluded; (b) increased complexity and costs in the case of a bulk assignment of receivables owed by debtors in multiple States insofar as the third-party effectiveness and priority of the assignee's right in the same portfolio of receivables could potentially be subject to multiple applicable laws; (c) the law applicable to the assigned receivable may not always be easy to identify if there is no clear choice of law in the contract between the debtor and assignor or if the receivable assigned is not contractual; (d) risk of prejudice to third parties insofar as: (i) the parties to the assigned receivable can choose the law applicable to it, and could change the applicable law; (ii) there is a lack of transparency with respect to the applicable law for third parties, notably the assignor's creditors, who ordinarily would not have access to the contract giving rise to the receivable in order to determine the applicable law; and (e) uncertainty and demarcation challenges in the event of the assignor's insolvency to the extent the *lex concursus* does not coincide with the law applicable to the assigned receivable.

15. To address the unsuitability of this solution for assignments of receivables under future contracts, the BIICL study and the European Commission report suggest: (a) a specific exception pointing to the law of the assignor's habitual residence; and (b) resolving potential conflicts between different applicable laws in a priority dispute between competing assignees or between an assignee and another right holder by applying the law of the state in which the assignor is located as of the date of the last assignment or other event giving rise to a competing right.

Law of the contract between the assignor and the assignee

16. The principal advantages of this solution are seen to be: (a) flexibility for commercial actors to choose the law which best suits their needs; and (b) potential for the application of a single governing law for bulk assignments and assignments of future receivables.

17. The principal disadvantages are seen to be: (a) potential for abuse of third parties including the avoidance of mandatory registration or other publicity requirements; (b) lack of transparency of the applicable law for third parties, notably creditors who may not have access to the assignment contract to determine the applicable law; (c) potential for different laws to apply to the effects of the assignment against the debtor and against third parties (unless the law applicable to the receivable is the chosen law); (d) uncertainty and demarcation challenges in the event of the assignor's insolvency to the extent the *lex concursus* does not coincide with the chosen law; (e) potential for different conflicting laws to apply to priority in the event of successive assignments of the same receivable to different assignees; and (f) potential instability of the applicable law in the event of a change in the applicable law by the parties.

18. To mitigate the risk of prejudice to third parties, it was noted that the BIICL study and the European Commission report suggest that the available choices be limited to the law of the assigned receivable or the law of the assignor's location. To address the absence of a clear choice of law in the assignment contract, or if the chosen law does not correspond to the permitted choices, the Commission report suggests that the third-party effectiveness and priority of the assignee's right could be governed by the law of the assignor's location. To address the problem of competing assignments governed by different laws, the BICCL study and the European Commission report suggest that the general first-in-time property principle could apply, subject to the sequential application of the rules protecting bona fide acquirers of the law applicable to the second and any later assignments.

4. Conclusions

19. As the panel presentations revealed, while there is a strong demand for a uniform solution, the possible approaches summarized above all have their respective

advantages and disadvantages and all pose problems of delineation insofar as they all contain exceptions and qualifications. It remains an open question whether the European Commission will ultimately propose any of these possible solutions or some other combination of approaches. For what it may be worth, it is noted that in the open discussion that followed the panel presentations, Colloquium participants focussed their remarks on the suitability of the UNCITRAL assignor location approach as a general rule including for securitization transactions.

20. As already noted (see para. 8 above), a dedicated legislative proposal from the European Commission on the law applicable to the ownership of securities and the third-party effects of the assignment of receivables is anticipated by the end of 2017. The Commission may wish to renew the mandate given to the secretariat to coordinate and cooperate with the European Commission and contribute to the stakeholder consultations and meetings leading up to the proposal with a view to avoiding any conflict with the Assignment Convention. Given that the pending proposal will also cover the conflict-of-law rules applicable to rights in securities and financial claims, the Commission may also wish to consider extending the mandate given to the secretariat to seek to avert any incompatibility with the conflict-of-laws rules of the Model Law, notably the rules determining the law applicable to security rights in non-intermediated securities, instruments, and bank accounts.

B. Technical assistance in secured transactions law reform: coordination and cooperation with other organizations

21. The panel that discussed technical assistance issues focused primarily on the discussions that took place at the conference on the coordination of secured transactions reform efforts that was held on 9 and 10 February 2017 at the University of Pennsylvania Law School. The conference was co-sponsored by the International Insolvency Institute, the National Law Center for Inter-American Free Trade and the Organization for the Harmonization of Business Law in Africa (OHADA).

22. A consensus view emerged that coordination in connection with the preparation of secured transactions instruments by international organizations (e.g. by UNCITRAL, Unidroit, and the Hague Conference on Private International Law) was extremely important to first avoid overlap and conflict, and to then facilitate coordination in connection with the implementation of those instruments.

23. The coordination of efforts among international governmental organizations, such as UNCITRAL, Unidroit and the Hague Conference, reflected in their annual coordination meetings and their Joint Publication on Security Interests, was generally thought to constitute a fine example of coordination in the preparation of texts. There was agreement that these annual coordination meetings should continue and the Joint Publication should be updated to include further texts prepared by these three organizations relating to security interests. A suggestion was made that the Joint Publication should also include references to regional security interest texts.

24. The coordination of efforts between international governmental organizations and regional intergovernmental organizations was also discussed and problems were identified that called for increased coordination efforts. There was general agreement that, while regional harmonization efforts were useful, they could not take the place of international harmonization efforts. There was also agreement that international or regional development financing institutions should use to the maximum extent possible international and regional legislative standards.

25. A potential tension was identified between the unitary, functional and comprehensive approach to secured transactions law reform (e.g. the Model Law) and asset-specific approaches (e.g. the Cape Town Convention and Protocols) or more simplified and less comprehensive but not asset-specific approaches. There was agreement that, while the unitary, functional and comprehensive approach should not be undermined, there was room for limited and narrow exceptions (e.g. for high-value, uniquely identifiable equipment that crossed national borders in its normal use). There was also agreement that discussion should continue on the

relative merits of other more simplified and less comprehensive approaches and the contexts in which they might be suitable.

26. There was also agreement that secured transactions law reforms should be coordinated with related reforms (e.g. laws on immovable property, including mortgages, etc.), insolvency laws, general reforms for improving the responsiveness and integrity of judicial systems, in particular as they may be utilized for the enforcement of a security right.

27. Several suggestions were made as to the possible next steps. One suggestion was to organize another conference, such as the February 2017 conference at the University of Pennsylvania Law School, perhaps with a view toward holding such conferences in the future on an annual basis. Another suggestion was that a repository of information should be developed, such as the one established by the International Insolvency Institute (at https://www.iiiglobal.org/node/2036). Yet another suggestion was that an ad hoc informal committee of representatives of principal organizations should be formed to discuss and plan the next steps and ongoing coordination efforts. Finally, the suggestion was made that there should be a standardized annual reporting system by all relevant organizations on the progress and developments in secured transactions law reform efforts.

C. Challenges in integrating a new secured transactions law into an existing legal system

28. At the outset, the panel that discussed the challenges in integrating a new secured transactions law into an existing legal system noted the need for those promoting secured transactions law reform in a State to work with the local administration and local lawyers and to refrain from offering a State with a developing economy a level of sophistication it does not need and is not equipped to use. The panel then went on to discuss the following three topics: (a) the lessons to be learned from the Australian experience in devising and implementing its Personal Property Securities Act 2009 ("PPSA"); (b) the importance of adopting a functional rather than a conceptual approach to secured transactions law reform; and (c) the need to adapt concepts, enforcement rules and legislative drafting style of an Article 9 UCC-type Model Law when introducing its ideas into a civil law jurisdiction.

1. The Australian Personal Property Security Act

29. A motive behind the Australian PPSA, a federal jurisdiction in which each State had its own personal property security law, was the need to streamline, simplify and modernize Australia's outdated secured transactions laws and registers. Particularly important was the task of building consensus, which itself required time and effort in disseminating detailed information about the proposed legislation and the need not only to listen to concerns from the private sector but also to involve it in the drafting process. Introducing a reform of this nature into a complex and developed economy had been a very challenging and complex process, and greater involvement of the private sector in the development of the legislation would have enabled the Act to better reflect the realities of the marketplace and business practice. The view of users is that the registry system also ended up to be too complex and not sufficiently user-friendly, though the Registrar and registry staff had been very receptive to industry input and had been working hard to improve this situation.

30. Awareness of the legislation among small businesses had been limited but had significantly improved as a result of education programmes. The lessons learned from the experience with the Australian PPSA were the need to have a deep understanding of what was proposed, to listen to and involve the private sector, to conduct an extensive education programme and to allow plenty of time to ensure that the legislation meets commercial needs.

2. The functional approach to secured transactions law reform

31. The second theme to emerge from the panel presentations was the need to adopt a functional approach to secured transactions law reform. In essence the goal was not to seek to reconcile differences in legal concepts but to provide best solutions to typical problems; in other words, to produce a results-based harmonization rather than one founded on legal doctrine. The Model Law does indeed adopt a functional approach to the concept of security, treating as secured transactions all those fulfilling a security function, including title-retention devices. This functional approach should be applied not only to the characterization of a transaction but also to the priority rules.

32. UNCITRAL plays numerous important roles in the harmonization and modernization of legal rules on secured transactions, including the offering of methodologies of modernization and harmonization, but it was also important to ensure that any rules proposed were acceptable to private actors in the marketplace. This part of the panel discussion concluded with a brief comment on the modernization of secured transactions law in Japan and a question as to why in certain jurisdictions asset-based lending and priority was more popular than debtor-based lending and priority.

3. The adaptation of the secured transactions model law to civil law systems

33. The last part of the panel session was devoted to the necessary acculturation of the Model Law on secured transactions to the philosophy and concepts of civil law systems. It was stated that the Model Law is not a standard model that could be incorporated as it stood. For civil law jurisdictions it was too close to Article 9 of the Uniform Commercial Code and needed to be "de-Americanised" both for political and for technical reasons. The "re-civilisation" of the instrument was said to pose significant challenges both as to substance and as to form. First, there needed to be an acculturation of concepts. Questions that need to be addressed include: (a) the characterization of the new security interest; (b) whether civil law systems should adopt a unitary approach to security or retain a non-unitary approach; and (c) the way in which the concept of proceeds was to be explained and addressed. It was also pointed out that there is also a choice to be made between clarity and readability with a short and simple text, and completeness and legal security with an elaborate and detailed text. In this respect, questions that need to be addressed include: (a) whether there were provisions that could be rejected as unnecessary in a civil law jurisdiction; and (b) the placement of a new law in a civil code, a commercial code or as a stand-alone text.

34. The final question posed was the role of UNCITRAL in the provision of technical assistance to legislators. It was noted that the draft Guide to Enactment would provide significant assistance. The question was raised whether it would be helpful to have an official commentary for the benefit of users, in view of the limited resources of UNCITRAL. It was also noted that academics world could provide a valuable resource with the establishment of a cadre of academics around the world appointed by UNCITRAL and working pro bono. This could provide a resource to which governments and legislators could turn.

J. Note by the Secretariat on possible future work by UNCITRAL on contractual networks: proposal of the Government of Italy

(A/CN.9/925)

[Original: English]

The Government of Italy has requested the Secretariat to transmit for consideration by the Commission at its fiftieth session a proposal for possible future work by UNCITRAL on alternative forms of organization to corporate-like models (contractual networks). The text of the proposal is reproduced as an annex to this note in the form in which it was received by the Secretariat. The proposal was before Working Group I (MSMEs) at its twenty-eighth session (New York, 1-9 May 2017) (A/CN.9/WG.I/WP.102).

Annex

Contractual networks and economic development: a proposal of Italy for possible future work by UNCITRAL on alternative forms of organization to corporate-like models

I. Introduction

1. At the twenty-third session of Working Group I, held in Vienna on 17 to 21 November 2014, Italy and France submitted observations on Possible Alternative Legislative Models for Micro and Small Businesses (A/CN.9/WG.I/WP.87). Such observations aimed at presenting domestic legislative models applicable to micro and small businesses that could provide for the segregation of business assets without requiring the creation of an entity with legal personality, but that could offer limited liability protection. In particular, as for the Italian model, reference was made to cooperation among micro, small and medium-sized enterprises (MSMEs) through the so-called "network contract" (*contratto di rete*). This model not only offers the possibility of segregation of assets and consequently limited liability protection, but also facilitates internationalization of MSMEs and cross-border cooperation. Moreover, it provides a tool to link MSMEs to larger companies by permitting MSMEs to be connected to the supply chain of such companies.

2. Working Group I is currently working on two separate instruments, one on business registration (A/CN.9/WG.I/WP.101 — Draft legislative guide on key principles of a business registry) and another on the statute of a limited liability organization (A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1 — Draft Legislative Guide on an UNCITRAL Limited Liability Organization). At its twenty-seventh session (Vienna, 3 to 7 October 2016), the Working Group agreed to devote some time at its twenty-eighth session (New York, 1 to 9 May 2017) on possible future work once the two mentioned instruments are completed. To complement the observations by Italy and France (A/CN.9/WG.I/WP.87), and being convinced that models to segregate business assets by entrepreneurs as well as to permit internationalization and cross-border cooperation between MSMEs would complement the texts the Working Group is currently working on, Italy submits the present observations to illustrate possible future work on alternative forms of organization to limited-liability entities, and its foreseen benefits for MSMEs. The aim is to fill a gap between issues of business registration, on the one hand, and the establishment of a limited-liability entity, on the other hand, with a flexible contractual instrument. As it will be explained, such a model would particularly fit those economies whose economic environment heavily relies on MSMEs.

II. Business landscape

1. Global value chains offer many opportunities to small and medium-sized enterprises

3. Economic development is increasingly aimed at driving local economies towards global markets. Recent statistics show that, between 1995 and 2011, most developed and developing countries have significantly increased their contributions to global value chains (GVCs), taking advantage of lower trade costs and improved communication technology.[1] Competitiveness of GVCs does not mirror one single national economy but builds on "*bundle of labor, capital and technology*".[2]

4. In this landscape, foreign investments have played a major role. However, even greater prominence has been achieved by the so called "non-equity modes" (NEMs) of international production, such as contract manufacturing, services outsourcing, contract farming, franchising, licensing, management contracts, and other types of "*contractual relationship through which transnational corporations (TNCs) coordinate the activities of host-country firms, without owning a stake in those firms*".[3] Indeed, participation in GVCs requires more and more explicit coordination and, through such coordination, developing countries are called upon to facilitate the upgrading of local economies.[4]

5. What is the role of MSMEs in this context? GVCs offer important opportunities to small and medium-sized enterprises, including those operating in low income and developing countries.[5] By learning from and interacting with other actors in the chain, these businesses can access new technologies and new markets, thereby contributing to the creation of value not only for the benefit of local economies but also for society at large.[6]

2. However, MSMEs experience a number of serious hurdles in accessing global trade and global supply chains

6. One of these is the lack of an appropriate common legal framework. Both micro enterprises (MiE) and SMEs[7] constitute the skeleton of domestic industrial and agricultural production systems.[8] They experience serious hurdles to access global

---

[1] See WTO, International trade statistics 2015: "In 2011, nearly half (49 per cent) of world trade in goods and services took place within GVCs, up from 36 per cent in 1995. The tendency of countries to specialize in particular stages of a good's production (known as vertical specialization), brought about by foreign direct investment, has created new trade opportunities, especially for small developing countries and eastern European economies. As a result, world trade in intermediate goods has grown with the rise of vertical specialization".

[2] R. Baldwin, Multilateralising 21st Century Regionalism, OECD Global Forum on Trade, February 2014, at 22.

[3] See UNCTAD, World Trade Investment Report, 2011, explaining that cross-border NEM activity worldwide is estimated to have generated over $2 trillion in sales in 2009. Contract manufacturing and services outsourcing accounted for $1.1-1.3 trillion, franchising for $330-350 billion, licensing for $340-360 billion, and management contracts for around $100 billion.

[4] See OECD, WTO and World Bank Group Report, Global Value Chains: Challenges, Opportunities and Implications for Policy, prepared for submission to the G20 Trade Ministers Meeting Sydney, Australia, 19 July 2014.

[5] See OECD and World Bank Group Report, Inclusive Global Value Chains Policy options in trade and complementary areas for GVC Integration by small and medium enterprises and low-income developing countries, prepared for submission to G20 Trade Ministers Meeting Istanbul, Turkey, 6 October 2015.

[6] See Inclusive Global Value Chains Policy options, cit.

[7] The differences between micro-enterprises and SMEs suggest that specific policies are required to support their activities and foster their growth both at the national and global levels. Whereas we believe that the objectives are similar, we maintain that legal instruments might differ depending on the size and capacity of the firms and the scope of their activities (whether global or local).

[8] In Italy, with regard to industry, services and construction sectors (no analogous data is available for agriculture), micro enterprises (0-9 employees) make up 95.3 per cent of the total, SMEs with 10-249 employees comprise 4.6 per cent and with 250+ employees represent 0.1 per cent of the total; in terms of value added, the ration is the following: micro enterprises 30.6 per cent, SMEs 38.4 per cent, large firms 31 per cent. In terms of the total number of firms, microenterprises are 83 per cent in the industrial sector, 96.7 per cent in services, and 96.1 per cent in construction;

trade and global supply chains. [9] These hurdles concern in particular: (1) access to capital, (2) access to technology, intellectual property rights, and know how, and (3) access to a qualified and well-trained labour force. [10] In order to ensure the participation of SMEs in global trade, access to critical resources has to be facilitated by promoting an appropriate common legal framework and new industrial policies.

7. The participation of SMEs in global trade is made even more difficult by a fragmented legal framework. National legal systems have developed various instruments, primarily in company law, to promote the integration of SMEs but relatively little has been done to favour contractual collaboration both among SMEs and between them and global chain leaders like transnational corporations (TNCs). Fragmentation is even more problematic when considering national tax legislation, state aids and foreign direct investment (FDI) policies where differences are remarkable and regulatory arbitrage substantial. Harmonization of the law governing interfirm contractual collaboration may reduce regulatory fragmentation and help SMEs taking part in global trade to access resources and opportunities.

3. Complementarity between the establishment of companies and contractual collaboration

8. SMEs' growth is driven, among other factors, by the adoption of an appropriate legal framework to promote their coordination in order to favour economic growth and specialization. Such growth can occur through integration in corporate entities or via contractual collaboration in various degrees.

9. These two families of legal instruments are complementary. The corporate-like family (company, cooperative) supports the integration of existing different enterprises when the level of mutual trust and reciprocal knowledge is high and the industrial project is well defined from the very beginning. The contractual family provides a set-up for enterprises to start new collaborations, in particular when they might not otherwise enter into a demanding and burdensome common industrial project. Lack of steady availability of physical capital or uneven access to financial resources among potential partners may also discourage SMEs from entering into corporate-like forms of integration. The complementarity between corporate-like and contractual modes might establish a process whereby SMEs start with contractual collaboration and end with the creation of new companies that integrate some of their activities.

10. When SMEs have relative little knowledge about their partners, the degree of risk and uncertainty stemming from potential collaboration is higher, and the incentives to invest might initially be lower. In that case, the contractual approach is more appropriate than the creation of a new company. What is needed is a more flexible instrument that maximizes the benefits of cooperation while reducing the costs of conflict and opportunism.

11. Collaboration is a process that might require various steps. The first is through contractual collaboration that may or may not translate into the creation of a company with a higher degree of ownership integration of different types of assets including both tangible and intangible ones. Hence, the evolution of a contractual collaboration over time should be compatible with dissolution, preservation or transformation of the contract into a corporate entity. Contractual networks (i.e.: multiparty contracts between SMEs located in the same or in different jurisdictions) may provide such an instrument with a relatively low level of initial capital, low entry and exit costs, and a light governance infrastructure. Multiparty contracts may facilitate access to capital by providing joint collateral to credit institutions; they can facilitate access to new technologies with the creation of common technological platforms, where common intellectual property rights may be used. Access to qualified labour force may be

---

the percentage of SMEs is: 16.7 per cent in the industrial sector, 3.2 per cent in services, 3.9 in construction.

[9] See Inclusive Global Value Chains Policy options, cit.

[10] See ILO, Decent work global chains, International conference, 2016 available at www.ilo.org.

enabled through the possibility of sharing employees who may rotate among the enterprises participating in the network, thus increasing specialization and the effective use of human capital.

4. Existing types of Contractual networks

12. Contractual networks include different existing forms of multiparty contracts ranging from joint ventures to consortia, franchises or patent pools; they can take the form of either a single contract with several parties, or of a set of interlinked bilateral contracts with high levels of coordination and interdependence. These contractual models include production and distribution and can be domestic or international. They can provide SMEs with the legal infrastructure to trade (for example, through e-commerce platforms and payment systems like "Pay-pal"). Legal frameworks exhibit a great degree of differentiation between jurisdictions that make international SME collaboration very difficult. In addition, choice of law and forum rules are unclear for multiparty contracts;[11] and even less clear for interlinked contracts.

13. Essentially two forms of contractual networks are currently in place. **Vertical networks** operate along supply chains that include different stages of production/distribution. Participants in vertical networks (e.g. suppliers) perform activities (e.g. production of intermediate goods, supply of services) to be incorporated into the activity of another chain participant (e.g. an assembler) and the network is aimed at coordinating their interdependent activity along the lines of a chain project, often developed by a chain leader. TNCs often face high transaction costs when investing in developing countries because local enterprises operate in isolation and conventional local intermediaries (such as local leaders, trade associations, or local chambers of commerce, governmental agencies) do not operate very effectively. TNCs look for stable relationships that decrease coordination costs and increase the stability of the supply required by global markets. In order to stabilize the supply chain governance they need stronger coordination between local suppliers of inputs and intermediate goods and chain leaders. This process is reinforced by the increasing number of regulatory requirements, as on safety, environmental and social protection, to be applied along the global chain. In order to facilitate access to global trade, cross border contractual collaboration is necessary and specific legal forms tailored to SMEs are needed. Such forms may contribute to the process of the internationalization of SMEs through or independently from existing global chains. Consolidated international instruments related to sales and distribution currently provide an excellent toolkit for bilateral relationships but do not allow the promotion of multiparty coordination among SMEs contributing to the same production process but located in different jurisdictions.[12] Multiparty contracts linking several SMEs involved in global supply chains can provide a useful collaborative instrument as long as they are designed to make access to critical resources easier and cheaper.

14. **Horizontal networks** are networks in which various SMEs contribute to a common project with their *products or services*, playing a similar role along the supply chain or having similar expectations from the network programme (e.g. new trade opportunities for the sale of final products). The latter may, for example, concern the construction industry, where suppliers of electrical infrastructure may collaborate with plumbers and carpenters to complement the work of the main contractor, or the fashion and garment industry where product design and software in the initial stage of the production process have to be integrated. Horizontal networks can also be found in agriculture, or agri-food industry, where, for example, producers of different final products (such as wines) or commodities (e.g. rice, soy, or corn) collaborate to comprise a richer portfolio of products to enter a new foreign market.

---

[11] See Hague Conference on Private International Law, Principles on choice of law in international commercial contracts (approved on 19 March 2015), available at https://assets.hcch.net/docs/5da3ed47-f54d-4c43-aaef-5eafc7c1f2a1.pdf.

[12] There is some debate about revising the United Nations Convention on Contracts for the International Sale of Goods (CISG) in order to correlate sales contracts into global chains. UNCITRAL might contribute to this debate by coordinating the proposal on contractual networks with proposals to revise existing international contractual instruments.

15. Vertical networks of SMEs are part of broader supply chains that include one or multiple chain leaders. For example, in the agri-food industry supply chains, both a producer of the final product and a large retailer may share the leadership. The contractual relationships between the leader(s) and the SMEs are generally characterized by strong asymmetric power between enterprises located in different jurisdictions. The choice of applicable law and forum becomes very important and may influence the effectiveness of collaboration. Horizontal networks may include SMEs of the same jurisdiction (the majority) or different jurisdictions (more common in the high tech industry or e-commerce). Horizontal networks feature lower asymmetric power distribution.

16. A third relevant dimension of contractual networks is their sheer number. Small collaborative networks (from 2 to 10 enterprises) of SMEs require a different governance structure than those encompassing hundreds or even thousands of SMEs (as it is the case for transnational e-commerce platforms devoted to SMEs).

17. Finally, creativity and innovation with intellectual property protection and management are among the key drivers of competitiveness, growth and development. This underscores the importance of network contracts in giving rise to platforms with a view to jointly exploit intellectual property rights. In particular, SMEs can share existing technology provided by one or more platform members, directly co-produce new technology within the platform itself or acquire technology licensed/transferred by subjects that are not party to the platform. Network contracts may also ease the provision of technical assistance given to SMEs related to intellectual property by business and government bodies, by facilitating the transfer of information and knowledge to a single collective subject and its subsequent dissemination among the network members.

5. Specific issues for micro enterprises

18. Compared to SMEs, MiEs exhibit financial, technological, trade weaknesses that are greater than for other types of enterprises. The role played by public institutions, non-governmental organizations (NGOs), trade or financial intermediaries and even MNCs is often pivotal to determine MiEs' chance to access GVCs. Such access requires a long-lasting process in which strategic collaboration, capacity-building and fair value allocation are key components. Networks aim at this type of collaboration, which is mostly focused on services rather than the mere exchange of goods.

19. Indeed, several types of networks may be distinguished among those involving MiEs:

(a) Those involving only MiEs;

(b) Those involving MiEs and non-business actors such as public entities, NGOs and the like;

(c) Those involving MiEs and business actors such as MNCs and/or trade intermediaries; and

(d) Various combinations of the above.

20. When dealing with networks involving MiEs, a uniform legal instrument should specifically address issues concerning the fairness on which network relations should be based and the guarantees that MiEs should enjoy vis à vis other GVC participants, regardless of whether these members belong to the same contractual network. Whereas such an instrument may envisage the adoption of mechanisms monitoring the fairness of contractual terms and practices in case (c), in the first two instances it could aim at empowering contracting parties (e.g. by establishing common negotiating platforms) in order to reduce power asymmetries along the chain.

21. A legal instrument facilitating collaboration among MiEs should focus on collective capacity-building in order to favour both individual and collective economic growth.

III. Legal framework

22. In light of the above, an international legal instrument could eliminate legal barriers and accommodate the specific needs arising from this model of cooperation. With the sole intent of presenting to the Commission the issues that may be considered, and in the hope of making it easier to assess the potential use of such an instrument, Italy will discuss some of the main issues to be included in a legal framework. These are broad and preliminary considerations to be intended for discussion, with no intention of being exhaustive, nor by any means to suggest a specific policy choice to the Commission.

1. Possible legal approaches to Contractual networks

23. The above-noted differences suggest that a legal framework to address contractual networks might be organized around some functional distinctions:

(a) Horizontal *versus* vertical;

(b) Domestic *versus* international;

(c) Small *versus* large networks;

(d) Networks of MiEe *versus* networks of SMEs; and

(e) For profit *versus* non-profit networks.

2. An integrated modular proposal of an international instrument on Contractual networks

24. Whereas we believe that instruments for MiEs might differ from those for SMEs and that the latter should definitely be part of global trade, we would envisage a modular legal instrument with common general principles and possibly two specific sections, one devoted to MiEs and one to SMEs.

25. These principles might be drafted having in mind a multilevel system: i.e., whatever is not explicitly regulated would be supplemented by national legislation, leaving scope for a certain level of differentiation in legal architecture. The international instrument would define the specific principles and provide the relevant definitions but some aspects (for example, mistake, fraud, or avoidance) could be left to applicable contract law.

26. Most importantly, the structure of such principles should identify the new roles of contract beyond pure exchange, focusing on organizational and regulatory functions in order to ensure that network contracts can also promote compliance with global standards related to environmental, social, and data protection requirements, and should be applicable to both domestic and transnational networks.

27. These rules should ensure both the stability and the flexibility of the contractual network, and distinguish between internal relationships among members and relationships between the network and third parties, in particular, with creditors. Such rules could provide for different degrees of complexity with increasingly structured forms of governance, which could take place inside the network or could use companies controlled by the network to perform specific activities that require limited liability and asset partitioning.

3. Governance, knowledge transfer and innovation

28. When defining a uniform legal framework, strategic importance might be devoted to knowledge transfers and innovation among the enterprises of the network and between the network and third parties. Contract rules become extremely important when knowledge cannot be “propertized” (i.e. cannot be made proprietary) either because no legal devices are available, or because the benefits of sharing are such that individual or even collective ownership would be inappropriate. In particular, two problems usually emerge within network governance: (1) Proportionality between investments, contributions and revenues, since lack of

proportionality often emerges between individual investments and profits, and opportunistic behaviour by some members of the network might arise; and (2) The interest of the contractual networks might require protection against behaviour such as unfair competition, violations of trade secrets, or unauthorized transfers to third parties external to the network.

29. A special regime concerning trade secrets and intellectual property rights might also need to be devised so as to maximize incentives to produce innovation inside the network, but, at the same time, to generate strong safeguards against knowledge leaking outside the network. Since creation and use of intellectual property rights might be too expensive for individual MSMEs, forms of collective ownership and licensed use might be regulated by multiparty contracts making innovation also possible for firms with limited capital.

30. Further, consideration should be given to instruments that permit the segregation of assets and the establishment of limited liability protection for the activities covered by the contractual network (or parts thereof), in order to offer an additional instrument to MSMEs.

31. Finally, specific rules concerning private international law might be appropriate in this context.[13] In multiparty contracts, when enterprises located in different jurisdictions want to collaborate there is a need to identify the applicable law to fill the gaps that are not explicitly regulated by the contract. Freedom of choice of applicable law should be encouraged along the lines of other initiatives established at the international level.[14] The international dimension may also require forms of mutual recognition when enterprises are registered in national registries with different requirements. To this latter extent, it would be advisable that the proposed international instrument permit coordination among the different business registration regimes in the countries of the network's members.

Annex to the proposal

Italian Law on Network Contracts[15]

1. Main features

1. The business network contract (*contratto di rete*) was recently introduced into the Italian legal system by Law Decree No. 5 of 10 February 2009, converted into Law No. 33 of 9 April 2009 and further amended.[16] This is an agreement by which "*more entrepreneurs pursuing the objective of enhancing, individually and collectively, their innovative capacities and competitiveness in the market, undertake a joint programme of collaboration in the forms and specific clusters as they agree in the network contract, or to exchange information or services of an industrial, commercial, technical or technological nature, or to engage in one or more common activities within the scope of their business*" (Article 3).[17] The scope of business network contracts can thus broadly differ, and kind and degree of cooperation are left to the free agreement of parties, as long as, through the determination of a common programme, strategic goals are shared that allow either the improvement of innovative capacity or the growth of competitiveness.

2. Cooperation can range from a plain undertaking to exchange information or services, to the organization of cooperation, up to the joint exercise of economic

[13] The above considerations are without any prejudice to the competence of The Hague Conference on Private International Law.

[14] See The Hague Conference on Private International Law, Principles on choice of law in international commercial contracts (approved on 19 March 2015), available at https://assets.hcch.net/docs/5da3ed47-f54d-4c43-aaef-5eafc7c1f2a1.pdf.

[15] This Annex is a slightly adjusted version of paras. 8 to 17, A/CN.9/WG.I/WP.87.

[16] This has been further amended in 2009-2010 (Law No. 99/2009 and Law No. 122/2010) and in 2012 (Law No. 134/2012 and Law No. 221/2012).

[17] As of 3 January 2017, 3,320 of such contracts have been established, involving almost 17,000 entrepreneurs (http://contrattidirete.registroimprese.it).

activities. In addition, the two mentioned goals of cooperation are widely interpreted: improvement of innovative capacity is understood to include any new opportunities that firms may have access to by virtue of belonging to a network, such as the development of new technical or technological opportunities.

3. With regard to the growth of competitiveness, this is generally meant to increase the competitiveness of the members of the network or the network itself at both the national and international level, in the sense of creating business opportunities otherwise precluded to a single firm. Competitiveness is increased thanks to measures (such as — but not limited to — access to funding, existing fiscal facilitations, participation in public bids and labour law measures for companies in contractual networks) and from endogenous growth factors (such as the overcome of dimensional limits, the creation of marketing opportunities, knowledge exchange etc.). This leaves the door open to vertical (coordination of suppliers with shared standards of production, distribution or franchise chains) or horizontal integration (research and development, centralized point of sale or of acquisition). Under the most recent amendment to the relevant legislation, business networks can also take part in public bids.[18]

4. Whatever categories can be abstractly drawn in respect of the business functions of network contracts, there is no specific type of network agreement for any of these entities: it is up to the parties to decide the organizational structure and functioning of their network. The sole requirement to enter into a business network contract is to be an entrepreneur, irrespective of the nature and the activities performed. This includes sole ownership, companies of all kinds and public entities, including those of a non-commercial nature, as well as for profit and non-profit entities (mixed networks do not seem to be precluded, where there are for profit and non-profit participants). Business networks, although factually mainly used as a scheme for cooperation of small and medium-sized enterprises, are thus generally open to any businesses, including corporations and groups.

2. Minimum content of the contract and registration

5. A business network contract must specify at a minimum: (i) The business or corporate name of each participant, as well as that of the network in the event that a common fund is constituted; (ii) Indication of the strategic objectives of the cooperation and the procedures agreed upon to measure progress towards these objectives; (iii) Description of the network programme, spelling out rights and obligations of each participant, the means of implementation of the common purpose, and, in the case of a common fund, the measure and standards of evaluation of participants' contributions, as well as its management regulation; (iv) Duration of the contract and rules for adhesion. Rules for early termination or withdrawal of a participant may also be inserted (in whose absence, general principles on termination of multiparty agreements with a common purpose apply); (v) Name of the entity, if any, appointed to act as the body responsible for the administration of the execution of the contractor of individual parts or stages thereof; (vi) Rules for decision-making of participants on any subject or aspect of common interest (not delegated to the body responsible for administration, if appointed).

6. The contract must be in writing, either by public deed or authenticated by a public notary, and be registered with the Business Registry of the place of registration of each of its members. Effectiveness of the contract runs from when the last of the prescribed registrations occurs, both among the contracting parties[19] and against third parties: registration is thus a necessary and essential prerequisite for the legal validity of the contract (*pubblicità costitutiva*). Modifications to the network and the contract need also to be registered in the Business Registry of the member directly involved and must be directly communicated by the manager of the relevant Business Registry to all other Registries involved so as to have the change automatically included in

[18] Italian Authority for the Oversight of Public Contracts for Works, Services and Supplies (AVCP), Resolution No. 3/2013.

[19] However, some scholars are of the view that registration only affects enforceability against third parties, the network contract being valid among parties irrespective of its registration.

each of them. The contract may also provide for the establishment of a capital fund (*fondo patrimoniale*) and the appointment of a common body responsible for the management, in the name and on behalf of the participants, of activities for the execution of the contract or of individual parts or stages thereof.

3. Separate fund

7. In order to carry out the programme of the business network, contracting parties may establish a common fund. This is a separate fund exclusively devoted to implement the programme of the network and then to the pursuit of its strategic objectives. Creditors of individual participants to the network cannot rely on the fund, which only serves to satisfy claims deriving from the activities performed within the scope of the network. Provisions in the civil code on the constitution and effects of a fund in consortia apply, although the exact scope of such reference has to be assessed taking into account that a business network contract, as described above, might involve a much looser cooperation among members, where activities might be carried out individually albeit for a common purpose and under a common programme.

8. As mentioned above, the relevant contract must establish the extent and criteria for the evaluation of contributions. These can be either in cash or in goods and services. The contribution may also consist of a separate fund. In separate legislation, a common fund has also been foreseen for agricultural enterprises establishing a business network, which can in turn contribute to a national mutual fund for the stabilization of returns of this category of entrepreneurs.[20]

4. Governance

9. Governance of the network is left to contractual freedom. If a common body is appointed for the management of the activities of the fund, it will act in the name and on behalf of the network when it has legal personality, or in the name and on behalf of the members of the network if it has none.

5. Legal personality

10. Business networks do not normally have legal personality. However, the most recent amendments to relevant legislation (as of 2012) permit these to also be established with legal personality.[21]

[20] DL 22 June 2012, No. 83 as converted into Law No. 134/2012.

[21] As of 3 January 2017, 474 business networks were established with legal personality (http://contrattidirete.registroimprese.it).

K. Note by the Secretariat on possible future work on security interests: proposal for a practice guide to the UNCITRAL Model Law on Secured Transactions: proposal of the Governments of Australia, Canada, Japan and the United Kingdom of Great Britain and Northern Ireland

(A/CN.9/926)

[Original: English/French/Spanish]

The annex to this note sets forth a proposal of the Governments of Australia, Canada, Japan and the United Kingdom of Great Britain and Northern Ireland for the preparation by the Commission of a practice guide to the UNCITRAL Model Law on Secured Transactions, as received in English, French and Spanish.

Annex

1. Introduction

At the Fourth UNCITRAL International Colloquium on Secured Transactions (15-17 March 2017), three panels discussed various areas where greater guidance and advice could be given to those involved in actually using the UNCITRAL Model Law on Secured Transactions in a State once it has been enacted. Categories of potential users include secured creditors and grantors (including micro-businesses), their lawyers and advisers, the grantor's other creditors and insolvency representative, transferees of the grantor's encumbered assets, regulatory authorities, judges, arbitrators and those involved in teaching the new regime.

The idea of preparing a practice guide, integrating and refining the ideas discussed at these three panels, attracted wide support among Colloquium participants. Without such a guide, it was feared that even if the Model Law was enacted by a State as recommended, the economic benefits which it aims to achieve (increasing the availability of credit at lower cost by the use of movable property as security for obligations) would not flow. Participants noted that the Guide to Enactment of the UNCITRAL Model Law on Secured Transactions provides essential assistance for legislators enacting the Model Law in a State. However, they observed that it provides insufficient concrete, practical guidance to those actually involved in or affected by the provision or receipt of credit under the Model Law. Nor does it give any advice as to the regulatory and transactional environment required to integrate the new secured transactions regime into the wider economic and policy objectives of the enacting State.

It is therefore proposed that Working Group VI prepare a practice guide along the lines suggested by Colloquium participants. The proposed guide would thus encompass all or most of the matters addressed by the first three Colloquium panels and presented as three distinct possible future work topics in paragraphs 8-44 of A/CN.9/913. As explained in more detail below, the proposed guide would thus include guidance on drawing up the contracts, notices, checklists and other documents needed to enter into and operate secured transactions according to the Model Law. It would also explain the need for users to acquire the practical tools needed to successfully carry out transactions, such as risk assessment, valuation of collateral and extrajudicial enforcement. It would additionally address how to successfully integrate a new regime of secured transactions into an enacting State's broader legal and financial regulation regime and objectives. And while the proposed guide would address the financing of businesses of all sizes, it would pay particular regard to the problems faced in the financing of micro-businesses identified in paragraphs 31-44 of A/CN.9/913.

2. Desirability

There was general agreement among Colloquium participants that matters external to the formal reform and modernization of a State's secured transactions law play a major role in determining whether a State has vibrant and well-functioning secured credit markets that further the overall goal increasing the availability of credit at lower cost. These matters include "capacity-building" in particular among lenders and their advisers, but also among borrowers, other creditors, judges, arbitrators and academics, as well as the development of appropriate related regulatory standards.

Capacity-building means the development of the practical ability to use the tools provided by the Model Law to engage efficiently and profitably in credit transactions with reduced risk of loss from default. It is generally recognized that providing a State with a modern secured transactions law, like the Model Law, does not automatically result in lenders acquiring the practical tools to extend credit in a meaningful way. Rather, creditors often do not embrace transactions newly made possible on a profitable basis by secured transactions law reform until they have the practical capacity to use the new legal rules effectively. Further, unless others involved in implementing the new system, such as administrators, lawyers, and judges, are able to do so effectively and knowledgeably, the system will not operate properly and creditors will be reluctant to rely on it. Thus, law reform without parallel capacity-building may not be effective in achieving its goal.

For example, empirical evidence suggests that, even in States that have adopted modern secured transactions law, lenders that are not familiar with the financing practices relating to movable property made possible by the new law, such as inventory and receivables financing, keep requiring mainly immovable property as security for credit. As the vast majority of immovable property is often owned by a small percentage of the population of a State, this means that, despite the adoption of a modern secured transactions law, credit may still not be available to the sector of the economy that most needs it, that is, micro, small, medium-size enterprises ("MSMEs").

Particular concerns apply to the financing of micro-businesses, which are a vital part of the world economy (i.e. over 90 per cent of all businesses) and which are critically important in developing economies. The amount of collateral available is usually very limited and its type different to that often provided by larger businesses, and there is heavy reliance on personal guarantees. The business and its personal guarantors are likely to be individuals. The amounts lent are often very small and this may have consequences concerning the cost of the transaction and the behaviour of lenders, both at time of the origination and during the lifecycle of the transaction. Thus, there is a need to consider and explain how secured transactions (under the Model Law) generally work for micro-businesses, and, more generally, how they interact with personal guarantees. The small size of a micro-business also puts the trader in a poor bargaining position vis-a-vis financiers. This often creates problems of over-collateralization. It also can lead to abusive interest rates, especially default interest rates.

There is also the need to ensure coordination between lending against movables and national regulatory environments, notably the capital requirements of the enacting State. Absent coordination, regulated financial institutions are induced to assign the same risk-weighting to transactions secured by movable property and receivables as unsecured credit, thwarting the goal of the Model Law to enhance access to credit.

A practice guide to the Model Law would be a significant step towards ameliorating all these concerns. It could explain the types of transactions and financing practices which can be entered into using the Model Law. It could provide users with guidance as to the contractual and other documentary forms and structures needed to achieve the economic benefits of these transactions. It could also provide guidance on the surrounding legal and practical infrastructure necessary for such financing to work, for example, risk assessment including valuation of collateral, and how to carry out extrajudicial enforcement. This would enable users to acquire the skills and practical

tools referred to above. It would also assist those involved in building capacity (whether external agencies or advisors or internal educators or facilitators) in states in which the Model Law is enacted. It could also guide judges and regulators as to the legal and regulatory environment necessary for a modern secured transactions regime to flourish and, in particular, address the specific issues which arise in the critical areas of the financing of micro-businesses and coordination with the capital requirements applicable to regulated lenders.

3. Feasibility

In order to demonstrate the feasibility of the proposed practice guide, this section sets out suggested content. Unlike the Guide to Enactment, which is structured as an article-by-article commentary on the Model Law, the proposed guide takes a more thematic approach, as this would better address the needs of users who have no or little previous experience of a modern secured transactions law. The suggested content draws heavily on the summaries of the three Colloquium panel discussions in A/CN.9/913, where more detailed discussion can be found.

(a) Best contractual and documentary practices

(i) Types of secured financing enabled by the Model Law

The guide could explain the characteristics and advantages of the different types of secured financing made possible by the Model Law with cross-references to the relevant provisions of the Model Law (e.g. inventory and equipment acquisition financing, revolving loan financing, factoring and forfaiting, securitization, term loan financing). It could also explain how the Model Law accommodates the extension of credit not just by lenders but also sellers and financing lessors, again with cross-reference to the provisions of the Model Law that address and accommodate these types of financing.

(ii) Cardinal issues that must be addressed by the parties throughout the life-cycle of a secured transaction

The guide could discuss issues arising at each point of the lifecycle of a secured transaction (e.g. the initial goals of the secured creditor and grantor, the necessary pre-contractual documents, issues relating to the closing of the deal, and post-closing monitoring of the grantor and the collateral).

(iii) Due diligence

The guide could discuss due diligence issues that must be addressed by prospective secured creditors (e.g. the need to obtain essential information about the grantor and the proposed collateral with sample check-lists; the need to conduct searches in secured transactions and other specialized registries, such as intellectual property registers; and the need to obtain information about judgements and tax or similar statutory liens).

(iv) Clear and simple drafting

The guide could explain the benefits of clear and simple drafting of security agreements, notices and other documents relevant to a secured transaction (e.g. to avoid disputes, ensure that the content is understood by the parties or recipients and takes into account their experience and sophistication). It could emphasize the importance of using plain language drafting techniques and provide concrete examples of ineffective drafting (e.g. avoiding legal jargon while still ensuring that the terms used are compatible with the Model Law, avoiding long sentences and long paragraphs, avoiding difficult-to-read fonts).

(v) Party autonomy and mandatory provisions

The guide could demonstrate how the party autonomy principle in article 3(1) of the Model Law enables contracting parties to adapt their agreements to their needs, by providing examples of particular provisions which the parties may derogate from or vary by agreement and explaining how and why they may wish to take advantage of this flexibility.

(vi) Sample documentation

The guide could include model forms of security agreements for different types of secured financing transactions based on widely acceptable international best practices. It could explain the key provisions of the model forms and the manner in which they relate to the provisions of the Model Law. It could provide model forms for making a security right enforceable against third parties by methods other than registration (e.g. "control agreements"). It could provide guidance on preparing and submitting appropriate notice forms to a registry (e.g. sample collateral descriptions), and notices to be given to the grantor and third parties in the context of extrajudicial enforcement of a security right. Difficulties in the service of notices on individuals is a particular potential issue which arises in the context of the financing of micro-businesses, and the guide could address possible solutions to this problem.

(b) Risk assessment, collateral valuation, and effective enforcement capacity

(i) Valuation of collateral

The value of the protection against loss that a secured transaction provides ultimately depends on the value of the encumbered asset when it is likely to be disposed of. The guide could therefore explain that it is critical for users to acquire or obtain (e.g. through employing professional appraisers) expertise in estimating the amount likely be received upon its disposition.

(ii) Administration of secured loans

Secured creditors need to build a relationship of trust with their debtors but due diligence requires that they are also able to verify the facts underlying the decision to extend credit on an ongoing basis. Thus they need to develop expertise in account-keeping and in monitoring the risk profile of the debtor and the continued existence and value of the collateral. The guide could explain these matters and provide assistance in building this capacity.

(iii) Extrajudicial seizure, disposition and distribution of proceeds of collateral

The extrajudicial seizure and disposition of encumbered assets on default may be unknown in a State that enacts the Model Law. Thus, the guide could explain the extrajudicial exercise of post-default enforcement rights and, in particular, the protection of the grantor and third-party rights and circumstances in which alternative dispute resolution methods may be available. Again, the particular concerns in relation to micro-businesses could be addressed here. The guide could also discuss secondary markets for the sale of collateral, including electronic platforms and their advantages and disadvantages.

(iv) Collection of receivables

Financing against the security of collateral in the form of receivables or other rights to the payment of money (e.g. debt securities) may not have been common or, indeed, possible, under the law of a State prior to enactment of the Model Law. The collection from the debtor or other obligor of a monetary claim requires different skills and is subject to different legal rules from repossessing and disposing of tangible assets and the guide could provide guidance in building this capacity.

(v) Investment in legal capacity

Modern secured transactions law is complex, and the exercise of rights is governed by complex rules. The Model Law, when enacted by a State, will not operate in isolation from the other laws of the enacting State. Accordingly, users will require expertise in related areas of law, such as insolvency law, and the law relating to personal guarantees and its interaction with the Model Law, since a guarantee is often provided in support of a loan in addition to the provision of security (this is particularly prevalent in the context of financing of micro-businesses).

(c) Regulatory capacity

(i) Secured transactions and capital requirements

The guide could indicate how to ensure coordination between national regulatory environments and the Model Law. In general terms, the Basel Accords — issued by the Basel Committee on Banking Supervision — look at secured credit with favour and security may reduce (risk-weighted) capital requirements. Nonetheless, it is generally recognized that regulatory requirements are overly cautious, if not sceptical, towards movable property and receivable taken as collateral. It is, in fact, assumed that movable assets cannot be swiftly liquidated — owing to the idea that secondary markets are limited — and that receivables are prone to depreciations. Capital requirements allow for considering movable property and receivables as effective credit protections only if certain conditions are met (e.g., the value of the collateral can be determined through reliable data, the enforceability of security is certain and swift, and a sufficiently liquid secondary market exist). Without understanding and addressing at the national level these relevant issues, lenders may not be prepared to lend or may lend only a higher cost to borrowers.

The guide could illustrate to national regulators how to meet these conditions. Particular attention would be given to the criteria for eligible collateral and past due loans. As a result, sound risk-management practices are promoted, while facilitating access to secured credit at a lower cost.

(ii) Financing of micro-businesses

Some specific characteristics of the financing of micro-businesses under a modern secured transactions regime may demand a particular regulatory response. Inequality of bargaining power often leads to unfair terms in loan and security agreements (such as high default interest rates, unfair termination clauses and definitions of events of default). The guide could discuss ways in which these potential sources of unfairness could be addressed.

The regulation of secured creditor behaviour in relation to lending to micro-businesses would also need to be discussed. Problems here include the fact that the very small size of loans reduces incentives for lenders to do a proper risk assessment and to engage in monitoring, paving the way for the over-collateralization of loans facilitated by the drastic inequality in bargaining power. Deficient monitoring and inefficient reactions to financial distress causes problems for borrowers as well as lenders. The guide could discuss possible solutions to these problems, which include access to more reliable credit rating information (through efficient credit reporting systems), more efficient monitoring practices, more efficient distribution of tasks within financial institutions, adequate implementation of the regulatory framework concerning non-performing loans, and perhaps even redesigned enforcement mechanisms to make them cheaper, quicker and easier.

4. Conclusions

The foregoing has shown that a practice guide to the Model Law is critical if its enactment is to lead to an appreciable increase in the availability of (and/or reduction in the cost of) credit to businesses in the enacting State. Working Group VI has the expertise to prepare such a guide based on its experience in the preparation of the Assignment Convention, the Legislative Guide on Secured Transactions, the Registry Guide, and the Model Law. It would be regrettable if a State were to reform its domestic law in line with the Model Law only to discover that its lenders, businesses and courts were unable to operate it effectively, due to a lack of practical understanding of how the law in the statute book is meant to operate on the ground. Technical assistance initiatives by UNCITRAL and other international agencies have intrinsic limitations. A practice guide would enable these agencies to perform their work far more efficiently and at lower cost.

As the foregoing has also demonstrated, the work that already has been done in preparation for the Colloquium and the resulting summaries in paragraphs 8-44 of A/CN.9/913 can be adapted to serve as the basis for an outline of the content of the proposed practice guide. At its first session, Working Group VI could debate and refine the topics and structure to enable detailed drafting to commence. With commitment from delegates and active engagement between sessions, it is estimated that a draft practice guide could be produced in three sessions.

VII. ENDORSEMENT OF TEXTS OF OTHER ORGANIZATIONS

Note by the Secretariat on endorsement of texts of other organizations: ICC Uniform Rules for Forfaiting (URF 800)

(A/CN.9/919)

[Original: English]

1. By letter of 14 November 2016 (reproduced in annex I), the Secretary General of the International Chamber of Commerce (the "ICC") requested the Commission to consider endorsing ICC Uniform Rules for Forfaiting (ICC Publication Number 800) (the "URF 800") for worldwide use. With its request, the ICC submitted a summary of the URF 800 (reproduced in annex II).

2. The Commission may wish to note that it has already endorsed a number of ICC texts, such as the Incoterms 2010, the Uniform Rules for Demand Guarantees: 2010 Revision (URDG 758), the Uniform Customs and Practices for Documentary Credits (UCP 600), the Incoterms 2000, the International Standby Practices (ISP98), the Uniform Rules for Contract Bonds (URCB), the Uniform Customs and Practices for Documentary Credits (UCP 500) and others.[1]

3. In addition, the Commission may wish to note that the objective of the URF 800 is to facilitate international receivables financing transactions and thus international trade by providing a new set of rules applicable to forfaiting transactions. Moreover, the Commission may wish to note that forfaiting transactions are covered by the United Nations Convention on the Assignment of Receivables in International Trade (New York, 2001),[2] and the URF 800 complement and are consistent with the rules of that Convention. Thus, the Commission may wish to consider endorsing the URF 800.

Annex I

[14 November 2016]

Letter of Mr. John Danilovich, Secretary General of the International Chamber of Commerce

In partnership with the International Trade & Forfaiting Association (the "ITFA"), the International Chamber of Commerce (the "ICC") has developed the first ever global rules for forfaiting, the Uniform Rules for Forfaiting, ICC publication No. 800 (the "URF 800"). The URF 800 is a set of standardized terms and conditions applicable to a forfaiting transaction when the parties indicate that their forfaiting agreement is subject to these rules. The URF 800 drafts were reviewed and commented upon by over 500 members of the ICC Banking Commission and ICC National Committees in 92 countries before adoption by the ICC Banking Commission at its biannual meeting held in Mexico in November 2012. The URF 800 came into effect on 01 January 2013.

A result of a three and half year joint effort by the ICC and the ITFA, the URF are the first ever global rules for forfaiting and have been developed to take into account the legitimate expectations of all relevant sections with the aim of becoming the standard set of rules applied within the forfaiting market worldwide in all developed countries as well as many emerging markets. The current market size of forfaiting is estimated to be close to USD 300 billion per year.

Forfaiting is a trade financing technique based on discounting of an exporter's receivables payable at a future date without recourse to the exporter. The "without recourse discounting" benefits the exporter immensely by eliminating risks typically associated with an international trade transaction such as country risk, commercial risk, interest risk and currency rate risk, improving cash flow of the exporter and enhancing exporter's competitive advantage by offering attractive credit terms to the importers/buyers.

Comprising of a total of 14 articles, the URF 800 cover the entire gamut of a forfaiting transaction starting from the origination of a forfaiting transaction in the primary market and the trading of the forfaited asset in the secondary, market providing access to a deep and liquid market which can provide much needed funding to producers, manufacturers and exporters and also assist banks in managing their portfolios and credit exposures.

We are submitting to you the full URF 800 text along with a summary note on forfaiting. ICC trusts that UNCITRAL will appreciate the efforts made by ICC to promote international trade through forfaiting as a flexible and creative alternative to traditional trade financing, helping exporters to cover the political, commercial and transfer risks in an export transaction, especially involving emerging markets/developing nations and thus facilitating international trade which is now well recognized as an engine for economic development and growth.

Therefore, as with previous requests for endorsement of ICC rules, we hereby request formal endorsement of the URF 800 by UNCITRAL. We hope to receive a favourable response to this request.

Annex II

Summary Document on ICC Uniform Rules for Forfaiting (ICC Publication Number 800)

Executive summary

This document briefly explains forfaiting as a technique for financing trade by discounting exporter's receivables without recourse to the exporter. The discounting is effected by a forfaiter (a specialized financing company, a bank or a financial institution) benefitting the exporter immensely by eliminating risks typically associated with an international trade transaction, improving cash flow of the exporter with an increased speed and simplicity enhancing exporter's competitive advantage due to the availability of finance under forfaiting.

This document also briefly explains and summarizes the key provisions of the URF 800.

What is forfaiting?

Forfaiting is a trade financing technique based on discounting of an instrument representing exporter's receivables payable at a future date without recourse to the exporter, such instrument evidencing a payment claim or a debt obligation of an importer or a bank/financial institution pursuant to a letter of credit, standby letter of credit, guarantee, aval, bill of exchange or a promissory note created under an export transaction.

Since the payment under a forfaiting transaction is without recourse to the exporter, the exporter has no further interest in the transaction. It is the forfaiter who collects the future payments due from the importer or the obligor and bears the risk of non-payment. In return, the forfaiter gets discount (interest) and any agreed fees or commission income.

What are the benefits of forfaiting?

By seeking financing of receivables to the extent of 100 per cent of contract value, using the forfaiting technique the exporter gets access to immediate cash from the forfaiter without recourse to the exporter and therefore his risks in a cross-border transaction such as country risk, commercial risk, interest risk and currency rate risk etc. are eliminated and by availing the forfaiting opportunities, the exporter can enhance his competitive advantage by offering attractive credit terms to the importers/buyers. The documentation associated with a forfaiting transaction that an exporter has to sign is concise, straightforward and are fairly standard.

What is the URF 800?

The Uniform Rules for Forfaiting, ICC Publication No. 800 (the "URF 800") are a set of standardized terms and conditions applicable to a forfaiting transaction when the parties indicate that their forfaiting agreement is subject to these rules. The URF 800 have been developed to facilitate the purchase of a payment claim arising out of a debt instrument such as a bill of exchange, promissory notes, documentary credit and any other instrument that reflects a debt undertaking of an importer, a bank or a guarantor.

The URF 800 are the first ever global rules for forfaiting, a result of a three and half years of joint effort by the International Chamber of Commerce (the "ICC") and the ITFA (the "International Trade & Forfaiting Association"), the erstwhile International Forfaiting Association (the "IFA") which have been developed taking into account the legitimate expectations of all relevant sections with the aim of becoming the standard set of rules applied within the Forfaiting market worldwide.

These rules cover both the primary market in which transactions are originated by exporters and other sellers of goods and the secondary market where those transactions are traded between banks and financial institutions.

Are the URF 800 universally accepted?

The various URF 800 drafts were reviewed and commented upon by over 500 members of the ICC Banking Commission and ICC National Committees in 92 countries before their adoption by the ICC Banking Commission in its meeting held at Mexico in Nov 2012 where representative of more than 60 ICC National Committees were present. Some votes were submitted electronically.

The URF 800 is a globally accepted set of rules. The ICC Banking Commission has constituted an international Forfaiting Task Force to promote the usage and awareness of URF 800 amongst global banks, exporting and importing companies. As a result of the efforts undertaken by both the ICC and the ITFA in developing a set of Frequently Asked Questions, organizing seminars on forfaiting, responding to queries, the URF 800 are fairly known in the international markets and are used by the global banks worldwide.

What are the key provisions of the URF 800?

Comprising of a total of 14 articles, the URF 800 cover the entire gamut of a forfaiting transaction starting from the origination of the transaction in the primary market, the obligations and liabilities of the parties involved, and the trading of the forfaited asset in the secondary market by the primary forfaiter, thus providing access to a deep and liquid market which can provide much needed funding to producers, manufacturers and exporters and also assist banks in managing their portfolios and credit exposures.

Aligning the format and drafting style of the URF 800 with ICC Rules like the Uniform Customs and Practice for Documentary Credit (the "UCP 600") and the ICC Uniform Rules for Demand Guarantees (the "URDG 758"), the URF 800 have been written in an easy to read and clear language and provide separate articles on Definitions and Interpretations. The URF 800 article on definitions (article 2) provides a total of "28" definitions of terms commonly used in a forfaiting transaction or in a forfaiting agreement. The definitions include the definitions of a "forfaiting transaction" and a "forfaiting agreement" apart from the definitions of what constitutes a "buyer, "obligor", a "payment claim", "primary forfaiter", "required documents", "satisfactory documents" etc. amongst others. The definitions ascribe precise and clear meaning to the terms using simple language.

The URF 800 article on "interpretations" (article 3) provides further clarity as to how commonly used phrases in a forfaiting transaction are to be interpreted. A separate article (article 4) clearly defines what the term "without recourse" stands for in international forfaiting markets. The article expressly states that under a forfaiting transaction, "a buyer will have no claim against a seller for the non-payment of any amount due in respect of the payment claim" except as provided under certain circumstances.

Other key provisions of the URF 800 are articles on "forfaiting agreements in the primary market"; "conditions in the primary market"; "satisfactory documents in the secondary market"; "payment", and "liabilities of the parties".

For guidance of the parties as to how a forfaiting agreement in the primary market should be formulated, article 5 of the URF 800 presents aspects that should be included in the forfaiting agreement. Article 6 states, inter-alia, that if the conditions of the forfaiting agreement are not satisfied, the agreement will terminate, however, without prejudice to either party's rights under the agreement or the applicable law. The two articles on "satisfactory documents" (article 6 and article 10) prescribe the initial seller's responsibility in the primary market or that of seller in the secondary market respectively, to deliver required documents to the primary forfaiter no later than the availability date and the course of action that both the primary forfaiter (in case of primary market) and the buyer (in case of a secondary forfaiter) should follow if they determine as per market practice that documents provided are not satisfactory.

To assist the users of the URF 800 in drafting contracts, the URF 800 also provide four model agreements in annexes.

Summing up

As a flexible and innovative alternative to traditional trade financing, forfaiting is a technique that promotes competitiveness and facilitates expansion of trade. By forfaiting without recourse, the exporters cover political, commercial and transfer risks associated to an export transaction especially in emerging markets/ developing countries. As a result, international trade is increased, which is well recognized now as an engine for economic development and growth.

VIII. TECHNICAL ASSISTANCE TO LAW REFORM

A. Note by the Secretariat on technical cooperation and assistance

(A/CN.9/905)

[Original: English]

Contents

I. Introduction

1. Pursuant to a decision taken at its twentieth session in 1987, technical cooperation and assistance activities aimed at promoting the use and adoption of its texts represent one of the priorities of the United Nations Commission on International Trade Law (UNCITRAL).[1]

2. In its resolution 67/89 of 14 January 2013, the General Assembly reaffirmed the importance, in particular for developing countries and economies in transition, of the technical cooperation and assistance work of the Commission and reiterated its appeal to bodies responsible for development assistance, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission.

3. The General Assembly welcomed the initiatives of the Commission towards expanding, through its Secretariat, its technical cooperation and assistance programme, and noted with interest the comprehensive approach to technical cooperation and assistance, based on the strategic framework for technical assistance suggested by the Secretariat to promote universal adoption of the texts of the Commission and to disseminate information on recently adopted texts.

[1] *Official Records of the General Assembly, Forty-second Session, Supplement No. 17* (A/42/17), para. 335.

4. The General Assembly also stressed the importance of promoting the use of texts emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urged States that have not yet done so to consider signing, ratifying or acceding to those conventions, enacting model laws and encouraging the use of other relevant texts.

5. The status of adoption of UNCITRAL texts is regularly updated and available on the UNCITRAL website. It is also compiled annually in a note by the Secretariat entitled "Status of conventions and model laws" (for the Commission's Fiftieth session, see A/CN.9/909). Information on the use and interpretation of UNCITRAL texts is reported annually in a note by the Secretariat entitled "Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts" (see A/CN.9/906).

6. This note sets out the technical cooperation and assistance activities of the Secretariat subsequent to the date of the previous note submitted to the Commission at its forty-ninth session in 2016 (A/CN.9/872 of 18 April 2016), including those carried out in the region covered by the UNCITRAL Regional Centre for Asia and the Pacific (RCAP) that relate to specific UNCITRAL instruments and subject areas. General activities undertaken in the Asia-Pacific region by the UNCITRAL Regional Centre for Asia and the Pacific are set out in a separate document (see A/CN.9/910).

7. A separate document on coordination activities (A/CN.9/908) provides information on current activities of international organizations related to the harmonization and unification of international trade law and on the role of UNCITRAL in coordinating those activities.

II. Technical cooperation and assistance activities

A. General approaches

8. Technical cooperation and assistance activities undertaken by the Secretariat aim at promoting the adoption and uniform interpretation of UNCITRAL legislative texts. Such activities include providing advice to States considering signature, ratification or accession to an UNCITRAL convention, adoption of an UNCITRAL model law or use of an UNCITRAL legislative guide.

9. Technical cooperation and assistance may involve: undertaking briefing missions and participating in seminars and conferences, organized at both regional and national levels; assisting countries in assessing their trade law reform needs, including by reviewing existing legislation; assisting with the drafting of national legislation to implement UNCITRAL texts; assisting multilateral and bilateral development agencies to use UNCITRAL texts in their law reform activities and projects; providing advice and assistance to international and other organizations, such as professional associations, organizations of attorneys, chambers of commerce and arbitration centres, on the use of UNCITRAL texts; and organizing training activities to facilitate the implementation and interpretation of legislation based on UNCITRAL texts by judges and legal practitioners.

10. Design and implementation of technical cooperation and assistance activities took place in line with the priorities identified for such activities, which include: stressing a regional and subregional approach in order not only to achieve economies of scale, but also to complement ongoing regional integration initiatives; promoting the universal adoption of those international trade law texts already enjoying wide acceptance, and making particular efforts to disseminate information on recently adopted texts, with a view, if such texts were treaties, to fostering their early adoption and entry into force (A/66/17, para. 255).

11. Some of the key activities undertaken by the Secretariat in the relevant time period are described below. It should be noted that due to lack of resources and time constraints, some of the activities were undertaken by experts on behalf of the

Secretariat. Activities denoted with an asterisk were funded by the UNCITRAL Trust Fund for Symposia.

Fiftieth Anniversary of UNCITRAL

12. To celebrate the 50th Anniversary of UNCITRAL, the secretariat participated in the conference "Celebrando El Éxito de la CNUDMI", organized by Universidad Carlos III de Madrid (Madrid, 21 July 2016) and two events in the RCAP region (see A/CN.9/910, paras. 5(b) and (c)).

Promotion of the universal adoption of fundamental trade law instruments

13. The Secretariat has continued to engage in promoting the adoption of fundamental trade law instruments, i.e., those treaties that are already enjoying wide adoption and the universal participation in which would seem particularly desirable.

14. The Secretariat has jointly organized, participated in, or contributed to the following events which dealt with a number of areas to which UNCITRAL's work relates:

(a) Remote participation at the World Bank Workshop: "Filling the Gaps — Missing Legal Infrastructure in Developing Countries" (18-20 May 2016);

(b) The 6th St. Petersburg International Legal Forum, to increase awareness among Russian legal practitioners about developments in UNCITRAL of relevance to the legal framework of the Russian Federation, in particular cross-border insolvency (St. Petersburg, Russian Federation, 19-21 May 2016);*

(c) Two panel sessions: "Integration in Small States" and "International B2B Dispute Resolution" at a conference on "Integration and International Dispute Resolution in Small States", jointly organized by The British Institute of International and Comparative Law, the Open University and the Centre for Small States (London, 19-20 May 2016);

(d) Fifth Meeting of Trade Ministers of Landlocked Developing Countries, delivering a presentation on becoming party to the key international conventions to facilitate transit transport and trade (Geneva, Switzerland, 23-24 June 2016);

(e) Opening remarks at the One-Belt-One-Road Inclusive and Sustainable High Level Forum hosted by UNIDO (Vienna, 20 October 2016);

(f) Presentation at the business programme of the Russian Export and Investment Fair (REIF) to further promote knowledge of UNCITRAL and its texts in the Russian Federation (Moscow, 24-25 November 2016);*

(g) Global Conference on Sustainable Transport, to address the usefulness of UNCITRAL standards in law reform efforts in the region and in particular how those standards can be used to strengthen the essential links between transport and international trade (Ashgabat, 26-27 November 2016);*

(h) Round-table session, General Meeting on Research on Law and Justice to discuss major issues of today and future developments in matters of law and justice; organized in partnership with research, judiciary and administration, and authority in charge of Higher Education (Paris, 30-31 January 2017); and

(i) French Society for International Law; part of an "SFDI Day", hosted by the Center for International Law in Nanterre (CEDIN) (Paris, 10 March 2017).

15. A number of related activities took place in the region covered by RCAP:

(a) UNCITRAL Thailand Symposium entitled "The Future of Legal Harmonization — New Horizons for International Commerce", co-organized with the Ministry of Justice of Thailand and the Thailand Arbitration Centre, attended by 250 legal professionals from Thailand and from neighbouring States (Bangkok, 8 April 2016);

(b) Incheon Trade Law Forum (Incheon, Republic of Korea, 17-18 May 2016) (see A/CN.9/910, para. 4(a));

(c) 29th LAWASIA Conference, presentation on the past achievements of UNCITRAL in 50 years and the current work and role of the Regional Centre (Colombo, 15 August 2016);

(d) Lecture to 200 Chinese judges on the relevance of UNCITRAL texts and related role of judiciary in the context of the Belt and Road Initiative, Supreme People's Court National Judges College (Beijing, 26 October 2016);

(e) Presentations on the United Nations Convention on the use of Electronic Communications in International Contracts (e-CC) and the UNCITRAL Model Law on International Commercial Arbitration, 2016 Attorney-General's Conference, Fiji (Suva, 9-10 December 2016);

(f) 7th Meeting of the International Law Research Committee of the Supreme Court of the Republic of Korea, presentation on CISG and international commercial arbitration (Seoul, 23 January 2017); and

(g) 12th Annual Generations in Arbitration Conference, presentation on arbitration and CISG (Hong Kong, China, 25 March 2017).

Initiatives for a regional approach

16. The Secretariat continued its collaboration with the Asia-Pacific Economic Cooperation (APEC). During the reporting period, the Secretariat participated in meetings of the Friends of the Chair Group on Strengthening Economic and Legal Infrastructure (SELI) (Lima, 21 August 2016 and Nha Trang, Viet Nam, 25 February 2017) and two workshops organized under the auspices of the APEC Economic Committee and SELI:

(a) Supply Chain Financing and Implementation of Secured Transactions in a Cross-border Context organized by US-APEC Technical Assistance to Advance Regional Integration (US-ATAARI) (Lima, Peru, 19-21 August 2016);* and

(b) The Use of International Instruments to Strengthen Contract Enforcement in Supply Chain Finance for Global Businesses (including MSMEs) (Nha Trang, Viet Nam, 24-25 February 2017).

17. The Secretariat also participated in meetings of the APEC Economic Committee on two occasions:

(a) The APEC Policy Discussion on Improving Participation and Transparency on Policy-Making and Implementation (Lima, 21 August 2016); and

(b) The APEC Policy Discussion on Public Procurement (Nha Trang, Viet Nam, 26 February 2017).

The Secretariat's participation in the APEC meetings mentioned above was made possible through support from US-ATTARI and the Department of Justice, Hong Kong, China.

18. The Secretariat also continued its participation in the APEC Ease of Doing Business (EoDB) project on enforcing contracts and getting credit, which aims at strengthening the legislative and institutional framework in APEC economies. In that context, UNCITRAL participated in the EoDB project for improving the getting credit environment in the Republic of Korea (Wellington and Auckland, New Zealand, 20-22 July 2016* and Singapore, 3-4 October 2016); the EoDB project for improving the enforcing contract environment in Malaysia (Kuala Lumpur, 29-30 September 2016);* and the wrap-up International Conference on EoDB (Seoul, 5-6 December 2016).* The Secretariat's participation in the EoDB project was made possible through voluntary contributions from the Government of the Republic of Korea.

19. It is expected that the Secretariat will continue to cooperate closely with the Republic of Korea, the United States of America, Hong Kong-China and Mexico in implementing the second APEC EoDB Action Plan (2016-2018). The Secretariat is seeking accreditation to the APEC Economic Committee, which will facilitate enhanced cooperation and coordination.

B. Specific activities

Dispute resolution

20. The Secretariat has been engaged in the promotion of UNCITRAL texts in the field of dispute resolution (for example, the UNCITRAL Model Law on International Commercial Arbitration, with amendments as adopted in 2006,[2] UNCITRAL Model Law on International Commercial Conciliation,[3] and the United Nations Convention on Transparency in Treaty-based Investor State Arbitration[4]), including through a number of training activities and has supported the ongoing law reform process in various jurisdictions. The Secretariat has also developed soft law instruments and tools to provide information on the application and interpretation of those texts (reported in A/CN.9/906). Given the high rate of adoption of those texts, the demand for technical assistance in the field of dispute resolution remains particularly acute. The Secretariat has jointly organized, participated in, or contributed to the following events:

(a) The Arab States in International Arbitration: Current Issues (Tunis, 14-15 April 2016);

(b) IAI Paris Conference on "Treaty-making in investment arbitration" (London, 19 April 2016);

(c) OECD workshop on arbitration for Iraqi government officials (Beirut, 21 April 2016);

(d) ICCA Mauritius 2016 and the first consultative workshop on cooperation among African arbitration initiatives (Port Louis, 8-11 May 2016);*

(e) OECD workshop on Legal Framework for Investment in Jordan (Amman, 10-12 May 2016);*

(f) 41st meeting of Ministers, OHADA and a preparatory expert meeting (Brazzaville, 15-17 June 2016);*

(g) The 2016 ILA Conference "A Critical Assessment of International Commercial Law Harmonization Efforts" (Johannesburg, South Africa, 7-11 August 2016);

(h) Seminar: "*l'arbitrage et la sécurisation des investissements dans l'espace OHADA*" organized by *l'Institut de Droit Communautaire* (IDC-Afrique) (Paris, 1-2 September 2016);

(i) Joint IMI-VIAC-UNCITRAL Event on Mediation (Vienna, 21 September 2016);

(j) Conference on international arbitration in the Middle East, with the aim to follow-up on arbitration law reforms in Iraq and Kuwait (Kuwait City, 9-10 October 2016);*

(k) Second Conference on International Commercial Arbitration organized by the Qatar Chamber for Commerce and Industry (QCCI) (Doha, 17-20 October 2016);*

(l) Multilateral Investment Tribunal Workshop at King's College London (London, 21 October 2016);

(m) Panel on Investor State Dispute Settlement (ISDS) Reform at the United Nations International Law Week, organized by the Indian Permanent Mission (New York, 24 October 2016);

(n) 42nd meeting of Ministers, OHADA (Brazzaville, 27-28 October 2016);

---

[3] General Assembly resolution 57/18, annex (model law only).

[4] General Assembly resolution 69/116.

(o) Presentation on "UNCITRAL's Contribution to the Development of International Arbitration'' at the invitation of the Arbitration Court attached to the Hungarian Chamber of Commerce and Industry (Budapest, 17 November 2016);

(p) Sharm El Sheikh VI Conference: The Role of State Courts in International Arbitration (Sharm El Sheikh, Egypt, 19-20 November 2016);

(q) ICC United Kingdom of Great Britain and Northern Ireland Annual Arbitration Conference with focus on transparency standards (London, 30 November 2016);

(r) Colloquium on investment arbitration in Latin America organized by the ICC Court of Arbitration (Paris, 8-9 December 2016);

(s) IDC-Afrique seminar "Traités Bilatéraux d'Investissement, *Code des Investissements et Arbitrag*e" (Paris, 5-9 December 2016);

(t) Third International Conference for a Euro-Mediterranean Community of International Arbitration, jointly organized with OECD and the Institute for the Promotion of Arbitration and Mediation in the Mediterranean (ISPRAMED) (Milan, Italy, 18 January 2017);*

(u) Workshop on "The Modes of Dispute Settlement in Trade and Investment between the OIC Member States" organized by the Islamic Centre for Development of Trade (ICDT), Organization of Islamic Cooperation (OIC) General Secretariat and International Islamic Centre for Reconciliation and Arbitration (IICRA) (Casablanca, Morocco, 20-21 February 2017);*

(v) Vienna Arbitration Day 2017, jointly organized with the Austrian Arbitration Association, the International Arbitral Centre of the Austrian Federal Economic Chamber (VIAC), ICC Austria and the Young Austrian Arbitration Practitioners (YAAP) (Vienna, 24-25 February 2017);

(w) OECD Investment Conference, followed by a stakeholders meeting and an intergovernmental forum, "Freedom of Investment Round-table", (Paris, 7-8 March 2017);

(x) Investment Moot Frankfurt, including a round-table "Age of Insecurity" (Frankfurt, Germany, 9-11 March 2017);

(y) Conference on International Investment Arbitration for the 25th anniversary of the International Commercial Arbitration Court (Kyiv, 17 March 2017);*

(z) Meeting on United Arab Emirates arbitration legislation reform (Paris, 28 March 2017);*

(aa) 2017 10th anniversary Vis Pre-Moot and Belgrade Arbitration Conference (Belgrade, 31 March-1 April 2017);

(bb) 2017 Joint UNCITRAL-LAC Conference: (Ljubljana, 3-5 April 2017); and

(cc) Arbitration in Africa conference: The Role of African Governments in the Development of Arbitration in Africa and the second consultative workshop on cooperation among African arbitration initiatives (Cairo, 3-5 April 2017).*

21. A number of activities on dispute resolution took place in the region covered by RCAP:

(a) Briefing for the Sri Lanka National Arbitration Centre (Colombo, 13 August 2016);

(b) Briefings for government representatives at the request of the Office of the Attorney General, Fiji (Suva, 30-31 August 2016);

(c) 2nd UNCITRAL South Pacific Seminar "Access to Justice for Better Trade in Pacific Small Island Developing States (PSIDS)", supported by the Department of Justice and Attorney General of Papua New Guinea, the Ministry of Justice of the

Republic of Korea, the Supreme People's Court of China and the Asian Development Bank, (Port Moresby, 20-21 September 2016);

(d) China Arbitration Summit 2016, co-hosted by the Supreme People's Court of China, the China Counsel for the Promotion of International Trade (CCPIT) and the China International Economic and Trade Arbitration Commission (CIETAC) (Beijing, 28-31 September 2016);*

(e) Asia Pacific Regional Arbitration Group (APRAG) Conference "The UNCITRAL Arbitration Rules as a unifying set of arbitration rules for the AEC" hosted by BANI Arbitration Centre (Bali, Indonesia, 6-8 October 2016);*

(f) 5th ADR Asia Pacific Conference (Seoul, 12-13 October 2016) (see A/CN.9/910, para. 4(b));

(g) Two International Dispute Resolution Masterclasses organized jointly with the International Dispute Resolution Academy (IDRA), CIArb East Asia Branch and the ICC-ICA (Shanghai, China, 26 September 2016) and with the China University of International Business and Economics (Beijing, 24 October 2016);

(h) 2nd Asia Pacific ISDS Transparency Observatory Annual Conference, hosted with KCAB and the Asia Pacific Law Institute of the Seoul National University and sponsored by Seoul International Dispute Resolution Center (SIDRC) (Seoul, 16 December 2016);

(i) Conference celebrating the revised arbitration law of Mongolia (Ulaanbaatar, 21 February 2017);

(j) "Training Programme on Chinese and International ADR Law and Practice" with the IDRA and the Macau Legal Affairs Bureau (Macau, China, 23 February-2 March 2017); and

(k) Inter-Pacific Bar Association (IPBA) 27th Annual Meeting and Conference 2017 (Auckland, New Zealand, 6-8 April 2017).

Institutional support

22. Institutional support was provided to a number of events, including:

(a) Somali International Arbitration Summit (SIAS) 2016 (Nairobi, 11 April 2016);

(b) International Bar Association (IBA)-the International Arbitral Centre of the Austrian Federal Economic Chamber (VIAC) Mediation and Negotiation Competition (Vienna, 28 June 2016);

(c) ICC-ICA training and conference themed "Arbitration in Myanmar" (Yangon, Myanmar, 18-20 August 2016);

(d) CIArb Inaugural Asia Pacific Diploma in International Commercial Arbitration Course (Singapore, 20-28 August 2016);

(e) World Mediation Organization-Thailand Arbitration Centre (WMO-THAC) Mediation Symposium (Bangkok, 23-25 August 2016);

(f) International Conference on "Challenges in Domestic and International Arbitration", organized by the Indian Institution of Technical Arbitrators (Chennai, India, 23-24 September 2016);

(g) Opening event for the Mumbai Centre for International Arbitration (Mumbai, India, 7-8 October 2016); and

(h) 4th International Arbitration Conference, organized by ACICA, CIArb and the Law Council of Australia (Sydney, Australia, 22 November 2016).

Review of enacting legislation and assistance with legislative drafting

23. The Secretariat has reviewed or provided comments on legislation on arbitration and/or mediation of a number of jurisdictions, including Albania; Fiji; Finland; the

Lao People's Democratic Republic; Macao, China; Malaysia; Papua New Guinea; Qatar; the Republic of Korea; Singapore; Timor-Leste; Turkmenistan and Viet Nam. The Secretariat has also reviewed or provided comments on rules of arbitral institutions upon their request. A briefing note on possible accession to the New York Convention was provided to the Minister for Finance and Sustainable Development of Nauru (3 March 2017).

Lectures

24. Lectures on dispute resolution were provided to: Japanese Association of International Business Law (Tokyo, 18 March 2017); East China University of Political Science (Shanghai, China, 22 March 2017), Shanghai International Economic and Trade Arbitration Commission (SHIAC) and Shanghai University of Political Science and Law (Shanghai, China, 23 March 2017).

Electronic commerce

25. The Secretariat has continued promoting the adoption, use and uniform interpretation of UNCITRAL texts on electronic commerce (United Nations Convention on the use of Electronic Communications in International Contracts (e-CC),[5] UNCITRAL Model Law on Electronic Signatures[6] and UNCITRAL Model Law on Electronic Commerce[7]), including in cooperation with other organizations and emphasizing a regional approach. In that framework, the Secretariat has interacted with legislators and policymakers, including by providing comments on draft legislation. Activities included:

(a) Remote participation in the European Forum on Electronic Signature (EFPE) (9 June 2016);

(b) Conference on "Future of Identity" (Tallinn, 1-3 September 2016);

(c) Remote participation in a roundtable on the draft model law on electronic transferable records organized by the Centre for Commercial Law Studies at Queen Mary, University of London (15 February 2017); and

(d) Co-organizing and participating in the United Nations/CEFACT Mini-Conference on "Ensuring Legally Significant Trusted Transboundary Electronic Interaction" (Geneva, Switzerland, 29 March 2017).

26. A number of activities on electronic commerce took place in the region covered by RCAP:

(a) Opening address at the International Legislative Seminar on E-Commerce organized by the Financial and Economic Committee of the National People's Congress of the People's Republic of China (Shanghai, China, 15-16 June 2016);

(b) Meeting with representatives of the Alibaba Group on e-CC and UNCITRAL's possible future work on cloud computing and identity management (Hangzhou, China, 17 June 2016);

(c) International Symposium on the Future of Informedia law: Human-oriented Information and Communication Technology (ICT) and Culture (Seoul, 25 June 2016);

(d) Two briefings on the ratification of e-CC for the Korean Internet and Security Agency (KISA) (Seoul, 9 August and 8 September 2016);

(e) Briefings on e-CC and the UNCITRAL Model Law on Electronic Commerce (1996) to government representatives of the Office of the Attorney General, Fiji (Suva, 30-31 August 2016);

---

[5] General Assembly resolution 60/21, annex.

[6] General Assembly resolution 56/80, annex (model law only).

[7] General Assembly resolution 51/162, annex (model law only).

(f) Presentation on e-CC, International Malaysian Law Conference, organized by the Malaysian Bar Council in particular (Kuala Lumpur, 21-23 September 2016);

(g) China-Europe Academic Conference 2016 "E-Commerce Law Forum", hosted by the China-EU School of Law, China University of Political Science and Law (Beijing, 20 October 2016);

(h) Presentation on "Drafting Contracts under the e-CC", 2016 UNCITRAL Viet Nam Workshop, co-hosted with the Faculty of Law of the Foreign Trade University (Hanoi, 24 November 2016); and

(i) Seminar on ratification of e-CC, co-hosted by RCAP, the Korea Association for Informedia Law, the Ministry of Science, ICT and Future Planning and the Korea Internet and Security Agency (KISA) (Seoul, 25 November 2016).

27. The Secretariat has continued its cooperation with the United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP) on the preparation, implementation and promotion of the Framework Agreement on Facilitation of Cross-border Paperless Trade in Asia and the Pacific ("FA-PT"), which was adopted in Bangkok on 19 May 2016. The FA-PT promotes "legal interoperability", i.e. cross-border legal recognition of electronic transactions and signatures, on the basis of UNCITRAL texts and their underlying fundamental principles (non-discrimination of the use of electronic communications; functional equivalence and technological neutrality). Relevant activities included:

(a) Joint Capacity Building Workshop on Advancement of Cross-Border Paperless Trade and Trade Facilitation jointly hosted by UNESCAP and the Asia Pacific Council for Trade Facilitation and Electronic Business (AFACT), supported by RCAP (Tokyo, 9 November 2016);

(b) A meeting of the Extended UNNExT Advisory Group on Cross-Border Paperless Trade Facilitation (Bangkok, 22-24 November) and a briefing session on the FA-PT (Bangkok, 25 November 2016);

(c) International Seminar on Trade Facilitation in North-East Asia hosted by UNESCAP East and North-East Asia Office and the Greater Tumen Initiative (Incheon, Republic of Korea, 13 December 2016);

(d) Workshop on Cross-border Paperless Trade Facilitation and Single Window Systems in Southern and Central Asia (Bangkok, 14-15 February) and an Expert Group Meeting on the Promotion and Implementation of the FA-PT in Asia and the Pacific (Bangkok, 16-17 February); and

(e) 4th Meeting of the Legal and Technical Working Group on Cross-border Paperless Trade facilitation and the 3rd Meeting of the Interim Intergovernmental Steering Group on Cross-Border Paperless Trade Facilitation for adoption of FA-PT implementing documents organized by ESCAP (Bangkok, 21-24 March 2017).

Review of enacting legislation and assistance with legislative drafting

28. The Secretariat reviewed: the Electronic Transactions Law and assisted in the preparation of the Electronic Transferable Records Law of Bahrain; reviewed Fiji's Electronic Transactions Promulgation 2008; and assisted with drafting legislative texts on electronic signature and e-payments in Madagascar (Antananarivo, 7-10 November 2016). A briefing note was provided to the Ministry of Domestic Trade, Cooperatives and Consumerism of Malaysia on possible accession to the e-CC (2 December 2016).

Lectures

29. A lecture on current UNCITRAL Working Group IV legislative projects was provided to the "UNCITRAL-Beijing Normal University Joint Certificate Programme on International E-Commerce Law: Theory and Practice" (Beijing, 14 June 2016).

Insolvency

30. The Secretariat has promoted the use and adoption of insolvency texts (UNCITRAL Model Law on Cross-Border Insolvency [8] and the UNCITRAL Legislative Guide on Insolvency Law[9]) by disseminating information about those texts to Government officials, legislators, judges, academics and practitioners and thus promoting their implementation and consulting with legislators and policymakers from various jurisdictions to review enacting legislation and assist with legislative drafting. Activities relating to the dissemination of information included:

(a) An INSOL Europe/R3 conference to provide an update on Working Group V (Insolvency Law) work on insolvency of multinational enterprise groups and to discuss the feasibility of negotiating an international insolvency convention (London, 22 April 2016); and

(b) 7th Africa Roundtable on Insolvency Law Reform 2016, with a focus on insolvency of micro, small and medium-sized enterprises (MSM) (Accra, 6-7 October 2016).*

31. A number of activities took place in the region covered by RCAP:

(a) An international conference on Cross-Border Insolvency co-hosted by UNCITRAL-RCAP and the Legal Execution Department of the Ministry of Justice, Thailand in the context of the ASEAN Government Legal Officers Programme (AGLOP) (Bangkok, 23-24 June 2017);

(b) The 3rd Regional Insolvency Conference, jointly organized by the Law Society of Singapore and the Insolvency Practitioners Association of Singapore (IPAS) (Singapore, 15-16 September, 2016);

(c) Forum on Asian Insolvency Reform (FAIR), to promote adoption of the Model Law on Cross-Border Insolvency and use of the Legislative Guide on Insolvency Law in the region (Hanoi, 21-22 November 2016);

(d) The inaugural Ian Fletcher International Insolvency Moot to award the UNCITRAL prize for the best mooter in the final round (Sydney, Australia, 17 March 2017);

(e) The 12th UNCITRAL/INSOL/World Bank Multinational Judicial Colloquium on insolvency (Sydney, Australia, 18-19 March 2017); and

(f) INSOL 2017, the Tenth World Congress of INSOL International (Sydney, Australia, 20-22 March 2017), presenting on current work of Working Group V (Insolvency Law).

Review of enacting legislation and assistance with legislative drafting

32. The Secretariat reviewed enactments of the Model Law on Cross-Border Insolvency by Singapore and the Dominican Republic.

Micro, small and medium-sized enterprises

33. The Secretariat has encouraged participation and dialogue in respect of its work on micro, small and medium-sized enterprises (MSMEs — Working Group I) through its participation in an academic conference on simplified business registration and discussion of Working Group I hosted by Tilburg University; delivered a presentation

[8] General Assembly resolution 52/158, annex.
[9] United Nations publication, Sales No. E.05.V.10.

and interacted with students, faculty and other presenters at a workshop for International Business Law students (Tilburg, Netherlands, 24-25 November 2016).

Online dispute resolution

34. In the region covered by RCAP, a presentation on the Technical Notes on Online Dispute Resolution (2016) was given at the International Malaysian Law Conference, organized by the Malaysian Bar Council (Kuala Lumpur, 21-23 September 2016).

Procurement and infrastructure development

35. The Secretariat has continued cooperation with other international organizations active in public procurement reform to support the use of the UNCITRAL Model Law on Public Procurement (2011) (the "Procurement Model Law"),[10] its accompanying Guide to Enactment (2012),[11] and the UNCITRAL texts on Privately-Financed Infrastructure Projects.[12]

36. The aims of such cooperation are to ensure that reforming Governments and organizations are informed of the terms of and the policy considerations underlying those texts, including as regards regional requirements and circumstances, so as to promote a thorough understanding and appropriate use of these UNCITRAL texts.[13] The Secretariat is following a regional approach to this cooperation, engaging with the multilateral development banks and regional organizations, addressing the role of public procurement in sustainable development, trade facilitation, good governance and the avoidance of corruption and achieving value for money in government expenditure.

37. The main activities and international events in the year to April 2017, in which the Secretariat has participated as speaker/presenter include the following:

(a) Procurement Week 2016, addressing "Modernization, Flexibility and Simplification of the EU Procurement Directive: A perspective from outside the EU Framework'' (Bangor, United Kingdom, 9-10 June 2016), and Procurement Week 2017, addressing "Rewriting the Public Procurement Playbook" (London, 23 March 2017);

(b) Conference of Internal Investigators, International Anti-Corruption Academy (IACA) (Laxenburg, Austria, 3 October 2016);

(c) OECD Leading Procurement Practitioners' meeting, including on updating OECD-DAC (World Bank) Methodology for the Assessment of Procurement Systems (Paris, 6-7 October 2016);

(d) Public Procurement in "OSCE Anti-Corruption Expert Meeting: Lessons from South East Europe" (Vienna, 24 October 2016);

(e) Office of the United Nations High Commissioner for Human Rights' "United Nations Forum on Business and Human Rights 2016" (Geneva, Switzerland, 16 November 2016);

(f) The second International Conference on Public Procurement Law Africa, hosted by the African Public Procurement Regulation Research Unit, Stellenbosch University (Cape Town, South Africa, 24-25 November, 2016);*

(g) Event hosted by the George Washington University Law School Government Procurement Law Programme on "Perspective on International Cooperation in Procurement — next steps" (Washington, D.C., 9 December 2016);

(h) Series of workshops on Professionalization in Public Procurement organized by the European Commission held in different EU member States as part of the Single Market Forum 2016-2017 (20 July 2016 (remote participation); Warsaw, 12 December 2016; Amsterdam, 21 February 2017; and Zagreb, 28 April 2017);

(i) German Ministry for Economic Cooperation and Development (BMZ)/Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH event on e-procurement systems in GIZ partner countries as well as in Germany (Bonn, Germany, 23 March 2017);*

(j) WTO workshop on public procurement for Central and Eastern Europe, Central Asian and the Caucasus Countries with the aim to encourage use of the Procurement Model Law in these countries (Vienna, 1 November 2016); and

(k) The African Development Bank and World Bank "Africa High Level Procurement Forum", addressing "How can Public Procurement make PPP succeed in Africa?" (Johannesburg, South Africa, 3-5 April 2017).*

Review of enacting legislation and assistance with legislative drafting

38. The Secretariat has provided advice to the Governments of Armenia,[14] Cambodia,[15] Dominica,[16] Guyana,[17] Kyrgyzstan,[18] Mongolia,[19] Surinam,[20] Tajikistan[21] and Uzbekistan,[22] and to local governmental bodies in Argentina, on reform of their public procurement legal and regulatory framework, including on proposed legislation. Within the framework of the EBRD-UNCITRAL Public Procurement Initiative,[23] the Secretariat assisted Egypt with modernization of its procurement system. In addition to a desk review of draft legislation and remote consultations with local experts, the Secretariat participated in workshops on reforms of the local procurement review system, e-procurement and identification of training needs (Cairo, 6-7 April 2016)* and on framework agreements (Cairo, 7 September 2016).*

Lectures

39. The Secretariat participated as a lecturer in:

(a) 10th and 11th editions of the ITC-ILO Master in Public Procurement for Sustainable Development (Turin, Italy, 31 May 2016 and 14-15 February 2017);

(b) Executive LLM in Public Procurement Law and Policy at the University of Nottingham (January 2017);

(c) Module in a Public Procurement Distance Learning Diploma at King's College, London (December 2016 and March 2017); and

(d) Anti-corruption training at IACA for compliance officers from Siemens; the Audit Board of the Republic of Indonesia; representatives of the EAEU member States; the Thailand National Anti-Corruption Commission (NACC); and the Central Vigilance Commission of India (Laxenburg, Austria).

Sale of goods

40. The Secretariat has continued to promote broader adoption, use and uniform interpretation of the United Nations Convention on Contracts for the International

[14] Under the EBRD-UNCITRAL Public Procurement Initiative, https://www.ppi-ebrd-uncitral.com.
[15] In cooperation with UNEP.

Sale of Goods (Vienna, 1980) ("CISG"),[24] and of the Convention on the Limitation Period in the International Sale of Goods (New York, 1974), as amended (Vienna, 1980),[25] including by organizing or participating in dedicated events:

(a) "Towards a Global Framework for International Commercial Transactions: Implementing the Hague Principles on Choice of Law in International Commercial Contracts" (Lucerne, Switzerland, 8-9 September 2016);

(b) The Seventh Annual Vis Middle East Pre-Moot and Regional Middle East Arbitration Forum (Kuwait City, 9-12 February 2017);

(c) Co-organizing an event on CISG and the Limitation Convention with a view to providing information about the forthcoming withdrawal of declarations on the scope of application of CISG and Limitation Convention by the Czech Republic (Prague, 24 March 2017);* and

(d) 8th Peter Schlechtriem CISG Conference "Cutting Edge Non-Conformity under the CISG" (Vienna, 7 April 2017).

41. A number of activities on the CISG took place in the region covered by RCAP:

(a) Briefings on CISG for the Government of Sri Lanka (Colombo, 13 August 2016); government representatives of the Office of the Attorney General of Fiji (Suva, 30-31 August 2016); the National Law Development Agency of the Ministry of Law and Human Rights of Indonesia (24 November 2016); and government representatives at the request of the Ministry of Foreign Affairs of Thailand (Bangkok, 25 November 2016);

(b) Workshop on CISG at the request of the Ministry of Industry and Trade of the Lao People's Democratic Republic (Vientiane, 21 November 2016);

(c) 2016 UNCITRAL Viet Nam Workshop with the Faculty of Law of the Foreign Trade University, supporting implementation of CISG in Viet Nam following accession, as well as regional introduction of the Joint Proposal on Cooperation in the area of International Commercial Contract Law (with a focus on sales), proposed by the Secretariats of UNCITRAL, the Hague Conference on Private international Law (HccH) and UNIDROIT (Hanoi, 24 November 2016); and

(d) Assistance with the translation of CISG into Laotian, "Lao PDR-US International and Association of Southeast Asian Nations (ASEAN) Integration" (USAID LUNA II) Project.

Lectures

42. Lectures were provided on Uniform Sales Law in a course organized by the University of Vienna Law School (Vienna, Autumn 2016); and on CISG for a delegation of 20 Vietnamese judges attending a training programme organized by the Judicial Research and Training Institute, Supreme Court of the Republic of Korea (Goyang, Republic of Korea, 14 November 2016).

Security interests

43. The approach taken by the Secretariat in providing technical assistance related to UNCITRAL texts on security interests: the United Nations Convention on the Assignment of Receivables in International Trade (2001),[26] the UNCITRAL Legislative Guide on Secured Transactions (2007),[27] its Supplement on Security Rights in Intellectual Property (2010), the UNCITRAL Guide on the Implementation of a Security Rights Registry (2013)[28] and the UNCITRAL Model Law on Secured

[24] United Nations, *Treaty Series*, vol. 1489, No. 25567.
[25] United Nations, *Treaty Series*, vol. 1511, No. 26121.
[26] General Assembly resolution 56/81, annex.
[27] United Nations publication, Sales No. E.09.V.12.
[28] General Assembly resolution 68/108.

Transactions (2016)[29] is twofold — disseminating information about those texts to Government officials, legislators, judges, academics and practitioners and thus promoting their implementation and consulting with legislators and policymakers from various jurisdictions to review enacting legislation and assist with legislative drafting.

44. The Secretariat is continuing its work with the World Bank with regard to revising the World Bank Insolvency and Creditor Rights Standard to include the key recommendations of the UNCITRAL Legislative Guide on Secured Transactions and reference to the other texts of UNCITRAL on security interests. The work with the World Bank includes, in addition, the comparison of key provisions of the Model Law on Secured Transactions with key provisions of Islamic finance law as part of an initiative carried out by the World Bank Global Islamic Finance Development Center.

45. Activities focussing on disseminating information included the following:

(a) 33rd International Financial Law Conference: a conference co-presented by the IBA Banking Law Committee and IBA Securities Law Committee, supported by the IBA European Regional Forum (Athens, 18-20 May 2016);

(b) Remote presentation at the University of Toronto Global Professional LL.M. Class (26 June 2016);

(c) Annual Congress of INSOL Europe to present the general work of UNCITRAL and the work of Working Group VI (Security Interests) (Cascais, Portugal, 23-24 September 2016);

(d) Annual Conference of the Asociación Americana de Derecho Internacional Privado (ASADIP) and Conference of the Centro de Estudios de Derecho, Economía y Política (CEDEP) to promote our work on security interests (Asunción and Buenos Aires, 7-11 November 2016);*

(e) Conference on reforming secured transactions in Brazil, co-organized by the National Confederation of Financial Institutions (CNF) and the University of São Paulo to discuss the benefits of the UNCITRAL Model Law on Secured Transactions (Brasilia, 26 January 2017);*

(f) Panellist at the 2017 Conference on International Coordination of Secured Transactions Law Reforms, hosted by International Insolvency Institute and the National Law Centre for Inter-American Free Trade (Philadelphia, United States, 9-10 February 2017);

(g) United Kingdom Society of Legal Scholars 2017 Seminar, “The Future for Commercial Law: Ways Forward for Harmonization”, organized by the University of Durham (Durham, United Kingdom, 27-28 February 2017); and

(h) MENA Secured Transaction Reform Workshop organized by the Asia and Middle East Economic Growth Best Practices (AMEG) programme funded by USAID to speak at the session on “A Comprehensive Approach to Secured Transaction Reform” (Nicosia, 13-14 March 2017).*

Review of enacting legislation and assistance with legislative drafting

46. The Secretariat has provided assistance to Pakistan with respect to the Secured Transactions Law at the request of the State Bank of Pakistan (20 May 2016); Paraguay with respect to the draft secured transactions law (7 and 8 November 2016); Bahrain with respect to the draft secured transactions law (Manama, 20-23 November 2016); and the Russian Federation with respect to their draft registry regulations (Moscow, 28-30 November 2016). The Secretariat also engages in informal consultation with legislators and policymakers from various jurisdictions, in some instances as a follow-up to the aforementioned activities.

[29] General Assembly resolution 71/136; *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), chap. III, sect. A.

Lectures

47. The Secretariat provided lectures on secured financing based on the UNCITRAL texts on security interests in a course organized by the Civil Law Institute of the University of Vienna Law School (Vienna, Autumn 2016 and Spring 2017).

III. Dissemination of information

48. A number of publications and documents prepared by UNCITRAL serve as key resources for its technical cooperation and assistance activities, particularly with respect to dissemination of information on its work and texts.

A. Website

49. The UNCITRAL website, available in the six official languages of the United Nations, provides access to full-text UNCITRAL documentation and other materials relating to the work of UNCITRAL, such as publications, treaty status information, press releases, events and news. In line with the organizational policy for document distribution, official documents are provided, when available, via linking to the United Nations Official Document System (ODS).

50. In 2016, the website received nearly 800,000 unique visitors, an increase from 2015 (690,000 unique visitors). Of all sessions, roughly 63 per cent were directed to pages in English and 37 per cent to pages in Arabic, Chinese, French, Russian and Spanish. In this respect, it should be noted that, while the UNCITRAL website is among the most important electronic sources of information on international trade law in all languages, it may represent one of few available sources on this topic in some of the official languages.

51. The content of the website is updated and expanded on an ongoing basis in the framework of the activities of the UNCITRAL Law Library and therefore at no additional cost to the Secretariat. The General Assembly has welcomed "the continuous efforts of the Commission to maintain and improve its website, including by developing new social media features, in accordance with the applicable guidelines."[30] In this regard, in September 2015, a general UNCITRAL LinkedIn account was established that now has nearly 1,900 followers, an increase from 900 in the last year. This account supplements the Tumblr microblog ("What's new at UNCITRAL?") established in 2014. Both features are accessible from the UNCITRAL website.

B. Library

52. Since its establishment in 1979, the UNCITRAL Law Library has been serving research needs of Secretariat staff and participants in intergovernmental meetings convened by UNCITRAL. It has also provided research assistance to staff of Permanent Missions, global staff of the United Nations, staff of other Vienna-based international organizations, external researchers and law students. In 2016, library staff responded to approximately 490 reference requests, originating from over 45 countries. Library visitors other than meeting participants, staff and interns included researchers from over 22 countries.

53. The collection of the UNCITRAL Law Library focuses primarily on international trade law and currently holds over 12,000 monographs, 100 active journal titles, legal and general reference material, including non-UNCITRAL United Nations documents, documents of other international organizations and electronic resources (restricted to in-house use only). Particular attention is given to expanding the holdings in all of the six United Nations official languages. While use of electronic

[30] General Assembly resolution 70/115.

resources has increased, resources on trade law from many countries are still only found in print, and circulation of print items has remained steady.

54. The UNCITRAL Law Library maintains an online public access catalogue (OPAC) jointly with the other United Nations libraries in Vienna. OPAC is available via the library page of the UNCITRAL website.[31]

55. The UNCITRAL Law Library staff prepares for the Commission an annual "Bibliography of recent writings related to the work of UNCITRAL". The bibliography includes references to books, articles and dissertations in a variety of languages, classified according to subject (for the fiftieth Commission session, see A/CN.9/907). Individual records of the bibliography are entered into OPAC, and the full-text collection of all cited materials is maintained in the Library collection. Monthly updates from the date of the latest annual bibliography are available in the bibliography section of the UNCITRAL website.

56. The Library produces a consolidated bibliography of writings related to the work of UNCITRAL on the UNCITRAL website.[32] The consolidated bibliography aims to compile all entries of the bibliographical reports submitted to the Commission since 1968. It currently contains over 9,500 entries, reproduced in the English and the original language versions, verified and standardized to the extent possible.

C. Publications

57. In addition to official documents, UNCITRAL traditionally maintains two series of publications, namely the texts of all instruments developed by the Commission and the UNCITRAL Yearbook. Publications are regularly provided in support of technical cooperation and assistance activities undertaken by the Secretariat, as well as by other organizations where the work of UNCITRAL is discussed, and in the context of national law reform efforts.

58. The following works were published in 2016: Second Conference for a Euro-Mediterranean Community of International Arbitration,[33] UNCITRAL Notes on Organizing Arbitral Proceedings, UNCITRAL Secretariat Guide on the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958), UNCITRAL Digest of Case Law on the United Nations Convention on Contracts for the International Sale of Goods: 2016 ed., UNCITRAL Model Law on Secured Transactions and the 2013 UNCITRAL *Yearbook*.[34]

59. In light of budget and environmental concerns, the Secretariat has continued its efforts to use electronic media as a primary method to disseminate UNCITRAL texts. Thus, print runs for all publications have been reduced and the 2013 UNCITRAL *Yearbook* was published exclusively in electronic format (CD-ROM and e-book).

D. Press releases

60. Press releases are being regularly issued when treaty actions relating to UNCITRAL texts take place or information is received on the adoption of an UNCITRAL model law or other relevant text. Press releases are also issued with respect to information of particular importance and direct relevance to UNCITRAL. Those press releases are provided to interested parties by e-mail and are posted on the UNCITRAL website, as well as on the website of the United Nations Information Service (UNIS) in Vienna or of the Department of Public Information, News and Media Division in New York, if applicable.

---

[31] Available from www.uncitral.org/uncitral/publications/library.html.
[32] Available from www.uncitral.org/uncitral/publications/bibliography_consolidated.html.
[33] Available from www.uncitral.org/uncitral/publications/publications.html.
[34] Available from www.uncitral.org/uncitral/publications/yearbook.html.

61. To improve the accuracy and timeliness of information received with respect to the adoption of UNCITRAL model laws, since such adoption does not require a formal action with the United Nations Secretariat, and to facilitate the dissemination of related information, the Commission may wish to request Member States to advise the Secretariat when enacting legislation implementing an UNCITRAL model law.

E. General enquiries

62. The Secretariat currently addresses approximately 2,000 general enquiries per year concerning, inter alia, technical aspects and availability of UNCITRAL texts, working papers, Commission documents and related matters. Increasingly, these enquiries are answered by reference to the UNCITRAL website.

F. Information lectures in Vienna

63. Upon request, the Secretariat provides information lectures in-house on the work of UNCITRAL to visiting university students and academics, members of the bar, Government officials including judges. Since the last report, more than 20 lectures have been provided to visitors from, inter alia, Austria, China, the Czech Republic, France, Germany, the Republic of Korea, Sweden, Turkey and Ukraine.

IV. Resources and funding

64. The costs of most technical cooperation and assistance activities are not covered by the regular budget. The ability of the Secretariat to implement the technical cooperation and assistance component of the UNCITRAL work programme is therefore contingent upon the availability of extrabudgetary funding.

65. The Secretariat has explored a variety of ways to increase resources for technical assistance activities, including through in-kind contributions. In particular, a number of missions have been funded, in full or in part, by the organizers. Additional potential sources of funding could be available if trade law reform activities could be mainstreamed more regularly in broader international development assistance programmes. In this respect, the Commission may wish to provide guidance on possible future steps.

A. UNCITRAL Trust Fund for symposia

66. The UNCITRAL Trust Fund for symposia supports technical cooperation and assistance activities for the members of the legal community in developing countries, funding the participation of UNCITRAL staff or other experts at seminars where UNCITRAL texts are presented for examination and possible adoption and fact-finding missions for law reform assessments in order to review existing domestic legislation and assess country needs for law reform in the commercial field.

67. During the period under review, the Government of the Republic of Korea provided a contribution of US$ 20,681.67 for the participation of the UNCITRAL Secretariat in the APEC EoDB project (see para. 17 above). No further contributions were received for Trust Fund activities.

68. At its 49th Session (New York, 27 June-15 July 2016), the Commission appealed to all States, international organizations and other interested entities to consider making contributions to the Trust Fund for UNCITRAL symposia, if possible, in the form of multi-year contributions, or as specific-purpose contributions, so as to facilitate planning and enable the Secretariat to meet the increasing requests from developing countries and countries with economies in transition for training and technical legislative assistance (A/71/17, paras. 249-251). Potential donors have also been approached on an individual basis.

69. The Commission may wish to note that, in spite of efforts by the Secretariat to solicit new donations, funds available in the Trust Fund are sufficient only for a very small number of future technical cooperation and assistance activities. Efforts to organize the requested activities at the lowest cost and with co-funding and cost sharing whenever possible are ongoing. However, once current funds are exhausted, requests for technical cooperation and assistance involving the expenditure of funds for travel or to meet other costs will have to be declined unless new donations to the Trust Fund are received or alternative sources of funds can be found.

70. The Commission may once again wish to appeal to all States, relevant United Nations Agencies and bodies, international organizations and other interested entities to make contributions to the Trust Fund, if possible in the form of multi-year contributions, so as to facilitate planning and to enable the Secretariat to meet the demand for technical cooperation and assistance activities and to develop a more sustainable technical assistance programme. The Commission may also wish to request Member States to assist the Secretariat in identifying sources of funding within their Governments.

B. UNCITRAL Trust Fund to grant travel assistance to developing countries that are members of UNCITRAL

71. The Commission may wish to recall that, in accordance with General Assembly resolution 48/32 of 9 December 1993, the Secretary-General was requested to establish a Trust Fund to grant travel assistance to developing countries that are members of UNCITRAL. The Trust Fund so established is open to voluntary financial contributions from States, intergovernmental organizations, regional economic integration organizations, national institutions and non-governmental organizations, as well as to natural and juridical persons.

72. In the period under review, no new contributions were received.

73. During the same reporting period, the available Trust Fund resources were used to facilitate participation at the 49th session of UNCITRAL in New York (27 June-15 July) for delegates from El Salvador, Honduras and Sri Lanka, and for participation in the 29th session of Working Group VI in New York (8-12 February), the 53rd session of Working Group IV in New York (9-13 May) and the 65th session of Working Group II in Vienna (12-23 September) for delegates from Armenia, Côte d'Ivoire and Sierra Leone. In order to allow for broader assistance despite the limited resources of the fund, cost coverage in each case has been provided either for the air ticket or for the Daily Subsistence Allowance only.

74. In order to ensure participation of all Member States in the sessions of UNCITRAL and its Working Groups, the Commission may wish to reiterate its appeal to relevant bodies in the United Nations system, organizations, institutions and individuals to make voluntary contributions to the Trust Fund established to provide travel assistance to developing countries that are members of the Commission.

75. It is recalled that in its resolution 51/161 of 16 December 1996, the General Assembly decided to include the Trust Funds for UNCITRAL symposia and travel assistance in the list of funds and programmes that are dealt with at the United Nations Pledging Conference for Development Activities.

B. Note by the Secretariat on UNCITRAL regional presence: activities of the UNCITRAL Regional Centre for Asia and the Pacific

(A/CN.9/910)

[Original: English]

1. The General Assembly, in its resolutions 67/89 of 14 December 2012, 68/106 of 16 December 2013, 69/115 of 10 December 2014, 70/115 of 14 December 2015 and 71/135 of 13 December 2016, welcomed the activities of the United Nations Commission on International Trade Law Regional Centre for Asia and the Pacific (RCAP or Regional Centre) in the Republic of Korea, towards reaching out and providing technical assistance with international trade law reforms to developing countries in the region.

2. RCAP has carried out its activities in accordance with the priority lines of action identified in the UNCITRAL Secretariat's strategic framework for technical assistance (A/66/17, para. 255 and A/CN.9/724, paras. 10-48), as well as with the specific mandate identified for the Regional Centre, which was revised in the 49th Commission session, namely as to (a) support public, private and civil society initiatives to enhance international trade and development by promoting certainty in international commercial transactions through the dissemination of international trade norms and standards, in particular those elaborated by UNCITRAL; (b) provide capacity-building and technical assistance services to States in the region, including to international and regional organizations, and development banks; (c) build and participate in regionally-based international trade law partnerships and alliances, including with other appropriate United Nations funds, programmes and specialized agencies; (d) strengthen information, knowledge and statistics through briefings, workshops, seminars, publications, social media, and information and communications technologies, including in regional languages; and (e) function as a channel of communication between States and UNCITRAL for non-legislative activities of the Commission.

3. The activities undertaken in the region covered by RCAP in relation to dissemination of UNCITRAL standards, capacity-building and technical assistance activities on specific topics are incorporated in the relevant Note by the Secretariat (A/CN.9/905, part II). This note provides an overview of the other activities undertaken by RCAP.

Flagship events

4. The Regional Centre has continued to deliver its four flagship events during the reporting period with the objective of streamlining activities to promote UNCITRAL texts and establishing regular opportunities for substantive regional contributions to support the present and possible future legislative work of UNCITRAL:

(a) The Incheon Trade Law Forum, 16-18 May 2016 (third edition) (previously named "UNCITRAL Asia Pacific Spring Conference"), a regional conference held in the host city of Incheon, Republic of Korea, co-hosted with the Hague Conference on Private International Law, Ministry of Justice of the Republic of Korea, the International Bar Association (IBA), the Korea Legislation Research Institute and the Korea International Trade Law Association, comprehensively covering UNCITRAL topics encompassing a Flagship conference, three seminars and a capacity-building workshop, featuring 69 speakers and bringing together more than 230 participants from 41 jurisdictions including representatives from international, regional and national organizations, government officials, judges, general counsels, legal officers, academics, entrepreneurs, experts and practitioners;

(b) The Asia Pacific ADR Conference, 12-13 October 2016 (fifth edition), a regional conference held in Seoul, promoting UNCITRAL standards on arbitration and conciliation, and designed to attract not only experts and practitioners from around the world, but also officials, researchers and scholars from 56 Asia Pacific

States, to share their opinions and research findings related to the conference themes. The conference was supported by the International Chamber of Commerce — International Court of Arbitration (ICC-ICA), the Ministry of Justice of the Republic of Korea, the Korean Commercial Arbitration Board (KCAB) and the Seoul International Dispute Resolution Centre. The conference assembled experts, researchers, scholars, practitioners, representatives from arbitration centres and officials from the region, attracting over 270 participants from 32 jurisdictions;

(c) The UNCITRAL Emergence Conference, 13-14 December 2016 (second edition), held in Macau, China, co-hosted with the University of Macau, supported by the World Trade Centre Macau, ICC-ICA and Asia Business Law Institute and the media partner the Asian Business Law Journal, aimed at promoting academic engagement with UNCITRAL's mandate and future work, based on an academic call for papers. Entitled "Regional Perspectives on Contemporary and Future Harmonization Agenda in International Trade Law", 36 papers were presented and the conference attracted more than 134 participants from 20 jurisdictions. It explored new development areas that UNCITRAL may take note of in the coming years, and several speakers were selected to present their research findings at the UNCITRAL Congress on "Modernizing International Trade Law to Support Innovation and Sustainable Development"; and

(d) The UNCITRAL Asia Pacific Day, during the last quarter of 2016 (third edition), aimed at promoting awareness, encouraging the study, discussion and implementation of UNCITRAL texts and celebrating the establishment of UNCITRAL by the General Assembly on 17 December 1966. Every year, universities from across the region are invited to join the celebrations by proposing a programme that can range from lectures and seminars to public conferences. In 2016, seven universities joined the celebrations, namely: National Law University Delhi, which organized a stakeholder consultation round table, public lecture and symposium focusing on the United Nations Convention on Contracts for the International Sale of Goods (CISG) (New Delhi, 17 October 2016); Gujarat National Law University, which delivered a special lecture series on "Issues of Harmonization of Laws on International Trade from the Perspective of UNCITRAL: The Past and The Current Work" (Gujarat, India, 11 November 2016); the University of Hong Kong, which held a panel discussion on Cross-Border Insolvency (Hong Kong, China, 5 December 2016); Singapore Management University and City University of Hong Kong, which organized a conference on "Towards an Asian Legal Order: Conversations on Convergence" (Singapore, 8-9 December 2016); KIIT University, which held the seminar "Quest Towards Harmonization of Global Trade Rules" (Odisha, India, 20-21 December 2016); and Kobe University, which organized arbitration moot practice sessions and special lectures on "Beyond CISG: Harmonization of contract law for globalizing market societies" and "UNCITRAL's contribution to transparency in Investor-Sate Arbitration" (Kobe, Japan, 23-24 December 2016).

National Coordination Committees

5. RCAP has continued its support to the UNCITRAL National Coordination Committees for Australia (UNCCA), India (UNCCI) and the Global Private Law Forum (GPLF) of Japan. The UNCITRAL National Coordination Committees are private sector initiatives aimed at disseminating international trade norms and coordinating national promotional activities, allowing the Regional Centre to allocate more resources to dissemination of UNCITRAL texts in Least Developed Countries (LDCs), Landlocked Developing Countries (LLDCs) and Small Island Developing States (SIDSs) in the region. During the reporting period, the Regional Centre collaborated with the National Coordination Committees in the following activities:

(a) Second Annual UNCITRAL Australia Seminar organized with the UNCCA which focused on the relationship between UNCITRAL texts and other international instruments (Canberra, 20 May 2016);

(b) "Celebrating UNCITRAL's 50 Years: Global Standards for Rule-based Commerce", organized by UNCITRAL and UNCC for India, with the support of the Permanent Court of Arbitration (New Delhi, 28-29 November 2016);

(c) Regional conference on the 50th anniversary of UNCITRAL, organized by UNCCA (Brisbane, Australia, 2-3 December 2016); and

(d) A book "Emerging Rules of International Commercial Law: Bilingual (English-Japanese)", published jointly by RCAP and GPLF (February 2017).

Supporting attendance of judges and government officials

6. The Regional Centre has supported the attendance of government officials, legal officers and judges from regional LDCs, LLDCs and SIDSs at various activities aimed at capacity-building:

(a) One judge from Timor-Leste and one delegate from the Ministry of Industry and Commerce of the Lao People's Democratic Republic to attend the Incheon Trade Law Forum (Incheon, Republic of Korea, 16-18 May 2016);

(b) Delegates from Fiji, Palau and Vanuatu to attend the Second UNCITRAL South Pacific Seminar on "Access to Justice for Better Trade in PSIDS" (Port Moresby, 20-21 September 2016);

(c) Two judges from the Supreme Court of Bangladesh to attend the International Dispute Resolution Masterclass (Beijing, 24-25 October 2016);

(d) One delegate from the Attorney-General's Department of Sri Lanka to attend the conference "The CISG as a Model for Harmonisation, Convergence and Law Reform" (Singapore, 6-7 January 2017);

(e) One judge from Nepal and one judge from Cambodia to attend the 12th Multinational Judicial Colloquium organized by UNCITRAL, INSOL International and the World Bank (Sydney, Australia, 18-19 March 2017); and

(f) One delegate from the Ministry of National Economy of Kazakhstan to attend the International Conference on CISG and the Convention on the Limitation Period (Prague, 24 March 2017).

Channel of communication between States

7. The Regional Centre has consolidated the function it serves on behalf of the UNCITRAL Secretariat as a channel of communication for non-legislative activities of the Commission between States in the region and UNCITRAL, setting up contact points within governments in the region and engaging in regular consultations with government officials from Australia, Bahrain, China (including the Special Administrative Regions of Hong Kong and Macau), Fiji, India, Indonesia, Iran (Islamic Republic of), Japan, Kazakhstan, Lao People's Democratic Republic, Malaysia, Myanmar, Mongolia, Nauru, New Zealand, Pakistan, Papua New Guinea, Philippines, Qatar, Republic of Korea, Singapore, Sri Lanka, Thailand, Timor-Leste, Turkmenistan, United Arab Emirates and Viet Nam.

New treaty action and enactment of model laws

8. The status of adoption of UNCITRAL texts is regularly updated and available on the UNCITRAL website. It is also compiled annually in a note by the Secretariat entitled "Status of conventions and model laws" (for the Commission's fiftieth session, see A/CN.9/909).

9. In the context of its communication with States, RCAP has monitored progress towards, and assisted States with, the adoption of the following UNCITRAL texts:

(a) In the area of dispute resolution:

UNCITRAL Model Law on International Commercial Arbitration (1985), with amendments as adopted in 2006: legislation based on the Model Law has been

adopted in Mongolia, the Republic of Korea and in the Australian Capital Territory (Australia);

UNCITRAL Model Law on International Commercial Arbitration (1985): legislation based on the Model Law has been adopted by Turkmenistan;

UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration (2014) (the "Rules"): the following concluded agreements provide for investor-state arbitration under the UNCITRAL Arbitration Rules, including the Transparency Rules;

i. Bilateral investment treaty between the United Arab Emirates and Greece signed on 6 May 2014;

ii. Bilateral investment treaty between Iran (Islamic Republic of) and Slovakia signed on 19 January 2016;

iii. Bilateral investment treaty between the United Arab Emirates and Mexico signed on 19 January 2016;

iv. Bilateral investment treaty between Iran (Islamic Republic of) and Singapore signed on 29 January 2016;

v. Bilateral investment treaty between Japan and Iran (Islamic Republic of) signed on 5 February 2016;

vi. Bilateral investment treaty between Kyrgyzstan and Austria signed on 22 April 2016;

vii. Bilateral investment treaty between Mongolia and Canada signed on 8 September 2016;

viii. Agreement to amend the Free Trade Agreement between Singapore and Australia signed on 13 October 2016; and

ix. Investment protection agreement between Hong Kong, China, and Chile signed on 18 November 2016;

(b) In the area of electronic commerce:

UNCITRAL Model Law on Electronic Commerce (1996): legislation based on the Model Law has been adopted in Fiji; and

(c) In the area of insolvency:

UNCITRAL Model Law on Cross-Border Insolvency (1997): legislation based on the Model Law has been adopted in Singapore.

Coordination Activities

10. Following its systematic coordination and cooperation efforts with institutions active in trade law reform, the Regional Centre has, during the reporting period, built and participated in regionally-based international trade law partnerships and alliances, including with other United Nations funds, programmes and agencies:

(a) United Nations Delivering as One: UNCITRAL signed the Lao People's Democratic Republic-United Nations Partnership Framework 2017-2021, as a non-resident agency, being tasked, through RCAP, to contribute in "Outcome 7: Institutions and policies at national and local level support the delivery of quality services that better respond to people's needs" and "Outcome 8: People enjoy improved access to justice and fulfilment of their human rights" (Vientiane, 7 September 2016); RCAP agreed to join the preparation of the United Nations Development Assistance Framework (UNDAF) Papua New Guinea (2018-2022) and provided inputs for Country Analysis, the Strategic Prioritization and the UNDAF drafting (25 August 2016); RCAP is engaged with United Nations Development Programme Pacific in preparation of the United Nations Pacific Strategy 2018-2022 (Suva, 30 August 2016);

(b) United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP) (see A/CN.9/905, para. 27);

(c) World Bank: with respect to the 12th Multinational Judicial Colloquium (Sydney, Australia, 17-18 March 2017) (see para. 6(e) above and A/CN.9/905, para. 31(e));

(d) Asian Development Bank (ADB): RCAP co-hosted the Second UNCITRAL South Pacific Seminar on "Access to Justice for Better Trade in PSIDS" with the support of ADB (Port Moresby, 20-21 September 2016). On 26 January 2017, ADB and UNCITRAL concluded an exchange of letters aimed at reforming arbitration laws in the South Pacific, focusing on accession to the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the New York Convention). UNCITRAL, through RCAP, in coordination with ADB, will (a) assist States in the preparation and deposit of instruments of accession to the New York Convention; (b) review existing or draft new arbitration laws based on the UNCITRAL Model Law on International Commercial Arbitration, including ensuring conformity with the provisions of the New York Convention; and (c) deliver capacity-building through tailored training programmes for stakeholders (government and judicial officials, arbitration practitioners as well as scholars);

(e) Asia Pacific Economic Cooperation (see A/CN.9/905, paras. 16-19);

(f) Greater Tumen Initiative (GTI) (see A/CN.9/905, para. 27(c));

(g) Hague Conference of Private International Law and its Asia Pacific Regional Office (see para. 4(a) above and A/CN.9/905, para. 41(c));

(h) International Chamber of Commerce — International Court of Arbitration (ICC-ICA): RCAP has continued its close coordination with ICC Arbitration and ADR North Asia and South Asia offices. In that framework, ICC became co-organizer of the Asia Pacific ADR Conference and of the UNCITRAL Emergence Conference, and the Regional Centre supported ICC capacity-building activities in the region; and

(i) Pacific Islands Forum: delivered technical briefing on the activities and mandate of UNCITRAL and discussed further coordination with the Pacific Islands Law Office Forum and the Pacific Legislative Drafter Technical Forum (Suva, 30 August 2016).

Strengthening information, knowledge and statistics

11. To fulfil its objective of strengthening information, knowledge and statistics through briefings, workshops, seminars, publications, social media, and information and communications technologies, including in regional languages, RCAP engaged in the following activities:

(a) Compilation and publication of selected UNCITRAL texts in Japanese (in some cases for the first time) and English, entitled "Emerging Rules of International Commercial Law: Bilingual (English-Japanese) Selected UNCITRAL Texts", in cooperation with GPLF, made available for free online and in hard copies distributed to Japanese law school's libraries;

(b) Publication of the first annual report by the ISDS Asia Pacific Transparency Observatory (Observatory), in support of the activities of the Transparency Registry. RCAP and the Asia Pacific Law Institute of the Seoul National University, with the support of KCAB, established a cooperation framework to monitor transparency in Asia Pacific treaty-based investor-State dispute settlements through the establishment of the Observatory;

(c) Publication of the RCAP website in regional languages, namely Japanese and Korean; and

(d) Managing the Incheon Trade Law Digest, dedicated to Incheon, the host of the first UNCITRAL Regional Centre, an annual online publication of articles on international trade law, which are selected following calls for papers or presented at RCAP events. The publication aims at stimulating interest, research and study on

UNCITRAL and its texts. All papers considered for publication must be relevant to the Asia Pacific.

Outreach

12. To expand the reach of its mandate, both within the hosting community and with regional academia, the Regional Centre continued its national outreach and regional educational programmes to maintain regular dialogue with non-governmental organizations, local and national political stakeholders, other international organizations, academia, the media and the general public on various aspects of RCAP, to enhance cooperation and community support, and increase awareness of UNCITRAL activities:

(a) For the national outreach programme, the Regional Centre has actively participated in the Incheon International Organizations Consultative Partnership and related events held by the Incheon Metropolitan City. In addition, RCAP has opened its doors to visitors including representatives of the Incheon Municipal Council, local students and interns from the Ministry of Justice of the Republic of Korea. Various lectures were delivered to local students on UNCITRAL and its work;

(b) RCAP has continued supporting international trade law moot competitions held in the region, namely: the International ADR Mooting Competition (Hong Kong, China, 8-9 July 2016); the Shanghai Pre-Moot 2017 (21-24 March 2017); and the 14th Vis East Moot (Hong Kong, China, 26 March-2 April 2017); and

(c) Academic engagement was fostered by delivering lectures at a number of universities, including: China University of International Business and Economics, Beijing Normal University, Dankook University, East China University of Political Science, Gachon University, Hitotsubashi University, Incheon National University, National Law University of Delhi, Renmin University of China, Shanghai University of Political Science and Law, Seoul National University and University of Macau.

Resources and Funding

13. RCAP is staffed with one professional, one programme assistant, one team assistant and two legal experts. During this reporting period, 17 interns were hosted at the Regional Centre. The core project budget allows for the occasional employment of experts and consultants. RCAP relies on the annual financial contribution from the Incheon Metropolitan City to the UNCITRAL Trust Fund for symposia to meet the cost of operation and programme. It further relies on the contribution of two non-reimbursable loans of legal experts by the Ministry of Justice of the Republic of Korea and the Government of Hong Kong, China, both of which were extended.

14. According to article 13.3 of the Memorandum of Understanding signed on 18 November 2011, between the United Nations and the Ministry of Justice and Incheon Metropolitan City of the Republic of Korea, the Incheon Metropolitan City extended its financial contribution over a 5-year period (2017-2021) for the operation of the Regional Centre, revising the annual contribution to US$ 450,000.

15. It is expected that interest in UNCITRAL texts in the region will grow with additional requests for technical assistance. Such increase will call for a corresponding increase in available resources. Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals are actively encouraged to make voluntary contributions to the UNCITRAL Trust Fund for symposia and, where appropriate, for the financing of special projects and otherwise to assist the UNCITRAL Secretariat in carrying out technical cooperation and assistance activities. Additional contributions to the RCAP project from member States, or from interested private and public entities recommended by member States, are required to further respond to regional expectations.

IX. CASE LAW ON UNCITRAL TEXTS (CLOUT)

Note by the Secretariat on promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts

(A/CN.9/906)

[Original: English]

Contents

I. Case Law on UNCITRAL Texts (CLOUT)

Background

1. CLOUT continues to be an important tool to promote the uniform interpretation and application of UNCITRAL texts, as it facilitates access to decisions and awards from many different jurisdictions. Furthermore, it contributes to the promotion of UNCITRAL legal texts since it demonstrates that the texts are being used and applied in many different countries and that judges and arbitrators at different latitudes are contributing to their interpretation. CLOUT also provides the basis for the analysis of interpretation trends that is a key part of the case law Digests. Background information on CLOUT and the Digests, is provided in the Provisional Agenda of the fiftieth session of the Commission (A/CN.9/894, para. 9).

2. At present, case law on the following texts is reported in the system:

- United Nations Convention on the Recognition and Enforcement of Foreign Arbitral Awards, 1958 (New York Convention);[1]
- Convention on the Limitation Period in the International Sale of Goods, 1974 and Convention on the Limitation Period in the International Sale of Goods as amended by the Protocol amending the Convention on the Limitation Period in the International Sale of Goods, 1980 (Limitation Convention);
- United Nations Convention on the Carriage of Goods by Sea, 1978 (Hamburg Rules);
- United Nations Convention on Contracts for the International Sale of Goods, 1980 (CISG);
- UNCITRAL Model Law on International Credit Transfers, 1992 (MLICT);
- United Nations Convention on Independent Guarantees and Stand-by Letters of Credit, 1995 (UNLOC);
- UNCITRAL Model Law on International Commercial Arbitration, 1985, as amended in 2006 (MAL);

[1] The Commission may recall that at its forty-first session, in 2008, it agreed that, resources permitting, the Secretariat could collect and disseminate information on the judicial interpretation of the New York Convention. For this reason, the CLOUT system includes only recent case law concerning the Convention. See *Official Records of the General Assembly, Sixty-third Session, Supplement No. 17* (A/63/17), para. 360. A comprehensive database of case law on the New York Convention complementing CLOUT can be found at www.newyorkconvention1958.org (see paras. 16-19 below and *Official Records of the General Assembly, Sixty-eighth Session, Supplement No. 17* (A/68/17), paras. 134-140).

- UNCITRAL Model Law on Electronic Commerce, 1996 (MLEC);
- UNCITRAL Model Law on Cross-Border Insolvency, 1997 (MLCBI);
- UNCITRAL Model Law on Electronic Signatures, 2001 (MLES); and
- United Nations Convention on the Use of Electronic Communications in International Contracts, 2005 (ECC).

3. Case law to be reported in CLOUT is provided by the network of national correspondents that, either as individuals or a specific organ or body, monitor and collect court decisions and arbitral awards and prepare abstracts of those considered relevant in one of the six official languages of the United Nations. The Secretariat collects the full texts of the decisions and awards in their original language and publishes them (see para. 13 below). The abstracts are edited and translated by the Secretariat into the official United Nations languages and published in all such languages as part of the regular documentation of UNCITRAL (under the identifying symbol: A/CN.9/SER.C/ABSTRACTS/...).

4. While the national correspondents are the principal support of the system, in agreement with the correspondents, contributions from scholars or institutions who are not appointed as national correspondents are also accepted, subject to control and prior notification to the relevant national correspondent, if appointed. This practice is consistent with the Commission's recommendation of utilizing all available sources of information to supplement the information provided by the national correspondents. [2] National correspondents meet every two years, when the Commission is in session in Vienna, to take stock of the latest developments and challenges of CLOUT maintenance and improvement.

Abstracts published and received

5. As at the date of this note, 179 issues of CLOUT had been prepared for publication, dealing with 1,661 cases from 65 jurisdictions. [3] Of these, 875 cases related to CISG, 447 cases related to MAL (a number of cases dealt with both MAL and the New York Convention), 112 cases related to MLCBI, 172 cases primarily related to the New York Convention, 34 cases related to MLEC, 18 cases related to the Limitation Convention (8 of which related to the amended version of the Convention), 3 cases related to the Hamburg Rules, 2 cases each related to EEC and MLICT and 1 case each to UNLOC and MLES. A slight discrepancy can be noted with respect to the total number of cases published and the breakdown of the individual UNCITRAL texts. This is due to the fact that in a few decisions more than one UNCITRAL text is applied.

6. With reference to the five regional groups represented within the Commission, no meaningful changes can be recorded in respect of last year as to the jurisdictions providing the abstracts and the figures of this Secretariat's Note coincide almost in full with the figures referred to in A/CN.9/873 (see para. 5). The majority of the abstracts published referred to Western European and other States (64 per cent, approximately), while the other regional groups were represented as follows (all figures are approximate): Asian States (16 per cent), Eastern European States (13 per cent), Latin American and Caribbean States (3 per cent) and African States (3 per cent). A few abstracts pertained to awards of the International Chamber of Commerce (ICC, 1 per cent).

---

[2] *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 371.

[3] The jurisdictions include: Albania, Argentina, Australia, Austria, Belarus, Belgium, Benin, Bermuda, Bosnia and Herzegovina, Brazil, Burkina Faso, Cameroon, Canada, Chile, China, Colombia, Côte d'Ivoire, Croatia, Cuba, Czechia, Denmark, Egypt, El Salvador, Finland, France, Georgia, Germany, Hong Kong,China, Hungary, India, Iraq, Israel, Italy, Japan, Kenya, Liechtenstein, Lithuania, Luxembourg, Mexico, Montenegro, Netherlands, New Zealand, Nigeria, Norway, Philippines, Poland, Portugal, Republic of Korea, Russian Federation, Serbia, Singapore, Slovakia, Slovenia, South Africa, Spain, Sri Lanka, Sweden, Switzerland, Thailand, Tunisia, Uganda, Ukraine, United Kingdom of Great Britain and Northern Ireland, United States of America and Zimbabwe.

7. Since the Secretariat's last Note to the Commission, 72 new abstracts were received from national correspondents and voluntary contributors. The abstracts referred to the following texts: CISG (21 abstracts), New York Convention (22), MLCBI (13), MAL (10), MLEC (4), ECC (1) and one abstract concerning both the CISG and the Limitation Convention (amended text). The court decisions and the arbitral awards to which the abstracts refer were rendered in the following 22 jurisdictions: Australia, Belarus, Brazil, Canada, China, Colombia, Denmark, Egypt, France, Germany, Hong Kong, China, India, Italy, Mexico, Norway, Poland, Russian Federation, South Africa, Spain, Sri Lanka, United Kingdom and United States. In the same period, 91 abstracts were published concerning CISG (38 abstracts); New York Convention (18), MAL (16), MLCBI (12), MLEC (6), Limitation Convention, amended text (4). For the first time abstracts from Norway and Sri Lanka were published.[4] The slight discrepancy between the total number of abstracts published in the period under review and the breakdown of the individual UNCITRAL texts referred to in the abstracts is due to some court decisions or arbitral awards applying more than one UNCITRAL text (see also para. 5 above).

The network of national correspondents

8. The composition[5] of the current network of national correspondents remained unchanged since the Secretariat's last Note to the Commission. This network will terminate its mandate at the beginning of July 2017, and on the first day of the fiftieth Commission session the new network of correspondents will begin its term for the next five years.[6] At the date of this Secretariat's Note, States that have appointed or reappointed their national correspondents include: Algeria, Austria, Côte d'Ivoire, Denmark, Ecuador, El Salvador, Finland, Gabon, Germany, Indonesia, Japan, Luxembourg, Montenegro, Norway, Republic of Korea, Spain, Serbia, Switzerland and Thailand for a total of 32 national correspondents.

9. As to the materials provided by the current network of national correspondents since the Secretariat's last Note to the Commission, they represented approximately 53 per cent of the abstracts published in that period.[7] The remaining abstracts were received from voluntary contributors or prepared by the Secretariat. Although this figure represents a high contribution of the national correspondents to CLOUT, the Commission may wish to note that the cases were provided by a very small number of correspondents. A large number of correspondents were unable to contribute materials for the entire duration of their appointment.

10. Four CLOUT national correspondents were part of the small group of experts that provided inputs into the revision of the CISG Digest (see para. 15 below).

Maintenance of the system

11. The Secretariat continued making available to users the full text decisions stored in the database's archives. Due to the time-consuming nature of the task, the modest resources available for CLOUT (see also A/CN.9/873) and the non-optimal quality of several scanned full texts, which requires retrieving new copies, it is envisaged that such a task will need several additional months to be completed. The full texts of new case law received by the Secretariat are uploaded upon receipt.

---

[4] Abstracts from the following jurisdictions were also published: Australia, Austria, Canada, China, Denmark, Egypt, France, India, Mexico, Netherlands, New Zealand, Norway, Poland, Republic of Korea, Russian Federation, Singapore, South Africa, Spain, Sri Lanka, United Kingdom and United States.

[5] At the date of this note, the network is composed of 74 correspondents representing 35 countries, which were as follows: Australia, Austria, Belarus, Bulgaria, Canada, China, Colombia, Cuba, Czechia, Denmark, El Salvador, Finland, France, Germany, Greece, Guatemala, Ireland, Israel, Italy, Japan, Luxembourg, Montenegro, New Zealand, Poland, Republic of Korea, Republic of Moldova, Russian Federation, Singapore, Slovakia, Spain, Sweden, Thailand, Tunisia, United States and Uruguay.

[6] See A/CN.9/873, para. 7.

[7] It can be noted that the figure is higher than the one provided in A/CN.9/873.

12. Since the Secretariat's last Note, the CLOUT database received slightly over 27,000 visitors. According to data provided by free web analytics services, most of the users would be located in Eastern Asia, followed by South America and Europe (in the following order: Western, Southern and Eastern Europe).

13. Since June 2016, regular information on CLOUT's latest releases is posted on the UNCITRAL blog (under the "What's new at UNCITRAL?" pages) and the UNCITRAL LinkedIn account in order to provide an "alert" feature to CLOUT users and raise the visibility of the system at the same time. With regard to increasing CLOUT's visibility, the Commission may wish to note that the system was also cited in several articles and publications of international legal scholars in the last 12 months.

14. The Secretariat explored the opportunity to develop collaboration with the UNALEX project,[8] sponsored by the European Commission, which has the same objectives as the CLOUT system and focuses on European and International Uniform Law with special emphasis on international private and civil procedural law (see also A/CN.9/908, para. 10).

II. The Digests

15. As reported in A/CN.9/873 (see para. 11), a new round of updates of the CISG Digest was finalized in 2016. The updated Digest was published as an e-book, in English, on the UNCITRAL website at the end of last year. At the date of this Secretariat's Note, the Digest is being translated into the other official United Nations languages and it is expected that such translations be finalized by the end of 2017.

16. Work to update the current edition of the MAL Digest is ongoing and finalization of the MLCBI Digest is progressing.

III. A way forward for CLOUT

17. As mentioned in paragraph 1 above, CLOUT continues to be an important tool through which the Secretariat promotes the uniform interpretation and application of UNCITRAL texts. In over 25 years, the system has developed a consolidated modus operandi which meets several of the standards that are said to determine the reliability of legal databases.[9] Within the limits of the human and financial resources available to the Secretariat, the system provides information of consistent quality, with an easy to verify source, which is presented in an immediate and user-friendly way and is regularly updated. After the database upgrade in 2015 (see para. 11, A/CN.9/840), accuracy of information has been further improved by making publicly available the full texts of the case law which is reported in the database. Similarly to its former version, the upgraded database is easy to browse and can be accessed with any standard IT equipment, moreover it allows for improved interactivity with the users who can carry out more accurate searches and simultaneously obtain diverse information on the topic they are inquiring about. Further, the multilingual nature of the database, a key feature since the system was established and was mainly working on paper, greatly enhances the dissemination of information.

18. As mentioned in previous Secretariat's Notes, the system would greatly benefit from further improvements in order, inter alia, to increase content from jurisdictions that are relatively under-represented, as well as of legislative texts where reported cases are few; ensure currency of the materials published more consistently and further improve interaction with the users. However, under the current arrangements,

[8] For further information on the project, see: https://www.unalex.eu/Project/Project.aspx?Project=ExtendUnalex.

[9] See for instance, M. Roznovschi, Features — Update to Evaluating Foreign and International Legal Databases on the Internet, September 2000 (available on LLRX.com) and J. Lee, Gatekeepers of legal information: evaluating and integrating free internet legal resources into the classroom, 2012 (available on Barry Law Review).

achieving those goals within a predictable timespan is not feasible and the same applies to developing additional services (e.g. cross reference of abstracts published in CLOUT to the citations in the Digests, provide texts or links to national enactments of UNCITRAL Model Laws reported in CLOUT), which would enrich the quality of the system and its database even further. Other projects similar to CLOUT in nature and purpose, implemented by other United Nations agencies, have developed into comprehensive knowledge repositories, supported by quite sophisticated web portals, in which collection and sharing of case law (or legislation, according to the focus of the portal) is one component among various other knowledge products that are made available to the users. Those portals attract an extremely high number of users.

19. While developing similar sophisticated products requires resources that are not immediately available to the Secretariat, the approach on which those projects were built should encourage reflection on how to increase CLOUT's capacity to reach out to higher volumes of interested users and provide them with extensive and varied information on the way UNCITRAL texts are applied across jurisdictions. These features are key to meeting the purpose of the system. In this regard, the Commission might wish to consider the context in which CLOUT was established, i.e. a time in which the desired information on the interpretation of UNCITRAL texts was available to a limited extent, and the current wealth of well-established commercial and non-commercial legal resources (whether online or on paper) on domestic and international case law, including case law that applies UNCITRAL texts, that greatly facilitate access to legal information worldwide.[10] If CLOUT is to remain current with its original purpose, then a further strengthening, or perhaps reorganization, of the system should be explored in order to keep ahead of changes occurring since 1988, allowing CLOUT to evolve into an innovative tool for the promotion of harmonized interpretation of UNCITRAL texts.

20. The Commission may thus wish to consider the most appropriate way forward for CLOUT: whether the system should remain in its current setting, or whether a more contemporary approach would be preferable.

IV. Promotion of uniform interpretation of the United Nations Convention on the Recognition and Enforcement of Foreign Arbitral Awards, 1958 (New York Convention)

21. The publication of the UNCITRAL Secretariat Guide on the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) was announced by the Commission in July 2016 (see para. 197 of A/71/17). The sixteen chapters of the Guide were made publicly accessible in the six official United Nations languages on the website www.newyorkconvention1958.org.[11] The website provides information gathered in the preparation of the Guide and contains freely and publicly available resources on the Convention, including case law from a growing number of jurisdictions as well as a comprehensive bibliography.

22. The website continued to expand, not only by way of increasing the volume of case law published on the application of the Convention, but also by way of adding information about the jurisdictions which have adopted the Convention. At the date of this Secretariat's Note the database included concise background notes on 40 Contracting States,[12] 1,062 original-language decisions, 119 English-language translations, 1,148 summaries of cases, the *travaux préparatoires* and a bibliography on the New York Convention which consists of the most comprehensive directory of publications relating to the application and interpretation of such text (listing

[10] See also H.M. Flechtner, Globalization of Law as Documented in the Law on International Sales of Goods, in PittLaw, Legal Studies Research paper Series Working Paper No. 2010-09, March 2010, p. 543.

[11] The Guide is also accessible on the UNCITRAL website at www.uncitral.org.

[12] A/CN.9/873 referred to concise background notes for 45 Contracting States. Following the website revision in 2016, and in order to ensure consistency, the project coordinators decided not to include reference to Contracting States for which no court decision was available.

811 books and articles from more than 72 countries in 11 different languages; 199 of such publications are directly accessible through hyperlinks).

23. Over the past twelve months, the website continued to renovate its design and its content in order to improve its accessibility on all electronic supports, as well as the efficiency of the research tools it proposes (see also para. 18 of A/CN.9/873).

24. As in previous years, close coordination between the website and the CLOUT system continued to be maintained (see also para. 19, A/CN.9/873). Several cases on the application of the New York Convention were published in both systems, which allowed for such cases to be available in the six official languages of the United Nations.

X. STATUS AND PROMOTION OF UNCITRAL LEGAL TEXTS

Note by the Secretariat on the status of conventions and model laws

(A/CN.9/909)

[Original: English]

1. At its thirteenth session, in 1980, the United Nations Commission on International Trade Law (UNCITRAL) decided[1] that it would consider, at each of its sessions, the status of conventions that were the outcome of work carried out by it.

2. The present note sets forth the status of the conventions and model laws emanating from the work of the Commission. It also shows the status of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958),[2] which, although adopted prior to the establishment of the Commission, is closely related to the work of the Commission in the area of international commercial arbitration.

3. Technical cooperation and assistance activities aimed at promoting the use and adoption of its texts are priorities for UNCITRAL pursuant to a decision taken at its twentieth session (1987).[3] The Secretariat monitors adoption of model laws and conventions.

4. This note indicates the changes since 17 May 2016, when the last annual report in this series (A/CN.9/876) was issued. The information contained herein is current up to 24 April 2017. Authoritative information on the status of the treaties deposited with the Secretary-General of the United Nations, including historical status information, may be obtained by consulting the United Nations Treaty Collection (http://treaties.un.org), and the information on conventions in this note and on the UNCITRAL website (www.uncitral.org) is based on that information. Readers may also wish to contact the Treaty Section of the Office of Legal Affairs of the United Nations (tel.: (+1-212) 963-5047; fax: (+1-212) 963-3693; e-mail: treaty@un.org). Information on the status of conventions and model laws is made available on the UNCITRAL website as detailed tables related to specific texts and as a single table providing an overview of all texts. Information on the status of model laws is updated on the website whenever the Secretariat is informed of a new enactment.

5. This note covers the following texts, incorporating as indicated new treaty actions (the term "action" is used generically to denote the deposit of an instrument of ratification, approval, acceptance, accession, or signature in respect of a treaty, or participation in a treaty as a result of an action to a related treaty, or the withdrawal or modification of a declaration or of a reservation) and enactments of Model Laws based on information received since the last report:

(a) In the area of sale of goods:

Convention on the Limitation Period in the International Sale of Goods (New York, 1974),[4] as amended by the Protocol of 11 April 1980 (Vienna).[5] 23 States parties; unamended: 30 States parties;

United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980).[6] 85 States parties;

(b) In the area of dispute resolution:

Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958).[7] New action by Angola (accession); 157 States parties;

UNCITRAL Model Law on International Commercial Arbitration (1985),[8] with amendments as adopted in 2006.[9] New legislation based on the Model Law has been adopted in Turkmenistan (2016). New legislation based on the Model Law as amended in 2006 has been adopted in the Republic of Korea (2016) and Mongolia (2017);

UNCITRAL Model Law on International Commercial Conciliation (2002).[10] New legislation based on the Model Law has been adopted in Malaysia (2012);

United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (New York, 2014).[11] New actions by Iraq (signature), Netherlands (signature), Canada (ratification) and Switzerland (ratification); 3 States parties;

(c) In the area of government contracting:

UNCITRAL Model Law on Public Procurement (2011);[12]

(d) In the area of banking and payments:

United Nations Convention on International Bills of Exchange and International Promissory Notes (New York, 1988).[13] 5 States parties;

UNCITRAL Model Law on International Credit Transfers (1992);[14]

United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (New York, 1995).[15] 8 States parties;

(e) In the area of security interests:

United Nations Convention on the Assignment of Receivables in International Trade (New York, 2001).[16] 1 State party;

UNCITRAL Model Law on Secured Transactions (2016);

(f) In the area of insolvency:

[11] General Assembly resolution 69/116, annex. On 18 April 2017, the conditions for entry into force of the Convention were met. Accordingly, the Convention shall enter into force on 18 October 2017. For the complete status of this text, see part I, sect. J.

[12] *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17* (A/66/17), annex I. For the complete status of this text, see part II, sect. G.

[13] General Assembly resolution 43/165, annex. The Convention has not yet entered into force; it requires ten States parties for entry into force. For the complete status of this text, see part I, sect. D.

[14] *Official Records of the General Assembly, Forty-seventh Session, Supplement No. 17* (A/47/17), annex I. For the complete status of this text, see part II, sect. B.

[15] United Nations, *Treaty Series*, vol. 2169, No. 38030, p. 163. For the complete status of this text, see part I, sect. F.

[16] General Assembly resolution 56/81, annex. The Convention has not yet entered into force; it requires five States parties for entry into force. For the complete status of this text, see part I, sect. G.

UNCITRAL Model Law on Cross-Border Insolvency (1997).[17] New legislation based on the Model Law has been adopted in the Dominican Republic (2015) and Singapore (2017);

(g) In the area of transport:

United Nations Convention on the Carriage of Goods by Sea (Hamburg, 1978).[18] 34 States parties;

United Nations Convention on the Liability of Operators of Transport Terminals in International Trade (Vienna, 1991).[19] 4 States parties;

United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (New York, 2008).[20] 3 States parties;

(h) In the area of electronic commerce:

UNCITRAL Model Law on Electronic Commerce (1996).[21] New legislation based on the Model Law has been adopted in Malawi (2016); Mozambique (2017) and Fiji (2017);

UNCITRAL Model Law on Electronic Signatures (2001);[22]

United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005).[23] 7 States parties.

6. Previous annual reports in this series also included chronological tables of actions for conventions. To avoid redundancy, this information can now be found on the UNCITRAL website.

7. UNCITRAL texts also include legislative and legal guides and contractual standards whose impact cannot be assessed by reference to their adoption by States.[24] In this regard, part III has been added to this note in an attempt to convey the impact of other selected UNCITRAL texts. Part III includes information on the use by arbitration centres of the UNCITRAL Arbitration Rules,[25] although it should be noted that the full impact of the Rules is difficult to assess since, for example, they are widely applied in ad hoc commercial arbitration where such use is generally not reported. In addition, part III includes information on the impact on investment treaties of the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration (effective date: 1 April 2014).[26]

Parties: 85

[a] This State declared, in accordance with articles 12 and 96 of the Convention, that any provision of article 11, article 29 or Part II of the Convention that allowed a contract of sale or its modification or termination by agreement or any offer, acceptance or other indication of intention to be made in any form other than in writing, would not apply where any party had his place of business in its territory.

[b] This State declared that it would not be bound by paragraph 1 (b) of article 1.

[c] Upon accession, Canada declared that, in accordance with article 93 of the Convention, the Convention would extend to Alberta, British Columbia, Manitoba, New Brunswick, Newfoundland and Labrador, Nova Scotia, Ontario, Prince Edward Island and the Northwest Territories. In a declaration received on 9 April 1992, Canada extended the application of the Convention to Quebec and Saskatchewan. In a notification received on 29 June 1992, Canada extended the application of the Convention to the Yukon Territory. In a notification received on 18 June 2003, Canada extended the application of the Convention to the Territory of Nunavut.

[d] Denmark, Finland, Iceland, Norway and Sweden declared that the Convention would not apply to contracts of sale or to their formation where the parties have their places of business in Denmark, Finland, Iceland, Norway or Sweden.

[e] Upon ratifying the Convention, Germany declared that it would not apply article 1, paragraph 1 (b) in respect of any State that had made a declaration that that State would not apply article 1, paragraph 1 (b).

It should be noted that the principles of the Convention were incorporated into the UNCITRAL Legislative Guide on Secured Transactions (2007).[27] Thus, States that substantially implement the recommendations of the Guide have, at the same time, introduced the principles of the Convention into their domestic law.

[a] Upon signature, Luxembourg lodged the following declaration:
"Pursuant to article 39 of the Convention, the Grand Duchy of Luxembourg declares that it does not wish to be bound by chapter V, which contains autonomous conflict-of-laws rules that allow too wide an application to laws other than those of the assignor and that moreover are difficult to reconcile with the Rome Convention. The Grand Duchy of Luxembourg, pursuant to article 42, paragraph 1 (c), of the Convention, will be bound by the priority rules set forth in section III of the annex, namely those based on the time of the contract of assignment."

Information on jurisdictions enacting at the national level substantive provisions of the Convention is included in the status information for the UNCITRAL Model Law on Electronic Commerce (1996) (see part II, sect. C).

[a] Upon ratification, Singapore declared: The Convention shall not apply to electronic communications relating to any contract for the sale or other disposition of immovable property, or any interest in such property. The Convention shall also not apply in respect of (i) the creation or execution of a will; or (ii) the creation, performance or enforcement of an indenture, declaration of trust or power of attorney, that may be contracted for in any contract governed by the Convention.

[b] Upon acceptance, the Russian Federation declared:
1. In accordance with article 19, paragraph 1, of the Convention, the Russian Federation will apply the Convention when the parties to the international contract have agreed that it applies;
2. In accordance with article 19, paragraph 2, of the Convention, the Russian Federation will not apply the Convention to transactions for which a notarized form or State registration is required under Russian law or to transactions for the sale of goods whose transfer across the Customs Union border is either prohibited or restricted;
3. The Russian Federation understands the international contracts covered by the Convention to mean civil law contracts involving foreign citizens or legal entities, or a foreign element.

[c] Upon ratification, Sri Lanka declared: In accordance with Articles 21 and 19 (para. 2) of the United Nations Convention on the Use of Electronic Communications in International Contracts, the Convention shall not apply to electronic communications or transactions specifically excluded under Section 23 of the Electronic Transactions Act No. 19 of 2006, of Sri Lanka.

Declarations or other notifications pursuant to article I(3) and article X(1)

[a] This State will apply the Convention only to recognition and enforcement of awards made in the territory of another contracting State.

[b] With regard to awards made in the territory of non-contracting States, this State will apply the Convention only to the extent to which those States grant reciprocal treatment.
[c] This State will apply the Convention only to differences arising out of legal relationships, whether contractual or not, that are considered commercial under the national law.
[d] Canada declared that it would apply the Convention only to differences arising out of legal relationships, whether contractual or not, that were considered commercial under the laws of Canada, except in the case of the Province of Quebec, where the law did not provide for such limitation.
[e] On 24 April 1964, the Netherlands declared that the Convention shall apply to the Netherlands Antilles.
[f] On 10 February 1976, Denmark declared that the Convention shall apply to the Faroe Islands and Greenland.
[g] On 24 February 2014, the United Kingdom submitted a notification to extend territorial application of the Convention to the British Virgin Islands. For the following territories, the United Kingdom has submitted notifications extending territorial application and declaring that the Convention shall apply only to the recognition and enforcement of awards made in the territory of another Contracting State: Gibraltar (24 September 1975), Isle of Man (22 February 1979), Bermuda (14 November 1979), Cayman Islands (26 November 1980), Guernsey (19 April 1985), Bailiwick of Jersey (28 May 2002).
[h] Upon resumption of sovereignty over Hong Kong on 1 July 1997, the Government of China extended the territorial application of the Convention to Hong Kong, Special Administrative Region of China, subject to the statement originally made by China upon accession to the Convention. On 19 July 2005, China declared that the Convention shall apply to the Macao Special Administrative Region of China, subject to the statement originally made by China upon accession to the Convention.

Reservations or other notifications

[i] This State formulated a reservation with regards to retroactive application of the Convention.
[j] This State formulated a reservation with regards to the application of the Convention in cases concerning immovable property.

II. Enactments of model laws[28]

A. UNCITRAL Model Law on International Commercial Arbitration (1985), with amendments as adopted in 2006

8. Legislation based on the Model Law has been adopted in 74 States in a total of 105 jurisdictions:

Armenia (2006); Australia (2010[a,c]), in Australian Capital Territory (2017[a]), New South Wales (2010[a]), Northern Territory (2011[a]), Queensland (2013[a]), South Australia (2011[a]), Tasmania (2011[a]), Victoria (2011[a]), and Western Australia (2012[a]); Austria (2006); Azerbaijan (1999); Bahrain (2015); Bangladesh (2001); Belarus (1999); Belgium (2013[a]); Bhutan (2013[a]); Brunei Darussalam (2009[a]); Bulgaria (2002[c]); Cambodia (2006); Canada (1986), in Alberta (1986), British Columbia (1986), Manitoba (1986), New Brunswick (1986), Newfoundland and Labrador (1986), Northwest Territories (1986), Nova Scotia (1986), Nunavut (1999), Ontario (1987), Prince Edward Island (1986), Quebec (1986), Saskatchewan (1988), and Yukon (1986); Chile (2004); China, in Hong Kong, China (2010[a,c]) and Macao, China (1998); Costa Rica (2011[a]); Croatia (2001); Cyprus (1987); Denmark (2005); Dominican Republic (2008); Egypt (1994); Estonia (2006); Georgia (2009[a]); Germany (1998); Greece (1999); Guatemala (1995); Honduras (2000); Hungary (1994); India (1996); Iran (Islamic Republic of) (1997); Ireland (2010[a,c]); Japan (2003); Jordan (2001); Kenya (1995); Lithuania (2012[a,c]); Madagascar (1998); Malaysia (2005); Maldives (2013); Malta (1996); Mauritius (2008[a]); Mexico (1993); Mongolia (2017[a]); Montenegro (2015); Myanmar (2016); New Zealand (2007[a,c]); Nicaragua (2005); Nigeria (1990); Norway (2004); Oman (1997); Paraguay (2002); Peru (2008[a,c]); Philippines (2004); Poland (2005); Republic of Korea (2016[a,c]); Russian Federation

[28] Since States enacting legislation based upon a model law have the flexibility to depart from the text, these lists are only indicative of the enactments that were made known to the UNCITRAL Secretariat. The legislation of each State should be considered in order to identify the exact nature of any possible deviation from the model in the legislative text that was adopted. The year of enactment provided in this note is the year the legislation was passed by the relevant legislative body, as indicated to the UNCITRAL Secretariat; it does not address the date of entry into force of that piece of legislation, the procedures for which vary from State to State, and could result in entry into force some time after enactment. In addition, there may be subsequent amending or repealing legislation that has not been made known to the UNCITRAL Secretariat.

(1993); Rwanda (2008[a]); Serbia (2006); Singapore (1994[d]); Slovakia (2014); Slovenia (2008[a]); Spain (2003); Sri Lanka (1995); Thailand (2002); the former Yugoslav Republic of Macedonia (2006); Tunisia (1993); Turkey (2001); Turkmenistan (2016); Uganda (2000); Ukraine (1994); United Kingdom of Great Britain and Northern Ireland, in Bermuda (1993[b]), British Virgin Islands (2013[a,b]), and Scotland (1990); United States of America, in California (1988), Connecticut (1989), Florida (2010[a]), Georgia (2012), Illinois (1998), Louisiana (2006), Oregon (1991), and Texas (1989); Venezuela (Bolivarian Republic of) (1998); Zambia (2000); and Zimbabwe (1996).

[a] Indicates legislation based on the text of the UNCITRAL Model Law on International Commercial Arbitration with amendments as adopted in 2006.
[b] Overseas territory of the United Kingdom of Great Britain and Northern Ireland.
[c] The legislation amends previous legislation based on the Model Law.
[d] The legislation has been further amended in 2001, 2003, 2005 and 2009.

B. UNCITRAL Model Law on International Credit Transfers (1992)

9. A directive of the European Parliament and of the Council of the European Union based on the principles of the UNCITRAL Model Law on International Credit Transfers was issued on 27 January 1997.

C. UNCITRAL Model Law on Electronic Commerce (1996)

10. Legislation based on or influenced by the Model Law has been adopted in 69 States in a total of 145 jurisdictions:

Antigua and Barbuda (2006[d]); Australia (2011[e,h]), in Australian Capital Territory (2012[e,h]), New South Wales (2010[e,h]), Northern Territory (2011[e, h]), Queensland (2013[e,h]), South Australia (2011[e,h]), Tasmania (2010[e,h]), Victoria (2011[e,h]), and Western Australia (2011[e,h]); Bahamas (2003); Bahrain (2002); Bangladesh (2006[a,d]); Barbados (2001); Belize (2003); Bhutan (2006); Brunei Darussalam (2000); Canada, in Alberta (2001[b]), British Columbia (2001[b]), Manitoba (2000[b]), New Brunswick (2001[b]), Newfoundland and Labrador (2001[b]), Northwest Territories (2011[b]), Nova Scotia (2000[b]), Nunavut (2004[b]), Ontario (2001[b]), Prince Edward Island (2001[b]), Quebec (2001[d]), Saskatchewan (2000[b]), and Yukon (2000[b]); Cape Verde (2003); China (2004), in Hong Kong, China (2000), and Macao, China (2005[d, h]); Colombia (1999[a]); Dominica (2013[e]); Dominican Republic (2002[a]); Ecuador (2002[a]); El Salvador (2015[d]); Fiji (2017[e]); France (2000); Gambia (2009[e]); Ghana (2008[e]); Grenada (2008); Guatemala (2008[e]); Honduras (2015); India (2000[a]); Iran (Islamic Republic of) (2004); Ireland (2000); Jamaica (2006); Jordan (2001); Kuwait (2014[a,d]); Lao People's Democratic Republic (2012[a]); Liberia (2002[a]); Madagascar (2014[e]); Malawi (2016[e]); Malaysia (2006); Mauritius (2000); Mexico (2000); Mozambique (2017[e]); New Zealand (2002); Oman (2008[a]); Pakistan (2002); Panama (2001[a]); Paraguay (2010); Philippines (2000); Qatar (2010[e]); Republic of Korea (1999); Rwanda (2010[e]); Saint Kitts and Nevis (2011[e]); Saint Lucia (2011); Saint Vincent and the Grenadines (2007); Samoa (2008); San Marino (2013[e]); Saudi Arabia (2007); Seychelles (2001[a]); Singapore (2010[e,h]); Slovenia (2000); South Africa (2002[a]); Sri Lanka (2006); Syrian Arab Republic (2014[a,d]); Thailand (2002); Trinidad and Tobago (2011[e]); United Arab Emirates (2006); United Kingdom of Great Britain and Northern Ireland, in Bailiwick of Guernsey (2000[f]), Bailiwick of Jersey (2000[f]), Bermuda (1999[g]), Cayman Islands (2000[g]), Isle of Man (2000[f]), Montserrat (2009[g]), and the Turks and Caicos Islands (2000[g]); United Republic of Tanzania (2015[e]); United States of America, in Alabama (2001[c]), Alaska (2004[c]), Arizona (2000[c]), Arkansas (2001[c]), California (1999[c]), Colorado (2002[c]), Connecticut (2002[c]), Delaware (2000[c]), District of Columbia (2001[c]), Florida (2000[c]), Georgia (2009[c]), Hawaii (2000[c]), Idaho (2000[c]), Illinois (1998), Indiana (2000[c]), Iowa (2000[c]), Kansas (2000[c]), Kentucky (2000[c]), Louisiana (2001[c]), Maine (2000[c]), Maryland (2000[c]), Massachusetts (2003[c]), Michigan (2000[c]), Minnesota (2000[c]), Mississippi (2001[c]), Missouri (2003[c]), Montana (2001[c]), Nebraska (2000[c]), Nevada (2001[c]), New Hampshire (2001[c]), New Jersey (2000[c]), New Mexico (2001[c]), North Carolina (2000[c]), North Dakota (2001[c]),

Ohio (2000[c]), Oklahoma (2000[c]), Oregon (2001[c]), Pennsylvania (1999[c]), Rhode Island (2000[c]), South Carolina (2004[c]), South Dakota (2000[c]), Tennessee (2001[c]), Texas (2001[c]), Utah (2000[c]), Vermont (2003[c]), Virginia (2000[c]), West Virginia (2001[c]), Wisconsin (2004[c]), and Wyoming (2001[c]); Vanuatu (2000); Venezuela (Bolivarian Republic of) (2001); Viet Nam (2005[e]); and Zambia (2009[e]).

[a] Except for the provisions on electronic signatures.
[b] The legislation enacts uniform legislation influenced by the Model Law and the principles on which it is based, namely, the Uniform Electronic Commerce Act, adopted in 1999 by the Uniform Law Conference of Canada.
[c] The legislation enacts uniform legislation influenced by the Model Law and the principles on which it is based, namely, the Uniform Electronic Transactions Act, adopted in 1999 by the National Conference of Commissioners on Uniform State Law.
[d] The legislation is influenced by the Model Law and the principles on which it is based.
[e] The legislation also includes substantive provisions of the United Nations Convention on the Use of Electronic Communications in International Contracts, the status of which can be found in part I, sect. H.
[f] Crown Dependency of the United Kingdom of Great Britain and Northern Ireland.
[g] Overseas territory of the United Kingdom of Great Britain and Northern Ireland.
[h] The legislation amends previous legislation based on the Model Law.

D. UNCITRAL Model Law on Cross-Border Insolvency (1997)

11. Legislation based on the Model Law has been adopted in 43 States in a total of 45 jurisdictions:

Australia (2008); Benin (2015[b]); Burkina Faso (2015[b]); Cameroon (2015[b]); Canada (2005); Central African Republic (2015[b]); Chad (2015[b]); Chile (2014); Colombia (2006); Comoros (2015[b]); Congo (2015[b]); Côte d'Ivoire (2015[b]); Democratic Republic of the Congo (2015[b]); Dominican Republic (2015); Equatorial Guinea (2015[b]); Gabon (2015[b]); Greece (2010); Guinea (2015[b]); Guinea-Bissau (2015[b]); Japan (2000); Kenya (2015); Malawi (2015); Mali (2015[b]); Mauritius (2009); Mexico (2000); Montenegro (2002); New Zealand (2006); Niger (2015[b]); Philippines (2010); Poland (2003); Republic of Korea (2006); Romania (2002); Senegal (2015[b]); Serbia (2004); Seychelles (2013); Singapore (2017); Slovenia (2007); South Africa (2000); Togo (2015[b]); Uganda (2011); United Kingdom of Great Britain and Northern Ireland, in Great Britain (2006), Gibraltar (2014[a]), and the British Virgin Islands (2003[a]); United States of America (2005); and Vanuatu (2013).

[a] Overseas territory of the United Kingdom of Great Britain and Northern Ireland.
[b] Enacting the *Acte uniforme portant organisation des procédures collectives d'apurement du passif* (OHADA), adopted on 10 September 2015 at Grand-Bassam, Côte d'Ivoire.

E. UNCITRAL Model Law on Electronic Signatures (2001)

12. Legislation based on or influenced by the Model Law has been adopted in 32 States:

Antigua and Barbuda (2006); Barbados (2001); Bhutan (2006); Cape Verde (2003); China (2004); Colombia (2012); Costa Rica (2005[a]); Gambia (2009); Ghana (2008); Grenada (2008); Guatemala (2008); Honduras (2013); India (2009[a]); Jamaica (2006); Madagascar (2014); Mexico (2003); Nicaragua (2010[a]); Oman (2008[a]); Paraguay (2010); Qatar (2010); Rwanda (2010); Saint Kitts and Nevis (2011); Saint Lucia (2011); Saint Vincent and the Grenadines (2007); San Marino (2013); Saudi Arabia (2007[a]); Thailand (2001); Trinidad and Tobago (2011); United Arab Emirates (2006); United Kingdom of Great Britain and Northern Ireland, in Montserrat (2009[b]); Viet Nam (2005); and Zambia (2009).

[a] The legislation is influenced by the Model Law and the principles on which it is based.
[b] Overseas territory of the United Kingdom of Great Britain and Northern Ireland.

F. UNCITRAL Model Law on International Commercial Conciliation (2002)

13. Legislation based on or influenced by the Model Law has been adopted in 16 States in a total of 28 jurisdictions:

Albania (2011[d]); Belgium (2005); Bhutan (2013); Canada, in Nova Scotia (2005[b]), and Ontario (2010[b]); Croatia (2003); France (2011[c]); Honduras (2000); Hungary (2002); Luxembourg (2012); Malaysia (2012); Montenegro (2005[c]); Nicaragua (2005); Slovenia (2008); Switzerland (2008[c]); the former Yugoslav Republic of Macedonia (2009); and United States of America, in District of Columbia (2006[a]), Hawaii (2013[a]); Idaho (2008[a]), Illinois (2004[a]), Iowa (2005[a]), Nebraska (2003[a]), New Jersey (2004[a]), Ohio (2005[a]), South Dakota (2007[a]), Utah (2006[a]), Vermont (2005[a]), and Washington (2005[a]).

[a] The legislation enacts uniform legislation influenced by the Model Law and the principles on which it is based, namely, the Uniform Mediation Act, adopted in 2001 (amended in 2003) by the National Conference of Commissioners on Uniform State Laws.

[b] The legislation enacts uniform legislation influenced by the Model Law and the principles on which it is based, namely, the Uniform [International] Commercial Mediation Act, adopted in 2005 by the Uniform Law Conference of Canada.

[c] The legislation is influenced by the Model Law and the principles on which it is based.

[d] The legislation amends previous legislation based on the Model Law.

G. UNCITRAL Model Law on Public Procurement (2011)[29]

14. The UNCITRAL Model Law on Public Procurement as adopted in 2011 forms the basis of or is reflected in the public procurement laws and regulations in the following States. These States have used the Model Law and accompanying Guide to Enactment in reforming their public procurement law and systems, though the extent to which the resulting regulatory framework incorporates the provisions of the Model Law varies, as that framework also reflects legal traditions, domestic policy and other objectives:

Afghanistan, Armenia, Belarus, Egypt, Ghana, India, Jamaica, Kazakhstan, Kenya, Kyrgyzstan, Mexico, Mongolia, Myanmar, Russian Federation, Rwanda, Tajikistan, Trinidad and Tobago, Tunisia, Ukraine, Uganda, United Republic of Tanzania, Uzbekistan and Zambia.

15. The following organizations use the Model Law and accompanying Guide to Enactment as a benchmark for public procurement law reform in countries of their operation:

African Development Bank, Asian Development Bank, European Bank for Reconstruction and Development, Inter-American Development Bank, Organization for Economic Cooperation and Development and the World Bank.

III. Status of other UNCITRAL texts

A. UNCITRAL Arbitration Rules

16. The following table presents a non-exhaustive list of arbitration centres which (i) have institutional rules based on, or inspired by, the UNCITRAL Arbitration Rules,

[29] The UNCITRAL Model Law on Public Procurement (2011) is a revision of the UNCITRAL Model Law on Procurement of Goods, Construction and Services (1994), *Official Records of the General Assembly, Forty-ninth Session, Supplement No. 17* and corrigendum (A/49/17 and Corr.1), annex I. Historical status information on the UNCITRAL Model Law on Procurement of Goods, Construction and Services (1994) is available on the UNCITRAL website, www.uncitral.org/uncitral/uncitral_texts/procurement_infrastructure.html.

(ii) administer arbitral proceedings or provide administrative services under the Rules, and/or (iii) act as an appointing authority under the Rules.[30]

State	*Name of the arbitration centre*	*With institutional Rules based on or inspired by the UNCITRAL Arbitration Rules*	*Administering arbitral proceedings under the UNCITRAL Arbitration Rules or providing some administrative services*	*Acting as appointing authority under the UNCITRAL Arbitration Rules*

XI. COORDINATION AND COOPERATION

Note by the Secretariat on coordination activities

(A/CN.9/908)

[Original: English]

Contents

I. Introduction

1. In resolution 34/142 of 17 December 1979, the General Assembly requested the Secretary-General to place before the United Nations Commission on International Trade Law a report on the legal activities of international organizations in the field of international trade law, together with recommendations as to the steps to be taken by the Commission to fulfil its mandate of coordinating the activities of other organizations in the field.

2. In resolution 36/32 of 13 November 1981, the General Assembly endorsed various suggestions by the Commission to implement further its coordinating role in the field of international trade law.[1] Those suggestions included presenting, in addition to a general report of activities of international organizations, reports on specific areas of activity focusing on work already under way and areas where unification work was not under way but could appropriately be undertaken.[2]

3. This report, prepared in response to resolution 34/142 and in accordance with UNCITRAL's mandate,[3] provides information on the activities of other international organizations active in the field of international trade law in which the UNCITRAL secretariat has participated. Most of such activities have included provision of comments on documents drafted by those organizations and participation in various meetings (e.g. working groups, expert groups and plenary meetings) and conferences. The purpose of that participation has been to ensure coordination of the related activities of the different organizations, share information and expertise and avoid duplication of work and the resultant work products.

4. The Commission may wish to note the increasing involvement of the Secretariat in initiatives of other organizations. This is a recurrent pattern in recent years, consistent with the increase in the Secretariat's technical assistance activities,[4] and is expected to continue and even increase in the future.

II. Coordination activities

A. The International Institute for the Unification of Private Law and the Hague Conference on Private International Law

International Institute for the Unification of Private Law (Unidroit)

5. The Secretariat attended the Unidroit Governing Council and the Conference on "The United Nations Conventions on Contracts for the International Sales of Goods CISG and Unidroit Principles of International Commercial Contracts: Contrast and Convergence", which was held as part of the Governing Council (Rome, 18-20 May 2016).

6. The Secretariat participated in the First Session of the Committee of Governmental Experts on the Mining, Agriculture and Construction Equipment Protocol of the Cape Town Convention on International Interests in Mobile Equipment (Rome, 20-24 March 2017).

Hague Conference on Private International Law (HccH)

7. The Secretariat participated in the following activities of the HccH:

(a) The HccH Special Commission on the Judgments Project for purposes of coordinating the work being done by UNCITRAL on recognition and enforcement of insolvency-related judgments, which draws on work being done by the HccH, in order to ensure consistency between the two instruments (The Hague, the Netherlands, 6-9 June 2016 and 20-24 February 2017);

(b) A conference organized by the HccH and the University of Lucerne at which the relevance of The Hague principles on choice of law in international commercial contracts was discussed (Lucerne, Switzerland, 8-9 September 2016); and

(c) The Council on General Affairs and Policy (The Hague, the Netherlands, 14-16 March 2017).

Joint activities with Unidroit and HccH

8. At its fiftieth session, the Commission will hear a report on the Secretariat's cooperation in the area of international commercial contract law (with a focus on sales) with the secretariats of the HccH and Unidroit (see also A/CN.9/892 and A/CN.9/875).

B. Other organizations

9. In addition to its participation in initiatives of Unidroit and HccH, the Secretariat undertook coordination activities with various other international organizations.

1. General

10. In the context of a potential collaboration with the UNALEX project, which is sponsored by the European Commission, the Secretariat participated in a round table (Zagreb, 29 September 2016) and a conference (Genoa, Italy, 24 February 2017) organized by that project. At both events, the collection and sharing of uniform case law were discussed, among other topics. The UNALEX project is quite similar in nature and structure to CLOUT. Although it emphasizes collecting and sharing decisions on private international and civil procedural law, mainly from European jurisdictions, the project also includes in its database several cases on the United Nations Convention on Contracts for the International Sale of Goods (CISG, 1980) as a result of an informal collaboration with CLOUT.

11. The Secretariat continued its involvement in the Inter-Agency Cluster on Trade and Productive Capacity and took part (remote participation) in the annual meeting of the Cluster (17 October 2016) at which follow-up actions in relation to the

establishment of a Global Multi Donor Trust Fund on Trade and Productive Capacity were further discussed (see also A/CN.9/875, para. 11).

12. The Secretariat attended meetings at the World Bank and International Law Institute and, as in the previous years, participated in the annual meeting of the United States State Department Advisory Committee on Private International Law (Washington, D.C., 14-17 November 2016).

13. The Secretariat participated in the 2016 United Nations Forum on Business and Human Rights hosted by the Office of the High Commissioner for Human Rights (OHCHR), at which it presented on UNCITRAL experience in public procurement (Geneva, Switzerland, 16 November 2016).

14. The Secretariat continued to be involved in the Global Forum on Law, Justice and Development (GFLJD), a permanent global forum, established at the initiative of the World Bank that aims to exchange and disseminate innovative legal solutions for development.[5] As in previous years (see also A/CN.9/875), the Secretariat attended the Law, Justice and Development Week organized by GFLJD at which it appeared as a panelist in a session on sustainable procurement and moderated two sessions, one on public procurement and development and one on public-private partnerships contracts and the Sustainable Development Goals (Washington, D.C., 5-9 December 2016).

Rule of Law

15. The Secretariat remained engaged in the Inter-Agency Task Force (IATF) on Financing for Development (FfD), convened by the Secretary-General to: (a) review progress in implementing the Addis Ababa Action Agenda (AAAA); and (b) advise the intergovernmental follow-up process thereon. In this context, the Secretariat contributed to tracking the progress of the implementation of the AAAA sustainable development goals as they are relevant to the work of UNCITRAL through provision of material for inclusion in the Annex to the 2017 IATF report (in a draft format at the date of this Note).

16. The web page on the Sustainable Development Goals, available on the UNCITRAL website,[6] became operational in all six official United Nations languages (see also A/CN.9/875, para. 20).

17. The Secretariat brought to the attention of the United Nations Legal Counsel the Guidance Note on strengthening United Nations support to States, upon their request, to implement sound commercial law reforms, endorsed by the Commission at its forty-ninth session, in 2016.[7] The Secretariat requested the Legal Counsel to make the Guidance Note a subject of discussion at such United Nations coordination mechanisms as: the United Nations System Chief Executives Board for Coordination (CEB); Rule of Law Coordination and Resource Group (ROLCRG); United Nations Development Group (UNDG); United Nations regional coordinator system and country teams (UNRC and UNCTs) and the United Nations Peacebuilding Commission. The Secretariat also requested the Legal Counsel to bring the Guidance Note to the attention of participants at coordination meetings of legal advisers hosted by the Legal Counsel (e.g. annual meetings of Field Legal Officers; of Legal Advisors and Legal Liaison Officers of the United Nations Offices, Funds and Programs and of Legal Advisors of the Specialised, Related and other Organisations of the United Nations System). This request was made pursuant to the request of the Commission and the General Assembly to the Secretary-General to circulate the Guidance Note as

[5] As explained in A/CN.9/838 para. 11, GFLJD is intended to spur both South-South and North-South collaboration and its multidisciplinary activities address economic, legal and technical dimensions of the targeted issues. The UNCITRAL secretariat was appointed as co-leader of the Law and Economy Working Group, with effect from September 2014 (see also A/CN.9/875, para. 12).

[6] See http://www.uncitral.org/uncitral/en/about/SDGs/Sustainable_Development_Goals.html.

[7] *Official Records of the General Assembly, Seventy-first session, Supplement No. 17* (A/71/17), Annex II.

broadly as possible to its intended users.[8] In that respect, the General Assembly recalled its resolutions stressing the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building and welcomed the efforts of the Secretary-General to ensure greater coordination and coherence among United Nations entities and with donors and recipients. The Guidance Note was also made available on the UNCITRAL website in all six official United Nations languages.[9]

2. Micro, small and medium-sized enterprises (MSMEs)

18. The Secretariat continued to encourage participation and dialogue in respect of UNCITRAL work on micro, small and medium-sized enterprises (MSMEs, Working Group I) through its participation in the 2017 Corporate Registers Forum (CFR) as well as presenting the latest developments of UNCITRAL work on business registration at such Conference. The Conference is an important annual event that gathers business registrars from all over the world (Hong Kong SAR, China, 7-10 March 2017).

3. Procurement

19. The Secretariat was actively involved in a policy dialogue between the WTO GPA Secretariat and the member States of the Eurasian Economic Union (EAEU) (Armenia, Belarus, Kazakhstan, the Kyrgyz Republic and the Russian Federation) under the EBRD GPA Technical Cooperation Facility[10] established for the purpose of facilitating accession of those countries to the WTO GPA. The Secretariat was requested to provide the expert input on aspects of harmonization of procurement-related provisions of the EAEU Treaty,[11] the CIS Protocol on Public Procurement and procurement legislation of the EAEU member States with the WTO GPA. The Secretariat participated at technical expert meetings on that matter (Podgorica, 6 May 2016,* [12] Geneva, Switzerland, 20 June 2016, and London, 19 April 2017. The Secretariat continues being engaged in EBRD-led coordination with UNCITRAL, the WTO GPA Secretariat, the European Commission and the Open Contracting Partnership[13] on standardizing procurement data collection in electronic procurement systems. In that context, the Secretariat was requested to provide expert input to the discussion of the need for harmonization of requirements for the minimum content of procurement notices and records of procurement proceedings. The Secretariat participated at coordination meetings on that matter (Paris, 5 December 2016 and London, 20 April 2017).

20. At its forty-ninth session, in 2016, the Commission instructed the Secretariat to consider updating where necessary all or parts of the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects, involving experts.[14] Therefore, the Secretariat hosted two in-person meetings, one in Washington, D.C., (5-7 December 2016 (contemporaneously with the Global Forum on Law, Justice and Development, see para. 14 above)) and one held in Vienna (6-7 March 2017). At those meetings, it was concluded that the recommendations of the existing text reflects good policy and practices, and remains relevant. However, limited revisions to update the PFIPs texts are considered necessary, in order to take account of developments in practice since the existing Legislative Guide was issued in 2000 (for further detail, see A/CN.9/912).

[14] See *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), paras. 359-360 and 362.

21. The Secretariat also issued the second *Call2Action* for the promotion of the UNCITRAL Model Law on Public Procurement (2011) on the occasion of the International Anti-Corruption Day (9 December 2016), joining the global United Nations campaign #UnitedAgainstCorruption, and considering that the Model Law was specifically designed to implement the procurement-related provisions in the United Nations Convention against Corruption (UNCAC, New York, 2003). The campaign was launched in English, Korean, Chinese and Bahasa Indonesia on all RCAP's social media platforms.

22. In addition, the Secretariat participated in the following coordination meetings:

(a) The Conference of the States Parties to UNAC organized by the United Nations Office on Drugs and Crimes (UNODC) (Vienna, 22-23 August 2016); and

(b) The World Bank 2016 E-Procurement Forum on "Moving Forward with E-Procurement". The main objective of the Forum was to provide an opportunity to public procurement agencies from participating developing countries in Europe and Central Asia to share their latest experiences and practices in E-Procurement (Berlin, 13-15 December 2016).

23. The Secretariat reviewed or provided comments on: (a) public-private partnerships in procurement to UNECE (ongoing, April 2016 and January 2017); (b) the UNDP Bangkok Hub Guidance Note on Integrity Risk management in Public Procurement (August-September 2016); and (c) an OECD taxonomy of trade affecting measures in government procurement processes (ongoing since autumn 2016). The Secretariat also provided inputs to UNODC publications and activities related to article 9 of UNCAC.[15]

4. Dispute settlement

24. In line with the decision of the Commission that the Secretariat should continue to coordinate with organizations in relation to the various types of arbitration to which UNCITRAL standards were applicable, and to closely monitor developments, further exploring areas for cooperation and coordination, the Secretariat activities in the area of international commercial arbitration and conciliation included participation in various meetings, and consultation with international organizations, in particular in relation to the preparation of possible future work topics on the agenda of the Commission. As mentioned in document A/CN.9/916, the Secretariat coordinated with the International Council for Commercial Arbitration (ICCA) regarding possible work on ethics in international arbitration. The Secretariat also consulted with the International Court of Arbitration of the International Chamber of Commerce on the topic. The Secretariat organized consultations with intergovernmental organizations in relation to possible work on a reform of investor-State dispute settlement, which included consulting UNCTAD, OECD, ICSID, the Permanent Court of Arbitration (PCA), as highlighted in document A/CN.9/917. The Secretariat also took part in meetings of the subcommittee of the International Bar Association (IBA) on investment arbitration.

25. In addition, the Secretariat coordinated with arbitral institutions which expressed interest in using the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration in conjunction with their own rules.

26. The Secretariat continued its coordination with the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ)[16] GmbH to support a new project, "Application of International Arbitration Standards in South-East Europe" within the Framework of the Open Regional Fund for South-East Europe-Legal Reform (ORF-LR). The project aims both at facilitating increased participation of selected South-East Europe States in UNCITRAL work on dispute resolution and to promote the use of the

[15] E.g. the preparation of the publication "Procurement and Corruption in Small Island Developing States" (available at https://www.unodc.org/documents/corruption/Publications/2016/V1608451.pdf) and retreats and other events organized by UNODC in the context of the review of the implementation of article 9 of UNCAC.

[16] On behalf of the German Federal Ministry for Economic Cooperation and Development (BMZ).

recently adopted UNCITRAL Transparency Rules in Treaty-based Investor-State Arbitration (Transparency Rules) in the region.

27. The Secretariat also took part in the following meetings:

(a) An informal meeting with ICCA to consider further collaboration with that organization in particular for the promotion of arbitration in Africa (New York, 8 July 2016);

(b) A round table jointly organized by the World Economic Forum and International Centre for Trade and Sustainable Development (ICTSD) on the new G20 Guiding Principles for Global Investment Policy-making (Geneva, Switzerland, 7 November 2016); and

(c) A meeting to discuss the scope of substantive investment protection standards under the Energy Charter Treaty (Brussels, 26-27 January 2017).

5. Electronic commerce

28. UNCITRAL became a partner of the UNCTAD "eTrade for All" initiative. eTrade for All is a multi-stakeholder initiative aimed to improve the ability of developing countries and countries with economies in transition to use and benefit from e-commerce. It is a demand-driven mechanism in which leading development partners cooperate with the private sector to pool capabilities and resources. The goals of the initiative are: to raise awareness of opportunities, challenges and solutions related to leveraging e-commerce; to mobilize and rationalize financial and human resources to implement e-commerce projects in developing countries; and to strengthen coherence and synergies among partners' activities with a view to avoiding duplication of work and enhancing aid efficiency. The main tool of the initiative is the eTrade for All Online Platform,[17] which aims to help developing countries and donors navigate the supply of and demand for support to e-commerce development, to learn about trends and best practices, and to raise visibility for the various partners' initiatives and resources.

29. In addition:

(a) The Secretariat attended (remote participation) the first meeting of the Working Group on E-Commerce (WGEC) of the World Customs Organization (WCO) participating in the panel "E-commerce: perspectives from other international bodies" (Brussels, 21-23 September 2016); and

(b) In the context of the 29th UN/CEFACT Forum, the Secretariat co-organized with the UN/CEFACT Bureau a Mini Conference on "Ensuring Legally Significant Trusted Transboundary Electronic Interaction", at which it presented on UNCITRAL texts relevant to cross-border recognition of e-signatures and electronic identity management as well as the ongoing work of Working Group IV (Geneva, Switzerland, 29 March 2017).

Part Three

ANNEXES

I. SUMMARY RECORDS OF THE MEETINGS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW

Summary record (partial) of the 1047th meeting held at the Vienna International Centre, Vienna, on Monday, 3 July 2017, at 10 a.m.

[A/CN.9/SR.1047]

Chair: Mr. Martonyi (Hungary)

The discussion covered in the summary record began at 11.20 a.m.

Micro, small and medium-sized enterprises: progress report of Working Group I (A/CN.9/895 and A/CN.9/900)

1. **Ms. Lannan (**Secretariat), introducing documents A/CN.9/895 and A/CN.9/900, recalled that the Working Group was continuing its work on two legal texts, namely a legislative guide on the creation of a simplified business entity and a legislative guide on key principles of a business registry, which were aimed at reducing the legal obstacles faced by micro, small and medium-sized enterprises both at the beginning of and throughout their life cycle, particularly in developing economies.

2. **Mr. Mishkorudny (Belarus)** said that his country was grateful to Working Group I for its efforts to gather information on States' experience of regulating and improving the mechanisms for the activities of micro, small and medium-sized enterprises. Belarus also attached significance to the work on simplifying administrative procedures, on improving the conditions for conducting business and on protecting the rights and best interests of such enterprises.

3. The Government of Belarus supported the drafting of an UNCITRAL legislative guide on key principles of a business registry and, in order to improve the State trade registry of Belarus by making legal persons and individual entrepreneurs more readily traceable, and to harmonize domestic legislation regulating the operation of micro, small and medium-sized enterprises, frequently referred to the data prepared by the Working Group to facilitate the cross-border exchange of information.

4. **Mr. Gazarian** (Russian Federation) noted with appreciation the work of Working Group I on the draft legislative guide on key principles of a business registry. His country supported continued work on the draft guide and commentary with a view to its adoption by the Commission at its fifty-first session. It was necessary to establish a straightforward and comprehensible system that would promote the registration and operation of micro, small and medium-sized enterprises, taking into account the interests both of States and of stakeholders in commerce and trade.

5. **Mr. Apter** (Israel) said that his delegation also welcomed the work of Working Group I and looked forward to further discussions on establishing common ground with respect to good practices in business registration and the simplification of incorporation. He was confident that the deliberations would result in productive outcomes that would facilitate the life cycle of micro, small and medium-sized enterprises. His country's experts had learned extensively from the experience of other States participating in the discussions, and would continue to share the experience of Israel with regard to the issues being considered by the Working Group.

6. **Ms. Fernandez** (Chile) expressing appreciation for the progress made by the Working Group, said that her delegation would like to see the topics under consideration linked more closely to the work of other groups, such as the work of Working Group V on insolvency law. That would facilitate joint action by States and thus ensure genuine development. It would also be useful to advance work on those topics at the same pace in other forums. In that regard, Chile was to coordinate a dialogue on micro, small and medium-sized enterprises at a World Trade Organization meeting to be held in December 2017. Such joint action, which had always been underscored by UNCITRAL, should also be emphasized in other forums.

7. **Mr. Won** (Republic of Korea) said that UNCITRAL had provided sensible solutions in relation to various cross-border transactions. The UNCITRAL mandate extended to the establishment of enabling environments for rule-based business, investment and trade as critical elements of conflict prevention, post-conflict reconstruction and the promotion of the rule of law and governance in commercial relations. His delegation highlighted the importance to the majority of developing economies of micro, small and medium-sized enterprises, which had limited experience of cross-border trade and limited access to legal advice. The recent efforts of UNCITRAL to provide States with a platform to achieve economic diversification, financial inclusion and resilience to economic crises could facilitate commercial and especially cross-border activities while reducing transaction costs and commercial risks. The world had become so unprecedentedly interconnected that no country or business stood alone; the dimensions and implications of international trade were constantly growing. UNCITRAL could play a leading role in helping States to cope with the globalized and interconnected economy by enhancing transparency and predictability and

encouraging increased cooperation and rule-based conduct by the international community.

8. **Ms. Sekhar** (India) expressed support for the work of Working Group I, in particular on the draft legislative guide on simplified business entities and on reducing the legal obstacles faced by micro, small and medium-sized enterprises. Her country encouraged the Working Group to ensure that its work had a broad impact and that it could assist enterprises of all sizes in the future.

9. **Mr. Marquez García** (Colombia) said that his country greatly valued the work of Working Group I, in which it hoped to continue to participate and share its experience.

Insolvency law: progress report of Working Group V (A/CN.9/898 and A/CN.9/903)

10. **Ms. Clift** (Secretariat), introducing the agenda item, said that in the area of recognition and enforcement of insolvency-related judgments, the Working Group had made good progress in developing a model law, a draft of which was annexed to document A/CN.9/903. Outstanding issues included the final definition of "insolvency-related judgment", the relationship between the draft model law and the UNCITRAL Model Law on Cross-Border Insolvency and one of the grounds for refusal of recognition. She hoped that the draft model law and its guide to enactment would be finalized at the Working Group's fifty-second session so that it could be circulated to States for comment early in 2018, with a view to subsequent adoption by the Commission.

11. Good progress had been made on drafting a set of legislative provisions on facilitating the cross-border insolvency of multinational enterprise groups. Chapter 2 of the draft legislative provisions, on cooperation and coordination, chapter 3 on the conduct of a planning proceeding in the enacting State and chapter 4 on recognition of a foreign planning proceeding and relief were well developed. The discussions on chapter 5 on the treatment of foreign claims, which included a number of optional articles, had to some extent clarified the policy considerations to be addressed, but more work was required to clarify and simplify the draft. Given the complexity of the subject matter, the text would need to be accompanied by a guide to enactment. While the draft provisions might be sufficiently developed for consideration by the Commission in 2018, it was unlikely that the guide to enactment would be completed for consideration at the same time.

12. Regarding the obligations of directors of enterprise group members in the period approaching insolvency, the text supplementing part four of the UNCITRAL Legislative Guide on Insolvency Law was almost completed but would be held in abeyance pending the outcome of the work on enterprise group insolvency. Some elements of directors' obligations relating to enterprise group members might need to be revised in light of the enterprise group text. If that text was developed sufficiently to enable its completion and adoption in 2018, the text on directors' obligations could also be completed and adopted at the same time.

13. The Working Group had not yet addressed in substance the topic of insolvency treatment of micro, small and medium-sized enterprises. The conclusions resulting from the very helpful preliminary discussion held at its fifty-first session, supplemented by presentations by States and international organizations, were set out in document A/CN.9/903, paragraph 14. Given the work on the agenda of the Working Group and the likelihood that the work on insolvency-related judgments and enterprise groups would not be completed until 2018, it was unlikely that that topic would be taken up before the second half of 2018 or early 2019.

14. **Mr. Schnabel** (United States of America) said that the two very complex projects handled by the Working Group might represent some of the Commission's most significant work over the preceding two decades, and he encouraged the Working Group to continue to take an ambitious approach in completing the two instruments that had been developed. The model law on the recognition and enforcement of insolvency-related judgments would provide a broad framework for the circulation of judgments relevant to the insolvency estate, thereby helping to reduce wasteful relitigation and permit easier gathering of assets by the State and ultimately greater recovery for creditors. He hoped that the project would be completed in the coming year and that all outstanding issues would be resolved in an ambitious way, enabling the model law to have a broad impact.

15. It was also encouraging that the Working Group was approaching completion of the model provisions on the insolvency of enterprise groups; that framework would include a variety of tools enabling courts confronted with group insolvencies, which accounted for the majority of significant cross-border insolvency cases, to adopt new approaches. If those tools enabled successful restructuring in cases where liquidation would otherwise have occurred at the group level, the impact of the work would be very significant and could ultimately become an even more important framework than the UNCITRAL Model Law on Cross-Border Insolvency. His country supported the continuation of work on the insolvency treatment of micro, small and medium-sized enterprises. He urged the Working Group to identify an ambitious project on that important topic which would not only identify and meet real-world needs, but would also make a significant difference and ensure the best use of the Working Group's time. Finally, he hoped that the Working Group would soon find time to consider asset tracing and recovery issues, a very significant area for future work which could have an enormous economic impact.

16. **Mr. Apter** (Israel) said that the discussions of Working Group V in 2016 and 2017 had been very useful and constructive. Much work remained to be done, especially with regard to the insolvency of micro, small and medium-sized enterprises, but the progress achieved and the professional and efficient discussions held would likely ensure the completion of the Working Group's mandated work in the near future. He added that the UNCITRAL Model Law on Cross-Border Insolvency would soon be enacted in law in Israel.

17. **Ms. Sabo** (Canada) said that the work of Working Group V was useful and important and that the Working Group was managing its priorities and topics well. Her country welcomed the progress on the provisions on cross-border insolvency of enterprise groups and was pleased to see that workable and practical solutions were being considered, and that there was growing consensus. Canada also supported the work on the recognition and enforcement of insolvency-related judgments, which was useful not only with respect to final reorganization or liquidation judgments, but also in relation to orders issued by insolvency tribunals during the insolvency process. On the important subject of micro, small and medium-sized enterprises, the Secretariat might work with the World Bank to identify areas for improvement for the benefit of developing countries and other countries where such enterprises were particularly important.

18. **Mr. Mishkorudny** (Belarus) expressed his appreciation for the work of Working Group V on improving legal protection for creditors and other interested parties through the recognition and enforcement of insolvency-related judgments, cooperation between jurisdictions and the prevention of duplication of insolvency proceedings. Belarus supported the expansion of the UNCITRAL Model Law on Cross-Border Insolvency and the UNCITRAL Legislative Guide on Insolvency Law. It was important to apply a special regime to micro, small and medium-sized enterprises in line with their specific needs in order to avoid the application of overly strict corporate laws to those enterprises, and to provide such enterprises working in an official economic sector with opportunities for further development. It would also be useful for UNCITRAL to establish grounds to refuse recognition and enforcement of insolvency-related judgments in cases of cross-border insolvency which were connected with public order in a State on whose territory the recognition and enforcement of such judgments were requested.

19. **Mr. Freeman** (United Kingdom) joined previous speakers in welcoming the work achieved by Working Group V on what were very important topics. Cross-border group insolvencies were the most economically significant insolvency proceedings: developing a new legal framework to ensure that such proceedings functioned efficiently and to maximize the possibility of rescuing of a group as a whole would be an important addition to the UNCITRAL Model Law on Cross-Border Insolvency. His country was pleased that the provisions of the new model law on the recognition and enforcement of insolvency-related judgments were now in the final stages of drafting. That text complemented work being done by the Special Commission on the Recognition and Enforcement of Foreign Judgments of the Hague Conference on Private International Law, and once enacted in States it would help to ensure that insolvency-related judgments were enforceable in other jurisdictions, which would be universally beneficial. Lastly, he welcomed the initial work on the insolvency treatment of micro, small and medium-sized enterprises, and looked forward to the establishment of specific guidance on such insolvency procedures, which would be another very helpful addition to the existing legal frameworks.

The discussion covered in the summary record ended at noon.

·

Summary record (partial)* of the 1050th meeting, held at the Vienna International Centre, Vienna, on Friday, 7 July 2017, at 2 p.m.**

[A/CN.9/SR.1050]

Chair: Mr. Martonyi (Hungary)

* No summary record was prepared for the rest of the meeting.
** No summary records were issued for the 1048th or 1049th meetings.

The discussion covered in the summary record began at 4.20 p.m.

International dispute settlement: progress report of Working Group II (A/CN.9/896 and A/CN.9/901)

1. **Ms. Montineri** (Secretariat), introducing the agenda item, recalled that at its forty-eighth session, the Commission had granted Working Group II a broad mandate to commence work on the topic of enforcement of settlement agreements, and at its forty-ninth session had requested the Working Group to proceed with its work on the preparation of an instrument on the enforcement of international commercial settlement agreements resulting from conciliation. The Working Group had made considerable progress over the course of its sixty-fifth and sixty-sixth sessions, as detailed in documents A/CN.9/896 and A/CN.9/901, respectively. At the sixty-sixth session of the Working Group, a compromise proposal had been made in relation to five issues, as set out in paragraph 52 of document A/CN.9/901, with a view to moving forward with the drafting of the aforementioned instrument. That compromise proposal had covered a number of issues, including the extent to which agreements resulting from conciliation concluded during judicial or arbitral proceedings should be excluded from the scope of application of the instrument. Since such proceedings were currently covered by a draft convention on judgments being prepared by the Hague Conference on Private International Law, coordination in that area was required. Another issue that had been discussed was the form the instrument was to take. The Working Group had decided, as a compromise and in order to take into account the different levels of conciliation experience of each country, to continue to draft both a legislative text that would complement the UNCITRAL Model Law on International Commercial Conciliation and a convention.

2. **Ms. Morris-Sharma** (Singapore), speaking as Chair of the Working Group, said that over the past year, delegations had been highly constructive in their engagement with the Working Group. There had been a palpable spirit of compromise and delegations had worked to accommodate the different practices and levels of experience of jurisdictions with regard to conciliation. As a result, significant progress had been achieved and a compromise proposal had been made. The working papers produced by the Secretariat had been of outstanding quality throughout the process and the Secretariat had been responsive to all delegations.

3. **Mr. Schoefisch** (Germany) said that his delegation was highly satisfied with the progress made by the Working Group, and reiterated his delegation's support for what was an important compromise proposal. Recalling that there had been some discussion of moving the date of the next Working Group session to October, he said that his delegation was in favour of that change of date.

4. **Mr. Schnabel** (United States of America) said that the project on which Working Group II was working was an important one about which the private sector and the mediation community were enthusiastic. He hoped that work on the topic and, in particular, on a convention, might in the long term give the same boost to mediation at the international level that arbitration had received as a result of the adoption of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958 New York Convention). Such a convention would make companies more willing to invest time and resources in mediation and conciliation, as the resulting decision could then be relied upon. At the UNCITRAL Congress just held, it had even been stated that that type of instrument might help to encourage foreign direct investment. Therefore, the Working Group should be as ambitious as possible in moving forward.

5. He commended Working Group II on the compromise proposal developed at its sixty-sixth session. In that connection, he noted with approval the proposal's five interlinked elements, which should meet the needs of each delegation. The proposal allowed States to decide whether to implement the convention or the legislative provisions; it avoided overlap with the 1958 New York Convention and the "Judgments Project" of the Hague Conference on Private International Law by excluding settlements that were enforceable as arbitral awards or judgments; it avoided referring to "recognition"; it provided for exceptions relating to the conduct of conciliators; and it would apply by default, but would have an "opt-in/opt-out" option. The proposal represented a major step forward in resolving significant issues and should allow the project to be completed very soon.

6. **Mr. Apter** (Israel) expressed agreement with the comments made by the previous speakers. His

delegation appreciated the role that had been played by the Chair of Working Group II and the flexibility that had been shown by the delegation of the European Union and other delegations in reaching a compromise. The adoption of a convention on the enforcement of international settlement agreements resulting from conciliation was very important to his delegation, but he supported safeguards to enable litigants' rights to be preserved and ensure flexibility for States, especially with regard to the opt-in/opt-out issue. The compromise proposal fulfilled those objectives. He was confident that the progress made at the sixty-sixth session of the Working Group could be used as a basis for concluding the project within a year, thereby enabling the model legislative provisions and draft convention to be adopted at the fifty-first session of the Commission.

7. **Mr. Ashworth** (United Kingdom) said that his delegation supported the compromise proposal entailing the development of two parallel instruments, which would allow contracting States to decide which instrument was most appropriate for them. Any instrument thus created should establish clear rules guaranteeing legal certainty and predictability for parties to an international settlement agreement, with effective defences for resisting enforcement. In the light of the recent elections held in the United Kingdom, his delegation intended to consult the newly elected ministers on their views, but ministers had, to date, been very supportive of the work being done.

8. **Ms. Sabo** (Canada) expressed her delegation's satisfaction with the progress that had been made by the Working Group.

9. **Mr. Rosner** (Observer for the European Union) said that the sixty-sixth session of Working Group II had provided an opportunity for in-depth discussions, enabling a compromise that encompassed the five different but interlinked issues. That compromise represented a sound basis for further work on the project.

10. **Ms. Nguyen** (Observer for Viet Nam), reaffirming her delegation's commitment to the work of Working Group II, said that she valued the opportunity to engage in the topic under consideration and to reflect on her country's experience of commercial conciliation. Indeed, Viet Nam had enacted a decree on international commercial conciliation and provisions on the enforcement of settlement agreements in the national Court of Civil Proceedings.

11. **Mr. Mishkorudny** (Belarus) said that in 2013, Belarus had adopted a law on mediation that regulated conciliation proceedings. Therefore, the work of UNCITRAL on the enforcement of judgments was important to Belarus and would, it was hoped, promote the use of such proceedings. Belarus had already created a registry of mediators, but a great deal of work lay ahead. It would be appropriate for the draft convention to exclude disputes involving State organizations, since problems had already been encountered with regard to immunity and the implementation of decisions of arbitral tribunals relating to such disputes. He hoped that the work on the draft convention would soon be concluded and that the instrument would be as successful as the 1958 New York Convention.

12. **Ms. Sekhar** (India), expressing her full support for the work of Working Group II, said that the enforcement of settlement agreements was a very important topic for her delegation, which was closely following the Working Group's discussions in that area and was satisfied with the Group's progress. In India, further consideration was being given to the compromise proposal agreed at the sixty-sixth session of the Working Group and to the choice between the drafting of a convention or a model law.

13. **Ms. Gehmacher** (Austria) said that her delegation would continue to participate in the work of Working Group II in a constructive manner. The current dual approach with regard to the form of the instrument on enforcement of international commercial settlement agreements resulting from conciliation should be maintained without prejudice to the future form of the instrument.

14. **The Chair** encouraged Working Group II to continue its good work, and said that a decision regarding the date of the next Working Group session would be made the following week.

15. He took it that the Commission wished to take note of the progress of the Working Group as reflected in documents A/CN.9/896 and A/CN.9/901.

16. *It was so decided.*

The meeting rose at 4.45 p.m.

Summary record of the 1051st meeting, held at the Vienna International Centre, Vienna, on Monday, 10 July 2017, at 9:30 a.m.

[A/CN.9/SR.1051]

Chair: Ms. Morris-Sharma (Vice-Chair) (Singapore)

The meeting was called to order at 9.40 a.m.

Possible future work in the area of international dispute settlement

(a) Concurrent proceedings (A/CN.9/915)

(b) Code of ethics/conduct for arbitrators (A/CN.9/916)

(c) Possible reform of investor-State dispute settlement (A/CN.9/917, A/CN.9/918, A/CN.9/918/Add.1, A/CN.9/918/Add.2, A/CN.9/918/Add.3, A/CN.9/918/Add.4, A/CN.9/918/Add.5, A/CN.9/918/Add.6, A/CN.9/918/Add.7, A/CN.9/918/Add.8 and A/CN.9/918/Add.9)

1. **The Chair**, drawing attention to the documentation under the item, suggested that the Commission should discuss possible reform of investor-State dispute settlement on the basis of that documentation, including the topics of concurrent proceedings and ethics in its consideration of that issue.

2. **Mr. Spelliscy** (Canada) said that his delegation strongly supported the immediate commencement by a working group of work on reform of the framework for investor-State dispute settlement. Such work should consist of three components: first, the Commission should identify and consider concerns regarding existing mechanisms for investor-State dispute settlement. Given that some States had valid concerns regarding the existing system while others were satisfied with that system and doubtful of the need for reform, a multilateral discussion was necessary in order to ensure a clear approach in the face of that lack of agreement. There was a wealth of valuable studies and evidence on which the discussion could be based, including the work carried out by civil society groups, academics and such organizations as the United Nations Conference on Trade and Development (UNCTAD), which had published numerous evidence-based studies on some of the concerns raised and possible options for reform.

3. Secondly, consideration should be given to the question of whether the concerns thus identified should be addressed. In that regard, the way in which the current system was perceived by the public was important, particularly since investment disputes often involved questions of public policy. Moreover, the State's defence and awards made against it in investor-State disputes essentially required taxpayers' money; money that was intended for the provision of important government services. Thus, while governments must be held accountable for the wrongful treatment of investors, the public would accept such decisions only if the system was perceived to be fair and legitimate. On the other hand, some perceptions might be considered misguided or baseless, in which case it might not be necessary to respond to those perceptions with reform. It was therefore important to consider and analyse those perceptions and concerns.

4. Thirdly, if, after rigorous analysis and consideration, reforms to address some or all of the concerns identified were deemed justified, it would be necessary to consider and develop tools to respond to those concerns. To that end, the broadest possible discretion should be given to a working group as to what the options for reform would be, and premature decisions with regard to possible outcomes should be avoided. While his delegation considered that a permanent multilateral investment tribunal should be established, other delegations might feel that alternative approaches were more appropriate. It was important to work collaboratively towards solutions that were acceptable to all, and in that regard the Secretariat should at the same time continue its cooperation with other interested organizations. In view of the significant public interest in the topic, the Commission should also continue its tradition of transparency by inviting observers to participate in the discussion, thus ensuring that all viewpoints were represented. Should the work be undertaken, member and observer States should be encouraged to ensure the participation of officials with the highest possible level of expertise in their delegations.

5. **Mr. Schnabel** (United States of America) proposed that Working Group II should finish its current work on conciliation and then continue to focus on commercial dispute settlement issues. Work was not needed urgently on any of the three proposed topics, although it might be useful to address some of the issues referred to in documents A/CN.9/915 and A/CN.9/916 with respect to concurrent proceedings and a code of ethics/conduct for arbitrators. However, it would be preferable to proceed with only one of the latter two topics rather than allowing all three topics to remain on the Commission's agenda.

6. With regard to a code of ethics/conduct for arbitrators, the suggestions set out in paragraphs 38 and 39 of document A/CN.9/916 were the most promising areas for exploration. Any work in that area should begin with consideration of the relationship between the different sets of ethical rules that might apply to an arbitration procedure, such as those of the forum State and those of the home jurisdictions of the parties, and should address not only fixed rules applicable to

arbitrators but also rules applicable to other actors participating in arbitration. Any effort at the current stage to substantively harmonize ethics rules would be undesirable.

7. With regard to concurrent proceedings, given that the factual circumstances in each of the relatively limited number of cases in which that problem arose varied from case to case, it would be difficult to formulate recommendations for new approaches of general application. However, if other delegations felt that further work in that area was necessary, his delegation would have no objection to work on specific aspects of the topic. For example, work could be done to provide guidance on the discretion of tribunals under existing UNCITRAL arbitration rules, to the extent that tribunals already had tools to deal with the problems posed by concurrent proceedings, and to examine the approaches taken in existing treaties to minimize those problems.

8. His delegation was strongly opposed to work on possible reform of investor-State dispute settlement, as such work was unnecessary, undesirable and unfeasible. The notion of a single investor-State dispute settlement regime was imprecise; there was currently a highly diverse body of some 3,000 international investment agreements with significantly different approaches to both substantive investment protection and dispute settlement, and to refer to such a regime was oversimplistic and led to a narrow view of what reforms might be needed. Moreover, the suggestion that reform of the investor-State dispute settlement system was a new idea and that a multilateral effort was necessary to achieve meaningful reform of that system did not reflect the reality of the past 20 years, during which time States had been advancing such reform in myriad ways. For example, in the United States of America, such reform had been not only a matter of practice for more than a decade but also a core aspect of the legislation establishing negotiating objectives for United States trade agreements. With respect to both substantive treaty standards and provisions on dispute settlement, typical investment treaties concluded by the United States of America over the past fifteen years had already included reform in relation to certain topics and thus were radically different from the treaties typically concluded in Europe, where the issue of reform had only entered policy discourse over the past few years. Those differences in recent practice also happened to correlate with the significant decline in investor-State dispute settlement cases under United States agreements, in contrast to the trend under other treaties, particularly intra-European treaties. The diversity in approaches reflected careful internal deliberation by sovereign States based on their specific social, economic and political circumstances, and best reflected the interests of legislators, regulators and other stakeholders in those States. Some States had elected to modify and supplement existing arbitral rules and some to limit or eliminate access to arbitration, while others had decided to eliminate investment treaties altogether. Indeed, that diversity was the reason why past attempts to forge a single multilateral approach had generally failed; for example, the multilateral agreement on investment negotiated under the auspices of the Organization for Economic Cooperation and Development (OECD) over a period of several years had ultimately not been adopted. Such diversity needed to be respected, as it produced benefits that could be assessed and compared by States that were considering whether to engage in reforms.

9. While a single multilateral approach to reform that would apply to all States was undesirable for the reasons he had already outlined, discussion of the investor-State dispute settlement regime could be useful, as demonstrated by the work carried out in that area by other organizations, such as UNCTAD, if such work was aimed at empirical research, experience-sharing and capacity-building in order to help States to identify and implement approaches that best suited their individual circumstances.

10. Although it had been suggested that work on the topic might proceed on the basis of a broad mandate, without the need to envisage a particular outcome, he was concerned that some delegations would seek the establishment of a multilateral institution that replicated key features of the specific approach that they were pursuing in their bilateral negotiations, rejecting all other approaches on the basis of the claim that those approaches would perpetuate a system that was not fit for purpose. It was not in the interest of UNCITRAL to be a forum for such work, even if that work was framed as the subject of a broad mandate.

11. Any future work on dispute settlement issues should remain within the remit of Working Group II so that that work could benefit from the input of all delegations, including representatives of academia and the private sector, that had contributed to prior projects of that Working Group. His delegation would not favour giving any dispute settlement work as a new topic to Working Group III at the current stage, since the discussion of that topic in a different working group might make it difficult for delegations to attend the meetings of both working groups.

12. **Mr. Brown** (Observer for the European Union), expressing agreement with the representative of Canada that the Commission should give a mandate to one of its working groups to work further on reform of investor-State dispute settlement, said that the Commission should first discuss and identify problems within the existing investor-State dispute settlement system and examine ways to respond to those problems, availing itself of all available expertise and opinions, especially those of international organizations engaged in work on the topic, before envisaging work on particular paths. It was extremely important that the discussions should be multilateral and inclusive in view of the more than 3,000 investment treaties in existence globally and the

difficulties posed by their divergent approaches, as well as the difficulties inherent in the bilateral amendment of treaties. Accordingly, no assumptions should be made regarding the outcomes of those discussions. While the proposed establishment of a multilateral investment tribunal, the consideration of which his delegation would support, was one possible outcome, the advantages and disadvantages of such a solution, and indeed of any other proposals put forward, needed to be examined, especially in view of the important policy decisions involved. Another means of enhancing inclusiveness would be to maximize participation by holding working group meetings in locations other than Vienna and New York. He requested the Secretariat to examine that possibility should the proposed work on reform go ahead. A multilateral approach would itself facilitate the kind of inclusiveness that a bilateral approach could not achieve.

13. **Mr. Romero Martínez** (Mexico) said that it was important to highlight the great diversity among States in terms of their specific concerns and interests, the degree of sophistication of their investor-State dispute settlement mechanisms and their level of experience of investor-State arbitration; some States had extensive experience of being a respondent in such proceedings, while others had none at all.

14. While the work of the various institutions and international organizations with which the Secretariat had consulted on the issue was useful, it was States themselves that should have the main role in the discussion of that issue, because it was essentially their conduct that might give rise to legal action against them by investors, and they were the parties that might consequently be subject to international liability and the payment of compensation.

15. With regard to the suggestion that the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (Mauritius Convention on Transparency) could be used as a model for possible reform in the field of investor-State arbitration, as referred to in document A/CN.9/917, it appeared that the questions of the form that such reform should take, the applicability of the reforms and other matters of substance were being considered before the need for and possible scope of reform had been properly addressed; that order should be inverted. Reform of the system of investor-State dispute settlement required coherence and the avoidance of fragmentation of that system. However, it was likely that the maintenance of the existing regime in parallel with a new multilateral regime would defeat those objectives.

16. The lack of common substantive provisions was the main reason for fragmentation and lack of coherence. In that regard, it was important that any reform should take into account the principle of effectiveness (*effet utile*) in treaty interpretation.

17. With respect to the possibility of adjustments to the current investor-State dispute settlement regime, he pointed out that it had always been possible to make such adjustments as circumstances evolved. For example, the Free Trade Commission of the North American Free Trade Agreement (NAFTA) had, in 2001, issued notes of interpretation on public access to documents and minimum standards of treatment, and in 2003 had issued a statement on non-disputing party participation. In addition, Mexico was itself updating a number of its international investment agreements. Those examples showed that the existing regime was sufficiently flexible to permit adaptation without radical change.

18. The matter of perceptions of the investor-State dispute settlement regime had been given substantial consideration during the discussions on the topic to date. However, since perceptions were subjective, they should be carefully evaluated.

19. In general, before any negotiations were initiated, a cautious approach to the question of reform was needed, and radical reform should be avoided; instead, specific aspects of the issue should be considered initially.

20. **Ms. Liu Huan** (China) said that in view of the difficulties experienced by the existing investor-State dispute settlement system as a result of evolving trends, including the diversification of forms of investment, adjustments should be made in a focused manner in order to increase parties' confidence in that regime. To that end, it was necessary to listen to the opinions and encourage the participation of different parties and to proceed on the basis of facts, which should be analysed and assessed objectively, rather than rushing to conclusions on the basis of perceptions. While States should be the main actors, public participation and transparency should also be maintained. The discussions should proceed step by step from the examination of ways to address the problems of the current regime and the reasons for those problems, and neither the time frame for nor the outcome of those discussions should be prejudged.

21. **Mr. Apter** (Israel) said he agreed with the representatives of Canada and the European Union that UNCITRAL should refer work on the reform of investor-State dispute settlement to a working group as a matter of priority. Although other bodies were carrying out work in that area, the Commission was an appropriate forum for discussion of the topic given its multilateral nature and its past successes in achieving consensus on many complex and challenging issues. The mandate for that discussion should be very broad and flexible, ensuring that all options were open, and all delegations should endeavour to find common ground as the basis for discussion. Any mechanism should be sufficiently flexible to accommodate the individual needs and systems of States, thus facilitating consensus, and the process should be inclusive, involving the broad participation of international organizations, observers

and experts. At the same time, that process should essentially be government-led. He agreed with previous speakers that the outcome of the discussions should not be prejudged. The concerns raised by other delegations should not prevent UNCITRAL from dealing with what was an important issue, since those concerns could be satisfactorily addressed during the course of the work. Since it was desirable to begin work on the topic immediately and Working Group II had other work to complete, he saw no potential problems in assigning the work on investor-State dispute settlement to Working Group III.

22. While his delegation had no objection to work on a code of ethics/conduct for arbitrators, the topic of concurrent proceedings should not be assigned to a working group at the current stage.

23. **Ms. Gómez Ricaurte** (Ecuador) said that her country attached importance to the reform of the investor-State dispute settlement system, which was necessary in view of the constant evolution of international law in response to new challenges. Concerns about the current system included the lack of accountability of arbitrators, the lack of an appellate court, the lack of transparency and the lack of a uniform approach to case law. Other important concerns related to the selection of arbitrators and how to determine their fees and the seat of arbitration. Consequently, UNCITRAL should discuss the establishment of a permanent arbitration system, which could resolve much of the uncertainty created by current mechanisms. As part of the United Nations system and as a multilateral body, UNCITRAL was the most appropriate forum for that discussion. She agreed with other speakers that it was important to hold an open discussion on the advantages and disadvantages of reform in order to address the concerns of all delegations. While that discussion should be held among States, it was also important to include experts from other international organizations and representatives of academia who had recently carried out studies on the subject. Such a discussion would be a priority for her country, which would like to see specific issues addressed. With regard to the establishment of a permanent court, in-depth consideration should be given to investor-State dispute cases to date. It would be useful to establish a regional court of first instance, to be supplemented by an appellate court.

24. **Mr. Sá Pires Filho** (Brazil) said that while his delegation did not object to the inclusion of the topic of reform of investor-State dispute settlement on the Commission's agenda, discussions should be limited to the improvement of the existing system. The resulting settlement mechanism should not be considered superior to other mechanisms, nor should the Commission promote its universalization. There was no standard solution that could be applied to all States; rather, countries should remain free to choose among different systems following a broad internal discussion aimed at balancing the interests of investors and States.

25. **Ms. Jamschon Mac Garry** (Argentina) said that she agreed with the criticisms of the current investor-State dispute settlement system as set out in documents A/CN.9/917 and A/CN.9.918, the problems of that system including the lack of independence and impartiality of arbitrators, the lack of coherence in decisions, the lack of corrective mechanisms, the length and cost of proceedings and the lack of transparency. She supported the consideration of the matter by a working group, which could establish the group members' preferred options and whether reform was needed, reporting to the Commission at its fifty-first session. Such work should be without prejudice to reforms on substantive issues or protection under bilateral investment treaties, which might be the outcomes of work conducted in other forums in the future. The discussion should be fully transparent and involve the greatest possible number of government officials from UNCITRAL member and observer States to ensure maximum legitimacy in the reform process, as well as representatives of international organizations such as the Permanent Court of Arbitration, OECD, the International Centre for the Settlement of Investment Disputes and UNCTAD. Subjects discussed could include the number of judges, provenance of arbitrators, selection processes, applicable law, costs and the court's budget, transparency issues and the need for firm and binding awards and decisions that had the same value as those handed down by local courts.

26. **Ms. Light** (Australia), noting the extensive criticism of the existing investor-State dispute settlement system and the fact that there had been much discussion on possible reform in other forums, including in particular the International Centre for the Settlement of Investment Disputes, OECD and UNCTAD, said that her delegation was open to the consideration of possible reforms but would need to consider those reforms fully and understand their implications. It was also important to establish the objective of any such reforms, to avoid adopting any one solution with excessive haste and to ensure that all available and potential options were given due consideration. In that connection, the working group selected to carry out the work should have a broad mandate and establish whether reforms were desirable, pinpointing the problems with the existing system and discussing the range of options for addressing them, which could include consideration of a multilateral court, as well as how any options would fit in with the existing system. She also seconded the view that the process should be government-led because of the important policy questions it posed. Participation in the working group by government officials should be encouraged to ensure the credibility of the process. However, such participation would have significant resource implications for governments. In order to encourage participation from as many regions as possible, she agreed with the observer for the European

Union that working group sessions should be organized in locations other than Vienna and New York. Her delegation was flexible in connection with the timing of the work, which could be conducted by Working Group III.

27. **Mr. Vinogradov** (Russian Federation) said that it would be useful for UNCITRAL to discuss the current investor-State dispute settlement system and possible improvements and reforms to that system. In that regard, the documentation provided by the Secretariat provided a good basis for further work. Such work must remain strictly within the confines of the Commission's mandate. The advantages and shortcomings of existing mechanisms must be understood, as well as the best direction for further development. While some felt that reform was necessary because the current system was failing to meet the expectations of investors, others considered that the system was skewed in the investors' favour. A step-by-step approach was essential, taking into account the advantages and disadvantages of reform and the positions of States, which were crucial actors in the establishment of an investor-State dispute settlement system. Specific initiatives could be undertaken only once a common position was established. Without such consensus, the desired result could not be obtained and attempts to reform that complex system at the unilateral or bilateral level could be counterproductive. Both permanent and ad hoc tribunals were currently used; investors were used to the current system and expected specific results in investor-State dispute settlements. It was important to avoid hasty and poorly planned initiatives that could be detrimental to the existing system. As the issue had not yet been discussed at the intergovernmental level in UNCITRAL, it was premature to refer to specific approaches on an ill-defined, general basis. Conclusions could be drawn only after the strengths and weaknesses of the investor-State dispute settlement system had been identified; it was premature to discuss specific options for reform. His country could support any format for the discussions that was based on consensus and a broad mandate, avoided prejudging any outcome and did not exceed the UNCITRAL mandate.

28. **Mr. Hernández Castilla** (Spain) said that the major shortcomings in the operation of the investor-State dispute settlement mechanism, as evidenced by the research already carried out on the topic and corroborated by users of that mechanism, had implications in terms of costs, fair treatment, efficiency and inclusivity and posed the problem of vested interests. Those shortcomings must be tackled using a multilateral, inclusive approach, and reforms should be undertaken as soon as possible and in an objective manner. He agreed that there was a need for a multilateral investment court, but that matter should be analysed objectively and in depth before any conclusion was reached. States must play a leading role but inputs by all other stakeholders, including experts and international organizations, should be sought.

29. **Ms. Mangklatanakul** (Thailand) said that if reform was to be taken up, one possible way to move forward would be to start working on the basis of a framework agreed upon by the UNCITRAL member States. Inclusiveness was key to successful reform, as many developing countries receiving foreign investment were progressively becoming investors. Considering the current state of play in international investment law, such reforms should not only focus on procedural aspects but also on substantive issues, taking particular account of the differences between the dispute settlement provisions of the various international investment agreements.

30. Thailand would like to see UNCITRAL take a broad approach to the consideration of the topic. Future areas for discussion could include reforms aimed at increasing the involvement of host States in interpreting international investment agreements. Since such agreements were governed by international law, the joint interpretation of treaty provisions by the parties should have some legally binding effect on the arbitral tribunals. That approach had been adopted in some Association of Southeast Asian Nations (ASEAN) foreign trade agreements.

31. Reform should be designed and implemented in such a way as to provide a host country with sufficient policy space under international investment rules to regulate investment activities on its territory in the public interest. There should also be a focus on increasing the transparency of the investment arbitration process, for example, through the establishment of an investment arbitration and appeal mechanism.

32. One area requiring further discussion was how to ensure the principles of independence and impartiality of arbitrators. Problems of conflict of interest arising from the multiple roles an individual could assume in investment arbitration cases could be tackled more efficiently. For example, if clear ethics rules or a code of conduct were established for investor-State dispute settlement procedures, roles could be distributed in a more balanced way.

33. The steady increase in the number of investor-State disputes had led to a wide range of languages and bodies being covered by investment treaties. It would therefore be timely to consider and clarify substantive issues under existing international investment agreements, such as fair and equitable treatment, expropriation and due process of law. Such work was not excessively ambitious for UNCITRAL and it would be more meaningful and beneficial for member States if the scope of that work were not limited to procedural issues.

34. **The Chair** said that both substantive and procedural solutions would be possible if UNCITRAL commenced work on investor-State dispute settlement.

35. **Mr. Kenfack Doujani** (Cameroon) said that the current investor-State dispute settlement system had

given rise to so many grievances that consideration must be given to its improvement. It was encouraging that even delegations that did not wish the Commission to undertake work on the issue agreed that such work would be well within the UNCITRAL mandate. While there were legitimate reasons for avoiding such a discussion, there were also sound reasons for discussing both the procedures and substance of a system that had led to and continued to generate so many problems, including the need for independence and impartiality among arbitrators. In the spirt of United Nations solidarity, even members of the international community that were not affected by such problems should endeavour to understand and assist in resolving those problems.

36. An extensive discussion of how clarity could be enhanced through the establishment of a supranational tribunal, and of a possible ethics code, could shed light on many of the issues raised, although it would be premature to envisage a specific outcome.

37. **Mr. Rundwal** (India) suggested that the Commission should request the Secretariat to provide more technical details on the important matter of preventing concurrent proceedings. Efforts could be made to elaborate general guidance on good practice in preventing concurrent proceedings under bilateral treaties, addressing the issues of forum shopping, treaty shopping and prevention of the misuse of investor-State dispute settlement.

38. Furthermore, there was a need for harmonized rules on ethics in international arbitration. Although existing rules addressed impartiality, independence, disclosures and the scope of ethical standards, ample leeway was still granted to the authority responsible for addressing challenges against the arbitrator. Consequently, specific rules and guidance on ethics were required in order to reduce uncertainty. UNCITRAL might consider formulating such rules along the lines of the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration, thus providing some clarity on disclosure norms.

39. With regard to possible reform of investor-State dispute settlement, he was unsure whether the Commission should discuss the establishment of a multilateral investment tribunal, because that was a wider policy question that should be discussed in consultation with other international bodies. The Commission could continue technical work on reforms within the existing mechanism, as the UNCITRAL Arbitration Rules were extensively used in investor-State dispute settlement. The Commission could work towards devising rules to address inconsistencies in the existing framework. His delegation would support reforms to address the ethics of arbitrators and conflicts of interest, the lack of a review mechanism, frivolous, unmeritorious and unfounded claims and the costs of proceedings, and strongly encouraged any work by the Secretariat in those areas. With regard to an appeal mechanism, his delegation preferred a review mechanism in the form of appeals and a single appellate body. However, further consultations on that matter should be conducted with other organizations, including with regard to the possible form and structure of such a mechanism. There should also be a focus on alternative modes of dispute settlement, including domestic remedies, compulsory negotiations and conciliation.

40. **Ms. Nguyen Thi Ngoc Quyen** (Observer for Viet Nam) said that her country had negotiated and concluded bilateral investment agreements and foreign trade agreements with several countries, and that many of those agreements provided mechanisms to resolve investor-State disputes. It was important to have an effective and fair mechanism that struck a balance between the right of foreign investors to protection and the host State's right to regulation. Viet Nam therefore welcomed in-depth discussions on increasing the effectiveness of the investor-State dispute settlement mechanism. UNCITRAL was a highly appropriate forum for discussion of that matter, and advantage should be taken of its inclusiveness and the expertise and practical experience of its member States, observer delegations representing international organizations, non-governmental organizations and academia and other relevant stakeholders.

41. The current investor-State dispute settlement system was not uniform but based on some 3,000 international investment agreements. While her delegation highly appreciated the research paper prepared by the Geneva Center for International Dispute Settlement, entitled "Can the Mauritius Convention serve as a model for the reform of investor-State arbitration in connection with the introduction of a permanent investment tribunal or an appeal mechanism?" (available from the UNCITRAL website), as well as the documentation prepared by the Secretariat to facilitate discussion of the issue, every country should proceed on the basis of its own experience, in consultation with the Secretariat and relevant stakeholders, to review and analyse thoroughly the perceived problems affecting the system and their underlying causes before consensus on any proposed solutions was sought. She supported the view that the mandate should be broad enough to enable the achievement of that objective. Since reform was not necessarily the ultimate objective of the proposed work, it might be preferable to avoid the word "reform" when referring to that mandate.

42. **Mr. Sorieul** (Secretary of the Commission), responding to the suggestion made by the observer for the European Union with regard to the location of working group meetings, said that from the administrative and technical perspectives it was possible to hold those meetings in locations other than Vienna or New York, perhaps on the premises of the regional economic commissions or at the duty stations in Nairobi

or Santiago, where the United Nations had the necessary infrastructure at its disposal. However, there were also financial considerations; the Secretariat did not have a budget for organizing meetings in such locations. Even if the documentation was the same in all locations, Secretariat staff would have to travel, as might some conference service staff and teams of interpreters. The regional commissions might not have much flexibility in their schedules to accommodate additional meetings. Consequently, the extra cost would probably have to be met through extrabudgetary resources and it might be difficult to secure member States' approval for the allocation of resources for such meetings. When UNCITRAL had been established, there had been universal agreement that its meetings should be held alternately in different regions, initially in Geneva and New York and later in Vienna and New York. That agreement already represented a compromise.

43. **Mr. Liptak** (Observer for Slovakia) said that his delegation would support a broad mandate on all three agenda sub-items in order to build confidence in the investor-State dispute settlement system and to maintain its legitimacy. His country's experience as a negotiator of bilateral investment treaties and as a respondent in investor-State dispute settlement cases had highlighted to it the importance of reform of the current system. Public consultations, surveys, conferences and other events on the subject had shown that concerns about that system were valid and should be addressed, particularly at a time when the commercial arbitration community had also begun to consider reform. As more than 3,000 investment agreements currently existed, a multilateral approach to reform was preferable. He endorsed the comments made by the representatives of Canada and the European Union and agreed that UNCITRAL should undertake government-led reform that would also involve experts from non-governmental organizations, academics and other stakeholders.

44. **Ms. Pierotic Mendia** (Chile) said that Working Group II should focus either on the issue of concurrent proceedings or on a code of ethics/conduct for arbitrators rather than the possible reform of the investor-State dispute settlement system. However, if the prevailing view was that UNCITRAL should focus on that reform, her delegation would not stand in the way of a broad mandate in that area. It was, however, important that such work should be progressive and results-based and should begin with the clear identification of problems posed by the system. The outcome should not be prejudged and a diagnostic approach should be adopted in order to identify all possible solutions before discussing and adopting a specific instrument. All concerns expressed during the current discussion should also be taken into account.

45. **Mr. Marquez García** (Colombia) said he agreed that a multilateral approach should be taken to the reform of the investor-State dispute settlement system and that UNCITRAL was an appropriate body to conduct such reform, as experts in arbitration and other organizations that could contribute to the discussion participated in its work. The topic should be approached in a systematic manner, whereby substance should be considered before matters of form, and the concerns raised during the current discussion and the needs of all stakeholders should be taken into account. The effectiveness of any proposed methods of implementing reform should be considered and alternative types of reform evaluated. He supported the proposal for the establishment of a permanent international investment court coordinated by UNCITRAL, but would be open to accepting any outcome of further deliberations in that regard.

46. **Mr. Glenz** (Germany) said that he seconded the view that the reform of investor-State dispute settlement based on a multilateral system should be researched and discussed within UNCITRAL as a matter of priority. That work should be assigned to Working Group III, whereas the important topic of concurrent proceedings in commercial and investment arbitration should be allocated to Working Group II after the Group had finished its current work. He also supported the proposal that a multilateral investment court with a built-in appeal mechanism should be created, but agreed that UNCITRAL should be given a broad mandate, with no premature decisions made as to what form the product of the Commission's discussions should take. The reform process should build on the work of international organizations such as UNCTAD, OECD, the International Centre for Settlement of Investment Disputes, the Permanent Court of Arbitration and the World Trade Organization (WTO) and allow members of those organizations to contribute to the discussions, but should be government-led in order to benefit from the expertise of the government officials of member and observer States in treaty law and investment matters.

47. **Mr. Biris** (Romania) said that his delegation would welcome the inclusion of investor-State dispute settlement reform on the agenda, and the topic should be referred to a working group for in-depth analysis. The possibility of a multilateral investment court should be investigated, as that would provide a solution to the shortcomings of the current system. The establishment of a public forum with highly qualified judges and strict ethical standards would address the concerns of the public about the current system, which was widely seen as being unfair to States, and would reduce opposition among various groups to the adoption or implementation of investment provisions contained in free trade agreements. He hoped that reform would improve transparency, the accountability of adjudicators and the consistency and quality of awards.

48. **Mr. Kozarek** (Czechia) said that his delegation supported the proposal for reform of the investor-State dispute settlement system within the framework of UNCITRAL, on the understanding that the result of such discussions would not be prejudged.

49. **Mr. Lapiere** (Observer for Belgium) said that his delegation would also support, on the same understanding, the in-depth discussion by a working group of possible options for multilateral reform of the investor-State dispute settlement system. The possibility of an international investment court with an appeal mechanism should be examined as part of that discussion. The reform process should be inclusive and transparent, and records of the discussions should be made public and should draw on the work of other international organizations such as OECD, UNCTAD, WTO and the International Centre for Settlement of Investment Disputes.

50. **Ms. Toku** (Japan) said that no empirical evidence had yet been provided in support of the arguments presented in the documentation prepared by the Secretariat and during the discussions to date in favour of investor-State dispute settlement reform and, in particular, the establishment of an international investment court. Instead, repeated reference had been made to perceptions. Although public perception was important, UNCITRAL should not be a forum where United Nations Member States worked solely on the basis of perception. If public perception did not reflect reality, it was the responsibility of governments and international organizations to convince the public that the reality was different, and to provide their constituents, and civil society, with facts and data that enabled them to make accurate and objective judgments.

51. That was precisely what had been done in her country: when Japan had started to negotiate the Trans-Pacific Partnership, there had been considerable criticism of investor-State dispute settlement as infringing State sovereignty, unduly restricting the regulatory space of the State and favouring the rich and powerful. However, following lengthy debate in the National Diet, that criticism had diminished significantly as public understanding of investor-State dispute settlement improved. Japan continued to negotiate and conclude investment treaties that were approved by an overwhelming majority in the Diet, including by members that had previously been the harshest critics of investor-State dispute settlement. It therefore could not be claimed that public perception of the investor-State dispute settlement system was universally negative, and an international organization should not base its work on public perception in only some States.

52. Facts and perceptions aside, an international investment court might not be the best solution to the perceived problems. It had been said that one of the advantages of such a court would be the possibility of ensuring consistency in treaty interpretation. She wondered, however, what kind of consistency was envisaged, given that there were more than 3,000 investment treaties and, under relevant treaty interpretation rules, even identically worded provisions could be interpreted differently when they were in different treaties, since they must be understood in a specific context in each case. If the hope was that such a court would produce a coherent body of international investment law, while such an intention was laudable, that court would be a de facto legislator; a universal administrative court vested with enormous law-making power. States might wish to conclude differently worded treaties to achieve different results, but a permanent international court might well disregard differences in wording as trivial. Moreover, it would be paradoxical to attempt to address the criticism that investor-State dispute settlement infringed State sovereignty by creating a powerful court that could override a State's wishes or treaty negotiations. Therefore, it might not be prudent to take such a step without being able to envisage the consequences. It was important first to garner evidence from research that the current investor-State dispute settlement system was truly flawed, drawing on the practical experience of practitioners and organizations that had been engaged in investor-State arbitration for many years, rather than on perceptions. In the absence of such research, it would be premature to decide on a specific mandate. While her delegation recognized the problems posed by the investor-State dispute settlement system, priority should be given to concurrent proceedings and a code of ethics/conduct for arbitrators, which were recognized in practice as issues that needed to be addressed. Although such an incremental approach might not satisfy those that wished to see a revolutionary change in international investment law, a modest and prudent approach would achieve more. With regard to the suggestion by several delegations that work should be undertaken on identifying current problems posed by the investor-State dispute settlement regime, it was not appropriate to dedicate precious working group time and resources to such preliminary studies on so broad a topic.

53. **Mr. Stifter** (Austria) said that his delegation strongly supported the statements of the representatives of the European Union and Canada. An open and inclusive discussion on the multilateral reform of the investor-State dispute settlement system would be particularly welcome on the basis of a broad mandate given to a working group. Although the legal basis of the current system of investment protection was mostly bilateral, the underlying issues and possible shortcomings were multilateral in nature; deliberations should therefore be held at the multilateral level and UNCITRAL would be an appropriate forum for those deliberations.

54. **Mr. Mathate** (Observer for South Africa) said that his delegation was fully in favour of the review of the investor-State dispute settlement system. The decision of South Africa to replace its current investor-State dispute settlement regime with a State-to-State mechanism in its future bilateral investment treaty negotiations was based on its experience as a respondent in investor-State dispute settlement cases. A review of the current system was therefore critical and should not

simply be a process that legitimized the current system by elevating it to the status of an international regime. Any future system should take public policy issues into account; it should not focus solely on protecting the interests of investors, but should consider a broader range of stakeholders that might be affected by investments. The review needed to strike a delicate balance between the interests of States and those of investors. The option of including the State-to-State dispute mechanism system should be considered as a possibility for States that might not favour the investor-State system. The system should have two tiers so that it provided both for a court of first instance and for an appeal mechanism. If possible, the discussion should not be limited to the review of the investor-State dispute settlement system, but should also involve the review of substantive provisions in order to tackle the shortcomings of the current system fully.

55. **Mr. Bellenger** (France) welcomed the possibility of exploratory discussions concerning possible reform of the investor-State dispute settlement system, which could lead to the creation of a multilateral legal instrument. As several meetings of experts had already been held and the Secretariat had issued a considerable volume of documentation on the topic, and as there was already evidence of agreement on certain issues, it would now be appropriate for a working group to assess the current situation and possible future options.

56. **Mr. Wallberg** (Observer for Sweden) said that his delegation would also support further work on the possible multilateral reform of the current investor-State dispute settlement system. The possibility of establishing an international investment court with a built-in appeal mechanism should be explored, but the outcome of the discussions should not be prejudged. The discussions should be an inclusive, government-led process which would build on the work being carried out by other international organizations and include other participants with the relevant expertise.

57. **Ms. Zaharlieva** (Bulgaria) said that her delegation too was in favour of a broad mandate for the discussion of the proposed reform, which should be multilateral, inclusive and government-led and should offer opportunities for sharing experience and exchanging opinions with stakeholders and relevant international organizations.

58. **Mr. Alafassi** (Kuwait) said that the existence of over 3,000 investment treaties showed the importance of investor-State dispute settlement, and significant progress had already been made in the discussions to date. Important elements to consider further were the code of ethics/conduct of arbitrators, the rules of procedure applicable to arbitration, transparency, conflicts of interest and the execution of awards; however, it would currently be premature to decide on the establishment of an international investment court. Working Group II was the most appropriate body for exploration of the issue.

59. **Mr. Soh** (Singapore) said that he welcomed the open discussion concerning investor-State dispute settlement. As other representatives had already stated, it was important that the outcome of possible further deliberations should not be prejudged and that all options should be considered. The starting point of the discussions should not be a far-reaching proposal to establish a permanent international investment court with an appeal mechanism, but rather to explore the possibility of improving existing mechanisms. All stakeholders should be involved in the discussions and the focus should be on deciding which elements would be desirable in an ideal system rather than criticizing the current system. A multilateral system would require multilateral support, which might not be forthcoming. He would prefer the discussions to focus on the broad objectives of making the existing system more cost-effective and fit for purpose.

60. **Mr. Lee Yongsoo** (Republic of Korea) said that his delegation was open to discussing the reform of the investor-State dispute settlement system, and that UNCITRAL was an appropriate forum for such discussions. It was important that conclusions should not be reached in haste or any outcome prejudged, and previous UNCITRAL experience should not be discounted when considering whether possible solutions might also give rise to additional problems. A key question was whether the working group selected to carry out the work should discuss key issues involving fundamental restructuring or more straightforward issues on which consensus was already in evidence.

61. **Ms. Malaguti** (Italy) expressed support for the statement by the representative of Canada at the outset of the meeting. Noting that the investor-State dispute settlement system presented many problems and shortcomings that needed to be addressed, and that there were many different options to be explored, she said that her delegation stood ready to participate in multilateral and inclusive work on the topic.

62. **Ms. Treier** (Observer for Estonia), expressing support for the statements by the representatives of the European Union and Canada, said that her delegation was also in favour of an inclusive and government-led process and shared the view that UNCITRAL was an appropriate forum to host discussions on that topic.

63. **Mr. Maradiaga** (Honduras) said that States should not lose sight of the fact that dispute settlement was of particular significance in the context of globalization. In that regard, it was important to note the recognized role of UNCITRAL in the international context. In view of the different approaches that had been highlighted, it was important to seek common ground among States, with the participation of the various relevant organizations, and particularly important for experts on the subject to participate in the discussions in order to advise States so that a decision acceptable to all could be adopted. For that reason, the current momentum

should be maintained and all States and organizations should contribute to the overall result.

64. **Mr. Sikiric** (Observer for Croatia) said that his delegation would support work on possible reform of the investor-State dispute settlement system, particularly for the reasons expressed by the representatives of the European Union and Canada. The work should be entrusted to a working group, which should be given a broad mandate. UNCITRAL legal instruments were elaborated in an intergovernmental process involving a variety of stakeholders and in a transparent manner, and were adopted by consensus. It was of utmost importance for future work on reform of the investor-State dispute settlement system to maintain that level of inclusiveness, transparency and consensus, which was a trademark of the legislative activity of UNCITRAL.

65. **Mr. Moollan** (Mauritius), expressing support for the approach suggested by the representatives of Canada and the European Union, said that two different meanings could be attributed to the term "broad mandate"; the first was meaningful and careful engagement with a clearly difficult subject in good faith in order to find consensus at the multilateral level, while the second was a way of turning a blind eye to relevant issues. He was heartened to see that all but two delegations had appeared to take the former approach.

66. Meaningful, albeit careful, engagement was important because the work carried out by the Secretariat had made clear that there was a legal basis for reform of the investor-State dispute settlement system. The need for such reform had also emerged with increasing clarity over the past few years and was now supported by evidence.

67. The political will to pursue such reform had also become clear. It was important to realize that States were at an important crossroads and the opportunity for reform would not arise again. A multilateral forum was needed for results-driven and meaningful discussions. It was inescapable that attempts at reform to date had failed; consequently, the task now fell to States. Legitimacy was about perception, and the negative press coverage of the current investor-State dispute settlement system could not be ignored. The politicization of the system was hindering rather than fostering the development of trade and investment rules, as States that would otherwise welcome such rules were apprehensive of the real or perceived legal risks now associated with them. The way forward might ultimately be the establishment of a new multilateral investment court, most probably using the Mauritius Convention on Transparency as a model; however, his delegation agreed that such an outcome should not be treated as a foregone conclusion.

68. He anticipated that discussions on the matter would focus on establishing the positions of States, rather than on achieving consensus. Since an optional model was being discussed, he urged States that did not support the mandate not to block progress for those interested in taking the matter forward. The Commission should seize what was a unique opportunity to carry out meaningful work on the issue. UNCITRAL was a forum for the harmonization of laws. Fragmentation offered no benefit, and it did not help to advocate such fragmentation simply because it suited a State's own policy interests. States were advocating for more coherent legal principles to be applied to specific treaty language on a context-sensitive basis.

69. **Ms. Szymanska** (Poland) said that her delegation shared the view that reform both of procedural rules and of standards of protection in investor-State dispute settlement was needed. Her delegation was fully aware of the complexity of the issue and the potential for political influence and that many questions would have to be answered by experts before the direction of the work could be determined.

70. With regard to the proposal for an international investment court, she underlined the importance her delegation attached to the appointment of judges, and said that such a court should include judges from all States that were contracting parties to the treaty establishing the court.

71. In view of the difficulties posed by concurrent proceedings, any solution that would limit the likelihood of concurrent proceedings would be welcome. There were also valid reasons for starting work on a code of ethics for arbitrators, but that should not be given priority.

72. **Ms. Teo** (Observer for New Zealand) said she agreed that there were a number of questions that needed to be considered before any further work on possible reform of the investor-State dispute settlement system was carried out, including what the reform was intended to achieve and what problems the existing system posed, and that it was important not to prejudge the outcome of that work. Any mandate for such work should be sufficiently broad to enable consideration of the full range of issues and possible solutions, including possible updates to existing models of investor-State dispute settlement. Her delegation would support a government-led process with the participation of relevant experts. Within a multilateral context, her delegation was ready to continue to exchange information on an informal basis, and to discuss issues at the technical level.

73. **Mr. Nauta** (Observer for the Netherlands) expressed support for the positions of the representatives of the European Union, Canada and Mauritius. Noting that his country was party to ninety bilateral investment treaties, he said that investment protection definitely improved the investment environment, and therefore offered clear added value. Reform of the investor-State dispute settlement system was a necessity, as was widely felt among non-governmental organizations, the public, academia

and other treaty partners. In general, his delegation was in favour of a rule-based multilateral trading system, of which multilateral negotiations were a part. Moreover, trade should not only be about free trade, but also about fair trade. Negotiations should therefore be transparent and inclusive, which would be guaranteed if they were held in the context of UNCITRAL. His delegation therefore supported the idea of starting discussions on reform within UNCITRAL, and was also in favour of the establishment of a multilateral investment court.

74. **Ms. Kaufmann-Kohler** (Switzerland) said that her delegation supported a broad mandate for a review of the need and possible options for reform, including the possibility of rules or other solutions with regard to concurrent proceedings and a code of ethics for arbitrators. UNICITRAL was an appropriate forum for such work, since it was transparent, government-driven and inclusive and benefited from the expertise of various organizations involved in investor-State dispute settlement. A mandate should be given without delay to Working Group III, which was currently available, in order to allow Working Group II to complete its current work without undue pressure.

75. She rejected the argument that there was no need for review or reform of the current investor-State dispute settlement system, as there were many recurrent issues arising from the different dispute resolution treaties and systems within investor-State arbitration that called for a consistent approach. There were no issues of shared concern that would not benefit from common solutions for the harmonization of international law. The suggestion that the work should proceed on the basis of facts rather than perceptions could be discussed further. While there was some evidence of a number of deficiencies in the current system, there were also achievements of the system that should be taken into account.

76. The establishment of a permanent investment court should not be the objective of the discussions; instead, delegations should engage in a review of the needs of the various stakeholders and possible forms of reform, taking all views into account. UNCITRAL was the ideal forum for such a review, since it was experienced in reconciling conflicting views and finding consensus. There should be no prejudgment of the outcome of the review. Future work should not be limited to concurrent proceedings and a code of ethics, although those topics should be included in the discussions on reform as part of a broad mandate. The issue of reform of substantive protection standards could also be discussed, although it was felt by some delegations, including her own, that it would be more feasible to limit work to procedural aspects, on which it would be easier to achieve consensus. The current debate had shown that the issues under consideration were shared concerns that called for multilateral consultations and efforts, which would ensure optimal solutions.

77. **Mr. Cooper** (United Kingdom) said that he supported the objectives of ensuring the fair outcomes of claims, high ethical standards for arbitrators and increased transparency of tribunal hearings. In that context, with regard to possible reform or improvement of the investor-State dispute settlement system, he supported further conceptual work on that subject within UNCITRAL, without prejudgment of the final conclusions. Further analysis was required to develop a robust evidence base that demonstrated how that work would improve the current dispute resolution framework and, especially, help to ensure better, fairer and more consistent decision-making. The establishment of a multilateral investment court was one possible solution, but there were a number of practical considerations that would need to be explored as part of the discussions, including the need to clarify how such a body would be established and resourced. He agreed that it was vital that such future discussions and negotiations should take place in a forum where governments would be represented and States consulted fully and regularly in order to ensure a system that was satisfactory to all, and urged the Commission to take into account the views of the various stakeholders in the course of that discussion, including civil society, the legal community and investors.

78. **The Chair**, summing up the discussion thus far, recalled that two delegations had opposed work on the investor-State dispute settlement system on the basis that such work was neither necessary nor desirable, and might even be premature. It had been stated that public perception of the existing system was not universally negative. The view had also been expressed that it might be inaccurate to describe the investor-State dispute settlement system as a single system because of the network of treaties concerned, and in that regard it had been pointed out that a multilateral investment court might not be able to resolve inconsistencies appropriately. It had also been pointed out that certain solutions might need to be based on context, and that some solutions were already being implemented on a rolling basis.

79. All other delegations that had made statements had either been supportive of or would not object to the commencement of work on reform, beginning with the consideration of concerns with regard to current investor-State dispute settlement mechanisms and possible solutions, if any. A preference had been expressed for a broad mandate to be given to a working group. There would be no assumptions as to the outcomes of that mandate, including whether or not reform was needed. Accordingly, the view had been expressed that the mandate should not refer to reform but, rather, should refer to the topic in a more neutral manner. The Commission had also been encouraged to undertake a fact-based rather than perception-based approach to the proposed work.

80. If reform was to be undertaken as the next phase, the Commission would need to consider which parts of the system were to be reformed and the tools needed. While the importance of a multilateral forum for the discussion had been emphasized, again no assumptions would be made as to whether those tools might be bilateral or multilateral in nature. Most delegations had expressed a preference for procedural solutions, but some delegations had also expressed an interest in discussing substantive solutions, for example, with regard to standards of protection.

81. In general, delegations had appeared open to considering the topics of concurrent proceedings and ethics. Some delegations had expressed support for the establishment of a permanent or regional multilateral tribunal and/or an appellate process, although others had expressed reservations in that regard. However, there appeared to be general agreement that all options needed to remain on the table. It had been felt important to examine how the tools sought would fit into the existing system so as to promote consistency rather than fragmentation, and also to accommodate the different contexts and different levels of experience of States. It had been emphasized that there should not be a one-size-fits-all solution.

82. Delegations had also highlighted the need for a transparent and inclusive approach and for a close collaborative process with relevant experts, especially government experts but also experts from observer States and organizations. It had been felt that the process should be government-led and that States should begin engaging in discussions in an open-minded and careful manner, without haste. In view of the importance of consensus, it had been considered that UNCITRAL was an appropriate forum for the discussions.

The meeting rose at 12.30 p.m.

Summary record of the 1052nd meeting, held at the Vienna International Centre, Vienna, on Monday, 10 July 2017, at 2 p.m.

[A/CN.9/SR.1052]

Chair: Ms. Morris-Sharma (Vice-Chair) (Singapore)

The meeting was called to order at 3.25 p.m.

Election of officers (*continued*)

1. **Ms. Angell-Hansen** (Observer for Norway), speaking on behalf of the Group of Western European and Other States, said that the Group wished to nominate Ms. Sabo (Canada) for the office of Vice-Chair.

2. *Ms. Sabo (Canada) was elected Vice-Chair by acclamation.*

Possible future work in the area of international dispute settlement (*continued*)

(a) Concurrent proceedings (*continued*) (A/CN.9/915)

(b) Code of ethics/conduct for arbitrators (*continued*) (A/CN.9/916)

(c) Possible reform of investor-State dispute settlement (*continued*) (A/CN.9/917, A/CN.9/918, A/CN.9/918/Add.1, A/CN.9/918/Add.2, A/CN.9/918/Add.3, A/CN.9/918/Add.4, A/CN.9/918/Add.5, A/CN.9/918/Add.6, A/CN.9/918/Add.7, A/CN.9/918/Add.8 and A/CN.9/918/Add.9)

3. **The Chair** said that the report of the session would reflect the Commission's earlier agreement to consider the three topics under agenda item 15 together.

4. Since the large majority of delegations had, to a greater or lesser extent, supported the proposal for work on the reform of investor-State dispute settlement, and in order to reflect the discussion in the report of the session, the following text would be included in the section of the draft report on item 15:

> "Having considered the topics in documents A/CN.9/915, A/CN.9/916 and A/CN.9/917, the Commission decided on the following mandate.
>
> The Commission entrusted Working Group [III] with a broad mandate to work on the possible reform of investor-State dispute settlement (ISDS). In line with the UNCITRAL process, Working Group [III] would, in discharging that mandate, ensure that the deliberations, while benefiting from the widest possible breadth of available expertise from all stakeholders, would be government-led, with high-level input from all governments, consensus-based and be fully transparent. The Working Group would proceed to: (i) first, identify and consider concerns regarding ISDS; (ii) second, consider whether reform was desirable in light of any identified concerns; and (iii) third, if the Working Group were to conclude that reform was desirable, develop any relevant solutions to be recommended to the Commission. The Commission agreed that broad discretion should be left to the Working Group in discharging its mandate, and that any solutions devised would be designed taking into account the ongoing work of relevant international organizations and with a view to allowing each State the choice of whether and to what extent it wishes to adopt the relevant solution(s)."

While most delegations had appeared to agree that the mandate to work on reform of investor-State dispute settlement should be given to Working Group III rather than Working Group II, there were concerns that that would result in parallel processes that would place a strain on resources, especially the resources of developing countries. She asked the Secretary to provide clarification with regard to the scheduling of the working groups' sessions.

5. **Mr. Sorieul** (Secretary of the Commission) said that Working Group II currently had a number of items on its work programme for its next two sessions. The Working Group's next session was scheduled to take place from 2 to 6 October 2017, subject to confirmation by the Commission at the current session. If those dates were confirmed, the Commission could decide whether or not to interrupt the Working Group's current work to take up the proposed new topic, an idea that might not appeal to all delegations. Another option was to begin work on the topic in Working Group III, the mandate of which had been terminated the previous year. Although some of the conference time that would ordinarily have been available to that Working Group had already been set aside for other working group sessions, as agreed by the Commission at its forty-ninth session, it would be possible to use the remainder of that time to convene a session of Working Group III in Vienna from 18 to 22 December 2017. As of 2018, the conference time allocated to the currently inactive Working Group III could return to normal, allowing a second session to be held in New York from 2 to 6 April 2018. It was for the Commission to decide whether it was advisable for the two working groups to work in parallel. Although that would entail a heavy burden, it was feasible. Numerous documents had already been prepared that could be used as a basis for discussions at the initial session of Working Group III. Therefore, the preparation of sufficient documentation was not a concern. Internal organization would be required in

order to determine how to combine the activities of Working Groups II and III, make available the resources necessary for work to be carried out in both Working Groups, and schedule the sessions of both Working Groups to ensure that they were sufficiently far apart to allow the Secretariat to prepare future documentation. However, those details could be settled at a later stage.

6. **The Chair** added that if Working Group II was given the mandate, the work could perhaps begin during the Group's sixty-eighth session in February 2018 or the following session in September 2018.

7. **Mr. Schoefisch** (Germany) expressed his delegation's support for the draft mandate. It was very important to commence without delay the work that had been discussed at the Commission's 1051st meeting. The mandate to undertake that work could be given either to Working Group III or to Working Group II, either of which could use the two weeks available in December 2017 and April 2018. The Commission could discuss the matter in further detail and make a final decision at the end of the week, during the discussion of its work programme under agenda item 21, to allow other proposals to be made with regard to Working Group III.

8. **The Chair** reminded delegates that the aim of the current discussion was to reach a provisional decision with regard to when the work on investor-State dispute settlement should commence, in order to guide the discussion that would take place under agenda item 21, rather than to determine which working group should be given the mandate to carry out that work.

9. **Mr. Moollan** (Mauritius) said that the draft mandate provided the Working Group with valuable guidance. With regard to the word "consensus-based", his understanding was that the draft mandate simply reflected usual UNCITRAL practice, although there had been occasions on which the Commission had had to move forward without consensus being reached, and interpretations as to what "consensus" meant might differ. While one of the areas of interest to a number of delegations was the creation of a multilateral adjudicatory body, it was unlikely that all delegations would agree to mandate the Working Group to work towards the establishment of such a body. He understood "consensus-based" to refer to deliberations based on broad agreement that an instrument should be developed with a view to its possible adoption, as in the case of the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (Mauritius Convention on Transparency), rather than consensus that that instrument should be adopted.

10. He agreed with the delegation of Germany that work should commence on possible reform of investor-State dispute settlement as a matter of priority, ideally during the current year. The obvious solution appeared to be to give the mandate to Working Group III, and for that Working Group to hold its next two sessions in December 2017 and April 2018.

11. **The Chair** said that the use of the term "consensus-based" in the mandate was not intended to signal deviation from the way in which consensus was usually understood in UNCITRAL. However the Working Group chose to proceed, it would operate in accordance with that understanding.

12. **Mr. Brown** (Observer for the European Union) said that although he agreed with the Chair's comments, it was important to keep in mind the possibility of a situation in which, as had happened previously in working group sessions, only some States members were ready to move forward. There had been an understanding, during previous work, that those members who were not ready to proceed should not prevent other members from doing so. In that regard, he supported the comments of the representative of Mauritius.

13. With regard to timing, it was desirable for work to begin on the reform of investor-State dispute settlement as soon as possible. Given that that work might begin only in February or September 2018 if Working Group II was given the mandate, he suggested that the Commission should instead give the mandate to Working Group III so that, subject to confirmation of that arrangement under agenda item 21, work could commence before the end of the current year and the Secretariat would have a reasonable amount of time to prepare documentation between sessions of the different working groups.

14. **The Chair**, referring to the comments made with regard to consensus, said that in UNCITRAL, a "consensus-based" process involved evaluating all possible solutions in order to agree on a model enabling all delegations to find a way forward. That understanding was based on the discussion that had taken place with regard to consensus during consideration of the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration and the Mauritius Convention on Transparency.

15. **Mr. Sorieul** (Secretary of the Commission) said that unless stated otherwise, references to a consensus-based process should be understood simply as reiterating usual UNCITRAL working methods. Consensus was always a delicate concept in the United Nations context. It was not the same as unanimity; rather, consensus was a mechanism that did not allow any one country to veto a project. In practice, it meant a substantial majority; in other words, where no more than a few countries objected to a given solution for compelling reasons. If consensus could not be reached, it was possible to use the default procedure of voting, which was generally regarded as undesirable because only a simple majority of members present and voting was required in order for a decision to be adopted; indeed, there had never been a vote on a matter of substance at UNCITRAL.

16. **Mr. Moollan** (Mauritius), clarifying his earlier comments, said that his concern in respect of the use of the wording "consensus-based" had been that certain delegations might seek to use that wording to justify blocking any discussion of an instrument that they did not intend to adhere to, such as a treaty creating a multilateral investment court. That would be contrary to UNCITRAL

practice to date, which distinguished between instruments that were binding on all member States and those that were not. Citing the Commission's earlier work on transparency as an example, he recalled that the UNCITRAL Arbitration Rules had been amended to clarify the link between those Rules and the Rules on Transparency, which had prospective effect for all member States. Delegations had worked together to reach consensus on establishing transparency rules that were acceptable to all. An opt-in mechanism had then been devised to enable those States that wished to apply the Rules on Transparency to their existing treaties to do so. As a further example, the expertise of all delegations had been drawn upon in drafting the Mauritius Convention on Transparency, regardless of whether or not the member States that those delegations represented had intended to accede to it or not. It should also be borne in mind that States also had the option of making reservations in relation to any instrument that was adopted. Thus, the fact that some States might not wish to accede to an instrument relating to the reform of investor-State dispute settlement should not mean that that possibility should not be discussed.

17. **The Chair** said that since there did not appear to be any disagreement with the explanation provided by the Secretary in respect of the word "consensus-based", the Commission could proceed on the basis that the use of that word in the mandate was not intended to deviate from usual UNCITRAL practice.

18. **Mr. Romero Martínez** (Mexico), referring to the suggested dates of working group sessions and the selection of the working group to which the mandate would be assigned, said that no reference had been made at the Commission's previous meeting or in document A/CN.9/917 to any urgency for that work to commence. Since Mexico was a developing country, his delegation was constrained by the great demands that meetings placed on limited human and financial resources. Therefore, it was preferable that Working Group II should be given the mandate. At the previous meeting, it had been stated that inclusiveness was important; matters should not be rushed if UNCITRAL truly wished to be inclusive and allow all member States to participate.

19. **Ms. Pierotic Mendia** (Chile) expressed her agreement with the comments of the representative of Mexico with regard to the limited resources of developing countries. As was the case in respect of other areas of the Commission's work, there was some overlap between the areas covered by the current work of Working Group II and the work that would be undertaken by Working Group III if it were to be given the mandate on investor-State dispute settlement. Her delegation's limited resources meant that the same representatives of Chile would have to participate in both working groups. While it was willing to accommodate that arrangement, the Commission should be aware of such restrictions faced by developing countries.

20. **Ms. Toku** (Japan) said that her delegation had no objection to the proposed wording of the new mandate. However, clarifying her delegation's position as expressed at the previous meeting, she said that although her delegation recognized the problems posed by the current investor-State dispute settlement system and was not opposed to reform of that system, it considered that Working Group II should take up the topics of concurrent proceedings and a code of ethics/conduct for arbitrators.

21. She agreed with the Chair's understanding of the word "consensus", which was confirmed by the opinion of the Office of Legal Affairs that in United Nations practice, consensus was generally understood to mean adoption of a decision without formal objections and vote. She also agreed with the comments of the representative of Mauritius in that regard. However, if in the course of the discussions on reform of investor-State dispute settlement no consensus was reached in respect of a multilateral court as the solution, the question of whether or not a country planned to ratify an instrument establishing such a court would become irrelevant because it would not be possible to proceed with that solution. Her delegation looked forward to the discussion of investor-State dispute settlement reform, with the understanding that the outcome of that discussion would not be prejudged.

22. **Mr. Sorieul** (Secretary of the Commission) said that in order to address the concern expressed in relation to the cost burden of sending delegations to attend the sessions of two different working groups, the possibility could be considered, when planning the sessions of Working Groups II and III in the spring of 2018, of holding those sessions consecutively, which would result in two weeks of meeting time. Although it was not an ideal solution, it might help to reduce the costs incurred.

23. **Mr. Spelliscy** (Canada) said that while his delegation was sensitive to the concerns expressed with regard to the cost burden on developing countries, the aim of UNCITRAL to be inclusive had to be balanced with the urgent need to commence work on the project. If Working Group II was mandated to work on reform of the investor-State dispute settlement system, there would be an approximate delay of over one year, which was not acceptable. He therefore urged the Commission to consider the options proposed by the Secretary to reduce the cost burden of that work, which would enable the work to begin as soon as possible.

24. **Mr. Apter** (Israel) expressed support for the aptly-drafted mandate, and for the comments of the Secretary with regard to consensus. In that regard, the opt-out mechanism offered by the Rules on Transparency was a good example of flexibility and compromise, and indeed his country had availed itself of that mechanism since the adoption of the Rules.

25. His delegation had no strong preference with regard to dates, but wished to note that although the option of holding back-to-back sessions of Working Groups II and III might reduce the cost burden on States whose delegations in those Groups comprised the same representatives, it might be problematic, for his delegation at least, if two representatives from the same office or department had to attend such back-to-back sessions.

26. With regard to resources, if Working Group III was given the mandate to work on reform of investor-State dispute settlement and the Group's initial session on that topic was held in December 2017, that would create difficulties for his delegation, which had already submitted its annual travel plan for 2017. He therefore suggested holding that session in 2018, either in April or, if that was too distant, slightly earlier. While work should begin as soon as possible, the process should be inclusive. In that regard, greater participation could be ensured by giving States a few more months to plan their travel accordingly.

27. **The Chair** said that there appeared to be agreement that the current work of Working Group II, which was scheduled to meet in October 2017 and February 2018, should not be disrupted. Dates were available in December 2017, April 2018 and September 2018 for the work on reform of investor-State dispute settlement, possibly in Working Group III. It was a question of striking a balance between commencing work as soon as possible and taking into account the concerns that had been expressed by delegations of developing countries. Holding the first session on the topic in April 2018 would perhaps allow States to make use of the budget cycle and make arrangements to attend that session and following sessions. A decision should be made first with regard to dates and then concerning which Working Group would be given the mandate.

28. **Mr. Moollan** (Mauritius), expressing agreement with comments made by the representative of Canada, said that work should begin on reform of investor-State dispute settlement as soon as possible and, if taken up by Working Group II, should ideally take priority over that Group's work on conciliation, given the current state of investor-State dispute settlement and its real impact far beyond that field itself. Responding to the comments made with regard to the resource limitations of developing countries, he pointed out that since the following year would most likely be spent on preliminary work based on documents that had already been submitted, that work need not entail an excessive financial burden on delegations. He suggested that a first session on the project should be held in December 2017, followed by a second session in April. If that was not possible, there should at least be two working group sessions before the fifty-first session of the Commission, to the detriment of the work of Working Group II on conciliation if necessary.

29. **Mr. Saadi** (Observer for Algeria) said that he fully supported the mandate as read out by the Chair and believed that the proposed multilateral body or appellate court was inextricably linked to the creation of a code of ethics/conduct for arbitrators. Consideration should be given to establishing such a code, which would facilitate the work of the aforementioned body.

30. **Ms. Kaufmann-Kohler** (Switzerland) asked the Secretary whether it would be possible for Working Group III to use the February 2018 dates tentatively scheduled for the sixty-eighth session of Working Group II to begin work on reform of investor-State dispute settlement. That would address the concerns expressed in relation to planning and budgeting for an additional meeting during the current year, while also satisfying those delegations that wished to proceed with the work as soon as possible.

31. **Mr. Sorieul** (Secretary of the Commission) said that, ideally, there should be an interval of six months between sessions of the same working group to enable documentation to be prepared and consultations to take place. That consideration would need to be taken into account if the February dates mentioned were used by Working Group III, as Working Group II would presumably have to meet in April instead, and there might not be a sufficient interval between that session and its following session.

32. **Ms. Kaufmann-Kohler** (Switzerland) said that work should commence on the reform project as soon as possible, but she understood that that could create difficulties for certain delegations. It would be preferable for Working Group III to be given the mandate to carry out that work.

33. **Ms. Pierotic Mendia** (Chile) said that her delegation's preference would be to hold back-to-back sessions of Working Groups II and III, as proposed by the Secretary, in order not to place a strain on the limited resources of delegations of developing countries.

34. **Mr. Maradiaga** (Honduras) suggested that the session dates should be left to the good judgment of the Secretariat, with due account taken of the comments made.

The meeting was suspended at 4.30 p.m. and resumed at 4.50 p.m.

35. **The Chair** said that following informal consultations, there appeared to be consensus with regard to dates of the working group sessions, although a final decision concerning which working group would be mandated to carry out the work on investor-State dispute settlement would be made under agenda item 21. Accordingly, there was provisional agreement that that work should be taken up by Working Group III at an initial session from 27 November to 1 December 2017 in Vienna. The following session would be held in February in New York, back to back with the sixty-eighth session of Working Group II. The first set of dates would entail swapping a session with Working Group V.

36. **Mr. Sorieul** (Secretary of the Commission) said that the suggestion of the Chair was feasible from the Secretariat's perspective. However, before a final decision was made, the delegations of Working Group V should be consulted on the proposal, as their schedule would be affected.

37. **The Chair**, expressing agreement with the Secretariat, emphasized that the proposed solution was a provisional agreement and was subject to further discussion under agenda item 21. She also reminded delegations that there was a travel trust fund to which all delegations were invited to make voluntary contributions.

38. **Mr. Schneider** (Swiss Arbitration Association) proposed that, since there might be interest in pursuing further topics in commercial arbitration as well as the work

to be undertaken in the area of investment arbitration, UNCITRAL should consider work on adjudication, which had recently become a prominent topic in arbitration rules and practice. That proposal was based on a proposal by the International Academy of Construction Lawyers concerning cost and loss of time in arbitration, which was a major concern, and inspired by the practice of adjudication as originally developed in the United Kingdom in relation to construction disputes, which provided for the urgent resolution of such disputes through summary decisions that could be enforced immediately but were subject to possible revision. In the United Kingdom, a large number of construction disputes had been settled through adjudication. The reason why it was important for an international body such as UNCITRAL to take up that topic was the difficulty of enforcing summary decisions that were not final. He therefore recommended that UNCITRAL should work on an instrument in that area, possibly as an addition to the UNCITRAL Model Law on International Commercial Arbitration (1985) as amended in 2006 or as a separate document, in order to assist countries that wished to adopt the practice of adjudication and thereby simplify or eliminate a large number of costly disputes.

39. **The Chair** suggested that in view of the time constraints, that very substantive proposal should be presented in greater detail and considered at the Commission's fifty-first session.

40. *It was so agreed.*

The meeting rose at 5 p.m.

Summary record (partial) of the 1053rd meeting, held at the Vienna International Centre, Vienna, on Tuesday, 11 July 2017, at 9.30 a.m.

[A/CN.9/SR.1053]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The discussion covered in the summary record began at 10.20 a.m.

Finalization and adoption of a model law on electronic transferable records and explanatory notes (A/CN.9/897, A/CN.9/920, A/CN.9/921, A/CN.9/921/Add.1, A/CN.9/921/Add.2, A/CN.9/921/Add.3 and A/CN.9/922)

1. **Mr. Castellani** (Secretariat), introducing the agenda item, said that the draft model law on electronic transferable records and explanatory notes, contained in document A/CN.9/920, had been finalized on the basis of the discussions of Working Group IV (Electronic Commerce) at its fifty-fourth session and, in accordance with usual UNCITRAL practice, subsequently circulated by the Secretariat among States and relevant international organizations for comment. The Commission was invited to consider that document together with the comments received, which were reproduced in documents A/CN.9/921 and its addenda, and the amendments proposed by the Secretariat in document A/CN.9/922, which were based on informal consultations with experts. On completing its consideration of the draft model law and explanatory notes, the Commission might wish to consider the relationship of the model law with other UNCITRAL texts in the area of electronic commerce, particularly the UNCITRAL Model Law on Electronic Commerce and the United Nations Convention on the Use of Electronic Communications in International Contracts, and the possibility of consolidating and compiling the provisions of those texts for the benefit of enacting States, as explained in document A/CN.9/922.

2. **The Chair** invited the Commission to consider the draft model law and accompanying explanatory notes, as contained in document A/CN.9/920, article by article.

Chapter I. General provisions

Article 1 and explanatory notes thereto

3. **Mr. Castellani** (Secretariat) said it had been suggested that the key principle that the model law was not intended to affect substantive law should be clarified as applying to such areas as privacy and data retention. However, the fact that that principle was of general application was adequately explained in paragraph 5 of the explanatory notes to article 1 and in section C of the proposed introduction to the explanatory notes (A/CN.9/922, para. 14).

4. **Mr. Fujita** (Comité Maritime International), referring to paragraph 22 of document A/CN.9/922 and drawing attention to his organization's comments as set out in document A/CN.9/921/Add.1, said that the exclusion from the scope of application of the model law of electronic transferable records whose substantive law was medium-neutral was important in order to avoid the possible interference of the model law with the application of the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (Rotterdam Rules), which contained parallel provisions on transport documents and electronic transport records that were almost identical except with respect to the issuance of multiple originals. If a State were to ratify the Rotterdam Rules, a carrier that entered into a contract of carriage to which the Rotterdam Rules applied could issue both a transport document and an electronic transport record that were each subject to those Rules. However, if the State had also established legislation based on the model law, that would raise the question of whether it would be possible for the carrier to issue an electronic transferable record incorporating the rights under the same contract of carriage but subject to that legislation. That should not be allowed, as it would make it possible to circumvent the provisions of the Rotterdam Rules on electronic transport records. The rights under the contract of carriage to which the Rotterdam Rules applied must be incorporated in an electronic document in the manner provided for by those Rules.

5. If the Rotterdam Rules were considered to constitute medium-neutral substantive law, the exclusion proposed in paragraph 22 of document A/CN.9/922 might suffice. However, it would be useful to add a more explicit reference to the Rotterdam Rules in the footnote to paragraph 3 of article 1 of the model law, to read along the lines of "rights and obligations under a contract of carriage to which the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea applies", so that any rights or obligations and any bill of lading under the Rotterdam Rules would be completely excluded from the scope of the model law.

6. **Ms. Peters** (Germany) said that in paragraph 13 of document A/CN.9/922, it was unclear to what the term "medium-neutral electronic transferable records" referred; that term might give the impression that there was a third category of transferable instruments that the model law did not address. Since the wording of paragraph 22 of the document subsequently clarified that medium neutrality referred to the substantive law

applicable to the instrument rather than to the instrument itself, the term should be removed from paragraph 13.

7. The possible general exclusion suggested in paragraph 22 of document A/CN.9/922 was too broad, as it might be difficult to determine whether a provision of substantive law was medium-neutral. Her delegation therefore disagreed that the explanation contained in paragraph 23 of A/CN.9/922 should be included in the explanatory notes. In particular, the meaning of the term "contractual integration" and the implications of its use were unclear; references to contractual integration, and indeed any references to contracts or agreements, always merited careful examination in the context of securities law.

8. Although her delegation would not oppose the addition of a specific reference to the Rotterdam Rules to footnote 1 of the model law, it did not consider there to be a conflict between the provisions of the model law and the Rotterdam Rules, as the scope of the provisions of the model law was broader, those provisions applying to securities in general.

9. **Ms. Guo** Yu (China) said that the reference in document A/CN.9/922 to the medium neutrality of substantive law might lead to misunderstandings. Since the reason for that reference was essentially to exclude all documents and instruments without a corresponding paper-based document or instrument from the scope of application of the model law, she suggested that item (c) of the footnote to article 1, paragraph 3, should be amended to read "electronic transferable records without a corresponding paper-based document", which would avoid the need to refer to medium-neutral substantive law.

10. As one of the purposes of the model law was to support the implementation of the Rotterdam Rules, the Rules should not be excluded as proposed. Such an exclusion would also overly restrict the scope of application of the model law. The provisions of the Rotterdam Rules were not comprehensive with respect to electronic transferable records and would in fact be improved and complemented by the provisions of the model law. Given that it was only under article 15 of the model law that a conflict with the relevant provisions of the Rotterdam Rules might arise, that incompatibility should be addressed under that article.

11. **Mr. Coffee** (United States of America) said that, with regard to paragraph 22 of document A/CN.9/922, it was important to bear in mind that the model law focused on functional equivalence. A law that either was medium-neutral or applied to electronic transferable records that had no paper-based equivalent would in any case allow the use of electronic transferable records. The suggested additional type of exclusion was therefore unnecessary, and might cause confusion. The explanation suggested in paragraph 23 also appeared unnecessary, as the point made was simply that contracting parties could, subject to the relevant legislative provisions, include in a contract between them any language they wished in relation to electronic transferable records existing only in an electronic environment and electronic transferable records whose substantive law was medium-neutral.

12. His delegation agreed with the proposal made by the representative of the Comité Maritime International to add a reference to the Rotterdam Rules to footnote 1 of the model law. In any case it would be for enacting States to decide what they excluded from the scope of their implementing legislation, and whether they wished to apply both instruments if they were party to the Rotterdam Rules. Moreover, since the Rules already provided for the use of electronic transferable records in the form of electronic transport records, in some situations it might suffice for a State to apply only the Rules.

13. **Mr.** Kah Wei **Chong** (Singapore) proposed that, since the issue raised by the representative of the Comité Maritime International concerned only article 15 of the model law, that issue could be addressed through the insertion of an additional paragraph in article 1, or perhaps elsewhere if appropriate, to state that article 15 did not apply to documents or instruments to which the Rotterdam Rules applied. None of the other articles appeared to present difficulties with respect to the application of the Rotterdam Rules; those articles would thus remain applicable.

14. **The Chair** suggested providing further clarification in the explanatory notes, for example, by indicating that States could decide whether they wished to exclude the application of the model law when the Rotterdam Rules applied.

15. **Mr. Castellani** (Secretariat) said that there was unanimous agreement that the model law should not affect substantive law in any manner. The suggestion made by the representative of the Comité Maritime International to exclude the Rotterdam Rules from the scope of application of the model law highlighted the fact that the Rotterdam Rules in effect constituted substantive law, since they dealt with the rights and obligations of parties, whereas the model law was intended to avoid any impact on such rights and obligations. Subject to the discussion of article 15 of the model law in relation to the Rotterdam Rules, the explanatory notes could clarify that the model law would not affect the application of substantive law, including the Rules.

16. The system for the management of electronic transferable records should operate regardless of the applicable substantive law. In order to ensure the relevance and impact of the model law, it was important to avoid the impression that its provisions would restrict the possibility of managing different types of electronic transferable record.

17. **Mr. Fujita** (Comité Maritime International) said that, in the light of the comments made by the

representative of the Secretariat to the effect that a reference to rights and obligations would be understood as concerning matters of substantive law, the language originally proposed by his delegation for inclusion in the footnote to article 1 could be modified to refer simply to transport documents to which the Rotterdam Rules applied. Although it had been suggested that only article 15 of the model law was problematic with respect to the application of the Rotterdam Rules, he was not certain that that was the case. For example, the concept of integrity of an electronic transferable record under article 10 of the model law differed from the concept of integrity of a negotiable electronic transport record under article 9 of the Rotterdam Rules, which might cause confusion. However, since there appeared to be agreement that article 15, at least, of the model law would be problematic if applied to a transport document that was subject to the Rotterdam Rules, he proposed that the additional item under footnote 1 should read along the lines of "transport documents under the scope of the Rotterdam Rules, especially regarding the application of article 15 of the Model Law".

18. **The Chair** said that it might not be appropriate to refer to article 15 of the model law in the footnote to article 1, particularly since that article had yet to be discussed. However, the proposed reference to transport documents to which the Rotterdam Rules applied was clear.

19. **Mr. Coffee** (United States of America) said the inclusion of the words "especially regarding the application of article 15 of the Model Law" in the proposed additional item under footnote 1 appeared to add nothing, since the model law would either apply or not apply to transport documents under the scope of the Rotterdam Rules. The question of whether explicit reference should be made to article 15 of the model law would depend on the Commission's discussion of that article. His delegation was in favour of the inclusion in the footnote of a reference to transport documents to which the Rotterdam Rules applied, but, if there was insufficient support for that solution, his delegation would also support the Chair's proposal that the matter should be addressed in the explanatory notes. It should be explained that the list in the footnote was illustrative only and that there might be other items that could be excluded, including transport documents that were subject to the Rotterdam Rules.

20. **The Chair** suggested that, given the lack of consensus regarding the inclusion of a reference to the Rotterdam Rules in the footnote to article 1 (3), the text of the footnote should be left unchanged and the notes accompanying the article should explain, possibly at the end of paragraph 11, the issue raised by the Comité Maritime International and invite enacting States to consider whether to exclude the Rotterdam Rules from the scope of application of their law on electronic transferable records.

21. *It was so decided*.

22. **Ms. Peters** (Germany), drawing attention to her delegation's suggestion with regard to paragraph 9 of the explanatory notes as contained in document A/CN.9/921, said that the point that the instruments to be counted as securities would be determined by substantive law was very important and, moreover, reflected the discussions of Working Group IV during the drafting of article 1 (3) of the model law.

23. **Mr. Coffee** (United States of America) expressed a preference for retaining the language of paragraph 9 of the explanatory notes as drafted. The term "investment instruments" was broad and could include such instruments as promissory notes, which might be covered by the model law, thus potentially causing confusion. The words "securities and other" helped to clarify that only a certain set of investment instruments was referred to, and also provided context with respect to the meaning of article 1 (3).

24. **The Chair** asked whether the matter could be resolved by leaving the first sentence of paragraph 9 of the explanatory notes as drafted but adding the sentence "The general determination as to which instruments are to be counted as securities is a matter of substantive law", as in the comments by the Government of Germany set out in A/CN.9/921.

25. **Ms. Peters** (Germany) said that that addition would not resolve the problem entirely because the current wording of the first sentence of that paragraph gave the impression that securities were excluded. That did not reflect the Working Group's decision to exclude only capital markets securities. She asked the representative of the United States to clarify his delegation's concern with regard to the consequences of the proposed amendment, as it was her understanding that the change would not affect the intended meaning of article 1 (3) or paragraph 9 of the explanatory notes. Even if the proposed new sentence were added, the reference to securities in the first sentence was still too broad.

26. **The Chair** wondered whether it was necessary to retain the reference to securities given that the proposed deletion of that reference would in any case not change the implied meaning of the original sentence that securities were a type of investment instrument; if a security was an investment instrument, it would be excluded from the scope of application of the model law.

27. **Mr. Coffee** (United States of America) said that while the interpretation that securities were a subset of investment instruments was possible, it was important to modify the paragraph in such a way as to clarify that it did not refer to all investment instruments, thus avoiding an overly broad interpretation that would be inconsistent with the text of article 1 (3). Possible solutions would be to replace the words "securities and other investment instruments" with the words "investment instruments such as securities" or with the words "investment securities".

28. **The Chair** pointed out that the second sentence of paragraph 9 was not intended to provide an exhaustive list of what was meant by "investment instruments". Since there appeared to be no agreement on the amendment of the paragraph, and bearing in mind the Working Group's deliberations on that text, she suggested that the paragraph be retained as drafted.

29. **Ms. Peters** (Germany) said that the inclusion of the sentence "The general determination as to which instruments are to be counted as securities is a matter of substantive law" would be a very helpful first step. She also supported the proposal by the representative of the United States to amend the first sentence of paragraph 9 to refer to investment securities.

30. **Mr. Castellani** (Secretariat) said that, if the proposed changes were accepted, the first part of paragraph 9 of the draft explanatory notes would read "Paragraph 3 clarifies that the Model Law does not apply to investment securities. The general determination as to which securities are to be counted as investment securities is a matter of substantive law." The original second sentence would thus become the third sentence and would remain unchanged except for the possible replacement of the term "investment instruments" with the term "investment securities". The final sentence of the paragraph would remain as drafted. The text of the amended paragraph as a whole would need to be further refined to reflect the fact that the term "investment instrument" was no longer being used.

31. **Ms. Peters** (Germany) pointed out that in the original version of the proposed additional sentence, the word "instruments" was not incorrect, as it was intended as a general term rather than as referring to investment instruments. Consequently, it should not be changed to "securities".

32. **The Chair** said that, in that light, the word "instruments" would be retained in that sentence. She took it that the proposed amendments to paragraph 9 of the draft explanatory notes were otherwise acceptable.

33. *It was so decided*.

34. **The Chair** recalled that it had been suggested that item (c) of the footnote to article 1 (3) should be modified to refer to "electronic transferable records without a corresponding paper-based document", in order to avoid the need to refer to electronic transferable records whose substantive law was medium-neutral. However, since that suggestion had attracted no support in the Working Group, she suggested that that item remain as drafted.

35. *It was so agreed*.

Article 2 and explanatory notes thereto

36. **Mr. Castellani** (Secretariat) suggested that paragraphs 24 and 25 of document A/CN.9/922, which reflected comments received from the International Maritime Organization, should be reproduced, subject to minor drafting, in a footnote to the term "insurance certificates" in paragraph 20 of the draft explanatory notes.

37. *It was so decided*.

38. **Mr. Coffee** (United States of America) said that his delegation objected to the proposal by the Government of Germany set out in document A/CN.9/921 to modify the second sentence of paragraph 19 of the explanatory notes, particularly the proposed reference to "the (rightful) holder". Given that the concept of "control" had been discussed extensively by the Working Group over the course of many sessions, the reference to "the person in control" should be retained. The holding of a document or instrument was a fact rather than a legal conclusion, and the insertion of the word "rightful" would introduce some additional legal elements. Whether a holder was the rightful holder would be determined by the applicable substantive law; it was not the purpose of the model law to displace that law.

39. **Ms. Cap** (Austria) said that she supported the proposal by the Government of Germany insofar as, for reasons of consistency, the sentence should refer to the equivalent of "person in control" in the paper world, i.e. the "possessor", since the explanatory notes to article 11 explained that "control" was the functional equivalent of "possession". However, she agreed with the representative of the United States that the applicable substantive law would determine who was the rightful holder.

40. **The Chair** suggested that, to reflect the comments made, the words "person in control" should simply be replaced with the word "possessor" in the second sentence of paragraph 19 of the explanatory notes.

41. *It was so decided*.

Article 3 and explanatory notes thereto

42. *Article 3 and the explanatory notes thereto were approved*.

Article 4 and explanatory notes thereto

43. **Mr. Castellani** (Secretariat) said that, during informal consultations, a large number of representatives of States and intergovernmental and non-governmental organizations had suggested that more guidance should be provided as to the provisions from which parties could derogate.

44. Recalling that party autonomy was addressed in other UNCITRAL model laws, as summarized in paragraphs 30 and 31 of the explanatory notes, he said that efforts had been made to strike a balance between two guiding principles, the first being that party autonomy was an expression of the principle of privity of contract, and the second being that rules of mandatory application, such as those on public policy, limited party autonomy. He also recalled that, during the discussions of Working Group IV, it had been said that derogation

from functional equivalence rules should not be permitted.

45. He noted that party autonomy was particularly relevant to chapter III, on the use of electronic transferable records.

46. **Ms. Guo** Yu (China), supported by **Mr. Sarapkin** (Russian Federation) said that article 4 should be amended to clearly identify the provisions from which parties could derogate, particularly since most of the provisions of the model law appeared to be of mandatory application.

47. **The Chair** said that if it was indeed the intention that most of the provisions of the model law should be of mandatory application, it might be appropriate to provide enacting States with more guidance. To that end, one possibility would be to adopt the suggestion, set out in paragraph 6 of the comments of the International Federation of Freight Forwarders Associations in document A/CN.9/921/Add.2, that articles 1 to 3, 5 to 12 and paragraph 2 of article 20 should be identified as rules of mandatory application, while parties could derogate from the remaining articles.

48. **Ms. Peters** (Germany) pointed out that paragraph 1 of article 4 reflected the compromise reached by the Working Group following extensive discussion and should therefore remain as drafted, leaving the decision as to the provisions from which parties could derogate to the enacting State.

49. **Mr. Coffee** (United States of America) said that the Working Group had indeed considered the matter on numerous occasions and had failed to reach agreement on the provisions that should be of mandatory application. It would be time-consuming to attempt once again to reach such a decision. Moreover, given the nature of the instrument, it would be more appropriate for national legislators to assess each provision to determine from which provisions parties could derogate. The article should therefore remain unchanged.

50. **Mr. Castellani** (Secretariat) said that some of the States that were considering early enactment of the model law had indicated that they would not enact article 4. It would therefore be useful to monitor the enactment of that article closely and seek feedback from States on the different ways in which they were enacting the model law as a whole. It would then be possible to supplement the guidance currently set out in the explanatory notes on the basis of that experience.

51. **Mr. Coffee** (United States of America) said that consideration should be given not only to the ways in which the model law was enacted but also to the ways in which its provisions were applied, since practical experience would be based on use of the model law rather than its enactment alone.

52. **The Chair** said she took it, in the light of the comments made, that the Commission wished to approve article 4 and the explanatory notes thereto unchanged.

53. *It was so decided*.

Article 5 and explanatory notes thereto

54. **Ms. Alshaiji** (Kuwait), drawing attention to her country's comments on the draft article, as contained in paragraph 4 of document A/CN.9/921/Add.1, said that the exemptions from liability referred to in those comments applied unless otherwise provided for in regulations governing the disclosure of and access to information. Similar provisions should be established in article 5 of the model law.

55. **The Chair** said that the discussion of article 5 would be deferred.

Article 6 and explanatory notes thereto

56. **Ms. Guo** Yu (China) drew attention to her country's proposal with respect to the article, as contained in paragraph 2 of document A/CN.9/921/Add.3.

57. **Ms. Peters** (Germany) said that the proposed addition of the words "as permitted by law" following the word "information" appeared to be unnecessary given that, in accordance with article 1, paragraph 2, of the model law, all information in an electronic transferable record must meet the requirements of substantive law governing transferable documents or instruments. Also, since functional equivalence with respect to electronic transferable records to which information was added was covered by article 10, the concern raised was amply addressed. Moreover, she was concerned that the proposed wording would have the unintended consequence of restricting the addition of technical data or useful information produced during the life cycle of an electronic transferable record unless the addition of such information was explicitly provided for.

58. **Mr. Coffee** (United States of America) said that his delegation did not support the proposal of the Government of China, for the reasons given by the representative of Germany.

59. **Mr.** Kah Wei **Chong** (Singapore) said that although he appreciated the intention behind the proposal made, he agreed with the representative of Germany that the concern raised related to restrictions under substantive law and was therefore already addressed by paragraph 2 of article 1. The possible unintended consequence of the proposed amendment, as also pointed out by the representative of Germany, would defeat the purpose of article 6.

60. **Mr. Sarapkin** (Russian Federation) said he agreed that the information that could be added to an electronic transferable record would be determined by substantive law. However, he also agreed that some restrictions should be established, either in the model law itself or in the explanatory notes, with respect to the type of information that could be added, in order to ensure that electronic transferable records to which information was

added were not substantively altered, compromised or rendered invalid.

61. **Ms. Guo** Yu (China) said that if her country's proposal was not supported by other delegations, it could be clarified in the explanatory note that "additional information" referred to technical information.

The meeting rose at 12.35 p.m.

Summary record of the 1054th meeting, held at the Vienna International Centre, Vienna, on Tuesday, 11 July 2017, at 2 p.m.

[A/CN.9/SR.1054]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 2.05 p.m.

Finalization and adoption of a model law on electronic transferable records and explanatory notes (*continued*) (A/CN.9/897, A/CN.9/920, A/CN.9/921, A/CN.9/921/Add.1, A/CN.9/921/Add.2, A/CN.9/921/Add.3 and A/CN.9/922)

The Chair invited the Commission to resume its consideration of the articles of the draft model law and accompanying explanatory notes as contained in document A/CN.9/920.

*Chapter I. General provisions (*continued*)*

*Article 6 and explanatory notes thereto (*continued*)*

1. **Mr. Castellani** (Secretariat) suggested that, in order to address the concerns raised at the previous meeting, a sentence could be added to the explanatory notes on article 6 to clarify that article 1, paragraph 2, of the model law precluded the insertion in an electronic transferable record of information not permitted under substantive law.

2. **Ms. Peters** (Germany) pointed out that paragraph 40 of the explanatory notes provided some examples of the types of additional information that could be included in an electronic transferable record. Consideration could be given to whether those examples were sufficient.

3. **Mr. Sarapkin** (Russian Federation) said that a compromise solution would be to expand paragraph 40 of the explanatory notes to establish restrictions with regard to the types of information that could be added to an electronic transferable record.

4. **The Chair** suggested that article 6 should remain unchanged and that the matter should be addressed in the explanatory notes, as suggested by the Secretariat. That additional text, together with the examples given in paragraph 40, would provide the necessary clarification.

5. *It was so decided.*

Article 7 and explanatory notes thereto

6. **The Chair**, drawing attention to paragraph 27 of document A/CN.9/922, said she took it that the Commission wished to accept the suggested revision of paragraph 48 of the explanatory notes to reflect the fact that not all token-based systems and distributed ledger-based systems lacked a centralized operator.

7. *It was so decided.*

Chapter II. Provisions on functional equivalence

Article 8 and explanatory notes thereto

8. *Article 8 and the explanatory notes thereto were approved.*

Article 9 and explanatory notes thereto

9. **Mr. Castellani** (Secretariat), drawing attention to paragraph 28 of document A/CN.9/922, said that the proposed clarification in the explanatory notes that "reference to electronic signatures in article 9 of the Model Law is intended also as reference to electronic seals or other methods used to enable the signature of a legal person electronically" was necessary because in some laws, including European Union Regulation No. 910/2014 on electronic identification and trust services for electronic transactions in the internal market, electronic seals were referred to as only one of various identification measures. In that Regulation, electronic seals referred to the method used to identify legal persons while electronic signature referred to the method used to identify natural persons; however, "electronic signature" was defined more broadly in the UNCITRAL Model Law on Electronic Signatures and was not defined at all in the model law on electronic transferable records.

10. **Mr. Coffee** (United States of America) expressed concern that the use of the term "legal person" in the proposed text could cause confusion. He would prefer the text to clarify, on first reference to a person, that that person might be legal or natural.

11. **The Chair** said that since the purpose of the proposed text was not to clarify that an electronic record could be signed by a legal person but that references to electronic signatures also encompassed electronic seals and other methods, the word "legal" could be removed from the text to avoid any possible confusion. She took it that, subject to that modification, the Commission wished to accept that text.

12. *It was so decided.*

Article 10 and explanatory notes thereto

13. **Mr. Castellani** (Secretariat) suggested that the Commission should begin its consideration of the article by examining the proposals made by the Government of China in document A/CN.9/921/Add.3. In addition to those proposals, a suggestion had been made in informal consultations to replace the phrase "the electronic transferable record" with the phrase "that electronic transferable record" in subparagraph 1 (b) (iii) of the article, in order to bring that subparagraph into line with subparagraphs 1 (b) (i) and (ii).

14. **Mr.** Kah Wei **Chong** (Singapore), referring to paragraph 3 (1) of document A/CN.9/921/Add.3, expressed support for the proposed change to the title of article 10, which would be consistent with the naming of the other provisions relating to functional equivalence.

15. **The Chair** said she took it that the Commission wished to accept the proposed change.

16. *It was so decided.*

17. **The Chair** said that the concern expressed in paragraph 3 (2) of document A/CN.9/921/Add.3 in respect of the definite article in subparagraph 1 (b) (i) of the article in the English version revolved around the question of how to render the idea of singularity in and ensure consistency between the six language versions of the text. Given that the matter involved linguistic rather than substantive issues, it should be dealt with through linguistic consultations, in conjunction with paragraphs 77 and 78 of the accompanying explanatory notes contained in document A/CN.9/920.

18. *It was so agreed.*

19. **The Chair** drew attention to the proposal made in paragraph 3 (3) of document A/CN.9/921/Add.3 to insert the word "exclusive" before the word "control" in subparagraph 1 (b) (ii) of the article. In the absence of support for that proposal, the text would remain unchanged.

20. She asked whether there were any objections to the proposal to replace the phrase "the electronic transferable record" with "that electronic transferable record" in subparagraph 1 (b) (iii).

21. **Mr. Coffee** (United States of America) pointed out that since the chapeau of paragraph 1 referred to an electronic record rather than an electronic transferable record, it would be unclear to what "that electronic transferable record" in subparagraph 1 (b) (iii) referred. Clarification was therefore needed.

22. **Mr. Castellani** (Secretariat) suggested that, in order to address that concern, the word "transferable" should be removed from subparagraph (b) (iii), which would thus read "To retain the integrity of that electronic record". That subparagraph would then be in line with subparagraph 1 (b) (ii).

23. *It was so decided.*

24. **Mr. Sarapkin** (Russian Federation) recalled that at a previous session of Working Group IV, it had been decided to delete the word "authoritative" before the words "electronic transferable record" in subparagraph 1 (b) (i). However, given that the definite article could not be expressed in Russian or Chinese, it should be replaced or supplemented with another word that made it clear that the electronic transferable record was authoritative and met the relevant requirements.

25. **The Chair** asked the delegation of the Russian Federation to raise that matter during the linguistic consultations that would be held to address the use of the definite article.

26. **Ms. Peters** (Germany) drew attention to her Government's suggestion, set out in document A/CN.9/921, to modify the second and third sentences of paragraph 63 of the explanatory notes to read "Uniqueness of a transferable document or instrument aims to prevent the circulation of multiple documents or instruments relating to the same performance and thus to avoid the existence of multiple claims for performance of the same obligation. Providing a guarantee of uniqueness in an electronic environment functionally equivalent to an original or authentic document or instrument in the paper world has long been considered a peculiar challenge."

27. **Mr. Castellani** (Secretariat) said that the suggestions made with regard to the second sentence were of an editorial rather than a substantive nature; they merely improved the clarity of the text. Meanwhile, the suggestion relating to the final sentence involved a more substantive change. It might therefore be appropriate to consider the proposed sentences separately.

28. **The Chair** said she took it that the Commission wished to accept the proposed changes to the second sentence of paragraph 63 of the explanatory notes.

29. *It was so agreed.*

30. **Mr. Coffee** (United States of America) said that he did not agree with the proposed change to the final sentence of paragraph 63, as it would create confusion. Uniqueness served to prevent multiple claims. As long as that objective was met, functional equivalence with respect to singular claims was achieved and the question of uniqueness became irrelevant. The original text, which made that point more clear, should therefore be retained. The proposed new language appeared to focus on the document or instrument itself, whereas the focus should be on the singularity of claims.

31. **Mr. Gabriel** (International Law Institute), expressing support for the revised sentence as proposed, suggested the insertion of the word "paper" after the word "authentic" in that sentence in order to clarify the idea that the purpose of uniqueness in its traditional sense was to avoid multiple claims with respect to paper documents or instruments.

32. **Ms. Peters** (Germany) said that the intention of the proposed wording was to express the difficulty of achieving a functional equivalent of uniqueness in the electronic environment. Since uniqueness referred to paper documents and instruments, the proposed wording did not affect the notions of singularity of claims or singularity of a document or instrument. She doubted the need to insert the word "paper" in the revised third sentence given that the proposed wording already referred to "the paper world" and "transferable document or instrument" was defined in the model law as documents or instruments issued on paper, as was also reflected in paragraph 64 of the explanatory notes.

33. **Ms. Cap** (Austria) said that while she agreed that "transferable document or instrument" clearly referred to a paper document or instrument, if other delegations felt that clarification was necessary, her delegation would not object.

34. She noted that the proposed revision appeared to introduce a shift in emphasis; while it seemed to be aimed at explaining the functional equivalent of uniqueness in the sense that it referred to the uniqueness of an original or authentic document or instrument, the wording of the original sentence appeared to emphasize the guarantee of uniqueness, namely possession of the paper instrument or document.

35. **Mr.** Kah Wei **Chong** (Singapore) expressed support for the proposed reformulation. Article 10 of the model law related to the functional equivalent of uniqueness in the electronic environment. The purpose of paragraph 63 was to explain that providing a guarantee of uniqueness in an electronic environment was a peculiar challenge. That intended meaning was expressed more clearly in the proposed revision than in the original sentence, in which the reference to possession confused matters.

36. **The Chair** said that on the basis of the comments made, she took it that the Commission wished to accept the revised third sentence of paragraph 63 of the explanatory notes as proposed by the Government of Germany.

37. *It was so decided.*

38. **The Chair** said she took it that the Commission wished to accept the proposals made by the Government of Germany in document A/CN.9/921 with regard to the first and third sentences of paragraph 64 of the explanatory notes.

39. *It was so agreed.*

40. **The Chair** drew attention to the further proposal by the Government of Germany to delete the reference to the combination of the "singularity" and "control" approaches in paragraph 65 of the explanatory notes.

41. **Mr. Coffee** (United States of America) said that while his delegation could agree to the other two proposals by the Government of Germany with respect to the same paragraph, namely the addition of "the existence of" before the word "multiple" and the replacement of the word "requests" with the word "claims", it was desirable to retain the reference to the combination of the two approaches mentioned. The paragraph would thus read "Article 10 aims at preventing the possibility of the existence of multiple claims to perform the same obligation by combining two approaches, i.e. 'singularity' and 'control'".

42. **The Chair** said she took it that that compromise was acceptable to the Commission.

43. *It was so decided.*

44. **The Chair** asked the representative of Germany to explain her Government's proposal to delete the reference to control in paragraph 67 of the explanatory notes.

45. **Ms. Peters** (Germany) said that since control was the functional equivalent of possession, it was not appropriate to refer to control in the context of that paragraph.

46. **Mr. Coffee** (United States of America) said that he opposed the proposed deletion given that the concept of control was a core element of the model law.

47. **The Chair** said that in the light of that objection, she took it that the Commission wished to retain the original wording of paragraph 67 unchanged.

48. *It was so agreed.*

49. **The Chair**, drawing attention to the proposal by the Government of Germany to insert the word "also" before the phrase "have an evidentiary value" in the last sentence of paragraph 68 of the explanatory notes, said she took it that that proposal was acceptable.

50. *It was so agreed.*

51. **The Chair** asked the delegation of Germany to clarify the statement in document A/CN.9/921 that "paragraph 70 should be made subject only to paragraph 4".

52. **Ms. Peters** (Germany) said that the suggestion made by her Government with respect to paragraph 70 of the explanatory notes was intended not to focus on the reference to paragraph 4 of the explanatory notes but, rather, to clarify the fact that the nominative instruments given as examples in the second sentence of paragraph 70 were only straight or nominative instruments if they were issued as instruments not to order.

53. **Mr. Castellani** (Secretariat) expressed doubt that the addition of the words "if these are issued as instruments not to order" to the second sentence of paragraph 70 would provide clarity. Documents or instruments were normally transferable. However, under substantive law, it was possible to make such documents or instruments non-transferable, whereupon they became straight. Since a straight document or instrument was not transferable, the model law would not apply; such documents or instruments would circulate as normal electronic records. Meanwhile, electronic transferable records were subject to additional requirements because of their peculiar legal value. The original paragraph had been intended to highlight the fact that the system for managing electronic transferable records should be able to manage both transferable and non-transferable records, although the phrase "in certain jurisdictions" in the second sentence might be unnecessary.

The meeting was suspended at 3.45 p.m. and resumed at 4.05 p.m.

54. **Ms. Cap** (Austria) said that a compromise proposal had been reached during informal consultations to replace

the first and second sentences of paragraph 70 with the following words: "The definition of 'electronic transferable record' does not cover certain documents or instruments which are generally transferable but whose transferability may be limited due to other agreements, for example in the case of straight bills of lading".

55. **The Chair** said she took it that the Commission wished to accept the proposed wording.

56. *It was so decided.*

57. **Mr. Coffee** (United States of America), referring to the comments of his Government in document A/CN.9/921, suggested redrafting the second sentence of paragraph 76 of the explanatory notes to read "That requirement implements the requirement of a singular claim.", because the current focus of the paragraph was incorrect.

58. **Ms. Peters** (Germany) said that that second sentence should be retained as drafted, because singularity of claims was the final effect, rather than the purpose, of article 10, paragraph 1 (b) (i).

59. **Mr.** Kah Wei **Chong** (Singapore) said that he too was in favour of retaining the existing wording of the second sentence which, although short, accurately reflected the work of Working Group IV. The singularity approach related to the singularity of the record, not the singularity of the claim. As had just been pointed out, the singularity of the claim was the final effect rather than the object of article 10, paragraph 1 (b) (i), which was to achieve the singularity of the record.

60. **Ms. Cap** (Austria) said she agreed that the notion of singularity referred to records rather than claims.

61. **Mr. Coffee** (United States of America) said it was his understanding that the purpose of paragraph 1 (b) (i) of article 10 was to identify the document that would be regarded as the electronic transferable record in conjunction with the concept of control, in order to require the performance of an obligation. The focus was on the performance of the obligation, i.e. the singular claim, not on the singularity of the electronic record. There might be multiple, similar electronic records. Therefore, it was not appropriate to indicate that only one record was relevant.

62. **Mr. Gabriel** (International Law Institute) said that the first sentence of paragraph 76 set out a requirement and the second sentence stated the purpose of that requirement. Accordingly, he supported the suggestion made by the United States Government in document A/CN.9/921, which was merely to clarify the purpose of that requirement.

63. **Mr. Sarapkin** (Russian Federation), referring to paragraph 77 of the explanatory notes, said that while it had been stated that the definite article in the English, French and Spanish language versions of the model law sufficed to indicate the singularity approach, the same meaning was not so readily conveyed in the Chinese and Russian language versions.

64. **The Chair** said that the linguistic issues raised would be discussed during the linguistic consultations.

65. With regard to paragraph 76, it appeared that there was insufficient support for the proposal submitted by the United States Government. Therefore, the original wording of paragraph 76 would be retained.

66. *It was so agreed.*

67. **Mr. Coffee** (United States of America) suggested the deletion of the words "as opposed to other electronic records that are not transferable" in the first sentence of paragraph 77 to avoid potential confusion, given that an electronic record was not transferable unless it was an electronic transferable record.

68. *It was so decided.*

69. **Ms. Cap** (Austria) said that the second sentence of paragraph 77 of the explanatory notes was confusing because it did not state clearly that an electronic transferable record entitled its holder to the same rights and obligations as a corresponding transferable document or instrument.

70. **Mr. Castellani** (Secretariat) said that it might be possible to add that information to the explanatory notes. However, it might be more appropriate to include it in the proposed introduction to the explanatory notes as set out in document A/CN.9/922. Those possibilities could be discussed when the Commission considered that introduction.

71. **Mr.** Kah Wei **Chong** (Singapore) said that it might be more fruitful if further discussion of the meaning of the second sentence of paragraph 77 was deferred until the next meeting, by which time the linguistic consultations on the definite article would have taken place. In the meantime, the Commission could move on to consider other parts of the explanatory notes.

72. **The Chair** said that that linguistic issue in relation to paragraph 77 was separate from the problem identified with regard to the second sentence of that paragraph. Since it was important to ensure a common understanding of the meaning of the sentence in question, she supported the proposal to defer further consideration of that sentence.

73. **Mr. Coffee** (United States of America) suggested that the second sentence should be deleted in order to avoid confusion, and could be reinstated if its meaning was subsequently clarified.

74. **The Chair** suggested that a decision on the sentence should be deferred. If no common understanding could be reached, its deletion could be considered.

75. *It was so agreed.*

76. **Ms. Guo** Yu (China), referring to her Government's comments in document A/CN.9/921/Add.3, said that

paragraph 78 of the explanatory notes should be deleted because the reference to "other legislation on electronic transferable records" might cause confusion. If there was no support for that proposal, the paragraph should be amended so that its focus was on the difference between "singularity" and "uniqueness".

77. **The Chair** suggested that the concern raised might be addressed by deleting only the words "Unlike other legislation on electronic transferable records" from the beginning of the paragraph.

78. **Mr.** Kah Wei **Chong** (Singapore) said that since paragraph 78 also raised the same linguistic issue concerning the definite article that had been mentioned previously, it would be preferable to defer further consideration of the paragraph.

79. *It was so decided*.

80. **Mr. Castellani** (Secretariat), drawing attention to the proposal of the Government of China, contained in document A/CN.9/921/Add.3, to delete paragraph 80 of the explanatory notes, said that the concern expressed in relation to that paragraph was unfounded because article 12 of the model law, which established a general reliability standard, applied to article 10 in its entirety. Rather than deleting paragraph 80, a cross reference to article 12 could be added to that paragraph. The reference would be similar in language and scope to that contained in the final part of paragraph 81 of document A/CN.9/920.

The Chair said she took it that that suggestion addressed the concern raised by the delegation of China and was acceptable to all other delegations.

81. *It was so decided*.

82. **Mr. Castellani** (Secretariat), referring to paragraph 29 of document A/CN.9/922, said that in paragraph 81 of the explanatory notes, the reference to the reliable method used to retain integrity was described as being relative or subjective. Paragraph 81 went on to state that the general reliability standard contained in article 12 of the model law applied to the assessment of that method. However, in paragraph 119 of the notes, the general reliability standard was described as being objective. It might be necessary to clarify the relationship between the concept of integrity and the application of a general reliability standard to that concept in order to avoid any inconsistency.

83. **Mr.** Kah Wei **Chong** (Singapore), supported by **Mr. Coffee** (United States of America), suggested that that issue could be resolved by deleting the words "or subjective" in paragraph 81.

84. **Mr. Castellani** (Secretariat) said that the reference to relativity might be connected to the fact that the general standard was implemented differently for each method. A cross reference to article 12 might be useful in explaining that notion in relation to article 10.

The meeting rose at 5 p.m.

Summary record of the 1055th meeting, held at the Vienna International Centre, Vienna, on Wednesday, 12 July 2017, at 9.30 a.m.

[A/CN.9/SR.1055]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 9.30 a.m.

Finalization and adoption of a model law on electronic transferable records and explanatory notes (A/CN.9/897, A/CN.9/920, A/CN.9/921, A/CN.9/921/Add.1, A/CN.9/921/Add.2, A/CN.9/921/Add.3 and A/CN.9/922)

1. **The Chair** invited the Commission to resume its consideration of the articles of the draft model law and accompanying explanatory notes as contained in document A/CN.9/920.

*Chapter II. Provisions on functional equivalence (*continued*)*

*Article 10 and explanatory notes thereto (*continued*)*

2. **Mr. Castellani** (Secretariat), reporting on the linguistic consultations that had been held following the previous meeting, recalled that it had been considered that the use of the definite article in article 10, paragraph (1) (b) (i), of the model law to qualify "electronic transferable record" was important in conveying the notion of singularity of an electronic transferable record. However, since definite articles were not used in Chinese or Russian, further discussion had been necessary in order to identify an appropriate linguistic solution that would convey exactly the same meaning in all six languages. The conclusion reached on the basis of the consultations was that there were two possible options: the first would be to use the qualifying adjective "singular" before the words "electronic transferable record" in all six language versions, and the second would be to use the definite article in the Arabic, English, French and Spanish language versions and an appropriate equivalent of the adjective "singular" in the Chinese and Russian versions, and to include in the explanatory notes a paragraph explaining the reason for that decision.

3. **Ms. Guo Yu** (China) said that use of a single equivalent in all six language versions would be the most desirable solution, as it would ensure that the model law was as clear as possible and facilitate interpretation and comparison of those versions. Her delegation was concerned that the second option could lead to differences in meaning. However, by way of compromise, she suggested that that second solution should be adopted but the approach should be explained in order to prevent any misunderstanding. To that end, she proposed that the paragraphs 77 and 78 of the explanatory notes should be reformulated to read:

> "77. The purpose of the provision is to identify the electronic transferable record which is an equivalent to a paper-based document.
>
> "78. "The combination of the article 'the' and singular noun in the Arabic, English, French and Spanish language versions of the Model Law suffices to point at the singularity approach. A qualifier is omitted to avoid interpretative challenges, because a qualifier could be interpreted as referring to the notion of "uniqueness", which has been abandoned, and could ultimately foster litigation. A qualifier is used in the Chinese and Russian language versions because a proper qualifier can be found in these languages and avoids the interpretation problem. All the six language versions intend to convey the same notion."

4. **The Chair** said she agreed that the ideal solution would be for a common word to be used in all language versions, but the suggestion made by the representative of China would also resolve the issue.

5. **Mr. Sarapkin** (Russian Federation), **Ms. Cap** (Austria) and **Ms. Finocchiaro** (Italy) expressed support for the proposal made by the representative of China.

6. **Ms. Peters** (Germany) said that the proposal was a useful compromise that accurately reflected the understanding of Working Group IV with regard to the notion of singularity underlying the text of article 10 of the model law.

7. **Mr. Coffee** (United States of America) suggested that the word "functional" should be inserted before the word "equivalent" in the proposed modified text of paragraph 77.

8. **Mr. Kah Wei Chong** (Singapore), expressing support for the proposals made by the representative of China and the United States, said he agreed that it was important for the intended meaning to be conveyed clearly in the explanatory notes to avoid the possibility of misinterpretation or misapplication.

9. **Mr. Bellenger** (France) said that while his delegation would have preferred use of the adjective "particulier" to qualify the noun "document éléctronique" in the French language version of the text, his delegation did not object to the proposed solution.

10. **Mr. Maradiaga** (Honduras) said that his delegation supported the proposals made by the representatives of China and the United States.

11. **The Chair** said she took it that the Commission wished to revise paragraphs 77 and 78 of the explanatory notes to reflect the proposals made.

12. *It was so decided.*

13. **Mr. Castellani** (Secretariat) recalled that, at the previous meeting, it had been suggested that the words "or subjective" in the second sentence of paragraph 81 of the explanatory notes should be deleted. The general reliability standard established in article 12 applied to each instance in which a method was used to achieve a specific function, and was therefore objective. Since each method was different, the assessment of the reliability of each method was relative to that specific function. He suggested that that explanation of the notion of relativity should be given in the explanatory notes to article 10, together with a cross reference to article 12, and that the words "or subjective" should be deleted as proposed.

14. *It was so decided.*

15. **Ms. Peters** (Germany), drawing attention to her Government's proposals, as set out in document A/CN.9/921, with regard to paragraphs 82 and 83 of the explanatory notes, said that the aim of the proposed amendments was not to change the substance of the provisions but, rather, to ensure that the discussions of the Working Group were clearly reflected. Specifically, the proposed amendment to paragraph 83 was aimed at reflecting clearly the meaning and purpose of article 10.

16. **Mr. Coffee** (United States of America) requested clarification as to the meaning of "dynamic notion of 'original'" in the text of paragraph 82 as proposed by the Government of Germany.

17. **Mr. Castellani** (Secretariat) said that that wording was explained by the second sentence of paragraph 82 of the draft explanatory notes: article 8 of the UNCITRAL Model Law on Electronic Commerce (1996) referred to a static notion of "original", while electronic transferable records were meant, by their nature, to circulate. Although that Model Law established functional equivalence for the notion of "original", article 8 was based on the assumption that a document was in its final form and would not be changed. That applied, for example, to contracts, modification of which was possible but usually neither necessary nor frequent.

18. Since the adoption of the Model Law, however, the modification of electronic records, such as through the addition of metadata, had become increasingly frequent. In the draft model law on electronic transferable records, the singular electronic transferable record fulfilled the same functions as the original transferable document or instrument but by its nature was meant to circulate, and would not be final until presentation. Therefore, the notion expressed in article 8 of the Model Law on Electronic Commerce could not be used to capture functional equivalence because although at the time of issuance of an electronic transferable record there was one original, that record would necessarily change during its life cycle. He suggested inserting that clarification in the draft explanatory notes.

19. **Mr. Coffee** (United States of America), welcoming that suggestion, said that in the light of the Secretariat's comments, his delegation had no objection to the proposal by the representative of Germany.

20. **The Chair** said she took it that the Commission wished to accept the proposals of the Government of Germany with regard to paragraphs 82 and 83 of the draft explanatory notes on the understanding that the concepts of "dynamic" and "static" should be clarified as proposed.

21. *It was so decided.*

22. **Mr. Castellani** (Secretariat), referring to paragraphs 84–86 of the explanatory notes, drew attention to the Secretariat's suggestion in paragraph 30 of document A/CN.9/922, which was intended to clarify that, in practice, integrity would be ensured through the use of certain types of electronic signature — such as signatures based on public key infrastructure — that provided a reliable assurance of the link between the electronic signature affixed on the electronic transferable record and the content of that record at the time the electronic signature was affixed.

23. **The Chair** said she took it that the Commission wished to accept the Secretariat's suggestion.

24. *It was so decided.*

Article 11 and explanatory notes thereto

25. **Ms. Guo Yu** (China) drew attention to her country's written proposals with respect to the article, as contained in document A/CN.9/921/Add.3.

26. **Mr. Coffee** (United States of America), referring to the proposal to change the title of article 11 to "Possession", recalled that the Working Group had agreed that that title should deviate from the naming style of the other articles of the draft model law relating to functional equivalence because of the novelty and relevance of the concept of "control" and the importance of highlighting that concept in the title of the article itself. His delegation therefore preferred to retain the title "Control".

27. **The Chair** suggested that, in view of those comments and the fact that the explanatory notes explained the link between possession in the paper world and control in the context of the model law, the title of article 11 should be left unchanged.

28. *It was so agreed.*

29. **Mr. Castellani** (Secretariat), referring to the proposal to insert the word "publicly" before the word "identify" in subparagraph 1 (b) of article 11, said it was his understanding that that proposal was intended to emphasize the need to identify the person in control vis-à-vis all concerned or potentially concerned parties. However, it should be borne in mind that the draft model law provided for anonymity and the use of pseudonyms in certain cases, as explained in the explanatory notes. Whenever the anonymous circulation of a transferable document or instrument was permitted under substantive law, the anonymous circulation of an electronic transferable record should also be possible, although that did not preclude the identification of the person in control for purposes other than those of commercial law, such as law enforcement. He therefore suggested that subparagraph 1 (b) of article 11 should remain unchanged and the issue that the proposal was intended to address should be dealt with in the explanatory notes.

30. **Ms. Peters** (Germany), supported by **Ms. Cap** (Austria), welcomed that suggestion. The problem identified by the delegation of China would be better addressed by providing clarification in the explanatory notes than by adding the qualifier "publicly", which had not been discussed by the Working Group and was unclear in the context of article 11; moreover, it would have certain implications with regard to substantive law in that it might be understood as referring, for example, to public registries providing protection for bona fide third parties.

31. **The Chair** said she took it, in the light of those comments, that the Commission wished to accept the solution suggested by the representative of the Secretariat.

32. *It was so decided.*

33. **Ms. Peters** (Germany), drawing attention to the proposal in document A/CN.9/921/Add.3 to insert the word "exclusive" before the word "control" in paragraph 2 of article 11, said that her delegation did not support that proposal; however, if it was supported by other delegations, the meaning of "exclusive control" in that context should be clarified in the explanatory notes, using wording along the lines of paragraph 92 of document A/CN.9/920.

34. **Ms. Guo Yu** (China) said that if the word "exclusive" was not included, paragraph 2 would be inconsistent with paragraph 1 of the article and the difference between "exclusive control" in paragraph 1 (a) and "control" in paragraph 2 would be unclear, which might lead to difficulties in interpretation. One option would be to add an explanation in the explanatory note; however, it would be more helpful to deal with the issue in the paragraph itself in order to ensure correct interpretation of the article.

35. **Mr. Castellani** (Secretariat) recalled that the Working Group had agreed that only article 11, subparagraph 1 (a), establishing the functional equivalent of possession, should refer to "exclusive" control for the reasons given in paragraph 92 of the explanatory notes, several delegations having expressed concern with regard to the meaning of exclusivity in the context of paragraph 2, which established transfer of control as the functional equivalent of delivery, i.e. transfer of possession. If there was concern that paragraph 2 as drafted might suggest that the transfer of control satisfied the requirement established in that paragraph even if control was not exclusive, paragraph 100 of the explanatory notes could be expanded to clarify that transfer of control implied transfer of exclusive control for the reasons explained in paragraph 92.

The meeting was suspended at 11 a.m. and resumed at 11.20 a.m.

36. **Ms. Guo Yu** (China) reiterated her position that the addition of the word "exclusive", possibly accompanied by an appropriate explanation, in article 11 would be preferable to the amendment of the explanatory notes, given the importance of consistency between the two paragraphs in terms of the requirements they established.

37. **Mr. Coffee** (United States of America) said that his delegation favoured the suggestion of the Secretariat that the text of article 11 should not be changed but, instead, paragraph 100 of the explanatory notes should be expanded to provide the necessary clarification.

38. **Mr. Kah Wei Chong** (Singapore) said that while he appreciated the point made by the representative of China, he supported the Secretariat's suggestion to add a reference to paragraph 92 in paragraph 100 of the explanatory notes. As paragraph 95 of the explanatory notes also explained how exclusive control could be exercised by more than one person, it would be helpful to refer to that paragraph also, in order to explain the various contexts in which control might be transferred.

39. **Mr. Maradiaga** (Honduras) expressed support for the comments made by the representatives of Singapore and the United States.

40. **The Chair** said she took it that the Commission wished to retain the text of article 11, paragraph 2, unchanged but to expand paragraph 100 of the explanatory notes as suggested by the Secretariat, drawing on paragraphs 92 and 95 of the notes.

41. *It was so decided.*

42. **Mr. Coffee** (United States of America) said that during his delegation's consultations with various stakeholders, security rights experts had expressed the concern that paragraph 1 of article 11 focused merely on whether the law required possession, thus failing to reflect the fact that security rights could be made effective against third parties by various methods, such as by taking possession or control or registering notice of the security right. In order to ensure that the article would apply in such cases, and to achieve consistency

with other provisions of the model law, he proposed that the words "or permits" should be added after the word "requires" in the chapeau of article 11. In addition, the matter should be explained in the explanatory notes. To that end, he proposed the wording: "This law is not intended to restrict the security rights of creditors that would be able to create such rights in transferable instruments or documents. Thus, control under article 11 provides a substitute for those cases where the security rights would be created by the possession of a paper document or instrument. This Model Law is also not intended to limit the creation of security rights where the rights would be created by the registration of the rights in a public registry." That proposal was not intended to alter the substance of the provision.

43. **The Chair** said that it was indeed important to avoid inconsistency with UNCITRAL texts in the area of security interests, including the UNCITRAL Model Law on Secured Transactions. She suggested that the word "creditor" should be avoided, as security rights could be created by persons other than creditors.

44. **Mr. Coffee** (United States of America) suggested that the first sentence of the proposed text should be modified accordingly to read: "This law is not intended to restrict the creation of security rights in transferable documents or instruments."

45. **The Chair** suggested that the Commission should request the Secretariat to ensure that the terminology used in the proposed text was consistent with the UNCITRAL texts relating to security interests.

46. **Ms. Peters** (Germany) proposed that, since the word "substitute" in the proposed text was unclear, that word should be replaced with "functional equivalent".

47. **The Chair** said that the words "an alternative" in place of "a substitute" might be suitable. A further solution would be simply to delete the words "a substitute".

48. **Mr. Coffee** (United States of America) said that he would support any of the three proposed formulations.

49. **The Chair** said that since the suggested reference to "a functional equivalent" appeared to accurately convey what was intended, she took it that the Commission wished to accept the proposed addition of the words "or permits" after the word "requires" in the chapeau of article 11 and the proposed accompanying explanation, to be included in the explanatory notes, that "control under article 11 provides a functional equivalent for those cases where the security rights would be created by possession of a paper document or instrument", subject to the necessary terminological adjustments to be made by the Secretariat.

50. *It was so decided.*

51. **Ms. Peters** (Germany), drawing attention to her Government's proposal, contained in document A/CN.9/921, with regard to paragraph 94 of the explanatory notes, said that the end of the first sentence should be corrected to read "identify the person in control as such" or "identify the person in control of the electronic transferable record as such".

52. **The Chair** noted that, like the Government of Germany, the Government of China had proposed, in document A/CN.9/921/Add.3, that the word "holder" should not be used with reference to electronic transferable records in paragraph 94 of the explanatory notes. She therefore took it that the Commission wished to accept the reformulation proposed by the Government of Germany, as orally amended.

53. *It was so decided.*

54. **Mr. Castellani** (Secretariat), drawing attention to the proposal made by the Government of Germany, contained in document A/CN.9/921, with respect to paragraph 96 of the explanatory notes, said that the comments accompanying that proposal raised the question of whether the explanatory notes should provide additional clarification with respect to securities held with intermediaries, although, according to article 1 (3) of the model law, the model law did not apply to securities.

55. **Ms. Peters** (Germany) said that the proposed amendment was important in light of the Commission's decision to amend the explanatory notes to article 1 (3) to state that the general determination as to which instruments were to be counted as securities was a matter of substantive law. Paragraph 96 of the explanatory notes should reflect the possibility that there were types of securities to which the model law applied that were held in accounts maintained and operated by intermediaries and that, under the substantive law of an enacting State, those intermediaries might have or be regarded as having possession of an electronic transferable document.

56. **Mr. Coffee** (United States of America) suggested, as a matter of drafting, that the second sentence of the proposed text should be modified slightly to read "It does not imply or exclude the possibility that the third-party service provider or any other intermediary is a person in control. Rather, this is to be determined by the applicable substantive law."

57. **The Chair** pointed out that any further drafting changes deemed necessary would be made at the stage of final editing of the report. She took it that the Commission wished to accept the proposed reformulation of paragraph 96 of the explanatory notes.

58. *It was so decided.*

59. **The Chair**, drawing attention to the proposal by the Government of Germany, in document A/CN.9/921, with respect to paragraph 102 of the explanatory notes, said she took it that the Commission wished to accept the proposed changes.

60. *It was so decided.*

Chapter III. Use of electronic transferable records

Article 12 and explanatory notes thereto

61. **Mr. Sarapkin (**Russian Federation), referring to the written comments of his Government as set out in document A/CN.9/921/Add.2, said that in article 12, the criteria for determining the reliability of the method referred to were non-mandatory, whereas the article should establish basic principles from which no deviation was permitted.

62. **Ms. Guo Yu** (China), drawing attention to her Government's proposal with respect to the article, as contained in document A/CN.9/921/Add.3, said that the additional items proposed for inclusion in paragraph (a) of article 12 were intended to ensure that the article addressed not only the reliability of the computer system but also the reliability of the method used, since a reliable computer system did not necessarily mean that the method used was also reliable. If those additional items were not added to the article itself, they should be included in the explanatory notes.

63. **Ms. Peter**s (Germany) said that she shared the view that certain criteria for determining the reliability of the method used should be mandatory rather than subject to derogation or modification on the basis of party agreement. In that regard, she drew attention to her Government's comments on the article, as set out in document A/CN.9/921.

64. **Mr. Castellani** (Secretariat) said that article 12 already reflected the elements that the Working Group had identified as particularly relevant, and the chapeau of paragraph (a) made clear that the list set out was not exhaustive but, rather, was aimed at providing guidance in assessing reliability.

65. With regard to the assurance of data integrity, which some Governments had highlighted in their written comments as one of the criteria that should be mandatory, he pointed out that paragraph 110 of the explanatory notes explained the important distinction between the implications of the term "integrity" for the purposes of article 12 and "integrity" as an essential element of an electronic transferable record under article 10.

66. With respect to the ability to prevent unauthorized access, which had also been highlighted as a possible mandatory criterion, he suggested expanding paragraph 111 of the explanatory notes to further explain the relationship between unauthorized access and exclusive control.

The meeting rose at 12.30 p.m

.

Summary record of the 1056th meeting, held at the Vienna International Centre, Vienna, on Wednesday, 12 July 2017, at 2 p.m.

[A/CN.9/SR.1056]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 2.05 p.m.

Finalization and adoption of a model law on electronic transferable records and explanatory notes (*continued*) (A/CN.9/897, A/CN.9/920, A/CN.9/921, A/CN.9/921/Add.1, A/CN.9/921/Add.2, A/CN.9/921/Add.3 and A/CN.9/922)

1. **The Chair** invited the Commission to resume its consideration of the articles of the draft model law and accompanying explanatory notes as contained in document A/CN.9/920.

Chapter III. Use of electronic transferable records (continued)

*Article 12 and explanatory notes thereto (*continued*)*

2. **Ms. Finocchiaro** (Italy) recalled that the Working Group had not been able to reach a consensus as to which of the elements listed in article 12, paragraph (a), should be defined as mandatory, despite extensive discussion. It was therefore doubtful that reopening that discussion would yield a different result, and doing so would be undesirable given the delicate nature of the matter. Since those elements were explained in the explanatory notes, and additional guidance could be provided if necessary, the current wording represented a good compromise. It should also be borne in mind that, as the text was a model law, States incorporating it into their legislation could derogate from any of its provisions.

3. **Mr. Soh** (Singapore) said that he shared the reservations expressed by the representative of Italy. When domestic stakeholders had been consulted on the model law, nearly all those in the banking sector had raised concerns over the reliability requirement, noting that no system could ever be completely secure and that it was impossible to guarantee that no system problems would ever arise. The question was whether the list of criteria in article 12 (a) should be expanded or whether a new list of mandatory requirements should be introduced. Both possibilities would require significant reformulation of the article, since mandatory requirements could not feature in a list introduced by the chapeau of paragraph (a) as currently drafted. If any of the elements currently listed were to be highlighted as mandatory, they would have to be removed from the list and reformulated as separate provisions. However, mandatory requirements might well lead to a range of practical problems; for example, a party wishing to initiate legal action in connection with an electronic transferable record would have to prove that the system used was reliable in order to be able to assert its rights with respect to that record. Moreover, any restrictions imposed on contracting parties would have to be worded very carefully. If the assurance of data integrity, for example, was a requirement from which no derogation was possible, consideration would have to be given to the question of whether parties would be prevented from establishing in an agreement concluded between them that they would not, having previously examined and approved the system to be used to ensure data integrity, file a claim in respect of data integrity. Although he did not oppose going into such detail, it would take up more time than was available to the Commission.

4. **The Chair** suggested that, in the light of the comments made, the text of article 12 should be left unchanged. However, the issue could be further explained in the explanatory notes.

5. **Mr. Sarapkin** (Russian Federation) said that while he agreed that it would not be appropriate to amend article 12 itself, items (ii), (iii) and (iv) of paragraph (a) should be identified in the explanatory notes as the elements that should be given priority.

6. **Ms. Peters** (Germany) proposed that paragraph 104 of the explanatory notes should be amended to reflect the view that certain elements listed in article 12 should be mandatory; that parties should not be able to derogate from those requirements by party agreement; and that those elements should be objective requirements, especially in the cross-border context, in which objective, mandatory and reliable standards were particularly important. Accordingly, she proposed the insertion in that paragraph of a new second sentence reading “In particular, elements such as data integrity, access protection and hardware and software security are conditions which are known to establish reliability especially in a cross-border context”. Similar text could also be inserted in paragraph 119.

7. **The Chair** sought clarification as to whether the elements in question should be highlighted as mandatory or as being of particular importance.

8. **Ms. Peters** (Germany) said that her delegation’s view was that those elements should be mandatory. However, since the Commission had agreed not to amend the text of article 12 itself, the explanatory notes should underscore that there was a view that certain objective elements should be mandatory, given their importance.

9. **Mr. Sarapkin** (Russian Federation) expressed support for the proposal of the representative of Germany.

10. **Mr. Coffee** (United States of America) said that the identification of items that were mandatory or more important than other items, whether in article 12 itself or in the accompanying explanatory notes, would be both problematic and unacceptable, for the reasons already given by previous speakers. Moreover, it would require the detailed analysis of each element when such an analysis had already been conducted by the Working Group.

11. **The Chair** suggested that the Commission should consider how the relative importance of each element might be highlighted when reviewing paragraphs 109–116 of the explanatory notes, which addressed each element in turn.

12. **Mr. Sarapkin** (Russian Federation) said that he appreciated the point that the Working Group had worked extensively on article 12 and the accompanying explanatory notes and therefore wished to propose, as a compromise solution, that items (ii), (iii) and (iv) of paragraph (a) of article 12 should be identified in the explanatory notes not as mandatory criteria but as criteria that parties were particularly encouraged to comply with.

13. **Mr. Gabriel** (International Law Institute) said that the words "which may include" in paragraph (a) of article 12 clearly indicated that the list of elements was not exhaustive but merely illustrative, and the relevance of each item would depend on the circumstances. Consequently, the elements in such a list could not be ranked in order of importance.

14. **Ms. Peters** (Germany) said that, in view of the comments made, the complexity of the issue and the fact that the Working Group had already discussed the matter at length, she wished to withdraw her proposal with regard to paragraphs 104 and 119 of the explanatory notes.

15. **The Chair** said she took it that the Commission wished to leave paragraphs 103 to 108 of the explanatory notes unchanged.

16. *It was so agreed.*

17. **Mr. Castellani** (Secretariat), drawing attention to paragraph 32 of document A/CN.9/922, which related to paragraphs 115 and 116 of the explanatory notes, recalled that concerns had been raised over the reference to "any applicable industry standard" in article 12 (a) (vii), as that reference could lead to the imposition of a specific technological standard, for example. Given that a standard might be accepted in only one specific business field, the reference to industry standards should not be interpreted as favouring the industry standards of one sector over those of other sectors, as that could hinder supply chain management.

18. **The Chair** said she took it that the Commission wished to include in the explanatory notes the clarifications proposed in paragraph 32 of document A/CN.9/922.

19. *It was so decided.*

20. **Mr. Castellani** (Secretariat) drew attention to the written proposal submitted by the International Federation of Freight Forwarders Associations, in document A.CN.9/921/Add.2, to delete paragraph 119 of the explanatory notes so that the role of party autonomy could be interpreted more freely under article 12.

21. He proposed that the last sentence of paragraph 119 should be moved to the beginning of paragraph 120, which was a more appropriate location for that text.

22. Recalling the Commission's decision that under article 4 of the model law it should be left to enacting States to identify which provisions could be derogated from or varied by agreement, he pointed out that if parties were to be encouraged to comply with certain elements among those listed in article 12 (a) — as suggested by the representative of the Russian Federation — in paragraph 119 of the explanatory notes, it was important to bear in mind that the question of whether such matters might be subject to party autonomy would necessarily relate back to article 4.

23. **Ms. Peters** (Germany) said that her delegation wished to confirm that it was withdrawing the written proposal submitted by her Government in relation to paragraph 119 of the explanatory notes in the light of the Commission's discussion of paragraph 104 of the notes.

24. **Mr. Coffee** (United States of America) said that he supported the proposal to delete paragraph 119 on the basis of the explanation provided by the International Federation of Freight Forwarders Associations for that proposal.

25. **Mr.** Kah Wei **Chong** (Singapore), supported by **Ms. Peters** (Germany) and **Mr. Sarapkin** (Russian Federation), said that he objected to the proposed deletion of paragraph 119, which would undo the Working Group's considerable work on the issue of party autonomy in the context of article 12.

26. **The Chair** said that, since there was insufficient support for the proposal to delete paragraph 119, she took it that the Commission wished to retain the text of that paragraph unchanged but, as suggested by the representative of the Secretariat, to move the final sentence of the paragraph to the beginning of paragraph 120.

27. *It was so decided.*

Article 13 and explanatory notes thereto

28. **The Chair**, drawing attention to the proposal of the Government of China with respect to the draft article, as set out in document A/CN.9/921/Add.3, said she took it that the Commission wished to accept that proposal.

29. *It was so decided.*

Article 14 and explanatory notes thereto

30. **Mr. Coffee** (United States of America), drawing attention to his Government's proposal, in document A/CN.9/921, to change the title of the article from "Determination of place of business" to "Place of business", pointed out that the text of article 14 did not apply to the determination of the place of business but merely included certain factors that did not apply when considering what constituted the place of business.

31. **The Chair** said she took it that the Commission wished to accept the proposed change.

32. *It was so decided.*

33. **Mr. Soh** (Singapore) said that since there were no other provisions of the model law itself that dealt with place of business, article 14 might be interpreted as applying where related rules of substantive law included reference to a place of business, which could raise conflict-of-laws issues. He therefore sought clarification as to the purpose of the article and when it might apply.

34. **Mr. Coffee** (United States of America) said that he shared the concerns expressed by the representative of Singapore and would support the deletion of the article. Although "place of business" was relevant in other UNCITRAL instruments relating to electronic commerce, that was not the case with regard to the draft model law on electronic transferable records, and it was unclear in what respect article 14 was relevant to the remainder of the model law.

35. **Mr. Gabriel** (International Law Institute) said that "place of business" would be relevant to the creation of an electronic transferable record and the performance of the obligation indicated in that record. Since in both cases the place of business would be determined by substantive law, as was indeed suggested by the fact that the article offered no positive elements for such determination, article 14 served no purpose and might even interfere with substantive law.

36. **Mr. Sarapkin** (Russian Federation) said that, since article 14 had been discussed over a lengthy period by the Working Group, with the input of many experts, its deletion would not be appropriate. The Working Group had clearly concluded that the article was necessary. Moreover, given that the Commission had been cautious during the current discussions about introducing even minor changes in the wording of the model law, it was doubtful that the deletion of an entire article would be appropriate at the current late stage of proceedings.

The meeting was suspended at 3.30 p.m. and resumed at 3.50 p.m.

37. **Mr. Soh** (Singapore) said that the outcome of informal consultations was that the retention of article 14 might be justified on the basis that the article might serve as an independent rule governing the determination of place of business in relation to electronic transferable records where no such rule existed under the substantive law of an enacting State.

38. **The Chair** suggested that article 14 should be retained, in view of the various reasons given for its retention.

39. *It was so decided.*

Article 15 and explanatory notes thereto

40. **Mr. Fujita** (Comité Maritime International) drew attention to his organization's comments and proposals, set out in document A/CN.9/921/Add.1, with regard to article 15, in particular its proposal to delete that article. In that regard, he pointed out that the concerns expressed by his organization in that document were shared by the International Federation of Freight Forwarders Associations, as reflected in document A/CN.9/921/Add.2.

41. **Ms. Yamanaka** (Japan) expressed support for the proposal of the Comité Maritime International. It was doubtful that the article was necessary given the nature of electronic records. Although historically, multiple originals of documents had been required because documents could be lost in the course of distribution, modern transfer speeds meant that it was rare for paper documents to be lost, and electronic records were never lost in the course of distribution. It was therefore questionable whether there was a business need for multiple originals. Moreover, as electronic records were easy to copy, it was difficult to distinguish between originals and copies, as a result of which the issuance of multiple originals could lead to disputes. Even if a functional equivalence approach was taken, it was important to consider the implications of issuance of multiple originals and whether the rationale for their issuance applied to electronic transferable records. As a minimum, consideration should be given to the extent of business demand for the issuance of multiple originals of electronic transferable records and the appropriateness of a provision such as article 15 in the model law.

42. **Mr. Maradiaga** (Honduras) said that the points raised by the Comité Maritime International were important, particularly since one of the main aims of instruments such as the model law was to ensure legal certainty. As the issuance of multiple originals in the electronic environment could lead to disputes, his delegation supported the deletion of article 15, subject to guidance from the Secretariat.

43. **Ms. Finocchiaro** (Italy) said it was important to bear in mind that, according to article 15, if the law did not permit the issuance of more than one original of a transferable document or instrument, the article did not apply. While she had no strong view as to whether article 15 should be preserved or deleted, she wondered what the consequences of deletion of article 15 would be; presumably its deletion would not prevent the issuance

of multiple originals of electronic transferable records in future business practice. If the article was deleted, the possible consequences of its deletion should be set out in the explanatory notes.

44. **Ms. Cap** (Austria), expressing support for the comments made by the representative of Italy, said it should be borne in mind that the model law did not seek to establish substantive rules on the matter. Since article 15 sought to establish functional equivalence with the paper-based environment and, moreover, was the product of lengthy discussion, it should be retained.

45. **Ms. Peters** (Germany), also expressing agreement with the statement made by the representative of Italy, said that since the model law applied not only to those instruments covered by the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (Rotterdam Rules) but also to those covered by article 1 of the model law itself, i.e. to securities in general, albeit subject to certain exceptions and exclusions, it was not necessarily the case that the model law should adopt the same approach as that taken in the Rotterdam Rules.

46. Given that the model law was intended to establish functional equivalence, it was beyond the scope of the model law to address the question of whether a certain practice that might be permitted or prohibited under substantive law was desirable in the electronic world. Even if article 15 were deleted, multiple originals could be issued under article 10 if their issuance was permitted by substantive law. Therefore, the deletion of article 15 would not prevent the issuance of multiple originals in jurisdictions where that practice was allowed.

47. **Mr. Coffee** (United States of America) recalled that, throughout the Working Group's discussions on article 15, it had been considered that there might be a business need for multiple originals of electronic records and that the article might therefore be helpful, hence its inclusion. However, such a need had in fact never been established, as confirmed by the comments submitted by the Comité Maritime International and the International Federation of Freight Forwarders Associations, which indeed suggested that the provision might in fact be detrimental. As no industry stakeholders had expressed support for preserving article 15, many having instead stated objections to the provision, the article should be deleted. As had been pointed out, the absence of the provision would not preclude the issuance of multiple originals; moreover, it might well be that the function to be achieved could be fulfilled through the notion of "control", as already established by the model law, if the intention was to provide for the issuance of multiple originals to multiple parties.

48. **Mr.** Kah Wei **Chong** (Singapore), expressing support for the comments made by the representative of Germany, said that the Working Group, when considering the article, had merely sought to achieve functional equivalence rather than to make policy decisions affecting substantive law. He was therefore in favour of retaining article 15.

49. **The Chair** said that there appeared to be considerable support for deleting article 15 and, as had been pointed out, deletion of the article would not preclude the issuance of multiple originals under substantive law. It also appeared that among those in favour of deletion, it was felt that while the practice of issuing multiple originals should perhaps not be prohibited, it should not be encouraged. She therefore suggested that article 15 should be deleted but the explanatory notes on the issuance of multiple originals should be retained, subject to the Commission's review and possible modification of those notes.

50. *It was so decided.*

51. **Mr. Castellani** (Secretariat), drawing attention to paragraphs 131 to 136 of the explanatory notes, suggested that the second and third sentences of paragraph 131 should be deleted and the first sentence should be merged with paragraph 132, the text of which would remain unchanged except for the reference to article 15, which would be replaced with a reference to the model law. Paragraph 133 could either be amended as proposed by the Government of Germany in document A/CN.9/921 or remain as drafted, and paragraph 134 could remain unchanged. In paragraph 135, he suggested that the first sentence should be deleted and the words "that obligation" in the second sentence should be replaced with the words "an obligation to indicate whether multiple originals have been issued". In paragraph 136, the reference to article 15 should be replaced with a reference to the model law as a whole. Those changes would reflect the lengthy discussions of the Working Group and the important point that the model law did not prevent the practice of issuing multiple originals, whether in electronic form or on different media.

52. **Ms. Peters** (Germany), expressing support for the proposed changes, said that she wished to withdraw her Government's proposal to revise paragraph 133 in view of the fact that the Commission had not accepted the Government's proposal to delete the reference to the "singularity" and "control" approaches in paragraph 65 of the explanatory notes.

53. **Mr. Coffee** (United States of America) suggested that the words "The Model Law aims to enable" in the proposed revised text of paragraph 132 should be replaced with the word "enables", or possibly the word "permits".

54. **The Chair** said she took it that the Commission wished to accept the amendments proposed by the representatives of the Secretariat and the United States.

55. *It was so decided.*

Article 16 and explanatory notes thereto

56. *Article 16 and the explanatory notes thereto were approved.*

Article 17 and explanatory notes thereto

57. *Article 17 and the explanatory notes thereto were approved.*

Article 18 and explanatory notes thereto

58. **Mr. Castellani** (Secretariat), referring to the submission of the Government of Colombia in document A/CN.9/921, suggested that text should be added to paragraph 157 of the explanatory notes, or possibly to the section of the notes on the issuance of multiple originals, to explain that paragraph 3 of article 18 did not apply where additional originals were issued on a medium or on media different from that used for the first original, in which case the first original would not cease to have validity.

59. Drawing attention to the submission of the Interparliamentary Assembly of the States members of the Commonwealth of Independent States, contained in document A/CN.9/921/Add.2, he noted that while a transferable document or instrument or an electronic transferable record might cease to have effect or validity with respect to a specific function or specific functions, some of the information it contained might nonetheless remain valid for other purposes that were not related to transferability. For example, a bill of lading provided evidence of a contract for the carriage of goods. He therefore suggested that further additional text to that effect should be inserted in paragraph 157 of the explanatory notes.

60. **The Chair** said she took it that the Commission wished to amend paragraph 157 of the explanatory notes as proposed.

61. *It was so decided.*

Article 19 and explanatory notes thereto

62. **Mr. Castellani** (Secretariat) said that a number of comments had been received, including in documents A/CN.9/921 and A/CN.9/921/Add.1, to the effect that the explanatory notes should provide guidance on data storage and archiving and, in that context, clarification with regard to data privacy and protection. In that regard, he recalled that an earlier draft of the model law had contained an article on the retention of information in an electronic transferable record, and certain points raised during the Working Group's discussion of that article, which was reflected in paragraphs 74 and 75 of document A/CN.9/834, had received broad support. The first point was that all applicable retention requirements found in other law, including legislation on privacy and data retention, must be complied with, in line with the principle that substantive law should not be affected. The second point was that when an electronic transferable record was terminated, it was not the record itself that was retained but, rather, the information contained in that record. It was therefore suggested that, in order to explain those two points, a paragraph containing guidance on storage and archiving should be inserted before the section of the explanatory notes concerning third-party service providers (paragraphs 167–170), including a reference to document A/CN.9/834.

63. **The Chair** said she took it that the Commission wished to accept that proposal.

64. *It was so decided.*

Chapter IV. Cross-border recognition of electronic transferable records

Article 20 and explanatory notes thereto

65. **Mr. Sarapkin** (Russian Federation), drawing attention to his Government's comments and proposal regarding article 20 as contained in document A/CN.9/921/Add.2, said that although the principle of non-discrimination was undoubtedly both positive and necessary, it was important to clarify the scope of application of that principle either in article 20 itself or, if that were not possible, in the explanatory notes.

66. **Ms. Peters** (Germany) said that since the proposal affected the substance of article 20 and the accompanying explanatory notes, a decision on the matter should be deferred so that the proposal could be given proper consideration.

67. **Mr. Castellani** (Secretariat), drawing attention to the comments submitted by the World Trade Organization (WTO) in document A/CN.9/921 with respect to article 20, suggested that the text of the final paragraph of that submission, from the words "underlying domestic criteria", should be included in the explanatory notes to the article.

68. **The Chair** suggested that the Commission should take a decision on the two proposals at its next meeting.

69. *It was so agreed.*

The meeting rose at 5 p.m.

Summary record of the 1057th meeting, held at the Vienna International Centre, Vienna, on Thursday, 13 July 2017, at 9.30 a.m.

[A/CN.9/SR.1057]

Chair: Ms. Sabo (Vice-Chair) (Canada)
Later: Mr. Martonyi (Hungary)

The meeting was called to order at 9.50 a.m.

Finalization and adoption of a model law on electronic transferable records and explanatory notes (*continued*) (A/CN.9/897, A/CN.9/920, A/CN.9/921, A/CN.9/921/Add.1, A/CN.9/921/Add.2, A/CN.9/921/Add.3 and A/CN.9/922)

1. **The Chair** invited the Commission to resume its consideration of the articles of the draft model law and accompanying explanatory notes as contained in document A/CN.9/920.

*Chapter IV. Cross-border recognition of electronic transferable records (*continued*)*

*Article 20 and explanatory notes thereto (*continued*)*

2. **Mr. Castellani** (Secretariat), recalling his earlier proposal to add to the explanatory notes the text of the final paragraph of the comments submitted by the World Trade Organization (WTO) in document A/CN.9/921, from the words "underlying domestic criteria", said that the proposed paragraph highlighted important considerations concerning the cross-border use and recognition of electronic transferable records.

3. **Ms. Peters** (Germany), supported by **Ms. Cap** (Austria), said that she did not support that proposal as the text in question would affect domestic substantive law, or substantive law in general, and would have the undesirable effect of broadening the scope of article 20.

4. **Mr. Sarapkin** (Russian Federation), recalling his Government's proposal, set out in document A/CN.9/921/Add.2, to amend article 20 or the explanatory notes thereto in such a way as to limit application of the principle of non-discrimination of electronic transferable records, said that the rationale for that proposal was echoed in paragraph 14 of the submission of the Government of Kuwait in document A/CN.9/921/Add.1 and was also supported by other delegations.

5. **The Chair** said that unless there was support for adding the proposed text to article 20 itself, she would take it that the Commission wished to consider the proposal in the context of the explanatory notes.

6. *It was so decided*.

7. **Mr. Gabriel** (International Law Institute) said that the proposed text appeared to be unnecessary, and might present problems. It implied that if an electronic transferable record did not meet the reliability standard established in article 12 of the model law, it would not be enforceable in a jurisdiction other than the one in which it was issued; however, under article 10, an electronic transferable record which did not meet that standard would in any case not be considered an electronic transferable record.

8. In the cross-border context, standards in different jurisdictions might develop differently over time, as a result of which an electronic transferable record deemed valid in one jurisdiction might be deemed invalid, or as not constituting an electronic transferable record, in another jurisdiction where its enforcement was sought. The question of whether the second jurisdiction should enforce the electronic transferable record, while important, was a matter of substantive law that was in fact answered by paragraph 2 of article 20. It was undesirable and unwise to dictate a universal and absolute answer as to how jurisdictions should address what was a question of private international law; instead, as paragraph 2 already provided, it should be left to each individual jurisdiction to determine the answer, given that there might be a variety of approaches. He therefore strongly supported the retention of article 20 and the explanatory notes thereto as drafted.

9. **Ms. Finocchiaro** (Italy) said that she did not support the proposed addition to the explanatory notes to article 20, as it would go beyond the scope of the article.

10. **Mr. Maradiaga** (Honduras) said that while he appreciated the rationale for the proposal of the Russian Federation, the proposed text would make the notes unclear and its inclusion would be counterproductive. For the sake of clarity, and in order for the Commission to be able to proceed more expeditiously, the explanatory notes to article 20 should be retained as drafted.

11. **The Chair** said that the Secretariat had pointed out that only the second part of the text proposed by the Russian Federation, reading "if such records do not meet the criteria determining the reliability of the method used, as set out in article 12", was problematic. The first part, reading "The principle of non-discrimination of electronic transferable records may not in itself constitute a ground for recognizing the legal effect, validity or enforceability of foreign electronic transferable records", was consistent with the model law and in fact clearer than the related text found in the second sentence of paragraph 176 of the explanatory

notes. She therefore suggested that that first part of the proposed text should be included in that paragraph.

12. *It was so decided.*

*Article 5 and explanatory notes thereto (*continued*)*

13. **Mr. Castellani** (Secretariat) said that the proposal made by the Government of Kuwait with respect to the article, in document A/CN.9/921/Add.1, appeared to concern matters of substantive law. The issue raised was in fact addressed by the additional text that the Commission had decided to add to the explanatory notes to article 19, in which it was explained that all applicable data retention requirements found in other law, including legislation on privacy and data protection, must be complied with.

14. **Ms. Peters** (Germany) said that she did not support the proposal of the Government of Kuwait as that proposal touched upon issues of substantive law concerning liability that were beyond the scope of the model law.

15. **The Chair** said she took it that the Commission wished to approve article 5 and the explanatory notes thereto unchanged.

16. *It was so decided.*

Proposed introduction to the draft explanatory notes (A/CN.9/922)

17. **Mr. Castellani** (Secretariat), introducing the proposed introduction to the explanatory notes as set out in paragraphs 4–21 of document A/CN.9/922, said that the content of that introduction was mainly historical and procedural in nature and that its structure followed that of similar UNCITRAL texts.

18. **Mr. Fujita** (Comité Maritime International), drawing attention to the second sentence of paragraph 8, said that in article 14, paragraph 3, of the United Nations Convention on the Carriage of Goods by Sea (Hamburg Rules) it was stated that bills of lading might be signed by any mechanical or electronic means; however, as that text had been drafted in 1978, it was unclear whether "electronic means" meant the same as "electronically" in the current sense. He therefore proposed that that sentence should be amended to read "Article 14, paragraph 3, of the United Nations Convention on the Carriage of Goods by Sea (the "Hamburg Rules") may be interpreted as implying the possible use of electronic bills of lading", which would be a less categorical and more cautious formulation.

19. *It was so decided.*

20. **Mr. Castellani** (Secretariat) said that during informal consultations, it had been suggested that the reference to medium-neutral electronic transferable records in paragraph 13 should be replaced with a reference to electronic transferable records for which applicable substantive law was medium-neutral.

21. **Ms. Peters** (Germany), expressing support for that suggestion, recalled that she had pointed out during the Commission's discussion of the explanatory notes to article 1, with reference to paragraphs 22 and 23 of document A/CN.9/922, that the term "medium-neutral electronic transferable records" should be avoided.

22. **Mr. Castellani** (Secretariat) suggested that the final sentence of paragraph 13 should be divided into two sentences, to read: "Consequently, the Model Law does not apply to electronic transferable records existing only in electronic form as those records do not need a functional equivalent to operate in the electronic environment. The Model Law does not affect medium-neutral substantive law applicable to electronic transferable records."

23. **Mr. Coffee** (United States of America) suggested that the word "Consequently" should be deleted, since that word did not follow on logically from the preceding sentence; i.e., the fact stated was not a consequence of the fact that the law of each jurisdiction would determine which documents or instruments were transferable.

24. **The Chair** said she took it that the Commission wished to accept the proposed amendments.

25. *It was so decided.*

26. *Subject to the agreed amendments, the introduction to the explanatory notes was approved.*

Relationship of the draft model law with other UNCITRAL texts in the area of electronic commerce

27. **Mr. Castellani** (Secretariat), referring to paragraphs 38 to 41 of document A/CN.9/922, said that the Commission might wish to provide guidance to States that had enacted the UNCITRAL Model Law on Electronic Commerce (1996) or were intending to enact it, particularly with respect to articles 16 and 17 of that Model Law. In that regard, he drew attention to the suggestions in paragraphs 40 and 41.

28. **The Chair** said that, in the absence of comments, she took it that the Commission did not wish to accept those suggestions, on the basis that it should be left to States to determine how they wished to address the relationship between the Model Law on Electronic Commerce and the model law on electronic transferable records. However, the Secretariat could provide guidance in that regard as part of its technical assistance activities, on a case-by-case basis.

29. *It was so decided.*

30. **Mr. Castellani** (Secretariat), drawing attention to paragraphs 42 to 48 of document A/CN.9/922 on methods of enactment of the model law and their effect on functional equivalence standards, said that if those matters were considered too technical to be addressed in the explanatory notes, one possible option would be for the Commission to address them in a more

general context during its deliberations on agenda item 17, in conjunction with paragraphs 49–53 of document A/CN.9/922 on the possible compilation of consolidated UNCITRAL model provisions on electronic commerce. That work could be assigned to Working Group IV (Electronic Commerce), which could further examine the relationship between the model laws on electronic commerce and report to the Commission with recommendations.

31. **The Chair** asked whether the Commission wished to provide additional guidance in the explanatory notes along the lines suggested in paragraphs 47 and 48 of document A/CN.9/922 or to consider the issues concerned under agenda item 17, as a possible area of future work for Working Group IV.

32. **Mr. Schoefisch** (Germany) said that while guidance on the issues raised would be useful, it was undesirable for the Working Group to undertake such a project given that it would require significant work.

33. **Mr. Soh** (Singapore) said that he did not support the addition of the proposed guidance to the explanatory notes, since the issues concerned were very detailed and technical. It would be preferable for the Working Group to engage in further discussion and broad consultation and to consider possible recommendations before the Commission made a firm decision with regard to future work on those issues. In the meantime, States could be provided with relevant guidance in the form of technical assistance, as necessary.

34. **Mr. Coffee** (United States of America) recalled that the draft model law had been drafted largely in isolation from the other UNCITRAL instruments on electronic commerce. In States where the Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures (2001) had been enacted, those texts had not necessarily been enacted verbatim. Consequently, it was unclear how the model law on electronic transferable records would interact with domestic laws based on those model laws. As suggested by the Chair, it would be more appropriate to deal with that question on a case-by-case basis than to make recommendations.

35. He did not support the suggestion made in paragraph 48 of document A/CN.9/922, since article 12 of the model law on electronic transferable records had been drafted in order to give context to the remainder of that model law, rather than with reference to the Model Law on Electronic Signatures.

36. Setting aside the question of whether UNCITRAL should consolidate and compile the provisions of its model laws on electronic commerce, as suggested in paragraph 53 of document A/CN.9/922, Working Group IV should not consider specific issues concerning the relationship between those model laws at the current time, since its agenda was already full.

37. **The Chair** said she took it that the Commission did not wish to add guidance to the explanatory notes on the interaction between existing UNCITRAL instruments on electronic commerce and the model law on electronic transferable records, particularly since such guidance might not be useful where domestic legislation departed from the provisions of those instruments and it was therefore best to approach the matter on a case-by-case basis.

38. *It was so decided.*

Draft decision on finalization and adoption of a model law on electronic transferable records and explanatory notes (A/CN.9/L/CRP.5)

39. *The draft decision was adopted.*

The meeting was suspended at 11.10 a.m. and resumed at 11.25 a.m.

40. *Mr. Martonyi (Hungary) took the chair.*

Electronic commerce: progress report of Working Group IV (A/CN.9/897 and A/CN.9/902)

41. **Mr. Castellani** (Secretariat), introducing the agenda item, drew attention to the recommendations on priority of work contained in paragraphs 93 and 96 of document A/CN.9/902. Referring to paragraph 99 of the same document, he said that while paperless trade facilitation had not been discussed formally at the level of the Working Group, the Secretariat continued to carry out intersessional work on the topic and to report on that work to the Working Group. In particular, the Secretariat was currently involved in preparations for the Eleventh Ministerial Conference of WTO, at which electronic commerce was to be discussed. UNCITRAL would provide technical information on how its texts on electronic commerce could support paperless trade facilitation and how they interacted with free trade agreements. That work was ongoing and both the Working Group and the Commission would continue to be informed of developments, including any suggestions received by the Secretariat that the Working Group should play a more active role in that area.

42. **Mr. Apter** (Israel) welcomed the work that had been carried out by the Working Group on the issue of cloud computing and the decision to start work on a checklist of contractual issues in that area. He hoped that the Working Group's discussions on the checklist would be concluded as soon as possible. The next step should be more substantive work on cloud computing, including the elaboration of substantive rules, and in that regard he called upon other delegations to encourage their Governments and experts in the field of cloud computing to participate in the Working Group's deliberations. UNCITRAL should be involved in that field as cloud computing was now the basis for trade between companies of all sizes, and was increasingly used in the regulation of international trade. UNCITRAL should therefore take the opportunity to

create, at the least, some form of non-binding universal guidance on the topic. Government experts from Israel could participate in meetings to promote work on such guidance. He encouraged UNCITRAL to play a leading role in addressing the legal challenges that States and other international actors faced in the area.

43. **Mr. Sarapkin** (Russian Federation) said that while the topics of cloud computing and identity management and trust services were both of importance, the Working Group's discussions had indicated that priority should be given to work on the latter subject, which was of key importance in trade transactions.

44. **Mr. Lapiere** (Observer for Belgium) said that identity management was a fundamental requirement underpinning the bulk of the work undertaken by Working Group IV. Reliable identity management and trust services had become essential requirements for electronic commerce activities owing to the increasing importance and sensitivity of online transactions, and were of key importance to economic operators wishing to conduct risk management.

45. It was clear that the topics of identity management and trust services were closely interlinked. Work on identity management necessarily entailed work on trust services, since identity management was a means to an end — typically being the first step in any electronic transaction — rather than an end in itself, while electronic transactions generally called for the use of one or more trust services.

46. It was essential to continue and deepen the work on identity management and trust services in order to support the security and trustworthiness requirements of commercial transactions. The objective should be to provide a general framework applicable to both identity management and trust services, including appropriate provisions to foster international cross-border legal and technical interoperability. In that context, it might be useful to note that the European Union had a comprehensive legal framework for both electronic identification and authentication and trust services for electronic transactions in the internal market, known as the eIDAS Regulation, which was the result of an agreement reached by the 28 member States of the European Union in spite of their different approaches to both identity management and trust services.

47. If, owing to resource constraints, it was not feasible to continue work on the topics of cloud computing and identity management and trust services in parallel, the Commission should give priority to the latter topic.

48. **Mr. Meier** (Switzerland) said that the preparation of a checklist of contractual issues relating to cloud computing was an appropriate and useful approach to that topic, work on which should be carried out in parallel with work on identity management and trust services.

49. **Mr. Schoefisch** (Germany) said that he welcomed the work on cloud computing carried out to date and supported the preparation of a checklist on contractual issues in that area. However, it was doubtful whether further work on the topic should be carried out and whether such work would be useful; moreover, there were other bodies that already dealt with cloud computing, particularly the Hague Conference on Private International Law. Priority should therefore be given to work on identity management and trust services, which should be carried out in parallel with work on the checklist.

50. **Mr. Bellenger** (France) said that, in view of the broad nature of the topics of identity management and trust services, it would be difficult to advance work both on those topics and on cloud computing. He therefore suggested that the work on cloud computing should be delegated to an expert group.

51. **Mr. Cooper** (United Kingdom) said that it was clear that identity management and trust services were a key foundation of electronic commerce. In that regard, the comprehensive and predictable legal framework developed in the European Union for electronic identity and trust services, the eIDAS Regulation, was a very good example of cooperation between States to establish a framework for mutual recognition and interoperability between electronic identity and trust services. The value of that framework was increasingly evident from the great interest it had generated in the commercial world, and from the fact that it supported other areas of legislation. While he acknowledged the value of the work on cloud computing, the topics of identity management and trust services should be prioritized given their considerable importance and the interest they attracted.

52. **Mr. Coffee** (United States of America) said that his delegation was sceptical of the utility of a checklist on cloud computing. However, recognizing that other delegations were interested in that work, it would not object to the Secretariat's continuing work on the checklist provided that the document was reviewed by the Working Group and that such review entailed only limited use of the Working Group's time and resources. His delegation did not support future work on cloud computing beyond the checklist at the current time, but was willing to consider any proposals at a future session.

53. Identity management was important in public-service and commercial transactions and was being considered by a number of forums globally. Noting that the current international focus seemed to be on standards and government-based systems, he said that UNCITRAL should not be involved in the development of standards in the area of identity management given that some governments might establish an identity management system both for commercial purposes and for public services.

54. The preparation of a useful legal instrument in the area of identity management might therefore be unrealistic. However, given the importance of the topic, he supported continued dialogue within the Working Group to determine whether it could clarify the relevance of trust services to identity management and recommend a mandate for future work. On the basis of those discussions, the Commission might be able to decide in 2018 whether to task the Working Group with a specific project on the subject.

55. **Ms. Sabo** (Canada) said that it would be necessary to determine the order of priority of the topics under consideration only if there was a conflict in terms of resources and timing. She had received the impression from the most recent Working Group session that both projects could be managed — over the course of the coming year at least — in parallel. Work on cloud computing at the current stage would not take up a significant amount of the Working Group's time, and appeared to be manageable from the Secretariat's perspective.

56. The subject of identity management was of interest to Canada and should be further explored. She encouraged the Working Group to agree on what work should and could feasibly be carried out in that area, on the basis of the discussions at the most recent Working Group session, although consensus might be difficult to achieve given that views on the most appropriate approach had been divided.

57. She looked forward to more detailed discussions and a decision on both cloud computing and identity management at the Commission's next session. While future work in the area of cloud computing would be an interesting possibility, it was currently premature to discuss work in that area beyond the preparation of the checklist.

58. **Ms. Cap** (Austria) expressed support for the comments made by the representatives of Belgium, France, Germany and the United Kingdom, particularly the suggestion that the work on cloud computing should be conducted by an expert group. She also shared the view that it would be premature to take a decision regarding future work in that area. With regard to identity management and trust services, the key principles and definitions already identified by the Working Group should be the starting point for further discussions, regardless of the type of instrument that might ultimately be produced.

59. **Mr. Kozarek** (Czechia), expressing support for the comments made by the representatives of Austria, Belgium and France, said that work on identity management and trust services should be conducted in the light of the close interrelationship between those two topics.

60. **Mr. Apter** (Israel), expressing agreement with the comments made by the representatives of Canada and Switzerland, said that the Commission should reaffirm the mandate that had been given to Working Group IV in 2016, as that mandate reflected a well balanced approach. He hoped that the Working Group would continue to engage in work on cloud computing over the coming year, after which the situation could be reviewed.

61. **Ms. Treier** (Observer for Estonia) said that her delegation shared the views expressed by the representatives of Austria, Belgium, Germany and the United Kingdom and was in favour of reaffirming the current mandate of the Working Group.

62. **Ms. Alampi** (Observer for the European Union) expressed support for the position that priority should be given to work on identity management and trust services in light of their importance with regard to electronic commerce transactions. Given the progress already made with regard to that topic, the Working Group should advance beyond that exploratory work, possibly beginning on the drafting of an instrument in that area. In that regard, her delegation was willing to consider all possibilities with regard to the type of instrument to be developed.

63. While the topic of cloud computing was important, any work beyond the checklist of contractual issues should be conducted in close cooperation with the Hague Conference on Private International Law given that that organization was also conducting work on the topic.

64. **Ms. Liu** Huan (China) said that while both cloud computing and the topic of identity management and trust services were important and necessary areas of work, parallel work on both topics could cause difficulties for the Working Group in terms of time and capacity. As a first step, key elements of the work in both areas should be identified and further discussed in order to determine what work should be conducted in the future.

65. **Ms. Finocchiaro** (Italy) said that the scope of the work on cloud computing was already well defined and good progress was being made, whereas the topic of identity management and trust services was newer and more ambitious, concerned more sensitive issues and had generated greater interest, as well as highlighting the diversity of approaches to those issues. In order to make progress on the latter topic, and in view of the exploratory work already carried out, a more specific mandate was needed: the Working Group should begin discussing the possible structure and provisions of a draft text.

66. **Mr. Mbabazize** (Uganda) said he agreed that work on identity management and trust services should continue and that work should begin on a legal instrument in that area in order to guide and give more focus to the discussion. The issue of cloud computing required more extensive technical deliberations and further research, given its complexity and the fact that it

concerned cross-border legal relations and various areas of law.

67. **Mr. Lapiere** (Observer for Belgium) said that his delegation supported the comments made by the representatives of Austria, the European Union, Germany and Italy, particularly with regard to the need to begin drafting an instrument on identity management and trust services, which would ensure that good use was made of the time and resources of the Working Group.

68. With regard to cloud computing, he agreed that it would be premature to go beyond the checklist. The suggestion that further work on that topic should be conducted by an expert group that would then report to the Working Group on its activities was worth further consideration.

69. **Mr. Coffee** (United States of America) said that the helpful and productive discussions of the past year on identity management and trust services should continue with a view to the establishment of a clear mandate to determine what kind of instrument, if any, the Working Group should draft. No drafting should begin without further discussion of the possible nature and objectives of an instrument in that area and clear agreement on the approach to be taken; otherwise, such drafting would be counterproductive.

70. **The Chair** said there appeared to be consensus that the mandate given to the Working Group at the Commission's forty-ninth session should be reaffirmed and that work in both areas should continue, without any formal assignment of priority. The Working Group could establish an expert group on cloud computing, as suggested, if it deemed such a course of action to be appropriate.

71. **Mr. Castellani** (Secretariat) said it should be borne in mind that the further discussion of identity management and trust services and a decision on the instrument to be produced, if any, might well take time. Consequently, it would be unrealistic to draft a text within a matter of months. However, he encouraged delegations to submit possible texts for consideration in order to facilitate the Secretariat's work and the Working Group's deliberations.

72. The work on cloud computing was already taking place informally at the level of experts. Delegations were encouraged to include additional experts in that field in the discussions on the topic, not only in order to assist the Secretariat through additional input and feedback but also to ensure that all regions and all legal and economic systems were represented. Welcoming the suggestion that expert group meetings on specific issues should be organized, he suggested that such meetings should be convened shortly before Working Group sessions in order to enable the expert groups to report to the Working Group on progress and new developments.

73. **Mr. Schoefisch** (Germany), responding to the Chair's summary, said it was his understanding of the Commission's discussion that the majority view was that the topic of cloud computing should not take up too much time or too many resources of the Working Group or the Secretariat and, consequently, it was desirable for work on that topic to be carried out, to the extent possible, by experts. Mere reaffirmation of the existing mandate of the Working Group would therefore not reflect the Commission's discussion entirely accurately.

74. **Ms. Sabo** (Canada) said that there would be sufficient time for the Working Group to discuss both topics. Given the progress made to date on identity management and trust services, there might be less concrete work for the Secretariat on that topic between sessions, although intersessional work by the Secretariat on cloud computing would be necessary. She therefore agreed that the existing mandate of the Working Group should be reaffirmed and, at the Commission's next session, reviewed in the light of the progress of the two projects.

75. **Mr. Apter** (Israel), expressing support for the comments by the representative of Canada, said that while the majority of delegations appeared to be in favour of giving priority to work on identity management and trust services, it was unnecessary to change the mandate of the Working Group. He had no objection to the organization of expert meetings prior to the sessions of the Working Group, as indeed had been done before by the other working groups. It would be premature to draw any conclusions from the work done to date on cloud computing.

76. **Mr. Sorieul** (Secretary of the Commission) said that, in order to avoid any misunderstanding, a clear distinction should be made between working groups and expert groups: working group meetings were intergovernmental meetings to which member and observer States were invited, whereas expert groups, rather than being subsets or smaller versions of working groups, represented a working method whereby the Secretariat could learn more about the topic under consideration and gather information for subsequent review at the intergovernmental level. The more informal atmosphere of expert group meetings provided the opportunity for preliminary discussion, brainstorming and the further development of ideas with a view to proposing a basis for legislative drafting. The checklist on cloud computing was a good candidate for work of that kind, as were guidance materials. The question of how many days were spent on a given topic at the working-group level was therefore less important than the question of which topic was more mature or on which topic the most information was available, which would be the basis for justifying what was a costly and elaborate intergovernmental process. The time and resources of the working groups were better spent when a specific project was ready to be discussed. If a proposal was made for a future legislative instrument, it

would probably have to be reviewed at the expert-group level before being submitted to the Working Group for formal consideration. Both working methods had been used successfully to date and could be used in combination. The Secretariat was confident that with the resources available, and provided that it continued to receive input and feedback, work on both cloud computing and identity management and trust services could continue. As always, the Working Group would be kept fully informed of progress, and efforts would be made to ensure balanced representation in the composition of any expert group that was established.

77. **The Chair** said he took it that the Commission wished to reaffirm the Working Group's current mandate and to request the Secretariat to convene expert group meetings as necessary in order to facilitate the Secretariat's work.

78. *It was so decided*.

The meeting rose at 12.30 p.m.

Summary record of the 1058th meeting, held at the Vienna International Centre, Vienna, on Thursday, 13 July 2017, at 2 p.m.

[A/CN.9/SR.1058]

Chair: Mr. Martonyi (Hungary)

The meeting was called to order at 2.15 p.m.

Legal developments in the area of public procurement and infrastructure development (A/CN.9/912)

1. **Ms. Nicholas** (Secretariat), introducing document A/CN.9/912, recalled that no working group had been involved in work on public procurement since the adoption of the UNCITRAL Model Law on Public Procurement in 2011 and the accompanying Guide to Enactment in 2012. At its forty-ninth session, the Commission had agreed that it would be premature to engage in any further legislative work on public procurement and infrastructure development, but had instructed the Secretariat to continue to monitor developments in those areas, particularly with regard to public-private partnerships. The UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects (2000), and the Model Legislative Provisions on Privately Financed Infrastructure Projects (2003), were now slightly out of date, but the fundamentals remained apposite. The Commission had therefore decided that the Secretariat should consider updating all or parts of the UNCITRAL Infrastructure Projects Guide (2000), with the involvement of experts.

2. As instructed by the Commission, the Secretariat had continued to monitor developments in suspension and debarment in public procurement and to promote relevant UNCITRAL texts, especially the UNCITRAL Model Law on Public Procurement. While there had been some convergence in areas such as procedural consistency, transparency and fairness, there remained significant divergence in policy and practice with respect to key parameters for a suspension and debarment system. The Secretariat recommended that progress towards convergence should continue to be monitored and that the topic should remain on the Commission's agenda, as it continued to be extremely important, but legislative development by UNCITRAL in the area was not presently feasible.

3. In order to assess the extent to which the UNCITRAL Infrastructure Projects Guide (2000) would need to be updated, the Secretariat had consulted experts in policy, law reform and practice in public-private partnerships on the Guide and accompanying legislative recommendations and the Model Legislative Provisions. The experts had concluded that most of the recommendations of those texts reflected good policy and practice and remained relevant, but that limited revisions were required to ensure that the texts contained up-to-date terminology and reflected current practice. The texts should also reflect the objectives and requirements of the United Nations Convention against Corruption. Most of the provisions of the Convention that addressed public procurement and management of public finances were also reflected in the UNCITRAL Infrastructure Projects Guide (2000), but some minor amendments were required, as the Guide focused on legislative but not institutional requirements. Guidance should also be provided to ensure that enacting States had appropriate institutional structures and capacity and legislative provisions to implement the public finance aspects of the Convention.

4. The review carried out by the Secretariat to date indicated that it would be feasible to update the UNCITRAL Infrastructure Projects Guide (2000) within current resource constraints through a project led by the Secretariat, with the assistance of experts. The Secretariat would then report back to the Commission in 2018, possibly with a draft revised legislative guide for its consideration.

5. **Mr. Coffee** (United States of America) said that, in light of the Secretariat's limited resources, time should not be devoted to monitoring legal developments in public procurement and infrastructure development. If the Commission were to decide otherwise, it should provide a narrower mandate to the Secretariat.

6. **Mr. Tirado Martí** (Spain), expressing agreement with the Secretariat's report and recommendations, said that while procurement and public-private partnerships were extremely important topics, they should not be assigned to a working group.

7. **Mr. Apter** (Israel) said that his delegation did not object to the continuation of work on public-private partnerships, subject to resource constraints. However, in view of those constraints, the issue of suspension and debarment in public procurement should not be taken up at the current stage. The United Nations Convention against Corruption, to which 181 States had acceded, included a specific article on public procurement in the context of corruption. In June 2016, the process of review of implementation by all States parties of chapter II of the Convention, which contained that provision, had begun. On completion of that five-year review cycle, the United Nations Office on Drugs and Crime would publish recommendations and best practices, which were expected to address the issue of sanctions in public procurement. Meanwhile, the Organization for Economic Cooperation and Development (OECD) Working Group on Bribery in International Business Transactions had carried out a significant amount of work on the issue of debarment

for corruption-related activities. As the important issue of suspension and debarment was being addressed in other forums and any duplication of efforts should be avoided, UNCITRAL should not pursue the topic, although it could do so in the future if appropriate.

8. **Mr. Bellenger** (France) said that he supported the recommendations of the Secretariat, particularly with regard to public-private partnerships. That area was of significant interest, especially to developing countries, which did not have the necessary resources to create a suitable legislative framework. He therefore supported the approach taken to date by the Secretariat. Although it was not currently possible for the work to be conducted by a working group, the item should remain on the agenda.

9. **Ms. Sabo** (Canada) expressing support for the comments of the representative of Israel, suggested that the topic of suspension and debarment should be removed from the Commission's agenda on the understanding that the Secretariat might revisit the topic at a later stage and report back to the Commission in 2020 or 2021. In view of resource constraints, the importance of revising the texts on privately financed infrastructure projects should be noted but no decision should be taken as to whether the Secretariat should undertake that work until other possible areas of future work had been considered, including in terms of their resource implications. The proposal might take lower priority than other proposed work, given that the existing texts concerning private-public partnerships were still serviceable.

10. **Mr. Meier** (Switzerland) said that while the importance of public procurement was incontestable, UNCITRAL might not be the most appropriate forum for work on suspension and debarment, as the topic was more closely related to corruption than to international commercial law. As it was not currently possible for UNCITRAL to conduct any legislative work in the area of suspension and debarment, the item should be removed from the agenda.

11. Given that representatives of various States, including States with developing economies, had spoken in favour of work in the area of public-private partnerships at the Commission's forty-ninth session, it was appropriate for the Secretariat to present a report and recommendations in that regard in 2018.

12. **Ms. Cap** (Austria) said that she supported the Secretariat's suggestions in relation to public-private partnerships.

13. **Ms. Gómez Ricaurte** (Ecuador) expressed support for the comments made by the representative of Israel regarding the topic of suspension and debarment. She agreed with the representative of Canada that while the topic of public-private partnerships was of interest, priority in terms of resources should be given to items that were of greatest interest to the majority of delegations.

14. **Ms. Nicholas** (Secretariat) said that since the UNCITRAL Infrastructure Projects Guide (2000) had been adopted, there had been growing consensus on issues that would not previously have been considered appropriate subjects for model legislative texts. The convergence of good practices would facilitate consolidation of the various texts and the expansion of legislative provisions in place of simple guidance.

15. **The Chair** noted that while differing opinions had been expressed with regard to the degree of priority of work on public-private partnerships, most delegations considered the topic to be important. He therefore took it that the Commission wished the Secretariat to continue its review and revision work in that area, subject to the availability of resources. He also took it, in light of the comments made, that the Commission wished to remove the topic of suspension and debarment in public procurement from its agenda.

16. *It was so decided.*

Possible future work in the area of security interests and related topics (A/CN.9/913, A/CN.9/924 and A/CN.9/926)

17. **Mr. Bazinas** (Secretariat), introducing documents A/CN.9/913 and A/CN.9/924, recalled that at its forty-ninth session, the Commission had reaffirmed its earlier decision that the preparation of a contractual guide on secured transactions and a text on intellectual property licensing should be retained on its future work programme. It had also added to that work programme the consideration of possible expansion of the UNCITRAL Model Law on Secured Transactions and its Guide to Enactment to address secured financing for micro-enterprises; the question of whether future work on a contractual guide should cover contractual issues of concern to micro-enterprises; warehouse receipt financing; alternative dispute resolution in connection with security agreements; and secured financing. In order to provide the Commission with feedback on those issues and thus facilitate its consideration of future work in the area of security interests, the Secretariat had organized the Fourth International Colloquium on Secured Transactions, which had been held in March 2017.

18. With regard to contractual issues, it had been concluded that a practice guide to the UNCITRAL Model Law on Secured Transactions, rather than a contractual guide, should be prepared to address issues of concern to users of legislation implementing the Model Law and its registry-related provisions, including parties to transactions, practitioners, academics, judges and arbitrators. It had been noted that the draft Guide to Enactment of the Model Law was directed mainly at legislators and that, without the provision of guidance to those users, States might not benefit from the adoption of implementing legislation. The issues that such a practice guide could address were set out in document A/CN.9/913. The text could be similar in nature to the UNCITRAL Practice Guide on Cross-Border

Insolvency Cooperation or could be directed at practitioners, in the manner of the UNCITRAL Notes on Organizing Arbitral Proceedings (2016).

19. With respect to transactional and regulatory issues, such as valuation and monitoring of collateral, administration of secured loans and collection of receivables, examples had been given of States that had adopted a new secured transactions law but had not made optimal use of it, for such reasons as a lack of understanding of the law among practitioners and persons at whom the law was directed, and the failure of lenders to accept modern secured finance practices such as receivables and inventory financing.

20. It had been noted that the Model Law on Secured Transactions addressed issues relating to secured financing for small and medium-sized enterprises, but a number of issues of interest specifically to micro-businesses were not covered, such as types of microfinance transaction, notifications, personal guarantees and enforcement of security rights. It had been concluded that the practice guide should address contractual, transactional and regulatory issues that were of relevance to micro-businesses.

21. A further conclusion reached at the Colloquium was that the Commission should consider preparing a text on warehouse receipts in cooperation with other international organizations involved in supply chain and warehouse receipt financing. It had been noted that the UNCITRAL Model Law on Secured Transactions and the UNCITRAL Model Law on Electronic Transferable Records addressed warehouse receipts only if they were treated as negotiable documents under the law of the enacting State governing negotiable documents and instruments. In addition, a number of issues had been identified that were not addressed in either model law, particularly non-negotiable warehouse receipts, which served as valuable collateral that could improve access to credit for small agricultural businesses in particular.

22. When the Commission had prepared the UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property, it had considered that future economic development would depend largely on innovation, which would in many cases be covered by intellectual property rights legislation, but that funding for new ideas was often insufficient. Intellectual property financing, involving the use of intellectual property rights as collateral, had been identified as one possible way of obtaining such funding. The Colloquium had identified both a need for a uniform law text on intellectual property licensing and a gap in the law in respect of contractual matters in that context, both of which could be addressed by model rules prepared in cooperation with relevant organizations.

23. It had been further noted at the Colloquium that the UNCITRAL Model Law on Secured Transactions, while not precluding the use of alternative dispute resolution, did not address issues such as arbitrability, disputes arising in the context of enforcement of a security right or the effect of its provisions on third-party rights. The Commission was therefore invited to consider whether model rules should be prepared to cover those issues.

24. There had been some support at the Colloquium for the preparation of a text on real estate financing, as many developing countries that were currently reforming their secured transactions laws required guidance on security interests in both movable and immovable property; however, doubt had been expressed as to whether real estate financing was a topic that lent itself to unification at the international level.

25. The Colloquium had also generated feedback with respect to coordination, cooperation and technical assistance. The Commission continued to work with the European Commission on a coordinated approach to the issue of the law applicable to the perfection and priority of security rights in receivables. The European Commission had also held discussions with the Secretariat regarding the law applicable to third-party effects of transactions involving receivables and securities, which had an impact on the application of the relevant rules of the UNCITRAL Model Law on Secured Transactions. The importance of the functional approach to the reform of secured transactions law in achieving the harmonization of that body of law, and the need to adapt the Model Law to concepts and approaches found in civil-law systems, had also been discussed.

26. Discussions had also been held on cooperation and coordination in the area of secured transactions, including the continuing work on the updating of the joint publication *UNCITRAL, Hague Conference and UNIDROIT Texts on Security Interests*. It had been suggested that further efforts should be made to ensure the continuation of that coordination, but no mandate was currently sought for work in that area.

27. **Mr. Sorieul** (Secretary of the Commission) said that, when deciding on future work on security interests and related topics, the Commission should bear in mind that conference time and Secretariat resources were limited, particularly in view of the Commission's decision to give a new mandate to Working Group III, and that Working Group VI might hold only one session before the Commission's fifty-first session. Priorities would therefore need to be established.

28. **Ms. Sabo** (Canada) said she agreed that priorities should be decided on, particularly since the Commission had already tasked Working Group VI with a number of projects.

29. Drawing attention to document A/CN.9/926, she said that the proposal set out in that document offered a way of addressing a number of the topics that had been raised by the Secretariat.

30. **Ms. Gullifer** (United Kingdom), introducing the proposal, said that the proposed practice guide to the UNCITRAL Model Law on Secured Transactions would complement the Guide to Enactment by providing guidance, information and context for those using a new system resulting from enactment of the Model Law.

31. The proposal drew on the work of the three panels at the Colloquium that had dealt with contractual matters, transactional and regulatory matters, and financing of micro-businesses. It had received broad support and had been seen as an essential part of the work on the UNCITRAL Model Law on Secured Transactions. The draft Guide to Enactment was an excellent guide for legislators seeking to incorporate the Model Law into domestic legislation; however, legislation enacting the Model Law would be used very little, incorrectly or not at all — and the economic benefits it was designed to bring to States would not materialize — unless those involved in its application understood it properly.

32. A practice guide would provide a wide range of users with detailed and practical advice on how to carry out transactions in accordance with the Model Law. Many of the types of transaction envisaged by the Model Law might rarely or never have been carried out in enacting States. Therefore, users might be unfamiliar with, for example, the use of movable property or intangible assets, such as receivables, as security. A practice guide would explain those transaction types and practices and provide guidance on issues such as the valuation of collateral and the administration of secured loans. It would also provide advice on building legal capacity in unfamiliar areas of law, such as extrajudicial enforcement and related areas such as insolvency law and the law relating to personal guarantees.

33. The practice guide could address the building of regulatory capacity by discussing the interrelationship between financial regulation and the economic benefits of secured transactions under the Model Law. It could also address the needs of specific types of business, such as micro-businesses, and enable international agencies that provided technical assistance to perform their work far more efficiently and at lower cost.

34. It was proposed that the topics to be included in the guide should be discussed and the content of the draft guide refined at an initial session of Working Group VI, building on the excellent work that had already been carried out in preparation for the Colloquium. It was estimated that the practice guide could then be completed in two or three further sessions.

35. **Ms. Yamanaka** (Japan) said that her country, as a sponsor of the proposal, believed that a practice guide would greatly enhance the usability and benefits of the UNCITRAL Model Law on Secured Transactions and related instruments.

36. **Mr. Whittaker** (Australia) said that the experience of his country, which was also a sponsor of the proposal, in reforming its domestic legislation on secured transactions had shown that the availability of a practice guide was important and the Model Law would be incomplete without it. Such a guide would maximize the Model Law's practical value. Although Australia had a well-developed economy, a sophisticated financial sector, an active legal and academic community and a high-quality judiciary, the transitional process had not been easy as the new rules had made the legal and business environments very uncertain, especially initially, and at first it had not been understood by all how to use the new system. Materials such as the proposed practice guide would have been of great assistance to the business, legal and consumer communities in explaining how the new regime was expected to work and how they could turn it to best advantage. Enacting States with developing economies would benefit even more from the proposed guide, which would ensure that the full potential of the Model Law to be of practical value was exploited.

37. **Mr. Schoefisch** (Germany) said that Working Group VI need meet only once before the fifty-first session of the Commission. Only three of the topics referred to in document A/CN.9/913 were suitable areas of future work by the Working Group: the most important was the practice guide proposed in document A/CN.9/926 and the others were warehouse receipts and financing of micro-businesses. The topic of alternative dispute resolution in relation to secured transactions was better suited to Working Group II, and no work should be undertaken on real estate financing, as it would not be possible for consensus to be reached on the desirable outcome of such work.

38. **Mr. Riffard** (France) said that his delegation, which had long supported the idea of an official commentary to the UNCITRAL Model Law on Secured Transactions, considered the practice guide to be the only feasible project in the short term. As so many diverse issues would be covered by the guide, preparatory work by the Secretariat would be required to ensure that the Model Law and the various instruments produced in connection with it did not overlap or contradict each other. A single session of Working Group VI before the Commission's fifty-first session was preferable, as that would give the Secretariat time to complete the preparatory work and submit a well-constructed preliminary draft to the Working Group. The preparation of such a draft before the Working Group session was essential, as the initial session of the Working Group on the topic should not be dedicated to preliminary discussions concerning the possible nature or structure of the practice guide.

39. **Mr. Meier** (Switzerland) said that the proposed practice guide was unnecessary, as UNCITRAL had already issued comprehensive instruments on secured transactions. Some of the aspects of the proposed work, such as the inclusion of advice on the preparation of contracts, was not within the remit of UNCITRAL and

there was a danger that work in the area would become self-perpetuating. It would be more appropriate for the Working Group to explore the various interesting proposals presented at the UNCITRAL Congress held the previous week, such as the topic of blockchain technology.

40. **Mr. Tirado Martí** (Spain), welcoming the proposal presented in document A/CN.9/926, said that the production of a practice guide was essential in order to provide a clear explanation of the Model Law to those who would be applying its provisions. Indeed, failure to produce such a guide would constitute a waste of the resources dedicated by the Commission to the preparation of the Model Law and its other texts on secured transactions, which were of tremendous importance and relevance with respect to the financing of small and medium-sized enterprises and, in general, the economies of developing nations, but extremely technical and difficult to implement.

41. Many of the concepts in the UNCITRAL Legislative Guide on Secured Transactions and the UNCITRAL Model Law on Secured Transactions related to common-law jurisdictions, so were unfamiliar to most civil-law jurisdictions. If developing countries, which were likely to be civil-law jurisdictions, attempted to implement the Model Law without further guidance, their legislators might be able to rely on the Guide to Enactment, but it was doubtful that users in those jurisdictions, such as judges, insolvency representatives and regulators of the financial sector, would be able to understand many of the concepts it referred to. A practice guide similar to the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation was needed.

42. **Mr. Castellano** (Italy), expressing support for the proposal set out in document A/CN.9/926, said that the proposed practice guide would be of particular help to regulatory authorities. Working Group VI was the most appropriate body to provide clear guidance on how to interpret the Model Law.

43. **Mr. Apter** (Israel) said that the proposed practice guide should be the main focus and priority of Working Group VI, and should include issues relating to microfinance if possible. However, the issue of warehouse receipts could also be explored. He agreed with the representative of Germany that the other topics proposed in document A/CN.9/913 should not be considered by the Working Group.

44. **Mr. Coffee** (United States of America) said that he shared the view that priorities should be established. Work should be undertaken on the proposed practice guide so that parties to transactions, especially creditors, their attorneys, the judiciary and regulators could develop the expertise they needed to exploit the potential created by a modern secured transactions law. However, the guide should not cover matters that were the subject of general debt or creditor law, such as effective credit reporting systems, or non-legal matters such as the more effective distribution of tasks within financial institutions.

45. Warehouse receipts would be an appropriate topic for Working Group VI to consider after completing its work on the practice guide, for the reasons given in document A/CN.9/913. The Secretariat should conduct a study to determine the appropriate scope and form of an UNCITRAL instrument on warehouse receipts, taking into account the need for harmonization and modernization, the current state of domestic and regional reforms, the contribution of other international and regional organizations and the advisability and feasibility of various forms of instrument, such as a legislative guide or a model law. It was not currently appropriate for Working Group VI or UNCITRAL to take on any of the other projects suggested in document A/CN.9/913.

46. **Ms. Sabo** (Canada) said that she was in favour of the exploration of contractual issues, some transactional and regulatory issues and financing of micro-businesses as identified in document A/CN.9/913, as those topics would be covered in the practice guide proposed in document A/CN.9/926. The precise contents of the practice guide should be decided by the Working Group. She did not support further work in the area of alternative dispute resolution in the area of secured transactions, and the topic of real estate financing should be reconsidered at a much later date. Although the topic of warehouse receipts was not a pressing issue, the Secretariat could explore the feasibility of achieving some harmonization in that area, subject to the availability of resources and other priorities of the Commission. The practice guide should be the Commission's current priority.

47. Referring to document A/CN.9/924, she said that the Secretariat should continue its efforts in respect of coordination and cooperation with other organizations, particularly concerning the law applicable to proprietary effects of assignments of receivables. There was a lack of harmony between the United Nations Convention on the Assignment of Receivables in International Trade (2001) and European Union law. Given that the European Union was currently revising its legislation in that area, the Secretariat should take advantage of that window of opportunity by devoting resources to addressing the issue. It was important that the European Union should be able to implement legislation that would enable it to participate in a broader global community in which common rules applied to the assignment of receivables.

48. **Mr. Soh** (Singapore) said that he supported the preparation of a practice guide but, in view of limited resources, it was important to consider how the work should be conducted. If the guide were to focus on legal advice, a document produced by experts could simply be approved by the Commission rather than the work being assigned to a working group.

49. **Mr. Brennan** (International Film and Television Alliance) said that intellectual property licensing remained a matter of interest to his organization. During the drafting of the UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property, it had been pointed out that there was a lack of legislation governing the terms of intellectual property contracts. Intellectual property was a fast-growing area and the financing of receivables in that context was of particular interest, as receivables in intellectual property licensing were not as straightforward as those in traditional markets, but could be of tremendous value with regard to secured financing. The harmonization of contracting rules would make such financing easier and would make collateral more transparent to lenders.

50. Although the Commission had limited resources, and other worthwhile projects were being considered, such as the proposed practice guide, intellectual property licensing should remain on the agenda for UNCITRAL to consider at an appropriate time, because it would make an important and valuable contribution to international trade law.

51. **Ms. Portillo Rodríguez** (El Salvador) said that she supported the proposal in document A/CN.9/926. Since El Salvador had not implemented specific legislation on topics such as warehouse receipts or intellectual property licensing, instead relying on generic legislation, the discussion of those issues by the Commission or in the practice guide would facilitate the enactment of additional national legislation.

52. **Mr. Weise** (American Bar Association), likewise expressing support for the proposal to prepare a practice guide, said that the American Bar Association had itself produced a practice guide at the time of reform of the secured transactions law of the United States of America, and that guide had been welcomed by a wide range of users.

53. **Mr. Maradiaga** (Honduras) said that the many instruments that had been produced by UNCITRAL were significant achievements, and the international harmonization of law was increasingly important. It was therefore vital that, at a time of financial constraints, Member States, including those with developed economies in particular, should continue to support UNCITRAL.

54. **Mr. Brink** (Factors Chain International and EU Federation for the Factoring and Commercial Finance Industry) said that priority should be given to the preparation of the practice guide proposed in document A/CN.9/926, as such a guide would be an important resource for the legal profession and its drafting would provide an opportunity to revisit the text of the Model Law to check whether its provisions were valid in an electronic environment, given that the world economy was becoming increasingly virtual.

55. **The Chair** suggested that, if the Commission agreed to the preparation of the proposed practice guide, Working Group VI should be selective when deciding on the substance of the guide and priority should be given to legal issues in view of the purpose of the text.

56. **Ms. Sabo** (Canada) said that the practice guide need not be strictly limited to legal issues. It might cover, for example, the forms that would need to be used in the electronic registry system, which was a key part of the Model Law. Although it had been suggested that the practice guide should not cover contractual issues, the overall objective was to provide information sufficient to enable users to make full use of the system. Therefore, confining the practice guide to legal issues might be overly restrictive and prevent the guide from fulfilling its purpose.

57. **The Chair** said that it might not be easy to identify what constituted a legal issue. Accordingly, the Commission should ask the Working Group to be selective in its choice of content in order to create a practice guide that would benefit users such as judges, arbitrators, lawyers and banking professionals in their everyday work.

58. **Mr. Tirado Martí** (Spain) said he agreed that the Working Group should focus on legal issues. The list of topics set out in the proposal should be used as the basis for discussions. The estimate that a draft version of the guide could be produced within three sessions was reasonable.

59. **Ms. Sabo** (Canada) said that any possible disagreement as to what constituted a legal issue could be avoided by agreeing that the Working Group should start its discussions on the basis of the list of topics outlined in document A/CN.9/926. The time frame provided was only approximate and was intended to indicate that the project would not be overly time-consuming; it might even be possible to complete the work in fewer sessions. Since it was unrealistic to impose a time frame, the work should simply be done as quickly as possible.

60. **Mr. Schoefisch** (Germany) and **Mr. Castellano** (Italy) expressed support for the proposal set out in document A/CN.9/926.

61. **Mr. Riffard** (France) said that identifying the content that future users of the practice guide would find useful was a priority. Preparatory work should therefore be carried out by the Secretariat in the form of consultations with future users to ascertain their needs, and with experts. It was premature to set a deadline for the work, although a minimum of two sessions seemed reasonable. However, those sessions should follow the Secretariat's preparatory work.

62. **Mr. Tirado Martí** (Spain) said he agreed that there should be no fixed time frame for the work, but that it should be completed as quickly as possible.

63. **Mr. Whittaker** (Australia) said that in his experience, users did not know what should be included in a practice guide until they had actually used the system themselves. Therefore, an initial survey of users might delay the work of the Working Group. There would be sufficient knowledge among those members of the Working Group who had personal experience of the system or had guided other States through the process to make it possible to determine which questions the practice guide should address.

64. **The Chair** said that each of the approaches proposed by the representatives of France and Australia had its merits. The Working Group would be free to choose its own methods of working on the practice guide and could ask the Secretariat to conduct a preliminary study as suggested if that was found to be appropriate. He agreed that the work should start as soon as possible.

65. **Ms. Sabo** (Canada) said she was confident that the Secretariat would draw on the knowledge and experience of experts who would be able to provide the information needed.

66. **Mr. Bazinas** (Secretariat) sought clarification as to whether the practice guide should cover the financing of micro-businesses, as that topic had been included in the proposal in document A/CN.9/926.

67. **The Chair** said that while it was his understanding that it would be for the Working Group to decide on the topics that the practice guide should address, the Commission could request the Working Group to include the topic of financing of micro-businesses among those topics in view of the desirability of providing help and encouragement to micro-businesses. However, it would be prudent to avoid listing issues for inclusion at the current stage, as that list could become overly long.

68. **Mr. Tirado Martí** (Spain) said that the practice guide should not cover general access to finance for micro-businesses but, rather, how the application of the Model Law should be considered in the specific case of micro-businesses, which accounted for the vast majority of businesses that would be using the Model Law in practice.

69. **Mr. Riffard** (France) said he agreed that Working Group VI should be able to adjust the scope of the proposed practice guide as appropriate, but disagreed that the Working Group should define the scope of the guide at its first session on the topic, as that might lead to protracted discussions, which would not be the most efficient use of UNCITRAL resources. The Commission should instruct the Secretariat to prepare an initial draft of the practice guide on the basis of document A/CN.9/926, which would provide the starting point for the Working Group's discussions.

70. **Ms. Sabo** (Canada), expressing support for the comments made by the representative of Spain, noted that there had not yet been any discussion of document A/CN.9/924, which she had referred to in her earlier comments. She suggested that the Commission should simply renew the Secretariat's mandate as referred to in paragraph 20 of that document.

71. **Mr. Coffee** (United States of America) said that he fully supported renewal of that mandate. He sought clarification as to whether work would be undertaken in the area of warehouse receipts.

72. **Mr. Schoefisch** (Germany) said his understanding was that work on that topic was not supported but there was general consensus that work on the proposed practice guide to the UNCITRAL Model Law on Secured Transactions should be undertaken on the basis of document A/CN.9/926, and that the topic of financing of micro-businesses should be included in that work.

73. **The Chair** said he took it that the Commission did not wish to pursue the topic of warehouse receipts but wished to request Working Group VI to proceed with the preparation of a practice guide to the UNCITRAL Model Law on Secured Transactions on the basis of document A/CN.9/926 and the relevant sections of document A/CN.9/913. While no time frame for that work would be imposed, it was desirable for the Working Group to complete the work as expeditiously as possible. The Working Group should define the scope, structure and content of the guide, keeping in mind that the guide should be as specific as possible and should not touch on, for example, general economic issues. He also took it that the Commission wished to renew the mandate given to the Secretariat in respect of the matters addressed in document A/CN.9/924.

74. *It was so decided.*

Election of officers (*continued*)

75. **Mr. Mbabazize** (Uganda), speaking on behalf of the African Group, said that the Group wished to nominate Mr. Moollan (Mauritius) for the office of Rapporteur.

76. *Mr. Moollan (Mauritius) was elected Rapporteur by acclamation.*

The meeting rose at 4.40 p.m.

Summary record (partial) of the 1059th meeting, held at the Vienna International Centre, Vienna, on Friday, 14 July 2017, at 9.30 a.m.

[A/CN.9/SR.1059]

Chair: Mr. Martonyi (Hungary)

The discussion covered in the summary record began at 10 a.m.

Work programme of the Commission (A/CN.9/911, A/CN.9/923 and A/CN.9/925)

1. **Ms. Nicholas** (Secretariat), introducing document A/CN.9/911, recalled that the Commission had already taken note of the progress made both by the working groups and in the various support activities undertaken by the Secretariat as reported earlier during the session, including technical assistance and coordination activities and the promotion of ways of ensuring the uniform interpretation and application of UNCITRAL legal texts. It was the Secretariat's understanding of the Commission's deliberations thus far that the Commission wished those activities to continue.

2. The Commission had always emphasized the importance of a strategic approach to the allocation of its limited resources, inter alia, to legislative development, and at the current session had confirmed its role in setting the UNCITRAL work programme, especially in relation to the mandates of the working groups.

3. The Commission had considered future legislative activity in several areas during the current session. With regard to electronic commerce, it had confirmed that Working Group IV should continue its projects concerning the contractual aspects of cloud computing and legal issues relating to identity management and trust services.

4. The Commission had also decided that Working Group III should be given a broad mandate to work on the possible reform of investor-State dispute settlement, including the issues of concurrent proceedings in the field of investment arbitration and a code of ethics in international arbitration. It had agreed that the Working Group should identify and consider concerns relating to investor-State dispute settlement, decide whether reform was appropriate and, if so, identify solutions to be recommended to the Commission, taking advantage of the widest possible range of expertise among all stakeholders.

5. With regard to public procurement and public-private partnerships, the Commission had decided that the Secretariat, with the assistance of experts, should continue to update and consolidate the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects (2000) and associated texts, and should report to the Commission at its next session.

6. Lastly, the Commission had decided that a practice guide on secured transactions should be prepared by Working Group VI and should address contractual, transactional and regulatory issues arising in the context of secured transactions, including the financing of micro-businesses.

7. **The Chair** said he took it that the Commission wished to confirm its decisions concerning the current legislative programme of the Commission.

8. *It was so decided*.

9. **Ms. Nicholas** (Secretariat) drew attention to the proposals set out in documents A/CN.9/923 and A/CN.9/925 concerning possible future work.

10. **Ms. Malaguti** (Italy), introducing her Government's proposal as contained in document A/CN.9/925, recalled that Working Group I, in the course of its work on the draft legislative guide on key principles of a business registry and the draft legislative guide on a limited liability organization, had identified a grey area between the stages of business registration and the establishment of a limited liability entity, noting that elements of limited liability protection were possible prior to the creation of an entity with legal personality. The proposal concerned the development of solutions enabling businesses that were registered but not incorporated to access credit more easily and benefit from other advantages offered by governments. To that end, her Government proposed work on contractual networks that would enable micro- and small enterprises to internationalize their business, engage in cross-border cooperation and join supply chains by entering into contracts with larger companies. By forming a network, micro- and small enterprises were able to work together to ensure that they met the standards required by large companies when concluding contracts, which would not be possible if they operated alone. Both large companies and micro- and small enterprises would benefit from an instrument in that area. However, contractual networks could raise conflict of laws issues, including with respect to liability.

As Working Group I intended to present the draft legislative guide on key principles of a business registry to the Commission in 2018, it might be possible for the Working Group to work on the proposal in parallel with the work on the two legislative guides. The delegation of Italy therefore sought endorsement of the project in principle, on the understanding that some delegations might require additional information, and that it would accordingly undertake further research, possibly in the form of a study with a small network of universities and

any other delegations wishing to take part, before presenting its findings to the Commission in 2018.

12. **Mr. Meier** (Switzerland), expressing support for the proposal, said that it was both appropriate and desirable to complement the work on the legislative guides with work on alternative forms of business organization.

13. **Mr. Bellenger** (France) said that he was also in favour of further research on contractual networks as an alternative business model that could be very useful for small and medium-sized enterprises.

14. **Ms. Sabo** (Canada) said that her delegation was interested in the proposal but had many questions and was therefore not currently in a position to endorse it in principle. However, it would support the preparation of further information to be presented to the Commission in 2018 and would welcome the opportunity to consult at the national level. A broader mandate to cover businesses in general should be considered, although she understood that the issue was of particular interest to micro-, small and medium-sized enterprises. There was no urgent need to take a decision on the matter, as Working Group I would be occupied with its current workplan in the coming year.

15. **Mr. Schoefisch** (Germany) and **Mr. Coffee** (United States of America) said that they shared the position expressed by the representative of Canada.

16. **Ms. Malaguti** (Italy) asked delegations to contact her directly with initial feedback and questions so that her delegation could conduct appropriate research and present the required information to the Commission at its fifty-first session.

17. **The Chair** said he took it that that approach was acceptable to the Commission.

18. *It was so decided*.

19. **Mr. Lux** (Comité Maritime International), introducing his organization's proposal for possible future work on cross-border issues related to the judicial sale of ships, as set out in document A/CN.9/923, said that the rationale for that proposal was that there was currently a significant gap in the existing legislation on the topic that could be bridged by an international instrument. The Comité Maritime International had prepared a draft text containing 10 articles, which provided a possible solution and a starting point for the Commission's discussions.

20. Over 95 per cent of world trade moved by sea and, as ships traded, they often incurred a wide range of debts, including to crew, mortgagees, port authorities, salvors, charterers and suppliers of fuel and other services such as insurance. In the current sluggish freight market, ship owners did not have the income to service debt, and even well-established companies had gone out of business. Such debts gave rise to maritime claims enabling creditors to arrest a vessel for non-payment. In the majority of such cases, following judgment or, exceptionally, prior to judgment, application could be made for judicial sale of the vessel. The sale was intended to ensure that all prior debts were covered by the proceeds from that sale and that the purchaser obtained clean title to the ship, free and clear of previous claims and encumbrances.

21. However, there had been numerous cases in which a judicial sale in one State had not been recognized in another State. For example, if a shipowner borrowed money from a bank and gave a mortgage on a ship as security, the value of the security would be drastically reduced if, when the ship came to be sold by a court, there was any doubt as to whether the purchaser would acquire title to the ship free of encumbrances and debts. No purchaser would be prepared to pay the market price for a vessel when there was a risk that pre-existing claims might still be enforceable against the ship, particularly because a recovery against the previous owner would not be successful.

22. If States or debtors refused to comply with judicial sale proceedings and enforce the decisions of courts located in other States, that would create confusion in an area which could be controlled only on the basis of the good faith of all seafaring nations or by an international instrument such as the one proposed.

23. There were several key consequences if a judicial sale went wrong. For example, purchasers might be unable to delete the vessel from the previous register and re-register the vessel in the register of their choice, which would prevent them from trading the vessel in the manner that they preferred.

24. In addition, the purchaser and the vessel might be exposed to prior claims of an unknown amount in multiple jurisdictions, which gave rise to the danger of further ship arrest and even a further judicial sale if the purchaser could not meet those prior claims. Therefore, purchasers would bid less for vessels at judicial sale. That worked to the disadvantage of all sectors of the industry: financiers might lend only a reduced sum or not be prepared to finance the purchase at all, and in turn, ship owners would be less able to obtain funds to finance the purchase and operation of their fleet. For creditors, including State entities such as port authorities, lower sale proceeds would mean that there would be less money to meet accrued claims. While claims could be pursued against the vessel under its new ownership, the prospects of recovery would at best be uncertain, and the creditor might find the vessel to be in a jurisdiction where the prior judicial sale was not recognized. Moreover, non-recognition of a judicial sale in another State could impede or delay world trade and lead to valuable space in ports being occupied by vessels arrested in respect of claims under their previous ownership. Ultimately, the reduced availability of money in the system would lead to an older and less well-maintained global fleet, to the disadvantage of all.

25. The problems described could be addressed in a short, simple, self-contained instrument conceptually similar to the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958. Prior claims would be recoverable from the ship sale proceeds and the previous ship owner, and the purchaser would acquire clean title and would therefore be prepared to pay the market value for the ship. The Comité Maritime International therefore requested the Commission to consider taking up the proposal as part of its work programme.

26. **Ms. Lee** Song Joo (Republic of Korea) expressed appreciation for the efforts of the Comité Maritime International in preparing a draft international instrument on the topic of judicial sales of ships, which raised unique issues in relation to international trade and international private law. Because of the nature of the vessels and the international nature of the stakeholders, the issue was closely connected to the mandate of UNCITRAL to promote the progressive harmonization and unification of international law. Accordingly, the topic merited the attention of UNCITRAL and her delegation supported the proposal.

27. **Ms. Jamschon Mac Garry** (Argentina) said she agreed that the Commission should undertake work on the topic.

28. **Mr. Apter** (Israel), welcoming the proposal, said that the issue was important and of interest. However, the International Maritime Organization (IMO) might be a more relevant body to conduct work in that area, as the topic related to maritime commerce. While UNCITRAL had dealt with such specific topics in the past, recent projects had had a more universal character. Given the full agenda of the Commission, which would soon have six working groups operating simultaneously, it would be difficult to include in the work programme a highly specific issue relevant only to some member States. The Commission could address such work in the future or simply take note of and endorse the proposal of the Comité Maritime International.

29. **Mr. Tirado Martí** (Spain), also welcoming the proposal, asked which working group might deal with work on the topic.

30. **Mr. Sorieul** (Secretary of the Commission) said that it would be difficult to undertake work on the topic given the full agendas of the working groups. As IMO, the Hague Conference on Private International Law and the International Institute for the Unification of Private International Law had also received the proposal of the Comité Maritime International and considered the topic, the organizations could coordinate at the secretariat level in the coming year to determine which organization was best placed to incorporate the matter into its work programme.

31. **Mr. Diyachenko** (Russian Federation) agreed with the representative of Israel that the topic should not be included in the Commission's work programme at the current time. While the issue was important and topical, all the working groups had full agendas, and the limited resources available should be used rationally. Furthermore, the topic was already under consideration by other organizations.

32. **Mr. Schoefisch** (Germany) said that while the topic was important, UNCITRAL might not be the most appropriate body to discuss it. He supported the suggestion that the Secretariat should remain in contact with other organizations on the issue, which could be reconsidered at the Commission's fifty-first session.

33. **Mr. Von Ziegler** (Switzerland) said that his Government had been following the topic for some years and had been involved in the work of the Comité Maritime International, because the issue was not a maritime one but a commercial problem that was hindering trade and the flow of cargo unnecessarily. Ships that had been subject to judicial sales might become subject to arrest; cargo was blocked in harbours and banks and creditors were losing assets. That was attributable to a gap in the legislation that had become evident only recently owing to the current commercial situation in which ship owners were increasingly unable to pay off debts, as a result of which a growing number of ships were subject to judicial sale. The matter needed to be addressed in order to prevent such cases from coming before the courts unnecessarily.

34. UNCITRAL was the most appropriate body to deal with the issue because it took a broad view of the commercial aspects of world trade and dealt with harmonization at a high level, with the involvement of many interest groups. The matter was not yet on the agenda of any other relevant organizations; they were only giving the proposal initial consideration. UNCITRAL should take the lead in the work. While the matter might not seem relevant to all States, addressing it could have a significant impact and would not entail a substantial increase in workload. Although UNCITRAL would have to work within its own programme and on its own terms, it would have the consistent support of the Comité Maritime International. Furthermore, the issue was not politicized and would not lead to conflict among interest groups over specific aspects. However, it should be addressed within a defined time frame, given the current commercial situation. Contact with businesses and industry stakeholders would make more information available to the Commission. His delegation stood ready to provide assistance in that regard.

Mr. Maradiaga (Honduras) said that the fact that his country had both Atlantic and Pacific coastlines had led to the substantial development of its maritime commerce activities. UNCITRAL should play a leading role in work on the topic proposed, but that might entail the establishment of an additional working group, which was subject to budgetary constraints. It was important to determine how much work on the topic would be feasible.

36. **Ms. Sabo (**Canada) said that when the Comité Maritime International had presented its proposal to the Hague Conference on Private International Law, that organization had decided against including it in its work programme, although it might consider it again in the future. However, many delegations, including her own, had suggested that UNCITRAL might be the appropriate body for such work. To her knowledge, the topic was not part of the workplan of the International Institute for the Unification of Private International Law, which was established every three years. Given that there appeared to be interest among delegations with regard to the proposal, the Comité Maritime International might wish to organize a colloquium to raise awareness of the issues concerned and enable the Commission's member States to take a more informed decision at its next session. There was currently no capacity for such work given the very full agendas of the working groups and the limited resources available.

37. **Mr. Lux** (Comité Maritime International) welcomed the suggestion that his organization should organize a colloquium to raise awareness of what was a complex subject. With regard to the relevance of the subject to other organizations, when the proposal had been presented to IMO, doubts had been expressed as to whether the topic, as a matter of private law, fell within the mandate of that body, which was primarily concerned with public law and technical, safety and environmental issues.

38. **Mr. Sorieul** (Secretary of the Commission) said that the issue had not been included in the work programme of the International Institute for the Unification of Private International Law or the Hague Conference on Private International Law. The topic had been discussed preliminarily at the most recent coordination meeting between UNCITRAL and those organizations, at which it had been felt that the topic might fit well into the current work programme of the International Institute for the Unification of Private International Law. The proposed colloquium would provide valuable additional information.

39. **The Chair** suggested that the Commission should take note of the proposal but should not refer the matter to a working group at the current time. Instead, the proposed colloquium could be organized by the Comité Maritime International and UNCITRAL could participate in that colloquium and contribute its expertise, together with other international organizations. Following the colloquium and additional studies, further consideration could be given to the questions of whether to incorporate the topic into the Commission's workplan and, if so, whether the relevant international organizations would be involved in the work.

40. **Mr. Von Ziegler** (Switzerland) said that it was important for UNCITRAL to participate and, indeed, play a leading role in the colloquium, because such an event would provide a platform for delegations to meet industry representatives and experts and an opportunity for them to express their views.

41. **Mr. Apter** (Israel), expressing support for the proposed colloquium, said that it would be helpful if the Comité Maritime International approached its national chapters to raise awareness of and increase interest in the topic. The Secretariat should report on the colloquium at the Commission's fifty-first session.

42. **The Chair** said he took it that the Commission wished the Comité Maritime International to organize a colloquium on the cross-border issues arising from the judicial sale of ships, with UNCITRAL support and participation, as proposed. The issue would be taken up again by the Commission as necessary in the light of developments.

43. *It was so decided.*

The discussion covered in the summary record ended at 11.05 a.m.

Summary record (partial) of the 1060th meeting, held at the Vienna International Centre, Vienna, on Friday, 14 July 2017, at 2 p.m.

[A/CN.9/SR.1060]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The discussion covered in the summary record began at 3.20 p.m.

Adoption of the report of the Commission (A/CN.9/L/CRP.1/Add.12)

1. **Mr. Sorieul** (Secretary of the Commission) invited the Commission to consider document A/CN.9/L/CRP.1/Add.12, which contained the sections of the draft report relating to the Commission's deliberations on possible future work in the area of international dispute settlement under agenda item 15.

2. **Ms. Knieper** (Secretariat), drawing attention to paragraph 1 of the addendum, pointed out that the square brackets around the second sentence would be deleted, because the Commission had indeed reaffirmed the conclusions reached during its preliminary discussion upon its consideration of agenda item 21.

3. **Mr. Diyachenko** (Russian Federation) proposed that the words "on the basis of those notes" in the second sentence of paragraph 3 should either be deleted or replaced with the words "taking note of those notes", since the mandate for work on that topic had not been formulated on the basis of those notes. The text as drafted suggested that Working Group III would be obliged to work strictly in accordance with the notes, whereas the Commission had in fact agreed that the Group's mandate would be a broad one.

4. **The Chair** suggested the wording "taking into account those notes" and the insertion of the word "including" before the words "on the basis of those notes".

5. **Mr. Diyachenko** (Russian Federation) expressed a preference for the Chair's suggested wording.

6. **Mr. Apter** (Israel) said he agreed that the wording in question should be clarified. It was his understanding that paragraph 3 referred to the beginning of the discussion rather than describing the mandate ultimately decided on.

7. **Ms. Montineri** (Secretariat) said that the words "on the basis of those notes" simply reflected the fact that the Commission's discussion had been based on the documentation considered under the agenda item. However, it would not be problematic to change that wording to "taking into account those notes".

8. **The Chair** said she took it that the Commission wished to accept that change.

9. *It was so decided.*

10. **Mr. Coffee** (United States of America) proposed replacing the word "necessary" with the word "possible" in the first sentence of paragraph 4. That change would be consistent with the use of the words "possible solutions" at the end of paragraph 9, and would avoid the impression that a decision had already been made that new solutions were necessary, given that the Working Group would be tasked with determining whether or not that was the case.

11. **Mr. Diyachenko** (Russian Federation) expressed support for that proposal. He also proposed replacing the word "restore" with the word "ensure" in the second sentence of paragraph 4, as the former implied there was no confidence in the system, which was untrue. There was confidence in the system, and that confidence needed to be maintained.

12. **Mr. Rosner** (Observer for the European Union), supported by **Ms. Sabo** (Canada), said that it would be preferable to replace the word "necessary" with the words "any relevant", which had been used in item (iii) of paragraph 25. He did not support the proposal of the representative of the Russian Federation, as the word "restore" accurately reflected the discussion that had taken place.

13. **Mr. Meier** (Switzerland) and **Ms. Gómez Ricaurte** (Ecuador) expressed support for the retention of the word "restore".

14. **The Chair** said she took it that the Commission wished to replace the word "necessary" with the words "any relevant" in the first sentence of paragraph 4, but to retain the word "restore" in the second sentence.

15. *It was so decided.*

16. **Mr. Meier** (Switzerland), supported by **Mr. Apter** (Israel), proposed that the information contained in paragraph 8 — save for the last sentence of that paragraph, which served to introduce paragraph 9 — should be placed after paragraph 4, since it reflected the positive outcome of the discussions. It would be more appropriate for that information to come before the information contained in paragraphs 5, 6 and 7, which reflected the doubts expressed by delegations regarding the desirability and feasibility of work on possible investor-State dispute settlement reforms.

17. **Mr. Schoefisch** (Germany), supported by **Mr. Lapiere** (Observer for Belgium), said that while his delegation supported the rationale behind the proposal of the representative of Switzerland, it would be preferable to retain the existing paragraph order and to instead insert the words "In spite of this criticism, there

was broad support for UNCITRAL to undertake work on ISDS reform" at the beginning of paragraph 8.

18. **Mr. Diyachenko** (Russian Federation) said that the existing paragraph order accurately reflected the chronology of the discussion that had taken place and should therefore be retained.

19. **Mr. Coffee** (United States of America), expressing agreement with that view, said that it would be more appropriate for paragraph 8, wherever it was located, to begin with the words "The prevailing view of the Commission was that UNCITRAL should undertake work on ISDS reform".

20. **Mr. Rosner** (Observer for the European Union), expressing support for that suggestion, said that while the proposal of the representative of Switzerland was logical, the existing paragraph order should be retained.

21. **The Chair** said that the structural change proposed by the representative of Switzerland could disrupt the logic of the text.

22. In the absence of support for that proposal, she took it that the Commission wished to retain the existing structure but to insert the additional wording proposed by the United States representative at the beginning of paragraph 8.

23. *It was so agreed.*

24. **Ms. Yamanaka** (Japan) proposed the addition of the words "more than" before the words "3,000 international investment agreements" in the second sentence of paragraph 5. She also proposed the insertion of the words "It was stated that" before the word "reforms" at the beginning of the sixth sentence of the same paragraph, to clarify that that sentence reflected an opinion expressed by some but not all delegations.

25. *It was so decided.*

26. **Mr. Rosner** (Observer for the European Union) suggested amending the words "However, doubts were expressed on" in the first sentence of paragraph 5 to read "However, some delegations expressed doubts on".

27. **Mr. Diyachenko** (Russian Federation) said that a significant number of States, rather than only some, had expressed doubts as to the desirability and feasibility of UNCITRAL undertaking work on possible reform of investor-State dispute settlement.

28. **Mr. Rosner** (Observer for the European Union) said that his suggested wording was intended to reflect the fact that only a limited number of delegations had expressed doubts during the Commission's initial discussion of the issue.

29. **Mr. Diyachenko** (Russian Federation) said that it was unnecessary to indicate the proportion of delegations that had supported a suggestion or view. He was willing to accept the suggestion for the sake of enabling the Commission to proceed with its consideration of the addendum, but considered the amendment to be unnecessary.

30. **Mr. Coffee** (United States of America), **Mr. Meier** (Switzerland), **Ms. Kiselyová** (Observer for Slovakia), and **Ms. Light** (Australia) expressed support for the suggestion made by the observer for the European Union.

31. **Mr. Schoefisch** (Germany) pointed out that since UNCITRAL had 60 member States, the words "some delegations" might easily be taken to mean more than just a few. Therefore, it was preferable to retain the existing wording.

32. **The Chair** suggested that, as a compromise solution, the word "some" should be inserted before the word "doubts" in the first sentence of paragraph 5.

33. *It was so decided.*

34. **Ms. Light** (Australia) proposed that the words "they generally followed similar patterns with regard to their structure and were centred around a number of core principles" in the penultimate sentence of paragraph 5 should be replaced with the words "there are many issues which are recurrent under different international investment agreements which would benefit from a consistent approach", which was a more accurate reflection of the discussion that had taken place.

35. **Mr. Diyachenko** (Russian Federation) said that he would prefer to retain the existing wording, as the specific elements of international investment agreements that might benefit from a unique approach had not been discussed.

36. **The Chair** said that unless there was support for the proposed change, the sentence of paragraph 5 would remain as drafted.

37. **Mr. Coffee** (United States of America), supported by **Mr. Rosner** (Observer for the European Union) proposed the insertion of a new second sentence in paragraph 6 along the lines of "It was pointed out that reform is neither something new, nor something that can only be pursued multilaterally, as countries have advanced ISDS reform in myriad ways for many years", to reflect a point made by his delegation during the discussions, and the deletion of the words "It was pointed out that" in the following sentence, which would thus begin with the existing words "Some States had elected to modify".

38. *It was so agreed.*

39. **Mr. Coffee** (United States of America) proposed deleting the words ", in particular" from the final sentence of paragraph 6, as the sentence was not intended to refer to forms of multilateral work on the subject beyond those listed.

40. He further proposed inserting the words ", rather than seeking to develop a single, multilateral approach that should apply to all countries" after the words "individual circumstances" at the end of paragraph 6, in

line with the comments made by his delegation during the discussion in question.

41. **The Chair** said that it was not feasible to incorporate the specific comments of individual delegations in the report of the session

42. She took it that the Commission wished to accept the first proposal by the representative of the United States, but not the second.

43. *It was so agreed.*

44. **Ms. Yamanaka** (Japan) said that while she appreciated the point made by the representative of Canada with regard to the reflection of delegations' individual statements in the report of the session, the wording of the first sentence of paragraph 7 did not accurately reflect the comments that had been made by her delegation, the essence of those comments being that it had not yet been verified whether or not the criticism of the existing investor-State dispute settlement regime was based on fact, and that UNCITRAL should not undertake work on the topic on the basis of perceptions. She therefore proposed amending the sentence to read "It was stated that those who emphasized the necessity of ISDS reform pointed out that the current ISDS regime was perceived to be illegitimate, but whether such perceptions collectively represented the reality of ISDS was not verified, and that UNCITRAL should not undertake work based on mere perceptions, but on facts."

45. **Mr. Schoefisch** (Germany) expressed support for the comments made by previous speakers to the effect that delegations' comments need not be reflected individually and that, similarly, it was unnecessary to indicate the proportion of delegations that had supported a suggestion or view. The report reflected the discussions sufficiently and there was no need to reflect additional comments.

46. **Mr. Diyachenko** (Russian Federation) said that while he agreed that it was important not to reproduce too many statements in the report, the proposal by the representative of Japan was an amendment to the existing language rather than an addition. It would be inappropriate to prevent a delegation from ensuring that its statement had been properly reflected.

47. **Mr. Meier** (Switzerland) said he was confident that the Secretariat's summary of the Commission's deliberations was as accurate and balanced as possible.

48. **The Chair** said that unless she heard any further objections to the wording of paragraph 7 as drafted, that paragraph would remain unchanged.

49. **Mr. Coffee** (United States of America) proposed that in paragraph 8, the words ", and those that opposed further work on general investor-State dispute settlement reform issues" should be added at the end of the second sentence in order to accurately reflect all views expressed.

50. **The Chair** pointed out that the paragraph was intended to reflect the views expressed in support of work on investor-State dispute settlement reform.

51. **Mr. Mbabazize** (Uganda), expressing agreement with the representative of Canada, said that the paragraph as currently drafted sufficiently reflected the discussion that had taken place.

52. **The Chair** said that in view of the comments made, the paragraph would be retained as drafted.

53. **Ms. Gómez Ricaurte** (Ecuador) pointed out that in paragraph 12 of the Spanish-language version of the addendum, the wrong acronym was used for the World Trade Organization and should therefore be corrected.

54. **Ms. Yamanaka** (Japan) proposed that the words "and organs" should be added after "intergovernmental organizations" in the second sentence of paragraph 12, as the United Nations Conference on Trade and Development (UNCTAD) was an organ of the United Nations rather than a stand-alone organization.

55. **The Chair** said she took it that the Commission wished to accept the proposed amendments to paragraph 12.

56. *It was so decided.*

57. **Mr. Apter** (Israel) said that in paragraph 15, the words "in the context of such reforms" should be added to the end of the second sentence in order to make it clear that the issues of concurrent proceedings and a code of ethics would be addressed only as part of the topic of investor-State dispute settlement reforms.

58. **The Chair** said that in the absence of support for that proposal, the text would remain unchanged.

59. **Mr. Diyachenko** (Russian Federation), supported by **Mr. Coffee** (United States of America), proposed inserting the word "possible" before the words "ISDS reforms" in the second sentence of paragraph 15, as the Commission had given the Working Group a mandate to simply consider whether reforms were necessary and was not prejudging the outcome of those deliberations. He noted that that qualifier was used elsewhere in the addendum and that the word "solutions" was also qualified throughout by "necessary", "possible", "relevant" and "any".

60. **Ms. Sabo** (Canada) said that the amendment was not necessary as it was implicit, whenever the term "ISDS reforms" was used in the addendum, that those reforms were only a possibility.

61. **Ms. Yamanaka** (Japan) said that while she understood that objection, she supported the proposal.

62. **Ms. Kiselyová** (Observer for Slovakia) said that as the section of the draft report was entitled "Possible future work in the area of international dispute settlement", there was no need to include the word "possible".

63. **The Chair** said that, in the light of that comment, and unless there were further objections, the paragraph could be retained as drafted.

64. **Ms. Yamanaka** (Japan) proposed that a sentence should be added at the end of paragraph 16 to read along the lines of "It was also pointed out that a permanent investment court could possess law-making power to override the intentions of treaty negotiators", in order to reflect the point raised by her delegation during the discussions.

65. **Mr. Rosner** (Observer for the European Union), supported by **Ms. Sabo** (Canada) and **Mr. Schoefisch** (Germany), said that he objected to that proposal because the report was a summary, not a verbatim report, as had already been pointed out by other speakers. If the point raised by the delegation of Japan was included, the responses of other delegations would also have to be reflected, including that of his own delegation, which had fundamentally disagreed with the point made.

66. **Ms. Gómez Ricaurte** (Ecuador), expressing support for that position, said that while she understood the concern expressed by the representative of Japan, the paragraph did not suggest that the establishment of a permanent multilateral investment court was a foregone conclusion.

67. **The Chair** said that in the absence of support for the proposal of the representative of Japan, the text would remain unchanged.

68. **Mr. Diyachenko** (Russian Federation) said that in the second sentence of paragraph 16 of the Russian-language version of the addendum, the word "возможно" should be deleted as the English equivalent "possibly" was not included after the words "It was suggested that while" in the English-language version of the document.

69. **Mr. Sorieul** (Secretary) said that any typographical, grammatical and translation errors would be corrected at the stage of preparation of the final report of the session. He asked delegations to submit any corrections in writing to the Secretariat.

70. **Mr. Soh** (Singapore) proposed that in the first sentence of paragraph 19, the word "reflected" should be replaced with the word "considered" and the words "could be affected" should be added after "States".

71. **Mr. Rosner** (Observer for European Union) said that he agreed with the proposal to change the word "reflected" to "considered", which more accurately reflected the Commission's intention, but did not support the second proposal as the reason for the proposed amendment was unclear.

72. **Ms. Sabo** (Canada) said that she shared the view expressed by the observer for the European Union; the proposed additional language would render the clause ungrammatical and was overly restrictive.

73. Speaking as Chair, she said she took it that the Commission wished to accept only the first proposal of the representative of Singapore.

74. *It was so agreed.*

75. **Mr. Dennis** (United States of America), supported by **Ms. Yamanaka** (Japan), proposed replacing the words "there was general agreement" with the words "it was said", or, alternatively, "the prevailing view was" in paragraph 19, as the current wording was misleading.

76. **Ms. Sabo** (Canada), supported by **Mr. Apter** (Israel), said that the sentence should be retained as currently drafted, as it referred to UNCITRAL in a general sense, but if there was strong support for the proposal, the wording "the prevailing view was" would be preferable.

77. **Mr. Coffee** (United States of America) said that the sentence as drafted appeared simply to reflect praise for UNCITRAL rather than explaining why the Commission was an appropriate forum for work on investor-State dispute settlement. If the intention was to indicate that the prevailing view was that UNCITRAL was an appropriate forum for that work owing to its inclusive nature, that should be clarified.

78. **Mr. Diyachenko** (Russian Federation) said he agreed that the paragraph referred to UNCITRAL in a general sense; however, it should be considered in the context of the preceding and following paragraphs. For that reason, he supported the proposal of the United States representative.

79. **The Chair** said she took it that the Commission wished to accept the words "the prevailing view was that", as proposed by the United States representative.

80. *It was so decided.*

81. **Ms. Gómez Ricaurte** (Ecuador), supported by **Ms. Portillo Rodríguez** (El Salvador), proposed the deletion of the words "a widely prevailing majority and" in the second sentence of paragraph 20, since it was her understanding that consensus was based on the absence of a formal objection but not on a widely prevailing majority, in line with the opinion of the United Nations Office of Legal Affairs on the matter. It might be useful to refer to that opinion for clarification.

82. **Mr. Pires Filho** (Brazil), recalling that the view that consensus was based on a widely prevailing majority had been expressed by only one delegation, said that he supported the proposal of the representative of Ecuador. If the original wording was retained, language should be added to the sentence to indicate that that view was not the general view of the Commission.

83. **Mr. Rosner** (Observer for the European Union) said it was his recollection that the view in question had been expressed by more than one delegation. The sentence should be retained as drafted, as it usefully reflected the Secretariat's explanation of UNCITRAL

practice and the discussion that had taken place on the meaning of consensus.

84. **Mr. Sorieul** (Secretariat) said that the sentence accurately reflected UNCITRAL practice. The proposed deletion would not necessarily resolve the issue of how consensus was defined, which might re-emerge at a future session.

85. **Mr. Pires Filho** (Brazil) said it should be made clear that the practice to which the sentence referred was the practice of UNCITRAL but not necessarily that of all United Nations bodies.

86. **Mr. Sorieul** (Secretariat) said that although there might not be time to amend the text in a manner sufficient to address the concerns that had been raised, the explanation of the meaning of consensus could be clarified as referring only to UNCITRAL practice. However, there was little doubt that in UNCITRAL practice it was insufficient to refer only to the absence of a formal objection, which according to other legal opinions might be understood as triggering a request for a vote. Consensus at UNCITRAL meant agreement among a large majority, more than a simple majority, as had been discussed by States when reviewing the Commission's working methods.

87. **The Chair** suggested as a possible solution the insertion of a reference to UNCITRAL practice in the second sentence of paragraph 20 of the addendum. The Secretariat would provide interested delegations with the relevant legal opinions in order to clarify the concept of consensus.

88. *It was so decided.*

89. **Mr. Fu** Liongliong (China) proposed that the word "broad" should be deleted from the first sentence of paragraph 25; that the words "relevant solutions" in the penultimate sentence of the paragraph should be replaced with the words "possible options"; and that the last sentence should be reformulated to read "The Commission instructed the Working Group to take into consideration the ongoing work of relevant international organizations in this respect."

90. **Mr. Pires Filho** (Brazil) said that he did not support the proposal to change the last sentence, as that sentence reflected the possibility for States to choose any dispute settlement option.

91. **Ms. Montineri** (Secretariat) said that the mandate set out in paragraph 25 could not be changed as it had been agreed upon by the Commission under item 21 of the session agenda. Any changes would cast doubt on the transparency of the UNCITRAL process.

92. **Mr. Schoefisch** (Germany) said that he also disagreed with the proposals. He suggested that the square brackets around "III" should be deleted as it had been decided that Working Group III would be entrusted with the work on possible reform of investor-State dispute settlement.

93. **Mr. Apter** (Israel), supported by **Mr. Lapiere** (Observer for Belgium), said that the mandate had been very carefully worded and should therefore remain as drafted, with the exception of the deletion of the square brackets.

94. **The Chair**, noting that there was no support for the proposals of the representative of China, said she took it that the Commission wished to delete the square brackets in paragraph 25.

95. *It was so decided.*

96. *Document* A/CN.9/L/CRP.1/Add.12*, as orally amended, was adopted.*

The meeting rose at 5.10 p.m.

Summary record of the 1061st meeting, held at the Vienna International Centre, Vienna, on Monday, 17 July 2017, at 9.30 a.m.

[A/CN.9/SR.1061]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 9.45 a.m.

Progress report of Working Group VI (Security Interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (A/CN.9/899, A/CN.9/904, A/CN.9/914, A/CN.9/914/Add.1, A/CN.9/914/Add.2, A/CN.9/914/Add.3, A/CN.9/914/Add.4, A/CN.9/914/Add.5 and A/CN.9/914/Add.6; A/CN.9/L/CRP.2 and A/CN.9/L/CRP.3)

1. The Chair invited the Commission to consider the parts of the draft guide to enactment as set out in document A/CN.9/914 and its addenda. She suggested that the Commission should focus on matters of substance and that drafting matters should be left to the Secretariat.

A/CN.9/914

Preface and general part

2. **Mr. Dennis** (United States of America) said that it was unnecessary to refer in the first sentence of paragraph 4 to the instruments relating to secured transactions that had previously been adopted, as those instruments were already listed in section I, paragraph 1.

3. The primary purpose of the Model Law, namely to assist States in harmonizing and modernizing their secured transactions laws, should be stated more clearly in paragraph 4. To that end, the wording should be brought more closely into line with the wording of the decision of the Commission on the adoption of the Model Law and the relevant General Assembly resolution (71/136), to the effect that the purpose of the Model Law was to assist States in developing a modern secured transactions law and that enactment of the Model Law would assist businesses, especially small and medium-sized enterprises, to obtain much-needed working capital. Such a statement would be helpful, particularly since States might wish to include a preamble when enacting the Model Law. It would also be useful if paragraph 1, in referring to all UNCITRAL texts on secured transactions, included language along the lines of "Together, these texts will provide comprehensive guidance to States with respect to legal and practical issues that need to be addressed when implementing a modern secured transactions regime", that language being drawn from General Assembly resolution 68/108.

4. The guide to enactment should also point out that the Model Law was designed for implementation in States with different legal traditions, possibly drawing on the useful language contained in paragraph 3 of the introduction to the UNCITRAL Legislative Guide on Secured Transactions.

5. **Mr. Tirado Martí** (Spain) expressed support for those comments. If a reference to the harmonization of laws was included in section II, it might be necessary to change the heading of section III to reflect the content of that section — which did not address harmonization in an obvious way — more accurately.

6. **The Chair** said she took it that the Commission wished to adjust paragraph 4 and possibly the heading of section III on the basis of the points raised.

7. *It was so agreed*.

8. **Mr. Tirado Martí** (Spain), drawing attention to his country's proposal in document A/CN.9/L/CRP.2, said that Spain firmly believed in the potential of the Model Law to help countries to achieve economic growth through the increased availability of credit at lower cost. To that end, the Model Law should be used by as many countries as possible. However, many States were likely to view the Model Law as a text intended to be enacted in full, and might therefore be inclined to reject it if they already had well-developed secured transactions systems. Nonetheless, those States should be encouraged to incorporate as many of the principles and provisions of the Model Law as possible in their domestic legislation. Accordingly, the idea behind the proposal was to provide States with greater flexibility in implementing all or part of the Model Law.

9. **Mr. Dennis** (United States of America) said that he did not support the proposal because the Commission's decision on the adoption of the Model Law and the relevant General Assembly resolution merely encouraged States to consider enacting the Model Law, and in any case it was the prerogative of States to decide whether and to what extent to enact the provisions of such an instrument. Therefore, since the aim was to encourage States to modernize and, in particular, harmonize their laws, it was undesirable to include a paragraph in the guide to enactment that highlighted the possibility for States to depart from the provisions of the Model Law.

10. **Ms. Gullifer** (United Kingdom) said that although the concern expressed by the United States representative was understandable, she agreed with the rationale for the first sentence of the proposed paragraph. In order to increase the likelihood that countries would adopt the Model Law in part or in full, it was important to bear in mind that certain aspects of existing domestic laws were considered to work well

and would not be changed. Therefore, if that first sentence could be drafted in such a way as to dispel the concern raised, she would support its inclusion. She was not in a position to comment on the remainder of the proposed paragraph since it did not apply to the United Kingdom.

11. **Mr. Riffard** (France) said that while he agreed with the delegation of Spain that the Model Law was designed to be adapted by legislators, which necessitated a certain degree of flexibility, that information was already reflected in paragraphs 5 to 8 of document A/CN.9/914. It would be inappropriate to include the proposed paragraph in the guide to enactment because it might be interpreted as encouraging a non-unified approach.

12. **Mr. Brink** (Factors Chain International and EU Federation for the Factoring and Commercial Finance Industry) said that it was important to bear in mind the complexity of the Model Law. As a practitioner, he could imagine that it might be frustrating for legislators in a country with an emerging economy to attempt to incorporate all the provisions of the Model Law in domestic legislation at the same time. Those provisions would need to be discussed in depth in such countries, and some provisions might need to be incorporated gradually over the course of several years, particularly if a certain type of secured transaction posed problems in the country concerned. However, that process should not prevent countries from achieving progress in other areas of their secured transactions regimes. Therefore, the call for flexibility should be supported.

13. **Mr. Whittaker** (Australia), expressing support for the comments made by the representatives of the United States and France, said that while he appreciated the rationale for the proposed paragraph and the desirability of achieving the use of the Model Law in as many jurisdictions as possible, he was concerned that that paragraph essentially constituted an open invitation to States to enact only parts of the Model Law, at the risk of overlooking other important provisions. For that reason, and in view of the objective of maximizing the harmonization of secured transactions laws worldwide, he would prefer not to include the proposed paragraph.

14. **Ms. Gross** (Israel) said that she agreed with the views expressed by the representatives of the United States, France and Australia. The first sentence of the proposed paragraph undermined the Commission's and the Working Group's focus on uniformity of application of the Model Law and the objective of encouraging the adoption of the instrument as a whole. As a compromise solution, she suggested that wording should be added to the proposed paragraph to the effect that partial implementation of the Model Law was not the recommended approach and the Model Law was designed to be, and should be, adopted as a whole, notwithstanding paragraphs 5 to 8 of the draft guide to enactment.

15. **Mr. Maradiaga** (Honduras) said that although he understood the arguments for the proposal, it was important not to lose sight of the fundamental objective of preparing instruments that had broad scope. In the context of globalization, it was essential to create uniform law. Model instruments should be implemented in the manner intended, in order to avoid problems with regard to the scope and interpretation of those instruments.

16. **The Chair** said that in the light of the comments made and the fact that the Working Group, in drafting the guide to enactment, had discussed the same issue and reached the same conclusion, the text proposed by Spain would not be included in the guide.

Chapter I. Scope of application and general provisions

17. **Ms. Gullifer** (United Kingdom) suggested deleting or explaining the reference to recommendation 6 of the Secured Transactions Guide in paragraph 28 of document A/CN.9/914, because that recommendation and article 1, paragraph 4, of the Model Law were not the same.

18. **Mr. Dennis** (United States of America), expressing support for that suggestion, said that while cross references to the Secured Transactions Guide were useful, detailed discussion of the manner in which specific issues were addressed both in that Guide and in the Model Law was confusing to the reader. It was important to focus on explaining how the Model Law dealt with those issues. One possible solution would be to move the reference to recommendation 6 of the Secured Transactions Guide to a footnote explaining that reference, so as not to interrupt the flow of the text; however, he would prefer its deletion.

19. **The Chair** said she took it that the Commission wished to delete the reference to paragraph 6 of the Secured Transactions Guide in paragraph 28.

20. *It was so agreed*.

21. **Mr. Deschamps** (Canada) suggested that the final sentence of paragraph 29 should be deleted, because the Model Law did not contain any provisions on consumer protection. Article 24 of the Model Law related to the effectiveness against third parties of an acquisition security right in consumer goods rather than to consumer protection.

22. *It was so decided*.

23. **Mr. Bazinas** (Secretariat), drawing attention to the note by the Secretariat contained in document A/CN.9/L/CRP.3, pointed out that paragraph 31 of document A/CN.9/914 was inconsistent in stating that the Commission had decided not to include rules on security rights in attachments in the Model Law yet at the same time suggesting that States should include such rules on the basis of the relevant recommendations of the Secured Transactions Guide when enacting the Model Law, particularly since the purpose of the Model

Law was to implement those recommendations and the guide to enactment was intended to explain any differences between the recommendations and the Model Law. Consequently, paragraph 31 made it unclear how States should implement the recommendations of the Secured Transactions Guide when enacting the Model Law. The model provisions set out in document A/CN.9/L/CRP.3 had been prepared in order to address that problem. However, if the Commission decided that those provisions should not be included in an annex to the guide to enactment, as suggested, paragraph 31 would nonetheless need to be revised.

24. Drawing attention also to the notes to the Commission in document A/CN.9/L/CRP.3 on specialized registration, he said that the relevant recommendations of the Secured Transactions Guide were not reflected in the proposed model provisions because the Working Group had decided that, since specialized registration was not addressed in the Model Law itself, it should be referred to only generally in the guide to enactment.

25. **Ms. Gullifer** (United Kingdom) said that it would be unwise, particularly since the Commission was at the stage of finalizing the guide to enactment and had limited time, to attempt to draft model provisions dealing with what was a difficult and very technical area of law. The topic of security rights in attachments was particularly complex in relation to immovable property, legislation on which varied greatly from State to State. An ill-considered set of model provisions would be worse than none at all. For those reasons, paragraph 31 should be amended rather than a new text produced.

26. **Mr. Dennis** (United States of America), expressing support for the comments made by the representative of the United Kingdom, said that the issue of security rights in attachments to immovable property might indeed be dealt with under domestic law governing immovable property rather than a secured transactions law, as provided for in recommendation 21 of the Secured Transactions Guide. Moreover, the approach taken in the Secured Transactions Guide to security rights in attachments was not necessarily the one always followed, and each enacting State would have to consider the issue on the basis of its specific needs. Paragraph 31 should therefore be redrafted to reflect the variety of approaches to the issue.

27. **Mr. Riffard** (France) said that while he understood the concerns expressed by the representative of the United Kingdom, it would be useful, in the context of a guide to enactment, to go beyond the current formulation of paragraph 31 and provide guidance in the form of model provisions such as those proposed by the Secretariat in document A/CN.9/L/CRP.3, particularly given the importance of the issue of security rights in attachments and the fact that legislators would need to consider that issue. Guidance on the subject could also be provided in the practice guide on secured transactions that was to be prepared by the Working Group.

28. **Mr. Tirado Martí** (Spain), supported by **Mr. Deschamps** (Canada), said he agreed that it was important to provide as much guidance as possible to legislators. It would be unwise to give the issue under discussion only light treatment at the current session, given its importance. He would support the inclusion of guidance on security rights in attachments in the guide to enactment provided that only attachments to movable property were addressed. More detailed guidance on the issue could be provided in the planned practice guide on secured transactions.

29. **Mr. Whittaker** (Australia) said that although he appreciated the desirability of providing as much information to enacting States as possible, even if the Commission decided to limit the proposed guidance to attachments to movable property, the fact that few of the delegations present had had an opportunity to consider those provisions in detail could lead to lengthy discussions. Given the current time constraints, it would be more appropriate to conclude discussion of the guide to enactment than to spend time on an additional document.

30. **The Chair** suggested that the discussion of document A/CN.9/L/CRP.3 and paragraph 31 of document A/CN.9/914 should be held in abeyance until delegations had had an opportunity to further consider the parts of document A/CN.9/L/CRP.3 that would be relevant if guidance was to be limited to attachments to movable property, the question of whether such guidance would be reliable and the question of how paragraph 31 might be adjusted, including in relation to attachments to immovable property.

31. *It was so agreed*.

32. **Mr. Deschamps** (Canada) suggested that the last sentence of paragraph 40 should be deleted, as although the statement that a control agreement did not need to be in a single written document was likely to be true under many national laws, that matter fell under the law of evidence rather than the Model Law.

33. *It was so decided*.

34. **Mr. Deschamps** (Canada) suggested that in paragraph 43, examples should be provided of assets that, depending on their use, could be characterized as “equipment”, “consumer goods” or “inventory”.

35. *It was so decided*.

36. **Mr. Whittaker** (Australia) said that he was concerned about the scope of the second sentence of paragraph 44, which related more to the nature of the assets in which a grantor could grant a security right than to the definition of the term “grantor”. It would be more appropriate to place the information contained in that sentence elsewhere in the guide to enactment, possibly where the term “encumbered asset” was discussed.

37. **The Chair** said she took it that the Commission wished to accept that proposal.

38. *It was so decided*.

39. **Mr. Deschamps** (Canada) suggested the deletion, in the second sentence of paragraph 53, of the example in parentheses, as the example was not correct: the issuer in the case in question did not have possession of the negotiable document through the various persons responsible for performing parts of the contract.

40. *It was so decided*.

41. **Mr. Dennis** (United States of America) recalled that Working Group VI had decided at its thirty-first session that the wording of paragraph 71 should be more closely aligned with that of paragraph 98 of the report of the Commission on the work of its forty-ninth session (A/71/17). Accordingly, he proposed that the second sentence of paragraph 71 should be split into two new sentences, the first ending with the words "to attract investment" and the second beginning with the words "Inefficient judicial enforcement mechanisms" and continuing as per the existing text. In addition, the word "resolution" following the words "prejudice the" in the final sentence should be replaced with the word "discussion", as the meaning of the word "resolution" in that instance was unclear.

42. Drawing attention to paragraph 74, he proposed that the words "is inspired by" and "based on" in the first sentence of that paragraph should be replaced with wording along the lines of "follows the language of", because article 5 was not based on the provisions referred to.

43. **The Chair** said she took it that the Commission wished to accept those suggestions.

44. *It was so decided*.

A/CN.9/914/Add.1

Chapter II. Creation of a security right

45. **Mr. Dennis** (United States of America), drawing attention to paragraph 1, proposed that the final three sentences of that paragraph should be reformulated along the lines of "Some asset-specific rules such as those dealing with receivables are essential for a well-functioning modern system and should not be omitted. Others should be omitted only if it is unlikely that those assets can serve as the basis for greater availability of credit at lower cost in the enacting State." Although he understood the intention behind the sentence, States should be encouraged to enact all the provisions of the Model Law, omitting provisions only if they had good reason to do so. Some of the asset-specific rules were essential and the number of instances in which a State might decide not to enact those rules was limited to those in which it was unlikely that assets of the type in question could serve as the basis for greater availability of credit at lower cost in the enacting State.

46. **The Chair** said she took it that the Commission wished the Secretariat to redraft paragraph 1 so that the wording encouraged the enactment of the asset-specific rules of the Model Law, particularly those on receivables.

47. *It was so decided*.

48. **Mr. Whittaker** (Australia), recalling his earlier comments regarding the definition of "grantor" in paragraph 44 of document A/CN.9/914, said that the explanation beginning in the second sentence of paragraph 3 of document A/CN.9/914/Add.1 was incomplete. For example, the paragraph did not explain the basis on which a lessee under a financial lease would be able, under the Model Law, to create a security right not only in its rights as lessee but also, under the priority rules, in the asset as a whole. Since that had been a major difficulty for his country in the context of its Personal Property Securities Act, it would be useful to provide States with a more detailed explanation of how a person that did not have full ownership of an asset was able in some circumstances to grant a security right in that asset.

49. **Mr. Deschamps** (Canada), expressing support for the comments of the representative of Australia, said that his delegation had submitted drafting suggestions to address the same point.

50. **Mr. Weise** (American Bar Association) said that it was appropriate to clarify that a lessee could create a security right only in its rights under the lease. There was nothing in the Model Law or the guide to enactment to suggest that a lessee could create a security right in the leased item as a whole.

51. **Mr. Gabriel** (International Law Institute) said that he agreed fully with the comments made concerning paragraph 3. The paragraph was important as it explained one of the basic building blocks of the entire Model Law, namely the prerequisites for the creation of a security right in an asset in terms of ownership of or the power to encumber that asset. While that point was quite easy to understand, it was swamped by the lengthy and convoluted discussion of how a security right could be granted in a receivable that had already been transferred. Although that explanation was important in the specific context of the transfer of receivables, it was not essential in making the general point about the power to create a security right in an asset. He therefore suggested that it should be set out in a separate paragraph either within the current section or together with other paragraphs concerning receivables or the transfer of receivables.

52. **Mr. Weise** (American Bar Association), expressing support for the comments made by the representative of the International Law Institute, said that the statement that a grantor was entitled to create a security right in its rights under a lease agreement was

correct, as such a grantor would not have a right under a standard lease to grant a security right in any other rights, such as the actual ownership rights of the lessor. The fundamental point was that although it was sometimes possible, in the case of negotiable types of encumbered asset, to create a security right in more than was owned, a lessee's rights were not negotiable rights. If that point was unclear, it should be clarified. However, as he understood it, the current wording of the paragraph seemed to address the concern of the representative of Australia.

53. **Mr. Whittaker** (Australia) said that the approach taken would depend on the legal tradition of the State concerned. Under the Personal Property Securities Act of Australia, a lessee under a financial lease would be regarded as having the ability to grant a security right not only in its rights as lessee but also in the entirety of the leased asset. That was necessary in order for the priority rules under the Personal Property Securities Act to function as intended, and should also be the case under the Model Law; otherwise, it would not be possible to determine the order of priority between the security rights granted by the lessor and those granted by the lessee.

54. **Mr. Dennis** (United States of America) suggested clarifying the wording of the third sentence of paragraph 3 by reformulating it along the lines of "Where the grantor is in possession of the asset on the basis of an agreement, such as a lease agreement, with the owner of the asset, the grantor has a right to create a security right in its rights under the agreement". The precise wording could be agreed upon during informal consultations.

55. He supported the suggestion of the representative of the International Law Institute to move the discussion of receivables from paragraph 3, as its inclusion in that paragraph was confusing given that receivables were not the subject of article 6.

56. **Ms. Gross** (Israel) said that she too supported that suggestion. It would suffice to state in paragraph 3 that the creditor of a receivable had the power to create a security right in the receivable. The remaining part of paragraph 3 on receivables could be included in the section of the guide on the priority of a security right.

57. **Ms. Gullifer** (United Kingdom) pointed out that the third sentence of paragraph 3 referred not necessarily to a financial lease or a lease that would be treated under the Model Law as a security agreement but, rather, to any kind of lease, such as a short-term hire agreement. Therefore, presumably, it could be agreed that the sentence was correct.

58. However, paragraph 3 should also make the point that where a financial lease right was treated as a security right but no notice was registered in respect of that security right, under the priority rules, the lessee could create a security right in the leased asset as a whole, in which case that security right would have priority over the unregistered financial lease right of the lessor. The same was true of receivables: if the transfer of a receivable was not registered, priority would be given to a subsequently registered transfer. The question was where those points should be made.

59. **The Chair** said there appeared to be agreement that the various matters covered by paragraph 3 should be clarified and dealt with separately, and that the treatment of financial leases should be explained in paragraph 3, while the issue of receivables should be addressed elsewhere.

60. **Mr. Weise** (American Bar Association) said that in order to address the concerns raised, it should simply be clarified that under a financial lease, a lessee could grant a security right in the leased asset as a whole, whereas under a non-financial lease, the lessee could create a security right only in its contractual rights to use the leased asset.

61. **Mr. Deschamps** (Canada) said that paragraph 3 should address only situations in which, under general principles of law, a person had the power to dispose of an asset. A separate paragraph should provide an explanation of situations in which, by virtue of the priority rules, a person that would not normally have the right to grant a security right in an asset would be regarded as having the same rights as an owner, such as a lessee under an unregistered financial lease. In such a case, the lessee would be regarded as having the power to grant a security right in the asset because, under the priority rules, the secured creditor to whom the lessee had granted a security right would rank above the lessor, i.e. the security right thus granted would have priority over the ownership rights of the lessor.

62. **Mr. Riffard** (France) said that he agreed with the Chair's summary. Paragraph 3 explained a fundamental point, namely the conditions under which a grantor could create a security right, which was straightforward if the grantor was the owner of the asset, but more problematic if the grantor was only the person in possession of the asset. The proposed clarification with regard to general and financial leases would therefore be helpful.

63. The discussion of receivables in paragraph 3 was important and should be retained in that paragraph. In particular, the point that a creditor of a receivable could create a security right in that receivable even if it had already transferred the receivable might not be obvious to all readers of the guide.

64. **The Chair** said she took it that the Commission wished the Secretariat to redraft paragraph 3 by reordering its contents and explaining in greater depth some of the points raised, including those relating to financial leases and unregistered security rights in that context. The discussion of receivables could be retained but should be set out in a separate paragraph.

65. *It was so decided*.

66. **Mr. Deschamps** (Canada) suggested the deletion of the last two sentences of paragraph 8 as the Model Law did not establish any requirement for the determination of the maximum amount under a security agreement, as a result of which the amount specified could be — and in reality often was — extremely high. Thus, the determination of a maximum amount did not offer grantors protection.

67. *It was so decided*.

68. **Mr. Dennis** (United States of America) proposed that paragraph 10 should reflect the final sentence of recommendation 17 of the Secured Transactions Guide by stating that any exceptions to the rule that a security right could encumber any type of asset should be described in a clear and specific way. Thus, paragraphs 9 and 10 would reflect that recommendation in full. Furthermore, since paragraph 9 referred to recommendation 17, paragraph 10 should include a reference to recommendation 18 of the Guide, for the sake of greater clarity and consistency.

69. He also proposed the deletion of paragraph 11, which seemed neither necessary nor appropriate.

70. **Mr. Riffard** (France) said that paragraph 11 provided helpful reassurance with regard to the protection of creditors and should therefore be retained or moved elsewhere.

71. **Mr. Von Ziegler** (Switzerland) said that he too supported the retention of paragraph 11, as it posed no problems, was useful and facilitated understanding of article 8 (e) of the Model Law.

72. **Mr. Bazinas** (Secretariat) said that paragraph 9 could be amended to clarify that the only part of recommendation 17 of the Secured Transactions Guide that was not reflected in article 8 of the Model Law was the final sentence of that recommendation.

73. Paragraph 10 referred to article 1, paragraph 6, of the Model Law because that paragraph implemented recommendation 18 of the Secured Transactions Guide. Consequently, the part of the draft guide to enactment concerning that provision, namely paragraph 30 of A/CN.9/914, referred to that recommendation. Once the various parts of the guide to enactment were compiled in a single document, a cross reference to that paragraph could be added to what was currently paragraph 10 of document A/CN.9/914/Add.1. Since the various parts of the draft guide to enactment were currently contained in several documents and had been prepared at different times, it had not been possible to add such cross references to date; instead, references had been made to articles rather than parts of the guide.

74. **The Chair** said that since the matter was one of drafting, the Secretariat would ensure that appropriate cross references were added as necessary at the stage of final review of the guide as a whole.

75. **Mr. Dennis** (United States of America), drawing attention to paragraph 14, proposed that the final sentence of that paragraph and the words “, although only up to the amount of the secured obligation” in the penultimate sentence should be deleted, as they did not concern proceeds specifically; moreover, he was not entirely convinced of their accuracy.

76. **Mr. Bazinas** (Secretariat) pointed out that the last sentence of paragraph 14 was intended to further explain the rationale for the rule contained in article 10, paragraph 1, of the Model Law by describing how the secured creditor would be affected in the absence of that rule.

77. **Ms. Gullifer** (United Kingdom) said that any explanation that enabled States to understand the purpose of a particular rule was useful. For that reason, she did not support the proposal to delete the final sentence of paragraph 14, as it was important to provide an explanation of the rule under article 10 to States that were unfamiliar with, or might not otherwise understand the need for, the rule that a security right could exist both in an encumbered asset and in its proceeds.

78. **Mr. Weise** (American Bar Association) said that the words “, although only up to the amount of the secured obligation” in the penultimate sentence of paragraph 14 stated a general rule that was generally applicable throughout the Model Law, namely that a secured creditor could enforce its security right in collateral only up to the amount necessary — if that amount was easily divisible — to pay the secured obligation, whether that collateral was the original collateral or the proceeds of collateral. It might be more useful to state that point in the part of the guide relating to chapter VII of the Model Law on the enforcement of a security right.

79. Since the last sentence of the paragraph was both accurate and useful, the question as to whether it should be deleted depended on the extent to which the Commission considered it desirable to explain the rationale for the rule in question and indeed for all other rules explained in the guide to enactment.

80. **Mr. Gabriel** (International Law Institute) said he agreed that the point made in the penultimate sentence of the paragraph was not limited to proceeds but, rather, was a general point that should be addressed in the part of the guide on enforcement of a security right. However, care should be taken to ensure precise wording so as to avoid the impression that an amount larger than the value of the secured obligation could be retained if, for example, a large asset secured only a small obligation.

81. Welcoming the explanation provided by the representative of the Secretariat with regard to the last sentence of paragraph 14, he said that the difficulty in understanding the meaning and appropriateness of that sentence arose partly from its location in the paragraph, as it seemed to explain the two preceding sentences, to

which it in fact did not relate. In the light of the explanation given by the representative of the Secretariat and the reasons given by the previous speakers in support of retention of the sentence, he suggested placing the sentence earlier in the paragraph for the sake of clarity.

82. **Ms. Walsh** (Canada) recalled that the issue raised had been discussed by the Working Group, which had agreed that although a security right could be enforced against both the original collateral and the proceeds, the amount that could be recovered was limited to the value of that original encumbered asset at the time it was disposed of, because otherwise the secured creditor would receive a windfall. It was therefore incorrect to state that the amount was limited to the value of the secured obligation; rather, the amount received would be limited to the value of the encumbered asset at the time of disposition.

83. **Mr. Bazinas** (Secretariat) said that the wording "although only up to the amount of the secured obligation" was meant not to refer to the general rule that the security right was limited to the amount of the secured obligation but, rather, to address the concern that without that wording the sentence would give the impression that the secured creditor could, by enforcing its security right both in the original encumbered asset and in the proceeds, receive more than it was owed. He was unsure whether it would be appropriate to refer to the value of the encumbered asset at the time of disposition rather than to the amount of the secured obligation.

84. With regard to the suggestion by the representative of the International Law Institute that the final sentence of paragraph 14 should be moved, the Secretariat could give that possibility further consideration as a drafting matter.

85. **Mr. Gabriel** (International Law Institute) said that he shared the understanding of the Secretariat with regard to the penultimate sentence of the paragraph, rather than that of the representative of Canada, whose explanation suggested that the wording "although only up to the amount of the secured obligation" was intended to limit the amount that could be collected from the proceeds to a sum related to the value of the original collateral. He recalled that the Working Group had discussed the issue extensively when drafting the Secured Transactions Guide, and that the position of the representative of Canada had not been the prevailing view. He had expressed support for the deletion of that wording not because the point it made was incorrect but, rather, because the way in which the sentence was drafted suggested that that point was tied to enforcement, which did not seem appropriate. While a fuller explanation of the point could be given in the enforcement chapter, paragraph 14 should be clarified to ensure a common understanding.

86. **Mr. Bazinas** (Secretariat) suggested that although the first sentence of paragraph 14 already referred to paragraphs 72 to 89 of chapter II of the Secured Transactions Guide, it would be useful to clarify the penultimate sentence by reference to paragraphs 82 to 85 of that chapter, particularly paragraph 85, which explained the essence of recommendations 19 and 20 of the Guide, namely that the secured creditor could enforce its security right in the original encumbered asset and in the proceeds of its disposition up to the value of the outstanding obligation, even when the amount obtained was greater than the value of the original encumbered assets at the time of disposition. The remainder of the paragraph went on to explain the rationale for that result.

87. **Ms. Walsh** (Canada) suggested, in the light of that explanation, that a new sentence should be added with a cross reference to the Secured Transactions Guide in order to clarify that, where a secured creditor enforced a security right both in the original encumbered asset and the proceeds, it was entitled to recover the amount of the secured obligation without being limited to the value of the original encumbered asset.

88. **The Chair** said she took it that the Commission wished to accept the Secretariat's proposal to clarify the penultimate sentence of paragraph 14, including by adding a cross reference to the Secured Transactions Guide.

89. *It was so decided*.

90. **Mr. Dennis** (United States of America), drawing attention to paragraph 15, proposed that the part of the third sentence beginning with the words ", as well as a negotiable warehouse receipt" should be deleted, as it was questionable whether such warehouse receipts constituted proceeds. He also proposed that the last sentence of the same paragraph should be deleted and that the matter it dealt with should be addressed in the planned practice guide on secured transactions rather than in the guide to enactment.

91. **Ms. Gullifer** (United Kingdom) said that she supported the proposal to delete the reference to negotiable warehouse receipts. According to article 2 (bb) of the Model Law, the definition of "proceeds" was "whatever is received in respect of an encumbered asset"; however, a warehouse receipt merely represented an encumbered asset rather than being something that was "received" in respect of an encumbered asset.

92. She agreed that the last sentence of paragraph 15 would be more useful in the practice guide, as, rather than explaining the rationale for the rule, it explained the effect of application of the rule in a given situation.

93. **Mr. Riffard** (France) said that while he supported the proposal to delete the reference to negotiable warehouse receipts, the last sentence of the paragraph should be both retained in the guide to enactment and

reflected in the practice guide, as it was important to draw users' attention to the value of including in the description of the encumbered assets any possible proceeds. The sentence would also enable legislators to understand the provisions of the Model Law relating to the description of encumbered assets.

94. **Mr. Weise** (American Bar Association) said that the last sentence was inaccurate, as an item received as proceeds could be both original collateral, if it was described in the security agreement, and proceeds of the collateral described. In the case of a security right both in inventory and in receivables, a receivable generated by the sale of the inventory would constitute both original collateral — because it was described in the security agreement — and proceeds of the inventory. In order to avoid a lengthy discussion on that point, it would be better to delete the sentence from the guide to enactment and consider addressing the issue in the practice guide on secured transactions.

95. **Mr. Bazinas** (Secretariat) recalled that the issue had already been discussed and resolved by the Working Group. The sentence was intended to explain the interrelationship between articles 6 and 10 of the Model Law and would be useful to legislators even if the same point was to be explained differently in the practice guide.

The meeting rose at 12.30 p.m.

Summary record of the 1062nd meeting, held at the Vienna International Centre, Vienna, on Monday, 17 July 2017, at 2 p.m.

[A/CN.9/SR.1062]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 2.10 p.m.

Progress report of Working Group VI (Security Interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (*continued*) (A/CN.9/899, A/CN.9/904, A/CN.9/914, A/CN.9/914/Add.1, A/CN.9/914/Add.2, A/CN.9/914/Add.3, A/CN.9/914/Add.4, A/CN.9/914/Add.5 and A/CN.9/914/Add.6; A/CN.9/L/CRP.3)

1. **The Chair** invited the Commission to resume its consideration of the part of the draft guide to enactment contained in document A/CN.9/914/Add.1.

Chapter II. Creation of a security right (continued)

2. **Mr. Gabriel** (International Law Institute), referring to the Commission's discussion of the final sentence of paragraph 15 at its previous meeting, recalled that the Working Group had decided that if a security agreement described, for example, inventory and receivables that if not thus described would be proceeds of that inventory, those receivables would be regarded as original collateral because they were described in the security agreement. However, it had not decided that such receivables could no longer be characterized as proceeds of the inventory in cases where that characterization was important. In insolvency regimes, for example, it often made a difference whether assets that were acquired after insolvency proceedings had commenced were new assets or proceeds of pre-insolvency collateral. It also made a difference whether a registered notice that only mentioned the original collateral was sufficient to cover the proceeds. Assets that were described in the security agreement could therefore be treated as proceeds when appropriate. Accordingly, if the language of the final sentence of paragraph 15 was retained, it should be revised in such a way as to avoid the opposite impression.

3. **The Chair** said that, in the light of those comments and the Commission's discussion at its previous meeting, she took it that the Commission wished to delete the words ", as well as a negotiable warehouse receipt issued by the warehouse in which new inventory may be stored" in the third sentence of paragraph 15 and to retain the final sentence of that paragraph, subject to drafting changes by the Secretariat to reflect the points made.

4. *It was so decided*.

5. **Mr. Gabriel** (International Law Institute) suggested that paragraphs 16 and 17 should refer to "money or funds" credited to a bank account, in line with article 10, paragraph 2, of the Model Law, rather than only to "funds".

6. The rationale given for the lowest intermediate balance rule in the final sentence of paragraph 17 was somewhat imprecise in that that rule applied only to changes in the balance that occurred after the proceeds were commingled. Accordingly, the sentence should be revised to explain that if the balance of a bank account fell below the amount of the proceeds deposited, subsequent increases would not be the result of those deposits.

7. **The Chair** said she took it that the Commission wished to accept those two suggestions.

8. *It was so decided*.

9. **Ms. Gullifer** (United Kingdom) suggested that the final two sentences of paragraph 20 should either be redrafted or separated from the rest of the paragraph to create an additional paragraph, for the sake of clarity.

10. **The Chair** said that that drafting suggestion could be left to the Secretariat.

11. **Mr. Dennis** (United States of America) said that paragraphs 20 and 21 should be revised to clarify that the limitation of the security right related to quantity in paragraph 20 and to value in paragraph 21, and explain why that was the case. The difference was that in the case of a mass, the components of the mass could be counted, as in the given example of litres of oil, whereas that was not the case with regard to products, such as bread.

12. **Ms. Gullifer** (United Kingdom), expressing support for that suggestion, said that the last two sentences of paragraph 20 should be modified to clarify that a security right in a mass was limited by reference to the quantity of the mass irrespective of the value of the goods.

13. **The Chair** said she took it that the Commission wished to accept those suggestions.

14. *It was so agreed*.

15. **Mr. Deschamps** (Canada), drawing attention to the second sentence of paragraph 28, questioned the accuracy of the statement that the rule established in article 13, paragraph 1, of the Model Law, if applied to financial receivables, could affect obligations undertaken by the financial institution towards third parties. It would be difficult to explain the exclusion of

financial receivables from the scope of that rule, because even in the case of trade receivables it could be said that the invalidation of an anti-assignment agreement could affect obligations undertaken by the debtor towards third parties. Therefore, it would be preferable to delete the explanation provided.

16. **Mr. Bazinas** (Secretariat) pointed out that the second and third sentences of paragraph 28 had been reproduced verbatim from paragraph 108 of chapter II of the UNCITRAL Legislative Guide on Secured Transactions.

17. **The Chair** suggested explaining in the guide to enactment the way in which obligations towards third parties might be affected.

18. **Mr. Deschamps** (Canada) recalled that a policy decision had been made to exclude financial receivables in general from the scope of invalidation of anti-assignment clauses. Such exclusion was relatively easy to explain in some cases, such as in the case of a receivable arising from a derivatives agreement or from a foreign exchange contract, but more difficult to explain in others, such as in the case of a loan. He therefore suggested that the explanation in the second sentence of paragraph 28 should simply be replaced with wording to the effect that article 13, paragraph 3, of the Model Law reflected a policy decision that had been made at the time of drafting of the United Nations Convention on the Assignment of Receivables in International Trade and subsequently confirmed in the Secured Transactions Guide.

19. **Mr. Bazinas** (Secretariat) said that since, as had been pointed out by the representative of Canada, the explanation provided was correct with respect to derivative and foreign exchange contracts, the problem might lie in the understanding of "financial receivables". Noting that the third sentence of paragraph 28 referred to receivables arising from or under securities or financial contracts, which were excluded from the scope of the Secured Transactions Guide, he wondered whether the term "financial receivables", while in quotation marks precisely because of the subsequent reference to securities and financial contracts, was too broad in the second sentence of the paragraph, and whether the solution would therefore be to refer not to financial receivables but to "receivables arising from or under securities, derivatives or other financial contracts".

20. **Mr. Gabriel** (International Law Institute) expressed agreement with the comments made by the representative of Canada. The suggestion was not to change the rule in article 13, paragraph 1, of the Model Law, which was based on the Assignment Convention and had been confirmed and reconfirmed many times. Indeed, the Working Group had been mandated to ensure consistency with the Convention and with the Secured Transactions Guide. Rather, the point raised was that the explanation provided in paragraph 28 might not be sufficient. Article 13, subparagraph 3 (a), of the Model Law described the receivables to which the rule applied, rather than describing the exceptions to the rule. However, since the rule applied to contracts for the supply or lease of goods or services "other than financial services", it did not apply to bank loans, for example. During the drafting of the Assignment Convention, there had been discussion of the possible unintended effects of the relevant provisions of that Convention on loan and other similar markets in which banks and other lenders participated, and it had been agreed that the rule typically applied to situations in which money was owed for goods and services, not to loans. The policy decision referred to by the representative of Canada would be supported more effectively by an explanation of the situations in which the rule applied than by the explanation currently provided in paragraph 28 as to why the rule did not apply to financial receivables, which did not stand up to close scrutiny.

21. **Mr. Dennis** (United States of America) said that the point raised by the representative of Canada was a valid one that warranted clarification in the guide to enactment along the lines suggested.

22. **Ms. Gullifer** (United Kingdom) said she agreed that the current explanation as to why financial receivables were not included in the scope of the rule set out in article 13, paragraph 1, was insufficient and should be clarified.

23. **Mr. Bazinas** (Secretariat) said that in the light of the statements made, one possibility would be to delete the second sentence of paragraph 28; however, an explanation of the first sentence of the paragraph would still be needed. It was his understanding that the scope of the rule in article 13, paragraph 1, of the Model Law was limited to trade receivables because in the case of what were broadly described as "financial receivables" — receivables arising from securities, derivatives and financing transactions excluded from the scope of the Model Law — obligations undertaken by financial institutions towards third parties, i.e., third-party relationships under financial contracts, could be affected. However, if that was not an appropriate explanation of the rule, an alternative solution would need to be found.

24. **Ms. Gullifer** (United Kingdom) said that, rather than deleting the second sentence of the paragraph altogether, it was important to provide a clearer explanation of the rule and of the reason why financial receivables were excluded from its scope. The explanation given by the representative of the International Law Institute went some way towards explaining why the rule was limited to trade receivables, and could be used in the redrafting of the second sentence of paragraph 28. By way of example, in the United Kingdom, the reason for the exclusion of financial receivables was that in the case of a syndicated loan agreement, there would always be an anti-assignment clause to prevent the loan being assigned to a vulture or hedge fund. That was standard practice, yet was not adequately covered by the explanation in paragraph 28

as currently drafted, which referred to cases in which the debtor of the receivable was a financial institution, whereas in the case of a syndicated loan agreement the creditor was a financial institution.

25. **Mr. Deschamps** (Canada) said that it was unnecessary to explain why the rule did not apply to receivables arising from financial contracts, because such receivables were in any case excluded from the scope of the Model Law. However, article 13, paragraph 3, excluded some financial receivables that did not arise from financial contracts, including loan receivables. On the other hand, it included receivables representing the payment obligation for a credit card transaction. Therefore, the explanation put forward by the representative of the United Kingdom, and the example given of a loan issued not to a financial institution but by a financial institution to a commercial borrower, might be more appropriate than a reference to financial receivables. Furthermore, if a loan was issued under a syndicated credit arrangement, some of the lenders might have an interest in ensuring that one of their co-lenders did not assign its share of the loan. On that basis, it could be explained that obligations undertaken by a lender under a syndicated credit agreement towards other lenders might be affected.

26. **Mr. Gabriel** (International Law Institute) expressed support for the cogent explanations provided by the representatives of the United Kingdom and Canada as to why the scope of the rule was limited. It would be helpful to explain that the overriding of anti-assignment agreements was very much justified in the cases described in article 13, paragraph 3 — for example, contracts for the supply of goods or services were usually assigned in bulk, and the cost of examining each contract individually would be high and would increase the cost of credit for all involved, whether or not they had negotiated an anti-assignment clause — but not so with respect to the types of financial receivables described by the representatives of the United Kingdom and Canada, hence the limitation of the rule. Given that the rule being described was new or unusual to many jurisdictions, it was important to explain the rationale underlying both the rule itself and the exceptions to it.

27. **The Chair** drew attention to the fact that the rationale for the rule was explained in paragraph 24 of document A/CN.9/914/Add.1.

28. **Mr. Brink** (Factors Chain International and EU Federation for the Factoring and Commercial Finance Industry) recalled that the policy decision in question had been discussed at length at the time of drafting of the Assignment Convention. The aim of the Convention was to provide cheaper sources of credit and financing, and one source of credit and financing was factoring. The overriding of anti-assignment clauses enabled factors to purchase receivables that usually arose as trade receivables from the supply of goods or services. That was evidently not true of all financial receivables. Banks at the time had insisted that financial receivables could not be assigned, owing to the need to comply with money-laundering laws and the "know your customer" approach, it being a general principle that banks should "know" their customers whether as creditors or debtors. If a receivable of which a bank was a debtor was assigned to a person whose identity the bank was unable to establish, the bank would have no control over who its counterparty would be. The need to avoid such situations was one of the reasons why it had been decided that certain financial receivables should be excepted from the general exclusion of such receivables under article 9 of the Convention. He suggested that that should be explained in the guide to enactment.

29. **Mr. Bazinas** (Secretariat) said that it might be helpful to refer to the explanatory note on the Assignment Convention, given that article 9 of that Convention had served as the basis for the text of article 13 of the Model Law. Both provisions were formulated in such a way as to encompass a wide variety of receivables, including consumer and sovereign receivables, as explained in paragraph 10 of the explanatory note. The explicit exclusion of financial service receivables in article 9, paragraph 3 (a), of the Convention was intended to ensure that receivables excluded from the scope of the Convention were not brought back within its scope through that provision. However, subparagraphs (c) and (d) made it clear that the article did apply to the assignment of certain financial service receivables, namely receivables arising from credit card transactions and receivables arising upon net settlement of payments due pursuant to a netting agreement involving more than two parties. In paragraph 3 (d), reference was made only to multilateral netting arrangements so as to avoid exclusion of the application of the article to assignments of trade receivables on the sole basis of a netting arrangement between the assignor and the debtor. Thus, the explanatory note offered additional clarification as to why the rule applied to trade receivables, although trade receivables were described very broadly and included certain financial service receivables.

30. **The Chair** wondered whether there might be a way to reaffirm the relevant part of the explanatory note on the Convention or refer to it as the source of the rationale for the rule in article 13, paragraph 1, of the Model Law.

31. **Mr. Dennis** (United States of America) suggested that, in the interests of efficiency, it might be more appropriate to return to paragraph 28 at a later stage, after delegations had had time to work on redrafting suggestions.

32. *It was so agreed*.

33. **Mr. Dennis** (United States of America), drawing attention to paragraph 24, said that the focus of the second sentence of that paragraph should be not on the prevention of the grantor from creating a security right but on the fact that article 13, paragraph 1, of the Model Law did not prevent a security right created by the

grantor from being effective. He therefore suggested that the part of the sentence following the information in parentheses should be amended accordingly.

34. **Mr. Weise** (American Bar Association) said that he supported that suggestion, as the key point was that article 13 (1) of the Model Law addressed the question of whether the receivable could be encumbered at all in the context described.

35. **The Chair** said she took it that the suggestion was acceptable to the Commission.

36. *It was so decided*.

37. **Mr. Dennis** (United States of America) said that the suggestion in paragraph 29 that article 13 of the Model Law should be read together with article 14 of that Law was confusing, because the fact that article 13 applied only to trade receivables meant that the type of asset described in paragraph 29 did not fall within the scope of that article, unless the intended meaning was that article 13, paragraph 3, should be understood more broadly in the light of article 14.

38. **Mr. Bazinas** (Secretariat) recalled that the information in paragraph 29, which was based on recommendation 25 (d) of the Secured Transactions Guide, had originally been set out in a draft version of article 14 of the Model Law but had subsequently been deleted by the Working Group on the basis that it would suffice for the matter to be addressed in the guide to enactment, hence the reference to article 14 in paragraph 29 of document A/CN.9/914/Add.1.

39. **The Chair** said that in the light of those comments, she took it that the Commission wished to delete the reference to article 14 of the Model Law in paragraph 29.

40. *It was so agreed*.

41. **Mr. Gabriel** (International Law Institute) said that whereas the rule in article 14 of the Model Law applied equally to personal or property rights that secured or supported payment or other performance of encumbered assets, paragraph 30 of document A/CN.9/914/Add.1 appeared to seek to categorize some of those rights as personal rights and others as property rights, and in so doing to categorize certain rights as securing payment and others as supporting payment of a receivable. However, since that categorization did not apply in all legal systems and might therefore give rise to debate, it should be avoided.

42. **Mr. Bazinas** (Secretariat) pointed out that not only the Model Law but also the Assignment Convention and the Secured Transactions Guide referred to rights that secured payment and rights that supported payment. Examples of each type had been included in the guide to enactment in order to explain the distinction to enacting States. The focus of those examples was not on whether a right was a personal right or a property right, but whether that right secured or supported payment or performance of a receivable. However, if the categorization of a right as a personal or property right was considered problematic, the third sentence of the paragraph could be revised to refer not to "a personal or property right" and "a personal right" but simply to "a right" in each instance.

43. **Mr. Gabriel** (International Law Institute) said that although he had no objection to the inclusion of an explanation of the two different categories of rights, examples that in many jurisdictions would be considered inaccurate should be avoided. In some jurisdictions, for example, secondary guarantees or suretyships would fall within the same category as independent guarantees; in other words, they would support rather than secure payment. Given that the paragraph already contained one good example of a right that secured payment of a receivable, namely a security right in immovable property, it would be preferable either to limit the text to that one example, or to devise another example that did not apply only to certain jurisdictions.

44. **Mr. Bazinas** (Secretariat) said that it was important to bear in mind that the text of paragraph 30 had been discussed at length by the Working Group.

45. **Mr. Dennis** (United States of America) expressed support for the comments made by the representative of the International Law Institute. The suggested change would clarify the text.

46. **Mr. Riffard** (France) said that it would be undesirable to modify paragraph 30 given that that text had been agreed on by the Working Group after lengthy discussion and various revisions, and represented a good compromise.

47. **Mr. Dennis** (United States of America) expressed concern that the examples provided in paragraph 30 might be inconsistent with the explanatory note on the Assignment Convention, which could prove problematic when the guide was presented to legislators in his country. The Secretariat should therefore clarify the examples provided, in the light of the Commission's discussion.

48. **Mr. Bazinas** (Secretariat) said that article 10 of the Assignment Convention reflected the generally accepted principle that an accessory security right, such as a suretyship, pledge or mortgage, was transferred automatically with the principal obligation, while an independent security right, such as an independent guarantee or a standby letter of credit, was transferable only with a new act of transfer. Thus, accessory rights were referred to as securing payment of an assigned receivable and independent security rights were referred to as supporting rights. While the examples in paragraph 30 could be changed in order to resolve the issue raised, those examples would have no impact on the implementation of the Assignment Convention.

49. **Mr. Weise** (American Bar Association) suggested that, in order to address the concerns raised while avoiding the need for any substantive change to the text,

wording along the lines of "in some States" should be added at the beginning of the third sentence of paragraph 30.

50. *It was so decided*.

51. **Mr. Dennis** (United States of America) said that the first two sentences of paragraph 31 were rendered superfluous by the statement in paragraph 30 that the first sentence of article 14 reflected the thrust of recommendation 25 of the Secured Transactions Guide. It was unnecessary to provide such a detailed discussion of the Secured Transactions Guide. He suggested that if the information in the first two sentences of paragraph 31 was deemed necessary, it should be moved up to follow the first sentence of paragraph 30, or moved to a footnote to that paragraph.

52. Furthermore, it was unnecessary to explain why it was self-evident that article 14 did not apply to matters not addressed in it. Thus, the paragraph as a whole served only to distract the reader from the explanation of article 14.

53. **Mr. Bazinas** (Secretariat) said that the Working Group had mandated the Secretariat to explain any differences between the articles of the Model Law and the recommendations of the Secured Transactions Guide throughout the guide to enactment, hence the explanation in paragraph 31. However, if the Commission was satisfied that the reason for the difference between article 14 and recommendation 25 would be clear to users, paragraph 31 could be deleted.

54. **The Chair** said that it was important to strike a balance between providing too much information and the need to explain the differences between the Model Law and the Secured Transactions Guide. She suggested that the Secretariat should therefore look at ways of making paragraph 31 more concise; for example, the paragraph could be modified simply to state that subparagraph (g) of recommendation 25 of the Secured Transactions Guide was reflected in articles 57 and 58 of the Model Law and that it had been unnecessary to include subparagraph (h) of that recommendation in article 14.

55. **Mr. Dennis** (United States of America) suggested that that information should be added in parentheses at the end of the first sentence of paragraph 30 and paragraph 31 deleted altogether.

56. **The Chair** said that if the suggested changes were acceptable to the Commission, the precise drafting could be left to the Secretariat.

57. *It was so agreed*.

Chapter III. Effectiveness of a security right against third parties

58. **Mr. Deschamps** (Canada), referring to paragraph 42 of document A/CN.9/914/Add.1, suggested that the rationale for preserving the continuity of third-party effectiveness, namely to preserve the priority achieved through the initial method of effectiveness against third parties, should be explained.

59. *It was so decided*.

60. **Mr. Whittaker** (Australia) said that the example given in the final sentence of paragraph 46 was unrealistic, as the cost of registration was in fact likely to be very low compared to the cost of typical durable household goods. He therefore suggested that the example should be modified accordingly.

61. *It was so decided*.

62. **Mr. Dennis** (United States of America) said that paragraph 52 was neither necessary nor appropriate, especially given that not all States that enacted the Model Law would be parties to the Convention providing a Uniform Law for Bills of Exchange and Promissory Notes, while the United Nations Convention on International Bills of Exchange and International Promissory Notes had not yet come into force. He suggested that either the information in that paragraph should be moved to a footnote to paragraph 53, which would need to be modified accordingly, or the two paragraphs should be replaced with a brief reference to the conventions and the need for States parties to those conventions to take the provisions in question into account when enacting the Model Law.

63. **The Chair** recalled that when the Commission had adopted the Model Law, it had decided that the guide to enactment should address the relationship between the Model Law and the two conventions.

64. **Mr. Tosato** (Italy) said that paragraphs 52 and 53 were acceptable to his delegation in their current form, and reflected the decision referred to by the Chair.

65. **Ms. Walsh** (Canada) said that paragraph 53 (a) should be revised to refer to certificated non-intermediated securities rather than non-intermediated securities in general, because it was not possible to endorse uncertificated non-intermediated securities.

66. Furthermore, paragraph 53 (b) unintentionally implied that an endorsement of an instrument or of a certificated non-intermediated security constituted an alternative to registration or possession as a method of third-party effectiveness. However, that was not her understanding of the effect of the conventions referred to; since an endorsement was in favour of the holder, i.e. the person in possession, the priority and third-party effectiveness of the security right would be determined by possession rather than by endorsement. The best approach would be to draw the attention of States that had enacted one of the conventions to the fact that where a secured creditor under the Model Law was in possession of a negotiable instrument or a certificated non-intermediated security, an endorsement on that instrument or security would have the effect determined by the convention in question in terms of the secured creditor's rights. That would suffice for the purposes of the guide.

67. **Mr. Tosato** (Italy) said that he agreed with the representative of Canada, whose comments provided all the more justification for retaining paragraph 52.

68. **Mr. Bazinas** (Secretariat) recalled that the Working Group had discussed the issue on a number of occasions, including most recently at its thirty-first session, and had concluded that it was satisfied with the substance of the paragraphs under consideration given their importance to States parties to the conventions concerned.

69. **Mr. Dennis** (United States of America) said that while he agreed with the representative of Canada that the content of paragraph 53 was not accurate and should be redrafted, since the matter was one of substance, the Secretariat should be asked to draft a revised version of the text for the Commission's further consideration rather than it being left to the Secretariat to resolve the issue.

70. **Ms. Walsh** (Canada) suggested that paragraph 53 (a) should be either clarified as she had proposed or deleted, and that paragraph 53 (b) should be revised to refer only to article 49, paragraph 3, and article 51, paragraph 1.

71. **The Chair** suggested that the matter should be discussed further in informal consultations.

The meeting was suspended at 4.10 p.m. and resumed at 4.30 p.m.

72. **Ms. Walsh** (Canada) said that following the informal consultations, it had been agreed that the heading of the section containing paragraphs 52 and 53 should be revised to read along the lines of "Additional considerations for States that have adopted the Geneva Uniform Law or the Bills and Notes Convention". Paragraph 52 should be retained. With respect to paragraph 53, there appeared to be agreement that endorsement of a certificated non-intermediated security or of a negotiable instrument was not a method of third-party effectiveness, nor did it affect application of the priority rules of the Model Law. Therefore, it was proposed that paragraph 53 (b) should be revised to read along the lines of "A State that has enacted the Geneva Uniform Law (or the Bills and Notes Convention) may wish to note that a secured creditor in possession of a negotiable instrument or certificated non-intermediated security may have, in addition to its rights under the Model Law, the rights afforded by the Geneva Uniform Law (or the Bills and Notes Convention) where the instrument or the security contains an endorsement contemplated by the Geneva Uniform Law or the Bills and Notes Convention".

73. **The Chair** said the Secretariat had suggested that the heading should read "Additional considerations for States parties to certain conventions for negotiable instruments and certificated non-intermediated securities". She took it that, subject to that change, the Commission wished to accept the proposals presented by the representative of Canada.

74. *It was so agreed*.

A/CN.9/914 (continued)

Chapter I. Scope of application and general provisions (continued)

75. **The Chair** invited the Commission to resume its consideration of paragraph 31 of document A/CN.9/914 in conjunction with document A/CN.9/L/CRP.3.

76. **Mr. Bazinas** (Secretariat) recalled that the Commission had yet to decide whether it wished to include model provisions on security rights in attachments as an annex to the guide to enactment, or to include only provisions on attachments to moveable property. Regardless of that decision, it would be necessary to redraft paragraph 31 of document A/CN.9/914. If the Commission decided to include provisions on attachments to moveable property, which was a matter that would fall within the scope of a domestic secured transactions law, only article 1, paragraph 1, article 2 and article 7, paragraph 1, of document A/CN.9/L/CRP.3, together with the definition of "attachment to a movable asset" in paragraph 2 of that document, could be retained, as all the other provisions dealt with attachments to immovable property. In addition, the Commission might wish to refer in the guide to enactment to the fact that specialized registration in relation to attachments to movable property was not addressed in the Model Law.

77. The Commission was also invited to consider the recommendation of the Working Group, referred to in paragraph 3 of document A/CN.9/L/CRP.3, to issue a corrigendum to the Model Law in order to correct two errors.

78. **Mr. Dennis** (United States of America) requested that further consideration of the issue of security rights in attachments be postponed until the following meeting to give delegations a chance to discuss the matter in informal consultations.

79. **The Chair** said she took it that that suggestion was agreeable to the Commission. She also took it that the Commission wished to authorize the issuance of the proposed corrigendum to the Model Law.

80. *It was so decided*.

A/CN.9/914/Add.2

Chapter IV. The registry system

81. **Mr. Dennis** (United States of America) said that although paragraph 2 of document A/CN.9/914/Add.2 was drawn from footnote 8 of the Model Law, it failed to reflect the first sentence of that footnote, which made an essential point. He therefore proposed the insertion, at the end of the paragraph, of a new sentence reading along the lines of "A separate law or other legal instrument that incorporates the provisions relating to

the registry system should be enacted and take effect simultaneously with the secured transactions law".

82. **The Chair** said that although it was important to avoid reproducing too much of the Model Law in the guide to enactment, it was worth mentioning that if the Model Registry Provisions were enacted separately from the Model Law, the two texts should take effect simultaneously.

83. **Mr. Gabriel** (International Law Institute) said that the manner in which the Chair had expressed that point was in fact clearer than the first sentence of footnote 8 of the Model Law, which suggested that the Model Registry Provisions would take effect on the date the Model Law was enacted, whereas they could not take effect until the secured transactions law implementing the Model Law became effective, as the registry would not come into existence until that time. The footnote also failed to reflect the fact that the entry into force of the secured transactions law might be delayed, for the reasons explained in the part of the draft guide to enactment relating to article 107 of the Model Law. Therefore, it should ideally be clarified, either in the guide to enactment or through a corrigendum to footnote 8, that the registry provisions should take effect when the secured transactions law itself became effective.

84. **The Chair** recalled that during the Working Group's discussion of the Model Registry Provisions, it had been pointed out that in certain jurisdictions, the provisions would have to be effective in order for the registry to be established and operational when the Model Law was enacted. It might therefore be unwise to issue a corrigendum to footnote 8 of the Model Law; instead, the first sentence of the footnote should be reflected in the guide to enactment, as had been pointed out.

85. **Ms. Gullifer** (United Kingdom) said that she was in favour of the modification of paragraph 2 of document A/CN.9/914/Add.2 along the lines proposed by the United States representative.

86. **The Chair** said it was important for the Commission to agree on precise wording in order to ensure that that paragraph was consistent with the footnote in terms of substance.

The meeting rose at 5 p.m.

Summary record of the 1063rd meeting, held at the Vienna International Centre, Vienna, on Tuesday, 18 July 2017, at 9.30 a.m.

[A/CN.9/SR.1063]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 9.35 a.m.

Progress report of Working Group VI (Security Interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (*continued*) (A/CN.9/899, A/CN.9/904, A/CN.9/914, A/CN.9/914/Add.1, A/CN.9/914/Add.2, A/CN.9/914/Add.3, A/CN.9/914/Add.4, A/CN.9/914/Add.5 and A/CN.9/914/Add.6; A/CN.9/L/CRP.3)

1. **The Chair** invited the Commission to resume its consideration of paragraph 31 of document A/CN.9/914 in conjunction with document A/CN.9/L/CRP.3. The Commission's discussions thus far suggested that there was emerging consensus that security rights in attachments to immovable property should not be addressed in the guide to enactment, except, possibly, through wording to the effect that that matter was governed by the legislation of the enacting State on immovable property. It remained to be decided whether the issue of attachments to movable property should be dealt with by including model legislative provisions in the guide to enactment or whether, instead, the matter should simply be addressed in paragraph 31 of document A/CN.9/914. A further option would be not to address the matter of security rights in attachments to movable and immovable property at all; however, given that some States that were considering enacting the Model Law had already approached the Secretariat for advice on how to address the issue, it appeared that guidance would be useful.

2. **Mr. Dennis** (United States of America), supported by **Mr. Sono** (Japan), said that the matter of security rights in attachments to movable and immovable property was addressed sufficiently in the UNCITRAL Legislative Guide on Secured Transactions. For that reason, and given that the model provisions set out in document A/CN.9/L/CRP.3 did not represent any changes in policy, it was unnecessary to include separate provisions on such security rights in the guide to enactment, even if those provisions were to deal only with movable property. He proposed that, instead, paragraph 31 of document A/CN.9/914 should be modified to state that the general rules of the Model Law would apply with respect to attachments to movable property, referring enacting States to the relevant provisions of the UNCITRAL Legislative Guide on Secured Transactions for guidance, and, as suggested by the Chair, that the treatment of security rights in attachments to immovable property would depend on domestic legislation governing immovable property.

3. With respect to priority, while the Secured Transactions Guide referred to the priority of competing security rights in attachments made effective against third parties by registration in a specialized registry, the normal priority rules would apply to movable property. That could be pointed out in the guide to enactment. With regard to enforcement, reference should also be made to situations in which an attachment was removed from the movable property to which it was attached and the value of the property decreased as a result.

4. **Ms. Gullifer** (United Kingdom), expressing support for the proposals made by the representative of the United States, said that during informal consultations, delegations had found that those of the model provisions proposed in document A/CN.9/L/CRP.3 that dealt with movable property simply restated the general rules of the Model Law, with the exception of the final sentence of the proposed article 7, paragraph 1, which dealt with liability for damage to movable property. Consequently, and since the difficulty of attempting to reach agreement on a possible set of model provisions would outweigh the benefit of incorporating such a text, the guide to enactment should simply state that the general rules of the Model Law applied to security rights in attachments to movable property with regard to creation, third-party effectiveness, priority and enforcement. As had already been concluded, it would be too difficult for the Commission to address the difficult issue of attachments to immovable property given the limited time available.

5. **Mr. Bazinas** (Secretariat) pointed out that paragraph 31 of document A/CN.9/914 referred to the recommendations of the Secured Transactions Guide with regard to attachments to both movable property and immovable property, and that with respect to the latter, the Guide essentially deferred to national immovable property law. Consequently, if the guide to enactment referred States to the recommendations of the Secured Transactions Guide only in relation to movable property and stated that the issue of security rights in attachments to immovable property was a matter for the domestic legislation of the enacting State, that would give the false impression that the Secured Transactions Guide failed to address that issue altogether. He therefore asked the Commission to clarify whether the guide to enactment should refer to the general rules of the Model Law when addressing attachments to movable property and to the recommendations of the Secured Transactions Guide with respect to both movable and immovable property, making clear that with regard to the latter, those recommendations deferred to national immovable property law.

6. **The Chair** said she agreed that, for the sake of completeness, the guide should point out that the Secured Transactions Guide addressed the issue of attachments to immovable property insofar as it deferred to the immovable property law of the enacting State.

7. **Mr. Maradiaga** (Honduras) said that he too supported the proposal made by the representative of the United States of America. It was important for the information in the guide to enactment to be clear and free of contradictions.

8. **Mr. Whittaker** (Australia) expressed support for the comments made by the representatives of Honduras, the United Kingdom and the United States of America.

9. **Mr. Riffard** (France) said that since the Commission's task was to finalize the guide to enactment, not to draft further model provisions, paragraph 31 of document A/CN.9/914 should simply be revised to explain that the issue of security rights in attachments was not addressed in the Model Law because of the difficulty in establishing a uniform approach to that issue, particularly as it concerned property law. It should then be pointed out that the enacting State would need to consider the matter and that the Secured Transactions Guide set out some general principles on which the Commission had reached consensus. While legislators were free to decide not to adopt those solutions if they were incompatible with national law, it was important to emphasize that the fundamental elements of the Model Law should remain intact in order to preserve the general balance achieved by the text, regardless of the manner in which the issue of attachments was addressed.

10. **Mr. Deschamps** (Canada) said that the general rules of the Model Law did not necessarily resolve all issues relating to attachments to movable property. However, in view of the limited time available to the Commission, it might not be possible to consider that point further.

11. **Mr. Bazinas** (Secretariat) said that, on the basis of the comments made, it was his understanding that the Commission wished to revise paragraph 31 of document A/CN.9/914 to state that the general rules of the Model Law applied to security rights in attachments to movable property and that the Model Law did not address security rights in attachments to immovable property because that matter did not lend itself to harmonization. The paragraph would then refer the reader to the relevant recommendations of the Secured Transactions Guide.

12. The guide to enactment could also explain that the general provisions of the Model Law applied to movables that were attachments to other movables, in order to reflect the statement made in article 1, paragraph 1, of the proposed model provisions in document A/CN.9/L/CRP.3, if that statement was not obvious. With regard to the third-party effectiveness of a security right in an attachment, the statement made in article 2 of those provisions could also be reflected in the guide to enactment if it was not considered obvious.

13. The first three sentences of paragraph 1 of article 7 of the proposed model provisions in effect did little more than restate the rights of a secured creditor with a security right in an attachment to a movable asset, those rights being unaffected if the attachment was itself a movable asset. The only element of document A/CN.9/L/CRP.3 relating to attachments to movable property that was mentioned neither in the Model Law nor in the draft guide to enactment was the statement made in the final sentence of paragraph 1 of article 7 with regard to the liability of the secured creditor for damage to the movable asset. That statement could be added as a new sentence to paragraph 31 of document A/CN.9/914. Lastly, it would be useful to include in the guide to enactment the definitions of "attachment to a movable asset" and "attachment to immovable property" set out in paragraph 2 of document A/CN.9/L/CRP.3.

14. **The Chair** said that that summary appeared to capture all of the points that had been raised, with the exception of the comment by the representative of France that the fundamental elements of the Model Law should remain intact regardless of the manner in which legislators chose to address the issue of security rights in attachments. That point should be emphasized.

15. **Mr. Dennis** (United States of America) said that he too agreed with the summary, which was consistent with his earlier proposal. However, the revised text of paragraph 31 of document A/CN.9/914 should clarify that a security right could be created in a tangible asset that was an attachment to movable property at the time of creation of the security right and that a security right could continue in a tangible asset that became an attachment after the creation of that security right. Those two possibilities were not made clear in article 1, paragraph 1, of the model provisions proposed in document A/CN.9/L/CRP.3, although he understood that the language used in that text might not necessarily be reproduced in the guide to enactment.

16. **The Chair** pointed out that the language used in that article had been taken from recommendation 21 of the Secured Transactions Guide. However, the proposed clarification might be helpful, and would not change the substance of the text.

17. **Ms. Walsh** (Canada) said she agreed that the two distinct situations described by the representative of the United States were not explained clearly in article 1, paragraph 1, of the proposed provisions and should be clarified in the guide to enactment.

18. With regard to her delegation's earlier comment that the general rules of the Model Law might not cover all situations with regard to attachments to movable property, she noted that the Model Law established no rules governing the priority competition between a security right in a tangible asset that was or became an

attachment and a security right in the asset to which the attachment was attached. Under general accession law in many jurisdictions, an attachment to movable property automatically became a part of that movable property; consequently, the matter did not simply concern the rules of immovable property law with respect to fixtures but also concerned accession rules with respect to movable property. Clear priority rules were needed in order to deal with such situations adequately, but in view of the time that would be needed in order to formulate such rules, the guide to enactment should simply explain that such priority competitions were not addressed, although they might be dealt with under the accession law of the enacting State.

19. **Mr. Bazinas** (Secretariat) pointed out that the matter raised by the representative of Canada was referred to in the note to the Commission in document A/CN.9/L/CRP.3 on priority between competing security rights in an attachment to a movable asset, and that a suggestion was made in that note to include in the guide to enactment a reference to recommendation 89 of the Secured Transactions Guide, which was the only priority rule that the Guide contained with respect to attachments. If it was felt that the type of priority competition described by the representative of Canada was not adequately dealt with by the Secured Transactions Guide, further clarification should be provided in the guide to enactment.

20. **Ms. Gullifer** (United Kingdom) said that the matter raised was dealt with in paragraph 115 of chapter V of the Secured Transactions Guide, which referred to several types of priority conflict that might arise with respect to security rights in assets that later became attachments to movable assets. According to that paragraph, in the cases described, priority could be determined in accordance with the general priority principle, i.e., by the order of registration or third-party effectiveness. Since that approach was recommended in the Guide, although it was not a recommendation as such, it should not be departed from.

21. **Mr. Yang** Bingxun (China) expressed support for the proposal made by the representative of the United States of America, the comments made by the representative of France and the additional suggestions put forward by the representative of the Secretariat.

22. **Ms. Walsh** (Canada) said that, as the representative of the United Kingdom had noted, paragraph 115 of chapter V of the Secured Transactions Guide dealt with both a priority conflict between two or more security rights in an asset that later became an attachment and a priority conflict between a security right in an asset that became an attachment and a security right in the asset to which the attachment was attached. It was not quite correct to state that the general rules were sufficient to deal with the latter type of competition because those rules referred only to competing security rights in the same asset. It was for that reason that, in the context of immovable property, article 5 of the proposed model provisions set out a rule concerning the priority of an acquisition security right in an attachment to immovable property as against a right in the immovable property itself. Thus, although it might not be necessary to draft a rule on the determination of priority between a security right in an attachment and a security right in the asset to which the attachment was attached, if such a rule was to be included, the guide to enactment should at least paraphrase paragraph 115 of chapter V of the Secured Transactions Guide to explain that, in the context of that kind of competition, priority would depend on the order of registration.

23. **Mr. Whittaker** (Australia) said that if an asset was attached to another movable asset and the effect of the relevant law was that a security right that had previously been granted in that movable asset also became a security right in the attachment, there would be a priority competition between two security rights in the attachment. On that basis, the general rules should still apply; thus, priority would be determined typically by order of registration, as had already been stated, but could also be determined by possession.

24. **The Chair** asked whether that interpretation — namely that such a situation essentially concerned competing security rights in the same movable asset, thus the general rules of the Model Law would apply — was acceptable to the Commission.

25. **Mr. Weise** (American Bar Association) said he agreed that a movable asset attached to another movable asset would continue to be considered a movable asset, and that the general rules of the Model Law would therefore apply. Given the limited time available to the Commission, the best solution would be to provide guidance in the guide to enactment as to how to interpret and apply those rules in the situation described.

26. **Mr. Gabriel** (International Law Institute) said that while he agreed that such a situation fell within the scope of the Model Law, it was not clear what the exact content of the relevant paragraph of the guide to enactment would be. He therefore sought clarification as to whether the guide would discuss the issue in depth, reflecting the points raised during the current discussion, given that reference only to the recommendations of the Secured Transactions Guide was unlikely to suffice.

27. **Mr Bazinas** (Secretariat), summarizing the points on which consensus appeared to have been reached, said it was his understanding that the Commission wished to revise paragraph 31 to state that the general provisions of the Model Law applied to security rights in attachments to movable property, which should be understood as movable property within the scope of the Model Law. The paragraph would then explain that statement, first by setting out the information contained in article 1, paragraph 1, of the proposed model provisions in document A/CN.9/L/CRP.3 and clarified as suggested. It would also be explained that a security

right in a tangible asset remained effective against third parties even after the tangible asset became an attachment, essentially reflecting article 2 of the proposed model provisions. With respect to priority, the guide would draw on paragraph 115 of chapter V of the Secured Transactions Guide in order to explain the priority conflicts that had been discussed. The issue of liability for damage to a movable asset, as dealt with in the final sentence of article 7, paragraph 1, of the proposed supplementary provisions, would also be addressed, and a cross reference to the relevant recommendation of the Secured Transactions Guide would be included. Lastly, it would be stated that the Model Law did not address attachments to immovable property as that matter did not lend itself to harmonization and was left to the relevant legislation of the enacting State. A general reference to the recommendations of the Secured Transactions Guide dealing with immovable property would be included.

28. **Mr. Gabriel** (International Law Institute) said that it was unclear how the point concerning the liability of the enforcing secured creditor could be inferred from the text of the Model Law alone, without the need for reference to the relevant recommendation of the Secured Transactions Guide, given that that recommendation was not reflected in the Model Law. He asked whether the intention was to explain that the liability rule was inherent in the Model Law or to suggest that enacting States should consider adding that rule in their implementing legislation. If the former was the case, it should be explained what made the rule inherent. If that could not be explained, the guide would effectively be adding a new recommendation.

29. **The Chair** said it would be suggested that the enacting State should consider adopting a rule that imposed liability on the enforcing secured creditor for any damage caused to a movable asset.

30. **Mr. Dennis** (United States of America) said it had been his understanding that the last sentence of article 7, paragraph 1, of the proposed supplementary provisions was drawn from the Secured Transactions Guide and that the relevant recommendation would be referred to in the guide to enactment.

31. **The Chair** said she took it that the Commission wished the Secretariat to redraft paragraph 31 as proposed.

32. *It was so decided*.

A/CN.9/914/Add.2 (*continued*)

Chapter IV. The registry system (*continued*)

33. **The Chair** recalled that, at the Commission's previous meeting, the representative of the United States had proposed the inclusion, in paragraph 2 of the addendum, of a new sentence reflecting the first sentence of footnote 8 of the Model Law, to the effect that if a State enacted the Model Law and the Model Registry Provisions separately, its implementing texts should be enacted and take effect simultaneously. In that regard, she noted that the "take effect" element of the proposal might be covered by the provisions of the Model Law on transition. However, it could be left to the Secretariat to ensure that the point was adequately reflected in paragraph 2.

34. **Ms. Gross** (Israel), expressing support for the proposal of the representative of the United States of America, suggested that the proposed new sentence should also clarify that the registry system should be operational by the time the enacting law took effect.

35. **The Chair** said she took it that the Commission wished, on the basis of the proposals made, to modify paragraph 2 to explain that if the Model Registry Provisions and the Model Law were enacted as separate instruments, their enactment and entry into force should be coordinated so that the registry system functioned as intended.

36. *It was so decided*.

37. **Mr. Whittaker** (Australia) said that it was noted in paragraph 3 that the Secured Transactions Guide recommended that the registry should be electronic "if possible". Given developments in technology since that Guide had been written, that recommendation should be made stronger in the guide to enactment, as a fully electronic registry system was critical if the system was to be efficient and effective.

38. **Mr. Dennis** (United States of America), expressing support for that view, said it was his understanding that information in registered notices should always be stored in electronic form. The question was whether the input of information, such as the submission of notices, could be paper-based or must be done electronically. Paragraph 3 should be modified to reflect those points.

39. **The Chair** said that the words "if possible" should be preserved, as that wording was used in the Secured Transactions Guide and also quoted in the UNCITRAL Guide on the Implementation of a Security Rights Registry. The question raised by the representative of the United States with regard to the input of information was already addressed in paragraph 4 of document A/CN.9/914/Add.2, which indicated that access to registry services, including the submission of and searches for notices, should be electronic. However, she suggested that in the light of the comments made, the recommendation set out in paragraph 3 should be made stronger, including with regard to the storage of information.

40. *It was so agreed*.

41. **Mr. Dennis** (United States of America) proposed the deletion of paragraph 17, which was unnecessary as it made a general point relating to the authorization of the registration.

42. **The Chair** said that unless there was support for that proposal, paragraph 17 would remain as drafted.

A/CN.9/914/Add.3

43. **Mr. Whittaker** (Australia) said that the statement made in the final sentence of paragraph 22 would not be true in all cases. He therefore proposed that the words "such a claimant by definition could not have been prejudiced" should be amended to read "such a claimant generally may not have been prejudiced" in order to qualify that statement.

44. *It was so decided.*

45. **Mr. Dennis** (United States of America) noted that references were made throughout the guide to enactment to articles of the Model Law as being "based on" recommendations of, or the discussion set out in, the Secured Transactions Guide or the Registry Guide. However, in many instances, such references were misleading. For example, paragraphs 19 and 70 of document A/CN.9/914/Add.3 suggested that the options referred to were set out in the Registry Guide and the Secured Transactions Guide, respectively, which was not the case. All such instances should therefore be reviewed in order to ensure accuracy and clarity.

46. **The Chair** said she took it that the Commission wished the Secretariat to examine such instances throughout the draft guide to enactment and amend them as appropriate.

47. *It was so decided.*

48. **Mr. Dennis** (United States of America) proposed deleting the first two sentences of paragraph 34, as they described an approach that was rejected both in the Registry Guide and in the Model Law. Moreover, that approach was detailed in paragraph 273 of the Registry Guide, to which reference was made in the final sentence of paragraph 34 of document A/CN.9/914/Add.3.

49. **Ms. Gullifer** (United Kingdom) said that she supported that proposal, as it was not helpful to provide States with information on an approach that was not recommended in the Model Law.

50. **Ms. Walsh** (Canada) said that while she had no strong objections to the proposed deletion, the approach described was in fact followed in many States. It might therefore be worth retaining the reference to the fact that the Model Law did not take that approach. Indeed, paragraph 34 served as a useful reminder to users that the approach in the Model Law might not be the approach with which they were familiar.

51. **Mr. Dubovec** (National Law Center for Inter-American Free Trade) said that he agreed with the proposal that the first two sentences of paragraph 34 should be deleted, for the reasons already given. While the representative of Canada was correct, electronic registries — for which strong support had been expressed earlier in the meeting — were not configured in a manner that required the assignment of currency dates. Therefore, if the objective of the guide to enactment and the Model Law was to support purely electronic registries, the issue of currency dates was unlikely to arise and reference to that issue might confuse readers.

52. **Mr. Bazinas** (Secretariat) said that merely deleting the first two sentences of paragraph 34 would not resolve the problem, because the remaining sentences also referred to currency dates and the discussion of the matter in the Registry Guide. It might therefore be more appropriate to redraft that paragraph so that it started with what was currently the third sentence, which could be reformulated to read "Under the Model Law, a registration becomes effective only when the information in a notice submitted to the Registry has been entered into the registry record so as to be accessible to searchers, and not when the notice is registered". The paragraph could then go on to explain that currency dates were used in some States, providing a definition of a currency date, and the reference to the Registry Guide could be retained. That would provide the necessary context for the final two sentences of the paragraph. It was important to explain the approach taken in the Model Law.

53. **The Chair** said that it might not be necessary to refer to the use of currency dates or to retain the paragraph at all, since the approach taken in the Model Law was already explained elsewhere in the draft guide to enactment.

54. **Ms. Walsh** (Canada) said that paragraph 34 was still needed to the extent that it indicated that a registration became effective only when the information in a notice had been entered into the registry record so as to be accessible to searchers. It should be clarified that the registration did not become effective upon submission of the notice to the registry.

55. **The Chair** suggested that since that idea was already reflected in the section of the draft guide relating to article 13 of the Model Registry Provisions, paragraph 34 could be deleted.

56. *It was so agreed.*

57. **Mr. Whittaker** (Australia), supported by **Mr. Dennis** (United States of America), said that the scenario described in paragraph 42 in order to explain the purpose and effect of article 24, paragraph 6, of the Model Registry Provisions would seldom arise, as the period of effectiveness of a registration would apply regardless of whether or not the registrant had made an error in entering that information. That being the case, the "error" did not constitute an error per se. It was therefore difficult to envisage how a party could be misled by such an error.

58. **Mr. Bazinas** (Secretariat) said that the fact that such a situation was unlikely to arise was indicated by the words "even if the error would be seriously misleading from the perspective of a hypothetical reasonable searcher" in paragraph 42 of document A/CN.9/914/Add.3. The matter was therefore adequately addressed, unless it was felt that the more

conceptual issue of whether an error in entering the period of effectiveness could indeed be regarded as an error should be considered.

59. **Ms. Gullifer** (United Kingdom), expressing support for the comments made by the representative of Australia, pointed out that the provision concerned only errors made by registrants, as was clear both from the heading of article 24 of the Model Registry Provisions and from paragraph 38 of document A/CN.9/914/Add.3, in which case the "error" could not be misleading, whereas errors made by the registry itself, for example in translating a submitted notice, would be a different matter.

60. **Ms. Walsh** (Canada) said that she too agreed with the comments made by the representative of Australia. Paragraph 42 should be amended to acknowledge that, in practice, article 24 (6) of the Model Registry Provisions had no effect. That provision should not have been included in the Model Registry Provisions, as its effect had not been thought through. According to paragraph 42 of document A/CN.9/914/Add.3, if the period entered was shorter than intended, the registration would remain effective against third parties even after it had lapsed and the notice was no longer searchable — i.e., the information that the registrant had intended to enter could be relied upon — unless a third party could prove that it had searched the registry and failed to find the notice concerned, and had thus been seriously misled. Her delegation could not accept that interpretation of the intended operation of article 24 (6). The original intention of a registrant that inadvertently entered the period of effectiveness incorrectly was irrelevant to the applicability of that period. There could therefore be no error, except, possibly, in the case of a system malfunction.

61. **Mr. Weise** (American Bar Association) said he disagreed that the period of effectiveness of a registration would apply regardless of whether that information had been entered incorrectly. For example, if the grantor and the secured creditor agreed to a period of effectiveness of four years and the secured creditor inadvertently entered five years in the notice, the actual period of effectiveness would still be four years, because the extra year would not be authorized under the agreement between them. While it was unlikely that a third party would rely to its detriment on the information entered, it was undesirable for the guide to enactment to suggest that the period of effectiveness entered in the notice would always apply.

62. **Mr. Bazinas** (Secretariat) said that the question of how third-party reliance might arise with respect to an error in entering the period of effectiveness of a registration was sufficiently addressed in paragraph 215 of the Registry Guide, a reference to which was already set out in paragraph 42 of document A/CN.9/914/Add.3, while paragraph 216 of the Registry Guide explained why the test for whether that information could be considered seriously misleading was subjective. The guide to enactment should therefore be read in the light of that commentary, although the information in the Registry Guide could be repeated in the guide to enactment if that was felt to be necessary.

63. **Mr. Gabriel** (International Law Institute) said that while paragraphs 215 and 216 of the Registry Guide were informative, they did not entirely reflect the text of the recommendations in question or unambiguously explain article 24, paragraph 6, of the Model Registry Provisions. If the error consisted in entering a period of effectiveness that was too short, that provision would have no effect, since the registration would simply cease to be effective upon expiry of the period given unless it was interpreted as making the surprising statement that if a competing claimant did not search for the notice, that claimant would not rely on the shorter period and the registration would therefore continue to be effective against that party even though it had lapsed. That possible reading of article 24, paragraph 6, was clearly incorrect, as was indicated by the fact that it was reflected neither in paragraph 215 nor in paragraph 216 of the Registry Guide. However, it would be undesirable to state in the guide to enactment, at least with respect to situations in which the period of effectiveness entered in the notice was too short, that the provision had no effect, thus implying that the matter had not been considered properly during the drafting of the Model Law.

64. **Mr. Von Ziegler** (Switzerland), expressing agreement with the representative of the Secretariat that it was important to read paragraph 42 of document A/CN.9/914/Add.3 in conjunction with paragraphs 215 and 216 of the Registry Guide, pointed out that article 24 of the Model Registry Provisions was based on recommendation 29 (c) of the Registry Guide.

65. **Ms. Walsh** (Canada) suggested that a possible solution to the problem might be to clarify that article 24, paragraph 6, was not intended to address situations in which the error consisted in entering too short a period of effectiveness, as it would not apply in such cases; once that period lapsed, third parties would not be able to find the notice concerned and as a result would be unable to rely on the information that the notice contained. It might therefore be useful to clarify that the provision addressed only situations where the error consisted in entering too long a period of effectiveness, because it was only in such situations that a searcher could find the notice after the actual period of effectiveness had lapsed and might rely on the information that the notice contained.

66. **Ms. Gross** (Israel) said that another possible solution might be to clarify that, while an error in the period of effectiveness of a registration did not render the registration ineffective, the registration would simply lapse if that period was too short and would be effective only for the duration stated in the security agreement if it was too long. The paragraph could then go on to explain that in the unlikely event that such an

error misled a potential creditor, the entire registration would be rendered ineffective.

67. **Mr. Dennis** (United States of America), expressing support for the comments made by the representative of the International Law Institute, said that the problem posed by article 24, paragraph 6, of the Model Registry Provisions should be explained clearly. An alternative solution would be to amend the Model Law itself.

68. **The Chair** said that the Commission should avoid drawing the conclusion that an error had been made in the drafting of the Model Law, given that the drafting process had been extremely thorough. Instead, a way should be found to provide an appropriate explanation in the notes.

69. **Mr. Bazinas** (Secretariat) recalled that the issue had indeed been discussed during the drafting both of the Registry Guide and of the Model Law and was therefore not new. That discussion was reflected in the Registry Guide commentary, which made clear that whether an error in the period of effectiveness of a registration consisted in the registrant's entering too short a period of effectiveness or too long a period, third-party searchers would not be prejudiced. The decision by the Commission to retain the relevant provisions both in the Registry Guide and in the Model Law had been deliberate and taken after careful consideration, and the discussions that had led to that decision did not need to be revisited.

The meeting was suspended at 11.40 a.m. and resumed at 11.55 a.m.

70. **Ms. Gullifer** (United Kingdom) said that despite the fact that the issue under discussion was dealt with extensively in the Registry Guide, it might nonetheless be useful to explain that there were two situations in which article 24, paragraph 6, of the Model Registry Provisions potentially applied, and to explain what would happen in each of those situations. While it might be necessary to reproduce some of the material set out in the Registry Guide, in view of the Commission's current discussion, it seemed appropriate to do so. Thus, paragraph 42 of document A/CN.9/914/Add.3 could be amended in two ways. The first would be to set out the situations in which article 24, paragraph 6, of the Model Registry Provisions would apply, thus leaving it to the enacting State to determine whether or not the paragraph was useful, and the second would be to add text to the guide to enactment to the effect that the provision would very rarely, if ever, have an effect, and to explain why that was the case.

71. **The Chair** suggested that, in the light of the comments made, the third and fourth sentences of paragraph 42 of document A/CN.9/914/Add.3 should be replaced with text that explained the two scenarios, drawing on the Registry Guide for that purpose and including a cross reference to the relevant paragraphs of that Guide.

72. **Mr. Dennis** (United States of America) asked whether the proposed amendment would reflect the fact that paragraph 6 of article 24 of the Model Registry Provisions would very rarely, if ever, apply.

73. **The Chair** said that it would be left to the reader to draw that conclusion.

74. **Mr. Dennis** (United States of America) said that it would nonetheless be preferable for the guide to offer that clarification, possibly with the addition of the words "in most States".

75. **The Chair** said that the qualification "in most States" might not be accurate and in any case was unnecessary. However, if there was no objection, she would take it that the Commission wished to add the proposed explanation that the provision would rarely have any effect.

76. *It was so agreed.*

A/CN.914/Add.4

Chapter V. Priority of a security right

77. **Mr. Dennis** (United States of America), drawing attention to paragraph 74 of document A/CN.914/Add.4, proposed that that paragraph should be deleted, as it provided an explanation of what the Model Law did not address, and was too complicated.

78. **Mr. Bazinas** (Secretariat) recalled that during the discussions of the Working Group, it had been decided that the explanation provided in that paragraph was necessary because in the absence of such an explanation it would seem that article 50 was incorrect or incomplete.

79. **Mr. Deschamps** (Canada), supported by **Ms. Gullifer** (United Kingdom), said that he agreed with the suggestion by the United States representative, particularly since the statement made in the first sentence of that paragraph was confusing. The paragraph would need to be significantly expanded upon in order to be made clear and, as it would take time to agree on any such additional language, it would be better to delete the paragraph for the sake of simplicity.

80. **The Chair** said it was important to ensure that the deletion of the paragraph would not result in the omission of necessary information explaining article 50 of the Model Law in the context of the work of UNCITRAL on secured transactions in relation to intellectual property matters.

81. **Mr. Bazinas** (Secretariat) suggested that paragraph 74 should be replaced with text along the lines of the first sentence of paragraph 204 of the UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property, to the effect that article 50 would be subject to article 1 (3) (b) of the Model Law, i.e. it would not apply to security rights in intellectual

property insofar as it was inconsistent with the law of the enacting State relating to intellectual property.

82. **Mr. Deschamps** (Canada), expressing his support for that suggestion, suggested that the proposed text should be added to the beginning of paragraph 73.

83. **The Chair** said she took it that the Commission wished to accept the proposed amendments. The language of paragraph 75 would also have to be adjusted to ensure that it followed on logically from the amended text.

84. *It was so decided*.

The meeting rose at 12.30 p.m.

Summary record of the 1064th meeting, held at the Vienna International Centre, Vienna, on Tuesday, 18 July 2017, at 2 p.m.

[A/CN.9/SR.1064]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 2 p.m.

Progress report of Working Group VI (Security Interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (*continued*) (A/CN.9/899, A/CN.9/904, A/CN.9/914, A/CN.9/914/Add.1, A/CN.9/914/Add.2, A/CN.9/914/Add.3, A/CN.9/914/Add.4, A/CN.9/914/Add.5 and A/CN.9/914/Add.6)

1. **The Chair** invited the Commission to resume its consideration of the part of the draft guide to enactment contained in document A/CN.9/914/Add.4.

2. **Mr. Deschamps** (Canada), drawing attention to paragraph 78, suggested that the reference to "the applicable law" in the second sentence should be replaced with a reference to "the law of the enacting State".

3. **The Chair** said she agreed that it was important to clarify that that sentence was not intended to address the possible application of the law of more than one State and thus a possible conflict-of-laws situation; rather, it should be understood as referring to other law within a given enacting State. Accordingly, she took it that the Commission wished to accept the proposal made.

4. *It was so decided.*

A/CN.9/914/Add.1 (continued)

Chapter II. Creation of a security right (continued)

5. **Ms. Gullifer** (United Kingdom), recalling the Commission's earlier discussion of paragraph 28 of document A/CN.9/914/Add.1, said that following informal consultations, it had been agreed that the first sentence of paragraph 28 should be left unchanged but the text should then go on to explain that "It does not apply to so-called 'financial receivables', for example loan receivables, for the following reasons: (1) the rule in paragraph 1 interferes with party autonomy, which is justified in relation to trade receivables because it has the effect of increasing the availability and reducing the cost of credit, and (2) in relation to financial receivables, there is a greater justification for the debtor, in other words the borrower, to be able to restrict the identity of its counterparty, which outweighs any possible benefit of overriding party autonomy in this regard". That suggested text could be expanded to include examples if that was felt to be appropriate.

6. **Mr. Deschamps** (Canada) said that one such example was a syndicated loan: a borrower might wish to ensure that a lender did not assign the loan without the borrower's consent or impose limitations on the eligible assignees; in the case of a long-term loan, there might be events during the life of the loan that would require the borrower to request a waiver of default or changes in the terms of the loan, in which case the borrower might wish to ensure that the original lender remained the same, in view of the good relationship that they had established, and that the loan was not assigned to a financial institution with which the borrower had no relationship, or to a vulture fund. Similarly, the lenders in a syndicated loan might have an interest in ensuring that one of the co-lenders was not free to assign the loan to a third party that was an affiliate of the borrower.

7. **Mr. Weise** (American Bar Association) said that if examples were to be provided of the type of receivables to which the rule in article 13 (1) of the Model Law did not apply, it should be made clear that those examples concerned receivables that were not covered by the term "trade receivables", notably financial receivables and loan receivables.

8. **Mr. Deschamps** (Canada) said that if examples of financial receivables were to be given, that should be done in the part of the guide relating to chapter I of the Model Law. Indeed, it might be preferable to avoid the term "financial receivables" in paragraph 28 altogether, because if that term was intended to refer to receivables arising from a financial contract, there was no need to discuss such receivables in relation to article 13, as they were excluded from the scope of the Model Law. Paragraph 3 of article 13 was not intended to limit the overriding effect of paragraph 1 to receivables other than receivables arising from financial contracts; rather, it was intended only to state that the invalidation of an anti-assignment clause applied only to a receivable arising from a contract for the supply or lease of goods or services.

9. **Mr. Bazinas** (Secretariat) suggested that, on the basis of the comments made, the second sentence of paragraph 28 should be modified along the lines suggested by the representative of the United Kingdom, beginning with the words "It does not apply to so-called 'financial receivables' arising from financial contracts" and going on to explain that those receivables were excluded from the Model Law and that, with respect to the receivables broadly defined under article 1 (3), the rule in paragraph 1 of article 13 interfered with party autonomy because that allowed the use of such receivables as collateral for credit and increased the availability of credit. However, with respect to other receivables, that was not the case. The example would

then be given of loan receivables, without reference to such receivables as financial receivables.

10. He pointed out that article 1, paragraph 3 (d), of the Model Law left out from the exclusion and therefore kept within the scope of the Model Law one type of financial receivable, namely payment rights arising upon the termination of all outstanding transactions, which was reflected in article 13, paragraph 3 (d). He suggested that the reason for the inclusion of such receivables should be explained, possibly along the lines of "The assignment of such a payment right upon termination of a netting arrangement is not excluded since, in the case of such an assignment, there is no risk of offsetting the mutuality of obligations." It might also be necessary to explain the rationale behind article 13 (3) (d), of the Model Law. While paragraph 26 of document A/CN.9/914, on article 1 (3) (d) of the Model Law, referred to the exclusion from the scope of the Model Law of payment rights under or from financial contracts governed by netting agreements, including foreign exchange transactions, on account of the complex issues that they raised, it did not refer to payment rights arising upon the termination of all outstanding obligations. The Commission might therefore wish the guide to state that such financial receivables were not excluded because they were essentially normal receivables. Concerning article 13 (3) (d), it could be stated that the anti-assignment rule applied to such receivables because there was no mutuality of obligations, and it could also be noted that there was a risk that the mutual positions of the counterparties might be offset if one type of receivable was excluded from their mutual obligations.

11. **Ms. Gullifer** (United Kingdom) said that she was in favour of removing the infelicitous reference to "financial receivables", which might easily be misunderstood. Article 13 (3) (a) referred to receivables "arising from a contract that is a contract for the supply or lease of goods or services other than financial services", which would include loan receivables. She had understood financial receivables to mean receivables arising from the kinds of contracts under which loan services and other financial services were provided, and that understanding had been the basis for her earlier comments. In the light of the observations made by the representative of the Secretariat, if a broader justification for the debtor to be able to control who its counterparty would be — illustrated by the examples given by the representative of Canada — was to be provided, it might also be useful to highlight that loan contracts were usually long-term, because as had been pointed out, by the time a netting agreement was reached there was no more mutuality, only the debt. That was not a feature of a loan agreement, as was confirmed by the examples provided by the representative of Canada.

12. **Mr. Deschamps** (Canada) suggested that no explanation should be provided for the exception to the exception, namely that article 13 applied to the net amount resulting from the termination of a netting agreement, because not all members of the Commission might agree on the reasons therefor. The explanation given by the Secretariat might then also apply to other receivables, in respect of which there would be no reason to override an anti-assignment clause, a situation which ought to be covered by the exception to the exception.

13. **Mr. Bazinas** (Secretariat) said that if no explanation was provided, it might be asked why payment rights arising upon the termination of all outstanding transactions were included in the scope of the Model Law under article 1 (3) (d) but subject to the anti-assignment rule under article 13 (3) (d). An explanation should not be omitted solely on the basis that it might not be understood. A possible way to provide an explanation that would give enacting States sufficient guidance without going into too much detail would be to explain that such payment rights were included in the scope of the Model Law not only because of the issue of mutuality, but also because, with respect to receivables arising from financial contracts, the assignment of a payment right would change the credit risk situation; consequently, any change in the risk exposure of a party was not only likely to make the whole transaction unravel, but would also adversely affect the availability and cost of credit, which would run counter to the overall objective of the Model Law. That would not happen in the case of close-out netting receivables.

14. He noted that the issue was dealt with in the explanatory note on the United Nations Convention on the Assignment of Receivables in International Trade (Assignment Convention).

15. **Mr. Deschamps** (Canada) said that the problem was that the explanation provided by the representative of the Secretariat would justify the inclusion of other financial receivables which were not listed in article 13 (3) of the Model Law.

16. **Ms. Gullifer** (United Kingdom) said that one possible solution might be to refer to the relevant provisions of the Assignment Convention by way of explanation.

17. **The Chair** said she took it that the Commission wished to accept that suggestion and to request the Secretariat to redraft paragraph 28 of document A/CN.9/914/Add.1 in the light of its discussion.

18. *It was so decided*.

A/CN.9/914/Add.5

Chapter VI. Rights and obligations of the parties and third-party obligors

19. **Mr. Dubovec** (National Law Center for Inter-American Free Trade), supported by **Mr. Dennis** (United States of America), said that the first sentence of paragraph 1 of document A/CN.9/914/Add.5 appeared to limit the scope of application of chapter VI

to pre-default situations, and that of chapter VII to post-default situations. He understood the rights and obligations of the parties covered by chapter VI to be applicable irrespective of the time of default. For instance, article 53 on the obligation of the party in possession to exercise reasonable care did not cease to apply if the grantor defaulted. He therefore requested clarification as to the scope of application of the two chapters, particularly chapter VI, as it was his understanding that the rights and obligations referred to also applied after default, subject to the provisions of chapter VII.

20. Mr. Deschamps (Canada) proposed that, as a solution to the issue raised, the word "pre-default" and the text in parentheses should be deleted from the first sentence of paragraph 1.

21. **Ms. Gullifer** (United Kingdom) said that if the proposed changes were made, the first sentence would effectively do no more than repeat the title of chapter VI.

22. **Ms. Gross** (Israel) said she agreed that the word "pre-default" should be deleted, but suggested that the text in parentheses should be retained and possibly adjusted to clarify the distinction between the topics dealt with in each chapter.

23. **Mr. Gabriel** (International Law Institute) said that since there appeared to be general agreement that chapter VI was not limited to pre-default situations and that chapter VII also came into play after default, it should be left to the Secretariat to redraft the sentence accordingly.

24. **Mr. Riffard** (France) proposed that, as a solution, the first sentence should read: "Chapter VI deals in general with the rights and obligations of the parties and third-party obligors, whereas chapter VII deals specifically with the post-default rights and obligations of the parties."

25. *It was so decided.*

26. **Mr. Deschamps** (Canada), drawing attention to paragraph 6, said that the question of whether or not it was the grantor that should bear any additional cost incurred by the secured creditor in returning an asset was not a matter of good faith, although the secured creditor should naturally seek to minimize such costs as far as possible. It should therefore be clarified that the costs of returning an asset should normally be borne by the grantor or the debtor of the receivable but the extent of those costs and the question of whether they were reasonable was subject to the standard of good faith.

27. **Ms. Gullifer** (United Kingdom), expressing support for that suggestion, said that the question of who should bear the costs was a matter of agreement between the parties and one that was usually governed by the security agreement. It was the agreement that would be subject to the standards of good faith and commercial reasonableness.

28. **Mr. Weise** (American Bar Association) suggested that the guide to enactment should note that article 54 was one of the articles that was not subject to party autonomy but that fact did not prevent the grantor and the secured creditor from reaching an agreement as to who should bear the cost of the return of the asset, as just pointed out by the representative of the United Kingdom.

29. **Mr. Bazinas** (Secretariat) said it was his understanding, on the basis of the comments made, that paragraph 6 of document A/CN.9/914/Add.5 should be revised to clarify that while article 54 was a mandatory provision, the cost of the return of an encumbered asset, which was usually borne by the grantor or the debtor of the receivable, was a matter that was subject to party autonomy and therefore would normally be governed by the security agreement. The guide would also clarify that the question of whether the cost was reasonable was subject to the good faith standard established in article 4 of the Model Law. If that was the understanding of the Commission, the Secretariat could redraft paragraph 6 accordingly.

30. **The Chair** said she took it that the Commission wished the Secretariat to redraft paragraph 6 in the light of that understanding.

31. *It was so decided.*

32. **Mr. Deschamps** (Canada) proposed that the text in parentheses in the second sentence of paragraph 11 should be removed, because the right to obtain information applied regardless of whether the security right had been registered.

33. *It was so decided.*

34. **Mr. Deschamps** (Canada), supported by **Mr. Whittaker** (Australia) and **Mr. Weise** (American Bar Association), said that the reference in the fourth and fifth sentences of paragraph 15 to "implicit" and "explicit" agreements was unnecessary, because the statement in the fifth sentence that the question of what constituted an implicit agreement was left to the applicable contract interpretation rules was a general principle which applied to any agreement that deviated from the Model Law, and thus was not specific to article 57. He therefore proposed that those two sentences should be deleted.

35. *It was so decided.*

36. **Ms. Gullifer** (United Kingdom), drawing attention to the scenario described in paragraph 28 to illustrate the operation of article 62, paragraph 4, of the Model Law, asked whether the paragraph also applied to security rights granted by the same grantor. That should be clarified.

37. **Mr. Bazinas** (Secretariat) said that article 62 (4) of the Model Law was based on article 16 (3) of the Assignment Convention, which stated that "Notification of a subsequent assignment constitutes notification of all prior assignments." When drafting the Model Law,

the Working Group had discussed the matter at length and had agreed that the language of that provision, but not the policy underlying it, should be revised. The example given in paragraph 28 of document A/CN.9/914/Add.5 illustrated what was meant by subsequent assignments.

38. **Ms. Gullifer** (United Kingdom) said that it was still unclear whether the paragraph applied to situations in which successive security rights were created by the same person, even if that person was a secured creditor — for example, where A created a security right in the receivable in favour of B, B created a security right in the receivable in favour of C and B also created a security right in the receivable in favour of D — or whether it applied only to the succession described.

39. **The Chair** said that the paragraph did not apply to situations in which successive security rights were granted by the same grantor.

40. **Mr. Deschamps** (Canada) said that he agreed with the explanation provided by the representative of the Secretariat. Noting that the first example in paragraph 28 concerned the creation of a security right in a receivable and the second concerned an outright assignment of a receivable, he suggested that since the draft guide to enactment already stated that the term "security right" included the right of the transferee under an outright transfer of a receivable by agreement, the second example should be removed, not because it was wrong but because it might give the impression that in the case of an outright assignment the result would not necessarily be the same.

41. **The Chair** recalled that the Working Group had decided to include the second example to reinforce the idea that the provision was applicable to the outright transfer of receivables.

42. **Mr. Gabriel** (International Law Institute) said that that was also his recollection, although he agreed with the representative of Canada that the text should not give the impression of restricting the meaning of the term "security right". He suggested that, to avoid confusion, the first example should be clarified as referring to a security right securing an obligation, using wording along the lines of "A, who is indebted to B, creates a security right to secure that indebtedness"; the second example would then show that the same rule applied to security rights arising from an outright transfer of a receivable.

43. **Mr. Brink** (Factors Chain International and EU Federation for the Factoring and Commercial Finance Industry) said that in view of the importance of ensuring that the text was not misleading, he supported the proposal to clarify the first example.

44. **The Chair** said she took it that the Commission wished to clarify the first example along the lines proposed by the representative of the International Law Institute.

45. *It was so decided.*

46. **Ms. Gross** (Israel) said that although the articles set out in section II of chapter VI of the Model Law, namely articles 61 to 71, were not explicitly referred to in article 3 as exceptions to the rule of party autonomy, that rule obviously did not apply to those articles because the parties could not modify the rights of third parties. That point should be made clear, possibly in paragraph 1 of document A/CN.9/914/Add.5, which in its current form might cause confusion given that it stated that of the provisions of chapter VI, only articles 53 and 54 were mandatory, whereas the rules relating to third-party rights were clearly neither mandatory nor non-mandatory.

47. **Mr. Bazinas** (Secretariat) said that the reason why the provisions of section II of chapter VI were not among the mandatory provisions listed in article 3 was explained in paragraph 24 of document A/CN.9/914/Add.5, according to which paragraph 1 of article 61 of the Model Law set out the general principle that the creation of a security right in a receivable did not affect the rights or obligations of the debtor of the receivable, unless the debtor of the receivable consented. Derogation from those provisions was therefore possible, subject to the consent of the debtor of the receivable. Thus, paragraph 1 of document A/CN.9/914/Add.5 was in fact consistent with article 3 (1) of the Model Law. He pointed out that the provisions of section II of chapter VI concerned the rights and obligations of third-party obligors, not simply third parties, who in the Model Law were essentially competing claimants.

48. **Ms. Gross** (Israel) said that while she agreed with that explanation, it should nonetheless be clarified in paragraph 1 of document A/CN.9/914/Add.5 that while the provisions of section II of chapter VI of the Model Law were not mandatory in the sense of article 3 (1), the rights of third parties could not be modified by agreement between the parties to a security agreement, as was made clear in article 3 (2).

49. **The Chair** said that the matter was not so much one of party autonomy as one of ensuring that the rights of third parties were not affected.

50. **Ms. Walsh** (Canada), expressing support for the comments made by the representative of Israel, said that the statement in paragraph 1 of document A/CN.9/914/Add.5 that the provisions of chapter VI were non-mandatory and thus did not apply if the parties had agreed otherwise was indeed incomplete, particularly since the articles that were referred to as mandatory rules fell under section I on mutual rights and obligations of the parties to a security agreement, whereas section II dealt with the rights and obligations of third parties. Thus, the rules set out in section II were mandatory insofar as they affected third parties, in line with article 3 (2).

51. **The Chair** said that caution should be exercised when referring to mandatory and non-mandatory provisions.

52. **Mr. Sono** (Japan) said he agreed that it was not a question of whether the provisions of section II of chapter VI were mandatory or non-mandatory but, rather, a question of the scope of the agreement between the parties and who was affected by it. Provided that that was made clear, he had no objection to the proposed reference to article 3 (2).

53. **The Chair** said she took it that the Commission wished to amend paragraph 1 of document A/CN.9/914/Add.5 in the light of the comments made.

54. *It was so decided.*

55. **Mr. Riffard** (France) said that he wished to return to paragraph 28, which, while set out quite logically, might be confusing to legislators, particularly those unfamiliar with the discussion set out in the Assignment Convention. In particular, it might not be understood how such a chain as that described in the first example was possible. The example concerning successive outright transfers also required elaboration.

56. **Mr. Bazinas** (Secretariat) said that article 16 (3) of the Assignment Convention ("Notification of a subsequent assignment constitutes notification of all prior assignments"), which was the basis for article 62 (4) of the Model Law, was itself based on article 11 (2) of the International Institute for the Unification of Private Law (Unidroit) Convention on International Factoring, according to which notice to the debtor of the subsequent assignment also constituted notice of the assignment to the factor. That provision had validated normal practice at the time, particularly in international factoring transactions, in which notification of the second assignment was required, but not of the first, in a chain of assignments. Unless there was some validation of the first assignment, the second assignment might be rendered invalid. An explanation along those lines could be included in the guide to enactment.

57. **Mr. Weise** (American Bar Association) said that he concurred with the representative of France. The first example in paragraph 28 could indeed be misunderstood, and was not entirely accurate. It concerned a series of assignments intended to secure an obligation, whereas article 16 (3) of the Assignment Convention did not specifically apply to such assignments. The Model Law required that in order to grant a security right in an encumbered asset, the grantor must have rights in the asset. In the example in paragraph 28, B did not have rights in the receivable itself, but rather a security right in the receivable. In an assignment of a secured obligation, the assignee received the benefit of the security right that secured that obligation, but had no direct claim on the underlying encumbered asset. As currently worded, the first example in paragraph 28 misleadingly suggested that B, who held a security right to secure an obligation, could somehow grant a security right in the underlying encumbered asset. The second example, on the other hand, on successive sales of the underlying receivable, was accurate.

58. **Mr. Brink** (Factors Chain International and EU Federation for the Factoring and Commercial Finance Industry) said that outright assignments were the key issue. It was important that the guide to enactment should provide an accurate explanation of the chain of assignments, which were a frequent occurrence in international factoring.

59. **Mr. Bazinas** (Secretariat) said that article 16 (3) of the Assignment Convention, and thus article 62 (4) of the Model Law, applied both to successive security rights in receivables and to outright transfers of receivables, which was why both scenarios were illustrated in paragraph 28 of document A/CN.9/914/Add.5.

60. **Mr. Deschamps** (Canada) said he shared the view that the first example should be elaborated on for the sake of readers who might be unfamiliar with the scenario presented. In that scenario, C and D could acquire their security right in the receivable only by operation of article 14 of the Model Law.

61. **Ms. Gullifer** (United Kingdom), concurring with the representative of Canada, said that the scenario concerning successive security rights was very complex and was therefore unlikely to be helpful. The second example, involving successive outright assignments, was much easier to understand, and should therefore be the main example given. A sentence could then be added at the end of paragraph 28 along the lines of "This will also apply, in certain circumstances, to successive security rights," accompanied, possibly, by a reference to article 14.

62. **Mr. Schoefisch** (Germany) said that he agreed with the representative of France that a distinction should be made between the transfer of ownership of a receivable and the creation of successive security rights in the same receivable.

63. **Mr. Whittaker** (Australia) said he agreed that the first example was complex. Subsequent grantors could only give their own security right in the receivable as security, not the receivable itself. He concurred with the view that it might be better to remove the first example.

64. **Mr. Gabriel** (International Law Institute) said he agreed with the view that the first example did not sufficiently or precisely describe the operation of successive security rights securing performance of an obligation. However, deletion of the example would mean that the paragraph no longer illustrated the protection given by article 62 (4) to the debtor of a receivable that had been the subject of a series of transactions of the kind described. That was important guidance, because in a situation where there was a series of loans secured by each party's rights with respect to the receivable, if in the first example it was D that, as a result of default by other parties in the chain, called on the debtor of the receivable to fulfil its payment obligation, it was necessary to know who should notify the debtor of the receivable, and whether D's notifying the debtor of the receivable was sufficient. He therefore

suggested that the first example should be explained more fully, in line with the Commission's discussion, rather than providing guidance only on the second scenario described.

65. **The Chair** suggested that both examples should be retained but a way of making the first example clearer and more accurate should be found.

The meeting was suspended at 4.10 p.m. and resumed at 4.30 p.m.

66. **The Chair** said that there appeared to be two options: (1) to retain only the second example in paragraph 28, adding a general comment to the effect that successive security rights in the same encumbered asset were also possible, or (2) to retain the first example, but to make it clearer and more accurate.

67. **Mr. Whittaker** (Australia) said that during the informal consultations, there had been concern that it was difficult to make the first example fully accurate, because it referred only to the granting of security rights in the receivable, rather than the granting of security rights in security rights in the receivable. Consequently, some delegations had concluded that only the second example should be retained. In any case, the first example was not intended to be a comprehensive description of all the ways in which article 62 (4) might apply.

68. **Ms. Gullifer** (United Kingdom), expressing support for those comments, repeated her earlier suggestion that a sentence should be added after the second example, to the effect that article 62 (4) also applied to successive security rights. During informal consultations, the example had been given of a two-stage process in which the first stage involved an outright assignment of a receivable by A to B while the second stage involved the creation by B of a security right in the receivable in favour of C. It might therefore be worth noting also that the rule in article 62 (4) applied even where the links in the chain involved different transactions. The question was how to find wording to make that clear.

69. **The Chair** asked whether, on the basis of the comments made, the first example should be deleted and the second should be followed by the explanation that the rule also applied in the case of successive transfers of a security right, possibly accompanied by a reference to article 14 of the Model Law.

70. **Mr. Sono** (Japan) pointed out that article 62 (4) of the Model Law concerned only situations involving a security right in a receivable, not a security right in a security right in the receivable. The proposed additional text might make the example excessively complicated.

71. **Ms. Gross** (Israel) said that she was in favour of retaining only the second example, without any additional text. She wondered whether there was a need to refer to article 14, the relevance of which was not entirely clear.

72. **Mr. Brink** (Factors Chain International and EU Federation for the Factoring and Commercial Finance Industry), referring to the second example, said that it was common for factors to borrow money in order to purchase receivables and subsequently create security rights in those receivables. Thus, the chain in such cases involved one outright purchase and one transfer of security rights. The guide to enactment should include a reference to that possibility in order to avoid the impression that only outright transfers would give rise to the application of article 14.

73. **Mr. Bazinas** (Secretariat) said he shared the understanding of the representative of Japan that article 62 (4) did not apply to a security right in a security right in a receivable but, rather, would apply only to successive security interests in the same receivable. However, if it was the Commission's understanding that in the first example in paragraph 28 of document A/CN.9/914/Add.5, B could only create a security right in A's security right, not directly in the encumbered asset, the guide should explain how article 62 (4) applied in such cases.

74. Responding to the comments made by the representative of Factors Chain International and EU Federation for the Factoring and Commercial Finance Industry, he wondered whether it was necessary for the guide to enactment to indicate that the rule in article 62 (4) applied in the situation described by that representative, or to any similar chain, such as where the factor created a security interest in a receivable that it had purchased using a loan, in order to borrow more money. He was unsure of how the rule would apply in such scenarios.

75. **Ms. Gullifer** (United Kingdom) said that she wished to withdraw her earlier proposal to add text at the end of paragraph 28 to the effect that article 62 (4) applied also to successive security rights, as that fact was already stated in the first sentence of the paragraph.

76. **Mr. Whittaker** (Australia) said that the scenario described with regard to factoring was fully within the scope of the Model Law because the first operation was an outright transfer, such that when the factor then granted a security right in favour of its bank, that security right was a security right in the receivable itself, not in a security right in that receivable. However, it was difficult to see how article 62 (4) would apply in the case of a series of security rights granted in favour of successive secured creditors rather than a series of transfers, whether outright transfers or transfers by way of security.

77. **The Chair** said she took it that the Commission wished, in the light of the comments made, to delete the first example in paragraph 28 of document A/CN.9/914/Add.5 and to retain and clarify the second example.

78. *It was so decided*.

79. **Mr. Deschamps** (Canada), drawing attention to the last sentence of paragraph 33 of document

A/CN.9/914/Add.5, said it was not clear that paragraph 8 of article 63 addressed the matter described. Paragraph 9 was also relevant, and perhaps more so than paragraph 8. He therefore suggested that the last sentence of paragraph 33 should be replaced with wording along the lines of "Paragraphs 8 and 9 provide ways for the debtor of the receivable to ensure that it does not make payment to the wrong person in such circumstances."

80. **Mr. Riffard** (France) said that while he had no objection to that proposal, he noted that the example set out in paragraph 33 was essentially the same as the one in paragraph 28 that had given rise to the Commission's earlier protracted and difficult discussion.

81. **The Chair** said she took it that the Commission wished to accept the proposal by the representative of Canada concerning the last sentence of paragraph 33, and suggested that, as had been agreed with respect to paragraph 28, the example given should be modified to refer to successive outright transfers of receivables rather than successive security rights.

82. *It was so decided*.

83. **Mr. Dennis** (United States of America) said that it was not clear why the first sentence of paragraph 41 of document A/CN.9/914/Add.5 referred to the United Nations Convention on International Bills of Exchange and International Promissory Notes (Bills and Notes Convention). The reference should instead be to the relevant article of the Assignment Convention. The final sentence of paragraph 41 was also unclear.

84. **Ms. Gullifer** (United Kingdom) said she agreed that the last sentence of paragraph 41 should be clarified, and that the first sentence should refer to the Assignment Convention. The relevant article of that Convention was article 19, which was referred to in paragraph 39.

85. **The Chair** said that the reason for the reference to the Bills and Notes Convention was that article 30 of that Convention was the basis for article 19 of the Assignment Convention.

86. **Mr. Dennis** (United States of America) said that it would be more relevant, and more helpful, to refer to the Assignment Convention than to the Bills and Notes Convention.

87. **Mr. Weise** (American Bar Association) suggested that reference should be made to both conventions, possibly by including the reference to article 30 of the Bills and Notes Convention on first mention of article 19 of the Assignment Convention in paragraph 39, and that the latter provision should be indicated as the most recent comparable rule.

The meeting rose at 5 p.m.

Summary record of the 1065th meeting, held at the Vienna International Centre, Vienna, on Wednesday, 19 July 2017, at 9.30 a.m.

[A/CN.9/SR.1065]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 9.40 a.m.

Progress report of Working Group VI (Security Interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (*continued*) (A/CN.9/899, A/CN.9/904, A/CN.9/914, A/CN.9/914/Add.1, A/CN.9/914/Add.2, A/CN.9/914/Add.3, A/CN.9/914/Add.4, A/CN.9/914/Add.5 and A/CN.9/914/Add.6)

1. **The Chair** invited the Commission to resume its consideration of the part of the draft guide to enactment contained in document A/CN.9/914/Add.5.

*Chapter VI. Rights and obligations of the parties and third-party obligors (*continued*)*

2. **The Chair** recalled that at the previous meeting, it had been proposed that the reference to the United Nations Convention on International Bills of Exchange and International Promissory Notes in paragraph 41 of document A/CN.9/914/Add.5 should be deleted and that the final sentence of that paragraph should be clarified. She took it that the Commission wished to accept those proposals.

3. *It was so decided.*

4. **Mr. Deschamps** (Canada) suggested the deletion of the words "to protect the general operations of deposit-taking institutions and" from the final sentence of paragraph 49, because if it were the case that the rights of set-off were preserved in order to protect the general operations of deposit-taking institutions, security rights in bank deposits would not be permitted. Without an explanation of how the general operations of deposit-taking institutions were protected, such a statement should be avoided.

5. **Mr. Bazinas** (Secretariat) said that that wording had been used because the Working Group had decided that the policy rationale set out in chapter VII, paragraph 34, of the UNCITRAL Legislative Guide on Secured Transactions should be reflected in the guide to enactment. If the Commission wished to confirm that decision, the phrase "to protect the general operations of deposit-taking institutions and" could be retained on the understanding that it was explained in the Secured Transactions Guide, or it could be further elaborated. If it were deleted, paragraph 49 of document A/CN.9/914/Add.5 would not be consistent with the Secured Transactions Guide.

6. **Ms. Gullifer** (United Kingdom) expressed concern that if the final sentence of paragraph 49 was redrafted in the manner suggested by the representative of Canada, the second, third and fourth sentences of the paragraph would all make the same point. The problem was that the phrase "to protect the general operations of deposit-taking institutions" was a much more simplified rationale than the one set out in chapter VII, paragraph 34, of the Secured Transactions Guide. She therefore suggested that the last sentence should be replaced with a reference to the much fuller discussion of the policy rationale contained in paragraph 34 of the Secured Transactions Guide.

7. **Mr. Gabriel** (International Law Institute) said that paragraph 49 of document A/CN.9/914/Add.5 as drafted might give the impression that the right of set-off was protected only in relation to banks, and that the policy rationale applied only to them, whereas in fact article 64, paragraph 1(b), of the Model Law protected the right of set-off of debtors of the receivable generally. It might therefore be helpful to refer to that provision, and to refer to article 69 as providing additional protection of the right of set-off.

8. **Mr. Deschamps** (Canada), expressing support for the suggestions of the representatives of the United Kingdom and the International Law Institute, said it was important to state that the right of set-off of the deposit-taking institution was preserved in the same way as that of any other debtor.

9. **Mr. Bazinas** (Secretariat) said that the right of set-off of any other debtor of the receivable was preserved only if that right was available to the debtor at the time it received notification of the security right. He suggested that the final sentence of paragraph 49 should be modified as suggested by the representative of the United Kingdom and that reference should also be made to the discussion of the rights of set-off of the debtor of the receivable in paragraph 37 of document A/CN.9/914/Add.5.

10. *It was so decided.*

Chapter VII. Enforcement of a security right

11. **Ms. Gross** (Israel), drawing attention to paragraph 58, suggested that the word "not" in the phrase "judicial or similar proceedings may not be efficient" should be deleted, as it was incorrect.

12. *It was so agreed.*

13. **Mr. Dennis** (United States of America) proposed that paragraph 59 should include a cross reference to article 3, paragraph 3, of the Model Law, since it concerned alternative dispute resolution.

14. *It was so decided.*

15. **Mr. Deschamps** (Canada), drawing attention to paragraph 67, said that it was unclear what was meant by the phrase "once the relevant enforcement process has reached a point when the asset is no longer available to be the subject of enforcement" in the first sentence of that paragraph. He therefore proposed that the phrase should be amended to read "once the relevant enforcement process is completed or a third party has acquired rights in the asset".

16. *It was so decided.*

17. **Ms. Gross** (Israel), supported by **Mr. Deschamps** (Canada) and **Mr. Gabriel** (International Law Institute), said that although the last sentence of paragraph 69 mirrored paragraphs 65 to 67, which described a similar situation in relation to article 75 of the Model Law, the explanation that it gave should be that the enforcement process had advanced so far that the higher-ranking secured creditor could not take over the enforcement process, because under article 76 the asset could still be subject to enforcement by the higher-ranking secured creditor at a later stage, but that secured creditor would have to start a new enforcement process.

18. *It was so agreed.*

19. **Mr. Whittaker** (Australia) suggested that the second sentence of paragraph 73 should be deleted, because in the situation described, the debtor or grantor would already be in breach of the credit or security agreement — that breach having led to the enforcement process — and therefore would be unlikely to be concerned about further violating the agreement by raising unfounded objections to the recovery of enforcement costs. It was therefore unnecessary to attempt to determine how likely it was that the debtor or grantor would raise such objections.

20. **Ms. Walsh** (Canada) said that if the second sentence were deleted, the whole paragraph would have to be redrafted, since the sentences were related. She suggested as an alternative solution that, while the precise drafting should be left to the Secretariat, the second and third sentences should be merged along the following lines: "It follows that, as a practical matter, the person in possession, whether it is the grantor or a third person, is unlikely to raise unfounded objections since this may expose that person to liability to pay the additional costs incurred by the secured creditor in having to seek judicial assistance."

21. **The Chair** said she took it that the Commission wished the Secretariat to redraft the paragraph to reflect the suggestion by the representative of Canada.

22. *It was so decided.*

23. **Mr. Deschamps** (Canada) said that while the explanation given in paragraph 75 as to why a lower-ranking secured creditor was not entitled to obtain possession of an encumbered asset that was in the possession of a higher-ranking secured creditor was correct, a sentence or separate paragraph should be added to explain the additional rationale that if the higher-ranking secured creditor had obtained possession of the encumbered asset through enforcement, the lower-ranking secured creditor should not be entitled to obtain possession from the higher-ranking secured creditor because the higher-ranking secured creditor would have priority, i.e., the lower-ranking secured creditor should not be allowed to terminate the enforcement process initiated by the higher-ranking secured creditor.

24. **Mr. Bazinas** (Secretariat) suggested that since the point made by the representative of Canada was largely covered by the first sentence of paragraph 75, the additional element regarding enforcement as the means by which the higher-ranking secured creditor might obtain possession of the asset should be reflected in the same sentence.

25. **Mr. Deschamps** (Canada) said that the point he had raised would need to be stated separately, as it also concerned the second sentence of the paragraph. That sentence explained the purpose of article 77 (4) as being to preserve the third-party effectiveness achieved by possession by the higher-ranking secured creditor; however, it should be added that if enforcement was initiated by a higher-ranking secured creditor that had obtained possession of the asset, the lower-ranking secured creditor would not be entitled to obtain possession from that higher-ranking secured creditor.

26. **Mr. Weise** (American Bar Association) said that the fifth sentence of paragraph 75 appeared to be inconsistent with article 81, paragraph 1, of the Model Law, the effect of which, as he understood it, was that it was for the enacting State to determine whether or not the rights of the higher-ranking secured creditor were extinguished. He suggested that paragraph 75 should be adjusted accordingly.

27. **Mr. Bazinas** (Secretariat) suggested that the problem identified by the representative of the American Bar Association might be resolved by replacing the reference to article 81 in the fourth sentence of paragraph 75 with a reference to the part of the draft guide to enactment that dealt with article 81 (1), namely paragraph 90 of document A/CN.9/914/Add.5, the final sentence of which recommended the manner in which the enacting State could implement that provision.

28. With regard to the matter raised by the representative of Canada, the Secretariat could draft additional text, to be inserted in paragraph 75, to the effect that the additional rationale for the rule in article 77 (4) was that if a higher-ranking secured creditor had already initiated enforcement, the relinquishment of possession to the lower-ranking secured creditor would interfere with the exercise of the enforcement rights of the higher-ranking secured creditor.

29. **Ms. Walsh** (Canada) said she agreed that the cross reference in the fourth sentence of paragraph 75 should be to paragraph 90 rather than to article 81 of the Model Law.

30. **Mr. Gabriel** (International Law Institute) said that the rationale described by the representative of Canada in relation to article 77 (4) was much stronger than the one set out in paragraph 75 as currently drafted, which would apply much less frequently and was therefore less relevant. Accordingly, the stronger rationale should be set out first in the second sentence of paragraph 75.

31. **Mr. Weise** (American Bar Association), referring to the suggestion made by the representative of the Secretariat with respect to article 81 of the Model Law, said that while he agreed that the statement made in the fifth sentence of paragraph 75 would be correct if the recommendation made in paragraph 90 was followed by a State, enacting States were not required to follow that recommendation. However, the sentence in question appeared to be based on the assumption that that recommendation would be followed. An appropriate solution would be to explain that the statement made in the fifth sentence of paragraph 75 would apply only in States that enacted article 81 (1) as recommended in paragraph 90.

32. **Mr. Dennis** (United States of America) and **Ms. Gullifer** (United Kingdom) expressed support for the solution proposed by the representative of the American Bar Association.

33. **The Chair** said she took it that the Commission wished to accept that solution, together with the replacement of the reference to article 81 with a reference to paragraph 90 of document A/CN.9/914/Add.5, and to accept the further changes to paragraph 75 suggested by the representative of the Secretariat in response to the proposal made by the representative of Canada.

34. *It was so decided.*

35. **Ms. Gross** (Israel), supported by **Mr. Maradiaga** (Honduras), said that in the part of the draft guide relating to article 78, it would be useful to clarify the relationship between the right of a secured creditor to obtain possession of a tangible asset and the right of a secured creditor to dispose of an encumbered asset, particularly in view of the language of article 78, paragraph 4(d). The fact that a secured creditor could dispose of an encumbered asset without taking possession of that asset was significant, and necessitated further explanation of how the provision would operate in practice.

36. **The Chair** asked whether, given that the Commission had decided to prepare a practice guide, the point raised by the representative of Israel might be better developed in that guide rather than in the guide to enactment.

37. **Mr. Bazinas** (Secretariat) said that while paragraph 75 already dealt with the right to take possession and dispose of an encumbered asset, a statement could be added to the commentary on article 78 to reinforce the point that while the secured creditor would normally take possession, it could dispose of an encumbered asset without taking possession.

38. **Mr. Gabriel** (International Law Institute) said it was important to clarify that article 78 applied not only to tangible assets, to which the concept of "possession" was relevant, but also to intangible assets, to which that concept did not apply.

39. **The Chair** suggested that, in view of the support expressed for the suggestion of the representative of Israel and the comments made by the representative of the Secretariat as to how that suggestion might be accommodated, the Secretariat could be asked to incorporate the suggestion into the redrafted commentary on article 78. The point raised by the representative of the International Law Institute could also be reflected.

40. *It was so decided.*

41. **Mr. Gabriel** (International Law Institute), referring to paragraph 79, suggested that the information in parentheses should be amended to reflect the fact that parties other than the grantor might be the recipients of the notice. In addition, it was not a "proposal" but, rather, notice of the intention to dispose of the encumbered asset that must be communicated; the word "proposal" should therefore be replaced with the word "notice".

42. *It was so agreed.*

43. **Mr. Dubovec** (National Law Center for Inter-American Free Trade), supported by **Mr. Dennis** (United States of America), said that the example of a "recognized market" provided in the final two sentences of paragraph 80, namely a stock exchange, was not applicable in the context of the Model Law, because intermediated securities were not included in its scope. He suggested that the paragraph should instead give an example of an organized market relating to a type of asset that did fall within the scope of the Model Law, such as a commodity exchange.

44. *It was so agreed*.

45. **Ms. Gullifer** (United Kingdom) said that the final sentence of paragraph 81 implied that it logically followed from article 79 (1) that the enacting State should specify in article 81 (1) that the transferee took free of all security rights in the encumbered asset. While she understood that that sentence was intended as a strong recommendation, it gave the impression that the enacting State would have no reason to do otherwise, or had no other choice. However, under article 81 (1), the enacting State did have a choice as to whether or not a buyer or other transferee acquired its rights free of any

rights. That choice should be made clear in the final sentence of paragraph 81. A reference to article 81 (2), which involved a similar choice to be made by the enacting State, should also be included.

46. **Ms. Walsh** (Canada) said that in the case of a judicial sale, paragraph 1 of article 79 indicated that the proceeds should be distributed in accordance with the provisions of the Model Law on priority. The logical implication of that provision was that the sale must therefore extinguish the rights of all secured creditors, including prior-ranking secured creditors, which was correct. If a different rule of distribution were to be established, it might not be consistent with the requirement to distribute the proceeds of the sale in accordance with the provisions of the Model Law on priority.

47. **Mr. Bazinas** (Secretariat) said that the approach of giving options in a text such as the Model Law and making recommendations in the accompanying commentary, which was designed to provide guidance to States, was not exceptional, and the reasons for the Working Group's decision to adopt that approach with respect to paragraph 81 of document A/CN.9/914/Add.5 were given in that paragraph, and had also been explained by the representative of Canada. The matter had been discussed at length by the Working Group, the understanding of which had been that, in most States, in a judicial sale the transferee would usually take free of all security rights in the encumbered asset. Both the judicial sale process itself and the distribution of the proceeds according to the priority rules ensured that the other parties were provided with adequate safeguards.

48. **Mr. Weise** (American Bar Association), expressing agreement with the comments made by the representative of the United Kingdom, said that while the policy decision recalled by the representative of the Secretariat was not in question, paragraph 81 should not indicate that there was only one possibility for the enacting State. The choice of the enacting State was clearly indicated by the words "whether … or not" in article 81 (1). While he agreed with the intended recommendation, it should be clarified that the final sentence of paragraph 81 was indeed only a recommendation.

49. **Mr. Whittaker** (Australia), expressing support for the comments made by the representative of Canada, said it appeared that the strength of the recommendation in the final sentence of paragraph 81 was designed to ensure that articles 79 and 81 of the Model Law operated together effectively and did not produce inconsistent outcomes.

50. **Mr. Bazinas** (Secretariat), referring to the proposal of the United Kingdom representative to include a reference to article 81 (2) in the final sentence of paragraph 81, said that it was not possible to incorporate such a reference in paragraph 81 because of the different language used with respect to lessees or licensees under that provision. It would therefore be more appropriate to include at the end of paragraph 82 a recommendation parallel to that set out in paragraph 81, i.e. to recommend that the enacting State should specify that a lessee or licensee was entitled to the benefit of the lease or licence unaffected by any security rights.

51. **The Chair** said she took it that the Commission wished to accept that suggestion.

52. *It was so decided.*

53. **Mr. Deschamps** (Canada) proposed the deletion in paragraphs 87 and 88 of the phrase beginning with the word "although" within the parentheses, as in both paragraphs that phrase would apply only to the grantor and the debtor, whereas the addressees of the secured creditor's proposal might also be other secured creditors or other persons with rights in the asset, who would not be discharged. Even if the secured obligation was satisfied, those persons might nonetheless have an interest in objecting to the proposal.

54. **Mr. Gabriel** (International Law Institute) said that while he agreed with the proposal by the representative of Canada, the explanation provided should not refer only to parties other than the grantor or debtor, as the grantor might wish to object to the proposal; for example, if the encumbered asset was worth more than the secured obligation, the grantor would be entitled to the surplus remaining after disposition and would therefore wish to claim that surplus, which would not be possible if the secured creditor acquired the asset in satisfaction of the secured obligation.

55. **The Chair** said she took it that the Commission wished, on the basis of the comments made, to modify paragraphs 87 and 88 accordingly.

56. *It was so decided.*

The meeting was suspended at 11.10 a.m. and resumed at 11.30 a.m.

A/CN.9/914/Add.6

Chapter VIII. Conflict of laws

57. **Mr. Dennis** (United States of America), drawing attention to the definition of "tangible asset" set out in paragraph 7 of document A/CN.9/914/Add.6, asked whether that term was intended to cover electronic negotiable documents, in which case the applicable law would be the law of the location of the asset, or whether electronic negotiable documents were to be treated as intangible assets, in which case they would be governed by the law of the location of the grantor, which would be more logical. Guidance on that point should be included in the guide to enactment.

58. **Mr. Bazinas** (Secretariat) said that the definition provided applied to paper-based negotiable documents, as both the Model Law and the Secured Transactions Guide had been prepared against the background of negotiable instruments and negotiable documents in paper form, as was stated in footnote 25 of part B of the

introduction to the Secured Transactions Guide. If the Commission agreed, a statement could be included in paragraph 14 or 15 of document A/CN.9/914/Add.6 to the effect that negotiable documents in electronic form should be treated as intangible assets.

59. **Ms. Gullifer** (United Kingdom) said that she supported the suggestion of the United States representative, as the inclusion of such guidance would provide useful clarification. She proposed incorporating that guidance in paragraph 7 with a cross reference to paragraphs 14 and 15 in order to ensure that the point was reflected both in the part of the guide on article 85 and in the part on article 86, thus avoiding any possible confusion.

60. **Ms. Walsh** (Canada) said that the addition of information regarding electronic negotiable instruments would be confusing for legislators, as the term "negotiable instruments" was understood to refer to negotiable instruments in paper form only. Electronic negotiable instruments were not among the types of encumbered asset dealt with in the Model Law. The only other types of asset to be considered in relation to articles 85 and 86 were non-intermediated securities, which posed no difficulties as it was clear that certificated non-intermediated securities were represented by a physical certificate and thus fell under the definition of "tangible asset", while uncertificated non-intermediated securities were represented by an electronic record and therefore fell within the definition of "intangible asset".

61. **Mr. Bazinas** (Secretariat) said that a definition of tangible assets was provided in paragraph 65 of document A/CN.9/914 and the way in which electronic equivalents were addressed in the Model Law was explained in paragraph 66 of that document, which reflected the decision taken by Working Group VI not to include a detailed discussion of electronic documents in the Secured Transactions Guide or in the Model Law. If the Commission wished to alter that decision, it would be necessary to ensure that every provision applied correctly to electronic equivalents of paper documents.

62. **Mr. Dennis** (United States of America), responding to the comments made by the representative of Canada, pointed out that there was no definition of "negotiable document" in the Model Law. The point that he had raised essentially concerned the definition of "tangible asset", and it was clear from paragraph 65 of document A/CN.9/914 that that term did not include every kind of negotiable document. While the guide to enactment could simply state that the term "tangible asset" was not intended to include electronic negotiable documents, such a statement would not be accurate, as it did cover electronic documents in the sense that it covered non-intermediated securities in electronic form. The Secured Transactions Guide had been prepared against the background of negotiable instruments and negotiable documents in paper form because it had been prepared in 2006, whereas it was now common for States to use negotiable documents and negotiable instruments in electronic form, including warehouse receipts. It was therefore necessary to explain clearly how the matter was dealt with, although the matter could perhaps be addressed as part of the future work of the Working Group.

63. **Mr. Bazinas** (Secretariat) pointed out that the Model Law defined intangible assets as "any movable asset other than a tangible asset". If the term "intangible asset" was understood to exclude paper documents, it followed that electronic documents must be intangible assets. According to paragraph 46 of A/CN.9/914, the term "intangible asset" included receivables, rights to the performance of obligations other than receivables, rights to payment of funds credited to a bank account and uncertificated non-intermediated securities, as well as any other movable asset that was not a tangible asset. That definition appeared to resolve the matter, although additional language could be added for clarification. However, if that was not the understanding of the Commission, the rules of the Model Law would need to be reviewed to check whether they applied to any other types of asset.

64. **Mr. Soh** (Singapore) noted that for States enacting the newly adopted Model Law on Electronic Transferable Records, certain electronic documents would be the equivalent of paper-based documents and would therefore be treated in the same manner.

65. **The Chair** said that the Model Law on Electronic Transferable Records was not intended to affect any substantive provisions of the Model Law on Secured Transactions, such as the definitions of "tangible asset" and "intangible asset".

66. **Ms. Walsh** (Canada) said that it would be helpful for the guide to enactment to indicate that negotiable documents and negotiable instruments should be understood as being represented by a physical document and thus fell under the definition of "tangible asset", as physical possession was needed in order for many of the rules of the Model Law to apply. In particular, special priority rights depended on physical possession as a means of achieving third-party effectiveness. The concept of virtual possession, for example, of electronic bills of lading or electronic warehouse receipts, did not exist, and a sophisticated set of rules would be needed to determine what constituted the equivalent of physical possession of a negotiable instrument.

67. **The Chair** suggested that, since there appeared to be support for the proposal to provide guidance on the matter, that guidance should be provided in paragraph 65 of A/CN.9/914, where the term "tangible asset" was explained, as it was relevant not only to the conflict-of-laws provisions but also to many other provisions of the Model Law.

68. **Mr. Dennis** (United States of America) said that it should also be explained, under the definition of "intangible asset" in paragraph 46 of document

A/CN.9/914, that that definition would include electronic negotiable documents and electronic negotiable instruments. Since negotiable documents and negotiable instruments were increasingly in electronic form, such additional guidance would be helpful for enacting States.

69. **Ms. Gullifer** (United Kingdom) said that she supported the suggestions made, as they would ensure clarity and would be consistent with the inclusion of certificated non-intermediated securities as examples of tangible assets and of uncertificated non-intermediated securities as intangible assets.

70. **Mr. Gabriel** (International Law Institute), referring to the comment made by the representative of Singapore, said that if States enacted both the Model Law on Secured Transactions and the Model Law on Electronic Transferable Records, the issue under discussion would be resolved by application of article 11 of the latter text, which dealt with control of an electronic transferable record as the functional equivalent of possession of a transferable document or instrument.

71. **The Chair** said that the Model Law on Electronic Transferable Records, which was not intended to have any impact on substantive law, would not affect the provisions of the Model Law on Secured Transactions. The proposed additional explanations concerning tangible and intangible assets would further clarify that point.

72. **Ms. Walsh** (Canada) expressed concern that reference to electronic negotiable instruments and electronic negotiable documents might be problematic, as it was unclear whether or how such an instrument or document could be negotiable. The rules relating to the possession of paper documents were intended to reflect the fact that negotiability was achieved through the transfer of physical possession. However, there was no established international practice with regard to the negotiation of documents such as bills of lading and warehouse receipts in electronic form or the achievement of functional equivalence of possession in respect of such documents, nor, to her knowledge, was the negotiability of electronic documents commonly dealt with under national legislation. As it was the word "negotiable" that was problematic, it would be better simply to refer to documents and instruments that were traditionally represented in paper form and to state that documents or instruments in electronic form fell under the category of "intangible assets", thus avoiding the assumption that paper-based and electronic documents or instruments were equally negotiable.

73. As the term "possession" would apply only to paper-based negotiable instruments or documents, she suggested the addition of wording to the effect that the rules of the Model Law that dealt with possession applied only where a document or instrument was in a tangible form, particularly since, as had been pointed out, the definitions set out in the guide to enactment would have a bearing not only on the conflict-of-laws provisions of the Model Law but also on the rules relating to third-party effectiveness and priority.

74. **Mr. Bazinas** (Secretariat) said that the question of whether negotiable documents or instruments were paper or electronic, and the question of whether a document or instrument was negotiable, would be determined not by a secured transactions law but by other law of the enacting State. The definitions of tangible and intangible assets set out in the Model Law were established solely for the purposes of a secured transactions law. It might therefore suffice, in the guide to enactment, to include negotiable documents and instruments represented in paper form as examples of a tangible asset and those in electronic form as examples of an intangible asset. It was unnecessary to refer to possession, which was clearly defined in the Model Law as "actual possession of a tangible asset".

75. **Mr. Whittaker** (Australia), expressing support for the comments made by the representative of Canada and the explanation provided by the representative of the Secretariat, said that it would be helpful to formulate the reference to electronic negotiable documents or instruments as examples of intangible assets in such a way as to avoid the implication that the concept of such documents or instruments was well established.

76. **Mr. Dennis** (United States of America) said he agreed that the question of negotiability of an electronic document or instrument was a matter for the law of the enacting State, and that the concept of an electronic negotiable document or an electronic negotiable instrument might not necessarily be widely established. In United States legislation, for example, electronic negotiable documents were referred to as "electronic documents of title". Both points should be clarified. He suggested that it should be left to the Secretariat to formulate appropriate wording.

77. **The Chair** suggested that the fact that the negotiability of a document, whether paper or electronic, would be determined under other legislation of the enacting State should be clarified both in paragraph 46 of document A/CN.9/914 with respect to intangible assets and in paragraph 65 of the same document with respect to tangible assets.

78. **Ms. Walsh** (Canada) said that the way in which negotiability was achieved in general law in the context of electronic documents or instruments was not relevant with respect to the Model Law, as in the Model Law there was no such concept as, and consequently no special rules applicable to, negotiable intangible assets. The Model Law did, however, recognize physical possession as the means of negotiating documents and instruments by according special priority to a party in possession of a negotiable document or instrument. It was important to ensure that the definition of "possession" was restricted to tangible assets, on which basis it would be understood that no special priority applied under the Model Law to an electronic document

or instrument. Since negotiability would depend on other law, it would suffice to state simply that negotiable electronic documents and negotiable electronic instruments constituted intangible assets.

79. **Mr. Dennis** (United States of America), referring to the comments made by the representative of Singapore, said that it would be helpful to clarify the impact of the Model Law on Electronic Transferable Records on the Model Law on Secured Transactions, for example, with respect to article 49 of the latter text, which referred to possession of a negotiable document.

The meeting rose at 12.30 p.m.

Summary record of the 1066th meeting, held at the Vienna International Centre, Vienna, on Wednesday, 19 July 2017, at 2 p.m.

[A/CN.9/SR.1066]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 2.05 p.m.

Progress report of Working Group VI (Security interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (*continued*) (A/CN.9/899, A/CN.9/904, A/CN.9/914, A/CN.9/914/Add.1, A/CN.9/914/Add.2, A/CN.9/914/Add.3, A/CN.9/914/Add.4, A/CN.9/914/Add.5 and A/CN.9/914/Add.6; A/CN.9/L/CRP.1/Add.14 and A/CN.9/L/CRP.4)

1. **The Chair** invited the Commission to resume its consideration of the part of the draft guide to enactment contained in document A/CN.9/914/Add.6.

2. Recalling the Commission's earlier discussion of the relationship between the UNCITRAL Model Law on Electronic Transferable Records and the Model Law on Secured Transactions, she noted that the purpose of the Model Law on Electronic Transferable Records was to establish the functional equivalence of transferable documents or instruments in electronic form to those in paper form. It was intended not to modify the substantive provisions of other laws but, rather, to apply where that functional equivalence was relevant or useful. However, in the context of the Model Law on Secured Transactions, and specifically with respect to the distinction between tangible and intangible assets, the Model Law on Electronic Transferable Records should not apply, particularly article 11, which established that where possession of a transferable document or instrument was required, that requirement was met with respect to an electronic transferable record if control of that record by a person could be reliably established; under the Model Law on Secured Transactions, possession was defined as applying only to tangible assets. The guide to enactment should therefore explain that a State enacting both model laws should ensure that the Model Law on Electronic Transferable Records did not affect the integrity of the regime established by the Model Law on Secured Transactions.

3. **Mr. Whittaker** (Australia), expressing support for that suggestion, said that it was important for the guide to enactment to clarify that relationship in order to prevent any possible inconsistency between the two model laws.

4. **Mr. Weise** (American Bar Association), expressing agreement with the Chair, said that the guide to enactment should explain that the relationship between the secured transactions law and other law of the enacting State, such as legislation governing electronic documents or the negotiability of such documents, should be such that neither affected the scope or effect of the other.

5. **Ms. Walsh** (Canada) noted that "negotiable documents" and "negotiable instruments" under the Model Law on Secured Transactions were essentially "transferable documents or instruments" under the Model Law on Electronic Transferable Records, in which the definition of "transferable document or instrument" was separate from and more precise than that of "electronic transferable record", being defined as a document or instrument issued on paper that entitled the holder to claim the performance of the obligation indicated in the document or instrument. That definition would cover warehouse receipts and bills of lading, and was compatible with the understanding, in the context of the Model Law on Secured Transactions, of negotiable documents or negotiable instruments as being in paper form. Article 11 of the Model Law on Electronic Transferable Records established the concept of exclusive control of an electronic transferable record as equivalent to possession of a transferable document or instrument — i.e., physical possession of a paper document — and, in paragraph 2, the transfer of control over an electronic transferable record as equivalent to the transfer of possession of a transferable document or instrument. Thus, to avoid conflict between that article and the Model Law on Secured Transactions, she suggested that in the definition of "possession" in the guide to enactment, it should be expressly stated that in the context of negotiable documents and instruments, possession meant physical possession of the paper document or instrument, as was reflected in the definition of "tangible asset". It should also be explained that States that had enacted the Model Law on Electronic Transferable Records might wish to include in their definition of "possession" the concept of control along the lines of article 11 of the Model Law. That would enable States enacting the Model Law on Secured Transactions to apply the special rules applicable to possession of negotiable documents. Otherwise, article 11 of the Model Law on Electronic Transferable Records would conflict with the Model Law on Secured Transactions, which did not provide for control as the equivalent of possession.

6. **Mr. Liu** Hong (China) said that while he was in favour of the proposed inclusion in the guide of electronic negotiable documents and electronic negotiable instruments as examples of intangible assets, which would be helpful to users of the guide, it should be left to enacting States to consider the relationship

between the two model laws. While the issue at hand was important, it was not urgent, as there was no existing practice or legislation with respect to negotiable documents or instruments in electronic form.

7. **Mr. Bazinas** (Secretariat) pointed out that neither the Model Law on Secured Transactions nor the Model Law on Electronic Transferable Records defined "negotiable document" or "negotiable instrument", nor did they deal with the issue of negotiability. The question of whether a document or instrument, whether paper or electronic, was negotiable would be determined by other law of the enacting State.

8. If the explanation proposed by the representative of Canada with respect to article 11 of the Model Law on Electronic Transferable Records was accepted, the possible impact would be that the rules of the Model Law on Secured Transactions that were meant to apply to negotiable instruments and negotiable documents in paper form would also apply to electronic negotiable instruments and documents, which would be a change of policy.

9. **The Chair** said that since the Commission had not had the opportunity to consider the possible implications of the proposed additional text inviting enacting States to consider expanding the definition of "possession" in their secured transaction law to reflect article 11 of the Model Law on Electronic Transferable Records, it might be unwise to include such text.

10. **Mr. Soh** (Singapore) said that the Model Law on Electronic Transferable Records was not intended to influence the way in which the terms "negotiable document" and "negotiable instrument" were defined in other legislation. A State wishing to enact both model laws would need to consider how they would interact and whether a negotiable document or instrument in electronic form under its legislation on electronic transferable records would be treated as a negotiable document or instrument for the purposes of its secured transactions law. The Commission therefore did not need to make a recommendation in that regard.

11. **Ms. Walsh** (Canada) said that since neither model law defined "negotiable document" or "negotiable instrument", the focus should not be on such documents or instruments and their electronic equivalents, nor should it be on the concepts of "tangible asset" and "intangible asset"; rather, the key issue was possession. In that regard, she recalled that the Commission had decided when adopting the Model Law on Electronic Transferable Records and the explanatory note thereto that, with respect to security rights in transferable documents or instruments, control would be the functional equivalent of possession, as was reflected in the relevant part of the draft report, namely paragraph 14 of document A/CN.9/L/CRP.1/Add.14. While that paragraph referred only to the creation of a security right in a transferable document or instrument, it would be logical to assume that the same functional equivalence applied not only to creation but also to third-party effectiveness and priority. However, in the absence of certainty in that regard, and in the light of the comments made by the previous speakers, it would be sufficient simply to draw the attention of States that enacted both model laws to the need to consider the relationship between the definition of "possession" in the Model Law on Secured Transactions and the concept of control as the functional equivalent of possession in article 11 of the Model Law on Electronic Transferable Records.

12. **The Chair** suggested that the discussion in the draft guide to enactment of the terms "intangible asset", "possession" and "tangible asset", set out in paragraphs 46, 53 and 65, respectively, of document A/CN.9/914, should be expanded on the basis of the comments made, and that paragraph 53 of that document should be revised to indicate that States enacting both model laws should consider the relationship between the two.

13. **Mr. Bazinas** (Secretariat) said it was his understanding that the Commission wished to clarify in paragraph 65 of document A/CN.9/914 that the definition of "tangible asset" covered only negotiable documents and negotiable instruments in paper form, and that the matter of negotiability was left to other law of the enacting State; and to expand the definition of "intangible asset" in paragraph 46 of that document to include negotiable documents and negotiable instruments in electronic form and to make a statement similar to that in paragraph 65 with regard to negotiability. However, given that "possession" was defined in the Model Law as "the actual possession of a tangible asset", if the term "tangible asset" did not include non-paper documents and instruments, the definition of "possession" would not apply at all to such documents or instruments. He therefore sought clarification as to whether that was the policy decision of the Commission, or whether the Commission wished to leave that matter to the enacting State.

14. **The Chair** said it was her understanding, on the basis of the comments made, that the Commission had confirmed that the policy under the Model Law on Secured Transactions was that the concept of possession was limited to tangible assets; however, since enacting States could depart from the provisions of the Model Law, the guide to enactment should simply indicate that if a State enacted both model laws, it should consider the relationship between them with respect to that concept.

15. **Mr. Dennis** (United States of America) said that the implication of such a conclusion was that the Model Law on Electronic Transferable Records would not apply if possession was limited to tangible assets.

16. **The Chair** said that throughout the development of the Model Law on Secured Transactions, the understanding had been that possession was limited to tangible assets. It would therefore be a dramatic shift in policy if the Commission were to decide otherwise; moreover, the Commission was not in a position to

adequately assess the implications of such a shift at the current stage of its deliberations.

17. **Mr. Dennis** (United States of America) said that his delegation had reached a different conclusion, namely that tangible assets included negotiable documents and instruments in both paper and electronic form and that the term "possession" would therefore apply to electronic negotiable documents and electronic negotiable instruments. It had also understood that control would be the functional equivalent of possession for the purposes of the Model Law, so that, for example, article 46 of the Model Law would apply to electronic negotiable instruments. The definition of "tangible asset" in the Model Law was unclear, and the proposed amended definition in the guide to enactment raised the question as to what the policy should be with regard to possession. As the representative of Canada had pointed out, paragraph 14 of document A/CN.9/L/CRP.1/Add.14 suggested that control as the functional equivalent of possession would apply to third-party effectiveness and priority — in that regard, he noted that the reference to creation of a security right by possession was incorrect, as a security right was created by a security agreement — but that was not his understanding of the effect of the Model Law on Electronic Transferable Records on the Model Law on Secured Transactions.

18. **The Chair** pointed out that the definition of "possession", in the Model Law on Secured Transactions, as the actual possession of a tangible asset was based on the definition of the term in the UNCITRAL Legislative Guide on Secured Transactions, and it appeared to be the prevailing view of the Commission that possession was indeed limited to tangible assets.

19. **Mr. Dennis** (United States of America) recalled his earlier comment that the Secured Transactions Guide had been prepared against the background of negotiable instruments and negotiable documents in paper form because it had been prepared in 2006. At that time, the Commission would not have been able to adopt a position with respect to the concept of possession in the context of electronic documents. Consequently, it could not be determined solely on the basis of that Guide that electronic documents were intangible assets and that the term "possession" therefore did not apply to them. The proposed approach to the matter was inconsistent with the conclusion that the Commission had reached with respect to the Model Law on Electronic Transferable Records.

20. **The Chair** said that the solution might be simply to invite States to consider the relationship between the two model laws. She suggested that the Commission should defer further consideration of the matter until it had completed its review of the remainder of the draft guide to enactment, in order to give delegations time to consult.

21. *It was so agreed.*

22. **Mr. Deschamps** (Canada) proposed that paragraph 4 of document A/CN.9/914/Add.6 should be modified to clarify that the parties were permitted to select the law applicable to their rights and obligations not because article 84 was non-mandatory but because it permitted that choice of law.

23. He further proposed that in paragraph 10, it should be clarified that a motor vehicle would always be treated as a mobile asset, regardless of whether it was used to cross national borders. The paragraph as currently drafted gave the impression that an asset would be mobile depending on its actual use, thus contradicting the second sentence, which stated that the exception referred to the ordinary use of assets of that type and not to their actual use.

24. Lastly, drawing attention to the example given in paragraph 22 of a foundation as a legal person without any commercial activities, he said it should be made clear that the term "business" was used in a broad sense in the Model Law and was not limited to commercial activities.

25. **The Chair** said that the Secretariat would take the suggestion made with regard to paragraph 22, together with any other such drafting suggestions submitted to it directly, into consideration during the final drafting of the guide. She took it that the Commission wished to accept the proposals made with respect to paragraphs 4 and 10.

26. *It was so decided.*

27. **Ms. Gross** (Israel) proposed that paragraph 24 should explain the relationship between article 91 and article 23, which provided for a period of time during which a security right would remain effective against third parties if the location of the asset or grantor changed, and would thus apply to the scenario described in article 91.

28. **Ms. Walsh** (Canada) said that such an explanation would helpfully remind the reader that although under article 91 the law applicable to third-party effectiveness and priority would change as a result of a change in the relevant connecting factor, that did not mean that the secured creditor could not preserve the third-party effectiveness of its security right. Under article 23, if the location was changed to the enacting State, the secured creditor would be allowed to preserve the third-party effectiveness of its security right for the period of time specified in that article, during which the priority of its security right would be determined by the time at which third-party effectiveness was achieved under the law of the other State.

29. **The Chair** said she took it that the Commission wished the Secretariat to modify paragraph 24 to include the proposed explanation on the basis of the comments made.

30. *It was so decided.*

31. **Mr. Deschamps** (Canada), drawing attention to the fourth sentence of paragraph 41, said it was not always the case that the location of the relevant branch of the deposit-taking institution could easily be determined. For example, a statement of account might be issued by an administrative office of a bank without any indication of the address of the branch; also, some cheques no longer indicated a bank address. The sentence should therefore be revised accordingly.

32. **The Chair** suggested that, in the light of those comments, the statement made in the fourth sentence should be qualified by the words "in most cases".

33. *It was so decided.*

34. **Mr. Deschamps** (Canada) said that paragraphs 41 and 42 gave the impression that the expectations of the parties would be the same under option A and option B of article 97 of the Model Law — the parties being the same in each case — whereas it should be made clear that that was not the case.

35. **Mr. Bazinas** (Secretariat) said it was his understanding also that the expectations of the parties referred to in paragraph 41 were different from those referred to in paragraph 42. In paragraph 41, the expectation of the parties was that the applicable law would be that of the State where the branch of the deposit-taking institution was located, whereas in paragraph 42 the expectation of the parties was that the law they designated in their account agreement would be the applicable law.

36. **Mr. Gabriel** (International Law Institute) said that he shared that understanding, as it did not seem possible that the different options could meet the same expectations of the parties. The law of the State where the branch of the deposit-taking institution was located might well be different from the law designated in the account agreement. He suggested that, since the explanations of the two options were otherwise satisfactory, the sentences referring to the expectations of the parties should simply be deleted.

37. **Mr. Deschamps** (Canada) suggested that each of the sentences in question should be reformulated to refer to the different expectations of the parties.

38. *It was so decided.*

39. **Mr. Deschamps** (Canada) proposed that, in paragraph 46, the words "the licensor's right to royalties or" should be deleted from the parentheses in the last sentence, because royalties were receivables, not intellectual property.

40. He further proposed that the last sentence of paragraph 48 should be deleted because, in certain circumstances, a security right in intellectual property could be enforced against persons other than the grantor. Furthermore, the statement made in that sentence was not specific to security rights in intellectual property, as it applied to the enforcement of any kind of security right.

41. **Mr. Sono** (Japan) proposed that the final sentence of paragraph 46 should be deleted in its entirety, as it was unclear how that sentence related to conflict of laws.

42. **The Chair** said she took it that the Commission wished to delete the final sentence of paragraph 46 and the final sentence of paragraph 48 as proposed.

43. *It was so decided.*

Chapter IX. Transition

44. **Ms. Walsh** (Canada) proposed that since paragraph 69 of document A/CN.9/914/Add.6 related to paragraph 1 of article 103 rather than paragraph 2 of the article, the references in paragraph 69 to paragraph 2 of the article should be corrected accordingly and the paragraph should be placed after paragraph 67, which also concerned article 103, paragraph 1.

45. *It was so decided.*

46. **Mr. Dennis** (United States of America) proposed that the last two sentences of paragraph 74, if not the whole paragraph, should be deleted because the matters discussed in that paragraph were already covered in the following paragraphs, specifically the discussion of paragraph 4 of article 105.

47. **Ms. Walsh** (Canada) proposed that paragraph 74 should be deleted in its entirety. The point made in the first sentence was covered by paragraph 75, while the point made in the last two sentences was covered by paragraph 77.

48. **The Chair** said she took it that the Commission wished to delete paragraph 74 as proposed.

49. *It was so decided.*

50. **Mr. Gabriel** (International Law Institute) proposed that it should be made clear in the last sentence of paragraph 78 that the registration venue might be in another State, as the prior law could be the law of another State. The sentence as currently drafted was confusing.

51. **Ms. Walsh** (Canada), expressing agreement with those comments, proposed that the last sentence of the paragraph should simply be deleted, as the preceding sentence contained all the necessary information.

52. **The Chair** said she took it that the Commission wished to accept the proposal by the representative of Canada.

53. *It was so decided.*

54. **Ms. Walsh** (Canada), drawing attention to paragraph 83, proposed that the words "(b) enable the establishment of the Registry (or adaptation of an existing registry to the registry system required by the new law) and ensure that it is fully operational;" should

be deleted and that the second part of the second sentence should be amended to read "the new law should come into force as soon as is practical after the text of the new law is final and the registry system required to support the new law is established and operational", as the need to establish the registry was not one of the reasons why lead time was necessary; rather, the registry must be both established and operational before the law entered into force. Moreover, the establishment of the registry might well take longer than the 6 to 12 months suggested as an example at the end of the paragraph.

55. **Ms. Gross** (Israel), expressing support for the comments made by the representative of Canada, said that if the paragraph was amended as proposed, the last sentence would also need to be revised, as it would still suggest that the period indicated was the time needed to establish the registry. While that appeared to have been the intention of the Working Group when drafting the guide, it would be more logical for the period of 6 to 12 months to be indicated as the suggested time needed to educate the persons affected once the registry had become operational. The sentence should be revised in such a way as to preserve the useful guidance that it provided on the mechanism for determining the time when the new law should enter into force.

56. **Mr. Whittaker** (Australia) said that he too agreed with the comments made by the representative of Canada, although with respect to the proposed wording "after the text of the new law is final", it went without saying that the "lead time" would begin only when the new law had been finalized. He also agreed that the lead time should refer to the time needed for education and training once the register was operational, and suggested that the final sentence of paragraph 83 should be redrafted accordingly.

57. **Mr. Dennis** (United States of America) said that paragraph 83 should reflect the fact that the time at which the new law would enter into force would also depend on whether the enacting State was reforming its secured transactions system and would therefore be implementing the Model Law only partially, or whether it was enacting the Model Law and its registry provisions in their entirety.

58. **Mr. Bazinas** (Secretariat) suggested that paragraph 83 should include a cross reference to paragraph 72, which suggested a transitional period of one to two years and referred the reader to paragraph 83 for the relevant considerations to be taken into account in determining the time required for the new law to enter into force. He recalled that, on the basis of a transitional period of one to two years and a period of 6 to 12 months for entry into force, it had been the understanding of the Working Group that the total time needed for the law to come into effect would be two to three years.

59. **Ms. Walsh** (Canada) said it was her understanding that paragraph 72 addressed a different matter, describing a scenario in which the law had already come into force and secured creditors had a given time period within which to make their security rights effective against third parties, whereas paragraph 83 dealt with the conditions that must be created before the law could enter into force, including the need for an operational registry system, whether that system was new or adapted according to the new law. For that reason, it was necessary to explain that the lead time did not refer to the time needed to establish the registry, but to the time needed for training and familiarization with the new system, i.e. the 6 to 12 months indicated as an example, once the text of the law had been finalized and possibly even enacted but not yet enforced. Expressing agreement with the representative of Israel that the final sentence of paragraph 83 would have to be amended if her original proposal was accepted, she suggested that that sentence should be deleted and a similar statement, to the effect that the new law could enter into force on a specific date or on the date to be specified by a decree once the registry became operational, should be added to paragraph 82.

60. **Mr. Bazinas** (Secretariat) said it was his understanding that the intention of paragraph 83 was to set out the factors that enacting States should consider when determining the time of the law's entry into force, rather than suggesting when the law should enter into force. Similarly, the last sentence of the paragraph was intended not to suggest that the law should enter into force within 6 to 12 months but, rather, to provide enacting States with a mechanism for determining the time when the law should enter into force.

61. **Mr. Dennis** (United States of America) said that he shared that understanding, and agreed with previous speakers that the law should not come into effect until the registry was established. He pointed out that training could be undertaken while the registry was being established, and that States were likely to want to bring their new law into effect as soon as possible after the registry became operational; indeed, secured transactions reform should be carried out as quickly as possible in order for States to benefit from that reform. A period of 6 to 12 months therefore seemed rather long and unrealistic.

62. **The Chair** said that, as she understood it, there was agreement that the registry should be operational before the law came into force and that States should consider the criteria set out in (a), (c) and (d) of paragraph 83 in determining when the new law would enter into force. The paragraph could be adjusted on that basis, and the final sentence could be deleted in the light of the comments made with respect to the time when the law should enter into force.

63. **Mr. Whittaker** (Australia) said that the period of time needed after the registry had become operational might depend on the complexity of the economy of the enacting State. His country, for example, had needed a significant period of time once its registry had become operational to enable banks and other financial institutions to adjust their systems in order to be able to

interface with the registry, and that had been a critical component of its implementation process. That point should be reflected in the guide to enactment.

64. **Ms. Gross** (Israel), expressing support for the Chair's suggestion, said that it might be simplest to remove the reference to the time period in parentheses in the final sentence of the paragraph, given that that time period could vary greatly among States and would depend on whether the conditions necessary for the law's implementation had been created.

65. **Mr. Dennis** (United States of America) said that he agreed with the Chair's suggestion to delete the final sentence of paragraph 83.

66. **Ms. Walsh** (Canada) expressed agreement that the deletion of that sentence was appropriate. Paragraph 82 already indicated that the Model Law did not recommend a particular date or mechanism, leaving the matter to the enacting State. That statement could be followed by the guidance contained in the final sentence of paragraph 83, i.e. a statement to the effect that the new law might enter into force on a specific date or on the date to be specified by decree. However, that guidance was linked to the important point that the law should not be brought into effect until the registry was operational, which should be reflected in paragraph 83, whereas paragraph 82 dealt with the mechanism for determining the time of entry into force.

67. **Ms. Gross** (Israel) expressed support for the suggestion to move the guidance set out in the final sentence of paragraph 83, with the exception of the reference to the time period, to paragraph 82.

68. **The Chair** said she took it that the Commission wished to accept that change, and to modify paragraph 83 to emphasize that the registry should be operational before the new law entered into force; that enacting States should consider the lead time needed for the steps described in (a), (c) and (d); and that the lead time would depend on the complexity of the economy of the enacting State.

69. *It was so decided*.

Draft decision on the adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (A/CN.9/L/CRP.4)

70. **Mr. Bazinas** (Secretariat) drew attention to the note to the Commission set out in document A/CN.9/L/CRP.4, relating to the publication of the guide to enactment.

71. **The Chair** recalled that the Commission had yet to resume its consideration of how and to what extent the guide to enactment should address the relationship between the Model Law on Secured Transactions and the Model Law on Electronic Transferable Records. However, the draft decision on the adoption of the guide could be considered independently of that discussion.

72. **Mr. Dennis** (United States of America), supported by **Ms. Gullifer** (United Kingdom), proposed that the draft decision should refer to the importance of secured transaction reform in facilitating cross-border trade and highlight the fact that the Model Law and the guide to enactment established a comprehensive regime governing secured transactions. If there was support for that proposal, his delegation could draft suggested provisions and circulate them for the Commission's consideration.

73. **The Chair** said that while she appreciated the desire to include such positive language, the benefits of the Model Law were already set out in the Commission's decision adopting the Model Law and in the relevant General Assembly resolution, namely resolution 71/136. It might therefore be best to avoid attributing the benefits of the Model Law to the guide to enactment; instead, an appropriate balance should be sought. She suggested that the Commission should defer its consideration of the draft decision until the Commission's next meeting, pending circulation of the proposed changes for discussion.

74. She suggested that the Commission should also defer until the next meeting its consideration of how the guide to enactment should address the relationship between the Model Law on Secured Transactions and the Model Law on Electronic Transferable Records, in order to give delegations time to consider the matter further.

75. *It was so agreed.*

The meeting rose at 4.55 p.m.

Summary record of the 1067th meeting, held at the Vienna International Centre, Vienna, on Thursday, 20 July 2017, at 9.30 a.m.

[A/CN.9/SR.1067]

Chair: Ms. Sabo (Vice-Chair) (Canada)

The meeting was called to order at 9.45 a.m.

Progress report of Working Group VI (Security Interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (*continued*) (A/CN.9/899, A/CN.9/904, A/CN.9/914, A/CN.9/914/Add.1, A/CN.9/914/Add.2, A/CN.9/914/Add.3, A/CN.9/914/Add.4, A/CN.9/914/Add.5 and A/CN.9/914/Add.6; A/CN.9/L/CRP.4)

Draft decision on the adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions (A/CN.9/L/CRP.4) (continued)

1. **Mr. Dennis** (United States of America), supported by **Ms. Gullifer** (United Kingdom), proposed that an additional paragraph should be inserted after the third preambular paragraph of the draft decision, to read "*Being convinced* that the overarching benefits of the Model Law include an increase in access to affordable credit, the facilitation of the development of international trade and greater legal certainty in the exercise of international commercial activities."

2. *It was so decided.*

3. *The draft decision, as orally amended, was adopted.*

4. **The Chair** recalled that the Commission, at its previous meeting, had discussed the possibility of including in the Guide to Enactment an explanation of the relationship between the UNCITRAL Model Law on Secured Transactions and the UNCITRAL Model Law on Electronic Transferable Records.

5. **Mr. Dennis** (United State of America) suggested that it might suffice for the Guide to Enactment to state simply that States wishing to enact both model laws should consider the relationship between them.

6. **The Chair** said it was indeed her understanding that the Commission wished to take a cautious approach rather than attempting to provide detailed guidance regarding the relationship between the two model laws. On that basis, she took it that the Commission wished to accept the suggestion made by the United States representative.

7. *It was so decided.*

Possible future work in the area of security interests and related topics (*continued*) (A/CN.9/913, A/CN.9/924 and A/CN.9/926)

8. **Mr. Dennis** (United States of America) recalled that, during the Commission's earlier discussion of future work in the area of security interests, his delegation had suggested that the Secretariat should conduct a study with respect to warehouse receipts. The outcome of informal consultations with regard to that suggestion was that his delegation and others intended to submit a paper regarding work on that topic, setting out the possible elements of such work, after the completion of the practice guide on secured transactions. He requested the inclusion of wording to that effect in the relevant part of the report of the session.

9. **The Chair** asked whether that paper would be made available for consideration at a later session of the Commission, when future work, priorities and the mandates of its working groups were discussed.

10. **Mr. Dennis** (United States of America) said that the intention was to submit the paper to Working Group VI to allow States to consider it first.

11. **Mr. Sorieul** (Secretary of the Commission) said that while delegations were entitled to put forward proposals on any subject at any time, the Commission had already concluded its discussion regarding the future work of Working Group VI, having decided to mandate the Working Group to prepare a practice guide on secured transactions. There would be an opportunity to return to the issue of warehouse receipts at a later session. However, the topic should not be referred to in the report of the session as having been added to the Working Group's agenda, as that would be inconsistent with the Commission's decision with regard to work in the area of security interests.

12. **Mr. Dennis** (United States of America) said that his proposal was simply to note the intention of a number of delegations to submit a paper on the topic. There seemed to be support for that proposal among delegations.

13. **The Chair** said it was her recollection that there had not been support for work on warehouse receipts as a priority. The most appropriate course of action would be to submit the proposed paper to the Commission for consideration, as it was for the Commission to decide on the projects to be assigned to the working groups. The topic of warehouse receipts should be considered by the Commission at its fifty-first or fifty-second session, as its discussion at the current time would be premature.

14. **Mr. Yuen** (Germany) expressed support for the proposal made by the United States representative that the intention to submit the paper in question should be noted in the report of the session.

15. **Mr. Dennis** (United States of America) said it was his understanding that any Working Group could consider its future work at any time and did not require approval from the Commission to do so.

16. **The Chair** suggested that, in the interests of reaching a wide audience and garnering support for work on the topic, it would be better for the paper to be submitted to the Commission at a future session.

17. *It was so agreed.*

Adoption of the report of the Commission
(*continued*) (A/CN.9/L/CRP.1/Add.1, A/CN.9/L/CRP.1/Add.2, A/CN.9/L/CRP.1/Add.3, A/CN.9/L/CRP.1/Add.4, A/CN.9/L/CRP.1/Add.5, A/CN.9/L/CRP.1/Add.6, A/CN.9/L/CRP.1/Add.7, A/CN.9/L/CRP.1/Add.8, A/CN.9/L/CRP.1/Add.9, A/CN.9/L/CRP.1/Add.10, A/CN.9/L/CRP.1/Add.11, A/CN.9/L/CRP.1/Add.13, A/CN.9/L/CRP.1/Add.14, A/CN.9/L/CRP.1/Add.15, A/CN.9/L/CRP.1/Add.16, A/CN.9/L/CRP.1/Add.18, A/CN.9/L/CRP.1/Add.19, A/CN.9/L/CRP.1/Add.23 and A/CN.9/L/CRP.1/Add.24)

18. **Mr. Sorieul** (Secretary of the Commission), recalling that document A/CN.9/L/CRP.1/Add.12 had already been adopted at the Commission's 1060th meeting, suggested that the Commission first consider the two available parts of the draft report on agenda item 24, contained in documents A/CN.9/L/CRP.1/Add.23 and A/CN.9/L/CRP.1/Add.24.

19. **The Chair** reminded delegations that they were encouraged not to reopen substantive issues but simply to ensure that the report was correct. If they wished to propose substantive changes, it was important that they should suggest specific language, as there would be no time for drafting. If delegations had linguistic or grammatical points to raise, they were invited to submit suggested changes to the Secretariat.

A/CN.9/L/CRP.1/Add.23

20. *Document A/CN.9/L/CRP.1/Add.23 was adopted.*

A/CN.9/L/CRP.1/Add.24

21. **Ms. Gullifer** (United Kingdom), drawing attention to paragraph 1, proposed that the words "to movable property" should be inserted after the words "an attachment" in items (e), (f) and (g), to clarify that those items did not refer to an attachment to immovable property.

22. **Mr. Sono** (Japan) said that while he supported that proposal, he suggested that the words "a movable asset" should be used in place of the words "movable property" in items (d), (e), (f) and (g).

23. **Mr. Dennis** (United States of America) expressed support for the proposal made by the representative of the United Kingdom. With regard to the suggestion to use the word "asset", he noted that items (a) and (b) referred to both movable and immovable property. It would be confusing to use both "property" and "asset"; either one or the other should be used.

24. **Ms. Gullifer** (United Kingdom) further proposed that the words "the attachment itself" in paragraph 1 (g) should be amended to read "the asset itself" or "the property itself".

25. **Ms. Walsh** (Canada) expressed support for that proposal, but pointed out that the word "movable" should be included. While the word "asset" was usually used in relation to movable property and the word "property" in relation to immovable property, she did not object to the use of the wording "movable property".

26. **Mr. Dennis** (United States of America) pointed out that the words "movable property" were used in item (b); however, it was his understanding that reference was made to chapter V, paragraph 115, of the UNCITRAL Legislative Guide on Secured Transactions, in which "attachment to a movable asset" was used. It was important for terminology to be used consistently throughout the paragraph.

27. **The Chair** suggested that the words " to movable property" should be inserted following the words "an attachment" in paragraph 1 (e), (f) and (g), and that the words "the attachment itself" at the end of item (g) should be replaced with the words "that movable property".

28. *It was so decided.*

29. **Ms. Gross** (Israel) said that paragraph 14 (b) should refer to paragraph 1 of article 3 rather than to paragraph 2. She also proposed the deletion of the words ", except to the extent provided in the provisions of section II of chapter VI (e.g. art. 63)" at the end of the paragraph.

30. **Mr. Bazinas** (Secretariat) pointed out that that wording was based on article 61, paragraph 1, of the Model Law and was intended to draw attention to the fact that a number of the provisions of chapter VI, section II, of the Model Law established obligations that the debtor of the receivable must fulfil regardless of whether it had given its consent.

31. **Mr. Sono** (Japan) said that the reference to paragraph 2 in paragraph 14 (b) was correct. However, he suggested that the words "while, under article 3, paragraph 2, the provisions of section II of chapter VI were not mandatory" should be reformulated to read "while the provisions of section II of chapter VI were not mandatory, under article 3, paragraph 2", for the sake of clarity as to what the paragraph in question referred to. Alternatively, reference could be made simply to article 3.

32. **The Chair** suggested that the reference to paragraph 2 should be deleted and the remainder of paragraph 14 (b) should be left unchanged.

33. *It was so decided.*

34. *Document A/CN.9/L/CRP.1/Add.24, as orally amended, was adopted.*

A/CN.9/L/CRP.1/Add.18

35. **Mr. Bazinas** (Secretariat) said that a number of structural changes would be made to the part of the draft report contained in the addendum: the chapter number would be IV rather than XV and the title of the chapter would be amended to "Consideration of issues in the area of security interests", in line with the titles of documents A/CN.9/L/CRP.1/Add.23 and A/CN.9/L/CRP.1/Add.24. Furthermore, since section A of that chapter would be entitled "Finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions", the title "Possible future work in the area of security interests" would become the heading of section B. In addition, the square brackets would be removed from paragraph 1.

36. **Ms. Gullifer** (United Kingdom), supported by **Mr. Tosato** (Italy) and **Mr. Dennis** (United States of America), said that the content of the final sentence of paragraph 5 did not fully capture the discussions that had taken place. Therefore, the words "inventory and receivables as security for credit was permitted" in that sentence should be replaced with wording along the lines of "movable assets as security were treated as eligible collateral for regulatory purposes".

37. *It was so agreed.*

38. **Ms. Gross** (Israel) suggested the insertion of the words ", including microfinance regulation" after the words "should form the basis of that work" in paragraph 10, to emphasize that issue.

39. **Mr. Bazinas** (Secretariat) pointed out that the financing of micro-businesses was already mentioned in paragraph 4 and addressed in both of the documents to which that paragraph referred, namely documents A/CN.9/913 and A/CN.9/926. It would therefore be undesirable to place particular emphasis on financing of micro-businesses in paragraph 10. However, as a compromise, a reference to paragraph 4 could be added to paragraph 10.

40. **The Chair** said that since the issue of financing of micro-businesses was already highlighted in paragraph 1, emphasis on only one element of the Commission's decision in paragraph 10 would mean that that decision was not accurately reflected.

41. **Mr. Dennis** (United States of America) said he agreed that the reference to financing of micro-businesses in paragraph 4 was sufficient.

42. Drawing attention to paragraph 8, he suggested the addition of the words "for immediate referral to a working group" at the end of the final sentence of that paragraph, because the suggestions referred to remained on the future work agenda.

43. *It was so agreed.*

44. **Mr. Tosato** (Italy) suggested the insertion, at the end of paragraph 9, of an additional sentence reading "Coordination and cooperation was also recommended with regard to international banking regulators", or worded similarly, to reflect more accurately the discussions that had taken place.

45. **The Chair** said that wording along the lines of "Coordination and cooperation with international banking regulators was also supported" might be more appropriate.

46. **Mr. Bazinas** (Secretariat), supported by **Mr. Dennis** (United States of America), suggested the wording "That mandate also included coordination and cooperation with international regulatory banking authorities", which would be consistent with the structure of the current final sentence.

47. *It was so decided.*

48. *Document A/CN.9/L/CRP.1/Add.18, as orally amended, was adopted.*

A/CN.9/L/CRP.1/Add.1, A/CN.9/L/CRP.1/Add.2, A/CN.9/L/CRP.1/Add.3, A/CN.9/L/CRP.1/Add.4 and A/CN.9/L/CRP.1/Add.19

49. *Documents A/CN.9/L/CRP.1/Add.1, A/CN.9/L/CRP.1/Add.2, A/CN.9/L/CRP.1/Add.3, A/CN.9/L/CRP.1/Add.4 and A/CN.9/L/CRP.1/Add.19 were adopted.*

A/CN.9/L/CRP.1/Add.5

50. **Mr. Sorieul** (Secretary of the Commission) informed the Commission that additional proposals had been made for the establishment of two new regional centres. Further information concerning those proposals could be found in documents A/CN.9/L/CRP.1/Add.20 and A/CN.9/L/CRP.1/Add.25, which would be considered by the Commission at a later stage.

51. **Mr. Dennis** (United States of America) said that the wording "further encouraging the Secretariat to continue the establishment of such partnerships, and noting with appreciation" in subparagraph (c) of paragraph 3 did not appear to follow on logically from the paragraph's introductory clause "Strong support was expressed for the various activities undertaken by the Secretariat and its Regional Centre, which were aimed at:". A standalone paragraph containing that information might be more appropriate, although the specific drafting could be left to the Secretariat.

52. *It was so agreed.*

53. *Subject to the agreed redrafting, document A/CN.9/L/CRP.1/Add.5, was adopted.*

A/CN.9/L/CRP.1/Add.6, A/CN.9/L/CRP.1/Add.7, A/CN.9/L/CRP.1/Add.8, A/CN.9/L/CRP.1/Add.9, A/CN.9/L/CRP.1/Add.10, A/CN.9/L/CRP.1/Add.11 and A/CN.9/L/CRP.1/Add.13

54. *Documents A/CN.9/L/CRP.1/Add.6, A/CN.9/L/CRP.1/Add.7, A/CN.9/L/CRP.1/Add.8, A/CN.9/L/CRP.1/Add.9, A/CN.9/L/CRP.1/Add.10, A/CN.9/L/CRP.1/Add.11 and A/CN.9/L/CRP.1/Add.13 were adopted.*

A/CN.9/L/CRP.1/Add.14

55. **Mr. Dennis** (United States of America), drawing attention to paragraph 12 of the document, suggested that a new sentence reading "The Commission agreed to retain that text unchanged" should be added at the end of that paragraph in order to state explicitly what the Commission had decided on, as had been done in other paragraphs of the document.

56. *It was* so *decided.*

57. **The Chair** suggested, in the light of consultations with delegations, that paragraph 14 should be modified to refer to the effectiveness of security rights against third parties rather than the creation of security rights, thus reflecting the Commission's discussions more accurately. Accordingly, in the first sentence of the paragraph, the word "created" would be replaced with the words "made effective against third parties", and the phrase "registering a security right" would be replaced with the phrase "registering notice of the security right". In the second sentence of the explanation given in quotation marks, the words "and made effective against third parties" would be inserted after the word "created", and in the third sentence of that quoted explanation, the words "created by the registration of the rights in a public registry" would be replaced with the words "made effective against third parties by registration in a public registry."

58. *It was* so *decided.*

59. **Ms. Walsh** (Canada) said that in the second sentence of paragraph 14, it was unclear to what wording "the same wording" referred. In order to clarify what was meant, she suggested that the second sentence be reformulated to read "It was noted that the same wording, 'or permits', was used in paragraph 2 of the draft article."

60. *It was so decided*.

61. **Mr. Castellani** (Secretariat), drawing attention to paragraph 131 of the explanatory notes to the Model Law on Electronic Transferable Records as quoted in paragraph 34 of document A/CN.9/L/CRP.1/Add.14, said that he had been requested to present a proposal by the delegation of the Comité Maritime International, which was unable to attend the meeting, to replace the word "enables" with the word "allows" and to insert the words "in accordance with article 10" after the words "electronic transferable records" in the second sentence of that quoted paragraph, in order to reflect more accurately the discussion summarized in paragraph 32 of the addendum.

62. **Mr.** Dennis (United States of America) said that since the text in question had been agreed on by the Commission, and formed part of the explanatory notes rather than part of the text of the draft report, it should not be modified for the sole purpose of alignment with paragraph 32.

63. **The Chair** recalled that there had been some discussion of whether to use the word "enables" or the word "allows" with respect to the practice of issuing multiple originals, and that the Commission had discussed the importance of article 10 in that context. However, the text quoted in paragraph 34 of the addendum had been presented to the Commission only as suggested language rather than as final text. The proposals made by the delegation of the Comité Maritime International did not affect the substance of the quoted paragraph, and reflected the Commission's deliberations. The reference to article 10, moreover, made the paragraph more precise.

64. **Mr. Soh** (Singapore) said that he shared the Chair's recollection of the Commission's discussion of paragraph 131 of the draft explanatory notes. Article 10 had been expressly mentioned as a basis for allowing the continuation of the practice of issuing multiple originals of a transferable document or instrument.

65. **Mr. Dennis** (United States of America) requested time to consult on the matter with his delegation.

66. **The Chair** suggested that, if there were no further comments on document A/CN.9/L/CRP.1/Add.14, the Commission should defer its consideration of paragraph 34 of the document until its next meeting.

67. *It was so agreed.*

The meeting was suspended at 11.30 a.m. and resumed at 11.45 a.m.

A/CN.9/L/CRP.1/Add.15

68. **Mr. Soh** (Singapore) said that under the heading "Article 5. Information requirements (*continued*)", the reference to "18 bis" should be corrected to read "20 bis".

69. *It was so agreed.*

70. *Document A/CN.9/L/CRP.1/Add.15, as orally amended, was adopted*.

A/CN.9/L/CRP.1/Add.16

71. *Document A/CN.9/L/CRP.1/Add.16 was adopted*.

The meeting rose at 11.55 a.m.

Summary record of the 1068th meeting, held at the Vienna International Centre, Vienna, on Friday, 21 July 2017, at 2 p.m.

[A/CN.9/SR.1068]

Chair: Mr. Martonyi (Hungary)

The meeting was called to order at 2.05 p.m.

Adoption of the report of the Commission (*continued*) (A/CN.9/L/CRP.1, A/CN.9/L/CRP.1/Add.14, A/CN.9/L/CRP.1/Add.17, A/CN.9/L/CRP.1/Add.20, A/CN.9/L/CRP.1/Add.21, A/CN.9/L/CRP.1/Add.22, A/CN.9/L/CRP.1/Add.25 and A/CN.9/L/CRP.1/Add.26)

A/CN.9/L/CRP.1/Add.14 (continued)

1. **Mr. Sorieul** (Secretary of the Commission) recalled that, at the Commission's previous meeting, the Secretariat had presented a proposal by the Comité Maritime International to revise the second sentence of paragraph 131 of the explanatory notes to the Model Law on Electronic Transferable Records, as quoted in paragraph 34 of document A/CN.9/L/CRP.1/Add.14, to read "The Model Law allows the continuation of that practice with respect to the use of electronic transferable records in accordance with article 10 when that practice is permitted under applicable law".

2. **Mr. Dennis** (United States of America) said that his delegation was willing to accept that proposal. However, the word "allow" should be replaced with the words "does not affect", which would more accurately reflect the Commission's discussions.

3. **The Chair** said he took it that the Commission wished to accept the proposed wording as modified by the representative of the United States.

4. *It was so decided.*

5. *Document A/CN.9/L/CRP.1/Add.14, as orally amended, was adopted.*

A/CN.9/L/CRP.1 and A/CN.9/L/CRP.1/Add.17

6. *Documents A/CN.9/L/CRP.1 and A/CN.9/L/CRP.1/Add.17 were adopted.*

A/CN.9/L/CRP.1/Add.20

7. **Mr. Sorieul** (Secretary of the Commission) read out a message received by the Secretariat from the Prime Minister of the Russian Federation congratulating UNCITRAL on its fiftieth anniversary. He suggested that a reference to that message should be added to paragraph 34 of document A/CN.9/L/CRP.1/Add.20.

8. The language of paragraphs 30 and 33, which related to the proposals made by the Governments of Cameroon and Bahrain to establish regional centres, had been redrafted and the new text of those paragraphs could be found at the end of document A/CN.9/L/CRP.1/Add.25.

9. **The Chair** said he took it that the Commission wished the Secretariat to update paragraphs 30, 33 and 34 of document A/CN.9/L/CRP.1/Add.20 accordingly.

10. *It was so decided.*

11. *Subject to the agreed changes, document A/CN.9/L/CRP.1/Add.20 was adopted.*

A/CN.9/L/CRP.1/Add.21

12. **Ms. Sabo** (Canada), referring to paragraph 5, said that she did not recall any mention having been made, during earlier discussions, of the use of the two remaining days of reserved conference services for a colloquium on public-private partnerships.

13. **Mr. Sorieul** (Secretary of the Commission) said that the wording "colloquium on public-private partnerships" might be misleading, as it did not reflect a specific decision made during the Commission's current session but, rather, a decision made by the Commission at its forty-ninth session that the Secretariat would be entitled to use the time freed up by the absence of a project for Working Group III. Those two days were to be dedicated to work by an expert group on the ongoing revision of the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects (2000).

14. **Ms. Sabo** (Canada) suggested that in view of that explanation, it might be more appropriate to use the word "meeting" rather than "colloquium".

15. *It was so decided.*

16. *Document A/CN.9/L/CRP.1/Add.21, as orally amended, was adopted.*

A/CN.9/L/CRP.1/Add.22

17. **Mr. Sorieul** (Secretary of the Commission), drawing the Commission's attention to paragraph 10, suggested deleting the words "to States", which appeared to be a drafting error.

18. *It was so agreed.*

19. *Document A/CN.9/L/CRP.1/Add.22, as orally amended, was adopted.*

A/CN.9/L/CRP.1/Add.25

20. **Ms. Gullifer** (United Kingdom), supported by **Mr. Whittaker** (Australia), said that an additional paragraph should be inserted before paragraph 4 to record the Commission's decision to delete the word "not" from the phrase "judicial or similar proceedings may not be

efficient" in paragraph 58 of document A/CN.9/914/Add.5.

21. *It was so agreed.*

22. **Mr. Whittaker** (Australia) said that paragraph 12 reflected an interim position in the Commission's lengthy discussions rather than the final conclusion that the Commission had reached. Accordingly, the paragraph should be amended to read "With respect to paragraph 81, it was agreed that the last sentence should be expanded to include a reference to article 81, paragraph 2".

23. *It was so agreed.*

24. **Ms. Walsh** (Canada) proposed deleting the words "(or dematerialized)" from paragraph 23 to avoid confusion, as the term was typically used in relation to securities rather than to the instruments and documents referred to in that paragraph.

25. *It was so decided.*

26. **Mr. Weise** (American Bar Association) said that paragraph 25 (a) was overly broad in indicating that the provisions of the Model Law that applied to tangible assets did not apply to electronic negotiable instruments or documents. He suggested that that should be resolved by inserting the word "specifically" after the word "applied".

27. *It was so agreed.*

28. **Mr. Dennis** (United States of America) suggested deleting the word "possible" from paragraph 25 (b), as the language "should consider their relationship" was sufficient. He also suggested inserting a cross reference to paragraph 14 of document A/CN.9/L/CRP.1/Add.14, where the relationship between the model laws in question was discussed.

29. *It was so agreed.*

30. **Ms. Walsh** (Canada), supported by **Ms. Gullifer** (United Kingdom), suggested that paragraph 26 should be amended to read along the lines of "With respect to paragraph 69, it was agreed that it should be revised to clarify that the reference to paragraph 2 of article 103 should be changed to a reference to paragraph 1 of article 103, and that the substance of paragraph 69 should be placed after or incorporated in paragraph 67, which deals with article 103, paragraph 1".

31. *It was so decided.*

32. **Ms. Walsh** (Canada) proposed that the words "electronic transferable records" in the second sentence of paragraph 24 should be replaced with the words "transferable documents or instruments in electronic form" so that the paragraph was consistent with the language used in article 11 of the Model Law on Secured Transactions. She also proposed that the words "of exclusive possession" should be added at the end of that sentence.

33. **Mr. Dennis** (United States of America) said that he did not support the inclusion of the word "exclusive" in the sentence as he was not familiar with the term "exclusive possession".

34. **Mr. Sorieul** (Secretary of the Commission) said he agreed that the term "exclusive possession" was unclear, but that the proposed reference to "possession" should be retained.

35. **The Chair** said he took it that the Commission wished to reformulate the sentence in question to read "It was widely felt that the Model Law on ETR was not intended to revise the substantive provisions of other law but rather to facilitate the use of transferable documents or instruments in electronic form by providing rules on achieving the functional equivalence of possession".

36. *It was so decided.*

37. **Mr. Dennis** (United States of America) proposed that the last sentence of paragraph 24 should be deleted, as it was inconsistent with the statement, made in paragraph 14 of document A/CN.9/L/CRP.1/Add.14 as amended, that control under article 11 of the Model Law on Electronic Transferable Records provided the functional equivalent in those cases where the security rights would be created and made effective against third parties by possession of a paper document or instrument. That inconsistency made the sentence unclear with respect to the intention of the Model Law.

38. **Ms. Walsh** (Canada) said that while she agreed with that view, if the sentence was deleted, paragraph 24 would no longer fully reflect the Commission's discussion on the Model Law on Secured Transactions, as it had been accepted that the intention of that Model Law was to restrict the concept of possession to tangible assets such as negotiable documents and negotiable instruments in paper form.

39. **Mr. Dennis** (United States of America), recalling that the relationship between the model laws had not been discussed in detail, said that the suggestion in paragraph 25 that States wishing to enact both model laws should consider their relationship was sufficient. It would be problematic to state that one view had been that "control" was the functional equivalent of "possession" but that the opposite view had also been stated. It would therefore be preferable to delete the final sentence of paragraph 24.

40. **Mr. Whittaker** (Australia) said that he did not support the deletion of the sentence, as it represented a view that had been expressed clearly and discussed at length, namely that, at least in the context of the Model Law on Secured Transactions, it did not automatically follow that the more general principles espoused by the Model Law on Electronic Transferable Records would automatically apply under the Model Law on Secured Transactions. That would have to be considered in more detail by enacting States if they chose to implement both

model laws. As a possible solution, he suggested amending the wording "the concept of 'possession' under the Model Law that applied only to tangible assets" in the sentence in question to read "the concept of 'possession' under the Model Law, which is intended to apply only to tangible assets".

41. **Mr. Dennis** (United States of America) said that he supported that suggestion but would prefer the words "it was stated" to "it was generally felt", to reflect the fact that different views had been expressed.

42. **Ms. Sabo** (Canada), expressing support for the suggestion by the representative of Australia, said that the wording "it was stated" would not accurately reflect the discussion, as the view referred to had indeed been the general view.

43. **Mr. Dennis** (United States of America) suggested that, alternatively, a sentence could be added to the paragraph to explain that another view had been that it was the plain meaning of both texts taken together that the concept of possession would be affected.

44. **Ms. Sabo** (Canada), speaking as Vice-Chair, said that on the basis of her recollection as the Chair of the meeting in question, the wording suggested by the representative of Australia best reflected the views that had been expressed. The words "it was stated" would represent a change of meaning, as the majority of delegations had expressed the same view.

45. **The Chair** suggested the wording "It was widely felt that" as a compromise solution.

46. **Mr. Tosato** (Italy) said that he was in favour of the proposal by the representative of Australia, which accurately reflected the discussion that had taken place.

47. **Mr. Whittaker** (Australia) suggested replacing the words "it was generally felt" with "it was the majority but not universal view that".

48. **Ms. Sabo** (Canada) suggested that the sentence should be amended as proposed by the representative of Australia and a new sentence should be added at the end of the paragraph along the lines of "Another view was that article 11 of the Model Law on Electronic Transferable Records would have the effect of changing the concept of 'possession' under the Model Law".

49. **Mr. Sorieul** (Secretary of the Commission) said that the Commission had not discussed the issue in such detail but, rather, had simply concluded that article 11 of the Model Law on Electronic Transferable Records was not intended to change the concept of possession as applied under the Model Law on Secured Transactions. Adding language to the effect that the article might change that concept, or that one of the views expressed had been that it did change the concept, would raise questions as to how and to what extent the concept of possession was changed, which had not been discussed. Therefore, the report should not suggest that the matter had been discussed at length. Instead, paragraph 24 should reflect no more than what had been agreed on, namely that the Model Law was not intended to change the concept of possession.

The meeting was suspended at 3.15 p.m. and resumed at 3.40 p.m.

50. **Mr. Dennis** (United States of America) said that the solution reached during informal consultations was that a new sentence should be added at the end of paragraph 24 stating that "Another view was that the plain meaning of article 11 of the Model Law on Electronic Transferable Records made 'control' the functional equivalent of possession for the purposes of the Model Law on Secured Transactions".

51. **The Chair** took it that the Commission wished to accept that proposal.

52. *It was so decided.*

53. *Document A/CN.9/L/CRP.1/Add.25, as orally amended, was adopted.*

A/CN.9/L/CRP.1/Add.26

54. **Mr. Bazinas** (Secretariat) suggested moving the information in paragraph 3 to the end of paragraph 8 of document A/CN.9/L/CRP.1/Add.18, which had already been adopted at the Commission's previous meeting, as that document addressed future work on security interests, to which paragraph 3 of document A/CN.9/L/CRP.1/Add.26 related.

55. **Mr. Sorieul** (Secretary of the Commission) said that a clear decision had been made not to add the topic of warehouse receipts to the work programme of Working Group VI. Therefore, care should be taken to ensure that the report of the session did not suggest the opposite, irrespective of any studies that might be prepared by the Secretariat or a Member State. Working Group VI currently had only one item for future work, namely the preparation of a practice guide on secured transactions, and the Commission had clearly indicated its unwillingness to add any other topic to that Working Group's future work programme.

56. **Ms. Sabo** (Canada) said that paragraph 3 of document A/CN.9/L/CRP.1/Add.26 seemed to indicate sufficiently clearly that the Commission did not wish to take up the topic of warehouse receipts at the current time. However, it was somewhat unusual to refer to the intentions of specific delegations in relation to the Commission's work. In order to avoid misunderstanding, she suggested that paragraph 3 be moved as proposed and redrafted to refer to a proposal having been made by a delegation to conduct additional research on the topic of warehouse receipts with a view to submitting a proposal for future work on that topic to the Commission at its next session.

57. **Mr. Dennis** (United States of America), expressing support for that suggestion, pointed out that paragraph 12 of document

A/CN.9/L/CRP.1/Add.18 indicated that the topic of warehouse receipts would be retained on the Commission's future work agenda for further discussion at a future session, since it had been discussed in document A/CN.9/913. It could be left to the Secretariat to further refine the paragraph concerning warehouse receipts accordingly and in such a manner as to address the concern expressed by the Secretary.

58. **Ms. Sabo** (Canada) suggested that only the wording "The Commission was also informed that a delegation intended to prepare and submit a study on warehouse receipts for future consideration by the Commission" should be moved to paragraph 8 of document A/CN.9/L/CRP.1/Add.18, as there was no need to refer to the practice guide on secured transactions.

59. *It was so decided.*

60. *Document A/CN.9/L/CRP.1/Add.26, as orally amended, was adopted.*

61. *The draft report as a whole, as amended, was adopted.*

Closure of the session

62. After the customary exchange of courtesies, **the Chair** declared the fiftieth session of the Commission closed.

The meeting rose at 4 p.m.

IV. LIST OF DOCUMENTS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW REPRODUCED IN PREVIOUS VOLUMES OF THE *YEARBOOK*

The present list indicates the particular volume, year, part and chapter where documents relating to the work of the United Nations Commission on International Trade Law were reproduced in previous volumes of the *Yearbook*; documents that do not appear in the list here were not reproduced in the *Yearbook*. The documents are divided into the following categories:

1. Reports on the annual sessions of the Commission

2. Resolutions of the General Assembly

3. Reports of the Sixth Committee

4. Extracts from the reports of the Trade and Development Board, United Nations Conference on Trade and Development

5. Documents submitted to the Commission (including reports of the meetings of Working Groups)

6. Documents submitted to the Working Groups:

   (a) Working Group I:

   Time-Limits and Limitation (Prescription) (1969 to 1971); Privately Financed Infrastructure Projects (2001 to 2003); Procurement (2004 to 2012); MSME's (as of 2014)

   (b) Working Group II:

   International Sale of Goods (1968 to 1978); International Contract Practices (1981 to 2000); Arbitration and Conciliation / Dispute Settlement (as of 2000)

   (c) Working Group III:

   International Legislation on Shipping (1970 to 1975); Transport Law (2002 to 2008); Online Dispute Resolution (2010 to 2016); Investor-State Dispute Settlement Reform (as of 2017)

   (d) Working Group IV:

   International Negotiable Instruments (1973 to 1987); International Payments (1988 to 1992); Electronic Data Interchange (1992 to 1996); Electronic Commerce (as of 1997)

   (e) Working Group V:

   New International Economic Order (1981 to 1994); Insolvency Law (1995 to 1999); Insolvency Law (as of 2001)*

   (f) Working Group VI:

   Security Interests (as of 2002)**

7. Summary records of discussions in the Commission

8. Texts adopted by Conferences of Plenipotentiaries

9. Bibliographies of writings relating to the work of the Commission.

---

* For its 23rd session (Vienna, 11-22 December 2000), this Working Group was named Working Group on International Contract Practices (see the report of the Commission on its 33rd session A/55/17, para.186).

** At its 35th session, the Commission adopted one-week sessions, creating six working groups.
